Broadly, the total public issues (excluding conversion operations) made in London last year (an earlier analysis of which was given in the *Economist* of December 28, 1929, page 1237) showed a falling-off of 23 per cent. as compared with those of 1928, though their aggregate, in pounds sterling, was 45 per cent. greater than in 1913. Of the whole amount offered, 48½ per cent. took the form of debentures, bonds, etc., 11 per cent. of preference stocks and shares, and 40½ per cent. of ordinary stocks. The proportion of "variable dividend" securities was appreciably greater than in 1928, when these accounted for 30 per cent. of the total issues, and very much greater than in 1913, when ordinary stocks represented only 17 per cent. of the whole, as the following table indicates:—

PUBLIC ISSUES OF NEW CAPITAL IN LONDON.

	Year 1913.	Year 1926.	Year 1927.	Year 1928.	Year 1929.
	£	£	£	£	£
Debentures, bonds, &c.	139,920,400	145,180,000	228,958,000	212,817,900	137,670,300
Preference stocks and shares	22,955,600	39,393,200	36,836,600	45,062,600	31,543,400
Ordinary stocks and shares	33,661,300	46,209,400	89,371,400	111,177,600	116,017,600
Total	196,537,300	230,782,600	355,166,000	369,058,100	285,231,300

The influential part played by the ordinary share in present-day capital operations reflects the ever-growing importance of the limited company in London finance. The next table, which classifies borrowers under 29 different headings, shows that last year Government and municipal authorities (whose issues fall entirely into the category of "debentures, bonds, etc.") took less than two-fifths of the total capital raised. The companies of various orders and species, whose issues compose the rest of the table, and were responsible for 62 per cent. of the aggregate offerings of 1929, floated only 16½ per cent. of their total emissions in the form of debentures, 18 per cent. in preference shares, and as much as 65½ per cent. in ordinary shares:—

Average yield %	4·77	4·71	5·00	5·02	4·97	6·76	7·21	5·09	5·07

* Includes all borrowing at over 6%. † This total of £52,437,000 includes £26,290,000 by Colonial Governments, at an average yield of 4·15%, and £26,158,000 by Foreign Governments, at an average yield of 5·31%. The British Government was not in the market.

It may come as a surprise to many of our readers that in a year of dear money, when Bank rate averaged a full one per cent. above the level of 1928, Government borrowers *as a whole* paid no higher a rate for long-term

resources than during the previous year. The reason is that such borrowers largely remained outside the market once rates had moved against them. Dominion Government issues, over the whole year, were reduced to not much more than half the dimensions of 1928, while foreign government emissions were negligible. The chief exception to this tendency was the British Government itself, which staged a major long-term borrowing operation in the late autumn, and paid a full 5 per cent.—a higher rate than it had been impelled to offer for some years past.

Turning next to municipal and railway borrowing, the following table shows the average rates offered in the past three years:—

	Amount borrowed in Years			Average Yield.		
	1927.	1928.	1929.	1927.	1928.	1929.
	£	£	£	%	%	%
British municipalities, &c.	27,114,400	14,871,000	8,316,000	4·96	4·75	4·96
Colonial municipalities, &c.	5,136,700	7,296,100	3,859,917	5·27	5·25	5·19
Foreign municipalities, &c.	5,683,800	4,332,000	472,500	6·68	6·61	6·90
British railways	14,207,500	2,080,900	1,920,000	5·27	5·21	5·36
Colonial railways	4,671,800*	Nil	Nil	6·42	...	...
Foreign railways	2,487,500	3,070,000	2,835,000	5·95	6·34	5·30

* Excluding £2,170,800 Trade Facilities issue of Gedaref Railway and Development 5 per cent. debs. at 100½ which yielded at issue price £4 19s. 3d.

It is doubtful how far the figures in the last column can be regarded as truly representative of market conditions. Borrowings by Colonial and foreign municipalities and by Colonial and foreign railways were too small in number and amount to prevent the average from being unduly influenced by exceptional cases. The rates paid by British municipalities must be read, again, in the light of the " Hatry " revelations. It is well known that the Corporation and General Securities Company (now in liquidation) had obtained a virtual monopoly of issue business in this section of the market, and, by a policy of intensive advertising and " rate-cutting " had appreciably reduced the prevailing yield on new Corporation securities. Apart from the losses of certain municipalities by reason of the irregular dealings of the Hatry group, the market has not yet been tested under " normal " conditions, only one British municipal issue having been made since the " crash."

The average rates offered by industrial borrowers are shown in the next table:—

INDUSTRIAL AND COMMERCIAL BONDS, DEBENTURES, &C.

Average yields %	5·5	6·48	6·21	5·75	5·48

* Including all capital yielding over 6 per cent.

For some years the rate on new debentures has been steadily declining. This most significant phenomenon was not arrested last year, when the average yield actually fell slightly below the 1913 figure. As in the case of the groups already considered, however, the figures call for substantial qualification, since the average *quality* of the various borrowers was higher in 1929 than in 1928. Companies with a low borrowing status tended to refrain last year from making issues whose price would, in some instances, have been virtually prohibitive, while even the more solid concerns held their hands when conditions became really tight. Further, many issues in this and other classes were largely left with underwriters in the later months of the year and promptly fell to a discount on the Stock Exchange. Similar observations apply as regards the apparent decline in the average rate offered on preference shares, which largely reflected the progressive elimination from the lists, as the year progressed, of the high-yielding preference shares of new speculative companies with deferred shares of low denomination:—

PREFERENCE STOCKS AND SHARES.

	%		%		%
1913	5·74	1922.....	7·17	1926.....	6·70
1920	8·09	1923.....	6·59	1927.....	6·67
1921	8·39	1924.....	6·27	1928.....	7·37
		1925.....	6·10	1929.....	6·58

The above figures do not take account of any participating rights attaching to particular preference shares after payment of a specified ordinary dividend, since there is obviously no means of calculating the amounts these shares may eventually receive.

The trend of modern investment practice is veering away from the preference share, and last year's figures do not afford convincing evidence of any reversal of sentiment in this respect.

Our final table gives the average Bank rate, the average three months' bill rate, and the rates paid on all Government borrowings and on industrial debentures in 1913, 1920, and in subsequent years:—

	Average Bank Rate.	Average 3 Months' Bill Rate.	Average Rate Paid by all Government Borrowers.	Average Rate on Issues of Industrial Debentures.
	%	%	%	%
	£ s. d.	£ s. d.		
1913	4 15 5	4 7 5	4·77	5·5
1920	6 16 4	6 7 11	6·05	7·92
1921	6 2 4	5 4 3	6·49	8·09
1922	3 13 10	2 13 0	5·65	6·72
1923	3 9 9	2 14 1	5·34	6·4
1924	4 0 0	3 10 9	5·95	6·61
1925	4 11 0	4 2 0	4·82	6·43
1926	5 0 0	4 10 3	6·01	6·48
1927	4 13 0	4 4 10	5·09	6·21
1928	4 10 0	4 3 0	5·09	5·75
1929	5 10 0	5 5 4	5·07	5·48

The table affords convenient data for a summing-up of the conclusions suggested by this survey. Though Bank rate and the market rate for three-months' bills were, on the average, higher in 1929 than in any year since 1921 and 1920, respectively, borrowers at fixed interest, both Government and industrial, paid less for new capital than for some years past. *Short-period* increases in money rates, indeed, have primarily a purgative effect on the *market for long-term capital*. The number of new issues rapidly falls off, many borrowers of first-rate reputation choosing, and of second- or third-rate reputation being compelled, to postpone their requirements to a more convenient season, financing themselves for the time being, if necessary, by short-term loans and advances. The British Government has already stated that its decision to make a major issue when money rates were at their highest was, in its view, largely involuntary. In the absence of this issue, the total emissions in London last year would have been only £218 million, against £369 million in 1928, a falling off of 40 per cent. If the tight conditions of 1929 are protracted far into 1930 the average rates paid will tend steadily to increase, since many long-term borrowers, unable indefinitely to postpone urgent capital expenditure, will choose to pay higher charges for 10, 15 or 20 years to come, rather than wait for a turn in the tide. Happily, there is every indication that in 1930 money market rates, the world over, will be lower than in 1929. A steady revival in new issues should follow. A recrudescence of activity in the more speculative types of issue, which are governed less by considerations of price than by contemporary stock market psychology, must, however, await the advent of more cheerful conditions on the Stock Exchange.

DISCOUNT CORPORATION OF NEW YORK

This Corporation discounts and resells Bankers' Acceptances and approved Bank endorsed Trade Acceptances, deals in United States Treasury Certificates of Indebtedness, Treasury Notes and other Short Term Government Obligations, and receives funds repayable on demand or at fixed maturity against the security of Bankers' Acceptances, or Government Obligations.

FORWARD RATES AND SPECIAL OFFERINGS ON REQUEST.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
February 4.	February 6.

Markets were listless, the absence of any major development chiming in with the mood of the "House," which was, for the time being, surfeited with unfavourable news and saw few bull points on the immediate horizon. The monetary outlook was regarded as being, temporarily, less promising, and no disappointment was expressed at the maintenance of Bank rate. Some slight liquidation was in progress in anticipation of the Hatry settlement, but for the most part prices reflected the absence of public interest rather than any special cause of weakness. A somewhat better tone, however, was observable on Wednesday afternoon. Evidence was also forthcoming that possibilities in the New York market were engaging attention in some quarters.

The Gilt-edged market was less firm than in the previous week, partly as a result of the Bank's loss of gold and the weakness of the sterling-dollar exchange, and partly on realisations to meet the call on Five per Cent. Conversion Loan. The decline in India Loans was sharply checked by the reassuring terms of the letter published by the Secretary of State for India, the tenour of which is given in an "Investment Note" on page 244. Tuesday's sharp rise, however, brought out a good deal of stock, and prices reacted. The downward trend of Australian Government stock was arrested by Mr Fenton's remarks, also discussed in a subsequent "Note," but again the recovery was not fully held.

Business in the Foreign market was on a meagre scale. Brazilians were slightly in demand at the beginning of the week, but became dull subsequently on vague rumours of further impending difficulties in the coffee situation. European loans showed little change. A few Japanese loans were fractionally easier, but Chinese held their ground in an inactive market.

Movements in Home Railways were narrow, with a small volume of dealings. The traffic returns showed increases on the 1929 figures on all lines except the London, Midland and Scottish, but the amounts were too small to affect quotations. Interest in Undergrounds fell off. The Metropolitan final dividend brought the year's total to 4 per cent., against 3½ per cent. for 1928. Foreign railways were neglected, Argentines reflecting the continuance of unfavourable traffic returns. The public subscription of 74 per cent. of the Central Argentine debenture issue was regarded as not unsatisfactory in prevailing conditions, dealings in the stock opening at a small discount.

Business in Industrials was mainly concentrated on international stocks, though American support for these counters was not consistently maintained. International Nickel attracted a fair share of attention, but Brazilian Traction came on offer. United Molasses were sold from the North, possibly in connection with the Hatry settlement. A decline in Turner and Newall was ascribed to sales by former Rhodesian and General Asbestos shareholders. An explanation of the recent weakness in Gramophone was provided by the announcement of a complete break with the company's film interests. The rayon market had a firmer tone, though the support for British Celanese, after the official intimation of a fresh cut in selling prices (described on page 245) was mainly of an inside character. Cables and Wireless showed conspicuous weakness on the revelations of the Post Office's unwillingness to co-operate with the Communications Company in certain directions. Dunlops recovered the previous week's losses. Motor shares derived but slight benefit from Mr Thomas's cryptic remarks on the representations made by the Society of Motor Manufacturers. Imperial Chemical had a slightly firmer tone. Little interest was taken in iron and steel shares, apart from a meteoric movement in N.C. Metal, the shares of which were in short supply. Breweries were a heavy market, and textiles remained out of favour. Match shares were dull on the American decision to raise the duty on imports, but responded to Thursday's favourable news regarding the German monopoly. Insurance shares were steady but inactive, and bank shares irregular, with a slightly downward tendency.

A slight accession of demand was reported from the rubber share market, though buying was generally in small lots. The commodity fluctuated on either side of 7 1/2d., but market sentiment, on the whole, was less pessimistic than last week. Tea shares were pressed for sale in some cases, the commodity market being quiet, with prices ¼d. to ½d. lower. The volume of business in oil shares showed no expansion, but the market leaders were better on investment inquiry.

Depression reigned in the Mining market during the earlier part of the week, and prices were generally on the down grade. Brakpans relapsed in the face of considerable realisation, the feeling being that the December quarterly report contained little to encourage a bullish view of development prospects. Hardly any change was recorded in Finance shares, which, with the exception of Gold Fields, remained firm. Rhodesians, headed by Bwana M'Kubwa, were a harder market after an uneventful week. Ashanti Goldfields were again in demand and Congo Borders developed unexpected strength at the close. The copper share market remained undistinguished, and after registering a slight fall on Monday, Rio Tintos showed no important change. Tin shares rose sharply on an improvement in the price of the metal following the news that Bolivia would participate in the restriction scheme, but fell away on the subsequent recession in the commodity.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Our New York correspondent cables:—The share market has been somewhat more active and rather strong, partly on account of a change of sides by professional traders, partly in response to indications of improvement in the steel and automobile industries. The United States Steel Corporation's fourth quarter earnings were much better than was expected, bringing the year's net profits up to $21 per share, including about $1 of special income. Coppers have been somewhat better on the expectation that producers will maintain the 18c. price, but the rally was restrained by the realisation that the January statistics will show another large increase of stocks. The effects of current curtailment of output will probably not be apparent in the stock figures for another two months. Public utilities continue a good market, and so do electrical manufacturing and business machine shares. Meanwhile, brokers' loans remain practically stationary. The steel industry, which was working at only 40 per cent. of capacity at the year end, now approximates to 75 per cent., and the volume of business is surprising the trade itself. Automobile manufacturers, also, have been increasing their January output schedules. December railway earnings were about 20 per cent. lower than a year ago, but the total for the year is running about 7 per cent. ahead of the previous year. There is a notable weakness of commodity prices, particularly those of farm products, in spite of the activities of the Federal Farm Board. In this connection, it should be noted that the winter wheat crop appears to be very large and in good condition. Reports putting forward various names for the presidency of the International Bank must be regarded as somewhat premature.

CANADA.

The Canadian stock markets have shown a distinctly livelier tendency since the New Year opened. While there have been considerable fluctuations, the movement of prices has, on the whole, been upward. There has, however, been no recovery of the volume of trading which prevailed before the slump, and the public still remains shy of speculative activities. There is a good deal of surplus capital in the country ready for investment, but its possessors are exceedingly careful in selecting their stocks, and many have reverted to a preference for bonds, which had been abandoned during the late boom. Professional operators are reported to be trying to obtain support for stocks by organised pools, and have met with some success in certain issues, notably International Nickel. Certain power stocks have also been stronger, but Brazilian Tractions remain weak on the unsatisfactory situation of the milreis. Newsprint stocks have been heavy on the failure of the concerted effort of the leaders of the industry to secure higher selling prices during 1930. Distillery stocks are weaker owing to the plans mooted by the Hoover administration for the closing of loopholes on the border through which liquor is imported to the United States. The mining market had a burst of liveliness early in January, but Western oil shares remain depressed.

INVESTMENT NOTES.

The Hatry Case and the Stock Exchange.—The conviction and sentence of Clarence Hatry and his associates, together with the Special Settlement in the Hatry securities—which it is hoped will be accompanied without undue difficulty on February 13th next—bring to an end, so far as the Stock Exchange is concerned, an unprecedented incident in its annals, the recollection of which (though not the lessons to be derived therefrom) the " House " naturally desires to obliterate as quickly as possible. We deal on another page with some of the far-reaching issues involved in the story of the Hatry deals. As regards the narrower but important field of Stock Exchange practice, the incident has illustrated in striking fashion the solidarity of feeling which exists in the " House," and its practical force when mobilised to meet a crisis which affects the honour and public reputation of that institution. The ability of the Stock Exchange Committee to take decisive action in time of emergency has been demonstrated and vindicated. The incident, further, has afforded a fresh example of the reluctance of members to resort to outside litigation on matters which can possibly be settled within the four walls of the " House." Whether the existing machinery of the Stock Exchange is as effective as it might be in checking possible abuses by unscrupulous persons is another matter, and the Committee has been well advised to institute a full inquiry into conditions under which permission to deal is granted. As a Stock Exchange correspondent points out in a subsequent " Note," this question is hedged about with formidable difficulties, but it may be hoped that an appreciable tightening of the present rules will follow the present inquiry. The fundamental difficulty is that the majority of Stock Exchange operations are, and must be, carried out on the assumption that all concerned will act in good faith. In the absence of this understanding, the vast number of dealings which make up a single day's business could not possibly be carried out by the existing *personnel* of the " House " or of the City. The discovery of means of imposing stringent checks on fraud, which would be sufficiently extensive in their operation to close every possible avenue to the able but unprincipled adventurer, without imposing an intolerable handicap on legitimate business, is a problem older than the Stock Exchange itself. The Hatry incident, while affording a *fresh* example of the damage which deliberate bad faith may inflict on the public, may also serve, in the long run, to emphasise the essential part which the factor of " goodwill " must always play in the affairs of the " House."

" Permission to Deal "—A Stock Exchange Inquiry.—The Stock Exchange Committee have decided to institute an inquiry into the conditions under which permission is given to deal in stocks and shares in the " House." The matter came before the full Committee at their meeting last Monday, writes a Stock Exchange correspondent. In the discussion which followed, mention was made of the criticism brought to bear upon the existing arrangements, not only by members, but by responsible people outside the Stock Exchange. The Committee agreed that more might possibly be done to tighten the prevailing regulations, but several members are believed to have emphasised the practical difficulties in the way of reforms calculated to have the desired effect without laying an undue handicap upon legitimate business. If the ordinary run of honest applications for facilities were alone in question, the problem would be comparatively simple, but, unfortunately, the Committee must reckon with the efforts of persons bent upon finding some means whereby its intention to protect the public can be defeated. A Sub-sub-Committee of the Sub-Committee which regularly deals with these matters was appointed and invested with the fullest powers for exploring the whole subject. Evidence will be given by members of the House and by authorities outside the Stock Exchange, and it is assumed that some practicable scheme will be evolved which will either make the present regulations more effective, or replace them with a new set of rules altogether. Mention was made here, a week ago (see the *Economist*, January 25, 1930, page 180) of a petition to the Stock Exchange Committee, under which it was sought to postpone any dealings in vendors' shares until after the issue of a company's first annual report. This matter falls within the purview of the Sub-sub-Committee and is, therefore, referred to a later date, when its suggestions may be found to fall within the proposals that the Committee may advance. The matter has arisen out of the Hatry collapse, and it is reasonable to suppose that for the next year or two the Stock Exchange Committee will have a good deal to do in the way of putting into effect the experience gained through the machinations of the Hatry group. It is becoming, incidentally, more and more apparent that election to membership of the Stock Exchange Committee entails heavy demands upon the time and attention of those sufficiently public-spirited to accept a purely honorary office. Its thanklessness, however, has been mitigated to a considerable extent of late by the appreciation which members of the " House," and of the public, have shown for the manner in which the Stock Exchange Committee have handled the unique crisis that arose out of the Hatry collapse. The coming settlement in Hatry stock and shares should do a great deal to disperse the uncertainties and suspicions that have been rife for the past four months.

India Sterling Securities—Official Statement.—Mr Wedgwood Benn, the Secretary of State for India, has taken the unusual step of issuing to the Press a letter sent in reply to an inquiry concerning the position of India Sterling Stocks. The letter points out that India sterling securities, while issued under the authority of Act of Parliament and charged on the revenues of India, are not guaranteed by the British Government, though, like many other stocks—including those issued by a British Dominion under the Colonial Stocks Acts—they are trustee investments. While disclaiming any undertaking to deal with hypothetical contingencies, the Secretary of State declares that the Government have no intention of allowing a state of things to arise in India in which repudiation of debt could become a practical possibility. He states, further, that it is inconceivable to him that, in dealing with any scheme of a constitutional change in India, Parliament could fail to provide safeguards, should they be needed, against a breach of the condition under which those loans were issued. This statement corresponds in all respects to the views expressed in our Note on " The Position of India Stocks " in the *Economist* of January 11, 1930 (page 79). Its clear official pronouncement, however, proved reassuring to investors whose confidence had been shaken, to some extent, by the terms of the resolution passed at the Lahore Congress early in January. A marked recovery in prices ensued after the publication of the letter, and quotations of India stocks are now, in practically every case, on a yield basis of less than 6 per cent.

PRICES OF INDIA, STOCKS AND LOANS.

	Highest 1929.	Lowest 1929.	Jan. 27, 1930.	Jan. 28, 1930.	Jan. 30, 1930.	Yield at Last Price £ s. d.
2½% Stock	51½	44	41½	42½	42½	5 17 9
3% Stock	61⅜	50½	48½	51½	50½	5 17 6
3½% Stock	71½	60	58½	60½	59½	5 16 3
4½% Loan, 1950-55...	92¾	80½	80½	81½	81½	6 1 6
4½% Loan, 1958-68...	92½	80½	79½	81½	81½	5 15 0
5½% Loan, 1932	102	98½	99	99½	99½	5 16 0

We repeat our previous suggestion that investors in these securities should be guided, as regards their estimates for the future, by the financial record and traditions of the Government of British India, and should regard a comparison of this position with that, say, of Canada or Australia, as not entirely irrelevant to the issue. The Secretary of State, indeed, gives a broad hint to this effect in his letter. For reasons we have explained elsewhere, such a comparison will not be unfavourable to India.

Australian Government Stocks.—The course of prices for Australian Government stocks has lately been downward. There is no widespread selling, but buying is absent, and the steady trickle of small sales is sufficient to depress prices to " record " low levels. Yields up to 6½ per cent. can now be obtained from a number of stocks, as the following table shows:—

	Highest, 1929.	Present Price.	Flat Yield. £ s. d.	Redemption Yield. £ s. d.
New South Wales 6%, 1930-40.....	102	97½	6 5 0	6 10 0
Western Australia 5¾%, 1930-40.....	102¾	96½	6 1 6	6 8 0
Commonwealth of Australia 6%, 1931-41 ...	103½	98½	6 4 0	6 8 6
Queensland 6%, 1930-40	102⅝	97	6 4 0	6 8 0
South Australia 6½%, 1930-40.....	102¾	98½	6 12 0	6 13 9
Victoria 5%, 1945-75 ...	99½	85	5 17 9	6 0 0

The economic difficulties of Australia are well known. A general trade depression has followed—to quote the chairman of the English, Scottish and Australian Bank—upon " the restriction of overseas borrowing and the discouragement of capital owing to the high costs of production and the prevalence of industrial strife." The steady flow of borrowed money from abroad, in conjunction with high tariffs, has, over a period of years, been the cause of a continued rise in prices, which in turn has resulted in a continuous rise in wages under the machinery of the arbitration awards. The policy of restricting borrowing from overseas, begun by Mr Bruce, has been followed out of sheer necessity by Mr Scullin. At the present time it would be difficult, if not impossible, to raise new money for Australia in London, even on a 6 per cent. basis, other than by temporary borrowing on bills. Prior to 1929 the Australian Commonwealth and States were borrowing abroad at the rate of about £40,000,000 a year. The figures for 1929 show a heavy reduction. The depression in trade and industry has been accentuated by the continued fall in the world prices of Australia's primary products—wool and wheat. The average price of greasy wool in the year 1928-29 was 17.58d. per lb., as against 20.48d. per lb. in 1927-28. For the current year 1929-30 prices are even lower. At the recent auctions in London, greasy wool has been fetching 15½d. per lb. This fall in prices is expected to involve a decrease of over £20,000,000 in the value of Australian wool exports, which in 1928-29 amounted to over £60,000,000. The total production of wheat for 1929-30 is estimated at about 100,000,000 bushels, against 160,000,000 bushels in the previous year, and exports may not exceed 45,000,000 bushels. Even at last September's sales the prices of wheat were from 35 per cent. to 40 per cent. below those of the previous year. The adverse economic situation has been reflected in the heavy discount in the Australian pound, bankers' buying and selling rates for demand drafts on Australia being £96½-£97⅜ per £100. The Commonwealth Government, which is now responsible for the States' debts as well as its own, has to face this year exceptionally heavy loan maturities amounting to £118,569,000, all of which with the exception of £3,782,000 Queensland Stock, is internal. In view of the trade depression in Australia, it is possible that the Australian Loan Council will seek to meet some of these maturities by borrowing abroad. These are the adverse features of the Australian situation. The brighter side was indicated by Mr J. E. Fenton, Minister of State for Trade and Customs, at the Australia Day Dinner in London this week. Mr Fenton pointed out that the public and private wealth of Australia, with a population of 6,500,000, was between £3,500 million and £4,000 million, as against a total Government debt of over £1,000 million; that the great services of the country (railways, waterworks, electrical, post office, telephones and wireless) were publicly owned; that the number of savings bank accounts open in 1928 was 4,688,000, totalling £220,000,000, or £45 18s. per depositor; that the joint-stock banks held £360 million, or nearly £60 per head; that the value of production from agriculture was £84 million, pastoral £175 million, forestry and fisheries £12 million, minerals £23 million, and manufacturing £168 million. Mr Fenton declared that the present Commonwealth Government was fully alive to the difficulties of the economic situation, and would so order its acts as to ensure a return to normal prosperity as quickly as possible. If the Commonwealth Government gives an earnest of its good intentions by reducing expenditure and borrowing less, it will no doubt receive the financial support it requires to tide over the present period of economic stress. As Mr Scullin has pointed out, Australia has never yet failed to meet all its obligations, and on that point the holders of Australian stocks may base their assurance for the future.

British Celanese Position.—The weakness of British Celanese Ordinary, which stand at 13s. 9d. after touching 136s. two years ago, has been associated with persistent rumours of a fresh " cut " in the company's price list. After a series of unofficial denials, a statement has now been issued to manufacturers and merchants announcing reductions varying from 1s. to 2s. per pound in Celanese yarns, together with various guarantees to and indemnities for buyers in the event of a renewal of the silk Excise duty in the next budget. The company's decision is an instructive commentary on the prevailing conditions in the industry, which we discussed in a leading article last week. A trade correspondent declares that the cut in prices, coming at a time when most customers have already prepared their stocks for the spring, tends to be unpopular among the large weaving concerns. The reductions made on the more important deniers are not large, the " novelty " trade being most affected. Nevertheless, no really substantial increase in turnover can be anticipated during the next few months on account of the general uncertainty regarding the future of the silk duties. The company is probably making economies in production, but its position is not unchallenged as far as acetate yarns are concerned. Apart from the general trade depression, competition from other types of rayon has played a considerable part in bringing about the present reductions, following on the rebates of a substantial nature given to important customers as recently as last October. Multifilament viscose and cuprammonium, both home-produced and imported, have increased in popularity at the expense of acetate yarns in recent months. In the circumstances, the prospects of a dividend on the company's ordinary shares seem no clearer than at the time of the last accounts, and the question of depreciation and the necessity of providing debenture and preference interest remain very much in the picture.

Gaumont-British and Fox Films.—The shareholders of the Gaumont-British Picture Corporation may be excused a certain consternation at the recent march of events. As long ago as May last it was stated in a British newspaper that the Fox Film Corporation had acquired, or was about to acquire, an interest in

OTIS & CO.
Established 1899

Underwriters
of Stocks and Bonds

Cleveland **New York**
Chicago **Philadelphia.**

Gaumont-British. This statement was officially denied the next day by Colonel Bromhead, the then chairman of the company. Two months later it was announced that a contract had been entered into with Messrs Ostrer Brothers whereby, subject to the articles being amended to provide that every director should be a British subject and that every foreigner who acquired ordinary shares should not be allowed to vote, Messrs Ostrer Brothers would subscribe for the whole issue of 1,316,571 ordinary shares of 10s. at 24s. 6d., although the market price was then 18s. 6d. net. (See the *Economist* of August 10, 1929.) A month later the Bromhead Brothers were forced to resign on the demands of the Ostrer Brothers. It was unofficially stated, in some quarters, that the Fox Film Corporation was behind this deal. At the annual meeting on September 20th Mr C. M. Woolfe, the deputy chairman, stated emphatically that the company was subject to no foreign control whatsoever, either financial or commercial. Then, in December, trouble came upon Mr Fox, who was forced to hand over his control to a committee of trustees. It was stated in the American Press that Mr Fox found himself in a position where the short-term notes he had signed to acquire the Loews (Theatre Circuit) and the Gaumont-British Picture Corporation could not be met. The Gaumont-British Company thereupon declared that the Fox Film Corporation not only had no control of any sort in the company, but had not contracted to buy any shares and, as far as the corporation were aware, had no shares in the corporation. Finally, it was stated in the American Press that the shares allotted to Messrs Ostrer Brothers last September were only 14s. 6d. paid up, 10s. being due on February 2nd, and that the Ostrer Brothers had acted on behalf of the Fox Film Corporation in the transaction. As far as we can judge, the conflicting statements of the Gaumont-British Picture Corporation and the American financial Press can be reconciled only on the ground that the new issue of shares to the Ostrer Brothers was intended to be taken up by a holding company in which Mr Fox and the Ostrer Brothers would have joint control. The latest news from America is to the effect that Mr Fox is receiving help from a group of bankers and will be able to meet the call—said to be £700,000—on the Gaumont-British shares.

Inveresk Paper—Chairman's Statement.—In December last the Inveresk Paper Company announced that Mr W. Harrison had resigned the chairmanship and that Mr B. H. Binder of Binder, Hamlyn and Company, chartered accountants, was acting as chairman *pro tem.* The latter gentleman has now issued a letter to the shareholders, dated January 24th last, declaring that the accounts of the company for the year ended December, 1929, will be issued during the next two or three weeks, and will be accompanied by a report embodying the results of his investigation into the affairs of the company and its associates. Mr Binder disclaims any status as a representative of the company's bankers, explaining that, although he accepted the chairmanship on the assurance that the bankers would, for the time being, continue (and in some cases increase) their financial assistance, the request for his services was made by the board of the company itself, on the ground that no one else with the requisite knowledge of the company's affairs was immediately available. The letter also discloses that Mr Binder had, at the time of writing, been unable to see his way to afford facilities for the examination of the company's private documents to a committee which had issued a circular letter asking for the support of the ordinary shareholders, since the necessary evidence as to the representative nature of this body had not been forthcoming. In the meantime, the chairman had sought advice and assistance from four large shareholders, three of whom were associated, respectively, with the Dominion Investment Company, the Century Insurance Company, and the Industrial and General Trust. None of the company's assets would be realised and no new members added to the board before the general meeting. Mr G. Arthur Wingfield, the chairman of the committee of ordinary shareholders referred to, is reported to have intimated that his request for the examination of the accounts would be pressed, and that he was meeting Mr Binder in a representative capacity. A clearing up of the financial circumstances surrounding the whole of the so-called "Harrison" group of companies is clearly urgent in the interests of all concerned. The prospect, however, that the accounts and a report upon them may be published within the next week or two would seem to suggest that those responsible are showing commendable celerity in carrying out their task. Shareholders may, therefore, deem it expedient to reserve their judgment until the relevant documents are before them.

Morris & Jones and Mr Harman.—The dispute between the chairman and the Liverpool directors of Morris and Jones, Ltd., which was discussed in an Investment note in the *Economist* of January 18th, ended in a bloodless victory for the Liverpool directors, when Mr Harman and two other London directors handed in their resignations at the extraordinary general meeting of the company in Liverpool on January 25th. The battle at this meeting had been preceded by a preliminary bombardment of circulars. First the Liverpool directors and then Mr Harman issued statements to shareholders; next, Mr E. Williams, another director, circularised shareholders, asking for proxies for himself as a neutral person, although the Liverpool directors declared that he was a nominee and supporter of Mr Harman; later, another director, Major C. N. Clarke, urged shareholders to send proxies for Mr Harman on the ground that he was "the moving spirit in every sound forward movement," although "he might not have been particularly successful recently in regard to the recommendations on the investment side of Morris and Jones"; and, finally, Mr A. G. R. Williams urged the company's shareholders to vote for Mr Harman. At the extraordinary general meeting, which was marked by some disorder, two resolutions were submitted: (1) to appoint a committee to consider, *inter alia*, the circumstances under which Mr Harman, Major Clarke and Mr A. G. R. Williams, acting as the finance committee, had depleted the funds of the company in taking up certain investments; and (2) to remove these gentlemen from the board. Though Mr Harman, after his resignation, declared the meeting closed, the proceedings continued, and Mr Jones on behalf of the Liverpool directors, described the steps he and his colleagues had taken to wrest financial control of the company from the finance committee. He stated that the trading position of the company was sound, and that its profits for the past six months were in excess of those of any other six months in the last two years. Whether the last has been heard of this matter, time must be left to show.

Phillips Rubber Soles.—The third balance sheet of this concern since its conversion into a public company goes some way to justify the rather cautious attitude adopted by the chairman at the last annual meeting. Net profits show a moderate setback as compared with those of the previous year, which, in turn, were not quite so good as in 1927. The dividend is maintained at 15 per cent. and, as will be seen from the table given below, is earned with an ample margin:—

YEARS ENDED NOVEMBER 30TH.

	1927. £	1928. £	1929. £
Dividends and royalties from subsidiaries	137,318	128,523	117,740
Net earnings	130,777	123,067	115,108
Preference dividend	18,456	18,000	18,000
Number of times covered	*7·1*	*6·8*	*6·4*
Ordinary — *Earned*	*31%*	*29%*	*27%*
Ordinary — Paid	15%	15%	15%
Ordinary — Amount of dividend	54,000	54,000	54,000
To general reserve	10,000	10,000	10,000
To raw materials reserve	...	16,000	...
Written off — Preliminary expenses	24,305	15,695	8,610
Written off — Patents and designs	...	...	10,425
Written off — Investments	...	...	1,388
Increase in carry-forward	...	1,513	3,431

The company is really a holding concern, mainly deriving its income from dividends paid by its subsidiaries, representing the whole of the profits earned by those companies. A start has been made in writing down the item of "Patents and Designs," which, after the allocation of £10,425, will stand at £80,000. Goodwill is included in "Investments in Subsidiary Companies," £354,141, and amounts to approximately £160,000 if the "Investment Reserve" of £48,646 is regarded as an offset. Patents and goodwill together, therefore, figure at about £240,000. It was indicated at the last meeting that the directors intended to make provision for writing down the patents account when preliminary expenses had been disposed of. The latter item disappears with this year's allocation. During its three years' public existence, the company has used more than £120,000 for writing off or placing to reserve, including the carry-forward, while paying £162,000 in ordinary dividends. The footwear business of Wood-Milne, acquired in March, 1927, was stated to have proved a satisfactory and profitable purchase, and shareholders may therefore feel some disappointment that earnings have subsequently receded. There has, however, been a change in the industry recently, competition having become more severe. In view of the depression in the price of raw rubber, the existence of a raw materials reserve is a welcome feature, though the reserve has not so far been drawn upon, stocks having been profitably used at book values. The lower profits in 1927-28 were due mainly to increased expenditure on advertising, and shareholders will no doubt be informed at the forthcoming meeting as to how far the same factor has been responsible for last year's setback. At the present quotation of 35s. the shares yield £8 11s. 6d., after deducting the final dividend of 2s. gross.

New Capital Issues in January.—In the table below we show the new capital raised in London by issue to the public or shareholders in January and recent periods:—

(000's omitted.)

Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	Total.
		£	£	£
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597
1928	21,965	5,263	3,526	30,754
1929	16,502	5,081	2,186	23,769

Monthly Average.	Govt. £	Other. £			
Jan.–Mar., 1928	*28,570*	*16,215*	*7,201*	*4,345*	*56,331*
April–June, 1928	*Dr. 150*	*16,888*	*6,192*	*2,343*	*25,273*
July–Sept., 1928	*Dr. 166*	*9,192*	*3,988*	*2,277*	*15,291*

Oct.–Dec., 1929	21,733	5,279	1,557	2,058	30,627
January, 1929	*650*	*14,080*	*24,897*	*2,983*	*42,610*
January, 1930	500	9,033	1,671	2,785	13,989

The year opened quietly as regards new issues, the majority being of non-speculative character. Sales of National Savings Certificates exceeded encashments by £500,000. Other issues in the United Kingdom showed a distinct increase, though the total of £9,033,000 was made up as to £7,000,000 by a single issue, the Central Electricity Board's offer of 5 per cent. stock at 97½. The main issues for employment overseas were the Ceylon Government's loan of £900,000 in 5 per cent. inscribed stock at 99, the Commercial Bank of Australia's issue of 500,000 10s. ordinary shares to shareholders and the offer of £270,000 7½ per cent. debentures at par by the Linggi Plantations. No money was raised in London by foreign Governments, but the Central Argentine Railway offered £3,000,000 in 5 per cent. debenture stock at 98½. Among domestic concerns, E. S. and A. Robinson offered 400,000 £1 6 per cent. cumulative preference shares at par, while the Hellenic and General Trust issued 44,200 £5 shares at a premium of 2s. 6d. per share.

Tin Restriction.—The Tin Producers' Association made the important announcement this week that the Patino group of Bolivian mines had decided to co-operate with the restriction plans of the British producers. Mr Patino has accepted an invitation to become President of the Tin Producers' Association and to nominate two members to represent his interests on the Council. As the Aramayo Mines of Bolivia, which are under the management of the Guggenheim Brothers, have already announced their intention of supporting the restriction plan, it may be said that Bolivia has joined the restrictionist party. Last week the Nigerian Advisory Council of the Tin Producers' Association unanimously recommended that its members should conserve their production for the first quarter of 1930 to the extent of 30 per cent. It was stated that the great majority of the Nigerian producers, covering 75 per cent. of the production of that colony, had already put this conservation plan into force and that the whole of the Nigerian industry would shortly be restricting. As regards Malaya, it was reported from Singapore, on January 20th, that 69 out of 105 tin dredges in the Malay States were closing down on Sundays in accordance with the scheme put forward by the Tin Producers' Association. Only the Dutch East Indies now remain outside the restriction scheme. The Dutch Colonial Government is being urged by its own nationals to take similar measures with regard to tin restriction and to introduce "free Sundays" in the tin industry. The Dutch East Indies Government is understood to be sympathetic but has not yet committed itself to a policy. Meanwhile the metal market has reflected the success of restriction campaign and, on Thursday, the price of tin closed at £178 2s. 6d., as compared with £174 17s. 6d. on Monday.

MARTINS BANK
LIMITED.

Head Office:
7, WATER STREET, LIVERPOOL.
London Office:
68, LOMBARD STREET, E.C. 3.
Manchester District Office:
43, SPRING GARDENS.

CAPITAL PAID UP AND RESERVES .. £7,800,045
DEPOSITS, ETC., AT 31ST DEC., 1929 £82,620,493

The Bank has over 560 Offices, and Agents in all the principal towns at home and abroad.

All descriptions of Banking, Trustee and Foreign Exchange Business Transacted. The Bank is prepared to act as Registrar for Public and Corporate Bodies, etc.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Westminster Bank, National Provincial Bank, Martins Bank, District Bank, Williams Deacon's Bank, The National Bank, Hungarian Commercial Bank of Pest, National Mutual Life Assurance Society, Sun Life Assurance Society, Metropolitan Trust, Mortgage Company of the River Plate, African and Eastern Trade Corporation, Sedenak Rubber Estates, Perak River Hydro-Electric Power, and Ashanti Goldfields. Mr. Robert Fleming, presiding at the annual meeting of the Metropolitan Trust, said that out of 153 trust companies examined, 101 companies, having a total capital of £167,000,000, did not publish a list of their investments, against 52 companies, with a total capital of £82,500,000, which published such a list. At the meeting of the Perak River Hydro-Electric Power Company, the chairman said that, in view of the difficulties with which the tin industry was faced, the company was offering an alternative form of tariff, which should assist the industry, without materially impairing their own revenue. At the African and Eastern meeting, the chairman informed shareholders that the production of oleaginous materials in 1927 amounted roughly to 2,500,000 tons, against 4,000,000 tons, an increase of 60 per cent., in 1929. The bankers' speeches of the week are dealt with in a leading article.

CAPITAL ISSUES.

Issues of new capital to the public were larger than for some weeks past, thanks mainly to an offer of £7,000,000 by the *Central Electricity Board*. Both as regards the security behind the issue, and the purposes to which the proceeds will be put, the stock is calculated to appeal to the most conservative of investors, but, unfortunately, it is not, in the present state of the law, a trustee investment, and in view of the large amount involved, the fact that 92 per cent. was left with underwriters was regrettable but not inexplicable. The *Manchester Guardian* issue of debentures, the interest on which is covered more than four time by average profits, will appeal to those requiring a high-yielding, moderately well-covered security with not more than twenty years to run. The *Hellenic and General Trust* was formed two years ago, but gives no figures showing results to a later date than January 31, 1929, and no particulars of the current valuation of its investments.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to January 25, 1930, £6,527,460.
Total, including conversion, recorded January 1 to January 25, 1930, £6,527,460.

National Savings Certificates.
Net sales week ended January 25, 1930, £100,000.

Central Electricity Board.—Issue of £7,000,000 Central Electricity 5 per cent. stock, 1950-70, at 97½, under the Electricity (Supply) Act, 1926, and the Central Electricity Board Borrowing Regulations, 1928. The stock now issued and the interest thereon rank *pari passu* with £3,000,000 Central Electricity 4 per cent. Stock, 1959-89, already issued, and are a first charge on the whole undertaking and the net revenues of the board. The board reserve power to create and issue further stock ranking *pari passu* with the above stocks. The stock will be redeemed by a cumulative sinking fund commencing not later than 1936, to be applied to the purchase of stock when the price does not exceed par. Any stock not previously redeemed will be repaid at par on March 1, 1970, or on any interest date on or after March 1, 1950, at the board's option, after three months' notice.

Metropolitan Water Board.—Issue by tender of £2,000,000 Metropolitan Water Board bills in amounts of £500, £1,000, £5,000 and £10,000, of which £1,000,000 are in replacement of bills falling due on February 9th. The bills will be dated February 8, 1930, and will be payable twelve months after date. Payments in full of amounts of the accepted tenders must be made to the Bank of England not later than 12 o'clock on February 8, 1930.

Hellenic and General Trust, Ltd.—Issue of 44,200 shares of £5 each at £5 2s. 6d. per share, carrying the right, when fully paid, to receive option certificates entitling bearer to subscribe at any time between May 1, 1930, and July 15, 1933, for additional shares at the price of £6 10s. per share in the proportion of one additional share to every four previously allotted. It is intended later to divide the whole of issued share capital into 5 per cent. preference stock and ordinary stock in equal proportions. The company was incorporated in January, 1928, to invest its funds in Greek Governmental and other enterprises. A first dividend of 3 per cent. was paid in June, 1929.

Manchester Guardian and Evening News, Ltd.—Issue at par of £300,000 6 per cent. first mortgage debentures, 1940-50, being a first charge on the undertaking and assets of the company. The company reserves the right to redeem outstanding debentures on three months' notice, at any time after January 31, 1940, at 102 per cent., and in any case not later than January 31, 1950. The company was incorporated as a limited company in 1907. The present issue will be used to provide additional accommodation to meet the growing needs of the company. Net profits for the year ended March 31, 1929, totalled £65,494.

COMPANY MEETINGS, &c.

WESTMINSTER BANK, LIMITED.

SUCCESSFUL RESULTS—INCREASED PROFIT.
REVIEW OF INDUSTRIAL SITUATION.
LONDON'S INTERNATIONAL FINANCIAL POSITION.
VALUE TO THE NATION'S ECONOMIC LIFE.
MR HUGH TENNANT'S REVIEW OF PAST YEAR.

The annual general meeting of the Westminster Bank, Ltd., was held on January 29, 1930, at the head office, 41, Lothbury, London, E.C. 2. Mr. Hugh Tennant (the chairman) presided.

The notice convening the meeting and the auditors' report having been read by the secretary (Mr F. Mytton), the directors' report, the balance sheet, and profit and loss account were taken as read.

The Chairman (who was received with cheers) said: My Lords, Ladies and Gentlemen,—Before passing on to the figures of the balance sheet, I must express my deep regret at the loss of two of our esteemed colleagues, both of whom have had almost lifelong connections with the bank. Mr Sturgis had been a most active director for 45 years, and almost to the day of his death he had continue to share our duties. Colonel Goodden, who was the chairman of Stuckey's Bank at the time of its amalgamation with Parr's Bank, brought with him a unique knowledge of the business and tradition of an old-established and honoured West Country banking firm. On the other hand, I am sure you will all welcome the return of Viscount Goschen to the board on his completing a successful term of office as Governor of Madras. Lord Goschen, as you all know, was chairman of the London County and Westminster Bank from 1909 to 1917, and was a director of the bank until his departure for India in 1924.

I much regret to have to report the retirement of one of our general managers, Mr F. W. Ingall, who has reached the age limit this month. Mr Ingall joined the staff of Parr's Bank in 1881, and after being manager of Bartholomew Lane office for seven years, became a general manager in 1920. He has been a most valuable official of the bank, highly popular both with our customers and with his colleagues, and we shall miss him greatly. I sincerely hope he may long live to enjoy his well-earned leisure.

THE BANK'S BALANCE SHEET.

Coming now to the bank's balance sheet: On the liabilities side our money lodged shows a decrease of over £8 million. When telling you last year that this item had increased by over £13 million I stated that the end of the year frequently showed large money movements up or down of a transitory character. This year the movement happens to have been down. Our average figures, however, throughout the year were several millions higher than those of a year ago, and the employment of this additional money is reflected in our profit and loss account. Our acceptances, endorsements, etc., are about £1 million higher.

Turning now to the assets side of the balance sheet: There is little change in the cash in hand and at call. The bills discounted, however, show a diminution of about £4 million—an ordinary market fluctuation. Our advances to customers are about £2 million less than at December 31, 1928, a small variation which does not call for comment. The item of investments, though not substantially changed in total, shows an increase in "other investments" of about £1 million.

B. I. HOLDING COMPANY, LTD.

In this amount there is one item which calls for remark, viz., a holding of 6 per cent. debentures in an English company—the B.I. Holding Company, Ltd. These debentures are secured on the value of sundry Italian investments. Our participation in this English company originated in a scheme supported by influential interests to maintain the solvency of a small bank in Italy—the Banca Italo-Britannica—whose continued weakness might have had some detrimental effect on the London bill market. We had only an indirect interest in this Italian venture through a shareholding in its parent company—the British Italian Banking Corporation, Ltd.—but, in conjunction with other important financial houses, we felt constrained, in the interests of British credit, to lend our aid in support of the scheme. Our commitment in this connection has been fully provided for; and the investment—written down to the figure of £453,143—is one which we have every hope will ultimately realise a surplus on the value assigned to it.

Shareholdings in subsidiary companies remain at about £3 million, a figure represented by our holdings in the Ulster Bank and the Westminster Foreign Bank. In each case we consider that the figure in the balance sheet is substantially below the intrinsic value.

Our bank premises account now stands in the balance sheet at just over £5 million. We have opened 43 new branches during the year and many other branches have been rebuilt or extended. The rebuilding of our Threadneedle Street office and the expenditure on our head office rebuilding up to date have been entirely written off, but I fear the latter will not be completed for some considerable time yet.

ALLOCATION OF PROFITS.

The profits for the past year at £2,160,000 are some £12,000 higher than last year. After reserving £1,356,000 for the payment of a dividend similar to that of 1928, we have allocated £250,000 to bank premises, £200,000 to the officers' pension fund (as in former years), and £400,000 to contingent fund, leaving £506,000 to be carried forward to the next account—about £45,000 less than brought in.

Before, however, leaving the affairs of our bank to deal with the general trade position, I desire to refer briefly to the Hatry case, which, owing to the perpetration of frauds and forgeries of a quite unprecedented character, has attracted much public attention.

We, among other banks, have been victims of these frauds, which were carried out by means of documents which neither banker nor broker nor any member of the public would ever dream of suspecting of being otherwise than genuine.

FACTS ABOUT HATRY TRANSACTIONS.

From reports which have reached me, it appears to be imagined (1) that we advanced money to the companies of the Hatry group, not for the purposes of trade, but to enable them to indulge in gambling transactions; and (2) that no sufficient investigation was made as to the security for the advances, or that advances were made on worthless shares.

Now as to (1); in each case the money was advanced for a perfectly legitimate purpose and no suggestion was made that the advance was required for supporting the share market; and, as to (2), a thorough investigation was made, and we have documentary evidence to prove that, in the absence of fraud, the security was undoubted.

For the purposes of our accounts we have provided for any possible losses we may make, and, thanks to the profitable character of the year's working, our contingent fund is now larger than it was at the beginning of last year. In this connection I should state that, not only have we been in the habit of making very full provisions, but we not infrequently make large recoveries of debts we have previously provided for.

I hope these remarks will enable shareholders to form a better judgment of these unfortunate transactions than was possible from the necessarily imperfect and abridged reports of the preliminary hearings.

BRITISH INDUSTRIAL CONDITIONS IN 1929.

I propose now to turn from the affairs of our own institution to consider some of the broader aspects of the present economic position of our country. Of British industry as a whole, it may at least be claimed that, if no spectacular progress was made in 1929, the general trend was in the right direction—with the important exception of the cotton trade. Though the army of unemployed remained around the disquieting total of 1,300,000, approximately 200,000 more workers were in employment at the end of the year than at the beginning, whilst according to the calculations of the Board of Trade, the national output in the September quarter was no less than ten per cent. above the level of twelve months earlier. I venture to commend to your serious attention the detailed figures of the Board's computations, which are appended.* These are given for the full year 1928 and for the September quarters of 1928 and 1929 (the latter being the most recent issued), together with the average of the first three quarters of 1929 which I have had worked out.

* See Table No. 1.

From the figures in the last column you will observe that while the mining, textile, and leather industries remain depressed, the engineering and shipbuilding trades have increased their output by 21 per cent. during the past five years, the chemical trades by 12½ per cent., the non-ferrous metal trades by nearly 20 per cent., the iron and steel trades by 14 per cent., and the food, drink, and tobacco trades by 6 per cent. Let us remember that last year's share of the recovery was achieved in the face of higher rates for money than in any other year since 1921, depression on the Stock Exchange, and a partially-frozen new issue market in which even the strongest companies found difficulty in satisfying their requirements for fresh capital during the later months of the year. Let us remember, further, that 1929 was marked by a General Election and a change of Government, and that while it witnessed the practical inception of a de-rating scheme which may have far-reaching effects on industry in the future, it afforded no relief from the immediate burden of national taxation. That the country's production advanced despite all these discouraging influences, was a distinctly gratifying achievement which reflects the essential soundness of our financial and industrial structure.

COTTON.

In the cotton trade, the year opened with some promise, but from February onwards the trend of business was distinctly downward, and the general depression of 1929 was even more pronounced than that of 1928. Yarn production has receded to barely two-thirds of the pre-war output; and the volume of piece-goods exported is little more than 50 per cent. of their pre-war scale.

I will not discuss the bearing of hostile tariffs, foreign shipping subsidies, and the occasional embarrassing boycotts which beset our export trade; these impediments are more or less political in character. In face of intense foreign competition it is becoming increasingly difficult for cotton manufacturers in certain grades to work at a profit; and in a trade so diversified, statistics alone show the trend of markets and the measure and character of the displacement of Manchester soft goods. But what concerns us most particularly is, that what I may call the "bread and butter" output from the Lancashire mills is unable, by quite 10 per cent., to compete with world prices. The present position is that while in both the American and Egyptian sections the production of specialities and finer lines can be worked to a profit, the bulk of the medium and lower grades cannot.

The two competitive advantages which Lancashire possesses in the inherited skill of the operatives and a climate specially suitable for cotton spinning are diminishing, owing to the increasing skill of her rivals, now aided by up-to-date textile and "air-humidifying" machinery. It should be borne in mind, however, that both in the re-adjustment of loom arrangements and in the technique of mixing cotton with silk and rayon, much good work has been done during the past year. But without a much greater co-ordination of individual producers, followed by scientific rationalisation, the problem confronting Lancashire will not be solved. To this end the scheme of the Lancashire Cotton Corporation still holds the field. During its year of existence, this corporation has come to an agreement with 75 companies controlling some 7,250,000 spindles and 20,000 looms, and it is understood that possibly 20 more companies will join, bringing the total of spindles up to 10 millions. The development of this project will be watched with considerable interest and its success will be a great stimulus to the cotton industry.

EGYPTIAN SECTION.

The Egyptian section—apart from special and finer lines—has not had a satisfactory year. Here, too, the pressure of increasing foreign competition has made itself felt. This section, however, is better placed to meet the position than the American side, as it has not been exhausted by long depression, and has at once grasped the need of reorganisation. With this objective, a syndicate called the Combined Egyptian Mills, Ltd., was formed in the early part of last year, and now controls over 3,000,000 spindles. Other schemes of a similar nature (embracing the manufacturing side also) are under consideration.

Like the Lancashire Cotton Corporation, the Combined Egyptian Mills company is of too recent origin to have made any effective impression on the difficulties confronting a section of the trade which has been for so long in British hands. The ground lost should not be irrecoverable if all-round efficiency and economy are combined with large-scale production and scientific salesmanship.

OTHER TEXTILE INDUSTRIES.

For the wool textile industry the year was one of disappointment, the decline in the price of its raw material, though a factor making for an improved position in the long run, having exercised an embarrassing and restrictive influence for the time being. The newest of the large-scale textile industries, artificial silk—which with its sister industry "natural silk," now affords employment to some 65,000 persons—recorded a fresh advance in output, but at no time in its history was competition so keen or the effect on profits so severe.

AGRICULTURE.

For British agriculture the year was one of extremes—extreme frost in the early months, extreme dryness in the summer, and extreme precipitation in the autumn. The effect of these conditions upon pastures and meadows was decidedly unfavourable, while a satisfactory cereal harvest brought less than its due share of benefit to the farmer, by reason of low market prices. The entry into this country of supplies from abroad under conditions which, in some cases, could by no stretch of imagination be regarded as normal or legitimate, accentuated his difficulties.

COAL.

Last year, I remarked that in its deep depression the coal industry might well have at last come down to a bedrock foundation upon which a solid structure could slowly be built up again. I think that events in 1929 have justified this view. Production during the year totalled about 261 million tons, which bears favourable comparison with 238 millions in 1928 and 251 millions in 1927. Exports are similarly encouraging, as the figures given in the footnote indicate.*

With the Coal Mines Bill now under consideration by Parliament, I feel that I must be sparing in my remarks, although in passing it strikes me as ironical that a Bill introduced by a Socialist Government should be opposed by the Conservatives and Liberals alike mainly on the ground that it is too favourable to the coal owners!

In my view, rather too much stress is being laid upon compulsory amalgamation. Although such a movement may in many instances bring substantial benefits, an up-to-date pit producing, say, 1,000,000 tons per annum, may easily be hampered, rather than helped, by enforced linking-up with other units less favourably placed. This is a danger which, however, rationalisation carried out in its strict interpretation would, of course, overcome. On the other hand, I consider that for marketing purposes some form of co-operation is essential.

IRON AND STEEL.

In spite of all handicaps—and it would be foolish to belittle them—the iron and steel industries are putting up a good fight. In 1929 some progress was made, and markets were being extended both at home and overseas. 1930 opens, therefore, with a degree of sober optimism.

So far as the production of pig-iron and steel is concerned, last year's figures are the best for many years past. Further, it is encouraging to note that whilst world production of these items showed increases of 11½ per cent and 11 per cent. respectively, the figures for the United Kingdom were somewhat higher, at 15 per cent. and 13 per cent. Even so, we were working at much below our full capacity—at about 65 per cent. in the case of pig-iron and 75 per cent. in the case of steel. A most serious factor has been the considerable increases in cost of our raw materials—ore and coke—which are several shillings in advance of last year's prices.

Despite the increased activity, the financial results of most of our leading iron and steel companies have been insufficient to yield any dividend on their ordinary shares. This is in marked contrast with the position on the Continent, where dividends have usually been distributed on an increased scale. Another significant point is the ability of our Continental rivals to provide out of revenue for extensions and renewals, whereas at home sufficient profits are not being earned to enable any such allocation to be made. Rationalisation proceeds but slowly here as compared with abroad, where lower wages, lower overhead charges, and lower taxation operate so advantageously.

SHIPBUILDING AND ENGINEERING.

Though shipbuilding suffered no such set-back as in the previous year, it is a regrettable fact that one in every four of its insured workers remained on the unemployed list. The engineering trades registered a distinct improvement on the whole, especially in the electrical, locomotive and textile branches, while the motor industry, despite the prevalence of strongly competitive conditions, resumed the advance which a year ago had been temporarily checked.

*Exports of Coal.

	Tons.	*Value.*
1927	51,149,193	£45,530,795
1928	50,051,195	£39,058,734
1929	60,266,618	£48,616,813

SHIPPING.

After a not unpromising start, the shipping trade was overtaken by serious depression in the later months of the year, attributable mainly to the decline in shipments of wheat, actual and prospective, from the New World to the Old. This falling-off arose from the relatively large harvests in Europe and the much less satisfactory yields obtained in the great wheat-growing areas overseas. At the same time, it is difficult to avoid the conclusion that the supply of the world's tonnage is still largely in excess of effective demand. To this condition is due, in the long run, the disparity which exists in many cases between the price of shipping facilities and those of other commodities and services, as judged by pre-war standards.

Outside the domain of industry the year's outstanding achievements were the formulation of arrangements for the final removal of the German reparations question from the dangerous sphere of politics to the more appropriate field of finance, and the liquidation of other outstanding international legacies of the Great War.

This brief recital has revealed many tendencies which may justly be regarded as matters for congratulation. I have purposely refrained from alluding until now to a factor which has proved more particularly reassuring to the City of London—the success with which the financial machinery of this country has withstood a period of the gravest international stress and strain. I need not here recount the various stages of the phenomenal speculative movement in security values in the United States of America, and its reflection, on a smaller scale, on Stock Exchange conditions in every European country. Nor do I propose to dwell upon the causes of the catastrophic break in Wall Street prices last autumn, when American industrial shares lost, on the average, from one-third to one-half of their "paper" values within the space of a few days. The effects of such a movement much necessarily be widespread. British investors have, in their turn, suffered serious loss during the costly though less spectacular Stock Exchange reaction here, which incidentally began at a much earlier date than in America. The numerous failures associated with new and speculative concerns or with particular financiers have been a disquieting feature of the year's history. But, while frankly facing this situation, let us not fail to recognise the important fact that, on the whole, London has emerged very creditably from a most trying ordeal.

LONDON AS AN INTERNATIONAL MONEY CENTRE.

The course of affairs in the sphere of international finance, and the part played by London as an international monetary centre during the past very difficult year, form a topic of such outstanding interest, not merely to the banker, but to the whole world of business, that I propose to select this as the main theme of my address to you to-day. There are two main reasons why I do so. In the first place, it is no exaggeration to say that the year 1929 has been the most critical and testing period for London's position as an international money centre since the outbreak of the Great War. Secondly, the very fact of the strain placed upon London by her successful efforts to maintain that position has given rise in certain quarters to a complaint and to a questioning—a complaint that the interests of British industrial production and trade are being sacrificed in order to maintain London's international position, and a questioning whether the maintenance of that position is sufficiently important to make such supposed sacrifice worth while.

Three stages are necessary to the examination of this problem: First, to review the reasons for the international strain exerted upon London and the way in which London withstood it; second, to assess the value to the economic life of the whole country of the international financial functions which London performs; and finally, to consider what foundation there may be for the complaint and the questioning to which I have just referred. The subject is, of course, a big one, but I will endeavour to lay before you the essential facts and to suggest the conclusions which in my view may properly and confidently be drawn from them.

CAUSE OF STRAIN ON WORLD MONEY MARKETS.

The fundamental cause of the strain to which the money markets of the world were subjected last year must be sought on the other side of the Atlantic. New York, which in preceding years had been an increasingly important partner of Great Britain in financing the reconstruction of Europe, entirely reversed her role. During the greater part of the year, until the abrupt transformation which took place in the autumn, New York persistently drew to herself funds from all other monetary centres. Owing to the intense speculative activity in Wall Street, we witnessed the phenomenon of the country possessing a very large proportion of the world's gold stocks offering the highest rates for money; and the magnet functioned irresistibly. Stock exchange activity in Europe increased the strain. London, in addition to having funds employed in New York, was called upon to make temporary advances to Germany, while France steadily recalled a considerable part of the extensive balances which she had maintained here. The huge drift of funds across the Atlantic, the large-scale repatriation of French balances, and the withdrawal of America as a financier of Germany, together imposed a strain unequalled in recent years; and London, facing her vast international liabilities with a gold reserve only one-quarter of that of the Federal Reserve System, or one-half of that of the Bank of France, was forced to protect her dwindling gold supply by raising Bank rate from 4½ per cent. to 5½ per cent. in February, and again from 5½ per cent. to 6½ per cent. in September. Then came relief of the tension. The bubble of speculation in America and in Europe burst. Wall Street ceased to act as a magnet, and the Bank of England was quickly able to reduce its rate by successive stages to 5 per cent. Nevertheless, it is some evidence of the strain through which London passed that the Bank of England gold reserve, although only £7 million lower on December 31st than on January 1, 1929, had in the meantime fluctuated by as much as £34 million, from the highest point reached in June to the lowest in October.

Glancing back over the year, it is permissible to congratulate ourselves that London's financial machine has emerged from the test with unimpaired credit and enhanced international prestige.

INDUSTRIALIST'S COMPLAINT ANSWERED.

But it is at this point that the industrialist and the trader enter their complaint. What you have been describing, they will say, is exactly what we are grumbling at, namely, that London's efforts to maintain her international position in a time of strain entail sacrifice on our part through the imposition of high rates for borrowed money, which often transform a small profit into a loss, and in some unfortunate industries are the last straw which breaks the camel's back. Now that is the position which I wish to meet.

First and foremost, it is unfair to place upon the British monetary and financial system the responsibility for the damage done by a great international monetary upheaval, which, after all, London did its best to check. Equally unfair is it to lay stress upon domestic sacrifices resulting from a wholly abnormal period, without examining such concrete and lasting benefits as may accrue in normal times.

IMPORTANCE OF LONDON'S INTERNATIONAL FINANCIAL BUSINESS.

I doubt whether the general public is aware of the contribution made by London's international financial business to the national income and the wealth of this country. Figures illustrating this contribution must necessarily partake, to some extent, of the nature of guesswork. The Board of Trade, after wide enquiry, have obtained sufficient data to give us a rough picture.* Their experts estimate that in 1928 the earnings of London as an international centre accounted for £65 million out of the £149 million of the balance in favour of this country. In 1927, the figure was put at £63 million out of a total favourable balance of £114 million, while in 1926 Britain's final balance of international payments would actually have shown a large deficit had it not been for the £60 million under this head. Such figures as these, approximate though they are, reveal the very important dimensions of the part played in British economic life by London's international functions.

Let us look at it in another way. Much is constantly and rightly heard of Britain's great export industries, by which is meant those great industries which show a favourable balance in their dealings with the rest of the world. The fact deserves emphasis that the net export balance of what I will call the "financial industry" is between £60 and £70 million per annum. It therefore ranks as one of our greatest export industries.

But these figures tell only one half of the story. The Board of Trade table shows that our "income from overseas investments" totals £285 million a year. This is an essential factor in our trade balance. The securities which yield this income have been accumulated during many past years, as a result of long-term loans by British citizens to foreign countries. The process still continues. London as an international financial centre has played a large part in finding opportunities for such investments, providing the machinery for their emission, filling the gap between the time when the foreign borrowers require the money and the time when the British investor is prepared to furnish it, providing facilities for the *transfer* of such securities, safeguarding holders' interests after their emission, and so on. In practice, this policy has given positive and most important benefits to British productive industry. Foreign borrowers have frequently used a large share of the proceeds of loans in the placing of orders with British manufacturers. Judiciously made, such loans enhance the wealth and *purchasing power* of overseas borrowing countries. That foreign lending may be abused, and in some cases overdone,

* See Table No. 2.

should not detract from a proper appreciation of its invaluable services to the community.

OVERSEAS TRADE AND FINANCIAL FACILITIES.

Even this is not all. Overseas trade—which, let us not forget, is the life blood of this country—calls for complex and specialised financial machinery in which separate but essential parts are played by banks, accepting houses, discount houses, foreign exchange brokers, and others, each with its own connection established in every large centre in the world. Without these facilities overseas commerce might not be impossible, but it would be a far more hazardous and tardy process for the trader. In London's machine of international finance the British trader has at his beck and call facilities more efficacious than those available in any other country.

If we were to awaken to-morrow and find that London had ceased to function as an international centre, it is clear that we should have to face a situation in which British trade and the national wealth would be very much worse off than they are at present. The figures that I have given suggest the scope of the definite losses which would be involved. Is it possible that there could result for British industry any compensating gain?

ALTERNATIVE SYSTEMS REVIEWED.

It is, of course, utterly inconceivable that London should suddenly abandon her international business, but there are some who appear to think that those who guide our monetary and credit system should concentrate their resources more in the development of British industry, and less in international finance. But it is never quite clear what precise measures critics of the present system would suggest. It cannot seriously be proposed at this stage that Great Britain should abandon the gold standard. For such procedure would not only shatter British credit in every country of the world, but would also lead the world back into that chaos of exchange fluctuations which, in the post-war period, provided one of the most stubborn obstacles to trade recovery. A less impossible suggestion is that steps might be taken to place unofficial but effective obstacles in the way of those who wish to withdraw gold. This covert half-and-half abandonment of the gold standard has indeed been tried by some countries. It is true that if the expedient were adopted here, the national gold reserve might show less fluctuation, but it is certain that foreign institutions would be unwilling to place their temporary floating reserves for short-term investment in London to anything like the present extent. Their willingness to do so now under full gold standard conditions is due to their complete confidence that they can withdraw their balances should need arise, immediately, without condition, and without difficulty, and if they wish it, *in the form of gold*, which is the only universally accepted medium.

Those overseas deposits in London are, in the aggregate, of very large dimensions at any given moment. They go to swell the total fund of credit in the country, in which *all* share, including the manufacturer. The inconvenience caused by the French withdrawal of their balances last year, itself indicates how large those deposits may be. If London ceases to be a repository for the world's spare resources, the rates paid by British industrialists for accommodation may fluctuate less frequently, *but on the average they will be appreciably higher than those now prevailing.*

By what means could British industry be compensated for this damaging result? To this question some thinkers on banking and credit subjects have two answers to make. The first is to suggest what is in reality inflation of credit, with which subject I dealt at some length in my speech to you last year. The second answer is, that the British banks should extend their activities to providing home industry with fixed as well as working capital, and should interest themselves financially in company formations, after the manner of certain, Continental banking systems. There is on definite obstacle which prevents British banks, as at present constituted, from pursuing this line of development. Unlike Continental banks, they are mainly *deposit* institutions, and are not in a position to lock up in long-term industrial investments funds which are, for the most part, liable to be withdrawn practically on demand. It may be argued that this fundamental difficulty should not be allowed to impede the development of any movement likely to be of benefit to the national well-being. It remains to find a way out of the difficulty, and this may perhaps lie in the formation of new institutions for this specific purpose.

LONDON'S FINANCIAL POSITION INDISPENSABLE TO THE NATION.

I have endeavoured in this brief review to lead up to this main conclusion: That in spite of the abnormal conditions of the past year, London's position as an international centre is not only indispensable to the country's international balance sheet, but is also of definite assistance both to overseas trade and to home industry, and that it cannot be replaced by any other system so far devised. Do not suppose for that reason, that any banker imagines the present system is perfect beyond all hope of improvement. Critics may rightly urge that the interests of domestic industry should always be kept to the forefront, especially in times when there is danger of possible over-lending abroad. They may urge, too, that money rates should not be changed more frequently than is absolutely inevitable, and that every effort should be made by co-operation among the central banks to avoid international competition for the world's supplies of gold.

All these subjects will, I believe, receive the increasing attention of British bankers and, one cannot doubt, will be among the important subjects discussed by the Banking Inquiry which has recently been set up by the Chancellor of the Exchequer. What that inquiry may recommend I do not venture to forecast, but of one thing I am certain, that their report will take due cognisance of the vast importance to this country of the City of London's international functions, and of the necessity to our economic well-being of maintaining her world-wide credit and prestige.

The Chairman then moved the adoption of the report and accounts, and the Hon. Rupert E. Beckett seconded the resolution.

Mr E. T. Hargraves said that all the shareholders must be indebted to Mr Tennant for his able and interesting address and for the manner in which he had exhaustively dealt with the subjects selected for comment. For his own part, and he was sure the shareholders would agree with him, the address had entirely reassured him, and he was perfectly satisfied that the chairman and his colleagues had exercised wise discretion in giving the shareholders the desired information without going into too much detail. He was quite certain that the total of losses to which their chairman had referred had not been caused by any laxity on the part of any official, but that they arose in circumstances which, in his long experience of 67 years, had never occurred and were not likely to recur during the remainder of his life. As to the point whether the banks might do more than they were doing at present to facilitate industry generally, he quite agreed that it would be undesirable for the banks, in any measure, to follow the plan of Continental banks in becoming partners in industry *qua* industry; it was no part of the banks to find fixed capital. Fixed capital ought always to be found by traders themselves. (Cheers.)

The resolution was then carried unanimously.

The retiring directors were re-elected, and Messrs. Turquand, Youngs and Co., Messrs. Kemp, Chatteris, Nichols, Sendell and Co., Messrs. Price, Waterhouse and Co., and Messrs. Stead, Taylor and Stead, were reappointed auditors for the year 1930.

Mr Frederick Tomkinson proposed a vote of thanks to the directors for the able manner in which they had conducted the affairs of the bank.

To a vote of thanks to the staff for their admirable work during the past year Mr John Rae (director and chief general manager) responded. Other formal votes were carried, and the proceedings terminated.

TABLE No. 1.—INDEX OF PRODUCTION.

1924 (the first Census of Production since the War) = 100.

Group.	Year 1928.	Sept. Quarter, 1928.	Sept. Quarter, 1929.	Average of First Three Quarters of 1929.
1. Mines and quarries	89·2	83·2	94·4	95·3
2. Iron and steel, and manufactures thereof	102·3	97·4	113·7	114·3
3. Non-ferrous metals.....	119·3	109·9	114·6	119·7
4. Engineering and shipbuilding.....	112·1	107·9	118·3	121·1
5. Textiles	99·9	91·9	91·2	97·5
6. Chemical and allied trades.....	110·3	106·3	117·5	112·5
7. Paper and printing.....	(*a*)	(*a*)	(*a*)	(*a*)
8. Leather and boots and shoes	102·0	90·9	95·2	98·7
9. Food, drink, and tobacco	101·9	105·1	111·8	106·1
10. Gas and electricity.....	126·0(*b*)	(*b*)	(*b*)	(*b*)
Total of manufacturing industries (2–10)*	109·4	104·6	114·4	114·8
Total of all groups (1–10)*	105·5	100·2	110·3	110·8

* Including also various industries not specified above.

(*a*) Adequate information in respect of the paper and printing trades has not up to the present been available. The particulars received, which cover about 40 per cent. of the net output of those trades in 1924, have been included in the general index.

(*b*) No information is available as to the quantities of gas made in each quarter. The provisional figures obtained by the Electricity Commissioners regarding the electrical energy generated by authorised undertakings show that in the first nine months of the present year 7,290 million units were generated, as against 6,395 millions in the first nine months of 1928, and 4,342 millions in the first nine months of 1924. The available data for electricity have been included in the general index numbers.

TABLE No. 2 (from *The Board of Trade Journal*, February 28, 1929).—BALANCES OF INCOME AND EXPENDITURE IN THE TRANSACTIONS (OTHER THAN LENDING AND REPAYMENT OF CAPITAL) BETWEEN THE UNITED KINGDOM AND ALL OTHER COUNTRIES.

(In million £'s.)

Particulars.	1926.	1927.	1928.
Excess of imports of merchandise and bullion	475	390	359
Estimated excess of Government receipts from overseas*	4	1	13
Estimated net national shipping income†....	120	140	130
Estimated net income from overseas investments	285	285	285

Estimated net receipts from other sources...	15	15	15
Total.....	484	504	508
Estimated total credit balance on items specified above	9	114	149

* Including some items on loan accounts.

† Including disbursements by foreign ships in British ports.

SEDENAK RUBBER ESTATES, LIMITED.

STRONG POSITION.

The ordinary general meeting of Sedenak Rubber Estates, Ltd., was held, on the 28th ultimo, at the registered offices, Finsbury House, Blomfield Street, London, Mr Philip C. Turnbull, O.B.E. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The crop produced during the year is the largest we have ever had, and works out at some 426 lb. per acre on the area actually in tapping.

The average net selling cost for the year was under 9d. per lb., yet, in spite of that figure, the economies effected, coupled with the increased output, permitted a low record of working costs to be achieved, thus resulting in a balance of profit and loss enabling us, as it does, to pay you a dividend of 10 per cent., which must, under all the circumstances, be considered very satisfactory.

At the present time the estate is in really good condition, and is most satisfactorily reported on, both by the manager, in his annual report, and the visiting agent, Mr Menzies.

The overhauling of the factory and machinery was completed during the year, and everything connected with the manufacturing end is now in first-class condition.

Given normal general conditions, the estate should be healthier this year than ever.

The estimates for the current year have been framed with a view to avoiding any loss, if possible, even should rubber continue at its present low level, and it is a cause of congratulation that your company is in such a strong position financially that it will come safely through the present slump. With a reserve fund of £35,000, nearly all of which is invested in Government securities, the position is certainly one of strength, but, of course, we look to higher prices to continue to give us good dividends in the future.

As all estimates of world production and consumption were so wide of the mark in 1929, statistics, unfortunately, are no guide to the future, but I do feel that consumption is increasing at a greater rate than production, and must soon overtake it.

Under the circumstances, you will not be surprised that we have made no forward sales, and your directors prefer to meet the market rather than snatch a small premium by any forward sales commitments that might turn out expensive bargains.

Mr George M. Weekley seconded the motion, which was carried unanimously.

The meeting terminated with a cordial vote of thanks to the chairman and directors and to the staff at home and abroad.

THE NATIONAL BANK, LIMITED.

BRIGHTER OUTLOOK.

The annual general meeting of the National Bank, Ltd., was held, on the 30th ultimo, at 13 Old Broad Street, London, E.C.

Mr J. B. Meers, C.B. (chairman of the bank), said, in the course of his speech: Ladies and gentlemen,—The year 1929 will go down in the history of the financial world as an extremely difficult one. It may be said to have begun in a promising manner, but as it went on it certainly did not uphold its promise, and perhaps the best way to criticise it is to say we are thankful, from a business point of view, that it is finished and done with.

The New Year has certainly opened with a brighter outlook, coupled with a welcome return of confidence. The practical steps being taken to solve our many problems show commendable determination, but I would venture to say, from a banking standpoint, that, in view of previous experience, well-established economic laws must not be lost sight of, as, if they are, they have the unhappy faculty of reasserting themselves and leaving the situation worse than before.

Our net profits at £126,000 for the half-year are less. The main explanation lies in the fact that the National Bank does not benefit by a high Bank rate. The cessation of our note issue in the Irish Free State has also, as I have more than once mentioned, to be taken into consideration. We pay the usual dividend at the rate of 14 per cent. per annum and we place £10,000 in reduction of "Bank Premises Account," and £10,000 to "Contingencies Account," carrying forward £30,376.

You will be pleased to learn, ladies and gentlemen, as your directors are to record, that the *clientele* of the Bank continues to grow—the number of accounts open in our books shows a most satisfactory increase when compared with twelve months ago.

AGRICULTURE.

Reports from Ireland on trade and agricultural conditions are satisfactory and the closing months of the year showed an upward tendency in the prices of live stock and produce. The weather, too, was, on the whole, favourable to agricultural pursuits, crops were abundant and well harvested and the health of live stock was well maintained throughout.

Graziers had a fairly prosperous year with an improved level of prices ruling. The cattle trade received a temporary set-back from the early drought, but an improvement later reasserted itself with advantage to those who held over stocks.

Crops were everywhere excellent in yield and quality, but realised very disappointing prices. Oats fell sharply, due to the competition of subsidised German grain, and barley growers have received little encouragement from the prices ruling for this commodity. There was a decline in the acreage under sugar beet, the results from which crop are reported to have been very satisfactory. Ample supplies of good quality potatoes and well-saved turf and an improvement in the kelp industry brought some comfort to those affected by the collapse of the fishing industry, steps for the revival of which are an urgent national necessity.

The reorganisation of the dairying industry is steadily bearing fruit.

The improvement in the cattle trade has brought some measure of stability to the land market, without, however, any material change in values, save perhaps a slight improvement in the case of small, well-placed holdings. The demand for grazing-land is somewhat more active.

The licensed trade continues under grave disabilities, and the outlook is not encouraging.

INDUSTRY.

In industry the chief feature of interest is the campaign for the reanimation of the linen trade, the future of which seems to be regarded with more optimism than for a long time past. The work on hand and in prospect in the shipyards is satisfactory, and the work in the textile and allied trades generally is increasing. The provision of housing throughout the entire country is giving considerable employment in the building trades.

The total external trade of the country showed expansion for the year with an increase in the adverse balance. The tendency, however, in the later months denoted a fall. Live stock exports increased in practically all branches, but fresh pork, fish and butter exports showed a falling off. An interesting feature is the sharp increase in imports of machinery and motor cars.

With present-day economic problems receiving an ever wider appreciation from agriculturists and others, a gradual change is working itself in the habits and activities of the people, and this process, though slow, is the least likely in the long run to impair its efficacy, since the looked-for new order will be founded upon matured experience, organised efficiency and an intelligent understanding of the factors that go to build up and sustain the social and economic fabric of the country.

The report and accounts were unanimously adopted.

NATIONAL PROVINCIAL BANK LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT PERIOD.
BANKERS AND THE FINANCING OF INDUSTRY.
NEED FOR PROVISION OF FURTHER CAPITAL.
SIR HARRY GOSCHEN ON THE OUTLOOK.

The annual general meeting of the National Provincial Bank, Ltd., was held on Thursday last, the 30th ultimo, in the Great Hall, Cannon Street Hotel, London, E.C., Sir Harry Goschen, Bt., K.B.E. (chairman of the Bank), presiding.

Sir Alfred Lewis (chief general manager) read the notice convening the meeting and the report of the auditors.

The Chairman, who was received with applause, said: Ladies and Gentlemen,—In accordance with my usual custom I propose to commence my remarks to you to-day by amplifying some of the matters touched upon in our report.

It is with much sorrow that we have to record the loss the board has sustained by the death of our friend and colleague, Lord Avebury. John Lubbock, as he was better known to many of us, came of a renowned banking family and bore a name which will always be associated with the welfare of bank officers: originally a partner in Robarts, Lubbock and Company, he became a director of this bank on our acquisition of Messrs Coutts and Company, and we have to deplore the loss, not only of a member of our board, but also of a valued colleague and friend.

We also report with deep regret the loss we, and especially our Northampton local board, have suffered by the death of Mr Charles B. Fisher, who was an influential and well-known figure in the shires.

The numbers of our extraordinary directors have, we are sorry to say, been depleted by the resignation of Col. H. F. Smith, for many years one of the directing factors in Messrs Smiths of Nottingham and also a partner in Messrs Smith, Payne and Smiths.

NEW DIRECTORS.

As announced in the report, your directors have appointed two new directors to seats on the board, whose names will be later on duly submitted to you for re-election. It has given the board much pleasure to express in this way some public proof of the appreciation they entertain for the valuable services Sir Alfred Lewis has rendered the bank as joint general manager and chief general manager for many years. We were fortunate in securing, as a result of the acquisition of the Bradford District Bank, Sir Alfred's services for this institution. Since that time he has laboured without ceasing to combine the best features and traditions of the National Provincial Bank and the Bradford District Bank into one homogeneous whole and to maintain the sound position the bank enjoys His efforts have been crowned with success, and we cordially welcome him as a member of our board.

In electing Captain Evan Cadogan Eric Smith to a seat on the board, we are glad thus officially to retain our connection with one of the oldest and most respected firms of bankers in the country, His father, Mr Lindsay Eric Smith, was an honoured member of our board for many years, and I am confident that his son, who has already made his name in other spheres of business, will prove a useful and valuable colleague.

NEW BRANCHES: BOARD'S POLICY.

Our report shows that the policy of opening new branches wherever favourable opportunities occur, continues in force, and I am pleased to say that our endeavours to encourage thrift and provide facilities for saving among even the youngest of all classes of the community are meeting with the success I venture to think they deserve.

The provision of means for depositing cash at our offices after banking hours, by the installation of night safes, appears to be meeting the convenience of our customers in increasing measure and will be developed as the demand for such facilities becomes apparent.

I think, too, I should not omit to say that we are proceeding with the installation of mechanical aids to our accounting and clerical system, steadily but cautiously, as is found desirable and with due regard to the experience obtained of the constant improvement in the machines placed at our disposal. The initial outlay is, of course, heavy, but the ultimate economies will, we believe, amply justify the expenditure involved.

BALANCE SHEET.

In accordance with the new Companies Act, the balance sheet, which is accompanied by a profit and loss account, is submitted to you in a revised form, but the changes involved are only slight and do not prevent a comparison with previous years.

Our capital and reserves, which show no change, appear in the same manner as before, and, with the balance of profit and loss account, show the total of the bank's paid-up capital and reserves at £19,808,086 18s. 5d. This is followed by the item representing our deposits and other accounts which, at £271,540,937 3s. 9d., shows a decrease, in common with most other banks, from the abnormally high figure at which they stood in last year's balance sheet.

The next line, balances due to subsidiary companies, is an innovation and represents balances in our hands belonging to our two subsidiary companies, Messrs Coutts and Messrs Grindlay. Liabilities for acceptances, &c., appears on both sides of the account as usual.

ASSETS SIDE.

The manner in which our first four items on the assets side of the account are set out is unchanged—these show a reduction in sympathy with the decreased figures of our deposits and the increased total of our advances, which is, perhaps, particularly noticeable in the amount of Treasury Bills as compared with the same date in 1928. This item forms what I may term the compensating balance of our accounts, for if our deposits increase, it is in this form mainly that the money finds a temporary home, and if the demand for advances increases or deposits are withdrawn, it is this hen roost that is primarily robbed to find the necessary funds.

Our investments show, in the aggregate, a small reduction as compared with the figures of last year. Our holding in other banks is set out somewhat differently than in previous balance sheets, but you will notice that the only alterations in the figures are that our investment in Lloyds and National Provincial Foreign Bank, which stood at £420,000, has now been increased to £600,000, owing to the shares having been fully paid up, and that we have increased our holding in the Yorkshire Penny Bank by £31,250. Our investments in subsidiary companies are set out separately in accordance with the terms of the Act, but otherwise show no change.

Our advances stand at £156,000,000, an increase of six millions a compared with 1928, which clearly demonstrates, especially in view of the decrease in our deposits, that the bank has again during the past year made every effort to meet the requirements of its customers, thus enabling them, in many cases, to keep their works running and avoid further unemployment. There is nothing owing to us by subsidiary companies.

PROFIT AND LOSS ACCOUNT.

On the next page we set forth a separate profit and loss account in the form required by the Act, from which you will see that the profit brought into the account after making provision for rebate and bad and doubtful debts, amounts to £2,224,786 8s. 11d.

I might here refer to the Hatry collapse. The repercussions of such a collapse could not but affect directly or indirectly, at some point or other, a business of the magnitude of, and as wide spread as ours. We have, however, made adequate provision for possible losses out of the year's revenue.

To return now to our own profit figures. From the sum of £2,224,786 8s. 11d., to which I have already referred, has to be deducted £35,082 1s. 4d., the amount of the directors' remuneration, paid by this bank. The total amount of £46,411 10s. 4d., as set out in the Account, includes over £11,000 which, although paid by our two subsidiary companies to their directors who are on our board, has, under the Companies Act, to be shown in our statement.

The balance of net profit brought down from this section of profit and loss to what I may term the appropriation account, amounts to £2,189,704 7s. 7d., and compares with the figure of £2,108,663 16s. 11d. in last year's balance sheet. With the balance of £865,845 8s. 6d. brought forward from last year, we arrive at a total of £3,055,549 16s. 1d. available for the dividends and various allocations, which have been set out on the other side of the account.

THE DIVIDEND.

The dividend paid in July last of £853,147 8s. 10d. has first to be charged and the balance is appropriated to the following accounts: To the pension fund, £100,000; to bank premises, £200,000, against £100,000 last year; and to the contingency account, £200,000; so that, after the deduction of a final dividend at the rate of 18 per cent. per annum for the half-year, amounting again to £853,147 8s. 10d., the sum of £849,254 18s. 5d. remains to be carried forward to next year, as shown in the balance sheet.

I need not emphasise the fact that such a satisfactory result of our operations as is before you, produced during a period of most extraordinary difficulty, could only be achieved by watchful control of our resources and careful management of our business. It has been a year of unremitting labour for the chief general manager and the general managers, and I am sure you will support me in paying tribute to them and also to our managers and staff throughout the country, who, by the loyalty and the efficiency of their united efforts, have contributed to the gratifying results which are before you.

AFFILIATED BANKS.

We follow our usual practice in appending the balance sheets of our affiliated banks, Messrs Coutts and Company, and Messrs Grindlay and Company, Ltd. The figures shown speak for themselves, and indicate the increasing business which is being conducted. Messrs Grindlay and Company, it will be observed, have established a reserve fund of £100,000.

Our foreign auxiliary continues successfully to serve the needs of our customers and connections in the towns in which it is situated in France, Belgium and Switzerland, and shows satisfactory progress.

Many of you will recall references that were made in the press in the early months of the year to difficulties which had arisen with the Banca Italo-Britannica, a subsidiary of the British Italian Banking Corporation, and we regret to say that the position of the Italian subsidiary bank had been seriously imperilled owing to alleged irregularities on the part of the management.

Whilst we were one of the three clearing banks for the British Italian Banking Corporation, we took no part in its establishment, and our direct financial interest was a comparatively small one, namely, £20,000.

In addition to its interest as the holder of the bulk of the capital in the Italian Bank, the parent institution in London was also materially interested on account of the facilities it had afforded the Italian Bank in the ordinary course of business.

THE ITALIAN BANK.

After conferring with the highest authorities both here and in Italy, we and our associates were fully confirmed it was of paramount importance that adequate support should be rendered to the Italian Bank, otherwise more serious losses were likely to eventuate, and British prestige, both in banking and commercial circles, might suffer irretrievable damage. An arrangement was, therefore, reached in which we participated, whereby the position should be safeguarded, and an announcement was made in February of last year, to which we were parties, to the following effect:—

> In view of certain unfavourable rumours in regard to the affairs of the Banca Italo-Britannica, the Italian subsidiary of the British Italian Banking Corporation, we are authoritatively informed that London banks have made such arrangements as will ensure due fulfilment of all the engagements of the Banca Italo-Britannica and the continuation of the business without interruption.

In the reorganisation which ensued we made a substantial contribution, for which due provision has been made by us; and I am pleased to say that, as a result of the efforts of the three clearing banks and others interested, the chairman of the Italian Bank, at the general meeting held in Milan in December last, was able to make a statement to the following effect:—

> That the Italian institution had now passed the crisis in which it had found itself in the early weeks of 1929, and that the balance sheet as on September 30, 1929, would furnish the proof of the correctness of his statement.

CHAIRMAN'S STATEMENT.

The chairman went on to say that he was able to make this declaration because in February last the English group had announced that they had intervened in order to put the Banca Italo-Britannica in a position not only to meet its liabilities, but also to carry on the course of its business without interruption and that this undertaking was accomplished with considerable sacrifices, as a result of which they had been enabled to consolidate and make completely liquid the position of the bank.

He further added that the undertaking then given by the English group, i.e., an undertaking to render the balance sheet of their Bank sound, had thus, as would be seen from the figures, been completely fulfilled. The capital and the reserves of the Bank were intact and they were now in a position, with their own resources, to be able to set out again on the path which was interrupted by the bad faith of others; the path for which the Banca Italo-Britannica was founded and for which it exists.

You will accordingly see that the London banks have completed the task which they undertook in February of last year, and the obligations implied under the announcement already referred to have been fulfilled in their entirety and are at an end, and we hope that with a new board and management the business of the bank may now be conducted in a thoroughly satisfactory manner.

FEATURES OF THE PAST YEAR.

In addressing you last year, I ventured to say that one could hardly forecast the probable course of business from one week to another, and I am sorry to say that the past year appears to me to have provided ample justification for that statement.

As you will remember, the year opened with a more confident feeling that better times were in store for the country, but the increase in the Bank rate at the beginning of February to 5½ per cent. in consequence of the persistent demand for gold from America was the first cloud in the sky.

The transfer of money from this country to the United States by American and other institutions, dictated no doubt by the high rates prevailing in New York on account of speculative commitments on the New York Stock Exchange, rather than for the requirements of commercial transactions, engendered a certain feeling of uneasiness, which subsequent events and the ever-growing fever of speculation did nothing to allay.

FORESIGHT OF BANK OF ENGLAND.

Thanks to the foresight of the Bank of England, who no doubt anticipated that, as time went on, still further shipments of bullion might be required, their stock of gold was, at some expense, considerably increased as compared with the beginning of the year, but the shipments to America, a growing demand from Germany and the unprecedented requirements of France for gold, gradually reduced the stock of the precious metal to 130 millions. Some counter action on the Bank's part was clearly needed, and the Bank rate (which in the interest of our trade had for some months been courageously maintained at 5½) was raised on September 26th to 6½ per cent. From that time onwards, the gold situation, although not by any means satisfactory, began to improve; the Bank rate was gradually reduced, until at December 31st it stood at 5 per cent. with a stock of gold of 146 millions.

It is, I think, a matter for congratulation that, in spite of the abnormal conditions prevailing throughout the past twelve months, the Bank of England's holding of gold showed a reduction of only £7,000,000 at the end of the year, compared with the corresponding date in 1928. The gold situation, however, has not been the only subject of pre-occupation during the year.

THE FAR EAST.

The Civil War in Afghanistan early in the year, with all the effects of its possible repercussion on India, was naturally a subject of much anxiety. Constant disturbances in China and the conflict between the Manchurian Government and the Soviet Republic, which arose in July last, dispelled any hope of that expansion of our business with China of which we had a reasonable expectation at the end of last year; while disturbances and political uncertainty in the Near East also contributed to the maintenance of a feeling of tension which has persisted throughout the last twelve months. The impending General Election in this country in the early months of the year had the usual effect of restricting business, perhaps even to a greater extent than has sometimes been the case, owing to the uncertainty of the result and the possible change in Government and in policy.

"UNFORTUNATE OCCURRENCES."

Unfortunate occurrences in the business world, both at home and abroad, have played their part too in keeping the nerves of the commercial community in a high state of strain and in restricting the enterprise and expansion of trade which might otherwise have taken place.

On the Continent of Europe business has not been good, and the reports of failures and difficulties have, unfortunately, been rife in many directions. It is a matter for regret that in many cases serious irregularities and undoubted evidence of fraudulent practice have been brought to light and one cannot help wondering whether the inordinate desire to make money quickly, and at all costs, which, unfortunately, has been only too prevalent, has not had some influence in lowering the high moral standard of business integrity both at home and abroad on which we have so far been accustomed to rely.

I trust that what appears to be a lapse from the high traditions of financial and commercial morality may prove to be only a temporary aberration, and that last year's experience will have shown the world at large that the maintenance of a high standard of honour and probity is the primary and the most essential basis of all domestic and international business transactions. This basis of credit, once destroyed, would be hard to restore, and the community must realise that, despite the allurements of possible profits

on a large scale, it is an honourable obligation on their part to see that their engagements bear a reasonable proportion to the means at their disposal.

STOCK MARKETS.

The feverish condition of the stock markets, both at home and in the United States, has been a constant menace throughout the year, and the orgy of speculation in America and the soaring prices of industrial securities in that market attracted many people to what appeared to be an easy way of making money. The disastrous slump which took place towards the end of the year not only dispelled this illusion, but probably caused unpleasant losses in many directions. At the same time a somewhat similar situation was developing in this country, fortunately on a smaller scale, but still carrying in its train material losses to those concerned.

I have endeavoured to give you in a somewhat sketchy form a short account of some of the more outstanding events which have characterised the past year, but the whole period has been one of constant anxiety and has called for the exercise of the greatest possible vigilance and care on the part of your executive officers.

IRON AND STEEL POSITION.

It may almost surprise you, after all I have said, that I am able to record improvement in the position and results of any of our important industries. The fact, however, that during the past twelve months there have been no prolonged or important trade disputes involving protracted stoppages of work has been of material value, and the better understanding between employers and employed, which appears to be slowly but surely permeating the country, has been an important factor in the improved results which have been achieved in some directions.

The production of both iron and steel shows a considerable development as compared with the figures of 1928, and a still more pleasing feature is that our exports of these metals represent an appreciable increase both in the raw and manufactured grades as well as in the more highly finished states, such as hardware, cutlery and machinery. The year's output of British steel of 9,600,000 tons is almost a record in the history of the industry, but even with this production the available steel plant in the country is not approaching its full capacity. It would be idle to pretend that our iron and steel trades are in a prosperous condition, but progress has been made. The reorganisation and amalgamations which have taken place and are still in process of completion, have effected many economies. Much dead wood has been cut out, and I do not think I should be expressing too optimistic an opinion if I say that there are several undertakings which are once again covering their expenses, and that there are some which are actually working at a profit.

IMPROVEMENTS NEEDED.

There can be, I think, no doubt that we have in this country, and indeed in the most suitable localities, an abundance of the material elements necessary to produce iron and steel on competitive terms with any country in the world. We have labour both skilled and unskilled unequalled by any other people, but while perhaps our machinery for subsidiary purposes cannot be surpassed, the information at my disposal leads me to think that improvements can be effected in the primary processes for economical production of the basic material. How these improvements can be effected is a question for our experts. Whilst financial considerations may here and there present difficulties, I am sure that no efforts will be wanting on the part of British banks to afford the necessary assistance to sound proposals, and I am confident that it is only by the provision of the most economic and efficient plant that this industry can successfully exploit to the fullest advantage the natural means at its disposal, and compete effectively in the markets of the world.

SHIPYARDS.

I am glad to say that our shipyards show an improvement in the volume of work, at all events, on which they are engaged, both the tonnage launched and that under construction showing an increase over last year's figure, and we seem to be holding our own in this direction with the rest of the world. Reports from some districts indicate that the orders in hand justify a certain measure of optimism as to sufficiency of work for some months, and we only hope that the prices at which contracts have been secured may afford satisfactory profits and thus contribute to the resources of our shipbuilders for such further developments as they may find it expedient to make. In this connection we cannot but be impressed with the intense efforts which our Continental rivals are making in the building of larger and more speedy ships for capturing a greater share of the trade of the world.

COAL.

Conditions in the coal industry, judged by the increased tonnage produced and larger exports, appear to be improving, and it is especially gratifying to note that a larger number of men are now employed in and about the mines. It is, however, doubtful whether net profits show any commensurate return, although some collieries appear at last to be more than covering production expenses, and some even to be working at a small profit. The tendency towards combined working and collective selling organisation is a satisfactory feature, and in one instance at all events appears to be showing successful results. Owners and workers seem to be coming closer together in the realisation of the fact that their interests are identical and not antagonistic. It seems almost a pity that this improving situation may again be disturbed by new legislation, and we can only hope that whatever provisions are enacted they may be carried through with the approval of both owners and workers and so foster this growing spirit of co-operation which so vitally affects this most important industry.

TEXTILES.

I am sorry to say that the textile industry again presents a depressing picture. I suppose that 1929 has been one of the worst years that the cotton trade, as a whole, has experienced for a long time. The home trade has been the one bright spot. Some money may have been made by manufacturers engaged on the finest counts and on specialities, but our former great export trade continues to show a most deplorable shrinkage. In many countries production exceeds demand and this, in addition to the handicap of higher costs of production here, intensifies the foreign competition with our manufacturers. In spite of all the assistance and advice which have been freely afforded to interested parties, schemes of reorganisation are only making slow progress amongst those concerned. From reports that reach me, I fear that we are suffering materially from the increased efficiency of machinery installed in foreign undertakings during recent years, and I am assured that we cannot hope to compete successfully in the markets of the world unless lower costs are brought into operation and the latest and most improved means of production are adopted.

WOOL.

Conditions in the wool section of the trade are not much better. Manufacturers of fine worsted goods and spinners of fine yarns may have had a good year, but in practically all other branches, losses rather than profits predominate. Top makers and merchants, in view of the continued fall in wool, have had a bad year. The present price of wool, which is now practically down to pre-war level, would seem to afford more hope for the future, especially as present values would appear to offer little inducement to flock owners to increase their production. Larger Continental production at lower costs continues to handicap this section of our trade, and our exports of tops and yarns show a lamentable decrease in comparison with pre-war days.

The artificial silk industry which had made such progress has, in the last few months, shown signs of depression, and here again over-production, with a corresponding fall in prices, has enhanced the difficulty of carrying on business on a profitable basis.

AGRICULTURE.

Little improvement, if any, is to be recorded in agriculture, in spite of the fact that the conditions as a whole have been favourable. The drought in the early part of the year resulted in a light hay crop in many districts, with correspondingly low prices for stock, owing to the fear of a scarcity of keep for the winter months. Cereal crops, on the other hand, at all events on the heavier lands, were good, and assisted by the fine weather, were harvested in good order and are showing satisfactory yields. The low prices obtainable for all classes of grain can hardly, unless under exceptional circumstances, have enabled farmers to produce at a profit, and this state of affairs is only too clearly reflected in the recent statement that there are a quarter of a million acres less under the plough in 1929 than in the previous year.

Sugar beet has again come to the rescue in many directions, and the yield both in tonnage and sugar content in some districts has proved to be a record one, but the depression which on the whole prevails in the sphere of agriculture continue to be a source of anxiety; drastic and immediate measures are necessary if still further land is not to go out of arable cultivation.

THE OUTLOOK.

It is, indeed, difficult to form an opinion as to the prospects for the year which we have now entered. We are faced with problems

in many directions which demand the greatest care and circumspection for their solution.

Our great basic industries—cotton, iron and steel—are all clamouring for further supplies of capital to instal new machinery to bring processes up to date and to effect such improvements and reorganisation as they confidently hope will enable them to compete successfully in the markets of the world, and where is this capital to come from? No one, I take it, would suggest that the banks should permanently find the money required for capital expenditure and lock up their resources in machinery and bricks and mortar. It never has been the policy of the English joint-stock banks to immobilise their funds in such investments, and I trust it never will be. Their function is to provide money for their customers' current needs, and it is owing to the fact that this has been their guiding light, and to the wise provision for eventualities which they have made from their profits in happier days, that they have been able, even in times of crisis, to assist their clients and at the same time maintain their sound position.

CAPITAL NEEDED.

Capital for permanent investment must be found from the savings of the people, and one is at once faced with the problem, s there a sufficient sum available from this source to meet the demand? It has been true, of course, that savings have shown an accumulation each year, but with the high cost of living, heavy taxation, reduced profits and higher expenses in all directions, are the country's savings at the present time adequate for the purpose? We have been warned that the still further improved social services, unemployment benefits, &c., will again necessitate still higher taxation and also that various duties which now produce revenue will be abandoned. In such an event their contribution to the national revenue must be replaced. No one would wish to see the standard of these services reduced, although now generally on a higher level—in spite of our greater financial sacrifices—than in other countries, but if we are wise we shall cut our coat according to our cloth. Can we have confidence, that under the new conditions for which we have had warnings to be prepared, the savings of the people of this country will provide the still larger sums required for industry? I will not attempt to answer the question, but it is not surprising that many thoughtful people have misgivings on the subject.

Spending and saving are not synonymous terms, and it would almost appear that we are inclined to dissipate our potential capital in unprofitable directions, a continuance of which policy can only result in encroachment on our national wealth.

A PROBLEM.

Have we considered whether even under favourable circumstances our industries can again provide enough work for our ever-growing population to keep the country free from the nightmare of unemployment, and are we offering sufficient inducements as compared with the advantages of existence in this country, to the youth of the operative section of our people to venture their fortunes in lands beyond the seas, as many of our young men in other walks of life have done? The diversion to this object of some of the money spent in other directions, might, I believe, have far-reaching effects.

These are some of the problems it seems to me we have to face at the present time. The situation is, to my mind, too serious to be the play of any political factor. The old saying "the day is always darkest before the dawn," is often a true one, and I believe the difficulties which confront us are not unsurmountable; indeed, some seem to be already in course of solution.

Let us remember that what is true of an individual business is equally true of a nation. A policy of rigid economy, although it might entail the scrapping for a time of idealistic programmes, possibly worthy in themselves, would give substantial grounds for encouragement on which to base our hopes for the future. It may well be also that the circumstances of the time demand that serious consideration should be given to the fiscal policy of the country in order that industry may not feel that it is too severely handicapped in its competition with other countries.

UNEMPLOYMENT.

It may not be inappropriate for me here to say that disregarding all party politics as such, I am sure we all welcome the wholehearted efforts of the Lord Privy Seal in his anxiety to solve the problem of unemployment in this country, and speaking for this bank we welcome any scheme founded on sound economic principles which will contribute to the extension of our overseas trade, without which we cannot enjoy that measure of prosperity which our increasing population, and the necessities of our time, require. It would be fatal, however, if such public intervention were to tempt us for a moment to relax our individual efforts or to induce us to rely on the possibility of State assistance taking the place of personal endeavour. Our future depends in the long run, not on Government ordinances or on conferences and committees, but in the efforts, industry and enterprise of a united people.

I now beg to move: "That the report and accounts, as presented, be received and adopted."

Mr Colin Frederick Campbell (deputy-chairman) seconded the motion, and, the chairman having replied to shareholders' questions, it was carried unanimously.

The chairman then proposed the re-election of Mr Maurice Otho FitzGerald, Sir Arthur Balfour, Bt., K.B.E., Brig.-Gen. the Hon. Everard Baring, C.V.O., Sir Austin Low, C.I.E., Sir Alfred Edward Lewis and Capt. Evan Cadogan Eric Smith, M.C., as directors.

Mr F. C. Le Marchant seconded the motion, which was unanimously adopted.

On the proposition of Mr F. W. Tanner, seconded by Mr H. C. Scrimgeour, Sir Nicholas Edwin Waterhouse, K.B.E. (of Messrs Price, Waterhouse and Company), and Sir William Henry Peat, K.B.E. (of Messrs Peat, Marwick, Mitchell and Company), were reappointed auditors for the current year.

VOTES OF THANKS.

Sir Hugh Bell, Bt., C.B., moved a vote of thanks to the directors, general managers, branch managers, and other officers of the bank for their efficient management and services.

Mr E. T. Hargraves seconded the vote, which was cordially passed, and brief acknowledgments were made by the chairman and Sir Alfred Lewis.

A vote of thanks to Sir Harry Goschen for his able conduct in the chair, proposed by Sir Frederic A. Aykroyd, Bt., and seconded by Mr Cecil Braithwaite, concluded the proceedings.

HUNGARIAN COMMERCIAL BANK OF PEST.

BUDAPEST, HUNGARY.

INCREASED PROFITS—DIVIDEND MAINTAINED.

The balance sheet for the year 1929—as approved of by the board of directors in their meeting of January 18th—shows, including the amount brought forward from 1928, a net profit of R. 6,009,140.95, against P. 5,805,157.60 last year. Profits already realised on several transactions concluded do not figure in this year's earnings.

The eighty-eighth ordinary general meeting of the shareholders will be held on February 4th. The board of directors will propose to the general meeting to distribute a dividend of P. 7, as last year. The sum needed for the dividend is P. 3,500,000 and P. 1,300,000 in 1928, P. 1,200,000 will be added to the reserves. The charity funds of the staff will receive P. 60,000.

INCREASED SAVINGS DEPOSITS.

It deserves to be specially mentioned that savings deposits increased by P. 42,802,002 to P. 137,687,908, against P. 94,885,906 last year. On the other hand, deposits on current accounts decreased from P. 121,637,825 to P. 107,505,685. Creditors figure only with P. 10,657,409 in the balance sheet. This sum represents the reimbursement credits used abroad on behalf of the clients of the bank.

Bills discounted increased from P. 90,434,544 to P. 104,008,842, mortgage loans rose from P. 51,776,189 to P. 58,151,366, and loans to municipalities from P. 6,443,638 to P. 9,927,832.

Deposits with banks and bankers increased from P. 11,386,023 to P. 37,617,979 by P. 26,231,956.

CONSERVATIVE VALUATION OF SECURITIES.

The securities owned by the bank were valued—in accordance with our time-honoured principle—very conservatively. The decline of the prices of security holdings has been fully covered, and thus the silent reserves contained in the portfolio remained unaltered.

INCREASED TURNOVER.

The turnover, as shown on one side of the general ledger, including the turnover of the branch offices, rose from P. 9,282,143,000 in 1928 to P. 12,401,584,000 in 1929. The turnover of the deposit department increased from P. 2,905,003,000 to P. 3,356,467,000, of the cash department from P. 3,449,846,000 to P. 3,551,582,000, and of foreign exchanges and bills from P. 3,681,845,000 to P. 4,239,843,000.

Overhead expenses were about the same as in 1928.

MARTINS BANK LIMITED.

IMPROVED RECORD IN DIFFICULT YEAR.
TRADE FEATURES AND PROBLEMS.
BANKS AND RECONSTRUCTION.
COTTON TRADE DIFFICULTIES.
MR A. ALLAN PATON'S CONFIDENCE IN THE INDUSTRIAL NORTH.

The ninety-ninth annual meeting of shareholders of Martins Bank, Ltd., was held, on Tuesday last, the 28th ultimo, at the Exchange Hotel, Liverpool.

Mr A. Allan Paton, C.B., the Chairman, presided over a large attendance.

The notice convening the meeting and the auditors' report having been read,

The Chairman said : The report and accounts have been circulated and I assume it is your pleasure they should be taken as read. —(Agreed.)

Since our last annual meeting we have suffered a great loss through the untimely death of Sir Aubrey Brocklebank, a deputy-chairman, who was an active and greatly valued member of the board. We regret deeply that he is no longer with us, and that a family connection which has existed since 1833 has been severed.

The vacancy on the board has been filled by the appointment of Mr A. Harold Bibby, of Messrs Bibby Bros. and Company, which we shall ask you to confirm.

I turn now to the balance sheet which is presented in a slightly different form this year, partly in compliance with the new Companies Act and in part furnishing the fuller details suggested by the Cunliffe Committee. In connection with the new Companies Act we propose to revise our Articles and to present them to you in their new form for adoption at a subsequent meeting.

INCREASED PROFITS.

It will be seen from the profit and loss account that the net profit for the year amounts to £836,239, which compares with £825,434 a year ago. Including £111,499 brought forward, the disposable balance is £947,738, out of which the board propose that £100,000 should be applied in reduction of the premises account, which will then stand at £2,198,648, as compared with £2,068,717 after last year's allocation from profits. The board also propose to place £50,000 to reserve, bringing that fund up to £3,507,872, and to pay the usual dividend of 16 per cent. which will absorb £665,607, leaving £132,131 to be carried forward to the next account. In these difficult times we may fairly congratulate ourselves on such results.

I do not wish to detain you for any length of time over the balance sheet, but you will no doubt welcome some explanatory comments, especially of the items which appear for the first time.

SUBSTANTIAL RESOURCES.

I would first draw your attention to the substantial amount of our own resources. The capital, reserve fund and profit and loss account together total £8,132,849, from which must, of course, be deducted the half-year's dividend of £332,803, payable on the 30th instant. This will leave the satisfactory figure of £7,800,046.

Current, deposit and other accounts stand at £82,620,493, against £82,932,881 a year ago, while, by a coincidence, loans and advances appear also to be less by about the same amount at £42,246,172 showing a ratio of 51 per cent. to the deposits. Actually, items which are now shown separately, but were formerly grouped under the heading of "Advances to Customers and Other Accounts" amount to £1,696,559, so that in fact the loans have increased by £1,342,253.

Our cash in hand and balances with the Bank of England (which are equivalent to cash) amount to £10,332,181, or a ratio of 12.5 per cent. to our liabilities to depositors. Money at call and short notice and our balances with British banks, plus cheques in course of collection, amount to £8,951,988, and combining this with the cash figures we get a total of £19,284,169, or a ratio of 23.3 per cent. to liabilities.

Balances abroad are with a large number of leading banks and represent funds employed in meeting the foreign requirements of our customers. Our correspondents also keep sterling accounts with us and, on balance, we generally have more foreign funds in our hands than we keep in accounts abroad.

Treasury Bills and British Bills of Exchange are self-explanatory, but I might say that the latter are all of good quality with an early date of maturity.

The item of Colonial and Foreign Bills includes £100,000 India Government Treasury Bills, and a substantial part of the remainder bear the endorsement of first-class foreign banks.

INVESTMENTS.

The decrease in the investments is reflected mainly in the item of Treasury Bills amounting to £3,370,000, in the increase in cash by £1,210,234 and in the larger totals of money at call, etc., by £858,116. Ignoring small variations in other items, the balance is accounted for by the previously mentioned increase in loans and advances and the diminution of £312,388 in the amount due to depositors.

Of the investments themselves I need only refer to the item of £861,953 in respect of Other First-Class Investments. This is largely composed of British railway debenture and preference stocks which have been written down below current values.

Items in transit represent inter-branch transactions which have since been wholly completed.

Other assets comprise items not readily classified under other heads and include our holding of Yorkshire Penny Bank shares valued at £131,250. Properties not in the occupation of the Bank are also included.

Premises have been liberally written down and are worth more than the figure at which they stand, but at the same time we consider it prudent to continue the policy of depreciation. Mention is made in the Report of fourteen new offices which we have arranged to open.

BANKS AND INDUSTRY.

Passing from our purely domestic concerns, I would refer in the first place to the appointment by the Government of a Committee to inquire into Banking, Finance and Credit. In view of much ill-informed criticism bankers generally welcome the appointment of such a committee and will await with interest as well as confidence the result of their deliberations. The frank statements recently made at Manchester by the Right Hon. J. H. Thomas will themselves have helped to dispel the erroneous idea that the banks do not assist trade and commerce as they should.

It is with satisfaction that we learn from Mr Thomas of the willingness of the City to assist in the reconstruction of our depressed industries. The banks are willing to play their part, but it must be remembered that the accepted banking practice precludes any investment of their funds in the capital of industrial undertakings.

The banks can only act as intermediaries between those who undertake a financial reconstruction, and the public who eventually subscribe the necessary capital from their accumulated savings.

If this reorganisation takes place and industry is placed once more on a sound competitive basis, credit will be plentiful and we could hope to see our export trade revive.

With regard to the frequent allegation that the needs of the small trader and manufacturer are not adequately met, I think it useful to repeat an anlysis which has been given from this chair in previous years. The analysis in question shows that out of 31,308 overdrawn accounts on our books at the end of the year no fewer than 26,743 were in debt less than £1,000, while, of the remainder, 3,288 were overdrawn by amounts varying from £1,000 to £5,000.

SPECULATION IN AMERICA.

The year will be memorable for the world-wide difficulties created by the speculative fever in America culminating in the Wall Street collapse last October. The speculation assumed the dimensions of an international problem towards the end of 1928, when Wall Street attracted fluid capital from all parts of the world and America definitely ceased to be a lending country. An outflow of gold commenced from London and the Bank of England raised its rate by stages, until the high rate of 6½ per cent. was imposed in September. It is probable that the determined action of the Bank constituted the first step towards pricking the bubble of speculation. When the reaction came the repercussions were felt in every market, but this country, in spite of its own troubles, stood the strain well.

The position created by the Hatry affair is being straightened out with the help of the banks. We have thought it proper, in the general as well as our own interests, to contribute our proportion to the guarantee fund which has been raised. Failing such help a serious state of affairs might have developed, with widespread reactions on credit in general.

GOLD MOVEMENTS.

Gold is flowing into the country, and a specially satisfactory feature is that the French demand, which has been abnormal in consequence of the French banks and private individuals requiring to draw on their foreign balances, appears to have diminished. In spite of statements to the contrary in our Press, it seems clear that it is to the interest of the Bank of France and the French market that high rates should not prevail in other centres and that the policy of the Bank of France is adverse to heavy gold imports which would be a disturbing influence.

An interesting development in connection with the payment of Reparations by Germany has been the projected establishment of a Bank for International Settlements. Precisely how the new Bank will function is not yet clear, but it is hoped that it may be a steadying factor of considerable influence.

EFFECT OF NEW COMPANIES ACT.

In this country, the new Companies Act which came into force on November 1st is a decided step in the right direction and will help to protect unwary investors from the unscrupulous company promoter. Offers for sale and foreign company issues are now governed by the same provisions as British company prospectuses; and the requirement that actual profits, as opposed to an average, shall be disclosed will be salutory.

It is impossible for a bank to guarantee the general soundness of a prospectus, but we ourselves exercise every care before we consent to the use of our name and have declined in a number of cases to act as bankers to proposed issues.

Coming to home trade generally, it is idle to pretend that it is doing anything more than holding its own, and in saying this I cannot include the cotton industry. I wish I could be more optimistic but the trend is too uncertain for me to predict any definite improvement in the immediate future.

THE COTTON TRADE.

So far as the cotton trade is concerned, it is evident that as a whole it has suffered a further reverse during the past year.

From the standpoint of shareholders or proprietors in the cotton industry, results in the American section have been disastrous, since the records of the spinning trade show that on a capital of some £47,000,000 little over 1 per cent. profit has been earned; in the weaving section, excluding those engaged in specialities, it is well known that while a few have made small profits the losses of others have been heavy. The distress in the industry is clearly shown by the published figures of liquidations and bankruptcies. It is recorded that 123 cotton companies have gone into liquidation, of which 51 have been reconstructed or amalgamated; that Receivers have been appointed in 34 cases; and that there have been 54 bankruptcies or deeds of arrangement.

Under the changed conditions which have obtained since the war, the British manufacturer has had to face an increasing competition from countries provided with the most up-to-date machinery and equipment, and employing a class of labour which is not only free from any restrictions but is willing and able to turn out by mass production at low wages the class of goods which satisfies the demands of many of our former markets.

It used to be said that the humidity of the Lancashire climate was always one of the factors which placed us ahead of our competitors, but this no longer holds. Our competitors now have mechanical devices for humidifying, and by cheaper living, longer hours of employment and double shifts, create formidable competition, particularly in India and China.

Our spinners and manufacturers have therefore been faced with a set of circumstances over which they have had no control, and for which they are in nowise to blame, though in the better class of goods there is still considerable scope for those possessing capital and initiative.

HOPES FROM REORGANISATION.

No doubt much can be achieved by reorganisation of the trade generally, which means the scrapping of many of the older methods and the breaking down of some customs and conditions which have grown up during past generations.

In the Spinning section the Lancashire Cotton Corporation, Ltd., which hopes soon to control some 10,000,000 spindles, has been constituted with the help of the Bank of England and the co-operation of the joint stock banks and is engaged in effecting all possible economies.

The Fine Spinning trade, which hitherto has been normally profitable, has followed to some extent in the wake of the American section, and has even been compelled to resort to short time. In this section also, a relatively small combine has been formed under the style of the Combined Egyptian Mills, Ltd., which we understand has already effected substantial economies.

There have, as yet, been no amalgamations of importance in the Weaving trade, but these are likely to follow in due course. In the meantime individual manufacturers have been attempting to improve their output by making arrangements under which their workers will operate more looms per individual without necessarily increasing their work, leaving ancillary processes to be dealt with by younger and cheaper labour.

If the necessary economies are to be accomplished and the cost of production of the finished article reduced to a figure enabling us to meet foreign competition, it seems obvious that it will also be necessary for the subsidiary trades, i.e., bleachers, finishers, dyers, etc., to come to some arrangement with the spinners and weavers.

A Committee has been appointed by the Government to inquire into the whole position of the Cotton industry, and a report is expected in the near future. This report, when published, will, it is hoped, be sufficiently convincing to bring home both to masters and men the necessity for mutual sacrifice, understanding and effort.

PROBLEMS OF PRODUCTION.

The essentials of manufacturing production as I see them are :—

(1) Management,
(2) Machinery,
(3) Labour.

It is recognised in these days that inefficient management must be changed as speedily as possible; that machinery when worn or obsolete should be replaced out of revenue, for which purpose much more generous allowances ought to be made by the Tax Authorities; and that, equally, if labour is inefficient, in the sense of not giving the highest possible return, it must be improved. If the Trade Unions could be brought to see the wisdom of modifying the restrictions they impose on production the result would be immeasurably beneficial to the whole trade of the country and to the workers themselves.

HEAVY BURDEN OF TAXATION.

As far as Lancashire is concerned, the cheapening of costs in this way, though without a reduction of wages, should go far towards recapturing some of our lost markets, but there is still another serious handicap under which manufacturers are labouring. I refer to the burden of imperial and local taxation, which is heavier in this country than in any other, and is, I fear, in danger of being increased still further. Social services are wholly admirable in themselves, but we are spending more than we can afford, and it is time that expenditure, both national and municipal, was checked. Private persons who overspend are soon overtaken by retribution, and Governments and municipalities are not immune, though the consequences are more remote in their cases and less easily discerned for a time. I feel despondent when I contemplate the enormous outlays of the present day and the apparent absence of any disposition to count the cost.

COAL AND POLITICS.

During the past year the Coal industry of the country has been through a period of great difficulty. When the year commenced the trade was literally fighting for its very existence in the export markets of the world, and it was only by accepting orders at, in many cases, less than cost that the industry was able to combat foreign competition and begin gradually to regain a footing overseas. However, as the year progressed the demand for coal and coke increased, with the result that outputs were increased, and this, with the assistance of the Railway Rate Rebate (Anticipation) Scheme, enabled collieries to reduce their costs to some extent, and the margin between selling price and cost has been steadily reduced until now the industry shows every prospect of again becoming self-supporting and profit-earning.

It is unfortunate that political interference with the trade should again be deemed to be necessary, the Government having introduced a Coal Mines Bill which has passed the Second Reading in the House of Commons. It is to be hoped for the sake of the industry as a whole that the provisions of the Bill will be thoroughly overhauled in Committee.

IRON AND STEEL REVIVAL.

No remarks concerning the coal trade are complete without a reference to the iron and steel trade, as the two industries are so largely interdependent. There has, during the past year been a very welcome revival in the iron and steel trades—a revival which has been assisted by the Railway Rebate Scheme to which reference has already been made. Iron and steel manufacturers are, however, viewing with grave concern the prospect of increased prices of fuel when and if the schemes at present before Parliament become law. A very serious aspect of the proposed Coal Marketing Scheme as it affects the iron and steel trades is the proposal to impose levies on coal used for home consumption to enable the price to foreign buyers to be reduced. Thus, we will not only be subsidising export coal at the expense of the home consumer, but we will also be assisting our foreign competitors to produce iron and steel at a cheaper rate. This will inevitably lead to the dumping of more foreign material into this country, thus reducing the home production of iron and steel and thereby increasing unemployment.

SHIPBUILDING.

During the last few months of 1928 shipbuilding centres were much encouraged by the orders for new tonnage which came in more freely than they had done for a long time previously. Unfortunately the gradual delivery of the new ships may have added to the difficulties of shipowners when the heavy fall in freights occurred in the latter part of last year. While in the early months of the year employment could be found for ships, though not at specially remunerative rates, it is clear that the experience of the closing months made it anything but a good year for shipowners, and it is understood that ships have been laid up recently in considerable numbers.

SHIPPING.

Foreign competition, which has been such a trial to other industries in which at one time we were pre-eminent, has also been a considerable factor in shipping. Since 1914 the world's gross tonnage of steam and motor ships has increased by approximately 20 million tons, and of this amount the increase of the tonnage of Great Britain's mercantile fleet is only about 1,154,000. The tonnage of the rest of the world has been increased in 15 years by nearly 19 million tons, an amount almost equal to the total tonnage of Great Britain, though it ought to be said that British tonnage is more effective than a substantial portion of the foreign tonnage.

In many directions the producer is suffering from the effects of over-production or the possession of facilities for production in excess of the world's power of absorption. Shipbuilding illustrates this as we have many more slips than can profitably be used. During the past three years coal mining has been another example, large numbers of collieries being idle. The same may be said of the cotton and woollen trades. These industries, it must be recognised, have always been largely affected by world conditions, and therefore any plan for restriction of output will be futile in the long run unless it is universal.

WHEAT SUPPLIES.

During the first half of 1929 trading in wheat on the Liverpool Grain Market was on a large scale, the Continent buying very freely. In the second half of the year developments were most unusual, very large quantities being sent to Liverpool owing to lack of demand on the Continent.

The New Year has opened with big stocks in Great Britain and generally good supplies on the Continent. Europe is expected to buy much wheat in America and Canada, but it is probable the demand will not be really heavy, and Argentina and Australia will probably contribute very fair quantities to the international supply. The world's supply of wheat is ample for all requirements and the new winter crops have made a good start.

During the year the milling trade of the country has been rationalised and this should greatly improve the position of millers with regard to the financial results of their industry.

WOOLLEN TRADE FEATURES.

The wool textile industry has had another disappointing year, and conditions have been difficult in all branches of the trade. There have been few bright features and the disheartening experiences of 1929, coming after the difficulties of previous years, have caused depression and lack of confidence. An outstanding feature has been the instability of wool values and the trend has been persistently downwards. Since the upward movement which commenced in 1927 and reached the highest point in March, 1928, prices have steadily declined. In view of this almost continuous fall, the general policy has been to carry light stocks, and with buyers cautious about placing bulk orders hand-to-mouth operations have been general. In most countries demand for wool textiles appears to have been restricted, and throughout the year manufacturing activity has been curtailed, both at home and on the Continent. In addition to lack of stability in prices, the wages dispute in the local industry has created a feeling of uncertainty.

In the export trade certain markets have taken fair quantities of our goods, but other markets, such as the Far East, which formerly provided a profitable outlet for wool products, have again been disappointing. Foreign competition has also increased, and orders have been lost not on account of the superiority of foreign goods but owing to the fact that our competitors were able to offer them at prices below those at which the goods could be profitably manufactured in this country.

AGRICULTURE.

The bulk of our farming customers, who depend more upon their stock than farmers in some other areas, have had on the whole a better experience. In Cheshire, for example, dairy farming is the predominant feature and is not so difficult as in other parts; and in Westmorland the breeding and rearing of cattle is a very essential part of farming operations. In Northumberland, again, sheep farming is the special feature.

Values for dairy cattle have been higher than for the past two years, and sheep and lambs have also commanded good prices.

Most of the crops were above the average and were harvested in good condition.

THE INDUSTRIAL NORTH.

I have been unable to give a very good account of a number of our leading industries, but none the less I do not share the gloomy forebodings of those who persuade themselves that the industrial North is in decay. *The Times* recently published an excellent article on industry in the North, and a leader in the same issue described it as "instinct with self-reliance, and confident, even in adversity, of winning through to success."

I do not myself believe in the alleged transfer of industry to the South on any serious scale. It is true that the lighter trades have tended to settle in the South but, with the exception of motor car manufacture, they do not represent anything like the same amount of employment as our heavy industries.

"NATIONAL PROSPERITY STILL DEPENDS ON THE NORTH."

We have numerous industries other than the older staple ones, and I am satisfied that, generally speaking, national prosperity still depends on the North. I conclude on a note of confidence that our people, while still faced with great difficulties, will in the long run prove themselves equal to meeting the changed conditions of our domestic and export trade.

Before moving the Resolution I would like to express in your name to the General Manager, Mr Shawyer, to our London Managing Director, Mr Bromley-Martin, and to the District General Managers and staff of the bank our appreciation of their loyal and efficient services.

The spirit of loyalty animates the whole staff, and I think you will agree with me that we owe them a debt of gratitude for their services. (Applause.)

I now move "That the report of the directors now submitted and already printed and distributed among the proprietors be adopted."

Lord Colwyn, in seconding, spoke of the growth and progress of Martins Bank, and the position it had now taken in the banking affairs of the country as the "Big Sixth." Referring to the industrial position, he said there was a power and virility in the people of the North which would enable them to overcome the difficulties.

The motion was carried.

Mr W. S. Crichton proposed, and Lord Ebbisham seconded, the re-election of Mr G. E. B. Bromley-Martin, Mr J. H. B. Forster, Mr Edward Paul and Mr W. Peart Robinson as directors, and the confirmation of the appointment of Mr A. Harold Bibby as a director, and this was agreed to.

VOTE OF THANKS.

On the motion of Mr Robert Rankin, seconded by Colonel J. G. Riddick, the thanks of the meeting were accorded to the directors, the committee of management, and to the general manager and other officers of the bank for their valuable services during the year.

Mr A. F. Shawyer, general manager, in reply, expressed his appreciation of the consideration of the directors and committee of management, and warmly acknowledged the able assistance of his head office colleagues, the district managers and the staff generally.

A vote of thanks to the chairman concluded the meeting.

DISTRICT BANK LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.
FINANCIAL POSITION "EXTREMELY STRONG."
POOR YEAR FOR COTTON TRADE.
SIR CHRISTOPHER T. NEEDHAM'S REVIEW.

The annual meeting of shareholders was held on the 24th ultimo, at the head office, Spring Gardens, Manchester. The Chairman, Sir Christopher T. Needham, presided. The other directors present were :—Mr A. A. G. Tulloch (deputy-chairman), Mr R. Noton Barclay (the Right Hon. the Lord Mayor of Manchester), Mr F. J. Dickens, Mr R. H. Hodgson, Mr Kenneth Lee, Mr G. L. McKelvie, Sir William Peter Rylands, and Mr Samuel Turner.

Mr Dafforn, the manager, read the notice convening the meeting.

Mr D. Halliday, of Messrs Halliday, Pearson and Company, chartered accountants, read the auditors' report.

The Chairman, in moving the adoption of the report and balance sheet, said :—

I assume that you will take the report and accounts as read.

I would like to begin my remarks to-day with the reminder that this is the bank's first annual meeting of its second century. It is of special personal interest that Mr R. Noton Barclay, one of our directors, is this year Lord Mayor of Manchester. He has served Manchester as a former president of the Chamber of Commerce and as a Member of Parliament, and in many other ways. In congratulating him on his election to this high office, we know that he will find in it an additional opportunity of giving service to the community.

TRADE REVIEW.

In looking back on the year 1929—an eventful and troublous one—it affords encouragement to note that the industrial production figures of the Board of Trade for the first three-quarters of the year show an increase over those of 1928. Taking 100 as the basis of comparison for the year 1924, when the last census of production was made, the percentages were 110.2, 111.4 and 110.3 for the March, June and September quarters respectively. The estimate for the December quarter is not yet available, but the estimated average number of insured persons shows an increase of about 202,000 for the last quarter of 1929 as compared with 1928. It is clear, judging from all available data, that there was an increase of industrial production during the year 1929 as compared with the year 1928.

With regard to our overseas trade, exports were up by £5,976,000 and imports increased by £25,993,000. The net export of bullion and specie was £15,937,750, and in the aggregate the net adverse visible balance was £366,356,000, or nearly £8,000,000 more than the year 1928. But in comparing the values of our overseas trade it must be remembered that we have witnessed a fall in sterling wholesale prices of 8½ per cent. during 1929, which follows falls of 3 per cent. in 1928, 2 per cent. in 1927, and 5 per cent. in 1926. If we calculate by volume, our exports during 1929 compare favourably with preceding years.

The estimate of invisible exports made annually by the Board of Trade is not yet available. It would, however, appear that the net estimated national income for 1929 from overseas transactions may be about £140,000,000, or about £10,000,000 less than the preceding year. In view of the difficulties of the year—financial, political and industrial—this credit balance of the country's overseas activities may be regarded with moderate satisfaction.

THE COTTON TRADE.

The history of the cotton trade during 1929 is not a cheerful one. The total exports of British goods last year were valued at £729,555,000, of which 18.6 per cent. were cotton textiles valued at £135,449,000, a decrease of £9,853,000 as compared with the year 1928. The trading results of the spinning mills using American cotton were again in the main unprofitable. Production is estimated to have been 75 per cent. to 80 per cent. of full capacity, and the demands on the mills using Egyptian cotton were not as great as in the preceding year. It was not a good year for manufacturers of ordinary piece-goods, but producers of specialities in finer goods have shown successful results.

Perhaps the most satisfactory feature to be noted is that, during the past year, definite progress has been made in the effort to put the cotton trade upon an efficient economic basis; there is discernible a fresh outlook upon its problems, and, though the difficulties continue to be great, there is promise of greater enterprise. The Lancashire Cotton Corporation, adumbrated a year ago, came into being during the past year. At our last annual meeting I stated that we intended to support the project, and we have done so. The formation of this corporation, which is largely due to the leadership and help of Mr Montagu Norman, Governor of the Bank of England, has not been accomplished without many difficulties which have involved sacrifices. It controls at the present time 75 mills, representing 7,250,000 spindles and 20,000 looms, and additional units will be added. It will thus be an important example of rationalisation.

The word rationalisation is used in many senses; I understand it to mean methods of technique and organisation designed to secure the minimum waste of effort or material. Another amalgamation of mills took effect last year, controlling about 3,000,000 spindles using Egyptian cotton. The formation of these amalgamations clearly marks the breaking away from the old Lancashire traditional unit system, and there is no doubt that opinion in the trade has definitely turned towards the view that the day of the small unit of production has gone. With regard to the present outlook, trading has not yet shown any indications of advance on last year. Conditions in India and the drop in the price of silver are two factors which are at the moment retarding business in the East. There has been no great change in other markets.

TWO MAIN PROBLEMS.

The joint committee of cotton trade organisations which, by the inclusion of the cotton trade unions, became a fully representative body in 1928, has continued its inquiries. There are two main problems before the trade, one relating to the production of the great staple lines where the price of the finished product is the dominating factor, and the other relating to the maintenance of our supremacy in the finer and more diverse types of goods where quality, finish, design, etc., are the chief considerations. To enable Lancashire to recover its trade in the staple lines, it is necessary to give producers the security and economy of full capacity production. It is therefore of the greatest importance to initiate methods which will more effectively co-ordinate the services of spinners, manufacturers, finishers and merchants in the production and distribution of staple lines than those existing at the present time. The Committee of Inquiry which the Government has set up to examine the position and prospects of the cotton industry has already performed a useful function by causing every section of the trade to review its own position. Whatever the recommendations of that committee may be, it cannot be doubted that they will stimulate the development of the work which the joint committee has undertaken.

The British Cotton Industry Research Association has continued its usefulness in dealing with questions requiring a vertical knowledge of the processes of the industry. Its work, partly done in co-operation with the British Cotton Growing Association and the Empire Cotton Growing Corporation, has increased its importance as a link between the grower and the spinner. The better buying of cotton, the more economical choice and blending of growths help towards lowering the cost of production. Its work on the improvement in the efficiency and scientific control of processes, and on the adaptation of existing machinery to produce other cloths and for use with various forms of rayon, must prove of increasing value to the cotton trade. Its recent discovery of a new antiseptic will be of considerable advantage to some parts of the industry.

The British Cotton Growing Association reports that it is estimated that increased crops of cotton were produced in 1929 in Nigeria, Uganda, Tanganyika, the Sudan, Nyassaland and Iraq, and it is believed that the total crop will be not less than 439,000 bales. The Empire Cotton Growing Corporation has continued its valuable work. The cotton industry will welcome the decision to reduce the levy in aid of the growth of cotton within the Empire from 3d. per bale of 500 lb. of cotton to one penny per bale. The importation direct by the Manchester Ship Canal during the past season totalled 679,816 bales of all growths, an increase of 121,068 bales over the previous season. Much of the credit for this material increase is due to the establishment by the Manchester Cotton Association of the Central Selling Rooms for "spot" and shipment cotton. This development, which was started just over two years ago, is regarded as fully justified.

IRON AND STEEL.

The iron and steel industry shows a great improvement in tonnage over 1928. The production of pig iron during 1929 was 7,579,500 tons, the highest since 1920, and of steel 9,654,700 tons,

the highest since 1917, when under the stimulus of war requirements steel production amounted to 9,716,500 tons. The 1929 figures show increases of 969,400 tons and 1,135,000 tons respectively over 1928. The financial improvement, however, has not been commensurate with the considerable increase in production. Economies obtained from working near to capacity were more than offset by the increased cost of raw materials. Prices, which rose to some extent during the year, were kept down partly by the desire of iron and steel makers to do nothing which would check the increasing demand, and partly by the influence of foreign competition. Imports from the Continent were rather less than in 1928, and amounted to 2,816,600 tons, while exports increased by 118,100 tons, and amounted to 4,379,400 tons. The competition from the Continent is still severe, and is helped by the much lower wage levels abroad and our heavy charges for social services. Taking the wage level of the United Kingdom as 100 per cent., it is estimated that German rates are about 75 per cent., French 50 per cent., and Belgian 45 per cent.

The year 1929 saw an extension of the principle of amalgamation by the merger between the works of Dorman, Long and Company, Ltd., and Bolckow, Vaughan and Company, Ltd., and a further movement towards better economic organisation of the industry by the proposals to combine certain portions of the undertakings of Guest, Keen and Nettlefolds, Ltd., and Baldwins, Ltd. The policy of rationalising the steel industry is gaining recognition, and the amalgamations which have taken place help towards this end. The steel makers are endeavouring to expand the demand for their products by means of the British Steel Works Association, which is designed to develop the use of steel constructional work by research of a scientific and technical character and also by the discovery of new uses and application of steel structures of all kinds. A notable step forward in the co-operation of the steelworks is the formation of the British Steel Exports Association for developing export markets, and it is reported that the outlook is most promising in certain overseas markets. Business in the new year has not so far been very active and competition from the Continent appears to be keener. It is not easy to speak of 1930 with any confidence until the result of the Government Coal Bill is known. Should there be an increase in the cost of fuel Great Britain's iron and steel industry must undoubtedly suffer. The shipbuilding trade, which uses so much steel, was busier than in 1928, and we are building at present more than the rest of the world combined. The machine-tool trade was more satisfactory and the electrical engineering trade was most active. Important overseas contracts were executed, and the value of the exports showed a considerable increase. Depression again characterised the textile machinery trade.

COAL.

There was an increased production of coal, and the industry as a whole is in a more favourable position than a year ago. Exports were up by about 10,250,000 tons, with an increased value of £9,558,079. Whilst we at home are having to consider prospective legislation in regard to the industry, it is of interest to recall the meeting at Geneva convened by the International Labour Office at the request of the League Assembly to consider hours, wages, and conditions in the European coal industry. We are reminded that the question is not merely one of national importance but of international importance as well, for at the Geneva Conference held last week there were, in addition to the British, representatives of eight other coal-producing countries of Europe. It is true that the Conference was a technical and preparatory one, with no power to commit the countries taking part in it, but it is a step forward that such a meeting should have taken place at all, and may be the first step towards some sort of agreement at a later date which will limit undue and unfair competition.

BANK RATE.

The variability of the Bank of England discount rate during the past year, when it changed no less than five times, as compared with a steady 4½ per cent. during 1928, is an indication of the perplexity in regard to finance which characterised 1929. The Bank lost 23 millions of its gold during the first nine months of which it recovered during the final quarter of the year about 16 millions. The extraordinary drain of gold from the Bank of England was caused by the Stock Exchange boom in America, where interest rates were very high, and by demands from Berlin and Paris. Accordingly the Bank, owing to the necessity of protecting its stock of gold, which at its lowest point was reduced to £129,100,000, was compelled to advance its rate to 5½ per cent. and then to 6½ per cent. The 6½ per cent. rate had its effect rapidly, and gold began to flow back to London. The Bank was quick to respond in the interest of trade and commerce to the altered situation, and reduced its rate from 6½ per cent. to 6 per cent. on October 31st, to 5½ per cent. on November 21st, and to 5 per cent. on December 12th. The country owes much to the skilful and timely action of the Bank of England during a year of extreme difficulty. One often hears the view expressed that banks welcome high money rates. This is entirely a mistaken idea. The effect of a high Bank rate on trade is soon felt, and the volume of business falls off; confidence is wanting, and no extensions of plant or trade commitments are willingly entered into. It is to the advantage of bankers and traders alike when there is a stable and moderate rate of interest, so that confidence can be maintained and commercial enterprise encouraged.

PROBLEM OF LIMITED SUPPLY OF GOLD.

The business world is coming to realise the great need of stability of price level, the lack of which underlies many of our economic difficulties. The gold standard has been almost universally adopted, and the problem of how best to deal with the world's limited supply of gold is pressing and insistent. It is seven years since the Genoa Conference discussed the desirability of international action, which should aim at the stabilisation, as far as possible, of the purchasing power of gold. Expert scientific knowledge is wanted for the solution of these problems, and investigations are being pursued. A Committee of the League of Nations is engaged in considering the problem of the adequacy of the supply of gold needed to carry on the world's trade and cognate matters. The International Bank, which is to be set up under the Young Plan, will also be concerned in these matters. In a recent speech Mr Snowden expressed the hope that this International Bank will be able to carry out what was wanted in the Genoa resolution, and devise means of international co-operation for the purpose of economising the use of gold and some machinery for preventing the unnecessary transhipment of gold. During 1929 the efflux of gold from this country from causes wholly outside our control reacted to the detriment of our trade and finance, and it is of the utmost importance to see what can be done to counter such ill-effects by means within our own control.

The important Committee appointed at the end of last year by the Chancellor of the Exchequer must also have these problems in mind. The terms of reference are wide :—"To enquire into banking, finance, and credit, paying regard to the factors, both internal and international, which govern their operation, and to make recommendations primarily for the relief of industries, and calculated to enable these agencies to promote the development of trade and commerce and the employment of labour." Whilst the financial experiences of the past year have shown both the stability and elasticity of the English banking system, we welcome this Committee, and it is with pleasure, which I am sure you will all share, that I refer to the fact that Mr Tulloch, the deputy-chairman and a managing director of this bank, is one of its members. Its report will be awaited with great eagerness, for the problems it will consider are of great importance and affect the interests of the whole country.

UNEMPLOYMENT.

The problem of unemployment is still one of anxiety for the country, and the statement of Mr J. H. Thomas, in his recent visit to Manchester, that in considering the steps which might be taken to produce a better employment position by improving the organisation and equipment of British industries, support will be given by the City to plans which lead to this end is of interest to Lancashire, as elsewhere. There could not be a more direct incentive towards that reorganisation of industry, the need for which has been admitted, but which has been deferred for lack of means. This bank has already shown its support of the principle of reorganising industry, as in the instance of the Lancashire Cotton Corporation, and will be ready and willing, having due regard to the interests of its depositors and shareholders, to take its part in carrying this principle into further effect.

BALANCE SHEET.

I turn now to consideration of the report and balance sheet, which have been circulated. Taking the liabilities side of the balance sheet first you will observe that the issued capital has been increased (in accordance with the resolutions passed at the extraordinary general meetings held in March and April last) by the issue of 316,000 "B" shares of £1 each as a bonus to the shareholders in celebration of the centenary of the Bank. To provide the necessary sum for this purpose £200,000 has been transferred from the amount carried forward from last account and £116,000 from certain undivided profits. The paid-up capital of the bank, therefore, now stands at £2,212,000.

Our current, deposit, and other accounts stand at practically the same figure as that of last year, which is, I think you will agree, satisfactory in view of the conditions, both financial and industrial, which have prevailed during the year.

The next small item of £400 has relation to certain subsidiary companies of the bank which were formed some time ago for technical reasons and to facilitate the transfer of securities on behalf of our customers.

ASSETS.

On the assets side cash in hand and at the Bank of England amounts to £8,063,749. Our money at call and short notice shows a diminution as compared with this item in last year's balance sheet. On the other hand, our advances to customers show an increase of £1,077,000. Investments amount to £14,826,830, which is a slight increase as compared with 1928. In spite of the general fall in prices last year, it is satisfactory to be able to state that the market value of the bank's investments remains materially in excess of the book value. Bills of exchange show little variation. It will be observed that the total liquid assets are nearly £32,000,000, or 60.8 per cent. of our liabilities to customers on current, deposit and other accounts. From the point of view of our depositors the position is, therefore, extremely strong. Bank property account has been increased by £26,000. Your directors have decided to follow the more usual practice of charging expenditure on bank premises to this account instead of against profits as hitherto. Bank property account now stands at £726,095, as against last year's figure of £700,000, and is arrived at by the addition of £46,095 in respect of the year's expenditure, less an allocation of £20,000 from profit and loss account.

PROFITS AND ALLOCATION.

The net profits for the year are shown at £510,526 10s. 3d., after payment of all expenses and after providing for bad and doubtful debts and income tax (other than income tax on dividends). In comparing the result of 1929 with that of the previous year we have, as I have already mentioned, adopted a different method of dealing with the expenditure in respect of bank property; we also show the amount of directors' fees separately. Each of these items was formerly included in the expenses of the year. The amount brought forward was £325,698 16s. 10d., less £200,000 which I have alluded to in connection with the issue of bonus shares. Adding the profit for the year, the amount available is £636,225 7s. 1d. The dividends recommended absorb £379,200, leaving a balance of £257,025 7s. 1d., from which fall to be deducted directors' fees, £7,800, appropriations to pensions and annuities fund, £40,000, and to bank property account, £20,000. There remains a balance of £189,225 7s. 1d., which it is proposed to carry forward.

The number of accounts on our books continues to increase, and a large number of savings accounts have been opened during the year.

Before moving the resolution I wish to take this opportunity of expressing the sincere appreciation of the board of the work done by the staff of the bank throughout the past year.

The Chairman then moved the adoption of the report and balance sheet. This was seconded and carried.

The retiring directors were re-elected, and the auditors, Messrs Halliday, Pearson and Company, reappointed.

The meeting closed with the usual votes of thanks.

MORTGAGE COMPANY OF THE RIVER PLATE, LIMITED.

STRONG FINANCIAL POSITION.

The annual meeting of the Mortgage Company of the River Plate, Ltd., was held, on the 27th ultimo, at 52, Moorgate, London. Mr James Anderson (the chairman) said that the net revenue for the year amounted to £82,364, as against £85,607, a decline of £3,243. The result, however, could not be regarded as other than satisfactory in a year which had not been a favourable one for the company from any point of view. In the mortgage business there was not much activity during the year, and this comparative stagnation had been the company's experience for several years past. In December last it was announced that the Argentine Government had closed the Conversion Office, which meant that the country had once again entered into a period of inconvertibility. This reversion to inconvertibility was very disconcerting and disappointing to all British interests in the country.

With regard to the company's investments in London, their valuation at the close of the year showed a considerable increase over the amount at which they stood in the balance sheet. The available profit for the year, after providing for debenture interest, income tax and all charges, amounted to £82,364, which enabled the board to declare a total dividend of 18 per cent. for the year, to place £10,000 to reserve, raising it to £450,000, and to add £3,365 to the carry-forward, raising it to £103,156. The large reserve and balance of undivided profits placed the company in a very strong position, so that they could view with equanimity any temporary set-back in income.

The report was unanimously adopted.

SUN LIFE ASSURANCE SOCIETY.

CONTINUED PROGRESS.

QUESTION OF INSURANCE COMPANIES INVESTMENTS.

The annual general meeting of the Sun Life Assurance Society was held, on the 28th ultimo, at 63 Threadneedle Street, London, the Hon. Sir William Henry Goschen, K.B.E. (the chairman), presiding.

The Chairman, in the course of his speech, said that an assurance company needed all the friends it could make, as a large part of its work consisted of obtaining new connections. One had to recognise that life assurance was an intangible article to those who did not really appreciate its value. They in the business knew its virtues, but it was the absence of that knowledge among people in general and the difficulties of the appeal to them that made the progress of their business depend upon the expenditure of great labour. The Society's new business this year had again exceeded that of previous years. The ordinary business had shown a steady expansion; it had again responded to the increasing effort that they put forward in the form of additional outdoor staff and increased branch and agency organisation. Endowment assurance was still by far the most popular form of assurance, and, although they were continually advising proposers to make their assurances mature at a later rather than an earlier age, they were by no means apostles of the whole-life school, with its attendant unfavourable comments that arose out of contracts continuing into advanced old age.

ABNORMAL CLAIMS.

The premium income again showed a large increase, consequent upon the amount and nature of the new business. The claim item was abnormal. The deaths of three of their single premium policyholders, assured for relatively large amounts, caused the amount of claims to appear large; the number of deaths that arose among their ordinary policy-holders had, however, been in excess of those of recent years. Even so, the rate of mortality experienced by the Society was very low, and their without medical examination experience pursued its satisfactory way and caused them no anxiety.

The phases they had passed through in the past year had afforded great opportunities for activity in investments, and when he stated that the total of their purchases and sales during the year had exceeded £11,000,000 the members would appreciate the effort that had been put into the management of the Society's assets.

FINANCING INDUSTRY—A WARNING.

The world of insurance was passing through a time of unrest, but he could at this meeting speak of life assurance only. Enterprise, competition, original ideas, were all welcome so long as they led to healthy development. There was one phase, however, of which he thought offices should beware. Last year he referred to the exhortations that life offices should invest in ordinary shares as distinguished from prior issues at fixed rates of interest. He observed that their friends in the United States had been authorised by their Government Department to invest to some degree in ordinary shares, and after what had happened in recent months one had the thought of wishing them luck and wondering how long the authority would remain. Now, however, they seemed to be getting beyond that, and assurance companies were being called upon to "finance industry." This was assuming the form of taking large interests in certain industrial companies or groups of companies. If this became common, assurance companies would become financing institutions, and the business of assurance would become of secondary importance and exist principally for the purpose of collecting money for use in the industrial financial world. An unduly large part of the assets might well become dependent upon one industry; in the event of such industry not flourishing, large losses might be made, and the officials of the company might be called upon to share the management of an industrial business of which they could have little knowledge. These financial transactions generally ran into comparatively large figures, and, although a few of the largest offices might be able to command the requisite expert knowledge and so face the difficulties, he feared that, if the smaller ones were led to follow suit they would get into matters beyond their control. They had recently had some reminders from the Continent as to what might happen when insurance companies launched out into business that was not insurance, and he thought those responsible should take every care to bear in mind that the primary business of an insurance company was insuring, not financing. Fire and casualty companies were to a very large extent trustees of moneys for widows and orphans, or at any rate of savings for old age, and the companies should not, therefore, invest their moneys in any way that might prejudice the coming beneficiaries.

The report and accounts were unanimously adopted.

WILLIAMS DEACON'S BANK, LIMITED.

RESULTS OF A DIFFICULT YEAR'S TRADE.
CONDITIONS IN THE COTTON INDUSTRY.
TRADE AND FINANCIAL CONDITIONS DURING PAST YEARS.
MR GERARD POWYS DEWHURST'S INTERESTING REVIEW.

The annual meeting of the shareholders of Williams Deacon's Bank, Limited, was held on Thursday, January 30th, in the Board Room, Mosley Street, Manchester, Mr Gerard Powys Dewhurst (the chairman) presiding.

The secretary (Mr R. Thorburn) read the notice convening the meeting, and the auditors' report.

The Chairman, in moving the adoption of the directors' report and statement of accounts, said :—

With your permission, ladies and gentlemen, I propose to take the report in your hands as read, and with no changes of particular importance during the year to report in the personnel of your board or executive, I will, if I may, turn to the figures of the balance sheet.

As you will notice, in order to comply with the Companies Act of 1929, these are presented in a somewhat different form and more detailed character.

BALANCE-SHEET ITEMS.

On the liability side our capital remains the same, but our reserve fund at £1,000,000 shows a reduction of £350,000, to which I will refer later, while our deposits at £31,792,000 are rather lower by some £400,000. Our liability also for acceptances and endorsements on behalf of customers shows a decrease on last year's figures of nearly £500,000, a temporary fluctuation, but caused partly by fall in prices.

Turning to the other side of the sheet, our cash stands higher by a quarter of a million, representing 12·2 per cent. of our deposits. This figure was higher than we anticipated, due to unexpected large sums paid in to credit by our customers on December 31st. Our daily average throughout the year is maintained, as near as possible, at 10·5 per cent.

Balances with other banks are less by £259,000, while our short money at £3,412,000 is higher this time by over half a million.

Commercial and bank bills have remained fairly steady throughout the year, and the actual figure at December 31st is almost the same as in the previous balance sheet—the variation in the total figure is due entirely to our holding, at the end of 1928, an exceptionally large amount (approximately £2,000,000) of Treasury bills. This year, as the sheet shows, we had more money at call and notice, and more invested in Government stocks.

We have made considerable purchases during the year of Short Term Treasury Bonds, and these account for an increase of over £600,000 in our British Government securities. Other investments and properties (other than bank premises) previously included as one item, now appear separately, and call for no comment, while a small increase is to be noted in our shareholding interest in the Yorkshire Penny Bank, representing our quota of that bank's new capital, which we have been glad to take up.

The next item, advances to customers, shows a reduction of some £800,000, compared with last year; the total, at £16,825,000, giving a ratio of 52·9 per cent. to our deposits. This figure is well spread, advances of £1,000 or under representing over 85 per cent. of the total number of our overdrawn accounts.

There is little change to report in our bank premises account, and it is satisfactory to note that the earning capacity of our new branches has, on the whole, fully come up to our expectations.

PROFIT AND LOSS ACCOUNT.

Passing now to our figures of profit and loss, you will see that, after making the usual provisions, our net profit appears at a total of £297,900, showing a decrease of £7,439. This profit, with the balance of £27,465 brought forward from last year, gives us a total of £325,366 now to be dealt with. This, after transferring £50,000 to contingencies account, enables us to pay a dividend at the rate of 13½ per cent. on our "A" shares and 12½ per cent. on our "B" shares, and to carry forward to next year's account a balance of £31,225, which compares with £27,465 brought into the account.

BANK'S ASSISTANCE TO LANCASHIRE'S STAPLE INDUSTRY.

The reduction of profit shown in our statements for the last two or three years is a direct reflection of the state of affairs in the staple industry of Lancashire. In a number of cases it has not been possible to charge interest, either where mills are working under schemes, or during the transition period pending absorption into new combines or mergers. Such schemes of rationalisation involve also sacrifices from all concerned, including the banks, and to provide for the contingencies arising therefrom the Board has transferred £50,000 from the current year's profits, and £350,000 from the general reserve fund, in addition to sums set aside internally, and if by their action in supporting such schemes the Board can feel that the bank has materially contributed in bringing about the reconstruction of the trade in Lancashire and the betterment of its principal industry, then I trust you will agree the sacrifices called for will not have been in vain.

With regard to the dividend, in view of the foregoing your Board have thought it desirable to reduce the rate by 1¼ per cent. on the "A" shares: obviously their first concern must be the replacement of reserves, and the directors feel sure the shareholders will approve of the prudence of this policy.

PROGRESS IN ALL OTHER DIRECTIONS.

Apart from these particular trading difficulties, I am glad to be able to report that the business of the bank shows gratifying progress in every direction, whether judged by fresh business entertained or new accounts opened, with the result that we can again note this year an increase in the proportionate figures of our bank in the clearing house returns of both London and Manchester.

Quite a feature of the year, too, has been the growing popularity of our home safes, which have evidently come to stay, and have proved a definite attraction to the small depositor.

COTTON INDUSTRY.

As regards the year under review, I am afraid I have little of an encouraging nature to report in regard to the cotton industry. A poor and irregular demand for our productions from the Far East and the Continent has been the experience of most of those engaged in the export side of the trade. Difficulties of trade with India have always increased in times of unrest, and movements such as the non-co-operation scheme and threats of boycott of British goods, the usual weapons of the political agitator, have been much in evidence. This factor, with still keener Japanese competition, and uncertainty with regard to an increase in the import duties, have had their effect on business. Trade, too, with China, hampered by the disorganised state of the country, has been temporarily brought to a standstill by the difficulties of exchange, following the heavy fall in silver, with the result that both spinners and manufacturers on this side have experienced the greatest difficulty in keeping machinery running with anything like regularity, which has led to short time and a considerable degree of unemployment for the operatives. One good feature appears, and that is that this country is assured of an ample supply of its raw material for the season, and it is satisfactory to note that growths of cotton, other than American, form an increasing proportion of our market supplies.

LANCASHIRE COTTON CORPORATION.

It would appear that the method of hand-to-mouth buying on the part of our foreign markets has quite superseded the old custom of seasonal purchases, and in view of the number of producers on this side who are forced to sell without regard to the cost of production, their policy would appear to be justified, and it can only be hoped that the Lancashire Cotton Corporation, when once it gets into its stride, will be able to correct this unfortunate tendency. This company has now been registered and has received acceptance of its proposals from 75 concerns containing 5,388,000 spindles and 19,700 looms. This means a "Federation equivalent" of 7,668,000 spindles, which is very hopeful progress towards the 10,000,000 spindles which the promoters fixed as their goal. High hopes are entertained of the success of this corporation in its efforts to resuscitate a large section of the cotton trade from its present position and regain for this country its lost markets. Considering the financial conditions under which this corporation will be operating, a high standard of efficiency may fairly be expected, and critics of this vast scheme of rationalisation will only be disarmed on proof being afforded that sound administration and economical methods have effected their object in substantially reducing the cost of production.

LOWER PRODUCTION COSTS THE ONLY SOLUTION.

It is in this direction, I feel sure, that the salvation of our trade must lie. For quality, durability and design, the goods we produce can hold their own in foreign markets, but the question of price at the rates ruling in distributing centres abroad must be the deciding factor. Certain improvements in our methods of marketing, distribution and selling, can doubtless be achieved and fresh capital, we have reason to believe, will be available for the reconditioning of plant and installation of the latest machinery, but when all is said and done, and every possible economy is effected, the heavy incidence of taxation still remains upon the industry, with the immediate prospect of a still heavier burden to provide for the proposed increase in the cost of social services, in the shape of pensions and unemployment pay which, in a full year, is estimated to amount to about £21,000,000.

NATION'S BURDEN FOR SOCIAL SERVICES.

Without passing any opinion on the merits of such schemes, which fall with particular weight upon our exporting industries, I merely submit that this country, at present, simply cannot afford them.

It may be instructive to compare our outlay in this direction with that of other countries. The cost of the Government's social services per head of population in this country appear to amount to £3 18s. 6d.,

France to 13s.,
Belgium to 5s. 6d.,
Italy to 3s.,
U.S.A. to nil,

and in each of these foreign countries the rate of taxation has been, or is being reduced, with the definite intention of improving the competitive power of their industries. It would almost seem that economy, to which all parties in the State since the war have rendered lip service, is no longer a live issue in politics.

COAL TRADE.

A certain improvement during the year can, I think, be reported in the coal trade, whether judged by the total output of the pits or the figures of tonnage exported, and we have better reports from our South Yorkshire customers than has been the case since the Coal Strike of 1926. Improvements in methods of working, the policy of mechanisation, and the effects of a longer working day have all contributed to lowering the cost of production and increasing the competitive power of the trade in foreign markets. We must hope that legislation now before the House of Commons, while concentrating particularly on this latter side of the trade, will be able to avoid the disastrous effect of the resultant higher prices of coal to our home industries.

IRON AND STEEL.

Though progress in the iron and steel trade during the year has been slow, it has nevertheless been steady. In Sheffield, where our interests are considerable, and also upon the North-East Coast, a distinct measure of improvement in output and even in marginal profit is to be recorded, whilst in no industry have the possibilities of rationalisation been more carefully explored or results attained on so considerable a scale.

MONETARY CONDITIONS DURING PAST YEAR.

During the year disturbed monetary conditions have been the rule rather than the exception, though it was not until the summer that matters became acute. From then onwards heavy gold withdrawals, mostly on French account, and continued weakness of sterling, necessitated a rise in the Bank rate to 6½ per cent. in September. In the meantime, prices of all stocks and shares on the New York Exchange, financed by money costing an exorbitant rate, had reached such a peak that they bore no relation to dividend yields and a collapse of appalling magnitude occurred in October, with the immediate result that the pressure on the world's money markets being relieved, sterling here appreciated in terms of dollars and gold began to return to London, thus enabling the authorities to reduce the Bank rate to 5 per cent. before the end of the year.

HATRY GROUP COLLAPSE.

A situation of extraordinary difficulty also arose in London as a result of the collapse in shares of certain companies known as the Hatry Group. The Stock Exchange and the financial community generally are to be congratulated on the way the position has been handled, with the view of localising the trouble and avoiding endless litigation. Naturally, Stock Exchange values of gilt-edged securities, as well as industrial shares, have given way in sympathy.

TRIBUTE TO STAFF.

In conclusion, gentlemen, I should like you to join with me in expressing to the executive officers and staff of this Bank our keen appreciation of the services they have rendered during the year. It is in difficult times such as these that we can estimate at its true worth the value of their help and co-operation, and the best evidence I can produce of that is the steady and continued growth of this Bank's business.

I have now pleasure in proposing "that the report and accounts now presented be received and approved and be entered on the minutes of this meeting."

Mr B. G. Wood (the deputy-chairman) seconded the motion, which was put to the meeting and carried unanimously.

Lord Bradbury then moved, and Sir Robert Williams seconded, the re-election of Sir Kenneth Irwin Crossley, Bart., and Mr Percy Ashworth as directors of this company, which was agreed to.

Major Murray Marsden moved and Mr Chapman seconded the election of Messrs Ashworth, Mosley and Company, chartered accountants, as auditors of the company for the year 1930, and it was carried unanimously.

Mr B. G. Wood then took the chair, when, upon the motion of Mr Rowley, seconded by Mr Lewis Orford, "the best thanks of the meeting were tendered to the chairman for his conduct in the chair."

The motion was carried with acclamation and the chairman having briefly responded, the meeting terminated.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED
ADVANTAGES FROM FUSION WITH MARGARINE UNION.

The annual ordinary general meeting of African and Eastern Trade Corporation, Ltd., was held, on the 24th ultimo, in St. George's Hall, Liverpool, Sir Robert Waley Cohen, K.B.E. (chairman of directors), presiding.

The Chairman, in moving the adoption of the report and accounts, said: Since we last met the United Africa Company has entered into an arrangement with the Margarine Union, as a result of which its capital will be enlarged by taking over the businesses which the Margarine Union and their associated companies had established in West Africa. That transaction involves the issue of 1,534,000 shares of the United Africa Company to the Margarine Union, in consideration of which the United Africa Company takes over the whole of the fixed assets of the Margarine Union's associated companies in West Africa, together with some £800,000 worth of liquid assets, valued in accordance with our rule at the market price at the time of transfer after allowing, in the case of merchandise, for age and obsolescence. The capital of the United Africa Company when all these transactions are completed will amount to £15,734,000, of which your share will be £7,100,000. Beyond this, and in connection with the transaction with the Margarine Union, the United Africa Company has given to the Margarine Union an option on 1,500,000 shares at 22s. 6d. per share. In our opinion, most important advantages will follow from these transactions.

The Chairman went on to point out that the suggestion that the recent fall in the prices of oleaginous products might be to some extent attributed to the concentration that had taken place among the interests which were the main consumers of those products was a complete illusion. "Our principal products," he said, "are oils and oilcakes derived from oleaginous seeds and from the palm fruit. They compete with similar products derived from other sources, such as copra, soya beans, whale oil, Indian ground nuts, and other similar materials. The production of those materials in the year 1927 amounted in round figures to 2,500,000 tons; in 1929 it amounted to 4,000,000 tons, an increase of 60 per cent. in two years. No combination, however powerful, could save prices from suffering a decline under such conditions. By the concentration which we have already effected in the West African trade, I think we have been able to save the West African producer from suffering to the full extent the effects of the serious fall which this over-production of raw material has brought about in the world markets for the products with which West African produce has to compete."

The report and accounts were adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C. 4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY.

RECORD AMOUNT OF NEW BUSINESS.
THE SPECIAL CENTENARY BONUS.
MR KEYNES ON INVESTMENT VALUES.

The 100th annual general meeting of the National Mutual Life Assurance Society was held, on Wednesday, the 29th ultimo, at the Society's House, 39, King Street, Cheapside, London, E.C.

Mr. J. M. Keynes, C.B. (chairman of the Society) said :—Gentlemen : We are celebrating to-day the completion of the hundredth year of the business life of our Society.

Our net new business for the year has fallen a little short of last year's record figures, though it exceeds all years previous to that. The small decline is due, however, only to our having given out during the year more reassurance than we have received back. The new assurance business obtained direct by this office is, in fact, the largest in our history.

Our expense ratio, adjusted so as to exclude the effect of single premiums, is slightly reduced. Our total trading profits for the year, exclusive of appreciation or depreciation on investments, have amounted to £149,403, as compared with £131,890 last year.

For the past year we are repeating the same rate of bonus as in the two previous years for the old series of policies, and giving a bonus of 15s. per cent. compound to the new series. The trading profits of the year are £21,512 in excess of the cost of this bonus.

FALL IN INVESTMENT VALUES.

The most important event of the year has been the fall in the level of investment values—the most notable movement since 1921. For many years we have shown an unbroken series of gains in the capital value of our Stock Exchange securities. I have repeatedly warned you that the time was sure to come when a general downward movement of investment values would wipe out some part of our previous gains. For this reason we have distributed no part whatever of our profits from capital appreciation, holding the view that any distributions made out of this source of profit should be averaged over a period of time. We are now making a special distribution out of these profits, partly because we think that it is time for such a distribution, and partly to celebrate our Centenary Year.

Turning to the actual amount of the depreciation, we have, on the whole, every reason for moderate satisfaction that our losses are not much larger. The capital value of our fund has depreciated by £317,420, or approximately 6 per cent. of its mean value, during the year. This is a substantial loss but, in relation to our previous capital gains, it leaves us in a position of immense financial strength; for, after writing down our securities to their selling value, we are still strong enough to divide out of the remaining balance of capital appreciation a large centennial bonus and to carry forward £386,000.

LOW PERCENTAGE OF LOSS.

But the main test of our investment policy must be made on a comparison with the decline of investment values generally. The indices compiled by the financial press and other authorities indicate that practically every class of investment securities has suffered a severe setback during 1929. For example, if the whole of our funds had been invested in long-dated British Government securities, we should have suffered a depreciation of 5 to 6 per cent., as compared with an actual figure of 6 per cent. on our funds as a whole, and 8 per cent. on our Stock Exchange securities. I should estimate that non-gilt-edged fixed-interest securities have fallen by something like 10 per cent., whilst industrial ordinary shares have fallen by from 20 to 30 per cent., according to the particular selection made by different authorities. In spite, therefore, of our well-known policy of investing in ordinary shares to a greater extent than most insurance offices, we have got through a year in which ordinary shares have suffered a quite exceptional depreciation, with a percentage of loss which is not only far below the fall in ordinary shares generally, but is much less than the depreciation in non-gilt-edged fixed-interest securities, and is only a little greater than that in long-dated British Government securities. The date of our valuation—December 31st last—came almost at the bottom of the decline, and we have already recovered since then an important proportion of the depreciation. After writing off all depreciation, we have earned, on the average of the past nine years, an annual return on our assets (from interest and capital appreciation) of nearly 6¼ per cent. free of income tax.

SPECIAL CENTENARY BONUS.

I now turn to our special centenary bonus. We are distributing to with-profit policyholders an important portion of the accumulated profits from appreciation which have arisen during the past decade and have never been distributed. Members who have entered the society since 1928 are excluded from participation, and other members are to share according to the date at which they took out their policies. Policies taken out in 1920 will receive a special reversionary bonus at the rate of 70s. per £100 assured, policies taken out in 1910 will receive 145s., and policies dating from 1900 or previously will receive 200s. The cost of this bonus will be £162,421, and it will leave us with an undivided surplus of more than double this sum, namely, £386,019, to be carried forward. A special occasion like the present offers an appropriate opportunity for dealing with that part of our accumulated surplus which we can prudently spare, without creating a precedent which might be dangerous, or arousing expectations which it might not be possible to fulfil. Our idea is, however, that, if future circumstances warrant it, the general policy of a special distribution should be considered from time to time, and we shall review the state of our aggregate surplus from this aspect at intervals of not less than five years.

We have prepared an exceedingly interesting history of the course of our affairs during the past hundred years, of which copies have been already sent to the large policyholders.

WAGES AND THE FALL IN PRICES.

It has been my custom at these annual meetings to cast an inquiring eye on the future; but to-day there has been so much to say about the past that I must be brief. I pointed out last year that the disparity of movement between prices and wages since 1924 had faced employers with the task of increasing efficiency by 16 per cent., if they were to hold their own. I ventured to guess that efficiency was, perhaps, increasing at the rate of 1½ per cent. per annum, with the result that they might have reduced their relative disadvantage from 16 per cent. to 10 per cent. in the four years ending in 1928. Unfortunately the course of events during 1929 has further aggravated their problem instead of mitigating it; for prices have fallen by a further 4 to 5 per cent., whilst wages are unchanged. Moreover, whilst the difficulties in which the return to gold involved our own industries in the period after 1924 were mainly local to this country, the fall in the wholesale prices of raw materials has now taken on the character of a world-wide disaster. The storm centres are to be found to-day, in my judgment, neither in Great Britain nor in the United States, but in the great producers of raw materials overseas. For significant signs of recovery or of further deterioration, it may not be so important to-day to consider London or New York as to watch Australia, South America, and Asia, and also Central Europe; for these areas are being reduced to very grievous distress by the combined circumstances of the fall in the prices of their chief products and the difficulty of obtaining funds on the international loan market.

Between 1921 and 1924 the reaction from the great post-war inflation was practically completed. But since 1924 our wholesale index number has fallen by a further 20 per cent. This rate of fall, lasting over a period of four or five years, otherwise than as a reaction from an immediately preceding inflation, is, I believe, unparalleled in modern economic history. The consequences have already reached the dimensions of a first-class disaster. Nor is it by any means certain that a further movement in the same direction is going to be avoided.

THE STRUGGLE FOR GOLD STOCKS.

I believe that these events, so inimical to the wealth and happiness of the whole world, are avoidable and remediable. But they are to be attributed to the want of collective wisdom on the part of the central banking authorities of the world, taken together, and are not now wholly remediable by the isolated action of any single country. The internecine struggle for gold stocks must cease and the market rates for money in the leading financial centres of the world must be reduced to a really low figure (which presents no difficulties if they all move together)—in the neighbourhood of (say) 3 per cent.—and must remain there for some time, before it is reasonable to expect a recovery of enterprise and confidence throughout the world and the general enjoyment of that measure of prosperity which the ever-increasing achievements of scientific and business technique would make possible, if only the government, or want of government, in international monetary affairs would at last permit.

The report and accounts were unanimously adopted.

THE METROPOLITAN TRUST COMPANY, LIMITED,
LIST OF SECURITIES.
REASONS FOR NON-PUBLICATION.
MR ROBERT FLEMING'S ANNUAL ADDRESS.

The thirty-second ordinary general meeting of the Metropolitan Trust Company, Ltd., was held on the 29th ultimo, at the company's offices, Gresham House, 24 Old Broad Street, London, E.C.

Mr Robert Fleming (the chairman) presided.

The secretary (Mr H. Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I presume that you will, as usual, take the report and accounts as read. (Agreed.)

The year 1929 has been a pretty trying one for a company such as ours, with 473 securities scattered all over the globe and subject to the various influences which the year has carried with it: dear money, the crash in New York, scarcity of gold, and the adverse effect on prices which these and other events, such as the Hatry smash, have caused. We have no interest whatever in any of the concerns whose affairs have been so unfortunately prominent lately, and it is a matter of satisfaction to your directors that we have come through these troublous times with little damage, either to annual revenue or to the Stock Exchange valuation of our securities.

Dealing first with the last of these two main elements in our condition, I would say that last year, referring to the same subject, I said :—

"The excess over book cost last year, 1927, was £675,000; this year, 1928, it is £900,000, being an average increase of 7 per cent. on the whole capital fund.

"We have now for seven consecutive years been able to report an increase in the Stock Exchange value of our funds over that of the preceding year. It may easily be that we have reached a point where the trend of value may run in an opposite direction."

Such has proved to be the case, and our excess valuation this year is £725,000, being £175,000 less than that shown a year ago.

INCREASED DIVIDEND—RESERVE AUGMENTED.

Our revenue account has been well maintained, our surplus beyond the 20 per cent. dividend on the ordinary stock being 4·53 per cent. on that stock, which is 1·05 per cent. more than last year, and we propose to raise the dividend from 19½ per cent. to 20 per cent. We have transferred £75,000 to reserve, raising that account to £625,000, and still have more than £20,000 to carry forward. Our prospect for an equally satisfactory result for 1930 is fair, though we cannot foretell what fresh trouble may arise to affect this result.

I usually mention the amount of old high interest-bearing securities that have matured and been paid off during the year. The amount this year is £119,000. During the past three years we have had no less an amount so paid off than £289,351, and we feared that this might have a bad effect on our total revenue, but through changes and otherwise, that has not proved to be the case. In 1926, with the same capital to work with, we earned beyond the preferred dividend 23·10 per cent. on the ordinary, and for 1929 it was 24·53 per cent., so that, notwithstanding the repayment of these old high rate securities, we more than maintain the surplus.

A QUESTION OF POLICY.

There has been some discussion lately on the question of whether trust companies should publish their lists of investments. As you know, that has not been our practice, nor is it the practice of the majority of trust companies. Mr Carlisle has taken a good deal of trouble to ascertain what companies publish and what do not, and the figures he has brought out and which have been very carefully checked are of a surprising character. We find that, taking 153 companies, 101 companies, having a total capital of £167,014,155, do not publish their lists, as compared with 52 companies, with a total capital of £82,569,249, which do publish. Of the 20 largest companies, 14 do not publish and six publish. This itself is a clear indication that the average shareholder does not look upon publication as something essential to good management, and the further fact that the average price of the ordinary stocks of those which publish is £202 per cent. while the average price of those which do not publish is £270 per cent. is further evidence of the same. I do not mean to say that the non-publication is the cause of this higher price, but at least it suggests that we need not change from our now 31 years' practice.

In our view, publication is not in the best interests of the shareholders. It has been found that in the case of companies which publish their lists shareholders are apt to invest their own money in some securities which they see therein, quite forgetful of the fact that the trust company may, and probably has, made its investment at a very different price from that ruling when the shareholder receives the list, and the company would not, perhaps, make the investment at that time—in fact, it may have disposed of it. In this way these printed lists are somewhat misleading to shareholders. Furthermore, we are of opinion that publication acts detrimentally when the company wishes to realise an investment which, possibly, has not a very active market.

Personally, I feel that the classifications of the investments which we give in the report, coupled with a statement of the value of those investments, give a better impression of the position of the company than would a detailed list of 473 different investments.

I must conclude by expressing our thanks to Mr Carlisle, our secretary and general manager, and to the whole staff for the excellent way in which the business of the company has been conducted during the year.

I will now move: "That the report and accounts, as presented, be and they are hereby received, approved, and adopted and that dividends of £2 5s. per cent., less income tax, on the preferred stock, making with the interim dividend £4 10s. per cent for the year, and £13 per cent., less income tax, on the ordinary stock, making with the interim dividend £20 per cent. for the year, be and the same are hereby declared."

Mr Henry A. Vernet seconded the resolution, which was carried unanimously.

The retiring director (Mr Robert Fleming) was re-elected, and on the motion of Mr. Thomson, seconded by Mr. Cater, the auditors (Messrs Deloitte, Plender, Griffiths and Company) were reappointed for the current year.

A vote of thanks to the chairman, directors and staff terminated the proceedings.

PERAK RIVER HYDRO-ELECTRIC POWER COMPANY, LIMITED.
FINANCIAL PROPOSALS APPROVED.

The adjourned third annual general meeting of the Perak River Hydro-Electric Power Company, Ltd., was held, on the 29th ultimo, at Winchester House, Old Broad Street, London, E.C.

The Right Hon. Viscount Elibank, D.L. (chairman of the company), presided.

The Chairman, in moving the adoption of the report and accounts, said: The important matter with which we have to deal at this meeting is the increased cost which has been incurred on the original scheme and to the plan now proposed for financing both this and the extension of the Malim Nawar steam station. I refer also to the approval which is sought from you to the loan of £850,000 by the Federated Malay States Government, secured by a charge ranking in front of the seven per cent. participating debenture stock.

In order to ensure finality in the construction expenditure, the board have settled with the contractors a final and fixed sum for the completion of the Chenderoh dam and power house buildings, etc. The board have, therefore, done all that they can reasonably do to ensure that the estimated excess cost of £600,000 on the original scheme cannot be further increased.

I should perhaps say a word or two now regarding the further £250,000 which has been spent on extending the Malim Nawar steam station from its originally proposed capacity of 5,000 kw. to its present capacity of 18,000 kw. As you will remember, the debenture stockholders sanctioned the financing of this extension by the issue of a further £250,000 of seven per cent. participating debenture stock. It had been the intention of your board to issue this stock last autumn, but when we were informed in October that we must provide £600,000 instead of £350,000 to complete the original scheme, we felt that it would not be right to issue this debenture stock until we could place before both shareholders and debenture stockholders a definite financial scheme for securing the whole of the money required.

You are now aware how impossible we found it, owing to the adverse monetary conditions in the City, to ensure obtaining the requisite finance by public issue in the ordinary way. After lengthy negotiations, the Federated Malay States Government have agreed to advance the required sum of £850,000 at the low rate of interest of 5 per cent.

ADVANTAGES OF SCHEME.

We have set out at the end of Appendix "A" in the circular of January 7th the advantages to be gained by the adoption of this financial scheme. It is unnecessary for me to labour these, for the lasting benefits to the whole undertaking of cheap money and of smaller annual burdens in interest and redemption obligations are obvious.

The construction scheme, when completed to its present stage of development, will enable an annual output in K.V.A. corresponding to approximately 160,000,000 units per annum to be sold, which compares with 100,000,000 units per annum forecast in our original prospectus. You will have seen from the progress report, Appendix "B" of the circular, that we are already generating at the rate of 74,000,000 units per annum, which is roughly equivalent to 62,000,000 units per annum sold to consumers, so that we are already supplying 60 per cent. of the output originally forecast and this before the water power station has come into commercial operation.

PROGRESS OF CONSTRUCTION WORK.

In order to bring your knowledge of the progress of construction work up to date, I am happy to inform you that the latest advices received from Perak indicate that the progress anticipated has been fully maintained and everything points to starting trial runs in April.

In conclusion, I would add a brief word regarding the future prospect of our undertaking. In view of the fact that our success is largely dependent on the tin industry, which, for the moment, is in difficulties owing to the heavy fall in the price of the metal due to over-production, we are being asked whether it is not possible for us to make some modification in our tariffs. This question has been investigated most carefully, and as a result we are offering an alternative form of tariff which should assist the tin industry without materially impairing our revenue.

We have not yet by any means tapped the whole of the business available to the company in our concession area. There is prospective business there corresponding to an output of at least 400,000,000 units per annum.

The resolution was carried unanimously.

At a subsequent extraordinary general meeting of the company and a separate general meeting of ordinary shareholders, resolutions were passed altering the articles of association in accordance with the financial proposals of the Board.

ASHANTI GOLDFIELDS CORPORATION, LIMITED.

DIVIDEND INCREASED TO 65 PER CENT.

The thirty-third ordinary general meeting of the Ashanti Goldfields Corporation, Ltd., was held, on the 30th ultimo, at the Holborn Restaurant, London, W.C.

Mr Jeremiah Colman, J.P. (the chairman), after expressing regret at the death of Mr C. W. Mann, one of the directors, said that the total profit for the year under review was £203,584, which was £40,144 more than in the previous year. They had already paid an interim dividend of 25 per cent. and recommended the payment of a final dividend of 40 per cent., making 65 per cent. for the year, as against 55 per cent. in the previous year. After making allocations totalling £37,000, they would have £63,260 to carry forward, as compared with £59,176 in the previous year.

The working cost of mining, treatment and general expenses was 39s. 1d. per ton, as compared with 40s. 9d. in the previous year, a saving of 1s. 8d. per ton. Of that amount, however, development had absorbed 1s. 3d., owing to the large footage made, and depreciation, 1d. The remaining 4d. per ton had been paid to the Government by way of royalty and was accounted for by the increase in the value per ton of ore mined.

IMPROVED ORE RESERVE POSITION.

The main feature of general interest in the consulting engineer's report was the improvement in the ore reserve position, which showed not only an increase in tonnage at nearly 600,000 tons, but also an increase in grade—a record for both tonnage and average value. They were able to take advantage of that by the improvements effected during the past year or two in the treatment plant, and were now crushing larger monthly tonnages of higher grade ore. As shareholders would have noticed from the published returns for the past three months, they had been producing successive record outputs and the profits had far exceeded all previous records of the corporation, and that, they thought, would continue.

Another very interesting feature was the good development that had been made in the mine since the end of the financial year. New ore of good width and value had been exposed on three of the bottom levels. He might summarise the position by saying that they had about six years' ore in sight, which should yield very handsome profits, and at the same time they had a reef that was developing well in two directions—up and down.

He thought it would be agreed that the mine was in a very sound position, and that fact was emphasised by the good returns which they had had during the past few months, which touched the highest mark, for both output and profit, ever reached in the history of the corporation. Work was still going on in the construction of the central treatment plant, but progress during the twelve months had been such that they were now able to handle an increased tonnage. Those alterations involved heavy structural work and had been carried out without any stoppage of the plant; in fact, the output had been increased while they were in progress.

In addition to the work at the central treatment plant, a new switchboard had been erected at the power station. The electric mains had been overhauled and a larger mine fan installed at the ventilation shaft. Their new programme of construction included additional bin capacity at the main shaft and more leaching vats at the cyanide plant to deal with increased tonnage. They were also installing another 500-600 h.p. Premier gas-engine at the power station. Again this year practically the whole of their electric power had been produced by the wood-gas plant, the Diesel engine being kept as a standby and only running intermittently.

THE TOTAL POWER CAPACITY.

Two of the older vertical gas engines were being replaced by the new Premier engine. That engine and its dynamo were on order, and, when installed, they would have three of that type with a total capacity of over 1,000 k.w., and, as spares, two of the newer vertical gas engines and the Diesel engine. The total capacity of the plant would be about 1,600 k.w. The cost of power for the year, including all charges and depreciation, was ·776d. per Board of Trade unit, which was a satisfactory figure.

The board proposed to transfer £30,000 to an exploring account, considering it prudent in times of prosperity to build up a fund which would enable them to investigate other propositions within their concession.

Doubtless the proposal to start a benevolent fund and a pension scheme would receive the entire sympathy of the shareholders. Up to the present the record of health at the mines was particularly good, but accidents did happen, and Ashanti was not exactly a health resort. The pensions scheme was a necessary provision to provide a reasonable allowance in old age to the employees. The directors were proposing to set aside £5,000 to form the nucleus of a fund.

The report and accounts were adopted.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 25, 1930:—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS	£
Supply Services	5,250	From Revenue	23,646
Interest, &c., on Debt	949		
Sinking Fund	1,155		
Sundries	786		
Decrease in Debt	15,078		
Increase in Balances	428		
	23,646		23,646

The Ordinary Revenue for the week amounted to £23,645,900, as compared with £20,686,700 in the corresponding week last year. Income tax was lower at £8,670,000, against £9,735,000, but super tax was higher at £2,260,000, against £2,000,000. Customs and Excise brought in £2,552,000 and £1,265,000, against £2,587,000 and £1,178,000 respectively. Ordinary receipts amounted to £95,300, as compared with £278,600. The National Debt was reduced by £15,078,000, as shown below:—

(000's omitted.)

	£		£
5% Conversion Loan	+ 7,250	Public Dept. Advances	− 3,200
National Savings Certificates	+ 100	Treasury Bills	− 18,778
		Sundries	− 450
	+ 7,350		− 22,428

The Floating Debt was reduced by £21,985,000 to £773,655,000.

FINANCIAL YEAR, 1929–30, APRIL 1 TO JANUARY 25.

				Sovs. for export	2,000
				Sovs. set aside	200,000
Total		22,936	Total		1,085,169

Net withdrawals, £1,085,169.

Messrs Samuel Montagu and Co. write on January 29, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £151,058,475 on the 22nd instant (as compared with £150,466,378 on the previous Wednesday), and represents a decrease of £2,847,840 since April 29, 1925—when an effective gold standard was resumed. Gold from South Africa to the value of about £480,000 was available in the open market yesterday and was realised at 84s. 11½d. per fine ounce. Trade requirements absorbed only £58,000; Germany secured the remaining £422,000 and this was supplemented by a withdrawal of about £100,000 from the Bank of England, as indicated below. Movements of gold as announced by the Bank of England show a net efflux of £960,518 for the week under review. Receipts amounted to £22,948, and of the withdrawals amounting to £983,466, £850,000 was in sovereigns "set aside" and £102,000 in bar gold for Germany. It has been suggested that the recent setting aside of sovereigns has been for account of the Argentine; should this be so the matter is, of course, in quite a different category from the "earmarking" of gold on behalf of British Dominions, which is normally only of a temporary nature.

SILVER.

The market has ruled quietly steady during the past week and movements in quotations have been within narrower limits. Operations have been chiefly on account of the Indian Bazaars, who have made forward sales besides further purchases for shipment by this week's steamer, which is due to arrive in Bombay in time for the February settlement. The imminence of the China New Year holidays has tended to restrict business with that quarter; some re-sales have been recorded, but the buying orders have been limited as to price. American operators have both bought and sold, but with little activity. On the 24th instant, the premium on silver for cash delivery was reduced to 1/16d., at which it remained until to-day, when the difference between the two quotations narrowed to ⅛d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 20th instant to mid-day on the 27th instant:—

Imports.	£	Exports.	£
Germany	23,176	British India	140,809
France	51,445	Other countries	5,302
U.S.A.	185,781		
Mexico	35,012		
British India	139,354		
Other countries	330		
	£435,098		£146,111

‖ Bonus 12%. ¶ For period of nine months.

Mappin Stores (Brazil) Limited.—In view of the present political condition, the recent fall in exchange, and the coffee crisis in Brazil, the Board of Directors do not feel justified in recommending the payment of an interim dividend. They state that the result of the company's trading for the first half-year to August 31st last was satisfactory, and the sales were well maintained up to the end of October.

OIL OUTPUTS.

British Controlled Oilfields, Ltd.—Production for December: Venezuela, 163,118 barrels; Trinidad, 50,290 barrels; total, 213,408 barrels. Shipments for December: Venezuela, 170,021 barrels; Trinidad, 75,542 barrels; total, 245,563 barrels. Production for the week ended January 8th:—Venexuela, 35,584 barrels; Trinidad, 11,550 barrels; total, 47,134 barrels. Production for the week ended January 15th: Venezuela, 31,629 barrels; Trinidad, 10,332 barrels; total, 41,961 barrels. Production for the week ended January 22:—Venezuela, 31,248 barrels (cable adds: "Gas collecting, station partially restarted, so expect improvement production this week"); Trinidad, 10,857 barrels; total, 42,105 barrels.

Venezuelan Oil Concessions.—Production for week ended January 11th was: Bolivar district, 120,158 metric tons; Maracaibo district, 6,132 metric tons; total, 126,390 metric tons. Production for the week ended January 18th was: Bolivar district, 118,979 metric tons; Maracaibo district, 6,784 metric tons; Total, 125,763 metric tons. BROKEN HILL SOUTH, LTD.—For four weeks to December 28, 1929, 22,710, tons of crude ore were treated and produced 4,384 tons of leady concentrates assaying 68 per cent. lead and 27 ounces silver per ton; also 4,389 tons of zinc concentrates assaying 49 per cent. zinc. Decreased output due to Christmas holidays.

ANGLO-ORIENTAL MINING CORPORATION, LTD.—December production of the affiliated tin companies in Malaya:—Larut, 75 tons; Jelapang, 34 tons; Kuala Kampar, 90 tons; Changkat, 95 tons; Rawang, 90 tons; Kundang, 40 tons; Rawang, 90 tons; Kampong Lanjut, 70 tons; Malim Nawar, 28 tons; tot 592 tons. December production of the affiliated tin companies: In the East: Kampar Malaya, 70 tons; Tavoy, 47 tons; Northern Tavoy, 40 tons; Thingandon, 10 tons; Theindaw, 6 tons; Toyo, 30.6 tons; total, 203.6 tons. Nigeria: Associated Tin Mines of Nigeria, 274 tons; Mongu (Nigeria) Tin, 60 tons; Juga Valley, 24 tons; Tin Properties, 28 tons; Junction Tin Mine (Nigeria), 4½ tons; London Tin Syndcate, 251 tons; total, 636½ tons. Cornwall: Wheal Kitty, 45½ tons; Polhigey, 34 tons; total, 79½ tons.

SAN FRANCISCO MINES OF MEXICO, LTD.—Operations for December: Ore treated, 28,140 tons; lead concentrates produced, 3,477 tons; zinc concentrates produced, 4,083 tons. Estimated net smelter returns, $225,206; operating expenses, $133,932; estimated operating profit, $81,274.

THE BROKEN HILL PROPRIETARY COMPANY, LTD.—Report for four weeks ended December 29, 1929, Iron and Steel Works, Newcastle, N.S.W. Introductory: Principal collieries northern coal-field, New South Wales, remained closed down during period, but operations at iron and steel works were continued on reduced scale; also operations further interfered with and production lessened by Christmas holidays. Coke ovens produced 6,166 tons of coke, 63,120 gallons of tar and 75 tons of sulphate of ammonia. Blast Furnaces (No. 1) produced 9,628 tons of pig iron. Open Hearth produced 13,310 tons steel. Steel Foundry produced 1,885 tons of castings. Iron Knob shipped 23,285 tons of ironstone. Ore raised: 9,035 tons, including 447 tons silicious ore for Broken Hill Associated Smelters. 8,520 tons crushed sulphide ore treated at Sulphide Corporation Mill produced 1,634 tons lead concentrates, assaying 8·4 per cent. zinc, 65·75 per cent. lead, and 48 ozs. silver per ton; also 1,795 tons zinc concentrates containing 3·1 per cent. lead, 5·0 ozs. silver, and 50·5 per cent. zinc. Slimes Flotation Plant treated 12,858 tons residues, producing 1,457 tons oxidised lead concentrates, assaying 39·2 per cent. lead, 17·5 ozs. silver per ton, also 26 tons zinc middlings. 1,997 tons oxidised lead concentrates disintegrated and dispatched Broken Hill Associated Smelters. Despatches zinc concentrates amounted to 1,476 tons.

Onverwacht Platinum, Ltd.—Reduction plant treated 2,615 tons during the month of December. Crude platinum produced is estimated to yield 450 ounces refined platinum and allied metals, equal to 3·442 dwts. per ton milled.

Mount Lyell Mining and Railway.—During the four-weekly period ended January 1st, the mill treated 14,469 tons of ore producing 3,122 tons of concentrates

North Broken Hill, Ltd.—For the month of December the production was as follows: 31,806 tons of crude ore were treated, assaying 14.2 per cent. lead, 8.3 ounces silver per ton, and 10.6 per cent. zinc, producing 6,950 tons lead concentrates, assaying 61.9 per cent. lead, 32.9 ounces silver per ton and 8.2 per cent. zinc; also 5,250 tons zinc concentrates, assaying 48.6 per cent. zinc, 2.1 per cent. lead, and 3.2 ounces silver per ton.

Burma Corporation, Ltd. (Incorporated in India).—During the month of December 35,777 tons of ore were mined, including 144 tons of high-grade ore. 29,500 tons of ore were milled in the treatment plant, producing 9,965 tons of leady concentrates. 13,337 tons of lead-bearing material, including 2,937 tons of high-grade ore, were smelted in the blast furnaces, producing 7,252 tons of hard lead for treatment in the refinery. Refinery products were 6,750 tons refined lead and 607,000 ounces refined silver. Of silver production 35,849 ounces were recovered from the treatment of copper matte. Zinc plant produced 4,330 tons zinc concentrates, assaying 8.6 ounces silver, 4 per cent. lead, and 51.7 per cent. zinc. In addition to the above, 900 tons copper matte were produced from the treatment of accumulated smelter by-products and 6,259 tons copper ore. 100 tons of refined antimonial lead and 300 tons of nickel speiss were also produced. Included in the tonnage of refined lead is 141 tons recovered from the smelting of copper ore.

San Finx Tin Mines, Ltd.—Returns for December, 1929: Extracted 2,614 tons; mill crushed, 1,853 tons; yield 10 tons tin concentrates, 6.5 tons wolfram. Estimated value, £1,900; working costs, £2,350; development, £540; construction and equipment, £200.

Electrolytic Zinc Company of Australasia.—Production during four-weekly period ended January 8, 1930: 4,251 tons zinc, of which 70 tons used at the works. Silver-lead product for shipment to Port Pirie for realisation, containing: 400 tons lead, 49,500 ounces silver.

Sulphide Corporation, Limited.—During the six weeks ended December 28, 1929, 14,237 tons of Central Mine ore were milled at the Central Mine, producing 2,671 tons of leady concentrates (including 99 tons from the de-leading plant) which assayed 49 ozs. silver and 66 per cent. lead, together with 3,340 tons of zinc concentrates, assaying 6 ozs. silver, 3 per cent. lead and 51 per cent. zinc per ton.

Working Profit, Transvaal.—The total estimated working profit of the gold mines of the Transvaal for the month of December, 1929, amounted to: Witwatersrand, £1,025,877; outside districts, £32,354; total, £1,058,231. The estimated working profit in November, 1929, was: Witwatersrand, £1,042,308; outside districts, £28,891; total, £1,071,199.

REPORTS AND NOTICES.

The board of the African Steam Ship Company have elected Mr James Henry Sharrock (chairman of the Liverpool board of Elder, Dempster and Company, Ltd.) to be a director of the company in place of the late Mr G. W. Neville.

McIlroy's Stores (Hanley), Ltd., announce that their registered office has been transferred from 1, Cornhill, E.C. 3, to Lamb Street, Hanley. The transfer office remains at 1, Cornhill, E.C.3.

Mr. John Montague Eddy, C.B.E., has been elected a director of the Buenos Ayres Great Southern Railway Co., Limited, and also a director of Buenos Ayres Western Railway.

At a meeting of the Joint Hull Committee, held January 23rd, Mr E. L. Jacobs (underwriter of the Alliance Assurance Company, Ltd.) and Mr F. J. L. Fish, of Lloyd's, were unanimously re-elected chairman and deputy-chairman respectively of the committee for 1930.

Australian Mutual Provident Society announce that Admiral of the Fleet, the Right Hon. Earl Jellicoe, G.C.B., O.M., G.C.V.O., has been appointed to a seat on the London board of the society in the place of the late Sir John A. Cockburn.

Mr Colin Skelton Anderson has been elected a director of Messrs Anderson, Green and Company, Ltd.

Mr C. T. Laurence, for many years chief surveyor of the London Assurance, has retired. Mr L. M. Clift has been appointed chief surveyor of the London Assurance in place of Mr C. T. Laurence. Mr Crossley, formerly chief surveyor of the London Assurance and its allied offices at Manchester, has also been appointed sprinkler superintendent of the corporation.

At a meeting of directors of the Pacific Steam Navigation Company, Mr P. G. M. Mitchell (a director and general manager of the Royal Mail Steam Packet Company), was appointed a director of that company.

MISCELLANEOUS.

IMPERIAL TOBACCO COMPANY, LIMITED.—About a year ago £7,487,928 was capitalised, and shareholders were issued one new share for every four shares held. On the capital prior to that capitalisation the distribution represents an increase of 2½ per cent. The net profit is expected to be about £9,105,000. With the amount brought forward £1,169,098, approximately £10,274,000 would be available for distribution. The dividend of 23 per cent. free of income tax, will require £8,611,108, an increase of £813,667. The reserve account will be increased to £4,500,000 by the transfer of £487,000, as compared with £500,000 previously. This would leave £1,176,000 to be carried forward, an increase of £7,000. When the directors announced their intention of issuing the bonus shares, they stated that shareholders should not expect the dividend rate to remain at the same level. In previous years a sum has been put to pensions fund, but this year it is stated that provision has been made for payments to the newly constituted pensions fund.

SWEDISH MATCH COMPANY.—Higginson & Co., Fiscal Agents of the Swedish Match Company, announce that, at a special session of the German Reichstag on Tuesday, the agreement between the German Government, the Swedish Match Company and N. V. Maatschappij Kreuger and Toll in connection with the German match monopoly was ratified. All that is now necessary before the agreement comes into force is the acceptance by the German Reichstag of the Young Plan.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions have been rather unsettled, but a drier spell enabled farmers to push ahead with spring preparations. The progress of winter crops is by no means satisfactory, the plant being thin and uneven on heavy soils owing to excessive moisture. Supplies of native wheat are difficult to place and prices further gave way, adversely affected to some extent by cheap Continental offers. On the import market, dull conditions continue, with scarcely any inquiry for floating and forward cargoes. In these circumstances, prices developed further weakness, being influenced by freer offers, particularly of Canadian grades, the result of Argentine competition and increasing shipments. Private estimates of the Argentine surplus exceed official figures, and consumers' requirements will probably be drawn from the Southern Hemisphere unless North American quotations come more into line with market parity. European consumers are apparently still well stocked, and prospective supplies give little cause for anxiety, although later purchases must necessarily be on a larger scale. These, however, may not be sufficiently weighty to maintain prices in North America, and there appears little prospect of the large Canadian surplus being absorbed unless prices are sufficiently attractive to encourage general buying on a substantial scale. Flour prices declined in sympathy with wheat both for spot and forward deliveries, offers on c.i.f. terms from Canada and Australia being on a reduced basis, without attracting much attention from importers. The market for feeders continues to display a good deal of irregularity, and firmer prices during the early part of the week were not sustained. Consumptive demand for maize fails to improve, and with prospects of a large new Argentine crop together with heavy supplies to come forward from the Danube, buyers adopt a reserved attitude pending further developments in the situation. Barley sells rather better at low rates, but oats are still difficult to sell.

Wheat.—Easier. No. 1 Northern Manitoba, ex ship, 51s. 6d.; No. 2 ditto, 50s. 6d.; No. 3, 49s. 6d.; No. 4 Manitoba, 48s. 6d.; No. 5, 44s. 9d.; No. 6, 38s.; No. 1 Vancouver, 50s. 3d.; No. 2 ditto, 49s. 3d.; No. 3, 48s.; No. 2 hard Winter, 46s. 6d.; No. 2 mixed Durum, 43s.; Rosafe, 63½ lbs., 44s. 9d.; Barusso, 63½ lbs., 45s. 3d.; Australian, 47s. per 496 lbs.; English, 8s. 11d.-9s. 4d. per 112 lbs.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929 —

Nearest Future.	Jan. 2, 1929.	Jan. 30, 1929.	Jan. 2, 1930.	Jan. 15, 1930.	Jan. 22, 1930.	Jan. 29, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	128⅞	148⅜	135⅛	135⅜	127⅛
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	124⅛	130⅞	124	124¼	118¼

The visible supply of wheat in Canada at 75,084,000 bushels shows a decrease on the week of 491,000 bushels. Supplies a year ago stood at 80,683,000 bushels.

THE COAL TRADE.

Our Glasgow correspondent writes: Coal business is slack, and in all districts the collieries are in need of prompt orders. The tone of the market is easy, with nuts generally weaker than round coal. Current prices for shipping business are approximately as follows (f.o.b. district ports): Lanarkshire :—Ell best, 16s.; splint best, 17s. 6d.-18s.; splint second, 17s.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; steam, 14s. 6s.; Hartley, 18s.; trebles, 15s. 6d.; doubles, 14s.; singles, 14s.; pearls, 13s. 6d.; dross, 10s. Fife.—Screened navigation, 18s.-19s. 6d.; first-class steam, 14s. 6d.-15s. 6d.; third-class steam, 13s.; trebles, 16s. 6d.-17s.; doubles, 14s.-14s. 6d.; singles, 13s. 9d.; pearls, 13s. 6d.-14s. Lothians.—Prime steam, 14s. 6d.; secondary steam, 14s.; trebles, 16s. 6d.; doubles, 14s.; singlse, 14s.; pearls, 13s. 6d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s. 6d.; trebles, 16s.; doubles, 14s. 3d.; singles, 14s.; pearls, 13s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes: Depressed conditions prevail on the Cardiff coal market. Outward freight rates are generally low, but they are not stimulating any inquiries for coal, and prices for most grades have been weak. Owing to the exceptionally heavy extent to which collieries are booked up with contracts, the shipments at the South Wales ports are being maintained at the rate of over 600,000 tons per week, but the demand is equal neither to the capacity of the collieries under their quotas nor of the docks. There has been a loss of working time at some of the pits, while many of the tips at the South Wales ports have been idle this week. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 20s.; best drys, 20s. to 20s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Eastern Valleys, 18s. to 18s. 3d.; Western Valleys, 18s. 3d. to 18s. 6d.; best small steams, 14s. 9d. to 15s.; cargo smalls, 14s. to 14s. 3d.; coking smalls, 14s. 6d. to 15s.; best anthracite large, 36s. to 38s.; Red Vein, large, 25s. to 27s. 6d.; machine made cobbles, 42s. 6d. to 45s.; French nuts, 45s. to 47s.; stove nuts, 44s. to 46s.; rubbly culm, 12s. 6d. to 13s. 3d.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 26s. 6d. to 26s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of The London Iron and Steel Exchange :—Conditions in the iron and steel trades show some improvement. The Continental steel makers appear be adhering to the prices recently fixed, and buyers are beginning to take more interest in the market. This is particularly the case in the overseas markets, but a similar tendency is noticeable amongst buyers in this country. The British works have received a fair share of the orders, and lately have taken some business which usually goes to the Continent. Nevertheless, conditions in the British steel industry are irregular, and while some works report that they are comparatively well off for orders, others are finding conditions difficult and business scarce. Steady trading conditions prevail in the pig iron market, but consumers show little inclination to buy forward. Most of the transactions reported concern small parcels for comparatively early delivery. Some competition has been experienced from Continental iron, but so far this does not appear to have extended to the inland districts. In the semi-finished steel department there has been a fair amount of inquiry and whilst a fair amount of business has gone to the Continent, some business has been diverted to British works, owing to the conditions prevailing in the Continental markets. The demand for finished steel continues irregular, but the home trade demand appears to be improving somewhat. The enquiry on export account has improved lately.

Our Middlesbrough correspondent writes: There is practically no change in the market for Cleveland iron. Consumers continue to buy only for their immediate requirements, and do not show any interest in forward business. The easing of coke prices has caused an idea in some quarters that pig iron may become cheaper, but producers do not encourage this, as prices were never adjusted to the high figures for coke which ruled recently. At the weekly market on Tuesday business was on a small scale, and comprised only odd lots of No. 3 by makers for early delivery at 72s. 6d. per ton, but merchants accepted a little less. No. 1 was 75s.; No. 4 foundry, 71s. 6d., and No. 4 forge, 71s., f.o.b. or f.o.t. Shipments of all kinds of pig iron to 28th instant amount to 16,421 tons, against 11,708 tons for the same period of December. In hematite there is only a moderate demand. Home consumers are buying very sparingly and export business is restricted owing to Continental competition. For early delivery makers have accepted 78s. per ton for mixed numbers, which is now the current quotation, and for delivery a few months ahead supplies can be secured at 79s. In the steel trade the different plants are well employed, and further orders are expected to be secured. Home prices under the rebate scheme are unchanged: Plates, ¾ in. up, £8 15s.; sections, £8 7s. 6d.; joists, £8 10s. Iron bars are £10 15s.; 24-gauge galvanised corrugated sheets, £12; 21-24 gauge black sheets, £9 15s., and heavy steel rails, £8 10s., also for home account. The ore market continues practically idle. For delivery a few months ahead best rubio is nominally 23s. c.i.f., but odd prompt cargoes might be secured at 22s. 6d. The present freight Bilbao-Middlesbrough for early tonnage is about 6s. 9d. Coke is weak and is offering freely at 22s. per ton delivered furnaces for ordinary qualities. The number of furnaces in blast in the district is increased to 42; the large furnace at Consett has begun operations on hematite, and one has also started on "specials" at Dorman's Eston works.

Our Sheffield correspondent writes :—Business in the steel trade continues severely restricted and there is still no sign of buying in bulk. Works are carrying on as best they can with a succession of small orders and have little to count upon for the future. January has been a poor month in all sections of the industry, and February starts with no improvement. Some of the men suspended for the holidays are now, however, dribbling back, and the next few weeks should see some revival. Both home and export demand for quality steels continues poor. Germany and Sweden are competing keenly with similar material at cut prices. Overseas trade generally is quiet. Not much pig iron is being sold or consumed in this district, and as a consequence the expected advance in prices has not materialised. Iron foundries are on short time. A feature of the steel trade is the diminished call for sheets. A fair tonnage of basic steel is being produced in Sheffield and in North Lincolnshire, whereas the superior acid steels are comparatively neglected. Makers of garden tools and tools used in

engineering and quarry work report an improved demand. Bright cold-rolled steel is an active trade. The call for steel for electrical engineering is not nearly so brisk as it was last year. The usual New Year lull prevails in the plate and cutlery branches.

Our Glasgow correspondent writes:—In the heavy steel trade, business remains very quiet notwithstanding that Continental prices are slightly stiffer. The arrangement between Messrs Beardmore and Colville is generally regarded as a move in the right direction by members of the industry here, although it is regrettable that meantime a number of workers at Parkhead will be thrown out of employment. The home market for both black and galvanised steel sheets continues satisfactory and there is a slight improvement in the export demand for both, but this is not sufficient to keep plants fully occupied and some are running only part-time. Jobbing galvanisers are fairly busy and sheet-metal workers are exceedingly well employed and have a considerable amount of work on hand.

Our Cardiff correspondent writes:—In the South Wales iron and steel trade there has been no improvement during the past week. Inquiries for tinplates have been comparatively quiet and prices easier. The associated owners who are parties to the pool are holding out for 18s. 9d. per basis box, but it is reported that makers outside the pool are selling on the basis of about 18s. 6d. Galvanised sheets are also inactive and quotations have been further reduced to £11 15s.-£12 per ton. Business is slow in Welsh tinplate bars, and where the specifications suit the consumption of foreign steel is fairly large. The c.i.f. prices of Belgian bars are round about £5 9s. per ton compared with £6 10s. per ton for the local bar.

OTHER METALS.

Tin.—The standard market presented firmer features in view of developments regarding the restriction scheme, which imparted rather more trade confidence, and a good business resulted in forward positions at an irregular advance. Later the improvement was partially lost. Eastern advices were also on a higher basis. Standard cash changed hands at £174 12s. 6d. to £180 10s. and £178 2s. 6d.; and three months, £175 10s. to £183 15s. and £181 5s. In the East, sales were recorded at £177 7s. 6d. to £182 15s. per ton c.i.f.

Copper in fair demand, but market still somewhat unsettled the backwardation being maintained, closing with a firm tone. Standard cash sold at £71 10s.-£72 5s. and £71 15s.; three months, £68 10s., £68 5s., and £68 16s. 3d.

Lead in quiet demand, but values steady. Good soft foreign pig, January, sold £21 12s. 6d. to £21 13s. 9d.; February, £21 11s. 3d.; March, £21 12s. 6d.; April, £21 12s. 6d.; May, £21 12s. 6d.

THE COTTON TRADE.

Liverpool, January 29th, 1930.

Very little business has been done during the week, but prices have fallen points, the nearer positions being most affected. The demand from spinners has not been sufficient to absorb the little hedge selling from the South and some selling from Bombay, probably encouraged by the political situation in India. The ginning figures issued last Thursday showed the ginnings to January 16th at 14,188,000 bales against 13,889,000 bales last year and 12,501,000 bales in 1928. Though slightly below the expectation of 14,200,000 bales, the figures had no effect upon prices. Mill news from America is not very encouraging and exports from that country are 600,000 bales behind those of last year, while spinners' takings outside America are over 500,000 bales less up to the present time. The Federal Farm Relief Board is making efforts to bring about reductions in planting acreage for the coming season, but prices will be the greatest influence on the attitude of the farmers. Spot sales for the week 23rd to 29th (inclusive) are 28,000 bales, of which 18,200 are American, 2,800 Brazil, 450 Argentine, 3,250 Peru, 1,450 Egyptian, 1,350 African, 250 East Indian, and 250 sundries. Imports for the same period are 83,290 bales, of which 47,859 are American, 126 Argentine, 921 Peru, 16,445 Egyptian, 1,505 African, 15,532 East Indian, and 902 sundries. Quotations to-day are: American Middling, 9·23; Egyptian Sakel, 14·40; Uppers, 10·44; Brazil Fair, 8·93; Peru G.F., Mod-Rough, 10·50; Smooth, 9·93; West African Middling, 9·28, and East African G.F., 10·18.

Manchester, January 29th.

Operations throughout the market have again been very restricted, and despite a fair amount of inquiry the sales have not shown any improvement. The attitude of buyers has been somewhat adversely affected by the easier movement in raw material rates, and there is a distinct fear of a further fall in values. Complaints from the weaving towns are increasing and more looms are stopping owing to the scarcity of orders. Only a limited turnover has taken place in cloth for India. Dealers in the bazaars and local shippers are nervous with regard to the political situation. There has not been any development in the offtake for China. Of the minor outlets, South America has been the best, and very little has been done for the Near East and the Continent. Certain special fabrics suitable for the home trade have attracted moderate attention. The depression in the spinning section remains acute. There is some discussion of organised short time, but it is doubtful whether the Masters' Federation will be able to secure adequate support to any proposal. In the meantime the sales in American and Egyptian counts are very poor and stocks are increasing at the mills.

THE WOOL TRADE.

Our Bradford correspondent writes: There are all sorts of rumours regarding Government intervention in Australia and South Africa, but so far nothing very definite has been said in either country. All that is known for certain is that in Durban the wool auctions have been temporarily suspended, while at Port Elizabeth and East London business is practically at a standstill owing to the lack of buying orders. It is known that both in Australia and in South Africa the respective Governments are keeping in close touch with the selling interests, and in view of the present

demoralised state of the market it would occasion no surprise if the authorities decided to take action in order *to stop* the fall in values. This action might take the form of State purchase of the unsold balance of the clips, or the imposing of reserves below which wool would not be allowed to be exported. In general, consumers here and on the Continent are inclined to the view that artificial measures would do more harm than good, the opinion being that as values have fallen to such a low level, there is not much prospect of any further material decline, and it would be better for all concerned to allow the market to find its true basis. When once that basis has been found, it seems certain that prices will take a sharp upward turn, as orders will immediately come on to the market. Meanwhile, all quotations for tops, yarns and by-products are nominal, and business has dwindled in all sections of the industry.

COLONIAL WOOLS.

(From a Correspondent.)

During the past week public and private cables from Australia have contained the welcome information that the drought is completely broken. Even the western areas of New South Wales and far western Queensland have had good falls. The rain has been so bountiful that it will put millions of pounds into the exchequer of the country, and in the case of pastoralists will provide some compensation for the unsatisfactory prices now ruling for wool. There will be a good clip shorn next July and August. The wool sales have continued in London on rather better lines. Home trade and Continental competition has improved somewhat. Withdrawals have been less numerous, and this alone shows that buyers have rather more confidence. The merino and crossbred offerings this week have been very good, and this has no doubt had something to do with the fact that occasionally rather better prices have been paid. Last Tuesday the clothing of the Eddington brand of scoureds sold up to 35d., whilst the bulk of the combing lots sold around 28d. This shows that the home trade can still buy the best wools. Better prices are needed for ordinary scoureds, but it is something to be able to say that fewer lots are being taken in. Speculators' wools present a sorry picture, and serious losses have had to be faced. At the same time reasonable prices have induced the development of a better buying spirit.

HIDE, LEATHER AND ALLIED TRADES.

Market hides remained steady at the auctions held so far this week, but there seems to be a feeling that the limit in value has been reached, at any rate for the time being, and any tendency towards change should be in a downward direction. The recent high prices for calfskins have now begun to recede in the face of larger supplies coming on to the market, and further reductions are expected to take place at the auctions held this week-end. Sheepskins are lower in price, in view of the poor state of the wool market. Only a limited demand has been experienced for foreign hides, and prices are again lower. In the South American market frigorifics are slightly weaker, and the last sales of Argentine ox were on the basis of 8 11/16d., with Montevideo ox selling at 9⅜d. A few sales of Saladeros have been made for shipment, while in dry River Plates the limited business passing has been on the basis of 9½d. for B.A. Americanos, and 5 3/16d. for B.A. Inservibles. Cape hides also are quoted lower, sales of drys having been made at 9½d. and 8½d. for firsts and seconds, and drysalted at 8½d. and 7½d. Most descriptions of other African hides are just about steady at late rates. The Chicago market is cabled as steady, with heavy native steers selling at 16½ cents. Business in sole leather continues satisfactory, and although no bulk business is being placed, the regular day-to-day orders that are received keep most firms moderately occupied, and make for an average turnover. Bends suitable for shoe manufacturing purposes are taken up by this section of the trade as required, and in view of the fact that consumers are rather doubtful as to the strength of the market, their commitments are restricted to the least possible requirements. Steady trading is being done in bends suitable for repairing purposes, and here there is a regular flow of small orders coming to hand every day. Bellies and shoulders are fairly easy to sell all the time, and stocks are kept low. Prices all round are fully maintained, and on some lines in certain tannages where there is a shortage the tendency is for values to harden. In the upper-leather market the greater part of the enquiry is for black and brown glacé kid and willow calf. In some quarters a further slight improvement has been experienced in box calf, but for semi-chrome box sides the call is not good, as most buyers want something at a very low price. Patent leathers have improved slightly, while there is a steady if limited call for most descriptions of reptile leathers. The position of shoe manufacturers continues to improve; more orders have come to hand of late, and although some firms are still compelled to work short time, there is a feeling that business will show further improvement in the near future.

THE TIMBER TRADE.

(From our own Correspondent.)

The past month has been a most anxious one for operators in the European softwood trade. Last year Russia sent double her December, 1927, exports to the United Kingdom; Finland and Sweden sent more than their usual December quantities, and, in all, imports were some 15,850 standards (of 165 cubic feet) over those for December, 1928, and for the year an increase of 186,790

standards. Stocks of battens and scantlings are now of very heavy volume, with demand from dock stocks not quite so good as a year ago, but gradually moving upward. Prices on the whole have weakened considerably, owing to the volume of wood on the market and also to the prospect of large and cheap shipments from Russia next June. The building trade is depressed, owing to seasonal conditions, but it is difficult to understand why timber trade and other operators regard its future so pessimistically. Official statistics point the other way, as costs of buildings for which plans were passed last quarter advanced, compared with the corresponding quarter of 1928, by £1·6 million, of which houses account for more, i.e., £1·9 million, and the cheaper and more abundant supplies of timber to come forward this season must, perforce, stimulate the demand. The real, dominating anxiety in the wood trade of this country is concerning the Soviet timber authorities' decision to have their wood marketed this year through the usual agency channels, and not disposed of in one bulk to a consortium of buyers, as were last year's Russian shipments. Shipments are expected to amount this year to 750,000 standards, against 550,000 in 1929. Some people still hope that some understanding will yet be arrived at between importers and shippers, while others are of opinion that it would be better to leave things as they are, and allow the Russian trade *to function normally*. The delay in forward buying, however, is also creating anxiety in Finland and Sweden, and possibly in Russia, though that country seems to have the whip hand. The hardwood market is moving slowly yet steadily. Much more American lumber arrived last month, but the trade would prefer lighter shipments that would help to strengthen the market while stocks are large and demand disappointing. Fewer mahogany logs arrived in 1929, and prices are now very firm for timber of good dimensions and character. Available Indian teak supplies are still said to be short at producing centres; this and conditions of Empire timber production and marketing generally do not give us any great measure of confidence in the Empire as a principal source of supply. Plywood, of which the imports and consumption are advancing rapidly, must be a strong competitor with the solid woods. Stocks are large, and European mills have orders booked well into this year. It may take many years yet, but the development in the timber-producing countries, and especially the British Empire hardwood-producing countries, will bring it about that instead of heavy logs, planks and boards, timber will reach this and other countries in the distant future mainly in the form of flat sheets of plywood—elimination of all waste, great strength, economy in shiproom. Pitwood imports in December were 50,535 loads (of 50 cubic feet) over December, 1928, receipts, yet for the year showed an increase of but 98,350 loads.

VEGETABLE OILS AND OILSEEDS.

Markets have continued quiet, with very little business passing. Linseed oil has been in fair demand from consumers, and prices have fluctuated slightly, with current value of raw oil for January delivery around £43 10s. per ton naked ex mill, and for February, £41 10s. Cotton oils are in poor demand, and crude Egyptian, ex Hull, lower at £28, with common edible still quoted £31 10s. Other seed oils share the general dullness of the market, and quotations are little changed. In the oilseed section Plate linseed is somewhat lower on the week, but there is little or no disposition to trade nor, in view of the poor demand for oil and cake, for crushers to increase their commitments. Nominal value of Plate on spot, £17 15s., and on passage to Hull, £17 10s., with January-February quoted £17 15s. Shipments of linseed from Argentina are not assuming substantial volume. The quantity on passage to Europe has increased to 154,000 tons, or 24,000 more than a week ago (including Indian, 4,600 tons). Cottonseed remains quiet and is easier. Black Egyptian on passage to Hull reported done at £7 12s. 6d., and for March loading at £7 16s. 3d. A parcel of Bombay cottonseed just arrived at Hull sold at £6 10s., or 20s. below forward prices. Soya beans quiet, and £9 7s. 6d. accepted for January loading to the Continent. Oil cakes and meals are in very disappointing demand.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

Sugar.—The general tone of the market is steady, no change being made in spot quotations, but apart from attending to pressing needs, trade buyers are not interested. Large quantities are available. Cuban authorities leave no stone unturned in order to lift prices, and the 2 cents f.o.b. quoted for 96 per cent. to the U.S.A., in force for a month, will naturally retard business, and which will be governed by quantities of free and "hedge" sugars available on the New York market. There is no improvement in Java kinds. Terminal sections ruled firmer and a fair amount of business resulted. Of raw, March delivery sold 5s. 8¼d. to 6s. 1½d.; May, 7s. 2¼d. and 7s. 3d., combined to 7s. 6d.; August, 7s. 11¼d. to 8s. 2¼d.; December, 8s. 2¼d. to 8s. 4½d. German crystals firmer.

at 10s. 9¾d. f.o.b. Hamburg. Receipts in Cuba of old crop for the week were 26,831 tons, compared with 45 in 1929 and 4,151 in 1928. The receipts of new crop for the week were 68,815 tons, against 199,302 a year ago and 113,462 in 1928. The total receipt of old crop to date amount to 4,326,268 tons, against 4,285,798 last year and 139,859 in 1928. The Cuban exports were: Old crop, 39,400 tons against 15,830 last year; new, 3,627 tons, against 83,326 last year; and the stocks of old crop 115,039, against 37,075 last year and 68,611 in 1928. The stocks of new crop were 64,724 tons, against 349,035 last year and 109,190 in 1928. Central workings, 139 tons, against 157 last year. The stocks of raw sugar in the three chief ports of the United Kingdom for week ending January 25th totalled 248,285 tons, against 161,904 last year. On Thursday spot prices advanced 3d.

COFFEE.—A very firm market continues, all good to fine qualities selling with freedom at mostly dearer rates. Common and medium fully steady.

COCOA.—Spot trade small, but prices steady. Forward positions rather irregular. Accra F/F, February-April, sold 40s. 6d.; March-May, 41s. 3d. f.o.b. Terminal: July sold 45s. 9d. to 45s. 6d.; September, 46s. 6d.

TEA.—Indian auctions during the week amounted to 56,042 packages. Competition was sustained, and fairly well distributed, resulting in a firm market. Good liquoring teas, particularly autumnals were in strong demand. Ceylon sales of 26,959 packages, and there was a generally good demand for finest and commonest descriptions at prices showing no material change. Owing to variation in quality regarding medium and low medium brokens, rates disclosed irregularity, while frequently ¼d. to ¾d. lower. Java sales about steady.

RICE.—This market shows no improvement. Firmness in the finer American varieties is attributable to manipulation by controlling groups. Two Stars Rangoon, spot, London, 14s. 3d., with small sales in February-March at 11s. 9d. c.i.f.; Spanish oiled, February-March sellers, 15s. 9d.; American blue rose from 22s. to 23s. c.i.f.

BEANS.—A dull market generally, but prices steady. Madagascar butters, spot, 40s. to 42s. Parcels per "Eugene Grossos" quoted 28s., per "Clan Macindoe" sold at 28s. 3d.; "Clan Chatton" at 28s.; "Belgrano," 27s. 1½d.; November-December, 26s. 6d.; December-January, 26s.; January-March, 25s. 6d. c.i.f. Ohtenashi, afloat, 20s. 6d.; February-March shipment, 21s. c.i.f. Rangoon haricots, ex store, 12s. to 12s. 6d.; January-February, 11s. 6d.; new crop, March-April, 14s. c.i.f. London. Danubian, hand-picked, spot, 25s.; January-February, 23s. 6d. c.i.f. London.

PEAS.—A quiet and rather featureless market. Japanese, spot, old, 14s. 6d.; new sold at 15s. 6d.; afloat, sellers, 15s. 3d.; January-February, 16s. 1½d.; February-March, 16s. 4½d.; March-April, 16s. 6d. c.i.f. London. Dutch steady, but quiet. Marrowfats, prompt quoted, 19s. to 20s.; small blues, H.P., 13s. to 14s. f.o.b. terms. Calcutta, January-February, 57s.; Karachi nominal c.i.f. Maples quiet. No. 1 New Zealand January, old, 57s. 6d.; new crop, March-April, 60s. Tasmanian, A grade, new, February-March, 67s. c.i.f.

SPICE.—Pepper continued in demand and a firm market prevailed, forward positions being held with reserve. Lampong January-March buyers, 1s. 0½d.; March-May quoted, 1s. 0⅝d.; Muntok, January-March sold 1s. 4¼d.; March-May, 1s. 4½d. to 1s. 5d. London stocks on the week reduced 45 tons regarding black and 107 white; stocks of black now 1,146, against 1,184 last year; and white, 1,366, against 294. Cloves quiet but steady. Sago flour, also tapioca, held for previous prices. Ginger slow. Cochin to arrive, 55s. cwt. c.i.f. Pimento idle.

FRUIT (Dried).—Currants: Market dull. Pyrgos, quoted, 37s. 6d.-38s.; Amalias, 38s. 6d.-40s.; Patras, 40s.-44s.; Gulf, 44s.-48s.; Vostizza, 51s.-63s.; Australian, 37s.-42s. Sultanas in limited demand and common Smyrna only saleable at low rates. Best Australian, however, sell steadily. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-80s.; Greek, 42s.-75s.; Australian, 35s.-52s.; Cape, bleached, 35s.-40s. Dates steady. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s. 9d.-14s. Raisins: Valencia slow of sale. Quarter-boxes, 45s. Figs quiet. Layers, 32s.-40s.; genuine, 30s.-38s.; good average, 25s.-27s.

EVAPORATED FRUITS.—Market continues quiet for most descriptions, but late rates were generally maintained. Plums: Californian, new crop, 30's-40's, 72s. 6d.; 50's-60's, 63s. Apricots: South African, new crop, Royal, 57s. 6d.-117s. 6d.; Australian, 67s. 6d.-77s. 6d. Pears: Californian Lake County, fancy, 90s.; extra, 100s.; Australian, 65s.-85s. Peaches: Californian, choice, 57s. 6d.-62s. 6d.; fancy, 67s. 6d.-72s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-69s.; Canadian, 64s. Almonds steady. Mazagan, 112s. 6d.; Mogador, 107s. 6d.; P.G. Sicily, 125s.; Majorcas, 112s. 6d.-130s.; Bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 75s.; China, bitter, for shipment, 39s. new crop c.i.f.; sweet, spot, 77s. 6d. Hazel kernels: Kerasunde, spot, 155s.; Barcelona, 147s. 6d. New crop French (shelled) walnuts, 145s. ex wharf London.

CANNED GOODS, &c.

CANNED FRUITS.—Market conditions remain steady, but buyers show no disposition to increase purchases. Peaches and apples are inquired for, but apricots move off slowly. New season's prices of Australian fruit are rather dearer for peaches, but apricots are about on a par with last year. Singapore pines quiet of sale both spot and forward, but other descriptions firmly held. Italian tomatoes sell slowly on about former terms.

CANNED FISH.—Salmon: Market quiet and prices barely steady. Alaska red talls, quoted, 48s.-50s.; pink talls, 25s.-26s. 6d.; and halves, 34s.-36s. Japanese crab firm and fancy qualities quoted 97s. 6d.-102s. 6d., with lower grades sparingly offered for shipment. Lobsters steady, halves ranging from 135s.-140s. Sardines in moderate demand and tone steady. Portuguese clubs, quarters, 4s.; 1-lb., 12s. per dozen tins.

CANNED MEATS.—Market firm and ox tongues tend dearer. Lunch tongues in request for both large and small tins, and Danish somewhat reservedly offered at full rates. Large contracts are reported in cooked boned hams for forward delivery.

CONDENSED MILK AND MILK POWDERS.—A good demand continues at present attractive prices. Dutch condensed milk: Full cream, sweetened, 5-cwt. casks, 37s.; machine-skimmed ditto, 22s. 6d.; full cream, sweetened, 56-lb. drums, two in a crate, 52s. 6d. English condensed milk: Full cream, sweetened, 5-cwt. casks, 40s.; machine-skimmed ditto, 23s. 9d. Full cream milk powders: 26 per cent. butterfat, English roller process, 26 per cent. butterfat, 2 by 56-lb. tins, crated, 85s.; Dutch ditto, 1-cwt. cases, 69s.; ditto spray, 2 by 56-lb. tins, crated, 95s. Dutch machine-skimmed powders: Roller process, 1-cwt. cases, 26s. 6d.; spray, 2 by 56-lb tins, crated, 39s.; ditto, 1-cwt. cases, 37s. 6d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are net, ex store London/Hull or Goole, and cover prompt or gradual delivery to end of April, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. On the grocery side: Full-cream, sweetened, 19s. 6d.; machine-skimmed, sweetened, 9s. 3d. per case, usual packing.

HONEY.—Market dull, especially for common grades. Jamaica, white, 56s.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s. Fine white Cuban, 49s.; San Domingo, good, 46s.; manufacturing, 41s. Californian, white, 55s.; light amber, 50s. New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d.. Ukrainian, light ambers, 45s.-49s. 6d.; whites, 49s. 6d.-52s. 6d. per cwt.

RUBBER.

Business was again confined to a narrow compass, the market just now being dull and featureless. Standard sheet, spot and February sold, 7¼d. to 7⅛d.; March, 7 3/16d.-7¼d.; April-June, 7 1/16d.; July-September, 8 3/16d.; October-December, 8 1/16d. to 8 7/16d. London stocks increased 377 tons on the week, landings being 1,853; deliveries, 1,476; stocks, 59,984, against 24,424 last year. Liverpool stocks 548 tons higher on the week; landings, 746; deliveries, 198; stocks, 20,062, against 3,824 last year.

GENERAL.

JUTE.—General quietness again characterised this market and prices proved the turn weaker. Firsts, January-February, Hamburg,

THE MONEY MARKET.

FOUR-AND-A-HALF PER CENT.

THURSDAY'S reduction in Bank rate, though not entirely unexpected, came as somewhat of a surprise in view of the week's gold losses to Germany and the growing stringency of money in London. The week has witnessed heavy revenue collections, with the result that, on Tues-

day and Wednesday, money became very scarce, and, while resort to the Bank was avoided, rates for new money ran in some cases as high as 5 per cent. The following day the Bank gave some relief by buying March bills at 4½ per cent., but more revenue money was taken off the market, and so a certain amount had to be borrowed at the Bank. Discount rates remained low, and, before the reduction in Bank rate, three months' bills were quoted at barely 3⅞ per cent., while, on Thursday afternoon, after the reduction, the rate firmed up to 3 15/16 per cent. Treasury bill maturities again exceeded issues by £15,000,000, and there was a general Continental demand for bills. According to one report, however, the Continental demand is beginning to show signs of falling away, and, with the shortage of money in London, a rise in discount rates is not impossible.

* * * *

The week's gold movements were unusually interesting. A further £400,000 was set aside under ear-mark by the Bank, probably upon Argentine account, and if so, this gold will not be released for several months. The main event of the week was the arrival of approximately £2,000,000 of the Spanish gold. £1,000,000 of this was sold direct to the Bank, but the balance was offered in the market, part of it on Tuesday with £834,000 of Cape gold, and the remainder on Wednesday. On both days, Germany bought all the gold on offer after satisfying the needs of India and the trade, 84s. 10½d. being paid on Tuesday, and 84s. 11d. on the following day. Lately the Bank of England has refrained from bidding for gold at more than its statutory buying price. There is something to be said for letting the gold market operate under natural conditions, so that everyone can see the directions in which gold flows.

* * * *

Probably one of the chief factors that influenced the Bank in its decision to reduce its rate was the reduction made in the French and German rates during the preceding week. The fall in the Banque de France's rate from 3½ to 3 per cent., is of little practical significance in view of the scarcity of Paris bills and the undeveloped state of the Paris market. It is, perhaps, intended more as a demonstration that France has all the gold and money she needs, and that it was time to stimulate French investment abroad. The Reichsbank reduction to 6 per cent. was not unexpected. There have recently been heavy transfers of foreign, especially French, funds to Germany, and these account not only for Germany's recent gold imports, but also for the ability of the Reichsbank to reduce its rate.

	Jan. 16, 1930.	Jan. 23, 1930.	Jan. 30, 1930.	Feb. 6, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5	5	5	4½	5 (Feb. 6, '30)
Banks' Deposit Rate	3	3	3	2½	3 (Feb. 6, '30)
Discount ⎧ Call	3	3	3	2½	3 (Feb. 6, '30)
Houses ⎩ Notice	3½	3½	3½	2½	3½ (Feb.6,'30)
Market rate (3 months' bills)	4 1/16–⅛	3⅞–15/16	3⅞	3 15/16	...

The Bank return reflects mainly the week's revenue influx. Public deposits have risen by £8,701,000, while bankers' deposits have fallen by £13,213,000. These figures illustrate concisely the stringency in evidence in the market this week. Government Securities are down by £4,500,000, but as the net gold influx of £784,000 was almost completely neutralised by an expansion of £673,000 in the note circulation, the reserve is only higher by £111,000.

NEW YORK.

Our New York correspondent cables:—The New York Reserve Bank has reduced its discount rate to 4 per cent. Federal Reserve statements disclose only minor changes, the System's circulation and discounts showing a moderate decline, and bill purchases a moderate increase. Ratios are little changed, and changes in the gold position are also small, with net imports $1,500,000 on the week and an increase of $2 million earmarked. Japanese gold, however, is still on the way. Bradstreet' and Dun's indices of commodity prices show declines of 1.4 per cent. and 1.1 per cent., respectively, in January. Bradstreet's is 4.5 per cent. down since December 1st, and 11.3 per cent. lower than a year ago. Considerable attention has been attracted by the recent marked weakness in wheat and cotton prices. It is realised that these are part of a world-wide decline in the values of raw materials and foodstuffs.

THE STOCK MARKETS.

Interest in the Stock Markets was concentrated mainly on investment securities, more speculative stocks being again conspicuously dull. Gilt-edged were firm before and after the reduction in Bank rate, while Indian Loans continued their recovery. Home Rails were an idle market. Apart from sporadic activity in a narrow range of international stocks, the undertone of the Miscellaneous market remained dull, though a modest rally ensued on the change in Bank rate. Tea shares were in increased demand, and buying of a semi-investment character was intermittently in progress in the oil share market. Rhodesians maintained their activity of the previous week, though the rise in prices tended in some instances to exaggerate the true volume of business.

THE COMMODITY MARKETS.

There is little, if any, improvement in this week's reports. Export trade in coal is falling off without any compensating improvement in the home demand. Little change has occurred in the iron and steel trades, but there is some increase in foreign enquiry for certain classes of steel. Declining cotton prices are adding to the difficulties of Lancashire trade. Wool is being more freely bought, and this movement coincides with the adoption by sellers of a temporary policy of organised restriction. Severe depression is prevalent in the jute trade. Hides are a shade easier, but the leather trades remain active. Vegetable oils and oilseeds are a very poor market. Wheat is again a few points lower.

THE FOREIGN EXCHANGES.

The foreign exchange market was rather dull last week, with sterling inclined to be weak against the dollar and certain Continental currencies, while the peseta and the South American exchanges again experienced considerable fluctuations. Thursday's Bank rate reduction had no conspicuous effect in the market. The New York rate fell from 4.86 9/16 to 4.86 11/32. Montreal also went against us, gaining ½ at 4.91⅛. On the reduction in French Bank rate, Paris fell from 123.92 to 124. Brussels was considerably better at 34.90, and Milan gained eight points at 92.90. Madrid, after spasmodic movements, lost 75 points at 37.00. Amsterdam was uncertain at 12.11⅜. Berlin gained ¼ on balance at 20.36½. Switzerland improved from 25.20¾ to 25.19½ after touching 25.21½. Stockholm gained ½ at 18.12¼, but Copenhagen was ¼ worse at 18.19. Constantinople lost 20 points at 10.50. Of the South American exchanges, Rio was unchanged after considerable hesitation at 5⅝d. Buenos Aires was erratic and very weak at 42¼d., a loss of 2¼d. in the week. Montevideo gained ¼d. at 45d. The premiums for 90 days' Lima on London dropped from 23¼ per cent. to 22⅜ per cent. In the Far East the rupee was firmer at 1.5 9/64d. In the futures market dollars went from 3/64 premium to par for either period. Paris was more wanted at 6 and 15 centimes premium against 4½ and 8 centimes premium last week. Brussels went from ½ and 1½ centimes premium to ½ discount for both periods. The silver market twice established new record low levels, but recovered a little at the close with spot at 20d. and forward at 19⅞d., a loss of ⅜d. during the week in each case. The Chinese silver exchanges fell away in sympathy, Hong Kong losing ⅞d. at 1s. 7½d. and Shanghai ⅝d. at 1s. 11¾d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's-Economist Services, 6 Bouverie Street, London, E.C. 4.

MR BALDWIN'S PANACEA.

THE widespread pessimism with regard to the economic outlook which is so fashionable at the moment, the discontent in the Conservative ranks at the lack of vigorous leadership, and the open revolt of the Empire Free Traders, combined to focus particular attention on the long-awaited pronouncement on policy which Mr. Baldwin made at the Coliseum last Wednesday. The meeting appears to have been an unenthusiastic affair, and the ex-Prime Minister only showed a few glimpses of his fighting form in the criticisms of the Government with which he opened. No doubt any Opposition leader in his place would have attributed to the Government the whole of the deterioration in employment—caused in part by the American slump and the fall in world prices—which has occurred in the nine months since the speaker left office, and like him might have used the slight seasonal hardening of the cost-of-living index as a stick to beat his opponents. Indeed, we would agree that to some extent, though in nothing like the measure suggested by Mr Baldwin, the Labour Party's lack of preparation and the uncertainty of their policy since taking office have been factors in the economic situation. But it was on the positive side that the country had been waiting for Mr Baldwin to offer guidance; and this part of his speech resolved itself substantially into a demand for a free hand to introduce Protection, subject to the important proviso that there should be no food taxes.

The argument used to support this claim was particularly interesting. A week or two ago, in discussing the discordant policies of Lords Rothermere and Beaverbrook, one of whom wants food taxes and free competition between Empire industries, and the other high protection for British industries, we observed that to complete the confusion it only required a third party to come forward with the proposal to set up a fighting tariff, which, of course, would cease to protect if by any chance it succeeded in lowering other people's defences. We hardly expected Mr Baldwin to oblige so quickly, but that is what he has done. Throughout the whole of his exposition on the subject Mr Baldwin roused the patriotic fervour of his audience by using the language of warfare. We are to arm ourselves with the modern artillery of a tariff; we have been engaged in target practice with our existing duties; let us equip ourselves with all the machinery of economic war.

Mr Baldwin demands a bargaining weapon. The experience of other countries has, it is true, shown it to be a dismal failure as a means of reducing trade barriers, and Mr Baldwin omitted to mention that this country "shackled" (an odd word to use in describing freedom to buy and sell) by our present fiscal system, has succeeded in getting most-favoured-nation treatment all over the world. But while a bargaining tariff is an intelligible idea which appeals to those who think that competitive armaments make for peace, it is a curious confusion of thought to mix it up with "safeguarding," and to regard such duties as an assistance in negotiating and in drawing up commercial treaties.

The fact of the matter is that the McKenna and safeguarding duties have been the great difficulty which our negotiators have had to overcome in commercial treaty discussions, as, for example, in the Anglo-German negotiations of a few years ago. The conception that safeguarding duties are the minimum rates necessary for the preservation of an essential industry, and the method of imposing them one by one by special inclusion in the Finance Bill, make it impossible either in theory or in practice for our negotiators to use them for bargaining purposes. The doctrine of the famous White Paper under which these duties are imposed, like that of the American tariff, is a purely protectionist one, and in both cases the resulting duties can never be used for purposes of discrimination or bargaining. But perhaps, after all, Mr Baldwin was really thinking not of negotiation but of retaliation, a policy which starts with irritation at other people's tariffs and ends—*vide* Lord Rothermere—in high protection and an attempt to find consolation in the home market. Mr Baldwin's policy, in short, is a free hand to introduce protection under the absurd and haphazard plan of considering the case of each industry separately and without reference to the economic conditions of the country as a whole.

In his desire to regain freedom of action to extend protection without having to encounter the fatal objection of taxing food, Mr Baldwin has definitely thrown over the Empire Free Traders. It is true that he did not mention this plan in so many words, but he pointed out that the fiscal system of the countries of the Empire has radically changed since the days of Mr Joseph Chamberlain's so-called Colonial Offer in 1903. He was not in the least alarmed at the growth of industries in the Dominions, and he had not the slightest intention of interfering with the fiscal autonomy of either the Dominions or India. One day, perhaps, the Empire might become a unity in the sense that the United States is a unit within a single tariff. But that is in the distant future, and in the meantime the only thing to do was to adhere to the mutual preferences which already exist.

But if he will not have Empire Free Trade, neither will he have the tariff truce, for this idea is altogether at variance with his conception of adding to our tariff for the purpose of using it as a means of forcing our way into other people's markets. The man who speaks the language of economic war naturally finds himself up against the protagonist of international agreement and economic peace. It is, however, important to call attention to the fact that Mr Baldwin and his followers, who are waging war against the proposal that will be considered in Geneva on February 17th, speak as though the object of this conference were to stabilise tariffs. It is nothing of the kind. Those responsible for the conference have repeated time and again that the truce is merely a first step to give the necessary time for the negotiation of positive measures designed to remove trade obstructions. Indeed, provision for this purpose is made in the draft convention which will be discussed. The key sentence of the report of the World Economic Conference was that "the time has come to put an end to the increase in tariffs and to move in the opposite direction." The present conference is definitely designed to carry out this programme. The pity of it is that Mr Baldwin did not take the opportunity to use the great influence of this country two years ago to press, as Mr Graham did in September last, for action on these lines.

Amid a good deal that is neither particularly new nor helpful, Mr Baldwin's one contribution, designed no doubt to outflank the Empire Free Traders, was the suggestion that efforts which are now being made to rationalise our industries should be extended and attempted on an Imperial scale. We think this suggestion is thoroughly sound so far as it goes. But it must be subject to a word of caution, that Imperial agreements are not a real alternative to international agreements, and, if they were, might give rise to many dangers. Subject to this qualification, the fostering of Imperial trade is a matter of very great importance, and one of the most useful tasks to which the Economic Advisory Council can turn its attention is to explore the possibilities in this connection before the meeting of the Imperial Conference in the autumn.

With the exception, however, of this modest suggestion, there was nothing in Mr Baldwin's speech with regard either to fiscal policy or any other topic that was not contained in his election programme last May. At a time when national economic policy is in the making, it is regrettable that the Conservative Leader, apart from turning down the unworkable, but politically dangerous, proposals of Lord Beaverbrook, should have so little fresh to contribute. The party's newly-established Research Department must get to work with vigour if Conservatism is to pull its weight in public affairs.

THE WEST ON TRIAL.

THE manner of living which is commonly described as Western Civilisation is on its trial to-day as never before. The social conflicts of Europe and North America are themselves a challenge to that civilisation and a proof that, even within its native home, certain aspects of it are not regarded without misgiving. Yet such doubts have hardly diminished the innocent confidence with which it has been exported wholesale to Asia and Africa; and it is when it is offered to, or imposed upon, non-European peoples that the true test of that civilisation is witnessed. What will be its effect upon the uncounted millions of the East? Will they reject it disdainfully as an alien growth, preferring their own immemorial usages? Will they accept it wholly and passively, force their manners and institutions into our ready-made forms, and become an indistinguishable part of the civilisation which has already conquered three continents? Or will they adopt such parts of it as seem compatible with their own peculiar heritage? And, if so, will the resultant change be for the better or the worse?

This is the great question which Professor Toynbee asks in the latest volume of his annual survey of world history.* There are few men living more competent to answer it; for those who possess a more detailed and intimate first-hand knowledge of the East are seldom endowed with the amazing breadth of historical knowledge which is Professor Toynbee's, and which alone gives the essential requisite of proportion. In this book he carries up to the end of 1928 the general sketch of the Islamic world which he gave in an earlier volume of the same series, and also includes a narrative of events in China during 1928. That portion of the book which deals with European affairs and with those subjects which, while nominally "world affairs," are, in fact, almost exclusively concerned with the relations of the white races among themselves, is devoted, significantly enough, mainly to the questions of armaments and of the prevention of war.

The main sections of the work show the East face to face with its great problem, and, for the moment, painfully uncertain as to how it shall be answered. One thing is clear: the East has ceased altogether to be "changeless," unless, perhaps, in Tibet. Everywhere else it is reacting violently, in some cases in positive fashion, in others in negative, to the "stimulus or virus of Western civilisation." The virus has affected some parts more strongly than others, and its final effects have not anywhere been reached. Thus, the whole East is passing through a period of unexampled transition, but with unequal rapidity; and the first and, so far, almost the only positive result has been to shatter very completely, at least for a time, what unity it formerly possessed. To take the countries of Islam alone, it would be difficult to-day to find a formula embracing Turk and Arab, Persian and Afghan. Only the future will show whether all these nations will develop ultimately along the same lines, or whether the divergencies will increase still further.

Turkey has already deliberately and effectively cut herself off from the main body of Islam. She has proclaimed herself a republic; abolished the Caliphate; disendowed and disestablished established religious institutions; and even turned the weight of ungentle Governmental authority against such outward forms as the national dress and the Arabic alphabet. The substitutes which she has adopted have been in most cases the products of the West: the Latin alphabet, the tall hat, the Parliament. Yet this enormous change, which has been effected with remarkably little opposition, has been carried through in no spirit of subservience towards the West, but rather with a *farouche* nationalism. It is well to remember that the Turks, natives of the Central Asiatic Highlands, are at bottom as strange to Islam as they are to Christ. Their national culture is a thing different from either. Unfortunately, it is also very rudimentary, and Turkey will not find it easy to build up a pure national civilisation worthy, by any standards, of the name.

Turkey has, however, at least achieved what the East seems agreed to regard as the first step towards ultimate salvation. She is completely master in her own house. Although what she makes of her destiny may in some respects be a poor thing, there can be little doubt that those classes in Egypt and Syria who are sufficiently educated to react to the spirit of the age envy her untrammelled independence. One effect of the spread of modern ideas has been to awaken throughout the Middle and Far East a strong political self-consciousness; and, so long as that self-consciousness feels itself limited by foreign control, it has little energy to spare for other matters. The more effective the control, the more violent the reaction. Thus we see Egypt, which enjoys sovereignty, but a somewhat special and limited form of it, occupied almost entirely with the still unsolved problem of Anglo-Egyptian relations. The negotiations, which Professor Toynbee describes in considerable detail, are Parliamentary and diplomatic, but in Syria, a mandated area administered by France, the period under review includes the last echoes of an armed revolt. In each case, however, internal questions have had to give way to the primary problem of national independence.

Both Egypt and Syria have perforce become well acquainted with the external policy of Western Civilisation. The struggle for independence, with its stimulation of national consciousness, has, in Professor Toynbee's opinion, had the effect in both countries of reinforcing their sense of solidarity with the other Arabic-speaking nations, and has diminished the likelihood of their finally losing touch with Islamic thought; but they cannot emerge from their period of tutelage unchanged. One may hope that they will end by combining the best of their own civilisations with the best which Europe has to offer. At present their future is hardly less undecided than that of Turkey.

Persia, on the other hand—another independent State—is managing in an unobtrusive way to get something of the best of both worlds. Her position has greatly improved in recent years. The Capitulations have been abolished, and with them the last vestiges of Western control, to which Persia had, until recently, been subjected. To a large extent she seems to have fought the Western Powers with her own weapons, and it is interesting to note that, like other Middle Eastern States, she has been attracted by the Western Powers in inverse ratio to the aggressiveness and imperialism displayed by the latter. The day clearly seems to be past when a European Power can say to an Asiatic (as was said in a different connection): "We will be your big brother, whether you like it or not." The Shah has consolidated his authority within his country, and has introduced a number of secular reforms on internal lines. Professor Toynbee thinks it possible that Persia, too, will ultimately be lost to Islam; but hitherto the Shah has proceeded cautiously, and has avoided incurring the hostility of organised religion in his country. In other respects, too, he has proved more circumspect than his fellow dictator in Turkey; for, while imposing upon his male subjects the use of round hats with peaks, he has refrained from dictating changes of dress to the Persian women.

At the other end of the pole stand Afghanistan and the Wahhabis. Everybody will remember the unfortunate end of King Amanullah's premature attempts to force Westernisation on his subjects. It is clear that, for the moment at least, Afghanistan will have none of the West. The Wahhabi chieftains have been equally obdurate in their conservatism. Demands put forward by two of them to Ibn Saud in 1928 included the abolition of Customs houses, hospitals, telephones, post offices and motor cars. Professor Toynbee's story closes with the consolidation of Ibn Saud's position by a series of victories over his more recalcitrant chiefs a year ago; and later news foreshadows the establishment of wireless stations throughout Najd-Hijaz and a service of electric trams in Mecca.

Thus it would seem that the onward march of, at least, those mechanical devices for which Western civilisation is conspicuous, is likely to prove irresistible. Half of the great problem can receive but one answer, in the last end.

The other half of the question remains problematical indeed. What use will the East make of such Western institutions as it adopts? It is not without significance that more than one Asiatic country has hastened to take over what is perhaps the most unlovely of all Western products—its headgear. It is an old story how, in North America, the very first innovations to which the White man introduced the Red—firearms and rum—were the instruments of the latter's destruction. A later generation is at least partly aware of the dangers for all the world if this mistake is repeated, and some effort has been made to prevent the wholesale exportation to China of arms which would probably have turned the story of that nation into a tale of sheer destruction. But Europe seems also to be awakening to a further truth: that the very advance of technical skill has made it no longer possible to withhold from the East what it wishes to take. If, then, the dangers attendant on Western progress are to be removed, they must be eliminated, first of all, in the West itself. For this reason, the efforts of Europe and America to limit and reduce armaments, and to abolish war as an instrument of national policy, to which the first part of Professor Toynbee's work is devoted, are, when seen aright, only another aspect of the great world processes which are bringing about the awakening of the Middle East.

THE FALL OF PRICES.

IN last week's issue of the *Economist* we commented on the references made by Mr J. M. Keynes in a recent speech to the problems and difficulties caused by falling prices. The gravity of such problems is underlined by the further severe decline in the value of many commodities which occurred last month. As will be seen from the following table, our index number of wholesale prices at January 31, 1930, stood at a level 14 per cent. lower than the average for 1927, and 9.1 per cent. below that for the corresponding date a year ago. The fall on the month amounted to 2.5 per cent.

AVERAGE, 1927 = 100.

End of—	Jan. 1929.	October 1929.	Nov. 1929.	Dec. 1929.	Jan. 1930.
Cereals and meat	96·7	94·4	90·6	92·3	89·2
Other foods	89·4	85·0	84·0	83·6	83·1
Textiles	101·3	85·2	83·6	82·6	76·7
Minerals	94·8	94·6	92·4	92·4	92·6
Miscellaneous	91·2	90·7	89·8	89·2	88·0
Complete Index	94·7	90·2	88·3	88·3	86·1

Of the five groups into which our index number is divided, textiles took the lead in last month's downward movement with a fall of over 7 per cent., which brought the figure for this class of commodities to a level 44 per cent. below its average for 1924. Cereals and meat followed with a decline of 3.3 per cent., and the "miscellaneous" group was 1.3 per cent. lower. Minerals and "other foods" on balance showed little change. The month's fluctuations in the price of each of the 58 commodities embraced in the index are shown in the next table. Increases in the price of seven articles—notably imported mutton, bacon, tea, coffee and copper—ranging up to 5.9 per cent. in the last-named—were outweighed by decreases in 29 prices, whereof those for Canadian wheat, rice, maize, beef, American cotton, wool, rubber, and sulphate of ammonia were prominent examples.

In view of the heavy August carry-overs, to which we drew attention a week ago, January's break of 7s. per qr. in imported wheat prices, after their comparative stability during the last four months of 1929, is significant, and suggests that the maintenance of the North American producers' plan of withholding stocks from the market may become a matter of difficulty, and that the Canadian "pools" may be faced with grave losses. Indeed, the history of wheat in recent months illustrates once again in a very forceful manner the insuperable difficulty of trying to stabilise the supply of a commodity which is dependent on the weather, and is produced under the most varied conditions in all parts of the world, and the boomerang effect upon prices which such efforts frequently produce. As the following table shows, other cereals have fallen further in price than wheat, in comparison with a year ago (Argentine maize at the end of January was quoted at 27s. per qr., landed, against 44s. 9d. on the corresponding date in 1929) and wheat, whose price was 48s. 6d. per qr. for No. 2 Manitoba on January 31 (against 50s. 9d. a year ago) is in a somewhat precarious situation, since Europe is still well supplied and Indian crop prospects appear favourable.

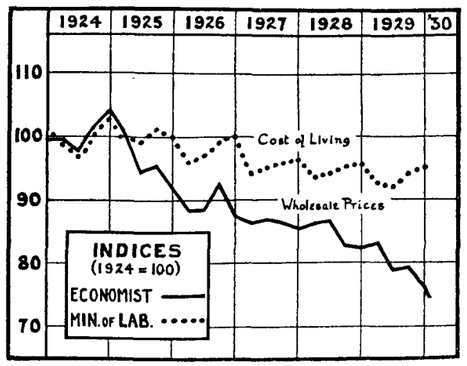
On producers the reactions of the fall, not only in cereal prices, but in those of cotton, wool, flax and jute, are bound to be seriously adverse. The slump in grain values, besides causing an acute depression in cargo shipping, has already led to difficulties with regard to Argentina's foreign exchange; unremunerative cotton prices are prompting demands in the Southern States for systematic reduction of acreage; and, as our New Zealand correspondent points out in a later column, the catastrophic drop in revenue from sales of wool will have undoubted repercussions on the importing capacity of the chief wool-producing countries. Wool tops, 64's, were quoted at the end of January at 27d., against 31d. a month ago and 47d. at this time last year. Meetings of wool growers' associations in both Australia and South Africa are being held to consider ways and means of dealing with the situation; and the producers of this commodity seem likely to join the growers of wheat, coffee, tea and rubber and the producers of tin and copper in the movement for one form or another of limitation of sales. As a significant commentary, however, on the effectiveness of such a movement, even temporarily (its disadvantages in the

long run are beyond dispute), it may be pointed out that the section of commodities whose prices, as shown above, have been the firmest during the past year, is the coal, iron and steel group, in which restriction has not been an appreciable factor.

So far as this country is concerned, apart from the fact that our exporting manufacturers will be faced with lessened purchasing power in the hands of primary producers overseas, the problem of falling wholesale prices is complicated by the fact that the cost of living (intimately connected, as it is, with wage-rates) has not proportionately decreased. In the accompanying diagram we have plotted the course of our index number and of the Ministry of Labour's index of the cost of living, the mean figure for the year 1924 being taken as 100 in each case. The growing divergence between the two curves is remarkable, the two major declines in wholesale prices, in January, 1925—March, 1926, and in July, 1928—January, 1930, having been reflected in the cost of living to a comparatively trifling extent. In the six years covered by the diagram the aggregate fall in wholesale prices amounted to approximately 24 per cent., as compared with a drop of only 6.2 per cent. in the cost of living figure.

To some extent this discrepancy is accounted for by the fact that materials, which have greater weight in the wholesale index, have cheapened more than foodstuffs,



but since the beginning of 1925 wholesale food values have themselves declined to a far greater extent than retail food prices. We show below the annual movements on balance of the Ministry of Labour's index of retail food costs and of the mean (" weighted " in the proportion of 13 :9) of the two food groups of the *Economist's* wholesale price index :—

Movement in	Wholesale Food. %	Retail Food. %
1925	− 9·3	− 3·9
1926	− 3·0	− 1·2
1927	− 1·3	− 4·1
1928	− 3·6	− 1·9
1929	− 6·2	− 1·3
Aggregate	−24·6	−11·8

Differences in the composition of the two indices preclude exact comparison, but the divergences in rate of fall are suggestively great.

In the final table we give the latest figures, in comparison with those for earlier periods, of our index number converted to a percentage of the average for 1913:—

AVERAGE 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168·5	215·8	214·7	149·3	122·6	166·2
,, 1925	168·4	204·2	194·6	139·8	126·2	160·9

End Jan., 1929	142·7	180·8	159·0	118·6	105·9	136·1
,, Dec., 1929	136·2	169·1	129·6	115·6	103·5	126·9
,, Jan., 1930	131·6	168·0	120·4	115·8	102·1	123·7

In 1925, few economists or traders would have ventured the prophecy that within five years prices would have fallen to a level less than 24 per cent. above that of the last pre-war year. To describe the movement, in Mr Keynes' words, as " a world-wide disaster " may be to overstate slightly the gravity of the consequential reactions on aggregate purchasing power, since producers' losses must in the long run be counterbalanced to some extent by gains in the consuming power of those dependent on manufacture for livelihood. But though it is reasonable to expect the attainment eventually of stability (it is difficult, as yet, to foresee at what level), there is no question that the present slump of prices, which reflects a deep-seated maladjustment of supply and demand arising from many causes and intensified by tariff barriers and other protective artifices, augurs ill for the immediate prospects of world trade, while losses on manufacturers' stocks must add to difficulties existing in many industries.

THE TIMBER TRADE IN 1929.

(BY A CORRESPONDENT.)

THE timber trade will inevitably regard 1929 as a memorable year. It had barely begun when there took place an event of prime importance. This was the formation, in January, of a group to take over the buying of the whole of the Russian exports of red and white sawn wood to this country, which is, of course, not only Russia's best customer, but the largest buyer in the world of the timbers of Sweden, Finland and other countries. This group—which operated under the name of Russian Softwood Import, Ltd.—consisted, after one or two modifications, of 16 timber-importing firms, with both London and the provinces well represented on the board of directors. Financially, these firms were among the strongest in the trade and well able to incur the not inconsiderable element of risk attaching to an experiment of this kind, for an experiment it was. The syndicate, as the group came to be commonly designated, bought the Russian stocks at guaranteed prices. The quantity involved was about 550,000 standards, of an estimated value of £8,000,000, and the deal was the largest in the annals of the British timber trade.

In order that importers outside the scheme should not reap benefit, minimum reselling prices—a revolutionary procedure in the conservative timber trade—were fixed and guaranteed throughout the year, and that all concerned, whether in the syndicate or not, have honoured their pledges, redounds to the credit of the trade. Moreover, the course of events has justified the inaugurators of the new method of central buying, which even its opponents, much as they disliked it, have to admit has been successful. By relieving the market of the threat of a sudden autumn fall in shippers' prices, a regular occurrence of previous years, the scheme brought stability to the market at a critical juncture. At first the project was severely criticised in many quarters, but there was general agreement that, provided the guarantees were fulfilled, a recurrence of the disastrous methods adopted by the Russians in recent years would be averted. One result has been a largely-increased arrival of Soviet timber in Great Britain, namely, 550,000 stardards, compared with 380,000 standards in 1928.

With the removal of the Russian bogey of former years, trading conditions in 1929 became favourable. There has been no great price fluctuation nor any particularly large business. Quotations for Scandinavian timber fell in the spring and again in the autumn, but the import cost has been on a fairly regular basis, while consumption was heavy, much in excess of that in 1928. Further, stocks carried over from 1928 were considerably less than in the preceding twelvemonth, so that importers were not hampered by large holdings of landed goods; and it was evident that they had learnt the lesson taught by 1927, when there was serious over-import. Another favourable factor was the fact that the extremely severe weather experienced in Northern Europe in February and March delayed winter shipments from those Baltic ports which are usually kept open all the year round, thereby enabling stockholders in Great Britain to hold out for the value of their wood.

Importers did not buy as early as usual, for they preferred to wait until the Russian stock notes had been issued. This delayed the bulk of the purchases until the early summer. Meantime, Swedish and Finnish shippers, less dependent on the British market than Russia, effected pretty good sales to Germany, Holland, France and Belgium. Scandinavian exporters had to lower their prices in order to be able to compete with the Soviet timber, though they held out as long as possible. Their f.o.b. values declined by about 10s. per standard on the opening prices; leading Finnish stocks fell to a level of £13 per standard basis for 7 in., and £12 10s. for 2 in. by 4 in., a popular dimension, and Swedish unsorted grade was about £14 10s. basis for 7 in. f.o.b. For both Swedish and Finnish fifth quality a big demand developed, especially for the former variety, and the prices attracted numerous new buyers. As this wood was especially useful for building-trade requirements, a large sale was conducted in the resale of bills of lading on c.i.f. terms.

On the whole, the spot market has been pretty steady throughout, and it was only in the last few weeks that signs of weakness were displayed. At the beginning of 1929, flooring were the reverse of strong. Large stocks were held in the London area, and from the usual liner ports of South Sweden and Norway the basis price was £15 10s. for 6 in., c.i.f. For April/May delivery, Finnish wood was sold at £15 to £15 5s. basis for 6 in., c.i.f. London, and though prime grade Swedish-planed goods were sold at a higher figure, the lower price quoted for Finnish wood encouraged buyers to place their contracts with Finland. Floorings more or less maintained their prices until the last few weeks, when they dropped appreciably—nearly 10s. per standard. Slatings and certain sizes in sawn laths have been weak owing to overproduction, but 2 by 7, 8 and 9 in. and 2½ by 7 in. enhanced their values. Until heavy imports in November caused a reduction in landed figures, 2 by 4 in. were strong. Traders in poles and putlogs also report that the market was good in spite of an increase in the number of shippers.

A disturbing feature of the season was the rapid rise in freights. In the first six months chartering market conditions and rates were considerably firmer and higher than in the second half. From the Baltic, charterers whose requirements for early loading were quite modest, succeeded in securing cheap tonnage. Props charterers were the first to come into the market, and in January took up tonnage at 43s. from South Finland. Soon afterwards 39s. 6d. was paid from Ryovaliniemi for first open water. In April and May the enquiry increased considerably, and rates steadily advanced, while in June a further advance was chronicled, owners obtaining 57s. 6d. from Leningrad to Boston and 52s. 6d. from Kemi to London, still higher figures naturally having to be conceded by South and West Coast importers. Extraordinarily high rates were asked, and paid, from Leningrad, a factor which affected other sections of the freight market. These substantial increases were due to the operations of the Russian shippers, for when their shipments began they secured almost all the available vessels able to transport from 750 to 1,250 standards, with a resultant scarcity of boats. Increased coal shipments also affected the supply of tonnage, and Swedish and Finnish exporters, selling at f.o.b. prices, were obliged to adjust quotations to counterbalance higher freights, thus reducing their profit margin materially.

Although some improvement was shown on the previous year, disappointment is felt in hardwood circles at the restricted trade done. At no time was there any real activity in the demand. A noteworthy feature was the continued limitation in the use of mahogany, for while the superior grades were still in request the poorer qualities were only slowly absorbed, owing to the competition of substitutes and other hardwoods. In spite of this competition, however, prices hardened, and this is also true of teak, for which shippers' prices remain very firm.

In plywood and veneers, trade fluctuated remarkably. Prices soared in the first six months, as demand was exceptionally good, but about June consumption began to decline seriously, until it reached an unusually low level in autumn, for no particular reason beyond a general falling away in trading throughout the country. Stocks at the end of December showed a heavy increase on the corresponding month in 1928, and in spite of the big demand from January to June the year can scarcely be called altogether satisfactory. The after-effects of the fall in prices will affect business in 1930 unless unforeseen factors arise.

From the statistics below, which are taken from the Board of Trade Returns, it will be seen that the total wood imports last year were up on 1928 by about £3½ million, though well below the figure of 1927:—

It is extremely difficult to write of the prospects of 1930. Until the position in connection with the Russian stocks is cleared up, which may not be for several weeks yet, the outlook will remain obscure. The present *impasse* is holding up buying generally, although it is understood that some of the smaller importers have placed with agents a few contracts for moderate quantities of Soviet timber. Fortunately consumption has exhibited signs of expansion, and provided it continues to be good during the spring a steady level of values should be maintained. It seems to be generally agreed, though reluctantly in some quarters, that some form of group purchasing of Russian wood is desirable, and with this end in view a most representative meeting of British importers was held not long ago, at which it was decided to form a new syndicate.

ROAD FINANCE AND MOTOR TAXATION.

(BY A CORRESPONDENT.)

THE inter-related questions of road finance and of motor taxation are now of sufficient importance for it to be permissible to hope that the authorities will shortly place more complete and up-to-date information on the subject before the public. Official sources are not as illuminating as they might be; the total cost of road maintenance as distinct from road construction is not known; and therefore there is no proper differentiation between expenditure which should be met from income and capital expenditure. Further, the latest figures available for the total cost of all roads relate to the financial year 1926-27.

It is commonly argued that a change in motor taxation is necessary in order to establish the principle of payment for the roads according to the use made of them. This is assumed to be equitable, since it is thought to correspond to the damage inflicted by particular vehicles, but little scientific investigation has been carried out to test the validity of this assumption. The figures on the following page would, indeed, appear to dispose of it altogether, for they show that the total number of motor vehicles registered has more than doubled in a period of six years, while the yield of the motor taxes has more than trebled. The total expenditure on the roads, including expenditure on maintenance, improvement, cleansing and construction, has increased only by some 33 per cent. in six years; the cost of maintenance of the Class 1 and Class 2 roads, which include all the principal motor roads, has actually decreased slightly, a large reduction in the cost of Class 1 roads making up for a small increase in Class 2. This would suggest that the factors regulating the amount of

repair work required on good modern motor roads are independent of the amount of traffic carried on them, possibly depending rather on climatic conditions; while the tendency for the Class 2 roads to settle down to a cost of about £340 per mile, and a further possible tendency for the total expenditure on roads also to settle down to a stationary figure, seems to indicate that, as the standard of the less important roads is improved, their costs also will show the same tendency to stabilisation independently of the growth of traffic—a circumstance which has already been observed in the case of Class 1 roads.

Year.	Expenditure on Roads, not including Expenditure out of Loans, but including Loan Charges.		Cost of Maintenance of Class 1 and Class 2 Roads and Bridges.		No. of Motor Vehicles Registered. The ratepayers' complaint that they are subsidising motor transport by providing it with its permanent way, the roads, must be considered in the light of the fact that motor transport is subsidising the rates to the extent of £15,000,000—the proceeds of the Petrol Tax imposed in 1928 to finance the De-rating Scheme. In evidence before the Royal Commission on Transport Sir Gilbert Vyle, ex-President of the Association of British Chambers of Commerce, submitted, on behalf of the ratepayers, that "the proportion of the expense of road maintenance which should be borne by the ratepayer should not exceed the cost before the time when motor transport became fairly common. . . . The balance should be paid by the State, and this national expense should be met out of motor taxation." He suggested that the basic year for the calculation should be 1910-11, because motor transport had not at that time had any effect in the direction of increasing road costs. This seems equitable and suggests the following calculation:—In 1910-11 the cost of the roads was £16,367,000, all contributed from the rates. After making allowance for increased wages and materials, this expenditure would correspond to £26,000,000 to-day. Actually, the ratepayers, after deducting the £15,000,000 proceeds of the Petrol Tax, which are used to relieve certain classes of ratepayers of their rates, at the present time pay only £23,850,000 towards highway costs. It would seem, then, that there is now no justice in the allegation that motor transport does not pay its fair share towards road costs.

It would be of the greatest assistance in allocating the cost of roads in this way to be able to sub-divide the cost between expenditure on maintenance and on construction; actually, the only sub-division is between "expenditure defrayed out of loans" and "other expenditure." The "expenditure defrayed out of loans" is, of course, purely for constructional or reconstruction work, but the general expenditure may, and undoubtedly does, include many items which a business firm would regard as a capital charge. The expenditure out of loans has been fairly constant in the period under consideration, never having been less than £9,250,000 or more than £11,500,000. This is substantially more than it was during the war and immediate post-war years, with the result that "loan charges," *i.e.*, the interest on loans for road construction or reconstruction, increased from £4,926,000 in 1922-23 to £8,249,000 in 1926-27, and have probably risen higher since then, although no figures other than estimates are available for subsequent years. The proportion of expenditure on road construction to the total expenditure on roads is increasing rather rapidly, partly on account of the demand for more roads by motorists and partly as a result of employment schemes and relief works of various kinds.

The conclusions to be drawn from the available evidence are that motor transport already contributes adequately towards the cost of the roads; that the cost of highway maintenance is likely to become stabilised as all the roads are gradually made suitable for heavy motor traffic (it is already stable for Class 1 and Class 2 roads); and that motor traffic is still expanding fast, so that motorists will increasingly have the right to claim a reduction in taxation in so far as motor taxation is a payment by motor transport to meet the cost of reconstructing the highway system of the country and of maintaining the roads in a suitable condition for modern traffic.

The British policy since the war has been gradually to bring all roads, starting with the most important, up to the standard of motor roads fit for heavy motor traffic. This may be in the best interest of the country's transport, although that seems a little doubtful in the case of many of the "other" roads, and the American system has much to commend it. Under that system traffic censuses are taken as the basis for determining the costliness of the road to be provided, according to the ton-miles run over it per day, and the average yield of taxation per ton-mile. On this basis the British position would be roughly as follows:—Given 2,163,000 vehicles averaging perhaps one ton each in unladen weight, and 10,000 miles per year, and paying £40,000,000 in taxation, the average yield of tax paid per ton-mile would be $\frac{£40,000,000}{2,163,000 \times 10,000} = .44$ pence per ton-mile. This would give the following rough and ready table:—

Per Mile of Road.

Average Traffic (in tons) Per Day.	Justified Expenditure from Motor Taxation.
	£
250	168
500	335
750	503
1,000	670
2,000	1,340
3,000	2,010

At present, of the £60,000,000 spent annually in this country on roads, at least £50,000,000 appears to be in respect of maintenance, allocated approximately as follows:—

£13,630,000 for Class 1 Roads, 25,500 miles, = £535 per mile
£5,370,000 for Class 2 Roads, 15,750 miles, = £340 per mile
£31,000,000 for "Other" Roads, 137,820 miles, = £225 per mile

Judged in the light of comparative traffics—so far as this factor can be estimated—the proportion of our maintenance bill allocated to "other" roads looks excessively high, and the inference is clear that many side-roads are being subsidised by taxing main-road traffic.

LIFE ASSURANCE BUSINESS IN 1929.

Not since 1920, the year of the post-war slump, has the business of life assurance encountered such adverse conditions as prevailed last year. It was a year of heavy depreciation in all classes of Stock Exchange securities, a year in which long-term British Government securities lost some 5½ per cent. of their value and public confidence received a severe shock by financial disclosures whose echoes have not yet died away. Added to this was the continued depression in the iron and steel trades and in the Lancashire textile industry. In face of such a combination of circumstances, it is hardly surprising that the rate of increase in new business should have suffered a check. Disappointment, however, must be tempered by the reflection that there has been an increase—albeit a small one—and not an actual decrease.

Up to date, returns of the volume of business have been published by 30 British offices, and these, together with the 1928 figures for purposes of comparison, are shown in the following table:—

Company.	1928.	1929.	Difference.
	£	£	£
Alliance	2,922,678	3,026,938	+ 104,260
Atlas	3,482,611	3,800,000	+ 317,389

Pearl	12,080,366	11,652,887	— 427,479
Phœnix.....	3,043,304	2,950,000	— 93,304
Prudential	17,401,001	17,600,000	+ 198,999
Refuge	6,377,442	6,479,796	+ 102,354
Royal Exchange	2,496,040	2,277,646	— 218,394
Royal London	4,098,075	4,180,000	+ 81,925
Scottish Amicable	1,267,028	1,235,026	— 32,002
Scottish Life.....	1,241,384	1,339,441	+ 98,057
Scottish Provident	2,789,886	3,099,000	+ 309,114
Scottish Widows	3,173,220	2,899,000	— 274,220
Sun Life	15,274,880	16,014,342	+ 739,462
United Kingdom Provident	3,109,870	3,335,080	+ 225,210
University Life.....	160,356	165,133	+ 4,777
Wesleyan and General	969,236	1,149,058	+ 179,822
	114,235,212	116,669,595	+2,434,383

The most cursory glance at the table will reveal how patchy the figures are. Out of the 30 offices represented 20 show increases and 10 decreases, while of those in the former group none shows a striking advance on the 1928 totals. The largest increases are shown by two offices of a very diverse character, though both "mutual" in constitution. An old-established but progressive society, the London Life (a non-commission-paying office), records an increase of £425,000, equivalent to 17 per cent. The Wesleyan and General, a Birmingham office, transacting, in addition to "ordinary" assurances, a large "industrial" business among the poorer classes, has achieved an increase of £180,000, equivalent to nearly 20 per cent. In addition to these, a few offices have succeeded in producing an increase of over 10 per cent., namely, the British Equitable, British General, London Assurance, and the Scottish Provident. A notable slowing up in the rate of increase has occurred in the case of the Legal and General, whose figures hitherto have exhibited a consistently large expansion. The same feature is noticeable also in the case of the ordinary-cum-industrial group (with the exception of the Wesleyan and General already referred to) for, of the three largest, the Prudential and the Refuge totals are only slightly ahead, while the Pearl total has suffered a decline. It should be mentioned that the apparent large increase of the Life Association of Scotland business is due to the fact that the 1928 total is in respect of a broken period of only nine months.

Turning from the particular to the general, the aggregate figures of all the 30 offices are ahead of those for 1928 by only £2,434,383, equal to about 2 per cent. Assuming that these offices can be considered representative of the whole, it is interesting to consider the figures in relation to the total volume of new business during the post-war period. The following figures have been extracted from the official returns furnished to the Board of Trade for the years 1919-1927 and estimated for 1928: —

Year.	New Life Assurance Business transacted by all Offices.	Increase per cent. each year over the previous year.
	£	Per cent.
1919	131,454,363	79·2
1920	146,627,474	11·5
1921	109,243,943	— 25·5
1922	106,302,251	— 2·7
1923	111,750,559	5·1
1924	123,661,009	10·7
1925	130,196,611	5·3
1926	128,915,643	— 1·0
1927	147,825,161	14·6
1928	161,129,425	9·0

The large volume of business transacted during the first two years of the period was, of course, due to the artificial boom conditions then prevailing and represented largely business delayed by the war. The subsequent falling off was severe, but was followed by a gradual recovery, accelerated in 1927 and 1928, and now checked during 1929. The total business, however, is now at a level well above the boom year 1920.

This review of the situation is necessarily limited to considerations affecting the volume of business. An analysis of the quality and of the trading results must perforce wait upon the publication of the annual reports, and more particularly of the valuation reports. So far only two offices, the National Mutual and the Sun Life, have made available their reports of the year's working, accompanied in the former case by a report on the annual valuation. In both cases the trading results appear to be satisfactory. The Sun Life has once again transacted an enormous volume of the now familiar super-tax-saving policies, largely, it is believed, on the basis of five-year term endowments. Such policies are life policies in name only. They contain no element of life risk, and we have already stated our belief that the present dimensions of this type of business are at the least a disservice to life assurance in general.

Meanwhile, the need for life assurance and for the inestimable benefits—mental and material—which it confers continues more strongly than ever before.

The advantages have indeed been lent additional emphasis by the recent slump in the stock exchanges of the

world. For comparison is at once invited between the results of an endowment assurance policy, combining with life assurance cover a steady yield free from anxiety concerning depreciation, and those of the most attractive Stock Exchange investment with all its inherent uncertainties.

ROUND THE CLOCK IN JAPAN.

(BY A TRAVELLING CORRESPONDENT.)

WHEN I took the train at Kobe it was already dark. I had expected to reach Nara by daylight, for our boat had dropped anchor off Kobe at about 1 p.m. on an October day, and the railway journey from Kobe to Nara should take, at the most, three hours. But I had not reckoned with the "formalities." Everybody with whom we had to deal, in the complicated process of getting on shore—the Health Authorities, the Passport Authorities, the Customs Authorities—had elaborate "formalities" of their own. But the most curious "formality" of all was imposed upon me, not by Japanese officialdom, but by a party of foreign residents who had kindly come down to meet us at the quay. This "South-Sea Barbarian" formality can be stated most simply in the following terms:—"One cannot go from the quay to the railway station without visiting *the* hotel on the way."

It was this hotel-worshipping "formality" that finally defeated my plans. While the Japanese officials were poring over my papers I had laid hands on a Japanese railway guide and had chartered the services of a coolie with a hand-barrow. "And now," I had thought in my innocence, "as soon as my papers have passed muster I have nothing to do but to walk off, with my coolie and his hand-barrow, see my luggage through the Customs, and board the first train that I can catch. The station, they tell me, is only a few hundred yards away." As the official "formalities" went on, I missed the first train in the time-table, and then the second; but I did not lose heart, for I had a third train (and a good fast train, too) in reserve. At last the official "formalities" were over, and I still had forty minutes to spare. But it was at this point that I suffered defeat.

When the Customs examination was over, there were still seventeen minutes left for catching the train: just time enough, said the coolie, if we hurried. So I jumped into a rickshaw, while the admirable coolie trotted alongside with his barrow. But, alas, I was now defeated for the third time, and this time irretrievably. For my kind foreign friends, solicitous for my welfare to the last, had shouted a parting injunction to the rickshaw man that he was to convey me without fail to—*the* hotel. And so, at a sudden parting of the ways, I found myself, to my consternation, being whirled away whither I would not go, while my coolie trotted steadily forward and disappeared down the station road. I expostulated with the rickshaw-man, but in vain. Neither arguments nor entreaties nor imprecations were of any avail. He had been given his instructions, and he knew his duty. He did not let me go until he had deposited me at the gate of the "South-Sea-Barbarians'" temple. In a frenzy of exasperation, I leapt out, paid him off (discovering, in the act, that rickshaw fares in Japan are very high), and started to run on my own legs all the way from that ineluctable hotel to the station. When I reached the station entrance, I found my coolie, with the hand-cart and the luggage, waiting patiently again. Sympathetically, he broke the news that the train had gone three minutes ago; but he was not yet at the end of his resources. Taking a time-table out of his pocket, he set to work to search the scriptures; and, before long, he had worked out a plan of salvation which would bring me to Nara that night after all. True, I was to be saved as by fire; but that was only to be expected when I had let three fair chances of salvation slip by (even though the fault was not my own). The plan was this: I was to sit in the station waiting-room for fifty minutes, take a slow train to Kyoto, wait at Kyoto for an hour and a quarter, and then take another slow train on to Nara—the early paradise where this purgatorial journey would end. I should not reach Nara now until 11.17 p.m. But never mind. At any rate, the last formality at Kobe was over; and I should not be condemned to sleep in *the* hotel to-night. (For all I know, it is a first-rate hotel, but its amenities had been spoilt for me, untasted). . . .

When at last my slow train moved out of Kobe station, I no longer regretted that I was not travelling in an express by daylight. The whole country was lighted up by electricity. Kobe melted into Osaka, Osaka into Kyoto, and still the galaxy of lights stretched on without a break. Was Japan one continuous city? No. When I left Kyoto again, now bound for Nara, I became aware that there was a countryside in Japan too. This time, through the darkness, I could make out, here and there, the dim shapes of woods and hills; and, when I got out of the train at Nara, I found myself driving in the taxi through a country town peacefully asleep. "What was that beast that crossed the road in front of the car just now, with its eyes gleaming in the glare of our headlights? Are we driving out into the wilds?" "O, that is just one of the sacred deer from the deer parks. They are very tame, and wander all over the town." They are tame, indeed. I was afterwards privileged to watch the pretty spectacle of seven hundred of them trooping together from all quarters of the park at their keeper's bugle call. . . .

Next morning, early, I was in the train again, this time with no impedimenta but a knapsack. I now found myself travelling, not through an electrically-lighted city, but through water-logged rice-fields—flat fields on the plain, terraced fields on the hillsides, when the railway began to wind its way up a valley. I changed from steam-train to electric tram and from tram to funicular; and then the terraces ceased and there was nothing around us but forest and mountain. Finally, the funicular, too, came to an end, and I started on the last stage of my journey on foot. It was an hour or so's walk, they told me, from the terminus of the funicular up to the gateway of Koya San.

The footpath zigzagged upwards among the pines which, surprisingly, seemed to grow taller, and not more stunted, as the altitude increased. But I was less interested in the scenery than in my fellow travellers. They were Japanese, every one of them; yet, among them, all types were to be found. There were rich people riding up in carrying chairs and poor people trudging on foot, and fairly-well-to-do people using their own feet with the aid of a hireling (usually a strapping young woman) to push them from behind. There were pilgrims with staff and scrip and palmer's hat (a vast lampshade of plaited straw); and there were tourists, all complete in shorts and alpenstock and rucksack and horn-rimmed spectacles and Tyrolese hat with the proper feather stuck into the ribbon. And the variety of the inner man was as great, I am sure, as the variety of the accoutrements. On that footpath, mediæval piety was rubbing shoulders with modern sophistication. So much engrossed was I in observing this variegated stream of humanity on the way, that I found myself entering the gateway of Koya San before I had realised that I had had quite a stiff climb.

The gateway was the highest point; for Koya San itself lies in a sort of cup, with ridges and peaks enfolding it on every side. I should explain that Koya San is a Buddhist Mount Athos—a little monastic world of its own, with libraries and schools and shops as well as temples. It is a place of extraordinary beauty; for, in this high hollow of the mountains, the giant pine of Japan—*Cryptomeria*, the botanists call it—grows to a stupendous height; and the buildings stand in clearings, with the immense trunks towering up to heaven all round them, as straight as if they had been regulated by plummet and line. The most beautiful part of all was a level stone-paved terrace, driven right through the heart of the forest, and flanked by cenotaphs of all the famous men of Japan (and many of the obscure) through all the ages.

By the time we had slowly paced the length of this terrace to the Hall of the Thousand Lamps and back again, it was growing dusk; and the young monk who had taken charge of me guided me back to my quarters in the temple where I had to spend the night. Conversation was difficult; for I knew only one word of Japanese ("ichijikan," meaning "hour"—the key-word for travelling, but not for small talk), while my guide's English was not nearly so good as that astonishing coolie's. Laboriously, I questioned him about his own career. It appeared he had been educated in a military college, but was now studying Classical Tibetan with a view to taking charge of the Tibetan books in Koya San Library. My knowledge of the Lamaistic form of Mahayana Buddhism was not extensive; but I raked up such crumbs as I could find in my memory and offered them up to my young friend—only to discover that he had no appetite for the subject. "Poor fellow," I thought to myself: "What up-hill work it must be to study Classical Tibetan against the grain! I wonder how you come to be in this galère. Let us try another tack." And aloud I remarked: "Is it true that Japan depends on Manchuria for 80 per cent. of her requirements in coal and iron ore?" Immediately the young man's face lighted up; his English became less halting; and there issued from his mouth statistics and technical terms which left me as cold as my platitudes about the Mahayana had left him. "Oho!" I thought again: "So it is not so far from Kobe to Koya San, after all!" I looked at my watch and noticed that it was now just twenty-four hours since I had landed.

Notes of the Week.

Full Circle.—At a time when the money market had almost given up all hope of a reduction, the Bank of England has reduced its rate to 4½ per cent. Three weeks ago, when the market rate of discount was barely over 4 per cent., a reduction in Bank rate was confidently expected, and when market rate fell below 4 per cent., so that brokers were actually having to pay more for their weekly money than they could earn on their bills, there was a considerable amount of criticism to be heard at the anomalous position which had been allowed to arise. The Bank, however, had to take a wider view than that of the market's technical difficulties. It had already decided to cease bidding for newly arrived gold at more than its statutory buying price, and the moment it did so and allowed gold to move under the influence of natural forces, it became apparent that France and later Germany were able to secure the week's supply of gold. This provided an apt illustration of the fact that both these important exchange rates were nearly, if not quite, at the point where it would be profitable for gold to be taken from the Bank, and inasmuch as the dollar exchange had also fallen during January from over $4.88 to $4.86-$\frac{3}{16}$, or to just below par, it was clear that the international situation at the end of last month hardly justified a reduction in Bank rate. Hence the market had become resigned to the view that a 4½ per cent. Bank rate was unlikely, and that sooner or later money and discount rates would have to adjust themselves to a 5 per cent. basis. So far as money was concerned, the first week of February provided definite evidence that this was taking place, for revenue collection took huge amounts off the market, and on Wednesday last there was some talk of the market having to go into the Bank. Discount rates, however, remained low, as the supply of Treasury bills continued to contract and Continental demand remained weak. It was this last factor, coupled with the recent reductions in the French and German rates, that possibly influenced the Bank in making Thursday's somewhat surprising but welcome decision. And so the wheel comes full circle, and on the same day as a year ago 4½ per cent. gave place to 5½ per cent., the 4½ per cent. rate is restored. The new rate will put an end to an anomalous situation in the discount market, it will ease the burden upon industry and the Exchequer, and will impart confidence to the Stock Exchange and to the new issue market. It shows that the Bank is not over-much concerned with recent foreign exchange fluctuations or gold movements, and that once more it is ready to take a chance in the interests of British trade.

Parties and Economic Policy.—If the intention of the Lord Privy Seal, when he gave an account in Parliament last Monday of his efforts to deal with unemployment, was to depress the House or even to alarm it, he certainly succeeded. No results have yet materialised from his Canadian tour, while some of his schemes, including that for the Lower Thames Tunnel, are being so delayed in preparation that they are unlikely to help the situation for some time to come. Further, he foresaw that the figure of unemployment might jump up by 100,000 by virtue of the new Insurance Bill which would keep people on the register who would otherwise be struck off, and though this does not mean a corresponding increase in actual unemployment, it must emphasise the magnitude of the problem. There are, it is true, counter-considerations, some of which were mentioned by Mr Thomas. There is, for example, the fact that of the 1,400,000 in receipt of benefit, one-half were in work less than a month ago; that two of the most depressed of our trades, coal and iron and steel, distinctly improved towards the end of last year; and that the index of production for the country as a whole, which we published last week, is at a record high level. But, as Mr Thomas rightly pointed out, the very necessary process of rationalisation will not immediately help to solve the problem, but will tend, indeed, to intensify it. The Lord Privy Seal's special task is, therefore, likely to remain difficult and heavy, and frankly—unless work is rapidly speeded up—the steps he has taken will not help to relieve the situation this winter. His own admissions lent force to Sir Herbert Samuel's renewed appeal that the Government should enlist the co-operation of the House as a whole. Fortunately there are signs that in hammering out a comprehensive economic policy, party manœuvring will play a smaller part than hitherto. One reason for this belief is the decision to form an Economic Advisory Council, whose membership and staff are rapidly being arranged, and whose labours will certainly include the consideration of the unemployment problem from all angles. The fortunate settlement of the threatened conflict between the Commons and the Lords, which would undoubtedly have raised party feeling to fever heat, gives ground for hope that our whole policy with regard to industry and the provision of work may be reviewed in the light of "collective wisdom," rather than partisan prejudice. There is, we think, a general feeling that the insurance system, even after all these years of experience and administration, may still be delaying the transfer of labour and its reabsorption into employment, and that the whole subject requires much more thorough reconsideration than was given to it last autumn. The Government, which is strong enough to make benefit conditional on productive work for those who have been out of work beyond a certain period, could, if it liked, make a real contribution to the problem. But the co-operation of the other parties is essential. The conversations that have taken place on the Coal Bill amendments are a welcome sign that the Government is willing to seek such co-operation. We suppose it was inevitable that Conservative critics should seize upon the fact that Mr Graham went so far as to visit Mr Lloyd George, and should try to make mischief by silly talk of "surrender." But if we are to get the best thought of the nation, both in and out of Parliament, on to these difficult questions, it is incumbent upon all to cease talking of party scores. No one comes out of that business better than the President of the Board of Trade, and if these sound methods of dealing are to continue other parties must face the obligation of meeting the Government in the same spirit as that in which it has made its advances.

The Leisurely Conference.—It is not altogether surprising that some impatience is being expressed at the slow progress of the Naval Conference. It is easy, no doubt, to be unduly restive. The direct conversations in progress between the different delegations do appear to be bearing some fruit, and difficult problems will be more readily soluble in consequence when they come to be considered by the Conference as a whole. At the same time, it has to be recognised that, after more than a fortnight of con-

tinuous work, the Conference has reached definite conclusions on nothing, not even on the method by which fleets are to be measured. On this point, indeed, a decision appears to be in sight, for though there are British and French texts in the field, they are quite easily reconcilable, and should, in fact, be reconciled with little further delay. But the main problems before the Conference—the decision regarding capital ships, the questions raised by France's demand for what the other delegations consider an excessive tonnage, Japan's demand for seven-tenths as many large cruisers as the United States, and the whole Franco-Italian parity controversy—still remain to be dealt with. Here too, however, private conversations are paving the way for progress. This is particularly true in the matter of capital ships, where the idea of supplementing a prolongation of the Naval Holiday by the scrapping of a substantial number of existing vessels is gaining ground. The prospect is, indeed, that the present totals of British, American and Japanese capital ships will be reduced from 20, 18, 10 to 15, 15, 9, while a little push from public opinion on both sides of the Atlantic might easily get the numbers down to 12, 12, 7 (or 8). This, after all, is a conference for the reduction, not the perpetuation of naval armaments, and it has always been recognised that the capital ship provides the most hopeful field for definite and visible achievement. The Japanese 70 per cent. demand in cruisers, if persisted in, would cause serious difficulties and upset the tentative arrangements Great Britain and America have already reached. The Japanese, moreover, have insisted so loudly and persistently on this particular percentage as to have made the path of concession a little difficult for them. None the less, some way can be found—one or two ways have, in fact, been suggested—of facilitating a graceful retirement from a position Japan could not continue to occupy without seriously imperilling the success of the Conference; and it is not the way of the Japanese to incur such a responsibility as that. All things considered, the method of slow progress favoured by the Prime Minister, who remains the dominating figure in the Conference, may be said to be justifying itself. So long as the negotiations ultimately succeed it matters nothing whether they last two months or three, or even longer. Great Britain, at any rate, by the wise decision to build no more 10,000-ton cruisers while there is a prospect of the Anglo-American understanding holding good, and by the progressive ideas its delegation is believed to entertain on the subject of capital ships, is doing all that could reasonably be asked of it to contribute to the Conference's success.

Progress in Spain.—News of the fortunes of the new *régime* in Spain is not abundant, but that on the whole is a good sign. General Berenguer has not been able to construct anything like a Cabinet of all the talents. The refusal of Senor Cambo, in particular, to accept the portfolio of Finance was a serious disappointment. The Catalan leader's opportunity will, no doubt, come a little later, when the movement back to constitutional government is further advanced. Meanwhile, as the instrument of a transitional administration, the Berenguer Cabinet should serve well enough. The new Prime Minister is acting with sense and moderation, though he has not so far had the courage to abolish the censorship. Both the Universities and the Army, which caused General Primo de Rivera his chief anxieties, are completely quiet, while the Church appears to be concentrating on perfectly legitimate political organisation with a view to the elections of the near future. The doubtful factors in the whole situation, and in many ways the most important, are the position and intentions of King Alfonso. The King was enabled to exercise a considerable measure of personal rule down to 1923 by reason of the impotence and dissensions of the Cortes, and since that date through the influence he exerted over his nominee, the Dictator. General Berenguer, like his predecessor, is a King's man, but he recognises that the demand of the country is for constitutional government, and under constitutional government, particularly with a far from insignificant republican movement in the field, the King's position cannot be what it was. King Alfonso may adapt himself to the new constitution sufficiently to secure a period of comparatively peaceful development for his country. If, instead, he endeavours to assert himself unduly, the Republicans may become a formidable element in the situation.

Unemployment Insurance and the Lords.—With the acceptance by the Upper House, on Wednesday, of the Government's compromise offer to place a time-limit of three years on the Unemployment Insurance Bill, Miss Bondfield's measure reached port after a voyage whose somewhat stormy final stages had provoked, with little enough solid reason, hasty talk of dissolution and even of a constitutional crisis on the issue of Lords *v.* Commons. The outcome should satisfy reasonable opinion in all parties. Of the two major amendments made by the Lords, one was a new clause in place of Clause 4, providing that a claimant should be disqualified from receipt of benefit " if it be proved that the claimant has refused, and refuses, without reason, to work when employment is found for him, or if it be proved that the claimant is not endeavouring to obtain employment." It may be doubted whether the Lords, in carrying this amendment based on an obsolete rule of the National Union of Railwaymen, really wanted to do more than underline their disapproval of Clause 4, already registered in a vote of rejection leaving a gap in the Bill which had somehow to be filled. The alternative clause still placed upon the officials administering benefit the onus of proving a negative, and the principle, thus virtually conceded, of practically unconditional right to benefit, was given effect more clearly and concisely in the clause which the Commons had passed. At all events, when the Lower House insisted, by 273 votes to 124, on the reinstatement of Clause 4 intact, the Lords, on Monday, without undue reluctance, withdrew this amendment. Their other amendment, however, limiting the operation of the Bill to March 31, 1931, was for a second time sent down to the Commons. Apart from any question of privilege—a point which the Government at first waived and later raised with no great conviction or consistency—this time-limit was manifestly too short to allow the Act to be reasonably tested in practice. If the Commons, however, had simply resisted (without amending) the amendment, the Bill would have passed into the category of measures awaiting the operation of the Parliament Act, and the Government's pledge to reform the administration of Unemployment Insurance would have remained unfulfilled. Wisely, as we think, Mr MacDonald decided to propose a three years' time-limit, which the Commons agreed to on Tuesday without a division, and which the Lords accepted next day. Since the administrative changes in the Bill are of a controversial and, indeed, experimental nature, it is no bad thing that the measure should be subject to revision in the light of three years' experience of its working.

Mr Snowden on Budget Prospects.—Speaking before the Leeds Chamber of Commerce last Friday, the Chancellor of the Exchequer gave a forecast in general terms of the situation which he will have to meet in the next Budget. It was not a very hopeful picture. The weekly revenue returns, he said, indicated that Budget estimates would not be realised. It was impossible to say what would happen with regard to income tax, which is collected mainly in the last two or three months of the fiscal year, but certainly the sources of Estate Duty were not " dying up to expectations," and it was likely that the yield of stamp duties would fall several millions short of the estimates. The cessation of the Stock Exchange boom of 1928 accounted not only for the disappointment in the last item, but partly also, through the decline of stock and share values, for the diminished yield of Estate Duties. On the expenditure side, Mr Snowden stoutly denied the charge of extravagance. " I will sanction no expenditure," he said, " especially at a time like this, which I do not believe to be imperatively necessary. There are many things I should like to do, but we must wait to do many things we should like to do until we are in a position better to afford them "; the country's apprehensions, however, are that Mr Snowden's less economical supporters may persuade him that things they would like to do are imperatively necessary. Mr Snowden also repudiated the assertion that the Labour Government had already incurred heavy new expenditure. The commitments had been, for the most part, previously entered into, and practically the only new expenditure was that incurred under the Unemployment Insurance Act, amounting to £8,500,000 in the current year and about £14,000,000 in 1930-31. The Chancellor went on to repeat some of the criticism of his predecessor's finance which he made in the House of Commons on Christmas Eve. In the last four years there had been raids of capital to the extent of £50 million used as revenue in order to avoid imposing new taxation. Mr Snowden would not be guilty of any such offences against sound finance. While it is impossible to disagree with the Chancellor in his objection to certain of Mr Churchill's financial methods, these remarks, coupled with the probability of a remission of indirect taxation, do not offer a very favourable prospect to direct taxpayers, particularly those with incomes between £1,500 and £2,000, on which, it is rumoured, the Government is casting covetous eyes. Mr Snowden was not sanguine that any considerable reduction of expenditure could be achieved in the immediate future. The limitation of armaments and the conversion of internal war debts offered the most hopeful possibilities. Mr Snowden can hardly offer the recent issue of 5 per cent. conversion loan as an example of the profitable debt operations which he apparently hopes to undertake before long.

The Coal Mines Bill.—The Committee Stage of the Coal Mines Bill began on Tuesday in the House of Commons with a ruling by the Speaker that an amendment in Mr Lloyd George's name, proposing that " the Committee be empowered to consider clauses providing for the acquisition of coal royalties and wayleaves," went beyond the scope of the Bill, and was, therefore, out of order. Two other important amendments had also been tabled by the Liberal Party. The first was that consideration of Part I of the Bill (the " marketing " schemes) should be postponed until the House had disposed of the remainder of the measure, including the new clauses setting up machinery to enforce amalgamations. The second was designed to delete from the " marketing " schemes the provision delegating power to regulate " production " of coal. This amendment, to which the Government could scarcely have been expected to agree—since regulation of output is an essential principle of the Bill and is, in fact, if soundly devised and operated, essential for the preliminary stages at least of the industry's reorganisation—was presumably intended primarily for use as a lever to secure the Cabinet's assent to postponing the discussion of Part I until more time had been given for consideration of its various questionable and difficult clauses. At all events, this object was attained, for Mr Graham himself moved postponement, and after a series of not very impressive complaints from the Conservative benches that in this procedure His Majesty's major Opposition had not been consulted, the House decided, by 276 votes to 131, to pass on to Part II of the Bill dealing with the statutory limitation of working hours. The fact, however, that this section of the Bill consists of a single brief clause did not avail to save the Commons from being entangled in a confused argument on a Conservative proposal that the reduction to 7½ hours should be " permanent," an amendment eventually ruled out of order. Further obstruction followed, and the debate was adjourned with little accomplished. Meanwhile, amendments to Part I of the Bill are piling up like drifts of Vallombrosa's leaves upon the Order Paper. Apart from the Liberal amendment already mentioned, a number of proposals designed variously to increase wages, to compensate " displaced " miners, and to facilitate nationalisation of the mines, have been tabled by members of the I.L.P.; a controversial amendment in Mr Mond's name seeks to define " standard tonnage " as that representing " the present normal producing capacity "; and there are many provisos regarding price-fixing and discrimination between different consumers. The passage of the Bill is clearly going to make heavy drafts on the Government's time.

Miners' Hours at Geneva.—The controversy over the inclusion of the question of miners' hours in the agenda for the next International Labour Conference was settled last Wednesday by a compromise. The British Government representative moved that the question be included, but that the Conference should be invited to bear in mind, in framing a convention, that the question has been raised purely as a European matter. With an amending clause inserted by M. Picquenard, to ensure that all the resolutions adopted by the Preparatory Conference shall also be taken into consideration, this resolution was carried by 15 votes to 5. The amendment met the difficulty of the German Government as to the special conditions which exist in connection with lignite, as these are referred to in one of the resolutions of the Preparatory Conference. The South African employers' representative also supported it, as it was clear that overseas countries would not be unwillingly involved. As the resolution stands it is left to the discretion of the Conference to frame a convention which is only applicable to Europe, or one which could subsequently be extended to include all States. The British employers' representative abstained from voting on the resolution, which was opposed by four other employers' delegates, and by the Swedish workers' representative. That the question is now secure of discussion in June is highly satisfactory.

The Canal Boats Bill.—On January 31st the second reading was carried of the Canal Boats Bill, which provides that on and after January 1, 1931, no child under 15 shall reside in or travel on a canal boat. That part of the discussion of the Bill which turned on questions of health, morals and child labour died of inanition; for though members showed little reluctance to base broad generalisations on a few days' experience of a single barge, few of them had even that qualification for the holding of views. The general consensus of opinion, as expressed both in the Press and in the House, appears to be that physically and morally canal life does not compare unfavourably with that which the same children might expect on land. Intellectually, however, it does present a problem which appears to be almost insuperable. Bringing the mountain, in the shape of floating schools, to Mohamet, appears to be impracticable, so that if illiteracy is not to be tolerated in this country, Mohamet, it seems, will have to go to the mountain. One of the strongest arguments in favour of this course is perhaps that, that under present conditions it is practically impossible for a child brought up on a barge to follow any calling but that of his father. Nevertheless, it seems somewhat drastic, as many supporters of the Bill admit, to forbid all children under fifteen to reside or travel upon a barge. In so far as the problem is purely educational—and we do not believe a case to have been made out on other grounds—there can be no need to

YOUR SON'S EDUCATION
MUST BE CONTINUED
IF ANYTHING HAPPENED TO YOU, could your children continue their Education on present lines? Could they?
Education is far too important a matter to be left to chance—Especially now that you can insure the School Fees. The cost is only a very small percentage of the Fees, and for this the Society will, in the event of your death, pay not only the actual fees, but all other agreed expenses during the remainder of the Educational period.
A copy of the leaflet " The Insurance of School Fees " will be sent to you post free on application to the
Legal & General Assurance Society Limited
10 Fleet Street, London, E.C.4
Assets exceed £21,000,000. General Manager—W. A. Workman, F.I.A.

exclude children under school age, or school children during holidays, from living afloat *en famille*. An amendment in this sense would give effect to the recommendation of the Chamberlain Report, and would be very much less destructive of family life than the Bill as it now stands.

Corporal Punishment.—The suicide in gaol last Monday of a prisoner who had been sentenced to flogging made, not without good cause, an uncomfortable impression on public opinion. Only one argument is now seriously advanced by the advocates of flogging, namely, that persons who commit crimes of violence in cold blood are too brutal to be in the least disturbed by any other form of punishment, and that they can, therefore, only be deterred by the prospect of severe physical pain. The unfortunate man who was sentenced last week had two previous convictions, and his crime on this occasion, robbery with violence of a very cowardly order, suggests that he was an average, though not an extreme specimen of this class of insensible persons. Yet, though the evidence at the inquest goes to show that it was the ten years' penal servitude, imposed in addition to flogging, that weighed most with him (incidentally, if flogging has unique properties as a deterrent, what justifies the infliction simultaneously of a long sentence which is *ex hypothesi* ineffective?), the deliberate infliction of torture as a method of dealing with any class of crime is repugnant to civilised senses. In adopting this course we descend to the level of the criminal himself, and there is not the smallest room for doubt that such a form of punishment must further brutalise its victim. His sentence completed, he emerges into a world of people who indirectly connived at a cruel assault on his person. Is he likely to be less ready than before to commit brutal assaults on theirs for his own profit? The sooner we face the fact that this system is a revolting form of legalised vindictiveness, the sooner are we likely to get a change in the law which will sweep away this relic of the Dark Ages.

Post Office Profits.—The Post Office Commercial Accounts for 1928-29 show a general improvement of the revenue-earning position. The net surplus, after charging interest on capital, is £9,012,764, a considerably larger sum than is recorded for any previous year in the table published with the accounts, which goes back to 1912-13. The surplus in 1927-28 was £7,570,348. These figures do not exactly agree with the sums payable to the Exchequer in each year, since the endeavour to make the accounts, as far as possible, representative of the commercial position of the Post Office services renders it necessary to include a number of adjustments which involve no cash exchange. Income and expenditure are apportioned between postal, telegraph, and telephone services, and it is gratifying to note that all three show a marked improvement. The telephone service produced a surplus of £524,695, compared with £107,391 in 1927-28. Rentals and call fees increased by over £1,500,000; on the expenditure side the chief increases occurred in provision for depreciation and interest, administrative and maintenance expenses remaining practically constant. Thus, that average prime costs were considerably reduced. The same is true of the telegraph service, whose deficit was reduced from £1,380,829 to £757,237. Message fees showed a slight increase, but administrative and traffic costs were reduced by about 9 per cent. The addition of £401,520 to the postal surplus was obtained by an increase of revenue offset by only a very small increase of operating expenditure. The general balance sheet shows fixed assets (land, buildings and plant) totalling £123,054,659, which is £7,603,205 more than at March 31, 1928. Depreciation is charged in the accounts on buildings, plant and engineering stores, as well as interest on the liabilities, so that the accounts represent fairly accurately the position of the Post Office as a commercial concern.

The Cotton Price Fall.—Our Manchester correspondent writes:—Since a week ago prices for American cotton have declined ½d. per lb. On Wednesday, in last week, the quotation for Middling American on the spot in Liverpool was 9.23d., and on February 5th the figure was 8.76d. It is nearly three years since values were on such a low level. During the last month or two the United States Government has been much concerned at the raw cotton situation. Growers have experienced a poor demand, partly as a result of reduced activity in local mills and partly owing to the increasing use in other parts of the world of foreign cottons. This decline in export demand is indicated by the fact that exports from the United States so far this season are 700,000 bales smaller than at the same time last season. During the last few weeks the Federal Farm Board has been active and has made certain proposals for the purpose of maintaining prices. Assistance has been promised to the Co-operative Associations, and a new organisation has been formed with a capital of 30,000,000 dollars. At the end of last week it was stated that the co-operative associations would start operating on the spot and futures markets within a few days. On the other hand, the Chairman of the Farm Board announced that there was no intention of making large purchases. Owing to uncertainty with regard to the position, liquidation of contracts has begun to bring distinctly lower prices. The Farm Board has urged that the acreage for next season should be reduced from 46,000,000 acres to 40,000,000 acres. Traders, however, believe that acreage plans will depend upon the prices ruling a little later, and there is not much confidence that the Government organisations will be able to influence the intentions of farmers very much. In the meantime there is a tendency to reduce ideas as to world consumption of American cotton this season, and a leading authority has pointed out that at the moment the consumption is on a basis of 14,200,000 bales for the twelve months, whereas the amount used last season was 15,076,000 bales. In Lancashire trade circles there is considerable interest in the increasing use of what are known as outside growths, and extensive purchases have recently been made of Brazilian and Peruvian qualities, whilst there is also a tendency to buy Indian cotton on a freer scale.

Cotton Trade Rationalisation.—It was rather remarkable, writes our Manchester correspondent, that, on Monday last, when Mr J. H. Thomas was saying in the House of Commons that there was a reluctance to face the facts in Lancashire, a most important meeting was being held in Manchester of the Joint Committee of Cotton Trade Organisations, and an official policy was outlined for the industry. Lancashire cotton spinners and manufacturers may have been late in realising the urgency of the problem, but there is now undoubtedly a determination to face the facts. It is pointed out that at various times during the last two years the Joint Committee of Cotton Trade Organisations has expressed its belief that changes in the present organisation of the industry are desirable, and it has endeavoured to assist reorganisation by such means as were within its power. It is recognised, however, that amalgamations, however large or strongly supported, do not, in themselves, offer a solution of the industry's problems, though they are a necessary first step towards the elimination of loss. The recovery of export trade and a return to normal employment in the industry depend upon a concerted policy and a recognition of the unity and interdependence of all sections of the industry. After very full discussions the Joint Committee has decided against vertical combines and in favour of horizontal amalgamations. There is ground for believing that many of the leaders in the Lancashire trade would like to see progress on the lines of vertical organisations, but it is possible that a development of this description has been found difficult, owing partly to the strong position of the combines in the finishing section of the industry and the improbability of those organisations being willing to enter upon a scheme which would mean a lessening of their power. With regard to the establishment of amalgamations, the Joint Committee decided to authorise the executive to give any assistance that may be required by those who are interested in the formation of stronger financial and economic units in the industry and to invite individuals and firms desiring to participate in such units to apply to the offices of the Committee for information. It was, therefore, resolved that a Trade Development Sub-Committee should be appointed to deal with this branch of the work of the Joint Committee. According to an official announcement the Lancashire Cotton Corporation, Ltd., has decided this week to increase its capital again by the issue of £375,000 ordinary shares, £78,529 preference shares, and £85,000 deferred shares. This increase is to provide for the acquisition of a further ten mills with an equipment of 950,000 spindles. The Corporation now controls 39 mills, with about 3,500,000 spindles and 5,200 looms, the issued capital being about £2,200,000. In considering the question of further amalgamations in the cotton industry it must be remembered that the Lancashire Cotton Corporation represents largely the absorption of bankrupt concerns and cannot be considered a scheme of voluntary combination. On the other hand, in the weaving branch of the industry, there are a large number of private firms, and, despite the depression of the last few years, some of them have not done badly. In any scheme of combination the personal factor is bound to be prominent. Quite recently there have been informal discussions between some leading manufacturers in the Burnley district whether something can be done to stop the cut-throat competition which has been so severe in recent months. It is understood that, so far, not much progress has been made with regard either to price-fixing for standard cloths or to an amalgamation of interests. Many people in the industry are convinced that production costs will not be sufficiently reduced to meet world competition by amalgamation, and it is urged that relief will only come when this system of eight looms instead of four to a weaver is more generally adopted or some method is applied whereby there can be greater use of automatic looms.

Shipbuilding in 1929.—In a recent issue (*Economist*, January 18th, page 114) we commented on the increased activity of the shipbuilding industry during the closing months of last year. The annual summary of output, issued this week by Lloyd's Register, shows that in 1929, as compared with 1928, there was an increase in the tonnage launched in the world of about 94,000 tons, of which 77,000 tons were accounted for by Great Britain. Production figures for the past four years, in comparison with averages for 1909-13 and 1922-25, are analysed in following table:—

TONNAGE OUTPUT.

Period.	Tons Launched (000's).			British Percentage.	Output as per cent. of 1909-13.		
	U.K.	Abroad.	World.		British.	Foreign.	World.
Average 1909-13...	1,522	967	2,489	*61*	100	100	100
,, 1922-25...	1,050	1,087	2,137	*49*	69	112	86
1926.....	640	1,035	1,675	*38*	42	107	67
1927.....	1,226	1,060	2,286	*54*	80	110	92
1928.....	1,446	1,253	2,699	*54*	95	130	108
1929.....	1,523	1,271	2,793	*54·5*	100	131	112

Of the vessels launched in this country 1,056,000 tons were steamers and 464,000 tons motor vessels, whereas abroad motor tonnage amounted to 802,000 tons, or nearly two-thirds of the total. Only 39 per cent. of the total tonnage launched in the world was designed exclusively for coal burning. Approximately 17 per cent. of the tonnage launched in British yards was built for owners resident abroad, as compared with a percentage of 20.2 in 1928 and over 22 in 1909-13. With regard to foreign countries, Japanese output rose from 104,000 to 164,000 tons, Dutch from 167,000 to 187,000, American from 86,000 to 126,000, and Italian from 59,000 to 71,000 tons. The output of Swedish yards was maintained at 107,000 tons, but production in Denmark fell from 139,000 to 111,000 tons, and Germany from 376,000 to 249,000 tons. The largest vessels launched during the year were the British-built motor ship "Britannic" and the turbine steamer "Empress of Japan," followed by the French motor ship "Lafayette" and the turbo-electric liner "Pennsylvania," built in the United States.

Shipping Freight Index Number.—A further substantial fall in "tramp" shipping freights took place in January, our index number, based on average quotations for the month, working out at 94.4, as compared with 100.3 a month ago, a decline of 5.8 per cent. A year ago the January figure of the index number was 127.5. The following table summarises recent movements of the index, the average figures for 1913 being added in the case of each group for purposes of comparison:—

AVERAGE 1898-1913=100.

	Average, 1913.	Jan., 1929.	Nov., 1929.	Dec., 1929.	Jan., 1930.
European Waters	110·0	119·2	124·9	117·3	104·2
North America	113·1	128·6	96·9	95·5	94·2
South America	123·4	125·2	97·6	94·6	95·1
India	106·3	123·7	110·7	109·0	99·8
Far East and Pacific	117·4	126·2	91·6	93·4	85·2
Australia	127·9	142·4	94·4	91·7	88·1
Total	116·3	127·5	102·7	100·3	94·4

The essential cause of the slump in rates continued to be the restriction of grain demand, consequent on the renewed weakness of wheat and maize prices. In spite of the laying up of a large number of vessels unable to find employment, tonnage was offered in all directions at rates which fell, under the stress of competition, to figures representing heavy losses on the voyage. Quotations from India were notably weak, and, with the exception of charters for South American discharge (in which case an even more pessimistic view was taken than a month ago of future prospects of homeward employment), outward coal freights, particularly for short voyages to the Continent, also registered heavy falls. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade	89·4	−14·6	South America—outwards	107·1	+ 3·2
Bay—outwards	110·1	−29·3	South America—homewards	83·1	− 2·1
Bay—homewards	130·6	− 9·7	India—outwards	115·8	− 2·1
Mediterranean—outwards	100·0	− 8·8	India—homewards	83 9	−16·3
Mediterranean—homewards	105·8	− 1·5	Far East, etc.	85·2	− 8·2
North America	94·2	− 1·3	Australia	88·1	− 3·6

Expressed as a percentage of the average for 1913, the total figure of our index number for January works out at 81.2, as compared with 86.2 in December and 109.6 a year ago. Freights are now lower than at any time since 1910.

The Deep Sea Fisheries.—A very valuable and substantial addition to the food supplies of the country continues to be made by the fishing industry of Great Britain, which, last year, landed not only increased quantities, but derived, roughly, a corresponding financial advantage. In other words, an increase of over a million cwts. in weight was accompanied by an income of over a million sterling in value. In addition to the landings by British-owned trawlers, there were, as usual, landings by foreign-owned vessels and imports from abroad, bringing the grand total of value up to nearly £25½ million in wet fish alone. The particulars taken from the returns

of the Ministry of Agriculture and Fisheries are as under:—

	Weight (in cwts.).		Value.	
	1928.	1929.	1928.	1929.
	£	£	£	£
British caught.				
England and Wales	13,443,625	14,287,099	13,183,830	14,443,992
Scotland	6,603,770	6,774,390	4,658,100	4,672,494
Shell fish	...	...	429,312	378,195
	20,047,395	21,061,489	18,271,242	19,494,681
Foreign landings ...	1,460,548	1,276,056	1,371,411	1,096,989
Imports	1,977,887	2,090,314	3,589,224	3,833,326

It will be noted that there was a substantial increase in the landings of British-caught fish in England and Wales, and a relatively small increase at Scottish ports. Landings by foreign-owned fishing vessels were somewhat less than in 1928, and represented 6.4 per cent. of the total landings of wet fish throughout Great Britain. The average first-hand value of all kinds of British-caught fish (including herrings) landed in England and Wales, was 20s. 2¼d. per cwt., as against 19s. 7¼d. per cwt. in 1928, and in Scotland 13s. 8¾d., against 14s. 1¼d. The principal kinds of fish were cod and haddock, these being followed at a distance by hake, plaice and whiting. Prime fish showed some increase, but the total is relatively very small, the shortage in this respect having to be made up by imports from the Continent. The Greenland Coast continues to be explored for halibut, the fish being caught by lines from a number of small boats and kept in good condition on the parent ship by means of the brine-freezing process. Small steam trawlers are now fishing off Bear Island to increase the supply of haddocks and cod for the curing industry. The herring season at English ports produced slightly larger supplies which brought rather more money, the average being 8s. 10¾d. per cwt., against 8s. 2½d. per cwt. in 1928. The export of wet fish from Great Britain in 1929 amounted to 1,481,826 cwts., equal to 7 per cent. of the total landings, having a f.o.b. value of £1,354,014, as against 1,413,497 cwts. and £1,219,744 in 1928. Our exports also included "cured or salted" (principally herrings), 6,797,567 cwts. valued at £6,551,175, as against 6,286,911 cwts. and £6,324,406. Our imports from abroad consisted of "cured or salted" (not canned), 580,437 cwts. valued at £1,049,190, as against 753,304 cwts. and £1,193,771; and canned fish to the value of £7,385,365, as against £7,443,410.

An American Banking View.—Mr Albert H. Wiggins, the chairman of the Chase National Bank, has much of interest to say in this year's report to his shareholders. The Wall Street crash he ascribes bluntly to the violent speculation which preceded it, which, in its turn, was due to the cheap and excessive credit available to speculators for several years. Urging that sound financial policy has to be fought for, and that business men and farmers must support bankers in the fight, he insists that an alternation of excessive speculation and sharp breaks does not help business, and that agriculture gains nothing by getting deeply into debt in periods of cheap money. Having added his quota to the volume of controversy now raging in America around the causes of the autumn break, Mr Wiggins goes on to discuss the business and monetary outlook. On the former, he admits that a moderate business recession, already in evidence before the break, has gone further as a result, but holds that the business situation is strong, morale is good and no crisis is possible because the business community has very little "quick debt." Inventories, too, are moderate and must be regularly replenished. On the monetary situation he is of opinion that there is enough gold in the world to do the legitimate business of the world at comfortable rates of interest, but that there is not enough to finance speculators on the recent Wall Street scale, or to justify extremely cheap money. Later on, he states that the general world money market situation is tight. This leads him to argue that, while America can still draw in gold if her rates are high enough, if rates go low she will lose gold. He concludes this section of his report with an allusion to France, as the only great country outside the United States in possession of surplus gold. France, he claims, has an extraordinary opportunity for profitable service to the rest of the world, and he welcomes the recent signs that she is growing ready to take it. An authoritative American expression of this kind on the general monetary situation is extremely timely, and it is only necessary to add that if, as we suggest elsewhere, the real need is a better distribution of the world's gold stocks, the opportunity lies with America herself, even more than with France.

The Indemnity Mutual.—The year 1929 was remarkable for a series of exceptionally heavy gales and severe weather, and was regarded as a bad marine underwriting year. Nevertheless, the accounts of the Indemnity Mutual Marine Assurance Company, Ltd.—the first of the marine companies to issue its report—show that the company has emerged satisfactorily from the first year's experience of 1929 account. The premium income again shows a large reduction from £458,000 to £378,000, and after meeting the claims and expenses there remains a balance to be carried forward equivalent to 57 per cent. of the premiums, compared with 55 per cent. of the corresponding premiums a year previously. So great and well recognised, however, is the time elapsing between the happening of the event and the intimation of the claim, that 1930 and subsequent years may yet bring to light heavy claims attributable to the 1929 account. The 1929 report shows the final results of the 1928 underwriting account, for the company adopts the marine form of accounts, that is to say, it closes each year's underwriting account after two years' experience by a transfer to suspense account. A summary of the results of the last five closed accounts is set out below:—

Year.	Premium Income	First and Second Year Claims.	Expenses.	Transfers to Suspense to close Account.	Surplus + or Deficit −.
	£	£	£	£	£
1924.....	750,229	650,048	33,995	68,076	− 1,889
1925.....	613,170	550,256	32,106	61,366	− 30,558
1926.....	611,516	548,762	31,587	166,167	−135,000
1927.....	630,100	562,737	32,116	35,246	...
1928.....	458,016	346,711	33,505	77,800	...

It will be observed from the above table that the company has, at any rate, succeeded in arresting in each of the last two years the heavy losses incurred in previous accounts. The dividend is maintained at the same rate as in 1928, viz., 28s. per share and costs £75,040, this amount being covered by interest earnings of £81,000. The share capital of the company is held by the Northern Assurance Company.

Overseas Correspondence.

FRANCE.—DISCOUNT POLICY—REPORT OF BANQUE DE FRANCE—FOREIGN TRADE—CAPITAL ISSUES.

(FROM OUR CORRESPONDENT.)

PARIS, February 5.

THE Bank of France announcement last Thursday of a reduction of the discount rate from 3½ per cent. (at which it had stood since January 19, 1928) to 3 per cent., and of the rate for advances on securities from 5½ per cent. to 4½ per cent., came as a complete surprise to most people, and particularly to the Bourse, where reports that such steps were contemplated had been discredited the day before. The surprise was chiefly due to the fact that the Bank, although no official announcement had appeared to this effect, had allowed, without contradiction, circumstantial statements to appear generally in the Paris Press for nearly a week indicating that the mobilisation was imminent of a portion of the Caisse d'Amortissement bonds that were passed to it at the moment of the stabilisation of the franc, and which, as explained here last week, it was understood were to be used for the double purpose of furnishing employment, as and when necessary, for

what might be an inadvisable volume of surplus floating capital, and for keeping the note circulation within desirable limits. It is now clear that the Bank's apparently sudden change of policy was due to the fact that the revenue authorities placed insuperable obstacles in the way of the mobilisation of the bonds. These instruments are non-interest bearing, and the Bank's plans for utilising them were based on the belief that, as they were not to be used for profit-making purposes but in the public interest, they would be exempt (like Rentes and other essentially public issues) from taxation. The revenue authorities insisted that, in the absence of any specific law on the point, the bonds must be subject to the same taxation as all other issues not enjoying specific exemption. This proved fatal to the scheme, as the Bank, while willing to sacrifice the interest payable to those organisations who would take up the bonds, naturally could not see its way also to shoulder the 18 per cent. income tax to which the coupons would be subjected.

The plan of lowering the discount rate and the rate for advances on securities, which was substituted for the bond issue, will largely result, it is held, in attaining the objectives the Bank had in view. Its immediate effect was a marked improvement in sterling exchange, promptly followed by a resumption of the outflow of available capital to London and other more attractive centres of employment. A renewal of heavy gold imports, involving the creation of further supplies of francs, has thus been, for the time being, removed, and with it the nervousness that has latterly prevailed as to an artificial inflation of commodity prices. After the Bank's announcement the private discount rate, which earlier in the week had stood at 3¼ per cent., was brought down to 2⅞ per cent., and day-to-day money from between 2½ per cent. and 2¾ per cent. to 2½ per cent. On Tuesday the rate for day-to-day money was raised to 3 per cent., owing to heavy demands for settlements of debitor accounts.

In the annual report of the Bank of France, which was made public after last Thursday's annual meeting, the Governors offered what is nothing more or less than a reply to the criticisms that have been voiced in other countries as to their policy in connection with the heavy gold imports that characterised the second half of 1929. After setting forth in detail "the circumstances that from July onwards combined to reverse the tendency of the exchange and to maintain it constantly in favour of France during the rest of the year," the report states:—

"The great increases (of gold, from 36,616,000,000 francs to 41,622,000,000 francs) from which we benefited during the second half of the year was, therefore, only the natural consequence of the international monetary situation.

"From June to December we carried out no direct exchange of currency instruments against gold. We confined ourselves to accepting across our counters gold which was offered to us from foreign sources, in exchange for francs, without intervening at any moment on the exchange market for the purpose of accelerating these imports of the metal.

"The Bank, therefore, in no way hampered the free play of the market under the *régime* of the gold standard. It will not depart from this attitude, whatever may be the orientation of the movements of capital.

"When the time comes, under the pressure of a rise in the exchange rates of foreign currency, for gold to be demanded at our counters, instead of being offered, we shall allow it to pass out of our possession, in execution of the monetary law, as freely as we have allowed it to enter."

The Bank's total gold reserve down to January 24th is returned as 42,830,670,000 francs (£345,500,000), or an increase of over £9,820,000 since the end of 1929, and of £50,000,000 (over 17½ per cent.) since December 31, 1928.

The report shows that the total Caisse d'Amortissement bonds (replacing the Russian Government bonds discounted by the Bank during the war), which were handed to the institution on the passing of the Stabilisation Law, amounted to 5,930,000,000 francs. During 1929 318,447,000 francs were extinguished (as to 288,797,000 francs from the portion of the Bank's amortisation fund, legalling allotted to this purpose, and as to 29,650,000 francs by the Budget annuity of 1 per cent. of the total of the bonds existing). During the week ending January 24th a further 159,000,000 francs were extinguished. The report states:—"We did not have to make use during the past year of the power given us under the Stabilisation Law to negotiate these bonds on the market. We shall not fail to make use of this power when the monetary situation appears to render necessary re-absorption of francs." This declaration may have been drafted before mobilisation of the bonds was rendered temporarily impossible by the attitude of the revenue authorities. It is believed that, if it is found possible to include in the pending Finance Bill a clause exempting the bonds from income tax, their mobilisation may be expected early in the financial year beginning April 1st.

With the publication of the December figures the complete foreign trade returns for 1929 are now available. The comparative details are as follows:—

Imports,	1928 Frs.	1929 Frs.	Inc. or Dec. Frs.
Foodstuffs	12,540,524,000	13,178,103,000	+ 637,579,000
Raw materials ...	32,981,735,000	35,159,792,000	+ 2,178,057,000
Manufactured goods	7,913,293,000	9,946,729,000	+ 2,033,436,000
Totals	53,435,552,000	58,284,624,000	+ 4,849,072,000
Exports			
Foodstuffs	6,241,212,000	6,068,576,000	− 172,636,000
Raw materials	13,070,230,000	12,564,065,000	− 506,165,000
Manufactured goods	32,063,287,000	31,439,707,000	− 623,580,000
Totals	51,374,729,000	50,072,348,000	− 1,302,381,000

So far as raw materials are concerned, the increase of 2,178 millions in the entries is a healthy factor, due to a steady increase in domestic industries and a constant expansion in the home market, territorially enlarged by the return of Alsace-Lorraine and economic domination over the Saar area. In 1913 there was a deficit balance of about 7,700,000,000 francs, which was not regarded as abnormal, and which corresponded to nearly 19 per cent. of the imports, the present deficit being about 14 per cent. of them. Import tonnage in 1929 was 10,107,000 tons greater, while exports were 1,237,000 francs less, the drop being due to decreased raw material exports; foreign sales of manufactured goods being 1 per cent. more in tonnage, although 2 per cent. less in value. These percentages suggest that French export prices have now reached the limit of compression, and that further inflation of manufacturing costs by increased taxation, such as is expected to arise from the application of the national insurance plan, will check French competition in the export market. The fact that French imports include German reparation deliveries in kind suggests that the adverse balance is, in any case, less serious than the figures would imply. Meanwhile, in order to render the country more independent of foreign producers, plans are developing for the recruiting of still larger contingents of foreign labour, particularly for the collieries, and for the revision upwards of certain tariff schedules which are regarded as at present insufficient to protect the motor car and similar industries against foreign competition in the home market.

The phenomenally large total of new capital issues, which amounted last year to over 15,000,000,000 francs, continues unabated. The total offers officially recorded during the week ending January 25th were 391,500,000 francs, divided between three new registrations (11,000,000 francs), nine companies issuing additional share capital (52,000,000 francs), and bond issues by twelve old companies (328,500,000 francs). For the week ending last Saturday the total new offers registered amounted to 587,000,000 francs, divided between three new companies (40,000,000 francs), six old companies issuing additional shares (34,000,000 francs), and ten old companies making new or additional bond issues (513,000,000 francs). These massive increases of capital are, of course, due to the necessity for refinancing arising from the stabilisation of the franc at one-fifth of its former value. The paralysis that has characterised the Bourse during the greater part of the past twelve months has been largely due to this large volume of new issues, and it is now being asked whether saturation point is not dangerously near.

BELGIUM.—STOCK MARKET—FAILURES—TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

LOUVAIN, January 26.

THE events which occurred during the last months of 1929 on the Belgian stock market turned this period into the most gloomy one of its history. The National Bank of Belgium share index, which stood at 124 in June, 1928, has dropped to 75. It should be noted that non-speculative shares, as, for example, those of the National Railways Company, Ltd., enter into the calculations of this average; for certain speculative stocks the fall amounted to from two-thirds to three-fourths of the highest recorded quotations. The movement shown below in prices of representative shares of companies which are still in a sound position is striking:—

	Highest, 1928.	Lowest, Dec., 1929.
Katanga (ord.)	178,000	55,400
Géomines	27,500	4,000
Minerva Motors	4,000	650
Crédit Général du Congo	790	130
Barcelona Traction	3,000	1,050

In consequence of this slump speculators generally have suffered heavy losses, which have led, in a certain number of cases, to insolvency. Nevertheless, these failures have not shaken the credit of the market, and the great banks have not been affected.

The recent fall in stocks caused the failure of a cork business, namely, the Compagnie Industrielle du Liège, known as the C.I.L., and that of the "Banque Chaudoir." It is anticipated that in both cases creditors will be paid, while shareholders will have their holdings written down. The C.I.L., incorporated in 1927, began brilliantly. Its 500-franc nominal shares were publicly issued at 1,500 francs, and rose quickly to 18,000; afterwards the shares were allotted in fifths, and an increase of capital was effected by the payment of 2,000 francs per fifth. This company, which had always been the subject of a certain uneasiness in many quarters, entered, at the end of 1929, into engagements manifestly in excess of its financial capacity, and the shares are now quoted at 360 francs.

On December 24th the "Banque Chaudoir," domiciled at Liège, went into liquidation. The paid-up capital is 40 million francs, but, according to the present state of affairs, net assets will return 7 millions only, if they be normally liquidated. The bank had been entrusted with 30 million francs deposits and held advances from banks amounting to 25 millions. It now appears that the bank has been very badly managed. Besides, substantial loans are alleged to have been granted to managing directors, who have incurred heavy losses through Stock Exchange speculation.

The board of directors, which was composed mainly of very honourable politicians, failed in watchfulness, and will suffer heavy losses. The responsibility of the managing directors seems more serious, since their doings have been the subject of vehement complaint, and legal proceedings have been instituted. At any rate, the C.I.L. and the "Banque Chaudoir" were unsound undertakings, the collapse of which can only relieve the general plight.

December is thought to have witnessed the worst of the depression in stocks. In accordance with the general hope, January has brought notable progress towards consolidation. Nevertheless, vigorous advance is not yet to be expected, since speculative syndicates are, in general, too heavily burdened, and many holders of leading shares are still too deeply in debt to the banks. In order to repay these advances there is bound to be heavy selling.

Nevertheless, it is felt that stocks have undoubtedly fallen to levels at which buyers will be forthcoming, at least for purposes of long-term investment. Dividends disbursed in 1929 total 3,500 million francs, against 2,900 millions in 1928; and, unless there should be an industrial crisis of an entirely unexpected severity, the amount must increase this year. On the basis of market quotations the average yield of Belgian stocks is at present about 3½ per cent., despite the very big number of enterprises which have not yet attained full development.

Since the publication of a balance sheet which met with public favour, quotations of Banque de Bruxelles shares show a remarkable advance. The resignation handed in by Mr Despret, chairman of the company, has not made a bad impression, and in certain quarters it is asserted that this measure was requested by the board of directors itself.

The world-wide industrial stagnation and the losses suffered from speculation are slackening trade and giving rise to complaint throughout the country. The extraordinarily mild winter, in conjunction with the reaction in the metallurgical and glassware industries, has diminished the demand for coal, and led to the anticipation of a decrease in the prices of certain qualities. Nevertheless, unemployment has prevailed only in the diamond and textile industries, and has been, in general, without perceptible influence on the soundness of the economic position. In the other trades the situation in January is slightly better than in December, though the improvement may be only seasonal. The House Rents Bill, as outlined in our last letter, has now passed into law; the Taxation Reform Bill is still before Parliament.

SWEDEN.—CHECK TO INDUSTRIAL EXPANSION—STOCK EXCHANGE—STRENGTH OF WOODPULP INDUSTRY.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, February 3.

THE effects of the autumn crisis in America are now becoming visible in Sweden, though the symptoms have varied and are in some cases difficult to interpret. As our most important export industries have a relatively long period of manufacture and operate on contracts which sometimes cover several years, the effects of the crisis will only appear gradually here. Nevertheless, it is already possible to point to certain facts which can scarcely be regarded as other than symptoms of a setback.

It is difficult to diagnose the reduction of exports in December. A considerable export surplus had been expected, and, under similar conditions in December, 1928, there was an active trade balance of 36 million kronor. Contrary to all expectations, however, there was last December an excess of imports of 2 million kronor. This is to be explained, in part, by larger imports, but it is also true that exports declined. Even allowing for the effect of forced exports in the autumn, this decline must be regarded as a symptom of trade recession.

This conclusion is reinforced by the fact that the volume of production showed a tendency to decline in the last month of the year. From 134 in October and 137 in November the index number of production of *Svensk Finanstidning* fell to 130 in December (1923-24=100). It is true that, towards the end of the year, there is a seasonal slackening in production, but it is not usually so pronounced. This must be interpreted as a symptom of decline, especially in view of the reduced employment in the iron and steel industry, which primarily explains the fall in the December index number. The iron and steel industry is the one which was most clearly influenced by the international situation, as was to be expected. According to *Svensk Finanstidning*, its increased production during the years 1927-29 is indicated by the index numbers 100, 114, and 138. Last year the curve rose to 152 in August, after which the decline set in. With the exception of November it declined without interruption, until in December the index number reached 135. Further, the upward movement in the mechanical engineering industry ceased in 1929, and a drop in the export value from 258 million kronor in 1928 to 245 million kronor occurred. The setback is not perhaps very serious, but its relation to the trade situation is emphasised when the figures for certain sections of the engineering industry are considered separately. Thus, while the telephone industry has maintained its export position, ball-bearing shipments have increased by 8 per cent., and the motor industry is able to report a 14 per cent. improvement in 1929, the electrical industry finds its export trade reduced by 26 per cent.,

and separators by 29 per cent. And the tendency implicit in these movements is rendered yet more ominous by certain much-heralded cases of output restriction. The most notable of these took place at the S.K.F. ball-bearing works, where 600 employees were given notice. This may, it is true, be partly accounted for by progressive rationalisation of production making possible a productive increase per labour unit; but it is, nevertheless, impossible to shut one's eyes to the fact that these measures are symptomatic of a turn in the tide of trade.

The attitude of the Stock Exchange during January is also illustrative of this general trend. True, the usual optimism engendered by the advent of a new year was in evidence for the first few days of the month, and a marked improvement has taken place in Kreuger stocks. But the latter was merely a reaction against the excessive fall in these shares towards the end of last year, and has mainly been dictated by rises on foreign stock exchanges. For the bulk of industrial securities January has been a month of complete stagnation. Banks have improved, of course, since the declaration of dividends, of which several show increases. The total impression of the Stock Exchange dealings in January was uncertain and irregular. The aggregate value of the shares quoted has risen, but only to the extent of the Kreuger improvement, hence the view is left unimpaired that speculators have adopted a policy of wait-and-see in relation to developments in the near future.

Finally, the effect of the Russian timber policy on the Swedish sawmill industry, though not directly connected with the international situation, is working in the same direction. The market at present is adopting a waiting attitude, and sales to date amount to only about 300,000 standards.

When it comes to measuring the degree of the virtual retrogression that has taken place it is necessary, however, to avoid exaggerating its import. For it can confidently be said that the general economic position in Sweden continues sound and satisfactory. The woodpulp industry is working to capacity, which means that production in 1930 will, in all likelihood, exceed last year's record figure by 5 to 10 per cent. The price level in this industry is, on the whole, very firm, and the greater part of the estimated output for the year has already been sold. The outlook for the paper mills, on the other hand, is not quite so good, owing to the uncertainty as to the results of the pending wages negotiations. The market for kraft paper must be regarded as declining, but the Swedish newsprint mills are well supplied with orders—so much so, in fact, that they are disinclined for the moment to commit themselves further. In so far as can be judged from the January shipments of iron ore, the position is most satisfactory, constituting a seasonal record. Taking the position as a whole, a reversal of the consistently upward tendency of the last few years is in evidence, but this does not as yet amount to anything like a serious setback, notwithstanding the fact that unemployment increased in December by 23 per cent. The increase over the previous month was somewhat greater than usual, yet even so the total figure is 35 per cent. below that of a year ago. There is nothing in the situation at present to indicate the approach of anything in the nature of a slump, the signs point rather to a temporary lull, of which it is difficult to judge whether it will be of a short or relatively long duration.

AUSTRIA.—UNEMPLOYMENT—BUILDING—INDUSTRIAL DEPRESSSION—STOCK EXCHANGE

(FROM OUR CORRESPONDENT.)

VIENNA, February 1.

THE serious deterioration in general economic conditions, reflected in an increase of unemployment to over 300,000, and the poor prospects of immediate improvement are engaging the attention of Parliament, and it is expected that the Government will make concrete proposals as to the manner in which it intends to deal with the crisis. It is easier to set up a comprehensive programme than to carry it out, especially in view of the lack of means. The investment loan is still hovering at an uncertain distance,

Copies may be had by asking at almost any branch or from the Secretary, Westminster Bank Limited 41 Lothbury, London, E.C.2

and the issue of the housing bonds, destined to animate public and private building enterprise during the present year, is also held up. The Government, it is true, has requested that investments be made as quickly as possible out of cash in the public funds, as far as this is possible. The Vienna Municipality has given several contracts, but the means at hand for this purpose are considerably more slender this year than last, as are also those of the Ministry of Finance. The taxable resources of the population are exhausted, and, in spite of severity in collection, taxes are coming in but slowly. Building activity is to be specially promoted this year, and the international easing of money conditions has helped in this connection. First mortgages, which for a long time were obtainable only with difficulty, are now offered more freely, and from Switzerland in particular there is interest in the placing of money on the basis of 7½ to 8 per cent. for first mortgages. Owing to the activity in the building trade, a not inconsiderable diminution of unemployment may ensue within the next few weeks. Another cause of unemployment is the disappearance of numerous banks, which in recent years have been too largely involved with industrial concerns that are now cutting down or entirely ceasing activity. To mention only one example, it is intended thoroughly to reorganise the big Mautner textile concern, which formerly belonged to the Bodencredit-Anstalt, and to reduce output by at least one-third. The contraction of the automobile industry has been mentioned on former occasions. The Alpine (iron works) has already dismissed workers. In view of the mildness of this winter and the fact that stocks on hand are considerable, the coal industry is also employing fewer men. The index figure of crude-iron production fell from 72.1 in November to 45.2 in December, that of crude-steel production from 73 to 53. The paper industry, which for a long time was very busy, now has to face marketing difficulties, and fresh attempts are being made to create a further cartel. An improvement is recorded on the leather market, as the shoe factories have received some large orders and prices have stiffened.

The easing of the international money market is gradually benefiting Austria. The influx of foreign credits, which are, however, only on short terms, is resulting in a great reduction in the call on the National Bank. Within the first three weeks of January the bill portfolio of the National Bank dropped from 305 to 188 million schillings; the fiduciary circulation has now been under a milliard schillings for several months; the cover has gone up by leaps and bounds to 69.2 per cent. For these reasons the National Bank was in a position to reduce its rate to 7 per cent. and seems to be contemplating a further modification by one-half per cent. in the not distant future. The lowering of the discount rate to

7 per cent. was perhaps deliberately timed to coincide with the return of Federal Chancellor Schober from the Hague, in order to demonstrate to the public the importance of the relief from reparations and the possibility of engaging immediately in negotiations for a loan. In spite of the reduction in the Bank rate and the desire of the banks to pay to depositors only 4½ per cent. on call money, money is still as tight as ever. The medium-sized and smaller firms have the utmost difficulty in obtaining credits, and the disappearance of the medium-sized banks, which are able to handle lesser clients, is being felt sorely. The big well-established enterprises can get any amount of credit. The tightness of money is further enhanced by the impossibility of raising fresh capital. It is true that the security market has recovered somewhat, and the index figure for industrial shares went up from a low-water mark of 93.4 to 101.5 within the six weeks preceding the middle of January. Since that time a further slight advance has been made. Individual securities, which had been dragged down in consequence of the collapse of the Bodencredit-Anstalt, now show important advances. For instance, State Railway shares have risen from 20 to 30 schillings. This means a rise of 50 per cent. within a few weeks, but the first quotation was a low one, as a result of executive sales. It is hoped that certain secured pre-war rentes, namely, those made out in silver value, will be valorised. The confidence of the public in investment values is being regained very slowly. Moreover, during the time of disquiet in domestic political affairs big purchases were made in foreign investment securities. It is anticipated that State loans, provincial loans and also the housing obligations will shortly be issued, so that the material available will be greatly augmented.

The balance of foreign trade has not improved, and the deficit for the past year amounts to 1,084 million schillings. Serious complaints are being made about economic relations with Germany; Austrian exports to Germany are receding, while German dumping into Austria continues. Further, the trade-treaty negotiations are not proceeding rapidly, as concessions are being made reluctantly by the German representatives. The endeavours of the farmers to get trade treaties revised as quickly as possible, though for a time supported by industry also, are not now so zealous, as the moment is not regarded as favourable. A fresh agreement has been arrived at between the Austrian National Bank and the State, subject to the approval of the general meeting and of Parliament. It has been decided to extend the charter of the Austrian National Bank until December 31, 1957. On the other hand, the share of net profits of the National Bank, which accrues to the State Finance Department, will be raised considerably for the future. Furthermore, the State debt to the National Bank, though as heretofore reduced each year by the State's share of the net profits, will pay no interest; up to the present it has paid 2½ per cent.

CANADA.—PARLIAMENT—ST. LAWRENCE WATERWAY—STOCK EXCHANGE IRREGULARITIES—UNEMPLOYMENT—PRICES.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 14.

THE meeting of the Federal Parliament has now been definitely fixed for February 20th, and politicians are beginning to drift into the Capital. Mr King has announced no further steps in connection with the reorganisation of his Ministry since he brought Mr Crerar, the former Progressive leader, into his Cabinet, but he is seeking for someone to replace Mr Robb, the late Finance Minister, as representative of the English-speaking Protestants of Quebec, and is publicly pledged to restore the weight of Quebec's influence in the councils of the Cabinet which was weakened by the loss of Mr Robb. The Ministry may be considerably embarrassed if the Hoover administration carries out its project of trying to close the loopholes on the border through which the liquor traffic is conducted. The measures suggested for this purpose include the employment of a force of 10,000 armed men and 1,000 machine guns, and an increase in the number of ports of entry. The Canadian Government will almost be compelled to duplicate these ports of entry on this side, a process which would entail heavy expense, and public opinion, knowing the capacities of American prohibition officers for reckless fusillades, will demand strong Canadian patrols to keep peace and order on the border. There loom up for the session also some highly controversial issues such as the legislation for the nationalisation of broadcasting services and the reorganisation of the capital structure of the Canadian National Railways.

The session may also see some interesting developments in connection with the St. Lawrence Waterway. Last week the Prime Minister, in replying to a deputation of the Canadian Chambers of Commerce which made representations to him upon the subject, went further than ever before in committing himself to support of the scheme by saying "the sooner the waterway is completed the better." He has now arranged that the postponed conference with the administrations of Ontario and Quebec about their rights over water powers on the St. Lawrence and other rivers shall take place on January 20th, and if current rumours are correct, that the engineers of the Federal Government and of the Hydro-Electric Commission of Ontario have reconciled their differences about their competing plans for power development of the St. Lawrence and agreed upon a common scheme, the chances of a successful outcome for the conference will have been greatly improved. It is also stated that Premier Taschereau, of Quebec, hitherto a resolute opponent of the waterway, has now modified his attitude, and if the King Government can reach an agreement with the two provinces about water powers, the road will be cleared for the resumption of negotiations with Washington.

A considerable sensation was created throughout Canada by the arrest, on February 10th, of the two senior partners of the well-known brokerage firm of Solloway and Mills. The past year has witnessed a steady subsidence of the great mining boom which had generated a tremendous fever of speculative activity throughout the Dominion since 1925, and there has also been a disastrous decline in the prices of the shares of many companies which were floated in connection with the oil fields of southern Alberta. There had developed throughout the Dominion a deep suspicion of the ethical standards and methods of a ring of brokerage houses which had their headquarters in the Standard Mining Exchange of Toronto and specialised in mining and oil shares. The *Financial Post of Toronto* took the lead in a campaign of exposure in which it made definite charges of stockmarket manipulations of a very discreditable character, backed by concrete evidence about specific cases. The Attorney-General of Alberta, under the powers conferred by the drastic Security Frauds Prevention Act, instigated an investigation, as the result of which Mr Mills and Mr Solloway were arrested. This is apparently only the preliminary step in a concerted move to clean up the situation. (Further arrests have since been reported.—*Ed., Econ.*) The provincial administration of Manitoba has launched an investigation into the affairs of the Winnipeg office of Solloway and Mills and another important brokerage firm, and the Attorney-General of British Columbia has announced that his Government is ready to pass legislation modelled on the lines of Alberta's Security Frauds Prevention Act. There is also to be a conference in Ottawa of provincial authorities, and it is expected that every province will fall into line with stiff legislation to check the present irregularities, which had, as the *Financial Post* alleged, completely destroyed confidence in Canada's mining industry and were bidding fair to perform the same disservice for the infant oil industry. It was feared that the arrests would adversely affect the mining markets, but these have, on the contrary, moved sharply upwards, presumably through the feeling that the public is henceforth likely to get a fairer deal from the brokers.

The Dominion Bureau of Statistics' latest index number of wholesale prices (1926=100) showed a virtually stationary situation, the index for December being 96.2, as compared with 95.8 for November. Eighty quotations were lower, 44 were higher and 378 remained unchanged. Such rise as took place was due chiefly to a gain in the agricultural product items. The Bureau's unemployment index, on December 1st, stood at 119.3, which is a fall of, roughly, 5 points from the previous month, but is still 2.6 higher than the figure for December 1, 1928. However, in labour circles complaint is made that the unemployment compilations of the Bureau are quite illusory, as they take account only of limited classes of workers.

Certainly the unemployment situation is exceedingly serious in many cities. Mr McBride, lately Mayor of Toronto, declared recently that unemployment conditions in that city were the worst that he had known in twenty-five years, and social service workers state that during Christmas week relief had to be given to between 7,000 and 8,000 families. Conditions are nearly as bad in Montreal and Winnipeg, for the local authorities are almost at the limit of their available resources for coping with the problem. The Federal Government has, so far, resisted a great deal of pressure to accept some responsibility for the unemployed, claiming that the problem is constitutionally outside its jurisdiction, but Mr Brownlee, the Premier of Alberta, has challenged this stand, declaring that an investigation in Alberta has revealed that 75 per cent. of the people securing public relief in that province were immigrants who had been brought to that country within the last five years through the agency of the Federal Government. He points out that objections which the province of Alberta raised last year to the influx of certain classes of immigrants were disregarded, and maintains that as long as the Federal Government controls immigration policies it must accept responsibility for the fate of immigrants who cannot obtain work.

Since the New Year began there has been no material change in business conditions, but retailers have been experiencing the usual post-holiday dullness and have been trying to stimulate business by forced sales. In the industrial field conditions remain uneven and there is a recession in certain lines of production. Both manufacturing and distributing business are unlikely to show any substantial gains until outdoor work is resumed with the advent of spring. The carloading figure for the week ending January 4th, placed at 44,310 cars, shows a gain of 2,806 cars, compared with the previous week, but a decline of 1,796 cars compared with the figure for the parallel week in 1928. The latest trade returns covering the twelve months ending November 30, 1929, indicate that British export trade is not holding its own in Canada against American competition. In this period British exports to Canada, valued at, roughly, $196½ million, showed a gain of little more than $6 million, but in the same period American exports to Canada rose from $815 to $902 million. As the result of the grain blockade, moreover, there was a sharp decline in Canada's exports to Britain, which fell from $459 to $309 million.

NEW ZEALAND.—WOOL PRICES—BUSINESS OUTLOOK—UNEMPLOYMENT—THE GOVERNOR-GENERAL.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, December 12.

THE opening wool sales of the season have given New Zealand something of a shock. Some recession in prices was expected, but the values realised were lower than the most pessimistic had anticipated. The average price for the Christchurch sales in November, 1928, was over £23 per bale. In 1929 the corresponding average was £14 2s. 6d. per bale, which represents a decline of about 38 per cent. Comparing December sales for this year and last, the *Mercantile Gazette* quotes the fall in average prices per lb. as follows:—

	1928. Dec. d.	1929. Dec. d.
Extra fine crossbred, 48/50	17¾	11¾
Fine crossbred, 46/48	16¼	11¼
Medium crossbred, 44/46	15½	11
Coarse crossbred, 40/44	15	10¾

Should the present level of prices continue throughout the season, the fall in the total value of wool can scarcely be less than 33 per cent., which means a reduction of more than £5 million in the value of wool exports. Moreover, decline in prices is not confined to wool, where it is most severe, but is spread over all the leading exports. London prices for butter for the first week in December are 165s. per cwt., as compared with 179s. last year, and for cheese 91s., as against 97s. 6d. last year. It is expected that freezing companies will pay about 8d. per lb. for lamb this season, as compared with 10d. last year. Since there is little chance of a big upward swing in prices during the main export season, extending to May, a pronounced decline in total export values may be regarded as certain, despite some increase in quantity.

Meanwhile, internal trade continues its recovery from the low activity of the past two years. A marked increase in imports reflects expanding local demand. Both the railways and coastal shipping are handling larger volumes of business, and rapidly increasing registrations of motor vehicles indicate expansion of road traffic. The growth of bank advances suggests that less hesitation is being shown in using funds for local business purposes. A big expansion of loans from the State Advances Office has stimulated building activity, and land transfers, mortgage registrations, totalisator receipts, and savings bank business all show decided improvements. Bankruptcies are lower than a year ago, the balance of immigration is more favourable, and the trade union unemployment figures are better.

It appears practically certain that internal trade will remain good throughout the summer. But the signs of impending decline are unmistakable. Export values are contracting rapidly, while imports are increasing, and it is quite possible that the balance of overseas trade may become definitely adverse by the middle of 1930. Following the change in the trade balance, the bank returns also are becoming less favourable. For the first half of November, 1929, as compared with 1928, free deposits are practically the same at £22 million, fixed deposits have risen from £29.3 to £30.7 million, and advances have risen from £47 to £52.8 million. These movements indicate that the balance of payments is already decidedly against the country, and, if expenditure on imports continues to increase and receipts from exports to decline, as appears practically certain, some restriction of credit and a consequent recession of domestic business is inevitable. New Zealand is now passing through a phase very similar to that which occurred in the 1925-26 export season, and similar results are to be expected. Experience has shown, however, that local business is very slow to react to changes in the credit situation, and the adjustments in internal trade will almost certainly be less severe than in external trade.

The Government fulfilled its promise made early in October last to absorb the unemployed within five weeks. The total number who applied for work was approximately 8,000, out of a working population of over 600,000. Of these about half refused to accept relief work away from the towns; but the remaining half were given employment, mainly at forestry and road and railway construction. It appears now that the policy adopted was merely to provide temporary relief, and that few of the men are likely to be retained after Christmas. Little has been done to explore, and practically nothing to remove, the basic causes of unemployment, which many people consider are to be found largely in the State fixation of wages and working conditions by the Arbitration Court; and the unemployment situation is likely to be worse before next winter is over.

Parliament is now in recess, but a by-election, caused by the resignation of the Hon. T. M. Wilford, who has been appointed High Commissioner for New Zealand in London, resulted in a victory for the Labour candidate. Mr Wilford's appointment is popular. He is a barrister who has been prominent in public life for many years, and is regarded as the father of the House, having represented the same constituency continuously for a longer period than any other member. The keenest gratification has been expressed throughout the Dominion upon the appointment of Lord Bledisloe as Governor-General, and his

arrival is anticipated with much interest. During recent years New Zealand has studied, stimulated and made appreciable progress in the improvement of farming methods, and is a little proud of the quantity and quality of its produce. The farmers, who are largely responsible, are keen to make further progress. They know something of Lord Bledisloe's work and interest in agriculture, and they look to him as a leader who may show them roads to further improvement, and who may possibly learn something of interest himself. The appreciation of the new Governor-General is, however, tinged with regret for the old, as Sir Charles Ferguson has been exceptionally popular, and has given sterling service to the Dominion during his five years of office.

HONG KONG.—CURRENCY SITUATION—DIVERSION OF TRADE TO SHANGHAI—PRICES LEVEL.

(FROM OUR CORRESPONDENT.)

HONG KONG, December 21.

THE currency of Hong Kong is in a curious position and the developments of recent months have given rise to a problem for which no satisfactory solution has yet been found. The legal tender of the Colony is the silver dollar, either British or Mexican, but for all practical purposes the coinage has been supplanted by the notes issued by three of the foreign banks established here. These notes circulate throughout South China, and by reason of their portability and their unquestioned backing they have been in increasing demand, especially of recent years, when incessant civil warfare has rendered the currency of the neighbouring provinces more and more unreliable. The coincidence of this demand with a shifting balance of trade between Hong Kong and South China resulted in the notes acquiring a greater value than the silver which they represented, and a few months ago they rose to a premium of nearly 20 per cent. above their par value. For many years past the banks of the Colony have declined to receive silver dollars except at the ruling rate of discount *vis-à-vis* notes, and all financial transactions, including payment of Government taxes, have been subject to payment in bank notes. Invisible exports, especially remittances from overseas Chinese, play an important part in the trade of Hong Kong, and with a marked decline in imported manufactures from gold-using countries, the local banks have had the utmost difficulty in obtaining cover to meet drawings from centres inside China. Owing to this lack of cover the banks maintained the rate of exchange at a higher level than the parity of bar silver and were protected in so doing because the import of silver bullion was impracticable so long as the currency of the Colony was on the basis of the bank note.

The steady rise of the Hong Kong dollar in relation to the currency of South China is believed to have diverted a good deal of business from Hong Kong to Shanghai, where the currency has been kept in close relationship with the fluctuations in the price of bar silver. A Canton merchant wishing to buy a case of piece goods found that he would have to pay from 10 per cent. to 15 per cent. more in Hong Kong than he would in Shanghai for the very same cloth. Moreover, in Shanghai there were still stocks of goods imported before the new Chinese Customs tariff came into force early in the present year, and such goods could be shipped to Canton without paying further duty. Goods from Hong Kong, on the other hand, would be subject to the higher scale charged under the new tariff, and despite the extra freight from Shanghai there was undoubtedly an appreciable advantage in purchasing from Shanghai rather than from Hong Kong. In the case of the exporter from South China, his produce would yield more in Shanghai by reason of the lower level of sterling exchange. The very existence of Hong Kong depends upon its ability to handle trade between South China and the outside world, as well as between South China and the other provinces. When, therefore, it became apparent that business was being diverted the Chinese Chamber of Commerce, at a meeting held in September, asked the Government to intervene with a view to bringing back the Hong Kong dollar to parity with silver. As Chinese merchants generally had been speculating upon an early return to a normal rate of exchange for Hong Kong notes, the appeal to Government was by no means disinterested. A few weeks after the appeal was made rumours of Government action brought out a big demand for sterling and within a few days the rate of exchange dropped from 1s. 11½d. to 1s. 9¼d. On October 24th the banks of the Colony announced that they would "receive and pay out Mexican and British dollars on the same basis as the notes of the issuing banks." With the rate as 1s. 9d. it was profitable to import silver dollars, which could be laid down at about 1s. 8d., and there was a rush to the Royal Mint in London and to the Bombay Mint where British dollars are also coined. During the past week or two silver dollars have been steadily arriving in the Colony and there are large quantities en route.

The influx of this specie will not affect the demand for notes, which are still at a premium, because silver dollars are no longer acceptable in the hinterland. All that will happen, so far as one can see, will be a steady accumulation of silver dollars in the vaults of the banks until the rate of exchange falls to the point where it no longer pays to import silver. The demand for notes will, presumably, continue. At present the Colony's note circulation exceeds $70 million and the issuing banks have no inducement to increase their note issue, for in addition to the cost of printing, registration and loss of interest there is an annual tax of 1 per cent. The Government are at present considering the removal of this tax, at any rate in respect of circulation in excess of the normal figure, and if they decide on remitting the tax the banks will be in a position to issue notes freely, thereby releasing the currency from an artificial situation. While uncertainty as to the future of the tax on circulation prevails, the banks are reducing their exchange operations to a minimum, for with the import trade practically at a standstill, owing to the political struggle in the neighbourhood of Canton, there is no cover to set off against the purchase of gold currencies, or in other words there is no counter-balance to the incessant demand for Hong Kong notes.

There have been previous occasions when the Hong Kong currency has required adjustment, but probably none which have been marked by such acute trouble as the present crisis. The chaotic conditions prevailing in South China are, of course, largely responsible and it is to be feared that a recurrence of the trouble will always be possible so long as the currency of the hinterland lacks any firm basis. The only satisfactory remedy is the adoption by China of a gold currency, but although Dr. Kemmerer is reported to have pressed this remedy upon the Nanking Government there seems little prospect of its being accepted. Hong Kong is, therefore, faced with the problem of acting as the intermediary between the gold-using countries of the world and an already sorely impoverished territory, whose people are called upon by the continued fall in silver to meet an advance of 15 per cent. in the price of foreign manufactures. The import trade of this Colony has never properly recovered from the boycott of four years ago and is therefore in no fit condition to bear the extra burden thrown on it by the drop in sterling exchange. There seems little hope of a recovery in the price of bar silver and every possibility of a further decline, so that there is nothing for it but to adjust local prices to the new level of exchange. Such adjustment in a time of financial depression means a severe curtailment of demand and the diversion of trade from those lines where quality counts and has to be paid for.

Books and Publications.

THE INTERNATIONAL BANK.*

DR. EINZIG'S book gives a fair picture of the antecedents of the Bank for International Settlements, the scope envisaged for it by the Young Plan experts and by the Bank Organisation Committee, and of some of the benefits and dangers which may be expected from its establishment. As the author indicates, the Bank is the outcome of two quite separate tendencies: the tendency to closer co-operation between Central Banks and the tendency to adjust Reparations to realities. Neither of these forces by itself would have sufficed to found the Bank; their combination was therefore necessary.

Dr. Einzig writes convincingly and ingeniously of the possible beneficial activities of the Bank. Governments (he instances the case of Spain among others) will turn, he thinks, to the new Bank for assistance in stabilising their currencies, though it is probable that in such operations the B.I.S. will act only as intermediary. As regards its dangers, he has two dominant fears—politics and inflation; or perhaps only one—inflation caused by politics. It is necessary to distinguish between the direct powers of credit expansion belonging to the Bank itself and those which it can only exercise indirectly through Central Banks. The Bank itself is more likely to create no credit at all than too much, since it can only create credit in the currency of its country of domicile, and any excessive creation of Swiss francs could presumably be prevented by the National Bank of Switzerland under the Veto Clause of the International Bank's Statutes. Dr. Einzig's argument that because the Bank (bound as it is to maintain most of its assets in the form of paper of prime liquidity) is not affected as commercial banks are by a cash ratio limit, it can therefore expand credit almost indefinitely by means of advances and counterbalancing deposits, is hopelessly illogical, since the restriction upon the nature of the assets means that advances cannot exceed a fraction of the holding of bills and exchange, the acquisition of which is limited by the Bank's cash resources. Again, there is no reason to suppose that the other Central Banks individually will be any more disposed to inflate on the basis of balances at the International Bank than they are under the present possibilities of the gold exchange standard. General expansion, if undertaken in concert to counteract a shortage of gold, would not necessarily be harmful.

The best parts of the book are those dealing with the determination of the rates which the Bank will charge for accommodation and on the possibility of economising gold movements. In practice it is probable that the Central Banks will largely effect settlements with each other, not by earmarking gold, but by the transfer from one to another of their balances with the International Bank. The powers of the Bank itself in "rationalising the gold standard" will be strictly limited, not only because it cannot be allowed to share in the scramble for gold, but because it is forbidden to issue notes and, as Dr. Einzig convincingly shows, cannot have a general published discount rate. Nevertheless, we can reassure ourselves that an institution which has been attacked on the grounds at once of its vast powers and of its incapacity of doing anything will probably confound both types of critic.

* "The Bank for International Settlements." By Paul Einzig. London: Macmillan and Company. 7s. 6d.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Farm Export Debenture Plan. By Joseph S. Davis. Food Research Institute, Stanford University, California. $3.00.

An exposition and thorough discussion of the export debenture proposal, as applied both to wheat and to other commodities. There are chapters on foreign experience of similar devices and on the possible reactions of foreign Governments to the adoption of the plan by the United States.

The Economics of the Coal Industry. By R. C. Smart. (London) P. S. King, Orchard House, Great Smith Street. 12s. 6d.

To the literature of the coal industry, representing for the most part the labour of politicians and economists, is now added a very welcome treatise by a mining engineer. That the book, which is illustrated by photographs and diagrams, is strong on the technical side, is by no means to imply that the economic aspects are neglected. There is a valuable chapter on the coal industry in Europe.

The Present Position of the British Coal Trade. By Professor J. H. Jones. (London) Royal Statistical Society, 9, Adelphi Terrace. 1s. 6d.

The text of the paper read before the Royal Statistical Society last November. A full report of the discussion is also reprinted.

Economic Democracy. By Robert S. Brookings. (London) Macmillan and Company, Ltd., St. Martin's Street. 6s. 6d. net.

The sub-title of this book is "America's Answer to Socialism and Communism." It consists principally of reprints of addresses and papers on various contemporary problems.

International Labour Review. January, 1930. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. net.

Includes an account of the thirteenth session of the International Labour Conference; the first of a series of articles on working conditions in a rationalised industry, dealing with the Bata system; a study of the relation of working hours to climate; and the third article in the coal mining wages and hours (1927) series.

Prospettive Economiche, 1930. By Giorgio Mortara. (Milan) Università Bocconi. 50 lire.

Three more volumes in this series, on maritime transport, iron and copper, are now available.

Annali di Economia. (Milan) Università Boccina, Via Solferino, 13.

Includes articles by Filippo Tajani on "The Wages Incentive," and Secondo Spinelli on "The Post-war Foreign Trade of Italy in Relation to the Fluctuations of the Lira."

The South and East African Year Book and Guide for 1930. Edited by A. Samlee Brown and G. Gordon Brown. (London) Union-Castle Mail Steamship Company, Ltd., 3, Fenchurch Street. 2s. 6d.

A reference book specifically commended by its compilers to business men, sportsmen, tourists, migrants and invalids. It contains an atlas, including harbour plans; articles on the principal events since the publication of the last edition; a bibliography; and a wide range of classified information.

The Economic Record, November, 1929. (London) Macmillan and Company, Ltd., St. Martin's Street. 5s. net.

Articles in this issue include: "Local Body Indebtedness in New Zealand"; "Theories of Population and their Application to Australia"; "Consumers' Co-operation in New South Wales"; and "The Drift to the Towns."

Report of the Superintendent of Insurance for the year ended December 31, 1928. *Part IV.* (Albany) Insurance Department.

Covers assessment, life and casualty associations, fraternal benefit societies and co-operative fire insurance.

Mid-Monthly Supplementary List. By subscription only, 42s. per year.

Gives interesting statistical information of unquoted securities in which dealings are marked, including mines, on the Stock Exchange.

1929 *Financial Notes.* Subscription, one guinea.

Monthly and Yearly Highest and Lowest Prices, with Diary of Principal Events in 1929. Price 2s. 6d.

The above three books are published by Messrs F. C. Mathieson and Sons, 16, Copthall Avenue, E.C.2.

The Stock Exchange.

SOME INVESTMENT TRUST RESULTS.

THE knowledge that security prices suffered a wholesale depreciation last year—ranging from 10 per cent. in the case of fixed-interest stocks (except gilt-edged) to between 20 and 30 per cent. in the case of ordinary shares—is not exactly a "bull" point for the market in investment trust stocks. Indeed, the impression appears to be abroad that not only the "equity" stocks, but also the debenture and preference stocks of investment trust companies are a less desirable purchase at the present time than they appeared to be, say, twelve months ago. This attitude on the part of the investing public is understandable but hardly logical, since the intrinsic security of the best investment trust stocks is unaffected by temporary market fluctuations. An investor normally buys these stocks because he knows that certain tried principles are followed by sound British trust companies in the investment of their capital funds and in the distribution of their profits. It may not be out of place to reiterate these principles.

In the first place, trust company funds are invested so as to ensure the greatest possible spreading of risks. This is achieved, under British investment trust practice, by investing not more than 1 or 2 per cent. of the capital in any one security or undertaking; by placing, say, 50 per cent. of the capital in bonds and debentures, and the balance in preference shares and ordinary shares in varying proportions; and by distributing holdings in each class geographically and by groups of trades or industries. This scientific distribution of risks acts as an insurance against the normal fluctuations of the stock markets. In the second place, the British investment trust company does not distribute its earnings up to the hilt, but applies a portion of its profits each year to reserve. At the same time, capital profits realised on the "turnover" of investments are not distributed, but reinvested. The strength of the old-established British trust companies lies in the fact that, over a long period of years, they have been paying out in dividends only a proportion of their earnings, and that, apart from the large visible reserves so created, they have also built up very large "internal" reserves by writing down the book value of their investments out of capital profits.

These conservative practices constitute the underlying security of well-managed British trusts. A general depreciation in security values is precisely the situation which these companies have been designed to meet. It is, therefore, not surprising to find that such old-established concerns as the Metropolitan Trust and the Army and Navy Investment have been able to increase their dividends in respect of 1929 in spite of the depreciation in securities. The following analysis of the income and disbursements of these and two other old-established companies brings out the conservatism of British trust company finance:—

Company and date of Balance Sheet.		Income after Tax.	Available for Ordinary.	*Per cent. earned (subject to Tax).*	Per cent. paid (subject to Tax).	Added to Reserve.	Carried forward.
		£	£			£	£

‡ For writing down investments. § Revenue Reserve Fund.

The forthcoming reports of other old-established trust companies will doubtless disclose the same satisfactory results. The formation of new trust companies has, however, been proceeding apace during the last four years, and it may be well to examine the figures disclosed by some of the later entrants to this field. The following table, accordingly, sets out the achievements of four companies formed between 1925 and 1928:—

Company and Date of Balance Sheet.		Income after Tax.	Available for Ordinary.	*Per cent. earned (subject to Tax).*	Per cent. paid (subject to Tax).	Added to Reserve.	Carried forward.
		£	£			£	£
Stockholders' Investment (Oct. 31).	1927	40,556	14,643	*9·8*	6·0	3,635	2,583
	1928	54,146	15,536	*8·1*	7·0	3,000	2,639

* 13 months. † For 9 months. ‡ *Plus* £1,330 written off issue expenses.
§ 16 months.

These companies, naturally, cannot be expected to show results of the same order as those of the older companies until they have had time and opportunity to build up a strong reserve position. On the whole, they may claim to have made a fair start. The question arises, however, of the extent to which they, as compared with the older companies, are likely to have suffered serious depreciation in the value of their investment holdings as a result of last year's Stock Exchange depression. Their financial position naturally renders them more vulnerable to attack from this quarter than does that of the older concerns. Companies formed between 1925 and 1927 may still show some appreciation in the capital value of their investments, but those established in 1928 and 1929 are much more likely to have "bought at the top" and suffered a loss on their present holdings. The following table contrasts the position of the old and new concerns in this respect:—

Company.	When formed.	Ordinary Capital.	Reserve Account.	Investments.	Surplus or Deficiency on Investments.	Date of Balance Sheet.
Companies formed before 1925:—		£	£	£	£	£
Metropolitan Trust.....	1899	625,000	625,000	3,205,479	+ 725,000	Jan 1, 1930.
Army and Navy	1887	200,000	312,285	1,326,738	(*a*)	Nov. 30, 1929.
Foreign and Colonial ...	1879	750,000	472,700	3,531,898	(*a*) (*b*)	Jan. 10, 1930.
Governments Stock and Other	1871	534,187	97,413	2,206,344	"Worth more" than balance sheet figure.	Dec. 31, 1929
Companies formed 1925 and later:—						
Stockholders' Investment	1925	300,000	50,000	1,507,532	(*c*)	Oct. 31, 1929.
Glasgow Stockholders	1927	280,000	25,000	1,342,896	— 120,219	Jan. 2, 1930.
English and New York...	1928	300,000	...	1,027,647	— 50,739	Dec. 31, 1929
London and Strathclyde	1928	200,000	...	893,769	— 13,300	Aug. 31, 1929.

(*a*) Not stated. (*b*) £30,000 used for writing down investments.
(*c*) Market value exceeds balance sheet valuation *after deducting reserve account.*

It goes without saying that the recently-formed investment trust companies cannot as yet offer the same security as the old-established, but the investor should appreciate that the prior charges of the young as well as the old trusts, which follow conservative principles of investment, are well covered, both as to interest and to assets, for the reason that these companies invest their funds to establish an adequate revenue, not to make capital profits. The debenture stock of the older trusts is generally covered from four-and-a-half to five-and-a-half times by profits and from two-and-a-half to three-and-a-half times by net assets, while earnings on the preference stock are covered from two-and-a-half to three times. The corresponding stocks of the newer companies are less well covered, but compare favourably in this respect, nevertheless, with those of much older companies in other industries. Investment trust debentures, being as a rule closely held by the conservative type of investor, frequently yield less than 5½ per cent., and preference stocks less than 6 per cent. As regards ordinary stocks, the investor may be advised to concentrate his attention on the yield on earnings rather than on dividends:—

Name.	High. 1928.	High. 1929.	Present. Price.	Earned. %	Divs. %	% Yield on Earnings.	% Yield on Divs.
Army and Navy Investment	333	365	350	27·7	17·0	7·90	4·86
Foreign and Colonial...	208	218	176	14·9	10·0	8·76	5·87
Governments Stock and Other	199½	273	217½	15·6	10·0	7·34	4·75
Stockholders' Investment	157½	157	117½	9·5	7·0	8·33	6·12
Glasgow Stockholders	...	168½	130	12·2	5·0	9·57	3·93
English and New York	144	136	102½	6·4	5·0	6·43	5·00
London & Strathclyde	...	...	134½	5·1	5·0	3·87	3·75

This table suggests that even if the security markets remain depressed for some time, the present dividends obtainable from the old-established investment trusts are well covered and firmly established. The course of security values during the next few months will, of course, be of moment for all investment trust stockholders. If the tendency of security prices should be downward for another year or so, investment trust companies would probably be called upon to apply out of their profits increasingly large amounts to reserve to meet the depreciation on their holdings. This might prevent the old-established from increasing their dividends and probably cause the newly-established to reduce their dividends. But if the stock markets recover before the year is out, large appropriations out of profits to reserve will not be necessary, and dividends will once again automatically increase with the increase in earnings. Stock Exchange depression must inevitably affect *all* investors. Holders of sound investment trust securities have, however, the consolation of knowing that their stocks are less liable to depreciation than those of almost any other form of business enterprise—a result due partly to the basic methods of trust company finance, which are the best form of assurance as yet devised against a general fall in investment values, and partly to the strong reserve position which the best companies have built up by a consistently conservative dividend policy in past years.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
February 18.	February 20.

Business up to noon on Thursday showed the same features—or absence of features—as in the previous week: paucity of business, a gradual recession of prices, and a general absence of enterprise, individual and collective. The reduction of Bank rate, while producing no significant change in the undertone of the "House," strengthened gilt-edged stocks, reinforced the specialised activity of Rhodesians, and caused a mild recovery in numerous "depressed" industrial counters. On the whole, liquidation, which has been the bane of business for months past, appears to be slowly drying up, and once next week's "Hatry" settlement is over, it may be less difficult to discern whether a slow recovery in values, or a continuance of quiet conditions is to be expected in the near future.

After a slow start, a fair volume of investment demand for gilt-edged securities was in evidence. The market

was not too well supplied with stock, and those dealers who were at pains, on Wednesday, to cover their positions in view of a possible decline in Bank rate, had some cause for congratulation. Five per Cent. War Loan maintained a small premium on Five per Cent. Conversion Loan, rising to 100 7/16 after Thursday's Bank rate announcement. India Loans continued last week's recovery, and Australians further improved. The public subscription of 5½ per cent. of the Brighton Loan was better than the market anticipated, the stock opening at only ⅜ discount. Steady absorption continued of the Central Electricity Loan, which rose from 1¾ to 1 discount.

The Foreign market hardened after a dull opening, Japanese issues being in demand on rumours of a Swedish Match Loan, while Chinese showed a better tendency. Europeans gained a fraction in a few instances. Brazilian bonds were quiet, but showed no evidence of further liquidation.

Home Railways were surprisingly idle, in view of the imminence of dividend declarations, which, by general agreement, are likely to be higher than those of a year ago. The traffic returns continued to exhibit no feature, good or ill, on which the market could concentrate, and, apart from the firmer tendency which naturally followed the Bank rate announcement, only Southern Deferred and North-Eastern Second Preference showed evidence of public interest. Undergrounds were quiet and unchanged. Among Foreign Railways, Argentines were weak, the exchange position again provoking unfavourable comment. Leopoldina was also on offer, despite the more satisfactory maintenance of revenue.

Though the reduction in Bank rate gave a mild fillip to business, the industrial markets were for the most part in cheerless condition. America was an intermittent buyer of Columbias and International Nickels, but British domestic stocks came on offer in numerous cases—partly on fears regarding the trade and budgetary outlook and partly owing to the imminence of the "Hatry" settlement. Cables and Wireless were particularly depressed, for reasons described in an "Investment Note" on page 312 of this issue, though some of the marking-down was in the nature of a precautionary measure by dealers with a fair amount of stock on their books at higher figures. A partial recovery occurred on Wednesday afternoon and Thursday. The Continent continued to absorb Swedish Match and Kreuger and Toll. Tobacco shares were dull on budgetary fears, and brewery shares easier. The news that short-time was being put into operation stimulated further selling of Courtaulds. This company's dividend prospects are discussed on page 313. Dunlops enjoyed a sizeable recovery, and Imperial Chemical, after a recurrence of dullness, went better on Thursday. Among motors, Leylands were firm on hopes of an ordinary dividend payment this year, though a reaction followed. Ford Motors gained ground following the publication of a Press article describing the progress of operations on the Continent. The textile share market remained under the influence of the unsatisfactory trade outlook. English Electric weakened after the announcement of a drastic reorganisation scheme (set out on page 312). Among shipping shares, Cunards were in demand. Iron and steel shares attracted little or no interest. N.C. Metals reacted after last week's rise. The enhanced dividend and one-in-three scrip bonus of H.P. Sauce had been anticipated, and the shares failed to hold their first rise following the announcement. Unilevers were steady. Insurance shares had a slightly downward trend, but banks held their ground in a quiet market.

Changes in rubber share values were trifling, business being on the smallest of scales in the absence of any definite trend in the price of the commodity. The market for tea shares, however, was broader, despite the further decline in the price of Ceylons at the week's sales. Oil shares responded to satisfactory news regarding the progress of "conservation" in America, Anglo-Persian and Burmah being bought from the provinces. Phœnix Oil and Transport rose on good production figures, and V.O.C. Holding on the bringing in of new wells.

Following the initial impetus provided by last week's activity in Northern Rhodesians, sporadic activity was witnessed in the mining markets. Congo Border showed little change at its new high level, while no appreciable selling movement was recorded in Loangwa or Bwana M'Kubwa. N'Changa continued to be a strong feature, and Chartered rose before the announcement of an increased dividend. Tin shares were irregular, despite the Tin Producers' announcement, on which we comment in a "Note" on page 311. Australians declined, and De Beers deferred fell away in the absence of any improvement in prospects. A feature was the sharp advance of Globe and Phœnix on the publication of further news regarding developments in the lowest level of the mine. West Rand were firm on a record return for the past month, but East Rand were less stable. Ashanti Goldfields advanced further after the meeting, but Brakpan continued its steady downward trend.

FOREIGN STOCK EXCHANGES.

Our New York correspondent cables:—The share market, which had been increasingly active and strong, showed signs of profit-taking after the reduction in the Bank of England rate was announced. It is evident that there has been a considerable increase in professional operations and some renewed speculation by the public. One bullish factor is the sharp improvement in steel-mill operations, which now average slightly better than 75 per cent. of capacity. This recovery, however, has not benefited steel prices. Another factor is the more cheerful feeling in the automobile trade, but it must be realised that the increase in production represents cars for dealers' stocks. The public attitude towards new purchases remains to be determined, and it is also understood that the used-car situation is still bad. Altogether there is a disposition to feel that the share market has been travelling rather fast, although the cut in discount rate may give support to further bull activity. Conservative observers point out that it is uncertain whether the recovery in steel production is a mere rebound from the abnormally low activity of November and December, or is the beginning of sustained improvement. In any event, it is questionable whether the improvement in general business is as good as the recent course of the share market would suggest. Coppers are slightly better, in sympathy with the general market tendency, and it is expected that producers will be able to maintain the price of the metal for the months immediately ahead. January statistics of output, however, are expected to be rather bearish. The reduction in discount rate is believed to be justified by the condition of world trade and the general tendency of money rates, but there has been less than the usual interest aroused by the change.

PARIS.

The course of the Paris market during the month of January has revealed merely the normal continuation of the movement begun in the second fortnight of December. The extreme narrowness of the market has brought about a rise in many descriptions, especially during the first half of the month, but clients have been few, and the Paris Bourse has experienced a remarkable stagnation of business. The stability which at first resulted from the total absence of activity later developed into a slight regression, the highest point being reached before the selling of the 15th. The extreme firmness of "rentes" is indicated by the fact that 3 per cent. perpetual stock has for the first time passed 90 francs, and the 4 per cent. 1918 stock 100 francs.

INVESTMENT NOTES.

The Marking of Bargains.—Considerable comment was aroused a few weeks ago by the action of the Stock Exchange Committee in ordering that the record of dealings in Sun Fruit Products and in Phantestra shares should not appear in the daily lists published by the Stock Exchange. This removal of publicity from the prices of the two companies' shares, declares a Stock Exchange correspondent, was held to be a strong hint that the Stock Exchange Committee were in possession of information suggesting that the machinery of the "House" was being utilised in a manner unlikely to prove profitable to the public. No ban was placed upon dealings in the shares, which continued without intermission and are still going on, although the prices at which bargains take place are not recorded in the Stock Exchange lists. The Committee's order reflected no imputation upon the companies themselves. The withdrawal of permission for the marking of bargains, however, aroused no little surprise, and in some quarters there was a disposition to criticise the Committee's action as being arbitrary. On the other hand, it appeared obvious to everybody that the Stock Exchange Committee would not have taken a step of this kind unless they had had strong reasons for doing so. It is common knowledge that two lists are published every day under the authority of the Stock Exchange Committee, one being reserved for stocks and shares which have received an official quotation, while the other is a record of bargains in securities which have not received a quotation in the Official List. The latter was instituted upon the reopening of the Stock Exchange in January, 1915, after the House had been closed for five months following the outbreak of war. At that time, when it was essential that track should be kept of dealings in stocks and shares, in order to prevent enemy sales in this country, the name of the seller and the distinctive numbers of bearer shares were required to be furnished, though these demands soon fell into disuse. In course of time, the necessity laid upon Stock Exchange members to mark every bargain was also waived, and to-day the recording of a bargain is at the discretion of the member, either broker or jobber, concerned; the daily records being no guide to the actual volume of business transacted. When, however, it is desired to give the appearance of activity in any stock or shares, one of the most telling methods is to get a good many bargains done during the day, and to have each of these marked in the Stock Exchange list. The more interest that is quickened in the minds of the public, the more easy, naturally, it is for people to sell shares of which they desire to rid themselves. The Stock Exchange Committee are therefore taking formal powers to enable them to remove any security from the record of the Official or Unofficial List. The authority already exists, but the Committee have passed a rule this week that will incorporate it into the other rules, and which will provide that a security may be removed from the record on the authority of the chairman, the deputy-chairman, or two members of one of the sub-committees. While upon the subject, reference may be made to the special marks that are placed against bargains in respect of transactions outside the ordinary course. A double asterisk distinguishes a bargain done at a special price. The seller of, say, three "Chartered" shares does not expect to obtain the same price as he would for a marketable number of shares, and the bargain is distinguished by the special sign. A triangle—popularly known as the "motor-mark"—placed against a price, refers to a bargain with or between non-members, e.g., a bargain done by a broker between two clients, or a bargain done, on account of a client, with a member of a provincial Stock Exchange. A third mark is a circle with a line through it, which indicates that the bargain was done during unofficial hours or on the previous day. This is used in cases where a bargain has been done in the "Street" market, or after 3.30 p.m. in the "House," or in cases of forgetfulness to mark a bargain done within official hours. The Stock Exchange slips for marking bargains provide separate columns for each of the three "special" cases alluded to above, but it frequently happens that bargains are inadvertently placed in the wrong column. The desirability of allowing special bargains to be marked at all, in view of the misunderstanding to which such marking constantly gives rise, is often challenged by members, brokers and dealers alike.

Tin Restriction.—We referred in the *Economist* last week to the progress made in the restriction campaign of the Tin Producers' Association, and, in particular, to the co-operation of the Bolivian companies and the acceptance by Don Simon Patino of the Presidency of the Tin Producers' Association. The Council of the Association this week announced that its recommendations with regard to the stoppage of work over week-ends and for one whole week in January and February, are now assured of sufficient support from tin producers all over

the world to justify their adoption by all members of the Association. In other words, tin restriction is a *fait accompli*. We understand that the important tin dredging companies in the Federated Malay States have already closed down for the period from January 25th to February 10 as a voluntary measure of restriction. The Tin Producers' Association further state in their announcement that a very large number of the Chinese-owned hydraulic enterprises have agreed to institute "a regular system of weekly suspension." In regard to Nigeria, as working hours in that field were already restricted and but few of the mines were working on Sundays, an alternative method of restricting output on a tonnage basis, calculated to effect a result at least equal to that obtained under the Malayan scheme, has been devised by the Nigerian Advisory Council, approved by the Association, and already put into operation. We understand that this scheme brings down the output of Nigeria, in effect, by about 20 per cent. As regards Bolivia, the Tin Producers' Association declare that a still more substantial curtailment is being effected in accordance with the plans elaborated by several very large producing interests representing the greater part of the mining industry in that country. We understand that restriction on a tonnage basis varies from about 15 per cent. in the case of the Patino mines to 50 per cent. in the case of the Aramayo-Guggenheim group. As regards the Dutch East Indies, we quote the following from the Tin Producers' Association's announcements:—"Satisfactory conversations are proceeding with the interests responsible for the production of tin in the Dutch East Indies, which is already regulated." In the smaller producing fields—Cornwall, Australia, South Africa and the Belgian Congo—operating companies have supported the recommendations of the Tin Producers' Association. These arrangements are the outcome of something approaching a crisis in the industry. Production has been running at a high level, and if the reaction in business in America persists, a state of under-consumption may obtain for some time. Last year, according to the estimates compiled by the Anglo-Oriental Mining Corporation, world production of tin exceeded world consumption by over 5,000 tons, and in the normal course of events an excess of supply this year of over 10,000 tons might have been looked for. Restriction of output is a policy frequently advocated, but seldom successful in the long run. So long as it is regarded as a temporary measure by the tin industry, so long as it is followed and observed by the whole of the world's producers and not merely by the British section, so long as it avoids the errors of the ill-fated rubber restriction scheme, having nothing to do with the manipulation of market prices, but aiming only at the working of short time, and so long as the breathing space it affords is used for the consideration of more permanent measures for putting the industry on its feet, it may serve its purpose as a temporary expedient. In these conditions, the scheme is up against a very severe test.

Cables & Wireless and the Post Office.—The continued liquidation in the stocks of Cables and Wireless has caused anxiety among investors. The extensive fall in values since last year is shown in the following table:—

	Highest. 1929.	End. 1929.	Present Price.
5½% Pref.	99	96	95½
7½% "A" Ord.	90½	76½	63
"B" Ord.	104	37½	31

Fresh liquidation broke out on the publication of an article in *The Times* on January 30th, which charged the Post Office with showing unwillingness to collaborate with Cables and Wireless, Ltd., in the development of the beam wireless system, which the latter had taken over. It is contended that the G.P.O., instead of making use of the beam wireless, has experimented with a long-wave system supplemented by inland connections by arrangement with the American Telephone and Telegraph Co. and its European subsidiary, the Standard Cable and Telephone. This system is to be employed for communications with America and Canada, while, for the Argentine, cable telephone lines are used to Paris or Berlin, from which Continental wireless companies supply the long-distance service. Sir Robert Donald, in a subsequent letter to *The Times* of February 3, declared that the Post Office had refused to make use of the beam stations of Cables and Wireless, Ltd., for telephonic communication with the Dominions, and had instead made an alliance with an American combine (the American Telephone and Telegraph), which contemplated laying a telephone cable between Nova Scotia, Newfoundland and Northern Ireland at a cost of about £3,000,000, and giving the cable constructional work to Germany. In commenting upon the allocation of shares in Imperial and International Communications Co., the operating subsidiary of Cables and Wireless, and in particular upon the small proportion (14.7 per cent.) allocated to the Marconi Co., we suggested in the *Economist* of January 25th that it was possible that the management of Cables and Wireless had decided to concentrate chiefly on the development of cable services for the time being, rather than on beam wireless. In any case, it now appears certain that the estimates of the earnings of Cables and Wireless will have to be revised, since it has been suggested that the standard revenue of the Imperial and International Communications, Ltd., which was fixed at £1,865,000, is not likely to be earned in the first year. Why the standard revenue of the Communications Co. was fixed at this figure if it was not likely to be earned is incomprehensible, especially as provision was made in the reorganisation of Cables and Wireless for a reduction in rates if profits were in excess of £1,865,000 (50 per cent. of the excess having to be passed on to the consumer), but no provision was made for any increase in rates if profits failed to reach £1,865,000. While there is no question but that dividends on the 5½ per cent. preference stock of Cables and Wireless will be amply covered, the market, which had variously estimated the earnings on the 7½ per cent. "A" ordinary stock at 5 per cent. to 6 per cent., is now inclined to revise its estimates down to between 3 per cent. and 4 per cent. The persistent selling of Cables and Wireless A and B stocks suggests that the first report of this combine is likely to disappoint the outside interests, and, in particular, those unfortunate Marconi £1 shareholders who have elected to stay outside the combine.

English Electric Reconstruction.—Despite its creditable achievements on the technical side, the English Electric Company has been in financial difficulties for some years, the directors having prepared the shareholders for a drastic reorganisation, at a fitting time, when presenting their balance sheet for 1927. Subsequent economies have cut down overhead expenses and increased operating efficiency, but the company has been unable to earn its debenture interest, and has been compelled to borrow from its bankers and to reduce working capital to meet interest and sinking fund payments. Intangible assets, such as goodwill and discount on debentures, stand in the balance sheet at as much as £882,000, while other more productive assets are definitely overvalued. Extra-ordinary meetings have now been called for February 25th next, when a scheme will be put forward for reducing the issued capital by £1,755,000 and obtaining, through Messrs. Lazard Brothers and Company, Ltd., some £750,000 of new money to enable all bank overdrafts to be liquidated and provide a substantial sum for re-equipment. The scheme inevitably involves heavy sacrifices from the preference and ordinary shareholders, while making important modifications in the rights of the convertible debenture-holders, as is shown by the following summary:—

Stock.	Amount as per Last Balance Sheet. £	To be Received in Exchange.
5½% Sinking FundConvrt. Debentures.	701,000	Principal unaffected, but ultimate repayment date extended from 1940 to 1960; prior charges limited to £125,000.
6% Convertible Debenture Stock.	1,329,916	For every £100: £35 6% deb. stock.*; £50 6½% £1 preference shares.; £15 ordinary £1.
6% Cum. £1 Pref. Shares.	983,565	For every £1: 10s. 6½% preference, cumulative *after* 4 years. All arrears cancelled.; 2s. 6d. ordinary.
Ordinary	1,664,023	Every £1 written down to 3s. 4d.

* Conversion rights cancelled; repayable at 103 per cent. at three months' notice; total limited to £750,000.

The scheme has a number of noteworthy features. The convertible debenture-holders are, in effect, asked to give up their prior rights as regards 65 per cent. of their capital, but in compensation are given slightly higher *preferential* rights in respect of half their holding, plus a share of about 15 per cent. in the "equity" of the business. The £1 preference shares are written down by 7s. 6d. and lose 3½ years' arrears of dividend, but as regards the *residuum* are given a slightly higher preferential rate (non-cumulative for the time being) and approximately 9 per cent. of the equity. The ordinary shareholders make a nominal sacrifice of five-sixths of their capital and a real sacrifice of their share in the equity, which is reduced from 100 per cent. to approximately 21 per cent. The association of a well-known City financial house with the scheme is a welcome feature. Control will, of course, pass to the Lazard interests, which will hold 55 per cent. of the voting power. The present directors have given an undertaking to resign in favour of Lazard nominees, if called upon, and it is definitely intended to reconstruct the board. Control is, however, to remain in British hands, and the association with Lazard's is expected to bring fresh business to the company. The fact that the new capital will rank not in front but behind the existing debentures and preference shares will be given due weight by existing shareholders when adjudicating on the scheme. The plan endeavours, with some ingenuity, to deal as equitably as possible with the interests of all concerned in an admittedly unpleasant contingency, and, as the probable alternative is eventual liquidation, with insufficient assets fully to cover even the convertible debenture stock, its acceptance would seem to be in the best interests of the share and debenture holders.

Courtaulds' Dividend Prospects.—There is general agreement, writes a rayon correspondent, that the forthcoming dividend of Courtaulds will be on conservative lines, and that earnings will show a reduction. So far as Great Britain is concerned, production has increased only to a small extent, while prices have been substantially reduced. In the United States, on the other hand, it is possible that, after allowing for a substantial price reduction, increased turnover combined with lower costs of production will bring total profits almost up to the previous year's level. On the Continent, where Courtaulds have increased their interest of recent years, the return may not be as large as last time. In 1928 the income from the American Viscose subsidiary was understood to be well above the actual amount paid in dividends by Courtaulds, and if these earnings have been reduced only to a small extent, the rate of dividend might be maintained. The company's finances are strong enough to bear a reduced allocation to reserves, but such a policy would be quite contrary to the practice of the board, whose conservatism is not inappropriate in a trade where considerable fluctuations in profits may be looked for in the future. Other factors may also impel the board to act with caution. Rayon prices still lack stability, both in Great Britain and on the Continent, and though the outlook is brighter than it was twelve months ago, so far as the large companies are concerned, present conditions are not conducive to the placing of large forward orders by consumers. Again, uncertainty as to the retention of the Silk Duties in the coming Budget is a factor making for caution. Though Courtaulds would probably be less seriously affected than any other company by the removal of the duties, a period of unsettlement would inevitably follow such a change. Any prolongation of uncertainty, however, might have regrettable effects on an industry in which short time is becoming pronounced.

Rhodesian Market Activity.—After some weeks of stagnation, Northern Rhodesian mining shares developed unexpected activity at the end of last month, Rhodesian Congo Border reaching a level considerably in advance of the highest for 1929. The recent course of prices is set out below:—

	Jan. 27.	Jan. 31.	Feb. 6.
Rhodesian Congo Border	8½	12½	14½
N'Changa	1⅝	2⅝	3¼
"Chartered"	40/3	42/1½	41/10½
Loangwa	5/10½	6/10½	6/9
Bwana M'Kubwa	21/3	23/6	23/-

The *raison d'être* of the movement was the receipt of a cable giving details of the extension of the "new discovery" at N'Changa. The two boreholes N.E. 8 and N.E. 16 put down by Rhodesian Congo Border to the west of N'Changa appear to have yielded outstandingly good assays, the former averaging 10.25 per cent. copper for 73 ft. and the latter 13.04 per cent. for 25 ft. before operations were suspended, while for short distances a metal content as high as 31 per cent. was recorded. The direction and consistency of the lodes has, moreover, suggested to optimistic minds the possibility that the whole area enclosed by the boreholes Nos. 5, 7, 8 and 16 would be found to contain ore of exceptional richness. At the same time a subsidiary impetus was given to Bwana M'Kubwa by new information relating to the probable continuity of the N'Kana and Mindola ore bodies. Whatever the actual developments behind the "boomlet," the market was to some extent caught napping, dealers being short of stock. Reports that two big buyers were in competition, coupled with the fact, which is no secret, that the public's holding of Congo Border shares is very limited, would seem to throw doubts on the permanence of this revived interest.

London Gas Companies.—The reports of the Gas Light and Coke Company and the South Metropolitan Gas Company were made available this week. Although the amount of coal used showed an increase of 2.2 per cent. and 4.1 per cent., respectively, the Gas Light Company had to pay 1.2 per cent. more for its coal, while the South Metropolitan saved 5.7 per cent. in this respect. Each company's sale of by-products showed a falling off amounting to between 3 per cent. and 4 per cent. The Gas Light Company increased its sales of gas by three per cent., the revenue from gas sales rising from

No new capital was issued during the year, but £42,335 of ordinary stock and £181,315 of debenture stock were redeemed. The special deposit with the bank has been replaced by a temporary loan of £225,000. Parliamentary sanction has been obtained for the company's purchase of the undertakings of the Grays and Tilbury Gas Company and the Pinner Gas Company, the purchase taking effect on January 1, 1930. At their present price of 18s. 10½d. the company's shares yield £5 18s. 8d. per cent. The South Metropolitan's net profit rose by just over one per cent. Gas sales during the year increased by 4.14 per cent. to £3,228,101, while sales of by-products dropped 3.9 per cent., the cheaper coal producing a smaller quantity of by-products:—

Years Ended December 31.	1927. £	1928. £	1929. £
Net revenue	563,338	595,240	609,689
Interest on debentures, &c.	148,987	153,069	160,376
Balance for dividends	414,351	442,171	449,313
Preference dividend	...	30,000	30,000
Ordinary dividend	413,118 (6¼%)	413,118 (6¼%)	419,368 (6¼%)
Increase or decrease in carry forward	+ 1,233	− 947	− 55

No expenditure was effected out of reserves last year, the latter rising by £48,013 to £420,536. The cost of repairs was again heavy owing mainly to gasholder and purifier replacements. Plant for the production of Coalite on a large scale is to be installed at West Greenwich, and plant for producing low temperature fuel at East Greenwich.

London Power Company.—The report in twelve lines of the London Power Company, stating briefly that the output of the stations during the year increased by 23.46 per cent. from 593,915,537 units to 733,238,288 units, and the kilowatt demand by 11.45 per cent. from 242,700 to 270,700, and that the effective plant capacity at the end of the year totalled 355,000 kilowatts, hardly does justice to the importance of the undertaking. The company took over the generating stations of the following London companies:—Brompton and Kensington, Central Electric, Charing Cross, Kensington and Knightsbridge, London Electric, Metropolitan, Notting Hill, St. James and Pall Mall, and Westminster—all of which have bound themselves to take from the company all the electricity they require until 1971 (excepting the Metropolitan, which has bound itself to take for at least ten years all the electricity which it may require for its London area), at which date the undertakings are to be handed over to the Joint Electricity Authority. The constituent companies hold the ordinary capital of the London Power, which consists of £50,000 in £1 shares carrying a fixed dividend of 6 per cent. The investing public is interested in the debenture stock, of which £13,748,400 was outstanding on December 31, 1929, the last issue—£3,000,000—having been made in February, 1929. The results for the last three years are shown in the following table:—

Yrs. to Dec. 31.	Total Receipts. £	Generation, Repairs, etc.* £	Sinking Funds. £	Debenture Interest. £	Ord. Div. £
1927 ...	1,725,253	1,200,254	217,038	304,961	3,000
1928 ...	1,651,864	999,961	271,740	377,163	3,000
1929 ...	1,953,447	1,062,652	316,643	571,152	3,000

* Including rents, taxes and special allocations.

The sinking fund and debenture interest were only just covered in 1929, but the investor must bear in mind that each of the constituent companies has agreed that, if the receipts of London Power on revenue account for any year are insufficient to meet the charges payable, it will provide a part of the deficiency equal to the proportion that the amount paid by it for electricity purchased during the year bears to the total amount for electricity supplied by the company during that year. The London Power Company's 5 per cent. debenture stock is at present quoted at 99, having been as high as 103 in 1929 and 104 in 1928.

Rylands and Sons.—This large firm of manufacturers and warehousemen again shows highly creditable results in view of the prevailing depression in the Lancashire textile industry. Dividends, maintained at 8 per cent. subject to tax, are on this occasion comfortably covered by earnings, whereas last year it was necessary to draw on the carry-forward item to the tune of £26,000.

YEARS ENDED DECEMBER 31.

In accordance with the Companies Act, 1929, a statement is attached to the balance sheet to the effect that the profits of subsidiary companies are included in the profit and loss account only to the extent of dividends received or declared, but as these are not given separately, it is impossible to judge to what degree the improvement in the parent company's position is due to the trading of subsidiaries. The balance sheet again reveals a satisfactorily liquid position. Investments in British Government and corporation stocks total £1,747,516, and are equal to fully one-third of the total assets. Cash is depleted by £35,000 and stocks by £85,000, but against this must be set a new loan to subsidiary companies of £160,000. The present price of the £1 ordinary shares is £1 3s., which, allowing for a final dividend of 4 per cent., gives a yield of £7 2s. 3d. per cent., less tax.

De Jersey and Company's Suspension.—The announcement of the suspension of payments by De Jersey and Company, Ltd., has come as an unpleasant surprise to Manchester business circles. The company is 100 years old and for many years before its registry in 1913 (as a private company with an authorised capital of £2,000,000, of which £1,200,000 was issued in 650 ordinary shares and 550 preference shares of £1,000, fully paid), it was one of the leading shippers of textiles and textile machinery. The firm had an intimate and thorough knowledge of the Russian market and was primarily responsible for negotiating the orders placed by the Russian Textile Machinery Syndicate. Like many other exporting houses in Lancashire, however, it has recently experienced difficult times. For a number of years the Russian market was closed and, although considerable orders have been received from that quarter by British firms for textile machinery during the past two or three years, these have not compared in value with the orders received from India, China or Japan. The publicity given to several large Russian orders considerably magnified their importance and obscured the difficulties of concerns like De Jersey, which specialised in the Russian market. A further indication of the unenviable position of companies with large Russian interests is the announcement that the engineering firm of Clayton and Shuttleworth is to be put into liquidation, after being operated for seven months by a receiver. In this case the company's Russian claims amount to £301,843, exclusive of 14 years' interest.

Linoleum Merger.—The shareholders of Barry, Ostlere and Shepherd have been asked to sanction the terms of the proposed amalgamation with the Linoleum Manufacturing Company, by which the latter concern absorbs the former under the new style of "Barry and Staines Linoleum, Ltd." As set out in a preliminary memorandum dated August 28 last, for every ordinary £1 Barry, Ostlere share an ordinary £1 share of the Linoleum Company is to be issued, to be followed by a 40 per cent. bonus from capitalised reserves. In addition, 10 Linoleum £1 6 per cent. preference shares, credited as fully paid, are to be issued for every £10 6 per cent. preference share of Barry, Ostlere. The new ordinary shares will receive all dividends (other than a distribution, on or about January 31st, of 7½ per cent., tax free, on the ordinary shares already issued), while the Linoleum Company is to receive all future dividends of Barry, Ostlere, other than the ordinary interim dividend of 11⅛ per cent. payable on January 31st, and the preference dividend at the rate of 6 per cent. per annum, payable for the half-year ended January 31st. The offer is conditional on acceptance by holders of 90 per cent. of the issued capital of Barry, Ostlere, or any smaller percentage the Linoleum Company may accept. As the whole of the present share capital of the Linoleum Company has been issued, it will be necessary for the board to seek powers to increase the authorised capital of the company by an amount sufficient to cover both the exchange and the bonus shares to be issued to shareholders of Barry, Ostlere. The two companies have hitherto produced linoleum, for the most part, of different grades, so that to some extent their business is complementary. The merging of interests and administration, however, will effect important economies, from which, it may be hoped, the public as well as shareholders will benefit.

United Fruit Company.—This company, always the first of the large American corporations to issue its annual report, has suffered less than many concerns with large shipping interests, as a result of the "controlled" sources of a large portion of its freights. It has shared in the worldwide depression in the sugar industry, but is one of the few sugar producers to show a profit on its operations last year. Its output of sugar, 1,801,277 bags, was the largest ever produced. Its refining subsidiary, the Revere Sugar Refinery, melted 354,282,591 lbs., against 361,120,180 in the previous year, but specially low producing costs partly compensated the company for lessened sales of refined sugar and the lower prices obtained. Cacao output and sales were less remunerative. Its profits from the banana trade were reduced by floods in Costa Rica early in the year, but the total shipments from tropical areas were 58,121,054 stems, a gain of 2,607,235, as compared with 1928. After payment of insurance, taxes, and allowing $9,785,646 for depreciation, net income available for dividends was $17,802,992, the equivalent of $6.78 a share, compared with $20,606,393 in 1928 and $19,671,340 in 1927. The trend of earnings has been slightly downward in recent years, but surplus account and cash in hand have steadily increased. In lieu of the extra dividends of $3,749,920 paid in 1928 and $3,749,215 paid in 1927 out of earnings of previous years, the company in 1929 paid a dividend in stock at the rate of one-twentieth of a share, while maintaining the regular rate of $4 on the no par value stock, and carrying forward $7,433,563:—

(Million of dollars.)

	1926.	1927.	1928.	1929.
Depreciation	...	7,934	9,324	9,876
Total net income	19,511	19,621	20,606	17,803
Cash dividends	9,998	†10,000	†10,000	10,369
Carried forward	9,513	9,622	10,607	7,434
Surplus, December 31st	76,156	81,029	87,885	90,319

† Not including dividends paid out of earnings of former years, $3,749,920 in 1928; $3,749,215 in 1927.

Nearly every item of the company's fixed assets increased during the year. Improved and unimproved acreage rose from 2,477,285 acres to 2,865,656, while total owned and chartered ship tonnage increased from 372,187 to 394,962 gross tons. Appropriations for capital expenditure dropped, however, to $9,768,367, about half the sum set aside in the previous year. The company's purchase of the properties and steamships of the Cuyamel Fruit Company has removed a large competitor, and the resulting economies should tend to increase earnings in 1930.

Siemens Debenture Issue.—The issue of participating debentures by the Siemens combine has given rise to an interesting discussion in Germany, writes a correspondent. Siemens and Halske have obtained from Dillon, Read and Company, New York, in connection with the Deutsche Bank and Disconto Gesellschaft, a loan on somewhat unusual terms. The issue is one of debentures running over 1,000 years. The American part of the issue amounts to $14,000,000 nominal at a price of 233 per cent., representing a gross value of about $32,000,000. The holder may give notice after 75 years; the company may give notice after 12 years; the price of repurchase is to be determined by the average New York quotations of the previous six months, to which will be added a premium graded down from 15 per cent. in 1942 to 5 per cent. in 1960, after which it will disappear. In every case, however, the price of issue, viz., 233 per cent., is to be the minimum price of repurchase. The German part of the issue is based on the value of fine gold and amounts to 10,000,000 marks; it will be offered to shareholders at 175 per cent. The conditions of the German scrip are substantially the same as those of the American. The total gross yield of the loan to Siemens will be about £7,700,000; it is believed that the bulk will be used for obtaining a financial interest in concerns which are the company's best present or potential customers—a method of sales promotion already largely in use in the electro-technical industry. The debentures are to participate in the company's profits to the same extent as the ordinary shares, but a minimum dividend of 6 per cent. on the nominal value is guaranteed. As a protection against possible depreciation through future increase of capital, it is laid down that holders of debentures shall be offered new debentures similar to the present ones on the same terms as new shares are offered to shareholders. From a purely financial point of view, the new Siemens debentures are almost equal to ordinary shares; they are, indeed, somewhat similar to the American type of voteless share. In Germany the tendency has been for some time for foreign credits to take the form of debentures approaching the character of shares as closely as possible, the most recent example being the I.G. Farbenindustrie loan. In view of the present state of the international capital market, ordinary debentures have, of course, little chance of finding sufficient demand at a reasonable rate of interest, while the issue of shares abroad holds all the dangerous possibilities of control by foreign interests. Possession of the Siemens debentures, however, will not carry any participation in the administration or, as in the case of the A.E.G., allow the holders to delegate a representative to the board. In this way, although the amount of the American debentures alone far exceeds the total share capital of the concern, Siemens have excluded the possibility of foreign control and, at the same time, pro-

tected the dominating position of the Siemens family in the firm. An interesting prospect now arises for the future grouping of the international electro-technical industry. The A.E.G. has for some time been in close co-operation with the (American) G.E.C., while Siemens has been known to have friendly relations with the American Westinghouse Corporation. It is now assumed that the General Electric will use the influence on the general policy of the Siemens concern which it will undoubtedly derive from the purchase of the debentures, to smooth over the tension between the two great German electro-technical groups. If any co-operation should thus be brought about between Siemens and the A.E.G., which have a combined annual turnover of roughly £72,500,000, and a combination in international business be effected between the two German groups and the American General Electric, which has an annual turnover of about £90,000,000, the trio would have a combined power far in excess of all the other world groups put together. Whether matters will thus develop and whether the fourth large group—Westinghouse (with an annual turnover of about £50,000,000)—will eventually be included in some sort of agreement, must be left to conjecture.

San Francisco.—In view of the absence of any increase in the dividend, writes our mining correspondent, it may have come as a surprise to shareholders to find that last year's earnings on the part of this Mexican enterprise substantially exceeded those of the preceding period. The explanation lies in the treatment of a somewhat increased tonnage, for a relatively higher revenue. To what extent the latter feature is due to the recovery in the price of lead, and to what extent to other factors, does not appear, and is scarcely ascertainable from the report. Although the dividend for the past year is the same as that in respect of 1927-28, the instalments were 15 per cent. interim and 22½ per cent. final, as against 12½ per cent. and 25 per cent. previously. The conservatism shown on the latest occasion is attributable to the difficulties with which the company was faced in November as a result of the shortage of power. To guard against a repetition of this, and to supplement the existing supply, a steam-driven electric power plant was erected on the property; it came into operation on December 1st. The vendors accepted payment in some 23,000 shares taken at 36s. each—a very advantageous arrangement for the 'Frisco:—

* Directors' commission.

The financial position shown by the balance sheet is a strong one—but not quite so strong as might be inferred at first sight, as the £171,770 required to cover the final dividend falls to be deducted. Allowing for this, the surplus of cash and cash assets amounts to about £211,000. Despite the curtailment of development due to shortage of electrical power, the fully developed ore reserves, at 1,458,900 tons, are up by 63,900 tons; the partly blocked out tonnage indicates a decrease. The total of 1,894,500 represents about six years' supply for the mill. At the current price of 24s. 6d. for the 10s. shares the yield works out at 15 per cent. Allowance is therefore made by the market for the probable effect upon profits of the setback in lead and the renewed fall in zinc and silver—the former to the lowest level for about 30 years and the latter to the lowest on record.

Company Registrations in 1929.—The annual compilation of Messrs Jordan and Sons shows that while the aggregate nominal capital of new companies registered at Somerset House last year, £229,568,122, was higher than in any year since the period of inflated values of the post-Armistice boom, and exceeded the 1928 total by £9,061,996, the Stock Exchange depression caused a marked slowing down in registrations during the second half of the year. Between January and June the total nominal capital registered by new companies was over £152,000,000, but between July and December only a further £77,000,000 was registered. As usual, public companies, though representing but a minority in numbers, accounted for much the largest part of the total capital. Last year 623 public companies were registered with an average capital of £250,500, and 8,049 private companies with an average capital of £9,100. The progress of rationalisation in British industry was attested by the registration of numerous concerns formed to amalgamate existing companies, the most noteworthy of which were the Imperial Smelting Corporation, with a nominal capital of £7,500,000, the Amalgamated Metal Corporation, with £5,000,000, and four companies formed in connection with the reorganisation of the Armstrong Whitworth interests. Messrs Jordan express the view that the coming into force of a new Companies Act on November 1st probably acted as a brake on activity in company promotion during the final months. It remains to be seen, however, whether this factor will militate to any appreciable extent against the activity of the promoter when the wheel has gone full circle, and market conditions are once more favourable.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Lloyds Bank, Canadian Bank of Commerce, London Merchant Bank, Sterling Trust, United States and General Trust, Standard Trust, United Serdang (Sumatra) Rubber Plantations, Phillips Rubber Soles, and Hackney Furnishing Company (1928). At the meeting of United Serdang Rubber Plantations, Mr Eric Miller declared that the native smallholders were again squandering their bark reserves at a very rapid rate, and that, when they came to the end of the tappable bark on the lower panels of their trees, there must be a pronounced falling off in production. Sir George Touche, presiding at the meeting of the Sterling Trust, Ltd., expressed disappointment that the Argentine authorities had found it necessary to suspend the smooth working of the Caja de Conversion as soon as its gold reserves had begun to be drawn upon in the first phase of momentary financial depression. At the first annual meeting of the Hackney Furnishing Company the chairman said that the company had a chain of twenty shops, mainly falling into the category of good-class provincial stores.

CAPITAL ISSUES.

The only public issue of the week, the *Brighton Corporation* loan, has a special interest as the first British corporation issue to be made, since the "Hatry" *débâcle*, by the old-established and conservative house which was accustomed to handle this business before the advent of the Corporation and General Securities Company, now in liquidation. The stock is a trustee issue, secured on the revenue of a populous and wealthy borough, with a high reputation as a borrower and a population reputed to be a loyal supporter of "home" issues. The authorities, however, would seem to have been disinclined to pay, for some years to come, a rate of interest reflecting tight market conditions which may well be ephemeral, the price at which the stock was offered being undoubtedly high, judged by current market conditions. Underwriters were, in fact, left with 48½ per cent. of the total, but the steady absorption of the stock in the market may be confidently looked for in the near future.

Brighton Corporation.—Issue of £1,100,000 5 per cent. redeemable stock, 1950-60, at 99½ per cent. Principal will be repaid at par on July 1, 1960, or on or after July 1, 1950, on three months' notice at the option of the Corporation. Trustees are authorised to invest funds in this stock. The rateable value of the Borough of Brighton is £1,504,380, and a rate of 1d. in the pound is estimated to produce £6,150. The total outstanding net debt on January 1, 1930, was £5,122,301, including £731,527 temporary borrowing to be repaid out of this issue.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices, and rubber company statistics will be found on page 330, under the heading "Company News."]

LLOYDS BANK, LIMITED.

INCREASED NET PROFITS.
MONETARY CONDITIONS—EFFECTIVENESS OF THE BANK RATE.
PROVISION FOR HATRY LOSSES.
BANKS AND THE REORGANISATION OF INDUSTRY.
MR. J. BEAUMONT PEASE'S REVIEW.

The seventy-second ordinary general meeting of the shareholders of Lloyds Bank, Limited, was held on the 31st ultimo, at the Cannon Street Hotel, London.

Mr J. Beaumont Pease (chairman of the bank) presided.

The auditors' report having been read by Sir Gilbert Garnsey, K.B.E.,

The Chairman, in moving the adoption of the directors' report, said :—During the past year death has robbed us of two of our colleagues, Mr. W. S. de Winton, who was a director of the bank for nearly twenty years, and Viscount Younger of Leckie, who joined the board when the National Bank of Scotland became affiliated with us in 1918, and we have elected in their places Mr Robert K. Blair, who is chairman of the National Bank of Scotland, and Sir Alexander R. Murray, C.B.E., who has had a distinguished business career in India and elsewhere.

Our director Mr R. H. Brand has been appointed as a member of the important and influential Committee which has recently been formed by the Chancellor of the Exchequer to inquire into banking, finance and credit. We welcome the formation of this Committee, as it should not fail to produce much valuable evidence and throw light on the general banking system of the country, and I hope it will dispel many of the misconceptions which are held in different sections of the community as to the functions and usefulness of the banks and the services which they render to the public.

Another interesting item has been the appointment of our former colleague, Lord Bledisloe, to the high office of Governor-General of New Zealand.

A face which we miss to-day is that of Mr W. H. Cooper, who, as secretary of the bank, has for the past nine years been a familiar figure at our annual general meetings. He retired in June last, after 42 years' service. Mr G. H. Chattaway has been appointed secretary of the bank in his place.

THE BALANCE SHEET.

The balance sheet and profit and loss account having been circulated with the annual report to all shareholders, I assume it is your wish that we should take them as read. (Agreed.) You will have noticed that the alterations in our balance sheet necessitated by the new Companies Act are quite trifling. We have always given full particulars of our shareholdings in our two subsidiary banks, the National Bank of Scotland, Ltd., and the Bank of London and South America, Ltd. We now have to show our balances in account with our subsidiaries; we have to state how their profits have been disposed of; and the fees received by our directors have also to be quoted.

Taking the liabilities side of our balance sheet first of all, our capital and reserve remain unaltered.

We have at the present time about sixty-five thousand shareholders on our books, and it may interest you to know that for some years past we have had an independent audit of our share registers made by our auditors, who, after examining all transfers and old certificates lodged with the bank, give us week by week a certificate to the effect that all new share certificates laid before the board for sealing are correct. (Hear, hear.)

The two great factors in the earning power of our bank are its total resources of capital, reserve and deposits, and the prevailing value of money. With the latter I shall have to deal when I come to discuss the profit and loss account. As regards the former, it is satisfactory to be able to report that throughout the year our current, deposit and other accounts, as you will have seen from our monthly published figures, have been consistently at a higher level than in 1928 . The average for the year is four million pounds higher than for the preceding twelve months, but payments on behalf of our customers for the 5 per cent. Conversion Loan cause our balance-sheet figure of £351,644,000 to be half-a-million less than a year ago.

TIME DEPOSITS AND CALL MONEY.

Some interest has recently been awakened in the varying ratio of time deposits to call money. We agree with the view that the fullest publicity should be given to any reliable data which may reflect the general trend and activity of trade, and we have, as you know, taken a lead in making our balance sheet as informative as possible. We therefore have pleasure in giving the figures for this bank in the hope that they may throw light upon the periodic fluctuations of credit and employment. While it is undoubtedly the fact that as trade slackens a tendency sets in to transfer call money on to time deposit, and that with the revival of activity the reverse process takes place, it would be a mistake to regard this as a cause rather than a symptom of the condition of trade.

At the same time, there are other influences continually operating which it is not easy to eliminate. For instance, the fall in bank deposits due to the ingathering of taxes in the early part of the year has a much more pronounced effect upon current account balances than upon deposits. The general level of money rates also appears to have a bearing upon the subject. However, for what they may be worth, we give our figures for the past quarter of a century. I will not weary you by reading them. The salient points are that the proportion of current account money falls from 1902 to 1907, and then remains fairly steady till 1914. There is a steep rise through the war period, followed by a quick fall in 1920 and 1921, since when, except for a slight recovery in 1923-24, the curve has fallen steadily away and is now at its lowest point. These variations have a considerable effect upon the bank's profits.

Yearly Averages of Current Account Credit Balances Expressed as Percentages of Total Deposits.

1902	58.2	1916	55.9

1914	49.9	1928	46.4
1915	52.5		

RECOMMENDATIONS OF THE BALFOUR COMMITTEE.

While we are on the subject of statistics, I might remind you that, among the many excellent recommendations of the Balfour Committee on Industry and Trade, was one to the effect that the joint-stock banks should publish their annual turnover—that is, the total value of the cheques drawn on customers' accounts—as it was thought that this would give more guidance than the Clearing House figures. You will be interested to know that arrangements have been made to give effect to this recommendation as from January 1.

Our acceptances, which, under the influence of a steady 4½ per cent. Bank rate, showed a marked upward tendency throughout 1928, fell away during the first half of last year, and have not since recovered. A period of cheaper money should bring renewed expansion in this class of business.

Our endorsements, guarantees and other obligations, in which are included our forward exchange contracts, show a reduction of three million pounds. Practically all nations have now returned to a gold standard in one form or another, and we welcome the recent decision of Japan in this connection. Spain, it is true, has not yet overcome all her difficulties, and the recent defection of the Argentine Government is a retrograde step. Foreign exchanges have

became much more stable than they were a few years ago, and some fall in our forward exchange business might have been anticipated. In fact, however, we find that our customers continue to make full use of the facilities which we are able to offer them to protect their trading commitments with foreign countries.

LIQUID ASSETS.

On the assets side, our cash in hand and with the Bank of England, together with the balances with, and cheques in course of collection on, other banks in the British Isles (the latter, of course, becoming cash in a day or two) stand at £57,000,000, which is 16.1 per cent. of our total deposits.

Our money at call and short notice, £26,500,000, of which about one-fifth is lent upon fortnightly loans to the Stock Exchange, is 7.5 per cent. of our deposits.

Taking these three items ,together we have £83,500,000, equal to 23.6 per cent. of our deposits in a most liquid form.

Our balances at call and short notice with banks abroad, which a year ago stood at a little over £2,000,000, are at the moment £2,500,000 higher.

Our next most liquid asset is our bills. We have continued our policy of taking all approved bills offered to us for discount by our own customers, and filled up our portfolio with Treasury bills. Thus we had on December 31st Treasury bills amounting to £27,000,000 and commercial bills £12,000,000, of which £4,000,000 were Colonial and foreign bills.

Our investments are all valued at market price or under, and out of a total of £37,000,000, £17,000,000 is in Treasury bonds and other short-term British securities and £16,500,000 in other British Government securities.

The value of our holding in the National Bank of Scotland, Ltd., has been increased approximately by the sum of £50,000, which that bank transferred to its reserve fund out of the profits of their last financial year. It will be observed that nothing is included for goodwill. The Bank of London and South America, Ltd., shares are still valued at £8 10s. per share.

ADVANCES.

Our loans and advances stand at £191,750,000, which is £4,500,000 more than a year ago. Throughout the year we have experienced a keen demand for accommodation, and on two occasions during the year the total advances for the ten London clearing banks have for the first time exceeded £1,000,000,000. Unfortunately, as was recently pointed out in *The Times*, this is no indication of the tendency of trade, but it is largely the result of the continued depression in some industries, which has prevented them from reducing their loans, and the comments made in the same paper as to the sympathetic treatment by the banks are amply borne out by our own knowledge and experience. (Hear, hear.)

Our annual analysis of overdrafts classified according to trades shows little of outstanding interest this year. Out of thirty-one groups, eighteen show increases and thirteen decreases, the variations upwards or downwards being quite small.

Agriculture retains its place at the head of the list as regards the amount lent, though a slight decrease is noticeable spread over a large number of branches. This is probably attributable to advances which our customers have received from the Agricultural Mortgage Corporation.

Foodstuffs and tobacco, building trades, theatres and hotels are groups in which continued activity is indicated. An increase in advances on imported corn is due to heavy shipments of wheat. Local authorities are borrowing less. Cotton advances reflect the general depression in the cotton industry. Shipping is also down, although we are happy to know that many of our shipyards are now more fully engaged than they have been for some time past.

Advances to stockbrokers are £200,000 up. Having regard to the prominence which has been given to the immense amount of bank credit used in America for Stock Exchange speculation, the very moderate amount of our advances to stockbrokers is a proof of the safe principles on which banking in connection with Stock Exchange business in this country is conducted. (Hear, hear.)

OTHER ASSETS.

As regards the remaining items on the assets side of the balance sheet, £54,501 relates to a small subsidiary of ours in India which owns some of our banking premises there; items in transit consist mainly of articles in course of post, which, on the day following the date of the balance sheet, will become debits to customers' accounts, and will consequently go either to diminish current, deposit and other accounts, or to increase loans and advances. Other assets and accounts include certain freehold and leasehold properties not at present used for banking business, but purchased to provide for further extensions, together with securities in course of realisation, written down to a very safe value, and impersonal accounts, such as our stock of stamped cheques.

BANK PREMISES—NEW HEAD OFFICE.

Bank premises at £6,957,000 show an increase of £180,000 on the year. During the past twelve months we have opened eight new branches in London and 43 in the country.

Our new head office premises are approaching completion, and I think we may all be proud of the stately and beautiful building which faces Lombard Street and Cornhill, into which I hope we may enter about mid-summer. These new premises have been very carefully designed so as to afford the utmost convenience and economy of internal arrangement under the most comfortable modern working conditions, and it will be a relief to us, after these many years of inconvenience and wasteful discomfort, to have our head office and City office centralised in one home, which will, I hope, provide for the steady and almost automatic growth of the bank for many years to come. (Hear, hear.) Shareholders will recollect that we made provision a few years ago for the estimated cost of this new building in setting aside from realised profits on investments a sum which, we hope, may not be materially exceeded.

PROFIT AND LOSS.

Let us now turn to our profit and loss account. It has been necessary to provide a larger amount than usual for bad and doubtful debts. A disquieting feature of the year has been noticeable throughout the greater part of the world. In Germany, Italy, France, America, and in other countries, a number of failures have taken place among banking and financial houses, as also in commercial concerns, due not so much to ordinary business difficulties, but to irregularities committed by individuals at the head of the respective businesses, whether in collusion with others or not, but without the knowledge of the general body of their colleagues. We in this country have not been immune from this phenomenon, though I am happy to think that, generally speaking, the high integrity of British character in business dealings is recognised as being pre-eminent in the world. (Hear, hear.)

HATRY GROUP ADVANCES.

You will expect me to refer at some length to what has been termed the Hatry case, and I should wise to do so, in view of the grotesque reports as to the extent and manner in which we are supposed to have been involved.

Fantastical figures of imaginary losses incurred by us have been freely bandied around, extending from £1,000,000 to some very much larger figures. Let me relieve your anxiety at once and at the same time put an end, I hope, to these wild stories. We have not a single penny invested in any company connected with the Hatry group, nor in any of their Corporation securities—(hear, hear)—but we acted as bankers to some of the companies, and, in common with other banks, we made advances to them almost entirely against what we believed to be Trustee securities, or good Stock Exchange securities outside the group, or against guarantees. These advances were made either to help municipal finance or in the belief that we were assisting the rationalisation of industry, and in no case for the furtherance of Stock Exchange operations.

Any securities of the group in our possession were lodged by way of margin only, and we should suffer little loss but for the fact that many of the municipal and other securities are now challenged as having been fraudulently issued or dealt with. Some very important and difficult questions of law as between innocent parties have arisen in consequence, which will have to be settled by the Courts, and, until that has been done, it is impossible to say exactly what our loss may be. We have, however, taken the prudent course of providing in the usual way out of the profits of the past year a sum of £500,000. We are quite satisfied that in no case is there any reasonable possibility of that amount being exceeded. (Hear, hear.) On the contrary, we believe that it will be substantially reduced.

BANCA ITALO-BRITANNICA.

I must specifically mention another matter which has come to light during the past year. Early in 1929 it came to the knowledge of the British Italian Banking Corporation, Ltd., in which company we and other banks were shareholders, that its subsidiary, the Banca Italo-Britannica, had incurred serious losses through grave irregularities which had taken place in Italy. After full discussion of the position by the banks and other institutions interested, the conclusion was unanimously reached that, although we were under no legal liability, it was the duty of the shareholders, and particularly of the shareholding banks, in the interests of British banking throughout the world, to come to the assistance of the Banca Italo-Britannica and to provide that those depositors and others who had entrusted funds to them should not suffer any loss—(hear, hear)—and an announcement to that effect was made in the Press on February 22, 1929.

A scheme was then formulated under which full provision was made for the losses incurred by the Banca Italo-Britannica through the irregularities above mentioned, and the balance sheet of that bank was put in order.

Reorganisation of a comprehensive nature has in the meantime been effected, and, as a result, the chairman of the bank in Italy was enabled at the annual general meeting held in Milan to announce that the task of the British group had been completely fulfilled.

It is yet too early to estimate what may be our share of such total loss as will fall to be divided among the banks interested, but out of our own ample contingency fund we have thought well to provide an amount which will, even in the worst possible circumstances, be fully sufficient to meet any demands made upon us. Apart from this, everything has been covered by the ordinary profits of the current year.

I have been more than usually informative with you on this subject of bad debts, partly because I believe in frankness for frankness' saks, and partly, as I have already pointed out, to remove various false conceptions. (Hear, hear.)

PROFIT AND ALLOCATIONS.

Apart from these matters, banking conditions throughout the year have been very difficult, and, at the same time, very interesting. Considered solely with a view to gross profits, 1929 has been a good banking year. It may not be out of place, however, to point out that a high Bank rate does not necessarily mean increased profits to bankers. In Scotland, for instance, where rates are agreed between the banks, the margin of profit between the lending rates and the borrowing rates was 8s. 3d. per cent. less in 1929 than in the preceding year. I am glad to be able to say that, in spite of the larger provisions to which I have referred, we are in the happy position of being able to bring in a net profit of £2,542,083, which is £13,941 more than a year ago. (Hear, hear.) The usual interim dividends were paid for the half-year ended June 30th last; we have placed £250,000 to the bank premises account and £300,000 to staff superannuation fund, these allocations being the same as last year; and, if you agree to the final dividends which we recommend, we shall have a balance of £508,234 to carry forward in our profit and loss account, an increase of £18,198. (Hear, hear.)

ORGANISATION.

With the rearrangement of our general management, under which Mr F. A. Beane and Mr G. F. Abell were appointed chief general managers, and Mr R. A. Wilson, Mr S. Parkes, and Mr S. P. Cherrington promoted to the position of joint general managers of the bank, a comprehensive scheme of staff training is being oragnised, and it is hoped that under it a more efficient system for the recognition of exceptional talent and consequent promotion will gradually evolve. This should provide additional encouragement in the future to those who enter the service of the bank, but it will naturally be some time before all the advantages and benefits of such a change will be apparent. We always desire service in our bank to be an attractive profession. It offers great prizes which are open to all, and we realise that one of the secrets of success in an institution like ours lies in a contented staff, in good team work, and also in individual effort. (Hear, hear.)

It will be interesting, while I am dealing with this subject, to inform shareholders that members of our staff obtained first and second places in all England in the final examination of the Institute of Bankers, and also won the Beckett Memorial Prize, the Whitehead Prize for Practice and Law of Banking, the Gwyther Prize for French, and the George Rae Prize. (Hear, hear.)

It is the policy of this bank steadily to proceed with the mechanisation of such part of the book-keeping work of the bank as can profitably be dealt with by the remarkably efficient ledger-posting and other calculating machines which are now available. This change is being made with all due caution, for, based on experience which is being acquired, it is anticipated that the special machines will be subject to continued improvement.

INDIA.

Our Indian branches continue to make steady progress. Their business is self-contained, and makes little or no call on our resources on this side.

GOLD MOVEMENTS.

Perhaps the most interesting, but in some ways a disturbing, feature of the past year has been the movement of gold, and a recent return shows us how exceptional and large this has been. We saw in the early part of the year large shipments to the United States of America, which were used to finance the stock markets there, where very high rates of interest were obtainable, and which necessitated the first rise in our Bank rate to 5½ per cent. on February 7. For a short time this rise checked the outflow, but it commenced again towards the beginning of June, not only in the same direction, but also in the direction of Germany, and during that month £4,000,000 in gold was taken by the United States of America and £2,500,000 by Germany.

This in itself was serious, but in July commenced what proved to be the largest and most persistent demand that we have had to meet—namely, from France. This continued intermittently until the end of the year, and very nearly £35,000,000 is the total amount of our gold shipments in that direction. The rise in our Bank rate to 6½ per cent. on September 26th seemed to exercise the desired check on the German and American exchanges, but did not affect the French demand, which seems to arise from causes other than those of pure exchange or the value of money. It was only at the end of October, when the inflated stock markets in America began to show signs of crumbling, that the relief came, enabling the Bank of England to reduce its rate to 6 per cent. on October 31st, to 5½ per cent. on November 21st, and again to 5 per cent. on December 12th. Since then a moderate flow of gold to this country has occurred, and what is equally important is that the Continental demand has been largely satisfied from sources outside London, and the net efflux for the year had been reduced at the end of December to some £8,000,000.

EFFECTIVENESS OF BANK OF ENGLAND RATE.

Once again the effectiveness of the Bank of England rate as a regulator of the international money situation has been clearly demonstrated, and one cannot help feeling that the recent measures of control by that institution must commend themselves to all unprejudiced observers; but it is none the less disturbing to realise how seriously the position over here can be affected by a widespread gamble in other parts of the world, a contingency to which I suppose we may always be subjected, although the recent lesson may have salutary results for some time to come.

It must, however, always be borne in mind, as is well pointed out by our colleague Mr W. W. Paine, in his excellent little book on Banking, that, although a high Bank rate may in a measure hamper trade, a much greater and more pressing evil would result from allowing our stock of gold to be depleted beyond the danger point—namely, the risk of bringing down our whole credit structure, depreciating our currency and intensifying adverse foreign exchange—which would do infinitely greater and more immediate damage to our trade and commerce than is done by a temporarily high Bank rate.

BANKERS AND INDUSTRY.

We hear to-day a great deal about rationalisation, and in some quarters there seems to be a certain amount of blame levelled at the banks that they are not using their influence and power to enforce amalgamations and reconstructions, and generally to assume functions which at present they only exercise to a limited extent. No doubt there is a great deal to be done by some industries in this direction, ad if I may say so, a great deal of spade work is at present in progress. We can ask ourselves how far can the banks assist; how far do their functions extend; and what is the form of influence they can usefully exert where any steps should appear to them to be desirable? How far can they legitimately press their customers in this direction; is their judgment likely to be better than that of those who have been brought up in the business concerned; and would not the ultimate responsibility for lack of success of any such schemes suggested by the banks react upon them?

My own answer to these somewhat difficult questions is definitely that it is not the function of individual banks, or even of banks as a whole, if that were a practical possibility, to initiate the reorganisation of industry, or to try to dictate the steps which should be taken in this direction. In the case of a particular company a banker may have very definite knowledge that all is not well with its affairs, and there have been many cases in recent years where distinguished bankers have served on reorganisation committees and have assisted in evolving schemes for the improvement of the business in question, and banks have followed this up by financial help in the reconstitution.

RÔLE OF THE BANKS.

But I do not think bankers have the necessary detailed knowledge of the condition of an industry as a whole, or are sufficiently acquainted with its technicalities, to be in a position to say what particular reforms are advisable; what flaws there may be in its technical procedure; or what units are redundant. These points should be left to the industry itself or to technical experts, called in for the purpose, to determine. No doubt banks have an important and useful *rôle* to play in providing the necessary temporary finance for the reconstituted industry, if they are satisfied that the position has been sufficiently investigated and that the reforms instituted have reasonable hopes of success. I have no doubt at all that banks will be willing in such an event to do their part.

A company such as that recently formed under the auspices of the Bank of England should prove a most useful intermediary in this way between industry and the banks. As to the nature of the financial help which a bank should give, there is no clear-cut division between liquid capital, such as seasonal advances, which all are agreed it is within the function of banks to supply, and fixed capital, which in the ordinary course is subscribed by the investing public. There is an intermediate class of capital for which it is not always easy to state the proper source. I do not think, however, that anyone who realises the nature of English banking and the fiduciary position of bankers to the public for the repayment of money left in their hands would lightly advocate the investment of bank deposits in anything which was of doubtful liquidity. (Hear, hear.)

POST OFFICE ROBBERIES.

A disquieting feature of recent times has been the numerous robberies of currency while in charge of the Post Office, and these seem to be becoming more frequent as time goes on. The Post Office assumes no responsibility in this respect, and banks and the public generally have suffered heavy losses from this cause. Some communications have taken place over a number of years between bankers and the Post Office authorities on this subject, and no doubt serious consideration has been given to the best methods of removing this blot on the administration of a public service, but nothing so far seems to have materialised, and the risk of entrusting money to the care of the Post Office is as great as ever. At the least it surely ought not to be beyond the powers of the authorities to institute a system of insurance which, for a much smaller premium than that charged by an outside institution which has no control over the transport of the money, would at any rate protect the public from the risk of total loss. (Hear, hear.)

GENERAL TENDENCIES.

In regard to trade and prospects generally, I am not going to indulge in the easy but dangerous luxury of prophesying. I do not, however, see any reason for being pessimistic. The desire of us all is to see our industries more active and our people more fully employed. As leaders of all parties have expressed their belief that the question of unemployment ought not to be regarded as a political or party one, perhaps it may be permissible for me to point out the sharp contrast which seems to exist between our methods and those of other countries in this very difficult and complex question.

In America, whither we are so often bidden to turn for guidance in these matters, we find a strict adherence to the principle that prosperity is closely allied to a high level of purchasing power. In conformity with this belief, leaders of major industries in the United States, when confronted with a probable fall in the general capacity for consumption in consequence of the recent Stock Exchange crisis, have agreed together to avoid any fall in the level of wages; indeed, in some cases there has been an actual increase, while the Government, with the same object in view, has announced a large remission of income tax. A similar reduction of taxation has taken place in Germany.

In this country, on the other hand, we are faced not only with large additional expenditure on the part of the Government, involving us in a probable greater burden of taxation, but also with a higher cost of coal, the raw material of all industries. It is not for me to say whether these things can be avoided, but undoubtedly they will delay the recovery of trade and the improvement in the number of unemployed.

THE RESOLUTION

I now beg to move: "That the report just taken as read be received and adopted, and that, in accordance with the recommendation of the directors therein, a dividend be declared for the half-year ended December 31st last on the paid-up capital of the company at the rate of 16¾ per cent. per annum on the "A" shares, and at the rate of 5 per cent. per annum on the "B" shares, payable, less income tax, on and after February 1, 1930."

The resolution was seconded by Sir Austin E. Harris, K.B.E., the deputy-chairman, and carried unanimously.

The retiring directors were re-elected, and Messrs. Price Waterhouse and Company were reappointed auditors for the year 1930.

Votes of thanks to the directors for their services during the past year, to the general managers and staff for their excellent work, and to the Chairman for presiding were carried unanimously, and the proceedings then terminated.

THE CANADIAN BANK OF COMMERCE.

ASSETS REACH NEW HIGH TOTAL OF $801,000,000. PROGRESSIVE DEVELOPMENT OF THE DOMINION RESOURCES.

The sixty-third annual meeting of the Canadian Bank of Commerce was held in Toronto on Tuesday, January 14, 1930.

GENERAL MANAGER'S ADDRESS.

Mr. S. H. Logan, the general manager, in the course of his address, said:

We have again had the good fortune to experience a very satisfactory year, both in growth of assets and in profits. Our total assets at $801,000,000 are the highest in our history, showing an increase for the year of over $56,000,000. The net profits, $5,066,229, were 27 per cent. greater than in the preceding year.

Comparing the principal figures of the balance sheet before you with those of last year, our total deposits, including bank balances, stand at $637,000,000, as against $611,000,000, an increase of $26,000,000. Advances under the Finance Act show an increase of $7,000,000. Total gold and Dominion notes at $77,000,000 compare with $69,000,000, an increase of $8,000,000. Other cash assets at $58,000,000 are only slightly lower than the figure of a year ago. Total securities at $77,000,000 are $16,000,000 below last year, the reduction being necessitated by increased commercial loans. Call loans in Canada at $55,000,000 are practically unchanged. On the other hand, call loans outside Canada at $105,000,000 show an increase of $26,000,000, all due to greatly increased deposits outside Canada. Our total quick assets at $372,000,000 represent 50.4 per cent. of our total liabilities to the public and over 46 per cent. of our total liabilities.

Current loans in Canada stand at $342,000,000, an increase of $28,000,000, and loans outside Canada are about the same as last year.

From the banking standpoint the past year was characterised throughout by great business activity and a strong demand for bank credit. The outstanding financial feature was the continuation of the Stock Market speculation of the past three years, terminating in the spectacular collapse of security prices in October and November. Throughout the entire period of rapidly declining values our call-loan margin requirements, both within and outside Canada, were always adequately maintained, and we have not found it necessary to write off a single dollar from any of our call-loan accounts.

THE VICE-PRESIDENT'S SPEECH.

Sir Thomas White, vice-president, acting in the absence of the president, Sir John Aird, now on a world tour, said, in the course of his address:—

The past year, taken as a whole, while not quite attaining to the high record of the previous year in sustained commercial and industrial activity, must be regarded as among the most favourable in our history. Under the stimulus of three years' general prosperity, of an extensive development and building programme, and of an unprecedented quantity of farm products for export, new records were established in industry and trade during the winter and spring.

Mining is now one of the main supports of our economic structure. The value of all minerals, about 60 in number, produced in 1929, is provisionally estimated at $303,000,000, or about 10 per cent. higher than that of the preceding year.

With the improvement of conditions in Europe and the establishment of sterling exchange upon a permanently firm basis, we may reasonably hope to see a much greater participation in these opportunities by British capital, whose flow was necessarily interrupted during the war and the period of its financial aftermath.

With opportunities such as ours, prosperity is largely dependent upon a state of mind. Surely we are abundantly justified in making the keynote of the New Year confidence in our country, in ourselves, in our courage and enterprise, and in the destiny, under Providence, of this great and growing Dominion as one of the most-favoured nations of the world.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journa with this week's issue is invited to fill up the attached:

To Publisher "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C. 4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address .....

STERLING TRUST, LIMITED.

STRONG FINANCIAL POSITION.

The thirteenth ordinary general meeting of the Sterling Trust, Ltd., was held, on the 4th instant, at Winchester House, London.

Sir George A. Touche, Bart., presided in the absence, through indisposition, of Baron Emile d'Erlanger, and read the speech prepared by that gentleman, in the course of which he said that a satisfactory feature of the accounts was the open reserve of £450,000, which was equal to over 50 per cent. of the ordinary share capital. With regard to the investments, notwithstanding the great fall in prices which had characterised the year 1929, the market valuation on December 31st last exceeded by some 3 per cent. the book price of £4,904,762 and the contingent fund of £300,696. He thought they had good reason to congratulate themselves on having passed practically unscathed through a year so full of political and financial vicissitudes, and on showing such a strong financial position. The total income amounted to £281,695, and the net profit to £159,240. Seeing how strong was the balance-sheet position and how satisfactory the revenue account, the directors thought they could safely recommend an increase from 14 per cent. to 14½ per cent. in the dividend on the ordinary stock.

GENERAL POSITION AND OUTLOOK.

With regard to the general position and outlook, there were, in certain directions, signs of progress. Many countries had by hard and persistent endeavours balanced their Budget and had stabilised their currency and returned to the gold standard. In this connection it was disappointing to see a great country like Argentina, so rich and financially so strong, suspend the smooth working of the Caja de Conversion as soon as its affluent gold reserves began to be drawn upon in the first phase of momentary financial depression. He looked forward with confidence to a day, near at hand, when those responsible for the finances of Argentina would banish their illusory fears and reopen the Caja, for there was nothing that would so tend to materialise these fears, and to bring about a fall in the exchange, than a prolonged suspension of the natural functions of the gold standard. His confidence had been increased by the information that arrangements had been made by which notes were issued in Argentina against deposit of gold in London.

In France he had met many men who thought that we in England looked with envy and jealousy upon the enormous stocks of gold and foreign currency which she had accumulated in recent years. It was not a subject for envy, but a subject for rejoicing that France had so rapidly recovered and found herself to-day in so strong a financial position. It was to be hoped that this great treasure of gold, vastly in excess of internal requirements, would not be sterilised, but would in a reasonable measure be used as a basis for supplying the legitimate credit requirements of other necessitous and deserving countries. Neither a Dawes nor a Young Plan, nor any other which human foresight could devise, would function if the hand of credit was not liberally extended. He would further say that we must, with discrimination, and as far as our means permitted, continue to lend money to the world at large, for this was essential to maintain and stimulate our foreign trade and exports. As regarded foreign loans, it would, he believed, be wise to give preference to those contracted for public works and the materials for which would be purchased in England.

HOME AFFAIRS.

Turning to home affairs, it would be idle to pretend that we were not faced with very serious difficulties. It would, however, be fatal to give way to the wave of pessimism generally prevailing. We must once more stand shoulder to shoulder in the economic crisis as we had done in the clash of arms, and preserve the country from the risk of falling into the depths of internal apathy and discord. Taxation had reached the high-water mark; any further burdens would cripple industry and commerce, kill incentive and thrift, and would permanent reduce the resources upon which any Government must rely in the task of improving the lot of the masses. The only remedy he could see to the present situation was the modern re-equipment, rational, co-ordination, and financial reconstruction of our basic industries, so as to place them in a position of equality with—nay, of superiority to—competitive countries. Such an industrial reconstruction required the co-operation of all classes, and of the best brains to be found in each and every case—employers, employed and finance. He felt confident that, if the numerous and powerful investment trust and similar companies of this country could be satisfied that the industrial problem was being seriously and intelligently tackled, they would not hesitate to co-operate to the best of their ability and power in the industrial reconstruction of our country.

The report and accounts were unanimously adopted.

THE UNITED STATES AND GENERAL TRUST CORPORATION, LIMITED.

DIVIDEND INCREASED TO 14 PER CENT. ISSUE OF NEW CAPITAL.

The fortieth ordinary general meeting of the United States and General Trust Corporation, Limited, was held on the 6th instant, at the Registered Office, Gresham House, 24 Old Broad Street, London, Mr M. Balfour, M.C., chairman of the company, presiding.

The secretary (Mr H. Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the reports and accounts said: The revenue again shows an increase over that of the previous year, due to a large extent no doubt, to our having had a full year's use of the new capital issued during 1928. The gross revenue of £189,277 1s. 9d. compares with £168,439 13s. 9d. last year, and represents nearly 7 per cent. on the book cost of the investments. As the nett revenue of £70,223 3s. 10d. is equivalent to approximately 17½ per cent. on the deferred stock, and as we do not anticipate a diminution in the current year, we are able to propose a final dividend of 9 per cent., making 14 per cent. for the year, against 13 per cent. for the previous year. We carry forward £12,161 5s. 3d., equal to 3 per cent. gross on the deferred stock.

We also state in the report that a valuation of the investments shows a surplus of approximately £400,000 over the balance sheet figure. This surplus shows a diminution of approximately 5 per cent. over that prevailing last year, but it must be remembered that we have been passing through a period of abnormal depression and shrinkage in values, and, as I pointed out at last year's meeting, the rise in prices could not be expected to continue indefinitely.

STOCK MARKET CONDITIONS.

The past year has been an eventful one, witnessing an all-round decline in prices culminating, in the autumn, in a Bank Rate of 6½ per cent., and the collapse in the United States.

Here, after a meteoric rise extending over a period of two or three years, during which stocks as a whole reached levels out of all proportion to their earnings or dividends, and during which the machinery of credit the world over was at times strained to breaking point, a severe relapse occurred, resulting in panic conditions. This brought to a conclusion a state of affairs not only financially dangerous to the whole world, but in other respects demoralising, as quite a large proportion of the population both in this country and the United States began to think that they could see their way to an assured income merely by speculating in securities.

Investment stocks now stand on a basis where the yield bears some sort of relation to the value of money, which latter over a period of time must be the chief determining factor in the regulation of prices.

In London, whilst it has been shown that the decline in representative securities was no less severe, it has been less apparent, as the process was a much more gradual one; in New York it occurred in a few weeks or even days.

Despite these conditions, an abnormally high Bank Rate, a General Election, and the serious financial developments well known to all of us of a certain group in London, I think it is generally admitted that London as a financial centre has acquitted itself creditably.

Touching on the financial difficulties to which I have just alluded, unfortunately the word "trust company" has figured rather prominently therein, and it has been brought to one's notice that investors, on occasions, have confused in their mind the class of business done by a company whose operations are those of company finance and promotion with that of the better known class of trust company, whose business is strictly that of investment. The all too common use of the word "trust company" is to be deplored, as certain concerns who adopt this title carry on a business which is entirely foreign to that of a company such as ours. I might add that we neither have, nor ever have had, directly or indirectly, any interest in the securities of the group that failed.

TERMS OF NEW ISSUE.

From the balance sheet you will see that we have a small amount of unissued capital, amounting to nearly £90,000. This we propose to offer shortly to holders of the existing deferred stock in the form of new preferred and deferred shares, representing an allotment of approximately 15 per cent. of their holdings. The preferred will be issued at par, and the deferred at 200 per cent., in the proportion of 60 per cent. of the former and 40 per cent. of the latter, which, after putting a value of, say, 90 per cent. on the preferred, is equivalent to 215 per cent. for the deferred. The shares will be payable by instalments running to June next, and will carry 5 per cent. interest on the amount paid up, after which they will be converted into stock and rank for the final dividend in respect of the last six months of this year.

Mr F. H. Ramsden seconded the motion, which was carried unanimously.

UNITED SERDANG (SUMATRA) RUBBER PLANTATIONS, LIMITED.

RUBBER PRODUCTION AND ABSORPTION.

The twenty-second ordinary general meeting of the United Serdang (Sumatra) Rubber Plantations, Ltd., was held, on the 4th instant, at Winchester House, London, Mr H. Eric Miller (chairman of the company) presiding.

In moving the adoption of the report and accounts, the chairman said that the net profit for the year amounted to £138,751. They proposed to transfer £20,000 to reserve account, making it £100,000, and to pay a dividend of 7½ per cent. The rubber crop to be harvested during the current financial year was estimated at 7,200,000 lb. The tapping systems in force were very conservative, and should ensure the maintenance of fully adequate bark reserves. Under no circumstances would any undue pressing for crops be permitted.

Of their current crops they had sold to date just over 1,400,000 lb. at an average net price of 1s. 1.49d. per lb., equivalent to 1s. 2.7d. per lb. London landed terms. The co-operative selling scheme formulated by the Rubber Growers' Association had their strong support

A year ago I submitted estimates of production and absorption of rubber for 1929 showing that production was likely to be less than 700,000 tons, and that everything pointed to absorption during 1929 being well over 700,000 tons. Absorption was, in fact, 800,000 tons during 1929, and actual production amounted to 840,000 tons, against my estimate of just under 700,000 tons. In my estimate of 700,000 tons I allowed for a production of 120,000 tons from the native smallholdings in Malaya, whereas they have actually turned out something like 200,000 tons. The estimate was based on an average yield of 300 lb. per acre, whereas the amount of rubber the smallholders produced averages no less than 470 lb. per acre.

It is perfectly clear from this that the benefits which accrued from enforced resting during the years of restricted exports in the improvement of bark reserves were even greater than the advocates of the restriction policy claimed they would be. It is likewise evident that the native smallholders are again squandering their bank reserves at a very rapid rate, and that when they come to the end of the tappable bark on the lower panels of their trees there must be a pronounced falling off in the production from those areas. I cannot say just when the contraction in output from the native smallholdings now being over-tapped will come, but it must be imminent before we are through 1930.

COMPETITION IN PRODUCTION COSTS.

What has been going on in the native areas of Malaya is true in a modified degree of part of the estimate areas where bark reserves had been well built up during restriction and have been somewhat freely dipped into since restriction came to an end. I desire not to overstate the point to which I am drawing attention, but ample bark reserves and favourable climatic conditions during 1929 have enabled estates in Malaya and Ceylon particularly to give yields which one may fairly claim are somewhat higher than can be maintained year in year out from those areas. There has been keen competition to show the lowest possible cost of production and a subconscious pressing for crop. I have thus explained why estimates of production made a year ago have been generally exceeded, and in addition to the prospective decline in Malayan smallholders' outputs I look for a moderate decline on estates from the high yields of 1929, except where bark consumption has been definitely conserved in spite of all temptations.

There had been no surprises during the year in connection with output from the native areas in the Netherlands East Indies. The price level in the market would continue to be the most important factor in influencing production from that part of those areas the tapping of which depended on the hiring of imported labour. Until the price of rubber was well over 1s. per lb. there was not much inducement for hired labour to come in. If the price of rubber did rise well above 1s. there were large areas of young rubber likely to be brought into tapping. It was not a bad thing to have a reserve which might help to prevent the price of rubber from again going to too high a level.

As to probable consumption in 1930, he thought that a fair picture to present to them was that production and absorption should about equal one another. In that event world stocks could not be far from their maximum now. It seems to him, therefore, that it should be possible for British and Dutch producers to raise the market price of rubber to a reasonably remunerative level by curtailing production to only a moderate extent. Without whole-hearted support on the part of the Dutch, it seemed to him that nothing could be done by voluntary agreement.

When they contrasted the position of the industry to-day, when consumption was 800,000 tons per annum, with its predicament in 1922, when consumption was 400,000 tons per annum, there was much solid comfort to be found to offset the present depression, which, in his judgment, need be of a temporary character if a little common sense was applied all round. It was to be hoped that it would prevail in the discussions between Dutch and British.

The report and accounts were unanimously adopted.

LONDON MERCHANT BANK, LIMITED.

SATISFACTORY RESULTS DESPITE DIFFICULTIES.

The fifty-eighth ordinary general meeting of the London Merchant Bank, Limited, was held, on the 6th instant, at 38 Lombard Street, London.

Mr Edward H. Tootal, who presided, said in the course of his speech: When I was addressing you last year there were indications which justified expectations of a gradual improvement in trade. These have, however, not been borne out by events; on the contrary, 1929 will be remembered for some time to come in commerce as a year of uneven and often difficult trade, and in finance as a period during which persistent liquidation of securities took place with a consequent heavy depreciation of values. Moreover, the year witnessed extensive movements of gold which caused more frequent changes in discount rates than for a considerable time past.

Against these factors may, perhaps, be placed the important progress made in dealing with the Reparations problem, the handling of which will, by the definite adoption of the Young Plan, be entirely transferred to the business field. The creation in connection therewith of the Bank for International Settlements constitutes an interesting departure, and its working will be followed with keen interest.

The main financial event of the year was the collapse of the American boom, following upon a prolonged period of inflated share prices during which exceptionally high rates of interest were paid in New York for Stock Exchange call loans. These excessive rates drew a good deal of money away from Europe to the detriment of the exchange and gold positions, and, as a consequence, the Bank of England raised its rate in February to 5½ per cent. By the end of September a further rise to 6½ per cent. became necessary which accomplished its purpose in a comparatively short time, so that after intermediate reductions to 6 per cent. and 5½ per cent. respectively, a 5 per cent. rate was again established in December. I may say that we have just heard that the Bank rate has been reduced to-day to 4½ per cent. (Hear, hear.)

The financial troubles in America and Europe also were a contributory cause to the fall in prices of staple commodities which, in many instances, show substantial declines, though it should be observed that in general stocks in the hands of merchants and manufacturers were not unduly high. World crops, always an important factor, were good on the whole, in some cases even excessive, and the prices of a number of agricultural and tropical products have reached a level at which they are hardly remunerative. This state of affairs is not in the general interest, however desirable a low cost of living, based on cheap prices of prime necessities, may be. As a more balanced condition of trade between the regions producing foodstuffs and raw materials on the one hand and manufacturing countries on the other is conducive to general prosperity, readjustments of the volume and cost of production of the agricultural and plantation industries should, in the long run, prove beneficial all round.

As regards the home and foreign trade of Great Britain, the figures of production for 1929 so far published—namely, for the period January to September—show an increase over the preceding year. In viewing the relative figures in conjunction with the volume of British production, it is fair to assume that a greater proportion than formerly of our production and imports has, during recent years, been employed in one way or another in the extension and improvement of industrial equipment, which should be helpful in increasing exports later on.

Abroad, the prosperous condition of some countries stood in marked contrast with the less satisfactory position of others. The high level of industrial activity in the United States during the first half-year was followed by a decline of business. Turning to Continental affairs, France, where employment remained regular and plentiful, had a prosperous year. In Germany, industrial production during 1929 was well maintained on the whole, notwithstanding the continued shortage of loanable capital which made itself felt in divers ways.

In conclusion the chairman said that, with regard to the figures, the net profit was £74,419 against £71,845, and they were paying dividends of 7 per cent. on the "A" shares and 5 per cent. on the "B" shares, both less tax. It was satisfactory that at the close of a very difficult year they were able to show increased earnings.

The report and accounts were unanimously adopted.

HACKNEY FURNISHING COMPANY (1928), LIMITED.

EXTENSION OF HIRE PURCHASE BUSINESS.

The first annual general meeting of the Hackney Furnishing Company (1928), Ltd., was held, on the 14th instant, at the Holborn Restaurant, High Holborn, London, Mr A. E. Somers (the chairman) presiding.

The Chairman, in the course of his address, said: On the debit side of the profit and loss account you will see that from the gross profit of £51,000 odd there have to be deducted items amounting to £12,667 13s. 6d.

Of the £38,000 now brought down, the directors have used £7,150 in writing down formation expenses and fixtures and transport. But to this figure must be added the amount of £2,496 8s. 10d. shown on the same side in the balance sheet. You will notice that the formation expenses have, therefore, been reduced by £7,838 15s. 3d. in all.

Returning to the profit and loss account, you will see that from the balance of £31,217 carried down, two preference dividends have been paid, and a transfer of £10,000 made to general reserve, the balance of £12,595 being carried forward.

NEW BUSINESSES PURCHASED.

Three businesses were purchased at Edinburgh, Glasgow and Leeds, on the lines indicated in the prospectus, comparatively little being paid for goodwill, each business being taken over as a going concern at almost asset value.

It was only during the last three months that our forward policy came to fruition in the acquirement of six further important branches at Bradford, Leicester, Middlesbrough, Sunderland, Southend and Wolverhampton.

Your company has now a chain of 20 shops, only two of which can be said to fall outside the category of first-class important provincial stores.

The experience of the opening of these six shops has demonstrated unquestionably to your board the enormous value of the Hackney Furnishing Company's goodwill, which, I may recall to your attention, stands in the balance sheet at only £20,800.

In my opinion, if this amount had stood at five times the present figure it would still inadequately represent the cash value of the enormous goodwill we have in this business; a business which has been established nearly fifty years and which has spent over one-and-a-half million pounds in advertising during this period.

The branches opened in these six important towns consisted of premises taken over on long leases, at reasonable rentals, in important positions in the towns. No sums were paid for premiums or for goodwill, and the success has been instantaneous and indisputable.

ADDITIONAL FINANCE ARRANGED.

To revert to the question of policy, you will see that our balance sheet shows a loan of £100,000 from our bankers, and I am pleased to be able to tell you that to finance the company's turnover during 1930 a further £100,000 will be available for the company's use.

In these days, when money and markets are still suffering from the "Hatrified" feeling, I feel we are entitled to be gratified at this indication of outside, and by no means uncritical, confidence in the company's future.

I have tried to be as frank as possible in regard to this, our business. We are confident that the turnover figure which we have set ourselves for 1930 is well within our reach, and unless anything untoward happens we feel that 1930 is likely to be the normal year referred to in the prospectus. That being the case, I hope to face you in 1931 with a balance sheet not only satisfactory, but gratifying. I feel, however, that I should warn you that even in those circumstances it does not follow that large dividends can be looked for, because in a business of this kind, more than perhaps in any other, the advantage of pursuing a cautious and in some respects conservative policy must be obvious. In our intention to wipe off the paper assets which still exist, and to allow ample sums for depreciation and for the building up of general reserve, I feel sure we shall meet with your commendation, for it will enable you to rest confident in the continued prosperity of the company.

I have shown you in rather a summarised form the manner in which the business has grown during the first year of its existence. If I were at liberty to divulge actual figures and details of the business done by your company, I think you would be even more impressed, but I think you have seen sufficient to convince you that there was a real need for an amalgamation of this kind which would unify and extend the hire purchase business already done by a number of enterprises working separately and in a small way.

The report and accounts were unanimously adopted.

PHILLIPS RUBBER SOLES, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The third ordinary general meeting of Phillips Rubber Soles, Limited, was held, on the 6th instant, at Winchester House, London.

Mr Walter W. Phillips, who presided, moved the adoption of the report and accounts for the year ended November 30, 1929, and said that the net profit for the year was £115,107. That was about £8,000 below the profit for the previous year, but the directors believed that but for the exceptionally dry weather which prevailed from January onwards the net profit would have been at least equal to that of the previous year. The figure approximated very closely to the average net profit shown in the prospectus when the company was formed three years ago, namely, £116,850. That indicated a sound and steady business. After adding the amount brought forward from the previous year, and deducting income tax, preference dividend for the year and interim dividend of 5 per cent. paid on the ordinary shares, there was a balance available of £80,425.

The chairman then briefly dealt with the items in the balance sheet and explained that the directors had arranged to convert the £150,000 holding in 5 per cent. War Loan into an equal amount of 5 per cent. Conversion Loan, and, referring to the appropriation account, he stated that the directors recommended writing off the balance of preliminary expenses, £8,610, writing £1,388 off 5 per cent. War Loan investment to reduce it to par value, and writing £10,425 off patents and designs, placing to general reserve a sum of £10,000 and paying a final dividend of 10 per cent., making 15 per cent. for the year on the ordinary shares, which required £36,000. That would leave a balance to carry forward of £14,002, an increase of approximately £3,500 as compared with the previous year. The balance of net profit after providing for all dividend on preference shares was equal to 27 per cent. on the ordinary share capital.

A SATISFACTORY RECORD.

During the three years since the incorporation of the company the general position had been strengthened by allocation to reserves, etc., of over £100,000—without including the £16,000, raw materials reserve—which he felt would be regarded as a very satisfactory record for the three years.

The business was being maintained in first-class order, and he fully believed the company should be able to maintain and increase its trade against all competition. The company's product, "Durata," had made substantial headway during the past year and had won golden opinions for its excellence and realiability. Nevertheless, he was convinced that for health, comfort and durability the ideal combination for the public to wear was leather-soled shoes with Phillips rubber soles and heels attached.

Mr Arthur Whittaker had retired from his position of managing director at the termination of his period of service, and Messrs A. J. Drywood and J. Cunningham had been appointed joint managing directors in his place. He thanked Mr Whittaker for his efforts to promote the success of the company, and stated that he had the fullest confidence that the company would also be well served by the gentlemen who had succeeded him.

TRADE OUTLOOK.

As regards the trade outlook, shareholders would no doubt appreciate that the profitable results of the company's business were linked up with the general state of trade and employment in the country, but the directors were optimistic that, if this was reasonably satisfactory, the turnover and profits during the current year would be at least equal to those of the past year. So far only ten weeks of the financial year had passed, but during that period their aggregate sales had shown a slight increase over those of the corresponding period of the previous year. He could assure the shareholders that everything would be done by the directors and staff with a view to making 1930 a very successful and profitable year. There was a general spirit of optimism in the business, which continued to be very sound and active.

He was pleased to say that the company's relations with all their workpeople were extremely satisfactory, and the directors heartily appreciated the excellent service rendered by the staff and workpeople of the company and its subsidiaries during the year.

Mr John Cunningham, in seconding the resolution, referred to the "Phillips Employees' Benefit Trust" and stated that that had been established through the generosity of the chairman, Mr W. W. Phillips, without any cost whatever to the shareholders, and that it consisted of investments of a present market value of about £40,000, largely in shares in the company.

The report and accounts were unanimously adopted and a final dividend of 10 per cent. was declared on the ordinary shares.

THE STANDARD TRUST, LIMITED.

SUCCESSFUL RESULTS IN A DIFFICULT YEAR.

The twenty-seventh annual general meeting of the Standard Trust, Ltd., was held, on the 3rd instant, at 25-31, Moorgate, London.

Mr Alfred Shepherd, W.S. (Chairman of the company), who presided, in moving the adoption of the report and accounts, said that the conditions ruling during the year 1929 had not been without anxiety to those responsible for the management of trust companies. As an example of the disturbed conditions he might instance the numerous changes in the minimum rate of discount of the Bank of England. Never since 1914 had there been so many changes in the Bank rate in one year. Trust companies such as theirs, however, had been able to stand the shock of the abnormal times without serious hurt.

Their income from investments had risen from £85,448 in 1928 to £111,210 at the close of the 1929 accounts, due to a large extent to further funds from the new issues being employed. The net profit of £57,009 available for dividends was equal to over 2¾ times the amount required for payment of the preference dividend, after which there was a balance of approximately £36,900, equal to 15 per cent. on the ordinary stock. The final dividend on the ordinary stock, now recommended, making 10 per cent. for the year, would leave approximately £12,500, out of which the directors had transferred to the superannuation fund a sum of £571, and to capital reserve fund £10,000, leaving a balance of £1,878 to increase the amount brought in from last year. The capital reserve fund was applied in writing down the cost of the investments before arriving at the figure at which these appeared in the balance sheet. The valuation of their quoted investments at the close of the accounts showed them to be of a value some £5,000 in excess of the amount appearing in the balance sheet. In other words, the valuation showed the ordinary stock, general reserve and the amount carried forward to be more than intact.

Unsettled conditions continued, but he trusted that normal conditions might soon prevail. In the meantime, with a revenue position as shown in the year's accounts, they could afford to bide their time.

The report and accounts were unanimously adopted and the dividends recommended approved.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 1, 1930 :—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS	£
Supply Services	6,351	From Revenue	21,899
Interest, &c., on Debt	13,743	Decrease in Balances	651
Sinking Fund	455		
Sundries	90		
Decrease in Debt	1,911		
	22,550		22,550

The ordinary revenue for the week amounted to £21,899,200, as compared with £30,118,400 in the corresponding week last year. Income tax and super tax were lower at £17,296,000 and £2,480,000, against £17,462,000 and £3,440,000, respectively. Customs brought in £1,657,000, against £1,803,000, and Excise £823,000, against £817,000. Ordinary receipts amounted to £18,500, as compared with £19,700, but special receipts were nil, as compared with £3,500,000. The National Debt was reduced by £1,911,000, as shown below :—

(000's omitted.)

	£		£

	Total	1,047,543		Total	320,525

Net arrivals, £727,018.

Messrs Samuel Montagu and Co. write on February 5, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £150,134,547 on the 29th ultimo (as compared with £151,058,475 on the previous Wednesday), and represents a decrease of £3,771,768 since April 29, 1925—when an effective gold standard was resumed. In addition to the £827,000 of South African bar gold, about £307,000 bar gold, forming part of a shipment of £2,000,000 from Spain, was offered in the open market yesterday. At the price realised, 84s. 10⅞d. per fine ounce, there was a keen demand from Germany, about £1,065,000 being taken for that country. The balance of about £69,000 was divided between the Home and Continental trade (£49,000) and India (£20,000). £1,000,000 of the gold from Spain was received by the Bank of England yesterday, as indicated below. The balance of about £680,000 was dealt with in the open market to-day and was secured for Germany at 84s. 11d. per fine ounce. Movements of gold as announced by the Bank of England show a net influx of £622,665 during the week under review. Receipts amounted to £1,040,056, which included £1,000,000 in bar gold from Spain and £40,000 sovereigns from Australia. Of the withdrawals, amounting to £417,391, £400,000 was in sovereigns "set aside."

SILVER.

The market has been poorly supported, and, with supplies freely offered, prices have declined sharply, a new low record being established yesterday, when quotations reached 19 13/16d. and 19 13/16d. for cash and two months' delivery respectively.

On the reopening of the Shanghai market after the China New Year holidays the exchange showed weakness, nevertheless yesterday and to-day some buying orders have been received from this quarter. Their demand for silver for shipment being satisfied for the time being the Indian Bazaars have proved disposed to sell, and, with supplies forthcoming from other quarters, demand—being confined mostly to covering operations by bears—has been inadequate to withstand the pressure. America has continued rather inactive but has made some sales here during the week.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 27th ultimo to mid-day on the 3rd instant:—

IMPORTS.	£	EXPORTS.	£
France	53,618	British India	357,782
U.S.A.	120,541	Other countries	10,040
Mexico	58,396		
Canada	30,691		
Other countries	246		
	£263,492		£367,822

The stock in Shanghai on the 4th instant consisted of about 89,600,000 ounces in sycee, 128,000,000 dollars and 18,640 silver bars, as compared with about 87,200,000 ounces in sycee, 128,000,000 dollars and 8,380 silver bars on the 25th ultimo.

REPORTS AND NOTICES.

BANKS.

CHASE NATIONAL BANK OF NEW YORK.—During 1929 the National Park Bank, the Garfield National Bank, and the American Express Company became amalgamated with the Chase Bank. Total resources on December 31st at $1,714,829,447 showed a gain of $284,521,210 over the preceding year. Deposits amounted to the record figure of $1,248,218,351. Capital, surplus and undivided profits, excluding the $101,216,619 capital, surplus and undivided profits of its security affiliate, Chase Securities Corporation, whose stock is held share for share by shareholders of the Chase National Bank, amounted to $241,346,145. During the year the capital of the bank was increased from $60,000,000 to $105,000,000. Net profits after all charges amounted to $18,304,171.

BANK OF NOVA SCOTIA.—The net profits of the Bank of Nova Scotia for 1929 amounted to $2,761,117 (against $2,535,519 for 1928), out of which four quarterly dividends of 4 per cent. have been paid (the same), absorbing in all $1,600,000. After deducting Dominion Government tax on note circulation, $100,000, contributing $110,000 (against $100,000) to officers' pension fund, and writing $400,000 (against $300,000) off bank premises account, the carry-forward is increased from $914,726 to $1,465,843. The balance sheet shows a total of $274,241,373 (against $279,503,065). Deposits are at $212,487,129, against $205,737,395. Current loans and discounts in Canada are $102,339,213 (against $89,685,059) and current loans and discounts outside Canada at $20,643,117 (against $21,160,454), while call loans in Canada amount to $32,376,948 (against $34,462,410), and call loans outside Canada to $12,763,039 (against $11,997,375). Investments are at $37,209,630 (against $49,891,359).

SWISS BANK CORPORATION.—The net profit for the year ended December 31, 1929 (including the carry forward of £28,611 from the previous year), amounts to £724,343, against £644,200 for 1928 (including a carry forward of £28,308 from 1927). At the annual general meeting, to take place on February 28th, the board will recommend the allocation of £20,000 to the pension fund and £40,000 to the reserve fund for the extension of the head office premises in Basle; they further propose to pay a dividend of 8 per cent. as for the preceding year, to place £80,000 to the reserve fund and to carry forward £40,770. The reserve fund, including the amount now carried forward, will thus reach a total of £2,080,000, *i.e.*, 32½ per cent. of the paid-up capital of £6,400,000.

MISCELLANEOUS.

CINZANO, LIMITED.—In accordance with the terms of issue 124,721 7½ per cent. cumulative convertible preference shares were converted on November 30th into 118,782 "A" ordinary shares. The capital now outstanding is £330,464 preference, £1,363,597 "A" ordinary, £300,000 "B" ordinary.

HALL TELEPHONE ACCESSORIES (1928).—The net profit from the year's working to December 31, 1929, amounts to £40,365, against £30,094 last year. Adding the brought forward of £4,631, there is £44,996. After providing for the interim dividend of 4 per cent. (less tax), paid in July, 1929, £5,376, setting aside for general and patent reserves and income-tax reserve £22,200, and paying additional remuneration to the directors of £1,950, there remains £15,471. The directors recommend a final dividend of 6 per cent., less tax, together with a bonus of 2 per cent., less tax, which will absorb £10,752, making 12 per cent. for the year, against 10 per cent. last year, leaving to be carried forward £4,719. The report says all the expenses of last year's issue of 56,000 shares have been written off out of share premium account. Meeting, Winchester House, London, February 10th, at 12 noon.

MAIDENHEAD BRICK AND TILE COMPANY.—The net profit for year ended September 30, 1929, was £29,192, comparing with £11,650 for preceding year. The ordinary dividend is raised from 56 per cent. to 90 per cent. for the year. The carry-forward is raised from £1,031 to £1,398. The general reserve has been increased from £3,695 to £37,109 by the addition of share premiums and profit at new works to date of purchase, less acquisition expenses and issue of new shares. Meeting, River Plate House, London, February 10th, at 12 noon.

WIGGINS, TEAPE AND CO. (1919), LIMITED.—A provisional agreement has been entered into between (1) Wiggins, Teape and Company (1919), Ltd., and (2) Portals (John Allen and Sons), Ltd., and their associated companies, W. Howard and Son, Ltd., and Roughway Paper Mills, Ltd., for a fusion of interests. Colonel Wyndham Portal, D.S.O., M.V.O., will, in due course, join the board of Wiggins, Teape and Company (1919), Ltd. This announcement does not refer to Portals, Ltd., who will carry on their business at their mills at Laverstoke and Overton as heretofore. With reference to the suggestions that Wiggins, Teape and Company (1919), Ltd., may be making a public issue of shares to finance these acquisitions, the directors of that company beg to state that they do not propose making a public issue for the time being as these asquisitions are being carried through in the main by an exchange of shares.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions have not been altogether favourable for agricultural operations in the United Kingdom, spring preparations being difficult on heavy land owing to excessive moisture, though fair progress was made on lighter soils. A spell of cold and dry weather is desired to facilitate ploughing and also check the rapid growth of winter cereals. Supplies of native wheat were on a lighter scale at the principal provincial markets, but prices marked a further downward tendency following the decline in foreign descriptions. On the import market, business fails to show any appreciable expansion, though some interest was shown for Canadian grades, which were more freely offered at again lower prices. The demand generally for overseas wheat, however, is by no means brisk and insufficient to support values. The reduced Argentine estimate had no effect on this side, and with increased offerings from Russia prices steadily declined. The weight of surplus supplies in North America and Canada in particular is still the chief factor, and while the latter variety is held for such a high premium on competing descriptions, European purchases of Canadian wheat will necessarily be restricted and cheaper kinds favoured. Although Southern Hemisphere supplies are much reduced, there will be sufficient to provide fair competition for some weeks ahead, when new crops will begin to attract attention. Meanwhile, available supplies are ample for present small requirements, and buyers generally adopt a reserved attitude pending further developments in the situation. Flour values have generally followed the course of wheat, and forward offers of Canadian more freely made at reduced prices, though without obtaining much response from importers. Feeding stuffs moved off slowly, and the market for Plate maize weakened under prospects of a record new crop and liberal supplies to come forward from the Danube. Russian barley is still pressing at low rates, and oats were also easier owing to lack of demand.

Wheat.—Easier. No. 1 Northern Manitoba, ex ship, 50s. 6d.; No. 2 ditto, 49s. 3d.; No. 3, 48s. 6d.; No. 4 Manitoba, 47s. 6d.; No. 5, 44s. 3d.; No. 6, 37s. 3d.; No. 1 Vancouver, 49s. 6d.; No. 2 ditto, 48s. 3d.; No. 3, 47s. 6d.; No. 2 hard Winter, 45s.; No. 2 mixed Durum, 41s. 6d.; Rosafe, 63½ lbs., 43s. 6d.; Barusso, 63½ lbs., 44s. 6d.; Australian 45s. 9d. per 496 lbs. English, 8s. 11d.-9s. 2d. per 112 lbs.

Flour.—Quiet. London straight run 40s. per sack for country deliveries, and 39s. London area. Of imported, Manitoba patents, 37s.-39s. 6d.; Buffalo, 38s.-40s.; Australian, 35s., ex store. On c.i.f. terms, Manitoba, top patents, January-February, 37s. 6d.-38s.; export ditto, 35s.-35s. 3d.; Australian, 33s. 9d.-34s. per 280 lbs. Argentine low grade, February-March, £6 10s. per ton.

Maize.—Easier. Plate landed, 26s. 6d., ex-ship to arrive, 25s. 3d.; February-March, 25s. 9d.; March-April, 26s. 9d.; new April-May, 26s. 9d.; May-June, 26s. 6d.; No. 4 yellow African, ex-ship, 26s. 6d., per 480 lbs. Yellow maize meal, £7 15s. per ton, f.o.r. London. Yellow African, £6 12s. 6d.; white, £6 2s. 6d. per ton ex-ship.

Barley.—Dull and weak. Californian old, landed, 36s.-42s.; new, ex-ship, 37s.-45s. as to sample; Chilian brewing, ex-store, 36s.-42s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs. No. 2 Federal American landed, 22s. 6d.; Danubian landed, 23s. 6d.; Black Sea, January, ex-ship, 20s. 6d.; Persian ditto, 20s. 6d. per 400 lbs. English malting, 8s., 12s. 6d.; feed, 6s. 9d.-7s. 3d. per 112 lbs.

Oats.—Weaker. Plate landed, 16s. 6d.; ex-ship to arrive, 15s. 6d.; black Plate landed, 16s. 3d.; Chilian white, landed, 23s.; ditto tawny, 18s.; German landed, 19s.; ex-ship to arrive, 17s. 6d.; mixed Canadian feed, 14s. 9d.; South Russian, 14s. 6d.-16s. 6d. as to quality, per 320 lbs. English, 6s.-7s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929 :—

Nearest Future.	Jan. 2, 1929.	Feb. 6, 1929.	Jan. 2, 1930.	Jan. 22, 1930.	Jan. 29, 1930.	Feb. 6, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	128⅜	148⅜	135⅛	127⅛	125⅛
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	124⅛	130⅞	124⅛	118⅛	114⅜

The visible supply of wheat in Canada at 75,278,000 bushels shows an increase on the week of 194,000 bushels. Supplies a year ago stood at 81,217,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports that the export trade in South Yorkshire steam coal is not quite so good as it has been, and buyers are obtaining rather easier quotations. The demand for industrial fuel has fallen off and the house coal market is disappointing. The present output of the pits is, however, being absorbed fairly promptly.

Our Glasgow correspondent writes :—Export business has fallen to very small proportions, and buyers abroad, being well stocked, are delaying the placing of further orders in hope of securing yet additional concessions in prices. At the moment the outlook appears to favour such expectations, as the collieries are unable to dispose of outputs and have resorted to short-time working in some areas. Lanarkshire splints, navigation coals and washed pearls are about the only qualities finding a ready market. Shipment prices (f.o.b. district ports) are approximately : LANARKSHIRE.—Ell best, 16s.; splint best, 17s. 6d.-18s.; splint second, 17s.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; Hartley, 18s.; steam, 14s.; trebles, 15s.; doubles, 13s. 6d.; singles, 13s. 6d.; pearls, 13s. 6d.; dross, 10s. FIFE.—Screened navigation, 18s.-19s. 6d.; first-class steam, 14s.-14s. 6d.; third-class steam, 13s.; trebles, 14s.-15s.; doubles, 13s.; singles, 13s. 9d.; pearls, 13s. 6d. LOTHIANS.—Prime steam, 14s. 6d.; secondary steam, 14s.; trebles, 14s. 6d.; doubles, 12s. 9d.; singles, 13s. 6d.; pearls, 13s. 6d. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 13s. 6d.; pearls, 13s. 6d.; dross, 10s. 6d.

Increasing Interest in South American Markets

Estd. *1862*

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branches in South America, in London, Bradford and Manchester; in France Belgium, Portugal and U.S.A. with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description Status reports are supplied on request, and a Monthly Review of Market information in English or French is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

Affiliated to Lloyds Bank Limited

Our Cardiff correspondent writes:—Throughout the present week the Cardiff coal market has presented a patchy appearance. Demand has been unevenly distributed, with general conditions unfavourable, except, perhaps, in Monmouthshire, where the recent orders placed by the Italian and Egyptian State Railways are maintaining a fairly active market. Other large coals, however, are dull and abundant, while the operations of middlemen are causing a certain amount of irregularity among sized coals. Freights continue very weak, and the volume of idle tonnage is accumulating. In order to prevent congestion owing to the presence of unemployed vessels the Great Western Railway Company have issued an order prohibiting the admission into their South Wales docks of vessels other than those coming to load or discharge cargoes. Owing to their heavy contract commitments the pits are working fairly regularly and shipments at the South Wales docks last week totalled 603,900 tons, compared with 657,700 tons the previous week, and 557,881 tons in the corresponding week last year. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 20s.; best drys, 19s. 3d. to 19s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. 3d. to 18s. 6d.; Eastern Valleys, 18s. to 18s. 3d.; best small steams, 14s. 9d. to 15s.; cargo smalls, 14s. 3d. to 14s. 6d.; coking smalls, 14s. 6d. to 15s.; anthracite best large, 36s. to 38s.; Red Vein large, 24s. 6d. to 28s.; machine-made cobbles, 42s. 6d. to 45s.; French nuts, 44s. 6d. to 46s.; stove nuts, 43s. 6d. to 45s.; rubbly culm, 12s. to 13s.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 26s. 3d. to 26s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Although business in some branches of the steel trades remains quiet, general conditions are more active than of late. Irregularity in working is still a feature of the British steel industry, and a lack of confidence in the home market is restricting buying to small quantities for near delivery. The export demand has improved and a good business is reported from the Far East in steel plates. Business with Canada also has been on an encouraging scale, and some attractive orders have been booked. The position in the pig-iron market remains steady and the threatened advance in prices at the end of January did not take place. In Scotland competition from Continental and Indian pig iron is still felt. The demand for semi-finished materials has improved slightly, but there has been a scarcity of any important orders. The Continental steel makers, however, have maintained the fixed prices recently agreed upon. In the finished steel department there has been an improved inquiry from the overseas markets, but with the exception of the orders referred to above only a moderate proportion of this has materialised into actual business. The fact that overseas buyers are showing much more interest in the market is regarded as an encouraging sign, as export business has been indifferent for some time past.

Our Middlesbrough correspondent writes:—The market for Cleveland iron continues extremely dull. Home users are buying small lots for early delivery, but there is an almost entire lack of forward business and consumers do not show any indication at present of coming on the market to purchase ahead. Stocks in the hands of producers are increasing to some extent, but they are not causing inconvenience and no encouragement is given to the idea held in some quarters that prices may be reduced. The weekly market on Tuesday was again quiet, with business on a restricted scale. A few small orders were placed with makers for early delivery at 72s. 6d. per ton for No. 3, but merchants accepted slightly less where their contract conditions with makers allowed them to compete. No. 1 was 75s., No. 4 foundry 71s. 6d., and No. 4 forge 71s. f.o.b. or f.o.t. Shipments of pig iron for January totalled 16,656 tons, against 12,619 tons in December and 21,518 tons in November. Hematite is a weak market. Producers have a fair number of contracts on their books made some time ago, but new business of importance does not come to hand so far. Transactions by makers during the week have been only small at 78s. for mixed numbers for early delivery and 78s. 6d. a month or two ahead. Merchants are in command of a fair amount of iron, and as they have a free hand in regard to export, have shaded makers' prices by 6d. to 1s. per ton to secure business. In the steel trade a moderate amount of new work is coming to hand in different departments. The sheet trade, however, does not show any improvement. Prices are generally unchanged from last week, except that galvanised corrugated sheets of 24-gauge are 2s. 6d. lower at £11 17s. 6d. There is no movement in the ore market and consumers are still holding off. Best rubio remains nominally 23s. c.i.f. for delivery over a few months, but odd prompt cargoes can be secured at 22s. 6d. The freight Bilbao/Middlesbrough for prompt tonnage is about 6s. 9d. Coke is in full supply and is now obtainable at 21s. 6d. delivered works for ordinary furnace qualities. The number of furnaces in blast in the district is unchanged at 42.

Our Sheffield correspondent writes: February has opened with slackness in most branches of local trade, although there are a few notable exceptions. In the lighter sections of the steel trade overseas business continues sluggish, and the demand for sheets has not recovered from the recent setback. In all departments buyers appear to be holding back, and the hand-to-mouth character of the trade is not conducive to remunerative working. The Derbyshire heavy cast pipe foundries are fairly well supplied with work. The depression of the pig iron branch is as acute as ever, and proposals to increase further the prices of foundry sorts have been dropped for the time being. The local output of open-hearth steel remains as before, but producers have little work booked forward, and the outlook is not so certain as they would like it to be. The railway section of the steel trade is suffering from the continued absence of waggon building for private uses. This trade has been almost at a standstill for a couple of years. The number of surplus waggons, however, is dwindling, and will soon disappear. Tool and cutlery makers report that turnover was less than a year ago.

Our Glasgow correspondent writes: There is no change in the position this week in the iron and steel trades in the West of Scotland. Business on the whole remains very quiet, and makers of heavies and semi raw materials are finding it very difficult to secure sufficient work to keep plants running. There is an unusual amount of depression in the foundry and light steel castings trades, and in many cases operations are being carried on for only a few days per week. Some sections of the tube trade are also experiencing a very poor demand, but generally makers have well-filled order books at the moment. Sheetmakers are not yet finding any improvement in the bookings for export, any business on offer being at prices too low to induce sales. The home trade in both black and galvanized sheets is quite satisfactory.

Our Cardiff correspondent writes: On the Swansea Metal Exchange on Tuesday there were apprehensions that the contemplated restriction on the output of tin would react on prices, and accordingly quotations for tinplates were firmly maintained at from 18s. 7½d. to 18s. 10½d. per basis box. There were inquiries from the Far East, but other trades were comparatively quiet. Odd sizes were in demand by home consumers at scheduled rates, and wasters were firm and in short supply. Galvanized sheets were unchanged at from £11 15s. 0d. to £12 per ton, and tinplate bars at £6 10s. 0d. for the native make, and £5 9s. 0d. for imported material. Shipments of tinplates last week totalled 161,394, compared with 155,345 boxes in the corresponding week last year, and stocks totalled 104,550, compared with 124,644 boxes.

OTHER METALS.

TIN.—Tin market irregular. After a weaker opening caused by some selling pressure, combined with lower Eastern cables, values recovered on a better demand. Standard cash changed hands at £175 15s.-£178 to £175 17s. 6d.; and three months, £179-£177 12s. 6d., £181 and £179 12s. 6d. In the East, sales were reported at £180 15s, to £179 15s. and £180 10s. ton c.i.f.

COPPER in fair support, and prices firmer on reserved offers. Standard cash sold at £72 to £74 5s.; three months, £68 15s., £69 7s. 6d. and £69 10s.

LEAD.—Market steady, but dealings somewhat restricted. Good soft foreign pig, February, sold at £21 11s. 3d.; April, £21 11s. 3d.; and May, £21 12s. 6d. to £21 11s. 3d.

SPELTER fairly active, but prices irregular, and tendency easier, on liberal offerings. February sold £19 17s. 6d. to £19 11s. 3d.; March, £20 3s. 9d. to £19 17s. 6d.; April, £20 5s. to £20 2s. 6d.; May, £20 8s. 9d. to £20 5s.; June, £20 10s. ton.

ALUMINIUM steady. Home trade, £95; export, £100 ton.

ANTIMONY dull. English regulus, £42 10s. to £50; China ditto, spot, £31 10s. to £32; February-March, £27 10s.; China, crude, February-March, £18 5s. per ton.

ANTIMONY OXIDE.—February-March, £27 10s. ton c.i.f.

ANTIMONY ORE.—60 per cent., February-March, 5s.; 50 per cent. ditto, 4s. per unit c.i.f.

WOLFRAM quiet. Chinese, February-March, 34s. per unit c.i.f.

QUICKSILVER maintained. Spot, £23 to £23 5s. per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 18s. 7½d. to 18s. 10½d. per box, f.o.b. Swansea.

ZINC OXIDE steady. Spot, £29 to £36 per ton as to quality, delivered U.K.

THE COTTON TRADE.

LIVERPOOL, February 5th.

Cotton has continued to decline, owing to the absence of demand from the trade, which has gone from bad to worse, and at the moment it would appear that only lower prices would bring about any improvement in cotton. It must not be forgotten that America, as the principal producer of cotton, has this season to a great extent lost its place. A plentiful crop in other parts of the world having resulted in very competitive prices, as the following table shows:—

	March.	July.	October.
Close, Wednesday last	9·00	9·17	9·22
Close to-night	8·50	8·70	8·79
High prices for week	9·00	9·17	9·22
Low prices for week	8·41	8·60	8·70

Spot sales for the week January 30th to February 5th (inclusive) are 25,000 bales, of which 14,630 American, 3,150 Brazil, 100

Argentine, 3,200 Peru, 1,320 Egyptian, 1,700 African, 500 East Indian, and 400 sundries. Imports for the same period are 52,996 bales, of which 41,903 American, 50 Argentine, 1,354 Peru, 2,291 African, 188 East Indian, and 7,210 sundries. Quotations to-day are: American Middling, 8·76; Egyptian Sakel, 13·95; Uppers, 10·19; Brazil Fair, 8·46; Peru G.F. Mod-Rough, 9·75; Smooth, 9·46; West African Middling, 8·81; East African G.F., 9·71.

MANCHESTER, February 5th.

The outstanding event in the market this week has been the further fall in raw cotton prices, and to secure orders spinners and manufacturers have had to grant concessions to buyers. A very unsettled feeling has prevailed, and the conditions at the moment are against activity, there being a fear of a further decline in prices. India has provided a restricted inquiry in piece goods, and the contracts arranged have been for small quantities. According to mail advices, dealers in the bazaars are feeling rather acutely the depreciation in the value of stocks. The New Year holidays in China have interfered with trade negotiations, and the further decline in exchange rates has resulted in very little being done. There are reports of local merchants re-selling goods in Manchester. A miscellaneous business has been done for Egypt, East and West Africa and South America, but demand for the Continent remains poor. Some reports from the home trade are rather better. There is still a tendency for weaving production to be reduced. Quotations in American and Egyptian yarns have been very irregular when tested.

THE WOOL TRADE.

Our Bradford correspondent writes: At a conference in Melbourne to-day it was decided to spread out the unsold balance of the clip, and continue the auctions to the middle of August. It was also agreed to withdraw from the auctions all wool which fails to receive bids equal to prices ruling during the second half of January. Action on these lines has been expected for some time past, and if the selling interests had adopted this policy immediately after the opening of the London wool auctions, they would have had a good deal of support. But the markets both in London and in the overseas centres have improved considerably during the last ten days, and not a few traders now think that matters would have righted themselves automatically if the sales had been continued without further restrictions. Antwerp futures, which were quoted at 23¾d. on January 23, are to-day up to 25½d., thus reflecting the improved tone. Moreover, there has been a considerable amount of business in tops, especially merinos, during the last week, the firmer tendency in the raw material market having induced spinners to operate with more freedom than they have shown for many weeks. The immediate effect of the new policy adopted by the selling interests may be seen in still further business in tops and yarns, for users everywhere will know that if wool is not to be allowed to come on to the market in bulk, there will be little prospect of lower prices. It remains to be seen whether the move is a good one, but it does seem a pity to introduce further restrictions just at a time when business shows signs of reviving and confidence seems to be returning.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The first series of London sales closed last Thursday with values around five per cent. higher than at the opening. After the first week, when the market was more or less demoralised, the trade began to feel that values were at the bottom, and competition improved considerably. Scoured merinos have sold distinctly better, often making up to 2d., and in a few cases even 3d. more than was bid earlier in the series. Fine quality merinos have made good prices, particularly 70's to 80's from New South Wales. There has been a good show of new clip greasy crossbreds from New Zealand. Halfbreds have sold up to 14½d., and though prices must have been disappointing for pastoralists, they have been better than those ruling recently in Dominion selling centres. Those who have bought should find that the wool is a profitable investment. Slipes have not been too plentiful, but during the closing week the quantity was larger, and this did not prevent a five per cent. improvement in values. Good halfbred lambs have probably been the cheapest of anything, although towards the finish 16d. to 17d. has been paid for specially clean wool of good 58's quality. Scoured crossbreds have been somewhat scarce, and these have sold fairly well. The Capes have been only a moderate show, although it is some years since such a large quantity was catalogued. Buyers remarked upon the depreciation in the quality of the Midland clips from the Cape Province. The Free State wools maintained an excellent standard, but it is to be hoped that Cape farmers will not go in for producing heavier fleeces of a lower quality. Taking the sales as a whole, the close has partly compensated for the disastrous opening, and the general opinion now is that there will be no further fall.

HIDES, LEATHER AND ALLIED TRADES.

Although a fairly good demand continues to be experienced for domestic hides and skins there is an easier tendency in regard to prices, and a feeling that lower values may be expected. Sheepskins are a very poor sale in view of the state of the market for wool and here again reductions must be expected. Imported hides have all recorded lower figures, and as a result a fair amount of trading has been done on account of tanners here in England. On the Continent, however, business in hides is very quiet indeed, and for the time being at any rate there seems to be no hope of an improvement. With less competition from America in the Frigorific market, prices for Argentine ox have dropped to 8 7/16d., while Anglo-Uruguay ox have changed hands on the basis of 8⅜d. Sales of Saladero hides have been made in Salto ox at 8⅜d. and Bovrils at 7 15/16d. With the lower prices now being asked for dry River Plates it is possible better business will mature; so far, however, only small sales have been made in B. A. Americanos at 8⅜d., Inservibles at 5d., and Sierra Cordobas at 9⅞d. An appreciable amount of business has been done in Capes at from 9d. to 5¼d. for the four selections of drys, while dry-salted 20/30 have been sold at 8d. and 7d. for firsts and seconds. The American market is cabled as weak, with Chicago heavy native steers selling at 15 cents. Business with tanners and merchants of sole leather continues fairly satisfactory, and although nothing in the way of large orders are received there is a steady day-to-day call for most descriptions, which makes for quite a respectable turnover. Manufacturers of footwear continue to take up supplies of the light to medium weight bends suitable for this class of trade, and stocks for the most part are held for full asking prices. The repairing section also are steady buyers of bends in the weights and selections needed for this purpose; in fact, at the moment this branch of the industry is considered as good as any to cater for. Bellies and shoulders usually can be disposed of readily; the difficulty seems to be to get sufficient of this class of stock, as the majority of tanners are fairly well sold forward. The call for upper leathers centres in the main on black and brown glacé kid, with a steady inquiry for willow calf. Box and patent leathers account for a fair amount of business, but not so much as the former descriptions, while there has been more inquiry going around for suède. Semi-chrome box sides continue to receive the attention of shoe and boot manufacturers, but the difficulty all the time is the price at which the goods are wanted. Shoe manufacturers appear to be fairly well placed for business, and although in some quarters expectations have not been realised a better inquiry is to be noticed for goods for the spring trade.

THE JUTE TRADE.

DUNDEE, February 5th.

Disappointment has once again been experienced by members of the jute trade. An advance in the prices of both raw jute and Calcutta goods created hopes of an impending improvement in business all round, but a return to a quieter tendency in Calcutta has caused the market to lapse into the state of inactivity, which has now prevailed for so many months past. Spinners and manufacturers are badly in need of orders, and any business that is passing is generally at prices under those quoted for yarns and cloth. Buyers have found that it has paid them to purchase in a hand-to-mouth manner, and, though prices of products are inadequate to meet the cost of spinning and weaving, only small lots are being bought to meet immediate requirements. Curtailment of output continues to increase, and it is thought that there will be no return to more prosperous times until the Calcutta mills signify their intention to revert to working 54 hours per week, which they increased to 60 hours on July 1st last year. The extra quantity of five million yards per week thrown on the market by this measure is not being absorbed. Owing to depression of trade throughout the world, the demand for jute goods is insufficient even to meet former production. Prices of raw jute advanced 10s. to 15s. per ton, but values have again slipped back to some extent. Good First Marks went up to £32 15s., but could be bought again at £32 5s., and best Lightnings at £29 5s., February-March. Daisee assortment rose to £26 5s., and Tossa assortment to £27 17s. 6d., but the respective rates are now £26 and £27 10s., February-March. Spinners are showing very little interest now in the further purchase of requirements for the present season. Though continuing to quote 2s. 10d. for common 8 lb. cops, and 2s. 11d. for 8 lb. spools, spinners have been quietly accepting business in small quantities at 2s. 9d. and 2s. 10d. respectively. All other yarns are more or less nominal in price, with little or nothing doing to test them. Cloth continues on dull lines, and business is confined to the merest trifles. Market quotations are from 3⅜d. to 3 13/16d. for 10½ oz. 40 in. hessians, and 2⅜d. to 2 13/16d. for 8 oz., but the rates accepted vary greatly according to the width and weight wanted. Narrow goods are worse off than the wide widths. Linoleum hessians are slow, but some good orders have been entered for sackings, both narrow and wide, at prices, however, which manufacturers do not care to repeat. There is no sustained demand for Calcutta goods, and sellers find it impossible to maintain prices.

VEGETABLE OILS AND OILSEEDS.

Very quiet conditions prevail in the markets for oilseeds, and oils and prices have displayed further weakness. Linseed oil is in improving supply, but is in only moderate demand, consumers being more interested in forward positions, which are at a substantial discount. Raw oil on spot is quoted £43 10s. per ton, naked ex Hull mill. February delivery at £41 5s., and April-May £39 10s. Cotton oil is in poor request and lower, crude Egyptian offering at £26 15s., and common edible at £30 10s., ex Hull. Other seed oils with barely an exception have an easier tendency. In the oilseed section there is very little demand for linseed and values are barely steady. Plate on spot is quoted around £17 5s., and for shipment to May, £17 12s. 6d., but there are no buyers. Indian linseed is also quiet and nominal. The quality of linseed on passage to Europe has increased to 160,600 tons, or 6,700 tons more than a week ago. Cotton seed is quiet, and only a few small sales by second holders are reported. Egyptian shippers not offering. Current value of black Egyptian is £7 10s. spot and February loading, and of Bombay £6 10s. on spot. The demand for oilcakes and meals is very poor.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market is again dull, and apart from filling up one or two gaps, trade buyers are not interested, but no change was made in prices of spot goods. As far as the United Kingdom is concerned, the commodity is still shackled and likely to remain so until its fiscal fate is known at the forthcoming Budget. Outside the U.K. there is marked lack of confidence owing to the abundance of supplies. Prices for raws in American markets slipped back owing to offers of duty free sugars being on an extended scale, so that any advance asked by the Cuban agency passes unnoticed. Affairs in Java fail to mend, and this is expressed in estimated shipments thence to all parts for last month of 138,000 tons, which compare with 213,000 for corresponding period last year. Raw refining sugars dull. Terminal sections easier, in sympathy with lower American cables, but a fair amount of business resulted in raw. March delivery changed hands at 6s. 3d.; May, 7s. 3d. to 7s. 2½d.; August, 7s. 9d. to 7s. 8½d.; December, 7s. 11½d. Business done in Polish crystals, February-March, to India, at 10s. c. and f. terms. White Java, February-March, to Calcutta, sellers, 10s. 6d. c. and f. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending February 1st totalled 255,575 tons, against 173,272 at same time last year. Cuban receipts last week, old crop, 16,231 tons, against nil last year; new, 136,520, against 188,144; exports, old, 15,281, against 16,118; new, 2,386, against 72,139; stocks, old, 115,942, against 19,754; new, 196,245, against 457,157 in 1929. Centrals at work total 149, against 160 same time last year. Mr. F. O. Licht has revised his estimate of the European crop, and now gives it at 8,339,000 tons, compared with previous total of 8,415,000 tons and an out-turn of 8,467,000 tons last season. Germany placed at 2,050,000 tons, against 1,965,000 tons, France, 910,000 tons, against 870,000 tons; Poland, 910,000 tons; against 900,000 tons; Italy, 445,000 tons, against 450,000 tons; Spain, 225,000 tons, against 240,000 tons; and England, 310,000 tons, against 290,000 tons previously. The Russian figure is 1,075,000 tons against 1,200,000 tons.

COFFEE.—The chief feature during the week was a sustained demand for all the finer qualities and which fetched full to dearer prices. Fancy bold blue Costa Rica sold to 181s. Medium and common grades slightly irregular.

COCOA.—A moderate quantity in auction, offered on Tuesday last, revealed a scarcity of buyers apart from Grenada qualities. These met a fair sale at about steady rates. Fine red sold 53s. to 53s. 6d.; good, 52s.; good dark red Trinidad sold 65s. Forward positions quiet and easier. Acera, F/F, London contract, March-May, quoted 41s. 3d. f.o.b. Terminal: March sold, 43s. 10½d. to 44s.; May, 44s. 6d. to 44s.; December, 45s. 3d.

TEA.—Of Indian qualities, 55,387 packages were offered during the week. Demand proved generally quieter which led to a good deal of irregularity. Finest tippy kinds quieter, and many parcels failed to reach selling limits. Plain and light liquoring teas mostly from ½d. to ¾d. lb. lower. Medium to fine leaf teas were fairly well supported by the export trade. Ceylon auctions of 27,852 packages also came to a somewhat quiet market, which proved irregular and frequently lower. Low medium and medium broken pekoes were a weak feature of the sale, and sometimes ½d. to 1d. easier. Java sales quiet and mostly easier.

RICE.—Market largely nominal, as buyers are still very reserved. Two Stars Rangoon, spot, London, 14s., with February-March, 11s. 6d. c.i.f. Spanish oiled, February-March sellers, 15s. 9d. American blue rose from 22s. to 23s. c.i.f. No. 3 Burma to the Levant, double bags, February, 11s. 7½d. S.Q. to Cuba, 12s. 1½d. Saigon No. 1 round grain February-March to Europe, 12s. Siam Super, January-February, 15s. 6d. Californian nominal.

BEANS.—Butters and most others slow and prices easier. Madagascar butters spot, London quoted, 41s. to 42s.; parcels per "Eugene

ALEXANDERS DISCOUNT COMPANY, LIMITED.

Grossos," 29s. 6d.; "Clan Macindoe," 29s. 9d.; "Clan Chatton," 29s., per "Belgrano," 28s. 6d.; December-January, 26s. 6d.; January-March, 26s. c.i.f. *Ohtenashi* afloat, 20s. 6d.; February-March shipment, 21s. c.i.f. Rangoon haricots, ex store, 12s. 6d.; January-February, 13s.; new crop, March-April, 14s. c.i.f. London. Danubian hand-picked, spot, 25s.; *January-February*, 23s. 6d. c.i.f. London. To Glasgow, North African, January-February, 9s. c.i.f. Chinese horse, spot, Glasgow, 8s. 6d. c.i.f.

PEAS remain very quiet; prices barely upheld. Japanese, spot, old, 14s. 6d.; new, 15s. 6d.; afloat, sellers, 15s. 3d.; January-February, 15s. 10½d.; February-March, 15s. 10½d.; March-April, 16s. c.i.f. London. Dutch marrowfats prompt, quoted 15s.; small blues, H.P., 10s. 9d. f.o.b. terms. Calcutta, January-February, 57s. Karachi nominal c.i.f. Maples quiet. No. 1 New Zealand, January, old, 57s. 6d.; *new crop, March-April*, 60s. Tasmanian "A" grade, new, February-March, 67s. c.i.f. China, white, hand-picked, December-January, quoted 13s.; f.a.q. 9s. 6d. Manchurian white, December-January, 11s. c.i.f.

LENTILS dull. Bold Bombay, January-February, nominally 68s. Calcutta Patna to arrive 75s. Bombay Patna nominal c.i.f. (504 lb.).

SPICE.—Pepper continued in demand and market manifested firm features. Lampong, January-March, sold 1s. 0½d.; March-May, 1s. 0½d.; Muntok, white, January-March, 1s. 4½d.; March-May, 1s. 4⅝d. to 1s. 4¾d. London stocks of black 18 tons down on the week, and white by 116. Stock of black now 1,128 tons, against 1,153 same time last year, and white 1,250, against 309. Tellicherry, February-April, quoted 118s.; Aleppy, 116s. c.i.f. Cloves quietly steady, also tapioca and ginger. Sago flour, February-March, to the U.K., 11s. 7½d.; March-April, 11s. 6d.; April-May, 11s. 4½d. c.i.f. Dutch Farina, prompt, 9s. 1½d. f.o.b.

FRUIT (Dried).—Currants: Market slow. Pyrgos, quoted, 37s.-38s.; Amalias, 38s.-40s.; Patras, 40s.-44s.; Gulf, 44s.-58s.; Vostizza, 51s.-60s.; Australian, 37s.-40s. Sultanas inactive. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-80s.; Greek, 42s.-75s.; Australian, 35s.-50s. Dates steady. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s. 9d.-14s. Raisins quiet. Valencia, quarter-boxes, 45s. Figs steady. Layers, 32s.-40s.; genuine, 29s.-38s.; good average, 25s.-27s.

EVAPORATED FRUITS.—Trade demand fails to expand, but late rates were generally maintained. Plums: Californian new crop, 30's-40's, 72s. 6d.; 50's-60's, 63s. Apricots: South African new crop Royal, 57s. 6d.-117s. 6d.; Australian, 67s. 6d.–77s. 6d. Pears: Californian Lake County, fancy, 90s.; extra, 100s.; Australian, Stocks 55s. week e... Peaches: Californian, choice, 57s.6d.-62s. 6d.; fancy, 67s. 6d.-72s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-69s.; Canadian, 64s. Almonds steady. Mazagan, 112s. 6d.; Mogador, 107s. 6d.; P.G. Sicily, 125s.; Majorcas, 112s. 6d.-130s. Bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 75s.; China, bitter, for shipment, 39s., new crop, c.i.f.; sweet, spot, 77s. 6d. Hazel kernels: Kerasunde, spot, 155s.; Barcelona, 147s. 6d. New crop French (shelled) walnuts, 145s. ex-wharf London.

CANNED GOODS.

CANNED FRUIT.—Californian fruits met with quiet attention, but there is no pressure to sell and prices remained steady. Australian new pack prices are reasonable compared with Californian, and business is expected to open out in the near future. Singapore pines move off slowly despite fairly attractive prices, but South African and Hawaiian firmly held. Tomatoes in slow request, trade being below normal for the time of year.

CANNED FISH.—Salmon: Market steady, but trade still restricted. Alaska red talls, quoted, 48s.-50s.; pink talls, 25s.-26s.; and halves, 34s.-36s. Japanese crab firm, and fancy qualities quoted, 97s. 6d.-102s. 6d. Lobsters steady. Halves ranging from 135s.-140s. Sardines in moderate demand, and best quality scarce. Portuguese clubs, *quarters*, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Market firm, and ox tongues realise full rates on limited offerings. Lunch tongues sell readily and Danish reservedly offered at firm rates, while cooked boned hams experienced a good demand for forward delivery.

CONDENSED MILK AND MILK POWDERS. — Market fairly steady, with a good trade passing. Dutch condensed milk, full cream, sweetened, 5 cwt. casks, 37s. 6d.; machine-skimmed ditto, 22s.; full cream, sweetened, 56 lb. drums, two in a crate, 52s. 6d. English condensed milk, full cream, sweetened, 5 cwt. casks, 40s.; machine-skimmed ditto, 23s. 3d. Full cream milk powders, English, roller process, 28 per cent. butterfat, 2 by 56 lb. tins, crated, 85s. Dutch ditto, 26 per cent. butterfat, 1 cwt. cases, 70s.; Dutch spray ditto, 2 by 56 lb. tins, crated, 95s.; Dutch machine-skimmed milk powders, roller process, 1 cwt. cases, 27s. 6d.; spray ditto, 2 by 56 lb. tins, created, 39s. 6d.; ditto, 1 cwt. cases, 38s., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are nett, ex-store London/Hull or Goole, and cover prompt or gradual delivery to end of April, 1930. Stocks available in Newcastle 3s. per cwt. extra, Liverpool 6d., Manchester 1s. On the grocery side, full cream, sweetened, 19s. 6d.; machine-skimmed, sweetened, 9s. basis per case, usual packing.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have examined the above statement of assets and liabilities as at November 30th, 1929, and compared it with the books at the Head Office and with the certified returns from the branches. We have checked the cash and verified the securities and investments of the Bank at the chief office in Toronto and at several of the principal branches at the close of business on November 30th, 1929.

We have obtained all the information and explanations that we required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank, and we certify that, in our opinion, the above statement discloses the true condition of the bank, and is as shown by the books of the Bank.

TORONTO, 20th December, 1929.

C. S. SCOTT, F.C.A., of C. S. Scott and Co.
D. McK. McCLELLAND, F.C.A., of Price, Waterhouse and Co. } Auditors.

The Annual Meeting of the Shareholders of the Bank was held on Tuesday, January 14th, 1930, at 12 o'clock noon.

The Bank has 800 Branches throughout the Dominion of Canada and in Newfoundland, the United States, the West Indies, Mexico, and Brazil.

CHARLES CAMBIE, Manager.

LONDON OFFICE: 2 Lombard Street, E.C.3.

A. R. PHIPPS, Assistant Manager.

The Canadian Bank of Commerce buys and sells Sterling and Currency Drafts and Telegraphic Transfers on Canada, Newfoundland, the United States, the West Indies, Mexico, and Brazil; issues Commercial and Travellers' Letters of Credit and Travellers' Cheques; collects Drafts, Coupons, etc.; and conducts a general banking business with these countries and with all parts of the world.

To receive the five per cent. Guaranteed Non-Voting Preferred Stock of Standard Oil Export Corporation and/or cash to which holders of the above Receipts are entitled under the terms of said Offer, they should surrender such Receipts accompanied by the necessary form of deposit duly completed, on and after 7th February, 1930, at the office of

GUARANTY TRUST COMPANY
OF NEW YORK,
32, Lombard Street, London, E.C. 3

The basis of exchange is as follows:—

For each
5-5/9 (five and five ninths) shares of Anglo-American Oil Company, Limited, £1 par value as represented by your Receipts

There will be delivered
1 (one) share of Standard Oil Export Corporation, a Delaware Corporation, 5 per cent. Guaranteed Non-Voting Preferred Stock, $100 par value.

No fractional shares of the Export Corporation will be issued in connection with this exchange.

Any Anglo-American Oil Company, Limited, shares as represented by your Receipts, offered in exchange which are not divisible by 5-5/9 will be paid for in cash (American dollars) at at the rate of $18 per Anglo-American Oil Company, Limited, share. Dollar payments to be made for such fractions by Guaranty Trust Company of New York, London Office, may be converted into sterling at the current rate of exchange on the day the payment is so made.

Receipts surrendered for exchange **must be accompanied by the necessary Form of Deposit,** which can be obtained on application to Guaranty Trust Company of New York, 32, Lombard Street, London, E.C.3.

GUARANTY TRUST COMPANY
OF NEW YORK,
Depositary.

HONEY.—Market remains dull. Jamaica, white, 56s.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s.; fine white Cuban, 49s.; San Domingo, good, 46s.; manufacturing, 41s.; Californian, white, 55s.; light amber, 50s.; New Zealand light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d.; Ukrainian light ambers, 45s.-49s. 6d.; whites, 49s. 6d.-52s. 6d. per cwt.

RUBBER.

Business is still very sluggish and the market seems to have quite forgotten how to improve, under stress of liberal production. Standard sheet, spot and February sold, 7½d. to 7⅝d.; March, 7⅝d.; April, 7⅝d.; April-June, 7 11/16d. to 7 13/16d.; July-September, 8 1/16d. to 8 3/16d.; and October-December, 8 5/16d. to 8 7/16d. London stocks increased 476 tons on the week. Landings, 2,154; deliveries, 1,678; stocks, 60,460 tons, against 25,413 last year. Liverpool stocks, 165 down; landings, 233; deliveries, 398; stocks, 19,898 tons, against 4,106 last year. Total Straits shipments for last month approximate to 52,000 tons.

GENERAL.

JUTE.—Dull and lower was the text of the Calcutta cables. The London centre disclosed similar features, and meantime trade in most jute manufactured goods fails to revive. Firsts, January-February, Hamburg quoted, £26 12s. 6d.; February, March, £26 17s. 6d.; March-April, £27 2s. 6d.; April-May, £27 10s. Lightnings, February-March, £25 10s.; Hearts, £22 10s.; Daisee assortment, £23 15s.; Tossa, £25 15s. Hamburg stocks, 31st ultimo, 90,158 bales, against 135,416 same time last year, increase of 5,068 on the fortnight. Afloat to Hamburg, 88,225; ditto, Antwerp and Rotterdam, 17,475. Arrivals at Hamburg, January 15-31st, 54,332 bales.

HEMP.—Quietness was again the salient feature respecting Manila parcels, but prices remained without essential change J2, February-April, quoted, £32 10s.; K, £31; L1, £29; L2, £26; M1, £26 5s.; M2, £24 10s.; G, £33 5s.; H., £31 10s.; C2, £27; C3, £22 10s.; S1, £42 10s.; S2, £40 10s.; S3, £37 10s. c.i.f. African sisal, No. 1, f.a.q., February-April, £34; marks, £34 15s. c.i.f. Mexican nominal pending definite offers from the other side and where, apparently, close study to the position is being given. Receipts last week cabled 27,000 bales, which compare with high level record same time last year of 51,000 and 27,000 in 1928. Estimate next week, 34,000; week following, 31,000. Shipments last week: 8,000, U.K.; 5,000, Continent; 8,000, U.S.A.; 8,000, Japan; and other countries, 1,000. Stocks now 167,000 bales.

SHELLAC.—Market dull and weaker. Fair T.N., spot, 142s. 6d.; March sold, 133s.; May, 137s.; August, 140s.

COPRA.—A dull and uninteresting market. Straits S.D., February-March, Rotterdam sellers, £22 7s. 6d.; Ceylon, £23 17s. 6d.; smoked, South Sea, to Marseilles, £21 5s.; sun-dried, ditto, £21 10s. c.i.f. Palm kernels slow of sale.

MISCELLANEOUS.—Coconuts, quoted, 14s. to 25s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £42 10s.; Ceylon, bristle, £19 10s. to £26; cinnamon leaf oil, 5½d.; citronelle, Ceylon. 2s. 3d.; Java, 2s. 6d.

METROPOLITAN CATTLE.—February 5.

British Beasts, per stone of 8 lbs.; to sink the offal. Sheep per stone.

THE MONEY MARKET.

MONEY, though still usable, has been a little more plentiful this week. It is true that on Wednesday rates ran up to 4¾ per cent., but next day, when it was expected that heavy Excise payments would deplete the market, rates receded to 4½ per cent., and the market was able to repay the Bank its borrowings of the preceding week without having to go into the Bank once more. The week's Bank return reveals a turnover of approximately five millions from Public to Bankers' deposits. This is probably the key to the slight easing in conditions, and presumably last week Government disbursements, in the form of Treasury bill maturities—which once again are £15,000,000 in excess of issues—and for other purposes,

were in excess of revenue actually turned over to the Treasury's account with the Bank. It should, incidentally, be borne in mind that taxes when paid are first of all banked by the collector at one of the joint-stock banks, and that it is only subsequently that they find their way into the Public Deposits at the Bank.

* * * *

Discount rates were quoted Wednesday at 3⅞ per cent., or possibly a shade lower, but the following day 3 15/16 per cent. was mentioned, the slightly higher tendency reflecting the higher short loan rates of 4½ per cent. It is generally agreed that the Continental demand for bills is falling away, while Stock Exchange houses are not renewing the Treasury bills they bought last autumn in order to find an outlet for unemployed funds. As money is likely to remain usable until the end of the financial year, it is not to be expected that discount rates will fall below the present level. The reduction in Bank rate to 4½ per cent. means that weekly fixtures are now 3½ per cent., so that the market now has a margin of ½ to ⅝ per cent. or more upon which to operate.

* * * *

Perhaps the most important development of recent weeks has been the rise in the French exchange from the lower gold point to Frs. 124.20, or practically to par. The explanation was heavy French short loans to Germany, and these also account for the depreciation of the pound against the mark, which this week, as in previous weeks, enabled Germany to secure all the available market gold. A few days ago it became clear that Germany had absorbed all the French money she could, and rates offered fell to 4¾ per cent. This explains the reaction in sterling to Frs. 124.15, and probably its recent slight recovery against the mark.

Comparing the latest figures with those of a year ago, deposits have fallen by 2.3 per cent., cash by 2.8 per cent. Investments are lower by 5.3 per cent., and bills by 10.7 per cent. Advances, however, are 1.4 per cent. higher.

NEW YORK.

Our New York correspondent cables:—Money is easier with further reductions in discount rates, and it is expected that the majority of the Reserve Banks will come down to the 4 per cent. level. The week's statement of the System indicates no important changes in the situation, and the Reserve ratio is slightly higher at 77.9 per cent. Trade is slowly reviving. The steel industry is now on a 79 per cent. operating basis, and motor production during January, while below that of a year ago, was substantially larger than during December, with the output of low-priced cars the principal feature.

THE STOCK MARKETS.

The strength of high-grade investment stocks was in sharp contrast to the dull conditions prevailing in the more speculative markets. The success of the India Government and Hastings Corporation loan issues was reflected in a firmer tendency throughout the market for gilt-edged and prior charge stocks. The Home Railway dividends, for the most part, surpassed expectation, but produced no rise in quotations. International stocks were quiet. Apart from a fresh break in Royal Mail stocks, the industrial markets had no outstanding features. Rubber shares improved with the commodity, and tea shares were harder. Oils, however, were neglected. A fair business was done in Rhodesians, but Kaffirs attracted little interest.

THE COMMODITY MARKETS.

What little change has occurred has been in the direction of improvement. Home trade in coal is poor, and overseas inquiries by no means satisfactory, but there is still a fairly active export business being done from South Wales. The iron and steel trades have not experienced the hoped-for revival, though some sections are fairly active. Fluctuations in raw material prices have been disadvantageous to the cotton trade, but there are nevertheless faint signs of improvement in Manchester. Though the position in the wool textile industries remains uncertain the prospect of stable wool values seems slightly less remote. Hides are slightly weak, but the leather and shoe trades remain satisfactory. Vegetable oils and oilseeds are a better market. Wheat has more than regained the level of a fortnight ago.

THE FOREIGN EXCHANGES.

The Foreign Exchange Market was only moderately active last week. A certain amount of irregularity prevailed, and the peseta was again very erratic, whilst the tendency of sterling was weak, especially agains[illegible] dollar. The New York rate declined steadily fro[illegible] to 4.86 7/32, and was at one time as low as 4.86⅛. [illegible] improved from 4.91⅛ to 4.90. Paris at one [illegible] ciated to 124.20 from 124 last week, but [illegible] to 124.15 at the close. Brussels gaine[illegible] half points at 34.88½, Milan lost a point at [illegible], and Madrid broke badly and declined from [illegible]7.00 to 38.55. Amsterdam rose in our favour from 12.11¾ to 12.12¾. Berlin fluctuated rather widely and closed ¼ worse at 20.36½, after touching 20.35¾ and 20.37½. Switzerland was again hesitant, but on balance lost ¼ only at 25.19¾. Stockholm lost a point at 12.13¼. Oslo was unchanged at 18.21, but Copenhagen was appreciably better at 18.16⅝, against 18.19 last week. The South American currencies were the subject of some attention from the Continent, Rio being weaker at 5 15/32d., against 5⅝d. last week. Buenos Aires showed a firmer tendency at 43⅛d., against 42¼d. last week. In the Far East the rupee and yen were steady and firm at 1s. 5 59/64d. and 2s. 0¼d. respectively. In the forward markets dollars were less wanted at discounts of 1/32 cent and 3/32 cent, against par for both periods last week. Paris was stronger at slightly higher premiums of 7 and 18 centimes. Madrid was a shade weaker at 5½ and 16 centimos premiums. Amsterdam was firmer at premiums of 1⅛ and 2¼ cents, as was Berlin at narrower discounts of 2 and 6 pfennigs, a gain of ½ on last week in each case. Silver prices advanced by 3/16d. for both spot and forward at 20¼d. and 20⅛d. respectively on Indian and China buying and less persistent offerings. The China silver exchange reacted differently, Hongkong losing ⅛d. at 1s. 7d., whilst Shanghai gained ⅜d. at 2s. 0⅛d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moodys-Economist Services, 6, Bouverie Street, London, E.C.4.

THE TARIFF TRUCE.

NEXT Monday will see the opening of the Conference at Geneva on the tariff truce. There has been in this country so much confusion of thought—based, to a considerable extent, on misunderstanding—with regard to the objects of the Conference that it is worth while to recapitulate a few facts about its purpose and composition. In the first place, the intention of the proposal made by Mr Graham and adopted at the League Assembly in September last is not to stabilise tariffs at their existing level, but to afford a temporary respite from increases or threatened increases of tariffs, in order to create a stable atmosphere for pursuing the aim of negotiating for a reduction of tariffs—the objective set before the League by the World Economic Conference. In this connection Dr. von Schubert, the rapporteur on this subject, reminded the Council, at its recent meeting, that the question of further action was not to be left in abeyance, but that the forthcoming Conference itself would have on its agenda the question of drawing up " a programme of subsequent negotiations for facilitating economic relations by all practicable means and especially by reducing hindrances to trade." The Economic Committee which is preparing the work of the Conference has not attempted to outline the principles of this further action to which the parties will bind themselves, as this will depend upon the attitude of the States taking part. The rapporteur, however, in a further word of explanation, states that these subsequent negotiations for further action are, under the Assembly resolutions, to be limited to the States which conclude the truce and such other States as these may, by common agreement, invite. " At a later stage, however, a final diplomatic conference will take note of the results of the negotiations referred to, examine them, and supplement them if necessary. To this Conference, all States, without distinction, will be invited."

This question of further action is of very great importance, particularly for Great Britain and countries which are on a low-tariff basis. Since 1927 much has been done to facilitate trade; a great network of commercial treaties has sprung up; many of the more vexatious obstructions and exceptional measures have been removed; and, if the Imports and Exports Prohibition Convention receives the necessary ratifications, the chief countries of the world will undertake not to revert to such obstructions. But little headway has been made by the Economic Committee in securing any general lowering of tariffs, and this for two reasons. Firstly, it was difficult to negotiate while existing tariffs were liable without notice to sudden movements, which created a constantly changing situation; and, secondly, the Economic Committee consists of experts, and, though they have done admirable work, they are necessarily to a large extent tied by the policy of their Governments. The truce attempts to meet the first difficulty, but though it will an advantage to the low-tariff countries to be safeguarded against further increases of tariffs, they will no doubt insist that, before the convention is concluded, they must have some assurance that the proposed further negotiations will take place, and will at least have exchanged views on the lines on which such further steps should be taken.

As to the second point, the rapporteur makes the following comment:—

" Although the importance of the principles laid down by the World Economic Conference and the great value of the Economic Committee's work are beyond all question, experience has shown that the work of experts, however distinguished, suffers from certain limitations which can only be overcome by a certain stimulus from more responsible quarters. .

" I am, therefore, glad to inform you that a considerable number of Governments intend to be represented at the Conference by the Ministers concerned.

" I am sure that, not only at this first Conference, but in the long subsequent period of important and difficult negotiations, it is essential that the Ministers concerned in the different countries should arrange to keep as closely in personal touch with the economic work of the League as Ministers for Foreign Affairs do with its political work. . . ."

In this connection Dr. von Schubert explained that Belgium would be represented by her Minister of Foreign Affairs, Great Britain by the President of the Board of Trade, Spain by the Minister of National Economy, and Poland by the Minister of Industry and Commerce. The coming together of the Commerce Ministers is a matter of great significance, as anyone will realise who reflects on the important results that have followed from the personal contact of the Ministers of Foreign Affairs at Geneva. The report of the rapporteur also emphasises the significant fact that the Conference will be mainly a European affair. All the European members of the League, except Albania, from whom no reply has been received, have accepted the invitation to the Conference. But Japan and Cuba are the only non-European countries which are participating in the fullest sense, though two other countries outside Europe are sending observers.

The attitude that will be adopted in this country towards the Conference will clearly be determined by our various fiscal opinions. The last election showed that a large majority of the electorate share our view that, even in a world of tariff-protected countries, free trade is a necessity for Great Britain. With a small territory containing, except for coal, very modest resources of raw material, but with a unique geographical island situation, we have built up and maintained a position in which our overseas trade is a far greater proportion of our total activity than is the case with any other leading country in the world. Recently-published figures show that this country exports about £13 2s. of manufactured goods per head per year, a figure which is four times as great as the corresponding figure per head in the United States, and is more than double the corresponding figures for Germany and France. Other countries' tariffs are, indeed, a barrier to trade, and it would be a very valuable assistance to this country if they were lowered or removed. But if they are not constantly raised they gradually cease to be as obstructive as might at first sight appear, owing to the tendency of prices within the barrier to rise; and, in any case, protected countries have not been more successful—as a rule they have been very much less successful—than ours in overcoming other tariffs. Those who take this view are not in the least afraid of, but see considerable advantages in, a temporary suspension of tariff activity with a view to negotiating further reductions. We might add that if, as seems to be the case, the European nations are being driven by force of circumstances to endeavour to find some appeasement of the tariff situation, it is very important that we should be in the discussion, firstly, in order that our influence, which is unquestionably great, should be used to prevent the discussion stopping short at a mere stabilisation of tariffs, and, secondly, that the arrangements made should be such as to enable us to enter all markets in the future, as in the past, on the most favourable terms.

On the other hand, the extreme protectionist followers of Lord Rothermere would abandon all the principles which have hitherto guided our commercial diplomacy, fondly believing that we can find employment for all our people by exploiting our own home market. This idea is largely based on an entirely false analogy with the United States. The latter possesses an area equivalent to 19.9 acres per head, including therein very great natural agricultural and mineral resources; Britain has 1.29 acres per head, of which a significant proportion consists of mountain and moor. In these circumstances a self-contained Britain would be desperately poor. To argue: America has a high tariff, America is rich, therefore if Britain had a high tariff Britain would be rich, is as false as would be the precisely opposite conclusion that might be drawn from the premises: Russia has the most restrictive tariff system of any in the world, and Russia is poor.

The doubts as to the wisdom of the tariff truce, however, come rather from those who have a hankering after a system of retaliation and bargaining, and would like to see us take some action that they think would force down other people's tariffs. If it were certain that by imposing a tariff for six months or a year we could compel a general reduction of tariffs, most free traders would agree that it would be worth facing the dislocation and the difficulties that would be involved. The trouble is that there is no evidence in the history of tariffs to show that there is the slightest ground for this belief. On the contrary, " fighting " tariffs, like competitive armaments, have always tended to raise the tariffs of other countries. This competitive idea has underlain the whole upward trend of tariffs in the past decade against which the World Economic Conference so strongly protested. Moreover, if the " fighting " policy fails to achieve its object quickly, it creates vested interests and rapidly develops into a purely protectionist tariff—so hard to remove when once established—and in fact ceases to be an elastic implement for effective bargaining. The universal concession of most-favoured-nation treatment to British trade is the strongest argument against adopting a policy of retaliation.

The effect of the World Economic Conference has definitely checked the upward trend of tariffs, and in the past year the only important increase was in the Australian tariff. Bilateral tariff treaties have played an important part in bringing about this comparatively satisfactory result, but they are a very niggling method of getting any real reduction, and nothing substantial is likely to be done unless the discussions include several nations at a time. The preliminary condition for this is that while negotiations are taking place none of the parties should make an increase and endeavour to obtain what they conceive to be fresh bargaining ground. It is to our advantage that these negotiations should go forward, and Mr Graham will be serving the true interests of this country if, as a result of this Conference, he can secure a lowering of the trade barriers of Europe.

THE HALF-SPEED CONFERENCE.

How much real progress the Naval Conference has made in the past ten days is to some extent a matter of opinion, but there is no question that many of the issues have been considerably clarified. The British and American delegations have issued a general statement of their attitude, and it is understood that the Japanese are on the point of doing so. These documents make it clear that the Anglo-American agreement, worked out last summer, is now complete in every detail, though the figures provisionally accepted must be subject always to the overriding reservation that they are dependent on the consent of the other Powers at the Conference to restrict their fleets, not necessarily to a cast-iron ratio, but to dimensions which conform broadly with the accepted ideas of their relationship to the naval strengths of Great Britain and the United States.

A feature of the Anglo-American agreement is the decision of the United States to content herself with eighteen 10,000-ton cruisers, instead of the twenty-one for which the Big Navy party has been pressing, a reduction countered by a larger allowance of 6-inch gun cruisers than the Americans have hitherto desired to build. These, however, are details. The central fact is that the two countries have reached complete agreement on a system of parity which is ingeniously armour-plated against all criticism by the arrangement that each country has the option to duplicate the fleet of the other, ship by ship and gun by gun, if it so desires. An essential and, so far as it goes, a welcome feature of the arrangement is the proposal for a certain limited scrapping of capital ships. On the question how far this process should be carried, the American memorandum is non-committal, stipulating simply the achievement of parity between Great Britain and the United States in 1931 by a reduction of the battleship fleets of both countries. The British proposals in this respect are cautious. The date they fix is eighteen months after the ratification of the London agreement (which might mean as late as 1933) and they propose to " scrap down " only to a 15, 15, 9 figure (as against the present 20, 18, 10). There is nothing very heroic about this, particularly in the light of the hopes expressed on both sides of the Atlantic before the Conference met that the complete abolition of the capital ship in its present form might be agreed.

The British memorandum does, indeed, contain some hesitant passages on total abolition, expressing doubts as to the utility of the battleship and hopes for an agreement by which it would in due time disappear altogether from the fleets of the world. If in due time, why not now? Relief from the maintenance cost of capital ships would be singularly welcome to Mr Snowden, and opinion, both in this country and in America, is clearly ready for much more drastic action than is involved in scrapping within the next couple of years five elderly vessels, four of which have already been withdrawn from fleet service and are in use as a training squadron. This restricted proposition leaves the Government open to the criticism that it is endeavouring to abolish the submarine, which many lesser nations regard as a valuable defensive weapon, while declining to discard an arm in which Great Britain is particularly strong. Signor Grandi, the Italian Foreign Minister, used this argument with much force at this week's plenary session of the Conference and his proposal that the abolition of submarines should be accompanied by the abolition of capital ships raised an issue which the Conference can profitably discuss. It is quite true that such a proposal involves little sacrifice on the part of a nation possessing no capital ships of account, but Italy has discarded her capital ships deliberately, and if she is prepared, in consideration of the abolition of the battleship, to abolish submarines—in which, rightly or wrongly, she has a firm belief—her attitude is commendable.

It is probably too late now to hope for the total abolition of the battleship at this Conference, but the scrapping could, at any rate, go lower than the 15, 15, 9 suggested by the British memorandum. There is reason to believe that if the memorandum had not been hurried out in response to the unexpected American statement the 15, 15, 9 figures would not have been included, for there is a strong feeling among a section of the British Delegation that scrapping ought to be carried to at least the 12, 12, 7 level, if not lower. In this connection it is unnecessary to do more than mention what an American paper justly describes as the "grotesque suggestion " of the United States Delegation that, in order to achieve what that delegation considers a more ideal parity, America should scrap four of her older ships instead of the intended three and proceed to build a new battleship of the same size as the " Rodney " and, no doubt (as embodying the latest lessons in construction) exceeding the British ship in fighting power. The reception everywhere given to that proposal has already expelled it from the realm of practical politics. The extension of the naval holiday from 1931 to 1936, as regards capital ships, is now assured, and since no new construction will be undertaken till nearly six years hence, and in all probability not then, there is more to be lost than gained by deciding now (as the British memorandum proposes) the size and gun calibre of the ships to be built in a problematic future.

With regard to other types of vessel, the Conference has been proceeding steadily with its spadework. The long controversy between the measurement of fleets by total tonnage, and their measurement by separate categories of ships, has been virtually, though not yet formally, settled on the principle of limitation by categories with a certain restricted right of transfer of tonnage from one category to another. This marks a real advance, in view of the difficulties which the opposition of views on this subject have raised in the past. The submarine debate, on the other hand, gave little ground for satisfaction. It revealed, what was already known, that the United States has changed its views since the Washington Conference, and is now in favour of abolition. The Italian Delegation, though it made a case for the submarine as a weapon of value to the lesser navies, was ready for abolition if other Powers concerned were ready equally.

COMPLETE INTERNATIONAL BANKING FACILITIES

100 BROADWAY NEW YORK CITY

France, however, has not moved an inch towards abolition, and the defence of the submarine by M. Leygues, the Minister of Marine, was almost aggressively emphatic. Japan ranged herself with France, though with more moderation of expression. The abolition of the submarine at the London Conference can, therefore, hardly be expected, though a proposal to that effect has gone to a sub-committee, together with proposals, in which France joins, for the preparation of a treaty subjecting the submarine to the same rules of warfare as apply to surface vessels. Mr Stimson, the American Secretary of State, has hailed the general identity of views on this point as a great achievement, but it does not appear to amount to more than consent by France to ratify the Root resolutions of 1922, which she signed at that time and which the other Powers concerned both signed and ratified.

Thus, while the Conference is by no means standing still, it would be idle to disguise the fact that none of the difficulties (except the controversy about the measurement of tonnage) outstanding before the delegates reached London have yet been composed. France, judging by the figures her delegates are understood to have laid before the Prime Minister, entertains ideas of naval development which may seriously affect the figures on which the Anglo-American agreement is based, particularly in regard to those craft designed for fighting submarines. Japan stands immovable on her claim for seventy per cent. of the American allowance in large cruisers, and her Government can pretty clearly not yield on that point before the General Election of February 20th, even if they are prepared to compromise afterwards. And as between the Italian claim for absolute parity with France and the French claim for parity in the Mediterranean alone, no approach to an adjustment has been made. Optimism need not be abandoned, but it must be of a restrained and long-range type.

WORLD GOLD DISTRIBUTION.

THE downward trend of commodity prices has inevitably brought into prominence the question of whether the world's monetary gold stocks are sufficient to finance the world's normal volume of business at the present level of prices. The fear of a gold shortage was no doubt in the minds of many of the experts who formulated the conception of the Bank of International Settlements as a world central bank. It was certainly the cause of the recommendations of the Genoa Conference for co-operation between existing central banks, and at the present day is the force behind the investigations now being conducted by the Financial Committee of the League of Nations. Finally, it is a fear that finds expression in much of the ill-considered criticism of the gold standard that is heard in business circles to-day.

Without in any way attempting to anticipate the verdict of the League's Financial Committee, it may serve a useful purpose to marshal some of the evidence. The following table (for which acknowledgment is due to Mr Joseph Kitchin) shows good production during the past sixteen years:—

GOLD PRODUCTION.

(In millions of pounds at 84s. 11½d. per fine oz.)

Year.	Transvaal.	The Rest of the Empire.	British Empire.	Foreign Countries.	World.
1914.....	35·7	20·8	56·5	33·9	90·4
1915.....	38·6	22·0	60·6	35·8	96·6
1916.....	39·5	20·0	59·5	34·0	93·5
1917.....	38·3	17·8	56·1	30·2	86·3

* Output temporarily reduced by strike of white miners.

When allowance is made for the disturbed history of the period, it must be conceded that production was maintained with a fair degree of consistency. The most serious shrinkage was in the years immediately following the war, which was a time when the price of gold was low in relation to its production cost. To-day Transvaal production is higher than in 1914, and the decline in total gold output must be ascribed to other goldfields.

The total gold production during these sixteen years was £1,292,000,000, while the estimated increase in the monetary gold stocks of the world was £757,000,000, demands of India and the trade largely accounting for the difference. This monetary increase of £757,000,000 compares with an approximate estimate of £1,579,000,000 for the monetary gold stocks of these countries in 1913, namely at the beginning of the period. This is equivalent to an increase of 47.9 per cent. during the whole period, or to an average of 2.4 per cent. (compound) per annum.

Gold held by central banks and Treasuries is estimated at £965,000,000 in 1913, thus leaving a difference of £614,000,000, representing gold held by other banks and in circulation. Gold stocks held by central banks and Treasuries in 1929 amounted to approximately £2,078,000,000. This leaves only £258,000,000 for monetary gold held by other banks and the public, the difference of £356,000,000 between this last figure and the

corresponding 1913 figure representing the extent of the intervening concentration of monetary gold in the vaults of the banks. The increase in the central banks' and Treasuries' stocks between 1913 and 1929 was £1,113,000,000. This equals 115.4 per cent., or 4.9 per cent. (compound) per annum.

All these calculations raise several important questions. The usual assumption by economists is that an increase in the volume of money of 3 per cent. per annum is needed to keep pace with industrial development and the growth of population. Now, the increase in the world's stocks of monetary gold alone is, as shown, the inadequate figure of 2.4 per cent. per annum; but, as " money " should be interpreted in the widest sense of the term, it is necessary to include bank and currency notes and also bank deposits, whose basis is not the world's total monetary gold stocks, including gold in circulation, but is the gold held by central banks and Treasuries. The actual rate of increase in their gold holdings is, as said, 115.4 per cent., and their annual increase 4.9 per cent.—a figure which is more than adequate. In fact, the difference between these last increases and the theoretical increase of 3 per cent. per annum is sufficient to justify a rise in world gold prices of 34.3 per cent., which is comparable with the increase that has actually taken place.

This last conclusion probably proves far too much, for the reasons why gold prices are 30 per cent. above their pre-war level are not nearly so simple as this. In addition to the concentration of gold in the vaults of central banks, which, perhaps, is the salient lesson of the above calculations, regard must be paid to the increases in note issues and to the general pyramiding of credit, which was one of the main consequences of the war. It is not only true that the central banks have during the past sixteen years succeeded in building a larger quantity, absolutely and relatively, of the world's monetary gold stocks into the foundations of the credit system; they are also making each ounce of gold support a bigger volume of credit than they did before the war.

A further point that has become of the utmost importance is the maldistribution of the world's monetary gold stocks which was brought about by the war. Thus, as the following table shows, the United States gold stocks increased during the war from £392 to £520 million, and have subsequently risen to about £800 million. This, it can be urged, represents genuine gold inflation far beyond the 35 per cent. rise in prices which represents the position in America to-day. This increase in American gold stocks has taken place at the expense of other countries, whose stocks have, in some cases, fallen, in others remained stationary, and, in very few cases, expanded to a degree commensurable with the aggregate increase in world monetary gold stocks. Thus, to keep pace with America other countries have, apart from emergencies created by the war, had to increase their note issues, pyramid their credit, and, in short, introduce all the familiar devices for economising their monetary use of gold.

This argument can be carried a stage further. Rightly or wrongly, national prestige is demanding the gradual abandonment of any practice that possesses the taint of inflation; but, so long as many countries are deprived of what, on a pre-war basis, is their proper share of the world's stocks, their return to the narrow path of monetary rectitude must involve one of two things. Either they must add to their existing gold stocks, and so intensify the " scramble " for gold which has been so much in evidence during the past few years, or they must be content to witness a steady decline in their internal price-level. In either case, a fall in world prices must eventually be anticipated, and, to complete the argument, it is here that the cause of the present downward trend of world prices must be sought.

Now what, if any, is the evidence behind this line of thought? It is to be found in the following tables. The first deals with the absolute distribution of the world's gold stocks, the figures being extracted from publications of the Federal Reserve Board and from other sources.

(£000,000.)

	Gold in Banks and Treasuries and in circulation. End 1913.	Gold in Central Banks and Treasuries. End 1913.	End 1919.	End 1927.	End 1928.	End 1929.
United States	392	266	520	818	770	800
France	304	140	143	196	258	336
Great Britain	150	35	120	152	153	146
Germany	184	57	54	92	134	112
Japan	17	13	72	111	111	109
Spain	19	19	97	103	102	102
Argentine	59	53	69	109	125	91
Italy	55	55	41	49	55	56
Netherlands	13	12	53	33	36	37
Belgium	16	12	11	20	26	34
Russia	211	162	?	20	19	31
Switzerland	9	7	20	20	21	24
Australia	15	4	24	22	22	18
Poland	...	...	...	12	14	16
Java	2	2	14	15	14	14
Sweden	6	6	15	13	13	13
Austria and Hungary	52	52	9	9	12	11
Denmark	4	4	13	10	9	10
South Africa	8	8	7	8	8	8
Czechoslovakia	...	...	...	6	7	8
Norway	2	2	8	8	8	7
Other countries	61	56	65	103	105	85
Total	1,579	965	1,355	1,929	2,022	2,078

The second table is confined to those countries that hold between them the major portion of the world's monetary gold. It shows the actual share, on a percentage basis, of these countries and of the rest of the world:—

Country.	1913. (a)	1913. (b)	1919.	1927.	1928.	1929.
	%	%	%	%	%	%
United Kingdom	9·5	3·6	8·9	7·9	7·6	7·0
France	19·5	14·5	10·5	10·2	12·7	16·2
Germany	11·7	5·9	4·0	4·8	6·6	5·4
United States	24·8	27·6	38·4	42·4	38·0	38·5
Argentine	3·7	5·5	5·1	5·7	6·2	4·4
Japan	1·1	1·3	5·3	5·8	5·5	5·2
Other Countries	29·7	41·6	27·8	23·2	23·4	23·3

1913: (a) Gold in banks and treasuries and in circulation.
(b) Gold in central banks and treasuries.

Regarding these two tables together, there is no doubt that America has gained inordinately at the expense, mainly, of England and Germany. The second table suggests that the recent French acquisitions are not wholly disproportionate, but right through the table the French proportion is extremely high in relation to her population and general economic needs. Our own share, most of which before the war was in circulation, is cut from 9.5 to 6.8 per cent. In view of our duties as banker to the world, we can fairly claim that we have been badly treated. If it be objected that the Bank of England's share has more than doubled, and that, therefore, we have no legitimate ground of complaint, the answer is that to-day the Bank's gold has to support a much bigger internal note issue than it had to before the war.

The vital point is that America and France, who even before the war had large percentages in comparison with their needs, have in one case gained enormously, and in the other case have largely restored recent losses at a time when England and Germany had, on the basis of pre-war figures, the prior claim. In short, the maldistribution to-day is intensified, and so there is urgent need for determining how far it is responsible for the apparent shortage of gold and downward trend of world prices. In view of the absence of any real proof to the effect that hitherto the world's monetary gold stocks have proved inadequate for their purpose, this question is one that should be carefully and comprehensively examined by those who to-day are investigating the main problem.

A final but most important point is that even if gold production should so far have proved adequate to the world's monetary needs, there is no guarantee that it will continue to do so, and, in fact, there is good ground for supposing that the rate of increase in the world's monetary gold will fall away appreciably within a very few years. This renders it all the more essential that such gold as exists should not only be used as economically as possible, but should also be distributed equitably in accordance with the legitimate needs of every centre. These are the real problems awaiting solution to-day if a future decline in world prices is to be avoided.

INVESTMENT TRUSTS AND OUR CAPITAL OVERSEAS.

THE investment trust company plays an important and increasing part in the investment of British capital both at home and abroad. Distinguished from the majority of American investment trusts by the fact that the latter are interested in special lines of securities and regard capital appreciation as profit, and distinguished from " financial trusts " for similar reasons, the British investment trust holds a peculiar place in the world's financial structure. It is true that the lure of capital appreciation, even if undistributed, stimulates the creation and enlargement of investment trusts when Stock Exchange prices are moving upwards, but the primary preoccupation of investment trust directorates and shareholders is with yield per annum, which, calculated on cost prices, is, if anything, likely to diminish during a period of Stock Exchange inflation.

The operations of investment trust companies are in themselves a miniature reflection of the course of British capital investment, other than purely speculative ventures. Variations in the attractiveness of investment in any part of the world are sensitively recorded in the holdings of investment trusts, details of which are thus of great interest outside the comparatively limited scope of the trusts themselves. Last year we published a table showing the geographical distribution of the investments of such companies, 26 in number, as issued information on this point. The figures for 1928 have now been revised, and a new column added for 1929, in the following table:—

GEOGRAPHICAL DISTRIBUTION OF INVESTMENT TRUST COMPANY INVESTMENTS.

	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%
Great Britain	34·5	35·3	34·9	34·0	32·4	34·5	36·7
British Empire	10·5	11·3	10·6	11·4	11·6	10·6	10·3
U.S.A.	17·7	14·1	13·4	12·8	12·8	10·6	9·9
Argentine	12·4	12·2	11·5	11·0	11·1	10·1	8·3
Other parts of South America	11·2	12·1	12·2	12·4	10·7	10·7	9·7
Mexico and Central America	5·1	4·8	4·5	3·9	3·5	3·4	3·1
Europe	4·5	5·3	7·9	9·6	13·2	15·9	17·2
Rest of the World*	4·1	4·9	5·0	4·9	4·7	4·2	4·8
	100·0	100·0	100·0	100·0	100·0	100·0	100·0

* Includes in some cases international companies.

The total book value of the investments covered by these figures is about £70 million, and it is fair to assume that the tendencies which they disclose would not be falsified if we could obtain figures for all investment trusts. The absolute figures should be regarded with greater suspicion, but the trend is beyond doubt. One word of warning must first be given. These percentages refer to book values, that is to say, cost prices less an allowance for depreciation; whatever sum is available year by year for the writing down process is not, of course, distributed uniformly among the book values of the various investments, but is divided up according to the sale value and prospects of each particular holding. Thus the proportion in any given geographical area can fall while the aggregate book value remains the same, and yet no funds are actually withdrawn from that area. The effect of this is that the figures anticipate slightly the actual movements of capital. If investments in one part of the world are depreciating more rapidly than the average, before long the nominal or cost value of those investments will certainly be reduced, if only by the slow process of redemption.

Bearing this in mind, we can examine the tendencies reflected in the table. Most notable is the fact that the percentage of investments in Great Britain was higher in 1929 than in any of the preceding six years. Several causes, no doubt, combined to produce this effect. New overseas borrowing in London fell off in 1928, and even more in 1929, from the level of earlier years. Foreign governments and municipalities had practically no recourse to the London issue market last year, and only exceptional activity in the Rhodesian mining market prevented the total of overseas issues from falling to the low level of 1925, when the embargo was in force. While trust company funds were becoming available both by new flotations and by the redemption and sale of Latin-American investments, the concentration of speculation, first on " shilling share " issues and then on American securities, left many sound if unexciting bargains at home. It is early yet to say how the world's capital markets will settle down after the Wall Street collapse, but if the above analysis is correct the upward movement of the percentage of investment trust holding located in this country is likely to be retarded.

It is, at first sight, odd to find the percentage in the United States continuing to fall, even in a year when Wall Street was drawing a large volume of international funds both for long- and short-term investment. Incidentally, no particular twelve months can be assigned to the interval between the columns of figures; the 26 companies made up their balance sheets at a number of different dates, the " average " of which was about the middle of the year. Thus the Wall Street boom will be reflected as much in the 1930 figures as in those for 1929. However, there is no reason why the boom should retard the fall in the American percentage, since the high prices obtainable by realisation were probably much more attractive to investment trust companies than was the possibility of a quick turn on new purchases.

The exchange of investments between Latin America and Europe continued undiminished. Investment trusts have been, no doubt, large holders of the shares and stock of South and Central American companies recently purchased by United States interests. At the same time, there is a constant repatriation of funds from all parts of the world through the process of amortisation and redemption. The greater attractiveness of Europe, as compared with Latin America, for these funds records at once the growing economic stability of the former and the advance of United States financial influence over the rest of the American Continent. Part of the decline in the Latin-American percentage is also due, no doubt, to the fact that diminishing confidence in the financial power of the Latin-American republics, whether justified or not, has required investments in those countries to be written down by more than the average amount. Probably the slight fall in the British Empire percentage is to be accounted for in the same way. A further factor has contributed to the astonishing and uninterrupted rise in the European percentage, namely, the resale of dollar blocks of international issues. Lists of investment trust company holdings include very large blocks of the New York issues of reconstruction and other European loans, which have frequently been at an appreciable discount below the sterling issues.

It is natural that these tendencies should be underlined in the figures for new investment trusts. Four of those whose first annual accounts refer to dates in 1929 published particulars of the geographical distribution of their capital. The aggregate percentages are as follows:—Great Britain, 32.3; British Empire, 16.1; U.S.A., 14.6; Argentina, 5.9; other South America, 7.3; Mexico and Central America, 1.4; Europe, 18.7; and the rest of the world, 3.7. From these figures it is perfectly plain that for new investment of a non-speculative kind Europe is much more attractive than Latin America. Both the British Empire and the United States appear to have tempted the new companies rather than the old. As regards the United States, this may be due to a less conservative policy adopted by the newcomers; as regards the

British Empire, a downward tendency which causes the existing bondholder to write down his investments presents to the new investor an opportunity for a bargain. If all the 30 old and new companies are combined together, the percentage for the British Empire is 10.6, exactly the same as for the existing companies in 1928.

IRON AND STEEL IN 1929.

(BY A CORRESPONDENT.)

It has already been noted in the *Economist* that Great Britain's production of steel in 1929 exceeded that in any previous year except 1917; that exports of iron and steel were higher than in any post-war year; and that the production of pig iron was higher than in any post-war year except 1920. Yet by all other criteria the iron and steel industry remains one of the depressed industries of the country, and the Government's concern regarding it is patent from the fact that one of its first acts was to appoint yet another Committee (a sub-committee of the Civil Research Committee of the Cabinet) to inquire fully into the industry's position and prospects.

As a commentary on the situation, it may also be observed that the ordinary shares of the principal iron and steel companies are now quoted in most cases at much less than 50 per cent. of their par value, and in practically every case at several shillings per share less than at this time last year. While some part of this decline is undoubtedly due to the Stock Exchange collapse at the end of last year and the fears of the investing public as to the effect that the Coal Mines Bill may have on the competitive power of " heavy " industry, it is undoubted evidence of the difficulty which the industry is experiencing in earning profits under present conditions.

The following table summarises the salient data illustrating the industry's progress during the last three years, in comparison with the position in 1913:—

	Furnaces in blast.	Board of Trade Price Index.		Production.		Imports.	Exports
		Iron and steel.	All commodities.	Pig-iron.	Steel ingots and castings.		
				(In thousands of tons.)			
Average monthly:							
1913	338	100·0	100·0	855·0	638·6	185·9	414·1
1927	168	120·0	141·4	607·7	758·1	367·2	350·0
1928	143	112·3	140·3	550·9	710·4	241·3	355·1
1929	159	114·2	136·5	631·6	804·6	234·7	364·9

Since 1927 our imports of iron and steel have undergone a marked decline. Comparison, moreover, of quantities and values shows that the value per ton of imports in 1929 was about £8 15s. (against £8 6s. in 1928 and £7 2s. in 1913), whereas the value of exports (£11 2s. per ton in 1913) was approximately £15 11s. in 1928 and £15 10s. last year. That is to say, not only do our imports normally take the form of less highly finished goods than those we export, but the fact that since 1913 the average value of our exports per ton has increased by 40 per cent., as compared with an increase of 23 per cent. in the value per ton of imports suggests that there has been an increasing tendency for our exports to take more highly finished forms.

The improvement in production in 1929 was due to two main causes—an improvement in the shipbuilding position, and the great activity in the iron and steel works on the Continent. With regard to shipbuilding, the operation of the Rebate Scheme, introduced a few years ago, led to the increased demand for steel for the shipyards being met for the most part from British steel works. As regards the second factor, the activity in Continental works was for the most part such as to preclude them from increasing their exports to Great Britain as our demand increased. The total imports of iron and steel in 1929 were actually little less than in 1928, but, owing to the increased home demand, they would have been much higher save for the fact that the Continent was working practically up to capacity for its home markets and for markets other than Great Britain, so that it had no margin from which to increase its exports to this country.

This is one of the reasons why iron and steel makers are dissatisfied with the results of 1929. They feel that such improvement as occurred (in spite of the increased output steel production in 1929 was no higher than 75 per cent. of capacity) was not the result of a definite improvement in competitive power but was largely adventitious; and an industry which has to wait until its competitors have full order books before beginning to fill up its own is in a thoroughly unsatisfactory position. The other reason for dissatisfaction has already been referred to—the lack of profits in the industry. This was due primarily to the fact that the cost of raw materials rose considerably. The increased production of pig iron, for instance, involved the consumption of about 1¼ million tons more coke than in the previous year, while the requirements of coke for export and for other industrial purposes also increased. As it is not possible to expand the production of coke quickly—in fact, at times blast furnaces were actually handicapped by a shortage of coke—the price of coke naturally rose, in some districts by as much as 6s. per ton, during the year. The price of iron ore, both home and imported, was also higher, but while these factors meant an inevitable increase in the cost of production of pig iron and steel, it was impossible to increase iron and steel prices in proportion to the increased costs. The Board of Trade's index number of iron and steel prices (1913 = 100), which was 112.5 in January, 1929, never rose above 115.3 (in October). The financial results of the steel industry in this country, therefore, have not been at all commensurate with the improvement in production, while on the other hand the increased activity on the Continent was accompanied by increased profits.

The Continental works mostly paid substantial dividends in 1928-29, after making ample allowance for reserves and depreciation and re-investing a proportion of the gross profits in extension of plant. Moreover, where a Continental firm's resources are not sufficient fully to finance the desired extensions, there is generally no difficulty in securing the necessary money, as the industry has become a regular dividend payer. Capacity both for pig iron and steel production on the Continent is therefore continually increasing. While the iron and steel demand in Britain is sufficient to keep the steelworks fully employed if the demand be met from home sources, the lower prices quoted for Continental semi-products result in a large part of the demand for that class of iron and steel being met from foreign sources. So far, therefore, from Great Britain expanding her capacity, it is in many cases impossible to find the money to keep the existing plant up to date.

The iron and steel industry is making considerable efforts to reduce costs of production by technical improvements and fuel economy. The movement in the direction of amalgamations has continued, and obviously provides possibilities of economies when the mergers are between sound firms possessing the same class of raw materials and manufacturing similar products, as in the case of the Dorman, Long and Bolckow, Vaughan merger on the north-east coast, and the arrangements now being negotiated between Guest, Keen and Nettlefolds and Baldwins in South Wales. Geographical considerations will probably prevent the movement going so far in this country as in the United States or Germany, for, whereas in Germany for instance, 80 per cent. of the production of iron and steel is concentrated in the Ruhr, no district in this country produces more than 30 per cent. of the country's pig iron output or 25 per cent. of the steel output.

But other measures of co-operation have been taken by the steel makers which do not depend upon geographical considerations. The " British Export Committee," which had been functioning for about eighteen months, has developed into the " British Steel Export Association," comprising practically all the firms in the heavy steel trade, and having for its object the centralising of the selling of plates, sections and joists in export markets. A " British Steelwork Association " has also been formed by leading firms engaged in the manufacture of structural steel or in constructional engineering " to promote and develop the production and use of structural steel and steel work, etc." These corporate activities cannot fail to have beneficial effects on the industry, but it must not be forgotten that corporate action of this kind is equally open to our competitors, and has, in fact, been taken by them. Propaganda on behalf of the increased use of steel is undertaken in the United States, France and Germany, while after many years of effort it seems that Germany's advocacy of international selling syndicates as the natural corollary of the International Steel Cartel is at length on the point of succeeding. At any rate, an export office has been established to distribute export orders between the different countries. True, the office is only a temporary one, and is to operate for six months only, but in the meantime a special commission is studying the problem, and it is hoped that the International Selling Syndicates will have been formed before the six months expire.

The outlook for 1930 is therefore not too favourable. It has already been stated that much of the improved production of 1929 was due indirectly to the great activity of Continental works; but a decline began to set in on the Continent in the autumn, although it was not until November 1st that the first reduction in output decreed by the International Cartel was intended to apply. This restriction, which has been continued since that date, amounts to 10 per cent. of output, and, although not observed at first, it has been officially continued since November 1st, and is likely to apply for some time. The International Cartel is also strengthening its organisation. The original agreement was to terminate on April 1, 1931. It was, however, open to any country to give notice before May 1, 1929, of withdrawal on October 31, 1929. No notice to terminate the agreement was given last year, but negotiations took place with a view to modifying the existing regulations largely to satisfy Germany's demand for more equitable treatment and to expand the functions of the cartel. One direction in which they are expanding is in the formation of export selling arrangements referred to above.

The outlook for the British iron and steel industry is also obscured by reason of the Government's Coal Mines Bill. The reduction in working hours proposed in the Bill must inevitably increase the cost of coal, and unless means can be found whereby coal prices for the iron and steel industry shall not be increased it is clear that the industry's competitive power must be still further handicapped.

THE HAGUE FINAL ACT.—I.

The Final Act of the Hague Conference, and the agreements of which it takes note, fill a very bulky official volume. The agreement with Germany alone has twelve annexes, and it is followed by agreements with Austria, Bulgaria, Hungary and Czechoslovakia, a convention with Switzerland, arrangements for distributing the annuities among the Creditor Powers and for mobilising the German annuities, and a number of other agreements and exchanges of letters. To have drawn up, negotiated and signed these highly technical documents within the space of little over a fortnight is a remarkable achievement, not only of the delegates, but also of the committee of lawyers and of Sir Maurice Hankey and the secretariat of the Conference. The various agreements regarding German reparations are summarised below.

The German Accord.

Art. I.—The Experts' Plan of the 7th June, 1929, together with this present agreement and the Protocol of the 31st August, 1929 (all of which are hereinafter described as the New Plan) is definitely accepted as a complete and final settlement, so far as Germany is concerned, of the financial questions resulting from the war. By their acceptance the Signatory Powers undertake the obligations and acquire the rights resulting for them respectively from the New Plan. The German Government gives the Creditor Powers the solemn undertaking to pay the annuities for which the New Plan provides in accordance with the stipulations contained therein.

Art. II declares that the payment in full of the New Plan annuities is accepted as a final discharge of all the liabilities still remaining undischarged. Art. III deals with outstanding accounts, including the liquidated property accounts; liquidation is to cease as from the date of the acceptance of the Young Report, the existing surpluses being subject to special agreements.

Art. IIIa.—The signatory Governments recognise that the accounts between the Reparation Commission and Germany relating to transactions prior to the period and the Dawes Plan, together with all accounts involving credits to Germany, either now or in the future, against the original capital debt are henceforth obsolete and without practical effect and declare them closed in their present condition.

By Art. IV the Bank for International Settlements (B.I.S.) takes over those functions of the Reparation Commission which still remain. Art. V states that the annuities mentioned in the Agreement include the Dawes Loan Service but not the Germano-American annuities.

Art. VI.—The Contracting Parties recognise the necessity, with a view to putting into force the New Plan, of the constitution of the Bank for International Settlements.

To the latter, by Art. VII, will be delivered the Debt Certificate of the Reich and the Certificate of the German Railway for its special obligation.

Art. VIII.—With a view to facilitating the successful working of the New Plan the German Government declares spontaneously that it is firmly determined to make every possible effort to avoid a declaration of postponement and not to have recourse thereto until it has come to the conclusion in good faith that Germany's exchange and economic life may be seriously endangered by the transfer in part or in full of the postponable portion of the annuities. It remains understood that Germany alone has authority to decide whether occasion has arisen for declaring a postponement as provided by the New Plan.

Art. IX refers to the amendment of the German Bank and Railway Laws, Art. X to the fiscal and political immunity of the International Bank, Art. XI to the Trust Agreement, Art. XII to the system of deliveries in kind. Art. XIII confirms the priority of the service of the Dawes Loan and the continuance of the securities and rights attached to it. Art. XIV declares that the solemn undertaking of the German Government replaces all existing controls, special securities, pledges or charges, except the security for the Dawes Loan, the assigned (but not controlled) revenues, and the Certificate of the German Railway. Art. XV provides for final arbitration by a tribunal composed of an American chairman, two neutrals, a national of Germany and a national of one of the Creditor Powers. The rules of procedure of this tribunal are contained in Annex XII. The final clause declares that:

The New Plan will come into force and will be considered as having been put into execution on the date on which the Reparation Commission and the Chairman of the Kriegslastenkommission have agreed in reporting:

(1) The ratification of the present Agreement by Germany and the enactment of the German laws in accordance with the relative Annexes.

(2) The ratification of the present Agreement by four of the following Powers, that is to say, Belgium, Great Britain, France, Italy and Japan.

(3) The constitution of the Bank for International Settlements and the acceptance by the Bank of the undertakings by it for which the present Agreement provides, and also its receipt of the Certificate of the German Government and the Certificate of the German Railway Company.

Then follow the Annexes. The first contains the exchange of declarations regarding the possible voluntary default of Germany, which has already been published; Annex II provides measures of transition. Sums paid by Germany during the transitional period in excess of her new annuities will be reimbursed, together with the net interest actually earned.

The Annuities.

Annex III contains the debt certificate of the German Reich. The table of annuities (payable by equal monthly instalments on the 15th of each month) corresponds to that in the Young Report. Section II contains the transfer provisions.

Except for any period in which the transfer of the postponable portion of the annuity is suspended, the monthly payments of the Reich must be made in currencies other than the reichsmark.

These currencies are to be so far as possible those preferred by the B.I.S. Exception to the clause is allowed to the extent of the sums due for deliveries in kind under

the Reparation Recovery Acts, or for administrative expenses incurred in Germany.

Sums paid in currencies other than Reichsmarks into the Annuity Trust Account shall be calculated in terms of Reichsmarks at the average of the middle rates (Mittelkurs) prevailing on the Berlin Bourse during the fifteen days preceding the date of payment.

Section III provides for the attachment of separate coupons to the debt certificate for the mobilisable and the postponable portions of the annuities. (Parts A and B respectively.) Section IV deals with mobilisation, which can take place only upon the request of the B.I.S.

The Bank will, as far as possible, make every effort to secure that loans will not be issued without granting to Germany an appropriate right of anticipated redemption. Germany shall have the right to redeem all or any part of the not yet mobilised annuities (Parts A and B of the coupons) on the basis of 5½ per cent. discount.

Section V of Annex III embodies the provisions for postponement of transfer, the general outline of which was incorporated in the Young Plan. The employment, whether for investment or deliveries in kind, of the Reichsmarks deposited on account of postponed portions shall be subject to agreement between the Reichsbank and the B.I.S.

Sec. VI.—The German Government undertakes during the period up to March 31st, 1966, to maintain at the B.I.S. a non-interest-bearing deposit equivalent to 50 per cent. of the average deposit remaining in the Annuity Trust Account, but not exceeding 100 million Reichsmarks.

The remainder of the third annex deals with collateral guarantees, which are provided for in detail in Annex XI, and with the formal discharge of the obligations. A form of annuity coupon is appended.

Reichsbahn and Reichsbank.

Annex IV comprises the Certificate of the German Railway promising to pay, as a contribution to the reparation annuities, a Reich tax of 600 million Reichsmarks *per annum*. Annex V contains the amendments to be made in the Reichsbank law in conformity with the Young Plan. The change of greatest general interest is the following addendum to Art. 21 of the law.

All functions confided to and obligations imposed on Central Banks in general or any one such Central Bank specially by the New Plan will be performed in Germany by the Reichsbank. All functions confided to and obligations imposed on Presidents of Central Banks in general or any one such President personally by the New Plan will be performed in Germany by the President of the Reichsbank.

By Annex Va, amendments to the Reichsbank law which may affect the provisions of Annex V must be submitted to the B.I.S. Annex VI contains the necessary amendments in the Railway Law, and Annex VIa describes the procedure to be followed for subsequent modifications thereof. Annex VII is a deed of assignment by the Reich Government of the Customs duties and the tobacco, beer and spirit taxes by way of collateral guarantee.

The Bank of International Settlements.

Annex VIII is the form of trust deed for the transfer of reparations by the B.I.S. The French text alone is authentic. The Bank holds the certificates of the Reich and of the Railway; it accepts the annuities and transfers them to the accounts of the creditor governments; it invests the Reichsmarks deposited when transfer of any portion is postponed, and calls the Special Advisory Committee in such an event; it must authorise and become agent for any projects of mobilisation. By Art. IV (e) the sums allocated from the annuities will remain without interest in the national subdivisions of the Annuity Trust Account up to the equivalent of the following minimum amounts: for France, Rm. 68,037,500; for Great Britain, Rm. 26,587,500; and lesser sums for the other creditors, totalling Rm. 125,000,000. For all these and other services under the Trust Agreement, the Bank is to be paid a commission of 1 per mille on the actual payments received from Germany.

Among the documents noted in the Final Act is a Convention between the Governments of Germany and of the chief Creditor Powers for the one part and the Swiss Government for the other part, incorporating the Charter and Statutes of the B.I.S. The latter have already been published in their draft form, from which they have been but little amended; the Charter secures immunity for the Bank from stamp and registration duties on its documents of incorporation and liquidation and on any first issue of its shares, from all taxes upon its capital, reserves or profits, whether distributed or not, and from all taxes upon agreements in connection with mobilisation loans and upon mobilisation bonds; the non-Swiss employees and administrators of the Bank are exempt from all taxes upon their remunerations and salaries.

Charter, para. 10.—The Bank, its property and assets, and all deposits and other funds entrusted to it, shall be immune in time of peace and in time of war from any measure such as expropriation, requisition, seizure, confiscation, prohibition or restriction of gold or currency export or import, and any other similar measures.

The Charter further provides that the supplementary law required for any amendment of the "reserved articles" of the statutes will only be passed by agreement between the Swiss and the other signatory governments. In view of the provisions of the Swiss Constitution, the Convention is entered into for a period of 15 years only.

Deliveries in Kind.

Annex IX of the German Agreement contains the new regulations for deliveries in kind. The Experts Report provided, it will be remembered, a gradually diminishing ten-year schedule for these deliveries. The Trust Agreement provides that the Bank shall place these quotas to separate accounts of the Creditor Powers, and shall act as paying agent for deliveries in kind.

Art. II, 7.—Each creditor is responsible for the utilisation of its quota for deliveries in kind. In principle . . . . each Power is required to obtain approval for contracts providing for payments of which the total is sufficient in any given year to absorb the quota of that Power for deliveries in kind.

The Article then provides for the postponement of antedating of the quotas under certain conditions. Article III concerns a German undertaking to facilitate so far as possible commercial contracts for deliveries in kind. Arts. IV, VII and VIII deal with the organisation both for approval of contracts and for payment. Arts. V and VI refer to the appended lists, A and C, of commodities which may not, or may only up to a certain percentage, be delivered as reparation payments in kind, and for certain direct payments even upon admitted deliveries. These clauses are the result of Mr Graham's demand for safeguards against certain kinds of deliveries which were injurious to British trade. Art IX contains the all-important prohibition of re-exportation.

93. Each Creditor Power undertakes, as far as possible, to prevent the commodities which it receives from Germany as deliveries in kind from being re-exported during five years.

The remaining Articles of the Annex deal with infractions and frauds, arbitration, temporary provisions, and the revision of the regulations.

Annex X is an agreement for amending the method of administering the German Reparation (Recovery) Act, 1921. The sterling equivalent of 23.05 per cent. of each annual quota of deliveries in kind is to be paid to the British Government under the terms of the Act. These transfers rank *pari passu* with deliveries in kind. Annex Xa is a comparable agreement between Germany and France.

Miscellaneous Provisions.

After the agreements with the non-German debtors comes an arrangement for carrying out the "Concurrent Memorandum" of the Experts' Report regarding the benefit to be received by Germany from any reduction of the net outward war debt payments of the Creditor Powers. There follows an arrangement between the Creditor Powers accepting the division of the German annuities as proposed in the Young Plan, subject to the undertakings entered into at the Hague last August. Great Britain is to receive an additional Rm. 102,000,000 out of receipts in respect of the last five months of the Dawes Plan (in order to cover out-payments); Italy and Greece are also to participate, the other debtors sacrificing sufficient to make up these payments. The French and Italian war debts to Great Britain are to be paid on the 15th of each month instead of half-yearly. Provision is made for the payment by France, Belgium and Italy of the annuities which they guaranteed to Great Britain in response to Mr Snowden's demand for a closer approximation to our Spa percentage.

Finally, there are appended an arrangement as to the financial mobilisation of the German annuities and certain letters regarding the German-American debt agreement and the tariffs of the German Railway Company. The terms of the agreement for issuing a maximum of $300 million of reparation bonds, one-third of the proceeds to be handed to Germany, have already been noted in these columns. The documents conclude with a declaration regarding transitory provisions signed by the President and the Secretary of the Conference.

If it should be impossible to put the New Plan into execution, the present Agreement shall become null and void and the amounts withheld through its application shall be paid to the Creditor Governments within four months.

The non-German Reparation and Liberation Debt settlements will be summarised next week.

Notes of the Week.

The Reichstag and the Young Plan.—The Bill for the Enslavement of the German People, as the German Nationalists have dubbed the Bill to ratify the Young Plan, came before the Reichsrat last week and the Reichstag on Tuesday, along with four attendant Bills for the alteration of the Reichsbank and Railway Laws and for the ratification of the American reparation settlement and of the liquidation and other subsidiary agreements signed at the Hague. The Reichsrat, after being invited to compare the present value of the Young Plan annuities, 34 milliard gold marks, with the offer made by Germany in 1921 to pay 50 milliard gold marks less previous payments, adopted the Bills by 48 votes to 6. Though the Government majority was never in doubt, the debate in the Reichstag has been protracted but most unexciting. Herr Hugenberg, the Nationalist magnate, broke the parliamentary silence which he has maintained since 1922 in order to denounce the Bills, but his speech was not otherwise notable. Herr Curtius, the Foreign Minister, who lucidly defended the Bills, emphasised the failure of the Nationalists to offer any alternative policy whatever. Another Nationalist critic, Dr. Hoetsch, described the Young Plan as a closely-meshed net of international capitalism which was to be cast by the International Bank over a whole continent for two generations. To this Dr. Wirth replied that it was the concern of Europe as a whole, rather than of Germany especially, that the former was committed for so long a period to the New World through the worst of all wars. The most interesting contribution to the debate was the description by the Minister of Finance, Dr. Moldenhauer, of what would happen if Germany demanded a moratorium. The Creditor Powers would forthwith declare a moratorium for their payments to America, and the whole matter would then have to be fundamentally reconsidered. The report of the Special Advisory Committee of the B.I.S., though not binding on Germany, would be drawn up with the co-operation of German representatives and would have such weight that no nation concerned would reject it. The most doubtful point in this forecast is the suggested ability and willingness of the Creditor Powers to suspend payments to America. Whether such a moratorium were declared or not, it is perfectly plain that any fundamental revision of the Young Plan settlement must depend on the attitude towards war debts adopted by the United States, and it is as well that Germany should realise that fact.

The Pope and Russia.—The Pope has published a protest against the anti-religious campaign which the Soviet Government is now carrying on throughout the territories of the U.S.S.R.; and he has announced his intention of celebrating a special mass on March 19th in order to express the feeling of Christians outside Russia about this extirpation of the Russian Church. It is noteworthy that, in this document, His Holiness asks the entire Christian world, and not only the members of his own communion, to join him in his supplications. And in an earlier passage of the letter he writes of "our dear Russian people." Thus the Pope takes his stand as the champion of a non-Catholic Christian people against a persecuting Government; and, in doing so, he is no doubt consciously carrying on the long tradition of the Vatican in its dealings with the Orthodox Church. In Western Christendom the Papacy has been above or aloof from the sovereignty of secular Governments ever since the eighth century, when it successfully repudiated the authority of the Iconoclastic Emperors of Byzantium. In Orthodox Christendom the State has always managed to keep the Church in that position of subservience to which the first Constantine intentionally reduced it when he made the Church the junior partner of the Imperial Power. The Iconoclasts destroyed as many ikons as the Bolsheviks and forced their long-suffering Orthodox subjects into an uncongenial mould for a century. Muhammed the Conqueror turned the Oecumenical Patriarch of Constantinople into an agent of the Ottoman Empire for the administration of the "Rayah"; and generations of Patriarchs accepted investiture (in the name of the Trinity!) at the Padishah's hands. Peter the Great knocked "the Old Believers" on the head and abolished the Patriarchate of Moscow—placing the Orthodox Church in the Russian Empire under the control of a secular board called the Holy Synod. In all these trials, such members of the Orthodox Church as have ventured to stand up against the might of the secular arm have looked to Rome as the champion of ecclesiastical liberty, from eighth-century Theodore of Studium onwards. To the Protestant mind this aspect of the Roman Church is unfamiliar; but then the Protestants shook off the yoke of the Papacy at the price of reverting to the condition of the Orthodox Christians and permitting the State to reimpose its own yoke on their necks. To the eyes of the State-ridden Orthodox the Vatican appears in quite a different guise; and the Vatican, on its part, has always been alive to the possibility of enlarging its domain at the expense of the Orthodox Churches. Since the later Middle Ages there have been communities of "Uniates"—ex-Orthodox Christians who have accepted the supremacy of the Pope without being required to give up their traditional Orthodox ritual. Is the remnant of the Orthodox Christian world destined to become Uniate now? It is strange to reflect that, before the war, the Russian and Ottoman Empires were the two strongholds of the Orthodox faith. How different the picture is to-day! At this moment Orthodoxy is virtually extinct in Turkey, and is in process of being extinguished in the U.S.S.R. Post-war Jugoslavia, Greater Roumania and Albania are part-Catholic, part-Orthodox countries, in which Catholicism may eventually gain the upper hand. The only purely Orthodox countries left in the world now are Bulgaria and Greece; and Bulgaria, ever since her conversion, has been led by purely political considerations to play continually with the idea of union with Rome. The "inter-ecclesiastical" situation just now is full of interesting possibilities; and while we do not doubt that the Pope is speaking from the heart, it would be difficult to believe that considerations of high ecclesiastical policy are altogether absent from His Holiness's mind.

The Economic Advisory Council.—On Wednesday night, in the House of Commons, the Prime Minister announced the names of the staff and of the non-Ministerial members of the Economic Advisory Council. Mr Thomas Jones, deputy secretary of the Cabinet, will act as the Council's secretary, and the staff will include

Mr H. D. Henderson, lately editor of *The Nation*; Mr A. F. Hemming, formerly assistant secretary to the Committee of Civil Research; Mr H. V. Hodson, a member of the staff of the *Economist*; and Mr. C. G. Clark, of the School of Social Science, Liverpool University. On the Advisory Council, economic theory is various represented by Mr J. M. Keynes, Mr G. D. H. Cole and Mr R. H. Tawney; different industrial interests find their spokesmen in Sir John Cadman, chairman of the Anglo-Persian Oil Company, Sir Arthur Balfour, late chairman of the Committee on Industry and Trade, Sir Josiah Stamp, chairman of the L.M.S. Railway, and Sir Andrew Duncan, chairman of the Central Electricity Board, the two last-named being also directors of the Bank of England; and Labour is represented by Mr Ernest Bevin, of the Transport and General Workers' Union, and Mr W. M. Citrine, secretary to the General Council of the Trades Union Congress. As representatives of banking there will be Mr Ernest Debenham, director of Lloyds Bank, and Sir Alfred Lewis, chief general manager of the National Provincial Bank; and the Council is completed by Sir William McLintock, the well-known chartered accountant, Sir Daniel Hall, director of the John Innes Horticultural Institution, Sir William Hardy, director of the Food Investigation Department of Scientific and Industrial Research, and Mr W. R. Blair, director of the Co-operative Wholesale Society. Thus the Council is a very representative one, and as a corporate body they should be able to give very valuable advice to the Government of the day. For the purpose of assisting and guiding the investigation work of its expert staff it is a rather large body, but it may be assumed that certain of its members will devote more of their time to this side of its activities than their colleagues. There is ample and urgent work awaiting it, and we wish it every success in the important task that has been entrusted to it.

Omnibuses Bill.—A further little bout in the desultory and ineffective duel between the House of Lords and the House of Commons was staged on Friday last, when the Omnibuses Bill came up for second reading in the lower House. This is a private member's Bill, enabling local authorities already authorised to operate passenger transport services, tramways, trolley vehicles and motor omnibuses to provide and run omnibuses both within and without their own districts. The principle is practically the same as that of Part V of the Road Traffic Bill, which was deleted by the House of Lords before the Christmas recess. Mr Scurr, in moving the Bill, claimed that it would entail real economy in the expenditure of local authorities upon private bill legislation. The principle of the Bill had the unanimous support of the Association of Municipal Corporations. Colonel Ashley desired the House to reject the Bill. He fulminated against the "Socialistic and extravagant tendencies" of local authorities, but weakened the force of this argument by a rather tepid comparison between the Omnibuses Bill and Part V of the Road Traffic Bill, which at least subjected the local authorities to the Traffic Commissioners in these matters. The comparison was doubtful, because Colonel Ashley, as president of the Anti-Socialist Union, no doubt feels it his duty to dislike both measures, though how a logical extension of existing powers which Colonel Ashley, when in office, himself regarded as legitimate can be described as an unwarrantable extension of Socialism, it is difficult to imagine. The Minister of Transport, in reply, did not quite succeed in explaining why he should support this Bill rather than promise instead to restore Part V, which presumably he prefers. The general intention of the Government was either to instruct the Committee upstairs that it had power to reincorporate Part V of the Road Traffic Bill, or to secure that both the Road Traffic Bill and the Omnibuses Bill were considered by the same Committee upstairs, and to instruct the Committee that it had power to amalgamate the two Bills. Mr Scurr's Bill received a second reading by 203 votes to 118.

Overseas Trade in January.—The trade returns for January are at first sight extremely disappointing. As the following table shows, comparing last month with January, 1929, imports have fallen by 12.6 per cent., British exports by 12.9 per cent., and re-exports by 16.7 per cent. Even allowing for the 9.1 per cent. fall in prices registered during the year by the *Economist* index numbers, these changes show that some contraction in volume has taken place:—

MONTH OF JANUARY.
(000's omitted.)

	1930.	Inc. or Dec. on January, 1929.		Inc. or Dec. on January, 1928.	
	£	£	%	£	%
Imports	101,854	−14,692	−12·6	+1,460	+1·5
British exports	58,262	− 8,617	−12·9	−1,480	− 2·5
Re-exports	8,174	− 1,637	−16·7	−2,133	−20·6
Total exports	66,436	−10,254	−13·4	−3,613	− 5·2
Excess of imports over total exports	35,418	− 4,438	−11·1	+5,074	+16·9

Fortunately there is an explanation, in part, for this apparent regression. It is that January, 1929, happened to be an unusually good month of the year. Imports at £116.5 million were the best of all the twelve months, while British exports at £66.9 million were only exceeded in May, and then by a mere £500,000. The monthly averages for the whole of 1929 were imports £101.8 million and exports £60.8 million, and this affords the clearest proof of the abnormal character of the January figures. Bearing this fact in mind, the latest results are not too unsatisfactory. Retained raw material imports have fallen from £33.8 to £26.3 million, but this last figure compares with a monthly average for 1929 of £23.8 million, so that, allowing for the fall in prices, the January, 1930, figure is far from unsatisfactory. Details of the principal exports are given below:—

SOME LEADING EXPORTS.
(Quantity.)

		Month of January.		
		1928.	1929.	1930.
Coal	tons	3,904,700	4,472,631	5,493,410
Railway material	,,	63,807	51,635	43,597
Total of iron and steel	,,	332,185	421,191	351,846
Textile machinery	,,	10,842	11,618	9,060
Total machinery	,,	50,176	52,175	56,219
Cotton yarns	lbs.	14,894,200	16,923,900	13,156,500
Cotton piece-goods	sq. yds.	337,406,100	379,342,300	313,183,000
Wool tops	centals	28,025	31,245	27,197
Woollen tissues	sq. yds.	13,105,200	12,424,600	9,695,100
Worsted tissues	,,	3,813,900	6,138,300	4,394,000
Linen piece-goods	,,	7,693,000	6,411,200	6,539,200
Jute piece-goods	,,	16,525,400	11,139,100	11,274,800
Boots and shoes	doz. prs.	83,830	76,450	77,777
Leather	cwts.	40,636	27,016	22,657
Locomotives	tons	1,903	4,218	4,475
Motor-cars and chassis	number	2,673	4,258	3,211

The increase, for the second year in succession, in the coal exports is most encouraging. Elsewhere textiles are bad, and machinery and iron and steel sufficiently unsatisfactory for it to be useful to remember the abnormal character of January of last year. The essential point to remember is that it is unsafe to dogmatise overmuch from the results of a single month. It is still early to determine how 1930 is going to shape.

More Views on Rationalisation.—On Wednesday Mr W. L. Hichens, chairman of Cammell, Laird and Company, Ltd., addressed the Manchester Statistical Society on Rationalisation. He excluded vertical combination, which had been tried and which had made real rationalisation—amalgamation of firms doing a similar class of business with the object of securing greater efficiency and economy in production—more difficult. Rationalisation must also be distinguished from price-fixing associations or cartels. Turning to the question of the unemployment which rationalisation might cause in the short run, Mr Hichens said that the incidence of unemployment in the lower grades would be altered, more men working full time and correspondingly more being wholly unemployed. By the time the marked improvements in layout and equipment had been made, it was reasonable to suppose that there would be an equivalent in increase in orders. But the unemployment would be more severe both in the early and later stages for the higher grades. The shipbuilding and steel industries were examples of those where productive capacity had far outrun consumption. It was futile to sit still and do nothing in the hope that in a short time demand would catch up and disproportion would thus automatically be adjusted. When the equilibrium had been deliberately restored, expansion might again become possible, but it must be based on modern plant adapted for modern needs. Strong financial backing was essential. "Unless the Bank of England and the big joint-stock banks are prepared to undertake this necessary work," added Mr Hichens, "I believe the Government will sooner or later be obliged to intervene and provide help. I should regard this as a highly dangerous step, but a policy of drift may make it inevitable. If, however, a committee were appointed by the Government for the steel industry and were to co-operate with the leaders of that industry and with the banks, I believe this country would, within a comparatively short time, regain the leading position in the world, which it is rapidly losing." Professor Henry Clay, supporting a vote of thanks, said that it was in the world market that a correlation between supply and demand was needed, and that contraction of capacity on the part of this country might only present the Continental steel works with an opportunity to expand.

Cotton Trade and Tariffs.—*It cannot be denied*, writes our Manchester correspondent, that among people engaged in the cotton industry there is increasing interest in the tariff question, and many people who hold Free Trade views are becoming concerned at the trend of events. The change in the situation is largely due to the many cases of foreign countries raising their import duties on cotton goods, and the question is being asked whether something cannot be done to counteract this movement. Also, from time to time, there are reports of cotton yarn and piece-goods from foreign countries competing in Lancashire against the home products. At the end of last week it was announced that the directors of the Manchester Chamber of Commerce had received a resolution which had been passed by the Europe and United States Section of the Chamber, in which it was stated that the proposal respecting the conclusion of a tariff truce was viewed with great anxiety, and the section protested to the Board of Trade against the adoption of any such proposal. The Board of the Chamber did not object to this resolution being submitted to the President of the Board of Trade, but pointed out that no opinions have been officially recorded on the subject by the Board itself. This matter was raised at the annual meeting of the members of the Chamber on Monday last, and from the body of the hall there was a protest against the directors allowing the resolution of the Europe and United States Section to go forward. Another interesting development this week has been that at the ordinary monthly meeting of the General Committee of the Federation of Master Cotton Spinners' Associations the draft report for last year was submitted for approval. It made reference to the fact that the trade depression was partly due to the higher tariffs of foreign countries against Lancashire goods. A member of the Committee raised a discussion on this point and ultimately it was decided to appoint a special committee of the Federation to inquire into the effect of tariffs upon the Lancashire cotton trade. Free Traders who were present at the meeting were somewhat impressed by the remarks of certain spinning employers, and undoubtedly there is increasing resentment against the higher import duties of foreign countries, and a desire in many quarters to see if something cannot be done to guard our interests. It was agreed that the committee should be appointed by the President and Vice-Presidents, and it is expected that the names will be announced within the next few days. It is recognised that the committee will have to hold numerous meetings and examine a large amount of evidence before it will be in a position to issue any report and recommendations. It must be acknowledged that many people who are discussing these problems to-day are not aware of the real facts relating to Free Trade and Protection. In a vague sort of way it is argued that this country should have some power to negotiate when other countries propose to raise their tariffs against us. It might be desirable, therefore, that before anything further is done in the matter, that those interested should be informed in an elementary way of the facts on which the principles of Free Trade are based. Undoubtedly this eagerness to take action is largely due to the severe trade depression in Lancashire, and the feeling that something should be done to find means whereby the present difficulties can be reduced.

Imperial Trade.—The Imperial Economic Committee has issued a most interesting report on Empire Trade,* based mainly on the publications of the Economic Section of the League of Nations, supplemented from other sources, in which it is shown that, between 1913 and 1927, the trade of the Empire, corrected as far as possible for price changes, expanded by 27.5 per cent., as compared with a growth of 20 per cent. in world trade. Since 1927, however, the growth has not kept pace with that of the rest of the world. If the Empire be treated as a unit and figures of inter-Imperial trade excluded from the world total, Empire foreign trade is shown to have increased from 18.86 per cent. of world trade in 1913 to 20.28 per cent. in 1927. If Continental Europe be treated in the same way, its external trade appears approximately comparable with that of the Empire, but the trade between the countries of Europe is probably about 50 per cent. greater than that between the countries of the Empire. A further analysis suggests that the Empire is, on balance, an importer of goods, since its aggregate share, including inter-Imperial trade, of the world's imports amounted in 1927 to 30.81 per cent., against 28.05 per cent. of world exports. In comparing trade between Empire countries with trade between them and the rest of the world, re-exports must be eliminated from the former to avoid double counting. The result is shown in the table below:—

	1913.	1925.	1926.	1927.
		Million £.		
Inter-Imperial trade	421	829·5	772	743·5
Empire-foreign trade	1,292	2,237	2,118	2,312
Total	1,713	3,006·5	2,890	3,055·5
Ratio of inter-Imperial to total Empire trade	24·6%	29·7%	26·7%	24·3%

Thus the value of foreign trade, which is about three times that of trade within the Empire, has been increasing in proportion to the total, especially during the last three years, but this is partly due to a change in trade practice involving a reduction in *entrepôt* trade in favour of direct shipments. The trade of the Oversea Empire has advanced more rapidly than that of the United Kingdom, as the following table shows:—

	Imports.		Exports.	
	Million £.			
	United Kingdom.	Empire Overseas.	United Kingdom.	Empire Overseas.
1913	659	468	525	491
1927	1,095	962	709	1,041
1928	1,075	979	724	1,074

Imports into overseas Possessions rose between 1913 and 1928 from 30 per cent. less than those of the United Kingdom to only 9 per cent. less, while exports, from 7 per cent. less, became 40 per cent. greater than those of the United Kingdom. This change would probably be accentuated if allowance could be made for price changes. Canada and New Zealand have experienced particularly rapid growth, whereas South Africa has only just kept pace with the world as a whole, and Australia, India and the United Kingdom have failed to do so. The relative importance of Empire and foreign markets to Empire

* "A Memorandum on the Trade of the British Empire, 1913 and 1925-1928." H.M. Stationery Office, 70-232-13. 6d. net.

countries is illustrated by the following table of percentages of the trade of the overseas Empire:—

	Percentage of Imports from			Percentage of Exports to		
	1913.	1925.	1927.	1913.	1925.	1927.
United Kingdom	44·2	38·0	36·1	41·2	38·5	36·8
Other parts of Empire ...	11·5	13·5	13·1	10·6	9·6	10·7
Foreign countries	44·3	47·5	50·8	48·2	51·9	52·5

A similar analysis for the United Kingdom shows that the percentage of her imports which came from the Empire was 20.5 in 1913, 29.3 in 1925 and 27.0 in 1927; corresponding percentages of exports were 37.2, 43.4 and 46.1. This includes trade with the Irish Free State in the two later years. Inter-Imperial trade still converges in the United Kingdom, and goods imported to or exported from this country are well over 80 per cent. of the total.

Automatic Looms in Lancashire.—Not long ago Mr Andrew Naesmith, the general secretary of the Weavers' Amalgamation, expressed the opinion that weavers in a few years' time would probably be running considerably more looms than the two to four they are running to-day. The Amalgamation is now asked to ratify an important agreement concluded last week, under which weavers employed by concerns operating automatic looms have waived their demand for a fixed limit to the number of looms which a weaver shall be required to attend, in consideration of an offer of proportionately higher rates of pay. Automatic looms so far represent only 5 per cent. of Lancashire's total loom equipment, but they are being tried out in a number of mills. It is of interest that, in addition to several British-made automatic looms, some Italian looms have been installed recently, and the Japanese Toyoda loom is being tried by at least one manufacturer. It is claimed that this loom is particularly suited for Lancashire mills, large numbers being used in Japan, our chief competitor for the Indian trade. Clear proof that the Lancashire cotton trade realises that a change of machinery and methods is necessary if it is to regain its position is afforded by the fact that the mills are trying out the various kinds of automatic looms, and in some cases, when they have found certain types of automatic looms unsatisfactory, have actually replaced them by others.

Cotton Trade Short Time.—Our Manchester correspondent writes:—Lancashire cotton spinners who use American cotton are making another effort to organise short time in the mills. The Federation of Master Cotton Spinners' Associations has decided to take a ballot of the members on a proposal for a curtailment of production equivalent to 13 hours' stoppage per week during the eight weeks commencing March 3rd. For the scheme to be effective the proposal will have to be supported by members owning 80 per cent. of the spindles affected. The voting papers have to be returned not later than February 24th. It is urged by the committee that immediate steps should be taken to arrest the shrinkage in margins, which have become absurdly low. It should be pointed out that during the past twelve months a large number of mills in Lancashire have been entirely stopped, and the output of yarn has only been from 75 to 80 per cent. of full capacity. If this organised curtailment of output is carried, however, it will mean that numerous mills that are now running full time will have to work 35 hours a week instead of the usual 48. Despite the deplorable state of trade there is some doubt in trade circles as to whether the necessary majority of votes will be obtained. It is recognised that organised short time is not a solution of the difficulties which present themselves, and numerous spinning employers wish to make their own running arrangements.

Iron and Steel Production in January.—The reactions on the British iron and steel industry of the decline in activity in Continental countries are apparent in the January figures of production and foreign trade. The number of blast furnaces in operation declined by three to 159; the production of pig iron was maintained at about the rate ruling in December, and amounted to 650,000 tons; while steel production amounted to 771,100 tons, a figure higher than the December production, which was affected by the Christmas holidays, but some 44,000 tons lower than in the shorter month of November. Pig-iron production is still considerably higher and steel production slightly higher than in January, 1929, but in January last year production was on a rising curve, whereas at the moment the curve of output is declining. The effects of the Continental decline are, however, even more clearly seen in the import figures, for imports of iron and steel in January amounted to 310,300 tons, which is 50,000 tons higher than in any month last year, and is also higher than in any month since October, 1927. Imports of pig iron continue to rise, and amounted to 22,900 tons. Imports of Belgian pig iron have increased, but a substantial proportion of the imports now consist of pig iron from India, which is finding an outlet in the British market to compensate for the decline in exports to Japan. The biggest increases, numerically, compared with December, occurred in the imports of semi-finished steel—billets, blooms and slabs, rising from 51,600 tons to 72,800 tons, and sheet and tinplate bars from 40,500 tons to 56,800 tons. Imports of scrap iron and steel at 23,600 tons show a notable increase, and for the first time for many years are not exceeded by the exports. Exports of iron and steel amounted to 351,800 tons, compared with 332,000 tons in December and 421,200 tons in January, 1929.

The Plight of the Wheat Pools.—The severe fall in American wheat prices which occurred in January has created a grave situation among the wheat-holding institutions of Canada and the United States. No doubt rumours have been far worse than facts, but the trouble has been serious enough to justify official interference. Last week, at the request of the Manitoba Wheat Pool Board, the Provincial Government of Manitoba stated its willingness to guarantee advances to the wheat pool to the extent of 15 per cent. over and above the advances made by the lending banks, and announced that the governments of Saskatchewan and Alberta were taking similar action. Later, the president of the Canadian Bankers' Association stated on behalf of the Association that the banks were standing behind the wheat pool and were prepared to ensure the orderly marketing of wheat and to prevent forced liquidation. It is now announced that the United States Federal Farm Board will immediately advance $10 million to the newly-formed Grain Stabilisation Corporation out of a revolving fund provided for it by Congress and will lend it whatever additional sums may be required for its operation to support prices. The aim of the Stabilisation Corporation is to maintain cash prices in Chicago at the level of 118c. a bushel or better. The present situation arises from the determination of the wheat pools to hold back supplies in the hope of a rise in prices in the New Year. Handicapped as they have been by the existence of large carry-overs and new crops in most parts of the world, they could not prevent a sharp though spasmodic fall of prices in January. As the following table shows, the decline has been arrested in the present month.

NEW YORK SPOT WHEAT PRICES.

	Cents per Bushel.	
1930.	No. 2 Hard Winter.	No. 2 Manitoba.
Jan. 2	137¾	155⅛
Jan. 9	135½	151
Jan. 16	129⅝	141¼
Jan. 23	130¾	144⅜
Jan. 30	123½	135
Feb. 6	122⅝	135⅜
Feb. 8	123	136⅛
Feb. 10	124	137

Strong criticism has appeared in Canadian newspapers of the policy of wheat pools and even more of the action of the Government in supporting that policy during recent months. The suggestion has been made in some quarters that the Dominion Government should take over the whole crop as in the war years. While there is little prospect of any such measure, the governmental support given to wheat-holding organisations, both in Canada and the United States, is quite as important and instructive to wheat-importing countries as the need for such interference. The end of the business is difficult to foresee. No large increase in European demand seems to be impending, and existing supplies are so enormous that if the early crop reports are favourable, prices may sag still further.

After the Break.—Mr Mitchell, in his address last month to the shareholders of the National City Bank of New York, took an optimistic view of the Wall Street collapse and its probable consequences. The break itself he explained by a reference to the previous annual report of the bank, dated nearly a year before, which stated that, "the danger, if there be one, must lie in the possible credit strain. Experience teaches that the danger to every period of prosperity lies in the development of overconfidence and a consequent tendency towards unwise use of credit. If this present period of prosperity is halted, it will be by the same old cause, and we are bound to guard against it." Now that the "if" has become an accomplished fact, and, so far as Wall Street is concerned, "prosperity" has been more than "halted," it is reassuring to see that Mr Mitchell is not unduly perturbed. He alludes to the strength of the banking system, and to the world fall in Stock Exchange prices and in interest rates, and also to the present outflow of foreign money from New York—a movement which he welcomes as tending to restore international equilibrium, and which he expects to continue. He concludes by claiming that "the past year has cleared itself, with difficulties, to be sure, of the dangers that menaced it from its very start." He is of opinion that business organisation is not incapacitated nor is the physical wealth of the country impaired. Industry and trade are more adequately financed than ever, no serious disturbance of commodity prices has occurred, the decline of interest rates is favourable to enterprise and there exists a general feeling of confidence. The only feeling of doubt left is whether events will not show that the difficulties to which Mr Mitchell alludes will not prove more serious than he seems to think. He admits that the New Year has begun with a somewhat diminished business activity, and, even remembering America's notorious power of recuperation, it seems difficult to believe that the consequences of a major collapse on the stock markets will be surmounted as easily or as quickly as Mr Mitchell anticipates.

Brazilian Exchange.—A Rio de Janeiro correspondent writes:—In consonance with the Monetary Reform Law of December, 1926, and the controlling influence of the Bank of Brazil's operations on the exchange market, the value of the Brazilian milreis was maintained with commendable stability for practically three years, *i.e.*, up to early December last. However, keen observers foresaw that the sequel of diminished coffee prices would inevitably be reduced export values, and a comparative paucity of bills on the exchange market, which would consequently engender a weak tendency in exchange rates. For some reason, which has not been explained to the public, the Bank of Brazil ceased to operate on the exchange market here in November last, and during December refused even to furnish cover for collections in the hands of other banks. This attitude appears unfortunate, for the natural inference was lack of resources and exhausted credits, the combined influence being expressed in marked weakness of the milreis. Sight transactions early this month were actually executed at $5\frac{3}{16}$d., thereby show a precipitate contraction in the value of Brazil's currency of over 10 per cent., a most serious factor for all who have liquid financial assets in this country. It seems obvious that such a collapse in the exchange market might well have been avoided by a more frank policy on the part of the Government in connection with the gold reserves in the "Caixa de Estabilizaçao." Two previous actions by official departments had already created apprehension on the part of the banks and public; firstly, the intimation that it would be considered an unpatriotic act to withdraw any gold from the "Caixa," although free export and import are prescribed by law; and, secondly, the accumulation by the Bank of Brazil of the major part of the gold notes emitted by the "Caixa," the bank's holding being estimated at over 500,000 contos out of a total of 860,000 contos. In these circumstances it is now satisfactory to observe that the Bank of Brazil, acting on behalf of the Federal Government, shipped on January 15th to New York bankers, the Guaranty Trust Company, $5,000,000 U.S., and it is understood that further successive shipments up to $20,000,000 U.S. will be made to the same destination. The purpose of these operations is primarily to meet Brazil's current foreign obligations, but simultaneously they are having an uplifting effect on exchange, the sight rate now quoted being 5⅛d. Encouraged by these official shipments several foreign banks are also effecting similar transactions, amounting already to $3,000,000 U.S. The total diminution observed in the reserve of the "Caixa de Estabilizaçao" up to January 18th was somewhat less than £1,500,000, with a corresponding contraction in the currency medium of nearly 60,000 contos de réis. The official statistics just published regarding Brazil's overseas trade disclose a favourable balance for 1929 up to the end of October last of £7,315,000, compared with one of £8,350,000 for the first ten months of 1928. The reduction occurred mainly during October last, diminished coffee values accounting for a contraction in exports of approximately one million sterling. Coffee shipments do not manifest any expansion of note, but prices have latterly appreciated by about 10 per cent. over the low-water mark recorded last month.

Recovery in Zinc.—After a long spell of weakness, accentuated by the dissolution of the Zinc Cartel on December 31st last, the London spelter market, writes a correspondent, has latterly shown signs of an improvement. Turnover has been heavy compared with that in other metals, while among consumers of the metal there has been ample evidence of returning interest for delivery as far ahead as June. Statistically the situation is nothing to boast about, for stocks in this country at January 31st showed a further big increase of 6,075 tons, while reserves on the Continent are also large. Output all over the world is very heavy, and since no scheme for limitation now exists, there is not much chance of any reduction in this direction. Fortunately, the American position, which has weighed so heavily on the London market, looks much healthier, and values have advanced slightly on better buying. Any considerable advance in spelter prices is very unlikely, but the removal of artificial barriers to production is encouraging buyers to cover their forward requirements.

National Provident Institution.—The accounts and report for the year ended November 20, 1929, disclose a substantial decline in the volume of new business, the figures being £1,215,234, compared with £1,511,950. The reason for this is to be sought largely—though not entirely—in a falling off of single-premium business, as a result of which the premium income has declined from £863,635 to £717,095. Ever since the war the new business of the National Provident has hovered round about the present total. The proportion of expenses and commission to premium income last year worked out at 12.7 per cent., compared with 12.4 per cent., and the net rate of interest earned was £4 14s. 6d. per cent., compared with £4 14s. 2d. per cent. Included in the report is the interesting announcement that the Institution has decided to fall into line with the majority—and incidentally to anticipate the provisions of the Insurance Undertakings Bill—by changing the financial year to accord with the calendar year. In addition, it has been decided to ask the sanction of the members for an alteration of the rules to permit of periodical valuations and distributions of profit being made triennially in future instead of quinquennially. the

first of such investigations to take place on December 31st next in respect of the period from November 20, 1927. The reduction in the interval between valuations will be welcomed, for there is now little, if anything, to justify the maintenance of a quinquennial period. A number of offices have already adopted the triennial period, viz., the Atlas, Caledonian, Friends' Provident and the United Kingdom Provident, and some two or three have even instituted an annual valuation.

Legal and General Assurance Society, Ltd.—A notable revision of premium rates charged for whole life and endowment non-profit assurances is announced by this society. The life business of the society is unique in that in 1919 it was decided to cease the issue of with-profit policies and to rely entirely on non-profit assurances. Notwithstanding this limitation, the society has actively developed its connections in new fields, such as group insurances, and in temporary assurances for redemption of building society loans, and in consequence has succeeded in showing a very striking expansion. The old and the new rates of premium are compared below:—

WHOLE LIFE ASSURANCE.

Age at Entry.	Old Rates per £100. Sum Assured. £ s. d.	New Rates per £100. Sum Assured. £ s. d.
20	1 8 0	1 6 0
30	1 16 4	1 14 1
40	2 10 8	2 7 2
50	3 14 8	3 10 1

ENDOWMENT ASSURANCE.

Age at Entry.	Term.	Old Rates per £100. Sum Assured. £ s. d.	New Rates per £100. Sum Assured. £ s. d.
25	30	2 10 0	2 8 6
35	30	2 15 0	2 12 6
25	25	3 1 8	3 0 4
35	25	3 5 4	3 3 6
35	20	4 2 8	4 2 0
45	15	5 19 8	5 17 1

The principle has also been introduced of granting a differential rate of premium for large policies. This takes the form of a reduction on the above rates of 1s. per cent. for sums assured in excess of £500, and a further 1s. per cent. for sums assured in excess of £1,000. It will be seen that the reductions for whole life assurances for sums assured in excess of £1,000 range from about 10 per cent. to 12 per cent. on the old premiums, the reductions for endowment assurances being rather less.

National Mutual of Australasia.—The report for the year ended September 30, 1929, of the National Mutual Life Association of Australasia presents some points of especial interest. The amount of new business transacted for the last complete year again shows an increase, the comparative figures being £9,807,845 and £9,868,350. The increase recorded on this occasion is very much smaller than previously, due to a falling off in single premium business and to a reduced volume of pure endowment policies. The report makes no specific mention of that portion of the total business transacted in this country, and the latest information as to this is contained in the Board of Trade returns for the year ended September 30, 1927, which shows that for that year 25 per cent. of the total business was attributable to the United Kingdom. The expense ratio is moderate, the figure being 14.6 per cent., compared with 13.8 per cent., in the preceding financial year. The gross rate of interest earned remains at about the same level as previously, viz., £5 14s. 3d. per cent., but the net rate of interest has declined from £5 10s. 11d. per cent. to £5 6s. per cent. This change in the situation is likely to be a permanent feature, since it is due to recent legislation in Australia imposing Federal income tax on the Mutual Life companies. In the case of the National Mutual of Australasia, the amount paid in rates and taxes has in consequence increased from £52,000 to £126,000 in a year. The difference hitherto existing in favour of the Australian life offices in the matter of rate of interest is therefore now reduced to very small proportions. The balance sheet shows no important changes in the distribution of the assets, which consist as to 27 per cent. of Government securities and as to 12 per cent. of other Australian Stock Exchange securities. The Australian life offices must undoubtedly have suffered heavily in the general economic crisis through which Australia is now passing. A representative stock, such as Commonwealth of Australia 5 per cent. stock, 1945-75, declined in value from 99 on September 30, 1928, to 94 on September 30, 1929, and is now worth only about 87½. Thus, in little more than sixteen months the company may well have suffered a depreciation not far short of 12 per cent. on 39 per cent. of its total assets.

Industrial Life Assurance Bonuses.—With the publication of announcements this week by the Pearl and Britannic, the bonuses for 1929 of the whole group of industrial-cum-ordinary offices are now made known. The occasion is a suitable one for reviewing the course of bonuses in this group of offices:—

Year.	Britannic.	Pearl.	Prudential.	Refuge.	Wesleyan & General.
1913	32/-	32/-	36/-	34/-	32/-
1920	24/-	25/-	20/-	26/-	20/-
1925	40/-	40/-	42/-	40/-	40/-
1926	42/-	42/-	44/-	42/-	Whole Life. 48/- / Endow. Ass. 42/-
1927	42/-	42/-	44/-	44/-	48/- / 42/-

	Whole Life.	Endow. Ass.				
1928	42/-	46/-	50/-	46/-	44/-	48/- / 42/-
1929	42/-	46/-	50/-	46/-	44/-	48/- / 42/-

Before the war the rates of bonuses declared had reached a uniformly high level, and the foregoing table shows clearly the remarkable recovery achieved from the low level to which bonuses had fallen just after the war. As regards the 1929 rates, it will be observed that in every case they show no change compared with 1928.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during January amounted to 882,801 ozs. of fine gold, as compared with 851,134 ozs. produced during December. In January, 1929, the output amounted to 876,452 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	796,768	823,692	796,270	839,782	843,857	876,452	882,801
February .	760,617	753,925	753,924	779,339	816,133	815,284	...
March	795,671	825,479	834,340	860,511	877,380	866,529	...

August ...	809,571	808,218	843,854	863,345	891,863	889,601	...
September	799,422	797,247	839,939	842,118	857,731	849,553	...
October ...	827,583	812,832	853,296	855,743	897,720	868,690	...
November	802,313	787,633	840,276	848,059	872,484	861,593	...
December	825,273	791,455	836,157	851,225	859,761	851,134	...
Total ...	9,597,634	9,589,702	9,962,852	10,130,630	10,358,596	10,414,066	...

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	May, 1929.	June, 1929.	July, 1929.	Aug., 1929.	Sept., 1929.	Oct., 1929.	Nov., 1929.	Dec., 1929.	Jan., 1930.
Gold mines	195,733	192,595	190,031	190,062	190,567	189,739	186,941	184,280	190,663
Coal mines	15,852	15,928	15,914	15,867	15,733	15,533	15,320	15,326	15,288
Diamond mines	5,473	5,029	4,845	5,071	4,814	4,555	4,561	4,811	5,889
	217,058	213,552	210,790	211,000	211,114	209,827	206,822	204,417	211,840

There was an increase in the number employed at the gold and diamond mines.

Forthcoming Lectures.—The following courses of lectures, to which the public are admitted free, are announced by the University of London:—"La Monnaie et le Change—Facteurs Quantitatifs et Facteurs Qualitatifs," by M. le Professeur Albert Aftalion, at the London School of Economics, March 10th and 11th, at 5 p.m.; "Some Recent Researches in the Theory of Statistics and Actuarial Science," by Professor Dr. J. F. Steffensen, at University College, Gower Street, on March 12th, 13th and 14th, at 5.30 p.m.; "Social Development in Germany during the Last Ten Years," by Professor E. Lederer, at the London School of Economics, on March 17th, 19th and 20th, at 5 p.m.; "Legal Administration in Egypt," by Sir Maurice S. Amos, K.B.E., at the London School of Economics, on March 12th, at 5 p.m.

Overseas Correspondence.

UNITED STATES.—SHARE MARKET—INDUSTRY—COPPER—MONEY MARKET—PRICES—NAVAL CONFERENCE.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 31.

A MORE cheerful tone has prevailed in Wall Street during the past week, partly on account of strength in the share market that carried prices to new high average levels for the year, and partly on account of encouraging industrial news. Another bullish factor was the annual report of the United States Steel Corporation, which showed unexpectedly good results for the fourth quarter, and which disclosed that $21.18 a share has been earned on the common shares. Of this latter sum approximately $1.24 was on account of special credit adjustments not credited to the earnings of any particular quarter. The net income was the largest for any peace-time year, and the earnings per share were particularly gratifying in view of the increase in shares outstanding during 1929 on account of the retirement of funded debt and of the acquisition of the Columbia Steel Company. Publication of the report was followed by a movement that carried the corporation's shares up to 184⅝, or to more than 25 points above the minimum since the end of last year. Utilities have continued to be consistently good, and shares of tobacco and agricultural implement companies have been distinctly strong. Altogether the share market has shown a disposition to broaden and become more active; but the volume does not compare with that prevailing during the bull campaigns of the past few years. Public interest in the market no doubt is increasing; but professionals still furnish most of the motive power, and brokers' loans advanced only $4,000,000 during the past week.

The bullish industrial news included reports from the steel industry placing the average for operations at about 75 per cent. of capacity. The trade has been surprised at the sharpness of the recovery in activity. The present rate compares with an average of less than 60 per cent. in December and with a low rate at the end of that month of about 45 per cent. It is noticeable that this improvement has not been attended by a stiffening in steel prices; and it is possible that the industry is having a rebound from year-end shut-downs rather than the beginning of a sustained recovery. Nevertheless, the improvement appears genuine; and it is encouraging. In the automobile industry the good news includes large-scale operations at the Ford factories and an increase in production schedules by Chevrolet. These makers of low-priced cars are going ahead faster than they intended a few weeks ago. It is possible, of course, that this increase merely represents heavier stocking by dealers; but, on the other hand, it seems probable that the dealers would not take cars from the manufacturers on a larger schedule unless inquiries from customers were encouraging.

There is little new development in the copper situation, where the producers are curtailing production sharply with what appears a firm intention of maintaining the 18 cent price, and where buyers of the metal, seeing large stocks in the hands of producers and refiners, are refusing to commit themselves in advance. As two or three months must pass before the effects of curtailment at the mines are reflected in the stocks of refined metal, the January and February statistics will probably reveal further material increases in stocks. In these circumstances copper shares have fluctuated within a comparatively narrow range, liquidation curbing occasional rallies that come from short covering. Oils remain dull, although it is possible that the recent cuts in mid-continent crude will not be maintained, other large purchasing companies having refused to follow the lead of the subsidiary of the Standard Oil Company of New Jersey.

Short-term liquid loans continue to be available at low rates (and the bill rate has just been reduced an eighth), while the longer-term and less liquid forms of borrowing remain relatively expensive. The banking reports show that liquidation is continuing. The member banks' loans on securities are declining consistently now, and the volume of Federal Reserve credit at the disposal of the member banks continues to decrease. As at January 29th the Federal Reserve System was extending credit aggregating $1,154,000,000, which represents a decrease of $68,000,000 on the week and one of $313,000,000 on the year. Circulation fell and reserves rose on the week, and the reserve ratio of 78.3 per cent. compared with 76.3 the week before and with 69.4 a year ago. Similar changes occurred during the week at the local Reserve Bank; but in the case of this institution the volume of credit extended is, at $377,000,000, $23,000,000 larger than a year ago. The ratio here is 77.3 per cent., as against 77.0 a year ago. There has been some talk of a lower discount rate, and the street was interested in the fact that this week's meeting of the governors of the Reserve Bank was an unusually prolonged one. It was assumed that the question of a lower rate was under discussion. Meanwhile, gold is coming into the country, the weekly report showing imports of approximately $5,000,000 from Brazil and releases of $2,500,000 from earmark. In addition, approximately $20,000,000 worth of the metal is on its way from Japan.

Weakness in commodity prices has been a noticeable feature of the past week. Wheat and cotton both have fallen to the lowest prices of the year and are substantially below the levels of a year ago. In this connection there has been some comment to the effect that weakness in raw materials and foodstuffs throughout the world is marked and may be significant. Notice is also taken of the number of commodities in which price controls are being maintained or attempted. Some observers draw the inference that the general trend of commodity prices, over a period of years, is downward.

A moderate amount of interest is being taken in the Naval Conference. If the public lacks ardour in this direction it is not for lack of general sympathy with the aims of the Conference. Rather it is a reflection of the prevailing apathy and, possibly, of a certain amount of dissatisfaction with the European attitude toward our affairs during the past few months.

FRANCE.—TREASURY SURPLUS—DEBT EXTINCTION—REPARATION BONDS—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, February 12.

THE annual Budget duel between the Finance Minister and the Finance Commission of the Chamber is now approaching its climax. M. Chéron is in the unfortunate situation of a Chancellor of the Exchequer with a revenue yield of well over £53,000,000 more than Budget estimates, who is faced with admittedly well-justified demands for large remissions of taxation and extra expenditure which it is difficult to stigmatise as unnecessary, but who believes he has the best of reasons for requiring the money for other and distinctly productive purposes.

A few days ago M. Chéron laid the whole situation before the Finance Commission in a statement which filled several newspaper columns. From this it is shown that the 1930 Budget, as balanced, provides for estimated

expenditure totalling 49,250,000,000 francs and estimated revenue of 49,565,000,000 francs. With this scanty estimated surplus of 315,000,000 francs the Minister bluntly insists that, as a matter of strict duty, "neither further reductions of taxation nor additional expenditure must be asked for." His opponents, however, point to the fact that the Treasury is not only lavishly supplied with ready money, but is every year receiving much more revenue than it needs, and actually hoarding it and multiplying it by investing it. M. Chéron, in response to the criticisms offered under this head, has now revealed the exact situation of the Treasury. Its total liquid resources on January 31st, he states, totalled 19,400,000,000 francs (composed of its current account at the Bank of France, 7,980,000,000 francs; at the Bank of Algeria, 959,000,000 francs; at the State Bank of Morocco, 510,000,000 francs; and a stock of foreign exchanges totalling 10,120,000,000 francs). The existence of this latter item has been known for some time, but its amount has never hitherto been disclosed. This mass of nearly £100,000,000 has been accumulated from excess of revenue over expenditure, from German reparation payments awaiting utilisation under the Budget and from "various Treasury operations since 1926." These operations, as is known, took the form of short-term loans to American and other banks prior to the Wall Street crash, which brought 450,000,000 francs to the Treasury in interest.

M. Chéron found no difficulty in showing why these liquid assets should not be distributed, either to compensate for taxation or in additional expenditure. First, the Treasury will need 5,000,000,000 francs as "working capital," to allow for the ebb and flow of revenue. Secondly, all realised surpluses must, under the constitutional law of 1928, be handed over to the Caisse d'Amortissement for debt extinction purposes. As the exact amount of such surpluses cannot be known until the year's accounts have been closed (which usually means some years after any given year's end), the money must remain in the Treasury account at the Bank. Out of the surpluses realised during the past three years, 1,909,000,000 francs have been handed to the Caisse d'Amortissement on account of the 1926 surplus, and a further 2,000,000,000 francs is to be paid to it this year. (Authority to secure power to make this payment was obtained at Monday's Ministerial Council.) A further sum of 1,500,000,000 francs out of the Treasury surplus has already been allocated, under the 1929 Budget, to pay for frontier defence works, increase civil service pay, and provide relief for *sinistrés*. Another 1,500,000,000 francs from the same source has already been voted, to complete the 5,000,000,000 francs required for the programme of national public works sanctioned in December. Owing to the extension of the financial year, the Treasury will require to keep in hand an extra 1,300,000,000 francs, it is estimated, although, as M. Chéron stated in December, this extension will involve no actual loss of revenue, but merely formal modifications in book-keeping. Other sums will be required for the payments that have to be made under the Dawes Plan and in connection with the setting up of the Bank for International Payments, etc. All this will absorb over 17,000,000,000 francs out of the 19,400,000,000 francs of liquid resources held by the Treasury, and much of the balance will probably be absorbed by supplementary expenditure. "Consequently," M. Chéron concluded, "the Minister of Finance, in economising his assets, for which he has been reproached, has not been guilty of hoarding, but has merely placed the Treasury in a position to meet its obligations."

Dealing with the debt situation, M. Chéron declared that the internal debt, which amounted four years ago to 289,600,000,000 francs, has now been reduced to 267,000,000,000 francs and its character "profoundly changed" by consolidations. The floating debt, which totalled 93,500,000,000 francs, is now only 38,800,000,000 francs. The irredeemable debt has been reduced from 101,700,000,000 francs to 98,500,000;000 francs, and the medium and short-term debt from 41,700,000,000 francs to 22,200,000,000 francs. The total of the redeemable debt alone has risen, owing to the consolidation of part of the floating and short-term debt. The debt represented by pensions is proving a steadily increasing burden, owing to demands for bringing the scale of these allowances into accord with the change in the value of the franc. The credits required for pensions, which in 1920 amounted to 5,623,000,000 francs, will amount in 1930 to 9,794,000,000 francs, and calls for further revisions upwards are constantly being made. The policy of debt extinction which is being pursued will relieve the 1930 Budget by 350,000,000 francs. If this policy is continued at its present rate, it will be possible to undertake in 1931 and 1932 conversion operations covering 125,000,000,000 francs of debt, which should very appreciably relieve future Budgets.

Inquiries in authoritative quarters here confirm the impression that the issue of the $100,000,000, which it is expected will be allotted to this country, out of the $300,000,000 of international German reparation bonds that are to be offered in May, may prove much more difficult to arrange than had been anticipated. This may explain why so much reticence is being observed as to the issue price, the interest rate to be fixed and other points. No doubt is entertained as to the capacity of the Paris market to absorb at least $100,000,000 of the bonds, but this will naturally largely depend on the terms. The Government's difficulty in regard to the pending loan is that French fiscal law imposes a 25 per cent. income tax on the yield from all categories of foreign bonds, under which heading the reparation issue would apparently come, although from some points of view this would be purely a French issue. One of the basic suggestions in regard to these bonds is that they shall be capable of being negotiated at the same price all over the world, irrespective of the particular market in which they may have been originally issued. Any modification of the issue price, or the net yield from the French section of the issue, in order to bring the bonds into harmony with the exceptional conditions prevailing here, however, would seem to render them unnegotiable in any other market. If the new bonds, on the other hand, were to be issued exempt from the 25 per cent. tax imposed on other foreign issues here, holders of the latter would strongly object to such discrimination; while any attempt to raise the issue price in this country above that fixed for the bonds in London, New York and the other markets, would seem likely doubly to prejudice the chances of success here.

The January wholesale price index of the Statistique Générale is 574 (July 1914 = 100), as against 588 in December, 637 in December, 1928, 640 in December, 1927, and 854 in July, 1926, the highest figure reached. The detailed recent comparative figures are as follows:—

	Articles.	Nov.	Dec.	Jan.
General index figure	45	596	588	574
French products	29	627	621	604
Imported products	16	540	530	520
Foodstuffs	20	555	546	524
Raw materials	25	632	625	618

Reduced to gold, the French figure for January works out (in round figures) at 117.

ITALY.—DUCE'S ECONOMY PROPOSALS—TREASURY ACCOUNTS—STOCK EXCHANGE FAILURES.

(FROM OUR CORRESPONDENT.)

TURIN, February 6.

A VERY significant speech was made by Signor Mussolini at a meeting of the 92 mayors (*podestà*) of the municipalities which are the seat of provincial administrations. The speech was focussed on the high tax pressure and the necessity of economies in the State and local finances. At any cost, he said, the tax burden must be diminished. The first tax to go is the octroi, or Customs duty levied on goods entering cities. Italy, said Signor Mussolini, shared with Paris and Greece the unwelcome privilege of these mediæval relics of the barriers which divided boroughs and counties. To achieve reduction of the tax burden we must reduce expenditure. After the large public capital investments of the years 1922 to 1929 we must begin in 1930 to slow down the pace of progress. All public works not absolutely necessary must be suspended. All expenditure for pure embellishment of cities must cease.

That the burden of taxation is high in Italy is only too true. Calculations by Professor Mortara in the new (1930) issue of *Prospettive Economiche* (the best private Italian annual survey of economic conditions) confirm the Prime Minister's utterance. Mortara's estimate of the proportion of public State and local revenue to national income is 25 per cent. for Italy, 23 per cent. for Great Britain, 20 per cent. for Germany, 20 per cent. for France. But his calculations of the national income lead to the conclusion that the average annual income per head amounts to about £24 for Italy, £86 for Great Britain, £50 for Germany, and £45 for France. Clearly, it is not the same thing for a man with an income of £24 to pay a fourth part of it to public bodies as it is for one whose income is £86.

That Signor Mussolini's warning in favour of economies is timely is evidenced by the results of the first half of the current fiscal year (July 1st to December 31, 1929), which closes with a deficit of 217.9 million lire, against a surplus of 22 million in the same period of 1928. This figure is not necessarily serious, as the deficit was mainly due to the falling of the wheat duty, owing to the good 1929 harvest. But the most careful scrutiny is required of the Treasury account, which, for the said half-year, can be summarised as follows (in million lire):—

	Million lire.	
Cash at June 30, 1929	2,352·0	
Deduct: Payments since June 30 in respect of the fiscal year ended June 30, 1929, 2,926·9 million lire; *less* surplus of receipts over payments in respect of the current fiscal year's effective revenue and expenditure, 1,458·2 million lire	1,468·7	
		883·3
Add: Excess of new debts over debt payments, 26·3 million lire; excess of Treasury floating debts over credits, 1,331·6 million lire	1,357·9	
Cash at December 31, 1929	2,241·2	

Thus it appears that the cash was maintained at the old level only by the generous deposits of various public administrations, such as the Postal Savings Banks, Social Insurance Funds, State railways, etc., which happened to have superabundant money lying at their credit in the usual Treasury current account. These temporary deposits are not permanent debts, as they appear to have taken the place of Treasury Bills, of which no more have been issued since the compulsory funding of November, 1926; and it must be noted that the first half of the year is always remarkable for big borrowings on account of the arrears of previous years. But all the same, the Prime Minister's warnings about the necessity of slowing the pace of expenditure were hailed with relief by taxpayers.

If Stock Exchange quotations could be regarded as a true mirror of the economic situation, we should say that we are entering into an era of optimism. A certain number of securities have risen substantially, so that the New York slump of last October seems already forgotten. A good impression was made by the announcement that the Fiat workshops are operating again at capacity as from February 3. In those industrial fields for which we have figures of production the indices show an increase. Production of rolled iron and steel has increased from a monthly average of 151,859 tons for 1928 to 165,884 tons in the first eleven months of 1929. That of artificial silk rose from 2.9 million tons in the first eleven months of 1928 to 2.9 in the same period of 1929. Failures, however, continue to be numerous; in the second half of 1929 they rose from a minimum of 864 in August to 1,084 in December, exclusive of 146 small failures.

POLAND.—AGRICULTURAL CRISIS—UNEMPLOYMENT—PROTESTED BILLS—FOREIGN TRADE—FINANCE.

(FROM OUR CORRESPONDENT.)

WARSAW, February 7.

THE crisis through which Polish agriculture is at present passing is in the forefront of public discussion. The present conditions are intimately connected with the decline in the prices of agricultural products all over the world, but the position is accentuated by special local complications.

First of all, the decline of the price of rye, which is Poland's most important cereal, is greater than that of other agricultural products. Secondly, the stocks which were carried over from the previous crop were exceptionally heavy. The greatest difficulty, however, is caused by the unsettled credit situation. Since the war Polish agriculture has had no long-term credits worth mentioning. The amount of loans obtained on mortgage by rural estates is to-day only a fraction of that before the war. In consequence, the rural proprietor has been obliged to resort to short-term credits, which were granted to him on usurious terms. It is alleged by people whose knowledge of rural conditions is reliable that the interest on rural loans varies between 2 per cent. and 10 per cent. monthly, and even reaches 15 per cent. As long as prices were high the farmer could, though not without difficulty, make both ends meet. But since prices began to fall it has been impossible for him to pay his debts, and bankruptcy is inevitable. It is reported that properties are exposed to forced sales for debts which amount to one-twentieth and even less of their value. To save himself from bankruptcy, the landowner throws more cereals on the market than in years when prices were high, so that a paradoxical situation has arisen, in which the fall of prices does not check the supply, but, on the contrary, stimulates it. At the same time, the decline of prices has no influence on consumption, which does not increase. This is due to the fact that while farm prices are exceedingly low, retail prices in the towns remain stationary.

The abnormal situation which has been created is illustrated by the following table:—

INDEX OF PRICE OF AGRICULTURAL PRODUCTS.
1927 = 100.

	Jan.	June.	Nov.	Dec.
1. Farm prices ...	87·1	75·2	57·8	57·9
2. Wholesale Prices	89·5	84·3	84·5	80·2
3. Retail prices in Warsaw ...	101·8	109·5	101·2	102·1

While farm prices have declined in comparison with 1927 by 42.1 per cent., retail prices are higher than two years ago. Thus, as the farmer does not succeed by lowering the price of his products in attracting the home consumer, the decline is accentuated. The producer is now beginning to throw not only cereals, but also other articles, such as meat, eggs and butter, on the market, and it is feared that the disastrous situation will be accentuated by a collapse of the prices of these products.

Poland has been trying to improve the situation by a convention with a German concern stabilising the price of rye. The task seemed easy, because the only competitors on the market were Poland and Germany. But during the last fortnight Russia has appeared as a third competitor, so that the plan has been partly thwarted.

Efforts are being made to settle the difficult credit situation. About 300 million zlotys would be necessary to transform the ruinous short-term into long-term credits. Agriculture plays such an important *rôle* in the economic life of Poland that necessarily all other branches of the economic system of the country are affected. The number of unemployed increased from 126,000 at the beginning of December to 186,000 at the end of the year, and at present more than 200,000 are unemployed.

Much light on the difficulties through which Poland is passing is thrown by the great increase of protested bills. During the second half of 1929 they amounted on the average to 115.2 million zlotys monthly, as compared with 56.6 million during the same period of 1926. While in

December, 1928, 6.9 per cent. of the total were protested, the percentage reached 11.7 at the end of last year. Figures published by the Bank of Poland show that the conditions of payment were most unsatisfactory in the textile district of Lodz and in the rural districts.

The crisis has contributed to a diminution in the excess of imports over exports, as may be seen from the figures below (million zlotys):—

(Million zloty's.)

Year.	Imports.	Total Exports.	Balance.
1926	1,541·5	2,246·4	+ 704·9
1927	2,896·5	2,515·1	− 381·4
1928	3,362·2	2,508·0	− 854·2
1929	3,112·6	2,813·4	− 299·2

This development is due to increased exports and smaller imports. The exports of food products have increased by 188 million zlotys, of raw materials and manufactured goods by 108 millions.

The Budget for 1930-31 estimates revenue at 2,943 and expenditure at 2,934.7 million zlotys.

HUNGARY.—HAGUE AGREEMENT—FINANCE—BANK RATE—FOREIGN TRADE—BUSINESS OUTLOOK—TARIFF TRUCE.

(FROM OUR CORRESPONDENT.)

BUDAPEST, February 9.

THE settlement at the Hague has been favourably received. Business men and financiers are at last relieved from the uncertainty brought about by the reopening of the Reparations question, which was thought by Hungarian public opinion to have been settled in 1924, when the League of Nations reconstruction scheme was put into operation. Count Bethlen gave a short account in Parliament of what happened at the Hague, and his exposition, pending the final agreement which is being discussed now in Paris, was endorsed by a great majority. There is little doubt that the settlement at the Hague is advantageous for Hungary, in spite of the fact that she was obliged to agree to pay on accounts other than Reparations an annuity of 13,500,000 gold crowns (£560,000) from 1944 to 1966. On the other hand, Hungary will enjoy complete financial sovereignty after the ratification of the Hague Agreement, and Count Bethlen was authorised by the Great Powers to state in Parliament that they will facilitate Hungary's endeavours to issue a State Loan on their money markets, when conditions will permit its flotation. It should be remembered that Hungary has not contracted any foreign loan since the League Reconstruction Loan of 250,000,000 gold crowns (£10,000,000), issued and subscribed mainly in London and New York in 1924. Another advantage of the Hague Agreement is that the long-protracted dispute of the Hungarian Optants has at last been settled in a fairly satisfactory way. The two funds set up under the Hague scheme are now being discussed in detail under the chairmanship of M. Loucheur in Paris. It is to be hoped that the elimination of the claims and counter-claims arising out of the interpretation of the Trianon Treaty by the Hague Agreement will contribute to a better understanding between Hungary and the States of the Little Entente.

The budget for 1930-31 is in preparation and it is rumoured that considerable economies will be made in expenditure. There is, indeed, an imperative need for the most rigorous economy because the receipts of the Treasury are declining, while expenditure is still growing. In the first five months of the present fiscal year (July-November, 1929), the budget deficit amounted to 28.7 million pengös (£1,000,000) owing to the depressed economic conditions prevailing in the second half of the past year. It seems, however, that the worst period has been passed and it is expected that the budget deficit will be made good in the second half of the fiscal year.

The National Bank reduced its discount rate from 7½ to 7 per cent. on January 25th, and it is confidently expected that it will be further reduced if the favourable trend of the international money market is maintained. Short-term money is abundantly offered at low rates from London and elsewhere, but what Hungary needs at present are not short-term loans but the placement of mortgage bonds, mainly of an agricultural character. Unfortunately, there is little evidence so far of any inflow of long-term loans, but it is hoped that the low rates of money prevailing in London and in New York will permit at no distant date the placement of such bonds. Some of the leading commercial banks have already published their balance sheets and, in spite of the difficult economic conditions of 1929, they are all able to show slightly increased profits, and dividends are maintained.

Foreign trade returns for 1929 have just been published and are satisfactory beyond expectation. The adverse balance of trade which amounted to 370.3 million pengös (£13,300,000) in 1928, was reduced to 22.8 million pengös (£800,000) in 1929. The decrease of the deficit is mainly due to the increase of exports, which rose from 818.7 million pengös to 1,042.2 million pengös (£37,500,000). On the other hand, imports declined from 1,189 millions in 1926 to 1,065 million pengös in 1929. The fall of imports is explained by the scarcity of money, as no foreign funds were available in the second half of 1929 with which to stimulate the import of foreign goods. The increase of exports is mainly due to agricultural commodities, which are responsible for more than four-fifths of the Hungarian export trade. It is significant that Hungary was able to counteract the absence of foreign funds in 1929 with increased merchandise exports and thus to maintain about the same standard of production in the difficult year 1929 as she did in 1927 and in 1928, when production and trade were abundantly stimulated by foreign credits.

The Hague Agreement and the lower money rates have completely changed the gloomy economic and financial outlook so characteristic of the end of the past year. There is, indeed, an optimism which is perhaps somewhat exaggerated on the assumption that foreign money will flow into the country too abundantly. The warning of the wise and much respected President of the National Bank, Dr. Popovics, against the sanguine expectation from foreign borrowing was, therefore, very timely. He emphasised that in contracting of foreign loans the fact should not be overlooked that the rate of interest is still too high and capital investments should be effected from foreign funds only if the returns allow a safe margin for their interest and amortisation. The Prime Minister, Count Bethlen, fully endorsed the view of Dr. Popovics and stated that the Government will not contract any loan or sanction municipal borrowing unless its productivity is secured. The Stock Exchange is firm. Quotations have risen on the whole by 10 to 15 per cent., as against the low level at the end of 1929.

The Hungarian delegation to the Tariff Truce Conference will be headed by Dr. Bud, Minister of Commerce and Economic Affairs, who will endeavour to convince the Geneva Conference that the interests of the small agricultural countries are not sufficiently safeguarded by the aims of the Conference. Dr. Bud will ask for equal treatment, that is to say, for an agricultural tariff truce and for the complete abolition of the veiled prohibitive measures of some European industrial States, such as the unwillingness to conclude veterinary agreements, disadvantageous railway and shipping freights, contingents and all sorts of internal regulations which at the present time hamper the export of cereals and animal products and thus diminish the purchasing power and the share in world trade of the smaller agricultural countries.

CANADA.—BUSINESS—UNEMPLOYMENT—BROKERAGE SCANDALS—WATER-POWER CONFERENCE.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 30th.

BUSINESS is now facing mid-winter conditions, and the quietude which normally prevails at that time has been accentuated this year by the effects of the short Western crop and the stock market débacle. Wholesale trade is fair, but retailers complain of rather dull business, which they have been attempting to stimulate by special sales. The manufacturing industry remains very uneven. The curtailment of operations of the automobile, farm implement and other plants has adversely affected the iron and steel industry, but the boot and shoe and clothing factories remain active. Lumbering operations are being curtailed owing to a lessened demand, but the newsprint industry continues to show a high record of production. In December its output, at 230,000 tons, was less than in October and November, but it was 10.3 per cent. larger than in December, 1928. Building permits issued in December were 3.2 per cent. less in value than in December, 1928, and will probably continue to show a recession, but there is the prospect of a substantial programme of new construction in spring.

The unemployment situation has grown worse in the past fortnight. There have been demonstrations of the unemployed at Vancouver and elsewhere, and at Winnipeg on January 29th representatives of the four Western Provinces held a conference on unemployment. Resolutions were passed insisting that the Federal Government assume some responsibility for the solution of the problem and suggesting the appointment of a Royal Commission. Mr Bracken, the Premier of Manitoba, has joined Premier Brownlee, of Alberta, in demanding help from the Federal Government, but the latter has not committed itself further than to declare that if the provinces unite in asking for help to cope with the unemployment problem they will give the request sympathetic consideration. Railway earnings are still suffering from the grain situation, but the carloading figure for the week ending January 18, at 55,819 cars, showed a gain of 4,070 cars compared with the previous week, although it was 2,373 cars below the figure for the parallel week of 1929. The wheat pools and their allies are understood to be very much disappointed at the course of the wheat market in January, as they expected a sharp upward turn in prices which has not materialised.

The campaign for a thorough clean-up of the unsatisfactory situation which has been disclosed in the mining and oil exchange is proceeding vigorously with the wholehearted commendation of the public. More than half the nine provincial Governments are now conducting investigations by special auditors into the books of brokerage houses, and a substantial number of arrests have been made as the result. On January 30th a group of leading brokers in Toronto had warrants issued against them. The *Vancouver Sun* has demanded that the Federal Government co-operate with the provinces in carrying out a complete purge of what it describes as "an intolerable situation." It holds that the Federal Government is involved because the mails have been used by brokers for fraudulent purposes. It is also understood that wholesale evasion of the Federal tax on transfers of mining shares has been revealed by the investigation of brokers' books, and that the Ministry of National Revenue has already collected a large sum from brokers who had evaded the levy. The Ontario Government has signified its willingness to participate in the conference suggested by the *Vancouver Sun*.

The long-delayed conference between the King Ministry and the provincial administrations of Ontario and Quebec, on the subject of their respective water-power rights, was held at Ottawa on Friday, January 24th. As far as the St. Lawrence waterway was concerned, comparatively little progress was made, and the conferees devoted themselves to a preliminary exploration of the general problem of water powers; each side submitted its views, and it was agreed that they should be allowed some time for the careful study of each other's position. Both the Federal Government and the two provinces are, in due course, to submit a written statement of their views and demands, and thereafter another conference will be held. It is now expected that the negotiations will take some time, as there are many difficulties to be smoothed out. The Federal Government does not wish to embark upon the business of developing or to obstruct the provinces in doing so, but it will not abandon its constitutional claims to at least partial ownership of such water powers on navigable waters. The conference made headway in regard to the power project at the Carillon Falls, which are situated on the Ottawa River between Ottawa and Montreal. Plans for their development were submitted some years ago to the Federal Parliament, but had to be abandoned through opposition from various quarters. However, according to an announcement made by Premier Ferguson at the conclusion of the conference, an agreement was virtually achieved about the development of these water powers. The plan proposed is that it should be jointly undertaken by the Hydro-Electric Commission of Ontario and a private corporation called the National Hydro-Electric Company, which is understood to be controlled by the Shawinigan Company of Montreal. The National Hydro-Electric Company is the holder of power rights there under the terms of an old lease granted in 1911, and it has the support of the provincial administration at Quebec, which declines to imitate the example of Ontario and develop power under a system of public ownership. The plan contemplates a 60-foot head scheme which will secure the development of 200,000 horse power, to be equally divided between the two provinces, Quebec's share going to the National Hydro-Electric Company and Ontario's portion to the public-owned Commission. The rights of the Federal Government in regard to navigation are to be protected by canal works, and the Federal Government also expects to derive a revenue of $150,000 per annum from the project. On this point some objections are raised by Ontario, which thinks that, if the Federal Government's navigation rights are protected, it should not claim any revenue. As soon as a compromise is achieved the work will be proceeded with. One important aspect of this arrangement is that, if the Carillon scheme is proceeded with immediately, it will meet most of the immediate needs of Eastern Ontario in regard to power and will lessen the demand for the immediate construction of the St. Lawrence waterway and the ancillary power projects. At the conclusion of the conference the Prime Minister said that, for the time being, there could be no further negotiations or communications with the United States about the St. Lawrence waterway, and Mr Ferguson, the Premier of Ontario, declared that he was still in favour of an all-Canadian scheme as far as it was humanly possible.

Preparations for the opening of the session of the Federal Parliament on February 20th are going steadily ahead in Ottawa. It is still uncertain whether the Government will undertake any comprehensive measure of tariff revision during the approaching session, but it has now available a large amount of data compiled by the Tariff Advisory Board. The latter completed the lengthy hearings upon the iron and steel schedules last week, and is now engaged in framing a report for the Government. There is known to be a sharp division of opinion in the Cabinet upon the fiscal question.

JAPAN.—GOLD STANDARD—DEPRESSION—FOREIGN TRADE—BALANCE OF PAYMENTS—BANKS AMALGAMATIONS.

(FROM OUR CORRESPONDENT.)

TOKYO, January 13.

JAPAN returned to the effective gold standard on January 11th. During the seven weeks which have elapsed since notice of this measure was given, business experienced exceptional dullness. Dealings in the stock market were extremely limited. Many branches of our staple industries curtailed operations or increased the rate of curtailment. Foreign trade was not very active. The December trade returns show that imports and exports were 21 per cent. and 8 per cent. respectively lower than in the corresponding month of 1928. Imports in the first ten days of this month, as compared with the same period of January last year, fell off by 38 per cent., and exports by 24 per cent. The downward movement of commodity prices was rapid. The Bank of Japan's wholesale index number registered a further substantial drop of 2.9 per cent. during December. As business was so slack, the needs of year-end settlements put no marked pressure upon the money market. The Bank return shows that both the note issue and advances at the close of last year were 140 and 186 million yen lower than those of a year ago, and after the turn of the year both of them rapidly contracted. The immediate business outlook after the stabilisation of the currency is far from cheerful. Revival of trade will be discouraged by the setback of American prosperity, the recent sharp fall of silver prices, and a real overvaluation of the yen on the

exchange markets. A possible dissolution of the Diet, which will meet next week after the New Year recess, may also prove another factor adverse to the recovery of business.

The foreign trade figures for last year are, on the whole, very satisfactory. The 1929 returns show that, as compared with the preceding year, imports at 2,216,157,000 yen rose by 19,847,000 yen, and exports at 2,148,551,000 yen advanced by 176,596,000 yen, the import excess over exports being 67,606,000 yen, as against 224,360,000 yen. Large individual increases in imports were recorded by machinery, raw cotton, ammonium sulphate, oil-cake, and iron and steel, while heavy declines were recorded by sugar, woollen and worsted yarns and manufacture, timber, rice, beans, and raw wool. On the export side cotton manufactures, raw silk, and silk fabrics advanced substantially, while sugar alone on the whole list recorded an appreciable fall. But the trade with China was slightly disappointing. Japan's imports from China during 1929 amounted to 365,616,000 yen, and exports to her were 525,886,000 yen, showing an export balance of 160,270,000 yen. As compared with the preceding year, both imports and exports show decreases of 10.9 millions and 4.9 millions respectively, while the favourable balance is 6 millions higher. Korea's trade returns for 1929 disclose that imports totalled 107,767,000 yen, and exports 35,773,000 yen, showing an adverse balance of 71,994,000 yen, as against 86,002,000 yen in 1928. Formosa's imports during last year amounted to 64,541,000 yen, and exports to 33,188,000 yen, an excess of imports over exports totalling 31,353,000 yen, as against 24,438,000 yen in the preceding year. The adverse balance on the visible trade figures for the whole year 1929 of Japan, including Korea and Formosa, thus amounted in the aggregate to 170.9 million yen, as compared with 334.8 millions in 1928 and 293.6 millions in 1927.

According to the tentative estimate of the balance of payments in 1928, lately published by the Treasury, Japan owed 162.6 million yen, as against 141.3 millions in 1927, in her international transactions. While the import excess of merchandise and net Government payments made abroad totalled 371.2 million yen, or 29.7 millions higher than in 1927, the official estimate of invisible exports was put at 208.6 millions, or only 8.2 millions higher. Invisible items, on balance, are set out below in comparison with the preceding year:—

THE OFFICIAL CALCULATION OF INTERNATIONAL PAYMENTS IN 1927 AND 1928.

(In Million yen.)

	1927.	1928.
Excess of imports of merchandise including that of Korea and Formosa	289·0	333·0
Net Government's payment made abroad	52·5	38·2
Total	341·5	371·2
Net income from overseas investments and business and emigrants' remittance	38·6	37·0
Net national shipping income	132·4	138·3
Foreign tourists' expenditure, &c.	17·0	15·2
Others	12·2	18·1
Total	200·2	208·6
Excess of expenditure over income	141·3	162·6

The official calculation of invisible exports for last year is not yet available. But, according to the private estimate of the chairman of the Yokohama Specie Bank, the 1929 merchandise excess of imports of 170.9 million yen was reduced to 40.4 millions by net invisible items, Japan's income from international transactions, including capital movements, amounting to 443 millions and expenditure to 302.5 millions. The excess of expenditure over income, however, was more than offset by errors and omissions, and the balance might even show a definite movement in her credit, in the chairman's opinion.

The bank amalgamation movement is going on. During last year the number of ordinary commercial banks was reduced by 95 and that of savings banks by 2 by way of merger, according to the statistics of the Treasury. Fifty-one more banks ceased to exist owing to bankruptcy, withdrawal of licences and other causes. The total number of Japanese banks at the end of 1929 was 1,006, as against 1,151 a year ago.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(*It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.*)

Central Banks. By C. H. Kisch and W. A. Elkin. With a Foreword by the Rt. Hon. Montagu C. Norman. Third edition. (London) Macmillan and Company, St. Martin's Street. 18s. net.

This third edition of one of the most useful recent books on banking has been brought thoroughly up to date and includes details of the important changes in the monetary legislation of the United Kingdom, France, and Italy. The number of central banks whose constitutions are summarised has been increased to thirty-two.

The Meaning of Money. By Hartley Withers. Fifth edition. (London) John Murray. Albemarle Street. 6s. net.

This text book, which has smoothed the path of many a student of monetary theory, has now been revised in accordance with the radical changes in the monetary situation which have taken place since it was first published.

Imperial Economic Unity. By Lord Melchett. (London) George G. Harrap and Company, Ltd., 39-41, Parker Street. 2s. 6d. net.

The first six chapters deal generally with Customs barriers, economic grouping and Imperial Preference. Then follow nine chapters, each dealing with a separate group of commodities; and two concluding chapters, which are principally devoted to the question of markets for British manufacturers.

The Liberal Year Book for 1930. (London) The Liberal Publication Department, 42, Parliament Street. 2s. net.

Includes a record of post-war General Elections; an analysis of the last General Election and of recent bye-elections; articles on parliamentary procedure; election law; State pensions; world fleets; and statistics of major political interest.

The Newspaper of To-Morrow. By Harold Herd. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. net.

A seventy-page booklet on trends in modern journalism.

The Theatre, Music Hall and Cinema Companies Blue Book, 1929-30. (London) Redway, Mann and Company, Ltd., 14, Clifford Street, New Bond Street. 2s. net.

A list of public amusement companies with the usual financial information about each.

The Stock Exchange.

THE COST OF BOOM FINANCE.

In a recent series of articles we have investigated the position of numerous companies promoted during the new issue boom of 1928. Safety glass, films, gramophones, artificial silk—group after group has revealed the same depressing picture of promises unfulfilled, difficulties under-estimated, and capital lost. The majority of the companies in question have already ceased to claim any measure of public attention. The Stock Exchange is concerned not with the dead but with the living, while the unfortunate subscribers have probably, by this time, written off the greater part of their holdings. Such a course of events, unfortunately, is by no means unprecedented. Every boom in the annals of the Stock Exchange has had its aftermath, and every resulting change in the law for the better protection of the investor has been followed in due course, by a fresh period of activity, a newly extemporised promotion technique, and a further series of losses. It may well be asked whether so obviously wasteful a process is inevitable, or whether its constant recurrence argues some constitutional defect in London's new issue machinery.

Some idea of the loss falling on the investor in recent "bubble" concerns may be obtained from an examination of the following table, in which we summarise the results of our calculations as regards fifty-one new companies formed in 1928:—

Industry.	Number of New Companies examined.	Par Value of Shares.	Market value at Highest Prices of 1929.	Market value after Slump of 1929.	Total Loss suffered by Shareholders (Col. 3 *less* Col. 5).
(1)	(2)	(3) £	(4) £	(5) £	(6) £
Safety glass.....	7	1,192,240	1,905,384	376,716	815,524
Films	12	2,322,200	2,265,607	613,255	1,708,945
Gramophones ...	23	3,965,000	5,246,614	1,826,000	2,139,000
Artificial silk ...	9	8,593,209	5,677,283	1,956,504	6,636,705
Total.....	51	16,072,649	15,094,888	4,772,475	11,300,174

In these four groups alone some £11,000,000 of capital has been lost. Some of the companies, it is true, may "make good" in the future, but others will inevitably be forced into liquidation. Shareholders would, therefore, be unwise to count on any significant future appreciation, on balance, in the capital value of their investments. Subscribers to the 51 issues shown in our table have thus lost, on the average, approximately 14s. 1d. of every £1 they invested. Our computations, however, cover but a small part of the field of speculative promotion. The reader may make his own additions and adjustments in respect of the host of patent companies, the "parent and offspring" flotations, the "Hatry" enterprises, and the groups of concerns associated with the names of brilliant but unfortunate financiers. The investor's total losses have evidently run into many millions of pounds.

It may be argued that all securities, new and old, suffered during last year's slump. But the decline in "old" company shares was on so strikingly smaller a scale than in "new" shares that the two will not bear comparison. In the table at the bottom of this page we contrast the fall which occurred last year in representative securities which have been in existence for at least six years, with the decline in the value of the shares included in our previous table.

"Established" British securities, on the average, lost rather more than a fifth of their value (measured from the "peak") during last year's slump. Values in the five groups which made the worst showing in the *Investors' Chronicle* index depreciated by more than a third of their "peak" figure. Their losses, however, were moderate indeed by comparison with the 65 per cent. to 80 per cent. depreciation in the shares of the "new" companies. We may add that our original selection was entirely unbiassed, every new prospectus issue falling within each industrial category being automatically included in our table.

"Established" company shares, in fact, largely remained outside the scope of the boom of 1926 to 1928, British experience in this respect differing significantly from that of America, where record industrial prosperity and profits acted as a stimulus to rising industrial share values, which was lacking in Great Britain. The following table offers an illuminating contrast between the experience of the two countries in this respect, the indices chosen affording as close a comparison as is possible:—

MOVEMENTS IN ORDINARY SHARES OF ESTABLISHED COMPANIES.

	America. (Standard Statistics Index: "337 Industrials.")	Great Britain. (*Investors' Chronicle* Index: "All Business.")
Year 1926, Average	100	100
"Peak" of 1929	218	127
End of 1929	151	97

"Established" industrial shares in America more than doubled in value between 1926 and the peak of 1929, and, even after the slump, were half as high again as in 1926. "Established" industrials in Great Britain rose by little more than one-fourth between 1926 and 1929, and, after "deflation," were actually, on balance, below the level of 1926. It is difficult to avoid the conclusion that the so-called "boom" in established British industrial stocks was largely non-existent, since the growth of industrial profits was insufficient to provide an economic or even a psychological basis for such a movement. The *terrain* of the boom was, in fact, the new capital market. But if the profits of old-established concerns, of proved earning-power, with a definite status in their respective industries, were insufficient to justify a period of abnormal Stock Exchange activity and capital expansion, how much less promising was the outlook for new and untried con-

public utilities and high-priced railroad stocks. The general run of industrials are not making much progress, apart from certain favoured groups, including tobaccos and electrical manufacturing. It is agreed that the pace of the share market is now faster than the business improvement warrants, but the autumn knockdown was more severe than the business recession, and prices are now discounting hopes of a further recovery in trade, which, if not realised, may conceivably bring another setback. Bond prices are firming up, but demand from investors and banks all over the country for new bonds is still lacking, as a result, partly, of the loaded-up position. Gilt-edged bonds, which appeal to savings banks and insurance companies, convertible stocks or other issues with special features are going well, and it is believed that substantial amounts, both of domestic and foreign flotations, are merely awaiting the advent of broader demand. Though copper production during January was somewhat lower stocks are higher, but the full force of the curtailment was not felt until towards the end of the month. Producers are confident of maintaining the metal at 18 cents, and the shares are marking time while the situation is becoming gradually healthier. With the formation of the new grain stabilisation corporation wheat and cotton are steadier, the first effect of which took the Treasury by surprise and hastened on the issue this week of $50,000,000 in Treasury bills, which were intended for issue on the March 15th tax date to supply funds for grain purchase.

INVESTMENT NOTES.

Home Railway Dividends.—Three of the four group railways announced their final dividends for 1929 on Wednesday last. All showed, as expected, an increase on the 1928 figures, that of the London Midland and Scottish being slightly below and those of the Great Western and the Southern slightly above market expectations. The total dividends for the past five years are shown below:—

	Stock.	Dividends. 1925.	1926.	1927.	1928.	1929
		%	%	%	%	%
L.M.S.	Ord.	6	3	4½	3½	4½
G.W.R.	Ord.	7	3	7	5	7½
S.R.	Def.	3½	1½	2	2	2½

The reception of the announcement was a significant commentary on the cautious attitude of the market towards railway stocks. After a slight upward movement, prices receded on Wednesday, finishing lower on balance. It will be seen that present prices are considerably below the highest point touched last year, when railway prospects were by no means as satisfactory as at present. The yields shown approximate to those commonly associated with speculative stocks and are in every case from 2 to 2½ per cent. higher than a year ago:—

	Highest and Lowest Prices. 1927. High.	1927. Low.	1928. High.	1928. Low.	1929. High.	1929. Low.	Present Price.	Yield at Present Price.*

								8 18 7

* After deducting final dividend.

It would seem that the market is taking a pessimistic view as regards the maintenance of earnings in 1930 at last year's level, having regard to the possibility that higher dividends may cause the railway workers to demand, in part at least, the reinstatement of the 2½ per cent. deducted from wages and salaries since August, 1928; that the Coal Bill, if passed, may seriously affect that part of railway revenue which showed the largest increase last year; and that British trade as a whole may not maintain the rate of increase registered in 1929. Making due allowance for these factors, however, last year's results clearly show that railway operation is more efficient and economical than at any time since the "grouping" system was carried into effect. Following on the economies achieved in 1928 and earlier years, the London Midland and Scottish apparently "saved" in various ways something over £1,600,000 last year, the Great Western over £500,000, and the Southern about £250,000. Though 1929 could not by any stretch of imagination be described as an abnormally active year for British trade, two of the four trunk lines came within sight of earning their standard revenue under the Railways Act, and it cannot be supposed that all the economies of rationalisation have been exhausted. Whether the railways are well advised to distribute increased net earnings "up to the hilt" is another matter. The prospect of recurrent fluctuations in dividends has an unsettling effect on the market for railway stocks, and a policy of distributing only such amounts as the companies were confident of maintaining for some years to come, and using any balance to form a reserve for equalising dividends, might be the best policy both for companies and stockholders.

Australian Government Stocks.—Official Announcement.—In an "Investment Note" in the *Economist* of February 1st last we discussed the position of Australian Government stocks. Since that date several noteworthy events have occurred. The Federal Prime Minister, Mr Scullin, and the chairman of the Australian Loan Council, Mr Theodore, issued a joint statement on February 6th, stating that the possibility of Australia postponing its interest payments to overseas investors or failing in any way to meet its national obligations was unthinkable. With regard to the loans maturing this year, which total £118,000,000 (of which nearly £115,000,000 is internal) Mr Scullin and Mr Theodore declared that it had always been the policy of Australia to deal with internal obligations without recourse to external markets, that that policy would be followed during the present year, and that it was the opinion of the Loan Council and of the banks that these operations could and would be satisfactorily carried out without any assistance from the overseas money markets. The final test of the situation, they added, was to be found in the integrity of the Australian people, which had never been questioned, and they ventured to express the opinion that holders of Australian securities in London would be making needless sacrifices by selling their holdings at the prices then ruling. This hint has apparently been taken, for Australian Government stocks made a notable recovery on the publication of this statement. The economic crisis, however, remains, and the difficulty of remitting funds to this country from Australia has had to be met by the shipment of gold. Sir Robert Gibson, the chairman of the Commonwealth Bank, announced on February 7th that the bank was shipping immediately to London £7,000,000 of gold for the purpose of building up reserves to meet overseas obligations. This shipment brings the total gold shipped from Australia since July to over £17,000,000. Sir Robert Gibson pointed out that these movements were designed, not to provide credit for further importations, but solely to meet accrued or accruing obligations. "That the financial position overseas is difficult, indeed serious," he said, "the board has no desire to minimise. . . . An unfortunate set of circumstances has synchronised so as suddenly to create a very serious embarrassment. . . . The Bank Board, however, has no hestitation in saying that, despite all difficulties, Australia is sound at the kernel and will surmount her difficulties and meet her obligations." Another event of importance has been the decision of the Loan Council further to reduce the loan programme for the present year, which had already been cut from the average of £43,000,000 down to £30,000,000. The Government is to report to the Loan Council the maximum saving it can effect in the programme for new works, and the position is to be reviewed again this month. These events may be taken as evidence that Australia is doing her best to protect the interests of her creditors, and Australian stocks will emerge from the present depression with, we trust, enhanced reputation and security.

Boot and Shoe Results.—British boot and shoe company shares are, as a rule, solidly held, earnings and dividends showing relatively narrow annual fluctuations. The experience of the last twelve months, however, has not been entirely true to type in this respect. Home conditions showed no great change, but export trade did not maintain the advance recorded in 1928, shipments of boots and shoes showing a drop of 7 per cent. in number and 5 per cent. in value. The following table contrasts the past two years' results of eight representative concerns:—

	1929. Net Profits.	1929. Ord. Div.	1929. Net Profits.	1929. Ord. Div.	Ordinary Shares (£1, unless otherwise stated). Present Price.	Yield %.
	£	%	£	%	£	£ s. d.
Freeman, Hardy & Willis.*	240,624	20 P.O. 20 D.O.	270,865	20 P.O. 55 D.O.	†	...
Lennards	38,940	15	42,568	12½	1⅝	6 11 1½
Lotus	69,254	6½	43,922	5	14/9	6 15 7
Public Benefit Boot	33,997	12½	31,313	...	†	...
Randall (H. E.)	37,558	15	35,365	15	42/9	7 0 4
Sears (J.) & Co.	216,003	22½	314,580	22½	1⅛§	3 16 6‡
Stead and Simpson	55,402	10	50,699	10	†	...
Weber (L. and J.) and Phillips	32,835	15	19,330	12½	⅛‖	11 2 2½

† Not listed. * Now controlled by J. Sears and Co. ‡ Free of income tax. § 5s. shares. ‖ 10s. shares.

Five of the eight companies recorded a decline in profits last year, and four reduced their dividends. In at least two cases, however, this reduction followed an increase of capital. The Public Benefit Boot Company, which passed its deferred dividend, wrote off as much as £38,194 from the value of its stocks, a policy recommended by the new members of the board, who represent holders of 98 per cent. of the deferred shares. The two largest companies, however, substantially increased their earnings. Over 99 per cent. of the issued ordinary capital of Freeman, Hardy and Willis was acquired by J. Sears and Company in December, 1928, the profits of the two businesses last year exceeding the figures for any of the years set out in the prospectus published last February. The turnover of J. Sears had been increasing for some time before the Freeman, Hardy acquisition and the operation would seem to have been eminently profitable. The earnings of many British shoe companies reflect retail selling as well as manufacturing conditions, numerous concerns owning extensive "chain" shops. Competition at home and abroad is, on the whole, increasing in intensity and although the majority of companies in the industry have a consistent record of steady profits and conservative finance for many years past, the question of further amalgamations may assume increasing importance in the near future.

The Volume of Stock Exchange Bank Clearings.—There is no precise means of ascertaining the volume of business passing through the London Stock Exchange, but an interesting light on this matter is afforded by the data given in the annual statement of the London Bankers' Clearing House. The total amount of bills, cheques, etc., paid at the Clearing House during 1929, excluding Stock Exchange settlement days, showed an increase of 1.7 per cent. over the 1928 figure, but the increase for settlement days in 1929 as compared with 1928 amounted to only 0.2 per cent. This result apparently reflects an increase in non-Stock Exchange clearings and a decline in Stock Exchange clearings. This conclusion is confirmed by comparison of the 1929 figures with those for 1928 and 1927. The statement gives the average clearing on settlement days and the total clearing on these days for each year. By deducting the latter from the grand total for the year, and dividing by the number of non-settlement working days (counting Saturdays as half-days), the following results are obtained:—

(000's omitted.)	1927. £	1928. £	1929. £
Average for Stock Exchange settling days	165,850	184,473	184,944
Average for non-settling days	139,149	147,322	157,424
Increase on settling days:			
Amount	26,701	37,151	27,520
Per cent.	*19·2*	*25·2*	*17·5*

The impressive dimensions of the total clearing for which, on this showing, Stock Exchange business is

OTIS & CO.
Established 1899

Underwriters of Stocks and Bonds

Cleveland New York
Chicago Philadelphia

responsible, would appear almost certainly to be considerably below the true figure, for the amount of Stock Exchange clearings on other than settlement days is of large proportions. In the ordinary way all transactions in the gilt-edged market are done for cash, and consequently little more than a normal day's turnover falls to be settled on account days. "Differences" between members, again, are usually collected on the Wednesday preceding the account day; while on the Friday and Monday following the settlement late cheques come in from clients. The latter subsequently pay into their bankers the cheques they have received for stock sold, and an appreciable amount of delayed stock is delivered. In considering the relation between the volume of clearings in connection with Stock Exchange business, and the actual volume of that business, it should also be remembered that (1) the figures include transactions on the money market in connection with the settlement; but (2) do not show transactions closed within the account or "contangoed"; while (3) a client's purchase or sale will often result in the passing of two cheques—one between broker and client and one between broker and jobber. Against the last qualification may be set the fact that in many cases the cheque between broker and client represents only the balance of more than one deal, while the broker will usually read through on a "Ticket" to another broker for the delivery or taking up of stock. Despite all these qualifications the increased turnover of the Clearing House on account days is of more than passing interest, and if the Clearing House could see its way to reveal the dimensions of the total clearings on *each* settlement day, at the end of the week concerned, the figures would be found useful in many respects.

Canadian Pacific Railway.—The rumour, many times denied, that the stock of the Canadian Pacific Railway would be split has at last been confirmed. If the Canadian Parliament grants the requisite authority the ordinary capital of the company, which consists of 3,300,000 shares of $100, including the issue of 300,000 shares in April last, is to be divided into 13,200,000 shares of $25 each. Mr E. W. Beatty, president of the company, has explained that this action is dictated by a desire to place the shares within the reach of investors of moderate means and thus increase the number of shareholders, particularly in Canada. The immediate effect of the announcement was to cause something closely resembling a gamble in the shares, the "bears" being heavily routed. On Wall Street the shares were hoisted from 201 to 224¼ and in London from 206½ to 232½, despite the fact that President Beatty had also declared that no change in the 10 per cent. rate of dividend was contemplated. The shares have now relapsed to 221½ in London. The range of prices in the latter centre in 1928 and 1929 has been as follows:—

1928		1929	
Low.	High.	Low	High.
205	254	194½	273

The earnings of the company for 1929 will probably show a considerable decline as compared with those of 1928 on account of some reduction in rates, the short crops and the withholding of wheat from the market by the Canadian Wheat Pool. Estimates of 1929 earnings vary from under $10 per share to $12 per share, against $15 in 1928. If it should prove that the company has only barely earned the 10 per cent. dividends it has paid on its ordinary stock for a long period of years the market may take a more sober view of the value of the new $25 shares.

Metropolitan Railway.—Results for 1929 reveal a considerable improvement on the previous twelve months' figures. Working receipts increased by £20,504 and working expenses declined by £44,906, the excess of receipts over expenditure being £552,952, against £491,937 for 1928. Gross revenue has risen from £826,695 to £890,770, while net revenue, after deducting all fixed charges, is £686,860, as compared with £619,656. This increase has made possible the payment of a final dividend on the ordinary capital of 2¾ per cent., as against 2¼ per cent., making 4 per cent. for the year and absorbing £303,147.

Year ended December 31st.	1927. £	1928. £	1929. £
Working receipts	1,826,369	1,606,966	1,627,470

Carried forward	26,464	23,888	32,017

* Including £16,318 sundry special additions.
† Including £1,013 sundry special additions.

A sum of £10,000 has again been placed to reserve account, and £32,017 is carried forward, against £23,888 brought in. According to the announcement of the surplus lands committee, the interim dividend on the surplus lands stock was 1½ per cent., which, with a final dividend of 2⅜ per cent., makes 3⅞ per cent. for the year, compared with 3¾ per cent. for 1928, and absorbs £102,335 against £99,034.

Harrods.—The preliminary dividend announcement of this great departmental store reveals a further increase in net profits, the amount of £834,188 for the twelve months ended January 31st last exceeding by £59,032 the earnings for 1928, which, in turn, showed an improvement of £53,405 on the results for the previous year. This year's profit includes the final dividend of £44,865 for 1928-29 on the shares of D. H. Evans and Company, which were acquired by Harrods in 1928. The directors recommend the usual final dividend on ordinary shares of 15 per cent., making, with the interim dividend of 5 per cent. already paid, a total for the year of 20 per cent., less tax, the same rate as for the past two years. Earnings were equivalent to 24.1 per cent.

Year Ends January 31st.

	1928.	1929.	1930.

* Information not yet available.

The special reserve account is being increased by £50,000, as against £25,000 last year, while the sum of £149,699 is carried forward, compared with £116,033 brought in. The company has a remarkable record of prosperity, and boasts a steady increase in net earnings, dividends earned and dividends paid, since 1922. Its subsidiaries continue to make steady progress, the preliminary statement of Dickins and Jones, Ltd., 95 per cent. of whose ordinary capital is held by Harrods, showing a profit of £129,367, as against £125,632 last year. At the present price of 3 9/16 the ordinary £1 shares of Harrods give a yield of £5 17s. per cent., allowing for a final dividend of 3s. per share.

Maple's.—The net profits of this large furnishing business show a drop of £52,318 at £274,741, following the previous year's fall of £27,011. The ordinary shares have earned only 11.9 per cent., compared with 14.8 per cent. in 1928 and 16.3 per cent. in 1927, and the dividend, reduced from 15 per cent. to 12½ per cent., is not fully covered:—

Year ends December 31st.	1927. £	1928. £	1929. £
Net profit	354,070	327,059	274,741
Brought forward	60,796	61,783	48,935

Other allocations	5,000	5,000	5,000
Carried forward	61,783	48,935	33,676

As usual, £5,000 has been placed to Staff Benevolent Fund, but there has been no allocation to reserves, and the amount of £33,676 carried forward is less by £15,259 than the amount brought in. As a result of the rebuilding of the Tottenham Court Road frontage, a re-valuation of the company's freehold and leasehold properties became necessary, and the resulting appreciation has been utilised in writing down the goodwill of the company from an unstated amount to £50,000. Investments stand at £91,931, as against £252,941 this time last year, while cash is up from £166,108 to £233,963. The balance sheet remains satisfactorily liquid, available assets covering current liabilities over six times. At the present price of 1 25/32 the £1 ordinary shares give a yield of £7 5s. 6d., less tax, allowing for a final dividend of 10 per cent.

Imperial Tobacco Company.—The dividend of 23 per cent., free of tax, declared by the Imperial Tobacco Company for the year to October 31, 1929, on its increased capital, exceeded market expectations. The accounts reveal an increase in net profits of £367,392, following last year's improvement of £371,909. The ordinary capital has been increased by a 25 per cent. bonus of over seven and a half millions, with a consequent decrease in the percentage earnings from 29.2 per cent. to 24.3 per cent. A distribution on ordinary shares of 23 per cent., free of tax, absorbs £8,619,594, as against last year's payment of 26 per cent., absorbing £7,787,441. The following table sets out the results for the past three years:—

Year ends October 31.	1927. £	1928. £	'1929. £
Net profits	9,227,797	9,599,706	9,967,098

Carried forward	959,042	1,169,098	1,176,468

* Tax free. † Plus capital bonus of 25 per cent.

A sum of £487,925 is placed to general reserve account, following previous allocations of £500,000 each year. As foreshadowed by the directors when the bonus shares were issued, no allocation has been made this year to Pensions Fund, a Contributory Pensions Fund having been instituted last May, the setting up of which is reflected in the balance sheet by the elimination of the item "Provision for Pensions," etc., which at October 31, 1928, amounted to £3,141,015, and by a reduction in Government and other securities from £12,939,952 to £9,862,441. At the present price of 4 23/32, the ordinary £1 shares give a yield of £4 16s. 9d., free of tax, allowing for the final dividend of 16s.

Two Investment Trusts: Guardian and British Investment.—Two of the older investment trusts have published their reports within the last ten days—the Guardian and the British Investment, which were formed as long ago as 1888 and 1889 respectively. Both show the usual increase in earnings and maintain their dividends at the 1928 rate. The Guardian applies £15,000 in writing down its securities, which stand in its balance sheet at £1,796,201. A complete list of its holdings is given in the report, but no mention is made of their present market value. The British Investment Trust does not find it necessary to apply anything to reserve as the valuation of its investments at market prices on January 1, 1930, showed an amount of £900,000 in excess of the book value of £6,713,191. An analysis of the results of these two companies over the past three years is given in the following statement:—

Company.		Income after Tax.	Avail. for Ord.	Per cent. Earned. (Subject	Per cent. Paid. to tax.)	Applied to Reserve.	Carried Forward.
Guardian— Ord. cap., £500,000 (Jan. 20)	1928	108,886	57,069	14·2	11·0	12,000	15,791
	1929	111,038	59,122	14·7	11·0	14,000	16,913
	1930	110,329	59,882	14·9	11·0	15,000	17,795
British Investment— Def. Ord. Cap., £1,000,000 (Jan. 1).	1928	341,497	193,707	26·9*	21	...	107,557
	1929	342,261	194,492	27·0*	21	...	150,849
	1930	367,545	209,556	26·2	21	...	192,405

* On £900,000 del. ord. capital.

This table reveals the useful margin between earnings and dividends paid. Debenture interest and preference dividends are covered 4 and 2.4 times respectively in the case of the Guardian and 4.4 and 2.5 times respectively in the case of the British Investment. The balance sheet of the Guardian shows that the debentures are covered by net assets 2.4 times and the preference stock 1.4 times, while that of British Investment shows that the debenture stock is covered 2.8 times and preference stock 1.7 times. The ordinary stock of the Guardian is valued in the market at 210 to yield 5.2 per cent. on

For quick starting use
WINTER SHELL
Specially blended for cold weather
Shell

dividends and 7.1 per cent. on earnings, and the deferred stock of the British Investment at 422 to yield 5.0 per cent. on dividends and 6.2 per cent. on earnings.

Bovril.—The report for 1929 shows that the company has experienced another "record" year. Trading profit was £20,689 greater at £603,197, and £19,430 more was received in dividends on investments. Administration charges, however, were £16,056 heavier and £11,525 more was paid on debentures and notes, net earnings being £12,295 greater at £329,820. The same rates of dividends were paid as for 1928, and after increasing the reserve fund by £60,000 to £1,220,000, £4,820 was added to the amount carried forward. The reserve fund and undivided profits are still £1,118,368 less than the intangible assets, goodwill and trade marks, though the company has doubtless large inner reserves:—

Years ending December 31st.

	1927.	1928.	1929.
	£	£	£

Increase or decrease in carry-forward	− 7,975	− 7,475	+ 4,820

Properties, goodwill and trade marks, shares and debentures in subsidiary companies and investments in associated companies are shown this year as separate items, the total being £190,735 greater at £3,223,518. Stocks are £183,620 lower at £1,772,003, and debtors show a decrease of £30,895 at £896,830. Creditors have increased by £54,902 to £595,556. The deferred shares, at their present price of 37s. 1½d., yield £7 per cent.

Greyhound Racing Profits.—The boom of 1927 in greyhound racing shares is now no more than a memory. The hopelessly inflated concerns having been largely eliminated, with the inevitable scandals, the "industry" has settled down to comparatively stable and humdrum operations, and those companies whose tracks are situated in large centres of working-class population, and whose initial finance was reasonably conservative, are earning moderate profits. We show below the results of two companies which have recently published their reports for 1929:—

	Year.	Gross Profit.	Expenses, &c., written off.	Preference Dividend.	Ordinary Dividend. Amount.	Ordinary Dividend. Rate.	Carried Forward.
		£	£	£	£	%	£
Greyhound Racing Assn. Trust	1928	68,809	1,188	64,354	...	...	3,267
	1929	89,819	2,301	69,693	19,894	10	1,199
Wembley Stadium	1928	143,945	139,635	...	...	...	4,310
	1929	129,888	103,924	26,287*	...	...	3,987

* Preference dividend paid for period from August 30, 1927, to August 31, 1929, at the rate of 7½ per cent. per annum.

The Greyhound Racing Association Trust now holds 98 per cent. of the issued capital of the Greyhound Racing Association, which operates tracks at the White City, Harringay, Edinburgh, Birmingham and Leeds. These were originally held on short leases, but the company has recently purchased the freehold of the Harringay track and is in course of acquiring that of the Birmingham track. Public attendances in 1929 showed an increase of over 10 per cent. The Trust is dividing its profits up to the hilt, the payment of 8.8 per cent. on the participating preference shares, and 10 per cent. on the ordinary shares, for 1929 being decidedly generous, since preliminary expenses and underwriting commission still stand at £57,112 in the balance sheet, and the company has no reserves. The £1 preference shares, which were quoted last year as low as 2s. 4½d. now stand at 9s. 3d., and the 1s. ordinary shares, after being dealt in at 1½d., stand at 8d., the respective yields being £18 16s. and £15 per cent. These high figures should be read in conjunction with last year's dividend policy, and the possibility that the company may have to incur further expenditure for the acquisition of the freeholds of its remaining leasehold properties. The Wembley Stadium Company, whose track is situated in the grounds of the former British Empire Exhibition, held 131 greyhound meetings and 34 "Speedway" meetings last year, the attendance apparently having risen, since approximately as many persons were present during the 12 as during the previous 16½ months. The company has written off all but £4,000 of its preliminary and issue expenses and is steadily redeeming its debenture stock. Arrears of preference dividend have now been paid off down to August 31, 1929, and if expenditure shows a further reduction, and attendances are maintained, the shilling ordinary shareholders may be within sight of a dividend next year. It is too early as yet confidently to declare that greyhound racing has ceased to be a craze and has become a permanent "industry." Recent experience on the more popular tracks, however, goes some way to suggest that a more or less regular *clientèle* has acquired the habit of attendance. Another year's experience may enable the stock market to assign the shares a definite status among speculative market counters.

Associated Anglo-Atlantic Winding-up.—The announcement that, in view of the severe depression in its investments, the Associated Anglo-Atlantic Corporation, Ltd., has presented a petition for winding-up, has been received with resignation, but not with surprise, in the City. The company was the outcome of Mr H. S. Horne's conviction that certain British industries might be raised from depression to prosperity by new and expert managements, who would introduce "new and revolutionary ideas," with influential financial support. Mr Horne's schemes, however, were prejudicially affected by last year's depression on the Stock Exchange, and his resignation, last November, from one of the largest of his concerns, British Cement Products Finance Company, was followed by the revelation that the company had suffered a loss of £2,018,578. The Associated Anglo-Atlantic was the central financing agency for the "Horne" group. It was inaugurated six years ago with a capital of £400,000, subscribed privately, the shares being introduced to the Stock Exchange in 1927, when the issued capital was brought up to £1,000,000 in 900,000 ordinary shares of £1 and 2,000,000 1s. deferred shares. For 1927, 10 per cent. was paid on both classes, while for 1928, 15 per cent. and 55 per cent. was paid, respectively. The company's holdings (including, *inter alia*, shares in Ship Canal Cement, British Cement Products, Anglo-Newfoundland Devt. Company, Carmelite Trust, Anglo-Foreign Newspapers, British Columbia Power Corporation and the British Oil Shipping Company) were stated by Mr Horne, in the meeting last March, to be valued at prices materially below their worth—a pronouncement on which this week's development affords a gloomy commentary. It would seem that only a thorough examination, by a competent outside authority, of the books of *all* the "Horne" companies can be expected to reveal the actual position of the group at the present moment.

National Mining.—This enterprise, brought out under very influential auspices—writes our mining correspondent—has proved disappointing in the extreme. In little more than three years from the date of registration (October, 1919) the shares were cut down from £1 to 8s., a loss of some £700,000 requiring to be extinguished. In all, three dividends totalling 2s. 1½d. have been distributed—6d. of this amount representing an interim payment on account of 1928. Much to the disappointment of the shareholders—whose hopes had naturally been whetted—there was no final. Of the £159,200 profit shown by the accounts, £90,500 fell to be written off

investments. For last year an operating loss of £12,800 was supplemented by £82,200 depreciation. To meet this position the profit and loss credit balance of £621,950 is appropriated, together with the remaining £50,000 of the reserve account, leaving a credit of £20,000 to go forward. Securities with market quotations figure at their book value of £316,500; other investments, including advances for subsidiary companies, at £1,002,900. The auditors report themselves unable to determine the value placed on the investments or the advances. The directors intimate that further depreciation may have to be provided for. Against cash and debtors totalling some £28,000, there are loans and creditors for £124,500. Obviously, further resources will have to be provided if the company is to resume operations, or even to continue the procedure lately followed of merely "nursing" the assets. The latter include a substantial participation in Roumanian oil undertakings, also shares in gold, copper and tin mines. In most cases the profit-earning stage is still some way ahead. Nothing is stated in the report as to the Chemical and Metallurgical Corporation—a concern in whose inception the National Mining took a very prominent part, and whose shares have also descended to a low price.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British and Hungarian Bank, Gas Light and Coke Company, South Metropolitan Gas, Wandsworth Wimbledon and Epsom District Gas, Timothy Whites (1928), and San Francisco Mines of Mexico. At the Gas Light and Coke meeting the chairman said that an order for coke ovens had been placed, and the plant would carbonise 1,200 tons of coal per day. The Earl of Denbigh, presiding at the annual meeting of San Francisco Mines, said that, in view of the continued shortage of rain, hydro-electric energy could obviously not be depended upon for the further expansion of the business, and the company was considering whether it would be better to contract for a supplementary supply of power, or to add to its own thermal plant.

CAPITAL ISSUES.

Last week's fall in Bank rate has come opportunely for long-term borrowers, and though conditions remain unfavourable for any but the highest class of issue, the reception of the week's offerings has been, on the whole, of encouraging omen. *The India Government Loan* terms were regarded as decidedly generous to subscribers, the flat yield being approximately 6½ per cent. on a Trustee security. The decision to issue a short-dated stock probably reflects the Indian Government's view that in two or three years' time a further issue may be placed on more advantageous terms. The loan was heavily "stagged," large applicants receiving about 14½ per cent. and applicants for £100 or under, allotment in full. The *Hastings Loan* which offered subscribers a flat yield of £5 1s. per cent. was also a Trustee stock, offered by a borrower of deservedly high reputation. The issue was subscribed about one-and-a-half times over, the larger applicants receiving about 70 per cent. The *British Automatic Company's* debenture stock offered a flat yield of £8 8s. 5d. per cent., this unusually high figure being an echo of the "Hatry" crisis, the company, though an old-established profit-earning concern, having been associated early last year with a unit of the "Hatry" group. This association has now been terminated without, it is understood, having prejudiced the company's earning position.

† Taken at price of 84½.

Government of India.—Issue of £6,000,000 6 per cent. Bonds at £99 per cent. in denominations of £50, £100, £200, £500, £1,000 and £5,000. The issue is a trustee security, made under the provisions of the East India Loans Act, 1923, and will be repayable at par on June 15, 1932, but the Secretary of State for India reserves to himself the right, on giving three months' notice, to extend the date of payment to June 15, 1933, in which case redemption will take place at 101.

Hastings Corporation.—Issue of £750,000 5 per cent. redeemable stock, 1947-1967, at £99 per cent. The stock will be repaid at par on April 1, 1967, but the corporation will have the option of redeeming the same at par at any time on or after April 1, 1947, on giving three months' notice. The stock and the interest thereon are secured on all the rates and revenues of the corporation. The rateable value of the County Borough of Hastings is £645,878, and a rate of 1d. in the £ produces £2,575. Trustees are authorised to invest in this stock.

Aldershot Gas, Water and District Lighting Company.—Issue by tender of £100,000 5 per cent. perpetual debenture stock (or such amount as will realise the net sum of £92,470). Minimum price, £93 per £100. The net revenue of the company for the year ended December 31, 1929, was £60,428, covering interest on the loan capital, including the present issue, 3.1 times.

British Automatic Company.—Issue of £250,000 8 per cent. debenture stock at 95 per cent., repayable at par on July 1, 1940. The stock will be secured by a floating charge on the undertaking and assets of the company. Power is reserved to redeem the stock, or any part thereof, by drawings on any interest date at par on three months' notice. The company was incorporated in November, 1887, to provide and operate automatic machines.

Particulars of the following have been issued for information only, with a view to Stock Exchange introduction:—
Petroleum Corpora —Issued capital 10,000,000 common shares without nominal or par value. The company was incorporated in January, 1929, in Delaware, to acquire stocks of representative oil companies.

[*Other Stock Exchange information, including the latest company dividends and profit and loss figures, balance sheet summaries, shorter notices, output statistics, and traffic returns, will be found on page* 382 *under the heading "Company News."*]

COMPANY MEETINGS, &c.

GAS LIGHT AND COKE COMPANY.

RECORD YEAR'S OUTPUT.

SIR DAVID MILNE-WATSON'S REVIEW.

The two hundred and twenty-third ordinary general meeting of the proprietors of the Gas Light and Coke Company was held, on the 7th instant, at the chief office of the company, Horseferry Road, Westminster, London, Sir David Milne-Watson, LL.D., D.L., the governor of the company, presiding.

The Secretary (Mr. W. L. Galbraith) read the notice convening the meeting. The report and accounts were taken as read.

The Governor, in moving the adoption of the report and accounts, said: The year under review has been a record one in the company's experience, a greater quantity of gas having been sold than in any previous year. This was largely due to the prolonged spell of cold weather which we had at the beginning of 1929.

There was an actual increase in sales of gas over the previous year of 4½ per cent., representing a quantity of over 2,000,000,000 cubic feet, and we had a record day's output on February 15th of over 240,000,000 cubic feet. I am glad to say that, notwithstanding the abnormal demand, we were able to give a satisfactory supply of gas during the whole period.

You will see that the revenue from gas went up by £292,000; and rentals of meters, stoves, and automatic fittings increased by £65,000. The only weak spot on that side of the account is to be found in residuals. Although coke gave us an increased revenue of £67,000, the other products fell away by over £134,000, tar and its products accounting for the bulk of this. The fall in the tar receipts is a very serious matter for the company, and one which is receiving our most careful consideration.

To summarise, the net result of the year's working is that, after paying the full statutory dividend for the June half-year and contributing £50,000 to the special purposes fund, there remains a balance of £815,000, out of which we are enabled to declare the usual dividends on the Four per Cent. Consolidated Preference stock and the Three and a Half per Cent. Maximum stock, and the statutory dividend of £5 12s. per cent. per annum on the ordinary stock. This, together with the contribution of £20,000 payable in respect of the redemption fund, will absorb £670,000, and leave £145,000 to be carried forward to the credit of the current year's accounts—a slight decrease on the amount brought forward from the year 1928.

NEW TYPES OF CARBONISING PLANT.

We have put in hand the installation of coke ovens, to which I referred last year. The order for the plant was placed last July with Messrs Koppers, of Sheffield, and it should be working in two years' time. The ovens will carbonise 1,200 tons of coal per day, and will embody in their construction all that is best in coke-oven practice. The plant is being erected at Beckton, and it is being so laid down that, should experience show that further installations are desirable, extensions can readily be undertaken. Other makes of carbonising plant are also receiving every attention; last month we put into operation a large installation of continuous vertical retorts, and we shall shortly have several benches of intermittent verticals at work. The policy of the board ensures that new types of plant, as they are proved capable of reducing manufacturing costs, are quickly adopted, and in this way the whole plant of the company is maintained in a highly efficient state.

WATERLESS GASHOLDERS.

The gasholders of the waterless type which we first brought into use last year have given every satisfaction; they worked through the very severe weather last February without giving any trouble. The largest we have ordered is the one that has just been completed at Southall. It has a capacity of 8,000,000 cubic feet and is 300 feet high. I was much attracted by the appearance of a 15,000,000 waterless holder in New York, and we are adopting a similar style of painting for this new holder at Southall. We hope to make what is undoubtedly a fine engineering structure also pleasing to the view.

"GLOCO"—A NEW SOLID SMOKELESS FUEL.

The low temperature plant at Richmond was put into action last March, and since then has worked continuously. The smokeless fuel produced has been placed on the market under the name of "Gloco." It lights very easily, burns freely, and gives a bright and cheerful fire. We have received many letters expressing appreciation of its qualities as a fuel, over 8,000 tons having been sold. To keep the plant working at full capacity 3,000 tons have to be sold every month. We are, therefore, hoping that a greater number of those who still prefer open fires will take advantage of the opportunity that is now afforded them of using a fuel which will give the warmth and comfort they desire, without distributing smoke and soot.

The tar oils obtained in the process have not proved so valuable or so marketable as was anticipated, and our research departments are giving serious consideration to this side of the problem.

It is too early yet to say much about the commercial value of the process, but I think I might say that, so far as gas making is concerned, we have formed a not very favourable opinion of the low temperature process as compared with the high temperature processes usually adopted by gas undertakings. On this matter, however, a full report will be made later on.

I am glad to say that our research laboratories at Fulham, Watson House, and elsewhere, are very actively engaged on investigating the many problems which arise with regard to the manufacture and use of gas and residuals, and they are helping the company very materially in their solution.

EDUCATION FOR BUSINESS.

In view of all that is being said just now about education for business, I am sure you will be glad to know that we are taking active steps to encourage our employees of all ranks to secure the best possible technical training and general education. (Cheers.) No less than two thousand of them, of all ages, are now receiving help and advice as to suitable courses of instruction at technical colleges and other institutes providing evening classes. We believe that the keenness shown is symbolic of the live spirit animating all the officers and men of the company from the highest to the lowest, and I am sure you will agree that the training provided will be a great help to the company, not only now, but in the future, by ensuring that we have growing up a class of fully-trained and qualified men.

HELPING TO DEAL WITH UNEMPLOYMENT.

As you are all aware, the Government, in an attempt to deal with the unemployment problem, undertook to make a grant towards the cost of raising money for schemes approved by them which could be put in hand immediately, instead of having to follow a normal course and be dealt with as time and circumstances permitted. The company, with the object of rendering as much assistance as possible in this direction, put forward certain schemes for consideration in connection with work which would have to be undertaken, not immediately but in the future, and three of them were accepted.

The work is now in hand, and consists of the erection of gasholders at Harrow, Battersea, and Beckton, a number of new mains, and the installation of plants at practically all our works for the extraction of moisture from the gas before it leaves the works. For a period of years, according to the particular circumstances of each description of work, the company will receive a grant to cover the interest on the money so expended.

AMALGAMATIONS.

The amalgamation of the Grays and Tilbury and Pinner Gas Companies became an accomplished fact on January 1st. These two amalgamations, while not immediately adding much to our gas output, provide us with a large new area which, combined with our present area, extends from Windsor to the outskirts of Southend-on-Sea—with the exception of one small intervening space which is supplied by the Romford Gas Company—a distance of sixty miles, and increase the territory of the Gas Light and Coke Company from 265 to 459 square miles.

While on this subject, I should just like to say a word of welcome to our new director, Mr Fooks, who joined the board on the amalgamation with the Grays and Tilbury Gas Company. I am sure that we shall find him a very useful and agreeable colleague. (Cheers.) I am glad to say that the amalgamations have started very happily, and I feel sure that the employees of the two companies that have come over to us will soon settle down and find themselves comfortable in their new surroundings, as I am glad to say has been the experience of the officers and men who have come to us from other companies previously amalgamated.

CAPITAL POWERS.

The authorised capital of the company will now be over £40,000,000, of which all but some £3,000,000 has been issued. Under the provisions of our Act of 1926 the borrowing powers of the company were fixed at a sum which was equal to one-half of the share capital then existing. By the Gas Undertakings Act of 1929 the company may borrow up to half of the aggregate amount of the paid-up share capital for the time being, including any premiums paid in respect thereof. The effect of this will be to give the company further borrowing powers in respect of premiums paid on the share capital.

The Gas Undertakings Act, 1929, which was passed by the late Government, will be of considerable advantage to the gas industry generally, though there is still need for further legislation before the industry can be regarded as being in a position to meet modern business requirements. It is hoped that before very long, though it cannot be looked for this session, legislation will be introduced to enable the industry to develop on a proper business basis.

HOLBORN EXPLOSION.

You will remember that the last time I addressed you I briefly referred to the Holborn explosion, which had only just occurred. We thought it well, in view of the Commission's findings, to get into touch with the Post Office. After some negotiation it was agreed that the company and the Post Office should each bear half the cost of compensation to third parties. I am glad to say that already a very large number of claims have been settled, the cost of which is included in the sum of £35,000 already referred to. There are some claims yet to be settled, and naturally there will be something more to add to the cost, but I am sure you will be relieved to know that the loss, though a grievous one, is not calculated to hurt the company seriously.

With regard to the future prospects of the company, I may say that we are every day increasing the outlets for the sale of gas by the installation of large numbers of appliances, and, providing a winter is not unusually mild, as this one has so far been, we shall in due course reap the reward.

THE COAL BILL.

The question which is causing us the most anxiety at the present moment is the Government Coal Mines Bill. I have on more than one occasion called attention to the vices inherent in Part I of this bill, but it is a matter of such grave importance to our industry and to the country that I have no hesitation in referring again to this measure at some length. The gas industry is largely—indeed, almost entirely—dependent upon coal for the manufacture of gas. It is true that oil in considerable quantities is purchased for carburetting water gas, but in the year 1928, to take the latest figures that are available, carburetted water gas only amounted to, say, 15 per cent. of the total gas manufactured in this country. You will see, therefore, how vitally important is the question of coal supplies and coal prices to the industry.

The accusation is levelled against us that we, as an industry, are paying an unfair price for our coal, but it needs no lengthy argument to show that this accusation is without foundation. Gas coal, like any other coal, is bought in the open market, and the prices paid are the market prices. If anybody is to blame, it is not the buyers, but the sellers, for selling coal at an unremunerative price. It is quite impossible for the buyer to be both buyer and seller. How can a buyer of coal, having come to agreement upon price with a colliery, go to his board and say "I have bought coal at "x" shillings, but I find that this is not a remunerative price for the colliery, and I therefore propose to pay more."

A MONOPOLISTIC TRUST.

It is not, however, as we all know, the selling price of coal that has induced the Government to introduce the Coal Mines Bill. It is their decision to shorten the miners' hours of work which has forced them, as wages are not to be reduced, to placate the coal-owners by enabling the latter to obtain higher prices for their coal. To achieve this result the Government are, in effect, forcing the coal industry to convert itself into a monopolistic trust, and have so framed the measure that no effective control over the owners, nor any real safeguard for the consumer, can be devised.

When I spoke the other day protesting against this bill, I was attacked by a colliery owner, who said that I ought to have known better. I ought not, he stated, to have attacked the bill because the gas industry, which I represent, was itself really a trust. Such a statement is entirely misleading. There is no comparison between the statutory position of the gas industry and that proposed under the Government Bill for the mining industry. The gas industry is strictly limited as to the dividends it can distribute. As you know, under the sliding scale, if we increase the price of gas we must decrease the dividend. This altogether prevents the exploitation of the public by gas undertakings.

BUYER DEFENCELESS.

Such check, however, is wholly lacking in the coal trust proposals, and the public is, to all intents and purposes, left defenceless. That is the crux of the whole matter; the gas industry is so controlled that it cannot abuse its powers; the coal industry is to be enabled to take advantage of a statutory monopoly to squeeze high prices from coal users, free from any restrictions as to the dividends it can pay, and without any guarantee that the extra money it is taking from coal consumers will be applied in making the industry more efficient.

In the past Governments have always looked with suspicion on trusts, and have endeavoured to put a check on their operations. Here we have the spectacle of a Government deliberately setting up a trust, and at the same time making no provisions—or, at any rate, no adequate provision—for ensuring that the trust does not abuse its power.

DIFFERENTIAL INJUSTICE TO GAS.

This trustification will adversely affect all coal consumers in this country—domestic and industrial—but the gas industry most of all. The spokesman both of the Government and of the coal industry have unequivocally stated that the gas industry must pay more for its coal. Part I of the bill enables the coalowners to levy taxation upon any section of the community, not merely for the purpose of recouping the coal industry for the increased costs of production due to shortened hours, but also for subsidising the export of coal. But the matter does not end there, for the coal-owners can weight the scales in favour of their own fuels (household coal and coke-oven coke) as against our fuels (gas and gas-works' coke).

Part I of the bill is both bad and unfair. It will increase the cost of living. It will prejudice the manufacture of British-made goods by supplying foreign rivals with cheaper coal. It permits the coalowners to impose indirect taxation upon such classes of the community as they think fit. The coal industry, the foreign manufacturer, and the oil companies alone will reap the benefit.

There are 36,000,000 people enjoying the benefit of gas in this country. There are some 113,000 persons directly employed by the gas industry, and immense numbers indirectly employed. These are heavy responsibilities, and I have no hesitation in saying that, faced as we are with this partisan measure, it is the bounden duty of one and all to leave no stone unturned to ensure the rejection *in toto* of Part I of this bill. (Hear, hear.)

The report and accounts were unanimously adopted.

TIMOTHY WHITES (1928), LIMITED.

INCREASE OF CAPITAL APPROVED.

An extra-ordinary general meeting of the holders of the 7½ per cent. cumulative preferred ordinary shares in Timothy Whites (1928), Ltd., was held, on the 11th instant, at the Hotel Cecil, London, for the purpose of considering a resolution increasing the capital of the company from £1,500,000 to £2,000,000 by the creation of 476,000 7½ per cent. cumulative preferred ordinary shares of £1 each and 480,000 deferred ordinary shares of 1s. each.

Mr Philip E. Hill (the chairman), who presided, said: Ladies and Gentlemen,—My letter of the 31st ultimo, I hope, fully explains the objects of this meeting. Since I have the pleasure of meeting you in October last, events, insofar as they relate to the acquisition of additional properties and development generally, have progressed much more rapidly than I had anticipated they would do, and we have been able to make a considerable number of advantageous purchases, possibly influenced by the restriction of credit and the temporary shortage of money. However, I am sure you will agree that, when favourable opportunity presents itself, the advantage should be taken.

CONTEMPLATED DEVELOPMENTS.

The expansion we have contracted for and contemplate up to the end of the company's financial year in July next will utilise a sum of approximately £500,000. The issue we are now proposing will produce about £535,000.

Further developments will probably be financed by the creation of mortgages on the property owned by the Property Company, and I am hoping that, when the time for that arrives, it will be possible to obtain such mortgages at a very much cheaper rate than those prevailing at the present time.

It is proposed to issue the preference shares at 20s. 6d. and the deferred shares at 2s., and any portion of the proposed capital not applied for by the shareholders will be taken by the directors and their friends. The form of application for shares will be posted on Wednesday.

The resolution was unanimously approved, and, at an extraordinary general meeting of the company, a similar resolution was also unanimously approved.

A hearty vote of thanks to the chairman concluded the meeting.

SOUTH METROPOLITAN GAS COMPANY.

MORE CONSUMERS—INCREASED SALES OF GAS.

DR. CARPENTER ON THE COAL PROBLEM.

The ordinary general meeting of the South Metropolitan Gas Company was held on the 12th instant, at the Cannon Street Hotel, London, Dr. Charles Carpenter, D.Sc., M.Inst.C.E. (the President), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The first paragraph of the report informs you of the progress made during the past year in the number of our consumers and in our sales of gas. I ought to say at once, however, that there is no co-relation between the two sets of figures. The increase in the number of consumers has been almost entirely the result of building activities in the south-east area of our district, where new estates are being laid out on land which was until recently pasture with some tillage. Of these new houses, some 3,500 were comprised in the schemes of public housing authorities, the remainder being constructed by private enterprise.

It will be remembered that in laying out these estates a much larger area of vacant land per unit of inhabitant is taken than that ruling generally all over London, and it must follow that the cost of providing roads, sewers, water and gas is proportionately increased. In this respect, therefore, we cannot hope that our new consumers will be as profitable to us as our older ones, since the capital costs for mains and services per therm sold must be perforce higher. I might, in passing, remind you that the opposite policy is operating in Central London, where so many houses, each occupied by one family, are being pulled down to make place for blocks of flats.

LOW TEMPERATURE CARBONISATION.

This will, perhaps, be a convenient stage for me to refer to what we are doing in the matter of low-temperature carbonisation. As regards the "coalite" plant, the contractors are well forward with the construction of this; the retorts have been delivered, and the late summer should see the completion of the work in anticipation of next winter's requirements. As regards what is known as the K. S. G. Plant, there have been certain mechanical troubles arising in the operation of this which were rather disturbing. We have carbonised about 2,300 tons of coal in the apparatus, and the yields therefrom have been promising. I can, indeed, go so far as to say in regard to most of the low-temperature carbonising schemes that, simply as processes, there appears no reason why they should not be successful. But whether they can be operated as economic successes is not yet clear. Much will depend upon the utilisation of the tars produced by the process.

With regard to our other primary products, ammonia, which once figured so largely in our revenue account, only brought us in the relatively small amount stated. The market for tar reached bottom during the year, and there are now signs that a reaction, though slight, has set in.

Two years ago you authorised an application to Parliament for an increase of our capital powers. The Bills duly became law, but owing to an oversight a year ago you were not asked to authorise the issue of that capital as and when required. That omission you are now asked to rectify, as the time is approaching when an issue will have to be made.

The recommended dividend on the year's working is the modest one of 6½ per cent. The amount added to the 5 per cent. allowed on our ordinary capital under the basic rate arrangement is in round figures £83,874, and a similar amount is therefore automatically paid over to the trustees of the co-partnership fund. It is also proposed to replace to the extent of £30,000 our recent drawings upon the special purposes fund for meeting extra charges in respect of purifier and gas-holder repairs, and our endeavour will be to build up this fund as soon as possible more nearly to the limits prescribed and contemplated by our Acts.

THE MOST SERIOUS MATTER—COAL.

I have so far left untouched the most serious of all the matters with which we are face to face to-day. The late Lord Oxford aptly described coal as the "life blood" of the nation, and that is especially true of that part of the nation comprised by the gas industry. Of the 245 millions of tons raised in this country, it uses but 16½ millions, a disproportion which constitutes a great handicap in making its voice heard effectively compared with the organisation which speaks for practically all the proprietors of collieries on the one hand, or the union which voices the aspirations of all the employees in them on the other. No reference to the coal question would be complete without including that of hours, and I must say a word or two with regard to that before I come to the most important part of the subject to which I desire to direct your attention this afternoon. The primary duty of a trade union, the one that comes first and foremost before all others, is the finding of, and the maintenance of its members in, employment; that necessity is ever paramount in its leaders' minds, and no one can wonder, least of all those who have had to face the spectre of unemployment, even with the relief given to-day by mutual insurance, that the avoidance of unemployment and the provision of regular work is the direction towards which their leaders first look for the amelioration of their members' status.

REDUCTION IN MINERS' HOURS.

Of all methods of achieving this none is more popular with them than the reduction of hours. It is so simple a process. Assume there is available work to be carried out which needs, say, forty thousand hours' work in one month. With a normal working of fifty hours per week, work would be available for 200 men. But 220 could be employed if the week were reduced to one of forty-five hours. Little fault could be found with such a policy directed towards a seven-and-a-half or even a seven-hour day for the coal industry if other nations followed suit, and that of course depends on how far labour discussions in Geneva crystallise into accomplished facts. As a buyer of coal, therefore, I am not greatly concerned in the matter of miners' hours, always provided their relationship is recognised to those current in other coal-producing countries. No one who knows anything about a miner's life can fail to be sympathetic with him in his endeavours to minimise its disabilities.

MARKETING SIDE.

I pass now to the marketing side of coal. It has been seriously suggested, and I say seriously because I understand the view has been accepted in Government circles, that—I quote letters in the Press of two or three weeks since—"Gas producers have been using coal under cost for many years past owing to the foolish competition of gas coal pits," and again, "It is now well known to the majority of the public that for some years past gas companies have obtained supplies of fuel at prices very much lower than the cost of production." And again, "Gas companies are stated to have formed buying rings by which they have played off one colliery against another." Finally, the President of the Board of Trade is reported to have stated that "all parties recognised that they could not continue to sell coal to public utility enterprises like gas, electricity, railways, &c., either at a loss or at an unremunerative level." So far as London is concerned those statements are ill-founded. I have been closely associated for the past twenty-five years with the purchase of the gas coal required by this company, and I can unhesitatingly say it has never been a member of any buying ring or other like organisation. It has always bargained separately and independently for its supplies of coal.

QUESTION OF A FAIR PRICE.

But it is said of us, "You have not paid a fair price for your coal." What is a fair price, and how can it be tested? We have gone, through our agent, on to the Coal Exchange and paid within a few pence of the price we were asked, after, of course, the bargaining inseparable from all such matters. Some twenty-five years or so ago we interested ourselves in the output of a new colliery in Durham, the district from which we mainly draw our supplies. We as users worked sympathetically with them as producers in their efforts to turn out coal suitable for gas production, and we have been customers of that colliery ever since. A few weeks ago it declared a dividend of 7½ per cent. Does that support the suggestion that we have bought under the cost of production?

I have been associated for some sixteen years with a company engaged in the supply of gas to some important cities on the Continent. The prices it has paid for Durham coal have been on the whole easier rather than harder as compared with London purchases. Is it suggested that this undertaking, too, has been paying less than the cost of production for its coal supplies abroad? Finally, let me quote the statement placed before the Samuel Commission on behalf of the coke-oven owners to the effect that the average price at which coal was delivered, including carriage to coke ovens, for the period January 1 to October 31, 1925, was eleven shillings and sixpence per ton. To make the comparison on all fours, the cost of leadage, averaging about another shilling, should be added. But the difference remains sufficiently startling. During the same period the cost of our own supplies delivered at the port of shipment was eighteen shillings and elevenpence. It is no business of mine if a colliery undertaking forms a subsidiary company to erect and work coke ovens, but I have cause for complaint if it supplies that company with coal at a price below the market value and desires to make up the difference by charging me more.

The report and accounts were adopted, the creation and issue of further stock was approved, and the proceedings closed with a vote of thanks to the president, directors and staff.

WANDSWORTH, WIMBLEDON AND EPSOM DISTRICT GAS COMPANY.

A YEAR OF PROGRESS AND SUCCESS.

The ordinary general meeting of the Wandsworth, Wimbledon and Epsom District Gas Company was held, on the 11th instant, at the Cannon Street Hotel, London, Mr Frank H. Jones (chairman and managing director) presiding.

The secretary (Mr W. H. Cromarty, F.C.I.S.) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said: It has been a year of some progress and, I think I can say, of some success. To add nearly 3,000 new customers to our 91,000 existing on January 1, 1929; to have a 4½ per cent. increase in the sale of gas during the year; to have an additional 6,600 appliances of different kinds using gas, and to have laid over twenty miles of mains I hope will satisfy you that your staff are doing their work efficiently and well.

The Bill giving the company further powers, about which I told you at this time last year, is now an Act of Parliament, and I am glad to say that during its travel from our extraordinary meeting last February until it received the Royal Assent in the summer, there was practically no alteration in it. That was very gratifying to all of us who were responsible for its inception. From January 1st this year the sliding scale ceases to govern our selling price and dividends. A basic price and tripartite division of profits is to be made. The new system should add to the prosperity of the company. The consumer, the stockholder and the worker are each very closely interested in the economical working of the undertaking, and the system encourages economy and efficiency much more than the old sliding scale did.

The report mentions the reason for our extraordinary general meeting which is to follow this meeting. At that meeting you will have explained to you, and will be asked to sanction, an amalgamation between this company and the Kingston-on-Thames Gas Company. If you are satisfied and approve the agreement which we have made with our neighbour, it will have two definite advantages, of which, indeed, I think there are several. The consumers of gas in the Kingston area will at once get a reduction in the price of gas, and I hope and believe that the addition of this new business will help to cheapen the cost of the production of gas in the whole area.

POINTS FROM THE ACCOUNTS.

As usual, I do not propose to go through the figures in the accounts in great detail, but there are just a few salient points which I will mention. No capital has been raised during the past year. A net £88,913 has been added to capital expended. The gross expenditure during the year was £812,000, against £821,000 last year. Receipts for gas are up, but the receipts for rentals of stoves, meters, etc., are down, owing to certain adjustments of charges which we have made. Our charges for the hire of meters and stoves have sometimes been criticised, but we have always watched them very carefully, and I am not prepared to criticise the charges made by our neighbours. We have made certain reductions and we have brought all our various apparatus into line, so that like is charged for like. Our charges to-day may appear to be somewhat higher than those of some companies, but, as we see it, we cannot charge less, because we have to pay interest on capital and we have to pay for repairs and many other things.

Now we come to the bad point. Our residuals are down by £22,000, and that is the only thing that worried me when I first saw the figures. If we had not had that £22,000 drop we should have had a wonderful balance sheet. I am glad to say that some of our residuals are doing better this year.

You will see that we have got to take something over £13,000 out of the carry-forward in order to pay the full dividend. Selling gas as cheaply as we do, it is impossible to estimate exactly year by year what the exact figure will be, but I should like to tell you what has happened during the past four years. Twice we have had a surplus—that is, we have made more profits than we wanted for all our capital charges—and twice we have had a deficit, but during those four years £140,000 odd has been written off for depreciation, £38,000 has been added to the special purposes fund, bringing it from under £2,000 to £39,000, and the carry-forward to this year's account is £16,700 as against, four years ago, £7,687. That, ladies and gentlemen, explains why we cannot always be exact. The cheaper your gas is, the less you have to play with.

You must remember that we are in a more difficult position than most companies because very nearly half of the gas sold by this company is sold 1d. per therm more cheaply than that of any of our neighbours.

The resolution was carried unanimously.

At a subsequent extraordinary general meeting resolutions were unanimously passed approving the amalgamation with the Kingston-on-Thames Company.

SAN FRANCISCO MINES OF MEXICO.

A VERY SATISFACTORY YEAR.

The seventeenth ordinary general meeting of the San Francisco Mines of Mexico, Ltd., was held, on the 11th instant, at Winchester House, Old Broad Street, London, E.C. 2, the Rt. Hon. the Earl of Denbigh, K.C.V.O., presiding.

Mr J. H. Jennings, F.C.I.S., on behalf of the secretaries (Union Corporation, Ltd.), read the notice convening the meeting and the auditors' report.

The Chairman said: As we figure it, we were favoured to the extent of about 2 per cent. by metal prices. The ore milled rose only from 300,010 to 307,450 tons, but our total revenue rose from £650,084 to £709,198, and our operating profit from £366,316 to £415,267, owing principally to improved terms for our lead concentrates, and higher recovery of metals. Charges were rather smaller at £81,678, against £83,186, resulting in a net profit of £333,589, against £278,130. In view of the considerable amount of capital expenditure which is in prospect, it was considered prudent to maintain the dividend for the year at 3s. 9d. per share instead of increasing it. There is an undivided surplus of £47,305, which results in the amount carried forward being increased from £125,260 to £172,565. On the whole, we have had a very satisfactory year.

CONTINUED SHORTAGE OF RAINS.

The fears expressed at the last annual meeting as to the effect of a continued failure of rains were unfortunately justified, and in anticipation of the position we set about the erection of the second-hand thermo-electric plant to which I then referred. The power supply company is erecting a thermo-electric plant at Torreon to augment the hydro-electric energy available, and we are now considering whether it is better to contract for a supplementary supply or to add to our own thermal plant. It is clear that we cannot depend upon hydro-electric energy for the further expansion of our business.

The results for the first four months of the current financial year have been disappointing. Owing to the power shortage, which was exceptionally felt in October and November, the ore milled for the period was 94,010 tons, as against 103,000 tons in the corresponding period of the previous year, and the operating profit fell to $295,000, as compared with $635,000 for the corresponding period. This was due not merely to the diminished power, but also to the drop in metal prices.

"A LONG AND PROSPEROUS FUTURE."

The combined blocked-out and partly blocked-out ore reserves, totalling 1,894,500 tons, show practically no increase for the year, this being due to the lack of power. Fortunately the condition of affairs in regard to stoping faces is now so good that the rate of development may temporarily be safely reduced, and, in fact, there is no longer the necessity to spend so much on development, as the ore reserve position, although actually representing over six years for the present mill, is very much stronger than the bare figures would indicate. In the past, the San Francisco Vein south of the North Shaft has been the backbone of the mine, but the other veins that have been opened up are increasingly showing their influence, so that while 58 per cent. of the reserves now apply to the San Fancisco Vein and 14½ per cent. to the Footwall Vein, the remaining 27½ per cent. applies to other reefs such as the Madrones, Brown, and Bronces. The development of the Brown Vein at the 7th Level has been the feature of recent work. I think we can be satisfied that the San Francisco mine, laterally and in depth, continues to give us every encouragement to assume a long and prosperous future.

In view of this strong position it is intended to increase the mill from a capacity of 300,000 to 500,000 tons per annum, and preliminary work with this in view is now in hand. The additional capacity can deal with either sulphide or oxdised ores, as the conditions may dictate. We have a considerable quantity of oxidised ore which such an enlarged mill could treat without interfering with the metallurgy of our sulphide ore. The oxidised ore amounts, so far as our calculated ore reserves go, to 332,000 tons in the San Francisco Mine, but, including the portions of that mine which are at present inaccessible and the newly-worked vein from which the oxidised portions have not yet been removed, the quantity should be considerably greater. There are, in addition, important reserves in the Clarines Mine. When we proceed with this extension of the plant it will not be possible to fully utilise it from the outset, as it is essential to reorganise and enlarge the transport arrangements from the mines, but the increased capacity available will at any rate enable us, in the meantime, to improve our metallurgy, even apart from the treating of additional tonnage.

The report and accounts were unanimously adopted.

BRITISH AND HUNGARIAN BANK, LIMITED, BUDAPEST.

BALANCE SHEET ITEMS.

INCREASED PROFIT.

The final accounts have been stated in the meeting of the board of directors, February 8, 1930.

The following are the main balance-sheet items as of December 31, 1929. The respective figures for 1928 are quoted in parenthesis :—

PROFITS AND ALLOCATIONS.

Gross profits, P. 8,150,089.66 (P. 7,287,211.26); net profits, P. 3,482,618.92 (P. 3,477,339.46).

As last year, 14 per cent. dividend will be paid therefrom, *i.e.*, P. 7 per share, being altogether P. 2,520,000. The new shares will be entitled to dividend only from 1930 on.

Allocations :—To reserve fund, P. 250,000 (P. 250,000); to clerks' pension fund and pension reserve fund, P. 325,000 (P. 300,000). Balance carried forward to 1930, P. 172,161 (P. 164,225). Several hundred thousand pengó more taxes have been paid than the year before.

BALANCE SHEET.

Own capital, P. 40 million (P. 31.5 million). Deposits and creditors, P. 132 million (P. 121 million). Own dollar and pound sterling mortgage bonds outstanding, P. 11.3 million (P. 11.4 million). Cash in hand, P. 12.4 million (P. 7.5 million). Bills, P. 63 million (P. 61.3 million). Bills discounted, P. 315 million (P. 285.1 million). Advances on securities quoted on the Stock Exchange and on produce, P. 7.1 million (P. 8.7 million). Debtors, P. 65.1 million (P. 53.6 million). Sinking fund mortgage loans, P. 12.6 million (P. 12.7 million). Total of balance, P.196.3 million (P. 173.3 million).

PROPOSED ABSORPTION OF THE ANGLO-INTERNATIONAL BANK OF BUDAPEST.

During the same meeting the board of directors decided to submit to the annual ordinary general meeting a proposal concerning absorption of the Anglo-International Bank, Ltd., Budapest, by the British and Hungarian Bank, Ltd. Further, the board of directors will propose that, as a delegate of the Anglo-International Bank, Ltd., London, the managing director of that institution, H.E. Peter Bark, G.C.V.O., late Minister of Finance of the Russian Empire under the Tsar, be elected a new member of the board of directors.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 8, 1930 :—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS	£

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND

Established 1889.

The ordinary revenue for the week amounted to £32,809,600, as compared with £31,047,600 in the corresponding week last year. Income tax was higher at £20,096,000, against £18,469,000, but super-tax was lower at £3,510,000, against £4,160,000. Customs and Excise were lower at £2,159,000 and £1,077,000, against £2,293,000 and £1,179,000 respectively. Ordinary receipts brought in £35,900, as compared with £42,600, while special receipts amounted to £2,630,000, against £1,959,000. The National Debt was reduced by £18,499,300, as shown below :—

(000's omitted.)

	£		£

	Total ...	39,444		Total ...	21,127

Net arrivals, £18,317.

Messrs. Samuel Montagu and Co. write on February 12, 1930, as follows:—

GOLD.

On the 6th instant the Bank of England lowered its official rate of discount from 5 per cent. to 4½ per cent. The Bank of England gold reserve against notes amounted to £150,783,865 on the 5th instant (as compared with £150,134,547 on the previous Wednesday), and represents a decrease of £3,122,450 since April 29, 1925—when an effective gold standard was resumed. Gold from South Africa to the value of about £991,000 was offered in the open market yesterday. The price realised was 84s. 10⅞d. per fine ounce, at which £893,000 was secured for Germany. £20,000 was taken for India, £30,000 for Home trade and £48,000 for Continental trade. Movements of gold as announced by the Bank of England show a net efflux of £106,033 during the week under review. Receipts amounted to £21,931, and of the withdrawals, totalling £127,964, £100,000 was in sovereigns "set aside."

SILVER.

Prices have shown some fluctuation and the feature of the week was a sharp rise on the 8th instant of ⅜d. for cash and 5/16d. for two months' delivery, which carried quotations to 20 7/16d. and 20¼d. This was due to a keen demand from China falling on a day when there was a marked absence of selling. The demand was not maintained, for the high level proved attractive to sellers and prices subsequently showed a tendency to sag. The Indian bazaars have made purchases without being active, but America has shown more interest in the market, having offered freely during the week. The Continent has contributed moderately to supplies and there has been some re-selling on China account. The tone of the market is fairly steady for the moment, but at the same time there are no indications of resistance sufficient to withstand any pressure of selling.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 3rd instant to mid-day on the 10th instant:—

IMPORTS.	£	EXPORTS.	£
Germany ...	9,625	British India ...	605,109
Belgium ...	6,503	Germany ...	32,195

BANKS.

MOSCOW-NARODNY BANK.—The Moscow-Narodny Bank has just celebrated its tenth anniversary. The turnover of the bank has increased from £70,000,000 for 1924 to £280,000,000 for 1929, and the balance-sheet total has risen from £2,391,629, as on December 31, 1924, to £8,089,724, as on June 30, 1929. On December 31, 1919, the total resources of the bank were £250,000 of paid-up capital, and the balance-sheet total was £633,523; on June 30, 1929, the total resources of the bank were £1,001,259, of which paid-up capital represented £845,000, reserves £135,000, and undivided profits £21,259. For the last four and a half years the co-operative organisations of the U.S.S.R. have been granted credits for exports from U.S.S.R. of over £21,000,000. The bank paid its shareholders for 1928 a dividend of 6 per cent., and for the last five years has accumulated reserves amounting to £140,000. It has branches in Paris, Berlin, and is represented in New York. It does business with English, American, French, Swiss, Belgian, German, Canadian and Indian banks, and pays special attention to the development of its business relations with co-operative and labour banks of various countries.

MISCELLANEOUS.

ANGLO-AMERICAN OIL COMPANY.—The offer of exchange made by Standard Oil Export Corporation, as outlined in the letter of said company dated November 6, 1929, has been declared operative as Anglo-American Oil Company, Ltd., shares in excess of the necessary two-thirds of each class, both voting and non-voting, have been deposited under the terms of said offer. To receive the five per cent. guaranteed non-voting preferred stock of Standard Oil Export Corporation and/or cash to which holders of the above receipts are entitled under the terms of the said offer, they should surrender such receipts accompanied by the necessary form of deposit duly completed, on and after February 7, 1930, at the office of Guaranty Trust Company of New York, 32, Lombard Street, London, E.C. 3.

BOLSOVER COLLIERY COMPANY.—The net profit for 1929 was £201,514 against a loss of £17,632 for 1928. The ordinary dividend is raised from 1½ per cent. to 3¾ per cent. less tax. The sum of £50,000 is put to reserve. The carry forward is £43,835.

COOK, SON AND CO. (ST. PAUL'S), LIMITED.—The profit for 1929 amounted to £156,183, as compared with £195,663 for 1928. The ordinary shareholders receive a dividend of 2½ per cent. for 1929, against a 5 per cent. distribution for 1928. The carry-forward is increased from £11,425 to £40,473. Cash stands at £144,940, against £210,139. Stocks are at £507,654, against £586,334. The company has £744,282 invested in British Government securities. Other investments are £72,640 also 2½ per cent. consolidated stock £24,380, and ordinary shares in John Howell and Company, at cost, £169,803.

OLYMPIA, LIMITED.—The first report for year 1929 shows a net revenue of £101,750. Deduct interest on first mortgage £13,716, directors' fees £2,398, and provision for taxation £11,500, leaving £74,136. Less interest on purchase price from January 1st to June 18th, 1929, £21,986. Proportion of profits prior to incorporation put to reserve £12,067, making net profit from period of incorporation to date, £40,082. Preference dividend absorbed £14,412. The dividend on the ordinary shares at 11 per cent. per annum absorbed £11,866. The carry-forward is £13,809. An issue of 450,000 7 per cent. cum preference shares £1, and 900,000 ordinary 5s. shares at par is to be made soon, the proceeds to be ultilised to repay the amount advanced by the bank and in paying the balance of the cost of alterations and extensions.

WM. FRANCE, FENWICK AND COMPANY.—The profit for 1929 amounted to £58,574, which compares with £38,802 for 1928. The ordinary dividend is raised from 5 per cent. to 6 per cent. for the year. A transfer of £15,639 is made to reserve, against no allocation a year ago. The carry-forward is raised from £10,518 to £10,853. Cash has risen from £43,106 to £75,010, but British Government securities at cost have been reduced from £130,966 to £50,912. Meeting Cannon Street Hotel, February 19th, at 2.30 p.m.

Tetluhe	2,293	Zinc concentrates; 1,151 tons lead concentrates.

THE BROKEN HILL PROPRIETARY COMPANY, LTD.—Report for four weeks ended January 26, 1930, Iron and Steel Works, Newcastle, N.S.W. Coke ovens produced 6,785 tons of coke, 63,859 gallons of tar, and 85 tons of sulphate of ammonia. Blast furnaces (No. 1) produced 9,611 tons of pig iron. Open hearth produced 13,709 tons of steel. Blooming Mill produced 13,160 tons. Iron Knob shipped 26,292 tons of ironstone. Broken Hill: Crude ore raised, 8,276 tons, including 414 tons oxidised despatched Broken Hill Associated Smelters. Crushing Plant treated 8,220 tons sulphide ore, which yielded at Sulphide Corporation Mill 1,440 tons lead concentrates, assaying 8·3 per cent. zinc, 65·1 per cent. lead, 47·5 ozs. silver per ton; also 1,710 tons zinc concentrates, containing 3 per cent. lead, 5·7 ozs. silver, and 50·3 per cent. zinc. Slimes Flotation Plant treated 8,900 tons residues, producing 1,168 tons lead concentrates, assaying 39·5 per cent. lead, 17 ozs. silver per ton, also 43 tons zinc middlings. Despatches oxidised lead concentrates amounted to 1,829 tons.

THE MOUNT LYELL MINING AND RAILWAY COMPANY, LTD.—During the four-weekly period ended January 29th the mill treated 17,071 tons of ore, producing 3,671 tons of concentrates.

MAZAPIL COPPER COMPANY.—Production for January:—Copper matte, 861 metric tons; lead concentrates, 451 metric tons; zinc concentrates, 613 metric tons.

SAN FRANCISCO MINES OF MEXICO, LTD.—Operations for January: Ore treated, 27,660 tons; lead concentrates produced, 3,716 tons; zinc concentrates produced, 3,699 tons. Estimated net smelter returns, $196,370; operating expenses, $140,962; estimated operating profit, $55,408. *Office Note.*—The return includes a minus adjustment of $19,886, being excess of valuations of products over realisations in respect of previous months.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Drier climatic conditions enabled farmers to resume field work and facilitate ploughing operations which have been retarded by excessive moisture. Winter wheat is making satisfactory progress, though condition is still indifferent on low-lying lands. Supplies of native wheat at the principal provincial markets continue restricted, but demand fails to improve and prices generally displayed a drooping tendency. On the import market, the tone was a shade steadier following improved American and Canadian cable advices, resulting from further measures taken in both countries to finance surplus stocks in order to maintain prices. Therefore, no undue pressure to sell arises from the northern hemisphere, while both Argentine and Australian growers are reluctant to offer new supplies with any degree of freedom at present values. Although European requirements are gradually increasing, the demand is not yet sufficient to impart stability to the market, and little confidence is shown by importers at the present level of values, particularly for Canadian descriptions, which are still held for a substantial premium on competing grades. Shipments are moderately larger, but in view of reduced needs of importers generally it is extremely doubtful if surplus supplies in the northern hemisphere can be absorbed this season. The demand for flour proved quiet, and bakers continue to purchase only for immediate requirements, with prices the turn in buyers' favour both spot and forward parcels. The steadier tone for wheat was reflected in feeding stuffs, though consumptive demand is still poor. The recent decline in Plate maize occasioned by lower Argentine exchange and depressed freight rates appears to be arrested for the time being. The outlook, however, is very uncertain and buyers adopt a reserved attitude in face of excellent new Argentine crop prospects, and increased competition to be met by large Danubian shipments in the spring. Barley and oats ruled steady, but largely nominal, owing to paucity of trade demand.

Wheat.—Steady. No. 1 Northern Manitoba, ex-ship, 50s.; No. 2 ditto, 49s.; No. 3, 48s.; No. 4 Manitoba, 47s.; No. 5, 44s.; No. 6, 36s. 6d.; No. 1 Vancouver, 48s. 9d.; No. 2 ditto, 47s. 9d.; No. 3, 46s. 9d.; No. 2, hard Winter, 44s. 6d.; No. 2 mixed, Durum, 41s. 6d.; Rosafe, 63½ lbs., 42s. 6d.; Barusso, 63½ lbs., 43s. 6d.; Australian, 44s. 9d. per 496 lbs., English, 8s. 7d. per 112 lbs.

Flour.—Quiet. London straight run, 38s. 6d. per sack for country deliveries; and 37s. 6d. London area. Of imported, Manitoba patents, 36s. 6d.-39s.; Buffalo, 37s. 6d.-39s. 6d.; Australian, 35s., ex store. On c.i.f. terms Manitoba top patents, February-March, 36s. 6d.-37s.; export ditto, 34s.-34s. 6d.; Australian, 31s. 6d.-32s. 6d.; French, prompt, 26s.-28s. per 280 lbs. Argentine low grade, February-March, £6 10s. per ton.

Maize.—Again firmer. Plate landed, 28s. 3d.; ex-ship to arrive, 27s.; February-March, 27s. 3d.; March-April, 27s. 6d.; new April-May, 27s. 6d.; May-June, 27s. 3d.; No. 4 yellow African, ex-ship, 28s. 6d. per 480 lbs. Yellow maize meal, £8 per ton f.o.r. London. Yellow African, £6 10s.; white, £6 2s. 6d. per ton ex-ship.

Barley.—Steadier. Californian old, landed, 36s.-42s.; new ex-ship, 37s.-45s. as to sample; Chilian brewing, ex-store, 36s.-42s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs. No. 2 Federal American landed, 22s. 6d.; Danubian landed, 23s. 6d.; Black Sea January, ex-ship, 21s.; Persian ditto, 21s. per 400 lbs. English malting, 8s., 11s. 10d.; feed, 6s. 9d.-7s. 3d. per 112 lbs.

Oats.—Dull. Plate landed, 16s. 6d.; ex-ship to arrive, 15s. 6d.; black Plate landed, 16s. 3d.; Chilian white, landed, 23s.; ditto, tawny, 17s.; German landed, 19s.; ex-ship to arrive, 17s. 6d.; mixed Canadian feed, 14s. 6d.; South Russian, 14s. 6d.; 16s. 6d. as to quality, per 320 lbs. English, 6s.-7s. 4d. per 112 lbs.

Average price of English wheat per cwt.	s. d. 9 2	s. d. 9 10	s. d. 9 9	s. d. 11 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929 :—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Feb. 1	275,466	357,366	55,429	9 4	8 4	6 9
Feb. 8	222,941	244,538	42,742	9 2	8 2	6 7
Feb. 6, 1926	304,818	235,762	64,347	11 10	10 0	9 2
Feb. 5, 1927	289,882	360,036	91,325	11 10	11 2	8 3
Feb. 11, 1928	307,295	274,511	91,445	9 9	10 11	10 1
Feb. 9, 1929	263,661	262,339	101,222	9 10	10 5	9 9

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929 :—

Nearest Future.	Jan. 2, 1929.	Feb. 13, 1929.	Jan. 2, 1930.	Jan. 29, 1930.	Feb. 5, 1930.	Feb. 11, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	132⅛	148⅛	127½	125½	128⅞
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅛	127⅛	130⅞	118⅛	114⅛	119

The visible supply of wheat in Canada at 75,180,000 bushels shows a decrease on the week of 98,000 bushels. Supplies a year ago stood at 82,145,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes: The export coal trade has been shrinking ever since the year started, and prices have eased about a shilling a ton. The winter season has been one of the poorest for years in the house coal trade, and the industrial demand is not at all strong. The coke market has almost gone to pieces, and there is practically no sale for such fuel on the open market. Sellers would gladly take lower prices to secure an order.

Our Glasgow correspondent writes: Business has not improved to any appreciable extent. Though the colder weather has helped the home trade a little, export and shipping markets generally are still poor. London is, however, a good buyer of certain qualities of nuts, especially pearls, which are one of the few firm spots in the market. Prices are not thoroughly tested, owing to the meagre business passing, but the tendency is definitely easy nearly all round. Approximately the ruling prices for shipping business are the following (f.o.b. district ports) :—Lanarkshire: Ell best, 16s.; splint best, 17s. 6d.-18s.; splint second, 16s. 6d.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; steam, 14s.; Hartley, 18s.; trebles, 14s. 6d.; doubles, 13s.-13s. 6d.; singles, 13s. 6d.; pearls, 13s. 6d.; dross, 10s. Fife.—Screened navigation, 18s.-19s. 6d.; first-class steam, 14s.-14s. 6d.; third-class steam, 12s. 6d.-12s. 9d.; trebles, 14s.-14s. 6d.; doubles, 12s. 6d.; singles, 13s. 9d.; pearls, 13s. 6d. Lothians.—Prime steam, 14s.; secondary steam, 13s. 6d.; trebles, 14s. 6d.; doubles, 12s. 9d.; singles, 13s. 6d.; pearls, 13s. 6d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 13s. 6d.; pearls, 13s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes: Although there is a dearth of inquiry on the Cardiff coal market, the shipment of coal continues active. The returns of the Customs authorities for January give a larger total than in any other month since October, 1923. The exports to foreign destinations amounted to nearly 2½ million tons compared with only just over 2 million tons in the corresponding period in 1929, while the weekly returns during the present month have exceeded an average of 600,000 tons. The proportion of trade arranged directly between colliery companies and foreign consumers is now far greater than it was in pre-war years. Colliery stems are well filled for some time ahead, but at the moment prompt tonnage is scarce. Production is being maintained, and for the first four weeks under the output regulation scheme it has exceeded that in the corresponding period last year by over 400,000 tons. Still, for prompt supplies quotations for all large coals were ruling at the minimum schedule figures, and sized coals are also in need of prompt business, but other smalls are scarce and strong. Current approximate quotations are as follows :—Best Admiralties, 20s.; seconds, 19s. 3d. to 20s.; best drys, 19s. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. 3d. to 18s. 6d.; Eastern Valleys, 18s. to 18s. 3d.; best steam smalls, 14s. 9d. to 15s.; cargo smalls, 14s. 3d. to 14s. 6d.; coking smalls, 14s. 6d. to 15s.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 24s. 6d. to 28s.; machine-made cobbles, 42s. 6d. to 45s.; French nuts, 44s. 6d. to 46s.; stove nuts, 43s. 6d. to 45s.; rubbly culm, 12s. to 12s. 9d.; patent fuel, 20s. to 22s. 6d.; foundry coke, 32s. 6d. to 37s. 6d.; pitwood, ex ship, 25s. 9d. to 26s.

IRON AND STEEL.

We extract the following from the weekly report of The London Iron and Steel Exchange :—The tendency for business in iron and steel to improve which was noticeable recently, has not been maintained. This is the more disappointing as at this period of the year the spring demand should be well in evidence. In the pig iron section of the market demand has become restricted, and pig iron is being put into stock at some of the furnaces. This to a large extent reflects the poor trading conditions which are being experienced by consumers such as foundries, forges, &c. Nevertheless, prices are being held at recent levels. The demand for semi-finished steel is also quieter than of late. Recently, inquiries totalling a considerable tonnage were circulated in the market; but a large proportion of this seems to have been for the purpose of testing the price position and a comparatively small amount resulted in actual business. Consumers seem to be buying only sufficient material to meet their immediate requirements, and this is particularly noticeable amongst users of Continental steel. On the other hand, the Continental makers are holding their recently fixed prices, and in some cases have retired from the market for a time. The position, so far as finished steel is concerned, continues irregular. Some of the British works are fairly well off for orders, whilst others find a difficulty in keeping their plants steadily occupied. The Continental steelmakers also report a quiet demand. In spite of encouraging inquiries which developed a week or two ago, good business with overseas markets has not come up to expectations.

Our Middlesbrough correspondent writes: The quietness that has characterised the market for Cleveland iron for some weeks past is unrelieved, and a gloomy view is taken of the immediate prospects. Consumption of iron at producer's own steel works and foundries is reported to be on a somewhat reduced scale, and with no expansion in the outside demand stocks at the furnaces are increasing. Producers up to now have maintained a firm front in regard to prices, but it is understood that they have just recently made a special cut in order to secure some of the Scotch trade in competition with Continental iron, which for some time past have been obtainable at much below Cleveland prices. During the past week only odd lots of iron have been purchased from makers by local and inland consumers at 72s. 6d. per ton for No. 3, and the business transacted at Tuesday's market was of a similar nature, although merchants accepted a trifle less. No. 1 remained at 75s.; No. 4 foundry, 71s. 6d., and No. 4 forge, 71s., f.o.b. or f.o.t. Shipments of pig iron are below those of last month, the clearances to 11th inst. being 5,579 tons against 7,219 tons to January 11th. In hematite business is disappointing, and orders coming to hand are only of small volume. Home consumers show little inclination to enter into forward purchases, and export business continues very restricted on account of Continental competition. Makers have orders on their books extending over several months, but current requirements do not absorb the whole make and stocks are being added to at most works. Makers now quote 78s. for mixed numbers for delivery over a month or two, but they would accept a trifle less for substantial business. Merchants have cut this price for such orders as they can handle. In the heavy steel trade new business is only quiet, but there are important orders still to execute under old bookings. The sheets trade continues very depressed and the price for 24-gauge galvanised corrugated is again lower. Prices for home consumption under the rebate scheme show no change, viz., steel plates, ⅜ in. up, £8 15s.; sections, £8 7s. 6d.; joists, £8 10s. Outside the rebate arrangement, iron bars are £10 15s.; heavy steel rails, £8 10s.; 24-gauge galvanised corrugated sheets, £11 12s. 6d., and 21-24-gauge black sheets, £9 15s. The ore market remains idle. Best Bilbao rubio is nominally 22s. 6d. for prompt and 23s. for delivery a few months ahead. The rate of freight, Bilbao-Middlesbrough for early loading is about 6s. 6d. Coke is offering freely at 21s. 6d. delivered furnaces for good medium qualities, and this price might be shaded. The number of furnaces in blast in the district remains at 42.

Our Sheffield correspondent writes: The position of the iron and steel industries does not mend and depression is general. Forward buying almost ceased early in December and has not yet been resumed. Consumers lack confidence in the future and will not commit themselves beyond week-to-week requirements. Many small orders are, however, being placed. Present conditions have led to intense price-cutting, with the result that much of the business being booked is barely remunerative. Several of the heavy steel forges are busy on ships and special work. Further orders have come in for drums for high-pressure boilers forged hollow by the new process. There is a good demand for twist drills. The market for steel scrap continues stagnant and export buying is easier. The depression in pig iron has deepened and the foundries are generally quiet. Association prices are being maintained but business transactions are few and unimportant. Demand for cutlery and plate shows some sign of reviving.

Our Glasgow correspondent writes: The iron and stee business in the West of Scotland remains very quiet. Steelmakers are keeping plants in operation fairly well employed, but the business, though steady, is not growing, and this notwithstanding that Continental competition both in heavy and semi-raw materials is not so keen at the moment. In the galvanised sheet trade the home demand is highly satisfactory, but there is still very little export business and prices are low for any orders placed. The home demand for black sheets is also good, and for export business is more satisfactory as regards both price and tonnage. During the week the Ailsa Shipbuilding Co., Ltd., have received an order from the General Steam Navigation Co. for a single-screw steamer having a deadweight capacity of 1,600 tons; the engines also to be supplied by the builders. This vessel is being fitted with special cold-storage equipment.

Our Cardiff correspondent writes: Stable conditions prevail in the South Wales tinplate market, and prices are being firmly maintained up to 18s. 9d. per basis box. There are better inquiries from the Far East, Australia and the Continent, as well as from the home market. Negotiations are in progress for the inclusion of three independent firms into the marketing organisation of the South Wales Tinplate Corporation, and it is anticipated that when they are concluded over 70 per cent. of the sales of the industry will be centralised. Galvanised sheets are still weak and quotations this week have further receded to £11 12s. 6d.-£11 15s., or £2 per ton less at the corresponding period last year. Local steel bars are unaltered at £6 10s., but foreign bars are obtainable at £5 9s. per ton.

OTHER METALS.

Tin.—In the standard market, values pursued a downward course owing to lack of support and weaker Eastern advices. Sellers, however, were reluctant to press, and moderate sales were attended by slight irregularity. Reports that Dutch interests did not view the restriction scheme with favour imparted some reserve on the part of buyers, and the market is still somewhat unsettled. Shipments from the Straits during January amounted to 8,238 tons, compared with 8,849 tons in December last. Total supply, 11,883 against 13,374; total deliveries, 11,026 against 10,850, and visible supplies 28,783 against 27,926 tons. Standard cash sold at £175 10s. to £174 2s. 6d.; three months, £178 10s.-£176 12s. 6d. Sales in the East were reported at £180 5s. to £178 15s. c.i.f. terms. Exports from British Malaya during January totalled 7,856 tons against 9,290 tons in December last. Foreign imports of tin ore into the Straits Settlements amounted to 4,681 tons.

Copper.—Market irregular and easier, especially for near positions, with a fair trade passing. Standard cash, sold, £74 15s.-£75 and £71 17s. 6d.; three months, £69 15s.-£70 and £69 2s. 6d.

Lead steady but inactive. Small sales include good soft foreign pig, February, at £21 12s. 6d. to £21 13s. 9d.; April, £21 11s. 3d.; May, £21 11s. 3d. per ton.

Spelter in good demand, but rates barely steady on liberal offerings. American production for January, 51,133 tons, compared with 48,590 during December; shipments, 40,462, against 34,389; stocks, 87,933, against 77,262 tons. February, sold, £19 13s. 9d. to £19 12s. 6d.; March, £19 18s. 9d. to £19 15s.; April, £20 2s. 6d. to £19 17s. 6d.; May, £20 2s. 6d. to £20 1s. 3d.

Antimony steady, with a better demand. English regulus, £42 10s. to £50; Chinese ditto, spot, £31; February-March, £26 10s.; Chinese, crude, February-March, £18 per ton c.i.f.

Antimony Oxide, February-March, £26 10s. ton c.i.f.

Antimony Ore, 50 per cent., February-March, 4s.; 60 per cent., 5s. per unit c.i.f.

Zinc Oxide dull. Spot, £29 to £36 per ton as to quality, delivered United Kingdom.

Copper Sulphate quiet. Spot, £26 15s. to £27 5s. ton.

Wolfram steady. Chinese, February-March, 32s. 6d.; March-April, 32s.; Burmese, spot, 36s. 6d.; February-April, 32s. per unit c.i.f.

Aluminium maintained. Home trade, £95 ; export, £100 ton.

Quicksilver quiet. Spot, £22 15s. to £22 17s. 6d. per bottle.

Tin Plates steady. I.C. coke, prompt and forward, 18s. 7½d. to 18s. 10½d. per box f.o.b. Swansea.

FIGURES OF ASSURANCE
AMP
By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £74,000,000. Annual Income £10,500,000. Full particulars on application.

THE COTTON TRADE.

LIVERPOOL, February 12th.

Prices on the week have witnessed a sharp decline of 47 points, followed by a rise of some 30 points, the net balance showing a loss of 19 points.

	March.	May.	October.
Noon Wednesday last	8·52	8·63	8·80
Noon to-day	8·34	8·44	8·61
High prices of the week	8·56	8·67	8·83
Low prices of the week	8·06	8·16	8·35

The selling in the beginning of the week under review was due to some stale long liquidation and speculative short selling on poor trade advices and the belief that the Farm Board in America was selling actual cotton and replacing with futures. Government interference has been fatal, and the decline in price has failed to stimulate trade demand. After a drop such as we have seen since the beginning of the year, a reaction could only be looked for and this has been brought about by some short covering. This season's crop of outsiders has been a large one and of good quality, and as the cotton is cheaper it has been freely used in place of American. The American Cotton Service (late Garside) yesterday estimated the January consumption in America at 590,000 bales against 454,000 bales in December and 668,000 bales in January last year. Spot sales for the week, 6th to 12th (inclusive), are 19,000 bales, of which 9,750 are American, 1,850 Brazil, 300 Argentine, 3,050 Peru, 1,780 Egyptian, 670 African, 1,200 East Indian, and 400 sundries. Imports for the same period are 59,321 bales, of which 25,822 are American, 17,150 Brazil, 1,025 Peru, 8,884 Egyptian, 1,488 African, 4,584 East Indian and 368 sundries. Quotations to-day are: American Middling, 8·62; Egyptian Sakel, 13·55; Uppers, 10·14; Brazil Fair, 8·32; Peru G.F. Mod-Rough, 9·50; Smooth, 9·32; West African middling, 8·67; and East African G.F., 9·57.

MANCHESTER, February 12th.

The wider fluctuations in raw material prices continue to have a disconcerting influence upon trade in the market, and although in certain quarters there has been rather more inquiry, sellers have not been successful in booking orders of any importance. It is stated that cloth clearances in Calcutta have recently improved. Buying continues to take place in light fabrics for that outlet on a moderate scale. There has been a little more demand in printing styles for Bombay and jaconets have been in request for Madras. There is rather less anxiety with regard to the political situation, but there remains a fear of an increase in the import duties. The auction sales have been resumed in Shanghai after the holidays and on Tuesday last there was a good inquiry, the position in dyed goods being better than for greys and whites. Merchants continue to be hampered by the low rate of exchange. Bleached shirtings have been sold for Egypt and finishing qualities have been in request for South America. There does not seem to be any move towards greater activity for the Continent On the whole, home trade demand has been better than shipping, and clearances throughout the country rather tend to improve In American and Egyptian yarns there has been considerable irregularity in quotations when tested. Some spinners have sold a little more freely, but the general position is still very poor.

THE WOOL TRADE.

Our Bradford correspondent writes: There has been a tendency to revert to the old hand-to-mouth policy during the past week and the turnover in both tops and yarns has been smaller. The wool position appears to worry a good many users at home and abroad, and not a few are disposed to resent the restrictions imposed by the Australian selling interests. The malcontents argue that wool should be marketed freely, and they contend that the big weight still to come on to the market is a menace to the trade. Others believe that the extension of the selling season and the fixing of reserves will tend to stabilise the market, but it must be admitted that even those who profess to see in the new policy a means of escape from the present deadlock are not very confident. In the meantime more encouraging reports are being received from the primary markets, and under the influence of good general competition values show a hardening tendency. In Bradford quotations for tops are certainly steadier than they have been for many months, but it is difficult for sellers to make more money for any quality. If the Australian stabilisation scheme had the effect of bringing out more business in piece-goods, something in the nature of a sustained buying movement might be expected, but at present cloth buyers are still inclined to play for safety, and users everywhere are desperately afraid of being caught with stock in the event of a relapse in the market.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The outlook for wool has been improved by recent events. The last series of London sales having closed with values fully 5 per cent. above the opening level, contributed to the development of confidence. The part played by the home trade is shown in the fact that the quantity purchased by that section was larger than at any series during 1929, while Continental purchases were smaller; 65,000 bales is, no doubt, a fair quantity to carry forward to the next series, arranged to commence on March 18th. This quantity included 45,000 bales not offered, but the situation has improved so much that, even recognising this carryover and the fact that the auctions were curtailed by three days, there is now less cause for concern about the future of values. Credit must be given to home trade buyers for the way in which they have helped to save the situation, though no doubt even these would have been unable to do anything towards the recovery if there had not been some definite requirements to provide for. The net result of the recent buying movement in wool, and the increased turnover in tops is to leave the top market firm at around 2s. 6d. for good 64's, and all that is needed to maintain this level is a steady development of manufacturing requirements. The news received from overseas markets is encouraging. There does not seem to have been any improvement in values in South Africa, but Bradford is credited with further activity in Sydney, the offerings having included some wools of average top-making style. Prices have not shown any advance, but there has been some broadening of competition. Buyers at Melbourne have revealed their confidence by paying enhanced prices, and values have probably passed the lowest point. The efforts made by Australian selling interests to stabilise values have met with the approval of the majority of users, for it was felt that a great deal of harm was being done by the persistent decline. There are difficulties associated with the extension of the selling season, but taking a definite stand on the question of selling price was justifiable.

HIDE, LEATHER AND ALLIED TRADES.

Domestic hides are slightly weaker; at the sales held in the north reductions of ½d. per lb. have been registered, and with the poor condition of most of the supplies now coming on to the market it is expected that lower prices will rule at the auctions during the week-end. Calfskins are scarce, but with the demand for these slightly less, values have again shown an easing tendency. With the lower prices ruling for wool, sheepskins continue to drop in value, and there is every prospect of further reductions in the near future. Foreign hides have again moved in favour of buyers on the whole, and although orders have been put through on account of the home trade there is no life in Continental business and the utmost difficulty is experienced in effecting sales. The South American market for frigorifics is just a fraction firmer; Argentine ox have changed hands on the basis of 8⅝d. for United States tanners, with sales of light ox-made at 7½d. and Montevideo ox at 8⅜d. The prices realised on Leibig Colon ox showed a decline on average of about four per cent Dry River Plates have been easier, and business has been done in B.A. Americanos at 8¾d., B.A. Inservibles at 5½d., and M.V. Americanos at 9⅜d. An appreciable amount of business has been done in Capes, which have commanded from 8⅜d. to 5½d. for the four selections, while dry-salted have changed hands at from 8d. to 7d. for the two first selections. The American market is cabled steady, with Chicago heavy native steers selling at 14½ cents. Business in sole leather continues to move on satisfactory lines, although here and there a slight setback is considered to have taken place. Generally speaking, however, the position is unchanged; tanners receive regular day-to-day orders, and prices for most descriptions remain firm. Shoe manufacturing wants are not large, and business is mainly centred on medium to light bends of a fairly decent tannage, stocks of which are not large. Common dry hide bends are the weakest spot in the market, and here possibly supplies might be obtained below asking prices. The repairing trade seems to be fairly well occupied, and business on account of this section is being put through all the time. Bellies and shoulders are wanted all the time, except perhaps the medium weights in the former, where a slight falling off in the inquiry has been noticed. In the upper leather section steady trade is taking place in connection with black and brown glacé in the medium and cheap selections, while a regular day-to-day call is experienced for box and willow calf; the best part of the inquiry being in connection with the latter. Patent leather continues to show improvement, while there has been further development in connection with the inquiry for suede leather for shoe purposes. Reptile and imitation reptile skins are moving a little better, and hopes are entertained for a larger business in the near future. Curriers report trade as slow, while shoe manufacturers have experienced an improvement in the number of orders coming to hand for footwear.

VEGETABLE OILS AND OILSEEDS.

A better tone has developed in the market for linseed crushers, both here and on the Continent, having bought freely in near positions after holding aloof for some time. Plate on passage and February shipment to Hull was done at as low as £17 last week, and this seems to have been sufficient inducement to consumers to fill their immediate requirements. Generally, the market is firmer, and the value on spot has advanced to £17 15s., and February shipment to £17 13s. 9d. The quantity of linseed on passage to Europe is now substantial, and at 174,300 tons, is 13,700 tons more than a week ago. Cotton seed has continued very quiet, and easy business again being largely of a re-sale character, although Alexandrian shippers have shown more disposition to meet the market. Business in black Egyptian is reported at £7 8s. 9d. for March, and £7 10s. for April loadings, while current value on spot and passage is £7 10s., with Sakellaridis 5s. per ton less than black. There is no trade in Bombay cotton seed, as values are too high. Linseed oil is in fair demand and steady current value being £43 15s. on spot, and £42 15s. for February delivery per ton naked ex Hull mill. Cotton oils are rather steadier, but demand is poor. Crude Egyptian is quoted £27, and common edible £30 5s. ex Hull. Other seed oils are quiet, and show but little change. Demand for oilcakes and meals is disappointing.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—A very dull market continues, and abstention from buying on the part of distributors and manufacturers, not only in the United Kingdom, but also American centres, is depressing the general position of the commodity. Prices for spot goods, almost without exception, were reduced 3d., and forward granulated by the same amount. Total Java shipments for last month were quite in line with estimate, viz., 138,000 tons, against 213,000 at same time last year. British India took 76,000 tons, against 90,000 last year; Port Said, nil, against 24,000; United Kingdom, nil, against 9,000; Singapore, etc., 13,000, against 14,000; Japan, 10,000, against 16,000; China, 31,000. against 38,000; Levant, 6,000, against 7,000; Scandinavia, nil, against 6,000; and others, 2,000, against 9,000. Home-grown granulated reduced 1½d. Raw refining sugars remain very dull; 500 tons Peruvian 96 per cent., February, to Liverpool, sold 7s. 6d. c.i.f. terms. Terminal sections easier and business conducted quietly. Of raw, March delivery sold 6s. 1½d. to 6s.; May, 7s. 2½d.; August, 7s. 9d. to 7s. 8½d.; December, 8s. 0⅜d. to 8s. Imports into the United Kingdom last month totalled 163,686 tons, as compared with 249,486 same time last year; home consumption, 128,765, against 152,533; stocks, 324,450, against 295,200; and stocks of home-grown, 137,950, against 61,000. Cuban receipts for past week, old crop, 15,778 tons, against nil last year; exports, 38,168, against 13,865; stocks, 93,524, against 4,963. Receipts of new crop last week, 165,257 tons, against 266,347 last year; exports, 19,275, against 125,830; stocks, 341,334, against 596,192. Centrals, 151 tons, against 163. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending February 8th amounted to 249,551 tons, compared with 178,942 at corresponding period last year.

COFFEE.—The London spot market continues to show some irregularity. A good many parcels realised full prices, but in other directions weakness prevailed. Progress at public sales proved quiet. Fine bold Costa Rica sold 161s.; Kenya, 149s.

COCOA.—Business on the spot market is still on a limited scale and prices barely maintained. Forward positions dull and easier. Accra, F/F, March-May, London contract, quoted, 40s. f.o.b. terms. In the terminal section, March delivery sold 43s. to 42s. 6d.; May, 43s. 6d. to 43s. 1½d. and 43s. 3d.; July, 44s. to 44s. 1½d., and later, 43s. 10½d.

† Duty on Tea repealed as from April 22, 1929, inclusive. Figures transferred from Group F to Group E.

TEA.—Quantity of Indian brought to auction during the week totalled 53,968 packages. After a decidedly quiet opening, bidding improved as the sales progressed, and, after manifesting certain irregularity, prices were ultimately very little changed. Some southern invoices showed a slight improvement in quality, and this was reflected in prices secured. Ceylon sales of 25,253 packages attracted generally good competition, and though slight irregularity was observable at times, there was no essential change to note on balance. Good medium leaf and broken teas well competed for, especially the former, owing to export support accorded. Java and Sumatra auctions met with fair competition and rates obtained proved generally steady.

RICE.—Market largely nominal, as buyers are still very reserved. Two Stars Rangoon, spot, London, 14s.; with February-March, 11s. 4½d. c.i.f. Spanish oiled, February-March, sellers, 15s. 9d. American blue rose from 22s. to 23s. c.i.f. No. 3, Burmah to the Levant, double bags, February, 11s. 3d. S.Q. to Cuba, 11s. 10½d. Saigon No. 1 round grain, February-March, to Europe, 12s. Siam Super, February-March, 15s. 4½d.

BROKEN RICE.—Quiet. Burma 1A, February-March, 10s. 10½d.; B1, 10s. 4½d.; A2, 10s. 3d.; B2, 10s. Saigon 1 and 2 mixed, 10s. 7½d. c.i.f.

RICE BRAN.—Market dull. Afloat, sellers, at £4; for shipment, February-March, £4; July-December, £5 per ton ex ship terms.

BEANS.—Butters quiet, and prices rather unsettled. Spot lots, old, 30s. to 34s.; new, per "Clan Macindoe," 34s. to 35s. ex wharf. Parcels per "Eugene Grossos," 30s. 6d.; "Clan Chatton," 30s. 6d.; per "Belgrano," 29s.; "Clan Macneil," 28s.; January-March, 26s. 9d. c.i.f. "Ohtenashi," afloat, 21s. 6d. to 22s.; February-March shipments, 21s. c.i.f. Rangoon haricots, ex store, 12s. 6d.; February-March, 12s. 6d.; new crop, March-April, 13s. 6d. c.i.f. London. Danubian, hand-picked, spot, London, 23s. 6d.; February-March, 23s. To Glasgow: North African, January-February, 8s. 9d. c.i.f.

PEAS.—A firmer market, demand becoming keener on colder weather and improved position of Dutch varieties. Japanese, spot, old, 15s.; new, 15s. 6d.; afloat, steamer "Diomed," sold at 15s. 9d.; January-February, 16s. 3d.; February-March, 16s. 3d.; March-April, 16s. 6d. c.i.f. London. Dutch marrowfats, prompt, quoted, 15s. 6d.; small blues, hand-picked, 12s. f.o.b. terms. Calcutta, January-February, 57s. Karachi, nominal c.i.f. Maples quiet. No. 1 New Zealand, February-March, old, 57s.; new crop, March-April, 58s. Tasmanian "A" grade, new, February-March, 66s. 6d. c.i.f.

SPICE.—Pepper again in demand, and market hardened, though assuming a quieter tone subsequently. Black Lampong, spot, quoted, 1s. 0½d.; Tellicherry, 1s. 2d.; Aleppy, 1s. 2d.; Muntok, white, 1s. 5d. Lampong, January-March, sold, 1s. 1d. to 1s. 0⅞d.; March-May, 1s. 1½d. to 1s. 1⅝d. Muntok, white, January-March, done, 1s. 4⅝d.; March-May, 1s. 5d. lb. London stocks of black underwent almost no change on the week at 1,126 tons, against 1,141 same time last year. White reduced 31 to 1,219, against 359 last year. Tellicherry, February-April, quoted, 127s.; Aleppy, ditto, 125s. cwt. c.i.f. Cloves steadier inclined. Forward, Zanzibar, 8¾d. to 8⅝d. as to position. Sago flour, February-March, to the United Kingdom, 11s. 6d.; March-April, 11s. 4½d.; April-May, 11s. 3d. c.i.f. Dutch farina, prompt, 9s. f.o.b. Ginger very dull at the moment.

FRUIT (Dried).—Currants: Market disclosed rather more inquiry, but trade still lacks activity and trend of prices easier. Pyrgos, quoted, 36s.-37s.; Amalias, 38s.-40s.; Patras, 39s.-43s.; Gulf, 43s.-48s.; Vostizza, 51s.-60s.; Australian, 36s.-39s. Sultanas quiet. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-80s.; Greek, 42s.-75s.; Australian, 34s.-48s. Dates steady. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s. 9d.-14s. Raisins in small supply, but trade restricted. Valencia, quarter-boxes, 45s. Figs steady. Layers, 32s.-40s.; genuine, 29s.-38s.; good average, 25s.-27s.

EVAPORATED FRUITS.—Trade requirements are still somewhat restricted, buyers showing no disposition to increase their purchases, but late rates were maintained, as no selling pressure is felt. Plums: Californian, new crop, 30's-40's, 72s. 6d.; 50's-60's 63s. Apricots: South African, new crop, Royal, 57s. 6d.-117s. 6d.; Australian, 67s. 6d.-77s. 6d. Pears: Californian Lake County, fancy, 90s.; extra, 100s.; Australian, 65s.-85s. Peaches: Californian, choice, 57s. 6d.-62s. 6d.; fancy, 67s. 6d.-72s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-69s.; Canadian, 64s. Almonds steady. Mazagan, 112s. 6d.; Mogador, 110s.; P.G. Sicily, 125s.; Majorcas, 112s. 6d.-130s.; bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 75s.; China, bitter, for shipment, 39s. new crop c.i.f.; sweet, spot, 77s. 6d. Hazel kernels: Kerasunde, spot, 155s.; Barcelona, 147s. 6d. New crop French (shelled) walnuts, 145s. ex wharf London.

CANNED GOODS.

CANNED FRUIT.—Trade generally fails to expand and with available supplies quite adequate for requirements prices for Californian descriptions exhibited slight irregularity and weakness. Stocks of Australian move off steadily, but so far buyers evince little interest in the new pack. Singapore pines steady on spot, but buyers still indifferent regarding shipment parcels despite reduced qualities held by packers. Available supplies of South African are in small compass, and new pack quotations are expected to be on a higher basis. Italian tomatoes in slow demand on former terms.

CANNED FISH.—Salmon: Market still quiet but undertone steady. Alaska, red talls, quoted, 48s.-50s.; pink talls, 25s.-26s.; and halves, 34s.-36s. Japanese crab firm, and fancy qualities quoted 97s. 6d.-102s. 6d. Lobsters in quiet demand but stocks light. Halves range from 135s.-140s. Sardines in fair demand, especially of best quality. Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Market firm, especially for ox tongues on restricted offerings. Lunch tongues sell well and Danish packers offer reservedly at full rates, while business is proceeding steadily in cooked hams for forward delivery.

CONDENSED MILK AND MILK POWDERS.—Market fairly steady and trade demand was maintained. Dutch condensed milk: Full cream, sweetened, 5-cwt. casks, 37s. 6d.; machine-skimmed ditto, 22s.; full cream, sweetened, 56-lb. drums, two in a crate, 52s. 6d. English condensed milk: Full cream, sweetened, 5-cwt. casks, 40s.; machine-skimmed ditto, 23s. Full cream milk-powders: English roller process, 28 per cent. butterfat, 2 by 56 lb. tins, crated, 95s.; Dutch ditto, 26 per cent. butterfat, 1-cwt. cases, 69s.; Dutch spray, 26 per cent. butterfat, 2 by 56-lb. tins, crated, 92s. Dutch machine-skimmed milk-powders: Roller process, 1-cwt. cases, 27s.; spray ditto, 2 by 56-lb. tins, crated, 39s.; ditto 1-cwt. cases, 37s. 6d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are net, ex store London/Hull or Goole, and cover prompt or gradual delivery to end of April, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. On the grocery side: Full cream, sweetened, 19s. 6d.; machine-skimmed, sweetened, 9s. basis per case, usual packing.

HONEY.—Market remains quiet. Jamaica, white, 56s.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s. Fine white Cuban, 49s. San Domingo, good, 46s.; manufacturing, 41s. Californian, white, 55s.; light amber, 50s. New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d. Ukrainian, light ambers, 45s.-49s. 6d.; whites, 49s. 6d.-52s. 6d. per cwt.

RUBBER.

RUBBER.—With sustained inquiries and reserve still marked on the part of sellers, a firm market resulted. Standard sheet, spot and February sold, 8d. to 8 1/16d.; March, 8⅛d.; April-June, 8⅛d. to 8 5/16d.; July-September, 8 3/16d.; October-December, 8 1/16d. to 8¼d. To New York, estate sheet, February-March sold, 7¾d.; March-April, 8d. c.i.f. London stocks increased 1,022 tons on the week. Landings, 2,710; deliveries, 1,688; stocks, 61,482 against 25,413 last year. Liverpool stocks 137 down: Landings, 175; deliveries, 312; stocks, 19,761 against 4,106.

GENERAL.

JUTE.—Calcutta became firmer, while influential buying of futures was reported, to which the London market slightly responded. But business just now is very professional, and trade in all jute-manufactured goods reduced to a minimum. First, January-February, Hamburg quoted, £26 12s. 6d.; ditto, February-March sold, £26 17s. 6d.; February-March to Antwerp at £27; March-April, usual ports, quoted £27 2s. 6d.; April-May, £27 7s. 6d. Lightnings, February-March, £25 5s.; Hearts, £22 5s. c.i.f.

HEMP.—Manila qualities in better request and market steadier as sellers adopted reserve. J2, February-April quoted, £32; K, January-March buyers, £31 5s.; February-April and March-May, £30 15s.; June-August, £31 5s.; L1, February-April quoted, £28 15s.; M1, £28 15s.; M2, £24 10s.; H, £31 10s. Sisal unaltered. No. 1, f.a.q. African, February-April, £33 10s. c.i.f. Receipts last week cabled 34,000 bales against 34,000 last year and 28,000 in 1928. Estimate for next week 35,000, and week after 33,000. Shipments last week from Manila, 23,000 bales to U.K. and Continent, 12,000 U.S.A., 2,000 Japan, and other countries 2,000. With an adjustment, local stock now stands at 177,000 bales.

SHELLAC.—A dearer market. Fair T.N., spot, 132s. 6d.; March, 122s.; May, 125s., and August sold, 129s.

COPRA.—Remains very quiet to Northern European ports, and Marseilles steady. Straits F.M.S., February-March, to Rotterdam, sold £22 1s. 3d.; Ceylon quoted, £23 10s.; Dutch East Indies, £22 1s. 3d. To Marseilles, mixed Dutch E.I., February-March, £21; smoked South Sea, £20 15s.; sun-dried ditto, £21 7s. 6d.; P.R. and H.A.D., £21 12s. 6d.; Manila, £21 7s. 6d. c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 14s. to 25s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £42 10s.; Ceylon, bristle, £19 10s. to £26; cinnamon leaf oil, 5d.; citronelle, Ceylon, 2s. 3½d.; Java, 2s. 6d.

METROPOLITAN CATTLE.—February 12.

THE MONEY MARKET.

THE market is now passing through a quiet period, and, apart from foreign exchange and gold movements, little of note occurred this week. Money has been definitely easier, and on Wednesday day-to-day loans were quoted at 3½ per cent., or the same as weekly fixtures. Discount

rates were fractionally lower than in the preceding week, 3 13/16 and 3 7/8 per cent. being variously mentioned for three months' bills. March and April bills were called 4 per cent., and the six months' rate 3 7/8 per cent.

* * *

Once more the Bank failed to secure any of Tuesday's Cape gold, of which £910,000 was on offer in the market, and, after satisfying Indian and trade needs, £870,000 was bought by Germany at 84s. 10 3/4d. The same night the second consignment of £2,000,000 in gold bars arrived from Spain. £500,000 was offered in the market the following day, and again bought by Germany, the price, however, rising to 84s. 10 7/8d. The balance of £1,500,000 was also taken by Germany on Thursday. The price realised was 84s. 11d. per oz., thus showing a further slight advance. Next week and the week after gold arrivals from the Cape will include on each occasion £250,000 in sovereigns, which will automatically pass into the hands of the Bank. There is also £7,000,000 of gold now on its way from Australia. Hence, despite recent German purchases and the present strength of the dollar exchange, there is no reason for anticipating any immediate inroads into the Bank's gold stocks.

* * * *

Among the foreign exchanges, the mark and the dollar have now replaced the franc as the danger point. The strength of the mark is not easy to understand, as a short time ago the Berlin market was supposed to have been saturated with foreign loans, and unable to absorb any more. A possible explanation is continued short-term borrowing by German municipalities, who find it easier to get accommodation abroad than at home, but such an explanation is of a very tentative character.

* * * *

The causes of the relapse of sterling against the dollar to under $4.86 can be stated more definitely. One reason is that the French Government are believed to be making certain debt preparations, while a moderate amount of French money is being re-transferred to New York for investment there. This makes the pound gain ground against the franc, but lose it against the dollar, and incidentally explains the rise in the Paris exchange to above par. The adverse movement in the New York exchange, however, is believed to be due to a further cause, and that is a transfer of investment money from British to American securities.

	Jan. 30, 1930.	Feb. 6, 1930.	Feb. 13, 1930.	Feb. 20, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5	4½	4½	4½	5 (Feb. 6, '30)
Banks' Deposit Rate	3	2½	2½	2½	3 (Feb. 6, '30)
Discount (Call	3	2½	2½	2½	3 (Feb. 6, '30)
Houses (Notice	3½	2¾	2¾	2¾	3½ (Feb.6,'30)
Market rate (3 months' bills)	3 7/8	3 15/16	3 7/8–15/16	3 13/16–7/8	

The most interesting movement in the week's Bank return is a contraction of £2,422,000 in the note circulation, which is mainly responsible for the increase of £2,562,000 in the Reserve, and for raising the Proportion to the high figure of 61⅜ per cent. The Reserve ratio of gold to outside liabilities, which in some ways is the more representative figure, is 33⅜ per cent., which is still low in comparison with accepted central banking standards. A reduction of £3,230,000 in Discounts and Advances represents market repayments to the Bank on February 13th, while there is very likely some connection between the steady reduction in the volume of outstanding Treasury Bills and the contraction of £6,129,000 in Government securities and of £4,066,000 in Public Deposits.

NEW YORK.

Money rates were unchanged, with the call rate a shade firmer at 4½ per cent. This week's Reserve statement contains little of interest, with no important alteration in any item, the ratio being 78.5, compared with 77.9 and 70.8 a year ago. Brokers' loans were up 44 millions, bringing the total to 150 millions above the recent low point. A gain of 7.4 millions in gold was recorded on the week as a result of shipments from South America, and a total of 25 millions now in from Japan, with another 50 millions expected. The steel industry's operating rate is up to 82 per cent., but the improvement is slowing down, and only a slight gain in motor output is expected during February, with the industry running on one-third of capacity. Employment in January was 1.8 per cent. below the December figure, but a slight gain occurred in February.

THE STOCK MARKETS.

The tone of the stock markets was dull and hesitant, apart from a slight accession of interest in mid-week, coinciding with distinctly firm conditions in New York. The rise in gilt-edged stock was arrested by the fall in the New York exchange, and the offer of a number of high-priced new trustee issues. Home rails recovered after further liquidation. A fair business, of a selective character, was done in international stocks, but domestic industrial shares were affected by the publication of unfavourable annual reports by more than one large concern. Rubber shares were marked up on an international decision to suspend tapping in May next, but tea shares were idle and oils depressed by reductions in crude prices in America. Business in the mining markets was restricted, Rhodesian coppers, though still the most active section, failing to maintain the whole of the preceding week's activity.

THE COMMODITY MARKETS.

The prospects for the spring are still uncertain. New orders for coal are not forthcoming, and the outlook is far from encouraging. There is no essential change in the position of the iron and steel trades, though there is some sign of improvement in the semi-finished section. The cotton industry is better supplied with orders, but uncertainty as to the future course of raw material values is hampering business. A similar situation obtains in Bradford, though there seems to be some hope of a sounder basis for wool prices. Depression in the jute trade remains unchanged. The hide and leather trades are steady, and some shoe manufacturers are well placed for orders. The oilseed and oil markets are fair. Wheat has declined sharply.

THE FOREIGN EXCHANGES.

Irregularity, with only moderate activity, again characterised the foreign exchange market last week, the features being the weakness of sterling against the dollar, further wide fluctuations in the peseta, and the Paris rate moving above parity for the first time for a considerable period. The New York rate declined from 4.86 7/32 to 4.86 after 4.85⅞. Montreal gained 1⅛ at 4.88½. Paris depreciated steadily from 124.15 to 124.25, while Brussels lost 1½ at 34.90. Milan gained 6 points at 92.85. Madrid went from 38.55 to 38.80, but was at one time 40.40. Amsterdam, after hesitation, gained ¾ at 12.12. Berlin was unchanged on balance at 20.36½. The Scandinavian currencies were all very firm, Stockholm improving from 18.13¼ to 18.12⅛, Oslo from 18.21 to 18.18⅜, Copenhagen from 18.16⅜ to 18.16⅛, and Helsingfors from 193⅜ to 193¼. Constantinople was again weaker at 10.70 offered. Of the South American exchanges, Rio gained 1/16d. at 5 17/32d. Buenos Aires was again weak, and lost 1 3/16d. at 42 5/16d., as was Montevideo, at 43⅜d., a decline of ⅛d. In the Far East the rupee lost 1/44d. at 1s. 5 29/32d., but the yen gained 1/32d. at 2s. 0 9/32d. Batavia was rather weaker at 12.12⅜. In the futures market the dollar was again at a discount of 1/32 cent for one month and ⅛ cent for three. Paris was quoted at considerably higher premiums of 14 and 27 centimes. Brussels went from one and two centimes discount to par for both periods. Pesetas were rather stronger at 6 and 14½ centimos premium. Amsterdam was less wanted at lower premiums of ⅞ cent and 2 cents. Silver prices declined steadily as the result of continuous selling from China and the Continent in the absence of any real support, and spot declined by 11/16d. to 19 15/16d. and forward by ⅜d. to 19 13/16d. The China silver exchanges fell away in sympathy, Hongkong losing ⅛d. at 1s. 6⅛d. and Shanghai ⅜d. at 1s. 11¾d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moodys-Economist Services, 6, Bouverie Street, London, E.C.4. [8859]

THE NEW PARTY AND ITS POLICY.

THE decision of Lords Beaverbrook and Rothermere to start a new political party to push their policy of Protection, independently of existing organisations, is an event of political importance. It is true that the history of previous attempts by great papers to mould politics to their liking is not encouraging; but Lord Beaverbrook has undoubtedly aroused interest by his persistent appeal to Imperial sentiment in this country, and as the noble lords are in a position to endow their enterprise with ample funds and to supply the material requirements of an active propaganda, the new movement, as the *Times* sadly admits, is likely to be a serious embarrassment to Conservatism. For the new party, so Lord Rothermere tells his readers, will, at the next election, contest half the seats of the country, "concentrating especially upon the South of England" (the exporting industries of the Midlands and North are, wisely, to be given a wide berth), and candidates are invited to come forward on the promise of having their expenses paid.

In an adventure of this kind, Press magnates have a great advantage over serious politicians who have had to deal with the Dominions and foreign countries, and may again have the responsibilities of office, for Press propaganda can be carried on without a really definite programme; a popular newspaper need not reply to criticism, however destructive, unless it chooses; and it can change its ground as occasion may serve. But the original differences between Lords Rothermere and Beaverbrook, as we pointed out in the *Economist* of January 11th, were so marked that, before a joint offensive could be launched, it was necessary to arrive at least at an apparent agreement.

The political story of the week really opens with Mr Baldwin's speech at Belfast, on Sunday last. Starting from the self-evident proposition that, on fiscal questions, his followers were all at sixes and sevens ("the Unionist Party was the only party in which they found every shade of fiscal opinion") Mr Baldwin went on to explain that "whoever led the party must have as his principal object a policy which would bring a greater number of the party together in harmony, and the extremists must act as they think fit." He, therefore, rejected the idea of a "general" tariff in favour of his idea of safeguarding industries according to their various needs on what he described as "business grounds"; for a "general" tariff (which he seems to regard as a flat rate of duty on all imports—a system which exists nowhere in the world) would afford too much protection to some and too little to others. On the other hand, he rejected Empire Free Trade as a great, but impractical, ideal, though he believed that freer trade between members of the Empire was a hopeful direction in which to start towards making the Empire a unit; one day we might reach such a condition of affairs that "we may spread like a blessing all the works here in England, in Scotland, in Canada; and that, whether we be masters or workmen, we shall think no more of emigrating within that area than we think of emigrating from Yorkshire into Lancashire."

This halting conclusion—so reminiscent of Mr Balfour in 1904—was not to the liking of the Press peers, and, on Tuesday, the new party was launched by Lord Beaverbrook under the official name of the United Empire Party, but apparently to be known in the *Daily Mail* as the "Party of Prosperity." Lord Rothermere's adhesion was loudly announced, with full details of the campaign, in all his Press organs on the following day. The terms of the alliance are that Lord Rothermere accepts food taxes. "Hitherto," he writes, "I have hesitated to commit myself to proposals for the taxation of food which Lord Beaverbrook regards as essential to the great scheme he has unfolded. During my recent visit to America my secretariat and I have devoted great pains to the consideration of this aspect of the Imperial question, and I have come to the conclusion that, wisely imposed and carefully applied, taxes upon foreign foodstuffs may achieve the results which every true patriot desires." He goes on to say that such taxes can be so applied as to benefit the farmer and increase trade between Britain and the rest of the Empire "without in any way increasing the price of food to the workers in our great industrial centres." Further, he declares that the Empire to-day is producing such a surplus of food which it cannot sell that there is "enough of every description to make up any shortage there may be in our home-grown supplies."

Somewhat inconveniently for Lord Rothermere, the Civil Service, pursuing the even tenor of its way, has just produced a valuable little Blue Book setting out the actual facts regarding our food supply.* They show that this country was fed before the war and in recent years from the following sources:—

SOURCES OF BRITISH FOOD SUPPLY.

	Pre-War. £ millions	Pre-War. %	Post War. £ millions	Post War. %
Home supply.....	136·2	*43·3*	250·9	*39·3*
Imported from—				
British sources	55·6	*17·7*	138·1	*21·6*
Foreign sources.....	122·6	*39·0*	250·0	*39·1*
Total	314·4	*100*	639·0	*100*

To-day, 8s. in the £ spent on food is paid for home produce, 8s. for foreign produce, and 4s. for Empire produce—the latter having very slightly increased at the expense of the home producer as compared with the situation before the war. The food tax policy means that 8s. worth of food bought from foreign countries is to be taxed—out of every pound spent—in the hope that this supply will be replaced from home or Empire sources.

No juggling with statistics could prove that there is to-day a sufficient surplus of food produced in the Empire to make good the loss of supplies from foreign countries, and the change in the source of supplies that would be needed is on so large a scale that it could not possibly take place without the stimulus of a sharp and sustained rise of prices. What is true of food is true in varying degrees of our chief raw material requirements. Mr Lloyd George in the House recently made extremely effective use of the case of cotton, but similar considerations apply with regard to such important commodities as iron ore, timber, oil, copper, wool, silk and many other products. In all these cases there is some Empire production which could demand protection against foreign supplies. In short, not only is Empire Free Trade an impracticable policy owing to the definite refusal of the Dominions to accept it, but, even if it could be introduced in the form Lord Beaverbrook proposes, it would raise both the cost of living and the production costs of every industry in the country.

If Lord Rothermere's contribution to the concordat is to swallow food taxes, Lord Beaverbrook has taken on board a great deal of heavy cargo in the shape of a high, and preferably a prohibitive, tariff against all foreign manufacturers; subsidies to the British farmer; and a high-handed policy towards India (presumably also to the non-self-governing colonies), designed to compel these markets to admit British goods free and to tax those from other countries. As regards the general tariff proposal, figures given in an article elsewhere in this issue will serve to show the large volume of trade which would be affected. Lord Rothermere seems to imply that, if only we could keep out foreign manufactured imports, there would be such a great expansion of sales in the home market by British producers that it would keep our factories fully employed. This conception is quite fantastic. In the first place, when we have eliminated from our imports of so-called manufactures the items in the list which are really raw materials, and the manufactures which we import from the Empire, and have subtracted from the balance the value of the raw materials which would have to be imported if the goods were made here, the resulting total is a very modest sum. Even if British industries

* The Agricultural Output and the Food Supplies of Gt. Britain. (H.M. Stationery Office. Price 1s. net.)

could fill the gap, which in many cases is impracticable, the work would be no sort of a substitute, from the employment point of view, for the loss of export trade which such a policy would involve.

Lord Rothermere, whose admiration for the United States is unbounded, should surely realise that the British market is not sufficiently large to ensure the possibility of production on the greatest possible scale, which has contributed so much to America's advancement. There is evidence, however, that he does not seriously think that these foreign manufactures will, in fact, be displaced by British goods. The new Party, he announces, stands above all for the reconstruction of British agriculture, for, if Lord Beaverbrook's food taxes fail to restore prosperity to agriculture and at the same time provide cheap food for the urban population, " then subsidies to the farming industry must be provided *from the funds raised by taxing foreign manufactured goods.*" So these accursed goods are to come in after all. The hypothesis reveals the complete illogicality of this programme, which is simply a full-blooded policy of protection, including food, with an option offered to the self-governing Dominions to come in on a Free Trade basis and compulsion on other parts of the Empire to do so.

Meanwhile, the problem of stimulating British trade remains. It is common ground that Empire trade has not only great possibilities of expansion, and also that we have special opportunities, as compared with other countries, of sharing in it. On the other hand, we cannot play fast and loose with our great foreign trade. As Sir Alan Anderson pointed out to the Chamber of Shipping on Thursday, in an interesting comparison of our trade with France and Australia, if we can exploit sentiment in the one case we must exploit contiguity in the other. While Mr Graham is wrestling at Geneva with the problem of seeking for a modification of European tariffs, the Federation of British Industries have made a serious attempt, which we examine in a " Note of the Week," to consider how we can develop Imperial trade. It is significant that, among the practical proposals made by this organisation, is the suggestion to hold an Imperial trade conference modelled on the World Economic Conference of 1927, to be followed by a standing organisation and continuous work on the Geneva model. On these lines, rather than in the fantasies and fallacies of the new party's ostentatious programme, is the basis for a sound Imperial economy policy to be sought.

CHINA STILL IN TROUBLE.

China is unmistakably still in trouble, after all. During the latter half of the year 1928 it looked as though she were successfully struggling out of the Slough of Despond. The evacuation of Peking by the Northern War-Lords in June of that year completed the political unification of the old provinces, inside the Great Wall, under the Kuomintang flag; and the process was carried an important stage further when that flag was hoisted in Manchuria in the last days of December. Simultaneously, symptoms of reconstruction appeared. A few days after the fall of Peking an economic conference of private business men was held at Nanking under the auspices of Mr Soong, the able Finance Minister of the Kuomintang Government. A few days after the formal recognition of that Government in Manchuria a conference for the reorganisation and disbandment of the Army was attended by Generals Chiang Kai-shek, Feng Yü-hsiang, and Yen Hsi-shan, by members of the Kwangsi Faction, and by a representative of Marshal Chang Hsüeh-liang, who was reigning (and still reigns) in his father, Chang Tso-lin's, stead at Mukden. Even when the Kwangsi Faction tried conclusions with the Nanking Government in the early summer of last year, 1929, their rapid and complete defeat at the hands of General Chiang Kai-shek increased the Nanking Government's prestige without exhausting its resources.

The turn for the worse came thereafter, with the breach between Chiang and Feng. The civil war between them last autumn was costly and indecisive; and Feng's withdrawal to his home province of Shensi, which looked like a negative success for Chiang, was more than offset by a crop of mutinies against Chiang in December—one at Pukow, just across the River Yangtse, opposite Nanking. The Nanking Government escaped destruction then by the skin of its teeth; and for a few weeks it lay low. Latterly, however, it has re-entered upon its fixed course of reunifying China under its authority; and this policy is now threatening to bring Chiang into conflict with Yen Hsi-shan, the prudent and long-lived " model tüchün " of Shansi, who obstinately sat on the fence while Chiang and Feng were at grips with one another last October. The latest news is that Yen has telegraphed to Chiang proposing that they should both resign and should travel abroad together. Chiang is reported to have rejected the suggestion, and some of Chiang's supporters have telegraphed to Yen reproaching him, more in sorrow than in anger, for having made so unpatriotic a suggestion. The upshot is that Yen has secured the *beau rôle* for himself.

A correspondent, who has recently visited China, writes that, during the last six months, the Nanking Government in general and Chiang Kai-shek in particular, have fallen very greatly in public esteem. " Nowadays, Chinese ' intellectuals ' speak of Nanking with contempt and even hatred; and the only consideration that seems to restrain them from declaring open war upon it is the shrewd reflection that almost any change of *régime* is likely to be a change for the worse. The fetish of unity has lost its hold upon their imaginations; peace is the panacea for which not only the non-political ' intellectuals,' but the entire Chinese nation, outside ' political circles,' really craves. And if peace can only be secured by the sacrifice of unity, it matters little to them.

" With this current of opinion, which is running strongly now throughout the country, the politicians and military commanders seem strangely out of touch. Perhaps they are just ignoring it. Perhaps they calculate that in the long future, as in the recent past, they can ignore deep popular desires with impunity. And yet, surely, the force that carried the Kuomintang to victory a year or so ago was just such a current of popular feeling as that which has begun to run against them to-day. Can they set their faces against it with impunity? That is not a question which can be answered by a mere foreign observer. Probably the Kuomintang politicians do not really know that answer themselves. Time alone will reveal it."

Meanwhile, the idea of democracy has been flouted in rather a startling way by a majority of the members of the Standing Committee of the Central Executive Council of the Kuomintang. This Committee, if its acts are reported correctly, has recently thrown out a " bill of rights " which had been designed to safeguard individual liberties —and this on the rather formal ground that the country is now deemed to be in " the stage of tutelage," the second of the three stages through which the late Dr. Sun Yat-sen pronounced that China would have to pass before the Revolution would be complete. This reference to the letter of the dead master's law is certainly not hypocritical, for Sun Yat-sen holds the same place in the political theology of the Kuomintang as Marx and Lenin hold in the tenets of the Russian Communist Party. The worshippers are in a state of mind in which verbal inspiration seems self-evident and in which texts have astonishing power. Nevertheless, this doctrinaire reverence for the sanctity of " the stage of tutelage " does very patently redound to the personal advantage of those in whose hands the tutorial authority has been placed by the wheel of fortune, which spins round rather erratically in times of revolution. On this account, the Committee's action seems likely to arouse serious opposition; and, indeed, it has been challenged promptly by no less a person than General Chiang Kai-shek, the commander-in-chief of the Kuomintang armies. By striking this posture, Chiang places himself in a favourable middle position between the " reactionary " right wing of the Kuomintang and the left, which is now in exile and therefore in unnatural temporary alliance with some of Chiang's military rivals. Chiang is too good a strategist not to take full advantage of the interior lines. It looks as though the politicians have offered him an opening for attempting a kind of Cromwellian dictatorship, on the plea that he is a truer and more honest exponent of the popular will than the parliamentarians.

Thus the witches' cauldron boils up again and again, with a baneful effect upon the lives of a population that is estimated to amount to one-quarter of the human race. At this juncture comes the news that an agreement for the rendition of the British leased territory of Wei-hai-wei has been negotiated and initialled by the British Minister in China and the Chinese Minister for Foreign Affairs. At first sight it seems a pity to merge this comfortable little enclave of Chinese territory in the boiling, spluttering mass; but on second thoughts the policy seems to be the right one. These foreign bites out of the Chinese cherry are anomalies. The neighbouring leased territory of Kiaochao—first German, then Japanese—has been " rendited " already. Lord Balfour has publicly promised that we will " rendite " Shanghai—and this eight years ago, at the Washington Conference of 1921-2. The fulfilment of such a promise cannot be postponed indefinitely. It would not be honourable, and it would not even be feasible, for the Chinese inhabitants of the territory are now well aware that rendition, sooner or later, is a certainty; and their eyes naturally turn more and more away from their present rulers to their rulers of the future, whom it is prudent to placate in good time. Thus it is to be hoped that this time the rendition of Wei-hai-wei will at last be carried through. And yet, policies and principles apart, we cannot help feeling for the people. For it is no joke to be under the tutelage of the Kuomintang in the second period of Dr. Sun's plan of national salvation.

SHIPOWNERS AND SHIPBUILDING.

The annual meeting of the Chamber of Shipping was held this week in circumstances which could not fail to give a somewhat dismal colour to the proceedings. " The past year," in the words of the Chamber's Report, " has been one of deep disappointment. The promise of better trade offered by the small but steady improvement in freights in 1928 was not fulfilled. . . . To-day freights are actually below pre-war level. . . . They have fallen 28 per cent. in twelve months. This decline has extended to nearly all trades, with the result that even new ships have been taken straight to the buoys, and some owners have a large proportion of their fleets laid up." The reference to " freights," it should be understood, applies not to the rates charged by regular liners, to which Conference agreements give a certain degree of stability, but only to the " open market " quotations for whole-cargo charters. Even with this qualification, however, the situation of shipowners is, temporarily at least, one of serious difficulty. Sir Arthur Sutherland, who succeeds Sir William Currie as President of the Chamber, illustrated the unremunerative character of current charter rates by showing in his presidential address that, after deducting loading and discharging expenses, grain is now being carried to Europe from the Plate at 1¼d., and from Australia at 1d. per 100 ton-miles, and though he expressed hopes of a recovery later in the year—adding significantly, " If only we could get rid of obstacles to trade revival created by tariff barriers and uneconomic conditions which restrict production, we should have more confidence "—he admitted that at the moment " the fortunes of the shipping industry seem to be at their lowest ebb."

In attempting to estimate the bearing of the present freight depression on the industries ancillary to shipping, it is important to determine its causes. Two factors are discernible: a sharp contraction in one form of demand, whose effects are likely to be transient, and an increase in supply—*i.e.*, of tonnage—whose results in the shape of a renewed disequilibrium may well be more lasting. The salient feature in the history of cargo shipping last year was the failure of the normal autumn demand for tonnage to transport North American wheat. The large August carry-overs, the plentiful European crops, the rapid accumulation of heavy importers' stocks, and the threatened collapse of grain prices, which led to the curtailment of exports by the Canadian " pools," all combined to disorganise the flow of cargoes for homeward tonnage. The diversion of numerous vessels from the North Atlantic to the Plate and other loading centres extended the glut of cargo space over the whole market; the instability of commodity prices after the Wall Street collapse was an added element tending to restrict shippers' demands; tonnage began to move homewards in ballast; and at the end of the year freights, even in the outward coal trade, whose improvement had up to then augmented the earnings of " tramp " shipping, shared the general *débâcle* under pressure of " unfixed " vessels seeking employment. From 94.8 in July (against 93.7 in July, 1928) the *Economist* index number of whole-cargo freights (1913 = 100) had fallen by December to 86.2, as compared with 113.2 a year ago; and though the volume of laid-up tonnage in this country on December 31st was only 23,000 net tons greater than at the end of 1928—the wide margin between differential and prime costs of operation is a factor which impedes quick adjustment of fluctuations in the freight market—large numbers of vessels have since been withdrawn from commission.

Restoration of a more normal flow of sea-borne grain is unlikely in the nature of things to be long deferred; and since shipowners, in placing orders for new tonnage, are obviously concerned less with immediate demand than with prospective demand a year ahead, there would be no grounds for fearing that the present violent slump in cargo freights might have serious repercussions on shipbuilding and, indirectly, on demand for steel, were it not that, even before the autumn collapse, there were signs that tonnage output had been proceeding at a rate beyond the freight market's capacity for absorption. Despite larger coal exports and an active Baltic timber season, the margin of improvement shown by the *Economist* freight index in comparison with a year ago had narrowed from 11 per cent. in January to 1 per cent. in July; from the spring onwards there were reports of increasingly keen competition between augmented liner services; and the Report of the Chamber of Shipping expresses the consensus of opinion in the industry that at least " the larger size of cargo vessel appears to have been overbuilt."

Two years ago (*Economist*, January 28, 1928) we expressed the opinion that on an average for 1928-33 the world's demand for new merchant shipping would not exceed 2¼ million tons per annum. As may be seen from the following comparative table, both in 1928 and 1929 output has substantially exceeded that estimate:—

Tonnage Output.

Period.	Tons Launched (000's).			Output as per Cent. of 1909–13.		
	U.K.	Abroad.	World.	British.	Foreign.	World.
Average—						
1909–13	1,522	967	2,489	100	100	100
1922–25	1,050	1,087	2,137	69	112	86
1927	1,226	1,060	2,286	80	110	92
1928	1,446	1,253	2,699	95	130	108
1929	1,523	1,271	2,794	100	131	112

In one respect, encouragement is to be derived from the foregoing figures. Though output in foreign countries

last year showed an increase of 31 per cent. as compared with 1909-13, whereas British production just equalled the pre-war average, the recovery in output since 1922-25 has been much more marked in this country than abroad. The competitive power of British shipbuilders has greatly improved since 1925, and though an increase in Continental costs has been an important contributory factor in this improvement, it is satisfactory to note that at the end of 1929 the British proportion of the total tonnage under construction was 50.2 per cent., as compared with 42.7 per cent. four years ago. Though policies of " nationalism " in shipbuilding, expressed in various forms of subsidisation—*e.g.*, in Italy, France, and the United States—make it unlikely that we shall regain the pre-war proportion of 57 per cent., the building of half the world's merchant tonnage is no mean achievement. The question is: Can world output be maintained at a rate 12 per cent. higher than in the period of rapidly-expanding trade immediately before the war, or is a reaction, affecting different countries in varying degrees, to be expected?

The Report of the Liverpool Steamship Owners' Association, also issued this week, reinforces the Chamber of Shipping's conclusions as to recent over-building by drawing attention to the " marked degree of under-employment " of existing tonnage. When tankers are deducted from the total output, the expansion in the world's production of vessels available for the carriage of passengers and cargoes other than bulk oil becomes even more striking, the figures being 1.74 million, 2.05 million, and 2.47 million tons launched in the past three years. The large increments of 1928-29 (wastage by loss and demolition has averaged only 1.2 millions annually for all classes of tonnage over the past four years) were calculated to put the freight market—temporary fluctuations apart—to considerable strain (the net increase between June, 1928, and June, 1929, in efficient ocean-going non-tanker tonnage was 3 per cent.); and, save in the case of the United States, where the influence of the Jones-White Act bounties was reflected in a large increase in tonnage under construction, the second half of 1929 saw signs already of incipient recession in shipbuilding activity. Work in hand rose, it is true, from 2,838,000 tons on June 30th to 3,110,000 tons on December 31st (the British figure rising from 1,454,000 to 1,560,000 tons), but this increase was due wholly to the commencement of work on numerous oil-tankers. Excluding this special type of vessel, tonnage under construction in the United Kingdom fell during the second half of 1929 by 121,000 tons, and world construction (excluding the United States) declined by 59,000 tons. Not only so, but in this country, as on the Continent, the volume of contracts placed, but for which work had not been begun, was substantially smaller at the end of 1929 than a year ago.

While it is unlikely that the British shipbuilding industry will revert to the extreme depression of 1922-25 (its recent successes in securing contracts from abroad, notably Norway, encourage better expectations than that), the present world-wide slump in freights suggests that orders for new cargo tonnage will be scarce for some months ahead, and though pure " replacements " should make up perhaps 4 million tons for the world's yards in the next two years, the volume of contracts above that minimum is likely to be small unless the shipping position radically improves. The shipowning concerns which consistently take long views and aim at the maintenance of a high standard of efficiency in their fleets, find their resources seriously depleted to-day by trading losses. Though the brunt of the depression is falling on " tramp " vessels, even the strongest lines are feeling the pinch; and the adverse fortunes of the great Royal Mail combine are eloquent testimony to the financial strain of a prolonged period of surplus capacity.

In these circumstances the shipbuilding industry is likely to find the need of eliminating its own surplus capacity insistent. Even last year, with an output as great as in 1909-13, only 55 per cent. of the available berths in British yards were ever in use; and the maintenance of plant so far in excess of conceivable requirements, the uneconomic spreading of work over a large number of semi-employed yards, and the unnecessary strength of the aggregate managerial personnel consequently employed by the industry, are a grave addition to costs. The industry is alive to the advantage of greater concentration of work, but the existence in many cases of " frozen " loans on physical assets of little present earning power is a factor which involves considerable difficulties. A comprehensive inquiry into the possibilities of rationalisation in the shipbuilding industry might be a useful item in the Economic Advisory Council's programme of work.

THE DIRECTION OF OVERSEAS TRADE.

THE Trade and Navigation Accounts for January contain the usual statistics of our trade with individual countries during the years 1927-29, and these are further analysed in the *Board of Trade Journal* for February 13, with comparative figures for 1913. In all those of the tables below in which the figures are grouped under the headings " British " and " foreign " countries, trade with the Irish Free State is omitted, and Palestine, the Sudan, South-West Africa, Tanganyika, Nauru and Western Samoa are treated as foreign countries for the sake of comparability with 1913.

The first table shows the percentage distribution of our trade as between British and foreign countries:—

Class of Trade.	1913. Per cent.	1927. Per cent.	1928. Per cent.	1929. Per cent.
Imports from:—				
Foreign countries	75·13	73·13	73·00	73·88
British countries	24·87	26·87	27·00	26·12
British Exports to:—				
Foreign countries	62·82	57·44	58·04	59·00
British countries	37·18	42·56	41·96	41·00
Re-exports to:—				
Foreign countries	87·58	88·92	88·21	87·19
British countries	12·42	11·08	11·79	12·81

The proportion of our imports which came from the Empire in 1929 was less than in any of the last five years, though greater than in 1913. The proportion of our exports consigned to British countries was less than in either of the two preceding years, but greater than in 1925 and 1913. A steadily increasing proportion of re-exports, on the other hand, has gone to the Empire.

The next table, which, like the preceding one, is based on the Board of Trade analysis, shows the percentage distribution of our trade by continents:—

Class of Trade.	Europe. Per cent.	Africa. Per cent.	Asia. Per cent.	North America. Per cent.	South America. Per cent.	Oceania etc. Per cent.
Imports:						
1913	40·53	6·10	12·71	23·86	9·06	7·74
1927	37·01	7·16	13·45	24·19	9·59	8·60
1928	36·66	7·85	12·29	24·08	10·10	9·02
1929	37·45	7·49	12·75	22·94	10·34	9·03
Exports (British produce):						
1913	34·64	9·87	25·20	11·99	9·59	8·71
1927	30·27	11·99	23·58	13·15	8·93	12·08
1928	29·93	11·83	23·63	13·95	9·66	11·00
1929	31·30	11·76	22·50	13·81	9·60	11·03
Exports (imported merchandise)						
1913	56·02	3·31	2·48	32·26	1·97	3·96
1927	68·27	3·51	2·63	21·30	1·31	2·98
1928	66·46	3·84	2·48	22·96	1·49	2·77
1929	68·57	4·29	2·67	19·76	1·76	2·95

The upward tendency in the percentage of imports from Europe, which has occurred in recent years but was checked in 9128, continued in 1929, though the proportion has not yet reached its pre-war level. Exports to Europe, which are also below the pre-war proportion, increased

substantially in 1929, and re-exports to that continent, which were already very much higher than in 1913, increased very sharply in 1929. The following table shows our trade with individual European countries:—

TRADE WITH EUROPEAN COUNTRIES.

Total	320,065	459,876	445,374	466,428	195,138	222,005	225,122	235,670

From this it appears that the most conspicuous contributors to the increase in our European imports last year were Russia, Germany, Sweden and Denmark, while France was a very marked exception and imports from Czechoslovakia, Switzerland and Greece declined slightly. The increased proportion of our exports which went to Europe was principally due to increased exports to Belgium, France, Spain and Italy, and a substantial part was played by exports of coal. Germany, Holland and Switzerland, among others, imported less from us.

The other most marked change in the geographical distribution indicated above is the diminution in the proportion of our imports from and re-exports to North America. This was very largely due to reduced shipments of wheat from Canada. Exports to Canada, on the other hand, have more than maintained the great improvement shown in 1928. As the following table of non-European foreign countries shows, our imports from the United States were higher than in 1928, though not as high as in 1927:—

Argentine	42,485	76,496	76,789	81,419	22,641	26,992	31,210	29,071
Other foreign countries (non-European)	9,540	16,530	17,428	15,841	7,215	10,167	10,677	11,856
Total	257,154	391,804	386,640	394,846	134,800	160,426	170,789	169,420

Imports from Egypt, Cuba and Uruguay declined as compared with 1928; those from the Argentine (reflecting large grain purchases), Brazil and Chile were higher. The most marked changes in our exports to this group of countries were an increase in those taken by Chile and declines in exports to Brazil and the Argentine. Asia took a smaller proportion of our exports, owing partly to small declines in our sales to Japan and China, and still more to a heavy decline in our exports to India, which appears in the following table of trade with Empire countries:—

TRADE WITH THE EMPIRE.
(000's omitted.)

	Imports from				Exports to			
	1913.	1927.	1928.	1929.	1913.	1927.	1928.	1929.

West Indies	2,116	4,487	5,344	5,342	2,339	4,528	5,111	5,044
Other possessions	7,168	27,472	27,935	27,363	13,785	25,147	26,719	27,989
Total, British countries	191,516	366,661	363,585	360,317	195,307	326,650	327,668	324,465

From the next table, which shows re-exports to various countries, it appears that the heavy decline last year was fairly general, though it was most conspicuous in the case of the United States and in a less degree of Germany, France and Italy. Russia and the Netherlands show slight increases:—

Total	109,575	122,953	120,283	109,742

Almost the entire fall in our re-exports to the United States was due to diminished exports of rubber.

The most striking fact which emerges from an examination of these returns is the steady growth of our trade with foreign countries, and more especially with Europe, as compared with our trade with the British Empire. Too great care cannot be exercised in interpreting statistics of this kind—for example, the Continental distribution of our trade has been to some extent affected by the policy of the Canadian wheat pool, and our re-export returns are directly influenced by the vicissitudes of rubber—but the tendency is too persistent to be dismissed as a statistical accident. Moreover, it is confirmed by the League of Nations' analysis of world trade, which suggests that the best market for the highly finished manufactured products of European countries is found in other European countries. Trade of this character, between countries all engaged in the same lines of production, but specialising individually along lines so subtle that A's exports to B often differ from her imports from B only by some very fine shade, is a delicately adjusted affair. Any attempt artificially to force it into different channels involves stepping where angels might reasonably fear to tread.

GERMAN STEEL AND COAL RATIONALISATION.

(BY A CORRESPONDENT.)

THE annual reports of the Vereinigte Stahlwerke A.G., commonly known as the German Steel Trust, contain information of the greatest importance to all students of the methods and achievements of rationalisation in the heavy industries. The report for the year ending September 30th last, just published, is specially interesting, as it includes a general survey of the planned rationalisation programme which, after three and a half years of intensive effort, is now almost completed.

The scope and significance of this rationalisation effort will be better understood if the circumstances in which the trust was formed, and the magnitude and intricacy of the administrative and management problems involved in the undertaking, are recalled. Following the reconstitution of the Steel Works Union after the French occupation of the Ruhr, and the renewal of regulated production, the principal firms found themselves, in 1925, in an exceedingly difficult position. The total steel production for that year, 9,800,000 tons, was 2,500,000 tons below the comparable 1913 figure, with a vastly increased productive capacity. Short-time working, high overhead costs, financial embarrassment, lack of liquid capital, low wages, and a twelve-hour day for a large number of the workers were general conditions. The Thyssen, Rhein-Elbe Union, Phœnix, and Rheinstahl concerns decided on the formation of the trust as the most effective means, in their respective circumstances, of carrying through drastic reorganisation, and the trust was formally constituted in the spring of 1926. The Krupp, Kloeckner, Hoesch, Guttehoffnungshütte, and Mannesmann concerns decided to carry out similar measures independently, while co-operating with the trust in the cartel organisations. The share capital of the trust was and remains £40,000,000. American loans amounting to just under £30,000,000 were arranged for reconstruction and other purposes. The plant brought under unified control included 48 coal mines, nearly 100 blast furnaces, 150 steel furnaces, and a great complex of rolling mills, ore mines in Germany and abroad, and other accessory works. Closing down of redundant, unremunerative, and unfavourably situated works proceeded without delay, and simultaneously concentration and specialisation of production was planned.

The new plant installed in three years includes 573 coke ovens of the latest type (replacing 717 taken over in 1926), new steel furnaces of 150 and 200 tons capacity, automatic rolling-mill equipment, and one 1,200-ton blast furnace. By closing mines and reorganising underground workings the coal-winding units have been reduced from 48 to 32, while the total raising capacity has been increased by new haulage and pithead equipment to cope with the higher output at the coal face following comprehensive mechanisation. On all this work a total of £15,000,000 has been expended in three years—over £13,000,000 in the first two years and about £1,500,000 in the year covered by the new report.

The technical results reported are remarkable. In the second half of this last year the average daily coal output from the 32 winding units was 93,300 tons, as compared with 77,300 from the old 48—an increase of 21 per cent. The total output in 1928-29 was 27,242,000 tons, against 26,454,000 in the preceding year, this being 22.83 per cent. of the total production of the Ruhr. To continued technical improvements is attributed a further notable increase in the average output per man per shift (all workers) to 1,327 kilogrammes (just over 26 cwts.), as compared with 1,235 kilogrammes in the preceding year, an increase of nearly 2 cwts. The Ruhr average in March, 1929, was 1,261 kilogrammes (24¾ cwts.). In 1913, with a 8½-hour underground (now 8 hours bank to bank), the Ruhr figure was 18.6 cwts. This fell to 16.8 in 1924, and came back to 18.6 in 1925. The latest trust figure of 26 cwts. compares with 23.18 cwts. for Yorkshire in the September, 1929, quarter (roughly, the same working time), and 21.40 cwts. average for Great Britain, with half an hour longer working time in many districts.

The production of raw iron fell from 6,518,000 tons in 1927-28 to 6,007,000 tons in 1928-29, and that of raw steel from 6,945,000 to 6,419,000 tons, this being attributed in the report to the lock-out of a month in November, 1928, to the hold-up of export traffic on the Rhine for many weeks in the late winter, and to a fall in trade during the summer. Exports increased by 77,000 tons, but the proportion of sales in the home market to exports fell from 67 to 63 per cent.

All the reports have been reticent about the productive economies achieved in the steel plants, but a broad indication of the effect of concentration and increased mechanisation is given by the personnel figures. In the first six months of the trust's operations steel output was at the rate of 5,078,000 tons a year, with a corresponding low iron production, and a total number of 89,000 workers in the iron and steel plants. Last year, with an increased steel production of 1,400,000 tons (in eleven months, allowing for the lock-out), the number of workers was 89,631. In the interval a large proportion of the workers have had the eight-hour day restored. Wages have risen substantially. The average payment last year, including youths, women, and allowances to invalids, was £128 (for eleven months' work), as compared with £123.10 in the preceding full year, and £118 in 1927, when it was reported that, since the formation of the trust, the wage bill had increased by 44 per cent., while the number of workers was only 6 per cent. higher.

The financial results, as disclosed by the balance sheets, have been almost uniform since the spurt given by the British coal stoppage in 1926. A dividend of 6 per cent. has been paid in each of the three years. The net profit of £2,600,000 last year varied but slightly. Depreciation, £4,170,000, was a little less, and in the three years a total of £14,000,000 has been placed to this account. Interest on loans was £1,700,000, taxes just over £3,000,000, and social services £2,850,000. The mines and works were valued on September 30th at £68,600,000, or £8,000,000 more than at the end of 1927. Reserve has remained at £4,000,000 during the three years. The total loans stood at £25,000,000, this being £1,000,000 less than two years ago.

Reconstruction work during the past year has been mainly concentrated on the utilisation of gas, the aim being the complete operation of all the steel works and finishing plant beyond the coke-oven stage with blast-furnace and coke-oven gas for heating and power. A gas net is being developed for this purpose, and the majority of the finishing plants are now linked up. The total coke-oven gas production last year was 3,673 milliard cubic metres, and the almost complete elimination of waste is reported. During the year the trust contributed 82 million cubic metres to the mains of the Ruhr Gas Company, whose long-distance supplies are now being rapidly developed. It is noted in the report that, as a result of the work of the extended research organisation, the proportion of quality steels produced is steadily increasing, and that an acceleration of this tendency is aimed at.

The report also refers briefly to a subject which is becoming increasingly prominent in German industrial discussions—the need for the restoration of national capital resources. The new slogan, supplementing that of rationalisation, is "*Eigenkapitalbildung.*" The trust directors declare that, unless comprehensive measures are taken to achieve this purpose, involving drastic national economy and a transformation in taxation and financial policy, continued rationalisation on borrowed foreign money at high cost will now produce only greater indebtedness and unemployment instead of increased competitive power. What seems to be foreshadowed is a new stage in German effort to rise from the ashes of the war. The shortage of national capital in 1924-25 has persisted. Vast foreign loans have been used to finance rationalisation and national and communal enterprises such as electrification. Now a concentrated effort is apparently to be made to liquidate the foreign indebtedness out of the economies resulting from the reorganisation and technical perfection of the industrial machine. This, in conjunction with the sharp check on foreign borrowing for public enterprises and services, may for a time create new and great difficulties, limiting the upward movement of wages, increasing unemployment, and to some extent reacting adversely on industrial production generally. If it develops it will be a phase worthy of careful study.

THE HAGUE FINAL ACT.—II.

The Non-German Settlement.

THE task of the adjourned Hague Conference, in so far as German reparations were concerned, was the comparatively simple one of bringing into force an agreed scheme. With regard to the Succession States of the Austro-Hungarian Empire, on the other hand, the problem had to be tackled *ab initio* with the guidance of no principles beyond those of consolidating all war obligations and of

reducing claims to the limits of capacity to pay. The technical committee on non-German reparations, which sat in Paris between the two meetings of the Hague Conference, received little publicity, and it is time that the value of its work was recognised, along with that of the delegations of the smaller Powers at the Hague, who worked night and day to secure an agreed settlement. The fruit of their labours, as it appears in the documents of the Hague Final Act, is summarised below.

Austria.

The first of the attached non-German agreements is that with Austria, who is given practically a clean slate.

Art. I.—The financial obligations of Austria arising under any provision of the Armistice of the 3rd November, 1918, of the Treaty of St. Germain and any Treaties or Agreements supplementary thereto, shall be finally discharged by the payments, deliveries and cessions made by Austria up to the date of the coming into force of this Agreement, subject to the provisions of Art. IV. . . .

(Art. IV provides that arrangements already signed between Austria and any other signatory Power remain unaffected; the sums involved in this exception are quite small.) Art. II terminates the relationship between Austria and the Reparation Commission. By Art. III all claims and counter-claims arising out of the war or the Treaty are reciprocally waived. Art. V provides that the liquidation of sequestrated Austrian property shall cease. Art. VI cancels the claims of Austria against Germany, Hungary or Bulgaria, or of any of the latter against Austria, under various Articles of the Peace Treaties.

Art. VII.—Nothing in this Agreement shall affect the arrangements made in connection with the guaranteed Austrian Loan of 1923, in connection with Austrian Relief Bonds and in connection with the obligations arising under Art. 203 of the Treaty of St. Germain. . . . .

Art. VIII provides for arbitration by the Tribunal mentioned in the German Agreement, an Austrian nominee taking the place of the German member.

Bulgaria.

It will be remembered that by an agreement signed at Sofia in 1923, the Bulgarian reparations debt was divided into two parts, a schedule of payments being imposed for Part A, while Part B, against which counter-claims for ceded property, etc., were to be adjusted, was not claimable till 1953. By Para. I of the new Agreement, the Creditor Powers waive their right to Tranche B; furthermore, Great Britain, France and Italy waive their claims in respect of occupation costs.

Art. 2.—The Creditor Powers accept in full and complete satisfaction of the total amount of Tranche A of the Bulgarian reparation debt which remains unpaid at this date the annuities expressed in gold francs fixed in the following Schedule of Payments, the gold franc as defined by Art. 146 of the Treaty of Neuilly :—

	Gold francs.
1st April, 1930	5,000,000
1st April, 1930, to 31st March, 1940—10 annuities of	10,000,000
1st April, 1940, to 31st March, 1950—10 annuities of	11,500,000
1st April, 1950, to 31st March, 1966—16 annuities of	12,515,238

The annuities are payable half-yearly. The system of transfer postponement already in force for Bulgarian reparations is applicable. The special security provided for in the 1923 Protocol is retained, but the prior charge established by the Treaty of Neuilly on all the assets and revenues of Bulgaria is abolished. A debt certificate will be delivered to the B.I.S. (or, in default, some other trustee), which will take over so far as is necessary the functions of the Reparation Commission and of the inter-Allied Commission in Bulgaria. The Bulgarian Government remains responsible for all its obligations to the nationals of the Creditor Powers, but, with the exception of claims subject to previous special agreement, all Bulgarian claims against the Creditor Powers are cancelled. There are provisions corresponding to Arts. V, VI and VIII of the Austrian Agreement above.

Hungary.

The accord with Hungary is not a final text but a basis, definitive in itself, for a detailed agreement to be elaborated by a committee now sitting in Paris. If the Committee is unanimous its texts shall be final; if not, the decision of France, Great Britain and Italy shall be accepted. Annexe I is a general agreement between the Creditor Powers and Hungary. The preamble declares that both Roumania, Czechoslovakia and Jugo-Slavia for the one part, and Hungary for the other, reserve their attitudes on the questions of principle and law.

Arts. I to VI provide for the constitution of an Agrarian Fund with legal identity which shall take the place of the defendants in all agrarian claim cases. Art. VII provides that no payment shall be made till the total amount of the judgments has been notified. The total distribution shall then not exceed the sum in the Agrarian Fund. By Arts. VIII and IX mixed arbitral tribunals are not competent to pronounce on questions of principle, but only to grant compensation in cases where a qualified Hungarian national has been expropriated by virtue of agrarian legislation. The Mixed Arbitral Tribunal will be completed (Art. X) by the appointment of two neutral nationals by the Permanent Court of International Justice, which, by Art. XII, is recognised as court of appeal.

Annexe II deals with the creation and working of the Agrarian Fund. Art. I fixes the capital of the Fund at 240 million gold crowns, the reduced total of claims presented by the Hungarian delegation. The final amount of the capital of the Fund shall (Art. IV) assure the service of the interest, at 4 per cent., and sinking fund of the bonds created.

Art. V.—The annuities available to the fund are the following :—

1. As from 1944, 6,100,000 gold crowns paid by Czechoslovakia, Jugo-Slavia and Roumania by means of the sums received in respect of the special claims.

2. From 1931 to 1943 the annuities paid by Hungary representing the shares of France, Great Britain, Italy, Portugal, Japan and Belgium.

3. Annuities paid by Great Britain, Italy and France, of which the maximum amounts are found below :—

1931-1932—Nil.
1933 to 1943—3,600,000 gold crowns,

of which 40 per cent. will be paid by France, 40 per cent. by Italy, and 20 per cent. by Great Britain.

1944 to 1946—2,280,000 gold crowns,

payable in the same proportions.

These latter annuities shall be reduced, if necessary, in order to take account of the diminution of the final amount of the capital of the fund.

Annexe III provides on similar lines for Fund B, out of which Hungarian commercial, ecclesiastical and Hapsburg claims will be met. The nominal capital of the Fund will be 100 million gold crowns.

Art. II.— . . . For the first 13 years, from 1931 to 1943, the 3,000,000 gold crowns necessary shall be paid under the following conditions :—

20 per cent., or 600,000 gold crowns, by Great Britain.
40 per cent., or 1,200,000 gold crowns, by France.
40 per cent., or 1,200,000 gold crowns, by Italy. . . .

Art. IV.—During each of the 23 years from 1944 to 1966 the maximum payments to be made to the Fund shall amount to 7,400,000 gold crowns per annum. They shall be charged against the 13,500,000 gold crowns which Hungary has undertaken to pay as from 1944 during 23 years in respect of the special claims.

Next follows an agreement regarding the annuities payable by Hungary. The present schedule of payments up to 1944 is maintained; in addition, Hungary undertakes to pay, on account of special claims and as a complete and final settlement of all war obligations, a constant annuity of 13,500,000 gold crowns from 1944 to 1966. These annuities are to be paid unconditionally. Further provisions bring the agreement into line with those, quoted above, with Bulgaria and Austria.

Czechoslovakia.

The agreement with Czechoslovakia, the only net debtor on account of Liberation Debt, is extremely short.

Art. I.—In complete and final settlement of her debt arising out of the Agreement of 10th September, 1919, to the other Powers having a credit on reparation account . . . . Czechoslovakia shall pay 37 annuities of 10 million gold marks.

The other two articles make the B.I.S. trustee for transfers and define the finality of the Agreement.

The Division of the Annuities.

Finally, there is appended an arrangement among the Creditor Powers for the division of the above non-German annuities. Art. I declares that debt in respect of ceded properties is discharged. Art. II divides the Czechoslovak annuity as follows:—France, 3,187,854 gold marks; Great Britain, 1,384,519; Italy, 3,146,632; Belgium, 418,816; Japan and Portugal, 51,920 each; and Greece, 1,758,339 gold marks. Art. III distributes, from the reparation payments of Bulgaria and Hungary up to 1943, to Greece 76.73 per cent., to Roumania 13 per cent., to Czechoslovakia 1 per cent. on both Bulgarian and Hungarian payments, and to Jugo-Slavia 5 per cent. on the Bulgarian payments and 2 per cent. on the Hungarian payments, the balance being distributed between the other Creditor Powers proportionately to the modified Spa percentages. (This gives Great Britain less than 2 per cent. of the total.) Greece comes out easily the best. Apart from her share of German reparations, namely, £350,000 a year to 1965 and £485,000 thereafter, and the non-German annuities mentioned above, she is to receive, by Art. IV of the distribution agreement, the undistributed liquid assets realised by the Reparation Commission in pursuance of the Treaty of Neuilly, and the whole of the payment of 5 million gold francs (£200,000) to be made by Bulgaria on April 1, 1930. The statesmanship of M. Venizelos has received a goodly reward.

Notes of the Week.

The Fall of the French Government.—Last Monday, February 17th, the French Government was defeated in the Chamber on a vote of confidence. The issue was the vexed question of how wives' and husbands' incomes should be reckoned for purposes of income tax—a question about which we most of us feel more strongly than we do about naval parity. The personal and partisan considerations which led to M. Tardieu's fall are described in our Paris correspondent's weekly letter. The Naval Conference has had nothing to do with this event in French domestic politics—unless it be true that the Government behaved more truculently to the Chamber than it might have done otherwise, in the belief that, so long as the Conference was sitting, its own life was secure. On the other hand, the fall of the Ministry in Paris has had an important bearing upon the course of events in London, which are described in another Note, by postponing vital decisions on the French demands. It is unlikely that so great a change could be made in the political complexion of the Government as to alter in any valuable measure the French naval attitude, but whatever the composition of the next French delegation, its hands will have been enfeebled by a political crisis which would seem to an English politician excessively frivolous. Many-partied government never more clearly betrays its weakness than when it turns out the only apparent stable administration in the middle of two important international conferences. As we go to press there is no more likely candidate for the Premiership in the field than M. Tardieu himself, but even if he returns, and even if agreement can be reached at London, the delegates will have less guarantee than ever that France will ratify.

A Naval Interlude.—The Naval Conference decided on Wednesday to go into recess for a week while France was getting a new Ministry on its feet. The adjournment has the additional advantage of enabling the Japanese Delegation to discover whether the Government it represents has the electorate's approval or not. By the time the Conference reassembles a new French Government and a new Japanese Government, or the old one re-elected, should be in existence and at work. The Conference can then make something in the nature of a fresh start, and on the whole it needs it. Some of the pessimists of last week-end may a little have overdone their *rôle*, but on any balanced view of the situation grounds for optimism were, and still are, far to seek. The issue of the French memorandum, with its indication that the Big Navy programme of 1924 will be carried out regardless of any reductions accepted by other Powers in London, leads logically to the conclusion that to hold a conference at all is in that case obviously futile. France did, however, imply that on one condition alone she might modify her programme. That condition is the conclusion of a new treaty of guarantee to provide for France's safety in the Mediterranean. The Americans, through the mouth of Senator Robinson, have immediately intimated that the United States would never involve itself in such an entanglement. That is not necessarily a fatal objection. The Powers concerned with the Mediterranean—and no Power is more concerned with conditions in that sea than Great Britain—could quite well conclude a security pact among themselves if they chose, but they are extremely unlikely so to choose unless France really means that in reliance on such a pact she is prepared to reduce her naval figures by, say, a third. If that prospect were opened up, there might be something to be said for, at any rate, discussing a proposal which would mean little more than giving definition to obligations which could in any case hardly be evaded by loyal members of the League of Nations or loyal signatories of the Kellogg Pact. At present, however, there is little disposition anywhere outside the French Delegation to consider a new security pact at all. France's apprehensions, indeed, have given the Italians the opportunity, in a memorandum their delegation issued on Wednesday, to observe a little pointedly that the League Covenant and the Kellogg Pact should be enough in themselves to open the door to a substantial measure of disarmament, and that it is by disarming that League members and Kellogg signatories can show what value they attach to pledges. In her general attitude Italy, like most of the other countries represented at the Conference, stands precisely where she did when her delegates came to London, except—and it is a notable exception—that Signor Grandi has twice declared his country's readiness to discuss sympathetically the abolition of the capital ship, provided that all nations are prepared to fall into line. Generally speaking, the process of convergence has yet to begin, and it is fully time it did. The prospects would be more cheerful if there were a likelihood of some change of front on the part of the new French delegates, whoever they may be. But it has to be recognised frankly that the chances of that are small.

Parties and their Leaders.—The past week has been enlivened by utterances in the political arena of a vigour, not to say asperity, in phraseology the more pungent in that they have been addressed in two instances to quondam friends. Lord Beaverbrook has proclaimed that his new party's campaign is launched against the "timidity, compromise, and shortsighted expediency" of the generalship of the old political parties—in other words, of Mr Baldwin—while Mr MacDonald, leaving it to his parliamentary private secretary to dub the House of Peers a "miscellaneous congregation of human freaks," has underlined his resignation from the I.L.P. with the bitter comment that the organisation "has lost both its grip on Socialism and its sense of the meaning of 'Comrade.'" The Prime Minister's severance of his connection with a group whose "flashy futilities" he was denouncing in 1928 is little more than a formal avowal of a breach whose existence has for some years been open and undisguised. Whether the Left Wing—*feu MM. les camarades* Maxton, Wheatley and Kirkwood—have it in them to form a Fifth Party (though expulsion from the Labour Party of a group characterised by the official leader as "henceforth good for nothing," would be a logical, if improbable, sequel) we take leave to doubt. The noble lords behind the Fourth Party now in the field command weightier artillery, and though sympathisers in the ranks of official Conservatism will hesitate, we imagine, before they openly secede from their old allegiance, the possibilities of disruption in the larger Opposition party cannot be overlooked. It would be ironical if the effects of a movement, whose electoral success would almost certainly mean a clear majority for Labour in the House, were to be offset by a formal, and equally wrecking, schism in the Labour Party itself.

The Left-ward Trend in Spain.—Spain is still "side-slipping" towards the Left—an involuntary, automatic trend rather than a deliberate movement of conscious public opinion. All the same, this trend may go far, and there is a feeling in the air that the retirement of General Primo is only the prelude to more momentous changes. In all government offices there is a general post. Exiles are returning, the famous Rector of the University of Salamanca, Señor Unamuno, at their head, The Fascist Press in Italy, which at first affected to make light of the counter-Fascist revolution in Spain, is now openly lamenting. Meanwhile, there are other symptoms which are less satisfactory. The Army has been extorting concessions from the new Government; and in Madrid, as well as at Barcelona, there has been rioting which the police have not suppressed without the use of force. Barcelona may be expected to be the storm-centre; for it is the focus both of the Catalan national movement and of the Spanish labour movement, which has a syndicalist tradition and is prone to violence. The Catalan problem is the more serious problem of the two. General Primo's *régime* abolished the very modest institutions of local self-government which the Catalans had succeeded in obtaining from previous governments at Madrid. Naturally the Catalans will now demand the restoration of these institutions, with some increment. How much increment will content them? That mainly depends upon how ready the present Government at Madrid may be to meet the Catalan aspirations half-way. If General Berenguer shows himself statesmanlike and sympathetic, the Catalan question may be settled in perpetuity by some form of limited autonomy. After all, political separation is not in the interests of Catalan industry, which at present enjoys the advantages of the Spanish market behind a high tariff wall. Nevertheless, the Government at Madrid would be rash to rely upon the operations of "enlightened self-interest" in the Catalan mind; for history demonstrates that such considerations have never consoled nationalists for the frustration of their political aims. Unless General Berenguer is very prudent just now, the Catalan party of independence is likely to gain the upper hand; and in the present state of Spain, they would have more opportunity of getting their way than they have ever had since they were abandoned by their allies at the close of the war of the Spanish Succession, more than two centuries ago. If that happened the political map of South-Western Europe might become as unstable as the map of Eastern Europe is already. An independent Catalonia would be a dangerous aggravation to the competition between France and Italy for the hegemony of the Western Mediterranean. Developments in Spain deserve watching closely.

The Metropolitan's Reply to the Pope.—The controversy over the question of alleged religious persecution in the U.S.S.R. is now following the course that is regularly taken by all controversies to which the Soviet Government is a party. The facts are being increasingly obscured by a cloud of unverified and probably unverifiable assertions and counter-assertions on the two sides; and these declarations are showing their true colours as the usual acts of belligerency in the never-ending war of words between the Socialist and the Capitalist churches militant here on earth. In fact, we must not expect the truth to emerge from this *mêlée* any more than it has ever emerged from the historic *mêlées* between Protestants and Catholics or between Christians and Muhammedans. Last week we commented on the Pope's protest. Since then, the Archbishop of Canterbury has protested in Convocation; Mr Henderson, in the House of Commons, has expressed the British Government's "concern," and has announced that the British Ambassador at Moscow has been asked to send a report (surely an invidious and inherently impossible task); Monsieur Rykov, the President of the Council of People's Kommissars, has informed the Society for Gas and Aerial Warfare in Moscow (are not all weapons lawful in holy wars?) that in the U.S.S.R. there is no religious persecution at all; and, finally, Tass, the official news agency of the Soviet Government, has published, in the form of question and answer, the upshot of an alleged interview with the Metropolitan Sergius, the acting head of the Patriarchal Church of Russia. This rather piquant document at once raises any number of nice points of what the Germans call *Quellenforschung*, or analysis of historical "sources." How much is Sergius? How much is Tass? And even if we may assume that, in some paragraphs at least, the voice is the voice of the Metropolitan himself, how much allowance have we to make for his specific reaction to these particular interviewers? If he had been interviewed confidentially by the Pope and the Archbishop instead of being interviewed publicly by representatives of the Soviet Government Press, would he have sung to a different tune? At any rate, he would scarcely have declared that the closing of churches had been done "not on the initiative of the authorities but at the request of the population, and in some cases even by the decision of the churchgoers themselves"—a statement which reminds us of a declaration once made by a Greek High Commissioner: "The Turks are so *malins* that they burn their own villages in order to bring discredit on the Greek Army." Nor, we think, would he have remarked that "the Pope in his manifesto proved himself to be in one camp with the British landlords and the Franco-Italian magnates." All the same, a study of Byzantine history suggests the surmise that the sallies against his ecclesiastical colleagues—or rivals—may have been the rare genuine pieces of the Metropolitan's alleged utterance. To a Byzantinist, there is something familiar and convincing in the picture of an Orthodox prelate who licks the secular hand that has just given him a hiding and bites the Catholic and Protestant fingers that are being extended over his head in a perfunctory gesture of protection and patronage. *Odium ecclesiasticum* is one of the strongest passions in this world; and it would not be at all surprising to learn that Sergius genuinely regarded the Catholic and Anglican *démarches* as insincere. Moreover, even if he took a less cynical view, he might justly say: "Save me from my friends." For though we personally do not question the Pope's or the Archbishop's sincerity, we do feel inclined to doubt their wisdom. Is it wise to protest against persecutions when there is no prospect of being able to follow up the protest by effective action on the victims' behalf? Too often, in such circumstances, a protest relieves the feelings and eases the consciences of those who indulge in it—at the price of drawing down the persecutor's wrath upon his victim in still greater measure than before. If anyone questions this proposition, let him study the tragic history of the Armenians.

Industrialists on Empire Trade.—While interest politically has been concentrated this week on the emergence of a Fourth Party, based on a conception of Imperial development with which we deal in a leading article, the possibility of increasing trade within the Empire has also been the subject of pronouncements by important business associations. The Annual Report of the Chamber of Shipping, referring to the restrictive effects of high tariffs within the Empire, emphasises the need of "an increased willingness to trade" and suggests that, in the British Commonwealth, "it is the duty of each State, subject always to the safeguarding of its own essential economic life, to do everything possible, without reference to any exact bargaining equivalence, to promote the prosperity of the Commonwealth as a whole." This admirable, if slightly vague, principle is commended by shipowners to this year's Imperial Conference, whose Preparatory Committee in this country has been furnished by the F.B.I. with a lengthy report of the Federation's conclusions with regard to the economic relations between Great Britain and the Dominions. The report starts from the wholly commendable premise that "greater reciprocal interchange of commodities" within the Empire would be to the advantage of all concerned. Lord Beaverbrook's "Empire Free Trade" policy is not advocated "as a concrete and practical proposition"; and the fact is

frankly recognised that the same desire for industrial expansion prevails in many of the Dominions as in the foreign countries which are striving to make themselves self-supporting behind a tariff barrier. The Committee might have added that the incidence of Dominion tariffs on British goods is, in many cases, much higher than the tariffs of several European nations. In these circumstances the Federation recommend:—

(i) That the Imperial machinery for consultation upon economic questions should be improved, and taken out of the political field. An Imperial Trade Conference should be convened, composed of chief Government officials concerned with trade, representatives of industrial capital and labour, and delegates of commerce, finance, shipping and agriculture, whose functions should be to explore the lines of sound Imperial economic policy and to ascertain what further advantages, on what terms, the Dominions are prepared to give British trade.

(ii) That an Imperial Economic Secretariat should be established, to act as a permanent secretariat to the Imperial Conference, whose agenda should be prepared on each occasion by a preliminary meeting of the Imperial Trade Conference.

(iii) That existing Preferences granted by Great Britain to the Dominions should not be disturbed.

(iv) That more should be done to make Empire sources of supply known to purchasers in this country, and that the possibility of the better organisation of the distribution and sale of Empire products should be explored.

(v) That further financial facilities should be provided by H.M. Government for the furtherance of Imperial air transport.

(vi) That an Empire College for Dominion students should be established in London.

To these six proposals is added the suggestion that steps should be taken to "rationalise" the Empire's industrial production and to dissuade the Dominions from continuing industries which are "economically unsound" in the sense that they require "exaggerated protection." In this task we wish the F.B.I. every success, though the Committee no doubt fully realised that it was here running into a very pretty controversy. Indeed, there are in the programme, which contains many excellent features, several such debatable points. Whether the scheme for an Empire College is really well conceived we have some doubts. Young men from the Dominions should certainly be brought here, but they should not be segregated. We should like to see this plan in fuller detail. With their insistence, however, on the advantage of a Trade Conference we are in complete sympathy, and we thoroughly endorse their regret that "better machinery exists, in connection with the Economic Section of the League of Nations, for discussing economic problems with foreign countries than is the case with our sister-nations of the British Empire." This flaw in Imperial organisation might well be rectified.

Parliament and the Banks.—In spite of Sir John Ferguson's disclaimer that his motion did not in any way cut across the functions of the Banking Committee, it is not very clear why he thought fit to bring before the House of Commons on Wednesday a motion which, after eulogising the banks, advocated the appointment of a standing committee of bankers and business men to advise the Government on all questions affecting the relations between finance and industry. As a late general manager of Lloyds Bank, he is well qualified to speak on banking matters, and it perhaps is just as well—particularly since the Macmillan Committee is unfortunately taking its evidence in private—that the case for the big banking amalgamations should be presented once more to the country. The debate, however, was somewhat academic, for while the supporters of the motion were concerned to prove the advantage of bank amalgamations, it seems a fair reply that the movement has already proceeded as far as it can, and that little, if any, further scope for combination exists. On the other hand, the proper relation between banking and industry is far too wide a question to be discussed adequately on a private member's motion, and must engage the attention, not only of the Banking Committee but also of the Advisory Economic Council, which must consider the position from the industrial standpoint.

The Limits of Taxation.—Concern at the weight of taxation and its effects upon productive enterprise has been voiced this week both in the House of Commons, where Mr Henry Mond, introducing a private member's motion on Wednesday, urged that the process of redistributing wealth by direct taxation might lead to a disastrous impoverishment of industry's capital resources, and in a manifesto issued by the F.B.I. In the Federation's statement attention is directed to the desirability of leaving industry with the maximum of accumulated resources to finance re-equipment and development. The complaint is made that successive Chancellors, in framing the Budgets of recent years, have taken no account of "The cumulative effect of the burden of taxation on a decade of industrial depression accompanied by a falling price level," which has added greatly to the real burden of debt and other charges. The disorganisation of the commodity markets consequent on the Wall Street depression will, it is suggested, be reflected in a decline in next year's industrial profits subject to income tax, whose net produce per penny of the normal rate is estimated to have declined appreciably since 1925-26; and, in the Federation's opinion, "the present volume of our national production is insufficient to provide the sums at present being expended—and under contemplation—by the State on unreproductive purposes without grave injury to our national productive forces." The implications of this statement are grave, and there seems to us to be still further work either for the secretariat of the Economic Advisory Council or for the experts attached to the Bank of England to do in making a serious attempt to gauge the amount of new capital required to finance the rationalisation of British industry and its relation to the current volume of corporate and individual savings.

Employment and Cost of Living in January.—The state of employment during the first three weeks of January showed some improvement as compared with the usual decrease which occurred in the last week of December. At the end of January, however, the numbers of those in employment were only slightly above the figures for the end of the previous month, a decline in employment having taken place in most industries between the middle of December and the end of January. According to the *Ministry of Labour Gazette*, among the 12.1 million workpeople insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at January 27th was 12.6, as compared with 11.1 per cent. at December 16th and 12.2 per cent. a year ago. The number of registered unemployed at January 27th was approximately 1,534,000. This compares with 1,341,000 at December 16th and 1,434,000 at January 28, 1929. With regard to the cost of living during January, the index number of the Ministry of Labour dropped 2 per cent. during the month. At February 1st the index stood at 64 per cent. above the level of July, 1914, as compared with 66 per cent. at January 1st and 65 per cent. a year ago. For food alone the index registered 54 per cent. at February 1st, as against 57 per cent. a month ago and 56 per cent. a year ago.

The Road Traffic Bill.—On Tuesday the Road Traffic Bill came up for second reading in the House of Commons, and received it without a division. The Bill does not divide the House on party lines, though the announcement of the Minister of Transport that steps would be taken to amalgamate the Omnibuses Bill with it threatens at least one close party division in Committee. Indeed, such opposition as was voiced on Tuesday, being directed chiefly against the abolition of the speed limit for private cars, came from members of all parties. Dr. Salter said that if that provision of the Bill were allowed to stand he and some of his colleagues in the Labour Party would be obliged to vote against the third reading. Support for abolition was also forthcoming from all sides, including the Opposition Front Bench, and Mr Morrison made out an excellent case. The Government had to deal with a situation in which the law was neither

observed, respected nor supported by the general body of public opinion. The police were in an impossible position. A law must either be obeyed or it must be altered, and, presented with the alternative of abolishing the speed limit or raising it to, say, 35 miles an hour, the Government had decided upon the former, since a legal maximum would inevitably come to be regarded as a reasonable speed under all circumstances. Ten miles an hour would be a dangerous speed in some cases, and so far from excusing the motorist who drove too fast the Bill stiffened the penalties to which he was liable. The Minister of Transport hoped that magistrates would not be too lenient in clear cases; we had got to get to the point of imprisonment with some drivers. The compulsory insurance proposals of Part III, he thought, provided a workable scheme with the least possible interference with the business of ordinary motor insurance. The insurance companies had assured him that premiums would not be raised merely on account of this legislation, but if in fact claims were increased and juries gave heavier damages, knowing that an insurance company would pay, the position would have to be reconsidered. Colonel Ashley suggested that this Part should be enacted for three years only. Several suggestions for amendment in Committee were offered by other speakers. The provision, for instance, that drivers of commercial or public service vehicles must be at least 21 came in for some criticism. Earl Winterton's proposal that the Minister should be empowered to make orders for uniformity of police signals throughout the country is very valuable in view of the confusion with regard to such points as turning left-handed when the policeman's hand is raised. Practically no criticism was forthcoming for the most revolutionary section of the Bill, that which creates twelve licensing authorities for road passenger services in place of the present heterogeneous local control or absence of control.

Ex-German Property.—The Government have published as a White Paper* the agreement reached with the German Government last December regarding the liquidation of sequestrated German property, together with an exchange of Notes on the subject. This agreement is mentioned in the Hague Final Act, but is not incorporated in it. Fulfilment is given to the recommendation of the Young Committee of Experts that as from the date of acceptance of their report the Allied Governments should make no further use of their rights to seize, retain or liquidate German property, rights and interests in so far as not already liquid or liquidated or finally disposed of. The Agreement provides (Articles 1 and 2) that unliquidated property shall be released and handed over or retransferred to the original owners or to the persons deriving title through them. It is scarcely necessary to reiterate our criticism of an arrangement whereby a few fortunate persons in no way more meritorious than those whose property has already been disposed of receive their former possessions back in full. The inability of the German Government to pay 100 per cent. compensation to the others is, however, not our concern. By Article 4 of the Agreement, owners of unliquidated property may elect to have their property sold by the administrator and to take the proceeds instead. There will be charged against released property or the proceeds thereof "the legal costs and other expenses incurred in connection with the said property." The Agreement comes into force, after exchange of ratifications, on the same date as the Experts' Plan; however, an accompanying Note states that it is the intention of the Government to date the suspension of liquidation from September 1, 1929. The Note also states that the British Government intends to waive its claims before United States Courts to certain German-owned American securities. The Agreement is "a final settlement of all questions and claims relating to the retention and liquidation of German property rights and interests or the proceeds thereof." Thus, although the realised surplus is not directly mentioned, the Agreement in fact authorises its retention, and an unfortunate page of post-war history is turned.

Charing Cross Bridge.—In spite of persistent Press opposition from disgruntled adherents of other schemes, the Charing Cross Bridge Bill promoted by the London County Council received the overwhelming support of the House of Commons on Wednesday, when the second reading was carried by 230 votes to 62. Sir William Davison and Sir Michael Conway, who were protagonists for the opposition, proved no match in argument with two successive Ministers of Transport, supported by London members drawn from all three political parties. The opposition case suffered for want both of detailed argument and of agreed alternative. Sir William Davison reiterated the now familiar contention of writers to the *Times*, that great lengths of viaduct would cut off South London from future development, that a Southern embankment would be blocked, and that practically the whole of professional opinion was against the London County Council's proposals. Sir Michael Conway, who hinted that this might be his last speech in the House, attacked the scheme from the point of view of town planning, and for its failure to provide five things: a "splendid square" on the north side, through routes from north to south and east to west, the relief of traffic in the Strand, relief of the "site famine" on the north side, and payment for the whole scheme by increased site values on the south. The House was less impressed by these visions than by the lucid expositions of practical possibilities to which they were treated by Sir Walter Greaves-Lord, Colonel Ashley and Mr Herbert Morrison. The weakening of Waterloo Bridge made a new bridge imperative, and considerations of navigability determined that it should occupy approximately the site of Hungerford Bridge. The proposal of the Royal Commission for a double-decker rail and road bridge was rendered out of date by the consent of the Southern Railway to move to the south side, where the terminus would possess excellent communication by 'bus and Tube with all parts of London. A high-level bridge was essential in order to avoid further congestion on the Embankment. Those being the ingredients of the problem, the London County Council, acting throughout in co-operation with the Ministry of Transport, had secured the best possible technical advice, and after long consideration had decided that the present plan was the best. More than 30 alternative schemes had been examined and rejected. Dealing with the position of Sir Edwin Lutyens, the Minister of Transport said that Sir Edwin had signed the lay-out plan jointly with the engineers, and had stated his confidence that the bridge and approaches were capable of distinguished expression in their architectural treatment; he would give evidence in Committee on behalf of the Bill. Mr Harris's motion, "that it be an instruction to the Committee to insert clauses, or to obtain an undertaking from the promoters to secure by competition or otherwise designs for the bridge and architectural treatment of the viaduct," was agreed to without a division.

Savings Bank Deposits.—An extraordinarily interesting and timely paper upon fluctuations in savings bank deposits was read recently to the Manchester Statistical Society by Mr T. S. Ashton, Reader in Currency and Finance to Manchester University. The first portion of his paper was historical, and in this section Mr Ashton traced the growth of the savings bank movement, its early vicissitudes, and the effect upon the volume of deposits of such factors as the rise in real wages, the counter-attractions of Consols in the years before the war and of savings certificates during recent years, and the war-time currency inflation. Even allowing for these influences, investigation showed that there was a remarkably close correlation between the annual increases of deposits and the state of employment, though, in post-war years at least, the annual increment in deposits has hardly kept pace with the interest earned on existing deposits, a fact which suggests that there has been little scope or inclination for " purposive thrift " as distinguished from the failure or forgetfulness to disturb the automatic accumulation of interest. Such a deduction is confirmed by the general state of trade and employment, and the low level of wages in many industries, which leave little margin for deliberate saving. The second half of the paper deals with the distribution of savings, so far as it can be ascertained from the paucity of data available. As is to be expected, savings conform to the well-known distribution curve, and Mr Ashton used this fact to demonstrate how misleading it is to calculate the average sum standing to the credit of each depositor. Thus in one bank where the deposits amounted to £16 per head for every inhabitant of the district covered by the bank, analysis showed that 60 per cent. of the deposition with balances of not more than £10 each held only 4.3 per cent. of the funds, and that the " mode," equivalent to 35.3 per cent. of the funds, fell within the £50—£100 range. In other words, " a relatively small number of richer depositors are responsible for the bulk of the savings." From these results, which will come as more of a surprise to the general public than to the statistician, Mr Ashton is led to agree that manual workers do not control the bulk of the deposits, and that " a wave of unemployment might sweep away their treasure without leaving any very deep mark on the aggregate of savings." The real lesson of the paper is that those who find comfort in the increase in savings bank deposits at a time when trade is depressed and unemployment is severe are basing their faith on a very insecure foundation.

Automatic Looms in Lancashire.—Our Manchester correspondent writes:—A further important move is announced in the direction of extending the use of automatic looms in Lancashire—a development referred to in last week's issue of the *Economist*. It is reported that the directors of the Lancashire Cotton Corporation, Ltd., have decided to equip with automatic looms the weaving shed near Preston formerly owned by Messrs. G. and R. Dewhurst, Ltd. It is understood that five different kinds are to be purchased, 50 of each type, making 250 in all. The idea is to carry out experiments with the object of finding which type of loom is most suitable for the Lancashire trade. The several kinds will be tested under similar conditions, and it is expected that the corporation will be able to secure valuable information for further developments. This decision has been very favourably received in Lancashire, as leading authorities contend that the amalgamation of firms which is now going on will not be sufficient to deal with the situation unless there are changes in production methods in the spinning mills and weaving sheds.

Anglo-International Bank.—This bank, which was formed in 1926 to take over the Anglo-Austrian Bank and the British Trade Corporation, has just issued its accounts for the year ended December 31, 1929. Last year was admittedly a difficult period, especially for banking institutions whose connections are mainly with the Continent, for they had to cope not only with difficult trading conditions, but also with the consequences of the Wall Street boom and slump. In these circumstances, the bank has done very well to increase its profits from £103,000 to £118,000, and also to add to the liquidity of its position. The decision not to pay a dividend, but to use the profits for building up reserves, is undoubtedly wise. As regards the balance sheet itself, the principal changes are contractions in acceptances, from £3.1 to £2.6 million; in deposits, from £5.1 to £4.4 million; and in advances, from £4.4 to £3.8 million. These changes are not easy to understand, but they do not possess the same significance as in the case of a bank operating purely in Great Britain. To mention but one possibility, if the bank last December had to pay higher rates to secure deposits than it would earn on advances made through its usual connections, it would naturally be disposed to let deposits run off. The margin between rates sought for deposits and those obtainable on advances is in this class of banking so fine that a small change one way or the other may quite easily have an appreciable effect upon the total of both items.

Scottish Life Assurance Company, Ltd.—Once again the normal course of the figures of this company are disturbed by single premium assurances. The volume of new business in 1929, at £1,339,441, shows an increase of almost £100,000 over that for the preceding year, and, although this relatively large total has been inflated by single premium business, the amount of such business last year was on a slightly smaller scale than in previous years. The net rate of interest earned is somewhat higher at £4 15s. 10d. net, but the expenses are also higher, the adjusted ratio being 16.3 per cent., compared with 16.0 per cent. This adjusted figure has been obtained from the figures in the revenue account on the assumption that the expenses attributable to single premium business amount to 4 per cent. of the single premiums. The year 1929 marks the completion of four years of the current quinquennium, and the next valuation is due to be made as at December 31, 1930. It is, therefore, of interest to compare the progress during the current quinquennium with the corresponding figures for the whole of the preceding quinquennium:—

Years.	Average new business per annum. £	Average premium income. £	Average net rate of interest. £ s. d.	Average adjusted expense ratio. %
1921–25.....	852,257	413,705	4 14 1%	15·5
1926–29.....	1,153,883	550,125	4 15 5%	15·6

Thus, in spite of the disturbing element of single premium assurances, the figures show a marked expansion compared with five years ago, and it is clear that the interest profits at any rate will be on a larger scale than previously. The year 1930 will complete the half century of the company's existence, and it seems not unlikely that the opportunity will be taken to mark the occasion by some special distribution to the policyholders and to the shareholders.

Scottish Temperance and General.—In order to comply with the new Companies Act, insurance companies are now compelled to disclose details of their interests in subsidiaries. Accordingly, in the accounts for the year 1929 of the Scottish Temperance and General Insurance Company, Ltd., there appears an item of £20,000 representing the company's holdings in the Holding Trust, Ltd. The disclosure is a reminder that five years ago the company mutualised itself by the purchase of its own share capital, which was thereupon transferred to this subsidiary company created for the purpose, and at the same time future dividends were limited to a maximum of 5 per cent. The balance sheet also shows that the company has made a loan to the Holding Trust amounting to £233,000, though the purpose for which this loan has been granted is not stated. The new business for the year 1929 shows an increase from £1,210,194 to £1,221,840, but since the new premiums include single premiums of £153,000, as compared with £64,000 in the preceding year, it is clear that the small increase is due to single premium business and that the ordinary business of the company has declined. Interest earnings are maintained at a high level, and work out at £4 17s. 7d. per cent. net, compared with £4 17s. 5d. per cent. net. The expense ratio shows a reduction from 13.7 per cent. to 12.6 per cent., though the reduction is due largely to the increased single premiums received during the year.

Overseas Correspondence.

LEAGUE OF NATIONS.—TARIFF TRUCE CONFERENCE.

(FROM OUR CORRESPONDENT.)

GENEVA, February 19.

THE Tariff Truce Conference, or as it is now officially and more comprehensively described, the Conference for Concerted Economic Action, opened this week under the Presidency of Count Moltke, a former Danish Foreign Minister. Thirty States are represented, including from overseas only Colombia, Peru, Japan and Turkey, with observers from the United States of America, Brazil, China, Cuba, Persia and the Dominican Republic. It is thus largely a matter of European concern, and is frankly so regarded. It is the first time that Ministers of Commerce have come directly into contact (as the Tenth Assembly desired) in making this renewed effort to get some progress towards the reduction of tariff and trade barriers.

A considerable part of the speeches so far made in the preliminary general debate has been devoted to dissipating misunderstandings which have existed in some countries as to the objects in view. It was by no means the intention to negotiate a tariff truce for the purpose of stabilising duties at their present level—such a result, as the President of the Board of Trade said this morning, would be disastrous—but merely to provide an appropriate environment for a programme of negotiations "with a view to the conclusion of collective agreements for facilitating economic relations by all practical means, especially by reducing tariffs." As Mr Graham said, the only alternative confronting Europe and a very large part of the world was that of increased tariffs. A breakdown of the efforts which this Conference was beginning would give encouragement to those countries which have so far proceeded on a free trade basis to join in a tariff campaign.

The Belgian Foreign Minister (M. Hymans) took the same view, that failure would certainly lead to a tariff war and aggravate existing difficulties. It is a curious paradox that the very existence of the renewed tariff controversy in England is regarded by some countries, not particularly anxious for tariff reductions, as in some degree a menace, and it was perhaps well that Mr Graham made a reference, mild though it was, to the possible effect of failure on English public opinion. England is the biggest market for several European Powers, including France and Germany; and, though Germany is in favour of a more sensible economic organisation of Europe, France, despite M. Briand's ideas of a United States of Europe, has been hesitant about the tariff truce and the subsequent negotiations. With her faith in the efficacy of tariffs and her knowledge of the value of the English market to her, she may perhaps be disturbed by the possible consequences to which Mr Graham alluded.

It is early yet to see what the developments of the Conference may be, and how far the idea of closer economic co-operation in Europe will proceed. The outlook has been somewhat clouded by a speech of Signor Bottai, which seems to strike a blow at the basis of the Conference, if not to question the usefulness of the League itself. Signor Bottai expressed frank scepticism as to the value of further negotiations, and delivered a considered attack on the system of multilateral agreements. He questioned the usefulness of a multilateral agreement from which most of America and other important countries would stand aside, and he defended with some asperity the view that bilateral agreements are the only effective instruments of progress. The crux of his speech lay in his statement that a temporary stabilisation of tariffs would be injurious to countries which " were in the process of creating an economic structure suitable to their essential requirements." The effect of this speech seems likely to be a more decisive grouping of States friendly and States unfavourable to the purpose of the Conference.

Behind much of the discussion lies the complication of the most-favoured-nation treaties. The European States, unless they can devise a way out of it, will not unnaturally be a little reluctant to agree to a general lowering of tariffs while the most-favoured-nation treaties compel them, so long as these treaties last, to extend similar reductions to States outside Europe which are not prepared to make any equivalent reductions. In other words, they will not be very ready to reduce their tariffs if it means being swamped by American products, a danger which may increase as the internal American market reaches saturation point.

An interesting contribution to the debate was made by the German Minister of Trade and Commerce, M. Schmidt, who warned the Conference against the fresh tariff wave which was threatening Europe. He asserted that, since July, 1929, only thirteen out of twenty-seven European countries had not raised their duties, while of these thirteen all except six were proposing to do so. In all other European countries further increases were to be expected. Though Germany had recently increased the duties on crude aluminium, boots and shoes, and certain kinds of toys, the thirty tariff increases in the German supplementary tariff of December last were balanced by reductions in 106 items. Germany had, as far as possible, complied with the Economic Conference's recommendations of autonomous lowering of tariffs. In Germany, as well as in other countries, industry and agriculture were pressing for increased Customs duties on many articles, and the general position fully justified the League's idea of a Customs truce. While he felt that the prospects of concluding a collective treaty regarding a Customs truce had somewhat diminished, he nevertheless emphasised the great importance of the Conference, particularly from the European point of view. If they succeeded in removing obstacles to trade in Europe and in extending the internal European market and increasing their purchasing power, the benefits would be shared by countries outside Europe who sold their raw materials or finished commodities to European countries. By this means, one of the preliminary conditions essential to economic recovery would be fulfilled, namely, the extension of markets and increased output, resulting in the raising of the standard of living for the masses.

There is some reluctance among delegates to participate in the general debate; many of them are disposed rather to watch the proceedings for the time being, and Mr Graham's definite suggestion that a committee should be immediately appointed to consider the methods by which negotiations should proceed may be a little premature. Perhaps a change of Government in France may lead to fresh instructions, and fresh delegates, who will be enabled to support the policy generally initiated last September by their own Foreign Minister.

UNITED STATES.—MONEY MARKET—FOREIGN TRADE—PRICES—INDUSTRY—SHARE MARKET.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 7.

THE reduction of the New York Federal Reserve Bank's discount rate from 4½ to 4 per cent., which was followed quickly by similar action at Chicago and reduction from 5 to 4½ at Cleveland, Dallas and Minneapolis, did not come as a surprise to the financial district, especially after the reduction in the Bank of England rate. There had been comparatively little public discussion of the change before the event. Some comment had appeared in newspapers to the effect that a cut in the rate was indicated by financial and business circumstances, and that there was no reason for delay. There were also some grounds for thinking that the directors of the New York bank had voted the

reduction at the previous week's meeting, and that the Federal Reserve Board in Washington had refused to approve the change. But, after the event, the general comment was simply that the bank's action was merely one step in a general world-wide movement toward lower rates that is a natural consequence of the collapse of speculation in the world's markets. Meanwhile, the week's Federal Reserve statements, while showing that a reduction in discount rates was justified, disclosed no striking changes in condition. For the System as a whole, circulations and discounts for member banks continued to fall; the latter item now amounts to only $381,000,000, as compared with $851,000,000 a year ago. The total volume of credit extended by the System amounted to $1,167,000,000, as compared with $1,471,000,000 a year ago; and the corresponding figures for the reserve ratio are 78.0 and 69.3 per cent. Gold reserves are $313,000,000 larger than a year ago. At the New York bank discounts amounted to only $54,000,000 and total credit extended to $383,000,000, as against $325,000,000 a year ago. The ratio was 76.5, as against 78.8 per cent. last year.

A feature of the money market has been the large increase during the last six months of 1929 in the volume of bills outstanding. The total was $1,732,000,000 on December 31st, compared with $1,282,000,000 on December 31, 1928, and with $982,000,000 on December 31, 1928. The largest increase was shown in bills based on goods stored in or shipped between foreign countries. Part of the comparative slowness of money rates to ease in January is attributed to the large supplies of bills that were in bill dealers' hands at the end of the year and the need for devoting funds to the repayment of indebtedness at the Reserve banks on account of these bills.

Foreign trade statistics show that the shrinkage of both exports and imports continued in December. Imports, valued at $311,000,000, were the smallest for any December since 1923. Lower prices were in part responsible for the shrinkage; but the influence of the reaction in world trade was plainly evident. As for commodity prices, publication of the Dun and Bradstreet indices showed that the decline that began in autumn continued during January. The former index fell 1.1 per cent.; the latter 1.4 per cent. The Bradstreet index on February 1st stood 4.5 per cent. below the level of December 1st and 11.3 per cent. below the level of February 1, 1929. The month's decline affected both raw materials and manufactured articles, and price movements in February have continued to be downward, with the weakness in wheat and cotton very striking.

The feature of industrial news is the continued good activity in the steel industry, where the rate of operations has risen to slightly above 75 per cent. The rebound in this industry from the low December level has exceeded expectations; but it is noted that further declines in steel prices have occurred despite it. In the automobile industry the introduction of many new models during January has confused the situation somewhat; but it is clear that the motor makers have recovered appreciably from their extreme pessimism of November and December. Production schedules of low-priced cars have been increased. It is realised, however, that cars are being manufactured largely for dealers' stocks, and the strength of consumer buying remains to be disclosed. The used-car position admittedly is as bad as, or worse than, at any earlier time, and there has been some talk of manufacturers helping dealers by "junking" used cars. Manufacturers are also alive to the necessity of not overburdening dealers with new cars. The building situation also reflects the general condition of business, with residential construction off about 50 per cent. from January a year ago, and with the best support coming from public utility and public works construction. Mortgage money continues difficult to obtain, with the mortgage banks and loan associations at the limit of their resources. Building experts, however, anticipate that 1930 will furnish about the same aggregate volume of building as 1929. They count on an early deficiency being made up during the latter half of the year. Railway car-loadings are showing a seasonal increase, but are at the lowest levels, for corresponding weeks, since the end of the great post-war depression. The general position suggests a business reaction, in which certain industries have made a turn, while others are continuing their declines.

Strength in the share market, that has carried average prices above the December and January high levels, and has produced a considerable increase in volume, is at once a result of greater optimism and a creator of optimism. Professional operations on the bull side have been coupled with a moderate renewal of public speculation. At the moment there is a disposition to feel that the improvement in the share market has attained a rather rapid pace and that it is better than the improvement in business. Reductions in money rates have helped the rather sluggish bond market, and have also stimulated the share market; but the further course of the latter will be considerably influenced by developments in the automobile industry. At the moment there are no indications of an early revival in the foreign bond market.

FRANCE.—POLITICS—CAPITAL ISSUES—MONEY MARKET.

(FROM OUR CORRESPONDENT.)

PARIS, February 19.

THE fall of the Tardieu Cabinet may be attributed directly to the fact that the last General Elections created a Chamber without a clearly defined majority of any kind. On balance, the outcome of the elections was slightly in favour of the Right, thanks to the prestige enjoyed by M. Poincaré, but the margin was small, and every Cabinet was bound to be at the mercy of the Radical Left. This section of the Chamber, generally known as the Loucheur group, consists of 51 members, who occupy a remarkable strategic position immediately on the frontier between the Left proper and the various parties who constitute the Right and so-called "Centre" sections. In these circumstances no French Ministry can hope for a long life which does not either include leaders of the Radical Left as hostages, or have the tacit support of that Party, which forms, in any case, the largest group in the Chamber. The Grand Committees of the Chamber, being constituted on a basis of proportional representation of the various groups, the Radical Socialists (115) and the Socialists (100)—with the more or less reliable support of the Independents of the Left (20), the Republican Socialists (19) and the French Socialist Party deputies (14)—can usually secure the chairmanships and the practical domination of the principal commissions (including the all-important Finance Commission), which count for so much in French Parliamentary practice. The effect of this system is, from the British point of view, something approaching chaos. Every Government with an unstable majority—which has been the rule of late years—is inevitably faced with a struggle with commissions whose conclusions are largely antagonistic to the Cabinet's own views; and coherence and continuity of policy are alike impossible. This, and M. Tardieu's unfortunate attack of *grippe*—which made it impossible for him to continue (like M. Poincaré) by sheer personal magnetism to maintain his majority around him—is the explanation of the present Ministerial crisis.

M. Chéron, directly he ceased to have M. Tardieu behind him and was called on to fend for himself, lost his grip and, as one financial newspaper puts it, "began to handle the national finances like a distinguished but limited accountant rather than a statesman of foresight." In financial and industrial circles there has been a loud outcry for many months past that excessive taxation alone is preventing advantage being taken of the existing remarkably favourable conditions, and all the facts seem to justify this view. M. Chéron's defence, in spite of the enormous accumulated liquid resources at the Treasury, was that the scanty relief accorded during last year was all he could grant, and his personal unpopularity in the Chamber has been such that in all probability he would have suffered a fatal set-back before Christmas but for the prolongation of the financial year until April 1. The immediate and direct cause of his and his leader's fall, however, was the outcome of purely party political warfare, apparently with the object of bringing about a return of M. Briand to power, with a majority extending much further towards the Left. The actual blow was delivered by 17 deputies belonging to M. Loucheur's Radical Left group of 51, who split away from the rest of the group and voted against the Government, which was defeated by a majority of five. The 17 rebels were led by M. Daniélou, a former Under-Secretary, who has for many years been one of M. Briand's closest associates. At the time of writing it is impossible to foretell the solution of the crisis.

The Budget, amid the welter of party under-currents, is admittedly in a parlous situation, with barely five weeks before the opening of the new financial year. Demagogy has been rampant during the past week's discussion, and amendments involving extra expenditure of some 60,000,000,000 francs have been, or will be, formally proposed, while concessions made by the Finance Minister, in view of the temper of the House, must already have more than swallowed up his estimated surplus of 315,000,000 francs. The National Insurance scheme, which should have come into operation on February 5, has been postponed for a further three months, but it is still doubtful whether it can be made workable by that date. M. Loucheur, whose handling of the measure has been the subject of bitter criticism from nearly all sections of opinion, now stands second only to M. Chéron in unpopularity with the business community.

The flood of increased capital issues shows no sign of abatement. Total issues of new capital in 1929 were 15,256,000,000 francs (say £123,000,000), of which 7,448,000,000 francs were increased share capital by old concerns and 6,796,000,000 francs bonds issued by the same class of companies, the amount of new registrations during the year being only 1,011,500,000 francs. The total issues in 1929 were 50 per cent. more than in 1928 and over 14 times the amount in 1913. The January issues totalled 1,313,000,000 francs, exclusive of railway bond issues, figures for which are not yet available. All weekly records have been beaten by the total announced on February 17, which amounted to 1,323,000,000 francs, of which 1,199,600,000 francs are in bonds. The average rate of interest offered on bonds issued in January was 5 per cent., against a mean of 5.40 per cent. in 1929 and of 6.03 per cent. in 1928. The past week's total has been swollen by offerings of 300,000,000 francs 5 per cent. bonds by the Finnish Central Land Bank, 175,000,000 francs 4½ per cent. bonds by the Messageries Maritimes shipping company, 90,000,000 francs 4½ per cent. bonds by the Compagnie Transatlantique, and 225,000,000 francs 4½ per cent. bonds by the Compagnie Générale d'Electricité, the latter being a conversion issue. The Petrofina oil concern is also making an issue of 100,000,000 francs additional share capital in 500-franc shares at 750 francs.

Meanwhile the Bourse is suffering severely from the absence of the average investor, and business is almost at a standstill. The amount of capital awaiting investment continues abnormally high, as was shown by carrying over rates at Saturday's mid-monthly settlement, which were officially fixed at 1⅞ per cent., as against 3½ per cent. on January 31 and 3⅝ per cent. on January 15. A good deal of business was actually done at 1¾ per cent. Sharp modification of these abnormal rates is to be expected, for it is difficult to see how lenders can be satisfied with returns below at least 2 per cent. Day-to-day money remains at 2½ per cent.

The marketing of the crops has enabled agriculturists to repay advances received from the banks, and the latter are now seeking short-term employment for exceptionally large sums. Substantial proportions of these resources are being transformed into foreign exchange, for operations in London and other foreign centres. The existence of the present plethora of available cash here is expected to foster the advance of the dollar and the mark above gold point, and reverse the situation that existed in the latter half of 1929 in regard to gold movements. Sterling rates in Paris are now at such a level that no further gold withdrawals from London are likely. The mark to-day went to 610, which is considered here as gold export point. The dollar, which was quoted 25.57¼ at to-day's opening, closed at 25.58¼, or well above gold export point, which is considered here as 25.57½. In both these cases, therefore, Paris may shortly be called upon to export gold. Whether, in this eventuality, the Bank of France will decide to send out gold or sell exchange is unknown, but it is considered probable that the policy of exporting gold will be followed, in which case there may be a certain amount of tightness here, which may appreciably modify present tendencies.

HOLLAND.—CAPITAL ISSUES—MONEY—NETHERLANDS BANK—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 12.

THE new year has made a favourable beginning. More abundant supplies of money on the Amsterdam market led to a further reduction in the discount rate of the Netherlands Bank and to a revival in the new issues market and the stock markets. Particularly in the early weeks of 1929 released capital was in search of re-investment. Debentures were in favour; and, as a consequence of the rise in fixed-interest-bearing securities, a number of new issues were placed on the market.

The radical changes which have taken place in the money and stock markets during the last few months are illustrated in a striking fashion by the course of the Dutch issues market during the past month. Of the issues subscribed for in the Netherlands during January, amounting to a total of 43.8 million guilders, no less than 43.7 million guilders were subscribed for debenture issues, irrespective of conversions. Compared with that amount, the shares issues, a total of only 125,000 guilders, sink into insignificance. If the abundance of money continues for some time it is to be expected that extensive issues of debentures will be made during the next few months, though it is hardly likely that they will be so predominant as last month. New capital taken up for domestic and foreign issues of shares and debentures in January is summarised in the following table:—

	Shares (guilders)	Debentures (guilders)	Total (guilders)
Domestic	125,000	38,228,762	38,353,762
Foreign	...	5,525,000	5,525,000
	125,000	43,753,762	43,878,762

A factor of interest for our issue market is the possibility that the acceptance of the Young Plan may result in endeavours on the part of Germany to avail herself of the French capital market.

A number of public authorities in Holland have rightly taken advantage of the present favourable opportunity to provide for their credit requirements or to convert loans outstanding at higher rates. The abundance of money on the Amsterdam market can best be illustrated by the course of the "prolongation" rates, which averaged 2.88 in January, 1930, as compared with 3.92 in December, 1929, and 4.48 in January, 1929. The highest rate of the month was 4⅜, and 2 was the lowest. Market rates of discount also show a similarly steep decline, as a result of which there was a large margin as compared with the official rate of the Netherlands Bank. This was reduced on January 16th to 4 per cent. At first it appeared as though the exchange market might suffer. Both the German mark and the French franc were quoted above the gold export point; gold in considerable amounts was sent to the Banque de France; and sterling and dollar rates also stiffened. The position of the Nether-

lands Bank consequently underwent a temporary weakness, as is apparent from the following table:—

(In million guilders).

1930.	Gold—Coin.	Gold—Bullion.	Foreign Bills.	Sundry Accounts.
January 6th	65·0	382·4	219·2	37·5
January 13th	65·0	382·4	219·4	33·2
January 20th	65·0	381·0	219·1	24·3
January 27th	65·0	374·5	217·1	24·0
February 3rd	64·9	372·0	211·3	22·8
February 10th	64·9	372·0	211·5	22·3

The circumstances which prevailed in the exchange market last week are expressed in the unchanged stocks of gold and bills, while the sundry accounts on the debit side of last week's statement of the Netherlands Bank did not show any change worth mentioning. Aided by the reductions in discount rates abroad, the guilder was able to maintain its parity without recourse to assistance from the Central Bank.

According to the official statistics, the value of Dutch imports and exports for the years 1926-29 were:—

(In millions of guilders.)

	1926.	1927.	1928.	1929.
Imports	2,441·9	2,548·9	2,683·9	2,752·3
Exports	1,749·2	1,899·7	1,986·2	1,989·5
Import balance	692·7	649·2	697·7	762·8

During these four years the value of imports has increased continually and to the extent of 310,400,000 guilders. The value of exports has increased by 240,300,000 guilders. The first half of 1929 was more favourable than the last six months of that year, considering that the value of our exports is usually much greater in the second half of the year than in the first half. The weight of merchandise imported and exported during 1925-29 (in metric tons) was as follows:—

	Imports.	Exports.
1925	25,398,193	12,336,338
1926	28,347,142	15,822,354
1927	28,618,769	14,338,018
1928	29,850,925	15,725,219
1929	30,988,919	16,301,164

Approximately one-third of the weight of the imports and over one-third of the weight of the exports consists of coal. While the production of coal in the Netherlands increased from 10,920,004 tons in 1928 to 11,612,702 tons in 1929, the imports of coal into the Netherlands increased from 8,759,801 tons in 1928 to 9,618,406 tons in 1929, and our export of coal and the bunker coal for foreign ships declined from 6,068,020 in 1928 to 5,594,606 tons in 1929. As a result, the amount of coal available for Holland was 13,611,785 tons in 1928 and 15,636,502 tons in 1929.

The value of the imports from the six countries specified in our monthly table of imports, export and transit traffic was as follows for the years 1926-29:—

IMPORTS INTO THE NETHERLANDS.

(In million guilders.)

	1926.	1927.	1928.	1929.
Germany	667·7	654·2	730·3	842·1
Belgium	270·5	267·4	299·9	283·0
Gt. Britain	231·1	246·2	252·5	257·6
France	113·1	124·0	120·8	113·1
U.S.A.	258·0	268·4	265·7	272·2
Dutch E. Indies	144·4	116·5	140·0	138·0

The value of exports from the Netherlands to these six countries for the years 1926-29 was as follows:—

EXPORTS FROM THE NETHERLANDS.

(In million guilders.)

	1926.	1927.	1928.	1929.
Germany	380·8	465·8	467·7	455·6
Belgium	143·6	154·8	172·1	204·3
Gt. Britain	483·1	452·6	431·9	408·1
France	82·8	129·8	122·5	117·2
U.S.A.	79·6	65·1	69·0	70·8
Dutch E. Indies	127·8	136·3	175·4	172·3

The increase in the imports from Germany is a very striking feature, the value in 1929 being almost 112 million guilders more than in 1928. In view of the fact that the total imports in 1929 are only 68.4 million guilders larger than in 1928, it is evident that German imports into this country have largely increased at the expense of imports from other countries. In 1925 Germany exported merchandise to Holland to the value of 594 million guilders, and in 1929 to the value of 842 millions, representing an increase of 248 million guilders, or approximately 42 per cent. Taking the same period, the value of our exports to Germany was 469 million guilders in 1925 and 455.6 millions in 1929. Germany's share in the value of the total imports into Holland increased from 27.2 per cent. in 1928 to 30.6 per cent. in 1929. December was a poor month for export, and the year 1929 as a whole was not particularly favourable. The fact that the decline in exports came in the second half of 1929, and during the month of December in particular, provides little hope of improvement for the first few months of 1930.

SWITZERLAND.—NATIONAL BANK REPORT—PUBLIC FINANCE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

GENEVA, February 16.

THE Swiss Government has just approved the accounts of the Swiss National Bank, which show for 1929 a net profit of £272,441, slightly higher than that of 1928. The sum of £20,000 will be employed in paying a dividend of 5 per cent. and a bonus of 1 per cent., while £69,424 will be paid into the Federal Treasury and the remaining £183,017 distributed among the Cantons. The annual report of the National Bank shows that Swiss currency remained steady throughout the year, and that its value was generally higher than that of foreign currencies on the Swiss market. In 1929 the circulation of banknotes was higher than during 1928, averaging £34,240,000, as against £32,720,000 the previous year, and the metallic reserve averaged £31,240,000, compared with £28,920,000 the year before.

The report remarks that economic conditions in Switzerland were, on the whole, satisfactory during 1929. For the first time the accounts of the Confederation in 1928 showed a surplus of £9,480,000, and another surplus is expected in 1929 as a result of the increased yield of Customs duties, stamp duty, and of the various Federal services. The public debt, which totalled £79,480,000 at the end of 1928, was reduced to £75,400,000 during 1929, thanks to the payment of an instalment provided for by the plan for the redemption of the debt, and to the repayment of the U.S.A. loan of 30 million dollars at 5½ per cent. issued in 1919. The Government has decided to launch in March next on the Swiss market a loan of £10,000,000 at 4½ per cent., which will be used for converting or repaying the Federal loan of £12,000,000 at 5½ per cent. which is to be repaid on September 1, 1930. The remaining £2,000,000 will be reimbursed by the Federal Treasury out of the fund created a few years ago for the repayment of loans.

Good news for the taxpayer has just arrived from Berne: there will be no renewal of the Extraordinary War Tax levied for the purpose of repaying the debts incurred during the war for the mobilisation and upkeep of the Swiss Army. That tax, levied both on capital and income, yielded about £4,086,540 up to 1928; another instalment—which is expected to produce nearly £1,600,000—is to be paid between 1928 and 1932; and this will be the last of a tax which was very heavy and unwelcome.

Though the report of the National Bank says that economic conditions were satisfactory in 1929, a depression was felt towards the end of the year in consequence of the New York slump and as a result of over-production in some countries and of big drops in the prices of goods on several markets. It was particularly felt by some exporting industries, and there was a continuous decline in export figures during the last quarter, while, on the other hand, the home market remained comparatively

active. The effect on exports of the depression is shown by the following figures:—

	£ million. 1928.	1929.
First quarter	20·7	19·8
Second quarter	20·0	20·6
Third quarter	20·7	21·4
Fourth quarter	23·8	22·4

The depression has not yet reached its lowest point, and exports in January, 1930, totalled £5,885,705, compared with £6,155,676 last year. Imports, on the other hand, aggregated £8,326,363, as against £8,485,110 in January, 1929. During the same month imports from Great Britain reached £480,880, compared with £560,425 in 1929, and exports to her £812,916, as against £843,641 the previous year. Conditions do not seem to have improved, trade is slack, several watchmaking factories are working short time, two or three have been compelled to close down, unemployment is growing, and the lack of snow for winter sports had a bad effect on the tourist industry.

The foreign trade returns for the year 1929 as a whole were not very satisfactory, though differences from the previous year are not on the whole very great. The year began under good auspices, but the value of exports, which began to dwindle in July, never exceeded the 1928 figures from that time onwards. Imports during the year totalled £111,353,930, as against £109,787,213 in 1928, an increase of £1,566,717. There was a large increase in the imports of rubber, all minerals and raw materials, motor cars and machines, and chemicals, while a big drop was recorded in the imports of raw cotton, wool and silk. On the other hand, exports aggregated £84,178,184, compared with £85,377,430 the previous year. Though this is a decrease of £1,199,246 on the 1928 figure it is higher than in any other year since 1922. While there was an increase in the exports of ready-made clothing, copper goods, machines, watches, chemicals and dyes, there was a large fall in the exports of leather, cotton, silk and aluminium goods.

The adverse balance, which was £24,409,783, or about 22.2 per cent. of imports, in 1928, rose to £27,175,746, or nearly 24.4 per cent. in 1929. As a matter of fact, that adverse balance, though very heavy, is entirely made good by visible exports, which left an estimated profit of about £33,000,000 last year. According to official estimates, the income derived from foreign securities held in Switzerland totalled nearly £19,000,000; the tourist and hotel industry—which had a record season in 1929, when over four million tourists visited Switzerland—left a profit of about £9,000,000; while insurances, banking, transit trade and the exportation of electric power left a surplus of nearly £6,000,000. The exports of the four principal industries were as follows:—

	£ million. 1928.	1929.
Cotton	10·6	9·3
Silk	13·4	11·9
Machines	9·3	9·6
Watches	12·0	12·3
	45·3	43·1

There was no great difference in regard to commercial exchanges with the five principal countries, as shown below:—

IMPORTS.

	£ million. 1928.	1929.
Germany	24·9	27·9
France	19·6	19·5
U.S.A.	9·7	11·6
Italy	7·9	8·1
Britain	9·1	6·7

EXPORTS.

	£ million. 1928.	1929.
Germany	15·4	14·2
Britain	12·2	11·5
U.S.A.	7·8	8·3
France	6·2	7·2
Italy	5·6	6·3

In regard to imports, Britain held in 1929 the fifth place, while she had the fourth in 1928; as regards exports, she retains the second place she had previously. There has been an increase in imports from the U.S.A., mainly due to big wheat purchases, and a rise in exports to France and Italy, following the commercial agreements concluded with those countries in the preceding year. Trade with Great Britain showed a considerable decrease in 1929; imports from her totalled exactly £6,712,800, as against £9,055,300 in 1928, a drop of £2,342,500. This drop may be partly ascribed to the lack of enterprise on the part of British manufacturers. While German, French, Italian and U.S.A. traders send commercial travellers to Switzerland, where they also have numerous agents, British manufacturers send only a few commercial travellers and they have a small number of agents in the country. The consequence is that they are losing many opportunities for selling their goods, though there are undoubtedly many openings for British goods on the Swiss market, particularly for cutlery, pottery, machines, textiles and paper goods. Exports to Britain aggregated £11,523,900, compared with £12,239,800 in 1928, a decrease of £175,900. Imports from other parts of the British Empire were £6.02 million, against £7.11 million in 1928, and exports £5.88 million, against £6.50 million. The British Empire, as a whole, remains one of the best clients of Switzerland, as it supplies nearly one-ninth of her imports and purchases about one-fifth of her exports.

NATIONAL BANK OF GREECE

GREECE.—ECONOMIC COUNCIL—BANKERS' MEMORANDUM—SHIPPING—FOREIGN TRADE—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

ATHENS, February 15.

A BILL has been brought before Parliament for the establishment of a Supreme Economic Council. The Council's object is to study and report upon the economic problems of the country, with a view to their better solution. Its organisation is framed along the lines laid down by the French expert M. Salvador, with some amendments. It is to act in an advisory capacity, and will consist of fifty-two members. Of these, twelve will represent agriculture, ten industry, nine trade and the banks, nine technical equipment, five the consumers, five the sciences and art, and two Greek economic organisations abroad. The members are to be elected by the appropriate organisations and are to be appointed by Decree on the proposal of the President of the Ministerial Council.

After repeated consultations with the Prime Minister and other members of the Cabinet, and in reply to a questionnaire submitted to them by the Minister of National Economy, the principal bankers of Athens handed to the Government some days ago a memorandum setting forth their opinion on the present economic situation, its causes and its remedies. Though they admit that Greece is passing through an economic crisis, they find no ground for anxiety. On the contrary, they think that the steady determination of the Government to help the situation, and the sincere collaboration of the banks will contribute, if nothing unforeseen happens, to avert any possible danger and to improve the economic organisation of the country. They suggest various administrative and fiscal measures which should, in their opinion, be adopted to this end. The institution of a special

economic organisation to deal with industry, on the same lines as that already provided for agriculture, is suggested, together with the systematic formulation by the Government of an industrial and commercial policy. For themselves, the bankers declare that they are granting every possible facility to industry and trade in a spirit of co-operation, and that, notwithstanding their diminished power, for which the State is partly responsible, they are helping to lay down a comprehensive programme for placing industry on a sound basis, and giving it the necessary financial support. It is understood that the Government will adopt and shortly put into effect most of the bankers' suggestions.

The growing importance of Greece as a market for automobiles and oil is revealed by the following figures, published in a weekly financial paper. Imports of motor cars and trucks during the last nine years amounted to: 1,309 in 1923, 2,866 in 1924, 3,461 in 1925, 1,824 in 1926, 2,941 in 1927, 3,588 in 1928, and 3,530 during the first nine months of 1929. Oil imported shows also a substantial increase: 7,946 tons in 1923, 14,842 in 1924; 24,275 in 1925, 23,465 in 1926, 28,509 in 1927, 35,476 tons in 1928 and 28,001 tons for the first nine months of 1929. To cope with the increasing demands of trade, a special organisation will be formed for the import and distribution of oil, in which English capital will perhaps participate. Entrances of ships in Greek ports in the foreign trade during 1929 amounted to 3,531, of a net capacity of 5,528,416 tons. Of these 1,086 ships, with a tonnage of 1,052,925 tons, carried the Greek flag; 987 ships, of 2,051,620 tons, were under the Italian flag; and 387 ships, of 823,561 tons, carried the British flag. Imports of merchandise in 1929 totalled 2,774,698 tons, of a value of 13,275,531,000 drachmas, and exports 748,743 tons, valued at 6,985,196,000 drachmas, leaving a net commercial deficit of 6,290,335,000 drachmas, compared with an adverse trade balance of 6,127,047,000 drachmas in 1928. Exports of currants and tobacco have fallen in 1929 owing to the reluctance of buyers, but it is expected that the deficit in the export of these two articles will be made up in the course of this year. First in the list of importers comes the United States, with exports to Greece of a value of 2,091 million drachmas; next, the United Kingdom, with a value of 1,663 million drachmas, and then Germany, with 1,249 million drachmas, and France, with 902 million drachmas.

Revenue for the first nine months of the financial year 1929-1930 amounted to 6,863.4 million drachmas, against 8,087 million drachmas assessed, and 9,855.3 million drachmas estimated for the whole year. The yield of taxes is considered satisfactory and conforms to the estimates. Expenditure for the same period amounted to 6,314.8 million drachmas, against liabilities undertaken of 9,861.6 million drachmas and credits granted of 10,437 million drachmas. Revenue assessed corresponds to 85.8 per cent. of the estimates for the whole year, and revenue collected to 77 per cent. of the total assessed. The corresponding figures for the same period of the preceding year were 90.80 per cent. and 85 per cent. respectively. Gross receipts for 1929 from revenues assigned for the Public Debt reached the new record figure of 4,231 million drachmas, showing an increase of 167 million drachmas over the receipts for 1928. Those specially assigned for the service of the Refugee Loan of 1924 show, at 903 million drachmas, an increase of 11 million drachmas, as compared with receipts for the previous year. Receipts subject to the distribution of the surpluses, however, while higher by 196 million drachmas than the minimum estimate of the Law of Control, are lower by 8 million drachmas in comparison with those of 1928.

SOUTH AFRICA.—POLITICS—ECONOMIC DEPRESSION—NATIVE LABOUR—WOOL PRICES.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, January 29.

THE second session of the sixth Parliament of the Union opened on January 18th. The political atmosphere is no longer satisfactory from the Government point of view, and the economic position is causing some temporary anxiety in all quarters. The European population of South Africa is known to take a possibly undue interest in politics, while at the same time a considerable proportion are even more lacking than most democracies in real grasp of political and economic principles. Having elected a strong Government they expect that Government to achieve economic miracles, sometimes with weapons chosen, not by the statesmen or the experienced official, but by the ordinary voter.

The Pact is showing greater and greater signs of old age. The two wings of the Labour Party are becoming increasingly independent in their flutterings, except when they oppose one another with unusual violence. The "extreme right" wing of the Nationalist Party is becoming more concrete. Reports from Capetown suggest an uneasy consciousness amongst the more responsible Nationalists that their party draws an unduly large measure of support from the less productive section of the population. On close practical acquaintance, certain portions of the economic and sociological programme have come to look less promising even to the politician of true Nationalist faith. The results of the by-elections in two rural constituencies were not comforting to the Government; Bethal—Mr Tielman Roos's late seat—was lost to the South African Party by a majority of fifty, while Stellenbosch remained Nationalist by a majority of fourteen. Both these were South African Party seats until very recently, but the Nationalists have acquired the habit of regarding all country seats once won as safe. Many of these disquieting symptoms are recognisable as the normal fate of parties after several years of power, but the worst of them (from the Government's point of view) are the fruit of political inexperience, of tactlessness towards opponents whose co-operation could have been valuable, and of certain fundamental weaknesses in the Pact position—weaknesses which experienced political critics foresaw when the Pact assumed power.

General Hertzog's prophecy of depression seems likely to be fulfilled, in the sense that there is a quiet time in store in the immediate future. The markets for most of South African products are depressed, in most cases through causes outside local control, except in so far as our costs of production are high. On the other hand, there is no doubt that a period of moderate depression is likely to force local opinion to consider courses which experience may indicate as sound, but which conflict with certain local prejudices. There are no serious indications, however, of fundamental or permanent unsoundness in the economic position of the country; and periods of depression offer better opportunities for the far-seeing and careful investor than do periods of inflation.

The position in regard to native labour is still uncertain. The 1928 Convention with the Province of Mozambique is now seen, even by Government supporters, to have been one of their less happy efforts. Article I of that Convention precludes the recruiting for Reef mines of natives from Portuguese territory north of latitude 22 degrees south. It now appears that British Governments and populations in South Central Africa are unlikely to look with favour on any migration of their native subjects to the Rand. It is reported from Pretoria that efforts are to be made to revise the Convention in that regard.

The present price of wool is about 7d. per pound, but the quotation is practically nominal at the moment. About 60 per cent. of this year's clip has been sold at higher prices, but the balance is practically unsaleable; it includes the bulk of the Free State clip, which is just reaching the market. The decline in money receipts (and incidentally in the national income) is estimated at £7,000,000. The present price is about pre-war level, but of course production costs, especially land values, have risen in 16 years.

Letters to the Editor.

ROAD FINANCE AND MOTOR TAXATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent's article on road finance, in the *Economist* of February 8, contains several wrong assumptions and false deductions. In the first table, setting forth the expenditure on roads and their maintenance costs, it should have been pointed out—

(*a*) That "expenditure on roads" excludes police regulation in connection with arterial road works carried out by the Ministry of Transport mainly for the relief of unemployment in the Metropolitan area.

(*b*) That the figures shown as "average cost per mile" represents only "ordinary maintenance and repairs." If a mile of concrete road on which £80,000 was spent requires £500 per annum for "ordinary maintenance and repair," the cost is not merely £500 per annum.

In the second table, purporting to show the allocation of motor taxes, the suggestion is made that the petrol tax is a contribution to road costs in reduction of the ratepayers' burden, and in this table the rates expended on roads are reduced by deducting £15,000,000 for the petrol tax. While local rates have been reduced for the benefit of certain industries and the loss broadly made good out of petrol taxation, the reduction is applied to *all* rates and not only highway rates. The payment of a subsidy on export coal financed by reductions of general rates on, say, the docks in Poplar and made good by State grants out of the petrol tax, does not affect the burden of highway rates in that borough.

In the next place, your correspondent's calculation of ton-mileage, for the purpose of reckoning the "justified" expenditure from motor taxation, appears to involve the curious assumptions (*a*) that 2,163,000 motor vehicles, which apparently include (though the writer omits to say so) 700,000 to 800,000 cycles, weigh unladen 2,163,000 tons; (*b*) that the average mileage—lorries, 'buses, private cars, cycles, etc.—is 10,000 per annum; (*c*) that the ton-miles (presumably excluding the weight of the vehicles) by a happy coincidence are equal to the unladen weight multiplied by mileage, *i.e.*, that the aggregate weight multiplied by distance conveyed of all the persons and things carried by motor cycles, beer lorries, 'buses, taxis, private cars of all types and motor tractors, is the same as the unladen weight of the vehicles multiplied by mileage run whether empty or loaded.

Finally, your correspondent gives the following comparison of allocation of maintenance:—

Class (1) Roads ...	£13,630,000,	or £535 per mile.
Class (2) Roads ...	£5,370,000,	or £340 per mile.
Other Roads ...	£31,000,000,	or £225 per mile.

These figures are stated to show "the clear inference" that many side roads are being subsidised by taxing main-road traffic.

The first two figures are for "ordinary maintenance and repair," and the third apparently represents the balance of the local authorities' road expenditure other than loan charges. The third, therefore, includes expenditure on building and improving Class (1) and (2) roads where the work is performed by local authorities out of road fund grants. "Other roads" would apparently include the non-loan part of the expenditure on a new bridge over the Thames. It may be added that 83 per cent. of the Metropolitan area roads are in the "other road" class, which is by some feat of arithmetic subsidised by the unfortunate users of 17 per cent.—Yours faithfully,

RAILWAYMAN.

London, February 12, 1930.

[Our correspondent writes:—

(*i*) The cost of police for traffic control was naturally not included in "Expenditure on Roads," and the taking of this into account would not materially affect the argument. According to the latest Statistical Abstract, the increase in the authorised strength of the police force in Great Britain between 1913 and 1928 was 3,632, and from the Reports of His Majesty's Inspectors of Constabulary for England and Wales it can be calculated that the average annual cost of a policeman in 1928 was £349. Thus, even if it be assumed that all of this increase was due to motoring (a questionable assumption) the adjustment in this respect would not amount to more than £1,300,000. Expenditure in connection with work on arterial roads, carried out by the Ministry of Transport, mainly for the relief of unemployment in the Metropolitan area, was also excluded from "Expenditure on Roads," because this is in respect of improvements and new constructions, and is analogous to expenditure out of loans. As a matter of fact, it only amounted to £859,045 in the last year for which the figures are available.

(*ii*) It was not necessary to include a capital charge in the costs per mile of road because the object of these figures was to show that the wear and tear on the roads has not increased in proportion to the increase of traffic, and the conclusion was drawn that the cost of *highway maintenance* is likely to become stabilised, "as all the roads are made suitable for motor traffic"—that is to say, when capital expenditure ceases. The capital charge was, of course, included in the total expenditure on roads when comparing this expenditure with total motor taxation.

(*iii*) Whether the proceeds of the petrol tax, as they are passed over to the local authorities, are credited to all the departmental accounts or solely to the Highways Account is purely a book-keeping matter. The only logical account to credit is the Highways Account, and any other procedure involves virtual misappropriation. The whole of the petrol tax goes to the local authorities, ratepayers being relieved accordingly, and in an economic analysis of the position of motor taxation *vis-à-vis* road costs, it can only be considered that the petrol tax is a direct contribution to the road costs. Nobody who has read the 1928 Budget Speech can have any doubts on this point.

(*iv*) The 2,163,000 vehicles are divided between the various classes as follows, and the average weight of each class of vehicle, obtained from a careful calculation by the Society of Motor Manufacturers and Traders, based on the last Census of Road Vehicles, is appended:—

		Average unladen weight (tons).
Private cars	981,000	1.25
Goods vehicles ...	315,000	2.0
Hackneys	98,000	2.0
Miscellaneous vehicles	37,000	2.0
Motor cycles ...	732,000	0.13
	2,163,000	1.027

It is generally accepted in the motor trade that the average annual mileage of the private car and motor cycle is about 8,000 miles, and that of commercial vehicles, while more uncertain, is about 15,000 miles, so that 10,000 is a fair average for all vehicles.

(*v*) The ton-miles refer to unladen weight multiplied by miles, and there is no suggestion of the "happy coincidence" to which reference is made. It is impossible to take the question of load into consideration, and the omission to do this does not affect the argument, unless there is evidence to show that the relation of load to unladen weight differs between vehicles using one class of road and another. If any such difference does exist, it will certainly be that relatively heavier loads are carried on the better roads, so that the inclusion of load would strengthen the argument.

(*vi*) From available information it is not possible to ascertain the amount of non-loan expenditure on improvements and new constructions, but I am informed by the Ministry of Transport that it is not usual for this type of expenditure to be met otherwise than out of loans, and that the cases where capital expenditure is made out of ordinary revenue are not considerable. There is no reason, therefore, to adjust this approximate allocation of maintenance. The fact that the proportion of "other roads" is higher in the Metropolitan area than elsewhere does not alter the case in the least.—ED., *Econ.*]

SIR,—In all forms of land transport the main item of expenditure is the construction and maintenance of the permanent way, not the cost of pushing or pulling a vehicle along it. If we look at the accounts of a railway company, as being the only undertaking which pays all the costs incidental to transport, we find that the capital account is made up mainly of the cost of its track and stations; and a large proportion of its annual expenditure is absorbed by the maintenance, lighting, policing and so on of the track. In the case of motor vehicles the cost of the permanent way falls on the ratepayer, but the owners of motor vehicles pay certain taxes, the yield of which is allocated to the improvement and maintenance of roads.

Whether the motorist's contribution should be regarded as taxation in the ordinary sense is a question which has not been settled; it has hardly been discussed. One might argue that it resembles the Compensation Levy paid by the licensees of public houses; no one, except perhaps the publican himself, would call this levy a tax. So far as the motorist's contribution comes back to him in the form of better roads, it might be called a compulsory subscription to a roads improvement association. Individual taxpayers have no right to dictate to

Parliament how their particular contribution shall be spent. If one looks at the accounts of a motor-owning concern, *e.g.*, of a big firm which delivers its goods by road, one sees certain items, such as wages, depreciation, cost of petrol and lubricant, and so on, set out separately. Licences are usually lumped with other small charges as sundries. Yet the licence duty, together with the petrol tax, is the payment made by the motor owner for the permanent way, without which his vehicle would be useless. His contribution to the cost of road repair and construction ought to be his chief separate expense. When compared with the annual cost of road maintenance, the motorist's contribution appears substantial, but the accounts of highway authorities say nothing about the capital charge for their roads except when there are charges for widenings and new roads. The roads of England might be regarded as a valuable national property comparable to railways. Their capital cost cannot be put at less than that of the railways, and might be a great deal more—an annual charge of £50 million is a moderate estimate.

So far we have only considered payments made by the motorist towards the cost of road repair; why should he not be asked to pay for the use of the roads, just as a seller in a municipal market pays rent for the space which he occupies, or as one pays charges according to scale for hiring a town hall? We now come to the taxation of the various classes of motor vehicles. These are divided roughly into three classes:—(1) Private cars, taxed according to an arbitrary definition of horse-power; (2) hackney vehicles (omnibuses, coaches and taxis), taxed according to seating capacity; and (3) commercial vehicles, taxed according to weight. The first class is fair enough, though possibly the heavier and faster cars ought to pay a super-tax; the second class presents several anomalies, the chief being that the smaller vehicles are charged more for seats than the larger, whereas it is clear that the larger vehicles have a greater "ability to pay," and do proportionately more damage. The third class, divided into several categories, presents anomalies so amazing that they must be seen—*e.g.*, in *Whitaker's Almanack*, pages 525-6—to be believed. It is almost incredible that there should be a maximum tax of £60 for a hard-tyred lorry weighing 5 tons unladen, but no maximum weight. Moreover, three heavy trailers may be drawn by a lorry on payment of an extra £6. Thus, as Mr Sherrington says, we have a railway train let loose in our streets. Fortunately it makes so much noise that people are warned to get out of its way. Farmers, of course, pay less than ordinary persons, with a maximum of £10 if they use tractors or of £25 if lorries. Showmen, also, enjoy specially low rates of tax, on the ground, perhaps, that what they gain on the swings they lose on the roundabouts.

The ordinary commercial vehicle pays £10 a year if it weighs 10 cwt., £15 if it weighs 15 cwt., and £20 if it weighs 20 cwt. After this point the tax per cwt. diminishes, as if the income tax were lower on incomes above £1,000 a year; moreover, there is a 20 per cent. reduction for pneumatic tyres. The writer of "Road Finance and Motor Taxation" (the *Economist*, February 8th, page 292) talks of British policy being to bring all roads up to the standard of motor roads "fit for heavy motor traffic." This is an admission that the heavy vehicles are responsible for the heavier charges on the ratepayer. Therefore they should themselves be made to pay a heavier contribution. Each successive ton should be charged at a higher, not a lower, rate than the last, and the weight of the trailer should be added to that of the tractor for taxation purposes. As things are, the Treasury appears to encourage the use of the heaviest and the most destructive vehicles. On economic grounds it is desirable that heavy traffic should be carried by the railways, not on the roads, except at each end of the journey.—Yours faithfully,

RATEPAYER.

Cambridge, February 12th, 1930.

GERMAN WHEAT IMPORTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The reference in the *Economist's* "Commercial History" Supplement (page 5) to the influence of imported German wheat is timely. The unimportance, on the one hand, of the total received and the seriousness, on the other, of its effects on distribution are sufficiently indicated, but perhaps I may be allowed to add a word by way of clue to why farmers have been so angered locally. Take two specific markets at which the German wheat has appeared—Canterbury and Lynn. At these the average weekly sale of English wheat is 300 and 500 quarters respectively. At either, a German tender of 1,000 quarters (less than 1 per cent. of London's need, as Mark Lane in 1929 took 114,000 quarters weekly) would quite possibly hang up all local wheat sales for two or even three weeks. Now the farmer, accustomed to treat wheat as cash, has felt very much as if confronted with R/D on his cheque. If imported wheat were allowed a sale only at some half-dozen great port markets—including, naturally, London—assimilation would take place without friction, and, indeed, in the case of the useful soft German wheat, with advantage.—Yours faithfully,

MARK LANE.

London, February 17, 1930.

Books and Publications.

GENERAL SMUTS'S LECTURES.

ONE of the principal intellectual treats of the past autumn was supplied by the addresses which General Smuts delivered during his all too brief visit as Rhodes' lecturer at Oxford and on various other occasions, and Mr Humphrey Milford has done the many students of General Smuts's opinions a real service in reprinting the text of these addresses in a handy permanent form.* General Smuts is at once one of the outstanding intellects and leading statesmen of our day, and his surveys of three great current problems—Africa and the question of colour; Peace; and Democracy—are permeated by breadth of vision, imagination and practical experience to an extent which few contemporaries indeed are capable of rivalling. Not that on all occasions he faces up quite squarely to all the implications of the tangled facts in the complex problems he discusses; now and again he descries a reef, describes it, and sheers off like an adroit sailor before it grazes his keel. But generally and broadly his analysis is piercing and helpful; and if the same broad idealistic spirit as he displays inspires all those who have to deal with these contentious and fateful problems, there are good grounds for hoping that time will solve them in the right way.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Weetman Pearson, First Viscount Cowdray. By J. A. Spender. (London) Cassell and Company, Ltd., La Belle Sauvage, Ludgate Hill. 21s. net.

A very interesting account of the lifework of a great engineer. Incidentally the book derives topical value from the sidelights it throws upon the development of Mexico.

Survey of American Foreign Relations. 1929. By Charles P. Howland. (London) Oxford University Press, Warwick Lane. 24s. net.

The 1929 survey covers the Carribbean, international organisation, and immigration. It amounts to a recent history of each of the subjects covered, and ends, for the most part, with 1928.

Principles of Politics. By George E. G. Catlin. (London) George Allen and Unwin, Ltd., 40, Museum Street. 18s. net.

A discussion, with the subtitle "An Essay Towards Political Rationalisation," of the familiar problems of political theory.

Memorandum on Public Finance. 1926-1928. (London) League of Nations, 16, Northumberland Avenue. 10s.

Reviews the financial situation of fifteen countries, and constitutes a first instalment of the League's invaluable annual survey.

Statistics of the Iron and Steel Industries (1929). (London) National Federation of Iron and Steel Manufacturers, Caxton House, Tothill Street. 5s. 5d. post free.

An unrivalled source of iron, steel and coal statistics of the principal producing countries. It includes production, foreign trade, and, in some cases, also capacity, number of furnaces in operation, materials consumed, etc., while for the United Kingdom there is much more detailed information. There is also a section on tariffs.

The Stock Exchange Year Book for 1930. Compiled and published by Thomas Skinner and Company, Gresham House, Old Broad Street. 50s. net.

Contains the usual full particulars of all companies listed on the London Stock Exchange, a directory of stockbrokers and an article on the Companies Act, 1929.

* "Africa and Some World Problems." By General J. C. Smuts. London: Oxford University Press (Mr Humphrey Milford.) Price, 7s. 6d. net.

The Mining Year Book. 1930. Compiled by Walter E. Skinner. (London) Walter E. Skinner, 15, Dowgate Hill. 20s. net.

Covers 1,584 companies, including some whose shares are not dealt in on the London Stock Exchange. Includes production statistics, financial particulars of companies, a glossary, and a directory of directors and of mining engineers.

The Discount Market in London. By H. W. Greengrass. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 6s. net.

Discusses the organisation and recent development of the money market from the point of view of the bill broker.

The Banker. February, 1930. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d. net.

Includes editorials on "Mr Thomas and the City," "The Hague Conference," and "Rationalisation."

The Whole Duty of a Director. By Albert Crew. Second Edition. (London) Gee and Company (Publishers), Ltd., 6, Kirby Street. 7s. 6d. net.

Those of our readers who are fortunate enough to be in a position to use such information will find this well-documented little book on the rights, powers, duties and liabilities of directors very concise and convenient.

Company Law. By Albert Crew. Third Edition, revised by the Author and W. G. H. Cook. (London) Butterworth and Company (Publishers), Ltd., Bell Yard, Temple Bar. 7s. 6d. net.

A useful text-book for commercial students and business men. It contains the text of all the relevant Acts and the essential points of many leading cases, and is very efficiently indexed. A selection of examination questions is appended.

Vocational Education in Agriculture. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 5s.

An International Labour Office publication which surveys the situation in thirty-two countries and discusses various special problems.

Annual Report of the Director of the Mint for the Fiscal Year ended June 30, 1929. (Washington) Superintendent of Documents. 65 cents.

A most valuable source of monetary statistics of the United States and other countries.

Monthly Labour Review, December, 1929. (Washington) Superintendent of Documents. 15 cents.

Includes articles on "Union Wage Rates in 1929" and "History of Wages from Colonial Times."

Building Permits in the Principal Cities of the United States in 1928. (Washington) Superintendent of Documents. 20 cents.

Contains a wealth of statistics on housing in the United States.

Care of Aged Persons in the United States. (Washington) Superintendent of Documents. 70 cents.

An extremely full survey of homes, institutions, annuities, and pension schemes of all kinds provided by private individuals, public authorities and voluntary organisations.

Wages and Hours of Labour in the Hosiery and Underwear Industries, 1907 *to* 1928. (Washington) Superintendent of Documents. 15 cents.

Handbook of American Trade Unions. 1929 edition. (Washington) Superintendent of Documents. 30 cents.

Contains a summary of the history, objects, membership qualifications, constitution, etc., of each union.

Bulletin of the British Library of Political and Economic Science, December, 1929. Edited by B. M. Headicar. (London) London School of Economics, Houghton Street. 6d.

Includes a bibliography on the judicial and legislative powers of administrative authorities.

Encyclopædia of the Social Sciences. Volume I. Edited by Edwin R. A. Seligman. (London) Macmillan and Company, Ltd., St. Martin's Street. 31s. 6d. net.

This first of a series of fifteen volumes contains a number of introductory articles and covers the alphabet as far as "All.". It appears likely to prove a valuable work of reference over a wide field.

Types of Economic Theory. By Othmar Spann. Translated from the German by Eden and Cedar Paul. (London) George Allen and Unwin, Ltd., 40, Museum Street. 10s. 6d. net.

A critical history of economic theory.

Die ideengeschichtliche Entwicklung des Einkommensteuerproblems in Frankreich. By Dr. Franz Rompe. (Leipzig) Akademische Verlagsgesellschaft M.B.H. Mks. 12.

A contribution to French financial history and to the history of the income tax in general.

Efficiency and Scarcity Profits. By C. J. Foreman. (London) Cambridge University Press, Fetter Lane. 18s. net.

The purpose of the book is "to aid in bringing economic principles into harmony with the concrete facts of the industrial world."

Anglo-Irish Trade in the Sixteenth Century. By Ada Kathleen Longfield. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 12s. 6d. net.

A detailed and well-documented history of one aspect of Irish economic history in the Tudor period.

Women Workers and the Industrial Revolution. 1750-1850. By Ivy Pinchbeck. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 15s. net.

A scholarly contribution to English economic history.

A History of the English Corn Laws. 1660-1846. By Donald Grove Barnes. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 15s. net.

Supplies a much fuller historical background to the regulation of the corn trade than has hitherto been available.

Public Assistance. By Geoffrey Drage. (London) John Murray, Albemarle Street. 15s. net.

Reprints of letters and articles by the author which constitute, in his own words, "A history of the struggle for economy and efficiency in the sphere of public assistance."

Economic History of Europe. By Melvin M. Knight, Henry Elmer Barnes and Felix Flügel. (London) George Allen and Unwin, Ltd., 40, Museum Street. 18s. net.

Fills a long-felt need for an elementary but comprehensive text-book. About a quarter of the book is devoted to the Middle Ages. In the modern section, special chapters are given to England, France, Germany and Russia.

Zeitgemässe Reformen der deutschen Sozialversicherung. By Dr. H. von Waldheim. (Berlin) Carl Heymanns Verlag.

A critical history and discussion of social insurance in Germany.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:—

Trading Accounts and Balance Sheets, 1928. 2s. 6d. net.

Department of Overseas Trade: Economic Conditions in Venezuela. November, 1929. 9d. net.

Third Edition. Thoroughly revised. With important additions.

CENTRAL BANKS

A study of the Constitutions of Banks of Issue, with an Analysis of Representative Charters. By C. H. KISCH, C.B., and W. A. ELKIN. With a Foreword by the Rt. Hon. MONTAGU C. NORMAN, D.S.O., Governor of the Bank of England. **18s. net.**

THE BANK FOR INTERNATIONAL SETTLEMENTS

By PAUL EINZIG, D.Sc., Pol. & Econ. (Paris), author of "International Gold Movements," etc. **7s. 6d. net.**

Saturday Review: "Dr. Einzig's book, the first and only one on the subject, is invaluable. It is short, clear, neither too hot nor too cold, contains appendices reproducing all the relevant official documents, and should be widely read before the Organization Committee reassembles on February 22."

BRITISH BUDGETS

Second Series—1913-14 to 1920-21. By Sir BERNARD MALLET, K.C.B., and C. OSWALD GEORGE, B.Sc. (Econ.) **20s. net.**

Bankers' Magazine: "Sounder and more interesting books on British Budgets have never been published."

Observer: "We owe a debt of gratitude to Sir Bernard Mallet for this second series of 'British Budgets.'"

MACMILLAN & CO., LTD., LONDON, W.C. 2.

The Stock Exchange.

INDIA AND THE INVESTOR.

INVESTMENTS in India have to be considered under three heads—Government, municipal and trade. Until recent months, India Government stock had for so long been valued in the market on a yield basis of 5 per cent. or less that it must have come as a shock to many investors last week to find £6,000,000 worth of 6 per cent. India bonds, repayable in 1932 or 1933, issued at 99. There is no doubt that this particular issue could have been made on a 5¼ per cent. basis. It was heavily "stagged," it was more than 6 times over-subscribed and it now appears that the Bank of England was prepared to accept these bonds as "floaters," that is, as equal security to British Treasury bonds for borrowing purposes. Nevertheless, it may have been desirable to make a clearer distinction between the borrowing status of the India Government and that of the British Government than was suggested by the Stock Exchange official list. Let us briefly consider where the former ranks. In the first place, a political risk in varying degree must be recognised as attaching to India Government stocks. India loans, while issued on the authority of the Secretary of State for India, under Acts passed by the British Parliament, are not guaranteed by the Imperial Government, and are secured on the revenues of India alone. Holders of these loans, however, have the assurance of the Secretary of State that the Labour Government has no intention of allowing a state of things to arise in which the repudiation of debt could become a practical possibility. A widespread campaign of civil disobedience, such as was envisaged at the recent Lahore Congress, might affect the collection of taxes, but its consequences would fall, mainly, on the revenues of the Provinces rather than those of the Central Government, since the largest contribution to the latter is made by customs duties, which nothing short of a complete boycott of foreign goods could seriously upset.

Apart, however, from political contingencies, the India Government has a fairly heavy crop of maturing loans, mostly internal, to meet during the next seven years, as the following table shows:—

	Sterling Equivalent. £
6% Rupee Bonds, 1930	21,962,115
6% ,, ,, 1931	8,480,587
6% ,, ,, 1932	14,617,500
5½% Sterling Loan, 1932	20,632,054
5% Rupee Bonds, 1933	16,091,865
4½% ,, ,, 1934	19,484,895
5% ,, ,, 1935	3,544,935
4% ,, Conversion Loan, 1931-6	7,425,090
4% ,, Loan, 1934-7	14,653,437
	£126,892,478

To provide for the maturities of the 6 per cent. Bonds, 1930, 1931 and 1932, a 5 per cent. Rupee Loan, 1939/44, and a further issue of 5 per cent. Bonds, 1935, were made in June last year but had a lukewarm reception. Until an alteration is made in the income-tax law of India, under which Indians escape liability on interest and dividends received from abroad, so long as these are not transferred to India for three years, it is not to be expected that Indians will subscribe generously to internal rupee loans on which income tax is deducted at the source. This law, in effect, tends to perpetuate India's dependence on the London capital market for urgent and indispensable financial accommodation.

It should be remembered, further, that the Indian Government is carrying out a development programme which calls for heavy capital expenditure for railway and irrigation purposes. At the present time severe curtailment of the capital programme has been entailed by the difficulty of raising new money at home or abroad on favourable terms—at a moment when there is a tight squeeze in the central budget between expenditure and revenue from existing taxation, accentuated, as at home, by the problem of repaying maturing savings certificates. For example, the scheme for constructing 1,000 miles of new railway line each year has been scrapped. But the Government cannot neglect its opportunities of acquiring revenue-producing lines under the terms of its various contracts. Last year it exercised its option to purchase the Southern Punjab Railway and the following options for railway purchases fall due in the next seven years:—

	Contract Determinable.	Value of Ord. Stock at par or Market Price. £
Assam Bengal	Dec. 31, 1931	1,500,000
Bengal and N. Western	,, 1932	7,650,000
Rohilkund and Kumaon	,, 1932	940,000
Bengal Dooars	,, 1933	660,000
Shahdara (Delhi)—Saharanpur	,, 1934	292,500
Madras and S. Mahratta	,, 1937	5,500,000

That the Government will be anxious to exercise some of these options is obvious seeing that the Indian State-owned railways are not merely solvent but contribute each year to the relief of taxation, besides making provision for reserves to meet less favourable times.

We may conclude that, having regard to the present loan programme and the state of Indian politics in these days of Mr Gandhi's influence, it was probably a wise policy on the part of the India Government to make sure of getting a favourable response to the recent issue of £6,000,000 6 per cent. bonds by offering definitely generous terms. Nevertheless, the credit of India should command a lower interest yield than 6 per cent. Its total debt of about £718,000,000 (inclusive of the recent issue of bonds), or £2.25 per head of its 319,000,000 population is small in relation to its actual and potential wealth. Moreover, about £580,372,500, or 80 per cent. of the whole, according to expert estimate, has been contracted for productive purposes—for the most part for railways and irrigation—which are not only remunerative but are steadily developing the wealth-producing capacity of the the country. At the moment, Sir George Schuster, the Finance Minister, is compelled to propose additional taxation to balance the budget, but it is clear that the public debt of India should not, in the future, tend to present difficult problems of finance, or to become burdensome to the Indian taxpayer.

A comparison between the present market prices and yields of India Government stocks and those of a year ago is shown in the next table:—

	Feb., 1929. Price.	Yield. £ s. d.	Feb., 1930. Price.	Yield. £ s. d.
India 3½% Perpetual	70	5 0 0	60	5 18 6
,, 4½% 1950-55	91½	4 19 3 / 5 5 9*	83½	5 7 9 / 5 16 6*
,, 5½% 1932	101	5 8 11 / 5 2 6*	99	5 11 0 / 6 5 0*
E. Indian "B" Annuities	19½	5 4 6	16¾	6 1 6*
Gt. Indian Peninsular 4% irred. deb.	80	5 0 0	64	6 5 0

* With redemption.

Turning our attention, next, to the municipal debt, with which we may include the Port Authority debentures, it may well be that the market prices of these stocks will be more sensitive to the chances and changes of the political situation than those of the India Government loans. Some of the Corporations—Calcutta for example—are not only under the control of Indians, but under the influence of the Congress. On the other hand, experience has shown that control by Swaraj of a corporation's affairs does not necessarily involve inefficient and prodigal administration. The Port Authority debentures possibly offer better security than the municipal corporations, seeing that the Port Commissioners are required to provide for the service of these loans out of the dues levied on shipping—which are not likely to be affected by political disturbances—but we may remark in the case of Bombay that the prolonged slump in the cotton-mill industry is causing some embarrassment to the Bombay Port Trust.

Finally, with regard to commercial and industrial investments in India, the investor's judgment has been affected by the consideration that, while India's leading industries, cotton, jute and tea, cannot (with the possible exception of cotton) be described as depressed, their standard of prosperity is not as high as it was a year or two ago. The jute mills are suffering from the reduced consuming power of their biggest customer—the sugar industry—while the tea growers are feeling the effects of over-production of the coarser varieties. These conditions are not by their nature permanent. Many of the best Indian tea gardens have their remedy—finer plucking—in their own hands, and have used it effectively more than once in the past. As regards jute, the conservatism of past financial policy even now invests certain shares with a definite appeal. In some cases, accumulated resources exceed the issued capital many times, and yields are high, while, as jute mill shares are for the most part in Indian hands, although the policy and management of the mills is European, the industry will perhaps be less subject to "political" influences than certain other trades.

Apart from these industries, the investor has an interesting field for his consideration in India's coal, iron and steel, hydro-electric power, oil and mining concerns. Indian coal mines have lately shown improved profit-earning capacity, and the future holds definite promise for the iron and steel industry, which for some years has enjoyed the doubtful benefits of a tariff. The great Tata enterprise, in which American interests have now secured a holding, is possibly the cheapest producer of steel in the world. The shares of utility companies—comprising tramway and electric light and power undertakings—are, possibly more subject to political influences, but this factor should be regarded with due reference to their indispensability to India in the future, under any *régime*.

Among Indian mining enterprises, the Central Provinces Manganese Ore Company and the much larger undertaking of the Burma Corporation are both meeting adverse times, the first by reason of the fall in the price of manganese ore, following increased output from the Russian mines and reduced demand from the iron and steel industry, and the second by reason of the fall in silver, lead and zinc prices, particularly silver, which has hitherto accounted for a large share of the profits of the Burma mines. There remains the vast industry of the Burmah Oil Company—covering crude oil production and refining, candle-making, kerosene and petrol distribution, and tin-plate making—which, since the stabilisation of kerosene prices in the Indian markets in 1928, has been steadily increasing its profits. The prospect of an increased dividend and of the capital appreciation of the company's holding in companies outside India (Anglo-Persian Oil and Shell Transport) renders the position of its shares, from the investor's point of view, the more interesting.

It is estimated that the total investment of British capital in India amounts to not less than £700,000,000. This is not an unduly large sum in relation to her potential economic resources. Sir Basil Blackett, in a recent paper, declared that if India were in a state of development comparable with that of the nations of Europe or the United States, her vast and unhampered home market could not fail to place her in the forefront of economic wealth. The economic interests of Great Britain and of the British Empire were, he urged, in no way divergent from those of India. The more prosperous and progressive India became, the better for this country, both as a great trading nation and as the political centre of a great Empire. Sir Basil's far-sighted view may serve as a text for the British investor.

THE CONCLUSION OF THE HATRY SETTLEMENT.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE Hatry settlement may now safely be considered at an end. The Stock Exchange and the public are awaiting the permission of the Stock Exchange Committee for dealings to begin again in the shares of the "Hatry" companies which have not gone into liquidation—Associated Automatic and Photomaton. The past week has seen stock delivered, differences agreed upon and paid, and the "pool" so busily engaged that its staff has been unable to leave until eleven at night or later. The pressure has now relaxed, however, and only the rounding off of various minor details now remains. One of the most threatening accounts which has menaced the Stock Exchange for the past fifty years has thus become a matter of history. It will always be quoted as an amazing feat in that it produced no failures in the Stock Exchange or any such widespread losses as arose, for instance, out of the London and Globe smash of Whitaker Wright's time.

There is a disposition to attribute the recent stagnation in Stock Exchange markets to the influence of the Hatry affair. The latter has certainly contributed to the caution existing in the minds of speculative investors, but many other factors are operating at the moment to check initiative and bullish sentiment. When the Hatry collapse occurred, last September, and the four principal members of the group gave themselves up to the police, the Stock Exchange undoubtedly feared, upon examination of the position, that there would be widespread trouble, the provinces being known to have a very substantial stake in the business and to have been badly hit. Efforts were made to straighten out the position in order to obtain a general view of the real dimensions of the trouble. The Stock Exchange Committee took the exceptional step of calling for returns from members of the London Stock Exchange of the names of clients with whom dealings had been transacted, and there was a demand in the House that, in cases where it could be proved that Hatry and his companies were both buyers and sellers, the bargains should be cancelled. This was but one of the many proposals carefully examined by the Stock Exchange Committee which, in the event, was found impracticable.

Matters dragged on, in spite of the Committee's incessant work, and after a time it became clear that unless something were done to bring matters to a head there would be lawsuits innumerable, calculated to extend over a lengthy period. A well-known member of the House summoned a meeting of interested persons, and a committee was formed to draw up a scheme to help to obviate the difficulties, but this committee lasted for a few days only, and matters again fell into suspense. The chairman of the Stock Exchange Committee, seeing that some definite action was imperatively required, himself approached a few of the leading members of the House, who took the matter in hand, and after an immense amount of labour succeeded in evolving the scheme finally adopted. The chairman of the Stock Exchange Committee, Mr Archibald Campbell, and four of his fellow-members on the Committee, were elected as a special committee to co-operate and work with the other, unofficial, committee of four members—two brokers and two jobbers—in whose hands was placed the task of formulating the details of the final plan. It was impossible for the Stock Exchange Committee themselves to undertake the task, for the reason that several of the proposals were diametrically opposed to Stock Exchange Rules. It was

not so much a matter of adapting the Rules as of abrogating them. Irony reached its peak in the fact that some of the crucial meetings of the unofficial committee, called to discuss proposals that were in flat defiance of Stock Exchange Rules, were held in the stately room assigned to the Stock Exchange Committee.

It was an essential feature of the plan that agreement should be secured from practically all those affected by it, and at one time it looked as though the whole scheme might be wrecked by lack of cohesion amongst those to whom its stipulations applied. Good humour and commonsense prevailed, however, and the scheme duly became operative. It called for financial support, amongst other things, to the extent of over £800,000 from members of the Stock Exchange, this money being put into a pool and utilised for the payment to clients of the money due to them through the sale of stocks on the end-September, 1929, settlement, and for the provision of good shares to purchasers who otherwise might have received forged documents. The substantial nature of the amount involved is an inadequate indication of the work and of the difficulties faced by the sub-committee and the unofficial committee. For some time past the unprecedented number of two or three committee meetings has taken place almost every day. In spite of the intricacy of the issues involved and the heavy losses voluntarily shouldered by Stock Exchange members, criticism of the arrangements has been slight. It is probable that a plan will be decided upon next week for testifying the appreciation of Stock Exchange members of the efforts of those of their number who have so successfully laboured to solve the problems of the Hatry settlement.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
March 4.	March 6.

The Account made an unsatisfactory start. Unfavourable monetary developments, and the issue of a number of new trustee stocks arrested the upward tendency of gilt-edged securities, and although the tone of New York was firm, on the whole, British industrial share values were affected by the political situation, Budgetary qualms, and the issue of a number of disappointing company reports. By the middle of the week, however, certain markets showed signs of an oversold position, and Wednesday's business had a better tone, though the volume of dealings failed to increase. Conditions subsequently became patchy, the week's events, in short, once again failing to throw light on the question as to when the long-awaited recovery in values was likely to begin.

The fall of the New York exchange below $4.86, and Germany's purchase of the gold from the Cape and Spain, had an adverse effect on British Government stocks, measurable declines occurring throughout the list. India stocks were again on offer. An appreciation of the position of India securities, in the light of political and financial possibilities, will be found in a leading article on page 416 of this issue. Dominion and Colonial stocks were steadier than for some time past. The new Nigeria Fives opened at ⅝ discount. Brighton scrip was dealt in at ¼ premium and Hastings Fives at ¼ discount.

The Foreign market was one of the firmest spots in the "House." Substantial gains were recorded by Brazilians, following an improvement in the milreis, in anticipation of next month's sinking fund purchases. The Brazilian situation is reviewed on page 421. Excellent revenue figures stimulated buying of Greek bonds, and Turkish Unified were better on more hopeful views of the maintenance of debt payments. Chinese loans, however, showed an easier tendency.

Home rails opened with fresh liquidation, such factors as the favourable Great Western report being entirely ignored. A smart rally, however, was initiated in the North, in mid-week, and became fairly general on

PRELIMINARY NOTICE.

OLYMPIA LIMITED

(Incorporated under the Companies Acts, 1908 to 1917.)

CAPITAL :

Authorised.		Issued or Proposed to be Issued.
£1,000,000	in 1,000,000 7 per Cent. Cumulative Preference Shares of £1 each	£850,000
£500,000	in 2,000,000 Ordinary Shares of 5/- each	£425,000
£1,500,000		£1,275,000

The Subscription Lists will open on Monday next for an

ISSUE AT PAR

of

450,000 7% Cumulative Preference Shares of £1 each

and

450,000 Ordinary Shares of 5s. each.

DIRECTORS :

PHILIP ERNEST HILL, 15, King Street, St. James's, London, S.W.1 (Chairman, Covent Garden Properties Company, Limited), Chairman.
LEO FREDERIC ALFRED D'ERLANGER, Park House, Rutland Gate, London, S.W.7 (Director, Erlangers Limited).
CLAUD FRANCIS GODDARD, of Messrs. Goddard & Smith, Auctioneers and Estate Agents, 22, King Street, St. James's, London, S.W.1.
PAUL STANLEY MAY, Surveyor (late Senior Partner of Messrs. May & Rowden, Auctioneers and Estate Agents), Polebrook, Hever, Kent.
LOUIS NICHOLAS, 55 & 56, Pall Mall, London, S.W.1, Chartered Accountant.
REGINALD GARDINER HEATON, Gays House, Holyport, Berks (Director of International Horse Show, Limited), Managing Director.

The Prospectus will show that :

Olympia holds a unique position as the recognised centre for Trade Exhibitions in Europe.

Since its acquisition in April last, extensive alterations have been made. These include the erection of an imposing four-storey edifice known as "Empire Hall," extensive workshops, the construction of a large car park and a bridge providing direct connection with Addison Road Station.

Profits for the past seven years have been as follows :—

Year to 31st December, 1923	£70,816
,, ,, ,, ,, 1924	£57,285
,, ,, ,, ,, 1925	£77,830
,, ,, ,, ,, 1926	£67,007
,, ,, ,, ,, 1927	£81,940
,, ,, ,, ,, 1928	£90,760
,, ,, ,, ,, 1929	£100,381

Net profit for 1930 is estimated at £142,500, and when the new "Empire Hall" is finally completed, the net profit is estimated at £162,500 per annum.

The estimated income for 1930 is sufficient to cover the Preference Dividend practically twice, leaving a balance available for the Ordinary Shares equivalent to over 13½ per cent. per annum, or 18 per cent. when the new "Empire Hall" is completed.

The Preference Capital issued and now to be offered for subscription is covered twice by net assets (valued at **£2,254,432**) apart from Goodwill. No sum is included in the Company's Balance sheet for Goodwill.

Prospectuses and Forms of Application can be obtained from the :—

BANKERS :

COUTTS & CO., 440, Strand, W.C.2; 15, Lombard Street, E.C.2., and Branches.
NATIONAL PROVINCIAL BANK LIMITED, 15, Bishopsgate, E.C.2, and Branches.
ERLANGERS LIMITED, 4, Moorgate, E.C.2.

RITCHER & CO., Austin Friars House, London, E.C.2.
FYSHE & HORTON, 3, Temple Row West, Birmingham.
CRICHTON BROS. & TOWNLEY, 13, Castle Street, Liverpool.

And from

QUADRANT TRUST LIMITED,

55-56, PALL MALL, LONDON, S.W.1.

the publication of a batch of good traffic returns. The fact that the latter afforded comparison with a period of 1929 when traffic was interrupted by severe frost was, apparently, overlooked in some quarters. Undergrounds attracted no more than moderate interest, though receipts again made a gratifying showing. Among foreign railways, Argentines made a partial recovery after early liquidation, on the improvement in the exchange, though the omens as regards current earning capacity remained adverse. Canadian Pacific had an uneventful week, closing with slight change.

Apart from a fair amount of activity, in mid-week, in "international" stocks, the tone of the industrial markets was uncertain. Brazilian Traction and International Nickel were strong under Transatlantic influence, but did not hold their gains on Thursday. As regards domestic stocks, the week opened under depressing auspices for textiles, the reports of Courtaulds and Bradford Dyers (discussed on pages 422 and 423 respectively), both disclosing lower earnings and dividends, having an unfavourable effect on market psychology. Courtaulds, however, later became harder on supporting orders, but other rayon stocks remained under a cloud.

The favourable report of Leyland Motors (dealt with on page 423) had been discounted, and the conservative distribution policy of the directors proved an inducement to profit-taking. Tobacco shares were fairly steady after an uncertain start, but breweries attracted limited interest. Metropolitan Electric were in demand on an increased dividend. Little interest was taken in coal and steel shares. Cunards were the best feature in a quiet shipping share market. No fresh liquidation of Royal Mail issues was encountered. Imperial Chemical, however, again came on offer, on nebulous rumours of a contemplated increase of capital. Among shops and stores, Harrods were easier, but John Barker improved on the satisfactory profit figures. Bank shares showed few movements, but insurance shares had a slight downward trend.

Rubber share prices were marked up, after the Amsterdam decision in favour of a tapping "holiday" during May, though business failed to attain large dimensions. Business in the tea share market was negligible, and prices showed few measurable variations. The outlook for tea and rubber is discussed in a "Note" on page 422. Oil shares were depressed by two separate factors—reductions in American crude prices, and a pending issue of £5,000,000 of 7 per cent. preference shares by the "Shell" Company. All the leaders lost ground, though a partial recovery occurred in mid-week—in which, however, "Shells" had no part.

The Mining markets again displayed only desultory activity. Rhodesian shares were fairly lively, but less consistent than during the previous week. Rhodesia Katanga was a strong spot, and Congo Border touched the record level of 15½. Bwanas, however, declined, and though "Chartered" were active on the report, their gains were not held. Kaffirs were harder after a dull opening, the Anglo-American Corporation dividend of 2s. 3d. creating a good impression. With copper down to £69 15s., Tintos were sold from Paris, the price falling by 22s. 6d. before a recovery set in. Tin shares lost ground at first on the absence of any recovery in the metal, and the better tone attained at the close was confined to one or two descriptions. Mysore were sold on a reduced dividend, and Santa Gertrudis weakened after a mid-week spurt.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Shares were reactionary and underwent the first sizeable decline this month on a weakened technical position and a suspicion that the rally had outrun any visible business recovery. Fresh anxieties created a continued decline in wheat, cotton and other commodities. The Bureau of Labour commodity price index for January is 93.4, a decline of ¾ per cent., and the lowest since April, 1922. Average prices still remained near the best levels since the autumn break, but little real progress has been made during the past three weeks, and the trading volume was only moderate despite slowly growing public participation and evidence that, since the banking group came in to support, stock has ceased to burden the market. The best advances were scored by high-grade stocks and particularly by the steel, public utility and tobacco groups. Mining shares were depressed, and a further gain was recorded in copper metal stocks for January, while some addition is expected this month. Rubbers proved to be a trifle better on reports of the duties restriction plan, while tobaccos were stimulated by the ever-mounting cigarette consumption. Utilities are earnings well and benefiting from the lower prices of materials. Rail shares had a dull appearance, January earnings statements running 66 per cent. under a year ago, while there has been a continued decline in freight traffic, which is now the lowest since 1923. Bonds have been better, but there is still no broad market, and bankers were inclined to caution in the matter of new issues. Recent flotations of a sound type were well received.

AMSTERDAM.

AT the opening of the New Year hopes were entertained in Amsterdam Exchange circles that the worst had been seen. A number of buying orders made their appearance, and, being principally for investment descriptions, soon caused the market, and particularly the debenture market, to assume a firm appearance, accompanied by brisk trading. The improvement, however, was of very short duration, for the advance in prices soon came to a standstill, and the month of February has so far been characterised by extreme dullness. In spite of the lack of business, however, prices have not sagged to any considerable extent, although more speculative descriptions, such as Margarine Unies and Philips, have not maintained their highest quotations. The idle tendency in the Amsterdam Exchange has continued in spite of the fact that the New York market has been fairly firm the last few weeks, the stimulus usually exerted on the Amsterdam market by New York having become decidedly less pronounced.

INVESTMENT NOTES.

The Outlook for Brazil.—The Brazilian economic situation has been the subject of recent market comment in view of the considerable decline in quotations for Brazilian Government and State securities, though more active conditions have obtained during the last few days:—

Brazil, though potentially the wealthiest State of South America, is as yet only at the beginning of the task of developing her immense resources. For many years she has been accustomed to borrow large amounts abroad each year, and her requirements for some years to come, in one form or another, are estimated to be not less than £35 million annually. Last year, however, high international money rates and the disinclination of the American investor to buy foreign bonds rendered the raising of fresh long-term loans by Brazil largely an impossibility. Though the internal budgetary position has markedly improved under Dr. Washington Luiz' Presidency, recurrent deficits having been replaced in the last three years by moderate surpluses, the market has been concerned rather with the fact that the national export balance has fallen to one-sixth of its dimensions six years ago, and is admittedly below the amount required to meet Brazil's external obligations. The milreis, which was stabilised just under 6d. in 1926, has recently fluctuated well below this figure, and the measures announced to combat this situation have not impressed outside observers as being completely effective. The key of the present position is to be found in the coffee situation. Brazil produces over three-fourths of the world's coffee, the commodity accounting for nearly 70 per cent. of her total exports. For the last 4½ years the commodity has been "controlled" by the Coffee Institute of the State of San Paulo, which operates on lines set out in the *Economist* of November 2nd and December 7th last (pages 829 and 1094). "Coffee defence" is not purely a post-war measure—it was practised as long ago as 1907-08, and again towards the end of the war. So long as large and small coffee crops alternate, those who favour the Institute's policy may make out a case for its operations. Unfortunately, during each of the last three seasons unusually large crops have been harvested in Brazil. Prices have fallen precipitately, and the stocks of coffee held by the Institute have risen to ominous proportions. A possible crisis was averted towards the end of last year by a seven months' credit of £2,000,000 from three well-known financial houses,

NOW READY.

Published Feb. 18, 1930. 44th Year.

Containing fuller and more up-to-date information than any other book of reference.

THE

MINING YEAR BOOK

formerly known as

MINING MANUAL & MINING YEAR BOOK

1930

By WALTER E. SKINNER.

The Standard Reference Work on Mines.

Price **20/-** net.

Post free (Inland), 20/9; Post free (Abroad), 21/6

1,012 pages. In Demy 8vo, bound in RED Cloth.

A Recognised Indispensable Work of Reference

For MINING INVESTORS, MINING ENGINEERS, MINE MANAGERS, BANKERS, STOCKBROKERS, DIRECTORS, and everyone interested in the MINING INDUSTRY.

COMPLETE AND UP-TO-DATE PARTICULARS concerning 1,584 Mining Companies operating in all parts of the world. Gold, Diamond, Copper, Tin, Platinum, Silver, Iron, and other Mines, Collieries, Exploration and Mining Investment Companies, arranged in alphabetical order.

PARTICULARS given of each Company include the Directors and other officials; date of establishment; seat of operations; description of the property, with the purchase consideration; plant erected or in course of erection; present working results; ore reserves, details of capital; calls; dividends paid; and the financial position as disclosed by the latest accounts. Highest and lowest prices of the shares for the last three years; also latest prices.

DIRECTORS (3,828) and Mining and Consulting **ENGINEERS** and **MINE MANAGERS** (966), and their addresses, and names of the Companies with which they are connected.

SUPPLEMENTARY INDEX of private, dormant, or Companies which have ceased to be of public or market interest. One of the most useful and important features of the book. It is the only List of its kind published.

STATISTICAL TABLES are given at the commencement of the volume, showing annual yields of the principal mining companies, Gold Outputs of the World's Mining Fields, and the highest and lowest prices of base metals for the past eight years.

DICTIONARY OF MINING TERMS.—An up-to-date glossary covering 440 Mining terms, by the use of which Mining developments can easily be followed, and the difficulty of understanding technical phraseology quickly mastered.

To be obtained from all Booksellers, or direct from the Publishers,

WALTER E. SKINNER, 15, Dowgate Hill, London, E.C. 4,

AND

"FINANCIAL TIMES," 72, Coleman Street, London, E.C. 2.

accompanied by an increase in the permitted daily entries of coffee. The outlook for the next few months depends largely, therefore, on whether or not the expectations held in some quarters, that the crop for 1930-31 will show a large decline, are borne out. A frost would doubtless alter the whole situation, as it has done in the past, though a large increase in plantings has occurred in recent years. International conditions, again, may be more favourable to international borrowing operations this year than last. Brazil's ability successfully to float long-term issues abroad must, however, depend to some extent on the development of the coffee situation, and possibly on the outcome of next month's Presidential elections.

Home and Underground Railway Accounts.—Three of the four "group" railways and the "Underground" group have published their accounts during the last few days, the reports of the London and North Eastern being alone unavailable as we go to press. We hope to present our readers, during the next two or three weeks, with our usual detailed analyses of the railway figures. In the meantime, the following table summarises the results for the past three years on the "trunk" systems:—

(000's omitted.)

		Railway Gross Receipts.	Railway Expenditure.‡	Miscellaneous Income (net).†	Ordinary Stock. Earned for Dividend.	Ordinary Stock. Paid. Amount.	Ordinary Stock. Paid. Rate.	Carried forward.

* Not available at time of going to press.
† Road transport, steamboats, canals, docks, hotels, parcels service, &c.
‡ The savings effected by the 2½ per cent. deduction from directors' fees, wages and salaries, from August, 1928, are not shown in these figures as regards the L.M.S. and the G.W.R., but are so shown in the other two cases.

The most significant feature, from the point of view of the stockholders, is the extent of recent reductions in expenditure. The London Midland and Scottish figures, under the latter head, are shown before allowing for the 2½ per cent. deducted from salaries, wages and fees since August, 1928, which saved the company £418,000 in 1928 and £1,089,000 in 1929. On the Great Western, whose expenditure figures are drawn up on the same basis, the 2½ per cent. deduction saved the company £181,000 in 1928 and £473,000 in 1929. The Great Western also benefited by the improved situation at its docks, the net receipts of the latter being £544,000 last year, against £389,000 in 1928. Economies on the other systems were also of gratifying proportions, but the figures in these cases are shown after, not before, allowance has been made for the cut in salaries and wages. The arrangement of railway capital is such that the benefits of economies are more or less automatically "passed on" to the ordinary stockholders, to whom their continuance is at least as crucial a matter as the extent of year-to-year fluctuations in gross receipts. The results of the Underground Railways for the last three years are shown below:—

(000's omitted.)

Year.	Traffic Receipts.	Expenditure.	Miscellaneous Receipts (net).	Earned for Dividend.	Common Fund. Paid. £	Common Fund. Paid % (average).	Carried Forward.
1927	13,951	11,287	978	1,030	922	4·66	414
1928	14,942	12,046	1,053	1,173	1,127	5·69	461
1929	15,098	12,288	1,080	1,150	1,127	5·69	484

Full particulars of the dividends paid on the various stocks of the Underground Combine will be found on page 435.

Tea and Rubber Prospects.—Recent developments in the tea and rubber plantation industries have been of considerable interest to investors. Though the price of tea and tea share quotations have recently been fairly steady, the world situation in the industry still leaves room for uneasiness. Stocks of tea in London at the end of last month were estimated to be not far short of 300,000,000 lbs. against 251,000,000 lbs. a year earlier. That surplus supplies of approximately 50,000,000 lbs. have not had a more depressing effect on the market is due less to increased British consumption, following the removal of the Customs duty (which has so far produced little in the way of positive results), than to the careful "feeding" of the market by sellers of India and Ceylon teas. These interests are, in effect, carrying a large share of the burden of surplus stocks, in contrast to the policy of sellers of Java and Sumatra varieties, who press their wares for sale immediately they reach the market. The result, as is pointed out by a prominent Mincing Lane firm,* is that while tea stocks as a whole show an increase of 16 per cent. on last year's figures, those of Ceylon are up by only 3 per cent. and those of India by 12 per cent., while the Java and Sumatra figures show a rise of no less than 91 per cent. Meanwhile two possible avenues for future action are being explored. Negotiations for the purchase of several million pounds of tea by Russia have been in progress for some time, but curtailment of the next year's crop by growers, either voluntarily or of necessity, appears at the moment more likely to eventuate. The outlook is governed by the continued demand of the market for really good tea and the over-abundance of all other varieties, particularly of low to good medium standard. Unfortunately, statistics of recent production suggest that whenever climatic influences favour high yields an abundance of the lower qualities is likely to be experienced. The position is made more difficult by the tendency for a larger proportion of the steadily increasing output of the Dutch East Indies to come to London, as a result of Holland's retention of a tea duty equal, at present prices, to 75 to 90 per cent. of the selling price of the commodity. Tea is remarkable on account of the extraordinary variations between the produce of one country and another or even one district and another—a factor involving a more than average danger of divided counsels. Whether Java and Sumatra will come into any scheme for restriction is an open question. Economic conditions, however, may induce producers in India and Ceylon—particularly the former—to follow a policy effectively practised at critical periods in the past—to "pluck fine" and thus produce less tea of indifferent quality and more of outstanding merit, the demand for which is as keen to-day as at any time in the history of the trade. As regards the rubber outlook, the announcement that Dutch, French, Belgian, Swiss and German producers have agreed, at a meeting on February 19th, to suspend rubber tapping during the month of May, 1930, may be welcomed as an indication of Dutch willingness to co-operate in matters affecting the policy of the rubber industry, but scarcely for any other reason. It is stated that the British rubber producers are to make their decision on the plan within a few days. That they will agree to come in is, however, by no means a foregone conclusion, and without them the plan will probably fall to the ground. Nearly half the acreage under rubber in the East is in native hands, and it is difficult to see any attraction in a plan which promises European growers a month during which everything is going out and nothing is coming in, without any guarantee that the results will be sufficient to have any material influence on the world situation.

Courtaulds.—The preliminary dividend and profit announcement of Courtaulds for the financial year ended December 31st last confirmed the worst expectations of the market. The directors remark that the reduction in trading profit is accounted for by the unsatisfactory state of business in this country. This is the only explana-

* Messrs. Wm. Jas. and Hy. Thompson, in *The Rubber and Tea Quarterly*, February, 1930.

tion they offer for a 28 per cent. drop in earnings and a reduction in dividends from 15 per cent. to 10 per cent., tax free. Net profits total £3,743,828, a reduction of £1,427,169 on last year and £842,093 on 1927, when the ordinary capital was only half the present figure of £24,000,000. Percentage earnings have dropped from 34.9 in 1927 to 13.9 for the past year, while dividends have been correspondingly cut from 25 per cent. to the present distribution of 10 per cent. The following table sets out the comparative figures for the past three years:—

	Year ended December 31, 1927.	1928.	1929.
	£	£	£
Ord. capital	12,000,000	24,000,000	24,000,000
Net profit	4,585,921	5,171,997	3,743,828
Brought forward	1,036,798	1,222,719	1,394,716
Preference dividend	400,000	400,000	400,000
Rate	5	5	5
No. of times covered	*10·1*	*12·9*	*9·4*
Ordinary capital:

Other allocations	...	...	1,651,856†
Carried forward	1,222,719	1,394,716	686,688

* Free of tax. † To writing down Continental investments.

The usual allocation of £1,000,000 to reserve has not been made, a sum of £1,651,856 being set aside instead for the purpose of writing down the Continental investments of the company. Meanwhile, the silk duties are regarded as the key to the situation for the next twelve months, and all eyes are turned on the Chancellor. The ordinary shares, which in 1928 touched 9⅛, fell after the announcement from 2 21/32 to 2 7/16, and have since dropped further to 2 5/16. At that price they give a yield of £4 9s. per cent. free of tax, or £5 11s. 3d. per cent. gross, allowing for a final dividend of 6 per cent., tax free.

Bradford Dyers' Association.—The continuance of depressed conditions and low output in the great textile industries of this country is reflected in the disappointing results of the Bradford Dyers. Net profits for the year, at £271,100, are down practically to the low level of 1926, and represent less than half last year's profit of £551,023. Percentage earnings have fallen from 19.6 to 6.5, and the reduced ordinary dividend of 8⅓ per cent. is not fully covered:—

	Year ended December 31, 1927.	1928.	1929.
	£	£	£
Net profits	428,429	551,023	271,100
Brought forward	478,629	563,022*	376,851*
Preference dividend £	125,000	125,000	125,000
Rate %	5	5	5
No. of times covered	*3·4*	*4·4*	*2·2*
Ordinary capital:			
Earned £	*303,429*	*426,023*	*146,100*
Paid £	217,036	244,166	183,747
Earned %	*13·9*	*19·6*	*6·5*
Paid %	10	11¼	8⅓
Reserves	...	356,028	...
Other allocations	...	10,000	...
Carried forward	565,022	378,851	339,204

* After deduction of directors' fees, £2,000.

The results are the more disappointing in view of the not unreasonable hope, entertained at one time, that last year's recovery, following a good year in 1927, indicated a real return to prosperity. In the circumstances, the allocation of £356,028 in 1928 to sundry reserve funds has not been increased, and the carry-forward item is less by £37,647 than the amount brought in. The balance sheet remains fairly liquid, available assets at £753,215 exceeding current liabilities by £260,298. Cash, debtors and creditors all stand at considerably reduced figures, while an increase of £870,888 in investments is offset by a reduction of over £1 million in properties. At the present price of £1 5/16, the £1 ordinary shares give a yield of £6 7s. per cent., allowing for a final dividend of 10d. per share.

Selfridges.—The accounts of this great departmental store for the year ended January 31, 1930, show an increase in net trading profit of £4,895 to £481,312, omitting results from branches which were included in the year's profits for 1928. Net revenue, after deduction of debenture interest, income tax and depreciation on fixed capital, but before writing down investments, totals £385,338, compared with £393,124 for the previous twelve months. The percentage earnings on the ordinary capital reveal a corresponding decline from 27.2 to 26.2, but the distribution is maintained at 20 per cent., less tax, absorbing £150,000.

	Year ended January 31, 1928.	1929.	1930.
	£	£	£
Net profit	380,578	393,124	385,338

Carried forward	148,950	146,937	147,774

* Including dividend on Staff Participating shares.

No addition has been made to reserve account, which stands at £425,000 in the balance sheet. An amount of £15,000 is written off investments in subsidiary companies, as against a previous £10,000. Under the arrangement by which the company guarantees 25 per cent. dividend on the ordinary shares of William Whiteley, Ltd., the sum of £31,002 has been paid out in respect of the year 1929, which compares with last year's contribution of £46,105. This connection may be a valuable source of profit in the future, but at present its benefits, from the Selfridge point of view, are mainly indirect. The balance carried forward is very slightly increased to £147,774, while the balance sheet offers no noteworthy alteration in any item.

Profits of the Motor Industry.—The reports of three motor manufacturing companies, published this week, reflect the uneven conditions prevailing in the industry. The year 1929 was an active period, the number of new cars turned out showing an increase of 12½ per cent. and the number of commercial vehicles of no less than 35 per cent. The overseas trade returns tell the same story, exports of British motor cars, parts and accessories, which in 1928 declined from £10½ million to £9 million, last year rising to £10¾ million. The table given below, however, shows that the industry includes concerns making handsome profits and others which are only just paying their way:—

* After tax. † Eight years' arrears on 6% Pref. ‡ Current year's dividend on 6% Pref., and 7 years' arrears on 7½% Pref. § Including £111,507 profit from sale of investments.

The recent progress of Leyland Motors, which in six years has succeeded in wiping out a debit balance of £998,710 and repaying £391,800 of preference dividend arrears, entirely out of revenue, is creditable to all concerned. The company's earnings last year (adding back income tax) were equal to approximately 66 per cent. of its ordinary capital, apart from preference arrears. The more optimistic section of the market had hoped that the company would pay off this year all its remaining preference arrears, but the directors have wisely chosen to use £120,000 of the year's profits as the foundation of a strong future reserve, the balance of the arrears being left for payment when cash resources permit—probably within the next few months. The ordinary shares are quoted at 56s. 3d. Crossley Motors, like Leyland Motors, has a considerable interest in the production of commercial vehicles, amounting possibly to one-half of its total production. The company has spent a good deal of money recently in designing and developing new models. Satisfactory progress has been made and demand continues to increase, but on the private car side competition is keen and has been aggravated, in the company's case, by " the general political situation and financial stringency." The meagre profits of £2,025 was arrived at after carrying forward in suspense £24,036 of expenditure applicable to omnibus and commercial vehicle designing. With the exception of a 5 per cent. dividend for 1926, no payment has been made on the company's capital since 1921. Willys Overland Crossley —a promotion of the 1919 boom—has similarly been affected by conditions in the touring car trade, last year's earnings falling short by some £14,416 of the amount paid on the preferred ordinary shares. The latter have received regular dividends since 1927, after five years' arrears had been cancelled, but the ordinary have received no payment since the company's inception, and certificates of indebtedness to the amount of £250,000 are outstanding, repayable under specified conditions out of profit. In view of the state of the market, the private car section of the motor industry would appear to have more to fear from the possible removal of the McKenna Duties than the commercial vehicle section.

Further Investment Trust Results.—Two of the most successful of the old-established investment trusts have published their reports during the past week—the Mercantile Investment and General Trust, formed in 1884 which has now a share capital of £3,500,000 and a loan capital of £3,000,000, and the British Assets Trust, formed in 1898, which now has a share capital of £2,625,000 and a loan capital of £2,025,000. A substantial increase is recorded in the earnings of the British Assets Trust (which include the dividends received from its holding in the Second British Assets Trust), but the dividend is maintained at 20 per cent. Only a slight increase in net profits is shown by the Mercantile Investment, although the final dividend is increased by ½ per cent. to 11½ per cent., making 16½ per cent. for the year. The following is an analysis of the profits and distributions of these two companies :—

	Net Rev. after Tax.	Avail. for Ord.	% Earned	% Paid (subject to tax).	Applied to Reserve.	Carry Forward.
Mercantile Investment :	£	£			£	£
January 31, 1928	293,023	233,023	19·4	Int. 5, Final 10	100,000	36,319

,, 1930	209,671	126,071	37·0	Int. 10, Final 10	47,000	38,659

* Excluding £250,000 sh. premiums to reserve.
† Excluding £100,000 sh. premiums to reserve in each year.

In addition to the transfer of £50,000 to general reserve, the directors of the Mercantile Investment have credited the sum of £250,000, being the premiums on the issue of shares made in March last, to the capital reserve account. With a general reserve of £750,000, the total reserves shown in the balance sheet now amount to £1,000,000. A list of investments held by the company is enclosed with the report, but no mention is made of their present market value. The directors of the British Assets Trust merely state that the value of the assets show a substantial surplus over the amount at which the investments stand in the balance sheet. The directors propose to issue 85,000 new ordinary shares of 5s. each at par to the ordinary shareholders, and these will be allotted as nearly as possible in the proportion of one new share for every 20 shares held. Some dissatisfaction has been felt in the market that the directors did not see fit to increase the cash dividend. The new issue of shares has been made on the meanest of bonus terms. The present market price of Mercantile Investment and General ordinary stock is 319, to yield 5.17 per cent., as against a high level of 350 last year, while that of the British Assets 5s. shares is 35s., to yield 2.86 per cent., as compared with a high level of 45s. 3d. last year.

British South Africa Company.—The substantial increase in the earnings of the British South Africa Company (" Chartered ") for the year ending September 30, 1929, was apparently due to the higher profits realised on the sale of shares. The company, besides owning the mineral rights in Northern and Southern Rhodesia, has taken large interests in some of the mining companies—in particular the Northern Rhodesian copper companies—and it may be assumed that it has taken advantage of the " boom " in Rhodesian copper shares to make a handsome profit on some part of its holdings. Reports are attached from the consulting mining engineer and the Rhodesian Anglo-American, the company's consulting engineers for Northern Rhodesia, which deal in a cautiously optimistic fashion with the progress of the Northern Rhodesian copper mines. An analysis of the profits of the " Chartered " Company is shown below. It will be seen that there was an increase in dividends and interest, which included the dividends of 10 per cent. free of tax from the Rhodesian Railways Trust, and in the mining royalties. On the other hand, there was a loss on the company's estates of £19,831, explained by the fact that conditions prevailing in Southern Rhodesia during the early part of the season affected adversely both the quality and yield of the fruit crop :—

In the balance sheet the company's investments stand at £6,264,212, as compared with £6,332,272 a year ago. The market value of the quoted investments are said to be largely in excess of the book value of £5,952,614. The surplus of current assets (including the company's quoted investments) over current liabilities amounts to no less than £5,373,000. The increased profits of the company have enabled the directors to increase the bonus from the year of 13⅓ per cent., against 10 per cent. in the previous year. The increased distribution gives a yield of £5 1s. 8d. per cent., less tax, at the present market price of 41s. (cum 2s. div.) for the 15s. shares.

Montgomery Ward Results.—For the first time since the change of management which followed the post-war depression, Montgomery Ward and Company published a poor annual report. Disappointment is the more keen as gross sales of the company's stores reached a new high level, and the company's large competitor, Sears, Roebuck, had a very fair year. A few years ago both the great houses began to experiment with retail stores, as a development of their old system of shipping goods from central distributing warehouses on mail orders. The experiment proved satisfactory, and Montgomery Ward outdistanced its competitor, having, during the past two years, placed in operation 532 chain and department stores. Retail store sales accounted for about 23 per cent. of total gross sales in 1928, and no less than 43 per cent. last year. The 1929 net profit of $13,434,935 was the equivalent of only $2.60 a share on the common shares, after payment of Class A dividends, being 40 cents a share under the regular annual dividend requirement. However, the company at its last quarterly meeting paid the regular rate. The president blames the mail order business for the poor results, but in view of the extremely rapid growth of the chain stores, the unfamiliarity of the management, and the poor selection of sites in some instances, it would seem that allocations for writing-down the accounts of the new stores—and of inventory values at the year-end—were also a factor in the reduced profit.

(000's omitted.)

From a balance-sheet standpoint the company's position at the end of the year was much stronger than at the beginning. More than $37,000,000 in cash and call loans was on hand, and the ratio of current assets to current liabilities was 11 to 1, as against a little less than 5½ to 1 at the end of 1928. The company sells merchandise to one-third of the families of the United States, and it has a great field for further expansion. Its problem is mainly one of consolidation of effort and more effective management on the " store " side, and it should be capable of satisfactory solution.

Shipping Share Values.—Conditions in the freight markets last year were not conducive to activity in shipping shares, and although a slight revival of interest has lately been witnessed in such shares as those of the Cunard Company, the trend of quotations continues to be downward. We show below the average quotation of seven representative ordinary shipping shares during the last five years :—

AVERAGE QUOTATIONS OF SEVEN ORDINARY SHIPPING SHARES.
(1924 = 100.)

Average, 12 end-month quotations :		End of each month :	
1924	100·0	1929 (*contd.*) :	
1925	93·6	April	98·6
1926	87·0	May	97·6
1927	101·3	June	96·3
1928	100·0	July	92·3
1929	95·2	August	92·6
End of each month :		September	93·2
1929 :		October	88·7
January	105·2	November	83·7
February	105·9	December	84·9
March	103·0	**1930 :**	
		January	82·8

Shipping share values declined during 1925 and 1926, recovered again in 1927, and reached their " peak," so far as recent history is concerned, in February of last year. The subsequent decline was due partly to the general fall in security values, partly to adverse conditions in the shipping trade and partly to the severe break in Royal Mail issues, as a result of causes peculiar to that very large and important group. For the last-mentioned reason the index exaggerates the real extent of the decline in values as a whole. The outlook for shipping shares should be read in the light of the review of the industry's prospects which will be found on page 397 of this issue of the *Economist*. One proviso, however, needs to be made; namely, that as the majority of the constituent companies of the above index are " liner " concerns their earnings may continue to show a relatively greater degree of stability than those of certain of their " tramp " colleagues and competitors.

Exploration Company.—After the writing down of its capital in 1916 by 10s. per share to meet depreciation on investments, this mining-finance enterprise for thirteen years—with only one interruption—has made distributions to its shareholders. From 1925 to 1928 inclusive the rate was 12½ per cent., a bonus of 6¼ per cent. being also disbursed in respect of 1927. Now depreciation once again spoils the picture. For 1929 the net profit came out at £35,100, or only a little less than in 1928, after £25,000 had been set aside for depreciation; but the latter on the present occasion amounts to £75,000, after appropriation of the reserve of £100,000 set up in past years. Accordingly no distribution can be recommended. Of investments totalling £375,000—principally mining interests in mixed industrials—72 per cent. have Stock Exchange quotations. The liquid cash assets amount to fully £62,000. In view of the past history of the company and of the difficult nature of the times through which it has lately passed, it would seem worth while for the shareholders to exercise patience. The 10s. shares, of which 750,000 are in issue, stand at 6s. 6d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies :—Scottish Life Assurance, Railway Debenture and General Trust, Railway Share Trust and Agency, South Suburban Gas, Bah Lias Rubber Estates, Imperial Tobacco Company, and Bovril. At the Scottish Life Assurance meeting the chairman said that one lesson to be learned from the events of the past year in London, New York and elsewhere, was the attraction of life assurance as an investment. Presiding at the annual meeting of the Imperial Tobacco Company, Lord Dulverton said that the year had been marked by a steady expansion of trade, and tobacco grown within the Empire had continued to sell freely at competitive prices.

CAPITAL ISSUES.

Though the London new issue market remains virtually closed to industrial concerns desirous of raising capital in the form of ordinary shares, the last reduction in Bank rate has stimulated applications from high-grade borrowers whose plans had presumably been held up by the stringency prevailing during the latter part of 1929. Apart from a small high-yielding debenture issue by *Buchanan Estates*, three issues of trustee stocks were made during the past week, the total of new money involved being nearly £5½ million. The *Metropolitan Railway Company's* debentures offered a yield of £5 6s. 10d. per cent., after the first interest payment, and obtained prompt subscription. Both the *Nigeria Government* and the *Hull Corporation* issues, however, took the form of 5 per cent. stock issued at 99, and were considered somewhat dear in view of prevailing market conditions. The terms offered, indeed—5 per cent. stock at 99—are tending to become, for the time being, a " standard rate " for trustee issues, the recent Hastings loan having been made on the same yield basis. Though the machinery of issue is invariably in strong hands, the fact that the Nigerian loan was left as to 77 per cent. with the underwriters, is an indication of the possible effects of such a policy.

Nigeria Government.—Issue of £4,650,000 5 per cent. Inscribed stock, 1950-60, at £99 per cent., of which £2,000,000 has already been placed on the terms of the prospectus. Trustees are authorised to invest in this stock. The loan is raised to meet the cost of construction of bridges, railways, etc., in the colony. It is secured on the general revenues and assets of the Government of Nigeria, and the principal will be repaid at par on February 1, 1960, but the Government reserves the right to redeem at par on or after February 1, 1950, on giving six months' notice. The Public Debt of the colony on December 31, 1929, amounted to £23,559,210.

Metropolitan Railway Company.—Issue of £2,000,000 3½ per cent. "A" debenture stock at £65½ per cent. The stock will rank from July 16, 1930, *pari passu* with the existing "A" debenture stock of the company. The stock is one in which trustees are authorised to invest. The net revenue of the company for the year ended December 31, 1929, exclusive of the revenue from surplus lands, was £844,515, covering interest on debenture stocks, including the present issue, 2.6 times.

Hull Corporation.—Issue of £1,500,000 5 per cent. redeemable stock, 1941-61, at £99 per cent. Repayable at par on August 1, 1961, but the Corporation reserve the right to redeem at par on any half-yearly interest date on or after August 1, 1941, on three months' notice. The rateable value of the city is £1,532,190, and a rate of 1d. in the £ will produce £6,800. The gross annual revenue of the city is approximately £1,200,000. Trustees are authorised to invest in this stock.

West Hampshire Water Company.—Issue by tender of 1,000 £10 5½ per cent. preference shares. Minimum price £9 15s. per share. Also 1,000 £10 ordinary "B" shares ranking for a maximum dividend of 7 per cent. with existing similar shares. Minimum price £11 5s. per share. The company was incorporated in 1893 to supply the Borough of Christchurch, part of the Borough of Bournemouth, and adjacent places with water.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction:—

General Refractories, Ltd Issued capital, £80,000 in 160,000 shares of 10s. each. The balance of 140,000 shares remains to be issued. Incorporated March 10, 1900, to carry on the business of Brick and Tile Manufacturing.

PENDING ISSUES.

"Shell" Transport and Trading.—It is understood that the "Shell" Transport and Trading Company propose shortly to issue five million 7 per cent. second preference shares at 25s. per share, to yield £5 12s. per cent.

Olympia.—An issue will be made on Monday next of 450,000 7 per cent. cumulative preference shares of £1 and 450,000 ordinary shares of 5s. each of Olympia, Ltd. Profits for the past year amounted to £100,381.

[Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, shorter notices, and dividend announcements will be found on page 435, under the heading "Company News."]

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—The results for the month of January are: Production of oil, 34,760 tons; deliveries, 32,250 tons.

THE BRITISH BURMAH PETROLEUM COMPANY.—The production of crude oil by this company for January was 37,514 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended February 5th: Venezuela, 36,134 barrels; Trinidad, 10,598 barrels; total, 46,732 barrels. Production for January: Venezuela, 149,565 barrels; Trinidad, 48,373 barrels; total, 197,938 barrels. Deliveries for January: Venezuela, 149,324 barrels; Trinidad, 76,218 barrels; total, 225,542 barrels. Production, Venezuela and Trinidad, for six months ending January 31, 1930 (first half of financial year), 1,352,079 barrels, as against 1,221,332 barrels for corresponding period of preceding year. Production week ended February 12, 1930:—Venezuela, 37,538 barrels; Trinidad, 12,095 barrels; total, 49,633 barrels.

HECTOR WHALING.—Catch report to February 9, 1930.

	Season 1928-29.	Season 1929-30.
Number of expeditions reporting ...	Three	Four
Catch for week ending February 9th in barrels of oil	6,300	11,100
Total catch to date in barrels of oil	94,500	128,100

THE KERN RIVER OILFIELDS OF CALIFORNIA.—The total production during January amounted to 107,003 barrels, or approximately 15,286 tons.

MEXICAN EAGLE OIL.—The production for the week ended February 8, 1930, was 281,000 barrels.

ROYAL DUTCH-SHELL GROUP.—The total production of crude oil of the Royal Dutch-Shell Group and of the companies in which this group is interested during the year 1929, compared with 1928, was:—

	1928. Kg. tons.	1929. Kg. tons.
Netherlands East Indies	3,971,045	4,746,400
Sarawak	751,092	759,700
Egypt	268,461	271,500

SERVICE PETROLEUM.—Production from the company's oil wells at Gura-Ocnitzei and Ceptura for the week ending January 5th was 1,105 tons (7,735 barrels). Production for the week ending January 12, was 1,189 tons (8,323 barrels). Production for the week ending January 26th was 1,144 tons (8,008 barrels). Production from the company's oil wells at Gura-Ocnitzei and Ceptura for the week ending February 2nd was 1,081 tons (7,567 barrels).

SERVICE PETROLEUM COMPANY, LTD.—Production from the company's wells at Gura-Ocnitzei and Ceptura for the week ended February 9th was 1,093 tons (7,651 barrels).

TAMPICO OIL.—The total production on the company's properties in Mexico during January was 20,553 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,541 barrels.

TRINIDAD LEASEHOLDS.—Oil produced during January, 32,100 tons; oil purchased in January from other companies, 40,000 tons.

COMPANY MEETINGS, &c.

IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.

STEADY EXPANSION OF TRADE.

The annual meeting of the Imperial Tobacco Company (of Great Britain and Ireland), Ltd., was held at Bristol, on the 18th instant, the chairman, Lord Dulverton, presiding. The attendance was so large that a second room was requisitioned for shareholders, and the speeches transferred there by microphone and amplifiers.

Mr R. J. Sinclair (secretary) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said: The first item on the assets side of the balance sheet—lands, buildings, plant and machinery at cost, less amounts written off—amounts to £4,969,691, an increase of £47,028 during the year. The increase represents the amount spent on additions at our various branches to land, buildings and plant, less the amounts provided for depreciation.

Goodwill, patent rights and trade marks remain at £9,422,581, being the cost (as reduced by the sale of goodwill of export business in 1903), less amounts written off. As I have said before, this is a very conservative figure having regard to the extent of the company's business, the profits earned and the great commercial value of our brands and trade marks.

INVESTMENTS IN SUBSIDIARIES.

Investments in subsidiary and associated companies total £10,261,398, an increase of £1,450,364, which is mainly accounted for by the acquisition of new six per cent. preference shares in the British-American Tobacco Company. As noted on the balance sheet, the market value of the investments in associated companies is largely in excess of the book value; this, as you are aware, is mainly due to the company's holding in the ordinary shares of the British-American Tobacco Company and its subsidiary, Tobacco Securities Trust, Ltd. I would remind you that this holding represents our interest in the overseas trade in our brands.

We have been asked on occasion to state precisely what that holding is, or what is its market value to-day. Its actual value is, of course, very considerable, but it cannot be measured by market quotations, and I cannot conceive it to be in the interests of the company that we should endeavour more closely to define it, and it is, of course, as a revenue-producing item reflected in our profit and loss account.

Loans to and current accounts with subsidiary and associated companies amount to £1,320,998, an increase of £268,253.

STOCK-IN-TRADE.

Stock-in-trade, including leaf in transit and advances to branches abroad for purchase of leaf, etc., amount to £29,340,736, a decrease of £1,154,697. The amount of this item is frequently subject to what I may term accidental fluctuation, in that the date at which our accounts are made up falls in the middle of the buying season. It so happens that at that particular date this year the unspent balance of money sent over to America for the purchase of leaf was less than on the corresponding date last year. This does not mean that we are reducing our stocks, nor has there been any material variation in the price we have paid for our leaf as compared with last year.

With our increasing trade, increasing demands have been made on our stocks, which will be reflected in gradually-increasing purchases. It is one of the points of strength of our company that our leaf stocks are very large and are most carefully bought, and the policy which has brought about this position is one that we shall most certainly maintain.

The debtors, after making ample provision for discounts to be allowed an doubtful debts, amount to £6,739,805, an increase of £133,034.

The investments in Government and other securities, taken at cost or market value, whichever is lower, amount to £9,862,441, a decrease, as compared with last year, of £3,077,511.

The Corporation loans not officially quoted remain at the same figure as last year—namely, £200,000.

Cash at bankers and in hand amounts to £4,426,579, a decrease of £339,982.

ORDINARY CAPITAL.

Turning to the other side of the balance sheet, it will be seen that the ordinary share capital issued now amounts to £37,492,625, an increase of £7,540,928 during the year, of which £7,487,925 was allotted fully paid as a bonus to ordinary shareholders at the rate of one share for every four shares held (in accordance with a resolution passed at the extraordinary general meeting held on February 19th last). The difference is represented by allotments at par under certain restrictions and conditions to various individuals actively engaged in the management of the company and its branches. This is in pursuance of a policy which has in the past been fully approved by our shareholders and which has been found of great benefit to the company.

The deposits by and current accounts with subsidiary and associated companies, totalling £451,700, form new items in the balance sheet, the corresponding figures in previous accounts having been included with the ordinary creditors.

Creditors, provision for taxation and bonus to customers, estimated capital liability under dividend guarantees, amounts set aside for obligations to pension fund, reserve for contingencies (including fluctuations in the value of leaf tobacco stocks), employers' liability, marine and other accounts, amount to £13,393,410. The reserve for contingencies included in this total has been diminished during the year by transfers to the pension fund and to the widows' and orphans' benefit account. The last-mentioned account stands as a separate item in the balance sheet at £247,167.

The general reserve, which at October 31, 1928, stood at £11,500,000, has been reduced by the amount of the share bonus authorised in February, 1929, and increased by a transfer from profit and loss account of £487,925, resulting in a balance of £4,500,000.

The last item in the balance sheet is the profit and loss account, particulars of which will be found on pages 10 and 11.

YEAR'S PROFIT.

The net trading profit and interest and dividends on investments and loans (including very substantial amounts derived from dividends on capital employed outside the United Kingdom), after fully providing for all charges, depreciation of property and plant, bonus to customers, taxation and £10,000 for directors' fees, amount, with the item of transfer fees, etc., to £9,967,098, an increase of £367,393 as compared with the previous year. After transferring £487,925 to the general reserve account, there remains a balance of profit for the year of £9,479,173.

The addition to this balance of the undivided profit brought from last year—namely, £1,169,098—gives an amount to be dealt with of £10,648,271.

Out of this total the dividends upon the three classes of preference shares have been provided.

Upon the ordinary shares an interim dividend of 7 per cent., free of tax, was paid on September 2nd last, and it is now proposed, with your consent, to declare a final dividend of 8½ per cent. and a bonus of 1s. 6d. per share, both free of income tax, being a total for the year of 23 per cent.

The service rendered to the company by its employees during the past year has been in every way admirable. We have a most efficient and a most loyal body of workers, and it is with the greatest pleasure that I ask your endorsement of the decision of your directors to make, as on many previous occasions, a gift to staff and workpeople over and above their ordinary salary or wage. Under this gift each person who has been in receipt of a salary or wage from the company during the year ended October 31, 1929, or any part of it, and either still remains in the service of the company to-day or has left the company's service through no fault of his (or her) own, will receive a sum equivalent to 16 per cent. of the total salary or wage received by him (or her) during the said twelve months or lesser period.

EMPIRE TOBACCO.

It is generally our practice on these occasions briefly to review the past year's trading and to say a word as to future prospects.

The year under review has been, I think, comparatively uneventful, but it has been marked by steady expansion of our trade and a further strengthening of the position of our most important brands.

Assisted by the low selling price made possible by the preferential duty, tobacco grown within the Empire continues to sell freely. The public have now the opportunity of buying Empire tobacco in every form.

As to the future—unless anything unforeseen should occur to check the present tendency towards increased consumption, I see no reason why our trade should not continue to expand. Competition in the trade is keen. We are out to meet competition and we derive benefit from its stimulus.

Fortunately, I think, the commodity with which we are concerned is one of which our shareholders can show their appréciation in the most practical way—by smoking our brands and recommending others to smoke them. We are sending to each shareholder this year a small list giving the names and retail prices of selected brands, and with that list are enclosed examples of two of our latest introductions—"Three Castles" Medium and "Bachelor."

The report and accounts were unanimously adopted.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED.

CONTINUED PROSPERITY.
RECORD TOTAL OF NEW BUSINESS.

The annual meeting of the Scottish Life Assurance Company, Ltd., was held, on the 18th instant, in Edinburgh, His Grace the Duke of Atholl, K.T., D.S.O., presided, and, in moving the adoption of the report for 1929 said :—

At a time such as this, when there is pessimism in various quarters in regard to the trade of the country, it is gratifying to be able to record continued prosperity in our own business. It is all the more satisfactory because the year 1929 was by no means uneventful. It witnessed at its commencement an epidemic of influenza, later on a General Election, with a change of Government, and, subsequently, financial trouble in London, as well as a financial crash in New York. It might not, therefore, have been surprising if our new business had been adversely affected; but the excellent work of the company's representatives surmounted these difficulties, and resulted in a record total of new business.

NEW ASSURANCES.

The new assurances granted during the year amounted to £1,388,000, and of that amount £49,000 was reassured with other companies, leaving a net new business of £1,339,000, which is very nearly £100,000 above the total of 1928, which, in itself, constituted a record. The net new premiums were £177,000. Of this £138,000 were in respect of assurances amounting to £192,000 effected by single premiums; the larger number of these assurances carried with them a debt, but by no means all, because it is satisfactory to state that single premiums to the extent of nearly £55,000 were paid in full, representing assurances of £82,000.

The total life premium income (net) amounted to £581,000. The annual premium income, apart from single premiums, has increased by £12,000. The interest on the life funds, after deducting income tax, reached £270,000. This represents a net rate (that is after deducting income tax) of £4 15s. 10d. per cent., as compared with £4 15s. per cent. in 1928. The fact that, throughout the current quinquennium, we have been able to earn, on the average, distinctly more than 4¾ per cent. is an important factor in the success of the company, because, in our actuarial valuation, we base the calculations on a rate of only 3 per cent. The claims by death amounted to £161,000. Measured by the most correct actuarial method, known technically as the "Death Strain" Method, the ratio of actual claims to expected claims represented 58 per cent. This is actually a point lower than in the previous year, although we, like all insurance companies, experienced a heavy death rate during the time of the influenza epidemic. The ratio of expenses of management, including commission, to premium income was 13.4 per cent., as compared with 12.7 per cent. for the previous year. The increase is due in great measure to two causes; first, the increase in the new business, with its relative expenses, and second, the reduction in the single premiums received during the year. The addition to the life funds was virtually £400,000, and on only one occasion has that increase been exceeded. At the end of the year the funds amounted to £5,975,000. The gross income of the company from all sources amounted to £952,000 and the total outgo was £559,000.

VALUE OF INVESTMENTS.

While it is at a quinquennial investigation that we are chiefly concerned with the value of our investment, still, in view of recent events in the City of London, it may not be amiss to state that our position is most satisfactory. All our securities, including those lodged with our bankers, have, as usual, been examined by the auditors, and reported to be in order. Notwithstanding the fall in market prices which has taken place, the value of the investments at December 31st, based on the low prices which prevailed at that date, is very substantially in excess of the value at which they appear in the balance sheet.

LIFE ASSURANCE AS AN INVESTMENT.

In conclusion, I may say that it appears to me that one lesson to be learnt from the events of the past year in London, New York, and elsewhere, is the superiority of life assurance as an investment. Many who in the past have waved it aside on the ground that they could do better with their money have seen their investments dwindle in value, sometimes to the vanishing point. Very different is the position of those who have had the foresight to entrust their savings to an institution such as ours, where they have had the satisfaction of seeing their assurances increase year by year through bonus additions, even throughout the darkest periods of war, and throughout some still darker financial periods in peace.

Sir John Lorne MacLeod, G.B.E., LL.D., chairman of the board, seconded, and the report was adopted, with the declaration of a dividend of 18 per cent., less tax.

RAILWAY DEBENTURE AND GENERAL TRUST COMPANY, LIMITED.

RECORD FIGURES.

The fifty-seventh ordinary general meeting of the Railway Debenture and General Trust Company, Ltd., was held, on the 20th instant, at Winchester House, London.

Mr Richard S. Guinness (the chairman) said that the financial disturbances of the past year had made little impression on the company's revenue, and he was able to submit accounts showing that the revenue from investments constituted a record in the history of the company. The revenue had increased by about £7,600, the amount available for distribution being £103,125. The earnings available on the ordinary stock were equal to 12 per cent., against 11 per cent. in the previous year, and they had increased the dividend from 8 per cent. to 9 per cent., while placing the same amount (£15,000) to reserve.

At the beginning of 1929 a gradual fall in prices began in the stock markets, and this was accentuated later by the strain upon the money market, due mainly to the unprecedented speculative movement in the United States, which created a flow of remittances to that country. The fall affected all classes of securities, and became more marked in the autumn, when the irregularities in the Hatry group of companies were disclosed, followed soon after by the collapse in Wall Street. This company, he was glad to say, had no interest in any of the so-called Hatry companies, nor in any of the issues with which they were connected, and had therefore had no direct losses. Of course, it had not been possible to escape from the general fall in values which had taken place all over the world, but as the company's average cash investment was about £5,600 in any one security, stockholders would agree that they had no cause for anxiety. There was a drop of just over 5 per cent. on the valuation as made at January 15, 1929. This, he thought, was less than the average fall on gilt-edged securities—a clear evidence that the company's invested funds were well and wisely distributed. There was a small depreciation on the investment but this was covered several times by the reserve account.

At the present time the company held 73 per cent. of its invested funds in prior charges, 14 per cent. in preference shares, and 13 per cent. in ordinary shares, so that 87 per cent. of its holdings were in fixed interest-bearing securities. Any improvement in the market for high-class investments should quickly readjust the small depreciation he had indicated.

The report was unanimously adopted.

RAILWAY SHARE TRUST AND AGENCY COMPANY, LIMITED.

CLASSIFICATION OF INVESTMENT TRUSTS.

The forty-first ordinary general meeting of the Railway Share Trust and Agency Company, Ltd., was held, on the 20th instant, at Winchester House, London.

Mr Richard S. Guinness (the chairman) said that the abnormal features which had characterised the stock markets during the past year had made little difference to the accounts submitted. There was an increase in income of about £7,600, and the directors were again able to recommend an increase of 1 per cent. in the ordinary dividend to 10 per cent., to increase the sum placed to reserve from £12,500 to £15,000, and to increase the amount carried forward by £3,500. The revenue received and the rate of dividend were record figures. Although it was extremely difficult to forecast, in these days of abnormal markets and political troubles in so many parts of the world, the directors were confident that at least the present revenue should be maintained in the coming year.

An analysis of the company's holdings showed that their average cash investment was about £4,000. In round figures, 44 per cent. of their total funds were invested in Great Britain, 30 per cent. in North and South America, 16 per cent. in the Continent of Europe, and the remaining 10 per cent. in other countries.

In his speech of two years ago he had referred to the flotation of many new concerns formed to carry on investment trust business, and said that so long as cardinal principles were maintained they could look forward to continued success for the old-established trusts as well as for the newcomers. The success which had attended their own class of company, however, had been the cause of the formation of quite another class of company, which had adopted in many cases the word "Trust" in its title when the promoters had no intention of transacting the business that the name implied should be carried on. The disclosures of the past year emphasised the fact that the time had certainly come when some regulations should be made to prevent unscrupulous trading upon the reputation which others had built up by years of care and to lay down such definition of an Investment Trust Company as would be fair to all parties concerned and enable the companies complying therewith to be officially quoted in a separate classification.

The report was unanimously adopted.

BAH LIAS RUBBER ESTATES, LIMITED.

THE NEW AGREEMENT WITH CONTINENTAL GROWERS.

The nineteenth ordinary general meeting of the Bah Lias Rubber Estates, Ltd., was held yesterday in the Council Room of the Rubber Growers' Association, 2/4 Idol Lane, E.C.

Mr H. Eric Miller (chairman of the company) said that the financial position was particularly good. After writing off £6,400 as depreciation of mature areas, the net profit for the year was £26,097, and, adding the unappropriated balance from last year, they had £78,378 at their disposal. The directors proposed that £10,000 be transferred to special cultivation reserve account, and that a dividend of 5 per cent. be paid, less income tax, leaving a balance of £50,817 to be carried forward. The rubber crop to be harvested during the current financial year was estimated at 1,580,000 lb., out of which the company had sold to date 99,893 lb. of a special grade at an average net price of 1s. 1·76d. per lb., equivalent to 1s. 2·92d. per lb., London landed terms.

You will have seen in the papers this morning the welcome announcement that, at a meeting of Dutch, French, Belgian, Swiss and German rubber producers held in Amsterdam yesterday, a proposal to stop tapping completely during the month of May this year was adopted almost unanimously.

This proposal was agreed upon by the British-Dutch Liaison Committee at their meeting in London on the 7th inst., and, now that we know that our friends on the Continent are almost unanimously in favour of this simple step to reduce the accumulation of surplus stocks of rubber, I hope and believe that British producers will give their wholehearted support to it. The Board of this company and of the other companies with which I am associated certainly will. We have plenty of cultivation work which can be usefully pushed forward during this tapping holiday, and we intend to do as much of it as we possibly can. Personally, I feel that this step towards real co-operation amongst rubber growers of different nationalities opens up the definite prospect of a more rational conduct of the industry. Producers and manufacturers alike have felt the disastrous effects of extreme price fluctuations not once but several times, and all should consistently work to bring about greater stability in the price of our commodity at a reasonable level, for that is undoubtedly the surest means of encouraging the healthy expansion of consumption throughout the world.

The report was unanimously adopted.

SOUTH SUBURBAN GAS COMPANY.

SATISFACTORY PROGRESS.

The annual ordinary meeting of the South Suburban Gas Company was held, on the 12th instant, at the Cannon Street Hotel, London.

Mr Charles Carpenter, D.Sc. (the chairman), said that after taking £7,718 from the reserve fund they had a balance of £50,738, which, after payment of the dividend at the same rate as before, left £565 to be carried forward. The real strength of the undertaking was shown very clearly in the report. The true test both of their working and of their stability was the price at which they sold their gas. Those who followed the working of the company through the medium of the accounts would remember that they had brought into the year's account a substantial balance of £37,800. With that in mind, they had decided that the time had come to reduce the price of gas, which was, in their opinion, at a point higher than would encourage extension of business.

There had been one complication in 1929 which they had not forecast, and that was the considerable fall in the value of residual products. It was true that they had carbonised a little less coal, but residuals had returned £27,500 less than in the corresponding period. The difficulties of the year arising from the price reduction were apparent from the accounts, but he thought it would be agreed that it was the right course to adopt. In the present year's working they anticipated an improvement in all these respects.

In all other respects their progress had been satisfactory. The sales of gas, excluding Northfleet, had increased by 5·93 per cent., and a substantial number had been added to their consumers and to appliances sold or hired. The taking over of the Northfleet company, besides proving a good investment, had been almost a necessity. Their present average price over the whole area of their supply was 9·06d. per therm.

With regard to by-products, they had shared in the improved demand for coke, and the average price obtained was good. In tar they had not done badly, but ammonia was disappointing, mainly owing to the increase in the production of the synthetic product in most civilised countries.

In conclusion, he referred to the Coal Mines Bill, saying that they did not grudge improved conditions for miners, but there were some provisions in the Bill which he would be sorry to see pass into law, particularly with reference to the bringing about of amlgamations of well-managed collieries with ill-equipped ones.

The report and accounts were unanimously adopted.

CAPITAL and INTEREST

are both lost if your investments fail.

This loss may be avoided by investing in "Globe" Life Assurance, a gilt-edged security not liable to depreciation.

A copy of our new comprehensive prospectus, featuring many attractive schemes, will be sent post free on your request.

THE
LIVERPOOL & LONDON & GLOBE
INSURANCE COMPANY, LTD.

Head Office: 1, Dale Street, Liverpool. | London: *Chief Office:* 1, Cornhill, E.C.3.

BOVRIL, LIMITED.

RECORD SALES.
PROBLEM OF WORLD'S CATTLE SUPPLIES.

The thirty-third annual general meeting of Bovril, Ltd., was held, on the 19th instant, at River Plate House, London, the Chairman, Lord Luke, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the gross profit, they would notice, was shown after advertising had been deducted.

Advertising was considerably larger, but as their additional sales were many times the amount of the extra advertising, they had no cause of complaint.

Not only did the sales of Bovril in 1929 surpass all previous records but the increase was at an accelerated pace. The year showed a larger increase over its predecessor than had been achieved in any previous year with the one exception of 1919, when conditions were abnormal. They had been restricted with regard to overseas sales in 1914-1918, and went forward with a bound when the restriction was removed.

One of the problems with which this country would be faced in the not far distant future would be that of securing adequate supplies of first quality beef. In a few years, when the United States entered the South American market as a buyer, thereby reducing British supplies from that source, this country would have to fall back on either increased home or oversea British production.

EMPIRE BEEF SUPPLIES.

It was important, therefore, that serious steps should be taken to increase the quantity and improve the quality of the beef the Dominions could in future spare for us, especially in Australasia and South Africa, as it was only in the Southern hemisphere that suitable pasturage was available.

What he wanted to draw attention to was that, though the Argentine would still take the very best bulls from here, a market must be found for bulls from this country, which, though of equally good blood, would not fetch four, or even three, figures. It was worth our while to see that they went to Australasia and South Africa, and it was worth the Dominions' while to try to obtain them.

£34,000,000 was some years ago earmarked for emigration and development. Would it not be possible to allocate at least £100,000 a year from that fund to buying from our breeders more of their bulls, and then, having made the purchase, to allot them for payment in four years without interest to New Zealand, Queensland, West Australia, New South Wales, Cape Colony, Rhodesia, &c.? It would then rest with those countries, with their great pastoral areas, to import the bulls and organise the distribution to their own cattle breeders through the local graziers' and breeders' associations.

OVER 300,000 HEAD ON ARGENTINE ESTATES.

The Argentine estates of Bovril, Ltd.'s herd had been gradually creeping up in size as well as quality—the last record sent home showed the stock to be 310,000, which he thought must be the largest herd under one ownership in the Argentine. The numbers on the Bovril Australia estates were considerably smaller, though the area of land was so much greater than the Argentine holding.

He had told them at the last meeting that each year since the war had shown an increase in the export of Bovril, and again, he could say that in 1929 oversea sales had exceeded 1928 and its predecessors. They had every reason to be pleased with their world-wide sales progress.

A considerable number of people had written to them—usually in a strain of surprised indignation—asking why they could not now obtain Bovril at the depots of one of the multiple shop catering companies. The reason was very simple. They did not consider that they would be justified in paying the exorbitant sum required as the price of retaining Bovril on the menu.

It might interest them, also, to know that Bovril was in regular use in more than 3,000 hospitals and public and private nursing institutions in Great Britain and Ireland.

Sir James Crichton-Browne, M.D., F.R.S., said he had been recalling that an Irish gentleman, who, like their chairman, Lord Luke, was interested in hospitals and charities, upon one occasion when appealing for funds for a special hospital, said: "Ladies and gentlemen, most public institutions have their ups and downs, but unfortunately, in the case of this hospital, the downs have been in the ascendant."

Well, it must, he thought, be satisfactory to them that day to realise that in the case of the public institution with which they were concerned (that is to say, Bovril) the ups had been in the ascendant, for the consumption of Bovril last year was higher than it had ever been before. Its praises were in all men's mouths and in all women's also. It grew steadily in public favour.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 15, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts	£
Supply Services	9,950	From Revenue	27,249
Interest, &c., on Debt	639		
Sinking Fund	615		
Sundries	190		
Decrease in Debt	15,679		
Increase in Balances	176		
	27,249		27,249

The ordinary revenue for the week amounted to £27,248,800, as compared with £24,977,332 in the corresponding week last year. Income tax and Super tax were higher at £16,410,000 and £3,240,000, against £14,809,000 and £2,960,000 respectively. Customs brought in £1,866,000, as compared with £1,529,000, and Excise £1,170,000, against £2,335,000. Ordinary receipts amounted to £287,700, against £28,400, and special receipts to £1,294,100, against £50. With six more weeks to run to the close of the financial year, revenue stands at £577,692,800, as compared with £599,779,600, and expenditure at £674,939,400, against £658,052,800. The accounts to date, therefore, show a deficit of £97,246,700, as compared with a deficit at this time last year of £58,273,200. During the week the National Debt was reduced by £15,678,900, as shown below :—

(000's omitted.)

	£		£
National Savings Certificates	+ 100	Treasury Bills	− 20,274
5% Conversion Loan	+ 100	Sundries	− 405
Public Dept. Advances	+ 7,800		
	+ 5,000		− 20,679

The Floating Debt was reduced by £15,470,000 to £726,170,000.

Financial Year, 1929–30, April 1 to February 15.

	£		£
Expenditure	674,939,445	Revenue	577,692,761
		Decreases in balance	3,386,141

,, 20		,, 19	Nil
		,, 20	
Total	8	Total	12,327

Net withdrawals, £12,319.

Messrs. Samuel Montagu and Co. write on February 19, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £150,936,551 on the 12th instant (as compared with £150,783,865 on the previous Wednesday), and represents a decrease of £2,969,764 since April 29, 1925—when an effective gold standard was resumed. £883,000 of gold from South Africa was offered in the open market yesterday and was disposed of at 84s. 10⅝d. per fine ounce. Germany was again a keen buyer and secured £841,000, the small balance being acquired for the Home and Continental trade (£32,000) and India (£10,000). To-day, in addition to about £40,000 African gold, about £500,000 of bar gold from Spain was available, out of the £2,000,000 shipped from there on the 15th instant. Germany was the only buyer and the whole amount was secured for that quarter at 84s. 10⅞d. per fine ounce. Movements of gold, as announced by the Bank of England, show a net influx of £12,681 during the week under review. Receipts amounted to £25,008, which consisted of sovereigns from Australia.

SILVER.

China has been the chief factor in the market this week and inquiry from this quarter carried quotations to 20⅜d. for cash and 20¼d. for two months' delivery on the 13th instant. At this level, however, the market proved rather overstrained and, following substantial re-sales by China, there were two successive falls of 3/16d., prices reaching 20d. and 19⅞d. for the respective deliveries on the 15th instant. The market has since ruled rather quiet, but reacted slightly on renewed demand from China, which, however, was only temporary, prices receding to-day to 19 15/16d. and 19 13/16d. owing to lack of support. Although American operators were substantial sellers at the higher prices touched at the beginning of the week, they have been less active and more inclined to buy on the declining rates. The Continent has continued to sell moderately, whilst the Indian Bazaars have both bought for early delivery and sold forward.

The difference between the cash and two months' quotations narrowed yesterday to 1/16d., but a difference of ⅛d. was re-established to-day.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 10th instant to mid-day on the 17th instant :—

IMPORTS.	£	EXPORTS.	£
Germany	17,351	Hong Kong	39,583
France	40,716	British India	205,626
U.S.A.	22,793	Other countries	3,165
British India	29,694		
Other countries	3,554		
	£114,108		£248,374

NOTICES.

It is announced that Mr W. J. Woolrich, one of the resident directors of Anglo-Portuguese Colonial and Overseas Bank, Ltd., has been elected vice-chairman of that bank.

The Midland Bank announces the opening of new branches at 43 Portman Square, London, W.1, and at 1 and 2 The Market, Burnt Oak, Edgware, Middlesex. Facilities for day and night banking are now available at 355 of the 2,050 offices of the Midland Bank, the service being in operation at 71 branches situated within the London postal area and at 284 branches in various important provincial centres.

Barclays Bank, Ltd., announce that sub-branches have been opened at Gunnerside, Yorks., and Low Row, Yorks.

Mr Alan Ross has been appointed trust officer of the Grace National Bank in New York.

Barclays Bank, Ltd., announce the opening of new branches at 323 Lea Bridge Road, Leyton, E.10, and also at 3 Stoneleigh Parade, Cheam Common Road, Worcester Park.

Lloyds Bank, Ltd., announce that a sub-branch of the bank is now open at 178 High Street, Cheltenham.

Company News.

REPORTS AND NOTICES.

Messrs Thomas Skinner and Company announce that the "Stock Exchange Year Book," 1930, will be published on February 25th.

The governor and committee of the Hudson's Bay Company announce that Mr H. B. Lyall has accepted a seat on the Canadian committee.

BANKS.

S. JAPHET AND COMPANY.—The balance sheet of S. Japhet and Company, Ltd., merchant bankers, as at December 31, 1929, shows the proportion of liquid assets to liabilities is 78 per cent. (compared with 74 per cent. last year). Advances to customers have decreased about £185,000, while the figure of acceptances for customers has declined by about £340,000. The reserve account has been increased to £700,000, so that capital and reserve now total £2,000,000.

INSURANCE.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY.—The total new business written by the society during 1929, in its ordinary and industrial departments amounted to £19,491,831. Details are as follows: Ordinary, gross, £15,107,915; industrial, £4,383,916.

MISCELLANEOUS.

"STOCK EXCHANGE OFFICIAL INTELLIGENCE."—The 1930 edition of the "Stock Exchange Official Intelligence" will be published on March 25th. The "Official Intelligence" is the only work of its kind that is published by the Stock Exchange.

CABLES AND WIRELESS, LIMITED.—It has already been announced that it is not possible for Cables and Wireless, Ltd., to publish its audited balance sheets and revenue accounts to December 31st in each year until about the following midsummer, owing to the time which must elapse before it can get in the accounts to the close of the year from its branches and subsidiary companies all over the world. The directors cannot give individual stockholders information which they do not give to the general body of stockholders, whilst to publish any anticipation of results based on incomplete data would be undesirable.

SWAN AND EDGAR, LTD.—The net profit for the year ended January 31, 1930, amounts to £138,146, against £101,488, which, added to balance brought forward of £12,113, against £11,987, makes a total of £150,259, against £113,475. Deducting interest on mortgage £16,500 (same), depreciation on plant, fixtures, etc., £17,963, against £13,596, directors' fees £1,950, against £1,807, and leasehold sinking fund £1,450, against £1,505, together £37,863, against £33,408, there remains a balance available of £112,396, against £80,067. The directors recommend the payment of a dividend at the rate of 5 per cent. per annum, against 4 per cent., absorbing £62,500, against £50,000, to write off preliminary expenses the sum of £25,000, against £17,954, leaving a balance to be carried forward of £24,896, against £12,113.

LEWIS'S LTD.—For the year ended February 1st last, a profit is recorded of £773,991, as against £707,324, an increase of £66,667 over the previous year. The directors recommend the payment of a dividend of 8¾ per cent., less tax, on the 12½ per cent. cumulative participating, preferred ordinary shares, making a full 15 per cent. for the year. This dividend will be paid on April 10th next. The directors also recommend that £10,000 be placed on the reserve for staff pensions, as last year, and that the sum of £175,621 be placed to the other reserves, an increase of £50,620 over the previous year. £17,179 will be carried forward to next year's accounts, as against £57,259 brought in. The balance of £308,437, less tax, is to be paid to Lewis's Investment Trust, Ltd., as sole holder of the deferred shares of the company. The annual meeting will be held in the Queen's Hotel, Birmingham, on Thursday, February 27th next, at noon.

JOHN BARKER AND COMPANY, LTD.—A net profit, subject to final audit, of £468,685, for the year ended January 31, 1930, was secured after providing for all administrative and working expenses, including taxation, directors' fees and debenture interest (against £444,901 for the previous year). It is proposed to pay the usual half-yearly dividends on the 5½ per cent. and 6 per cent. preference shares, together with a balance dividend of 15 per cent. on the ordinary shares, making 20 per cent. for the year, being the same as distributed for the last ten years; to place £125,000 to reserve for rebuilding and modernisation of premises; £10,000 to employees pension and benevolent fund; while £35,000 is to be written off goodwill and £25,000 off fixtures, fittings and furniture in view of the company's rebuilding programme. A balance of £297,254 will remain to be carried forward, against £291,010 brought in. It is also proposed to apply the sum of £67,000 out of rebuilding and modernisation reserve to write off the book value of certain properties involved in rebuilding.

THE UNDERGROUND DIVIDENDS.—The dividends declared by the Underground Railways group for the year 1929 were declared on February 13th. The dividends and amounts to be carried forward are shown below :—

	1928 Final. %	1928 Total. %	1929. Final. %	1929. Total. %	Carried forward. 1928. £	Carried forward. 1929. £
Cent. Lon. Ord.	2½	5	2½	5

Underground Ordinary Shares	4	7	5	8	262,504	265,950

* Tax free.

With regard to Central London Railway, the holders of assented stocks are entitled in respect of the year 1929 to an additional dividend of *approximately* 0·4 per cent. in excess of the guaranteed dividend of 4 per cent. per annum. The Associated Equipment Company is again paying a dividend for the year of 8 per cent., tax free, and the amount carried forward is £207,843, as compared with £201,261 brought in. The London and Suburban Traction is unable to recommend payment of the dividend on the 5 per cent. cumulative preference shares. The North Metropolitan Electric Power Supply Company is maintaining its dividend rate at 10 per cent.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

A spell of dry and seasonable weather over the United Kingdom during the past week proved of great benefit to the wheat crop, while enabling farmers to make up arrears in ploughing. Native wheat is still difficult to vend, despite light supplies at the principal markets, and prices tend easier in sympathy with the international situation. The recent improvement of imported varieties has not been maintained despite additional financial strength in Canada and the United States. In fact, values have since pursued a downward course owing to the indifference of European importers and cheaper offers from Argentina. The absence of European demand is the chief factor in the situation and resulted in a depressed market. Consequently Canadian sellers have been forced to materially reduce their quotation, though same are still much above the parity of competing grades. Larger and attractive offers from the Argentine, helped by easy rates of exchange, provided keen competition to North American grades, and prospects of marketing the Canadian surplus this season do not appear hopeful, especially in view of reports that the result of the conference here with the Canadian Pool Authorities was unsuccessful. In this case, pressing offers from the Dominion appear likely, as it would not be desirable to carry large quantities over into the next cereal year. Shipments were of moderate extent, with non-European countries taking a fair proportion. Flour prices ruled easier in sympathy with wheat, forward offers being more freely made, both of Australian and North American grades. Of feeders, prices are also steadily receding for maize in view of increased offers by Argentine shippers and weakness of wheat. Consumptive demand, however, is rather better, while stimulated by colder climatic conditions. Danubian varieties were neglected, though chartering is proceeding for March-April to North Europe. Barley and oats quiet, and without new feature.

Wheat.—Easier. No. 1 Northern Manitoba (Vancouver shipment), ex-ship, 46s.; No. 2 ditto, 45s.; No. 3, 44s.; No. 4 Manitoba, 43s.; No. 5 ditto (Atlantic shipment), 42s.; No. 6 ditto, 35s.; Rosafe, 63¼ lbs., 39s. 9d.; Barusso, 63¼ lbs., 40s. 3d.; Australian, 43s. per 496 lbs. English, 8s. 7d. per 112 lbs.

Flour.—Quiet and easier. London straight run, 38s. per sack for country deliveries, and 37s. London area. Of imported, Manitoba patents, 36s.-38s.; Buffalo, 36s. 6d.-38s. 6d.; Australian, 33s. 6d. ex-store. On c.i.f. terms, Manitoba top patents, February-March, 36s. 6d.-37s.; export ditto, 34s.-34s. 6d.; Australian, 30s. 6d.-31s.; French, prompt, 26s.-28s. per 280 lbs. Argentine low grade, February-March, £6 per ton.

Maize.—Easier. Plate, landed, 26s. 3d., ex-ship; arrived, 25s. 3d.; February-March, 25s. 6d.; March-April, 26s.; new, April-May, 26s.; May-June, 25s. 9d.; No. 4 yellow African, ex-ship, 26s. per 480 lbs. Yellow maize meal, £7 15s. per ton f.o.r. London. Yellow African, £6 10s.; white, £6 5s. per ton ex-ship.

Barley.—Dull. Californian old, landed, 36s.-42s.; new, ex-ship, 36s.-42s. as to sample; Chilian brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs. Danubian, landed, 23s. 6d.; Black Sea, ex-ship, 20s. 6d.; Persian ditto, 20s. 6d. per 400 lbs. English malting, 8s.-11s. 10d.; feed, 6s. 9d.-7s. 3d. per 112 lbs.

Oats.—Slow. Plate, landed, 16s. 3d.; ex-ship, to arrive, 15s. 3d.; black Plate, landed, 16s.; Chilian white, 22s.; ditto tawny, 16s. 6d.; German, landed, 18s.; ex-ship to arrive, 16s. 6d.; mixed Canadian feed, 14s. 6d.; South Russian, 14s. 6d.-17s., as to quality, per 320 lbs. English, 6s.-7s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

	1929–1930.	1928–1929.	1927–1928.	1926–1927.
Estimated sales of home-grown wheat—				
1 week to February 15	Cwts. 217,170	Cwts. 277,114	Cwts. 277,908	Cwts. 289,058

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929 :—

Nearest Future.	Jan. 2, 1929.	Feb. 20, 1929.	Jan. 2, 1930.	Feb. 5, 1930.	Feb. 11, 1930.	Feb. 19, 1930.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	122	134⅞	148⅝	125½	128⅞	116⅛
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅛	128⅜	130⅞	114⅝	119	110½

The visible supply of wheat in Canada at 74,971,000 bushels shows a decrease on the week of 209,000 bushels. Supplies a year ago stood at 82,874,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes : The coal situation continues to grow worse. The tonnage sold for export tends to fall off every week, and prices are again easier. The industrial and domestic demand is also poor. It is difficult at the moment to sell blast-furnace coke, at any rate on the open market, and producers are prepared to cut their prices to tempt new business.

Our Glasgow correspondent writes : Conditions in Scottish coal trade show no improvement. With only a few exceptions, these including navigation qualities, prime splint in Lanarkshire, and pearls, practically all coals are pressed for sale, with market still weak. There has been a fair demand lately for certain qualities of smalls for the London market. Shipping prices are approximately as follows (all f.o.b. district ports) : Lanarkshire.—Ell best, 16s.; splint best, 17s. 6d.-18s.; splint second, 16s. 6d.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; steam, 14s.; Hartley, 18s.; trebles, 14s. 6d.; doubles, 13s.-13s. 6d.; singles, 13s. 6d.; pearls, 13s. 6d.; dross, 10s. Fife.—Screened navigation, 18s.-19s. 6d.; first-class steam, 14s.-14s. 6d.; third-class steam, 12s. 6d.-12s. 9d.; trebles, 14s.-14s. 6d.; doubles, 13s.; singles, 13s.; pearls, 13s. 6d. Lothians.—Prime steam, 14s.; secondary steam, 13s. 6d.; trebles, 14s. 6d.; doubles, 12s. 9d.; singles, 13s. 6d.; pearls, 13s. 6d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 13s. 6d.; pearls, 13s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes : There has been no improvement this week in the state of business on the Cardiff coal market. The dearth of inquiry has been, if anything, more pronounced, and even in the Monmouthshire area, where work has been very busy since the beginning of the year and where outputs have been increasing, colliery owners are fearing stoppages next week unless they are better supplied with tonnage. In these circumstances, prices for large coals would doubtless be falling but for the marketing

The Investors' Chronicle and Money Market Review

THIS WEEK

The Investors' Chronicle may be obtained at all bookstalls and newsagents throughout the country, price 6d., or from

The Publisher :

"THE INVESTORS' CHRONICLE"
20 BISHOPSGATE, LONDON, E.C.2.

scheme, under which sales under the minimum schedule are punishable at the rate of 2s. 6d. per ton. Small coals, however, are being well maintained at prices substantially in excess of the schedule and they continue in fairly active demand. Shipments at the South Wales docks continue good; last week they totalled 613,600 tons compared with 644,600 tons the previous week and with only 283,007 tons in the corresponding week last year, when traffic was partly suspended owing to the severe frosts of that period. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 20s.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 9d. to 18s. 3d.; best small steams, 14s. 9d. to 15s.; cargo smalls, 14s. 3d. to 14s. 6d.; coking smalls, 14s. 6d. to 15s.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 24s. to 28s.; machine-made cobbles, 42s. 6d. to 45s.; French nuts 44s. 6d. to 46s.; stove nuts, 43s. 6d. to 45s.; rubbly culm, 11s. 9d. to 12s. 6d.; patent fuel, 20s. to 22s. 6d.; foundry coke, 35s. to 37s. 6d.; pitwood, ex ship, 25s. to 25s. 3d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—While some of the British steelworks have enough work in hand to keep them moderately well employed for a time the absence of fresh orders is causing concern. In the home trade there is usually a period of quiet trading immediately before the Budget, and this year it seems to have set in earlier than usual. In the pig-iron department the demand has dwindled and in some districts iron has been put into stock. Nevertheless, the official prices are maintained and in the aggregate a fair business has been transacted. In Scotland, however, the home makers are finding conditions difficult owing to the import of Continental and Indian iron. In the market for semi-finished materials the British works have experienced a somewhat better demand, and apparently less business is now passing to the Continent. Last week some substantial buying of Continental finished and semi-finished materials took place in anticipation of an advance in the official prices. There has been a fair amount of inquiry for finished steel; but generally export business leaves much to be desired.

Our Middlesbrough correspondent writes:—Business in Cleveland iron continues on a very small scale and transactions are still confined to odd lots for immediate requirements. Consumers are less disposed than ever to place orders of importance at present prices, and if this policy is maintained makers may not be able to hold out. Buyers contend that with the substantial fall in coke, pig iron is too high and that a reasonable reduction should be made. Makers, on the other hand, argue that costs of production hitherto have been too high to allow an economic profit on production and that they are entitled to any benefit now obtainable on raw materials. Some business was recently taken from Scotch consumers at a specially cut price, and the Scottish branch of the National Light Castings Association are now inquiring for 10,000 tons foundry iron from different districts, including Cleveland. This business will probably be settled this week, and it is hoped that part, at any rate, of the order will come here, but Continental competition will be keen, and as this iron has been selling recently at several shillings below Cleveland delivered at Grangemouth, the prospects for this district are doubtful. On Tuesday makers adhered to their price of 72s. 6d. for No. 3 and secured a few small orders on home account at this figure, but no business on export account was reported. No. 1 was 75s.; No. 4 foundry, 71s. 6d.; and No. 4 forge, 71s. f.o.b. or f.o.t. Shipments of pig iron to 18th instant total 9,681 tons, against 12,226 tons to same date in January. The hematite position shows very little change. A few moderate orders are coming to hand for early delivery, but there is no buying of volume so far and stocks in makers' hands are increasing to some extent. Makers continue to quote 78s. for mixed numbers for delivery over two or three months, but for good lines would accept a little less. In the steel trade some departments are well employed but in others demand has fallen off. Overhead, however, there is still a considerable tonnage of old orders to work off. The demand for sheets continues poor, but there is a little more inquiry about and trade shows signs of developing. Prices of different materials are unchanged from last week. There is no change in the ore market and consumers are still holding off. Best rubio is nominally 22s. 6d. for early delivery and 23s. for forward. The freight Bilbao-Middlesbrough for early tonnage is about 6s. 6d. Coke is being pressed for sale and good medium qualities are now obtainable at 21s. delivered works.

Our Sheffield correspondent writes: The position of the trade in pig iron and crude steel materials fails to improve, and there has been some further decline of activity on the week The depression is reacting on prices. Scrap merchants report that users refuse to buy forward, and few contracts have been placed over a period of three months. The value of basic scrap has declined nearly 10s. per ton since November. Output of blast furnaces and steel furnaces is now in excess of demand, with the result that material is going into stock at a number of plants. Confidence in the trade is now at a low ebb. The depression is less acute in specialty finished steels, but sales are not equal to the corresponding period of last year. Nevertheless, a considerable weight of alloy and other special steels is being taken by the motor and general engineering trade. The tool trade is also quieter, and makers of cutlery and plate report very poor order books alike on home and export account.

Our Glasgow correspondent writes: Conditions in the iron and steel trades in Glasgow and the West of Scotland generally show no improvement. The pig-iron market remains quiet and prices are unaltered. The increase in the prices of Continental steel agreed to last week have not had any noticeable effect on the demand for British material and in practically every department buyers are holding off. Steel makers are able to maintain output on the same scale as during the past month or two, but there has been some falling off in the demand for structural sections recently. The position in the bar-iron trade and also in re-rolled steel bars is unchanged. Tube makers are fairly well employed at the moment. In the sheet trade things are still quiet and during the present week the number of mills in operation has been further reduced. Prices for black sheets have been fairly well maintained, but for galvanised sheets there have been further cuts, as low as £11 10s. f.o.b. having been accepted for 24-gauge galvanised and corrugated.

Our Cardiff correspondent writes: Comparatively quiet conditions have ruled this week in the South Wales tinplate market, and prices have widened and weakened from a range of 18s. 7½d.-18s. 10½d. to 18s. 3d.-18s. 9d. The lower price is being quoted by manufacturers using foreign steel, of which the imports recently have been on a larger scale than at any period since the early months of 1927. Belgian bars are quoted at £5 9s., compared with £6 10s. for the Welsh tinplate bar. It is anticipated that with the conclusion of pending agreements with five local units the control of the South Wales Tinplate Corporation over the sale of tinplates will be increased to 54·4 per cent. of the total output, and to 61 per cent. of the output of the mills at present represented in the South Wales Tinplate Pooling Scheme. Galvanised sheets continue a weak market and quotations this week have been as low as £11 10s. per ton for corrugated bundles, compared with £13 per ton at the corresponding period last year. Shipments of tinplates last week at Swansea totalled 137,843 boxes, compared with 89,002 boxes the previous week, but owing to increased supplies received from works stocks are 183,218 boxes, compared with 174,844 boxes the previous week.

OTHER METALS.

TIN.—Market opened firmer while assisted by fair buying orders and higher Eastern advices, but later dealings were somewhat restricted, and with sellers more in evidence values displayed irregularity. Standard cash, sold, £174 12s. 6d.-£173 5s. and £175; three months, £178-£176 5s. and £177 17s. 6d. In the East, sales were reported at £178 5s.-£179 10s. c.i.f. terms.

COPPER.—A moderate turnover resulted, and market generally displayed steady features. Standard cash, sold, £70 10s.-£69 15s. and £70; three months, £68 5s.-£68 10s. and £68 and £68 15s. per ton.

LEAD.—Market quiet, and with sellers more in evidence prices on balance were barely steady. Good soft foreign pig, February, sold, £21 12s. 6d.-£20 13s. 9d.; March, £21 1s. 3d.-£20 10s.-£20 13s. 9d.; April, £21 10s.-£21 3s. 9d.; May, £21 11s. 3d.-£21 1s. 3d. and £20 11s. 3d.; June, £21 11s. 3d.-£21 2s. 6d. ton.

SPELTER in fair support, but with sellers to the fore an easier tone resulted. March sold £19 10s.-£19; May, £19 18s. 9d.-£19 8s. 9d.; June, £20-£19 13s. 9d. per ton.

ALUMINIUM dull. Home trade, £95; export, £100 ton.

QUICKSILVER quietly steady. Spot, £22 15s. per bottle.

ZINC OXIDE dull. Spot, £29 to £36 per ton as to quality delivered United Kingdom.

ANTIMONY ORE.—50 per cent., February-March, 4s.; 60 per cent., 5s. per unit c.i.f.

ANTIMONY tends easier. English regulus, £42 10s. to £50; Chinese ditto, spot, £31; February-March, £26 5s.; ditto, crude, £17 10s. ton.

WOLFRAM maintained. Chinese, February-March, 32s.; Burmese, spot, 36s.; February-April, 32s. per unit c.i.f.

TIN PLATES quiet. I.C. coke, prompt and forward, 18s. 6d. to 18s. 9d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, February 19th.

Spot sales for the week 13th to 19th (inclusive) are 29,000 bales, of which 12,880 are American, 5,200 Brazilian, 2,000 Peruvian, 2,720 Egyptian, 4,930 African, 400 East Indian, and 870 sundries. Imports for the same period are 102,800 bales, of which 48,055 are American, 23,664 Brazilian, 1,472 Peruvian, 21,109 Egyptian, 8,264 East Indian, and 236 sundries. Quotations to-day are: American Middling, 8·57; Egyptian Sakel, 13·53; Uppers, 10·25; Brazil Fair, 8·27; Peru G.F. Mod-Rough, 9·50; Smooth, 9·27; West African Middling, 8·62; and East African G.F., 9·62.

MANCHESTER, February 19th.

At the end of last week there was increased activity in the market, and more orders were booked in yarn and piece goods. During the last day or two, however, demand has fallen off and the attitude of buyers has been affected by the decline in raw material rates. There is still much fear of lower values. Inquiry in cloth for abroad has expanded. Increased sales have been arranged for India, especially in light bleaching descriptions. The bulk of the buying has been for Calcutta, but fair activity has shown itself for Karachi. Less satisfactory news has been received from China, and the Shanghai market is now described as depressed owing to unrest. New business on this side has been very limited. A fair miscellaneous business has been done for Egypt, certain African markets and South America. Buying for the home trade has been fairly encouraging. Production in weaving centres remains very irregular. Since a week ago the sales in American and Egyptian yarns have been rather larger, but spinners have had to accept very poor prices. There is a tendency to reduce production in the American section.

THE WOOL TRADE.

Our Bradford correspondent writes: The market is all "on edge" and susceptible to every passing breeze. The efforts being made in the primary markets to bring about stabilisation are regarded with a good deal of suspicion in some quarters. The wool trade expert, Mr. Harry Dawson, asserts that "we can no more govern the economic position in wool by artificial means than we can alter the law of gravitation." On the other hand, an equally well-known expert, Mr. William Hunter, a past president of the British Wool Federation, is strongly in favour of the Australian policy of limiting offerings and fixing reserves. "A stabil sing influence such as Australia is establishing," he says, "is bound to act for good, because it will put wool on its relative national and international basis." Many users here and on the Continent are whole-heartedly in favour of unrestricted selling, on the grounds that the big weight of unsold wool will have to come on to the market sooner or later. Most spinners and manufacturers are therefore playing for safety and restricting their purchases to the bare minimum. There is an entire lack of bulk business, and although quotations for tops and yarns show little change, the tendency is in buyers' favour for practically all qualities. There are numerous inquiries, but offers are very low, and few top makers are prepared to sell forward on the chance of a further fall in prices. There is a fair amount of seasonal activity in the piece goods trade, but here, also, buyers are unwilling to operate freely on forward account, the bulk of the business being in small quantities for quick delivery.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The chief test of wool values is now being made in overseas markets, and it is evident that there is sufficient demand to maintain prices on a healthy level. Competition in Sydney at auctions held within the past week has been good; all sections of buyers have operated, and this has been accompanied by a hardening tendency in prices. It may be assumed that any determination shown not to sell wool for which satisfactory prices cannot be realised is partly due to the interest the Australian Government is likely to take in this policy. The situation in New Zealand seems to be more complicated, as some of the big growers are determined to hold their clips, and evidently believe that current prices for crossbred wool will be maintained if not actually improved. Though manufacturing conditions in this country and on the Continent are not good, the possibility of continued buying without any reaction in values is strengthened by the fact that this season a good deal of the wool is still in the hands of the Colonial selling end of the trade. Excellent rains have fallen in various important wool-growing areas in Australia. Pastoral prospects must have been greatly improved thereby, and with good clips to offer, and opportunities for increasing the flocks, growers will be in a better position for offering wool at around the present level of values.

HIDE, LEATHER AND ALLIED TRADES.

Further reductions have been recorded in prices for English hides at the auctions held in the North during the earlier part of this week, and from a survey of the general position it is more than likely that this condition will be in evidence at the sales to be held over the week-end. Calfskins are rather more steady, and up to the time of writing prices are unchanged. The market for imported hides has also steadied itself somewhat, with the result that, except for one or two descriptions, prices are about the same level as those last reported. A fair amount of business has been put through on account of English tanners, but the Continental trade is so dull as to make even small sales a difficult proposition. Most of the trade being done in frigorifics is on account of the United States, although a little more interest has been shown by Europe in kips. Sales of Argentine ox have been made on the basis of 8¾d., while Montevideo ox have changed hands at the equivalent of 8¾d., and cows at 7¾d. In dry River Plates business has been done in B.A. Americanos at 8⅜d.; Inservibles at 5d.; and Sierra Cordobas at 9¼d. African hides are slightly easier on average, business in first and second dry Capes having been put through at 8⅜d. and 7⅜d. respectively and 8d. and 7d. for dry-salted 20-30 lbs. With a more steady tone prevailing in the Australian market, further sales have been made of dry-salted Queensland meats 30-40 lbs. at 7⅜d. The Chicago market is cabled as steady, with prices unchanged. In the sole-leather market a fair amount of business has again been put through and prices for most descriptions are firm. In certain directions a slight feeling of weakness is apparent, but it is only in lines which are hanging fire that any concessions are possible. Light bends have been taken up by shoe manufacturers in limited quantities, while the repairing section has been in the market for medium to heavy weights. Offal in both bellies and shoulders has experienced a satisfactory sale, and the call is such as to keep the market clear of anything in the way of accumulations. Upper leathers move steadily, with best part of the inquiry for black and brown glacé kid. Willow calf is also a good selling line, while the call for box seems to be better. There has also been a slight improvement in the demand for certain grades of patent leather, while reptile skins and novelty leathers for the shoe trade have made further headway. Shoe manufacturers are better placed for orders.

THE JUTE TRADE.

DUNDEE: February 19th.

Dull times are still being experienced in the jute trade and all producers complain of a lack of orders. The Calcutta mills are making no move to improve the outlook. Veiled satisfaction seemed to be expressed by the chairman of their association at the annual general meeting held recently, because of the prevalence of short time in Europe. The mills believe that their present policy of depressing the jute trade will ultimately prove beneficial to themselves. The statement is made that the exports of jute goods from the Continent of Europe increased by 57 per cent. during the years 1924 to 1928, while those of United Kingdom increased by 12½ per cent. in the same period. A considerable decline in the exports from these producing countries took place during the year 1929, mainly through world-wide bad trading conditions. Prices of raw jute continue to fluctuate only very slightly. The value of Daisee assortment is £25 10s.; threes, £25; and fours, £23, February-March shipment; while Tossa assortment rules at £27; threes, £26 10s.; and fours, £25. Little interest is being displayed by spinners here now in any quality of fibre, owing to the lack of demand for jute yarns. First Marks and Lightnings are quite nominal at £32 and £29 respectively, February-March.

FINANCIAL NEWSPAPER PROPRIETORS LTD.,
20 Bishopsgate, E.C.2.

Jute yarns are not being tested and a nominal situation prevails. Business has been done in the merest trifles of hessian descriptions at 2s. 9d. for common 8-lb. cops and 2s. 10d. for 8-lb. spools, and no buyer would now pay more. Yet there are some spinners who continue to quote 2s. 10d. and 2s. 11d. respectively. Twist is quiet at round about 5d. for 3-ply 8-lb., and sacking yarns are from 3½d. for 24-lb. weft and 4½d. for 8-lb. chains. Rove is quieter at £16 10s. done for 200 lb., and £26 10s. might not be refused for common spins of 48-lb. Fine yarns are quiet but steady, and carpet qualities are neglected at 4½d. for 14-lb. warp. Manufacturers complain that orders for jute cloth are only for the smallest of quantities to satisfy immediate requirements. Buyers are offering ridiculously low prices, which are being refused, but in some cases concessions on the quoted terms are being given. The rate for 10½-oz. 40-in. is 3 $\frac{11}{16}$d. to 3¾d., and for 8-oz. from 2 $\frac{11}{16}$d. to 2¾d., the wider widths commanding the higher figure. Calcutta goods have remained fairly steady during the past week owing to a better demand from speculators. On spot, 22s. has been done for 10-oz., and 8-oz. is quoted at 21s.

VEGETABLE OILS AND OILSEEDS.

Rather quieter conditions again prevail. Consumers of linseed, both here and on the Continent, appear to have satisfied their immediate requirements when prices were in their favour and are now content to wait for an improvement in the demand for the oil and cake products before purchasing further. Plate linseed has lost something of the recent advance and is quoted £17 11s. 3d. on spot, passage and February shipment. Some interest has shown itself in Bombay linseed, for which £19 12s. 6d. has been paid for March-April. The quantity of linseed on passage to Europe has increased to 184,400 tons, or 10,000 tons more on the week. About one-third of the new Argentine seed available for export has already been shipped. Egyptian cottonseed has a better tone. Re-sale parcels having been cleared off the market, shippers are again offering. Business is reported in black Egyptian at £7 8s. 9d. on passage and £7 10s. February loading, and this about remains the value. In the oil section, linseed oil is in fair demand from consumers, current value being £43 10s. per ton naked for oil on spot, £42 7s. 6d. February and £40 10s. March-April. Cotton oil is firmer and crude Egyptian quoted £28 and common edible £31 spot. Other seed oils are about unchanged.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Business in spot parcels has drifted into the doldrums. No change was made in quotations. Once again the market was faced with a rumour from New York that the United Kingdom had purchased a very large quantity of Cuban raws, but the gargantuan quantity named led to its being discredited in the London centre. Terminal markets slightly unsettled at times, with moderate sales. Of raw, March delivery sold 6s. 3d.; May, 7s. to 6s. 11½d. and 7s.; August, 7s. 5½d. to 7s. 4½d. and 7s. 5½d.; December, 7s. 10½d. to 7s. 9¾d. Cuban receipts last week: Old crop, 9,976 tons, against nil last year; exports, 28,126, against 3,292; stocks, 75,343, against 1,615. Receipts of new, 161,457, against 235,532; exports, 10,463, against 119,865; stocks, 491,281, against 710,630. Centrals, 154, against 163. Stocks of raw sugar in the three principal ports of the United Kingdom for week ending February 16th totalled 252,388 tons, against 165,547 last year.

COFFEE.—The dull tone which recently set in continues. Only small absorption takes place on the spot, and prices almost without exception are weaker. A few fine lots are steady, but, speaking generally, rates are distinctly easier on the week.

COCOA.—There is only a retail movement with regard to the spot market, while general quietness attended by weakness characterised forward positions. Accra, F/F, March-May, Liverpool contract, sold 37s. 9d. to 38s., and April-June 38s. 6d. to 38s. 9d. f.o.b. Terminal, March delivery, sold 42s. 3d.; May, 42s. 6d.; and July, 43s. 3d. to 43s. 1½d.

TEA.—Public sales of Indian during the week amounted to 53,430 packages. There was quite a good demand for most descriptions, and though prices at times manifested slight irregularity, no essential change occurred in any given direction. A few fine invoices possessing autumnal flavour were keenly competed for. Only commonest proved a weak feature. Ceylon auctions of 22,423 packages elicited active competition at full to dearer prices, but any advance was, in most cases, attributable to improved quality. Export orders being in evidence, leaf teas were quite a strong feature. Only the very low descriptions failed to command increased attention. Java and Sumatra sales met with good competition at firm to dearer rates. China sorts selling steadily at a full range of prices.

RICE.—Business continues of retail proportions, and trend of prices easier for most descriptions. A minor reduction has been made in previous estimate of quantity available for export from Burma. This now stands at 3,050,000 tons, against 3,100,000 previously. Two stars, Rangoon, spot, London, 13s. 9d.; February-March, 10s. 10½d. c.i.f. Spanish oiled, February-March, sellers, 14s. 9d. American blue rose from 23s. to 24s. c.i.f. No. 3 Burma to the Levant, double bags, February, 11s. S.Q. to Cuba, 11s. 6d. Saigon No. 1 round grain, February-March, to Europe, 11s. 10½d. Siam Super, February-March, 15s. 3d. Californian nominal. Landed last week, 11 tons; delivered, exclusive of the quantity ex ship, 49 tons; stock, 2,641 tons, against 3,445 tons at this time last year.

BROKEN RICE quiet. Burma, 1A, February-March, 10s. 10½d.; B1, 10s. 4½d.; A2, 10s. 3d.; B2, 10s. Saigon 1 and 2 mixed, 10s. 7½d. c.i.f.

RICE BRAN dull, and afloat sellers at £4; for shipment, February-March, £4; July-December, £5 per ton, ex ship terms.

BEANS.—Market quiet, but steady. Madagascar butters, spot, 35s.; parcels per "Eugene Grossos," 32s.; "Clan Chatton," 30s. 6d.; per "Belgrano," 30s.; "Clan Macneil," 29s. 6d.; January-March, 29s. c.i.f. Ohtenashi, spot, London, 22s. 6d.; afloat, 21s. 3d.; February-March shipment, 21s. c.i.f. Rangoon haricots, ex store, 12s. 6d.; February-March, quoted 12s.; new crop, March-April, 13s. 6d. c.i.f. London. Danubian H.P., spot, London, 22s. 6d.; February-March, 22s. To Glasgow, North African, February-March, 8s. 9d. c.i.f. Chinese horse, spot, Glasgow, 9s. c.i.f.

PEAS met a quiet market, and prices favour buyers. Japanese, spot, old 15s., new 15s. 9d.; afloat, steamer "Diomed," quoted 15s.; February-March, 15s. 6d.; March-April, 15s. 6d., c.i.f. London. Dutch marrowfats, prompt, quoted 15s. 6d.; small blues H.P., 12s. 6d. f.o.b. terms. Calcutta, February-March, 55s. Karachi nominal c.i.f. Maples quiet. No. 1 New Zealand, February-March, old, 57s.; new crop, March-April, 58s. Tasmanian A grade, new, February-March, 65s. c.i.f. China white, February-March, quoted f.a.q. 9s. 6d. Manchurian white, February-March, 11s. c.i.f.

SPICE.—Pepper elicited but quiet support, but prices ruled tolerably steady. Lampong black, January-March, sold, 1s. 1¼d.; March-May, 1s. 1⅜d. Muntok white, January-March quoted, 1s. 5⅜d.; March-May, 1s. 5½d. lb. London stocks of black reduced 22 tons on the week at 1,104; white, 22 tons lower at 1,195. Tellicherry, February-April, quoted 135s.; Aleppy, ditto, at 135s. cwt. c.i.f. Cloves steady. Zanzibar, spot, 9½d., and December-February, sold, 9d. c.i.f. Sago flour, tapioca and desiccated coconut unaltered. African ginger, spot, 60s., and business in February-April at 40s. c.i.f.

FRUIT (Dried).—Currants: Market generally steady with moderate inquiries. Pyrgos, quoted, 36s. 6d.-37s.; Amalias, 37s. 6d.-39s.; Patras, 39s.-42s.; Gulf, 42s.-48s.; Vostizza, 49s.-58s.; Australian, 36s.-39s. Sultanas quiet. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-80s.; Greek, 42s.-75s.; Australian, 34s.-48s. Dates steady. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s. 9d.-14s. Raisins quiet of sale. Valencia, quarter-boxes, 45s. Figs dull. Layers, 32s.-40s.; genuine, 29s.-33s.; good average, 23s.

EVAPORATED FRUITS.—Business marked slight improvement and with stocks in manageable compass the general tone remained firm. Plums: Californian new crop, 30's-40's, 70s.; 40's-50's, 63s. Apricots: South African new crop Royal, 55s.-117s. 6d.; Australian, 65s.-75s. Pears: Californian Lake County, fancy, 87s. 6d.; extra 97s. 6d.; Australian, 65s.-85s. Peaches: Californian, choice, 57s. 6d.-62s. 6d.; fancy, 67s. 6d.-72s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-69s.; Canadian, 64s. Almonds steady. Mazagan, 112s. 6d.; Mogador, 110s.; P.G. Sicily, 125s.; Majorcas, 112s. 6d.-130s.; Bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 75s.; China, bitter, for shipment, 39s. new crop c.i.f.; sweet, spot, 77s. 6d. Hazel kernels: Kerasunde, spot, 155s.; Barcelona, 147s. 6d. New crop French (shelled) walnuts, 140s. ex wharf London.

CANNED GOODS.

CANNED FRUITS.—Supplies of Californian descriptions are adequate for requirements, trade being still somewhat restricted. Prices, however, remain steady, as there is no undue pressure to sell. Australian varieties also move off quietly. Singapore pines show a rather better movement for shipment parcels, but spot business fails to expand. South African and Hawaiian held for full rates. Tomatoes quietly steady.

CANNED FISH.—Salmon: Demand rather more active and market steady. Alaska red talls, quoted, 48s.-50s.; pink talls, 25s.-26s.; and halves, 34s.-36s. Japanese crab firm and fancy qualities quoted 97s. 6d.-102s. 6d. Lobsters: Trade dull, but stocks small. Halves range from 135s.-140s. Sardines in fair demand, but supplies of best quality are by no means plentiful. Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Market firm, especially for ox tongues on restricted offerings. Lunch tongues sell readily and 6's marked an advance of 5s.-10s., while large contracts are proceeding for cooked hams.

CONDENSED MILK AND MILK POWDERS — In fair demand at about late rates. Dutch condensed milk: Full cream, sweetened, 5-cwt. casks, 37s. 6d.; machine-skimmed, sweetened, 22s.; full cream, sweetened, 56-lb. drums, two in a crate, 52s. 6d. English condensed milk: Full cream, sweetened, 5-cwt. casks, 40s.; machine-skimmed, sweetened, 23s. Dutch full cream milk-powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 69s.; spray ditto, 2 by 56-lb. tins, crated, 88s. Dutch machine-skimmed milk-powders, roller process, 1 cwt. cases, 26s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 38s. 6d.; ditto, 1-cwt. cases, 37s., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are net, ex store London/Hull or Goole, and cover prompt or gradual delivery to the end of April, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. Minimum, 1-ton lots. On the grocery side: Full cream, sweetened, 19s. 6d.; machine-skimmed, sweetened, 9s. 3d. basis per case, usual packing.

HONEY.—Market remains quiet and offers of manufacturing grades freely made. Jamaica, white, 56s.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s. Fine white Cuban, 49s.; San Domingo, good, 46s.; manufacturing, 41s. Californian,

AVOID THAT SKID

Are you confident that your tyres will grip and hold on greasy roads?

Winter motoring conditions demand tyres with treads of scientific design—treads that will bite through mud and grease to the road surface below.

Discard smooth, worn covers now, and equip your car with new Dunlop tyres. They are a safeguard against the skid menace.

RUBBER.

A generally active and buoyant market predominated, in which outside interests figured largely as there was an optimistic feeling respecting the outcome of the meeting between British and Dutch planters to adopt restrictive crop measures. Standard sheet, spot, and February, sold 8 3/16d. to 8 5/16d.; March, 8½d. to 8 3/16d.-8½d.; April-June, 8 7/16d. to 8 9/16d.; July-September, 8 11/16d. to 8 13/16d.; October-December, 8 15/16d. to 8 9/16d.; January-March, 9⅜d. London stocks increased 1,177 tons on the week, landings being 2,216 tons; deliveries, 1,039; stocks, 62,659 tons, against 24,757 last year. Liverpool stocks 84 down. Landings, 166; deliveries, 250; and stocks, 19,677, against 4,086 last year.

GENERAL.

JUTE.—A dull market again ensued, and prices manifested further slight weakness. Firsts, January-February, Hamburg, quoted £26 2s. 6d.; February-March sold £26 10s.; March-April, £26 12s. 6d.; April-May quoted £26 17s. 6d. Lightnings, March-April, quoted £25; Hearts, £22; Daisee assortment, £24; Tossa, £25 12s. 6d. c.i.f. Hamburg stocks increased 5,000 bales on the fortnight to 95,300, arrivals first half of present month being 15,250 bales.

HEMP.—Business at the moment is very sluggish regarding Manila grades, but sellers do not press, which helps to maintain quotations. J No. 2, February-April, quoted £32, K ditto, £31; L No. 1, £29; L No. 2, £26; M. No. 1, £26; M No. 2, £24 10s.; H, £31 10s.; G £32 15s.; C No. 2, £27 5s.; C. No. 3, £22 15s.; S No. 1, £42 10s.; S No. 2, £40 10s.; S No. 3, £37 10s. c.i.f. African sisal firmer with sellers of No. 1 f.a.q. February-April, £35 10s.; and good marks £36 10s.; No. 2 f.a.q., £33 15s.; marks £34 5s. c.i.f. Receipts last week cabled 31,000 bales, against 41,000 last year and 27,000 in 1928. Estimate for next week 33,000 and week following 33,000. Shipments last week, 3,000 bales to U.K./Continent; 5,000, U.S.A.; 5,000, Japan; and other countries, 1,000. Stocks, 194,000 bales.

SHELLAC.—A quiet market. T.N. spot, 127s. 6d.; March, 115s.; May, 117s.; August, 125s.

COPRA in fair demand and prices steady. Straits sun-dried, February-March to Rotterdam quoted £22 2s. 6d. Dutch East Indies ditto, £22 2s. 6d. Ceylon £23 5s. Sun-dried, South Sea, £21 5s. Plantation Rabaul and hot-air dried, £21 10s. To Marseilles, mixed Dutch East Indies, Padang excluded, February-March quoted £21 2s. 6d. F.M. Straits, £21 10s. Smoked, South Sea, £21. Manila F.M. at £21 3s. 9d. buyers.

PALM KERNELS quiet. February-March, Hamburg, quoted £15 15s.; March-April, £15 17s. 6d.; April-May, £15 17s. 6d.; May-June, £16 c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 14s to 25s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £42 10s.; Ceylon, bristle, £19 10s. to £26; cinnamon leaf oil, 5d.; for shipment, 4s.4d.; citronelle, Ceylon, 2s. 3½d.; Java, 2s. 4d.

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. CX. SATURDAY, MARCH 1, 1930. No. 4,514.

ROYAL EXCHANGE ASSURANCE

Incorporated A.D. 1720.

All classes of Insurance transacted and the duties of Executor and Trustee undertaken.

For full particulars apply to :—

Head Office: Royal Exchange, London.

Telegraphic Address: Ultramarin, London. *Telephone:* London Wall 0295

ANGLO-PORTUGUESE COLONIAL AND OVERSEAS BANK, LIMITED

9 BISHOPSGATE, E.C.2

Capital Authorised £1,500,000 — Capital Issued and fully Paid £1,000,000

Sole London Agents for

BANCO NACIONAL ULTRAMARINO, LISBON, and its offices in PORTUGAL, the PORTUGUESE COLONIES, BRAZIL AND BOMBAY and for BANQUE FRANCO-PORTUGAISE D'OUTREMER, PARIS

The Bank places at the disposal of its Clients a complete international banking service.

BANCA COMMERCIALE ITALIANA.

Limited Company Incorporated in Italy.

Established in 1894. Head Office: MILAN. Capital 700 million Lire. Reserves 560 millions. Deposits 7,239 millions.

Branches in every centre of commercial and industrial importance in Italy; also in London, New York, Constantinople, and Smyrna.

Affiliated and Auxiliary Institutions in France (Paris and Riviera), Switzerland, Czecho-Slovakia, Poland, Yugoslavia, Austria, Hungary, Bulgaria, Roumania, Greece, Egypt, Morocco, U.S.A., Brazil, Argentina, Chile, Uruguay, Peru, Colombia, Ecuador, etc.

London Office

32, Threadneedle Street, E.C.2.

A. JOEL, *Manager.*

Correspondents to the Italian Treasury.

THE MONEY MARKET.

MONEY has only been in moderate supply, and rates ranged from 3½ to 4 per cent. The main feature, however, was the fall in discount rates from 3¾ to just under 3½ per cent. This has brought the period of stability that lasted since the reduction in Bank rate early in the

month to an abrupt end, and has once more made the margin between Bank rate and market rate wider than 1 per cent. Hence it is not surprising that, just as was the case seven weeks ago, on Tuesday and Wednesday of this week the market was looking for a reduction in Bank rate.

* * * *

The Bank, however, decided to make no change in its rate, and it must be admitted that there is no real ground at present for a reduction. This week's fall in discount rates is to some extent due to a special cause, namely, that the Treasury bills issued on February 21st were largely secured by French and American buyers. The market consequently found itself short of bills, and the resulting competition to buy up such bills as were available easily explains the fall in discount rates. The continued influx of revenue and of cash payments for the new Conversion Loan are likely to take more money off the market, which is already finding money none too plentiful, and on these grounds a market rate of under 3½ per cent. does not seem likely to last for long.

* * * *

Once again the balance of bar gold available in the market on Tuesday, after satisfying the needs of India and the trade, was secured by Germany, the price paid being 84s. 11d. £250,000 of this week's Cape gold, however, came in the form of sovereigns, and these automatically went to the Bank. The same thing will happen both next week and the week after, so that the Bank is sure of a further £500,000 within the next fortnight. A development of much greater importance is that this week some gold shipments were made from Paris to Germany. In the aggregate they were of small dimensions, but they are of significance, both in showing that the German demand for gold need not fall wholly upon London, and, more important still, that France is willing to part with her gold.

* * * *

It seems fairly clear that the post-war "scramble" for gold has now come to an end, and that central banks at least are not disposed to welcome further additions to their stocks. The Bank of England two months ago ceased to bid for gold in the market, the Banque de France has for long let it be known that it does not want more gold and is prepared to lose it, and there is reason to believe that the Reichsbank is not wholly pleased with the present flow of gold to Germany. Finally, the American Reserve Banks do not want gold, and the fall of sterling to under $4.86 a few days ago probably caused as much apprehension in New York as in London, and its subsequent recovery was just as welcome.

	Feb. 6, 1930.	Feb. 13, 1930.	Feb. 20, 1930.	Feb. 27, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4½	4½	4½	4½	5 (Feb. 6, '30)
Banks' Deposit Rate	2½	2½	2½	2½	3 (Feb. 6, '30)
Discount { Call	2½	2½	2½	2½	3 (Feb. 6, '30)
Houses { Notice	2¾	2¾	2¾	2¾	3½ (Feb. 6, '30)
Market rate (3 months' bills)	3 15/16	3 7/8–15/16	3 13/16–7/8	3 7/16	

Partly owing to a reduction of £4,142,000 in the Bank's holdings of Government securities, and partly to a somewhat mysterious decline of £3,424,000 in Other Securities, Bankers' Deposits have fallen by £8,453,000 to the low level of £50,714,000. This means that the market is short of money, and were it not for the corresponding shortage of bills, a position of some stringency would probably have arisen. The Bank return confirms the view that the present low level of discount rates may not persist.

NEW YORK.

Our New York correspondent cables:—Month-end settlements are not disturbing the money market, and $500,000,000 dividends and interest will be available for reinvestment in the next few days. The Reserve statement shows a drop in discounts greater than the increase in bill holdings. Total credit is down $14 millions, and the reserve ratio is 78.8 per cent. Gold from South America and Japan continues to come in, and about $10 million were received this week. The selection of McGarrah and Fraser is liked, and it is understood that McGarrah will be chosen President of the International Bank. J. H. Case has been elected to succeed McGarrah as chairman of the local Board and Reserve agent. There is a growing demand in some trade sections for the Reserve to pursue a more vigorous easy-money policy, but it is probable that Washington wishes to go slowly.

THE STOCK MARKETS.

Interest in the stock markets was confined mainly to high-grade investments. Second thoughts on the new Conversion issue were not unfavourable, and Gilt-edged stocks advanced appreciably under the lead of War Loan Fives. Little change was made in Home Railway prices, despite the hopeful review of the Great Western chairman. In the industrial markets the chief features were sales of Cables and Wireless on the Post Office's announcement of its decision against the "Beam" system, and a sharp rise in Austin Motors, following an unexpectedly favourable dividend announcement. Rubber shares declined with the commodity, the tea share market was idle, and, apart from Paris buying of Rio Tinto, the mining markets remained largely out of favour.

THE COMMODITY MARKETS.

Reports from the coal districts are gloomy and prices weak. There is a shade more buying in the iron and steel markets, especially in the sheet trade, but forward contracts are not yet forthcoming. Raw cotton has touched a new low level for the season, and this, coupled with poor advices from the Far East and a quiet home demand, has left the Manchester outlook far from hopeful. The wool textile trades are still in a state of uncertainty. Timber stocks are expected to be satisfactorily reduced in the near future. The hide market is inclined to weakness and sole leathers are in poor demand. Upper leathers remain strong. The state of the shoe manufacturing industry is very uneven. Vegetable oils and oilseeds are quiet. Wheat declined on the week, but is now firmer.

THE FOREIGN EXCHANGES.

Moderate activity and a general tendency to irregularity marked transactions last week. Sterling held its own against the dollar after some hesitation, and the Paris rate reached the highest level recorded since stabilisation. New York went from 4.86 to 4.86⅛, having been at one time below 4.86. Montreal depreciated from 4.88½ to 4.88⅞. Paris lost two points at 124.27, after touching 124.31. Brussels gained a point at 34.89. Milan was considerably better at 92.74 and Madrid fell away, after continued uncertainty and irregularity, from 38.80 to 39.50. Berlin lost ¼ at 20.36¾, after some slight irregularity, and Switzerland gained ¾ at 25.19. The Scandinavian exchanges all moved against this country. Stockholm was very firm, and gained 1⅛ at 18.11, Oslo improved from 18.18⅜ to 18.17½ and Copenhagen from 18.16⅛ to 18.16. The South American currencies were erratic, but rather less so than of late, Rio being unchanged on balance at 5 17/32d., and Buenos Aires at 42 5/16d. Montevideo gained ⅛d. at 43⅛d. In the Far East the rupee lost 1/32d. at 1s. 5 7/8d., but the yen was firm and unchanged at 2s. 0 7/32d. Batavia gained ¼ at 12.12½. In the futures market the dollar was unchanged at discounts of 1/32 and ⅛ cent. Paris was more wanted at 15 and 28 centimes premium, a rise of a centime on last week's quotations in each case. Madrid showed no change for one month at 6 centimos premium, but was considerably firmer on three months at 18½ centimos premium against 14½ last week. Berlin was ¼ better in each case at 1¾ and 5¾ pfennigs discount. The silver market established new low levels again last week, and prices closed 1/16d. lower with spot at 19¾d. and forward at 19⅝d., as a result of India, China and the Continent all selling in a volume too great to be affected by small buying from the States. The China silver exchanges reacted in sympathy, Hong Kong losing ⅛d. at 1s. 6¾d., whilst Shanghai lost ½d. at 1s. 11¼d.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

DEFEATISM OR ACHIEVEMENT?

There are two elements always at work in the early phases of a trade recession. On the one hand, there is what may be termed the material factor—the familiar sequence of over-production, losses on immobilised stocks, curtailment of output, and increased unemployment—involving restriction of purchasing power and diminished volume of turnover; on the other, there is the influence of loss of confidence. The presence of this second element is particularly noticeable in the record of commercial and industrial developments in this country since the beginning of the year. In the light of all the available evidence, a detailed examination of which will be found in our usual Monthly Supplement published with this issue of the *Economist*, there can be little doubt that British trade has experienced an appreciable setback, whose effects are to be found not only in additions to the numbers unemployed, short time in many branches of manufacture and depleted order-books, but in less obvious, though equally significant, symptoms of depression such as declining cable traffic and a striking fall in the volume of general advertising matter carried by the daily Press. The trade cycle, in fact, has clearly taken a downward turn; but the most casual observer of the situation could not fail to be impressed by the depth of the psychological depression into which the country seems already to have fallen, without much regard either to the causes of the material reaction or its probable duration.

In business circles the popular scapegoat is the forthcoming Budget; apprehensions of increased taxation are cited as a prime factor in retarding trade and stifling enterprise. More generally, doubts with regard to the effects of the Coal Mines Bill and uncertainty as to the alignment of the Government's whole future policy are held responsible for the absence of the requisite confidence in our industrial progress. In addition, there is the calculated pessimism of interests bent on justifying claims to protection by tariff; and the dismal chorus is swelled by a large chain of newspapers whose noble proprietors demand that England should discern in her imminent bankruptcy and downfall the necessity for swallowing their particular panacea. Discounting, however, all forebodings which are not disinterested in motive, the impression remains that the country as a whole is set in a frame of mind almost, one might say, deliberately "bearish" of our prospects. Emphasis is laid on every unfavourable factor in our position—the growth of competing industries in hitherto non-industrialised countries overseas, and our handicaps in the shape of much antiquated plant, dear cost of living and high "sheltered" wages—while not only is the extent of our recovery since the war belittled, but the possibilities of renewed expansion, based on a forward policy of constructive rationalisation, are tending to be viewed in a spirit of apathy and discouragement. It is as though England, having long ago lost faith in Samuel Smiles, had ceased, as a result of the present setback, to believe either in her luck or in herself.

This being so, it is pertinent to consider carefully whether the present lack of confidence has any warrant. Let us state at once that in our view pessimism is being quite unjustifiably overdone. We have no desire to minimise the gravity of the unemployment problem; and the trade reaction, coming not as the aftermath of a boom in this country, but as the sequel to nine years of hardly-won and very moderate recovery, is a serious disappointment to hopes already long deferred. At the same time, there are features in the situation, as we see it, which entitle this country—on one condition—to take a rationally optimistic view of the future.

In the first place, when the distinctively inflationary boom of 1920 collapsed, the world's credit system was badly strained; currencies in a dozen countries were threatening chaos; the long and painful path of deflation had to be trodden; and the political stability of Europe was dangerously precarious. These events upset and imposed obstacles to international commerce, and hastened a new orientation of world trade; and the nation most dependent on overseas trade suffered in an exceptional degree. The present recession is fraught with none of these abnormal adverse factors. In the second place, we have the consolation to-day of knowing that the setback is not peculiar to this country, or significant of loss of ground by British industry in the competitive race, but is unmistakably a world-wide phenomenon. "Over-production" is a term which begs many questions, but there is no need to quarrel with its use in application to the position of a large number of primary products towards the end of 1929. Though monetary influences during the spring and summer may have played a part in preparing the way for a downward turn in the trade cycle, just as losses in the Wall Street slump finally precipitated a break in many commodity prices, the central fact is that last autumn a surplus of supply over recent average demand reached simultaneously over a wide range of foodstuffs and raw materials a point at which lower prices were inevitable. The fall of prices, curtailing the purchasing power of producers of such important commodities as wheat, sugar, coffee, rubber, wool and tin—to name only a few of the "distressed products"—was bound to have a rapid effect on the volume of international trade; and though the disequilibrium between demand and supply is a passing phase (prolonged rather than mitigated by artificially withholding stocks from sale), its indirect repercussions on highly industrialised areas have been already serious. Our misfortunes, as witness the rapid increase of unemployment in the United States, Germany and other manufacturing countries, are by no means unique.

Far, indeed, from its being the case that our competitive power deteriorated during the past twelve months, the weight of evidence favours the conclusion that British industry, after losing ground relatively to its competitors between 1923 and 1928, last year progressed to an extent greater than that achieved by most industrial countries. Measured in terms of indices (1924=100) British production rose in volume between 1928 and 1929 from 105 to 111; our net raw material imports from 101 to 113; our total foreign trade turnover from 106 to 112; and our consumption of coal and electricity combined from 105 to 111. Although the absolute level of 1924 was not high enough for us to be complacent over the present position, last year's advance was sufficiently striking to enable us to face a recession without foolish and feeble talk of "national decline."

England's imperative need to-day may be summed up in three words—courage, vision and determination. We have endeavoured to direct attention to such elements of comfort and assurance in the situation as we can discern. In so doing we have had in mind that rational optimism does depend, as we have said, on one condition—England's ability to throw off the malaise of economic defeatism whose symptoms are disquietingly visible. It is a distemper which takes various forms. There are those whose mistrust in our industrial future, coupled with desire to cheat the tax collector, is being expressed in a quiet "flight from the pound"; some evince their disbelief in our capacity by proposing that we should secure a tiny "sheltered" home market at the cost of throwing up the sponge in the foreign trade essential to our present population's standard of life; others—and in their ranks one may fairly include the majority of the Privy Council, of the bankers and industrialists, and of the trade union leaders throughout the country—are defeatists in the sense that the courage is lacking to push forward, even at a risk, bold and enterprising plans.

In our present situation, "safety first" is a counsel of despair; there is no salvation in caution which "looks" until senescent legs can no longer "leap" at all. Traditionalism is a heavy brake on the progress of

every effort to modernise and reconstruct our industrial and commercial organisation. But the greater the severity of the present trade recession, the greater becomes the need for enterprise in carrying reconstruction through, however painful the process of rationalisation may be in its immediate and direct results on interests affected. And the heavier the prospective burden of direct taxation, the less reason have those possessed of wealth, either in capital or brains, to draw back from the risks of the arena. Defeatism in the form of manual workers' " ca' canny " is not the worst danger to our future national achievement. Those who profess that their " enterprise " is deadened because reward is so heavily mulcted by the fisc would do well to bear in mind that taxation becomes a burden greater or less onerous to a nation in proportion as the national productivity diminishes or expands. There is little need to point the moral for the individual, whether he considers the national interest or his own.

THE PACT AND THE COVENANT.

SINCE all the States Members of the League of Nations have become parties to the Pact of Paris, they find themselves bound by two international instruments, each of which is concerned with the prevention of war, but each of which approaches the problem from an angle of its own, independently of the other. In such circumstances, it is natural and proper to take stock of the two commitments with a view to making sure, not merely that they are compatible (as indeed they are already), but that they shall be in some kind of positive co-ordination with one another. Accordingly, last September, the Assembly of the League, during its Tenth Session, invited the Council to appoint a committee to report on " the amendments in the Covenant of the League which are necessary to bring it into harmony with the Pact of Paris "—with a view to action being taken in the matter at the eleventh regular session of the Assembly next autumn. The Council duly appointed the committee, and the committee is meeting at Geneva this week.

To deal with a very technical question rather broadly, one may say that the Covenant and the Pact, as they respectively stand at present, differ from one another in two distinct respects. The range within which war is banned is narrower in the Covenant than in the Pact; for whereas the Pact absolutely renounces war as an instrument of national policy—allowing it only as an instrument of international policy (*e.g.*, in execution of the Covenant) or in self-defence—the Covenant does permit a resort to war as an instrument of national policy in certain circumstances after a period of delay which may run to as long as nine months. On the other hand, the Covenant goes deeper than the Pact, inasmuch as, within the limits within which it does ban war, it provides specific alternative means for the settlement of international disputes and specific sanctions in case one of the parties to a dispute goes to war in violation of the Covenant's terms; whereas the Pact merely lays down that the settlement of disputes " shall never be sought except by pacific means." The British Government has put forward certain draft amendments to the Covenant which would have the effect of enlarging the range within which war is banned, so as to make the Covenant co-extensive with the Pact in that respect, but this without touching the existing procedure for the pacific settlement of disputes or the existing obligations upon members to enforce certain sanctions against Covenant-breaking States. Thus the general effect of the British amendments would be to make the existing sanctions of the Covenant applicable to the wider range of embargo upon war which is at present enacted, not in the Covenant, but in the Pact.

The British Government's view is that this extension of commitments is theoretical rather than practical; and that the burden of sanctions, though greater in bulk, will be not of greater total weight if its amendments are adopted, because (if one may pursue the metaphor) the reduction in the likelihood of war will reduce the " specific gravity " of sanctions proportionately. On the other hand, certain critics are maintaining that the extension of commitments will be not only practical but substantial as far as the British Empire is concerned, and, in particular, that it will increase the danger that our obligations, under Article 16 of the Covenant, may involve us in a conflict with the United States over the old question of " neutral rights at sea." Under Article 16, of course, we are bound to use our sea power in order to impose the sanction of an international economic boycott upon a Covenant-breaking State.

On the general point we cannot take these critics very seriously, because we never felt that the famous " gap " in the Covenant was as important in practice as it looks on paper. Under the Covenant as it stands, in an international dispute, if the Council of the League (excluding any representatives of the parties themselves) fail to attain unanimity, either party is at liberty to use war as an instrument of national policy after a final three months' delay. Under the proposed amendment this licence is to be withdrawn. But then, how many States would ever really have availed themselves of it? Surely, if one looks at the contemplated situation in its concrete setting, it becomes evident at once that " the broad road which leadeth to destruction " would pass through that ready-made gap very seldom indeed. Almost always the State which was determined, in the last resort, to go to war in pursuit of some national policy would prefer to take the consequences of driving a coach and horses (or, shall we say, a fleet of tanks?) straight through the bulwark which the Covenant, as it stands, is intended to set up. Of course, by so doing, it would be deliberately making itself a Covenant-breaker, and incurring the penalties to which Covenant-breakers are subject, instead of waiting to wage its " private war " as a legitimate and unpenalised belligerent. But, in the calculations of General Staffs and Cabinet Councils, this drawback would scarcely weigh in the balance against the advantage of taking the prospective enemy State by surprise; for in private wars waged, as instruments of national policy by one State, or group of States, against another, the value of getting in the first blow is nowadays so supreme that nothing can really make up for the surrender of it.

For this reason we believe that, even under the Covenant as it stands, there would rarely be a private war in which both belligerents were technically acting within their rights under the Covenant, and in which the other parties to the Covenant were therefore absolved from applying sanctions against one or other belligerent. Almost every war would prove, in practice, to be a war between a Covenant-breaker and his victim—that is, a war in which " the burden of sanctions " would have to be borne by the other States Members of the League. If this argument is correct, then the British Government is justified in its thesis that the burden of sanctions will not be increased in practice by amendments to the Covenant which have the effect of extending the existing sanctions of the Covenant to the wider range of cases covered by the Pact.

Incidentally, this would dispose of the second criticism —a specifically British criticism—that the proposed amendments would seriously increase the likelihood of our coming into conflict with the United States over the question of " neutral rights at sea." We do not question the seriousness of this risk to which Great Britain is specially subject. Our contention is that it is already virtually as great under the Covenant as it stands as it would be under the Covenant if amended along the lines proposed. We may, perhaps, comfort ourselves by reflecting that, if the premium of risk which we contribute towards the pooled security of the League is definitely higher, on this account, than that of other members, our interest in general security is also definitely greater than that of any other member, since there is no other member that has so many possessions and interests scattered all over the world or that is so dependent upon foreign trade and foreign services like shipping or investments that are apt to be depreciated or destroyed by wars waged anywhere between any parties.

Anyhow, we must console ourselves as best we can, since we are committed to the Covenant and nobody contemplates the possibility of our denouncing that commitment. At the same time, there is no sane Englishman who would not be anxious, consistently with the national honour, to reduce the danger of a clash between Great Britain and the United States to a narrower compass; and it is worth considering whether this might not actually be the effect of amending the Covenant in accordance with the British Government's draft proposals.

This is really a psychological question, which may be put as follows: Supposing the Covenant is amended so as to become co-extensive with the Pact, will the American people be more likely or less likely to take umbrage at the application of sanctions against a Covenant breaker, involving the question of " neutral rights at sea," than if the Covenant is left as it stands? It would be natural to suppose that they would feel less objection to measures taken in support of a Covenant amended into conformity with a Pact which their own Government had begotten—and this even if the American dislike of "sanctions," in principle, remained unabated. There is, however, one school of English publicists which delights in portraying the American leviathan as an inhumanly irrational and arbitrary creature—a kind of caricature of the Semitic Jehovah at his worst moments—and these critics are now lifting up their voices in warning. " You must not assume," they say, " that the American people would hesitate to oppose the execution of a Covenant amended into harmony with the Pact, simply because the Pact is a product of American statesmanship. You forget that the Covenant, as it stands, has the same origin. And if President Wilson's work was rejected by his countrymen, why should you expect the work of Professor Shotwell and Mr Kellogg to fare any better at their hands?"

To this argument there is one obvious reply: The Treaty of Versailles was never ratified by the United States; the Pact of Paris has been. All the same, we agree with these critics that it is desirable, before any amendment to the Covenant is finally enacted, to explore the American point of view in regard to the implementation of the Pact by States members of the League. And we would draw attention again to a point which we made at the beginning of this article. There are two respects in which the Covenant at present differs from the Pact: the range within which war is banned and the existence of sanctions. It would be possible to make the Covenant co-extensive with the Pact in range by banning war as an instrument of national policy altogether, and at the same time to leave the sanctions of the Covenant applicable only to those wars which are banned by the Covenant as it now stands. This may not be logical, yet it might prove to be the easiest working compromise between the " pro-sanctions " and the " anti-sanctions " schools of thought.

BANKS AND INDUSTRY IN ENGLAND AND GERMANY.—I.

(BY A BANKING CORRESPONDENT.)

THE chairmen of the " Big Five " have made their annual speeches and, with the exception of Mr McKenna, whose position as a member of the present Banking Committee imposed silence in this respect, all touched on the burning question of the relation of banks to industry. Their views were remarkably unanimous. They repudiated the suggestion that the banks had not granted sufficient facilities to industry, and rightly pointed out that it was not the function of the banks to find the permanent funds required for capital expenditure. Mr Goodenough restated the view so often expressed by bankers in England that it lies with industry to reorganise itself, this question being outside the province of the banks, and Mr Beaumont Pease also refused to entertain the idea that banks should dictate the steps to be taken towards reorganisation. While it is difficult to quarrel with any of these views *per se*, the cumulative effect was rather that of a general repudiation of responsibility, and suggested a disinclination on the part of bankers even to reconsider their position in this issue, notwithstanding the widespread feeling that there is a gap in the British financial system which in some way or other ought to be bridged.

An article published in the *Economist* last November dealt with a number of differences between the banking systems in England and Germany which have been the subject of considerable misunderstanding. The so-called Continental system of banking, and particularly the system prevalent in Germany, is popularly believed in England to involve large long-term investments in industry, and English banks have rightly pointed out that as deposit banks, the bulk of whose assets are obtained as current or short-term deposits from their customers, they cannot take the responsibility of tying up their funds in this way. What is not generally realised is that the German banks have of recent years been developing very much on the lines of the English deposit banks, without ceasing, however, to play a leading part in industrial organisation and issue business. The German system has, in fact, become quite different from that in many other Continental countries, such as Austria, Belgium, etc., and, as indicated in the article above referred to, there is no very considerable difference between the investment of banking assets in England and Germany. The German system is admittedly by no means perfect, and it is absurd to suggest that it should be transplanted to England, where the conditions are quite different. Nevertheless, just as there are numerous aspects of the English system of banking—particularly in regard to short-term commercial credits and the handling of cheques and current banking transactions in general—from which the German banks can and do learn, so there are a number of features in the organisation of industrial

banking and issue business in Germany which are worth study by progressive bankers in this country.

A well-known British industrialist once gave it to the writer as his considered opinion that the reorganisation of German industry and its recovery from the catastrophic depression of 1925-26 would have been impossible but for the close co-operation between banks and industry. This co-operation was a natural consequence of historical developments in Germany, while the opposite view taken by English banks is due, as indicated in an article on "Banks and Business" in the *Economist* of January 18th, to the fact that commerce has played so large a part in British economic life. British industry was developed by independent industrialists who provided their fixed capital themselves, and who rarely had recourse to the mechanism of the London issue market. The banks' relations with industry were mainly confined to providing current finance for the trade arising out of the activities of the industrialists. The banks were thus never called upon to handle industrial issue business. In Germany, on the other hand, the public issue market played a much larger part in industrial finance; and since this business mainly passed through the hands of the banks, bankers were obliged in the interests of the customers who had bought issues backed by their name to exercise a closer supervision over, and to play a certain part in, the direction of industry. Their attitude in this respect may be compared to that of the great merchant banking houses which did the foreign issue business in London and generally exercised a certain control over borrowers. An additional cause of the influence exerted by German banks over industry was that before the war they worked with a much larger proportion of capital and reserves—funds at their free disposal and not subject to calls by depositors—than is the case to-day, and they were thus in a position to make long-term advances to their industrial clients and to invest in equities, with the idea of floating these investments at some considerably later date. Although they do this to a far lesser extent to-day, their hold on the issue business and their general influence on the conduct of industry remains.

In England, joint-stock bankers consider "investment banking" so far outside their province that they repudiate responsibility for prospectuses under which their name appears, and in giving investment advice generally confine their recommendations to War Loan or some similar gilt-edged security. In Germany, on the other hand, the large banks take the lead. Industrial organisation and reorganisation, however, is on its financial side largely a question of investment banking, and experience in two highly-developed industrial countries, Germany and America, goes to show that a connection, or at any rate close co-operation, between commercial and investment banking is of great value to industry. The principal American banks, indeed, excluded by legislation from engaging directly in issue and financing business, have created so-called "security companies," to carry out the type of transaction in question. The security companies work closely together with their parent banks so that the net effect is somewhat similar to that of the German system.

It is impossible here to go fully into the advantages and disadvantages of the two systems. There is no doubt, however, that the German system has proved its value during the difficult period of industrial reorganisation through which Germany has been and is still passing. The regrouping of industrial units in many important industries has been undoubtedly due to banking initiative, and the necessary new long-term financing has been found through new issues at home and abroad backed by the names and standing of the leading banks. All those who have experience of industrial reorganisation, and large amalgamations in particular, know that one of the main obstacles to be overcome lies in the conservatism, inertia and obstruction of individual business men. Obviously one of the most powerful weapons that can be used here is the power to call in credits, and while this weapon has been used very sparingly, the knowledge that it is held in reserve is almost always sufficient. In this connection it may be said, as was emphasised by Mr Goodenough and Mr Beaumont Pease, that neither in England nor in Germany is it the function of the banks—who lack the specialised knowledge required—to work out the actual schemes of reorganisation. They can, however, put pressure on industries in difficulties to get schemes worked out by the best available brains, and when those schemes have been worked out they can use their influence to force them through. This, it is true, means taking responsibility, and possibly being blamed if the schemes are a failure. But in a period of industrial development and change such as we are passing through to-day it is very doubtful whether those whose function it is to grant credits to industry can avoid such responsibility in any case, and whether the blame attaching to a policy of "wait and see" will not be greater than that attaching to initiative, even if that initiative is not always successful.

The connection between investment and commercial banking, which is one of the principal features of the German system, has another aspect which deserves special attention after the Hatry crash and the collapse of the 1929 speculative issue boom. The issue market in Germany is very largely controlled by the banks; and unless supported by one or more D-banks, or at any rate one of the leading private banks, no important issue has a chance of being successful. The general public invest mainly through their banks, and in any case have been educated to expect the name of a substantial bank or syndicate of banks on an issue prospectus. The banks take full responsibility for their issues, and keep in permanent touch with the issuing companies, generally through representation on the board—a system which will be dealt with fully in a subsequent article. One finds in England the best analogy in the attitude of the merchant banks towards their issue business, but, owing to the peculiar history of the London issue market, this business has scarcely ever had to do with the financing of British industry.

Of recent years a crop of so-called "trust companies" and finance houses have sprung up to fill the gap in the City system, but they have not the permanent interest in the well-being of their industrial customers, nor have they for the most part the standing and financial backing, to enable them to play anything approaching the part played by the leading joint-stock and private banks in industrial finance in Germany. Compare, for instance, the "United Steel" deal of the Austin Friars Trust—an ill-fated transaction with private profit alone as its object—with the flotation of the "Vereinigte Stahlwerke" in Germany, backed by all the leading banks. It is sometimes urged that banks which do both credit and issue business may use their names and standing to unload frozen credits in the shape of unpromising issues on their investment clients. Here, however, a check lies in the fact that the banks must maintain their reputations; and, therefore, when industries are in difficulties, they are obliged to make certain to the best of their ability that reorganisation has been thoroughly carried out and offers good prospects before approaching the public. In any case, the connection between the two types of business guarantees the permanent interest of the issuing houses in their industrial customers, since every credit banker of necessity wishes his customers to be prosperous.

The following conclusions may at this stage be drawn from a study of these aspects of German banking. Co-operation between the commercial and investment sides of industrial banking is an aid to industrial reorganisation. This co-operation, let it be said in parenthesis, need not necessarily be carried out by using the same organisation for both types of business. The organisations dealing with industrial investment banking should, however, be of first-rate standing and should have the support and co-operation of the leading commercial banks. The industrial issue market should—like the foreign bond market in London—be dominated by institutions of this kind, and the public should be educated to expect first-rate banking names on prospectuses, names which should never appear unless they really mean something. All this, from the standpoint of purely commercial banks, need not involve any important change in the principles on which they invest their assets or in their liquidity. But the most essential lesson is the value of an active industrial policy, conceived on broad lines, and backed by co-operation instead of competition between the banks themselves. This feature of co-operation between the banks, as organised in Germany, will be the principal subject of the succeeding article.

THE CANADIAN WHEAT CRISIS.

(BY OUR OTTAWA CORRESPONDENT.)

THE crisis in the Winnipeg grain market which developed early in February had its origin in the price war which has been waged during the last six months between the holders of Canadian wheat on the one side and European importers on the other. On the Canadian side the chief protagonists are the Western co-operative wheat pools, who, with 140,000 members, to-day control 55 per cent. of the wheat crop of Western Canada. When it became plain that the prairie wheat crop of 1929 was of very modest dimensions (the latest estimates of the Dominion Bureau of Statistics place it at 279,000,000 bushels, as compared with 522,000,000 bushels in 1928 and a five-year average of roughly 400,000,000 bushels), the pools determined upon a policy of holding up their wheat stocks for a price higher than European buyers felt justified in paying. In this policy they were able to secure the co-operation of a number of important private grain and elevator companies who were normally their bitter antagonists, but it is an open secret that one of the largest private grain operators in the West declined to take part in the holding arrangement. The pool officials and their allies held the view that not only did the condition of world supplies justify a higher price than was available in September, when the Canadian crop was coming on to the market, but that the quality of that crop, owing to its high average of grades and unusually good protein content, should enable it to command a premium price over competing wheats.

The wheat-holding interests of Canada, knowing that there was a substantial volume of wheat still available from the last Argentine crop, had no serious expectation that their policy would yield any great fruits before the end of 1929, but they were serenely confident that the month of January would see other supplies well on the way to exhaustion and a strong buying demand materialising from Liverpool and other grain trading centres of Europe. Meanwhile, their policy had inflicted a very serious dislocation on the economic life of Canada. The earnings of all the railway companies suffered a severe curtailment, as did the revenues of both lake and ocean shipping companies; business firms catering for the Western trade were afraid to make commitments and place orders with manufacturers; and, as a consequence of a tremendous fall in exports, which are usually high in the last quarter of the year through the outflow of the wheat crop, a favourable trade balance was transformed into an unfavourable one.

Accordingly, the wheat-holding interests had to face considerable criticism from different quarters, but their spokesman continued to predict success for their policy. Acute disappointment, however, was experienced as the days passed by in January, and the European buyers, having contrived to pick up supplies of wheat from Argentina, France, Germany and other countries, showed a stubborn obduracy and kept out of the Canadian market. Wheat prices sagged steadily downward, and at the end of last month the banks, which had advanced very large sums to the pools and the private grain firms, became nervous about the situation and began to call for further security. Simultaneously, an important grain firm, the Electric Grain and Elevator Company, became involved in serious financial difficulties, and a well-known bank, from whom it had borrowed heavily, stepped in and—under the authority of Section 88 of the Bank Act—seized the pledged grain in the elevators belonging to the company.

It transpired that part of the grain which had been seized did not actually belong to the embarrassed company, being merely held by it in storage in trust for farmers and milling interests. The latter appealed to the Board of Grain Commissioners, who took immediate action under powers conferred upon them by the Grain Act and impounded all the wheat in these elevators. The difficulties of this company soon became common property, and the disquietude which was aroused produced a real crisis in Winnipeg in the opening days of February. What exactly took place has not been fully revealed, but the seriousness of the *impasse* is not difficult to appraise in view of the fact that, on February 5th, the provincial governments of the three prairie provinces took the drastic and unprecedented step of announcing that they would guarantee advances made by the banks to the pool.

Up to this point the public had been more or less kept in the dark about the situation, but the Press then began to carry front-page stories about the grain crisis in the West, and members of the King Government, as well as the President of the Canadian Bankers' Association, felt it necessary to issue reassuring statements to the effect that the crisis had been surmounted and that there need be no further fear of a wholesale collapse of the wheat market. Undoubtedly, the action of the provincial governments had at first the effect of halting the downward trend of prices, and towards the middle of February they showed an upward tendency, helped by reports that European buyers had taken options on substantial quantities of Canadian wheat, and, therefore, were interested in preventing any further serious price decline.

But whatever wheat has been purchased for Europe it will only be a comparatively small proportion of the 221,000,000 bushels of Canadian wheat which were in store in Canada and the United States on January 31st, and impartial observers do not foresee any prospect of marketing more than half these stocks before July 1st, when the new crops of 1930 begin to be available. Selling pressure, at least upon the pools, is bound to increase rather than diminish, for apparently the pools have not yet made to their members the final payment for the crop of 1928, and the latter also expect a second payment on the 1929 crop on March 1st to provide funds for their spring seeding operations. Thus the pool directors must find money in the near future in order to meet their obligations, or they cannot fail to lose prestige with their members. And even as things are, they will have to explain why they embarked upon a policy which, unless there is a swift upturn in prices, must entail very substantial losses in a year when they could ill be afforded.

The crisis, even if it results in no disastrous setback to Western Canada, promises to have unfortunate repercussions in various directions. During the first half of February there has been in progress over the Atlantic a cross-barrage of recriminatory exchanges between the Canadian holders of wheat and British importing interests. The former are making the accusation that a boycott of Canadian wheat has been deliberately organised in Great Britain, and the *Manitoba Free Press*, the most influential paper in Western Canada, on February 8th delivered a bitter editorial attack upon what it described as the "milling trust of Great Britain," which it charged with deliberately manipulating the grain markets of the world in order to extract huge profits for itself at the joint expense of the Canadian grain grower and the British consumer. From Britain, on the other hand, there have come cabled despatches quoting extracts from the British Press and statements from grain merchants to the effect that the Canadian pools and their allies have been engaging in an unjustifiable gamble in an effort to hold up grain prices and increase the cost of living for a community struggling with grave economic difficulties. Altogether a very unpleasant controversy has developed, which will not help Imperial relations or schemes for the stimulation of inter-Imperial trade, and the healing hand of time may be required for its effects to pass away.

The fortunes of the King Ministry may also be affected in a considerable measure. It is involved in at least partial responsibility for the situation which has come to pass. For one thing, the Finance Department exercises many of the powers of a central reserve bank and only

with its co-operation could the banks have extended the generous line of credit which they have given to the grain-holding interests; if the Finance Department had chosen to call a halt to this credit, it would not have been given and it would have been necessary to sell wheat long ago. Furthermore, Mr E. B. Ramsay, the Chairman of the Board of Grain Commissioners, who is the Government's chief grain official, at least twice issued statements declaring that the policy of holding wheat was wise and proper in order than an equitable price should be secured to maintain the living standards and purchasing power of the prairie farmers. Again, at least two members of the King Cabinet in public speeches strongly endorsed the policy and predicted its certain success. Accordingly, Conservative papers are now beginning to make party capital out of the situation, and the *Ottawa Journal*, the Conservative organ in the capital, in its issue of February 8th, severely criticised the Dominion Government for failure to draw upon its knowledge of world markets and " warn the pool of the danger of its course."

Nothing is quite so certain as that the Conservative opposition will endeavour, when Parliament meets, to fasten some responsibility for the crisis upon the King Government and to persuade the farmers of the prairies that their interests have been grossly mismanaged. Furthermore, the King Government may discover that a policy of tariff revision by way of a substantial increase in the British preference is liable to be much less popular in Western Canada than it would have been if the idea had not been disseminated that the prairie farmers are being penalised by the hard-hearted selfishness of British grain importers.

THE ARGENTINE EXCHANGE.

(BY A CORRESPONDENT.)

THE recent spectacular decline in Argentine exchange, coupled with marked weakness in the London quotations for the leading Anglo-Argentine railway stocks, came as an unpleasant surprise to those numerous persons who, at the beginning of 1929, envisaged a prolonged period of financial and economic prosperity in Argentina. It is obvious that the closure of the Conversion Office was bound to affect the exchange, coming, as it did, at a moment when the Republic, in common with most of the world, was facing over-production of all its exportable wares, meat alone excepted; but it is not quite so easy to understand why the sharp revulsion of feeling should have affected railway shares. These are held almost in their entirety by proprietors non-resident in Argentina, well informed as to the actual state of business there, and possessing clear statistical evidence of the inherent strength of their investments. There is, admittedly, a psychological factor to be taken into account, and everything goes to show that, contrary to the usual practice, this intangible influence has been far stronger abroad than in Argentina itself.

The closure of the " Caja de Conversion," with the consequent cessation of gold exports, has been regarded by Argentina as a logical sequence to the somewhat heavy specie shipments made during the latter half of 1929, whereas both in Europe and the United States the Presidential order is generally considered retrograde and dangerous. Argentina regards all gold leaving the country as " lost," forgetting that the 70 millions shipped to New York in January-October, 1929, were but the natural reflex corresponding to the admittedly excessive gold imports of 1928. In January, 1929, the Conversion Office held $504,675,000 gold, as against this year's figure of $427,416,000, but the gain in specie secured from abroad during 1927-28, roughly, $132,000,000 gold, was ample both to demonstrate Argentina's inherent financial soundness and to give her, in popular parlance, " a margin to come and go upon " when, as has happened, reduction in export values and a flood tide of imports made it essential for the bankers to obtain cover for their drawings by means other than those embodied in the purchase of bills. For not only were imports of manufactured goods heavy during 1929, but the incidence of their payment fell largely within the last quarter of that year—a time when both wheat and wool were being shipped overseas unsold, in the hope of an early market improvement. Thus one may say that the position when Dr. Irigoyen, or his Cabinet, gave the order of closure, was neither better nor worse than it had been at any stated moment during last year.

The closure of the Conversion Office was, indeed, a retrograde step, which has, with unexpected promptitude, defeated its own object. Argentina's listed obligations, national, provincial, and municipal, are not excessive, nor have they been added to since the election of Dr. Irigoyen as President. None the less, taking public and private commitments, and including both fixed interest and varying earnings of bonds and shares, Argentina must remit abroad annually some 200 million dollars gold, and for this sum cover must be found. With wheat and wool being poured into consuming markets that were already glutted — a condition of affairs that precluded prompt disposal and the consequent negotiation of bills based on such shipments—gold export was the natural solution. It was indeed the " syphonic " connection between what Argentina had to pay and what she expected eventually to receive for her produce. Once that connection was broken, the position, translated into terms of her exchange, became artificial. For if at the end of October, 1929, the Argentine gold dollar stood at 47½, nothing that has since taken place warrants the present fall to 43d., a depreciation of 9 per cent. Of all the South American Republics, Argentina alone may be said to be free from grave disabilities, other than those incidental to her own precipitate flight from the free gold standard so recently re-established. And the pity of it is that, with a promise of smaller crops in 1930, and a notable reduction of imports, the natural tendency of the Argentine market to correct its own errors by the ordinary processes of finance and trade should be practically nullified by the well-meant, but ill-contrived, efforts of an official world wholly unacquainted with rudimentary economic axioms.

It is claimed that exporters, receiving more dollars for their drafts on foreign purchasers, will be able to pay better prices to producers. Yet, even admitting for the moment that this is so, is it not plain that all remittances must suffer? And, even granting that the various foreign industries established in the Argentine, receiving Argentine paper dollars as their profits, will perforce have to bear the brunt of converting such profits into foreign currency, what of the obligations payable abroad and therefore calling for a larger sum in Argentine paper? Ocean freights, the service of all external debts, payment for goods invoiced in the terms of foreign currencies—all these are obligations which must minimise, if they do not wholly counterbalance, the suppositious gains which the producer is told will come his way.

The discount of £5,000,000, more or less, in Argentine Treasury Bills, placed in London at the disposal of the Banco de la Nacion Argentina, and considered by it as gold on deposit with the Conversion Office against which it may withdraw paper to an approximate amount of sixty million paper dollars (the first instalment of the authorised extraction of $200,000,000 paper), is, in a sense, but a red herring across the trail. It illustrates rather the chaotic position of the Argentine money market, unable to control demand for credit by means of an official discount rate, and it certainly has no relation to the main problem, which dates back, as has been shown, to the excessive imports of gold made in 1927-28. Argentina's danger lies, therefore, in the direction of a managed currency which has been " temporarily " deprived of its chief counterpoise, and the anxiety of all who know her position best turns upon the interpretation which the word " temporary " may have when used in this connection.

BRITISH COMPANIES ABROAD.—I.

IN spite of the impetus given to America by the war, Great Britain is still the largest creditor nation in the world. New issue figures afford only partial evidence of our leadership in this respect. Purchases and sales of existing securities are immeasurable factors affecting our total of over £4,000 million invested abroad, and, largely for that reason, the problem of discovering with any degree of certainty and precision the amount of British capital in the Empire and in foreign countries defies the ingenuity of statisticians. Nevertheless, some parts of the total may be ascertained with reasonable accuracy, and for the past year or more the *Economist* has been pursuing, in co-operation with Sir Robert Kindersley, a detailed investigation into British capital overseas.

We are now able to publish some interesting results with regard to the capital of companies registered in Great Britain and operating overseas. They contribute about one quarter to the grand total of exported British capital. If we exclude all companies liquidated or in liquidation, companies with a total capital of less than £30,000, and all companies (such as oil concessionaires in Russia) which have been expropriated or are otherwise without tangible assets, the nominal total of the share capital is some £819.9 million, and of the loan capital £322.0 million, divided among 1,716 companies. The figures for companies which did not furnish returns are taken throughout from the 1929 edition of the Stock Exchange Official Intelligence. Otherwise, the figures may be taken as referring to the year 1929. The smallness of the average size, compared with great corporations like the Argentine railways or the oil amalgamations, is chiefly due to the large number of comparatively small plantation companies. Thus the 744 rubber, tea and coffee companies accounted for only about 15 per cent. of the total share capital.

All the companies included in the totals were operating entirely or almost entirely overseas, and thus an important section of capital, invested in companies operating only partly overseas, is excluded. The distinction is sometimes very difficult to draw, particularly regarding shipping and telegraph companies. In these two groups, only those concerns have been included whose ships were permanently located in foreign or Imperial waters, or whose telegraph lines lie entirely in foreign countries or the Colonies and Dominions.

Information has been tabulated regarding 532 companies, having a total share capital of £334.1 million and loan capital of £138.7 million, a sample quite large enough to give reliable results. We are extremely grateful to the boards and the secretaries of these companies for furnishing so much valuable information. The results, tabulated according to the groups in the Stock Exchange Official Intelligence, are as follows:—

BRITISH COMPANIES OVERSEAS.

	Share Capital.			Loan Capital.		
	Total Amount Paid up.	Proportion British Owned.	Amount British Owned.	Total Amount Outstanding.	Proportion British Owned.	Amount British Owned.
	£'000.	%	£'000.	£'000.	%	£'000.
Dominion & Colonial rails	26,111	95·5	24,940	46,381	90·3	41,890
American rails	805	99·4	800	805	*	*
Foreign rails	207,468	98·9	205,230	146,119	97·7	141,770

	819,940	91·4	746,500	321,986	95·6	307,730

* Insufficient information; the general average has been applied.

" British residents " include companies registered in Great Britain. Where, however, a company is a subsidiary of another also included in the list, that part of its capital which is held by the parent concern is omitted in order to avoid double counting. The proportions thus obtained, if applied to the various groups, give a total British-held proportion of £1,054.2 million, or 92.3 per cent. of the grand total, share and loan capital combined.

The foreign and colonial participation is very unevenly divided among the groups. The greater part of it is either local holding, chiefly in mines, iron and steel companies, and public utilities, or United States investments in South American public utility companies. If we take the public utility companies as a single group (canals and docks, electric lighting and power, gas, telegraphs and telephones, tramways and omnibuses and waterworks), we find that out of a total *share* capital of £62,566,000 only £33,900,000 was still held by British residents, or some 54 per cent. Less than one-half of the share capital of telegraph and telephone companies, and only one-third of that of tramway companies, were registered in British names. The lowest percentage under the head of loan capital was recorded by a public utility group, electric lighting and power.

These public utility figures reflect, to some extent, " local " as well as American holding. Residents in the Dominions and in Europe have especially been buying up the shares of their own lighting companies. The 30 per cent. of iron, coal and steel shares held overseas is chiefly accounted for in this way, and mining companies registered in the Union of South Africa are considerable holders of securities of British registered African mines. Much of the capital of these South African companies is undoubtedly held by Britishers, but if we are to avoid double counting we must reckon it under a different section of British capital overseas.

It will be observed that the proportion British-held is considerably higher for debentures than for shares, and this is even more striking with regard to separate groups than with regard to the grand totals. Indeed, only two groups, Dominion and Colonial railways and foreign railways, recorded a lower debenture than share percentage; this may have been due to some aberration in the information available, but as the latter was peculiarly ample it was more probably due to the high international standing of these railway securities, which has made them such an excellent investment for those who require a good margin of safety but who are not restricted to Government and corporation securities. Apart from those two groups, it is clear that the absence of speculative interest and of controlling rights militates strongly against the international resale of debenture securities, which are rarely listed in overseas bourses. Preference shares are likewise appreciably less mobile than ordinary shares.

A further element which our figures reflect is the holding, particularly of plantation company shares, by employees, or former employees, of the company itself, who may be only temporarily living abroad. The term " Residents in Great Britain " is not so inclusive as " British subjects," and if subjects of the British Empire abroad were added the proportion still " British held " would appear much larger. Residence, however, is the tax test, and in connection with the balance of trade, to which all these statistics must be related, is apt because the interest or dividends paid to residents overseas are probably either never brought home or are " re-exported."

On the whole, the results are notable for the small proportion which has been sold outside this country. Many of the securities included were issued long ago, and the stream of resales to abroad must in the nature of things be stronger than that of repurchase of securities once exported. The special—and perhaps transient—influences playing upon public utility concerns may be set on one side. Even with utility securities included, only 7.7 per cent. of the capital of British companies overseas has left British hands; excluding them, the proportion falls to 5.5 per cent.

Notes of the Week.

French Politics and the Naval Conference.—Since we last went to press a new French Ministry has been constituted and defeated and a new French delegation to the London Conference has found itself bereft of authority before it has had time to jump into a taxi and drive to the Gare du Nord. The Cabinet of M. Chautemps was formed on the evening of Friday, the 21st; it fell on the evening of Tuesday, the 25th. We refrain from prophesying what may have happened before the present issue of the *Economist* is in readers' hands. M. Chautemps was overthrown by his predecessor's refusal to co-operate with him, and by the hostility of the Right and the Centre to a Ministry which leant upon Socialist support. The forces that have made and unmade this four days' Government are entirely partisan and personal. No concrete issue of either domestic or foreign politics has been in question. Meanwhile, in London, so far as formal meetings are concerned, the Naval Conference remains necessarily at a standstill. It could hardly do otherwise in the absence of the French, for there could be no greater mistake than to pursue the general work of the Conference during the period of Cabinet reconstruction in France. There is no great reason to regret the delay in itself, and still less to base pessimistic predictions on it. Whether the Conference resumes a week sooner or a week later is of little ultimate consequence. In point of fact, conversations on certain points which do not directly concern the French—such as the Japanese ratio in relation to the United States—are being pursued. This interval in the Conference's labours naturally provides an opportunity for some survey of the actual prospects. The outlook may be described as overcast, but in no sense hopeless. The main difficulty is still France's statement of her requirements. A good deal may depend on whether the new French Prime Minister, whether he be M. Tardieu or someone else, comes himself to London. Nothing could be worse than a repetition of the arrangement which went far to wreck the Genoa Conference, when M. Poincaré sat in Paris at the end of a telephone wire and persistently vetoed every concession his chief delegate, M. Barthou, was prepared to make after reasoned discussion with other delegates. Though M. Briand may be more tractable as a negotiator than M. Tardieu, it will not help to have M. Briand as chief delegate unless he happens to be Prime Minister himself. Whatever may be the ultimate outcome of the Conference, it is unlikely that it can end in open and complete failure. The Anglo-American agreement is something already achieved, and there can be little doubt that the Japanese figures will, after further discussion, be accommodated with it. Such a Three Power Agreement would be well worth while in itself, though there is no ground at present for abandoning all hope of a Five Power arrangement. It is quite true that the actual execution of the French naval programme would make it difficult for this country to maintain her restricted estimates in respect of certain classes of vessels, particularly cruisers and destroyers. But the French fleet as it exists to-day causes anxiety to no one. It would be quite possible to conclude a Three Power Agreement on the basis of the Anglo-American figures, subject to the provision (for which the Washington Treaty provides a precedent) that, in case of the undue expansion of some fleet not affected by the treaty, the signatories would meet to reconsider their position. This is by no means the only method of securing tangible results. Another way would be to reach provisional conclusions, which could be developed further at Geneva in discussion with other Powers, such as Germany and Spain, whose building programmes have a definite bearing on the armaments of the London Conference Powers.

The New Conversion Loan.—At the end of last week the Government sprang a surprise upon the City by announcing the issue of a further block of 4½ per cent. 1940-44 Conversion Loan. The primary object of the issue is to deal with £55 million of the 5½ per cent. Treasury Bonds maturing next May, and holders of these bonds are invited to exchange into the new loan at the rate of £105 10s. of Conversion Loan for £100 of Treasury Bonds. Cash applications, however, were also sought, the issue price being 95. Allowing for the profit on redemption and other factors, the total yield works out at between £5 0s. 2d. and £5 3s. 1d. per cent., according to whether the loan runs the full term or is repaid in 1940. The flat yield is £4 14s. 9d. per cent. Thus, despite the three reductions in Bank rate that have intervened, the Government have, if redemption terms are taken into account, secured nothing in comparison with the cost of the much-criticised 5 per cent. Conversion Loan of last December, while the saving on the flat yield basis is only just over ¼ per cent. It is clear that fluctuations in short money rates have comparatively little effect at present upon long-term rates, and on this score the Chancellor can claim to be acquitted of the charge of undue precipitancy made against him last December. From a psychological aspect, however, there is much to be said for getting the words "5 per cent." out of the prospectus for a British Government loan, and this is the main advantage of the new loan over its immediate predecessor. The final, and perhaps the most important, point of interest is that, in issuing this new loan, Mr Snowden is obviously pursuing his declared objective of reducing the floating debt. The immediate advantages to the nation are not apparent, for the replacement of Treasury bills, which can now be sold at well under 4 per cent., by long-term debt issued on a 4¾ per cent. basis will certainly not permit of any immediate economy. On the other hand, when it is recalled that as recently as last September the difficulty the Bank had in selling the week's quota of Treasury bills was a principal cause of the rise in Bank rate to 6½ per cent., it will be realised that the margin between the two figures just quoted may not be an excessive price to pay for the advantage accruing to the nation from a floating debt of a more manageable size. It is true that, if the supply of Treasury bills is going to be steadily reduced, the money market will be faced with the problem of a shortage of bills, which is already making itself apparent; but within reasonable limits the nation can fairly ask the market to find its own solution to that problem.

Progress of the Coal Bill.—On Tuesday the House of Commons in Committee embarked on the first of the more controversial parts of the Coal Mines Bill. The sections of the measure providing for the limitation of the statutory working day to 7½ hours (the miners' members, unfortunately, declined to accept any elasticity in the shape of a weekly maximum), and for the establishment of a National Industrial Board, had been passed without serious opposition before Mr Graham's visit to Geneva last week. There remained the new "amalgamation" proposals and the whole of Part I, which the Government had consented to postpone until the new clauses had been considered. The Reorganisation Commission got through with surprisingly little obstruction or criticism from the Conservative benches, and with the comfortable margin of 269 votes against 115 on the final division. An unsatisfactory obscurity in the clause defining the Commission's powers and functions was cleared up, and the probable rate of progress in amalgamation accelerated, by the acceptance of a Liberal amendment providing clearly that in cases where the Commissioners consider a merger to be desirable, they should inform the mineowners concerned, and if the latter—within a time limit approved by the Commission—fail to submit an amalgamation scheme, the Commissioners shall then, but not till then, frame a scheme themselves. The opportunity thus afforded for voluntary schemes (albeit under indirect stimulus) should be of value. Some doubts, however, may be felt whether the Government is wise in not excluding from the scope of compulsory amalgamation with other mines the pits belonging to, and supplying coal for use by, undertakings not solely or primarily engaged in coal production. The House agreed with Mr Graham that the Commissioners must be trusted to have common sense, but Parliament cannot

divest itself of responsibility for mistakes made under delegated authority, and though in some cases it might be an intolerable objection if a pit belonging to a "mixed" undertaking were left in the middle of an amalgamated group, there might be serious disadvantages, as Mr Runciman, Major Nathan and other speakers pointed out, in breaking up or obstructing by a purely "mining" amalgamation the working of a successful "vertical" combination. This point might well be reconsidered in the Report stage. In any case, the passage of the "amalgamation" clauses put a very different complexion on the Bill, and on Thursday, when a critical division took place on a Liberal amendment proposing that the power to regulate "production" should be deleted from the central and district Schemes, Mr Graham secured a majority of Government votes in favour of what he insisted was an essential element in a measure whose object was not only to achieve the eventual reconstruction of the industry, but to enable it to prevent a further fall in prices, and to pay for the cost of the shorter working day, which Parliament had decided to impose, during the transitional period before the full fruits of amalgamation were enjoyed. Mr Lloyd George's speech on the evils of quota restriction would have been convincing had the amalgamation clauses not been already inserted in the Bill; but temporary regulations on an admittedly enormous volume of surplus capacity, coincidentally with the rationalisation of industry on the lines proposed by the Liberal Party itself, is not the same thing as stereotyping the *status quo*, and Mr Bevan, one of the miners' members, carefully pointed out that in Westphalia, where the greatest degree of "concentration" had been achieved, the process had been based on a quota system regulated by a compulsory cartel. In a number of details the quota clauses of the Bill can probably be improved in Committee, but it would have been a pity if the Bill, which, in its remodelled form, does represent a serious attempt to rationalise the coal industry, had been killed out of hand on Thursday night.

The Tariff Truce.—Our League correspondent writes:—The Tariff Truce Conference has reached a difficult stage. About sixteen or seventeen States have expressed themselves as favourable in principle to the truce, but some of them make reservations, either depending upon which other States join in or upon exceptions in one form or another. It would, of course, be worse than useless to attempt to call a halt in tariff rises if it is accompanied by exceptions which interest each State. As against this support in principle, there is the direct opposition of Italy, Spain and Portugal, though Italy has since said she would be prepared to consider collective agreements if so conceived as to make it possible for countries not represented at this Conference to participate. The Conference appears to be departing a little from its original purpose, which was to endeavour to arrive at an agreement on a tariff truce and to determine the programme of subsequent negotiations. It seems now to be engaged upon a consideration of the substantive problems rather than of a programme of negotiations, although a certain degree of overlapping is inevitable. The situation at present is that some Ministers have left, with a request from the President that they should return by the time the committees have completed their work. Three sub-committees are now sitting; one is examining the articles of the draft convention immediately or remotely concerning exceptions; another is examining the articles concerning trade hindrances; and the third is examining the articles concerning the relation of the draft truce convention to bilateral most-favoured-nation treaties. Mr Graham has suggested, with regard to the future programme of negotiations, that there should be a series of conferences by groups of commodities. Hitherto the efforts in this direction have not been very promising, but it may be that better results can be obtained along this line if the Ministers themselves enter into conference instead of leaving it to their officials. It is not easy to say whether that would be preferable to efforts on a general European or even on a limited European scale, to reach tariff reductions and freer trade by, so to speak, global negotiations. Negotiations by categories or groups of commodities are inclined to be more complicated in matters of this kind, and for such negotiations to be really successful it will be essential to await the conclusion of the League's work on the unification of customs nomenclature. Some more light will undoubtedly be thrown on this in the course of the work of the committees, which has hardly yet begun.

LONDON OFFICE: 38, Threadneedle St., E.C.2
Every description of Banking Business transacted.

Sir Robert Horne and Protection.—Sir Robert Horne gave an address on the political situation at the Constitutional Club on Wednesday which was interpreted by some as a bid for the succession to Mr Baldwin's leadership and by others as an attempt to bridge in his own way the schism between the orthodox and the heretics. This point may be left to the gossips to decide. We are more concerned with Sir Robert's case for Protection. He based his speech upon all the old assumptions and trotted out all the old arguments. Because you can increase employment in a particular trade by giving it protection, therefore you can increase employment all round by protecting everything. In spite of the unanimous opinion of the Balfour Committee to the contrary, it is to Sir Robert a monstrous thing that we should import goods from countries where wages are lower than our own. Like other recent speakers, he talks as though trade were a form of war, and the fact that we import is a sign of our defenceless position. It is, of course, a sign of purchasing power, and in as much as we are importing without either borrowing from abroad or breaking the exchange, it is proved that we are paying for these goods by the exports of our industries, the services of our shipping or of our commercial community. If every speaker on this subject would murmur to himself, before he begins, that "trade is not war but a process of exchange, that in time of peace our neighbours are our customers and that their prosperity is a condition of our own well-being," we should at least have some common ground on which to start; and we could then proceed to the further point which Sir Robert discussed, namely, whether it is practicable or desirable that we should deliberately endeavour to divert the present current of trade, even at some sacrifice to ourselves, into Empire channels. This brings us to the point on which Sir Robert joined issue with an article printed in the *Economist* of July 20th of last year, in which we discussed the question of Britain's economic position *vis-à-vis* Europe and the Empire respectively. Sir Robert represented us quite fairly as holding the view that it is impossible for Great Britain to be either entirely within the economic orbit of the Empire or entirely within that of Europe. We agree with Sir Robert that it will be a very long time before a complete customs union in Europe is reached. It will be at least as long before there is such an organisation of the Empire, and in practice we have to consider how best we can secure outlets for our trade taking the world as we find it. As regards Europe, our argument was that we cannot disinterest ourselves from a continent adjacent to us to whom we sell one-third of our exports. Moreover, as we showed last week, while the proportion of our exports to the Empire has of recent years been slowly falling, the proportion going to Europe has risen. It is true that the proportion of our exports which goes to the Empire is higher to-day than it was before the war, but a more complete analysis leads to the conclusion that was put before the World Economic Conference by the British delegation,

namely, that while our exports to the Empire have grown, they have not grown so fast as the purchasing power of the countries of the Empire. In other words, we have not been holding our own in Empire markets. On the other hand, while, owing to the comparative stagnation of European economic life, our exports to Europe have not been rising very fast, we have succeeded in maintaining or actually improving on our proportion of the trade of Europe which we held before the war. It is to the interest of this country to encourage agreement in Europe which will reduce the existing high barriers and thus develop its prosperity, and it would even be to our benefit if Europe ever achieved the very difficult task of creating a zollverein, provided the single general tariff wall around it were a low one—which would, of course, mean our entry into these markets on better terms than at present. If there were a possibility that the world would one day be divided into three great economic units with high protective tariffs between them, it would be a different story. But for reasons which we have frequently given such a prospect is the wildest fantasy.

The Post Office and Wireless Telephony.—The Postmaster-General informed the House of Commons on Wednesday that the Government had decided not to utilise for the Post Office's wireless telephony services the beam stations leased to the Imperial Communications Company, but to concentrate instead on the Government's transmitting station at Rugby with its complementary receiving station at Baldock. According to a lengthy statement subsequently issued by Mr Lees-Smith, two independent experts, whom the Cabinet consulted, had reported that both the Marconi system and the Rugby system were capable of providing efficient long-distance services to the Dominions and foreign countries, but that, as regards future development, the Rugby system, which has lower aerial masts, would give equally satisfactory results with a smaller expenditure of money. Also, by grouping the services at one centre a smaller number of lines would suffice—786 miles of telephone circuit if the four services to India and the Dominions were worked through Rugby and Baldock, as compared with 4,910 miles if the I.C.C. stations were used. The company had asked a minimum rental of £40,000 per annum for the use of their beam stations, plus a royalty of 10 per cent. on the gross receipts above a certain figure; and an estimate of the cost of operating the same service from Rugby showed a saving on the above figure in the neighbourhood of £20,000 a year. The Postmaster-General referred in his statement to suggestions made in some newspapers that the Government had an obligation, in view of the recommendations of the Imperial (Wireless) Conference, to use the beam telegraph stations for telephone purposes. The Post Office, he said, had the right to use the stations, but it was not the intention either of the Conference or of the late Government to impose any such obligation. Finally, Mr Lees-Smith had little difficulty in disposing of the somewhat grotesque criticism that, in co-operating with the American telephone service, as it is bound to do in the working of an Anglo-American telephone service, the Post Office is "preferring to deal with foreign interests." The whole issue is involved in such highly technical considerations that it is difficult for the non-expert to take sides in the controversy between the Post Office and the I.C.C. If the Government have been well advised by their experts, the case for the present decision appears to be convincing on the grounds of greater economy and equal efficiency. The suggestion has been made that competition between an independent Post Office radio-telephony service and the wireless telegraph services of the I.C.C. would be injurious to Imperial interests. We are inclined to think that this argument cannot be seriously supported.

The Foreign Relations of Austria.—The Austrian Chancellor, Herr Schober, has been doing well for his country—to judge by the progress which Austria has made, under his auspices, in her relations with her two most powerful neighbours, Italy and Germany. He began by tackling the problem of Austro-Italian relations, which was the harder problem of the two; for here an ancient national feud had been aggravated by the sudden reversal of fortune at the end of the Great War, which placed a Tyrolese population under Italian rule, and then, by the establishment of the Fascist *régime* in Italy, which was followed by systematic and ruthless measures of "Italianisation" in the annexed Tyrolese territory. The first step taken here was the negotiation of an Austro-Italian pact of friendship and arbitration. After that, Herr Schober put an end to the irredentist propaganda which had been going on in Austria with the countenance of the authorities. His third step was to pay an official visit to Rome; and now, during his visit this week to Berlin, comes the welcome news of an answering gesture from the Italian side. Signor Mussolini has given an amnesty to all Italian subjects of South Tyrolese nationality who were serving sentences for political offences. This is good as far as it goes. Let us hope that it will be followed before long by a mitigation of the "Italianising" policy which has set the Southern Tyrolese in opposition to the Italian Government. Meanwhile, this week, Herr Schober has been visiting Berlin in order to discuss with the German Government one aspect of Austro-German relations. The problem of Austro-German relations is, of course, quite different from the problem of relations between Austria and Italy. Between Austria and Germany political feeling since the peace settlement has been fraternal. And if the mutual desire of the two peoples had free play Austria might have been admitted into the German Reich at any time during the past twelve years. The political problem here is created entirely by the opposition of third parties—primarily France and secondarily Italy, Czechoslovakia and Poland. On the other hand, if this foreign opposition had ceased and the *Anschluss* had been accomplished under the economic conditions at present prevailing, it seems probable that union with Germany would have been followed by a certain disillusionment in Austria; for the union might at first have aggravated rather than alleviated Austria's economic difficulties. The truth is that the economic relations between countries, unless they are deliberately taken in hand, are apt to go their own way, oblivious of political considerations. And since the war the trade between Austria (a small and relatively inefficient country) and Germany (a large and highly efficient country) has worked out distinctly to Germany's advantage. The main concrete object of Herr Schober's visit to Berlin this week has been to prepare the ground for the negotiation of an Austro-German commercial treaty which will give Austria a rather better economic bargain than she has obtained hitherto in her commercial dealings with Germany. As a result of the Austrian Chancellor's visit, this object seems likely to be achieved.

The Japanese General Election.—The policy of the Minseito (Liberal) Government in holding a general election at this time has been justified by the outcome. Mr Hamaguchi has been returned to office with an absolute majority of 80 over all other parties, and of 99 over the Seiyukai (Conservative) Party, whereas in the late Diet he had to carry on the Government with a minority of 60. The fact that he was able to do so showed, of course, that public opinion was behind him; and this public opinion is reflected in the composition of the new Diet more accurately than it was in that of the late Diet. The Naval Conference was not an election issue; nor, indeed, was any other question of foreign policy. For, in Japan, as in Great Britain, there is nowadays a substantial continuity in the conduct of foreign policy as between successive ministries. This is so even in regard to Japanese policy towards China—the most important and the most contentious of all the foreign affairs with which a Japanese Ministry has to deal. The way in which Mr Hamaguchi's predecessor in office, Baron Tanaka, handled the Tsinanfu incident and the *Anschluss* of Manchuria to the Kuomintang showed very clearly that a reversion to the policy of 1915 (the year of the famous Twenty-One Demands) is now out of the question. In the field of foreign affairs, the variations of policy that are open to any Japanese Ministry have come to be rather narrowly limited—though these variations are still sufficiently important to make it desirable in Japan, as in Great Britain, that the Conservative Party should not be in power. The point of general interest in the present election results is the approximation towards a two-party system in Japan at a time when that system has been breaking up elsewhere, even in its old strongholds, Great Britain and Belgium. The tendency in Japan comes out clearly from the figures:—Minseito, 273 seats; Seiyukai, 174 seats; Labour, 5 seats; Other groups, 9 seats; Independents, 5 seats. The discomfitures of Labour and of the Independents are significant. That of the Independents is certainly a healthy sign; for the successful candidates who have sat under that name seem often to have shown themselves somewhat mercenary when it came to the question of who was to count upon their support; and when they were numerically strong enough to hold the balance between organised parties, they made Japanese Parliamentary politics a good deal less representative of Japanese public opinion than they ought to have been. The set-back to Labour is marked by the defeats of Mr Abe, the Leader of the Social Democrats, and Mr Suzuki, the President of the Federation of Labour. It is to be hoped that the Japanese working-class finds itself genuinely represented in the new Diet by others besides the five members who are formally Labour men; for there is a great and growing class here, with serious problems of its own, which must find means of expressing and pursuing its legitimate wants through constitutional channels if it is to refrain from looking to unconstitutional methods. The Japanese police are remarkably sensitive to the possible spread of "dangerous thought." The best antidote to it is a healthy political life in which Parliament really fulfils in practice the functions assigned to it in constitutional theory.

Mr Snowden on the Budget.—Speaking in his constituency on Saturday, the Chancellor of the Exchequer admitted the possibility of a deficit in the national accounts for the current financial year. If there were a deficiency, he said, the Labour Party would not be responsible for it. The last Budget had been a fraudulent Budget. "The estimates of revenue were put at a figure beyond reasonable expectation, and the expenditure had been put down at a figure reduced beyond all reasonable expectation." Mr Snowden certainly has to face a difficult situation. According to the latest official return, ordinary revenue is £22½ million behind last year's figure, whereas Mr Churchill budgeted for a drop of only £12 million, as compared with actual receipts in 1928-29. Ordinary expenditure is £15½ million up so far. Mr Snowden did not mince words in his description of his predecessor's finance, but he might have added that the method of carrying over each year's surplus to a Suspensory Fund, instead of using it to redeem debt, is betrayed as unsound as soon as a deficit occurs and there is nothing to set against it. The Chancellor proceeded to drop hints about his expectation of continuance in office. Having taken up a duty and a responsibility, he said, he wanted to see it through. He could not see it through in one session of Parliament, or in two. It would take him three years to bring back the finances of the country to the condition in which they were when he left them five years ago, and he wanted an opportunity of doing that. If this is not bluff on Mr Snowden's part, it discredits the rumours that the Labour Government intends for tactical reasons to go to the country at a relatively early date.

Mr Churchill's Chauvinism.—The atmosphere of a Navy League meeting is heady air for an ex-First Lord of Mr Churchill's temperamental proclivities; and when desire to make party capital by attacking the Government on any and every issue leads to appeals being made to "Jingo" prejudice and suspicion, the results are wholly deplorable. In his speech on Wednesday Mr Churchill saw fit to arraign the Government for being alone among the Powers in presenting "an aspect of squeezability, of shuffling retreat, of precipitately proferred concessions" in the matter of reducing naval armaments. Mr MacDonald's proposals, he said, meant a "definite abasement" of our position on the seas of the world. Other nations were demanding larger navies; arithmetical parity with the United States would represent real naval inferiority for Great Britain; the Kellogg Pact had no bearing on strategic problems, and was a poor substitute for more cruisers. In short, Mr Churchill's contribution to the furtherance of international amity was a speech whose burden was praise of armaments for armaments' sake. Of this mischievous nonsense it should be enough to say that the speaker represents in this issue a negligible fraction of the country's opinion.

Production in 1929.—Industrial activity last year, as reflected in the Board of Trade index of production, was 5.8 per cent. greater than in 1928 and 4.5 per cent. greater than in 1927. As the quarterly figures indicate (those of the London and Cambridge Economic Service have been added for comparison) production was more steadily maintained in 1929 than in 1928:—

1924 = 100.

	March Quarter.	June Quarter.	September Quarter.	December Quarter.
Board of Trade—				
1928	109·3	103·6	100·2	108·4
1929	110·4	111·9	110·6	113·5
London and Cambridge—				
1928	105·7	103·7	95·4	105·2
1929	108·3	111·0	108·2	115·0

There was no decline in the second quarter of 1929 corresponding to that in 1928, and the decline in the third quarter was slighter, with a subsequent recovery to a much higher level than in the preceding year. The second table shows the figure for the respective groups in each of the last three years and in the last quarter of 1929:—

Group.	Year 1927.	Year 1928.	Year 1929.	1929 Dec. Quarter.
1. Mines and quarries	94·3	89·2	96·6	100·3
2. Iron and steel and manufactures thereof	110·0	102·3	114·0	112·2
3. Non-ferrous metals.....	116·9	119·3	120·5	123·0
4. Engineering and shipbuilding	115·2	113·1	120·9	119·6
5. Textiles	101·6	99·9	98·5	100·7
6. Chemical and allied trades.....	105·2	110·3	112·5	111·5
7. Paper and printing.....	(*a*)	(*a*)	(*a*)	(*a*)
8. Leather and boots and shoes	107·7	102·0	98·5	97·9
9. Food, drink and tobacco	99·7	101·9	106·0	105·7
10. Gas and electricity	119·7	126·0	135·7(*b*)	(*b*)
Total of manufacturing industries (2–10)*	109·9	109·4	115·3	116·9
Total of all groups (1–10)*	106·8	105·5	111·6	113·5

* Including various industries not specified above.
(*a*) Not fully available. Returns received included in general index.
(*b*) Not available. Provisional estimate included in general index.

Over the year as a whole the greatest improvement is shown by the mining and iron and steel industries. The output of coal was about 8 per cent. greater in 1929 than in 1928. Electrical engineering, shipbuilding and marine engineering are mainly responsible for the improvement in group 4. The improvement in the boot and shoe industries was more than offset by a decline of nearly 13 per cent. in the index for leather. Improvements in the linen and silk industries outweighed the decline in cotton and wool to a surprising extent, and in the December quarter the textile index rose by 9.3 points over the preceding quarter. The chemical index, though better on the year, compared very unfavourably in the last quarter with its level of 118.5 in

the September quarter and 115.1 in the last quarter of 1928. The London and Cambridge figures for the whole years 1927 to 1929 are 108, 102.5 and 111, showing a similar trend but a more marked drop in 1928. In detail, however, the movements of this index differ from those of the Board of Trade index. The level of its differently composed chemical group, for example, is the highest recorded, and its textile index, which does not include wool, is higher than at any time since the first quarter of 1927. Both indices agree, however, that 1929 was a year of greater and steadier activity than its predecessor, and that the last quarter of 1929 was the best in the period which they cover.

Organising the International Bank.—The arrangements for the establishment of the International Bank are proceeding according to plan. This week both Federal Chambers in Switzerland have taken the necessary steps to provide for the granting of the Charter to the Bank, and a meeting has been held at Rome attended by the heads of the five leading European banks of issue, together with a representative of the Governor of the Bank of Japan, at which the composition of the board was determined. The names of the German delegates are not yet announced, as the new Reichsbank Law, which will put the necessary pressure upon Dr. Schacht to participate, has not yet been passed. The representatives at this meeting decided to invite Mr Gates McGarrah, chairman of the board of the Federal Reserve Bank of New York, and Mr Leon Fraser, a New York lawyer, and former general counsel for the Dawes Plan, to be the American directors, and it is understood that Mr McGarrah will be appointed president of the bank and chairman of the board. The fact that the chairman of the Federal Reserve Bank of New York has been nominated may cause some surprise in view of the feeling in some quarters of America that the Federal Reserve Bank should not be drawn into too close an association with the new International Bank. But these nominations would obviously not have been made unless it had been ascertained that they were acceptable in America. Indeed, Mr McGarrah has announced his acceptance of the nomination, and has paid a farewell visit to Mr Hoover before leaving for Europe. As he will be resident in Europe, he will resign his position on the Federal Reserve Bank. Mr McGarrah, who is a member of the Transfer Committee under the Dawes Plan, is known to those concerned with international affairs as a banker of the highest standing. To undertake the primary responsibility for inaugurating and carrying through its initial difficulties so great an experiment as this International Bank, might have been thought a task to tax the energies of a much younger man than Mr McGarrah. But the new president will have at his right hand very powerful support in Mr Leon Fraser, and it is an asset of the greatest importance that the bank should be guided by a man whose presence ensures the closest contact with the Federal Reserve System. The nominees of the other five central banks represented will be as follows:—

Great Britain ...	Mr Montagu Norman and Sir Charles Addis;
France	M. Emile Moreau, Governor of the Bank of France, Baron Brincard, President of the Crédit Lyonnais, and the Marquis de Vogüé, President of the Suez Canal Company;
Belgium	M. Franck, Governor of the Bank of Belgium, and M. Emile Francqui, Belgian financier, who were both members of the Young Committee;
Italy	Signor Stringher and Signor Beneduce, Professor of Political Economy and a member of the International Bank Organisation Committee;
Japan	Mr Tanaka, London representative of the Bank of Japan, and Mr. Nohara, London manager of the Yokohama Specie Bank.

It will be remembered that the statutes provided for the possibility of appointing directors from other countries than the seven founder Powers. But the original directors will presumably prefer to wait until their own numbers are complete and the bank actually established before taking steps to co-opt additional members of the board.

Cotton Trade and Short Time.—The members of the Master Cotton Spinners' Federation who use American cotton have decided against organised short time. A fortnight ago it was decided to take a ballot on the proposal to curtail production by 13 hours per week—*i.e.*, that the mills should run 35 hours instead of 48—for eight weeks from March 3rd. At the beginning of this week it was announced that the ballot showed 58.82 per cent. in favour, 16.14 per cent. against, and no replies from 25.04 per cent. According to the rules of the Federation, no organised short time can be put into force without the support of members owning 80 per cent. of the spindles, and, in view of the result of the ballot, the committee decided to take no further action. Owing to repeated reports of severe trade depression in Lancashire, especially in the American spinning section, some people outside the industry may be surprised at the voting; but the fact of the matter is that spinning employers have realised for some time that organised curtailment of output is not a remedy for the difficulties which face the trade. Some surprise has been expressed in trade circles at the large number of members who did not vote, but it is understood that many firms did not want to vote against the proposal, yet at the same time could not support it, so that they did not return the voting paper.

Cotton Trade Co-operative Enterprise.—At the end of last week the Joint Committee of Cotton Trade Organisations announced that arrangements had been made for the formation of the British Cotton Textile Association. The aim of this new organisation is to make a further effort to increase Lancashire's trade in bulk standard cotton goods, and the movement will have the support of all sections of the trade, including the operatives. The Association will facilitate and supervise the co-operation of firms in the different sections; it will translate the work of the various sub-committees of the Joint Committee into increased trade for Lancashire by bringing it to the notice of those most likely to be interested and by arranging for the production of chosen cloths by syndicates working under its auspices. One of the chief aims will be to secure economies incidental to mass production. It is urged that the scheme will present the most efficient and economical way of restoring the former strength of Lancashire in meeting the world's demand for cheap standard goods, and for this purpose it will treat all the processes and services involved as part of a single transaction, beginning with the purchase of raw cotton and only ending with the goods in the final state, ready for the consumer. This further effort towards co-operation in the Lancashire cotton trade has been well received, and it is understood that in the near future a definite attack will be made upon a particular foreign market with a standard cloth produced under the joint auspices of spinners, manufacturers and merchants.

Another Wheat Slump.—The official action of the Canadian provincial governments and of the United States Federal Farm Board to support wheat holding organisations, which we recorded a fortnight ago, has not succeeded in raising the level of prices. Our forecast that they would sag still further has, in fact, been fully justified. No vigorous export demand has manifested itself in North American markets, and the sellers' position naturally grows weaker day by day as storage space becomes filled up and interest charges grow more formidable. The following table illustrates the recent movement of prices:—

NEW YORK SPOT WHEAT PRICES.

	Cents per Bushel.	
1930.	No. 2 Hard Winter.	No. 2 Manitoba.
January 2nd	137⅜	155⅛
,, 16th	129⅜	141½
February 6th	122⅝	135⅝
,, 13th	125	137½
,, 18th	119½	129⅞
,, 19th	115⅞	126½
,, 20th	114½	123⅞
,, 21st	114½	127½
,, 24th	108½	121¼
,, 25th	107⅞	121
,, 26th	108½	121½

The rally which occurred at the end of last week on a bout of European buying lapsed entirely on Monday, when several big American holders are reported to have sought to cut their losses. A conference of the Premiers of Alberta, Manitoba and Saskatchewan was held on Saturday to discuss the wheat situation and the form of legislation embodying the promise of support to the pools, but it is doubtful whether governmental interference or the pools themselves can alter the consequences of world-wide over-supply of wheat. It is remarkable that although the 1929-30 crop was much smaller than that of the preceding year, the visible supply, according to *Bradstreet's* latest estimate, is now 369,960,000 bushels, against 313,301,000 bushels a year ago. The course of prices now depends principally on the forecasts of the new crop. If they are notably favourable, it is difficult to see how prices can even be maintained at their present level.

Reparation Payments in January.—The Report of the Agent-General for January shows that the balance of the fifth Dawes annuity was further reduced by Rm. 9,142,498 (less gains by interest and exchange amounting to Rm. 500,378) to Rm. 65,385,969. No part of the sum transferred, which was almost exclusively required for deliveries in kind, was taken by Great Britain. On account of the transition period annuity, Rm. 182,488,526 was paid by Germany in January, raising the cumulative total paid since September 1, 1929, to Rm. 831,097,841. Allocations from the January contribution for the service of the Dawes Loan and for distribution to the creditor Powers on the Young Plan scale, in accordance with the Hague Protocol of August, totalled Rm. 113,495,379. The sum remaining to the credit of Germany, contingent upon final acceptance of the Young Plan, was raised to Rm. 223,774,565. These figures exclude interest and exchange differences. Transfers in January from the current annuity totalled Rm. 146,112,779, including Rm. 8,329,450 for Great Britain, reducing the balance available for future transfer to Rm. 137,807,806.

German Film Industry.—A German correspondent writes:—There has been an interesting development in the situation in the German film industry described in an article in the *Economist* of December 14, 1929. At that time it was announced that the Commerz und Privat Bank had purchased on behalf of the Reich Government the majority of shares in Emelka, the second largest film concern in Germany. The reasons for this remarkable deal were mainly political; the Nationalist campaign against acceptance of the Young Plan was then in full swing, and when the Emelka shares suddenly came into the market the Government had reason to fear that they might pass into the hands of Herr Hugenberg, the Nationalist leader, and thus be added to his already formidable array of film and newspaper interests as a further political weapon. But while the purchase of the Emelka shares was considered unavoidable as a way out of a threatened emergency, few people believed that the Reich would retain this commitment after the political crisis had passed. A number of offers of purchase from both home and foreign interests were reported to be under consideration, but at a board meeting of the Emelka last week it was revealed that none of these offers would be accepted at present. Thus it would seem that the Government is really prepared to embark actively upon the strange enterprise of film production, though it is not yet known in what way and by which department it will exercise its control, nor whether any estimate for this commitment will be introduced into the Budget. At the board meeting a thorough reorganisation was decided on; Press reports state that arrangements have been made for Mr Dupont to become director of production for the company; the change-over to the "talkies" is to be accelerated, and previous losses are to be written off with more courage than has hitherto characterised balance sheets in the film industry. The accounts for the first half of 1929 which were laid before the meeting show a net loss of nearly £50,000 on the production side, in addition to a net loss of nearly £20,000 in the theatre business. Presumably the Government considers the risk of future losses a fair price for the political advantage of controlling a large part of film production and exhibition throughout the country.

Pearl Assurance Company, Ltd.—The results of the usual annual valuation in both the Ordinary and Industrial Life Branches of this company are set out below:—

	1927. £	1928. £	1929. £
Ordinary Branch.			
Surplus earned during year	662,638	837,363	980,508
Brought forward from previous year	67,934	73,798	113,113
	730,572	911,161	1,093,621
Allocations:—			
To Policyholders' bonus	504,572	617,375	684,132
,, Shareholders' account	126,143	154,344	171,033
,, Investment reserve fund ...	...	...	135,196
,, Staff pension fund	26,059	26,329	26,905
,, Carry forward to next year	73,798	113,113	76,355
	730,572	911,161	1,093,621
Industrial Branch.			
Surplus earned during year	252,552	359,334	1,004,895
Brought forward from previous year	82,685	86,296	96,959
	335,237	445,630	1,101,854
Allocations:—			
To Policyholders' bonus	...	...	506,671
,, Shareholders' account	175,000	275,000	340,000
,, Investment reserve fund ...	...	...	64,804
,, Staff pension fund	73,941	73,671	73,095
,, Carry forward to next year	86,296	96,959	117,284
	335,237	445,630	1,101,854

In the Ordinary Branch the reversionary bonus is maintained at the same rate as previously, viz.: 46s. per cent., calculated on the sums assured. The extraordinary increase in the surplus shown as having been earned in the Industrial Branch is the result of years of effort devoted to strengthening the basis of valuation. These measures have now been completed and the present surplus is the first fruits. The chairman's promise, in his speech at the last annual meeting, has been implemented, and a measure of profit-sharing for the policyholders has been inaugurated by the distribution of approximately one-half of the surplus earned. The sum distributed is being allotted to policies effected prior to 1923 in the form of a reversionary bonus equal to 16s. for whole life assurances subject to weekly premiums of 1s., and to 12s. for endowment assurances with weekly premiums of the same amount. In the Fire and General Branch the profits, as might have been expected, are on a reduced scale, but, nevertheless, together with interest earnings, contribute an aggregate sum of £47,757 to the shareholders' account. Since the end of 1928 the paid-up capital has increased by £280,000 to £1,060,000. Notwithstanding this, the rate of dividend has been maintained at approximately the same rate, viz.: 50 per cent., but the cost has increased from £298,000 to £476,000. In spite of a larger amount received in the form of single premiums, the new life business in the Ordinary Branch has declined from £12,080,000 to £11,653,000, but the Industrial Branch total has been slightly increased from £20,434,000 to £20,603,000. The expense ratio in the Ordinary Branch works out at 14.7 per cent., and in the Industrial Branch at 34.2 per cent., while the net interest earnings in the two branches combined represented £4 15s. 2d. per cent. on the average mean fund, compared with £4 15s. 11d. per cent. in 1928. The certificate

as to the basis of values of the Stock Exchange securities in the balance sheet is in the following form:—

"The values of Stock Exchange securities are determined under the Articles of the Company, by the Directors. Due allowance has been made for accrued interest, and the book values of these securities (which have been compared with the middle market prices as at 31st December, 1929) stand in the aggregate considerably below cost price."

The inadequacy of a statement in this form is scarcely worthy of a company of the size and standing of the Pearl.

Provident Mutual Life Assurance Association.—In the report just issued for the year 1929 the Association claims to have made steady progress and a record increase in funds of over £600,000. New policies for a total of £1,941,000 were issued, as compared with £2,273,214 in 1928. Although the volume of new business shows a large reduction, it is only fair to point out that 1928 was the last year of a quinquennial period and a year, therefore, which customarily produces increased new business. Actually the 1929 total compares favourably with the average new business for the period 1925-29. The expense ratio—*i.e.*, the ratio to the premium income of the expenses of management plus commission—works out at 13.6 per cent., compared with 14.5 per cent. in 1928, while the rate of interest is £4 16s. 8d. per cent. net, compared with £4 12s. 2d. per cent. net in 1928. Here again, it is necessary to say that the particular method of calculating the interest factor—a method common to all life offices—produced an artificially low rate in 1928. The balance sheet is interesting principally because it shows a further substantial increase in the amount invested in ordinary stocks and shares. At the end of 1925 the ordinary shareholdings stood at £225,000; at the end of 1928 this item had grown to £717,000; while the 1929 total has further risen to £1,013,000, or 14 per cent. of the total balance sheet assets. The Provident Mutual is thus now a strong advocate of the ordinary share investment policy, though it is understood that it confines itself largely to the ordinary shares of railway and other public utility companies. In view of the heavy depreciation last year in ordinary shares, it would be interesting to know if the new purchases were effected in the early part of the year before the slump or in the late autumn after the slump. Last year the chairman stated, in the course of his speech, that, apart from the investment reserve fund of £160,000, the market values of the Stock Exchange securities exceeded the book values by the sum of £320,000.

Overseas Correspondence.

UNITED STATES.—SHARE MARKET—INDUSTRY—WHEAT STABILISATION CORPORATION—MONEY MARKET.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 14.

DURING the past week Wall Street has been impressed with the contrast between a continuance of strength in shares and the pronounced weakness in commodity prices throughout the world. The share market has not been as buoyant as during the few weeks preceding; but the undertone has remained firm, despite rather general expectations of a "technical reaction." The market has had the support of the reduction in discount rates throughout the Federal Reserve system, the 4½ to 5 per cent. basis having been replaced by 4 to 4½. It also has had the assistance of continued bullish news from the steel industry, where production has increased further to close on 80 per cent. of capacity. On the other hand, it has not escaped attention that wheat and cotton have fallen to the lowest prices for the year, and to levels substantially below those existing a year ago. Thus there has been the spectacle of a distinctly encouraging upswing in steel output (and in that of automobiles) coinciding with a continued weakness in commodity prices that might be taken as forecasting a period of depression. In these circumstances a very considerable diversity of opinion as to business prospects exists, but the general frame of mind is hopeful.

The optimists take the view that the pick-up in steel indicates that the corner has been turned, and that other industries will soon fall in line. The more conservatively inclined point out that there are some reasons for thinking that the extent of the rebound in steel production may be misleading. They argue that stocks of steel products, and of steel in the various processes of manufacture, were reduced to abnormally low proportions at the end of 1929, so that a certain amount of replenishment on this account would be natural. They also point out that the steel industry may still be running on a part of its old momentum. In this connection, however, it may be noted that the unfilled orders of the United States Steel Corporation increased 51,000 tons in January, and at 4,468,000 tons were the highest for any month-end since January, 1926. The increase on the year amounts to about 360,000 tons. The railroads continue to be the steel industry's best customers, but agricultural implement companies are running at close to capacity, and the automobile industry increased its requirements during January. The building industry is poor in the residential department, but its activity is sustained by public works and public utility construction. Output of structural steel is large—somewhat larger, it appears, than current lettings of contracts for this kind of material. The higher rate of activity in steel has steadied steel prices, but has done no more than that.

Automobile production during January was about 300,000 cars and trucks, as compared with 125,000 in December and with about 425,000 in January, 1929. The increase in output has been in the low-priced cars, chiefly in Fords and Chevrolets. The high-priced cars have been selling poorly, and few of the medium-priced makes are doing as well as a year ago. Then there is the question how well the cars that are being made for dealers' stocks will sell to consumers. It must, however, be admitted that the manufacturers are anxious not to overload dealers, who are struggling with the used car problem, and that the large production in January must to some degree, at least, reflect the response that dealers are having from their customers. Chrysler earnings for 1929 amounted to $21,902,000, as compared with $30,991,000 in 1928, when earnings from the Dodge properties were included only from August 1st to the end of the year. In contrast to the low-priced field, where prices were reduced early in the year, there have, recently, been a number of price advances in the medium and high-priced ranges.

Copper statistics for January revealed another increase in stocks, despite a further reduction in output. Stocks of refined in the hands of North and South American producers stood at 203,000 tons on February 1, and the January increase of 32,000 tons compared with one of 45,000 tons in December. Stocks of blister were 269,000 tons, the increase here during January amounting to only 1,400 tons. North and South American production in January amounted to 132,000 tons, as compared with 138,000 in December and with 157,000 in January, 1929. If the curtailment that became operative on January 15th had been effective during the whole month, January production would have been 126,000 tons. Shipments during January meanwhile increased to 100,000 tons from 93,000 in December. Thus production has been reduced substantially but not enough to meet the still subnormal rate of shipments. At present the producers give every indication of a firm intention of maintaining the 18 cent price. They believe that as the spring demand for the metal materialises and as the business revival gathers strength, shipments will overtake production and the stock position will be strengthened.

A fair rally in cotton and wheat coincides this week with the formation of the Farm Board's Wheat Stabilisation Corporation. The corporation proceeded to buy cash wheat on several markets, and its demand for funds forced the Treasury to make an unexpected offer of $50,000,000 in bills dated February 18 and maturing May 19. Bids for these bills were to be received up to February 14. The Treasury had evidently expected to carry on until the March 15th tax date without financing. Meanwhile there is considerable comment on the ineffectiveness of the Board's earlier attempts to support wheat prices by offering to lend money to co-operative associations on the basis of $1.25 a bushel of wheat. There is some speculation as to whether the Board has in mind the fathering of a cotton stabilisation corporation. The whole business is much disliked in conservative quarters. At the same time, the decline in wheat prices has to some extent turned the farmers against the Farm Board and the Co-operatives.

This week's bank statements are devoid of striking changes. Having lowered its discount rates, the Federal Reserve system is evidently inclined toward further watchful waiting. There are further evidences that the stresses within the system are considerable, and that prompt action by the regional banks is hindered by the board at Washington.

FRANCE.—POLITICS—REVENUE—FOREIGN TRADE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

PARIS, February 26.

M. CHAUTEMPS'S ill-advised decision to form a Ministry dependent on the support of the Socialist Party (after M. Tardieu had rather naturally refused to co-operate with the combination who had kicked him downstairs) resulted in a disaster last night, when the new Ministry came before the Chamber for the first time and was defeated by 15 votes on a division in which 569 out of a total strength of 597 deputies voted. The Loucheur Radical Left group, four of whose members (including M. Loucheur himself) had seats in the new Cabinet, was again sharply divided, 25 of the 51 voting against the Ministry, 20 for, and six abstaining. The outstanding factor in the brief debate was the attitude of M. Franklin-Bouillon's little group of 15 members, the Social and Radical Left, whose strenuous leader insisted that, in view of the very slight superiority of the Moderate half of the Chamber over the Left wing, as the result of the 1928 elections, it was useless for either to continue to manifest an intransigeant attitude, except at the cost of general chaos. M. Franklin-Bouillon urged both main sections to bury the hatchet and constitute a Ministry of Concentration, relying on the whole of the centre groups, and barring only the extremists at either end. This would be to reconstitute the situation that prevailed under M. Poincaré's recent Ministries, until the Radical Socialists, as the result of a vote taken at the end of their Angers Party Congress, compelled M. Herriot and his three Radical Socialist colleagues to withdraw from the Cabinet.

To the impartial observer this would appear to be the only possible solution of the present chaotic situation. From the international point of view it would ensure continuity of policy, so far as France is concerned, as M. Briand would almost certainly remain at the Quai d'Orsay. On the other hand, it would leave French policy at the naval disarmanent conference exactly as it was when M. Tardieu was seized with his unfortunate attack of *grippe*. M. Chautemps's declaration of policy yesterday made it clear that the Radical Socialist Ministry stood absolutely four-square with their predecessors on the French memorandum of December 20th, and everything confirms that whatever Cabinet may now be formed will take the same line. The President of the Republic this morning, in accordance with practice, summoned M. Tardieu, as the head of the principal Opposition group that brought about the late Government's defeat, and invited him to form a Ministry. M. Tardieu, with characteristic tact, postponed definite acceptance until he had consulted M. Poincaré, whom all parties recognise as the one statesman best fitted to take charge in present circumstances. M. Poincaré was compelled to decline, from the fact that his state of health will prevent any return to activity for some months yet, whereupon M. Tardieu formally accepted the task. It is generally believed to-night that before mid-day to-morrow he will have succeeded in forming a Cabinet that will be assured of a stable majority, and that it will be found possible after all to complete the Budget discussion before the new financial year begins on April 1st.

In present circumstances it is difficult to see how the Budget can be got through without being to a large extent recast. The demand for much more liberal reduction of taxation has now become so general and insistent, particularly in view of the country's economic outlook at present, that relief can only be accorded by a further substantial scaling down of proposed expenditure, unless the accumulated reserves of the Treasury are to be utilised for the purpose in view.

The probability of gold exports from this country in the near future, which was foreshadowed here last week, was confirmed by the fact last Saturday, when a small parcel of about £250,000 was withdrawn from the Bank of France and consigned to Berlin. The exchange rate for the mark has stood at 610 in Paris for the past two or three days, however, and this level, although it represents gold export point as accepted here, is insufficient to make further withdrawals on German account profitable. The dollar exchange, although it reached gold export point (25.57½) a few days ago, has since strengthened and closed to-night at 25.57, after 25.57½, which leaves gold movements from Paris to New York again impracticable. United States financial leaders are stated to regard a possible influx of French gold with some alarm. Mr Harrison, the Governor of the New York Federal Reserve Bank, is said to be on his way to Europe for conferences in regard to the gold problem with both the Bank of France and the Bank of England.

The revenue continues to increase. The January return shows a total yield of 4,469,984,000 francs, of which 4,420,158,700 francs were from normal and permanent sources (exclusive of the revenue from the Postal Department, and from the tobacco monopoly and the special taxes applied to debt extinction purposes through the Caisse d'Amortissement), as against 4,250,000,000 francs in January, 1929, and 3,412,000,000 francs in January, 1928. The fact that the January yield exceeds appreciably the average of the previous twelve months points to a practical certainty that it will furnish the Treasury with a substantial surplus over expenditure, even taking into account the recent reductions of taxation.

The foreign trade returns for January show total imports of 4,778,000,000 francs, and exports of 3,714,000,000 francs, representing an adverse balance of 1,063,000,000 francs on the first month of the year, following a deficit of 8,212,000,000 francs for the twelve months of 1929. These totals include German reparation payments in kind. Imports in January were 345,000,000 francs less than in January, 1929, although 900,000 tons more in bulk, this increase in tonnage being due to larger imports of raw materials (which were 950,000 tons larger, but 229,000,000 francs less in value). Imports of manufactured goods were 66,000 tons greater and 217,857,000 francs larger in value, while foodstuff entries were lower by 333,500,000 francs and 121,847 tons. Exports of foodstuffs were 51,000,000 francs and 46,150 tons larger and of manufactured goods 100,000,000 francs and 25,000 tons larger. Exports of raw materials fell off by 139½ millions and 165½ thousand tons. While imports had a value of 345,000,000 francs (or 7 per cent.) less, exports were 15,000,000 francs larger. French foreign trade, on which there has been an adverse balance for about two years, now appears to have more or less returned to what was its normal situation before the war. In January, 1913, there was an adverse balance of 1,450,000,000 francs (present currency), which corresponded to about 40 per cent. of the imports. Last month's adverse balance was equivalent to about 20 per cent. of the present volume of imports.

Production continues on the up-grade. The general index figure for December (1913=100) is returned as 144, as against 143 in November, and a mean of 127 throughout 1929. The motor car industry is given a figure of 613, against 598 in November; rubber as 962, against 957; paper industry, 121, against 116; leather, 105, against 103; engineering and textiles being unchanged. The only declines are in the metallurgical industry (which has dropped three points to 130, owing to

the 10 per cent. production cut order by the European Steel Cartel as from November 1st), and in extractive industries (129 to 126). January and February production figures in certain industries are not expected to be as good. The revenue from the tourist industry is reported to have been about 1,000,000,000 francs less during 1929 than in 1928, and the winter season this year is considerably below the average, owing to the unsettled financial situation in the United States and Great Britain. This has had a directly adverse effect, especially on the Paris region.

GERMANY.—PUBLIC FINANCE—UNEMPLOYMENT FUND—GERMAN-POLISH TREATY—MUNICIPAL LOAN—BANK AMALGAMATION.

(FROM OUR CORRESPONDENT.)

BERLIN, February 25.

THE acute crisis in the Reich's finances at the end of the year was met temporarily by a credit granted by the banks, and subsequently by the sale of Treasury certificates. Since then efforts have been concentrated on the placing of the finances on a healthy basis in the 1930-31 Budget. If the necessary liquidity of the national treasury's finances is to be secured, it is urgently necessary to reduce the floating debt, which still amounts at the end of each quarter to some 1,700 million marks. The Reich is to receive in the coming summer the first instalment of the Kreuger Loan (roundly 200 millions), and the Minister of Finance may possibly succeed in discounting the second instalment. The budget for 1930 also contains an extraordinary amortisation fund of 450 million marks, required by a law enacted in December at Dr. Schacht's instigation. Hence the floating debt will be reduced in the course of the fiscal year 1930-31 by at least 650 and possibly by 850 million marks.

This will be sufficient if it be carried through. But if it is to be carried through, it will be necessary to make quite certain that the 1930-31 budget is balanced. The Minister of Finance, Herr Moldenhauer, seems to have been conservative in his estimates of receipts and expenditures, and the result is that despite the reduction of the reparation payments under the Young Plan, a considerable amount of new taxes will have to be imposed. The Minister's original plan was as follows:—

Increased expenditures and decreased receipts as compared with budget of 1929.	Mn. marks.	Resources.	Mn. marks.
Payments to amortization fund	450	Savings under Young Plan	700
To cover 1928 deficit	154	Special credits for unemployment insurance	250
Contribution to unemployment insurance	250	Miscellaneous savings	80
Reduced tax receipts	230	Increased taxation	370

The Finance Minister's negotiations with the parties upon which he depended to assure his programme encountered great difficulties from the beginning. The present coalition, which includes the parties from the German People's Party to the Socialists, is at bottom still merely an experiment, although it has been in existence for almost two years. It has hitherto been held together by the necessity of achieving a new regulation of the reparation question. Now that this has been reached through the Young Plan, the right and left wings are tending apart. The budget problems, therefore, disclose themselves as a dangerous political issue—and this is especially so because no one appears hitherto to have had the ability and courage to set financial reform before the German people as an imperative task, and thus to rouse public opinion to political activity in aid of the Government's efforts. In order to reduce the political difficulties it was decided at the outset to include the sum for covering the 1928 deficit in the contribution to the amortisation fund.

The Minister had desired to raise the special credits for unemployment insurance by a sort of forced loan from the State invalid and old-age insurance departments. The plan was bitterly opposed by the Socialists, and, in fact, it did create misgivings. For the supplementary payments for unemployment insurance may not be made by borrowing, and, moreover, the sums would have been withdrawn from housing, which has been largely dependent on credit from the insurance organisations. All that is left of this plan is that the insurance department will voluntarily buy a part of the preferred German railway shares held by the Reich—which receives an option for their repurchase— and the money thus secured is to be used for unemployment insurance. There has been some consideration of a plan to leave it to the unemployment insurance department itself to cover its remaining deficit and to see how it can balance its own budget for the coming years. But the Socialists oppose this also, and it is doubtful whether any progress can be made along this way.

It is also doubtful whether the Minister of Finance can gain the support of a majority of the Cabinet and the Reichstag for all his proposals for economies as compared with the expenditures in 1929. But at best, despite the elimination of the deficit of 1928, the sum of roundly 300 millions will have to be covered by new taxation. An increase of the tax on beer is to bring 180 millions of this, an increase of taxes on tea and coffee 50 millions. How the remainder is to be raised is still not clear. The Socialists are demanding an " emergency sacrifice " by payers of income tax, since they are unwilling to have the budget put on a sound basis merely through taxes on articles of consumption. But the German income tax is already so high that a reduction is necessary for the formation of new capital. More can be said in favour of a special contribution by the civil service officials to the unemployment insurance funds, since the deficit in the budget is in considerable part due to the salary increases granted in 1927. The negotiations concerning the financial problems are adversely handicapped by the fact that the fate of the coalition depends on them, and that, gladly as the parties on the wings would shake off responsibility, it is impossible to see how any other coalition could be formed.

Another source of trouble for the Government is the treaty with Poland. Poland, taking advantage of every possible legal technicality, has expropriated German property in the ceded districts in a particularly ruthless manner, and in many cases practically without any compensation, since the property was sold for a song. This has given risen to large German claims for indemnity, but the Poles will not acknowledge them. The Hague Court of Arbitration took up for consideration these disputes and other German claims for indemnity for property connected with the cession of territory, but it has as yet reached no decision concerning the typical cases. The Young Plan, as will be recalled, contemplated that Germany should reach an agreement with Poland in these matters. After wearisome negotiations the two governments reached an agreement under which Poland abandoned the right to make further expropriations, which would assure the existence of about 12,000 German settlers in Poland, and Germany for her part surrendered her claims for indemnity for former expropriations and other legal claims.

Strong opposition to this treaty is now being shown in the Reichstag, nor does this come merely from the German National opposition, but from all parties, and especially from the German People's Party and the Centre. Nor is this opposition based merely on sentimental grounds, but on very grave doubts as to whether responsibility can be assumed for the surrender by Germany of such important and well-founded claims in view of the Reich's financial situation. The Government has thus far maintained its position that the treaty must be disposed of together with the Young Plan, but it is doubtful whether it will be able to carry its point.

The City of Berlin desires to raise a 45-million credit from a consortium of large German banks for carrying out urgent building plans. The conditions are anything but favourable. The interest rate will be about 9½ per cent. The city pledges its holdings of shares of the Deutsche Gasgesellschaft (German Gas Company). At the same time, 8 per cent. Municipal Treasury certificates, payable on October 1, 1933, will be issued at a subscription price of 95½. The proceeds of these certificates are to be handed over to the consortium and to be regarded as an advance repayment of the bank credit, which is otherwise to run until July 1, 1931. The Berlin City Council has approved the issue, but it has still to be approved by the State authorities.

Germany's two largest mortgage banks—the Preussische Central-Bodenkredit-A.G. and the Preussische Pfandbriefbank—have just decided to combine. The amalgamation was prepared for months ago, but this is only the fourth case of a fusion of mortgage banks for 30 years. The Preussische Pfandbriefbank has already taken over two other banks, the Roggenrentenbank, which was founded in the inflation period, and, a year ago, the Preussische Hypothekenaktienbank, which was controlled by Ivar Kreuger. When the fusion took place Kreuger retained a qualified minority of 25 per cent., and it is to be assumed that he retains it in the combined bank. The new institution will have a share capital of 36 million marks and 27 millions of liquid reserves, though before the two banks had, respectively, 25 and 18.2 millions of stock. But the main stockholders of the Pfandbriefbank already possess about 8 millions of the Centralbodenkredit, and thus the new institution can, with a smaller capital, handle a circulation of almost a thousand million mortgage bonds and municipal obligations. This means an increase of its earning power. Both banks pay dividends of 12 per cent.

ROUMANIA.—INTEREST PROBLEM—MORTGAGE CREDIT—NATIONAL BANK—COMMERCIAL TREATIES—TREASURY.

(FROM OUR CORRESPONDENT.)

BUCHAREST, February 20.

AN active campaign is being carried on against the high rate of interest charged in Roumania at present. Resolutions condemning this practice are passed by the chambers of commerce, and by the unions of commercial, industrial and other bodies interested in the question. The disastrous effect of these charges on commerce and industry, and on the whole economic life of the country, cannot be denied, but it is striking that so far no practical solution of the problem has been found. The Government has now stepped in, and has asked the large banks of Bucharest and the provinces not to charge more than 18 per cent. per annum. As a matter of fact, the principal banks have not charged more than this rate for some time, several of the Bucharest institutions have even reduced their charges to an average of 16 per cent. Nothing has been gained, therefore, by this step of the Government. The high rates to which objection is taken are charged by the small banks, and it must not be overlooked that a considerable proportion of the rates applied by them is represented by the risk which they incur in granting the loans. The insecurity of the economic conditions prevailing in this country at the moment justifies these heavy rates to some extent at least. Competition has already brought down the interest rates of the principal banks on the better class business which falls to them; competition will eventually reduce the charges of the smaller banks.

A plan to relieve the critical situation of mortgaged property has been suggested by the Government to the principal banks. A Temporary Mortgage Credit Institute is to be formed for the purpose of taking up abnormal mortgages at a reduced rate of interest and of facilitating their transfer to the rural and urban land banks and to the proposed Agricultural Credit Bank. It is to have a duration of three years with the option of extending the period to six. The capital of 250 million lei is to be subscribed by the large banks; additional resources are to be found by the issue of bonds in the internal market for an amount not exceeding 500 million lei. It cannot be said that the scheme is greeted enthusiastically by the banks who will be called upon to subscribe the capital. The bonds, which are to be guaranteed by the State, will be exempt from all taxes and will have to be issued on about a 9 per cent. basis; this will mean that loans can-

ANNUITIES
are usually purchased for those to whom a guaranteed income is a necessity. The Society has long been associated with Annuity business, and the special facilities available for the payment of Annuities commend it to those seeking Ease, Contentment, and Safety.

ASSURANCE SOCIETY LIMITED
10 Fleet Street, London, E.C.4
Assets Exceed £21,000,000.

not be granted much below 13 or 14 per cent. Besides, the placing of the bonds will not be an easy matter. It will be interesting to watch the development of the scheme.

The National Bank has closed the year 1929 with a net profit of 188 million lei, against 191 million lei for 1928. After appropriating certain amounts to reserves and other funds, in accordance with the statutes, there remains sufficient to pay a dividend of 480 lei per share of 3,000 lei. As an interim dividend of 150 lei was paid in August last, and 84 lei must be deducted for taxes, there will be a final distribution of 246 lei per share. The gross profit amounted to 958 millions, the general expenses and amortisations to 770 millions, against 689 millions and 537 millions respectively in the previous year.

Discounts on December 31, 1929, amounted to 8,765 million lei, comparing with 9,286 millions on December 31, 1928. The difference of 521 millions is represented by a fall of the discounts in the central institution of 1,527 millions and an increase of the discounts in the provinces of 1,006 millions. The discount rate is now 9 per cent., to which figure it was reduced from 9½ per cent. on November 26th last. The average circulation during 1929 amounted to 20,393 millions against 21,160 millions in 1928. The proportion of the total stock to the liabilities was 30.10 per cent.; the lowest figures during the year were 33.42 per cent. and 26.48 per cent. in March. The report lays stress on the success of the stabilisation of the lei, which is now assumed to be safe. The change from the state of immobilisation in which the bank found itself before the introduction of this measure to the normal function of an issuing bank has practically been completed during the year.

On March 1st the term expires during which commercial treaties should have been concluded in accordance with the provisions of the Customs Tariff of last summer. As it has not been possible to come to an agreement with the various countries, the period has been prolonged to May 1st. It is particularly in the discussions with Germany that difficulties have arisen on account of the raising of the German import taxes on agricultural produce, principally barley. Germany has always been one of the chief buyers of Roumanian barley, and the increase of the German import tax on this article has hit the Roumanian producer very hard. This is to be deplored in view of last year's rich barley crops. The question is of the greatest importance for Roumania, as the country has already suffered severely from Canadian and Argentine competition and is further menaced by possible Russian exports.

The legislation against income tax evasion is bearing good fruit. The number of income tax declarations handed in in Bucharest alone is 50 per cent. larger than last year. A considerable increase in the yield of this tax can be expected. Treasury receipts in the new year are said to progress very well. If expectations are realised there is hope that in August next a reduction of taxes may be made by the Minister of Finance. The importance of such a measure cannot be exaggerated. Removal of the additional taxation introduced in the course of last year would cause considerable relief to trade. The success experienced by Roumania at the Hague Conference with regard to payments under the Young Plan and Eastern Reparations has caused considerable satisfaction and means a welcome gain for the

Roumanian Exchequer. Good results have also been obtained by the realisation of petroleum concessions. The policy of disposing of these concessions in accordance with the provisions of the new Mining Law is actively pursued by the Government. On the whole, Roumania's finances are at present in a healthier condition than they have been for a long time past, and one of the principal foundation stones for economic recovery has thereby been laid.

Meanwhile, present conditions are still very difficult. As was expected, the economic crisis is beginning to affect the banks. The trouble has started in Timisoara, where the important provincial bank, the Banca Timisana, was obliged to close its doors, happily only temporarily owing to the intervention of the National Bank. Difficulties are also being experienced in Jassy, and it is not unlikely that other centres will follow suit. The responsible circles, however, are well aware of the perilous situation, and it may be assumed that timely measures, such, for instance, as the amalgamation of small institutions under a strong lead, will avert serious danger.

CANADA.—PARLIAMENT—BROKERAGE SCANDALS—RAILWAY DEVELOPMENTS.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 11.

THE Federal Parliament is due to reassemble on February 20th. The King Government will not be in any danger of defeat on the floor of Parliament, but it can expect to be pressed hard by the Opposition, who are in a militant and confident mood and feel that the tide of public sentiment is now definitely running in their favour. It is still uncertain whether Mr Dunning, the new Finance Minister, will undertake any comprehensive measure of tariff revision. In a speech delivered at Regina on February 6th, he proclaimed himself a low-tariff man and declared that the Liberal policy would be to keep the tariff as low as possible with proper regard for the interests of the producers, consumers and industry generally. He also argued that a general increase in the tariff would offer no panacea for the ills from which Canada is suffering, and pointed out that high protectionist countries like the United States and Australia had at present relatively a worse problem of unemployment than the Dominion. The Liberal Press has strongly commended his speech, but Conservative papers have derided it as fresh evidence of the impotency of the King Government to deal with the situation which will be created by the passage of the Smoot-Hawley Tariff Bill. The *Montreal Gazette* characterises the speech as an attempt to hold western Liberal support, but regards it as a serious matter for the Dominion as a whole, and especially for the great industrial provinces of Ontario and Quebec, that the Finance Minister should take such a nebulous line. The Conservatives are certain to raise the tariff issue soon after Parliament meets, and other questions, which will provide material for sharp controversy will be the Government's plan for the control of radio broadcasting, the proposed ban upon liquor exports to the United States, the reorganisation of the capital structure of the Canadian National Railway and the revision of the system of soldiers' pensions. There are also likely to be interesting debates upon the report of the special conference which has recommended a series of adjustments to bring the legal arrangements of the British Commonwealth into greater conformity with the constitutional position affirmed by the resolutions of the Imperial Conference of 1926.

On February 10th there opened in Toronto a conference of the attorney-generals of six provinces which are interested in the brokerage scandals, and two others, Nova Scotia and Prince Edward Island, sent notification that they would accept any recommendations made by the conferees. Colonel W. H. Price, the Attorney-General of Ontario, presided, and some chartered accountants, who had been making investigations into the books of the brokerage houses involved in the scandals, gave an account of the results of these investigations and offered suggestions about amendments which were necessary to meet the situation. Spokesmen of the Toronto Stock Exchange, the Standard Mining Exchange and the Vancouver Stock Exchange presented their case, and later on representatives of the banking interests will be heard. The chief aim of the conference is to secure uniform legislation throughout the Dominion which will prevent "bucketing" and illegal short selling by brokers. For this purpose not only will such Security Frauds Preventions Acts as different provinces have on their statute books be amended, but there will have to be amendments to the Companies Acts of all the provinces, the Dominion Companies Act and the Criminal Code. For changes in the latter two statutes the co-operation of the Federal Government will be necessary. Another matter which is to be discussed is the adoption of the "Loan Post" system of the New York Stock Exchange, under which stock loaned between brokers must be posted as collateral in any short selling transaction. Another projected reform is that before an issue can be listed for trading on the board of an exchange, ninety per cent. of the stock must be in the hands of the public. Meanwhile, a number of the brokers who were arrested appeared for a preliminary hearing before a magistrate in Toronto and were all remanded, the bail being reduced in some cases.

Last week the Canadian Pacific Railway made the important announcement that its stock is to be split four to one if the necessary parliamentary authority can be secured; each holder of a share with a present par value of $100 will be given four shares of a par value of $25. Application has been made at Ottawa for the necessary legislation and, while it will almost certainly go through, there may be considerable opposition on the floor of Parliament. Undoubtedly one of the chief motives for the move is to make C.P.R. stock more accessible to investors with modest resources, and the hope is that by attracting a number of these throughout Canada, the company may acquire for itself the support of a greater body of popular opinion than it has hitherto been able to command. It is confronted nowadays with extremely keen competition from the State-owned Canadian National system and the latter has undoubtedly secured a lot of extra business from the fact that the whole body of taxpayers was interested in reducing its deficits and easing the drain upon the Federal Treasury. Futhermore, during the approaching session the question of the reorganisation of the capital structure of the Canadian National system is likely to come before Parliament, and the supporters of the principle of public ownership, who have considerable strength in Parliament, will press for a scaling down of the swollen capital of the C.N.R. to manageable dimensions on which it will have a prospect of earning interest. Such financial surgery would mean that the Federal Government would have to lump into the National Debt a substantial part of the obligations for which the C.N.R. is now responsible, and the proposal will provoke sharp controversy. The Canadian Pacific and its political friends will certainly oppose it and, if a bitter fight develops, it will be to the advantage of the corporation to have as much interested public support as possible behind it.

The directors of the C.P.R. have just shown practical evidence of their faith in Canada's economic future by announcing an improvement programme for 1930 which will involve the expenditure of more than 50 million dollars. Of this sum about 14½ million dollars will be expended on new equipment or the conversion and improvement of existing equipment, 3½ million on hotels, and 3 millions on its telegraph system; 17½ millions will be devoted to the provision of additional railway facilities of which 10 millions will be spent in the West and 7½ millions in the East. In addition, there will be the normal expenditure for maintenance work, which will exceed 9 million dollars. This huge programme will benefit a variety of industries which supply railway equipment of different kinds and, once the actual work can be undertaken on the arrival of spring, it will absorb a great deal of labour.

IRISH FREE STATE.—TARIFF TRUCE—FREIGHTS—MILLERS' RATIONALISATION SCHEME—OVERSEAS TRADE.

(FROM OUR CORRESPONDENT.)

DUBLIN, February 23.

MR MACGILLAN, Minister for Industry and Commerce, has made an important statement on the fiscal policy of the Government, in answer to a suggestion by the Opposition that the Free State should not have sent a delegate to the Tariff Truct Conference. The Free State, he pointed out, is the only British Dominion represented at the Conference because it is the only one situated in Europe, and it cannot therefore assume an air of detached indifference to what its European neighbours are doing. Ample steps are being taken to develop industries catering mainly for the home market by the policy of selective protection administered by the Tariff Commission, but the prosperity of the export industries, especially the Ford tractor works, depends on the capacity of the Free State to conclude suitable trade agreements with other countries. The Free State delegates are present at the Conference principally in the capacity of observers, and, while anxious to do everything possible to further the cause of international solidarity, they have strict instructions not to tie the hands of their Government in regard to the imposition of further duties.

A public meeting was held in Dublin last week to protest against the high local and cross-channel freights on cattle. It was pointed out that the cost of transport has failed to fall with the decline of prices of agricultural exports, and that it is therefore tending to become an increasingly onerous item in the farmer's expenses of production. Much sound sense was shown at the meeting by farmers, who are much more intelligent than the politicians whom they elect to represent them. One speaker pointed out, quite rightly, that a substantial reduction in freights would afford a much greater relief to Irish agriculture than the de-rating of land or the proposed compulsory use of a certain proportion of home-grown feeding stuffs. The general conclusion arrived at was that the problem could be solved only by co-operative action on the part of farmers themselves, who should organise a cross-channel service of their own. Such a scheme would, of course, encounter numerous difficulties, the principal ones being the provision of return cargoes and lack of facilities for landing in Great Britain.

Negotiations are rumoured to be proceeding between the Irish Flour Millers' Association and the British Millers' Mutual Association for an arrangement by which the Free State millers should copy the British "rationalisation" scheme. The basis of such an arrangement would appear to be the limitation of the output of the Irish mills at a level computed on their output during the last three years, and the closing of the smaller, less efficient mills. The precise details of the benefits which the Irish millers would receive in return for these concessions will not be disclosed until at least three-quarters of the Irish Flour Millers' Association signify their assent to the scheme, but it is believed that there will be no difficulty in getting the assent of this proportion. Public opinion is, meanwhile, anxious regarding the possible effects of such an arrangement on employment in the Irish mills and on the price of flour. Mr MacGilligan has stated on behalf of the Government that "no agreement arrived at privately within the industry can in any way diminish either the power or the right of the Government to propose such measures for the safeguarding of the public interest as future developments might warrant," and has hinted at the possibility of a tribunal of inquiry with power to take evidence on oath.

Imports amounted in 1929 to £60,221,000, an increase of £1,846,000 over 1928, and exports to £47,128,000, an increase of £1,605,000. The adverse balance is thus £13,093,000, an increase of £241,000. The substantial increase in exports is largely accounted for by tractors manufactured at the Ford works in Cork. The value of the tractors exported in 1929 was about £1,000,000. The Free State is greatly indebted to Mr Ford for having demonstrated that it is possible to build up a great manufacturing export industry in Ireland with Irish labour, and also for having shown that an adverse trade balance is capable of being reduced in ways other than the restriction of imports—the remedy so dear to protectionist hearts. An interesting fact disclosed by the trade statistics is that direct trade between the Free State and foreign countries is rapidly expanding. While by far the greater part of our exports still go to Great Britain, exports to the United States, Germany, France, Australia, Finland and many other countries are showing signs of substantial development. A large part of the imports in 1929 was made up of machinery and electrical goods in connection with the Shannon scheme. The import of motors is increasing, and the Free State now buys over twenty per cent. of all motors exported from Great Britain. No doubt the Imperial preference given to British cars is very effective in directing demand to British manufactures.

Letters to the Editor.

THE NAVAL CONFERENCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The difficulties of securing a real advance towards achieving something beyond a temporary or mere reduction in armaments through the Naval Conference are immense. Nevertheless, is it not possible to make a beginning in the creation of some arrangement or procedure which will enable us to get clear of the vicious circle of competing armaments?

Security is, in the main, what nations are most desirous of obtaining. You quote France, for example, in your "Notes of the Week" as having implied "that on one condition alone she might modify her programme. That condition is the conclusion of a new treaty of guarantee to provide for France's safety in the Mediterranean." Should we not approach the whole question from a different standpoint, introduce the spirit of Locarno, and, in a practical manner, formulate a policy which will guarantee security and, therefore, go a long way towards ensuring the peace of the world?

It appears to me there are two ways of doing this. One method would be by a mandate of the Powers to allocate to certain countries the responsibility for the maintenance of law and order and the prevention of aggression in particular seas. The other way which suggests itself would be through the agency of an international navy or police force responsible to the League of Nations or Council of the Powers. If either of these methods was adopted a feeling of security would be encouraged in the minds of the various peoples, with the result that disarmament would follow. I suggest, therefore, before the Conference closes, that a committee of representatives of the various delegates might be appointed to draw up a scheme for consideration on the lines suggested.—I am, Sir, your obedient servant,

D. M. MASON.

WORLD TRADE AND TARIFFS.

IN view of the present Tariff Truce Conference at Geneva, Dr. Grotkopp's work* is a valuable and timely contribution to a profoundly difficult and important problem, and should prove extremely useful in presenting a clear outline of the points at issue, the difficulties to be faced, and the benefits to be achieved, even by a partial realisation of the results aimed at. The book is clear and concise; it contains a large amount of very relevant data in small compass; and the short summaries of conclusions reached at various stages as the argument proceeds should prove very acceptable to the busy reader and student.

The author looks chiefly to the League of Nations as the direct instrument by which any reforms in trade

* "Die Zölle neider! (Down with the Tariffs!) Wege zur europäischen Wirtschaftseinheit." By Dr. W. Grotkopp. 1930. Dr. Walther Rothschild. Berlin-Grunewald.

policy in the way of reduced tariffs can be achieved, but the indirect forces of public opinion must ultimately decide the degree of success with which that instrument can be used; and from this point of view his book should be widely read and closely studied. In the main, it adheres very closely to facts, so far as these are definitely discoverable, and to logical deductions based thereon. Dr. Grotkopp's conclusion that within the course of the next five or ten years it will be possible, by means of tariff truces and ultimately more or less comprehensive zollvereins, to attain almost complete free trade between the constituent parts of Europe, and even to include other parts of the world, is perhaps too hopeful. Nevertheless, the wildest and most visionary hopes are sometimes realised. The present tendency among most civilised nations towards ever higher protective tariffs cannot be looked upon as permanent, and may indeed even now have reached its zenith preparatory to a gradual decline.

It is, in any case, of the utmost moment to examine carefully all the signs and portents that may indicate a saner trade policy among the nations, and Dr. Grotkopp gives us a useful survey, in the first place, of the present position of the more important countries in regard to tariffs. One indubitable fact stands out clearly enough: protectionist tendencies are not quite so strong or so universal as might at first sight have been imagined. There are powerful forces and interests on the side of free trade, not only in England but in some of the other countries of Europe, and these are to be found, not only in academic circles, but also among industrialists and traders, and in a large measure also among politicians and statesmen.

In his analysis of the effective forces ranged on the protectionist side the author gives first place to the agricultural interests—especially in France, Germany and the U.S.A., but not in England. Agriculture, of course, is of much smaller account in this country than in other countries of Europe and in America, and, apart from that, it is much less strongly organised politically. Other powerful influences on the tariff side are certain manufacturing interests, and, owing to the peculiar circumstances arising during and after the war, the rise and persistence of the "key industry" idea. The use of tariffs as a source of national revenue is perhaps now a secondary consideration to that of protecting industry and agriculture, but it has at times played a leading *rôle* in tariff policy. It is an interesting commentary on the importance of other sources of revenue to-day to find that in France tariffs provide only 5 per cent. of the national revenue (18 per cent. before the war); in England 13 per cent. (18 per cent. pre-war); U.S.A. 15 per cent. (44 per cent. pre-war); Germany 5.8 per cent. (15.8 per cent. pre-war). England's few import duties bring in a much greater share of the national revenue than the hundreds of duties levied under the French tariff.

Among the forces making for free trade the author includes the mercantile elements, banking and shipping interests, and consumers' associations; and one can hazard the prediction that, in proportion as the consumers' interests become better organised throughout the world—and some progress in this direction is apparently being made—free trade forces will become stronger. In the second part of his book Dr. Grotkopp describes the various practical methods by which a tariff truce could be made possible, under the various forms of commercial or trade agreements, zollvereins, international cartels and combines, and other methods. He concludes with a brief survey of the conditions under which a definite European convention for tariff reduction might become practical politics, say, about 1935 or a little later.

NOW READY.

THE
DISCOUNT MARKET
IN LONDON

By H. W. GREENGRASS, Cert.A.I.B. A descriptive survey of the organization and recent development of the London Money Market, from the point of view of the discount broker. An interesting and informative book for all interested, actively or otherwise, in finance. Demy 8vo, cloth, 195 pp. 6s. net.

Of a Bookseller, or

PITMAN'S, Parker St., Kingsway, LONDON, W.C.2.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Economic Development of Post-War France. By William F. Ogburn and William Jaffé. (London) Humphrey Milford, Amen House, Warwick Square, E.C.4. 30s. net.

A valuable study of a remarkable achievement. The book is liberally equipped with statistics that are not conveniently accessible elsewhere.

The Public Finances of Post-War France. By Robert Murray Haig. (London) Humphrey Milford, Amen House, Warwick Square, E.C.4. 27s. 6d. net.

Valuable as general reading alike to the student of French politics and to the student of public finance, this volume is packed with statistics which make it a most convenient work of reference.

London Life in the XVIIIth Century. By M. Dorothy George. (London) Kegan Paul, Trench, Trübner and Company, Ltd., Broadway House, Carter Lane, E.C. 7s. 6d. net.

An indispensable book for the economic historian. It is a most absorbing account of the subject, very fully illustrated from contemporary sources. Chapter and verse are given for every statement, but the references are conveniently relegated to the end of the book.

Economic Trends in Soviet Russia. By A. Yugoff. Translated by Eden and Cedar Paul. (London) Allen and Unwin, Ltd., 40, Museum Street, W.C.1. 12s. 6d. net.

The author has been at great pains to evolve accurate statistics from the welter of contradictory material available, and his dispassionate discussion of the subject is a welcome contribution to a subject upon which reliable information is so much desired.

Russian Co-operation Abroad. Foreign Trade, 1912-1928. By N. Barou. Foreword by Sir Thomas Allen. (London) P. S. King and Son, Ltd., Orchard House, Great Smith Street. 2s. 6d.

An account, with the appropriate statistical tables, of Russian foreign trade during the last six years. The "1912" of the title is somewhat misleading.

The Soviet Union in Reconstruction. By Louis Segal. (London) Blackfriars Press, Ltd., 32, Furnival Street. 1s. net.

A brief outline of the Five Year Plan.

Russia's Socialist Triumph. By Andrew Rothstein. Second edition. (London) Communist Party of Great Britain, 16, King Street. 2d.

An exposition, in pamphlet form, of the Five-Year Plan.

Rumania's New Economic Policy. By Virgil Madgearu. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 5s.

A concise account of the recent economic reforms in Rumania, by one of their principal promoters.

The Indian Cotton Textile Industry. By M. P. Gandhi. (Calcutta). The Book Company, Ltd., 4-3B College Square. 6s. net.

A monograph on the history of the Indian cotton industry, which is a useful aid to the understanding of the international cotton problems of to-day.

Provincial Finance in India. By Pramathanath Banerjea. (London) Macmillan and Company, Ltd., St. Martin's Street.

A useful account, based on official sources.

Federation of Indian Chambers of Commerce and Industry. Monograph on Common Salt. (London) Indian Chamber of Commerce, 85 Gracechurch Street. 3s. 6d.

A history of the salt industry and salt revenue in India, compiled with a view to providing background for discussion of the salt duty question.

America Conquers Britain. By Ludwell Denny. (London) Alfred A. Knopf, Ltd., 37, Bedford Square. 12s. 6d.

The thesis of this unusual book is that war between the United States and Great Britain, far from being unthinkable, is a by no means remote possibility that must be faced. The author believes that the best safeguard lies in compelling people to face the facts of the economic displacement of the older country by the new, and he tells the story in the language, though by no means in the spirit, of a typical American "booster."

Unsolved Problems: National and International. By John S. Hecht. (London) Jarrolds Publishers, Ltd., 34, Paternoster Row. 16s.

Part I is devoted to the problem of wages; Part II to that of international trade.

Corso di Politica Economica Internazionale. By Vincenzo Porri. (Torino) Libreria Scientifica Giappichelli.

An Italian treatise on the theory of international trade.

Die Staatseinnahmen aus Steuern und Zöllen im Deutschen Reich und im Auslande. (Berlin) Verlag von Reimar Hobbing, S.W.61. Rm. 12.

A remarkably valuable collection of detailed revenue statistics for Germany, Belgium, France, Great Britain, Italy, Austria and the United States, in the years 1925-28.

Fairplay's Annual Summary of British Shipping Finance, 1930. (London) "Fairplay," 51-56, Palmerston House, Bishopsgate, E.C.2. 10s. 6d.

An indispensable book of reference to people who are interested in the finance of shipping companies. In addition to share quotations and information about individual companies, there are earnings statistics over a period of twenty-six years, tables of prices, etc.

The Municipal Year Book, 1930. (London) The Municipal Journal, Ltd., Sardinia House, W.C. 2.

A remarkable work of reference on every aspect of local government in 1929. There is also a directory of municipal and county council authorities and their officers.

The Japan Year Book, 1930. (London) Azakami and Company, 6, Denmark Street, Charging Cross Road. 32s. 6d. net.

Contains a full background of history, geography, currency, politics and administration, etc.; a fully classified provision of economic and statistical fact, and chapters on the arts, sport, medicine and other matters of interest to the foreign observer of Japan.

Chapters in the History of Book-keeping, Accountancy and Commercial Arithmetic. By David Murray. (Glasgow) Jackson, Wylie and Co., 73, West George Street. 21s.

A substantial volume of historical scholarship, which gives an account of book-keeping and accountancy in seventeenth and eighteenth century Scotland and elsewhere in Roman and Mediæval times. There are also several chapters on early writers on book-keeping in various countries.

The History of the National Mutual Life Assurance Society, 1830-1930. Compiled by Robert Finch, assisted by Alfred Roberts. With a Foreword by J. Maynard Keynes. (London) National Mutual Life Assurance Society, 39, King Street.

An interesting history, very beautifully printed.

Report of the Superintendent of Insurance of the Dominion of Canada for the year ended December 31, 1928. *Vol. I. Insurance Companies other than Life.* (Ottawa) Department of Insurance.

Journal of the Royal Statistical Society. Part I, 1930. (London) Royal Statistical Society, 9, Adelphi Terrace, W.C.2. 7s. 6d.

Contains reprints of two papers, with the discussions which followed, namely: "The Present Position of the British Coal Trade," by Professor J. H. Jones, and "Money and Index Numbers," by R. G. Hawtrey.

The Round Table. March, 1930. Macmillan and Co., Ltd. 5s.

Includes articles on "The Kyoto Conference"; "India and the Viceroy's Pronouncement"; "An Impression of China," and "Crime in the United States."

Europa-Wirtschaft. February, 1930. (Berlin-Grunewald) Verlag Dr. Walther Rothschild. 1 Mark.

A new German monthly whose purpose is to keep its readers informed of all events bearing on the reconstruction of Europe, and to promote European co-operation.

Annali dell' Istituto di Statistica. (Bari) Stabilimento Arte Grafiche, Cressati.

Includes an article on population by Corrado Gini, and one on changes in income distribution in Bari from 1914 to 1927.

Rubber and Rubber Shares. Compiled by Gow, Watson and Stanton, Ltd., 13, Rood Lane, London, E.C. 3. 2s.

A handbook for the investor which incorporates a simple but ingenious system of valuing shares.

The Communist Manifesto. With an introduction and explanatory notes by Professor D. Ryazanoff. Translated by Eden and Cedar Paul. (London) Martin Lawrence, Ltd., 26, Bedford Row, W.C.1. 15s.

Readers to whom an understanding of the Manifesto of Marx and Engels is necessary will undoubtedly find this commentary a valuable aid.

OFFICIAL PUBLICATIONS RECEIVED.

TARIFF WALLS
A European Crusade
By SIR CLIVE MORRISON-BELL, Bt., M.P.

"Highly original. This striking little book, of great interest, written clearly and with humour; it tells a warning tale."—*Daily Telegraph.*

"A notable contribution to the employment question."—*Sunday Referee.* Illus. 7s. 6d. net.

THE MEANING OF MONEY
By HARTLEY WITHERS

"Not only has much of the matter been re-written or eliminated, but several new chapters have been inserted. Mr. Withers has succeeded in condensing within rather less than 300 pages a very great deal of useful information."—*The Financial Times.* Fifth Edition, Thoroughly Revised. 6s. net.

PUBLIC ASSISTANCE
By GEOFFREY DRAGE

The history of the struggle for economy and efficiency in the sphere of Public Assistance in which the author has been engaged for the last 17 years. The letters which the volume contains have been described in *The Times* by an historian as "a most terrible indictment of national policy." 15s. net.

ALBEMARLE STREET, LONDON, W. 1.

The Stock Exchange.

THE OUTLOOK FOR HOME RAILWAY STOCKS.

THE net earnings of the four " group " railways of Great Britain showed an increase last year of nearly 9 per cent., as compared with those of 1928, and all the four companies have increased their ordinary dividends. Depression in the Home Railway market, however, has proceeded to such lengths that ordinary stocks can now be purchased to give a yield of 8½ to 9½ per cent.—a range more appropriate to new and speculative " patent " or mining enterprises than to indispensable public utility concerns in a great industrial country. It may be well, therefore, to examine the financial results of last year's railway operations to discover what light they throw on the unsatisfactory state of the market.

Our first table summarises the receipts and expenditure of the four trunk railways last year, as compared with 1928:—

	London Midland and Scottish Railway.	London and North Eastern Railway.	Great Western Railway.	Southern Railway.	Total Four "Group" Railways.
	(£000.)	(£000.)	(£000.)	(£000.)	(£000.)
Railway Receipts:—					
1929	73,195	55,561	31,028	22,993	182,777
Compared with 1928	*−675*	+1,448	+542	*−26*	+1,289
†*Railway Expenditure:*—					
1929	58,163	43,283	24,309	18,175	143,930
Compared with 1928	*−778*	*−48*	*−168*	*−272*	*−1,266*
•*Ancillary Businesses:*— Receipts:					
1929	8,466	7,734	5,156	3,514	24,870
Compared with 1928	+78	+423	+114	+17	+632
•*Ancillary Businesses:*— Expenditure:					
1929	8,715	7,613	4,900	2,740	23,968
Compared with 192 8	+98	+206	*−32*	+44	+316
‡*Net Revenue from all sources:*—					
1929	17,175	13,061	8,199	6,548	44,983
Compared with 1928	+904	+1,783	+1,142	+154	+3,983

• Including road transport, steamboats, canals, docks, hotels, collection and delivery service.
† Saving effected by 2½ per cent. deduction from salaries, wages and fees since August, 1928, reflected in these figures, in case of L.N.E.R. and S.R., but not in L.M.S. or G.W.R. The amounts in question, which are included in "Net Revenue from all sources," were: L.M.S., 1928, £419,000; 1929, £1,089,000; G.W.R., 1928, £181,000; 1929, £473,000.
‡ Including joint lines, and miscellaneous receipts, *less* charges.

It will be seen that while two of the four companies showed a falling off in railway receipts last year, and two an increase, all four made fresh substantial savings in expenditure. Reference to the detailed accounts shows that while all but the London, Midland and Scottish carried a larger number of passengers than in 1928, gross receipts from this source showed a further decline, owing to the increased use of cheap fare facilities. Falling passenger revenue is thus the price which the railways are being called upon to pay for competition with road transport. If the prospect promised merely an indefinite prolongation of such competition, the outlook for the stockholder would be anything but cheerful, but conditions in this respect have been profoundly modified by the railways' acquisition of road transport powers in 1928 and their policy of obtaining interests, under these powers, in a network of road transport services during 1929.

The most valuable set-off to the fall in passenger revenue last year was not receipts from the carriage of general merchandise, which showed only a slight rise (on the London, Midland and Scottish, a slight decline), but a marked change for the better in the revenue obtained from the transport of a single commodity—coal. Broadly speaking, about 18 per cent. of British gross railway receipts are derived from this one commodity. Last year's recovery was due less to conditions in the coal trade as a whole than in the coal *export* trade, and its beneficial effects were more marked on the North Eastern and the Great Western (where export coal accounts normally for as much as 25 per cent. and 45 per cent. of the total coal traffic receipts, respectively) than on the Midland and Scottish (where the proportion is not much higher than 10 per cent.). The so-called " Five Counties Scheme," indeed, with its virtual subsidisation of export at the expense of domestic coal, tended to worsen rather than to improve the position of the London, Midland and Scottish, which, in addition, bore the brunt of continued depression in Lancashire and the Clyde Valley.

The further reduction of expenditure was a crucially important factor in the final position. Broadly speaking, of the £1,096,635 additional dividend received by the ordinary shareholder on the Great Western this year, as compared with last, about 60 per cent. may be regarded as attributable to increased gross receipts, and no less than 40 per cent. to savings in expenditure, including wages and salaries. On the London Midland and Scottish, of £952,024 extra ordinary dividends, the whole was due to savings in expenditure, in the absence of which shareholders would probably have faced a *reduction* of from ½ to ¾ per cent. in dividends. To what must these economies in expenditure be chiefly ascribed ? It is clear that the 2½ per cent. deduction from wages, salaries and fees, agreed upon as from August, 1928, has made a material contribution. In its absence, expenses would have been higher last year by nearly £1,100,000 on the Midland and Scottish (equivalent to 1.15 per cent. on the ordinary capital), and by nearly £500,000 (1.1 per cent. on ordinary capital) on the Great Western. A second source of economies in expenditure is the increase in efficiency, contingent on the progressive rationalisation of the railways which the " grouping " system, laid down by the Act of 1921, has made possible. A year ago we gave figures showing that, in the absence of grouping, ordinary stockholders on many famous post-war lines might not under contemporary conditions be receiving any ordinary dividends whatever. The economies of rationalisation are by no means exhausted, but they were less striking in 1929 than in 1928, and were, naturally, greater on the Midland and Scottish and the North Eastern—which amalgamated many widely varying pre-war railway systems—than on the Great Western and the Southern—which were much more coherent units from the start.

Our next table compares net revenue, and revenue available for ordinary dividends, during each of the past three years and in 1923, the first year after " grouping " came into legal operation:—

RAILWAY REVENUE.
(000's omitted.)

	Net Revenue (before Debenture Interest).				Year's Revenue available for Ordinary Dividends.			
	1923.	1927.	1928.	1929.	1923.	1927.	1928.	1929.

The Midland and Scottish is earning appreciably less, and the North-Eastern slightly less than in 1923, despite the increased efficiency and lower working costs of both companies. The Great Western and the Southern, on the other hand, show a gain on balance, though not of very striking dimensions. Our next table shows that no company is paying as high a rate of dividend on its ordinary capital to-day as during the first year after grouping, but whereas in 1923 no railway fully earned its ordinary dividend, recent payments have been adequately covered, while the North Eastern has this year created a favourable precedent by placing £500,000 of earnings to general reserve. With this exception, division of profits " up to the hilt " is still the rule on British railways:—

RAILWAY DIVIDENDS.

	Rate of Dividend Paid.				Increase or Decrease in Reserves and Carry Forward.			
	1923.	1927.	1928.	1929.	1923.	1927.	1928.	1929.

Four Groups	...	...	...	..	−1,108‡	+ 72	+163	+715

• 3½ per cent. paid also on "A" Ordinary.
† £500,000 to General Reserve.
‡ Further amounts were taken from reserves for the payment of dividends in 1924-26.

It is doubtful how far the policy of generous dividend distribution is in the best interests of the railway stockholders in the long run. Admittedly, the financial policy of the railways in other respects may be, in many cases, conservative, and the railways, for " strategic " and other reasons may prefer austerely to treat such items as renewals and replacements than to make considerable additions to general reserves each year out of profits. But their present dividend policy, taken in conjunction with the capital structure of the railways—which in other industries would be regarded as decidedly " top-heavy "—tends to throw on ordinary stockholders the entire burden of fluctuations in annual receipts. The results of 1929, and their bearing on the question of railway earning-power in the future, will be further discussed in a subsequent article.

INVERESK PAPER.

THE report for the year to December, 1929, issued by the directors of the Inveresk Paper Company, is distressing, but might have been much worse. Profits fell from £317,452 to £181,795. Expenses showed a substantial increase, chiefly on account of the interest on heavy bank loans, while dividends and interest from investments and loans were £116,000 less than in 1928, chiefly on account of the more conservative dividend policy adopted by the subsidiary companies, which retained about £110,000 of profits instead of distributing up to the hilt. If the full year's preference dividends are charged (only six months dividends have actually been paid on both the 6½ per cent. first and 7 per cent. second preference shares) the earnings on the ordinary shares work out at 2.7 per cent., as against 28.4 per cent. in the previous year. In spite of this unfortunate decline in profits, an interim dividend of 12½ per cent. was paid on the ordinary shares in July, when Mr William Harrison was chairman. The directors " profoundly regret that the estimate of profits submitted to the board by the ex-chairman, Mr William Harrison, to justify the declaration of the interim dividend, proved to be erroneous." The circular issued to the shareholders in September last, expressing the opinion that the profits for the year would show a substantial increase over those of 1928, was based on this erroneous estimate.

An analysis of the last three years' results is given below:—

	Issued Ord. Cap.	Net Profit after deb'nture Int. and Tax.	Avail. for Ord. Shares.	Earned.	Paid.	To Reserve.	Carried Forw'd.
				%	%		
1927•	1,000,000	257,762	227,732	43·0‡	int. 12½ final 22½	4,838	95,439
1928	1,300,000	317,462	229,799	28·4	int. 12½ final 12½	Nil	124,199
1929	1,300,000	181,795	28,195†	2·7	int. 12½ final nil	Nil	67,001

• 13 months.
† After charging full year's dividends on preference shares.
‡ Per annum on ordinary capital ranking for dividend during the year.

With the directors' report is issued a long circular to the shareholders by Mr B. H. Binder, who was appointed chairman when the bank concerned insisted on the resignation of Mr. William Harrison. We quote the following words from Mr Binder's report:—

" The present position is largely due to the policy of indiscriminate expansion initiated by Mr William Harrison and loose business methods on his part. He committed the company to transactions without previous consultation with the board. . . . The purchase of shares in companies manufacturing esparto paper, supplying esparto grass or purchasing in large quantities esparto paper (such as Illustrated Newspapers, Ltd.) can be rightly deemed the natural expansion of the company's enterprise, but it is difficult to reconcile with the normal expansion of a company manufacturing esparto paper the investment of large sums of money in the purchase of shares in daily newspaper companies (United Newspapers, controlling the *Daily Chronicle* group and various provincial newspapers), and in a real property company (Inveresk House), or in the launching of a weekly newspaper (*Britannia*). . . . A collective letter from the directors to Mr Harrison, protesting against his exercising exceptional executive functions, not having the desired effect, his resignation from the chairmanship was insisted upon in December last. He declines to resign from the board, and it therefore remains for the shareholders to decide at a general meeting whether it is not inimical in the company's interest for him to act as a director."

Mr William Harrison has replied to Mr Binder's pertinent criticisms in an equally voluminous circular to shareholders. He denies that the present position of the company is due to a policy of indiscriminate expansion, and declares that, with the sole exception of the *Daily Chronicle* acquisition, there is no purchase of an established business which cannot be justified by results. He protests against a proposal to amalgamate United Newspapers (1918), Ltd., Daily Chronicle Investment Corporation, Ltd., and Provincial Newspapers, Ltd., alleging that too favourable terms are being given to Sir Thomas Catto and his group for putting up half the £250,000 required to develop the *Daily Chronicle* and the *Sunday News*. This, however, is obviously a risky business, for, even according to Mr Harrison, there are certain to be heavy losses in the first two years under the development scheme which he himself launched. Further, Sir Thomas Catto and his friends have not only suffered from the passing of the dividend on the second preference shares which they hold in the Daily Chronicle Investment Company, but have seen the two provincial papers which were the safest profit-earning assets of United Newspapers (1918), Ltd., transferred to Provincial Newspapers on terms under which a substantial proportion of the profits which they continue to earn has failed to return to the *Chronicle* group and been swallowed up elsewhere. These are some of the complications in the situation. One fact, however, is clear, namely, that under Mr Harrison's chairmanship and control, the company has got into an extremely difficult and tangled position from which only prudent finance and management can rescue it. Mr Binder declares that, although the company's investments have brought a number of paper mills under one group, the full benefits from such grouping do not appear to have been obtained. There has been competition within the group as well as with outside competitors, and a lack of cohesion as regards supplies of raw materials.

Further, the unpleasant fact remains that the company has loans and bankers' overdrafts for £1,151,954; that its investments will require to be written down, and some of them—for example, that in the Daily Chronicle Investment Corporation—will need patient and careful handling. The technical management of the company, however, is in capable hands, and in Mr Binder's opinion it should be possible to secure better results from the various enterprises when general trading conditions improve.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 4.	March 6.

The extreme conservatism of sentiment associated with the later stages of a prolonged downward movement in prices, was again in evidence on the Stock Exchange. The gilt-edged market alone showed even a superficial appearance of activity, industrial shares, with a few exceptions, continuing the slow but steady downward trend which characterised the month of February as a whole. Budget fears bore heavily on the market, and the less favourable industrial outlook prevented many of the more favourable company reports, made public during the wek, efrom exercising their normal effect on quotations.

The first effect of the unexpected offer by the Government of a new 4½ per Cent. Conversion Loan was the downward adjustment of the existing stock and the 4½ per Cent. War Loan, but the gilt-edged market quickly gathered strength under the lead of Five per Cent. War Loan. The movement was most pronounced on Wednesday, when rumours were current of American buying, associated, in some quarters, with the pending arrival of Governor Harris, of the Federal Reserve Bank. Further support was given to India loans, the new sixes rising to 1½ premium. Australian loans were steady after early dullness.

Expectations of increased business in the Foreign market were scarcely borne out by events. European bonds obtained fair support, and Turkish Unified reflected a more favourable view regarding the Turkish Government's financial intentions, but Brazilians were inclined to sag. Some disquietude was caused by the returns of tenders for the amortisation of the Argentine 5 per cent. Internal Gold Loan of 1909, but the explanation was subsequently given that the Government had bought bonds held in the Argentine.

No substantial changes occurred in Home Railway prices, though the market was a shade better on the cautiously hopeful review of prospects by the Great Western chairman, and the publication of a satisfactory week's batch of traffic returns—the latter, however, again affording comparison with a "frost-bound" week of 1929. Argentine railways lost ground on a reaction in the peso, and Brazilians were irregular. Canadian Pacific shed a further portion of their recent rise.

The industrial markets were quiet and dull, apart from a few special features owing their origin to unexpected—and not always welcome—developments. The Inveresk report, and its *sequelae*, revealed an even more complicated state of affairs than the market had anticipated. The position is discussed on page 469. The Postmaster General's announcement on the "Beam" position stimulated fresh selling of Cables and Wireless, two or three fairly large lines even of the 5½ per Cent. preference coming on offer. The Post Office's statement of its case was found fairly convincing, but much criticism was heard of the handling of the matter from the outset. The pessimistic tenor of the Courtaulds report served still further to depress the artificial silk market. The Austin Motor profit statement, on the other hand, greatly surpassed anticipation, and the ordinary shares rapidly doubled in value. A certain amount of investment support was forthcoming for tobacco shares, but breweries were irregular. The Match group was steady on the Swedish Match agreement with the Danzig Free State. Electrical shares made a fair showing, Johnson and Phillips being prominent. Internationals reflected moderate New York interest, after a quiet opening. With the Coal Mines Bill again before the House of Commons, at a vital stage of its career, iron and steel shares naturally attracted little public interest. Banking and insurance shares were dull at the outset, but had a harder tone in mid-week.

Rubber shares had an easier tendency, in sympathy with the course of prices for the commodity. The Rubber Growers' Association on Monday decided to support the scheme for a cessation of tapping in May, but America refused to follow London in putting up the quotation for rubber, and a reaction ensued throughout the market. Tea shares had a slightly better tone, but business remained on a small scale. The oil share market opened with considerable selling, but on Tuesday Paris became a buyer, and the leading stocks closed firm. The V.O.C. share proposals would have been more favourably received had they been unaccompanied by the announcement of a new capital issue.

The mining share market was out of favour this week, business being decidedly attenuated. Little change was recorded in Finance descriptions, though Rand Mines moved up the turn on Paris buying. Kaffirs closed slightly harder and Mozambique were a good market on reports of new oil discoveries. Tin shares were little affected by a further decline in the metal, though Renong improved a trifle, and London Tin remained firm. Northern Rhodesians strengthened after a weak opening and Congo Border moved up to 14⅞, while N'Changa also improved. Paris interest added a fraction to "Chartered," and copper shares, which at first were largely deserted, improved later on home and Paris inquiries, and Rio Tinto registered an appreciable gain. De Beers moved up on slight demand, but were unable to hold the rise.

FOREIGN STOCK EXCHANGES.

NEW YORK.

There is evidence of a slight setback to trade recovery, and feeling is growing that the coming month will see less than the usual seasonal improvement. The steel industry has dropped to 80 per cent. of operating capacity, and motor manufacturers are running about 65 per cent. Railroad traffic is improving somewhat, but earning statements for the last month are about 23 per cent. under those of a year ago. Mr Hoover's statements on the subject of economy are generally disliked as they are felt to be inconsistent. The prospect of higher taxation is discouraging, and public statements by the Government cause a suspicion that it is whistling to keep up its courage. The progress of the Tariff is slow. The Farm Board is criticised, as, after dropping below a dollar per bushel, the Chicago market recovered 12 cents per bushel as the direct result of buying with Board money. Approximately 25,000,000 bushels were bought. In the best quarters these activities are disliked, as eventually they do the farmer more harm than good. The Canadian wheat pool is quoted as an example, and the Farm Board is believed to have little hope of really accomplishing anything. The announcement of the liquidation of the balance of banking consortium stock, bought to arrest the decline last autumn, was without effect on the market. Bankers made a million or so profit, though they had not attempted to do more than come out even. After a moderate decline wheat and cotton stocks are rallying. Coppers are quiet; metal

stocks on hand in February are expected to show a further rise, but no immediate drop in price is anticipated. The oil situation grows worse, with output up and price-cutting in both crude oil and gasoline spreading. Utility shares are firm, and tobaccos, theatres and foods are rising. Foreign investment buying is believed to be an important factor.

CANADA.

The stock markets have attained a much healthier condition during the past month. The technical position has undergone improvement, and, although there has been considerable irregularity, the general tone has been one of steadiness, and at intervals the market has even been strong. The volume of trading, however, remains far below last year's dimensions, and the public, which has had a severe lesson, is clearly determined to play for safety in its stock market operations. There has, however, been a steady stream of investment buying of good stocks and pools have even been able to generate some speculative enthusiasm, particularly in International Nickel, as a result of glowing reports regarding developments at the Frood mine. The splitting of the shares of the Canadian Pacific Railway was also a bullish

factor, which took the stock of the corporation up more than 20 points. The stocks of companies manufacturing railway equipment have benefited by the generous programme of new construction and equipment work announced by the Canadian Pacific Railway, but forecasts of a diminution of construction programmes in other industries have adversely affected the stocks of companies which cannot rely upon railway orders. Newsprint stocks sagged steadily after the New Year, on depressing earning estimates, but some recovery has recently been visible. Public utility stocks have been reasonably strong, but the distillery stocks remain weak pending a decision on the proposed ban upon liquor exports to the United States. The Bureau of Statistics "Investors" Index of industrial common stocks (1926=100) was, for the week ended February 6th, 205.1, as compared with 206.4 for the previous week.

INVESTMENT NOTES.

Protecting the Investor.—The possibility of making the new issue market a safer place for the legitimate investor in time of activity is engaging the attention of many responsible people inside and outside the Stock Exchange. One of the most valuable contributions to the subject for some months past was contained in a paper read at Edinburgh on Friday by Mr O. R. Hobson, Editor-in-Chief of the *Financial News*. To protect the investor against the notorious evils of "boom" company promotion—reckless flotations, "group finance," weak underwriting and deliberate concealment of unfavourable developments—Mr Hobson believes that the Press, the Law and the Stock Exchange must co-operate. In spite of (or, possibly, because of) his long experience as a financial journalist, Mr Hobson's view of the "power of the Press" is modest. A responsible newspaper, he declares, can, and should, draw a line between "tipping" based on knowledge and "tipping" based on market rumour, but commercial considerations limit its effective action in certain other directions. Company law, again, may be fairly effective in the rôle of *Nemesis pede claude*, if its provisions are duly and promptly enforced. Astute promoters, however, will always tend to discover new avenues for parting the investor from his money much more quickly than the Law can discover means of closing them. The Stock Exchange, Mr Hobson believes, is likely to be a far more effective agency for protecting the investor, since without its *imprimatur* the speculative promoter's wares cannot satisfactorily be marketed. The Committee, he suggests, should tighten up their regulations regarding "permission to deal" in many different ways, and members of the House whose conduct "falls below the highest standard of professional integrity" should be more severely dealt with. Whether this last requirement could be enforced without making invidious distinctions, however, is an open question, since optimism is neither criminal nor "bad form." The most provocative part of Mr Hobson's paper, indeed, is concerned with the case for the revision of the constitution of the Stock Exchange, and the imposition of severer qualifications for membership. The question raises many complicated issues, but its courteous presentment, in the present instance, will ensure its being seriously and sympathetically considered by those concerned. At the same time, the City might go further, and consider the possibility of reorganising the whole new issue system, so as, eventually, to take the initiative out of the hands of the irresponsible individual promoter, and to replace him by more far-seeing and reputable financial institutions.

The Post Office and the "Beam" System.—In the House of Commons on Wednesday last the Postmaster-General announced that the Government had decided to conduct overseas wireless telephony by concentration at the Post Office stations at Rugby and Baldock rather than to utilise the facilities offered by the Imperial and International Communications Company. The main points of the Postmaster-General's statement are discussed in a "Note of the Week" on page 456 of this issue. Both the "A" and "B" stocks of Cables and Wireless were weak before and after the announcement. The secretary of Imperial and International Communications had, in fact, circulated a notice, a few hours before the Postmaster-General's statement, to the effect that the company had received no intimation of the Government's decision—of which, presumably, the company first learned when the announcement was made in the House. Press statements had appeared the same morning accurately forecasting the Post Office's declarations, and as these reports undoubtedly affected the market for Cables and Wireless shares, it would seem that a "leakage" of information occurred, which, in the circumstances, was particularly regrettable. The market's pessimism somewhat overstresses the importance of "Beam" telephony as a factor in the combine's earning position, the rental proposed being in the neighbourhood of only £45,000. The situation would, however, wear a more formidable aspect if developments on the *cable* side were found, for any reason, to fall short of expectation.

Oil Developments.—The threat of fiercer competition in the oil industry, following on the continued over-production of crude oil and gasolene, is causing the large oil groups to strengthen both their organisations and their cash resources. The Standard Oil group is paying attention to its marketing machinery, while the Royal Dutch Shell group is adding to its already large cash resources. The Standard Oil Company of New York and the Vacuum Oil Company propose to amalgamate, though the merger is being opposed in the United States under the anti-trust laws. The Vacuum Oil Company markets lubricating oils in practically every country in the world, and the Standard Oil Company of New York is a large exporter of petrol and kerosene to the European and Eastern markets. The Standard Oil Company of New Jersey not long ago formed the Standard Oil Export Company to amalgamate the export trade of its subsidiaries, including its British subsidiary, the Anglo-American Oil Company. The Royal Dutch-Shell group, in its turn, is proposing to merge the Venezuelan Oil Concessions, Limited, and the V.O.C. Holding Company, Ltd., which holds 99.9 per cent. of the former's capital. There is obviously no purpose in keeping the two companies distinct, seeing that V.O.C. Holding Company holds no oil shares outside its investment in the Concessions Company. There will be a share-for-share exchange between the two companies—the preference shareholders of the Holding Company taking preference shares and the ordinary shareholders ordinary shares in the Concessions Company with identical rights. To provide funds for the further development of the properties the Concessions Company will offer 1,800,000 ordinary shares, the shareholders of the Holding Company having the right to take one such share at par (ranking for dividend from January 1, 1930) for every three held, whether preference or ordinary. Finally, the Shell Transport and Trading Company, the junior partner of the Royal Dutch-Shell group, issued this week 5,000,000 7 per cent. second preference shares of £1 at 25s. per share, bringing its capital up to £34,421,361—£300,000 in 5 per cent. first preference, £10,000,000 in 7 per cent. second preference and the balance in ordinary shares. The prospectus states that the Royal Dutch-Shell group controls a production of 25,000,000 tons of crude oil a year, which it refines and markets, a fleet of tank steamships of over 2,000,000 tons, and a world-wide marketing organisation, and that it placed orders in Great Britain last year for material of all kinds of a total value of £7,375,000. Since 1897 the company has paid over £66,000,000 in tax free dividends to its shareholders. The company is deservedly popular with investors, and the comparatively low yield of £5 12s. per cent. offered by the new second preference shares should be duly regarded in the light of the company's past achievement and present position.

White Star Line.—An announcement has been made by the British, Foreign and Colonial Corporation, as trustees for the 6½ per cent. preference shareholders of the White Star Line. The corporation have informed underwriters of the 1927 issues of these preference shares that, after an interview with the chairman of the White Star Line, they are authorised to state that the results for the past year will be practically identical with those for 1927 and 1928, both of which were fully up to the average estimates given in the offer for sale in 1927. This statement is somewhat ambiguous, seeing that there was considerable difference between the White Star earnings of 1927 and those of 1928, and that Lord Kylsant added, according to the corporation's statement, that, in common with other shipping concerns, the current year's receipts of the White Star were not up to the average. In 1927 the preference dividends were covered 1.6 times on earnings of £255,744, and in 1928 1.2 times on earnings of £323,768. The British, Foreign and Colonial Corporation remark that, in these circumstances, there should be ample margin for payment of the preference dividends, apart from the fact that these dividends are guaranteed by the Royal Mail Steam Packet Company. Such announcements are reassuring up to a point, but shareholders can scarcely be in a position to form a comprehensive estimate of the position until the full accounts are presented. There are £5,000,000 6½ per cent. preference shares in existence, the issues being made in 1927 at 21s., and last year they changed hands as high as 23s. 9d. At the present time they are quoted at 10s. 3d., having been as low as 7s. 6d. this month.

Further Investment Trust Results.—Two more old-established investment trust companies have published their reports—the Merchants Trust and United States Debenture Corporation. Both companies were formed in 1889. The Merchants Trust, which has a share capital of £1,625,000 and a loan capital of £1,580,000, reports that its investments, on January 31st last, had a market value in excess of the book figure of £3,612,091. Nevertheless, the company, as usual, applied £10,000 out of profits to writing down securities, the general reserve account standing at £260,000. A complete list of the 495 investments is given with the report, together with a geographical classification, showing that 32.78 per cent. were held in Great Britain, 10.12 per cent. in the Colonies, and 19.57 per cent. in the United States. The United States Debenture Corporation, which has a share capital of £2,050,000 and a loan capital of £1,207,500, reports a depreciation, on January 31st, of £34,000 in its investments of £4,348,270. This depreciation represents less than 1 per cent. of the invested funds, and, to meet it, an amount has been taken from capital reserve. To maintain the reserve fund at the figure of £1,060,656 an appropriation of £34,000 was made to revenue reserve from the net profits. The investments number 862, but no list is given with the report. The geographical classification shows that 49 per cent. of the investments are in Great Britain, 13 per cent. in the Colonies, and only 6 per cent. in the United States of America. The following is an analysis of the profits and distributions of these companies in the last three years:—

	Net Rev. after Tax.*	Avail. for Ord.	% Earned. (subject	% Paid. to tax).	Reserve.	Carried Forward.
Merchants Trust:	£	£			£	£
January 31 1928	198,178	104,145	16·0	13	10,000	88,079

B. MINIATAS, *Chief Bookkeeper.*

At the annual meeting of stockholders of the Lietuvos Bankas, held February 15th, 1930, 7 p.m., at the Bank's offices, Kaunas, presided over by Mr. J. Tubelis, reports of the Directors, of the Advisory Board and of the Auditing Committee were presented. The reports were by motion unanimously carried, ordered received and filed. It was further voted to pay to the stockholders 10 per cent. dividend.

London Canadian Investment Corporation.—The first report of this company (formed in Canada in May, 1928, under the auspices of Wood, Gundy and Company with well-known British investment trust directors on its board) is of interest as showing how a Canadian investment trust company, managed on orthodox lines, has fared in the slump in the American and Canadian markets. The company has an issued capital of $4,000,000 in 5 per cent. preferred shares and 350,000 common shares of no par value. In addition, there are $6,000,000 of 4½ per cent. debentures, which were issued at the time of the company's formation. Few trust companies have had the advantage of capital obtained at so cheap an average rate as 4½ per cent. Since its formation the company realised profits on the sale of securities of $1,062,069, which have been transferred to investment reserve, in accordance with British trust company practice. After taking into consideration the investment reserve, the market value of the securities at December 31, 1929, showed a depreciation on book value of 5.43 per cent. The net revenue for the period from May 8, 1928, to December 31, 1929, amounted to $100,626, which gave a satisfactory margin in excess of bond interest and preferred dividend requirements. This revenue took no account of dividends accrued but not yet paid, or of stock dividends received. The investments of the corporation were divided as to 21.74 per cent. in bonds, 15.63 per cent. in preferred stocks, 58.94 per cent. in common stocks, and 3.69 per cent. in cash and call loans. The geographical distribution of the investments was as follows:—Canada, 40.4 per cent.; United States, 30.89 per cent.; British Empire (excluding Canada), 7.98 per cent.; foreign (excluding United States), 20.72 per cent. The chairman, at the general meeting of the corporation, stated that the investments since December 31st last had appreciated by $295,000, reducing the net depreciation in market value of securities to 2.69 per cent.—a reassuring development.

Mather and Platt.—The accounts of this northern engineering firm for the year ended December 31st last may be regarded as another milestone on the road to prosperity. Profits, which declined steadily from the "peak" of 1921 until 1927, recovered to the extent of £8,000 in 1928, and have now almost regained the 1924 level at £228,398. Percentage earnings on the ordinary capital cover the dividend payments of 15 per cent., tax free, for the first time for five years, and at 15.3 per cent. compare favourably with the 13.2 per cent. earned for 1928.

Year ended December 31	1927.	1928.	1929.
	£	£	£

* Free of tax.

Some £2,000 was voted last year to the employees' benefit fund at the general meeting, and the item may recur this year. No addition has been made to reserve account, which figures in the balance sheet at £250,000, the last allocation of £50,000 having been made in 1923. Certain changes appear in the balance sheet in pursuance of the new Companies Act, the item of £939,418, which last year represented fixed capital, trade investments and goodwill, now appearing under three separate heads, which together account for £974,103. The total amount representing "sundry creditors" and "loans to subsidiaries," which last year were shown as one item, has dropped from £284,126 to £264,683. The present price of the ordinary £1 shares is 2$\frac{5}{16}$, which, allowing for a final dividend of 10 per cent., gives a yield of £6 16s. per cent., free of tax.

H.P. Sauce.—The accounts have shown increased profits each year since the company became a public one in December, 1924. The dividend is now raised to 30 per cent., as compared with 25 per cent. on the last two occasions, and, in addition, a capital bonus of one new share for each three is to be distributed:—

Years ended December 30th.

	1927.	1928.	1929.
	£	£	£
Net profits after depreciation and income tax	150,649	153,171	159,526

Depreciation trustee securities	...	...	9,443
Increase or decrease in carry-forward	− 5,908	+ 3,611	+ 3,522

† Plus capital bonus, one share in three.

A conservative policy has been pursued in the distribution of profits, considerably less than 50 per cent. of net earnings, since the present company's inception, having been paid away in dividends. The effect is seen in the strong balance-sheet position, surplus liquid assets, including £507,236 in trustee securities, totalling £516,781 after payment of the dividend, as compared with a present issued capital of £560,007 and a balance-sheet total of £992,387. The stipulated policy of the Board was not to pay a dividend exceeding 25 per cent. until the goodwill and trade marks item of £156,997 had been eliminated, which was accomplished in 1927 by a transfer from the accumulated reserve fund. The latter account is brought up to £185,000 by this year's allocation from profits and, after the appropriation for the capitalised bonus, will be £85,000. Last year's earnings were equivalent to over 45 per cent. on the enlarged capital, and if the dividend is maintained at 30 per cent., the shares will yield nearly £6 10s. per cent. at the relative *ex* dividend and bonus price of the present quotation of £6 8s. 9d.

Austin Motors Dividend.—The Austin Motor Company has issued an announcement to the effect that on March 31st all arrears of dividend will be paid on the 6 per cent. "B" preference shares. Hitherto no allocation has been made since June 30, 1926, and the distribution required to bring payments up to date will take £262,500 gross. In addition a first dividend of 20 per cent. is to be paid on the 1,500,000 preferred ordinary shares, taking £150,000 gross, and a dividend of 20 per cent. on the 600,000 5s. ordinary shares, taking £30,000 gross. The total amount represented by these payments is £442,500 gross, or £354,000 after tax. The past twelve months have clearly seen a far-reaching improvement in the affairs of the Austin company. In 1928 the total amount earned for dividend was only £243,025. The results are the more remarkable in view of the intensity of competition prevailing last year in the private-car trade, and the invasion of the "Baby" car market by the wealthiest British producer. The 5s. ordinary shares jumped from 7s. 3d. to 12s. 6d. on Thursday, after the announcement, and were subsequently dealt in at 15s. 3d.

S.T.D. Motors Capital Scheme.—The scheme of capital reconstruction foreshadowed at the last general meeting of S.T.D. Motors, Ltd., has now taken definite shape, and reserves which have been built up in the past to prepare for "the inevitable losses resulting from the stabilisation of the franc at 124.21 to the £" will be used to write down the ordinary capital to one-third of its book value. The present capital of £3,300,000, made up of 1,900,000 £1 preferred ordinary shares and 1,400,000 £1 ordinary shares, is to be reduced to £2,370,261, divided into 1,900,000 preferred ordinary shares of £1 each, 5,392 ordinary shares of £1 each, and 1,394,608 ordinary shares of 6s. 8d. each. The reduction is thus effected by cancelling paid-up capital which has been lost or is unrepresented by available assets, to the extent of 13s. 4d. per £1 ordinary share issued. At the same time, each of the 5,392 unissued ordinary shares of £1 each will be divided into three ordinary shares of 6s. 8d. each, and the company's capital will be increased to £3,300,000 by the additional creation of 2,789,216 ordinary shares of 6s. 8d. each. Preference shareholders have, therefore, for once in a way, little reason to be dissatisfied with the terms offered them. Arrears of preference dividend dating back to September, 1926, are to be funded, and certificates issued to creditors carrying cumulative interest at the rate of 4 per cent. per annum. Application will be made for the quotation of these certificates on the Stock Exchange, so that they may become a marketable security. They will be redeemable from time to time out of available profits by purchase in the open market, by tender, or by drawings.

The Outlook for Copper.—While the price of Rio Tinto has lately fluctuated more or less in sympathy with the movements of standard copper prices, Rhodesian issues have been among the very few markets of the Stock Exchange which have shown even moderate activity. How far the latter movement, however, is influenced by the immediate outlook for copper is doubtful. For months past, users of the metal have pursued a strictly hand-to-mouth policy, writes a trade correspondent, and particularly during November, December and January they drew heavily upon stocks and substituted scrap for virgin metal whenever possible. Though this policy has been met to some extent by curtailment of production, its result is seen in the steady increase of stocks of refined copper across the Atlantic. At the end of last year this total had trebled the lowest point touched, and was up to 170,000 short tons, but during January there was a further addition of 30,000 short tons of refined copper and 4,000 tons of blister, bringing the grand total up to about 470,000 short tons. Not for years has such a huge tonnage of copper been seen above ground, and but for the grip on the situation exercised by the Incorporated Exporters, a reduction in price would have long since occurred. It is now nearly a year since electrolytic copper was "pegged" at 18 cents in New York (equivalent to about £84 on this side), while average costs of production are mostly below 10 cents per pound. Having maintained the present price for so long, and survived what will probably prove to be the worst statistical position recorded for many years, it is unlikely that the American producers will bow to the popular clamour for cheaper copper, more especially as they are understood to be sceptical of the power of a lower quotation to induce purchasing. Consumers are at last being compelled to abate their attitude of aloofness, and buying during February has been on a much more generous scale. With this encouragement, strengthened by a cut in mine output, it seems quite possible, concludes our correspondent, that 18 cents will be maintained throughout the present year. This view, it should be added, is not shared by all well-informed observers in the market.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Underground Electric Railways of London, Great Western Railway, Southern Railway, Manchester Ship Canal, Clerical, Medical and General Life Assurance Society, Pearl Assurance, General Investors and Trustees, English Electric, City Offices, Borax Consolidated, Leyland Motors, Selfridge and Company, Maple and Company, and B. Morris and Sons. At the Manchester Ship Canal meeting the chairman said that the tonnage using the port of Manchester during 1929—6,344,000 tons of sea-borne traffic—had only once been exceeded in the history of the company, in 1926, when the traffic was abnormally affected by large imports of coal arising out of the coal stoppage. Presiding at the general meeting of Leyland Motors, Ltd., Mr J. H. Toulmin informed shareholders that considerable attention had been given by the technical experts of the company throughout the year to the question of heavy oil engines and exhaustive tests were being made. At the Great Western meeting the chairman declared that the company had contracted for a large part of its fuel for some months to come. At the Underground meeting, Lord Ashfield described the economic effects of the rapid growth of London.

CAPITAL ISSUES.

The week's new capital issues, though few in number, have been of undoubted investment interest. The *British Government's* offer of 4½ per cent. Conversion Loan came as a surprise to the market, but was more warmly welcomed than its predecessor, the more so as the Treasury did not, on this occasion, deem it necessary to effect any preliminary "placing" of the loan. The issue is discussed in detail in a "Note of the Week" on page 454 of this issue. The "*Shell*" *Transport and Trading Company's* ability to obtain immediate subscription of a large line of new second preference shares at a price yielding subscribers no more than £5 12s. per cent., is a tribute to the high regard in which the company is held. Further comment on this issue, and its relation to general financial developments in the Royal Dutch-Shell group, will be found on page 472. The preference and ordinary shares of *Olympia, Ltd.* (whose issue was doubtless timed to coincide with the holding of the British Industries Fair in the company's new "Empire Hall"), were reasonable speculative propositions. The unexpected synchronisation of the offer with that of the Government's Conversion Loan was, from the company's point of view, unfortunate, underwriters being required to take up 40 per cent. of the issue. The underwriters' share of last week's Hull Corporation Loan was 85 per cent.

Conversion Loan.—Issue of 4½ per cent., Conversion Loan 1940-44, at £95 per cent. Redeemable at par on July 1, 1944, or on any half-yearly interest date on or after July 1, 1940, at the option of the Government, at three months' notice. The loan is a trustee security, ranking *pari passu* with the 4½ per cent. Conversion Loan, 1940-44, already existing. Holders of 5½ per cent. Treasury Bonds, due May 15, 1930, may surrender their holdings, in whole or in part, and receive therefor 4½ per cent. Conversion Loan, 1940-44, at the rate of £105 10s. Conversion Loan for each £100 nominal of 5½ per cent. Treasury Bonds surrendered.

"Shell" Transport and Trading Co.—Issue of 5,000,000 7 per cent second preference shares of £1 each at £1 5s. per share. The proceeds of the present issue are required for the future development of the company's business. Profits for the year ended December 31, 1928, totalled £5,447,894, covering dividends on the 7 per cent. preference shares, including the present issue, 7.6 times.

Olympia, Ltd.—Issue at par of 450,000 7 per cent. Cumulative preference shares of £1 each, and 450,000 ordinary shares of 5s. each, to provide for the costs of the extensions and improvements to Olympia. The company was incorporated in April, 1929, to acquire the property known as Olympia. Net profits for the year ended December 31, 1929, were £100,381, covering dividend on preference shares, including the present issue, 1.7 times.

[Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, shorter notices, and dividend announcements will be found on page 491, under the heading "Company News."]

OIL OUTPUTS.

THE ATTOCK OIL COMPANY.—Output for January, 21,778 barrels.

THE BRITISH BURMAH PETROLEUM COMPANY.—The production of crude oil by this company for January was 37,514 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended February 19:—Venezuela, 35,487 barrels; Trinidad, 11,116 barrels; total, 46,603 barrels.

HECTOR WHALING, LTD.—Catch report to February 23, 1930:—

VICKERS, LTD.—The following final dividends for the half-year ended December 31, 1929, will be paid to the holders of the preferred stock and preference shares of the company, who are registered in the books of the company on Saturday, March 8, 1930: 2½ per cent. on the preferred 5 per cent. stock (less income tax), 2½ per cent. on the 5 per cent. preference shares (less income tax), 2½ per cent. on the cumulative preference shares (free of income tax). Payment will be made on Friday, April 4, 1930. The transfer books of the company relating to these issues will be closed from Monday, March 10th, to Saturday, March 15, 1930, inclusive.

UNITED RAILWAYS OF HAVANA.—Owing to the serious and unexpected decrease in the traffic receipts the earnings will not be adequate to provide the amount required for the payment of the final dividend on the 5 per cent. cumulative preference stock in respect of the year ending June 30, 1930.

COMPANY MEETINGS, &c.

PEARL ASSURANCE COMPANY, LIMITED.

SOUND PROGRESS DURING PAST YEAR.
GOOD RESULTS IN ALL BRANCHES.
INCREASE IN FUNDS OF NEARLY FIVE MILLIONS.
MR GEORGE TILLEY'S REVIEW.

The sixty-sixth annual general meeting of the Pearl Assurance Company, Ltd., was held, on Thursday, the 27th ultimo, at the registered offices, High Holborn, London, W.C. 1. Mr George Tilley (the chairman of the company) presided.

The Secretary (Mr W. N. Proddow, F.C.I.S.), having read the auditors' certificate,

The Chairman said: Ladies and Gentlemen,—Before reviewing the progress of the company during the past year, I regret to record that we have lost an old and valued friend by the death of Mr J. T. Bonny, which occurred last September. He entered the service of the company nearly sixty years ago. In 1909 he was elected to the board, and when, in 1924, his failing health made it necessary that he should relinquish active participation in the work, he took with him into his retirement the respect and goodwill of everyone connected with the company. He will be remembered as amongst those who, in earlier years, laid the foundations upon which the "Pearl" has been built, and those of us who were his colleagues and friends will not forget those high qualities of mind and character which made his life an example to all those associated with him.

You will notice that our president, Mr G. Shrubsall, is not here to-day. He has asked me to express his regret for this absence, which is due to his being on the high seas. I am sure you equally regret this absence which, I am pleased to say, is not necessitated by any reason of ill-health. We hope to welcome him as usual at our next meeting.

In commenting on the operations of the Pearl Company in any year one is always brought to consider the various currents of social, commercial and economic forces which surround and influence the results obtained. Recent history in these respects has not recorded a very helpful tendency for insurance, which is a far-seeing and sober provision for, and protection against, the adverse results of calamity and misfortune.

CONDITIONS DURING THE PAST YEAR.

The past year was marked by the deflation or collapse in value of the capital and stocks of many doubtful concerns, accompanied by considerable losses to investors.

Throughout the greater part of the year a long-continued period of optimism regarding security values in America led to a constant drain of money from this country, among others, for use there in financing speculation, with the result that rates of interest were forced up in this country to the detriment of our trade and industry.

The collapse of the inflationary movement in America was severe, and led to a prompt repatriation of money, with consequent reduction in the Bank rate of interest, changes which should ultimately enure to the benefit of our industries.

Notwithstanding the conditions referred to, I am pleased to once again be in a position to report sound progress for the company, and I am hopeful that the conditions under which business will be conducted in the coming year will be more favourable. In a more orderly progression increased impetus should be given to the growing recognition of the claims of life and endowment assurance as an unrivalled medium of investment.

ORDINARY BRANCH.

This branch continues to show a vigorous and healthy expansion. During the year we have issued 40,308 policies, assuring sums of £11,652,887, and carrying annual premiums of £626,414. As a result of this new business the annual premium income of the branch shows an increase of £365,525, and the total premium income established a new record in exceeding £5,000,000 per annum.

Mainly by reason of a very serious epidemic of influenza at the beginning of the year, our normal claim rate was considerably exceeded. Thus, if you turn to the revenue account of the branch you will note that the claims by death total £530,989, which is an increase over the corresponding total for the previous year of £76,943. An increase of this nature does not, however, perturb us. Our experienced rate of mortality is well within what we expect, and variations upward, even of a severe character, are amply provided for and, indeed, form a basis for the acquisition of further business.

Of the other items shown in the revenue account of this branch, cash surrenders of policies and bonuses show an actual reduction as compared with the total of the previous year. Variations in the amounts under this heading are often looked at as a more or less reliable barometer of the state of trade and commercial activity. The reduction in question may well be a reflection of the slight, though, we think, undoubted, tendency to improvement in this direction last year.

BONUS.

As a result of his valuation of this branch, the actuary reports a surplus of £1,093,621, and the directors, acting on his recommendation, are again declaring a bonus of £2 6s. per cent. of the sum assured on all policies entitled to full participation. I would once again direct your atteention to the steady and continuous increase that has taken place in the bonuses granted to our policyholders. The record is:—

1923	£1 16 0
1924	2 0 0
1925	2 0 0
1926	2 2 0
1927	2 2 0
1928	2 6 0
1929	2 6 0

The rate of bonus we are now granting places us well to the forefront of all competitors in this respect, and renders a "Pearl" with-profit policy a most desirable investment. We have every expectation of at least maintaining this bonus in the years to come.

INDUSTRIAL BRANCH.

Any comparisons that can be made in this, and to a less extent the ordinary branch, are vitiated by the fact that in 1928 we had what we term a 53-week year. The explanation of the term is the falling of that number of Mondays in the year, and, as we receive our weekly accounts dated for Monday, in such a year an extra week's business falls to be dealt with. Bearing this in mind, the record of the year in this branch is a very good one. I have informed you in each of the past few years of the position of the great number of our policyholders who found difficulty in maintaining their premium payments, consequent on the trouble in the coalfields of the year 1926. Year after year since, we have relaxed our normal rules in their favour, have kept their policies on our books although they were heavily in arrears with premiums, have paid claims upon such policies as qualified for benefit by the death of the assured, and have gradually brought the great bulk of them up to a state of normality. A satisfactory reflection of this may be seen in the item of industrial branch outstanding premiums in the balance sheet, which stands at £137,832, or only slightly over 2 per cent. of the premium income. The premium income of this branch has attained the figure of £6,656,349, and shows an increase of £165,456. The amount of the claims paid on death, which exceeded two and a-quarter million pounds, is an unusually high figure, being influenced by the epidemic of influenza to which I have already referred.

FIRE BRANCH.

The premium income in the fire branch during the year amounted to £498,126. Losses incurred, including provision for all losses outstanding, and after deducting the amounts recoverable under reinsurance, accounted for £264,065, being 53 per cent. of the premiums. Commission and expenses of management amounted to £216,454, or nearly 43½ per cent. of the premiums. The premium reserve has been adjusted on our usual basis of 40 per cent. of the year's income, and the account shows a surplus, including interest, of £35,168, of which £22,000 has been carried to the profit and loss account, and the balance of £13,168 to additional reserve. No part of the underwriting profit has been withdrawn from the account, for, as you will notice, the amount transferred is not even as large as the net interest on the fire funds.

The fire insurance fund at the end of the year was £547,193, and the account is, therefore, in an even stronger position than before.

Since I last had the pleasure of addressing you we have established a branch in Australia for the transaction of fire and accident business, in addition to certain agencies in other parts of the world, and, as a result of the opening up of these new territories and the expansion of our organisation in the home field, I trust that from

now onwards we can rely upon presenting you with an account showing a steadily increasing income.

ACCIDENT BRANCH.

Premiums in the personal accident, employers' liability and general accident accounts were £150,964, a considerable advance on the previous year's figure of £118,125. Claims paid and outstanding, less recoveries under re-insurance, amounted to £68,544, being 45.4 per cent. of the premiums. Commission and expenses of management were £49,328, that is, 32.6 per cent. of the premiums. After the adjustment of the premium reserve, the surplus, with the interest, is £26,403, of which £13,000 has been transferred to the profit and loss account, and the balance of £13,403 to additional reserve. The accident funds amount to £170,718.

The growth of the premium income of the accident branch will doubtless be gratifying to you, and, although we could not expect a repetition of the very favourable claims experience of the previous year, the experience of 1929 was quite good. In the accident branch, as in the fire branch, we are cautiously extending our operations in the foreign field, and the results in this respect are justifying our expectations.

INDUSTRIAL ASSURANCE ACT, 1929.

Among the more important events of the year affecting the business of the company was the passing of the Industrial Assurance and Friendly Societies Act, 1929. The origin of, and the reasons necessitating, this Act are curious and deserve mention. Life assurance companies are in the habit of granting on the lives of children, policies which provide for the payment of a capital sum upon the attainment of a fixed age, such as 14 or 21, and such policies are very popular with parents in that they supply a ready means of accumulating a sum to provide for education or some advantageous start in life for their children. The policies usually contain a clause providing, in the event of the death of the beneficiary, for the return of the whole or a part of the premiums paid. From time to time a doubt had been expressed as to whether such a return of premiums was the payment of an assurance on death within the meaning of the Friendly Societies Acts, which Acts impose a limit on such payments in the case of industrial assurance companies and friendly societies, and, in consequence, when the Industrial Assurance Act of 1923 was under debate, Mr Alexander, M.P. for Hillsborough, moved the insertion of a clause which would remove all doubt. This clause was opposed by the then Solicitor-General on the ground that it was unnecessary, and it was stated, in effect, that the payment referred to, that is, the return of premiums, was in order and did not offend against the Acts governing these payments. The Industrial Assurance Commissioner, acting in his judicial capacity as arbitrator between policyholders and the offices, began to have doubts on this point, and he initiated proceedings to test the legality of a payment such as described, which proceedings resulted in the conviction of the office concerned, with the imposition of a fine.

These returns on death where they exceeded the statutory limits which may be paid on the death of a child under 10 years of age were thus, in effect, declared to be illegal, although the policies were beneficial in character and were issued in good faith by the industrial assurance offices on assurances given in Parliament by responsible officers of the Crown.

To rectify this injustice the introduction and passing of the Act of 1929 was secured, after a long and difficult struggle by the offices concerned, but the Act went further than a simple rectification of the impossible position in which we were placed. It takes its place as another addition to the list of enactments governing our business, and introduces further complexities into its administration.

We endeavour to carry out every ordinance imposed on us by Parliament in the spirit as in the letter, and our success in impartng to thousands of employees throughout the country an understanding of the meaning of these various enactments is evidenced by the extraordinarily few cases of complaint that are brought against us.

INVESTMENT AND INTEREST.

The funds of the company, as shown in the balance sheet, amount to £58,464,241, and show a growth of nearly five millions sterling. Of the assets, which comprise Stock Exchange securities, over 40 per cent. are invested in British Government securities, and, if the combined group of Government, provincial and municipal securities be taken, the proportion is nearly 80 per cent. The gross interest yield on these funds again shows a slight increase in both the ordinary and industrial branches of the company, a fact satisfactory in itself, and particularly so to your directors, as a tangible result of the care and attention they have devoted to this most important subject.

RESERVE FUNDS.

In the balance sheet you may have noted that we have certain reserve funds, namely, a contingency fund of £100,000, and investment reserve funds of £164,804 and £235,196 in respect of the ordinary and industrial branches respectively, the total of these being £500,000. Heretofore the investment reserve funds were amalgamated, but we think it better to divide them into separate funds in accordance with their origin, one for each of our major branches of business. Further than that we have, as stated in the report, reinforced them by the substantial additions of £135,196 in the ordinary branch and £64,804 in the industrial branch, thereby bringing each investment reserve fund up to £300,000 in amount, and giving a grand total of investment reserves and contingency funds of £700,000. This additional safeguarding of our position was determined on partly because of the troubled financial history of the past year; not that it had become necessary by reason of anything that we have experienced, but rather as a further safety margin against the possibility of anything unforeseen which may happen in the future.

FINANCE.

In connection with our investments a report appeared recently in the Press stating that this company was joined with others as defendants in an action brought by the Gloucester Corporation, with reference to the loan which they issued through the Corporation and General Securities, and you may be anxious to know whether this implies any loss to us. As the action in the Court is actually pending, it would be improper for me to comment at length on the case, but I wish to assure you that the purchase of the security in question, amounting to £20,000, was perfectly in order; it is registered in the books of the Gloucester Corporation, and we hold the certificate under their corporate seal.

We feel some little grievance in that, by reason of legal procedure and formalities, we are put in the position of defendants when we should be, if anything, plaintiffs, since payment of dividend due has been withheld pending the hearing of the action.

PROFIT SHARING.

In my speech last year I stated that your board contemplated the inauguration of a scheme whereby policyholders in the Industrial Branch should be accorded a definite share in profits. I then proceeded to a reasoned argument showing that such a development of policy was clearly indicated, not only as a plain duty towards our policyholders, but also by reason of the great advantages which may be expected consequent on its adoption.

I recalled to your recollection that on two previous occasions similar considerations had influenced your directors, with the result that in the year 1906 the sums assured in this branch were increased by substantial bonuses varying from 5 to 7½ per cent. of the sums assured, and again in 1926, when a similar distribution was made averaging an increase in sums assured of 11 per cent., and involving a total increase of over £9,000,000. These generous distributions have been of great value, not only to the recipients, but to the company, in the enhancement of its reputation for liberal treatment of policyholders, and in the attraction of an ever-increasing circle of new policyholders.

Much thought and time have been devoted during the past year by your directors and management in the formulation of a definite scheme of profit distribution to policyholders as an instrument in the general policy of the company, but no completely satisfactory scheme has yet been evolved. We are, however, for this year, moving towards our goal by allocating out of the profits of the year a sum in excess of half a million pounds for the purpose of increasing the sums assured to the extent and in the manner stated in the report.

SCHEME EXPLAINED.

The method we have adopted in this distribution deserves some attention. It is novel in that it is calculated upon the premium paid by the policyholder instead of on the sum assured. The reason for this is that in this branch sums assured are calculated in reference to pennies or multiples thereof paid in premiums, and, as a consequence, are rarely a conveniently round amount, whereas in Ordinary Branch assurance the premium is calculated by reference to £100 of assurance. A method of distribution based on one penny of premium therefore has the merit that a policyholder can more easily understand an addition of 1s. 4d. in respect of a penny premium than he could a percentage of the odd number of pounds and shillings for which he may be assured. Further than this, the method is easily and economically dealt with administratively at Head Office, and it has the merit of being at least as equitable in its broad effects to different classes of policyholders as any of the methods commonly in use which we have examined.

NATIONAL HEALTH INSURANCE.

There is one branch of our operations which cannot be included in our accounts, but which represents a vast amount of work of national importance, and to which I would like to make brief reference. I refer to National Health Insurance, in the administration of which our staff is associated with the National Amalgamated Approved Society. The extent of our participation in the work of that society may be measured by the fact that the Pearl staff are now introducing annually between 50,000 to 60,000 new entrants, and last year made 1,295,206 payments in respect of the various forms of insurance benefit, representing a sum of over £800,000. I include in these figures the disbursements in respect of maternity benefit, an adjunct of National Insurance which is rightly regarded as being of primary importance. These payments numbered 40,375 and totalled in amount over £86,000.

The figures of benefits are of substantial magnitude, but it is important that we should look beyond and behind the figures and appreciate what they represent in the alleviation of suffering, the restoration of health and their beneficial effect upon the welfare of the insured classes. Very valuable work is being done, and we regard it as both a duty and a privilege to contribute what we can through the society towards making the National Insurance Scheme of maximum benefit to the community.

I am glad to say that our relations with the society continue to be of a most cordial nature; through our representatives on the committee of management we take an adequate share in the administration of its affairs. I would like to avail myself of this opportunity to add our congratulations to the many our good friend Sir Thomas Neill has received on the occasion of the presentation of his portrait to him by the staff of the society. As chairman, Sir Thomas occupies with distinction a very onerous office to which he has brought gifts of character and ability which have earned for him an outstanding position in the insurance world, and we hope that for many years to come he will be spared to guide the great organisaion with which his name is so closely associated.

EXTENSION OF CHIEF OFFICE.

Prior to the removal, in the year 1914, of the chief office to our present premises, our experience had been that, notwithstanding very optimistic views as to the probable growth of the company, and in consequence a practical realisation of the need for accommodation capable of expansion, we had never been sufficiently optimistic, and the housing of our staff was a constant source of concern. In the preparation of the plans for our present offices we endeavoured to look far ahead, and although ground was secured and provision made for ultimate completion of the approved design, it was considered that the building as erected would meet our requirements almost indefinitely. Well, ladies and gentlemen, we were yet again not sufficiently sanguine, and it has now become necessary that we undertake further building and provide additional accommodation. The eastern frontage of the office is now in process of being extended, and we hope that when you meet us again next year the building will be sufficiently advanced to enable you to view the accommodation it will provide, and also, we feel sure, to agree with us that from an architectural point of view it will prove an acceptable addition to London's commercial buildings.

PENSION FUND.

This fund stands in the balance sheet at £897,859, an increase on the total shown last year of £88,619, and we are allocating to it from our profits a further sum of £100,000. This fund is being steadily built up the addition of interest earned upon the moneys invested, as well as by the annual contribution from profits, and each successive year with a growth in the average age of the staff, it meets increasing charges for the support of those whose work is necessarily terminated by the disabilities of age. I feel assured now, as always, of your hearty sympathy and support for our policy of allocating substantial grants towards the pension fund.

SURPLUS OF THE LIFE FUNDS.

The total surplus for the year from the life funds amounts to £2,195,475, and this has been dealt with as follows: To policyholders, £1,190,803; to staff pension fund, £100,000; to investment reserve funds, £200,000; to profit and loss account, £511,033; while £193,033 is carried forward.

PROFIT AND LOSS ACCOUNT.

In addition to profits from the life funds, there has, during the year, been carried to this account from the fire and other branches a total of £35,000, and the balance of the account at the end of the year amounts to £137,210. This, with the addition of the amounts transferred from the life branches, totals £648,243, out of which it is proposed to pay £246,963 as a final dividend to the ordinary shareholders.

The report was adopted, other ordinary business was transacted and the proceedings terminated with a vote of thanks to the chairman.

SOUTHERN RAILWAY COMPANY.
INCREASED DISTRIBUTION.
THE BRIGHTON LINE ELECTRIFICATION.

The annual general meeting of the Southern Railway Company was held, on the 27th ultimo, at the Cannon Street Hotel, London.

Brigadier-General the Hon. Everard Baring, C.V.O., C.B.E. (the chairman), said that receipts from railway working showed a decrease of £27,000, there being a falling off in passenger train traffic receipts of £165,000, an increase in goods train traffic receipts of £145,000, and a decrease in miscellaneous receipts of £7,000. The electrification of their suburban lines had again come to their assistance in regard to passenger train receipts; in fact, the increase in traffic in the electrified area was progressing at a pace which had considerably exceeded all expectations.

After mentioning the benefit they had derived from the abolition of the railway passenger duty, he said that the working expenditure as a whole showed a decrease of £273,000, against a reduction in receipts of £27,000, and there was therefore an increase in net revenue under the heading of "Railway" of £246,000. Net receipts from steamboats showed a decrease of £45,000. To sum up, the net receipts under the head of "Railway working" had increased by £246,000, while the net revenue from other businesses had decreased by £27,000, giving a net increase from railway and ancillary businesses of £219,000. As a result of the satisfactory increase in the amount for disposal, they were able to recommend that the dividend on the deferred ordinary stock should be increased from 2 per cent. to 2½ per cent. and the amount carried forward from £136,000 to £162,000.

AN ANXIOUS YEAR.

The year had been an anxious one. Serious financial troubles on both sides of the Atlantic had done nothing to lessen the feeling of distrust and pessimism which existed, and the crushing load of taxation was not made easier to carry by the knowledge that it might be increased. The number of motor licences issued was going up every day, and in the circumstances it was satisfactory that they had been able not only to hold their own but even to increase their distribution and their carry-forward.

If the Coal Mines Bill was passed in its present form, it was certain to have a serious effect upon the prices at which coal would be sold to consumers in this country. He was glad to say that they had made contracts up to the end of 1931 at prices very little in excess of those they were now paying. The amount of the reduction in their salaries and wages bill due to the satisfactory arrangement with the trade unions amounted in 1929 to £300,000, and it had been agreed that the deduction should remain in force until May 16, 1930.

ELECTRIFICATION OF BRIGHTON LINE.

The decision to electrify the line from London to Brighton and Worthing had only been arrived at after long and careful consideration. They had had to decide not only the type of motor and the type of carriage, but they had also had to decide on the system to be worked. They were anxious to maintain the Pullman cars on the Brighton section, and special arrangements would have to be made. One of the most important points was whether the new trains should be worked by electric locomotives or on the multiple unit system. They had decided on the latter, treating that phase of their electrification rather as an extension of suburban electrification than as a main line electrification.

The steam-train mileage that would be discontinued amounted to about 1,972,000 miles per annum. They proposed to substitute for that an electric train service with a mileage of about 4,921,000, thereby providing an increase in the train service of 150 per cent. The total cost of the whole scheme, including the re-signalling of the line from Purley to Brighton, was estimated at £2,700,000. In order to cover the increased cost of the additional mileage and to provide for depreciation and interest on capital, it would be necessary to increase their traffic receipts by 6 per cent. They were confident that that result would be achieved and they would be very much surprised if it was not achieved in the first year of working.

They had come to an understanding with many of the large omnibus companies under which both sides would work to their mutual benefit, the total sum invested in those companies up to the end of the year being £1,038,000. They had every reason to expect a good return upon the money invested. They were in negotiation with other companies and, if those arrangements fructified, they would have obtained an interest in every one of the large omnibus companies operating throughout their territory. They had also arrived at an understanding with Imperial Airways. Should the company wish to run air services, they would be operated by Imperial Airways.

The report was adopted and at a subsequent Wharncliffe meeting Parliamentary Bills were approved, including one dealing with the Charing Cross scheme.

GREAT WESTERN RAILWAY COMPANY.

IMPROVED RESULTS.

DEVELOPMENT SCHEMES.

The annual general meeting of the Great Western Railway was held, on the 26th ultimo, at Paddington, London, the Right Hon. Viscount Churchill, G.C.V.O., in the chair.

In submitting the accounts the chairman said that the company's liquid resources were ample to finance not only the present overdraft on capital account, but also the projected expenditure, so that the issue of new capital was not contemplated. The company had carried about 1,250,000 more tons of merchandise traffic, 5,250,000 more tons of coal and coke, and 1,300,000 more passengers than in 1928, and while the goods and coal traffic accounted for increased receipts, the passenger train receipts showed a drop of £278,000 due to the policy of extending cheap fare facilities to stimulate the development of passenger travel.

Expenditure on locomotive repairs and partial renewals was higher than last year, but this was largely due to greater mileage, and the expenditure in connection with superannuation, benevolent funds, pensions, &c., also showed a large increase, due to the circumstances which he had explained on a previous occasion. There were two items of railway expenditure which were new, namely, their payments in respect of the Railway Freight Rebates Fund, and in respect of the deficiency in the Railway Freight Rebates (Anticipation) Fund. The net receipts from railway and ancillary businesses amounted to £6,975,262, as compared with £6,119,372, an increase of £855,890.

The net revenue for the year amounted to £8,198,644, which, after meeting debenture interest and other charges, enabled a dividend of £4 15s. per cent. for the half-year to be paid on the ordinary stock, making £7 10s. per cent. for the year. Referring to the Railway Rates Rebates Scheme arising out of de-rating, the chairman said that in the case of export coal the average rebate allowed was equivalent to about 6½d. per ton, a reduction of about 30 per cent. off the railway rate, and there was no doubt that this had been of material assistance to the coal industry in its efforts to regain lost markets.

CAPITAL EXPENDITURE.

He stated that the capitalised value of the railway passenger duty which was repealed by the Finance Act, 1929, was, under the arrangement with the Government, being expended on the renewal of 100 locomotives, the equipment of Roath Dock, Cardiff, with shipping appliances capable of dealing with 20-ton wagons, the provision of a concentration yard at Acton, where a very large volume of traffic was exchanged with other railway companies, and of additional warehouse accommodation at South Lambeth depot. Alluding to the large amount which the company would be spending on capital account during the next few years—principally in respect of new works which were being undertaken with financial assistance from the Government under the Development (Loan Guarantees and Grants) Act, 1929, the chairman said it had long been recognised that the railways of this country must continue to incur expenditure on capital account if they were to keep pace with modern requirements and deal with the problems of transport in an efficient manner, but the situation in recent years, as affecting the railways, had been one of abnormal difficulty, and with the unsettled outlook which had confronted the company, they had been reluctant to embark on capital expenditure on a large scale.

When, however, the railway companies were asked by the Government through the Lord Privy Seal, Mr. J. H. Thomas, whether they could put forward any proposals for assisting the Government in their schemes for the relief of unemployment, the companies intimated that, with adequate financial assistance from the Government to safeguard the position of the shareholders, schemes involving an expenditure of at least £30,000,000 could usefully be undertaken on new works, which ultimately should prove remunerative. The outcome of the discussions was the passing of the Development (Loan Guarantees and Grants) Act, 1929, under which the railway companies, in common with other authorities, were eligible to receive financial assistance from the Government for a period not exceeding fifteen years, in respect of the interest charges on expenditure incurred on schemes approved by the Government.

COMPANY'S SCHEMES.

The Great Western schemes were the first to be considered by the Government Committee. So far thirty schemes, involving a capital expenditure of about £6,150,000, have been put forward. Most of them had been approved, and eighteen commenced.

Dealing briefly with some of the more important schemes, the chairman said the proposed alterations at Paddington Station included the provision of a new parcels depot for down-line traffic and the reconstruction of Bishop's Road Station. The construction of a new parcels depot would also enable some much-needed improvements to be carried out at the east end of the station, and by reconstructing Bishop's Road Station the company would be able to divert a considerable number of local trains from Paddington, where additional accommodation was required for long-distance trains. The enlargement of Bristol Temple Meads Station had been under consideration on many occasions, and during recent years great difficulty had been experienced in working traffic through this station. Practically all the property required for future extensions had been purchased, but the company did not feel justified at the time in spending the large amount of capital necessary to provide the additional facilities required. As, however, the Government were prepared to afford the financial assistance which was considered necessary to safeguard the position of the shareholders until the work might be expected to become remunerative, it was felt that the opportunity of proceeding with the proposed improvements should be taken. The quadrupling of the line between Olton and Rowington Junction, a distance of 9¼ miles, was under consideration prior to the war, and as the major portion of the land required had been purchased, it was thought desirable to offer to complete the work on certain terms which have been accepted by the Government.

CARDIFF AND SOUTH WALES.

At Cardiff the scheme provided for the remodelling and enlargement of Cardiff general station, the quadrupling of the line from Newtown, Cardiff, to near Ely, and the construction of a new carriage shed. Under normal conditions in the coal industry, the running lines through Cardiff station were heavily occupied, and coal trains were seriously delayed. During the summer months and holiday periods considerable difficulties were also experienced owing to insufficient platform accommodation and the absence of convenient storage sidings. The quadrupling of the line between Cogload Junction and Norton Fitzwarren was necessary to enable the increased volume of traffic passing to and from the West of England to be dealt with efficiently. The reconstruction and enlargements of the goods depot at Wolverhampton was desirable for dealing with the increasing volume of traffic, and the modernisation of their locomotive repair shops would enable substantial economies to be effected. The deviation line at Westbury and Frome was to eliminate two-speed restrictions which adversely affected the working of express trains to and from the West of England.

The largest, and perhaps most important scheme which the company had put forward to the Government was for additional and improved facilities at the South Wales Docks. This scheme, which entailed a capital expenditure of about £2,000,000, was now under consideration by the Government Committee, and it provided for the construction of a new entrance to the docks at Swansea, the extension of the North and South piers at Port Talbot, and the completion of the programme for fully equipping all the docks with appliances capable of dealing with 20-ton wagons.

Swansea was the only large port in South Wales dependent on a single entrance, and it was generally recognised that this drawback militated against the development of the port which served the anthracite coalfield, the metal trades, and the Anglo-Persian Oil Refineries. Recently, owing to the absence of a second entrance, it was necessary to close the dock to vessels over a certain size, in order to carry out some essential repair work. The traders suffered serious inconvenience through this, and the Chamber of Shipping, the Swansea Chamber of Commerce, and other important bodies had strongly urged the company to make application to the Government for such financial assistance as might be necessary to provide improved facilities, and to obviate any risk of the dock having again to be closed for repairs. The extension of the North and South Piers at Port Talbot was under consideration in 1914, and the improvements now contemplated would enable larger vessels to be accommodated at that port.

TERMINAL FACILITIES AT PORTS.

The completion of the programme for providing shipping appliances at all the ports capable of dealing with 20-ton wagons was in accordance with the recommendations of the Standing Committee on Mineral Transport. This committee recommended, *inter alia*, that financial assistance should be accorded to all schemes designed to further the use of 20-ton wagons by providing improved terminal facilities at docks, and as their recommendations had recently been approved by the Government, it was anticipated that in the near future 20-ton wagons would be adopted as the standard for export trade.

The report and accounts were adopted, and the bill submitted to the special general meeting was approved.

MANCHESTER SHIP CANAL COMPANY.

DIVIDENDS MAINTAINED—INCREASED CARRY-FORWARD.

The annual meeting of the Manchester Ship Canal was held, on the 27th ultimo, in the Houldsworth Hall, Manchester.
