The markets for their coal had improved, the company's control of output, coupled with an enlightened sales policy, having inspired customers with confidence to purchase in advance. They were now commencing their Canadian shipments, and there was a valuable market in Canada for Welsh anthracite. During last season a new competitor had come into the field in the form of Russian anthracite, but the company's Canadian friends had a very efficient organisation, and they had in Senator Webster a very loyal associate who sincerely believed in the paramount importance of trade within the Empire.

The Canadian market was not without its difficulties, one being that of obtaining sufficient tonnage to convey their coal owing to the small movement of Canadian grain to this country. He wished to express his appreciation of the interest shown in their Canadian market and of the action taken by the Lord Privy Seal during his recent visit to that country, when he proved himself to be a salesman of great ability.

As to the industry generally, coal exported from South Wales was still 6,500,000 tons less than in 1913, and collieries had worked only 73 per cent. of potential capacity, yet, comparing 1929 with 1928, the production of coal in Great Britain was 19,000,000 tons more, and exports had increased by nearly 10,000,000 tons. The company was favourably sold for 1930, and the trading profits for January and February of this year were so far quite satisfactory. On the other hand, trade barriers erected by foreign countries for the restriction of British imports had undergone no curtailment, the use of preferential railway rates abroad for facilitating their coal exports continued, and the fact remained that there was a potential power of production far in excess of the ordinary consuming capacity of the world. The general outlook could hardly be called too reassuring, and there was also the question of wages in their own trade still awaiting final settlement.

The report and accounts were adopted.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED.

YEAR OF EXCEPTIONAL DIFFICULTY.

SIR HENRY STRAKOSCH ON THE OUTLOOK.

The fifth ordinary general meeting of the British Enka Artificial Silk Company, Ltd., was held, on the 24th instant, at Cannon Street Hotel, London, Sir Henry Strakosch, G.B.E. (the chairman), presiding.

The Chairman, in the course of his speech, said: You will observe from the profit and loss account that, after charging debenture interest, head office expenses and income tax and making provision for depreciation, totalling in all £87,620 after crediting interest received, this account shows a loss for the year of £157,276. The difference of £69,656 represents the factory loss on trading during the period, which is mainly due to the unsatisfactory state of the rayon market and also to technical difficulties in our No. 2 factory.

The result of the year's trading can only be described as most disappointing. Our disappointment is not relieved by the fact that the year was one of exceptional difficulty, and that one of the causes—the continuous and severe fall in the price of rayon—was beyond our control. The efficiency of our labour force, I am glad to say, has, generally speaking, gone on improving, but technical difficulties, of which one was of a particularly obstinate character, have continued to trouble us. While these persisted, production suffered in several ways; costs were unduly high, and the output for a given amount of raw materials unduly low. The cumulative effect of these factors was sufficiently disturbing, but the persistent and substantial fall of rayon prices accentuated our troubles.

Towards the middle of the year, however, the management was successful in locating the source of the technical difficulty to which I have referred. Anyone familiar with industrial production, however, knows how profoundly the efficiency of a work's organisation is affected, and how the cost of production is raised by any disturbance in the smooth flow of manufacture. Such disturbances tend to increase beyond all reasonable limits the number of workers needed both for production and for the maintenance of the plant, not to speak of the general impairment of efficiency. To illustrate this point, I may mention that our No. 1 factory, which has largely escaped some of the technical difficulties from which we have been suffering in No. 2 factory, managed, in spite of the fall in rayon prices, to show a small factory surplus for the year, after charging against its production an equitable share of administration and selling expenses. The cost of production in that factory was 10 per cent. lower than in the No. 2 factory, in spite of the fact that its spinning is done in a bobbin plant, which ordinarily is somewhat more expensive to operate than a pot-spinning plant, such as we have working in the No. 2 factory, though I should add that this factory has not been running in the average during 1929, nor is it now running, beyond about 80 per cent. of its capacity. Though considerable progress has been made towards ridding the No. 2 factory of the after-effects of the disorganisation, a good deal remains to be done to bring it to the standard of efficiency which ought to be attained.

DUTCH ENKA GROUP.

In the past we have relied for advice in matters of a technical nature almost entirely on the co-operation of our Dutch friends. Indeed, as you know, our company was formed for the purpose of exploiting in this country their long and successful experience in the production of rayon in Holland, under agreements which are designed to establish the most intimate technical collaboration between the two companies. Financially, also, the two companies are closely associated by the fact that the majority of the shares in our company are held by the Dutch Enka group. Certain important changes in the organisation of the Dutch Enka group took place during the middle of last year. As the result of an arrangement concluded in July last between the Dutch Enka Company and the Vereinigte Glanzstoff-Werke, the biggest rayon producing group in Germany, the interests of the two companies were merged under the designation of what, translated into English, corresponds to General Rayon Union, commonly known as the A.K.U.

The negotiations for the merger, and the subsequent rearrangement of the managerial, administrative and technical staffs, took a good deal of time to accomplish. It was, therefore, only quite recently that we were able to take advantage of the facilities which this new combination are able to offer us. Pending these rearrangements which the merger had made necessary, the A.K.U. was not able to give us as much assistance as would have been desirable. I am glad to say, however, that we were quite recently able to arrange for an investigation of our problems at Aintree by two experts of the A.K.U. They recommend certain changes in our works organisation and manufacturing methods which they believe will result in economies. The first steps to put their recommendations into effect have already been taken, and they may involve our having to curtail production in our No. 2 factory for a time. The rearrangement of the managerial organisation of the Dutch Enga group has led to the retirement from active management of the Dutch group of Dr. J. C. Hartogs, who also resigned from our board and relinquished the position of managing director of our company.

I am assured that the quality of our production fully comes up to that of rayon produced by the Dutch factories. The comparative smallness of our stock sufficiently indicates that we have had no difficulty in currently disposing of a very satisfactory proportion of our production. We are, however, anxious to avail ourselves of every means that experience has proved to be efficacious for the improvement of the quality of our products, and so to fortify our position, particularly in the home market. Our efforts in this direction have so far been mainly concentrated on increasing the strength of our yarn. Research work carried on by us and our friends on the Continent will, I hope, enable us to introduce further improvements.

CONDITIONS OF RAYON MARKET.

There is no doubt that the major share of the loss that has been incurred is due to the unsatisfactory state of the rayon market. In that connection, Mr Samuel Courtauld at the last general meeting of shareholders of Courtaulds, Ltd., dealt at some length with the detrimental effect which the uncertainty regarding the future of the rayon duties has been exercising on trade. I need only say that so far as our observations go there has been, as a consequence of this uncertainty, a definite tendency on the part of our customers to restrict purchases to their immediate requirements.

Although, owing to various factors, it is almost impossible to express in figures the true extent to which rayon prices have been reduced, I should say that prices have fallen by an average of at least 18d. per pound since the autumn of 1928. I am advised that, if there had been no fall, then instead of the heavy loss we have made we should have earned a very handsome profit in spite of the unduly high costs of production in the No. 2 factory. Though this is poor consolation when we have, in fact, made a substantial loss, it does illustrate how great a share of our misfortune is directly due to the fall in the price of the commodity we produce.

I understand, from what seems to be a carefully prepared estimate of a competent authority, that while the world production further expanded in 1929 by about 17 per cent. as compared with 1928, consumption increased at about double that rate. There was, it is true, again an overproduction, but only of about 4 to 5 per cent.

The figures indicate that, in spite of the unbridled expansion of manufacturing capacity in recent years the world over, and in spite of the absence of any sort of co-ordination of their manufacturing and selling policies by the big producers, a process of adjustment is under way. Periodical adjustments of this character are almost inevitable in a young industry which is called upon to meet a demand for its products which has shown such uninterruptedly rapid expansion. It is pertinent to ask, however, whether it is really necessary to allow these adjustments to react as violently as this last adjustment has upon the market price of the commodity the industry produces. It is not the worst feature that a severe fall in the market price of rayon reacts adversely on the profit-earning capacity of the rayon industry itself—it also disorganises the trade of our customers and inflicts losses on them.

No one, I should imagine, would more wholeheartedly welcome co-operation and co-ordination among the big producers of rayon with a view to stabilising prices than our own customers. Widely fluctuating prices of the raw material they employ in their trades must be an intolerable handicap to them. The progress of the past in the consumption of rayon has been phenomenal, and it would be unreasonable to expect this same rate of advance to continue in the future; but, if there is anything, apart from an improvement of quality, which is likely to stimulate further progress, it is stability of prices.

THE OUTLOOK.

The rayon industry as a whole has, as you know, gone through a very difficult year. What are the prospects of the future? Portents, I fear, are not favourable. The precipitous fall in the price of practically all the great staple commodities is bound to react unfavourably, for a time at any rate, upon the purchasing power of the masses of the population the world over, and it is hardly to be expected that the rayon industry will escape the reactions which this diminished power of consumption is likely to have on industry generally. This is an additional reason why co-ordination in the distribution of rayon by the great producers is a matter of particular urgency at the present moment.

The picture I have drawn of our own particular experience in 1929, and of the prospects of the rayon industry as a whole in the more immediate future, is not a bright one. I hope that events may convict me of undue pessimism in regard to the latter. As regards our own affairs, I will only say that I feel confident, from the assurances I have had from our technical advisers, that our manufacturing and selling costs can and will be reduced, and that the rayon we produce can and will be further improved, especially in the direction which appeals to our home consumers. We shall not relax our efforts until we have succeeded in achieving these things.

The report and accounts were adopted.

THE STANDARD LIFE ASSURANCE COMPANY.

BONUS MAINTAINED AND RESERVES STRENGTHENED.

LIFE ASSURANCE AS AN INVESTMENT.

The hundred and fourth annual general meeting of the company was held in Edinburgh on Tuesday, the 25th inst., Mr E. M. Beilby presiding.

After reviewing the unsettled trade situation during the preceding year, the Chairman stated that the net Life Assurances effected with the Standard during the year amounted to over £2,800,000 which, excluding Single Premium business, was only £80,000 less than the amount in the previous year.

As regards the revenue account the amount of premiums received during the year exceeded £1,100,000, and over £500,000 was received as consideration money for annuities. The net rate of interest earned on funds was again in excess of 5 per cent. The Life Assurance and Annuity Fund benefited by the receipt of over £30,000 excess income from the Guarantee Fund, while £100,000 was transferred to General Reserve, bringing the amount of this fund to £700,000 and the total of the Guarantee Fund to £1,550,000.

VALUE OF THE ASSETS.

The valuation of the Company's Liabilities and Assets was made as at November 15th last. The same basis was adopted in valuing the liabilities as that employed previously, the rate of interest assumed for the purpose being 2½ per cent. As regards the assets, the bases previously adopted were again employed, the Stock Exchange Securities being valued by taking the lowest quotation ruling on November 15, 1929. Notwithstanding the general fall in Stock Exchange Securities during the year which caused but a moderate depreciation in the market value of the Company's holdings, the value of the assets was very considerably in excess of the value at which they appear in the Balance Sheet. The results of the Valuation were very satisfactory; the surplus of assets over liabilities as valued on the stringent basis already mentioned enabled the Directors to transfer £100,000 to the General Reserve, to provide for the compound Reversionary Bonus of £2 2s. per cent. declared last November, and to carry forward over £25,000.

A POSITION OF STRENGTH.

"The policy of your Directors," Mr Beilby went on to say, "has been to make security for the policyholders' contracts their first consideration, and as a result a position of strength has been built up which we believe to be unexcelled in the world of life assurance; notwithstanding, however, our policy of caution, the high rate of 42s. per cent. bonus compounded annually is paid to our policyholders, and after a careful survey of the position of the Company we see no reason to depart from the view expressed last year that we should be able to maintain this rate of bonus for many years to come."

ADVANTAGES OF WITH-PROFIT ENDOWMENTS.

The Chairman concluded by pointing out the very favourable results to be obtained from with profit endowment assurances from a purely investment point of view. The advantages of this type of investment over a Stock Exchange security were firstly, because of its security; secondly, because payment for the investment by instalments could be spread over a long period of years; thirdly, because in the event of death the full capital sum was forthcoming, even if only one instalment had been paid to the Company; and fourthly, because of the rebate in income tax allowed in most cases. At the same time he did not dissociate himself from the remarks which had fallen of late from the Chairmen of several important Life Offices emphasising that the primary necessity for the public was to safeguard dependants adequately before considering the question of investment. The New Cash Bonus Scheme had proved a great success, the public having evidently realised that it was supplying a need. The principal feature of this Scheme was that although the rate of premium charged was little more than the average non-profit rate, the policy had the right to participate in profits in the form of increasing Cash Bonuses. These were set off against the premiums payable so that the cost was soon reduced below the non-profit rate and became less and less as time went on.

NORWICH UNION LIFE INSURANCE SOCIETY.

SUCCESSFUL RESULTS—GOOD PROSPECTS.

The 122nd annual general meeting of the Norwich Union Life Insurance Society was held, on the 25th instant, at Norwich.

Sir George H. Morse (the president) presided, and, in moving the adoption of the report and accounts, said:—The results of the year's transactions are up to the high standard which has been a feature of the society over the long period of its existence, during which time it has protected its policyholders by its conservative outlook, not only in regard to finance, but in its careful selection of lives. Our figures show that we declined proposals amounting to £662,500 this year on account of medical unsuitability, which, I think, fully bears out the statement I have just made.

EXPENSE RATIO LOWERED.

The directors are careful in the selection of lives suitable for insurance, but anyone contemplating insurance should also have regard to the cost at which an office conducts its business, whether the expense ratio tends upwards or downwards, and also the cost of obtaining new business. It is a pleasure to be able to say that, during the past four years, the tendency of the society's expense ratio has been downward. In 1926, the beginning of the quinquennial period, it was 16.23 per cent., whereas it is now 14.16 per cent. Looking at the actual figures, while commission is down by £6,700, due in a measure to the smaller volume of new business written in 1929, compared with the previous year, the expenses have gone up by £6,900, but against this there is an increase in the premium income of £119,000, which has had the effect of reducing the level expense ratio by one-half per cent. on the previous year's working.

The society has reached a stage in its existence when its outgo in respect of claims by death and by maturity is assuming large figures, especially in regard to claims by maturity, which amount to £1,005,000, and considerably exceed the claims by death at £783,000. This again emphasises the superiority of our insured lives, whom we congratulate on surviving to draw the sums payable under their own policies. On the other hand, it is regrettable that, if they are only possessors of endowment assurance policies, they cease to be members of the society, and in order that we may provide against this a new table has been published giving premiums of our "Norwich" policy under which a member may take half the sum assured after an agreed upon number of years and continue the other half, free from all further payment, for the benefit of those who come after him.

At the end of this year the valuation of the society's assets and liabilities will take place, and the result should, under ordinary circumstances, give every satisfaction to all concerned. This has already been foreshadowed by the steps taken by the directors in increasing the interim bonuses twice in the past four years. In 1925 whole-life full-profit bonuses ranged from £2 6s. per annum at young ages to £4 10s. at old ages for each £100 assured, and these have now been increased so as to range from £2 11s. per cent. to £4 12s. per cent. per annum. This has been rendered possible by the steadily increasing improvement in earnings which has taken placed during the past four years. The net rate of interest during that period on the funds, productive and unproductive, has been slightly over 5 per cent., that for last year being £5 0s. 5d. per cent.

INVESTMENTS.

Although our funds are rapidly mounting up, and last year added £2,151,440 to the total, our liabilities to our policyholders are also vast. Out of total assets of £32,000,000 we have invested £9,900,000 in Stock Exchange securities, of which £2,250,000 is in British Government stocks and the remainder in widely diversified classifications which, from a security point of view, are, in the opinion of the directors, likely to cause, in the aggregate, the minimum amount of fluctuation in value. This is evidenced by the scrutiny made of the society's holdings at the end of the year, which showed on the account under review a depreciation in Stock Exchange securities of 3.4 per cent., which, having regard to the conditions overshadowing all markets last year, is very satisfactory. These securities still stand in the balance sheet at a figure well below the market value at December 31, 1929.

We have also £9,940,000 invested in mortgages, and the interest charged and standing in the books at the end of the year has all since been paid. We have not altered our Norwich Union Fire Insurance Society investment, although that society has been able to pay a further sum of £2 10s. per share out of earned profits towards the extinguishing of the unpaid capital, leaving only £44,000, or £1 per share, still outstanding.

The resolution for the adoption of the report and accounts was carried.

CITY OF LONDON ELECTRIC LIGHTING COMPANY, LIMITED.

SUBSTANTIAL INCREASE IN SALES OF CURRENT.

The ordinary general meeting of the City of London Electric Lighting Company, Ltd., was held, on the 26th instant, at the registered offices of the company, Falcon House, Aldersgate Street, London, Mr J. B. Braithwaite (chairman of the company) presiding.

The Secretary (Mr A. F. Harrison) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the sales for the year again showed a substantial increase. Last year he had pointed out that their sales of current showed a progressive increase; for 1926 the increase was 4,000,000 units; for 1927 it was 5,000,000 units; for 1928 it was 8,400,000 units; and he was glad to say that for 1929 the increase was just over 9,000,000 units. Thus it was seen that the progress in their sales was entirely satisfactory.

All the various departments of supply had shared in that increase. Lighting showed an increase of 12.6 per cent.; power, 4.2 per cent—not quite so large as in the preceding year; heating, 34.9 per cent.; and the increase over the whole output was 12.6 per cent. In spite of the reductions which they had made in the prices to their consumers, the profit also showed a small increase, that for 1929 being £473,972, as compared with £451,587 in 1928, showing an increase of £22,385.

BENEFITS FOR CONSUMERS.

For 1929 the average price paid by their consumers all-over was 2 1-10d., which, he thought, in the circumstances in which they were situated in the City of London, with no evening load and with other drawbacks to which reference had been made in the past, was an exceedingly satisfactory figure. The reduction in the price to their consumers led, of course, to an increase in the so-called consumer's benefit. In 1926 that was £128,274; in 1927, £178,095; in 1928, £275,937; and in 1929 it was £348,253, an increase of £72,316 over the figure of the previous year, so that during the four years in which that arrangement had been in force their consumers had benefited to the extent of £930,000, as compared with what they would have paid had they been charged the standard price as authorised by the Electricity Commissioners.

That increase in the consumer's benefit led to an increase in the one-sixth share which the company was allowed to retain and add to the reserve fund, which, as explained last year, was available either for capitalisation or for supplementing their statutory dividend. In 1926 they were able to retain £12,986; in 1927, £27,676; in 1928, £45,989; and for the past year, £58,052, so that the reserve fund now stood at £243,137.

They proposed to pay the usual statutory dividend, and they now had their special reserve raised to close on a quarter of a million pounds. Their intention was, if possible, by 1932, to get that figure up to half a million, which would enable them to capitalise a further half-million, and the result of that would be that in 1933, when the statutory dividend dropped to 7 per cent., they would still be able to distribute £120,000 to the shareholders, just as they were doing on the present occasion. After that it would be within their discretion whether they supplemented the dividend or not.

INCREASING USES OF ELECTRICITY.

Looking at the position all round, and in view of the enormously increasing uses for electricity, he had confidence in the future. He recommended all shareholders in electric supply companies to go to the Ideal Home Exhibition, at which they would see that lighting no longer played the most important part as regarded the use of electricity. There were many other uses, including heating, cooking, and cleaning, making toast for breakfast, heating water for shaving, making tea, washing up, and many other things, including refrigerating, so that one could keep cool in the summer and warm in the winter by means of electricity. There was, in fact, hardly anything which electricity could not do.

They looked forward to the current year with quiet confidence. They were considering further reductions in their charges, which would increase their consumer's benefit, and consequently the one-sixth share of it which they were entitled to retain. Their power house at Bankside was a selected station under the Central Electricity Board, and they might, therefore, be called upon at any time to supply current in bulk. Their generating plant and distribution system were the best of their kind; their staff was loyal and competent, and might be relied upon to obtain the best possible results, from which, as co-partners, they would stand to benefit.

The resolution was carried unanimously.

SHROPSHIRE, WORCESTERSHIRE AND STAFFORDSHIRE ELECTRIC POWER COMPANY.

LARGE EXPANSION OF BUSINESS.

The ordinary general meeting of the Shropshire, Worcestershire and Staffordshire Electric Power Company was held, on the 25th instant, at Electrical Federation Offices, 88 Kingsway, London, Mr E. Garcke (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The tendency of modern industry is in the direction of rational combination of producers with the object of attaining the highest efficiency, the greatest economy, the largest output, so as to secure the widest market at the lowest selling price, all with a view to render the best service to the consumer while maintaining a high standard of living for the workers and a fair return to the investors. Electricity is to-day performing the most important function in the general development in industry not only in the supply of current, but in many other auxiliary services, and these services in total call for very complete an dspecialised organisation. The concentration of generation electricity in fewer, large and, consequently, more efficient stations is taking place and, without doubt, similar concentration of distribution and of the auxiliary services of electricity supply will follow.

Considerable development has taken place in the provision of electricity supply in the more sparsely populated portions of the company's area, and many extensions of our low-tension networks have also been made in the important towns served.

The use of electricity in domestic premises for purposes other than lighting has made marked progress, and the hire service of the company, including cookers of standard design, portable electric fires and wash boilers, has met with considerable favour.

During the year over 5,000 new services to domestic premises have been connected by the Shropshire and subsidiary companies.

THE PAST YEAR.

The year 1929 has witnessed an even larger expansion of operations than the years immediately preceding it, and over £816,000 has been spent on new capital works and acquisition of undertakings during the year.

The revenue account reflects the large expansion in the company's business. The net receipts were £369,109, as against £303,950 last year, with expenses £188,588, as against £160,957, leaving a balance for appropriation of £180,520, as against £142,993 last year.

We propose to appropriate the balance of £180,520 as follows, the dividends recommended being at the same rates as for 1928:—

	£
Dividend for the year on the 6 per cent. cumulative preference shares	42,000
Dividend of 8 per cent. for the year on the "A" ordinary shares	24,000
Dividend of 7½ per cent. for the year on the "B" ordinary shares	56,625
Reserve appropriation account	57,895

Turning to the reserve appropriation account, it will be noted that, after transferring the sum of £60,000 to our reserve, bringing that account up to £497,899, we carry forward the sum of £80,249, as against £78,937 brought into that account.

During the year new industrial connections to our system have been quite good. In the early part of the year there was a marked development in electric furnace load. The additional power connections to our mains during the year approximate to 20,000 h.p.

PROGRESS SINCE 1924.

The following figures showing the advance made since the year 1924 may be or interest:—

No. of consumers	An increase of 270 per cent.
No. of units sold	An increase of 91 per cent.
Revenue from units sold	An increase of 73 per cent.
Average price per unit sold	1.38d. in 1924; 1.25d. in 1929, a reduction of 10 per cent.

During the past year we have continued the policy of reducing the price wherever the load justifies it, but so long as we are adding new areas and incorporating small undertakings, whose charges are high and cannot immediately be reduced, the reductions in prices we are making in the more developed districts do not show up in the large average. Nevertheless, they are evident in the ratio between the average increase of units sold and of price obtained per unit. The criterion of our activities is that we are building up a large and well organised business capable of supplying electricity to consumers in our area at steadily reducing prices, while for the present maintaining efficiently our plants and earning a moderate return on the total capital employed, while the holders of preference and debenture stocks are receiving good yields on well-secured investments.

The report and accounts were unanimously adopted.

NEWCASTLE-UPON-TYNE ELECTRIC SUPPLY COMPANY, LIMITED.

IMPROVED PROFIT—REVISED CHARGES.

NORTH-EAST ELECTRICITY SCHEME.

The forty-second annual general meeting of the Newcastle-upon-Tyne Electric Supply Company, Ltd., was held, on the 25th instant, at the Central Station Hotel, Newcastle-upon-Tyne, Mr R. P. Sloan (chairman of the company) presiding.

The notice convening the meeting was read by Mr M. Short (joint secretary).

The Chairman, in moving the adoption of the report and accounts, said:—Last year I expressed disappointment at the decrease in the electrical energy we were called upon to supply to collieries. While the position, as a whole, did not change to any extent during the past year, additional colliery supplies—which included the supply to six new pits—went a long way towards making up this setback. The consumption in shipyards and engineering works showed a distinct improvement. There also was an increase in our supplies to the iron, steel, and general engineering trades.

Revised tariffs became effective, in the case of shops, as from January 1, 1929, and in the case of domestic supplies as from April 1, 1929. The sum represented has somewhat exceeded our forecast, and is about £50,000 per annum. While our immediate profits have, of course, been materially affected, we have good reason to believe that the concessions will encourage the further use of electricity. Within a week or two of our first publishing these tariffs, a number of local authorities applied to the Minister of Transport for an order reducing our statutory maximum prices. We strongly opposed this application on the grounds that our then charges were reasonable, having regard to our costs in giving such supplies. We have not yet received the award of the Minister.

SATISFACTORY PROFIT.

The year's profit shows an improvement of £56,895, which, I think, may be considered satisfactory, bearing in mind the effect of the substantial reductions in the charges. Interest on debentures and loans shows a reduction of £16,104, due to our bank overdraft having been cleared by the proceeds of the share capital issue which was made in November, 1928.

The transfer from profit to general reserve has been increased to £175,000, as against £150,000, while £75,000 has been transferred to renewals and improvements reserves, as against £60,500 so transferred in the previous year.

We had to meet exceptionally heavy expenditure in connection with the complete renewal of certain turbo-generator plant, and mainly on account of this, our expenditure during the year upon renewals and improvements reached £85,000. On account of this expenditure, the directors have transferred a larger sum to renewals reserve, and have met the remainder by drawing upon the renewals reserve, leaving £41,703 still standing to its credit.

The directors recommend a dividend, on the ordinary shares, at the rate of 6 per cent., which leaves £96,029 to be carried forward. Owing to the issue of ordinary shares made in November, 1928, the increased amount required to pay a dividend at the same rate as last year will be £55,500. The capital expenditure during the year amounted to £243,480.

NEW DOMESTIC CONSUMERS.

The profit on sale of current apparatus and other rentals, etc., shows an increase of £28,466 on the corresponding figure of the previous year. The increase in interest and dividends received, which amounts to £28,482, is due as to £16,240 on account of interest on bank deposits, and as to £12,242 increased interest and dividends received from associated companies.

The additional connections made amounted to 22,677 horse power. We connected 7,802 new domestic consumers. This number is less than in the previous year, partly due to the fact that in 1928 we acquired a number of existing low-pressure distribution networks previously owned and supplied by a colliery company, and, therefore, the number of new connections was increased beyond what might be considered as normal, and partly because our rate of development has been adversely affected by the prices agitation.

NORTH-EAST ENGLAND SCHEME.

Under the North-East England electricity scheme, all our main power stations—at Carville, Dunston, and North Tees—are specified as being "Selected" stations. The owners of "Selected" stations are under obligation to generate such quantities of electricity as the Central Electricity Board may direct, and the Central Board will be under obligation to supply back such quantities of electricity as the owners may require for their own undertakings. The Central Board will pay to the owners the actual operating costs, together with the capital and depreciation charges on the stations; and, in respect of electricity repurchased, the owners will pay the actual cost price plus a fair proportion of the Central Board's general expenses. The cost at which owners repurchase from the Central Board is not to exceed the cost they would have incurred in generating, independently, the same quantity of electricity as they take from the Central Board.

CHANGE OF FREQUENCY.

The North-East England scheme involves the change of the periodicity of our supply from forty to fifty cycles per second, so as to make it comply with the standard frequency. The work involved in this change is estimated to cost some £8,000,000 or £9,000,000, and some seven years will be required to complete it. By the exercise of proper care and providing an efficient organisation I see no reason why the work should not be carried out without undue dislocation.

While we will be primarily responsible for the carrying out of the change of frequency, the whole cost involved, both in our own works and in consumers' premises, will be met by the Central Electricity Board, who will finance the work as it proceeds. We intend, throughout this period, to carry on our ordinary development work in the usual way, and are arranging our organisation accordingly.

In the current year we shall suffer some reduction of output, due to the Castner-Kellner and United Alkali works being transferred to the Imperial Chemical premises at Billingham-on-Tees. One of our associated companies, however (Cleveland Power Company), has an agreement under which large quantities of power will be supplied to the Billingham works.

It is difficult at this time to make any forecast with regard to the coal situation. The Coal Mines Bill, now before Parliament, is having an unsettling effect generally, and as coal represents a large portion of our revenue expenditure we are, naturally, somewhat apprehensive on this account.

With regard to shipbuilding, we must expect some curtailment of further work from the Admiralty. In the case of ordinary merchant shipbuilding, it is gratifying to note that a certain volume of new work has been booked.

ORDERS IN HAND.

The actual connections to the system during the last ten years have averaged over 30,800 h.p. per annum. That period included many years of acute trade depression. The orders we have in hand for further supplies, viz., 26,000 h.p., fall little short of the corresponding average during the last five years, and I think the shareholders will agree that there is every prospect of continued development.

As a public utility undertaking, we are precluded from receiving any direct relief under the de-rating scheme. So far as the past year is concerned, our rates exceeded those paid on account of the year 1928 by nearly £20,000, which is equivalent to no less than 35 per cent. of the total increase in our gross profits.

Although the outlook for the future as regards trade generally is a little uncertain, I do not consider that our prospects are by any means discouraging, and, bearing in mind the fact that we supply electricity to the majority of the industries throughout the area, and are steadily increasing our domestic supply business, I think we may look forward hopefully to 1930.

The sum divisible among the directors has stood at the same amount for ten years. During that time the business has vastly increased, and it is the directors' intention to take an early opportunity of raising the question of an increase in their remuneration to a figure more commensurate with their responsibilities.

The Chairman concluded by paying tribute to Mr Couves, the general manager, the staff and employees.

Mr James Tennant seconded the resolution, which was adopted.

The Chairman then moved that a dividend of 3½ per cent. on the 7 per cent. cumulative preference shares be declared, making with the interim dividend paid September 30th last, 7 per cent. for year; also a dividend of 2½ per cent. on the 5 per cent. preference shares, making with the interim dividend paid September 30th last, 5 per cent. for the year; also a dividend of 2½ per cent. on the ordinary shares, making with the interim dividend of 2½ per cent. paid September 30th last, 6 per cent. for the year, and that the above dividends be payable on March 31, 1930, less income tax.

Sir G. B. Hunter seconded the motion, which was carried.

Lieutenant-Colonel C. M. Headlam, Mr H. W. F. Bolckow, the Hon. R. H. Brand, and Sir G. B. Hunter were re-elected directors of the company.

Messrs Price, Waterhouse and Company were re-elected auditors, and the meeting closed with a vote of thanks to the chairman, which was carried with acclamation.

LONDON LIFE, CLERGY MUTUAL AND METROPOLITAN.

REVIEW OF ANOTHER PROSPEROUS YEAR.

LARGE INCREASES IN RATES OF REDUCTION OF PREMIUM.

AMAZING CENTENARY BONUS FOR CLERGY MUTUAL.

The ordinary general meetings of the above companies were held, on the 26th instant, at 81, King William Street, London, E.C.

Mr Reginald Jacomb (president of the London Life Association), in opening the proceedings, referred to the death of Mr Frank Bertrand Wyatt and to the resignation of Sir John Mullens from the board, and introduced the new director, the Earl of Limerick.

He said :—In any review of the year 1929, from an insurance point of view, one would expect it to be labelled as difficult, whether you consider it from the point of view of investments at home or abroad, or of the business of writing life assurance, affected as it has been by the conditions of trade.

As president of this association, which, although 123 years old, is still on the threshold of a great future, I decline to be other than an optimist as regards the future. (Hear, hear.)

Take, for instance, the fall in the values of securities; that, in itself, in connection with the class of securities which a sound life assurance company should hold, should be no more than an inconvenience. From the various causes which led to the fall in values, there is, however, much to be learned, and surely all thoughtful people must see that the safest investments they can make are by the medium of an insurance policy.

Again, look at the present condition of trade and of unemployment. We, as a people, are passing through critical times, and have not yet recovered from the effects of the war. Is that a reason for assuming that the old country is fast going down hill and that nothing can stop it? Problems have got to be solved, but there is a spirit among us to-day which will brook no policy of *laissez-faire* and will in the end prevail. (Hear, hear.)

INCREASE IN TOTAL FUNDS.

Now let us consider some of the items which are dealt with in the report.

The first, which records an increase in our total funds by £1,209,215 to £21,058,385, is in itself of considerable importance. One of the problems we have had to face was how to expand our business and thus spread our overhead charges over a broader basis, without increasing the percentage of our expenses of management. That we have succeeded is evidenced by the large increase in our total funds in recent years, while our expense ratio remains the lowest of any life office in the world. (Hear, hear.)

The depreciation in the values of our Stock Exchange securities during the year represents some 2½ per cent. only of the total funds. On December 31st last we had an investment fluctuation fund of £328,000, apart from other reserves, to cover the sum of £22,456 by which the value of the Stock Exchange securities fell short of the total at which these securities stood in the books.

I am informed that up to yesterday the values of our Stock Exchange securities have appreciated by more than £250,000 since December 31st. (Applause.)

He then explained why it should be the policy of the association to build up the investment fluctuation fund rather than write down the value of securities.

LARGE INCREASE IN NEW BUSINESS.

He said : I have so often in the past had the pleasure of calling your attention to fresh records in the amount of new business that such an announcement ceases to be a novelty. This year is, however, exceptional, and we have jumped forward with an increase of £424,683 and secured a total of £2,927,608, a magnificent figure—(hear, hear)—obtained without any material increase in the expense ratio. I say we, because in our satisfaction at such a result the directors and staff—and I hope our members—are one.

He then alluded to single premium (with loan) business and its effect on the accounts. He expressed the opinion that recent forms of this business constituted a gross abuse and should be stopped. He added : " The association, I am glad to say, has never issued a policy of this kind with less assurance than is contained in a 10-year endowment assurance."

" VERY GRATIFYING RESULTS."

He went on to say : I have kept the most pleasing subject for the conclusion of my remarks—namely, the very gratifying results of the year's working and the declaration of increases in rates of reduction of premium and reversionary bonuses.

Taking the London Life first, we are, for the third year in succession, increasing the rate of reduction for members assured under our reduction of premium system by three. Two years ago I said at the general meeting : " It is a matter for surprise that more new entrants do not choose this system." Since then there has been a distinct movement in favour of this system. I would add that my opinion is unchanged.

For our reversionary bonus policies we are for the second year declaring a 40s. bonus on sums assured and existing bonuses, a high rate when the smallness of the premiums is considered and when you realise what a compound yearly bonus means in the years to come. We have been able to apply £29,794 in strengthening the valuation basis as well as transfer £28,463 to the investment fluctuation fund. I feel justified in regarding the future of this class of policy as extremely good.

CLERGY MUTUAL BONUSES.

The bonuses declared for the Clergy Mutual policyholders are amazing, £5 per cent. for endowment assurances and for whole-life assurances £5 per cent. for all ages up to 65, increasing by 5 per cent. for each additional year of age up to no less than £13 15s. at age 100.

Remembering the lean years following the outbreak of war, we can, without any jealous comparison, congratulate the Clergy Mutual policyholders that the centenary of the founding of the society should produce such remarkable results. (Hear, hear.)

This year it is the turn of the Metropolitan members to feel the advantage both of the cautious and sound policy adopted by their directors in recent years, and of the amalgamation with the London Life. An increase in rates of abatement by no less than ten should give great satisfaction, combined with the prospect of the normal increases in future years.

The president concluded his address with a tribute to the services of Mr Trouncer and the staff.

The reports and accounts submitted were unanimously adopted.

UNITED DRAPERY STORES, LIMITED.

PROGRESS OF SUBSIDIARY BUSINESSES.

The third annual general meeting of the United Drapery Stores, Ltd., was held, on the 25th instant, at the Cannon Street Hotel, London.

Sir Arthur Wheeler, Bart., D.L., J.P. (the chairman of the company), who presided, said that the net profit for the year, after charging all expenses and providing for income tax, was £102,413, as compared with £86,251. It was proposed to write a further £20,000 off preliminary expenses and to pay a final dividend of 6 per cent., making 11 per cent. for the year.

Dealing with the progress made by the subsidiaries of the company, the Chairman said that during the year John Blundell, Ltd., had moved to larger premises at 196, City Road, bringing their business under one roof, with room for expansion. Their new building provided approximately 78,000 square feet of space, and their total staff was now about 1,400. Walker and Penistans, Ltd., established in 1897 as a small drapery business with two assistants, now comprised nine branches, with a staff of over 350, and had served during the year under review over two millions of customers, constituting a record in the company's history. Shinners, Ltd., a vital factor in the activities of the shopping public of Sutton, during the year had been occupied in an extensive rebuilding scheme, but, in spite of that, 75,000 more customers had been served than in any previous year. The new building would be equipped with every modern comfort and should prove one of this company's most valuable allies.

Hinds and Company, Blackheath, Ltd., established over forty years ago, had, from a small beginning, shown a record of uninterrupted progress and prosperity, and had proved a steady revenue-earner, whilst S. Young and Son, Ltd., which occupied two of the best sites in Sevenoaks, was this year commemorating its 150th anniversary. Hawes Bros., founded in 1892 as general and fancy drapers, had built up one of the largest postal depôts in the country for knitting wools. Last year they had acquired the business of Edward Evans, Ltd., in King Street, Hammersmith, which had already proved to be a valuable asset. Since it was taken over the leases of two neighbouring shops had been acquired, and alterations were nearly completed which would result in the necessary expansion and modernisation of the existing premises.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached :

To Publisher " Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address .....

THE SALT UNION, LIMITED.

SATISFACTORY PROFITS—DIVIDEND OF 12½ PER CENT. MAINTAINED.

AGREEMENT WITH IMPERIAL CHEMICAL INDUSTRIES.

MR GEORGE H. COX REVIEWS COMPANY'S INTERESTS.

The forty-first annual meeting of shareholders of the Salt Union, Ltd., was held on Tuesday, the 25th instant, at Exchange Station Buildings, Liverpool, there being a good attendance of shareholders.

Mr George Henry Cox, J.P., chairman of the company, presided.

Mr E. C. Wickes, secretary, having read the notice convening the meeting,

The Chairman said :—Ladies and Gentlemen,—Before proceeding with the regular business, it is my duty to express, on behalf of the board and his many friends, our deep regret at the loss sustained by the death of our late colleague Mr J. H. Beazley. He was most punctual and assiduous in the performance of his duties up to the last, and he was rarely absent from our numerous meetings.

DIVIDEND MAINTAINED.

As you have had ample opportunity to peruse the report and accounts, I assume you will prefer to take them as read. I am sure you will be glad to find that we are again able to recommend a dividend at the handsome rate of 12½ per cent., now to be paid for the sixth year in succession. (Hear, hear.) The net profits, although showing a small falling off as compared with the previous year, are satisfactory, especially having regard to the many difficulties that had to be overcome and to the unfavourable economic conditions generally prevailing throughout the world. Therefore, I take this opportunity of heartily thanking the managing directors and the staffs, both technical and clerical, and the large body of our artisans, for their loyal and strenuous efforts on behalf of the Union.

Reverting to the accounts, the small increase (£330) in directors' fees is due to the fact that a director was added to our board as part of the bargain for the purchase of Garner's Works; but the subsequent death of Mr Beazley has reduced the number of the board again to seven members.

SUBSTANTIAL RESERVE FUND.

I do not think I need detain you by going through the figures of the balance sheet in detail, except perhaps to remind you that the general reserve fund remains intact at the substantial figure of £550,000.

I wish, however, to call your attention to certain very important transactions in connection with our works and estate matters. The contingencies account has been utilised in providing for the purchase of the works at Winsford, lately owned by John Garner and Company, as described to you last year, and for the building of much-needed office accommodation at Stoke Works in Worcestershire.

CONTROL OF IRISH PRODUCTION.

The item " Shares in subsidiary companies " includes the purchase, on favourable terms, of all the shares of the Carrickfergus Saltworks Company, Ltd. This acquisition gives us complete control of the Irish salt production (both rock and white salt) and will, we anticipate, be of considerable value to us.

Further, there are two matters of much interest which were not completed in time to appear in the 1929 accounts, but which have since been successfully carried through.

AGREEMENT WITH I.C.I.

A satisfactory working agreement with Imperial Chemical Industries, Ltd., re salt and chemicals, has been sealed, and an agreement with that company has been reached for the exchange of certain works in Middlesbrough, whereby I.C.I. retire from the manufacture of salt for sale in that area, and we absorb their quota. We believe we shall reap valuable benefits from these arrangements, and from the friendship thus cemented with Imperial Chemical Industries, Ltd. (Hear, hear.)

CHESHIRE PROPERTIES.

Finally, I am glad to be able to tell you that our holding of properties under lease from Lord Delamere, including the site of the Winsford Vacuum Plant, Purification Plant, Packing Room, Mine, and Falk's Works, has been converted into freehold on satisfactory terms, thus consolidating the company's position materially. With this purchase practically the whole of the River Weaver banks on either side of the river from the Winsford Town Bridge up to Newbridge are included in the company's freehold.

HIGHER QUALITY SALT.

All our works are now in first-class order throughout. We are engaged in carrying out a fairly big job which will perfect our pure dried vacuum salt arrangements, and which will give us salt of a better grain and even higher purity than before. We have also decided to rebuild portions of the old Falk's factory works and carry out considerable improvements thereto. No opportunity is lost from time to time of perfecting our processes and increasing efficiency. The line of fortifications has been reduced in length by concentration and the elimination of expensive and unremunerative outlying works, manufacture thus being concentrated in the works best fitted to undertake it.

LABOUR.

As stated in the report, relations with our workpeople have been harmonious. Such mutual goodwill is essential to the sound working of an industry, and will help us through troubled times when they occur.

DE-RATING.

The new assessments of our salt works under the provisions of the 1925 Rating and Valuation Act are not yet agreed, but our works properties have been recognised as " Industrial hereditaments " for the purpose of the 75 per cent. relief under the de-rating scheme.

CALCUTTA AND THE EAST.

With regard to our Eastern export trade, to Japan we shipped less, but to Calcutta rather more than in 1928. I am sorry to say that the competition in solar salt, to which I referred in March last, has brought about a dissolution of the Salt Importers' Association of Bengal.

Concerning the Indian Government Tariff Board Inquiry, you will have gathered from Press notices that a movement is on foot to protect the native production of salt in the Indian Empire. The outcome of this inquiry cannot be known for some time.

SALT MANUFACTURERS' ASSOCIATION.

Coming to our home trade, after protracted negotiations arrangements were made to carry on the Salt Manufacturers' Association for another year as a minimum period. (Hear, hear.)

So far there have been no fresh entrants to the quota scheme. The refusal of the manufacturers still outside it to realise the benefit of the agreement to the whole trade, if all were signatories to it, is extremely disappointing. We trust they will soon recognise that it is to their best interest to join with the principal manufacturers, if profits are to be earned. Given complete unity, the problem of dealing with the large importations of foreign salt will be far easier. It is well to remember that the menace from this quarter, even to our home trade, is a constant source of anxiety.

COAL.

We have continued our policy of " no contracts " for fuel; and have purchased daily and weekly our requirements throughout the year. This has enabled us to buy much very cheap coal, although on the average the level of prices has been about a shilling per ton higher than in 1928. The coalowners have formed combinations regulating output and prices, and with a fair amount of success, thus securing better terms for themselves. It is essential that the coal industry should be placed if possible on a satisfactory economic basis, for the ultimate benefit of both producers and consumers; and it is to be hoped that either through the improvement of the Coal Bill now before Parliament, or by some other means, this will be effected. I need hardly remind you that a reasonable price of fuel is of vital importance to us, to enable us to compete with low-grade foreign salts produced without the use of coal.

MERSEY POWER COMPANY.

We have retained the whole of our large investment in the Mersey Power Company, which has continued its prosperous career. In a few minutes I shall be presiding at its second public meeting, when I hope that many of you will be able to remain, in order to hear an account of the operations for the past year.

I now beg to move :—" That the report of the directors, with statement of accounts for the year ended 31st December, 1929, now submitted, be received and adopted." (Applause.)

Mr F. W. Clark (deputy-chairman) seconded, and the motion was carried unanimously.

On the motion of the chairman, seconded by the deputy-chairman, the meeting authorised the payment of the preference dividend at the rate of 2s. 4d. per share and ordinary dividend at the rate of 2s. 6d. per share.

The Chairman proposed the re-election of Mr H. J. Falk as a director, and this was seconded by Mr R. O. Crichton, and carried.

PINCHIN, JOHNSON AND COMPANY, LIMITED.

CONTINUED PROGRESS.

SUCCESS OF EXPANSION AT HOME AND ABROAD.

The annual general meeting of the shareholders of Pinchin, Johnson and Company, Ltd., was held, on the 25th instant, at the Hotel Metropole, London.

Mr Edward Robson (the chairman) presided.

The Secretary (Mr E. P. Thompson), having read the notice convening the meeting,

The Chairman said :—My Lords, Ladies and Gentlemen,—I now move that the report of the directors, dated March 10, 1930, and the balance sheet of December 31, 1929, now submitted, be, and the same are, hereby received and adopted, and that a final dividend on the ordinary shares for the year ended December 31, 1929, of 20 per cent., less income tax, making, with the interim dividend already paid, 30 per cent., less tax, for the year, be declared and paid to holders of ordinary shares on the register at March 11, 1930.

In submitting the report and accounts for 1929, my task, in one sense, becomes a particularly easy one, or at any rate extremely agreeable, as the figures shown in the accounts represent another landmark in the successful history of the Pinchin, Johnson organisation, and reflect a condition of robust health, strength and progress throughout the undertaking.

DEVELOPMENT PROGRESS.

Our programme during the past year has been directed particularly to two features—the first being to effect a substantial step forward in the direction of consolidating, organising and developing various interests and extensions previously acquired, and secondly, we have made important extensions to our organisation. I refer first to the acquisition of a majority interest in an additional important Australian undertaking, which should be a valuable addition to the strength of our already large and important developments in the Commonwealth.

Then, again, we have made another step forward in the direction of consolidating our interests on the Continent of Europe. We had previously possessed various branches and units on the Continent, as well as a substantial holding in a progressive and growing Italian manufacturing unit. The arrangements have since been consolidated, and to-day we are not only firmly established on the Continent, but are in a position to go further with similar developments as the opportunity arises.

FURTHER ACQUISITIONS.

Since the close of the year we have extended our holding in an important North of England organisation, which again we are satisfied is a desirable adjunct to our other British interests.

Whilst these developments have been so actively proceeded with, we have at the same time effected further satisfactory progress with the undertakings previously within our control, with the result that our sales for 1929 again establish a further record.

Our production is on an even higher standard, and the net result represents a further substantial advance in profits.

These results have been attained during a year of unexampled international trade depression and difficulties. The depression of trade that has been a feature so pronounced in our own country, has been equally in evidence in many parts of the world, and has produced a set of conditions preventing the fullest benefit being obtained from our own domestic efforts.

RESOURCES AND FACILITIES.

That such satisfactory results should have been attained in conditions of extreme difficulty merely serves to indicate the possibilities of progress and growth when conditions in general become a little more normal.

One must not lose sight of the fact that during the latter part of the past year there was a substantial increase in the value of raw material commodities, in spite of which our selling values in the main are, if anything, on a slightly lower level. This carries with it a natural reduction in the rate of gross profit earned, but by larger production, more efficient handling of our business, and a reduction in costs and charges generally, it has been possible to produce this satisfactory result.

This improvement continues, and it is a feature that has the constant care and attention of our management and executive.

If I had to sum up in a few words the real reason for our success, I would say, apart from efficient production and organisation generally, it is the fact that we are in a position to cater for every type of product dealt with in our industry, and to give value that can be beaten by no other organisation, and equalled by few.

CONTINUED EXPANSION CONTEMPLATED.

Now, as to the prospects for the future. It is a very difficult matter to anticipate the course of events over a period of eight or nine months ahead. Added to this is the fact that conditions generally throughout the world are a little obscure and our own national and political situation is somewhat uncertain, but I take confidence from the fact that, first, the sales of our organisation to date this year show a further satisfactory advance over the corresponding period of 1929, also we have in mind the possibilities of substantial further expansion, in vew of which contingency we are making, at the extraordinary meeting which follows this gathering, provision for an increase in our capital.

Mr F. E. Powell seconded the resolution, which was carried unanimously.

All retiring directors and the auditors were unanimously re-elected for the coming year.

The Chairman then expressed his warmest thanks to his co-directors and the staff, to which Mr R. Paltridge (managing director) responded.

The meeting terminated after a hearty vote of thanks to the chairman, proposed by Mr R. H. Ingham Clark.

INCREASE OF CAPITAL.

An extraordinary general meeting followed immediately, whereat the resolution to increase the capital of the company to £2,500,000 by the creation of 1,000,000 additional ordinary shares of 10s. each was unanimously carried.

The proceedings then terminated.

ODHAMS PRESS, LIMITED.

RECORD GROSS AND NET PROFIT.

The tenth annual general meeting of Odhams Press, Ltd., was held, on the 26th instant, at the Connaught Rooms, Great Queen Street, London.

Mr W. J. B. Odhams (the chairman) said that the net profit for the year was the record figure of £203,653, which compared with £176,783 for 1928, £151,753 for 1927, and £116,872 for 1926. They were able to say of last year's working, as they did of that preceding it, that the business of the company continued to grow, that they had had a larger gross turnover, a larger gross profit and a larger net profit than in any previous year of the company's existence. They were providing every year more and more employment for compositors, machine men, warehousemen, and all the many other classes of workmen engaged in the production of newspapers, in addition to their increased purchases of paper and materials. They were paying out in wages, apart from salaries, at the rate of over a million pounds a year. They were able to recommend a dividend of 17½ per cent. upon their ordinary shares.

Towards the net profit *The People* newspaper had contributed a reasonable return through the printing bills rendered week by week. A substantial profit had been made by that newspaper, and the net circulation, which had been under 300,000 some five years ago, was now over 2,350,000 copies.

In July last, Mr Elias had suggested the desirability of coming to an arrangement with the *Daily Herald* and developing it into a paper worthy of the large party it represented. Negotiations followed, lines of demarcation were agreed, and the result was the *Daily Herald* in the form made familiar to the shareholders during the last ten days. Naturally, the question of the political opinion of the paper had been keenly present in the minds of the directors. Ought Odhams Press to become interested in any paper whatever its politics when the views of the board and of the shareholders were necessarily of such great divergence? The answer which had finally prevailed with them all was that they were trustees, charged with the use of valuable plant and machinery with the object of earning the best return for some nine or ten thousand shareholders of all shades of opinion. In the new *Daily Herald* company they were investing £51,000 in ordinary shares and £324,000 in 7 per cent. debentures. To provide that amount and for the setting up of new works at Manchester, they had decided to issue the balance of their debentures, namely, £100,000, and the £340,000 of their unissued ordinary shares.

In conclusion, the chairman paid a tribute to the work done by the managing director, Mr Elias, and by the whole of the staff.

The report was adopted.

UNITED GLASS BOTTLE MANUFACTURERS, LIMITED.

RECORD INCREASE IN PRODUCTION AND SALES.

DIVIDEND RAISED TO 7½ PER CENT.

The seventeenth ordinary general meeting of the United Glass Bottle Manufacturers, Ltd., was held, on the 26th instant, at the registered office, 40-43, Norfolk Street, Strand, London.

Mr George E. Alexander, O.B.E. (chairman and managing director) presided.

The Acting-Secretary (Mr S. S. Kenyon), having read the notice convening the meeting and the auditors' report,

The Chairman said : Referring to the balance sheet first, it will be seen that the increase in buildings, plant and machinery (after writing off depreciation £64,378 1s. 5d.) amounts to £15,823 3s. 7d. (all repairs and renewals having been efficiently maintained and charged to revenue); and house property, trade and other investments to £6,944 15s. 11d. The stocks and stores on hand, trade debtors and cash in hand show an increase of £110,738 19s. 7d., which, after deducting the increase in creditors of £67,417 15s. 7d., shows a surplus of £43,321 4s. As I have informed you on previous occasions, the stock of bottles, which constitutes 71 per cent. of the item "Stock, Stores, Packages, etc.," is not stock accumulated in anticipation of demand, but with very minor exceptions, represents definite contracts which have been executed pending actual delivery to our customers—amongst whom we are proud to claim the largest users in this country of glass containers. Their requirements are spread over the whole year, not necessarily in regular intervals; but it is a matter of factory economy to execute these bulk orders by continuous runs even at the extra expense of carrying the finished ware in our warehouses.

APPROPRIATION OF PROFITS.

Turning to the profit and loss accounts, you will observe that the profits of the subsidiary companies (including interest on investments, etc.) amount to £245,428 3s. 6d., as compared with £191,863 4s. 11d., the corresponding figure for last year—an increase of £53,564 18s. 7d. After charging interest on debentures, income tax and directors' remuneration, etc., the amount of profit carried to the balance sheet is £146,750 15s. 8d., as compared with last year's balance of £104,054 18s. 3d. Taking the figure of net profits as above, and adding the sum carried forward from last year of £42,659 15s. 10d., the total amount with which we have to deal is £189,410 11s. 6d., out of which there have been paid an appropriated (1) preference dividend and preferred ordinary dividend for the half-year to June 30, 1929 (less tax), £20,993 2s.; (2) debenture redemption reserve, £9,826 12s. 6d.; (3) general reserve, £10,000; (4) capital reserve, £50,000; (5) staff benevolent fund, £8,000, and (6) since December 31st last, applied in payment of final dividend for the half-year ended December 31, 1929, on preference shares, £17,993 2s., and in respect of the dividend on the preferred ordinary shares, £3,000, leaving a balance of £69,597 15s., with which the directors propose dealing as follows :—

Payment of dividend on the ordinary shares of the company for the year ended December 31, 1929, at the rate of 7½ per cent. per annum (less income tax) £25,051 16s.; leaving a balance to carry forward of £44,545 19s.

Reserves.—During the year further debenture stock was redeemed in accordance with the terms of the debenture trust deed, and the debenture redemption reserve now stands at £27,981. A sum of £10,000 has been transferred to general reserve, bringing this figure up to £100,000, and a sum of £50,000 to capital reserve, bringing this figure up to £200,000.

Increasing the capital reserve by such a considerable amount might give the impression that your board considers that the asset of land, fixed plant, machinery, etc., stands at too high a figure. I can assure you that such is not their opinion. It is solely a matter of prudence. In reviewing your company's assets, in particular its holding in subsidiaries and the various "Trade investments," your board naturally prefers to err on the side of conservative finance.

Staff Endowment and Benevolent Fund.—In the year 1925 the sum of £5,000 was appropriated from the profit and loss account to form a nucleus of a staff benevolent fund. As you are aware, your company was an amalgamation of old-established concerns, and took over a large number of employees with a long period of faithful and efficient service; many of whom had reached retirement age. There was no pension scheme or benevolent fund in operation, but from time to time pensions and temporary grants were made to members of the staff; the total amount paid for the five years to December 31, 1929, being £16,292. The board felt that some permanent provision should be made for the present members of the staff, and during the past year entered into an arrangement with one of the large insurance companies to provide pensions, group life insurance and other benefits, the cost of which is shared between members of the staff and your company.

Commercial Position.—Again I am pleased to report an increase in the quantity and bulk of the orders received, also an increase in the production and sales—all three creating new records.

WAREHOUSING BOON TO CUSTOMERS.

The miscellaneous nature of our manufacture naturally necessitates the carrying of larger stocks, and our factory warehouses last year were almost taxed to their limits. Your board, instead, however, of increasing these facilities, embarked on a new policy, viz., of establishing warehouses in the most important centres of the country, thereby giving better and quicker service to its customers. Such warehouses have been leased in London, Glasgow, Edinburgh, Manchester, Birmingham, Nottingham, Wolverhampton, Leeds, Huddersfield and Bristol, where stocks can be held almost at the customer's door, guaranteeing immediate delivery and obviating delays in transit that may arise from inclement weather and congestion on the railway systems from various unavoidable causes. This boon has been much appreciated by our large circle of customers, and has enhanced our already well-earned reputation for good service.

At the end of the year our unfilled order sheet was exceptionally satisfactory, and I am happy to state that new orders during the first months of the New Year have been ahead of the corresponding period last year. In view, however, of the general slackening of trade, it would have been surprising had we not experienced some reaction in the shape of a slowing down in our delivery instructions.

THE BURDEN OF TAXATION.

The causes of the present trade situation, both at home and abroad, are manifold, and I do not propose to detain you with a long homily. But I feel compelled to draw attention to the ever-increasing extravagant schemes for social services constituting an exceptional burden on the British taxpayer and British industry in particular. I submit that our statesmen should have the foresight not to "kill the goose that lays the golden egg"; I suggest that they should look instead to other sources—if only for revenue-raising purposes, by making the foreigner contribute in return for the benefit conferred upon him in our open markets. (Hear, hear.)

I am pleased to say that as regards our export trade, mainly within the Empire, last year shows a very large increase over 1928. The remarks I made last year in reference to the expansion in the closure sales of our subsidiary company—now re-named Kork-n-Seal, Ltd.—apply to a much increased extent. The results of 1929 in production, sales and profits establish records. Our box factory at St. Helens has also largely increased its contribution towards the results of your company, the quality of its products becoming more and more recognised by the brewing and mineral-water trades.

SERVICES OF STAFF.

I cannot close my remarks without expressing our deep appreciation of the services rendered by the staff during the past year. Again our excellent results could only have been obtained by their loyalty and devotion to the interests of the company, and I am sure that shareholders will join the board in expressing our sincere thanks for their services.

I beg to move the adoption of the report and accounts for the year, and that a dividend at the rate of 7½ per cent per annum (less tax) on the ordinary shares of the company for the year ended December 31, 1929 (less tax at 4s. in the £), be paid.

Sir Max J. Bonn, K.B.E. (deputy-chairman), seconded the resolution, which was carried unanimously.

On the motion of the chairman, seconded by Mr J. S. Cannington, the retiring directors, Sir Max J. Bonn, K.B.E., and Sir Walrond Sinclair, K.B.E., were re-elected.

VOTE OF THANKS.

The Hon. W. B. L. Barrington said he would like to be allowed to propose a very hearty vote of thanks to the chairman, directors, management and the staff for the extraordinarily good results which had been achieved by the company for 1929. They had had a most interesting and illuminating speech from the chairman, and he thought the shareholders could feel quite satisfied that they had such admirable gentlemen looking after the business. As was well known, the year 1929 had been a most difficult one, and the board must have had many problems to solve. He particularly wished to include in the resolution the chairman and Mr Moorshead, both of whom gave the whole of their time to the affairs of the company. As the chairman had stated, the staff had co-operated in a wonderful way, and it was marvellous what results had been achieved.

Major C. H. Campbell, in seconding the vote, also congratulated the board on the past year's results.

The vote was unanimously accorded, and the chairman and Mr T. C. Moorshead, M.Am.Soc.C.E., having briefly responded, the proceedings terminated.

INTERNATIONAL AUTOMATIC TELEPHONE COMPANY, LIMITED.

DIVIDENDS AND BONUSES MAINTAINED.

The tenth ordinary general meeting of the International Automatic Telephone Company, Ltd., was held, on the 24th instant, at Winchester House, London, Sir Alexander Roger (chairman of the company) presiding.

The Secretary (Mr C. H. W. Brougham) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The net profit for the year is £135,849, an increase of £5,025. Your directors recommend that a further £10,000 be transferred to reserve, and the payment of a final dividend at the rate of 6¼ per cent. per annum on the ordinary shares, making a total of 10 per cent. (less income tax) for the year. A bonus of 2½ per cent. (less income tax) on the ordinary shares is also recommended. On the deferred shares there is recommended a dividend of 10 per cent. (less income tax) for the year and, in common with the ordinary shares, a bonus of 2½ per cent. (less income tax).

This is the second time a bonus of 2½ per cent. is recommended on ordinary and deferred shares, and your directors wish again to emphasise that these additional distributions should be regarded in the light of bonuses. Dividends and bonuses will take in all £82,625 (the same as last year), leaving £82,578 to be carried to the next account, as against £69,735 brought in from the previous year.

CONDITIONS IN THE INDUSTRY.

It was ten years ago—in 1920—that your company was formed, for the purpose of promoting sales in overseas markets of Strowger automatic telephone exchange equipment and other products manufactured by Automatic Telephone Manufacturing Company, Ltd., of Liverpool. This was done through the assistance of Automatic Electric, Incorporated, of Chicago, and affiliated American financial interests.

Since that time telephony has made gigantic strides. The telephone is becoming more and more universally adopted, and the art has progressed amazingly. Until a few years ago conversation between people remotely situated was possible only where physical links in the form of land lines, etc., existed, but to-day speech can be transmitted over almost any distance and speech distortion has been almost entirely eliminated from land and sea cables.

So far as the technical side of the business is concerned, I think we may safely say that we have remained in the forefront. Automatic Telephone Manufacturing Company, Ltd.'s, Strowger automatic system has been adopted as standard in Great Britain, U.S.A., Germany, Japan, Australia, etc.

Out of Automatic Telephone Manufacturing Company, Ltd.'s, works, and through our alliances and associations, we are able to place at the disposal of our customers all the advantages of pooled research and development both of a manufacturing and operating nature, and of technical and financial assistance and the economies consequent on the ability to purchase bulk supplies.

STRONG COMMERCIAL POSITION.

So far as the commercial side is concerned, I think we may be said also to have built up a strong position. It became quite apparent to the founders of the Automatic Telephone Manufacturing Company that owing to the growing international character of telephony, both from the point of view of manufacturing and communications, they would have no continued success if they were to remain isolated. The formation of the International Automatic Telephone Company, Ltd., was the first stage towards breaking down that isolation, and, after some years of strenuous work, we have made very valuable alliances and connections, with the result that we are now a prominent link in an important chain of companies covering the U.S.A., Great Britain and Germany, and elsewhere, who together undertake :—

1. Engineering, construction, management and operation of complete telephone installations;

2. The examination, negotiation and acquisition of telephone concesssions; and

3. The financing of telephone operating properties and extensions to existing plant.

Throughout the period during which we have been achieving reasonably good and improving results we have been opposed in foreign markets, and to a certain extent at home, by groups representing capital many times in excess of our own. These combinations were making determined efforts to secure a monopoly both in international communications and of manufacturing interests, and although we made many attempts to interest capital in England for the purpose of developing telephone and other communications throughout the world, we were obliged ultimately to rely to a large extent on our friends in American in this and other directions.

The report and accounts were adopted.

THE POWELL DUFFRYN STEAM COAL COMPANY, LIMITED.

IMPROVED RESULTS.

The annual general meeting of the Powell Duffryn Steam Coal Company, Ltd., was held, on the 27th instant, at Cannon Street Hotel, London, Mr Edmund L. Hann (acting chairman and managing director) presiding.

The Chairman, referring to the accounts, said that the temporary arrangements which were necessitated by the serious difficulties in the coal trade in 1926 for carrying out the company's marketing policy were not looked upon by the directors as being the ideal method of finance, and when opportunity occurred, they would lay before the shareholders a scheme which would have as its object the placing of the finance of the company upon a basis more in keeping with its needs.

He wished to say that the past year's results did not give a proper indication of the company's earning capacity. In order that shareholders might realise the position, it was only necessary for him to refer to the published figures of the ascertainment made of the working results of the South Wales coalfield by joint accountants on behalf of the owners and the men. These independently ascertained figures showed in respect of South Wales a loss for the whole of that coalfield for the year ended October 31, 1929, of 2·40d. per ton. As a contrast, the results for the three months, November, December and January last, which were the last published figures, showed for the whole South Wales coalfield a profit of 9·94d. per ton.

This would give shareholders an indication of the change which had taken place. It was true that trade in March had shown a decline, as a result probably of the mild winter and the consequent accumulation of stocks both at home and abroad, but, taking all in all, there had been a marked improvement in conditions. On the marketing side they were making good progress. Their working arrangements with Messrs Stephenson Clarke and its associated companies continued to develop in a most satisfactory way. They were working in the closest co-operation and in perfect harmony, and the results shown by the marketing side were most satisfactory and encouraging. Those companies, with the full concurrence of the Powell Duffryn board, were pursuing a very conservative financial policy.

While there was cause for gratification that the trading loss of £36,000 in 1928 had been converted into a trading profit of £309,000 for 1929, he confessed to a feeling of disappointment that the results were not even better.

OUTLOOK FOR COAL TRADE.

With regard to the outlook for the coal trade, while it was too much to expect that it could be really prosperous during a time of such depression in general trade, there was little doubt that the uncertainty of the political situation had aggravated the situation, and until the effect of the Coal Bill and the effect of the Budget were known, it was extremely difficult to give any indication of the probable course of events in the trade. He could only say that the results of working for the first two months of 1930 were a distinct improvement over the corresponding period of last year. The board's policy having been to strengthen and consolidate the company's position, when better times for the trade did arrive they would be in a position to make the best use of the opportunity. It must be remembered that the world's consumption of coal was gradually increasing, and that the rapidly increasing use of power and gas must continue to have its effect. Of the eventual recovery of the coal trade the directors had little doubt, and he thought there was justification for their confidence in the future of the company.

THE COAL BILL.

His remarks would be incomplete without some reference to the Coal Bill before the House of Commons, which had been the cause of so many differences of opinion among politicians and within the trade itself. The directors did not take the view that the provisions as to regulation of output, commonly referred to as the "quota," would be a detriment to the trade. On the contrary, it was his firm opinion that it was only by a proper regulation of output to meet market requirements that some measure of reasonable prosperity could be obtained and maintained for both capital and labour employed in the trade.

He deplored that at this moment, when the coal export trade of this country was in process of recovering so many of its lost markets, recovery should be jeopardised once more by Government interference, for the shortening of hours must of necessity increase the cost, and, with that increased cost, their competitors would be put in a stronger position at the expense of the British coal trade in those foreign markets.

The chairman concluded by moving the adoption of the report and accounts.

After a brief discussion the motion was carried unanimously.

V.O.C. HOLDING COMPANY, LIMITED.

AMALGAMATION WITH CONCESSIONS COMPANY.

SHAREHOLDERS' UNANIMOUS APPROVAL.

An extraordinary general meeting of the V.O.C. Holding Company, Ltd., was held, on the 24th instant, at the Cannon Street Hotel, London, E.C., to consider resolutions approving amalgamation with the Venezuelan Oil Concessions, Ltd.

Viscount Bearsted, M.C. (chairman of the company), presided.

The Secretary (Mr W. A. Turner, F.C.I.S.) having read the notice convening the meeting,

The Chairman said: Ladies and Gentlemen,—As early as 1924 suggestions were made that our company's structure should be simplified. I do not propose to go into the difficulties which prevented our acting earlier upon these suggestions. You have been advised in the circular issued to you on February 27th that recent alterations in the law have made it possible, at a relatively small cost, to take this desirable action, and the consequent proposals are before you in detail. These proposals, if carried into effect, will result in your holding shares in the Venezuelan Oil Concessions, Ltd., a company with articles of association similar to those of your company, of like number, and of the same class, and having identical rights to the shares you now hold in the V.O.C. Holding Company, Ltd.

THE EXCHANGE OF SHARES.

As stated in the circular, the agreements provide that all the assets of the Holding Company (excepting the shares in the Concessions Company held by the Holding Company) will be transferred to the Concessions Company. The Holding Company will receive a sufficient number of shares in the Concessions Company to place it in a position to distribute one ordinary share in the Venezuelan Oil Concessions, Ltd., for each ordinary share in this company, and a 7 per cent. preference share for each preference share in this company. To enable this distribution to be made, the Holding Company will have to be placed in liquidation. The scheme will do away with duplication of board meetings and shareholders' meetings. It will simplify the accounts and reports, and it will give shareholders a direct interest in the operating company instead of an indirect one.

At a meeting of the Venezuelan Oil Concessions, Ltd., held just before this meeting, the sale agreement was confirmed, and the necessary resolutions for carrying the scheme into effect were passed, and you are now in the position (subject to the class meetings of shareholders to be held immediately after this meeting) to put the scheme into immediate operation if this meeting so elects.

NEW ISSUE OF ORDINARY CAPITAL.

At the Concessions Company meeting, an additional issue of 1,800,000 ordinary £1 shares was also authorised. These 1,800,000 ordinary shares will be offered to the Holding Company shareholders at par on the basis of one share for each three ordinary and/or preference shares held, and on the same basis to the individuals who hold the 135 outstanding shares in the Concessions Company.

The new capital is required to replace and release for dividend purposes profits utilised for capital expenditure in 1929 and this year to date and to provide working capital for the future. The money last raised by the V.O.C. companies amounted to £1,800,000, and represented an issue of 1,800,000 shares at par made at the beginning of 1927. At the time that that issue was made the company was in a somewhat similar position to that obtaining to-day, in that capital expenditure had been financed to a certain extent from profits. Shortly put, the total capital expenditure since the middle of 1926 has been met from the £1,800,000 raised in early 1927, plus sum set aside for depreciation each year and certain amounts taken earned but undivided profits. In the case of this last-mentioned perhaps only fair to state that certain of our profits divided, as, in our opinion, in a business such as the under such conditions as have ruled during the years, the rate of depreciation which the revenue he maximum is not as conservative as we consider

LARGEST PRODUCER IN VENEZUELA.

enditure in three and a half years (from the middle of end of 1929) has included a sum just under £1,600,000 ant and machinery, over £800,000 for the capitalised npleted new wells, about £470,000 for new tanks and 40,000 for new buildings, and £500,000 on land acquisums, together with expenditure on furniture, liveation units, etc., total over £4,000,000. While this ry large sum, I would point out that your company position in a remarkably short time of being the al producer of crude oil in Venezuela—the rate of the first half of 1926 having been about 30,000 tons per week, while during the year 1929 the average weekly production was about 125,000 tons. Your board are of the opinion that the important position which the company now occupies as a producer can be maintained.

Big production, however, necessarily involves large capital expenditure, and, while a very substantial part of the principal capital expenditure over the next few years will be met—if profits continue—from the depreciation account, the end of our important capital expenditure is by no means in sight, as sustained large production carries with it the necessity of developing new fields with the attendant outlay on drilling, housing, road construction, oil, water, mud and gas lines, field tankage, pumping stations, and wharves for receiving goods and loading oil.

I do not propose to discuss at this meeting the result of last year's operations, as it is not my practice to attempt to forecast results without having very definite information upon which to base the estimates, nor is it the object of this meeting. Every effort is being made to complete the audit of the accounts in time to hold the annual general meeting at about the same date as it was held last year.

I think, perhaps, a word from me on the subject of the attitude of this company toward rationalisation of the oil industry might be appropriate. We have already met with some success in our measures of stabilisation of production in Venezuela, but before the industry is placed in a really healthy condition much more has to be done not only in Venezuela, but in other oil-producing countries. Your board has always favoured the policy of rationalisation, and has done everything in its power to effect agreement toward that end with the other companies. The best evidence of our attitude is that we have only recently considerably reduced the V.O.C. drilling programme, as we feel that further expansion in production at this moment would be injurious to the efforts which are being generally made toward stabilisation of crude oil output to a point consistent with the consumption.

I shall be pleased to answer any questions with regard to the proposed amalgamation, and then I think it will be convenient if the resolutions which the secretary has read and which I now propose are put to the vote as a whole. I shall ask Sir Charles Wright to second these proposed resolutions. (Cheers.)

Colonel Sir W. Charles Wright, Bt., K.B.E., C.B., seconded the resolutions, and, in the absence of question or comment, they were carried unanimously.

The scheme was also unanimously approved at subsequent separate meetings of the holders of preference shares and ordinary shares.

CAPITAL and INTEREST

are both lost if your investments fail.

This loss may be avoided by investing in "Globe" Life Assurance, a gilt-edged security not liable to depreciation.

A copy of our new comprehensive prospectus, featuring many attractive schemes, will be sent post free on your request.

THE

LIVERPOOL & LONDON & GLOBE

INSURANCE COMPANY, LTD.

Head Office: 1, Dale Street, Liverpool. | London: *Chief Office:* 1, Cornhill, E.C.3.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 22, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts	£
Supply Services	6,200	From Revenue	25,008
Interest, &c., on Debt	217	Decrease in Balances	162
Sinking Fund	1,509		
Sundries	2,776		
Decrease in Debt	14,468		
	25,170		25,170

The ordinary revenue for the week amounted to £25,008,400, as compared with £28,259,000 in the corresponding week last year. Income tax was lower at £9,613,000, against £11,468,000, but surtax and super-tax brought in £4,040,000, against £3,890,000. Customs and Excise amounted to £3,595,000, and £5,420,000,

against £3,878,000 and £4,866,000 respectively. Ordinary receipts brought in £18,500, as compared with £14,500, and special receipts, £9,500, against nil. With nine more days to run to the end of the financial year, the deficit amounts to £24,023,500, as compared with a surplus of £9,481,200 at the corresponding date last year. During the week the National Debt was reduced by £14,467,900, as shown below :—

(000's omitted.)

INDIA COUNCIL REMITTANCES.

No remittances were made by the Government of India to the Secretary of State for India in Council during the week ending March 22, 1930.

BULLION.

The following statistics of imports and exports of gold for week ended March 27, 1930, are issued by the Statistical Department of H.M. Customs and Excise :—

Imported into Great Britain and Northern Ireland.	£	Exported from Great Britain and Northern Ireland.	£
From—		*To*—	
France	15,509	Germany	17,040
Argentine Republic	26,000	Netherlands	2,023
British South Africa	211,718	France	16,209
Australia	3,000,000	Switzerland	12,000
		Italy	250,086
		Austria	4,100
		Morocco	2,000
		Straits Settlements	9,900
Total declared value of imports	3,253,227	Total declared value of exports	313,358

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1930.	ARRIVALS.	£	1930.	WITHDRAWALS.	£
Mar. 21	Bars bought	2,952	Mar. 21	Sovs. set aside	500,000
	Foreign coin bought	16		Sovs. for export	2,000
Mar. 22	Sovs. from abroad	2,000,000	Mar. 22		Nil
	Bars bought	206	Mar. 24		Nil
Mar. 24		Nil	Mar. 25		Nil
Mar. 25	Bars bought	151,300	Mar. 26		Nil
Mar. 26		Nil	Mar. 27		Nil
Mar. 27	Sovs. from abroad	1,000,000			
	Bars bought	1.030			
	Total	3,155,504		Total	502,000

Net arrivals, £2,653,504.

Messrs Samuel Montagu and Company write on March 26, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £153,458,058 on the 19th instant (as compared with £151,873,749 on the previous Wednesday), and represents a decrease of £448,257 since April 29, 1925, when an effective gold standard was resumed. In the open market yesterday only £212,000 bar gold from South Africa was on offer. There was, however, little demand, Indian requirements being £35,000 and those of the Home and Continental trade £23,000. The price was fixed at 84s. 10d. per fine ounce, but the Bank of England obtained about £151,000 at the statutory buying price. Movements of gold as announced by the Bank of England show a net influx of £1,677,982 during the week under review. Receipts amounted to £2,179,982, which included £2,000,000 in sovereigns from Australia, and of the withdrawals £500,000 was in sovereigns "set aside."

SILVER.

The feature of the week was a sharp rise on the 20th instant of ⅝d., which carried quotations to 20d. and 19 13/16d. for cash and two months' delivery respectively. This was attributable to paucity of offerings as well as to demand from China and India. Although the market appeared overstrained, the rise created some nervousness on the part of bears, and covering orders were at first sufficient to prevent any sharp relapse. Yesterday, however, following some re-selling by the Indian Bazaars, prices were quoted 19½d. and 19 7/16d. after a fall of ¼d. and 3/16d. in the cash and two months' quotations respectively. To-day rates again eased slightly to 19 7/16d. and 19⅜d. India and China both bought and sold, whilst America offered to sell fairly freely, especially at the higher rates.

The difference between the quotations has narrowed to 1/16d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 17th instant to mid-day on the 24th instant :—

IMPORTS.	£	EXPORTS.	£
Netherlands	9,350	British India	169,061
Germany	13,047	Other countries	2,913
France	161,313		
Egypt	14,046		
U.S.A.	125,769		
Mexico	95,076		
Canada	16,188		
Other countries	7,090		
	£441,879		£171,974

REPORTS AND NOTICES.

The directors of the London and Lancashire Insurance Company announce the retirement, on pension, as from February 28th, of Mr J. S. Proctor, who has held the position of Glasgow local manager for the last twenty years. To succeed Mr J. S. Proctor, whose retirement is announced, the directors of the London and Lancashire have appointed Mr Lancelot Paget as local manager at Glasgow. To succeed Mr Paget, the directors of the Law Union and Rock Insurance Company have appointed Mr David Wood as district manager at Glasgow.

The directors of the Scottish Widows' Fund and Life Assurance Society announce that Mr G. J. Lidstone, LL.D., F.F.A., F.I.A., F.A.S., F.R.S.E., formerly manager and actuary of the society, has been appointed an ordinary director.

The next examination of candidates for admission to the Society of Incorporated Accountants and Auditors will be held on May 5th, 6th, 7th and 8th in London, Manchester, Cardiff, Leeds, Glasgow, Dublin, Belfast, Cape Town, Johannesburg and Durban. Women are eligible under the society's regulations to qualify as Incorporated Accountants upon the same terms and conditions as are applicable to men. Particulars and forms are obtainable at the offices of the Society, Incorporated Accountants' Hall, Victoria Embankment, W.C.2.

BANKS.

BANCO NACIONAL ULTRAMARINO.—The net profit for year 1929, after deduction of Esc. 5,484,998 for contributions to the Portuguese State, and Esc. 40,651 interest on bonds, is Esc. 14,013,456, against Ecs. 13,950,506 for 1928. The following distribution is proposed:—To reserve funds, Esc. 1,562,080$00 (bringing amount up to Esc. 67,000,000); participating (working) shares of staff and pension fund, Esc. 526,306$81; dividend 22 per cent. (including interim dividend of 9 per cent., viz., Esc. 4,500,000 already distributed), Esc. 11,000,000$00, subject to Portuguese taxes; carried forward, Esc. 925,069$71.

THE YOKOHAMA SPECIE BANK, LIMITED.—The accounts fo the half-year ended December 31, 1929, as presented at the meeting of the shareholders held in Japan on the 10th inst., show net profit for the past half-year of 17,731,848 yen, including 10,420,920 yen brought forward from the preceding half-year. The amount was distributed as follows:—To reserve fund, 3,000,000 yen; dividend 10 per cent. per annum, 5,000,000 yen; special dividend of 3 per cent. in commemoration of the fiftieth anniversary, 3,000,000 yen; balance carried forward, 6,731,848 yen. An ordinary dividend at the rate of 10 per cent. per annum was declared as on the previous occasion, while a special anniversary dividend of 3 per cent. was also decided upon. Once again a sum of 3,000,000 yen has been placed to reserve, which brings the total amount of the reserve to 111,500,000 yen. The actual sum carried forward is less than the amount carried forward last half-year, principally by reason of the special anniversary dividend referred to. Another factor was the preparation for the lifting of the gold embargo, which affected certain transactions quite irrespective of the matter of profit. In conclusion, it may be added, however, that a greater volume of business than ever passed through the bank.

MISCELLANEOUS.

ALFRED DUNHILL, LIMITED.—The seventh annual report and accounts shows a net profit for the year 1929 of £50,689 (last year £48,207). Adding the amount brought forward and deducting preference dividend and interim dividend paid on the ordinary shares of 15 per cent., free of income tax, there is a balance of £102,243 from which the directors recommend the payment of a final dividend on the ordinary shares of 5 per cent., free of income tax, making 20 per cent. for the year, free of income tax (last year same), leaving £92,243 to be carried forward (last year £91,553). The directors further declare an interim dividend of 5 per cent., free of income tax, on the ordinary shares on account of the current year. Cash is at £67,401, against £38,818. Meeting:—137, High Street, Notting Hill Gate, W. 11, on March 28, 1930, at 11 a.m.

HARLAND AND WOLFF.—From the profit and lass account, now shown separately for the first time, the profits for 1929, after providing £300,000 for depreciation, amounted to £374,874. For 1928 the net balance, after meeting wear and tear, was £204,355. A sum of £115,615 is written off investments, and income tax takes £42,509. The sum carried forward is £132,307, against £107,558. The company has a reserve fund of £1,000,000. Preference shares of £1 each have been as low as 8s. 9d. this year, but are now quoted at 11s. The preference dividend for 1929 absorbs £192,000, as before.

CANNING TOWN GLASS WORKS, LIMITED.—The third annual report and accounts show a net trading profit for the year ended December 31, 1929, of £47,295 (last year £33,406, plus £2,000 realised on investment account). Adding the amount brought forward, and deducting directors' additional remuneration, there is a balance of £57,779, from which the directors propose transferring to depreciation reserve £7,500, general reserve, £7,500, development account £3,500, and the payment of a 7½ per cent. dividend (last year 5 per cent.), leaving £12,373 to be carried forward (last year £10,984). Bank loan has been reduced from £30,000 to £10,000. Meeting: Winchester House, E.C. 2, on April 14, 1930, at 12.30 p.m.

COLTNESS IRON COMPANY.—Output of coal for 1929 was 1,800,000 tons, the highest in the history of the company. The Warwickshire Coal Company (a subsidiary) also reached a high level output of 700,000 tons. Net profit rose from £70,263 for 1928 to £141,398 for 1929. The ordinary shareholders will receive 10 per cent., against 5 per cent. for 1928. Carry forward is increased from £118,513 to £120,411.

BALDWINS, LIMITED.—The profit for 1929 was £352,042, against £220,107 in 1928. A dividend of 3½ per cent. is paid on the income debenture stocks, which are entitled to 6½ per cent. if the money is available. Nothing is provided for the income notes. The balance of the discount on the issue of 6 per cent. first mortgage debenture stock has been written off out of profits and ££24,494 has been carried forward, making it £27,893.

HOME AND COLONIAL STORES, LIMITED.—At an extraordinary general meeting held, March 21st, at the offices of the company, a special resolution bringing the articles of the company into conformity with the new Companies Act, and also giving wider powers to the board regarding the investment of the reserve fund, was unanimously agreed to.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

A spell of mild and open weather over the United Kingdom during the past week has considerably enhanced agricultural prospects. All cereal crops are responding to warmth and sunshine and present a healthy appearance, while spring seeding operations are well advanced in all parts of the country, under ideal climatic conditions. Native wheat is selling better, and, with small supplies on offer prices reacted slightly from the low levels recently ruling. On the import market, the recent slight improvement in demand was not maintained, and the market relapsed into a dull state, with prices again on a downward course. Despite the absence of United States offers, renewed weakness set in at Chicago and Winnipeg, and greater pressure on the part of Canadian sellers to stimulate the export movement met with little response on this side. Importers still express a lack of confidence in the general situation and are showing reserve, as future supplies will be more than adequate for the restricted requirements this season. Influencing factors were the increased tax on imports into Germany, further large quantities available for export from France, and the favourable outlook for new crops both in North American and Europe. The policy of the United States Farm Board in the continued withholding of surplus stocks is causing a good deal of uncertainty, and meanwhile lessens competition in the world's markets to the benefit of Canadian sellers, but it may be found that a definite move will be made later on to seek overseas custom, provided that prospects of new crops remain satisfactory. River Plate shippers were competing freely, which assisted the downward trend. Feeding stuffs also displayed weaker features, and the recent improved demand for maize failed to expand, although near at hand parcels remain at a premium owing to scanty offerings. New crop positions, however, were adversely affected by large prospective supplies from Argentine, the Danube, and South Africa, the latter indicating a record yield this season. Barley and oats were easier and difficult to sell.

Wheat.—Easier. No. 1 Northern Manitoba (Vancouver shipment), ex ship, 43s. 6d.; No. 2 ditto, 43s.; No. 3, 42s.; No. 4 Manitoba, 41s. 3d.; No. 5 ditto (Atlantic shipment), 39s.; No. 6 ditto, 31s. 3d.; Rosafe, 62½ lbs., 38s. 9d.; Barusso, 62½ lbs., ex ship to arrive, 38s. 6d.; Australian, 41s. 6d. per 496 lbs.; English, 8s.-8s. 2d. per 112 lbs.

Flour.—Quiet. London straight run, 36s. per sack for country deliveries, and 35s. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 34s.-35s.; Australian, 31s.-32s.; ex store. On c.i.f. terms, Manitoba top patents, March-April, 33s.-33s. 3d.; export ditto, 30s. 6d.-31s.; Australian, 28s.; French prompt, 26s.-27s. 3d. per 280 lbs. Argentine, low grade, March-June, £6 per ton.

Maize.—Quiet. Plate, landed, 28s.; ex ship, 27s.; March-April, 26s. 6d.; new, April-May, 25s. 6d.; May-June, 25s.; June-July, 25s. per 480 lbs. Yellow maize meal, £7 15s. per ton, f.o.r. London. Yellow African, £6 per ton, ex ship.

Barley.—Steady. Californian: old, landed, 36s.-42s.; new, ex ship, 36s.-42s., as to sample. Chilian brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s., per 448 lbs. Black Sea, landed, 19s. 6d.; Persian, landed, 18s. 6d. per 400 lbs. English malting, 7s.-11s. 6d.; feed, 6s. 6d.-6s. 9d. per 112 lbs.

Oats.—Quiet. Plate, landed, 15s. 6d.; ex ship to arrive, 14s. 9d.; Chilian, white, 21s. 6d.; ditto, tawny, 16s. German, landed, 17s. 6d. ex ship to arrive, 16s. 6d. South Russian, ex ship, 14s. 3d.; North ditto, 13s. 6d. per 320 lbs. English, 5s. 6d.-6s. 4d. per 112 lbs.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	Mar 27, 1929.	Jan. 2, 1930.	Mar. 12, 1930.	Mar.19, 1930.	Mar. 26, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	123⅜	148⅜	104⅜	108⅜	108⅜
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	116⅛	130⅞	105¼	104⅜	105⅛

The visible supply of wheat in Canada at 75,037,000 bushels shows a decrease on the week of 1,115,000 bushels. Supplies a year ago stood at 87,786,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports continued depression in the South Yorkshire coal market with a further drop in exports and prices. Home prices are also easier. The severe weather has caused a spurt in the demand for house coal, but industrialists are buying fuel from hand-to-mouth and consumption barely maintains previous records. Coke is a drug on the market and prices have tumbled.

Our Glasgow correspondent writes:—The shipping side of the coal market is still very slack. Foreign buyers hold large stocks and are doing little business, either for early or forward shipment. The collieries which depend principally upon the shipping trade—especially those in Fife and the Lothians—are consequently having considerable difficulty in keeping their outputs moving, and a deal of short-time working has had to be resorted to in districts. Prices generally are weak, although round coals are slightly firmer than nuts, one or two qualities of which on the market at the moment. Current quotations are as follows (all f.o.b. district ports): Lanarkshire, 15s. 6d.; splint best, 17s. 6d. to 18s.; splint second navigation, 17s.; navigation second, 14s. 6d.; steam, 14s.; trebles, 12s. 6d.; doubles, 12s.; single pearls, 11s.; dross, 10s. Fife.—Screened navigation first class steam, 12s. 9d.; third-class steam, 11s. 6d.; trebles, doubles, 11s. 9d.; singles, 11s. 6d.; pearls, 11s. Lothians steam, 13s.; secondary steam, 12s. 9d.; trebles, 12s. 6d.; doubles, singles, 12s.; pearls, 12s. Ayrshire.—Unscreened navigation jewel, 17s.; steam, 13s. 6d.; trebles, 13s.; doubles, 12s. 6d.; singles, 11s. 9d.; pearls, 11s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—There has been little change this week in the general position on the Cardiff market and the volume of exports is practically stationary at a reduced level. Shipments in the week ended March 22 were 567,700 tons compared with 564,500 tons in the corresponding week last year, but with 633,755 tons in the corresponding week last year. Quotations for practically all classes of large coals, and also now for many of the smaller grades, are at the minimum fixed under the marketing scheme. The trade is suffering to an exceptional extent from the shipping depression, for the laying up of so many vessels is reacting not only on the bunker shipments at the South Wales ports but to a far greater extent on the cargo shipments to coaling depots abroad. The Monmouthshire collieries are working, on the whole, fairly regularly on the strength largely of the Italian and Egyptian State Railway contracts; conditions in the anthracite district are also good and are likely to improve with the opening of the Canadian season; but in the steam coal area there is much lost time, and it is now pretty generally thought that a serious mistake was made in not reducing the allocations under the marketing scheme for the second quarter of the year. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. 9d. to 13s.; coking smalls, 13s. 9d. to 14s.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 23s. 6d. to 28s.; machine-made cobbles, 41s. to 45s.; French nuts, 44s. to 46s.; stove nuts, 41s. to 45s.; rubbly culm, 11s. to 11s. 9d.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 25s. 9d. to 26s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The iron and steel markets remain in a depressed condition. Inquiry has certainly expanded of late, but the volume of business transacted is still below the normal for the time of year. The home market has been rather more active, but the improvement has been confined to one or two consuming industries which have placed seasonal requirements, and it is stated these are less than usual. There is considerable irregularity in the position of the British steelworks, and while a few have moderately-filled order books others have had to close down departments owing to lack of work. Business in pig iron has been dull, but the reduction of 5s. per ton by the North East Coast producers has stimulated a certain amount of buying. In other districts, recent quotations are maintained, but in some cases iron is being put into stock. There has been a poor demand for semi-finished material, and although a certain amount of business has been taken by Continental works it is understood that they are badly off for orders. The official Cartel prices, however, are maintained. Similar conditions rule in the finished steel department. The British works are experiencing keen competition from the Continent for the comparatively small amount of export business passing, but in this branch some encouragement has been provided by an increase in the volume of inquiry from abroad.

Our Middlesbrough correspondent writes: The reduction in prices of Cleveland iron has had a good effect on the market. During the past week consumers have come forward more freely, and made fair purchases of Cleveland iron for delivery over the next month or two, but so far, little inclination is shown to purchase further ahead. This, no doubt, is accounted for by the uncertainties in regard to the Budget, but in the meantime the position of makers is much improved, and the orders now coming along will absorb the present limited make, and allow recent accumulations of stocks to be gradually reduced. Trade with Scotland has not increased to any great extent so far, as the consumers there are well bought, in Continental and Indian iron, but as the contracts are worked off, more business is expected to be diverted to this district. There was more business doing at Tuesday's weekly market, and several decent lots of No. 3 were booked by makers on home account at 67s. 6d., but export business was almost negligible. No. 1 was 70s., No. 4 foundry 66s. 6d., and No. 4 forge 66s. f.o.b. or f.o.t. Merchants now hold very little Cleveland iron, and do not wish to cut the reduced price to any important extent. Shipments of pig iron have passed off recently, the total shipped to 25th instant being 15,447, tons, against 15,473 tons to February 25th. Hematite iron continues in poor demand, and stocks are still increasing in maker's hands. The latter are weaker again in their price, and now offer mixed numbers at 76s. per ton for delivery over a few months, but second hands who have fair holdings, are willing to take business at a little less. In the steel trade there is still a large amount of work to execute under old contracts, and some important orders are expected to be placed here shortly for bridge and constructional [illegible] The Associated Steel Makers, at their meeting in London [illegible] decided to leave prices for this district unchanged, viz., [illegible] up, £8 15s.; sections, £8 7s. 6d.; and joists, £8 10s., [illegible] usual rebates. In other departments, prices are also [illegible] iron bars, £10 15s.; heavy steel rails, £8 10s.; [illegible] nised corrugated sheets, £12; and black sheets, [illegible] 15s. There is no business doing in ore, and best [illegible] at 21s. 6d. c.i.f., the current freight Bilbao/[illegible] ping round 5s. 9d. Coke is offering very freely, and [illegible] ordinary furnace qualities can now be secured for [illegible] 19s. 9d. delivered works. The number of furnaces [illegible] strict is reduced to 40.

[illegible] correspondent writes:—The local industrial situa[illegible] change, but conditions are no worse and there is [illegible] at to be found in the axle and tyre department. [illegible] working better than last year, but are not fully [illegible] output of open-hearth steel is being maintained, [illegible] for forward delivery are being booked. In Lincoln[illegible] producers of such material are working full time [illegible] prospects. The Association price of file steel acid billets has been increased from £9 15s. to £10 10s. The prices of other material have not been altered so far this year, but there is some cutting for orders for the softer steels. Wire makers are moderately employed. Rolling mills and tool steel makers are on short time but report trade as being steady. Some very keen quotations for steel products are heard of. The season for farm and garden tools is developing slowly and sales so far are below those of last year. Activity in cutlery and plate is confined to the cheaper classes of goods.

Our Cardiff correspondent writes:—On the Swansea Metal Exchange on Tuesday it was reported that in the export trade inquiries were broadening and that negotiations were in progress for the arrangement of contract supplies up to the end of the year, one order reported being for a quantity of 40,000 boxes. Prices are fairly stable at 18s. 3d. per basis box, with some works holding out for 18s. 4½d. to 18s. 6d. Galvanised sheet prices are unaltered at £5 9s. for foreign makes and £6 10s. for Welsh bars. Latterly, the imports of Belgian bars have not been on so heavy a scale as at the beginning of the year.

OTHER METALS.

Tin.—The standard market presented firm features in face of improved inquiries and higher Eastern advices, though some irregularity prevailed at times due to profit-taking. The market continues to offer resistance to any further decline, sellers generally showing more reserve. Confidence, however, is returning slowly, and a substantial improvement in consumptive demand is necessary in order to make some tangible inroad upon accumulated stocks. The closing tone was weak. Shipments from the East up to the 17th inst. were 4,423 tons, and for the whole month are estimated at about 7,500 tons. Standard cash changed hands at £166 10s., £170 5s. and £168 10s.; three months, £168 10s., £172 and £170. Sales in the East were reported at £170 15s. to £173 and £171 10s. c.i.f. terms.

Copper opened firmer, but buyers evinced moderate interest, and later dealings disclosed slight irregularity in forward positions. Standard cash sold at £70 to £70 5s.; three months, £68 5s., £68 7s. 6d., £67 15s. and £68 7s. 6d. per ton.

Lead in better support and market firmer. Good soft foreign pig, March sold, £18 13s. 9d., £19 and £18 18s. 9d.; April, £18 18s. 9d. to £19 and £18 17s. 6d.; May, £18 15s. to £19, and £18 18s. 9d.; June, £18 15s., £19 and £18 17s. 6d.; July, £18 16s. 3d. to £19 1s. 3d. and £18 18s. 9d. ton.

Spelter.—Market active, but after a firm opening values gave way under liberal offerings, closing steady. March sold, £19 2s. 6d. to £18 10s. and £18 12s. 6d.; April, £19 3s. 9d. to £18 15s.; May, £19 5s.; June, £19 10s., £18 17s. 6d. and £19 3s. 9d.; July, £19 5s.; August, £19 8s. 9d. ton.

Aluminium steady. Home trade, £95; export, £100 per ton.

Antimony maintained. English regulus, £40 10s.-£46 10s.; Chinese ditto, spot, £29 10s. to £30; March-April, £26 15s.; crude, March-April, £17 10s. per ton c.i.f.

Antimony Oxide.—March-April, £26 15s. per ton c.i.f.

Antimony Ore.—50 per cent., March-April, 3s. 6d.; 60 per cent., ditto, 4s. 3d. per unit c.i.f.

Wolfram firm on reserved offers. Chinese, March-April, 27s. 6d. per unit c.i.f.

Quicksilver easier. Spot, £22 10s. per bottle.

Zinc Oxide steady. Spot, £29 to £36 as to quality, per ton delivered London.

Tin Plates quiet of sale. I.C. coke, prompt and forward, 18s. 3d. to 18s. 6d. per box, f.o.b. Swansea.

THE COTTON TRADE.

Liverpool: March 26th.

Prices show practically no change on the week. The rush of buying of the near positions seems to have ceased for the time being and some fresh selling has taken place. The final report of the United States ginnings was issued on Thursday last and gave

14,545,000 running bales. The figures are a little less than the December estimate, but this had been anticipated. Spot sales for the period 20th to 26th (inclusive) are 33,000 bales, of which 18,020 are American, 3,300 Brazil, 50 Argentine, 3,900 Peru, 2,600 Egyptian, 1,940 African, 2,200 East Indian and 990 sundries. Imports for the same period are 41,290 bales, of which 23,705 are American, 9,660 Brazil, 39 Peru, 2,997 Egyptian, 3,563 African, 1,134 East Indian and 192 sundries. Quotations to-day are: American Middling, 8·42; Egyptian Sakel, 14·05; Uppers, 10·24; Brazil Fair, 8·03; Peru G.F. Smooth, 9·13; West African Middling, 8·48; and East African G.F., 9·58.

MANCHESTER: March 26th.

Inquiry in the market during the past week has continued on a larger scale, and although many of the offers in yarn and piece-goods have been unworkable, a fair amount of business has been done. There are indications of steadier prices in raw cotton, and on the whole buyers are showing rather more confidence in current values. A welcome improvement has been experienced in the demand in cloth for India. Dhooties and light whites have been sold more freely, especially for Calcutta and Karachi. Rather more promising reports have been received from China, and a few contracts have been arranged in bleached shirtings and fancies. There has not been any general activity for Egypt, the Near East and South America, but numerous small orders in the aggregate have totalled to rather larger dimensions. Manufacturers have not yet been able to improve their position, but the stoppage of machinery has been checked. In American yarns for home consumption the sales have been more encouraging, and some spinners have sold more than the restricted output. A better turnover has also taken place in Egyptian yarns. Throughout the spinning section, however, the prices ruling remain very poor.

THE WOOL TRADE.

Our Bradford correspondent writes:—There is a better tendency in business this week, from which it might reasonably be concluded that members of the industry are being more influenced by the improvement in the demand for wool in London than by the dramatic developments in the wages dispute. The wool offered in the London sale room has brought out more general competition, and in some quarters there is a growing belief that if this improvement can be maintained to the end of the series, it will mark the beginning of better times for the industry. It cannot fail to produce a more confident feeling among users, especially as stocks of raw wool here and on the Continent are light, and if with a return to confidence there is a fairly substantial increase in machinery consumption during the next few months, the problem of the carry-over in Australia will be largely solved. On the other hand, it must be recognised that anything in the nature of a stoppage in the West Riding on account of reductions in wages would be bound severely to handicap the industry just at the time when it should be in a position to make the most of every opportunity offered. This week quotations for tops and yarns are much steadier and in the aggregate, a fair amount of new business has been booked.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

At the London wool sales the demand was very satisfactory, and the present tendency of prices is in favour of sellers. The catalogues have been very good, containing many attractive merino and cross-bred clips. One of the best features is the increased competition on the part of Germany, especially as the bulk of the buying has been done by users, rather than by outside speculators. Values for merinos are being maintained better than was expected. At the present basis for the wool, average 64's tops are costing 27½d. The best demand of all is seen for wool of superior quality, both New England and Tasmanian descriptions realising excellent figures. The market for scoured merinos is rather irregular, though anything of good quality and style is still making from 24d. to 26d. A noteworthy feature is the support that is being given to the cross-breds. Big supplies are being catalogued every day, and yet there is not the slightest evidence of flagging interest on the part of buyers. The home trade is particularly active, and though slipes are not making much more than at the opening, there are fewer withdrawals. Greasy crossbreds are all in excellent demand, often making ¼d. per lb. more than during the first week of the sales. Puntas are also meeting an excellent reception, particularly considering the low prices ruling for similar qualities of New Zealands. The cables received from Australia and New Zealand indicate an upward tendency in values. The season in South Africa is also finishing with a fairly firm market, and the balance of the clip is likely to move quickly into users' hands.

HIDE, LEATHER AND ALLIED TRADES.

Market hides were a trifle easier at the auctions held in the North this week, several weights in both clear and warbled making ⅛d. per lb. less. With a better inquiry for calfskins, prices were inclined to be higher in view of the fact that considerable clearances of these goods have been made of late. Now that the new classification in regard to market hides has been tried out, it is felt that the ultimate result should be to the benefit of not only tanners, but butchers and farmers also. Although prices for imported hides are considered to be at a low level, buying on account of the home trade is still limited for the most part to the covering of immediate needs. In spite of this, there seems to be a little better feeling, and here and there one hears talk of the possibility of higher values in the near future. Such an eventuality, however, would only result in again stultifying any increase in the demand that may mature, and the majority of those connected with the hide trade are hoping for a stabilised market on a basis at which a steady regular trade can be done. Over the past week business has taken place in connection with Argentine ox on American account on the basis of 8d., with light ox selling at 7½d. and Uruguay ox at 8 1/16d. In dry River Plates a fair amount of business has been done in B.A. Americanos at 7 15/16d., Inservibles at 5d., and Sierra Cordobas at 8⅞d. Prices for most descriptions of African hides are steady, sales of dry Capes having been made at 8d. and 7d. for firsts and seconds, and 7½d. and 6½d. for dry-salted 20/30 lbs. A slightly better business has been done in Australians, while the American market is cabled as steady, with Chicago heavy native steers selling at 14 cents. The regular day-to-day trade that is passing in small parcels of sole leather makes a respectable turnover. Bends for manufacturing purposes are taken up in sufficient quantities to meet the orders for footwear in hand, and it is hoped that as soon as larger orders for spring shoes are placed, better business will be in evidence from this quarter. A slight improvement has been noted in the inquiry for repairing bends, and although business is still not large, orders come to hand with satisfactory regularity. Bellies and shoulders continue to be taken up fairly freely; some prices are quoted fractionally lower, but this is not general. All things considered, values are well maintained, with hardly any accumulation of stock to be found in any quarter. Business in upper leathers continues satisfactory, and although a larger turnover would be welcomed, most of the regular lines go out in sufficient quantity to prevent any receding of values. Glacé kid, in both black and brown, together with willow calf, are the lines in most request, while the improvement in connection with patent is maintained. Box calf and reptile and novelty leathers move steadily. Suède for shoe purposes has been inquired for more freely in the better grades, but there is a certain amount of hesitancy on the part of producers, as it is not known whether this fashion will last for any length of time. Shoe manufacturers still find orders for spring footwear hang fire, but it is hoped that the finer weather of late will induce distributors to place their orders for larger quantities.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Receipts last month were some 30,000 Petrograd (of 165 cubic feet) in excess of those of February la surplus for the two months amounting to 21,710 stand and dressed floorings, on the other hand, declined by over the two months. Stocks of sawn wood on th market are much larger compared with a year ago, b is decidedly better. In planed and dressed wood smaller than for years past, whilst demand also satisfactory for the time of year. Such condition in a much more steady market than that now operators are nervous, and competition to sel conclusion that can be drawn from this state of t uncertainty with regard to the volume of Ru come forward this year, which are to be freely m those of last season were distributed through a B In all directions the spot outlook for timber is muc in the early spring of 1929. Building contracts ar the forthcoming Budget inspires confidence the trade will improve, and will assuredly make for a better ti tion. The uneasy feeling in spot timber circles is a

The North American Company

60 Broadway, New York, N. Y., U. S. A.

ORGANIZED in 1890, controls through stock ownership five main groups of public utility companies operating in large and important areas of the United States. The electric properties in each group form a distinct interconnected power system. Summaries of operations of the principal subsidiaries follow:

CALIFORNIA: Electric service in San Francisco, Oakland, Sacramento and Fresno, and 258 other communities in Central California; territory served, area 12,957 square miles, population 1,650,000; gas service in Bakersfield and 2 other communities.

DISTRICT OF COLUMBIA: Electric service in Washington, D. C. and 30 communities in adjoining sections of Maryland and Virginia; territory served, area 629 square miles, population 600,000; electric railway and motor bus service in the District of Columbia and adjacent suburbs in Maryland.

MISSOURI-ILLINOIS-IOWA: Electric service in St. Louis and East St. Louis, and 88 other communities in Mississippi Valley; territory served, area 2,722 square miles, population 1,350,000; gas service in St. Louis County, Mo., Alton, Ill. and Keokuk, Ia.

OHIO: Electric service in Cleveland and 129 other communities; territory served extends 100 miles along Lake Erie, area 1,697 square miles, population 1,300,000.

WISCONSIN-MICHIGAN: Electric service in Milwaukee, Racine, Kenosha, Watertown, Appleton, Iron Mountain and 315 other communities in Wisconsin and upper peninsula of Michigan; territory served, area 11,859 square miles, population 1,400,000; gas service in Racine, Kenosha, Watertown and 59 other communities in Wisconsin; electric railway and motor bus service in Milwaukee and suburbs, and interurban electric railway service in surrounding territory.

Summary of 40th Annual Report to the Stockholders by F. L. Dame, President

THE annual report of The North American Company for 1929 shows substantial progress during its fortieth year. The statement of gross and net earnings from operations, the statistics of service rendered, and the description of additions to facilities completed and under way are collectively a measurement not only of progress but also of stability and strength of position. Briefly summarizing the report and statements, the important features of the year's operations were as follows:

Gross Earnings increased 9.02% over the year 1928.

Net Income from Operation increased 10.76% over the previous year, reflecting the decrease, from 52.49% for 1928 to 51.73% for 1929, in the proportion of Gross Earnings required for Operating Expenses, Maintenance and Taxes.

Appropriations for Depreciation Reserves amounted to 10.57% of Gross Earnings and were equivalent to $2.91 per share on the average number of shares of North American Common Stock outstanding during the year.

After deducting Depreciation and all other reserves, the Balance for Dividends and Surplus amounted to $28,806,824, of which $1,820,034 was paid in dividends on North American Preferred Stock.

The balance of $26,986,790, after all preferred dividends, is an increase of 19.50% over the previous year, and is equivalent to $5.03 per share on the average number of shares of North American Common Stock outstanding during 1929, compared with $4.68 per share on the average number of shares outstanding during 1928.

Under the Company's policy of paying dividends on its Common Stock in Common Stock, at the quarterly rate of 2½% (1/40th of a share), the entire balance of $26,986,790 is available for investment in the business.

This dividend policy is now in its seventh year. From April 1, 1923 to December 31, 1929 Common Stock increased 110.42% on account of stock dividends and 38.01% on account of stock issued for cash and for properties, a total increase of 148.43%, while during the same period the balance for Common Stock dividends increased 299.38%.

Electric output of subsidiaries for 1929 was 6,772,637,073 kilowatt hours, an increase of 10.97% over 1928. Gas output was 5,915,919,900 cubic feet, an increase of 9.25%. Revenue passengers on electric railway and motor bus systems numbered 270,950,658. Electric customers numbered 1,216,428, gas customers 112,121.

Stockholders of the parent company (not including those of subsidiaries) numbered 47,528, including more than 900 residents of foreign countries. Common stockholders numbered 37,718, an increase of 15.4% for the year, and of 9.6% for the last quarter of 1929, when the stock market disturbance occurred.

Improvement of business in 1929 over the preceding year was distinctly favorable, particularly in view of the high rates of increase over 1927 established in 1928 when all business activity showed decided acceleration . . . and indicates continued and substantial growth over a period of years regardless of such lessening in business activity as that which developed in the latter part of the year. . . . Marked recession in certain industrial lines emphasizes the advantages of the diversification enjoyed by The North American Company not only in location of important territories served by its various groups of subsidiaries but also in character of essential industries in those areas. . . . Large projects of subsidiaries are being carried forward without interruption and others are in preparation which will insure availability of facilities as service demands increase. . . . Expenditures contemplated for additions to plants and systems in 1930 are 14% greater than in 1929.

CONSOLIDATED INCOME STATEMENT

	Year 1929	Year 1928
Gross Earnings	$147,779,869.32	$135,551,899.02

in the forward market, and buying for the coming season's goods is backward. As an example, Finland, to the 1st instant this year, has sold to all buying countries (in thousand standards) 350, against 520 to same date, 1929; 475 in 1928, and 795 in 1927 (an abnormally early year for forward business). Of the above the United Kingdom this year has bought (000's omitted) only 95, against 150; 140 and 365 standards respectively for the previous three years to March 1. The Russian sales are naturally slow, as, so far as we are aware, the British consortium of timber importers and the Soviet sellers have not yet come to an agreement as to the former buying in bulk. The Swedish market also is affected by the long waiting policy—absolutely necessary as a precautionary measure—of U.K. importers. The hardwood section of the trade is feeling none of the anxieties that are the lot to-day of the building woods operators. True, the demand for these furniture and cabinet timbers on the whole is slow, but the market generally is steady. There is, however, too much American lumber coming forward in comparison with demand, some on consignment, which has the effect of depressing the market. Hardwood logs and lumber from British India and Canada are increasing in import, and we trust in demand. Australasian hardwoods will become more popular here as a result of the exhibition of the principal woods now being held at Australia House. The imports of pitwood have shown an increase of 53,840 loads (of 50 cubic feet) compared with January-February, 1929. The improvement in the output of coal this year should help the imported pitwood branch of the trade. Plywood imports for January-February increased by nearly 9·5 million square feet. Stocks in docks in London are larger than at this time last year, and the demand has slowed down. The call for this material, however, is getting wider month by month. Although it may have occasional setbacks the progress of plywood is assured.

VEGETABLE OILS AND OILSEEDS.

Rather more active conditions have ruled and a fair volume of trading is recorded. Spot and "near" linseed prices have recovered following the reduced quantity now on passage to Europe and other causes. Plate on spot and passage at Hull has risen to £18, and March, £17 15s. Indian linseed is again offering freely. The quantity of linseed now afloat for Europe is 96,500 tons, or about 8,000 tons less on the week. The very low level of values of cottonseed recorded last week brought out buyers, and a good trade was done at steadily advancing prices, Black Egyptian now being held for £7 10s. on spot and shipment to the end of April. There is nothing doing in Bombay cottonseed, which is quite nominal. In the vegetable oil section linseed oil is firm but in slow demand, and quoted £40 on spot, £39 April, and £38 10s. May-August delivery. Cotton oils are steady, crude Egyptian being held for £28 10s. and common edible for £31 15s. Other seed oils are quiet and show but little change in value. The reduced prices of oilcakes appears to be stimulating demand, but it is insufficient in volume materially to reduce supplies.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There is no extension in trade requirements, which are strictly measured by pressing needs, and no change occurred in spot quotations. The undertone of the market is distinctly better, the acute depression prevalent for a prolonged period gradually disappearing, and very low prices should operate in favour of consumption extending so soon as political barriers are removed. Spirited opposition to the Cuban Single Seller Agency continues. Raw refining sugars fully steady though quiet. Terminal sections quite steady and a feature proved extensive transactions in the August position of raw. May, quoted, 6s. 10½d.; August, sold, 7s. 2½d.; large turnover at 7s. 1½d.; December, sold, 7s. 6½d.; March, 1931, at 8s. 5½d.; foreign, 96 per cent. centrifugal, May, 7s. 6½d. sellers c.i.f. Cuban receipts for the past week were 192,890 tons, against 257,963 last year and 222,152 in 1928. The total of new crop to date amounts to 1,430,009, against 2,308,591 last year and 1,884,725 in 1928. The exports were 22,353, against 163,446 last year and 139,225 in 1928. The stocks of new crop were 1,269,203, against 1,226,533 last year, and 1,104,305 in 1928. Stocks of old crop 13,220, against 1,615 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for ending March 22nd totalled 235,671 tons, compared with 138,306 last year.

COFFEE.—A quiet tone again characterised this market and prices manifest some irregularity, particularly with regard to the lower descriptions. Bold sizes of Kenya met with but little patronage.

COCOA.—Only retail transactions took place on the spot and prices tended against the seller. Forward positions dull and easier. Accra, F/F, April-June, 36s.; May-July, 36s. 6d.; mid-crop, 34s. f.o.b. Terminal easier. May, sold, 40s. 7½d. to 40s. 6d.; July, 41s. 3d. December, 42s.

TEA.—Indian auctions during the week amounted to 48,582 packages. Active and well distributed competition was evidenced and a firmer market resulted. Finest kinds in particular were sought after and those with autumnal flavour advanced 1d. to 2d. per lb. Good medium teas fully ½d. up, plain and common ruling ¼d. to ½d. higher than last week. Ceylon sales embraced some 22,800 packages. With active inquiries a buoyant market was evidenced. Finest teas from ½d. to 1d. dearer, with medium to fine brokens 1d. to 2d. higher. Plain medium, also common, distinctly against the buyer. Java and Sumatra auctions firm to dearer with a good inquiry. All China teas in request at full rates.

RICE.—Market firm for most kinds of Eastern, and sustained inquiries continue on Shanghai account for Burma, where supplies of "paddy" now become considerably lessened. Small sales in Spanish oiled, March-April, at 15s. 1½d. c.i.f. London. Siam and Saigon firm, quiet.

BEANS.—Butters in better demand and market firmer, but others remain slow. Butters, on spot, good colour, quoted, 35s.-35s. 6d.; parcels afloat, steamer "Clan MacNeil," 35s.; per "Belgrano," 34s. c.i.f. Rangoon haricots, spot, London, 10s. 4½d. paid.

PEAS.—Market steadier inclined with buying back-orders received from Holland. Japanese, March-April, 14s. c.i.f. Dutch marrowfats, prompt, 15s.; small hand-picked blues, 10s. 3d. f.o.b. terms.

SPICE.—Pepper market dull on about former terms. Lampong, March-May, 1s. 0⅝d.; May-July, 11⅞d.; August-October, 11½d. Muntok, white, March-May, 1s. 3⅞d.; May-July, 1s. 3½d.; August-October, 1s. 2½d. lb. Tellicherry, February-April, 127s.; Aleppy, 123s. cwt. c.i.f. Pimento, April-May, to London, 73s. c.i.f. Zanzibar cloves firm and spot lots sparingly offered. Value about 11½d., forward quoted 11⅜d. c.i.f. Tapioca, sago flour and farina dull, unaltered. African ginger, spot, 45s.; March-April, to London, sold, 37s. 6d. c.i.f.

FRUIT (Dried).—Currants: In fair demand and market steady. Pyrgos, quoted, 35s.-36s.; Amalias, 37s.-39s.; Patras, 39s.-42s.; Gulf, 42s.-46s.; Vostizza, 49s.-58s. Sultanas quiet of sale. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-75s.; Greek, 42s.-65s.; Australian, 34s.-48s. Dates dull. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s.-14s. Raisins slow. Valencia, quarter-boxes, 40s.-42s. Figs quiet. Layers, 32s.-40s.; genuine, 26s.-33s.; good average, 23s.

EVAPORATED FRUITS.—Apricots move off steadily, and there is a better inquiry for large-size plums, but pears experienced a quiet outlet. Other descriptions without material change. Plums, Californian, new crop, 30's-40's, 68s.; 40's-50's, 66s.; Oregon, 30's-40's, 57s. 6d.; 50's-60's, 52s. Apricots: South African Royal, 57s. 6d.-117s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 87s. 6d.; extra, 97s. 6d.; Australian, 65s.-85s. Peaches: Californian, choice, 57s. 6d.-62s. 6d.; fancy, 67s. 6d.-72s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-67s.; Canadian, 62s. Almonds easier. Mazagan, 105s.; Mogador, 102s. 6d.; P.G. Sicily, 110s.; Majorcas, 107s. 6d.-125s. Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels: Indian, sweet, 72s. 6d.; China, bitter, for shipment, 39s. new crop c.i.f.; sweet, spot, 72s. 6d. Hazel kernels: Kerasunde, spot, 145s.; Barcelona, 136s. French (shelled) walnuts, 135s.-140s., ex wharf, London.

CANNED GOODS.

CANNED FRUITS.—Market conditions remained unchanged, demand for Californian varieties being restricted, despite somewhat attractive offers of shipment parcels, while buyers evince little interest, so far, in Australian pack. Singapore pines steady, but with fair quantities coming forward trade interest is lacking. Hawaiian firm on scarcity, and only small supplies of South African were available. Italian tomatoes quiet and prices barely steady.

CANNED FISH.—Salmon: The tone continues firm, but business slow to expand. Alaska red talls, quoted, 48s.-50s.; pink talls, 25s.-26s.; and halves, 34s.-36s. Japanese crabs in quiet request, and fancy qualities quoted 97s. 6d.-102s. 6d. Lobsters sell slowly. Halves range from 135s.-140s. Sardines in moderate request, with adequate supplies on offer. Portuguese clubs, quarters, 4s.; 1-lb., 12s. per dozen tins.

CANNED MEAT.—Trade quiet, but prices firm for ox tongues on scanty supplies. Lunch tongues realise full rates, also cooked boned hams.

CONDENSED MILK AND MILK POWDERS.—Market about steady. Dutch condensed milk: Full cream, sweetened, 5-cwt. casks, 35s.; machine-skimmed ditto, 21s.; full cream, sweetened, 56-lb. drums (two in a crate), 52s. 6d. English condensed milk: Full cream, sweetened, 5-cwt. casks, 40s.; machine-skimmed ditto, 23s. Dutch full cream milk powders: 26 per cent. butterfat, roller process, 1-cwt. cases, 65s.; spray ditto, 2 by 56-lb. tins, crated, 85s. Dutch machine-skimmed milk powders, roller process, 1-cwt. c[illegible] 27s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 38s. 9d.; ditto, [illegible] cases, 37s.; all per cwt. All English prices basis carriag[illegible] provi- nearest station. Dutch prices are net, ex store London, as the Goole, and cover prompt or gradual delivery to the end [illegible] ontrary, it 1930. Stocks available in Newcastle, 3d. per cwt. extra [illegible]on of output 6d.; Manchester, 1s. Minimum 1-ton lots. Smaller cwt. extra. On the grocery side: full cream, sweeten[illegible] f reasonable machine-skimmed, sweetened, 9s. 1½d. per case; usu[illegible] capital and

HONEY.—Market quiet and prices weak for i[illegible] Jamaica, white, 56s.; good amber to fine pale, 45s.[illegible] port trade of to fair amber, 42s.-44s.; fine white Cuban, 49s.; [illegible]ost markets, good, 45s.; manufacturing, 38s.; Californian, 55s.[illegible]rnment inter- 50s.; New Zealand, light amber, 50s.-85s.; white ar[illegible]ty increase the 65s.-87s. 6d. per cwt. [illegible] would be put

RUBBER.

by 1,519 tons; landings being 2,751; deliveries, 1,232; stocks 68,404, against 27,656 last year. Liverpool stocks 338 tons higher; landings, 588; deliveries, 250; stocks, 21,187, against 4,333 last year.

GENERAL.

JUTE.—Market stronger, the outcome of advancing prices cabled from Calcutta and where extensive covering orders now circulate. Rain is required to facilitate field work. Cables state: Calcutta mills may resort to reduced working hours. Firsts, March-April, Continent, quoted £24; April-May, sold, £23 15s. to £24 5s.; May-June, £24 10s.; new crop, August-September, quoted £26 5s.; September-October, £26; Lightnings, April-May, £23; Hearts, £21.

HEMP.—A steadier tone characterised the market for Manila parcels, sellers showing more reserve on increased buying disposition J2, March-May, sold, £29 10s.; K ditto, quoted, £29; July-September, buyers, £29 5s.; L1, March-May, quoted, £28 5s.; L2, £25 5s.; M1, £25 15s.; M2, £24. African sisal, No. 1, f.a.q. sellers £34 c.i.f. Manila receipts for past week, 35,000, against 37,000 last year; estimate for next week 34,000, and following week 34,000.

SHELLAC.—Firm, fair demand. T.N., spot, 125s.; May, sold 120s. to 122s.; August, 123s. to 126s.

COPRA.—Market without essential change, but general demand quiet. Straits, S.D., April, to Rotterdam, quoted £21 3s. 9d.; Dutch East Indies, £21 3s. 9d.; Ceylon, £22 5s.; S.D., South Sea, £20 10s.; smoked ditto, to Marseilles, £20 2s. 6d.; mixed Dutch East Indies, £20 3s. 9d.; Manila, in bulk, £19 17s. 6d.; bags, £20 2s. 6d. c.i.f. Palm kernels, April-May, to Hamburg, quoted £14 15s. c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 17s. to 25s. per Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43; C bristle, £19 to £25; cinnamon leaf oil, 5s. 6d.; for si vi- March-April, 4s. 6d.; citronelle, Ceylon, 2s. 4d.; Java as the

GOVERNMENT GOLD MINING AREAS
(MODDERFONTEIN) CONSOLIDATED, LTD.

(Incorporated in the Union of South Africa.)

Issued Capital, £1,400,000 in 5,600,000 Shares of 5s. each.

DIRECTORATE.

S. B. JOEL, J.P. (*Chairman*).
J. H. CROSBY (Deputy-Chairman). SIR REGINALD A. BLANKENBERG, K.B.E. J. G. LAWN, C.B.E.
G. IMROTH. D. CHRISTOPHERSON, C.B.E. and G. J. JOEL, M.C.

Extracted from the Annual Report to 31st December, 1929.

Tons crushed, **2,416,000**, yielding **1,086,165** fine ounces of gold.

		Per ton, based on tonnage crushed.
Total Working Revenue	£4,645,001 4 7	£1 18 5
Total Working Costs	1,977,188 19 8	0 16 4
Working Profit	£2,667,812 4 11	£1 2 1
Rents, Interest and Sundry Revenue	61,673 14 10	
Balance at 31st December, 1928, brought forward	141,071 19 11	
	£2,870,557 19 8	
This amount has been dealt with as follows:—		
Government's Share of Profits	£1,448,863 5 0	
Taxation—Union and Provincial	9,393 8 8	
Miners' Phthisis Sanatoria, Donations and Depreciation	3,631 12 6	
Provision in respect of outstanding liabilities, Miners' Phthisis Compensation Fund	11,376 9 8	
Capital Expenditure	62,452 10 2	
Dividends Nos. 24 and 25 of 45 per cent. each	1,260,000 0 0	
	2,795,707 3 10	
Leaving a balance carried forward of	£74,850 15 10	

The **Ore Reserves** at the end of the year were estimated to amount to **10,876,000** tons with an average value of **8.9** dwts. over a stoping width of **63** inches. The reserves exclude ore of a value less than **4** dwts. over the *stoping width*.

The full Report and Accounts may be obtained from the London Agents, The Johannesburg Consolidated Investment Co., Ltd., 10/11, Austin Friars, London, E.C. 2.

THE MONEY MARKET.

MONEY proved extremely stringent during the turn of the quarter, and on both March 31st and April 1st the market had to go to the Bank, while the following day 3 to 4 per cent. was quoted. On Thursday money was

somewhat easier. The explanation of Monday's stringency was partly a big foreign exchange settlement, but mainly that the Treasury bills to be paid for that day were the favourite June 30th maturity, and so had been applied for heavily by the market. It was not, therefore, surprising that the market found itself short of funds on Monday, but it was not expected that conditions would remain stringent the following day, when money was released through the payment of the 3½ per cent. Conversion Loan dividend.

* * * *

Tuesday, however, being April 1st, was the first day on which the final call on the recent 4½ per cent. Conversion Loan could be paid under discount of 3½ per cent., and, as suggested in last week's *Economist*, a fair number of holders took advantage of this option, so much so that payments to the Treasury on this account more than neutralised the effect of the 3½ per cent. Conversion Loan dividend. Hence, as the Bank return shows, the market had to obtain from the Bank a net £4,199,392, and had not the Bank bought Government securities (mainly May Treasury bills at 2 5/16 and 2¼ per cent.) to the tune of £9,259,000, the pressure on the market would have been fairly severe.

* * * *

These developments, coupled with the fact that the new financial year has been reached, have produced a complete change of tone in the discount market. May bills this week were quoted at 2¾ per cent. and June bills at 2 5/16–7/16 per cent., while the three months' market rate, which ten days ago was only 2½ per cent., has since risen to 2 5/16 per cent., and on Thursday to 2⅜ per cent. Longer maturities have lately been around 2⅜ per cent. In addition to the upward turn of money rates, there are signs of a larger number of bills coming forward, while now that the chances of a quick turn in Treasury bills has disappeared with the end of the financial year, American buying has also fallen away. This last fact explains not only the rise in discount rates, but also this week's set-back in sterling.

* * * *

These internal developments proved sufficient to quash all suggestions of a 3 per cent. Bank rate, and no surprise was felt on Thursday when the Bank failed to make any change. Apart from the situation in London, it must be remembered that so far the New York Reserve Bank has failed to conform to the last reduction in the Bank of England's rate, and the present trend of events in New York amply explains its failure. It is clear that it would not take much of a stimulus in the form of cheap money to bring about another outbreak of Wall Street speculation, and this is the last thing that the American authorities desire.

	Mar. 13, 1930.	Mar. 20, 1930.	Mar. 27, 1930.	Apr. 3, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4	3½	3½	3½	4 (Mar. 20,'30)
Banks' Deposit Rate	2	1½	1½	1½	2 (Mar. 20,'30)
Discount { Call	2	1½	1½	1½	2 (Mar. 20,'30)
Houses { Notice	2½	1½	1½	1½	2½ (Mar. 20,'30)
Market rate (3 months' bills)	3 1/16	2½–½	2⅛	2⅛	...

While, therefore, the prospect of a 3 per cent. Bank rate need not be entirely written off, the chances clearly have diminished. The gold outlook, however, remains favourable. It is true that this week's Cape gold went to Germany, but the price paid was only 84s. 10½d., and meanwhile the arrivals of Australian gold have already raised the Bank's holding to £157,125,000. Against this there has been a further rise in the note circulation this week of £5,962,000, so that, all things considered, the Bank may decide not to make any move for the present.

NEW YORK.

Our New York correspondent cables:—During March there was a halt in the decline in commodity prices, which were down by only three-tenths of one per cent. Bradstreets, and nine-tenths of one per cent., Duns. There is an increase in building, but general trade can be measured by the Bank clearings, which are the lowest since 1924. Brokers' loans are up by 148 million dollars, according to the Federal Reserve Report for the week ended April 2nd, and by 488.7 million dollars in March, according to the Stock Exchange statement. The Reserve system credit is up by 80 million dollars, chiefly due to increased bill-holdings as the result of the rise this week in bill rates. Discounts were up moderately, the ratio at the end of the month being 79.8. Call money was steady at 4 per cent., but lower rates are expected next week.

THE STOCK MARKETS.

Stock market prices were well maintained, and a confident tone prevailed, though the volume of dealings fell appreciably below the previous week's level. A moderate reaction on speculative offering of gilt-edged stock was succeeded by renewed firmness, despite the hardening of bill rates, which put a further reduction of Bank out of court for the time being. International stocks marked up in sympathy with the activity in New (which was looked at somewhat askance in conservative London circles). A few investment trusts were cautious buyers of the best domestic industrial stocks. The tea and rubber share markets tended to broaden. Increased confidence was in evidence, also, in the oil market. Kaffirs attracted slightly more interest than of late, and Rhodesians made a fair showing, but tin shares, with a few exceptions, were easier on a reaction in the metal.

THE COMMODITY MARKETS.

Symptoms of faint recovery are just perceptible. Coal prices, however, are easy and a seasonal decline in home demand has intensified the slackness of the market. Conditions in the iron and steel trades are at least no worse, and the tinplate market is sound. Cotton is firmer, and business in Manchester shows faint signs of improvement. According to our Bradford correspondent, little interruption is anticipated from the wool textile wages dispute, and wool is being freely bought. Short-time negotiations are in progress among the Calcutta jute mills. Conditions in the hide and leather trades are quiet, but not unfavourable. Vegetable oils and oilseeds are moderately active. Wheat has recovered a few points.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was very quiet this week, sterling being weak against the dollar, whilst the Continent was irregular, although fluctuations were small. The dollar rate fell from 4.86⅝ to 4.86 15/32 and Montreal improved from 4.86 7/32 to 4.86⅛. Paris lost a point at 124.29, whilst Brussels was ½ better at 34.87. Milan lost a point at 92.81 and the peseta rate, after hesitation, declined from 39.05 to 38.75. Amsterdam gained 1⅛ at 12.11⅜. Berlin improved from 20.38½ to 20.37½, after 20.37¼. Switzerland was ¼ better at 12.13. Stockholm was considerably weaker at 18.10⅜, and Copenhagen lost ¾ at 18.16 7/16. Of the South American exchanges Rio was 1/32d. better at 5 25/32d. Buenos Aires appreciated sharply from 42⅜d. to 44⅛d. on rumours of a loan in New York, and Monte Video gained ¼d. at 45d. The new Peruvian sole, which was introduced on March 27th, opened for 90 days Lima on London at 12.47½, but fell away to 12.52½. In the Far East the rupee was unchanged at 1s. 5 27/32d., as was the yen at 2s. 0⅜d. Batavia gained a point at 12.11½. In the futures market New York went from par and 1/32 cent discount to par for both periods. Paris was slightly less wanted for one month at 9 centimes premium, against 10 last week, but was in better demand for three months at 25 centimes, or 2 centimes higher than last week. Brussels weakened from par and 1 centime discount to 1 and 1½ centimes discount. Milan was a point weaker for both quotations at 13 and 32 centesimi discount, as was Madrid at 4 and 12 centimos premium, against 7 and 19 last week. Amsterdam was ½ cent lower for both periods, at ½ cent and 1½ cents premium respectively. Berlin was virtually unchanged at 1⅜ and 5¼ pfennigs discount. The silver market was quiet with only small business within narrow limits. Price fell ¼d. for spot and 3/16d. for forward to 19⅜d. and 19 1/16d. respectively. The China silver exchanges fell slightly in sympathy, Hong Kong losing ⅛d. at 1s. 6⅜d. and Shanghai also ⅛d. at 1s. 11d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Mo... Investors Service, Ltd., is available to our readers for the sup... economic, statistical and other information, at a charge proport... to the work involved. Inquiries should be addressed to M... Economist Services, 6, Bouverie Street, London, E.C.4.

THE DEFICIT AND THE BUDGET.

THE individual taxpayer, being human, inevitably concentrates his attention on that aspect of each year's Budget which affects his own pocket in the immediate future. Chancellors, on the other hand, and equally their advisers and responsible critics, are constrained to take a wider view. To them, as to the taxpayer, a Budget is a financial programme for a particular financial year; but to them it is also, or should be, something much more important, namely, one chapter in financial history and policy, deriving its justification from lessons of the past and showing vision in its provision for the future. It is mainly for the use of observers from this broader standpoint that we publish this week, as in former years, our Budget Supplement. In it our readers will find salient facts and figures enabling them to trace the course of British financial policy since the war, as well as to gauge the particular and immediate problem with which Mr Snowden is now grappling.

The scope of that problem, as it affects the new financial year, is now known as far as it can be known until the Budget is opened; and the publication of the National Accounts for the year ended March 31st affords opportunity for cogitation over the new year's revenue prospects in the light of recent experience. The actual deficit turns out to be £14½ million, or just a little less than we recently anticipated. Details showing how this deficit accrued are given on a later page. The principal facts are that tax-revenue fell about £13 million below estimate, while the Supply Services cost nearly £8½ million more than was estimated. It would be unfair to Mr Churchill to lay upon him the whole blame for the fact that his estimate of a £4 million surplus has been thus stultified; for the present Cabinet is responsible for a considerable volume of increase in expenditure; while no Chancellor, even of Mr Churchill's perspicacity, could be expected to foresee events such as the Wall Street slump and the Hatry affair, to which in some measure is attributable a shortage of over £5 million in Stamp Duty. Nevertheless, we are entitled to recall our expressed view of a year ago, that Mr Churchill had budgeted optimistically, and had left the Sinking Fund at the mercy of events that were by no means certain to mature.

The position with regard to redemption of debt out of current revenue is, indeed, a cause for uneasiness, and here the responsibility clearly rests mainly with Mr Snowden's predecessor. By grouping the entire service of the National Debt into one allocated figure, Mr Churchill left the Sinking Fund payments largely dependent upon the accuracy with which he forecast the future course of monetary rates, and in the past year his forecast was not vindicated. His projected allocation for debt repayment was £50 million, which itself was a figure considered inadequate by the Colwyn Committee. But this figure has not been realised. Instead of £50 million, the accounts show that the new sinking fund received £47¾ million, and, unfortunately, the real position is very much worse than it appears. Under the 1928 Finance Act, nearly £5 million in respect of interest on National Savings Certificates has been paid, not out of revenue, but out of borrowing. Add to this the fact that the deficit of £14½ million is also met in a similar manner, and the conclusion is reached that the true figure of debt repayment out of current revenue in the past financial year was less than £30 million. That is a serious fact to which Mr Snowden cannot shut his eyes, however preoccupied he may be with the already serious gap between his prospective revenue and his prospective expenditure. A sound debt policy is at the root of wise finance, and cannot be made the sport of passing convulsions and unexpected Treasury difficulties. We hope, therefore, that whatever else Mr Snowden finds it impossible to do, he will face up boldly to the task of retrieving Mr Churchill's shortcomings in the treatment of the Sinking Fund.

But his task is admittedly unenviable. The estimates for the Supply Services for 1930-31 total £418 million. According to the programme instituted by Mr Churchill, the figure for the debt service is fixed at £355 million, in addition to which a sum of about £8 million net may be required for Consolidated Fund Services, allowing for De-rating changes and excluding the Road Fund payments. This would provide a total on the expenditure side of £781 million. Revenue in the past year, including Post Office net receipts, but excluding the £22 million received from motor vehicle duties and apportioned to the Road Fund, totalled £734 million, and it would be a bold estimate to place the new year's revenue on the existing basis of taxation at any substantially higher level. For instance, income tax will be levied from the profits of a year which has closed with a grave depression, while indirect taxes are showing disquieting signs of apparent lack of expansive power. Viewed in this light, the gulf which Mr Snowden has to bridge becomes formidable in the extreme. It is not beyond probability that Mr Snowden may have to find new revenue to the tune of between £50 million and £60 million, and even then have little margin for additional expenditure such as might arise in the form of supplementary Naval estimates, unemployment charges, or projected legislation in connection with slum clearance. In his search for methods of providing so large a sum the Chancellor is confronted by serious difficulties. His predecessor has spring-cleaned every cupboard which might hide a windfall available for a time of urgent need, and the £20 million accumulated in Rating Relief Suspense Account represents a specifically earmarked capital reserve.

We do not propose to guess the various methods upon which Mr Snowden will decide. Among the favourite expectations of the moment are an addition to the petrol duty and the lowering of the minimum rate of income liable to surtax. But in view of the wideness of the margin which has to be covered, it is difficult to rule out the unpleasant possibility of some increase in the standard rate of income tax. We trust that in the present depressed state of the country's economic life the Chancellor will not find it necessary to increase this burden, but we must confess that circumstances have seldom made it more difficult for any Chancellor to frame a programme which is a reasonable and proper compromise between the urgent needs of the present and the dictates of sound financial policy upon which future prosperity largely depends.

Enough has been said to indicate the abundant reasons why Mr Snowden's Budget is awaited in financial circles with far more than the normal interest. But the importance of the Budget will not end with financial policy. Mr. Snowden has also to make clear to the country his Government's fiscal policy. From his well-known Free-Trade correctitude it may be deduced that a refusal to be stampeded by economic depression or "Imperial" fallacies into acquiescence with protectionism will stand out prominently in his speech. What revenue changes result from his vindication of vital principle is a minor matter. We hope that he will give equal prominence to the one clear lesson to be derived from the National Accounts, which, if they are anything, are the most eloquent sermon that could be pronounced upon the need for public retrenchment—a need that is heavily emphasised by the industrial difficulties of the moment. British industry is struggling along the hard path of reorganisation and rationalisation towards the greater production of wealth, upon which both prosperity and future national revenue depend, and a factor indispensable to success is that the national savings should be sufficient to provide an adequate supply of new capital for permanent investment at low interest rates. If this adequate supply is to be forthcoming, it is essential that the national resources should be carefully husbanded, and that the savings of the country should not be squandered for unproductive purposes.

THE PALESTINE REPORT.

THE report* of the Commission on the Palestine Disturbances of August, 1929, has been published this week. The Commissioners were directed to "inquire into the immediate causes which led to the recent outbreak in Palestine and to make recommendations as to the steps necessary to avoid a recurrence." Almost before there has been time to read and digest the Report, its authors have been publicly criticised on the ground that they have gone beyond their terms of reference. Though some of the critics are people whose opinion carries great weight, we cannot help feeling that the criticism is not entirely free from a political *arrière pensée*, and that objectively it is unfair. The truth is that the warrant of appointment contained a latent contradiction, since it was extremely improbable that any intelligent or useful recommendations for preventing a recurrence of the recent troubles could be made if only the immediate, and not the ultimate, causes of these troubles were taken into account. In other words, the Secretary of State placed the Commission in a dilemma. The Commissioners had either to perform something more than the first of their two tasks or else fail adequately to perform the second task that had been assigned to them. Palestine has suffered too much from equivocal documents already. There is a latent contradiction in the terms of the Mandate itself which has created a constant series of dilemmas for the Administration. Here, again, the responsibility is not with the British officials who have to do their best to execute the Mandate on the spot, but with the Government of the Mandatory Power and with the Council of the League of Nations.

In form, the report of the four Commissioners is unanimous; but in substance the note of reservation made by one Commissioner, Mr Snell, amounts almost to a minority report—though Mr Snell has found himself able to append his signature to the main report, side by side with the signature of his colleagues. Briefly, Mr Snell agrees with his colleagues in their view that the animosity and hostility of the Arabs towards the Jews was the fundamental cause of the outbreak, but differs from them in his view that this Arab feeling itself was not of a fundamental character. He attributes it to agitation on the part of the Arab leaders, and he assigns to these a more active responsibility for the outbreak than his colleagues are inclined to assign to them. He is also more inclined than his colleagues to convict the Administration of having failed to act with sufficient firmness.

As to the nature of the outbreak itself, there is no difference of opinion. It "was from the beginning an attack by Arabs on Jews for which no excuse in the form of earlier murders by Jews has been established." . . . "The outbreak was not premeditated," and it "neither was nor was intended to be a revolt against British authority in Palestine." In the report, Mr Luke, the acting head of the Administration at the time, is thoroughly vindicated and the British police are warmly praised. This favourable judgment on the conduct of the *personnel* of the Administration is not surprising; but it is none the less satisfactory to find it rendered in such clear language. Anyone who has followed the history of Palestine since the termination of the Ottoman *régime* will have realised that the execution of the Mandate imposes upon British administrators in Palestine one of the most difficult tasks that any administrators have ever been called upon to perform. The best evidence of their success is the fact that, for the three-and-a-half years preceding the outbreak of last August, Palestine had been practically denuded of troops without any serious disturbance of public order occurring throughout that period—and this in spite of the fact that chronic warfare in the cause of Arab nationalism against European rule was being waged in the adjoining territory mandated to France, just on the other side of an artificial frontier. Of course, it was only human that the Treasury and the taxpayers in Great Britain should take full advantage of every possible saving in expenditure on the garrison in Palestine. But, considering that such saving was only made possible by a *tour de force* of good administration in Palestine itself, we at home ought to be very scrupulous now in not trying to put off upon the shoulders of our countrymen in the Palestine Administrative Service our own responsibility for the fact that, when the outbreak came, the men on the spot found themselves without the necessary force at their command.

But why, after three-and-a-half years, was force needed, after all? Because, in Palestine in general and at Jerusalem in particular, there is an endemic bacillus of homicidal religious mania which becomes epidemic at irregular and unpredictable intervals. When one reads, in this report, the detailed account of the squabble over the Wailing Wall which was the immediate occasion of the outbreak of last August, one feels as if one were reading the journal of a physician in charge of a lunatic asylum; and then one remembers that this mania has infested the country for over 2,000 years at least—as far back as the age of the Maccabees, if not of Nehemiah and Ezra. In the contemporary world there is really nothing comparable to this Palestinian madness except the communal outbreaks in India. As the Commission point out, its evil effect upon the relations between Arabs and Jews in Palestine has been actually much stronger under the British mandate than under the foregoing Ottoman *régime*. There is evidently something latent in the Mandate which has been exacerbating this communal trouble (to borrow the Indian term), in spite of the best that British administrators have been able to do. There is some new bedevilment in Palestine to be accounted for over and above the chronic bedevilment of the last two millennia.

The devil which has been bringing these troubles upon us in Palestine is the war spirit—the atmosphere in which the Balfour Declaration to the Zionists was conceived and born in 1917, and in which the MacMahon-Husayn correspondence regarding Arab independence was conducted in 1915-16. That spirit was a tragic combination of two sets of ultimately incompatible emotions and aims—altruism and self-interest, love and hate, far-sighted idealism and a hand-to-mouth *Realpolitik* with "after victory the deluge" for its motto. True, we did have our imaginations kindled and our sympathies touched by the prospect of giving a national home again to a famous and unhappy nation that had been scattered abroad over the face of the earth since Titus ploughed up the site of Jerusalem and sowed it with salt. But, equally, we did want to take some very immediate and very practical step to counteract the effect of the atrocities which had been committed against the Jews of the Pale by the Government of our ally the Czar during the great Russian retreat of 1915. The stake was the sympathy of Jewry all over the world. If the Russian atrocities were not counterbalanced by some gesture on the part of the Western Powers, the Central European Jews would remain "pro-German" and the Jews of the United States might become "pro-German" too.

The "victory-value" of the Balfour Declaration was that it retained the sympathy of the American Jews for the *entente* and upset the loyalty of the Jews in Germany and Austria-Hungary. We have had our victory and now we are paying for it. It was the same with our policy towards the Arabs. We did have a genuine zeal for the liberation of subject nationalities (at least in so far as they were subject to enemy Powers); but, equally, we also had an immediate politico-military aim: the alienation of the Arabs from Turkey. Here, again, we obtained what we wanted at the moment (as the Commission points out), and the price is now being paid.

During the war we persuaded the Zionists and the Arabs simultaneously to lend us support which was in both cases a substantial contribution to our eventual victory; and we contracted to repay both parties with interest by enabling them to realise certain political desiderata of their own after our victory was won. The assumption was that the victory would bring into our possession sufficient assets to pay off both debts. And now the two parties are claiming that we had promised some of the same assets to each of them. From time to time the Colonial Office has done its duty by giving ingenious demonstrations that our commitments to the Jews and to the Arabs are technically not incompatible. That may be so. Yet we find in practice that incompatible expectations have been aroused in Jewish and Arab minds and that these incompatible expectations give rise to outbreaks like that of August 1st.

In Palestine we have a very heavy responsibility towards both Arabs and Jews. We have moral if not contractual obligations towards the two peoples which we may find ourselves unable to discharge in full. And the most serious feature in the situation is that we are working against time. The Palestine Mandate is of the "A" class, which means that the mandatory is pledged to educate the people of the country to govern themselves at the earliest possible date. Palestine and Syria are now surrounded by countries which are either completely independent already or are on the verge of becoming so: 'Iraq and Egypt on the east and west, Turkey and Najd-Hijaz on the north and the south. Can it be supposed that the situation in Arab Palestine and Arab Syria will not be profoundly affected when Arab Egypt and Arab 'Iraq both take their places in the League of Nations as sovereign and fully self-governing States? We have not much time left for teaching Jews and Arabs in Palestine how to live together and co-operate in the government of their common country without the supervision of a mandatory Power.

SLUM CLEARANCE.

THE Government's promised Bill relating to slum clearance has appeared, and the Second Reading is to be moved by Mr Greenwood in the course of the coming week. It takes the title of a Housing Bill, and its scope is widened by the inclusion, first, of an attempt to stimulate the process, notoriously slow hitherto, of improving housing conditions in rural areas, and secondly, of a special provision for the assisted building of small houses designed for aged persons; but it is against the problem of the slums that it is principally directed. There is nothing revolutionary, in either sense of that word, in the proposals put forward. Clearly they are intended to accelerate rather than to transform the existing methods of procedure. How far they are likely to succeed may be conjectured in debate, but can be proved only in operation.

The main novelties of the Bill are two. It ordains that local authorities shall differentiate slum property into three categories, each for separate treatment—not a spectacular, but a thoroughly useful step forward; and on the financial side it breaks entirely new ground by altering the whole basis of the Exchequer grant. The Bill proposes that the local authority shall determine whether unsavoury property is to be treated as a "clearance area," as an "improvement area," or as a case of individual dwelling houses to be dealt with in isolation. "A clearance area" explains itself. It is one where the most satisfactory method of dealing with the conditions is the demolition of all the buildings in the area. Provided that the authority has ascertained that accommodation can be made available for the persons displaced, it is to be empowered either to compel the owners of the buildings in the clearance area to demolish them, or else to purchase the land and take its own steps for the demolition. The latter alternative is a simplification of the method at present available. The former is original, and will lay on the owners the cost of demolition; but they will retain possession of the land when cleared, whereas the authority will have no expense at all, except such as it has to incur in ensuring the provision of fresh accommodation. In any case, a clearance order requires confirmation by the Ministry, who must hold a public inquiry in the locality if objections are made.

The second category, the "improvement area," is one whose conditions can be effectively remedied, without total demolition, by demolishing or repairing houses unfit for habitation, by purchasing any land required for opening out the area, and by directly lessening the overcrowding in the area. These are not alternatives; once an authority has satisfied the Minister and thereafter passed a resolution declaring an area to be an "improvement area," it must proceed to take all the steps that are required for securing the improvement of housing conditions within it and for maintaining a proper standard subsequently. The same procedure is laid down for enforcing the demolition or repair of insanitary dwelling-houses in an "improvement area" as for similar houses outside either class of area, which (as mentioned above) need to be dealt with in isolation. In future the appeal against the decision of the local authority is to be to the County Court, a simplification of procedure which is likely to command approval; but if the judge allows the appeal he must also, if requested, give his decision whether the house can or cannot be rendered fit for habitation at reasonable expense. But unless the notice served by the authority is quashed in court, the owner of the house will be compelled to pay the cost, either of the repairs that are necessary or, in cases where the expense of reconditioning the house would be unreasonable, of its demolition.

The grants hitherto allowed from the Exchequer towards slum clearance schemes have always been regarded by local authorities as inadequate. The extremely heavy burden likely to fall on the rates has in the past been probably the principal reason why slum clearance has only made progress in the large cities. Under the existing law grants are made to a local authority towards a slum clearance scheme not exceeding 50 per cent. of the average annual loss that the authority is likely to incur. This basis of grant is to disappear. It is to be replaced by a grant based directly on the number of persons re-housed in dwellings provided by the local authority. The grant will be 45s. per head normally, 50s. in agricultural parishes and 70s. where accommodation has to be provided in tenements on the cleared site or on other costly sites; and in each case the duration of the annual grant will be 40 years. The 70s. grant is clearly intended for those cases where the displaced inhabitants cannot be expected to move far from their work.

This new unit grant has a dual purpose: to increase the assistance to local authorities and to enable them to let a proportion of the new houses required at rents definitely lower than those now possible for "Wheatley" houses. The charge on the rates in respect of these new houses is not to fall below that now fixed for "Wheatley" houses; that is to say, if the new Exchequer grant does reduce the cost of the new houses to the local authority, the rents, not the rates, are to receive the benefit, and apparently the authority is free to concentrate all the benefit on a proportion of the houses.

These are the fundamentals of the new Bill, for the new powers offered to county councils to assist or spur rural district councils into action, and the relaxation of minimum dimensions requirements in the case of houses designed for elderly persons, are additions that have no bearing on the main proposals. Slum clearance will never go forward satisfactorily until the Ministry of Health wins the confidence, and with that the eager co-operation, of the local authorities in the matter. All-important, therefore, is the psychological effect of any new proposal on the local authorities. What will it be in this case? They are

INTEREST ALLOWED ON DAILY CREDIT BALANCES.

likely to welcome the unit grant. Indeed, it is understood that their representative associations have approved it in principle. A grant on this basis should have the beneficent result of encouraging councils to attack the blackest spots in their areas, instead of fighting shy of them as likely to be the most expensive. Much of the slum clearance and re-housing that has actually succeeded in recent years has been carried out by the efforts of voluntary associations and non-profit-making societies. It is good to see that such bodies will be enabled, through the local authority, to obtain the same unit grant from the Exchequer. On the other hand, this assistance will not be available to private enterprise working for profit. It is supposed, perhaps rightly, that private enterprise cannot at present provide houses at rents which ex-slum-dwellers could afford to pay, but it would be a mistake to encourage the idea that private builders are not to be expected ever again to interest themselves in endeavouring to do so.

There remains the subject of compensation. The new Bill appears at first sight to do nothing to remove the objection which has long been raised against the existing law, and which has deterred many a council from even formulating a plan for dealing with its slum area. In brief, the objection is that an injustice is committed against the well-intentioned owner of satisfactory property which happens to be situated within an unhealthy area, for, as the law stands, if a local authority condemns an area and compulsorily acquires the property, it is only allowed to pay compensation on the basis of the site value, with no allowance whatever for the buildings; so that all the latter, good as well as bad, go for nothing. The early critics of the new Bill are condemning it as perpetuating this injustice. It will be interesting to hear how Mr Greenwood replies to the charge. He may ignore it, but his Bill would also appear to leave it open to him to point out that where good property of that type exists the local authority will be likely to schedule it as an "improvement" and not as a "clearance" area, so that the fear of injustice will not arise.

That and many other points will have to be elucidated when the Bill reaches its later stages; it is believed that, following the precedent of other housing bills, the Second Reading will not be challenged. In particular, more detailed information on the probable cost to the Exchequer ought to be elicited. The financial memorandum accompanying the Bill indicates that if 100,000 persons are displaced and re-housed in a year, the annual Exchequer grant would amount to about £250,000 for 40 years. This, be it noted, is cumulative, so that if another 100,000 are displaced in the second year the grant will then be £500,000 per annum. It is not in any reactionary spirit that we ask for more detailed estimates of the cost. Slum clearance on a large scale has to be faced by the nation. It will require money, which in the long run will prove to be well spent. But the country is entitled to assure itself that its money will be so used as to achieve as extensive results as possible; that subsidies will not lead to a renewed inflation of building costs; and that the liability to be incurred is not unlimited.

PRICES: THE QUARTER'S MOVEMENT.

In view of the serious reactions on international trade produced by the catastrophic fall in wholesale prices which has taken place during the past nine months, any signs of greater stability in the price level are matter for satisfaction; and it is encouraging to note that for the month of March our index number records a decline of only 1.3 per cent., as compared with a fall of over 2 per cent. in February, and 2.5 per cent. in the first month of the year. Not only was the rate of fall retarded, but in the case of a number of important commodities prices in the last fortnight of March showed some recovery from a nadir reached in the middle of the month. Changes in the indices of each price-group during the past quarter are summarised in the following table, the figures for the end of March, 1929, being added for purposes of comparison:—

AVERAGE, 1927 = 100.

	Mar., 1929.	Dec., 1929.	Jan., 1930.	Feb., 1930.	Mar., 1930.
Cereals and meat	100·9	92·3	89·2	85·4	84·7
Other foods	87·3	83·6	83·1	83·0	82·7
Textiles	100·8	82·6	76·7	74·7	73·0
Minerals	99·7	92·4	92·6	90·5	89·8
Miscellaneous	91·4	89·2	88·0	87·0	85·5
Complete Index	96·1	88·3	86·1	84·2	83·1

As between groups, the largest movements in the month were a further decline of 2.3 per cent. in textiles, and a fall of 1.7 per cent. in the miscellaneous section. Minerals and "cereals and meat" were both rather less than 1 per cent. lower. Fluctuations last month in the price of individual commodities were again mostly downwards, prominent declines occurring in the case of English wheat and oats, New Zealand mutton, cocoa, butter, wool, hemp, pig iron and lead; but raw cotton, flax, tin and copper prices were firmer, tea advanced sharply, a recovery took place in maize, and English beef was dearer. Changes as compared with a month ago and a year ago are summarised below:—

	Inc. (+) or Dec. (−) per cent. compared with Month Ago.	Year Ago.		Inc. (+) or Dec. (−) per cent. compared with Month Ago.	Year Ago.
Wheat—Foreign	− 2·2	−12·9	Flax	+ 8·1	−32·6
,, English	− 5·7	− 5·1	Hemp	− 6·2	−18·4

Coco oil	...	− 4·3	Hides	− 4·0	−14·3
Tobacco	...	+ 2·3	Leather	...	− 4·6
			Petrol No. 1	...	...
Other foods	− 0·4	− 5·3	Petroleum oil	...	...
			Fuel oil	...	...
Cotton A.	+ 0·9	−21·8	Linseed oil	− 4·7	+39·7
Cotton E.	+ 5·2	−26·5	Tallow	...	− 3·3
Cotton yarn	− 1·0	−22·7	Rubber	− 3·2	−30·7
Cotton cloth	− 3·9	−12·5	Soda, crystals	...	...
Wool, English	− 5·6	−34·6	Sulphate of ammonia	− 4·3	−24·1
Wool, Australian	− 7·7	−41·2	Creosote	− 3·1	−28·6
Wool tops	− 5·5	−40·9			
Silk	− 5·3	−22·2	Miscellaneous	− 1·7	− 6·5

During the past quarter the largest falls have been recorded in the cereals and meat, and textile groups, whose indices have declined by 8.2 per cent. and 11.6 per cent. respectively. The latter group, with an aggregate decline of 27 per cent., as compared with the average for the year 1927, has far outdistanced the other groups in the general slump.

In the next table we show actual price quotations for a number of important commodities at the end of last month, in comparison with their prices at earlier dates:—

	End 1927.	End 1928.	1929. End March.	1929. End Dec.	1930. End March.
Wheat, Canadian, per qr.	58/−	49/3	50/3	55/6	43/9
Potatoes, per ton	£6	£6	£6/5/−	£3/15/−	£3/5/−
Beef, English sides, per 8 lbs.	4/8	5/4	5/4	5/8	6/−
Mutton, New Zealand, per 8 lbs.	4/9	5/−	5/−	4/10	4/6
Tea, Indian auction, average, per lb.	1/6⅝	1/5½	1/5½	1/1½	1/4½
Sugar, granulated, per cwt.	29/9½	24/7½	23/6	22/9	22/−
Cotton, American middling, per lb.	11·06d.	10·59d.	10·96d.	9·42d.	8·57d.
Cotton yarn, 32's twist, per lb.	15·25d.	15·50d.	16d.	13·87d.	12·37d.
Wool, Australian, per lb.	48d.	44d.	41d.	33d.	24d.
Jute, per ton	£31/15/−	£32/5/−	£33/10/−	£27/15/−	£24/15/−
Pig Iron, Cleveland, No. 3, per ton	65/−	66/−	67/−	72/6	67/6
Coal, best Welsh, per ton	19/1½	19/4½	21/6	20/1½	20/−
Tin, Standard, per ton	£265/2/6	£225/15/−	£220/10/−	£178/2/6	£170/10/−
Copper, per ton	£60/18/3	£74	£95/15/−	£68	£71
Linseed oil, per ton	£28	£29	£29	£45	£40/10/−
Rubber, plant, sheet, per lb.	20d.	8·69d.	11d.	8·06d.	7·62d.
Cement, Portland, per ton	54/−	47/−	47/−	47/−	47/−

It will be observed that during the past quarter the only commodities in the above list which have not shared in the general downward movement are English beef, tea, copper and cement; and as compared with a year ago the only articles appreciably dearer in price are English beef and linseed oil.

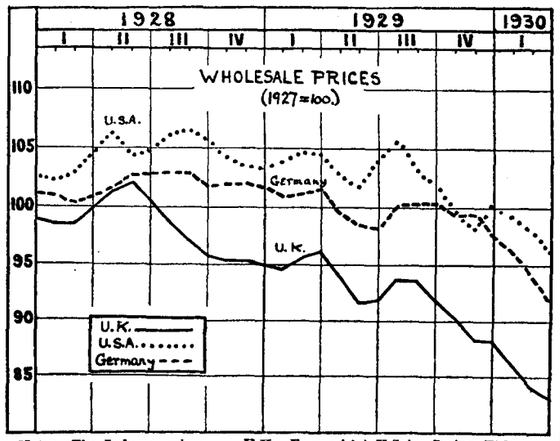
The final table shows the course of our index number computed as a percentage of the average for 1913:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168·5	215·8	214·7	149·3	122·6	166.2
,, 1925	168·4	204·2	194·6	139·8	126·2	160·9
,, 1926	151·7	195·3	152·6	149·8	120·7	149·4
,, 1927	147·6	202·2	157·0	125·1	116·1	143·7
,, 1928	152·9	189·7	165·0	125·2	111·2	140·9
,, 1929	143·0	173·5	144·7	119·6	105·0	132·8
End Mar., 1929	148·9	176·5	158·2	124·7	106·1	138·1
End Feb., 1930	126·0	167·8	117·2	113·2	101·0	121·0
End Mar., 1930	125·0	167·2	114·6	112·3	99·2	119·4

The latest figure of our index number is 28 per cent. lower than the average for 1924, and since March, 1929, there has been a fall of no less than 13.5 per cent. It will be seen that as a result of the collapse of textile prices, foodstuffs, particularly "other foods," now stand at a level which, in relation to 1913, is disproportionately higher than that of materials.

Though the rate of fall, as we have seen, was checked last month, it would be premature as yet to conclude that the downward movement, which has assumed particularly violent form since the third quarter of 1929, has



Note:—The Index numbers are U.K., *Economist*; U.S.A., Irving Fisher; Germany, Official Index.

run its full course. In the case of a number of important commodities, *e.g.*, wheat and certain non-ferrous metals, the stability of future prices depends somewhat precariously on the success of various methods of marketing restriction in holding up the value of heavy stocks. On the other hand, it is interesting to note that the *Economist* price index has fallen during the past two years much more heavily than price indices in certain other countries on the gold standard. The diagram accompanying this article shows the course of commodity prices, as measured by index numbers, in the United Kingdom, Germany and the United States. Differences in the weighting of indices of prices necessarily render international comparison liable to a certain margin of error. It is notorious that raw materials have fallen further in price than finished goods, and the fact that primary products play a larger part in the *Economist* index number than in the German and American indices whose course is plotted in the diagram, may account, to some extent, for the disproportionately greater fall shown by the British price index since the beginning of 1928. At the same time it will be seen that the *Economist* index, apart from two fluctuations in 1929, has declined steadily since the end of May, 1928; whereas, between that date and the beginning of the slump last autumn, the American and German price indices remained relatively stable. The divergence between the British and the other two indices in the second half of 1928 is particularly striking.

PRIORITY FOR REPARATIONS.

In reply to a letter addressed to it by an American business firm asking whether the adoption of the Young Plan has changed the situation as regards the question of priority of reparation payments over external commercial debt, the German Government has set out its reasons for thinking that, under the new Plan, Article 248 of the Treaty of Versailles can no longer be applied. That the whole question of the status of reparation payments in Germany's economy is an issue of practical moment was clearly shown two years ago, when distinct nervousness developed in the American investment market at the suggestion that the status of commercial loans to Germany might be affected by reparation difficulties. It may, therefore, be of interest to consider the relevant points of the new Plan.

At the outset it is important to distinguish two separate questions which are sometimes confused. One is whether the annuities of the Young Plan still constitute a first charge on all Germany's resources as laid down in Article 248 of the Treaty of Versailles which declares that: "Subject to such exceptions as the Reparation Commission may approve, a first charge upon all the assets and revenues of the German Empire and its constituent States shall be the cost of reparation and all other costs arising under the present Treaty or any treaties or agreements supplementary thereto or under arrangements concluded between Germany and the Allied and Associated Powers during the Armistice or its extensions." This is the question to which the German Government have replied. The second is whether the reparation creditors of Germany can claim that the transfer of reparations should (and if so, whether they can in practice), take precedence over the transfer of commercial payments in the event of there being difficulty in transferring both. This question is, perhaps, of even more importance to investors than the first.

On the second of these points there can be no room for doubt. There is no word in the Young Plan suggesting that such right of priority exists. On the contrary, Germany has the right of postponing transfer, and is the sole judge of whether such postponement should be made. The only clause which might conceivably be cited as giving the right to challenge Germany's decision is the general provision that if a creditor thinks that Germany is committing itself to actions "revealing its determination to destroy the New Plan," that creditor may appeal to the Permanent Court of International Justice and, if the plea is sustained, he will be entitled "to resume full liberty of action." But the postponement provisions were intended to provide some elasticity in times of difficulty without provoking an exchange catastrophe. Whether they can be so used in practice may be open to question; but it can hardly be claimed in face of the wording of the Plan that they may not be so used without at the same time suspending all commercial transfers, and that if Germany declares a postponement without stopping all international transactions she would be open to the charge of determining "to destroy the New Plan." It is clear that the postponement clauses, which present many analogies with the postponement clauses of the War Debt Agreements, while not definitely declaring the right of priority of commercial debts, undoubtedly remove any claim that may have existed to any priority of transfer of reparations.

The other question, namely, the ranking of the reparation charge on German assets, is more complicated. The guarantees provided by Germany relate to three different obligations, viz.: (*a*) the German External Loan of 1924; (*b*) the reparation annuities as laid down in the Plan; and (*c*) Reparation Bonds that may be mobilised in the future in accordance with the Plan. As regards the first of these, the charge upon certain German revenues as created by the Dawes Plan—viz.: customs profits, the spirit monopoly, and the taxes on tobacco, beer and sugar—remain in force, but the Trustees of the Loan have agreed that instead of being remitted to the controller of Assigned Revenues, the proceeds of these taxes will be paid to the Reichsbank to an account either

in the name of the Trustees or in that of the Bank for International Settlements for the account of the Trustees. The Reichsbank will have a standing order to release monthly from this account all sums in excess of requirements. (*Final Act of The Hague Conference, Annex XI.*)

As to the annuities as a whole, the Plan retains only one source of payment other than the Budget, namely, the contribution of the Railway Company, which was included by the Experts not only from the point of view of security, but also as a suitable method of raising the necessary revenue (*Experts' Report, Section* 8 (*a*)). Apart from this, "the basis of security for the payment of the annuities is the solemn undertaking of the German Government to which no further guarantee can add anything whatsoever"; and the Report recommends that the creditors should release "all controls, special securities, etc.," and should regard this solemn undertaking as replacing "such securities, pledges, charges and controls as may now exist." The Plan, however, proceeds to assign as a "negative pledge" the proceeds of the customs, tobacco, beer and spirit taxes, *i.e.*, the Dawes revenues, except the sugar tax. If these do not provide a margin of 50 per cent. over the annuities, the German Government will add additional taxes to make the margin up to this figure. The Government undertakes not to assign these revenues for any other purpose without the consent of the Bank for International Settlements and any assignment so made will rank after reparations. (*Final Act, Annex VIII.*)

Nothing is said as to the earmarking of these revenues, nor is procedure laid down as to payment. Their assignment for the service of Germany's Certificate of Indebtedness, however, and the indication of the right to charge upon them other obligations, provided they rank after reparations, clearly implies that other resources might be pledged for other purposes. It is true that the German Certificate of Indebtedness (*vide Annex VII*) mentions these collateral guarantees as being "*without prejudice to its* (the German Government's) *general liability* (responsabilité générale) *for payment of the annuities* and its complete freedom to make these payments out of its general revenues." It might conceivably be argued that the words we have italicised keep alive the general charge on Germany's resources contained in Article 248 of the Treaty of Versailles; but the claim will hardly stand examination in the light of Article IV of the Final Act of The Hague, which lays down that "the powers of the Creditor Powers in relation to Germany will be determined in accordance with the provisions of the Plan." Again—subject to the clause mentioned above as to procedure in the event of Germany determining "to destroy the Plan"—the Creditor Governments (*Final Act, Annex I*) accept "the solemn undertaking of the German Government to pay the annuities fixed in accordance with the provisions of the New Plan as the guarantee for the fulfilment of the German Government's obligations." In the light of these clauses, and the repeated declarations in the Plan of the intention to put the reparation claim on a commercial basis and of the specific statements as to the nature of the guarantee under the Plan, there would seem to be no room for the revival of any vague and general charge which would prejudice the position of Germany's commercial creditors.

THE TARIFF TRUCE CONVENTION.

LONG before the conclusion, on March 24th, of the Preliminary Conference for Concerted Economic Action, it was evident that the objects originally contemplated were not destined to be fully achieved. The conception of a tariff truce covering a substantial enough period to afford a real breathing space in which to consider calmly, without risk of sporadic Customs hostilities, the possibility of lowering trade barriers, was sabotaged by the reluctance of more than one European nation to renounce at all the right to wage tariff war; and it cannot be said that the Conference was a great success.

At the same time, this meeting between the responsible statesmen of the various countries in the sphere of commercial policy was by no means wholly fruitless. Predominantly European in character (apart from observers, the only non-European delegates were those of Japan, Peru and Colombia), the Conference, as the President pointed out in his concluding address, helped to create a new sense of the interdependence of Europe's commercial policies, and in its agreements, albeit limited in scope and hestitating in intention, there may be "the germ of a future development which cannot now be estimated."

Questions addressed to Mr Graham in the House of Commons, this week, appeared to reflect uncertainty on the part of members of Parliament as to the precise nature of the conclusions which the Conference reached; and we have endeavoured, therefore, to summarise the three instruments whose texts the League has issued. These are: (1) A Commercial Convention, signed by Austria, Belgium, Great Britain, Estonia, Finland, France, Germany, Holland, Luxemburg and Switzerland; (2) a Protocol on Future Negotiations, signed by the foregoing, *plus* Greece, Latvia, Lithuania and Portugal; and (3) a Final Act, signed by all the above, *plus* Denmark and Sweden. The Commercial Convention consists of 15 Articles and an explanatory Protocol.

In *Article I*, the Contracting Parties undertake not to denounce before April 1, 1931, their existing bilateral commercial treaties. *Reservations.* (1) Austria excludes from this agreement her commercial treaties with Hungary and Czechoslovakia; (2) Czechoslovakia excludes her treaty with Hungary; and (3) Greece may avail herself of the right of denunciation stipulated in her commercial treaties, should measures taken by any one of the Contracting Parties seriously disturb the balance of trade to her detriment.

Article II provides that if any of the Contracting Parties who consolidate their Customs duties by treaty are obliged to impose higher duties or fresh duties before the Convention expires, in such a way as to affect seriously the interests of others, any Party who feels injured may ask for the opening of friendly negotiations to restore the equilibrium; and in *Article III* it is agreed that, wherever possible, 20 days' notice of tariff increases shall be given. Should the negotiations not result in agreement the injured Party may denounce the Convention either *in toto* or as regards the offending Party only.

Contracting Parties who do not normally consolidate their Customs duties by treaty (Great Britain, Denmark, Holland, Norway and Portugal) are exempt from *Articles II* and *III*, but undertake in *Article IV* not to increase existing, or impose new, "protective" duties during the life of the Convention. If they do so, any injured Party may denounce the Convention on one month's notice (*Article V*). The term "fiscal," as opposed to "protective" duties, will not be applied to duties having as their object the protection of national production against foreign competition.

In *Article IV* the Contracting Parties undertake not to aggravate the existing situation with regard to Import and Export Prohibitions and Restrictions.

Article VII provides that any Party who considers that the equilibrium of the Convention has been seriously disturbed by denunciations may himself on that account denounce the Convention after one month's notice.

In *Article VIII* it is stipulated that bilateral commercial treaties denounced before March 24, 1930, are exempted from the operation of the Convention; that bilateral treaties concluded before that date, but not yet in force, may be substituted during the period of the Convention for existing treaties; that provisional agreements substituted for commercial treaties denounced before March 24, 1930, and in force on that date, may be replaced during the term of the Convention by definitive treaties or by other provisional agreements, but that should increases in duties result from these new treaties or agreements they may be dealt with by negotiations; and that prolonged bilateral commercial treaties may be modified or replaced by new agreements, with the proviso that resulting increases of duties may be dealt with by negotiation.

Under *Article IX* the Convention is concluded for one year as from April 1, 1930. Before February 1, 1931, any of the Contracting Parties may inform the Secretary-General of his intention to withdraw from the Convention on April 1, 1931, but failing such notification the Convention remains in force for a further period of six months, and similarly for successive half-yearly periods. A Conference of the States concerned may be convened to decide whether the Convention shall be maintained if the right to withdraw is exercised by any of the Parties (*Article X*).

The Contracting Parties express in *Article XI* their intention of applying the Convention in a spirit of loyal co-operation, and undertake to refrain from any measure of any kind calculated to evade the obligations resulting from the Convention.

Article XII provides that the Convention shall be ratified by the signatory States before November 1, 1930; a meeting of the Parties who have ratified the Convention shall be held between November 1 and 15, 1930, to fix the date for the coming into force of the Convention (*Article XIII*); any State may hereafter accede to the Convention (*Article XIV*); and any Contracting Party may exempt from the Convention any of his colonies, protectorates, etc. (*Article XV*).

Since the maximum life of the Convention, unless prolonged under *Article IX*, is less than five months, the "breathing space" is short; and the provisos for increases of duties, denunciations and withdrawals are so numerous that the instrument, regarded as an agreement to be observed only in the letter, is of little practical value. Greater interest attaches, therefore, to the Programme Protocol.

In the preamble the signatories express their desire to ensure the effective application of the resolutions of the World Economic Conference of 1927, and recognise it as indispensable that concerted action should be taken "to secure closer co-operation, the improvement of the *régime* of production and trade, and the enlargement of markets, and to facilitate the relations of the European markets between themselves and with overseas markets, so as to consolidate economic peace between the nations." The object of future negotiations is declared to be the determination of means of "organising more rationally the production and circulation of wealth, and removing, as far as possible, unjustified hindrances which hamper the development of international trade."

In *Article I* the signatories agree that among the means of achieving the above aim are "those in the sphere of Customs." Accordingly, as a basis for future negotiations, Governments shall be asked:—

(*a*) In what agricultural products is there over-production in each country? What are the normal outlets for these products? What practical means can be employed to ensure disposal and distribution of surplus production in the normal markets and in other countries with an insufficient production?

(*b*) What practical means can be employed to facilitate the disposal of manufactured products, particularly by increasing the extent to which it is possible for consuming countries to purchase them?

(*c*) In the case of the products mentioned in (*a*) and (*b*), what are the customs and administrative measures which seem likely to promote the extension of markets and the improvement of international trade?

(*d*) What practical means can be employed to ensure the movement of European raw materials amongst the different countries under more satisfactory conditions and their better utilisation?

Without anticipating the results of these negotiations, the signatories decide in *Article II* that the programme should also include, *inter alia*, the following points:—

(*a*) The adoption of a unified Customs nomenclature;

(*b*) A study and comparison of tariffs; the codification in a single text of certain of the provisions other than tariff provisions generally embodied in bilateral commercial treaties; the establishment of a permanent body for arbitration and conciliation; and the periodical convening of a Conference of Governments;

(*c*) A study of means to promote the more effective application of the recommendations and principles contained in the Convention for the Simplification of Customs Formalities concluded at Geneva in 1923;

(*d*) The preparation of a draft Convention against indirect protectionism;

(*e*) An inquiry into the use and effects of export bounties and subsidies.

In *Article III* the signatories agree that in applying *Articles I* and *II* regard shall be had to the recommendations and considerations embodied in the Annex. This is a lengthy document reflecting considerable diversity of view in the Conference. The chief agreed conclusions are:—

(1) A system of inter-European tariff preferences—*e.g.*, on European wheat—would aggravate existing difficulties.

(2) Indirect protectionism should be abolished in all its forms.

(3) Abolition is desired, as far as possible, of bounties which modify the conditions of competition in the international market.

The Final Act places on record the Conference's recognition that the Convention is merely a first stage in the direction of economic co-operation in Europe. Recognising the importance of overseas markets for Europe's economic life, the Conference recommends that the Economic Organisation of the League should undertake an objective investigation into the means of establishing closer co-operation between Europe and the overseas countries, with a view to improving trade relations to their mutual advantage.

It is well to admit frankly that the signatories to these instruments have not committed themselves to much. But as M. de Moltke, the President of the Conference, remarked, present engagements are of less importance than future intentions. If the programme of future negotiations, whose procedure and time-table are both elastic, is obstructed by protectionist prejudices, then, despite the Conference's sound definition of the ultimate objective, progress is likely to be slow and halting. It is something, however, to have had the true goal once more restated. In human affairs, if professions of faith are made sufficiently often, conflicting practice usually conforms in the end more closely to the ideal.

Notes of the Week.

The Coal Mines Bill.—On Thursday the Coal Mines Bill secured its Third Reading in the House of Commons. During the final stages the Liberal Party, adhering to their sudden change of policy in Committee, made no attempt to secure much further revision of the measure, and contented themselves with putting forward two amendments, both of which the Government accepted—the first embodying an expression of opinion how standard tonnages should be assessed, the second limiting the operation of Part I of the Bill to the end of 1932, instead of 1933. As the fruits of the Reorganisation Commission's work can hardly ripen in two years, it is unlikely that the "regulation" clauses of the Bill can be allowed to expire so soon, and though the merit of this shortened time-limit is that Parliament can then renew the operation of the measure, we find it difficult to be complacent on that account over the passage through the Lower House of a Bill whose cardinal errors are still undeleted. The indefensible and needless provisions for minimum price fixing, the failure to meet the needs of "mixed" concerns, and the permission to make district levies for the subsidisation of sales abroad or to particular consumers, are grave defects which should not have been allowed to remain uncorrected. In its present form we regard the Bill as uneconomic and unworkable, despite the merits of the reorganisation clauses, and we trust that the House of Lords will drastically amend it. In the case of a measure which has scraped through the Lower House not on its merits but as a result of extraneous and, as many will think, not wholly justifying considerations, the opportunity and the duty of the Upper Chamber as a revisory body are clear.

Naval Conference Hopes.—Like most gatherings of its kind, except those which end in a sudden crisis, the Naval Conference is protracting itself inordinately. A sudden crisis has not come to end it, despite the habitual crop of periodic rumours, and it seems possible now that it may run on to the eve of Easter or even longer. In the past week the Three-Power understanding between Great Britain, the United States and Japan has been definitely clinched, though only at the cost of a struggle—apparently inevitable in greater or lesser degree in every country—between the Cabinet and the admirals in Japan. The Japanese, it might have been supposed, would have every reason to be satisfied with their bargain, for in the period the Agreement is to cover (up to the end of 1935) the United States undertakes to build only fifteen instead of eighteen 8-inch-gun cruisers, while Japan will have twelve (including the four "Furutakas" of just over 7,000 tons). The Japanese will thus obtain in auxiliary vessels virtually the 70 per cent. ratio in relation to America. As to capital ships, the assumption at present is that figures of 15:15:9, instead of the present 20:18:12, will be established at the earliest moment possible, though there is still some possibility that a lower standard, either 12:12:7 or 10:10:6, may be reached. The tendency to regard the capital ship as a costly luxury is growing, and all the nations most concerned have strong financial motives for scrapping to something under the 15:15:9 level. But the objective of the Conference is still a Five-Power Treaty, and the prospects of achieving that have been considerably improved as a result of the conversations between Mr Henderson and M. Briand on what is popularly described as France's "demand for guarantees." The French Press are still talking of "automatic sanctions." Of that there can be no question. It is abundantly clear that British public opinion would not support any extension of British commitments in this direction. There seems reason to hope, however, that France has abandoned her demand for

assurances going beyond the League Covenant and the Locarno Treaty, asking now only for some declaration designed to make it clear that this country will never seek by any subterfuge to evade the responsibilities to which she is morally committed as a signatory of the League Covenant and, in particular, of Article XVI. of that document. That is a reasonable demand if, as would appear, what the French want is merely some form of words indicating that, in the event of a manifestly illegal attack by one League State on another, Great Britain, as a member of the League Council, would join in "recommending" joint action against the aggressor and would take her proper share in such action. That is the obvious interpretation of the obligation Article XVI. lays on any member of the Council, as the Declaration framed by Sir Austen Chamberlain and his colleagues regarding Article XVI. at Locarno indicates. The search for a form of words implying precisely what it is meant to imply, no more and no less, has been a lengthy business, particularly as successive drafts have had to be referred to M. Tardieu in Paris. It looks, however, as if a formula would be found and it will then remain to be seen what abatement in her tonnage figures France will offer in consequence. A reduction from the proposed 724,000 tons to round about 600,000 tons might be considered satisfactory. Even then there remains the still unsolved question of Franco-Italian parity. No progress has so far been made in that particular field, but there will, no doubt, be concentration on that if once the Franco-British difficulty can be cleared up.

The New German Cabinet.—Last Sunday, March 30th, Dr. Brüning succeeded in forming a Ministry substantially in accordance with President Hindenburg's desires and his own. The new Chancellor and his Ministers of the Interior (Dr. Wirth), Labour and Communications belong to the Centre Party, and the Government as a whole represents an informal coalition of the moderate bourgeois groups, excluding the Socialists as well as the Communists on the Left and the Conservatives as well as the Fascists on the Right. There is, indeed, one conspicuous Conservative political leader in the new Ministry, Herr Schiele, who has been given the portfolio for Food and Agriculture. His inclusion appears to have been decided upon in deference to a strongly expressed wish of President Hindenburg's; but he has not brought his party with him into the Government's camp. Indeed, he has undertaken to resign his seat in the Reichstag and thus withdraw from the Conservative Parliamentary Group, though this without ceasing to be a member of the party. The situation is not altogether satisfactory, since the new Government cannot even secure a vote of confidence without some support from beyond the limits of the groups represented in the coalition; and it is to Conservatives that they will have to look for this. There is an element of instability here; but probably the difficulty will prove to be greater in theory than in practice. In practice, the moderate Conservatives are unlikely to let themselves be stampeded into dangerous courses by their leader Herr Hugenberg; and, *à fortiori*, there is no serious danger of their giving ear to the wild men to the right of him. This is the more unlikely inasmuch as the President is pressing for something to be done on behalf of the "Ost-Elbisch" agrarian interests as a *quid pro quo* for the advantages which the industrialists have lately gained through the conclusion of the commercial treaty with Poland. This, no doubt, is where Herr Schiele comes in, and this domestic question will probably be the main issue in German politics under the new Administration. As far as foreign affairs are concerned, Dr. Brüning may be relied upon, no less than his predecessors in office, to remain true to the Stresemann tradition.

France Accepts the Young Plan.—On Saturday, March 29th, the French Chamber ratified the Hague Agreements, embodying the Young Plan, by 527 votes to 38, with 14 absences and 21 abstentions. This falls short of the unanimity which Monsieur Tardieu hoped to secure, but that, after all, is a matter of sentiment. The substantial point is that, with the French ratification piled on the German ratification like Pelion on Ossa, the Young Plan is now solidly established as part of the European *régime*. The debate, which preceded the voting not only threw interesting light on the foregoing discussions, at The Hague, between Monsieur Tardieu himself and Herr Curtius, but showed how far, after all, opinion in France has moved in the right direction since the earlier years of the post-war period. It appears to have been agreed, at The Hague, between these two representatives of the French and German Governments that, in the event of Germany defaulting, France should appeal, first to the Permanent Court of International Justice and then to the Council of the League of Nations under Article 13 of the Covenant; and that, if the decisions of the Court and the Council were ignored by the German Government of the day, then, and then only, France should "recover her liberty of action." A significant and satisfactory feature of the debate in the French Chamber was that the deputies were not satisfied with the information that this understanding had been entered into by the German Government. They insisted upon being assured, for their own peace of mind, that "liberty of action" excluded any resort to war, and they succeeded in obtaining from Monsieur Tardieu an assurance to this effect—in substance if not in terms. Monsieur Tardieu declared that Article 430 of the Versailles Treaty, providing for the occupation of German territory as a sanction, had become defunct simultaneously with the Reparation Commission, by whose decision alone this article could be brought into operation. He further declared that the term "liberty of action" was "only to be interpreted within the general framework of the League of Nations," and that the likelihood of this stage being reached at all was decreased by a Franco-German understanding for preventing a deadlock from arising owing to a lack of unanimity in the League Council. Finally, he mentioned that the French and German jurists at The Hague had agreed that the terms of the Franco-German understanding were in perfect harmony with both the League Covenant and the Kellogg Pact. The credit for having extracted these assurances from Monsieur Tardieu belongs to Monsieur Herriot and Monsieur León Blum. The fact that a French statesman with Monsieur Tardieu's record and outlook should have been able to give satisfaction on these points shows that France has moved, in harmony with the rest of the world, very far indeed from the unfortunate position on which she took her stand in 1923.

Mr Cosgrave's Re-election.—Our Dublin correspondent writes:—The political crisis which has been agitating the Free State came to a head quite unexpectedly on Thursday, March 27th, when a division on a private member's Bill resulted in the defeat of the Government by two votes. The Bill proposed an extension of the scope of old age pensions which would have cost, according to the calculations of the Minister of Finance, some £300.000. The Government took the view that the existing expenditure of £2,700,000 a year on old age pensions is excessive and they therefore opposed the Bill, and, regarding their defeat as involving a matter of principle, resigned the following day. As, however, the defeat took place in the absence of several members of the Government Party, the crisis was never regarded as one of the first magnitude. The constitution of the Free State provides that the President of the Executive Council may be nominated by the Dail, and as the Government did not demand a dissolution this right was exercised on Wednesday. Mr Cosgrave's re-election was generally expected, as no single party commanded a majority in the House and it was felt that although the Opposition Parties might combine to evict the Cosgrave Government they were scarcely inspired with sufficient unity of purpose to join forces in the formation of an administration. The correctness of the suspicion of differences between the Opposition Parties was confirmed early in the debate. Speaking to the motion for Mr de Valera's election, Mr O'Connell, the leader of the Labour Party, in a statesmanlike speech, which will greatly enhance the prestige of his party, made it clear that he could not support the proposal because in his party's opinion Mr de Valera refused to accept the fundamental constitution of the country, and should not be put in command of a government, the legitimacy of which he did not recognise. In the full-dress debate which followed, Mr de Valera's career and pronouncements were thoroughly explored. A division resulted in the defeat of Mr de Valera's candidature by 93 votes to 54. It is significant that not a single member of any party but his own supported it, and this testimony of distrust will do much to weaken the position of the Fianna Fail Party. The next candidate proposed was Mr O'Connell, whose nomination was defeated by 78 votes to 13. Mr Cosgrave was then elected by 80 votes to 65. The only change in the political situation which this incident has wrought has been a slight enhancement of the prestige of the Government.

The Passing of the Guardians.—After a century and a half of service which, though exercised within the framework of a system that has long stood condemned, has been generally recognised as an invaluable and devoted contribution to the public wellbeing, the guardians of the poor have ceased to exist. This by no means implies that all the public-spirited individuals who have been engaged in the administration of poor relief will cease to be so, for the Public Assistance Committees, through which the county councils and the town councils of county boroughs are henceforward to administer what will in future be called "public assistance" are empowered to co-opt outside persons, and many of them have already co-opted a large number of former guardians, whose experience will ensure continuity. The Relief Regulation Order issued last Friday makes it clear that the general principles on which relief has been given in the past are not to be altered, though the reiteration of the warning of January 3rd against too rigid a refusal of relief to single men and able-bodied men shows how far the circumstances of the last few years have driven the system from the original principles of 1834. It is satisfactory that this Order lays very great stress on the importance of training and on the necessity of a careful classification of applicants, in pursuance of the aim that: "A primary objective should be to maintain the employability of those able and willing to work, so that when opportunity offers these men may have no difficulty in resuming their places in industry." It is very greatly to be hoped that this may prove more than a pious aspiration. According to one school of thought, the abolition of a body which existed for no other purpose, and the transfer of its functions to a local government organ which is already loaded with other work is bound to diminish the efficiency of the service. But a body which acts through committees need not overweight individuals, and much seems to depend on the choice of the personnel of the Public Assistance Committees. As for those sides of Poor Law activity which are not concerned with the able-bodied, the elimination of duplication of function as between the guardians and the public health authorities should make possible a much more satisfactory utilisation of the accommodation in hospitals and other institutions. This is one more stage on the way to the elimination of the Poor Law that was recommended in the Minority Report of 1909.

Single Premium Insurances.—One of the annual tasks of a Chancellor is the prevention of legitimate but undesirable leakages of revenue and the practice of taking out large insurance policies on payment of a single premium is an instance of the sort of development on which Mr Snowden is likely to have a watchful eye. The procedure is much as follows:—A man of such substance as to be a sur-tax payer contracts with an insurance company for a five-year endowment policy of, say, £40,000, on payment of a single initial premium, which will be, say, £34,000. The point is, however, that he does not pay all this £34,000 in cash. Instead, the insurance company agrees to accept in cash only 5 per cent., i.e., £1,700, and to treat the remaining sum due of £32,300 as a loan to the assured, repayable in five years' time out of the proceeds of the policy when it matures, and in the meantime subject to interest. The rate of interest charged to the assured on this "loan" is often 5 per cent. gross, that is, 4 per cent. after deduction of income tax at the standard rate. Thus the assured pays in cash to the company an initial sum of £1,700, and an annual sum in interest of 4 per cent. on £32,300, that is, £1,292. The interest, like interest on any other loan, can be deducted from his income when he comes to make his return for sur-tax; and naturally he deducts not the net cash payment of £1,292 but the gross interest (including income tax at the standard rate) of £1,615, this being the full 5 per cent. on the loan of £32,300. Now assume that his income is such that its final portion is subject to sur-tax at the rate of 6s. in the £. By adopting this procedure, he saves in sur-tax each year 6s. in the £ on £1,615, or £484 10s. a year. Thus the net cost to him of the policy is an initial payment of £1,700 and a net annual payment of £1,292 less £484 10s., or £807 10s. In return for this he receives at the end of five years £40,000, being the value of the policy, less £32,300 already advanced to him, or £7,700. This is clearly a princely return for five annual payments averaging less than £1,150 each, so the attractions of this contract to sur-tax payers are very potent. But the objections from the Chancellor's standpoint are obvious, though it is calculated that up to the present the annual leakage has not been very considerable. There is reason to think, moreover, that in the insurance world there has been growing uneasiness concerning this class of business. Evidence of this is to be found in the speech of Mr Jacomb at the annual meeting of the London Life Association last week. "So long," he said, "as there was a substantial amount of assurance involved, so that on death there was some set-off to the Inland Revenue in death duties, there seemed no great objection to such policies. Recently, however, this system has been grossly abused and a number of policies have been issued which contain little or no life assurance and are simply and solely made use of as a means of evading the payment of sur-tax. Such an abuse brings assurance companies into disrepute and should be stopped." As usual, however, the evil is easier to discover than the remedy. It is clearly impossible and undesirable to prevent members of the public from borrowing money on the security of their insurance policies, and while it is understood that the Chancellor and representatives of the insurance companies have lately been in consultation, and while it is possible that some attempt will be made this year to grapple with the problem, it is not easy to see what is the most equitable solution.

Australian Reserve Bank Bill.—The Bill to establish a Reserve Bank in Australia, which has just received a first reading, is an attempt to put an end to a long-standing anomalous situation. When the Commonwealth Bank was established in 1911 its immediate purpose was to act as a competitor to what the Labour Government in existence at the time regarded as a ring of privately owned commercial banks. It was not intended to be a central bank at all, and though it was entrusted with the Dominion note issue, and thirteen years later was given by law the duty of acting as clearing agent for Australian banks, who had to maintain balances with the Commonwealth Bank for that purpose, it has primarily been a trading bank as opposed to a "bankers'" bank. Thus hitherto Australia has lacked a central bank in the full sense of the word, and any suggestion to turn the Commonwealth Bank into a central bank has been combated on the ground that it would deprive the Commonwealth Bank of the function of acting as a competitor of the commercial banks of the Dominion. Events of last year, however, culminating in the new powers of forcibly acquiring gold and of regulating gold exports given jointly to the Government and to the Commonwealth Bank under the Act of last December, have made it clear that Australia requires a central bank; and little surprise need be felt at the introduction of the present Bill. In the main it is drafted upon familiar lines, and it is frankly admitted that the South African Reserve Bank has been

taken as a model. The Australian bank is to have the usual powers and duties of modern central banks, including the right of note issue, the duty to act as agent for Commonwealth and State loans, and the power to rediscount approved bills and securities, or to buy and sell them in the open market. It is to maintain a reserve equal to 25 per cent. of its note issue (as the Commonwealth Bank is bound to maintain to-day), to 25 per cent. of the first £20,000,000 of its deposits, and to 50 per cent. of its deposits in excess of that figure—such reserve to consist of gold, of British Government securities, and of first-class commercial bills maturing within 120 days. Other banks must maintain with it minimum balances equivalent to 10 per cent. of their demand liabilities and 5 per cent. of their time liabilities. Some of these percentages differ in detail from those of the South African Bank, but the general principle is the same. Finally, the Commonwealth Bank is to hand over to it £2,000,000 out of its present capital account of £4,000,000, together with its note issue. It remains to be seen how all these proposals will appeal to the Australian banking and commercial community, and also to those who have old-established views upon the proper functions of the Commonwealth Bank, but there seems no doubt that Australia badly needs a fully fledged central bank, and there is no obvious weakness in these proposals.

London Railway Schemes.—When the Underground system introduced their Bill authorising them, *inter alia*, to extend the Piccadilly tube from Finsbury Park to Cockfosters, mid-way between Barnet and Enfield, they must have anticipated opposition from the London and North Eastern Railway, whose territory they were invading. Before the war, when the Piccadilly tube was built immediately under the Great Northern line from King's Cross to Finsbury Park, it was agreed that no further invasion northwards should take place; and the same applied to the Hampstead tube at its Highgate terminus. This agreement has for long been a source of discontent in the outer suburbs of North London, as it was felt that it deprived those areas of much-needed traffic facilities, which otherwise might have been provided long ago, and led to acute congestion and discomfort at Finsbury Park. Against this, the former Great Northern Railway could urge that the construction of the Piccadilly tube had forced them to close down their Holloway station, and in any case, as recent happenings have shown, it is doubtful if the Underground would have embarked upon a further big programme so long as they had to finance it without outside help. It is germane to recall that the Edgware and Morden lines were only built through the assistance of the Trade Facilities Scheme, and last February Lord Ashfield made it clear that this new project had become possible only through the help offered by Mr Thomas under the 1929 Development Act. Proceedings during the Committee stage of the Bill have shown, however, that what was sauce for the Underground goose is equally sauce for the London and North Eastern gander, for Sir Ralph Wedgewood intimated that now that Mr Thomas is prepared to give financial help, the North Eastern Railway is preparing schemes to electrify the old Great Northern lines to Edgware, High Barnet, Welwyn Garden City and Hertford North. Once these lines were electrified, Sir Ralph argued, the additional facilities so provided would render the Underground's extension unnecessary; the Cockfosters tube would simply filch traffic from the North Eastern, thereby destroying the basis of their electrification plans; and, as is indubitably the case, it was cheaper to electrify existing lines than to build new lines. The merits of the case depend upon an examination of the map. The new tube is to parallel the existing main line from Finsbury Park to New Barnet and Welwyn at distances varying from a few hundred yards to approximately a mile; and it also intersects the Hertford line at Bowes Park. This is not unduly close for a suburban area, and, indeed, the distance between the North Eastern's own main and High Barnet lines is in places no greater. In any case, if recent history of Edgware is any guide, the district served by the proposed Cockfosters line will be rapidly developed, so much so that, north of Wood Green, there should soon be more than enough traffic for both rivals. Thus the Committee's decision to approve the Bill, coupled with their hope that the North Eastern Railway would proceed with their own plans, is eminently in the public interest.

Trade Unions and Taxation.—Those who fear that a demand for indefinite expansion of the social services might have behind it the full force of trade union opinion may derive some comfort from a report recently made to the General Federation of Trade Unions, dealing with the effect of taxation upon prices. It takes very definitely the view that excessive taxation of income weakens the will to save, and astutely observes that the idea that high taxation will compel both livelier thinking and greater effort "would appear to be a dangerous one for trade unionists to advance, especially at a time when employers are everywhere seeking to reduce costs of production by attacks upon wages." Similarly the conclusion is reached that high taxation affects the power to save, and the framers of the report do not flinch at applying this to insurance in respect of workmen's compensation, pensions, health and unemployment. The gist of the report is contained in the statement: "The conclusion that present stocks of reproductive capital are insufficient for national needs and that taxation is too high appear to be unescapable; as is also the further conclusion that all taxation, in varying but certain degrees, raises costs of production and selling prices and by limiting the number of purchasers increases unemployment, especially in those trades which manufacture for export." Further, there is a reminder that to advise the workman that all his insurances, pensions, housing and education expenditures can be extracted from capital without endangering his industrial existence is badly to mislead him; and the report closes with the words: "It is important that the workers of Britain should realise where the burden of all taxation ultimately falls, and to what extent it prevents the accumulation of that capital which is necessary to maintain and expand the industry by which they live." True, this pronouncement comes from Labour's extreme Right Wing, but it should be read in conjunction with the following passage from a Trades Union Congress report: "... an increase in the purchasing power of the workers is highly desirable. An increase in their purchasing power effected by a transfer of wealth from the richer classes is, however, a very different proposition, economically speaking, from an increase brought about by a greater total productivity of the nation as a whole. Both types are desirable, but the latter is more important because the amount that it is possible to transfer from the rich to the poor is limited." Taken together, these reports suggest that the industrial side of the Labour Party is not under such misapprehensions as to the elasticity of the taxpayer's purse as is commonly supposed.

Lancashire and Eight-Loom System.—Our Manchester correspondent writes:—At the end of last week there was an important development in the negotiations between cotton manufacturers in Lancashire and the operatives relating to the eight-loom system. A special meeting of the General Council of the Operative Weavers' Amalgamation decided to resist the introduction of the new system of production. It was stated that the new method would not bring about the object which the employers had in mind when the subject was introduced and the co-operation of the workpeople invited; that while an increased individual wage was possible, a serious reduction in the family income would ensue; and that a considerable displacement of labour would take place. It was, therefore, resolved not to enter into any agreement with the employers, and each district will oppose the introduction or continuance of the system. It had been understood that the chief difficulty in connection with this matter was the settlement of the wages to be paid to weavers working eight looms, but it now seems the trade union is opposed to the

THE REVENUE.

I.—An Account of the Total Revenue of the United Kingdom in the undermentioned periods of the Year ending March 31, 1930, as compared with the corresponding periods of the preceding Year.

whole principle. It is hoped, however, that as a result of further negotiations some way out of the difficulty will be found, as undoubtedly this revised system of production has proved to be beneficial in reducing costs.

New Capital Issues in the United States.—By courtesy of the New York *Journal of Commerce*, we are able to supplement our article last week on new capital raised in London during the past quarter with the corresponding figures for the United States. In our table we show the first quarters of 1930 and 1929 in comparison with the whole-year totals for 1928 and 1927:—

	Year 1927.	Year 1928.	First Quarter of 1929.	First Quarter of 1930.
Foreign—	$	$	$	$
Government ...	786,630,000	764,943,000	42,167,000	97,334,000
Corporate	601,563,375	811,550,482	126,925,000	203,400,000
Domestic—				
Municipal	1,867,230,449	1,123,940,316	180,306,289	254,251,444
Railroad	731,202,000	668,488,843	232,673,000	485,177,070
Public utility ...	2,405,298,382	2,427,790,217	488,512,350	756,540,000
Industrial	2,013,430,220	2,311,350,808	709,983,822	221,494,042
Others	1,132,307,589	1,783,542,833	993,626,182	142,064,000
Totals	9,597,662,015	9,891,606,499	2,774,193,643	2,160,260,556

Particular interest attaches to the figures for the past quarter, inasmuch as they indicate the tendency of the American new issue market now that the first effects of the Wall Street collapse are wearing off. As compared with the first three months of 1929, the total shows a notable decline, and the striking contraction in the aggregate of industrial and " other " domestic issues reflects much the same disinclination to offer new stock of a speculative character as has been witnessed in the London market. The increases in municipal, railroad and public utility issues are evidence of a desire on the part of the American investing public for sound stocks in which the speculative element is absent, and the revival in foreign lending, both Government and corporate, is encouraging from the point of view of European interest.

Income Tax for Ceylon.—A correspondent writes:—The immunity from income tax that residents of Ceylon have enjoyed is likely to come to an end in 1931. A draft ordinance has now been published, framed by the income tax expert sent out from the British Treasury in September, 1929, providing for an income tax effective from April 1, 1931, on a basis of approximately 10 per cent. for large and 5 per cent. for smaller incomes. This comes as no surprise to Ceylon, for the Governor, Sir Herbert Stanley, in his opening address to the Ceylon Legislative Council, in July last, said: " I have no doubt that we shall find in an income tax some part of the additional revenue that we need "; he added that this new source of revenue would not produce anything like the whole of the additional sum required. It was, therefore, foreseen that the additional impost was bound to be reasonably heavy. Assuming that the Council accepts the Income Tax Ordinance as now proposed, a married resident of Ceylon earning £1,000 per annum, and with one child, would be taxed about £33, or about one-third of the amount that a resident of the United Kingdom similarly situated financially, would have to pay. Two points, however, must be considered. Firstly, this is only the inception of income tax in Ceylon, and, with the heavy recurrent expenditure with which the Colony is faced, it is probable that no Colonial Treasurer will in future years be able to resist the temptation to raise the rate, once the machinery of collection is in operation. Secondly, Ceylon residents, and particularly Europeans, already suffer very heavy indirect taxation owing to the exceptionally severe import duties which have been in existence for many years, and which are continually being enhanced. The new tax will be unpopular. For one thing, the allowance to the married man which is proposed in the Ordinance is held to be too small, at Rs. 1,000 (say, £75), for the difference in the cost of a married man's establishment in Ceylon and that of a bachelor has to be experienced before it can be realised. A deputation of business men recently interviewed the Governor, protesting against the new taxation (not by any means confined to income tax), and it has been suggested that such costly schemes as the Hydro Electric Scheme, the State Mortgage Bank, and the Ceylon University should be abandoned. The Colony is going through a period of depression in its three staple industries—tea, rubber and coconuts—and it is unfortunate that new taxation should be brought in at this time.

Norwich Union Life Insurance Society.—The chief characteristic of the business of this, the largest British mutual life office, is its universality. The total new life business transacted in 1929 amounted to £7,891,661, in addition to which there was collected almost £150,000 in consideration money for annuity contracts and £10,500 in premiums for new capital redemption policies. Both the new life business and the new annuity business are somewhat less than for 1928. The world-wide character of the life business is illustrated by the sources from which it was derived in 1929:—

	£
United Kingdom	4,247,781
Irish Free State	384,078
Dominions	2,052,329
Foreign	1,207,473
	£7,891,661

The society's total assets increased during the year from £30 million to just over £32 million, and the average net rate of interest earned worked out at the high figure of £5 0s. 5d. per cent., or practically the same rate as in 1928. This is a high figure in itself, and is more than double the rate assumed in valuing the liabilities, namely, 2½ per cent. Examination of the assets shows that these are grouped in rather an unusual manner, as follows:—

	Per cent.
Mortgages and loans	43
British Government securities	8
Other Stock Exchange securities	24
Norwich Union Fire Insurance Society shares...	19
Properties and other miscellaneous assets	6
	100

The striking feature of this table is the fact that almost 20 per cent. of the entire assets of a mutual life insurance society are, in fact, invested in fire and general insurance. Although this use of the funds is open to criticism, it is only fair to say that the fire company is a strong one, and increase of dividends is being deliberately deferred until such time—probably this year—as the uncalled share liability can be eliminated. At the present time the yield to the life company on its investment is but 4⅛ per cent. gross, though this is certain to show improvement hereafter. It is evident that the society's high interest earnings must be derived from its extensive mortgages, particularly from foreign mortgages, since earnings on the first two items, which comprise over 50 per cent. of the total, cannot exceed 4½ per cent. gross.

The Council of the Royal Statistical Society announces that the Frances Wood Memorial Prize, value £30, will be awarded in 1931 for the best investigation, on statistical lines, of any problem affecting the economic or social conditions of the wage-earning classes. Further particulars may be obtained from the Honorary Secretaries, the Royal Statistical Society, 9, Adelphi Terrace, W.C. 2.

Money — Credit — Industry — Price — Bank Merger.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 20.

MONEY was more abundant and less wanted this week than it has been at any time since 1924, which was also a year of lagging business and a period when the Federal Reserve Banks were active in stimulating a revival by means of cheap money. Call funds were unwanted at 1½ per cent. outside the Stock Exchange, the official rate going no lower than 2 per cent., and these rates finally had the effect of driving out-of-town money home and shifting some funds into the bond market. That was particularly noticeable with regard to corporation money. Most corporations are unusually well supplied with cash, owing in part to their new capital issues of last year, and the withdrawal of their money from the call loan market has been rapid. This week they drew down $90,000,000 and, of course, the bulk of it went into securities.

Time funds also were a drug on the market and the rate for one and two months money dropped to 3½ per cent. Commercial paper also fell one quarter per cent. to 3¾ per cent. But the greatest rout took place in the bankers' acceptance market. Bills were reduced four times this week, making nine cuts in the past fortnight, and the 90-day asking rate, which usually stands one quarter per cent below the Reserve Bank's discount rate, is now 2½ per cent. The Reserve Bank followed the open market downward with its buying rate as far as 3 per cent., but kept a step behind, with the result that this week's statement of the system shows a drop of $71,000,000 in bill holdings, most of the loss being due to maturities which were not replaced. Total bills outstanding at the end of February were reported by the American Acceptance Council to be $1,623,899,218, a drop of $66,894,000, which may be considered as no more than seasonal.

In addition to the easy money contribution of slow business and falling commodity prices, gold imports for the year to date, plus release of metal from earmark, are over $100,000,000, and this week the Treasury injected over $200,000,000 of credit into the market by borrowing on special certificate from the Federal Reserve Banks. This money was used to meet maturing obligations, amounting to $405,000,000 of certificates on the tax date, Saturday, and to $100,000,000 on Monday to cover the Treasury bill issue of last December. Member bank reserves were thereby increased and in addition to a scramble to lend money at any price, the banks cut down further their already low borrowings at the Reserve. For the system these now total only $205,600,000, as compared with $942,737,000 a year ago. At the local bank discounts are only $30,800,000, against $208,136,000 last year.

Repayment by the Treasury of its overdraft has been slow, although tax collections to March 18th amounted to $314,200,000, or $40,000,000 ahead of the same period last year. These figures tend to disprove the predictions that the lower rate on small incomes and the sharp break in the stock market last autumn would seriously cut into tax receipts.

In connection with discount rate, there is an interesting passage in the annual report of the New York Federal Reserve Bank, published to-day. The report says: " For a number of weeks from February to May the directors of the Federal Reserve Bank of New York voted an increase in the discount rate from 5 per cent. to 6 per cent. This increase was not approved by the Federal Reserve board." It will be recalled that the rate finally was raised in the following August. Before the local bank board met this afternoon Governor Roy A. Young of the board at Washington, in a public address, asked that critics of the board's slow movement should take into consideration the mechanics of regional bank credit. He said that during recent months the system has moved as " rapidly as the mechanics would permit."

The security markets have responded valiantly to cheap money. Bonds have been more active and buoyant this week than at any time in the past eight years. Stocks also have forged ahead on rising volume, but their rise has on the whole been moderate, with a tendency for syndicates to take profits. Shares, too, have been restrained somewhat by the uncertainties of the business position. However, the public is taking more interest, as shown by another sharp rise in brokers' loans. The gain this week was $121,000,000, making a total for the month of $258,000,000, and for the past month and a half of approximately $500,000,000. As of the end of February the ratio of brokers' loans to market value of all listed shares was 5.89 per cent., a gain for the month of .12 per cent.

The lively bond market has naturally stimulated offerings. New capital flotations this week were approximately $200,000,000, or about $5,000,000 below the previous week's level. For the year to date issues amount to about $2,000,000,000. Next week's planned offerings are about as large as this week's issues. Nearly all the new bonds have gone well, but investment houses are beginning to fear some temporary glut in the market. Some regret is expressed that the forthcoming reparation issue could not have been ready at this time, and thus led off the foreign offerings, which now are coming on the market. However, the period of easy money is expected to last for at least sixty days. Reviving trade is unlikely to absorb large quantities of credit before then and the share market scarcely will make a serious drain on money until business improves.

Although trade is still lagging, there are some indications that the declining tendency of last month has come to a halt. Motor output in February is officially announced by the Department of Commerce at 323,962 units, compared with 273,170 in January and 466,418 in February of last year. The General Motors Corporation reports February sales of 126,196, compared with 106,509 in January and 175,148 a year ago, including Canadian sales and overseas shipments. The steel industry lost a little more ground and is now operating at 75 per cent. of capacity, but activity is expanding in some lines. Freight car loadings were lower again, being for the week of March 8 below any corresponding week since 1922. The Department of Labour, surveying the unemployment situation for February, reports that " industry made no substantial gain," while in some industries " a slight recession was noted."

Commodity markets are somewhat steadier, but the Farm Board's policies are receiving increasingly sharp criticism. The Bureau of Labour's index of wholesale prices for February shows a drop of 1⅓ per cent., the index being within ¾ per cent. of the post-war minimum.

An interesting development this week was the merging of the Equitable Trust Company with the Chase National Bank to form the largest banking organisation in the world. The Chase now has resources in excess of $2,800,000,000, total deposits of approximately $2,100,000,000 and total capital funds of about $500,000,000. The combined institution will continue under the active direction of Mr Albert H. Wiggin of the Chase, who becomes chairman of a newly-created committee called the board of governors, made necessary by the size of the full board, numbering 74 members. The merger is another sign of the trend in this country toward branch banking and control of banking resources by a few gigantic institutions. The Chase now has 52 offices here and seven foreign offices. The Equitable Trust, long known as a " Rockefeller " bank, will lose its identity in the merger. Other large mergers are under discussion.

FRANCE.

Budget — Young Plan — Money — Bank for International Settlements — Foreign Loans.

(FROM OUR CORRESPONDENT.)

PARIS, April 2.

THE new financial year began yesterday with the Budget still under discussion in the Senate, and the inevitable result, foreseen last week, has occurred. On Monday the Government laid before the Chamber a Bill for the opening of provisional credits for the month of April totalling 4,725,000,000 francs, and authorising it to collect taxation during that month. The Bill was "reported" immediately, adopted by 470 votes against 115, after an abnormally brief discussion, and sent at once to the Senate, where it was approved, without debate, the same afternoon.

Thus ends one of the most curious Parliamentary experiences on record connected with the Budget. It will be recalled that in December, when it was seen to be impossible to complete the Budget before the end of the month, M. Tardieu took the heroic step of proposing that the current financial year, in order to enable *douzièmes provisoires* to be avoided, should be extended to March 31st. When the Chambers resumed their sittings after a leisurely Christmas holiday, however, two Ministerial crises occurred, which held up the completion of the Budget for nearly a month. Eventually, when the Finance Bill was sent to the Senate on March 13th, the measure was in such a questionable condition that it was obviously doubtful whether the Upper House would be able to straighten matters out in the limited time available, and the last day of March saw this prognostication realised. Whether one monthly Vote on Account will be sufficient depends on whether the Socialistic-Radical and Socialist Opposition will accept the modifications to their Budget proposals that have been made by the Upper Chamber.

The ratification of the Hague agreements and the Young Plan (by 527 votes against 38) was a foregone conclusion before the opening of the debate. Every group had become so deeply committed in advance to support ratification that the rejection of the Government proposal was practically impossible. M. Tardieu, by making the question one of confidence in the Government, nevertheless showed that he was determined to take no risks. In the result, each of the 15 Groups voted practically solidly for the Government, with the exception of the nine Communists. M. Louis Marin and six of his Nationalist colleagues voted against the Government and the vast majority of his own party, while seven other members of the group abstained. Of the 113 Socialistic Radicals, 106 voted with the Government and 98 of the 101 Socialists. The acceptance of the Young Plan by France—for a similar ratification by the Senate is expected as a matter of course—largely clears the way for the completion of the evacuation of the Rhineland in July and for the issue of the first portion of the international reparations loan, the two events which will mark the definite liquidation of the war.

Active preparations are now being made for the issue of the French portion of the international loan. So far as can be ascertained, the exact rate of interest to be offered has not yet been fixed, but it is expected to be either 5 or 5½ per cent. The question of French taxation on the scrip and its yield, which a few weeks ago appeared likely to prove fatal to the bonds being used as international counters, capable of being dealt with on level terms in all markets alike, has now been definitely settled by the decision that the bonds issued here shall, like Rentes, be "free of all taxation, past, present and future."

Money continues superabundant and of record cheapness. The rate for carrying over requirements at Monday's monthly Bourse settlement was 1¼ per cent. (against 1½ per cent. on March 15th and 1¾ per cent. at the end of February), which establishes a new low record in this market. Day-to-day money, which stood at 2½ per cent. down to Friday, has since stiffened to 2¾ per cent., which was the rate ruling this afternoon, consequent on increased demand for end of the month payments. The private discount rate ruling here to-day was 2½ per cent. Between the end of September and the end of March, 3,300,000,000 francs of savings banks excess balances have passed to the Caisse des Depots and thence to the Treasury or the Bank of France. The greater portion of this money is understood to have come from the reimbursement, since the end of September, of 2,700,000,000 francs of Defence Bonds and Rentes by the Caisse d'Amortissement.

The announcement that the Government intend to introduce, on the day the Budget is adopted, the Bill for taxation reductions promised some weeks ago, has given an appreciable fillip to the Bourse since the beginning of the week. It is generally understood that the decrease in the burden on securities will include the reduction of the income tax schedule rate on coupons from 18 per cent. to 12 per cent., and that the hated transmission tax, which is based on the mean quotation during the year, will be reduced by 50 per cent. (from 40c. per cent. *ad valorem* to 20c.). Foreign securities dealt in here are also to benefit from substantial reductions. It is reported that the extent to which the taxes on Bourse operations are reduced will depend upon the degree by which brokers are prepared to consent to a reduction of their commission rates.

The Chamber ratification debate made it clear that there was a good deal of misgiving among deputies as to whether acceptance of the statutes of the Bank for International Payments might not result in the development of a new kind of financial Frankenstein monster, that might eventually bring industry in all countries—and particularly in Europe—into a state of servitude to the great international banking interests. Whether the fears expressed were the result of expert technical knowledge of the constitution of the new international bank, or the outcome of experience in the effects of the remarkable *rôle* that has for many years been played by certain of the banking institutions of France itself, it is difficult to say. There are indications, nevertheless, of a growing desire, especially in certain groups of the Left, for legislation tending to the better protection of the investor, especially in regard to foreign loans issued here.

Foreign loans now being offered here, or about to be, include one of 500,000,000 francs by the Finnish Central Land Bank (with Finnish Government guarantee), 300,000,000 francs by Peru, 175,000,000 francs by Chili, 100,000,000 francs by the Credit Foncier of Brazil, 1,000,000,000 francs by Serbia, and 600,000,000 francs by Hungary. French lenders' experience with some of these countries in the immediate past has been unfortunate, and many people are curious to know whether the banks entrusted with the issues here will again succeed in their efforts. Serbia, for example, several years ago took advantage of the fall in the value of the franc, and adopted the practice of paying French holders their dividends and redemption values in francs of the present day, while continuing to pay its British and other sound money creditors in gold. A judgment of the Hague International Court some months ago ordered the Serbian Government to honour its engagements by gold payments. On Monday an agreement was signed between the French and the Serbian Governments, under which Serbia undertakes to pay dividends and reimbursements to French holders at the rate of 55 per cent. gold for five years, as from April 1, 1930, 60 per cent. as from 1936, 75 per cent. as from 1955, and the full 100 per cent. in 1958. This sliding scale is due to the fact that the Hague Court, in a rider attached to its judgment, expressed the opinion that, in view of the economic situation of Serbia, her creditors should endeavour to come to a compromise by agreement. Brazil, against whom the Hague Court rendered a similar judgment (but without any rider), has accepted the decision, and is now paying its French creditors in gold.

GERMANY.

New Cabinet — Rhenish-Westphalian Coal Syndicate — Health Insurance Proposals.

(FROM OUR CORRESPONDENT.)

BERLIN, April 1.

THE overthrow of the Müller Government came as an extraordinary surprise to everybody in Germany. A provisional agreement in respect of questions of taxation had been reached in the last negotiations, and in respect of the most important issue, the matter of unemployment insurance, a solution seemed almost to have been found: the decision as to whether the unemployment insurance system should be made solvent by reducing its scope, as desired by the People's Party, or by raising the contributions to it, as desired by the Socialists, was to be postponed until the autumn for decision. Under the pressure of the trade unions the Socialist Reichstag deputies unexpectedly rejected this compromise, which had been proposed by the Democrats and the Centre. This meant the rupture of the coalition.

Herr Brüning, the new Chancellor, is a member of the Centre, and has hitherto been in close contact with the Christian Labour movement. His cabinet list indicates that he desires to assure himself support from both the Right and the Left. In accordance with a wish of President von Hindenburg and with obvious tactical considerations, he nominated Herr Schiele, the leader of the Landbund and hitherto a German National member, as Minister of Agriculture. It is now up to this trusted representative of the agriculturists of Eastern Germany to see whether he can accomplish anything with the help of import duties or by other means to overcome distress among the farmers, due to the catastrophic rye situation and other causes. In addition to Herr Schiele, who has resigned his Reichstag mandate as German National member, the cabinet includes another former German National, Herr Treviranus, who, a short time ago, left Hugenberg, the leader of the party, and helped to organise the People's Conservative Party (Volkskonservative Partei). The Chancellor plainly hopes that his colleagues Schiele and Treviranus will attract further support from German National circles.

The leftward connection comes through the appointment of Dr. Wirth, the one-time Chancellor, as Minister of the Interior. As holder of this portfolio, which is of especial political importance, one of his principal tasks will be to carry on the struggle with the disobedient Thuringian State Government, which is favouring the anti-constitutional efforts of extreme nationalistic elements and hence came into conflict with Herr Severing, Dr. Wirth's predecessor. The appointment of the Democrat, Herr Dietrich, as Vice-Chancellor may also gain sympathy for the new cabinet from the Left. The Government's official statement declares that the sole task set by the cabinet for itself is the carrying out of the compromises that were reached by the ministers of the last cabinet. Any policy directed against the interests of the labouring classes would be out of the question for this cabinet, for the reason that the Christian trade unions—their leader, Herr Stegerwald, is Minister of Labour—could not then co-operate. But whether the Socialists can be induced to give the new cabinet a chance, and whether the Government will survive even the next few days, is as impossible to predict as are the consequences of a new crisis. If there is a vote of lack of confidence, the Reichstag will be dissolved and the taxation laws will be put into effect, before the new elections are held, by an emergency decree based on Article 48 of the Constitution.

The life of the Rhenish-Westphalian coal syndicate has had to be compulsorily extended by the Minister of Economics in accordance with law, since the members themselves could not agree on a new contract until April 1st. The chief point at issue was the question of the deliveries by the mines to their own smelters. Those mines which are amalgamated with smelters can deliver to these without reference to their quota as fixed by the syndicate for sales by its members on the open market. But these "smelter-mines" must pay in respect of such deliveries the levy which is imposed by the syndicate chiefly for the purpose of making it possible to quote low prices in competition with foreign coal. The "smelter-mines" involved have objected to paying this levy on the ground that they have no interest in securing sales possibilities on the open market, and hence do not desire to pay any part of the expenses of such efforts. The "free" mines take the standpoint that the deliveries to smelters by mines belonging to them artificially reduce the market for the other mines and compel these to fight against the competition of foreign coal. For the present the Minister of Economics has merely extended the old syndicate contract, which requires the payment of the full levy for coal used in the mines' own smelters. But the free mines have already offered to exact for such consumption only 70 per cent. of the full levy.

The Union of German Employers' Associations (Vereinigung Deutscher Arbeitgeber-Verbände) has made public a memorandum dealing with the reform of social insurance, especially health insurance. The aim is to prevent the misuse of the funds by waste of medicine and by malingering. It is proposed that the insured shall pay one mark in every case of illness, and as a rule also pay 25 per cent. of the cost of the medicines and other things prescribed. In addition to this, there is to be a special control exercised by physicians named by the health insurance department. Sick benefits are not to be paid until after some days of illness. Similar proposals have also come from officials of the funds themselves, since the contributions to these funds—6½ to 7 per cent. of the wage, making a total of 2,200 million marks—are a heavy burden for employer and employee alike.

DENMARK.

Prices — Bank and Industrial Results — Trade Balance.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, March 17.

THE depression prevailing in the international markets lately is also making itself felt in Denmark in various branches of trade. It has also affected agriculture and caused a fall in the prices of some export articles (eggs and butter), though this may partly be ascribed to very big supplies in our principal market, England. From December to February the Danish wholesale price index declined from 146 to 140 (against 159 in February, 1929). In this connection it should be mentioned that the index figure for grain and cattle food declined from 132 to 113 in the course of the months December-February (the latter figure comparing with 164 in February, 1929). As Denmark imports cattle food, this decline amounts to a cheapening of the requirements of our leading trade, and this will partially compensate for the decline in export prices. For February, 1930, the index figure for import goods was 135, against 164 a year ago, while the figure for export goods shows a rise from 145 to 146. Since November, however, the export figure has declined from 159, while at the same time the import figure declined from 143.

This rather heavy decline of prices has affected some grain houses in provincial towns, as well as one of the big trading concerns of the metropolis, Det sibiriske Kompagni, which has been obliged to go into liquidation as the consequence of losses, mostly on Manchurian soya beans. The company is in close co-operation with the General Commercial Company, and the position of this big concern is at present under investigation. Its fate is said to depend upon the amount of its loss on Det sibiriske Kompagni, as well as upon possible losses on its own business and that of affiliated companies.

These two companies are clients of the Kjöbenhavns Handelsbank, which is one of the biggest and best reputed banks in Denmark. After the suspension of payments of Det sibiriske Kompagni the management of the Handelsbank officially stated that the amount of the unsecured interests of the bank in this company and in the General Commercial Company was estimated to aggregate 6,000,000 kroner, which corresponds to one-half of

the total interests of the bank in the companies. In the opinion of the management, the loss likely to result for the bank on these engagements would not be likely to have any influence upon the dividend policy of the bank. At the time, the bank had already declared a dividend of 8 per cent. for 1929, or the same percentage as for the last few years. The net profits for 1929 were about 5,000,000 kroner, or slightly below the 1928 figure. An amount of about 9,000,000 kroner was carried forward in new account, including the balance carried over from 1928, amounting to about 8,900,000 kroner.

Den danske Landmandsbank earned profits amounting to 7,600,000 kroner in 1929, against 7,400,000 kroner in 1928. To the shareholders (the State) a dividend of 5 per cent. is paid, while 3,800,000 kroner are placed to the reserve fund of the bank, which is thereby increased to 5,500,000 kroner. At the same time the State guarantee for reserves is reduced to about 28,500,000 kroner. Accordingly, the total amount of the reserves is unchanged 34,000,000 kroner. It has now been decided that the Landmandsbank will take a further step towards the liquidation of the State guarantee, and from April 1, 1930, the bank will accept only pass book and time deposits without State guarantee, while deposits of the said description made before April 1, 1930, as well as the accrued interest on them, may retain the State guarantee until its complete cessation on April 1, 1932. The soundness and liquidity of the bank are now so generally recognised that this step is likely to be met with goodwill and understanding by its extensive clientèle.

The Privatbank, which was reconstructed in 1928, has a surplus of 7,800,000 kroner for 1929, including an amount of 3,000,000 kroner carried over from 1928. An amount of 500,000 kroner is set aside against loss, while 2,000,000 kroner are placed to reserves. The shareholders obtain a dividend of 6 per cent. and 1,000,000 kroner are transferred to a price regulation fund for securities, while 1,700,000 kroner are carried forward.

The East Asiatic Company has paid a dividend of 10 per cent., as for the last few years, while 2,200,000 kroner are carried forward in new account. In the course of 1929 the share capital of Burmeister and Wain has been increased from 30,000,000 kroner to 35,000,000 kroner, and the new shares partake in dividends for the year with one fourth. As has been the case for the last few years, the dividend is 8 per cent. The machine building factory and the iron foundry of the company have had record production in 1929, and the shipyards have been fully employed, and have launched a greater gross tonnage than in 1928. The United Steamship Company has declared a dividend of 6 per cent., as for last year.

The balance of trade gives no cause for any anxiety, as the excess of imports for December and January is only 2,000,000 kroner and 3,000,000 kroner respectively, the imports aggregating 149,000,000 kroner for each of the said months, against exports amounting to 147,000,000 kroner and 146,000,000 kroner respectively.

As from March 6th, the Nationalbank reduced its discount rate from 5 per cent. to 4½ per cent., the lowest rate since 1911. The Nationalbank has lately increased considerably its credit balances abroad, and on February 28th they had reached 125,000,000 kroner.

ROUMANIA.

Trade Depression — Credit Defence Law — Textile Combines — Mortgage Credit — Finance — Politics.

(FROM OUR CORRESPONDENT.)

BUCHAREST, March 21.

THERE is, unfortunately, little prospect that the hopes of an improvement in the agricultural situation will be fulfilled to any appreciable extent. The world's over-production and the state of the markets have caused prices in Roumania to fall to new low records. The large quantities of cereals which remained on hand from last year's harvest can only be sold at a loss. On the other hand, the producer is obliged to sell to meet his most pressing requirements. With the present enormous competition there seems little possibility of a change for the better while the farmer continues to work under present conditions. It is but natural that this situation is viewed with grave concern, for its continuation must eventually result in the ruin of agriculture and thereby of the whole economic life of the country based on it. This explains in a measure the wave of pessimism which has come over business circles during the last few weeks, and the general feeling of uncertainty was a fertile soil for irresponsible rumours of political danger on the Eastern frontier. It was also responsible for the exaggerated anxiety of the public with regard to some banks of good standing, which caused runs of the depositors on some of these banks and did a great deal of harm to credit in general. Of late, the feeling has become calmer, but the period of acute apprehension through which the country has passed has caused the Government to bring in a proposed new law which is ill-advised and panicky. This is the Law of Defence of Public and Private Credit, which aims at making it a penal offence to spread by written or spoken word news of a tendency to disturb credit. In the form in which it is proposed, the law will amount to nothing short of a severe censorship on all publications and an interference with the freedom of the Press. Such a measure can only have one result—the increase of general suspicion, and it, therefore, defeats its own object.

Meanwhile, trade remains very bad. Textile factories and wholesale houses are selling at great sacrifice, in view of the small demand, in order to dispose of their continually growing stock. As a result, some of the principal cloth factories of old Roumania and Transylvania have combined for the purpose of obtaining by narrow co-operation a rationalisation of the production and sale of their goods. This move is a step in the right direction, and will undoubtedly bring about a strengthening of the trade, which was in a very topheavy condition.

The Temporary Mortgage Credit Bank will probably be founded by the end of this month or the beginning of the next. The Bill proposed by the Government to sanction its foundation is now before Parliament. The capital, which originally was to be 250 million lei, is now fixed at 100 million, and has been entirely subscribed by the principal banks and insurance companies. Bonds are to be issued, as and when additional funds are required, up to an amount of 500 million. It would appear at first sight that the funds at the disposal of the new institution are hopelessly insufficient. It must be explained, therefore, that the mortgages taken up by the bank are to be transferred as soon as feasible to the Land Credit Banks, existing or to be created, against ready money, which, in turn, will be available for the new bank to take up fresh mortgages. For the moment it is not explained how the mortgages are to be transferred. It is understood that certain alterations in the statutes of the existing Land Credit Banks are contemplated for this purpose, but the operation will be one of considerable delicacy so as not to interfere with the vested rights of the mortgage bondholders. Upon the successful transfer of the mortgages depends the success of the whole scheme.

The Customs receipts for January and February, 1930, amount to 713 million lei, of which 596 million are for imports, 105 million for exports, and 12 million for receipts from various sources. This compares with the Budget estimates for the whole year of 6,000 million for imports, 1,200 million for exports, and 100 million for various duties. Last year Custom receipts for the same period amounted to 730 million, against Budget estimates for the whole year of 7,600 million. The Treasury receipts for revenue stamps for the period from January 1st to February 28, 1930, amount to 702 million lei, against a Budget estimate for the same two months of last year amounting to 576 million. These figures are very satisfactory, especially if taken in conjunction with the enormous increase of income tax declarations, which must result in a very substantially increased yield from this tax. On the other hand, Treasury disbursements appear to be very heavy. The Government has already taken full advantage of its facilities of 2,000 million lei with the National Bank,

which are authorised by the Monetary Law, and, nevertheless, there are complaints that certain State debts, such, for instance, as those taken over from the railways, are not too promptly settled.

As was expected, the Liberal Party did well at the municipal elections, which took place recently, but not sufficiently well to shake the position of the Government. The elections have made it more than ever apparent that at the present time there exists a clear-cut two-party system—on the one hand, the present dominant National Peasant Party; on the other, the Liberals. All the other factions are of very little consequence. This would be all to the good if the pernicious system of sulky withdrawal from the parliamentary debates, inaugurated by the present Prime Minister when in opposition, and now aped by the Liberal Party, did not make parliamentary Government a farce. The present Government appears to be still firmly established. It is energetically pursuing its policy of economic reconstruction based on the foundation of sound public finance.

GREECE.

Bank of Greece — Trade — Public Finance.

(FROM OUR CORRESPONDENT.)

ATHENS, March 21.

IN his speech to the shareholders of the Bank of Greece, the governor, Mr Diomède, said that economic conditions all over the world were not normal during the past year, and that Greece had felt the consequences of this situation. The Bank of Greece was confronted with new problems due to international developments on the one hand, and to special causes relating to the economic conditions of Greece of the other. In order that trade might be carried on with absolute safety, and be spared the expense entailed by exchange fluctuations, the rates at which the bank bought and sold foreign exchange were maintained unchanged throughout the year. The cover of circulation on December 31, 1929, at £8,309,111, showed a diminution, as compared with a year ago, of £3,000,000.

More than £2,000,000 of this decrease is due to smaller receipts from exports, while speculation and higher interest rates in New York caused a substantial outflow of capital. Exports of tobacco only fell by £1,500,000 compared with 1928, but the Governor believes that this loss, due to a simple postponement of foreign purchases, will be recovered in the course of this year. On the other hand, the restoration of normal conditions in the international money market has put an end to the emigration of capital. A reverse movement has even started, an indication of which is the already noticeable demand for Greek stocks. Capital imports from abroad, in the form of loans, has been estimated during recent years at £3 to £3.5 million annually. The burden represented by this borrowing is set off, however, to a considerable extent by the annual amortisation of the National Debt, apart from the fact that these loans are employed for productive purposes. Emigrants' remittances for 1929 are estimated at £7,815,000, against £6,500,000 for 1928.

The fact, Mr Diomède said, that in the past year, when the principal article of export (tobacco) underwent a temporary setback, when the universal fall of prices brought about a decrease of receipts, when, owing to bad weather, production of cereals was smaller and cattle breeding less successful, so that an increase of imports was necessary, and when nearly all the foreign banks of issue were compelled to take protective measures against the outflow of capital from their respective countries, the Bank of Greece succeeded in maintaining the proportion of its reserve at 46 per cent. of its total liabilities and 60 per cent. of its actual circulation, proves the elasticity and the strength of the economic structure of the country.

The task of the Bank of Greece, continued the governor, was not easy during the period under review. The economic crisis, which began to appear in 1928, increased considerably in proportions, especially towards the end of 1929. Lack of demand for products, the fall in prices, a foolish immobilisation of short-term capitals, all this created an acuteness of conditions which brought to an impasse many industrial concerns, and the commercial and banking houses connected with them. The liquidation of an unsound situation, which is the result of policies, not always prudent, followed for over ten years, is being now accomplished. The general restriction of credit, resorted to during the last few months, has entailed also a restriction of expenditure and a better adjustment of production. These and the recent downward trend of interest rates, are indications that the liquidation is proceeding comparatively smoothly.

A satisfactory feature of the situation is the state of public finance. The budgets of the State have been leaving a real surplus since 1927, while the Treasury has had a steady credit balance at the bank. It is, of course, not improbable, under the influence of the economic developments of the recent months, that a slowing down of revenue may take place. But the financial position of a country is not judged by movements over a brief period. A longer view is necessary. And such an examination cannot but leave a satisfactory impression on every calm student of Greek finance. It is true that the service of National Debt represents 34 per cent. of the State's expenditure. Foreign debt alone requires over £4,800,000 yearly. It should be taken into consideration, however, that a large amount, corresponding to 13 per cent. of budget expenditure, is employed for amortisation of the Debt, and that the foreign debt is, to an appreciable extent, held by Greeks. It is estimated that two-fifths of the National Debt, or approximately £50 million, will have been paid off within 12 years. A large part of this amount, belonging to Greeks, will remain in the country.

However prudent this policy of generous amortisation may be, it constitutes none the less a great burden. That is why, as soon as the conditions in the International money markets are favourable, a conversion of that part of the debt which is more oppressive should be made. The real interest rate on Greek loans on the London market varies now between 6½ to 7 per cent., whereas for other countries the rate continues to be as high as 8½ to 9 per cent. This is the result, Mr. Diomèdes said in fine, of a favourable opinion of the public finances and the economic potentialities of Greece.

SOUTH AFRICA.

Immigration Quotas — Miners' Phthisis — Public Debt.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, February 26.

FOR some time past, the position in regard to immigration, and its effect on the future constitution of the population, has been a cause of anxiety to the Government. Of late years there has been no important net gain in the stocks (*e.g.*, British, Dutch, German) regarded as preferable, whilst there has been a considerable influx of immigrants from Southern and Eastern Europe. These immigrants have been, in preponderating numbers, Jewish people of the poorer class from Lithuania and certain other parts of the former Russian Empire. The

THE BRITISH LINEN BANK.

Capital and Reserve Funds, £3,500,000.
Head Office: 38, St. Andrew Square, Edinburgh
OVER 200 BRANCHES IN SCOTLAND
LONDON OFFICE: 38, Threadneedle St., E.C.2
Every description of Banking Business transacted.

Minister of the Interior has now introduced the "Immigration Quota Bill." Nationals of countries not mentioned in the Schedule to the Bill will, in future, be admitted only to the number of fifty per country per year, and under strictly prescribed conditions. The western borders of Lapland and Finland, the Eastern Baltic shore and the western borders of Poland, Czechoslovakia, Hungary, Jugo-Slavia, and Greece constitute the dividing line. The measure was not mentioned in the Governor-General's speech—presumably to obviate a flood of persons affected. It is to come into effect on May 1st, and there is no doubt whatever that the Government mean to pass the Bill, substantially as introduced. There has been an extremely vocal opposition on usual lines, while the Government have defended the Bill on the ground that immigrants of the class chiefly affected are usually illiterate, that they are traders (and poor small-scale traders) rather than producers, and that they are "unassimilable." On his first night in South Africa, General Smuts abandoned the line previously followed by his party (who for practical purposes supported the Bill), and declared that the Union needs any European immigrants it can secure. The Government team work on the Bill has been unusually good, even for them.

The Director of the Census has just published an abstract of his report on vital statistics for the year 1928. The number of European births corresponded to a birth-rate of 25.77 per thousand of the estimated population, whilst the crude death-rate was 10.15 and the standardised death-rate 10.69. The survival rate of 15.62 is exceptionally high—a fact partly due to abnormalities in the Union European population dating back to the Boer War. Of the 886 deaths from tuberculosis, 161 were due to miners' phthisis. A year or so ago, it was suggested to the Miners' Phthisis Board by the Controller and Auditor-General that the Board was not properly secured as regards the provision of contributions to its funds due by companies on ceasing operations. A trust has now been created, to which the Miners' Phthisis Board and the Chamber of Mines are parties, which trust will receive and manage these funds separately from those of the Miners' Phthisis Board proper. The present value of the "Outstanding Liability" is somewhat over £6,000,000. Ordinary quarterly payments are charged by companies to working costs, but the practice in reference to payments on account of "Outstanding Liability" is to deduct them from profits. The "Scheduled Mines"—they are substantially identical with the gold mining members of the Chamber of Mines—pay £800,000 per annum to the Miners' Phthisis Board, and earmark about £400,000 for "Outstanding Liability."

It may be remarked that recently a considerable amount of attention has been paid to the "life" of the mines. Several statements have been published purporting to give well founded estimates of the "lives" of the various companies, most of these being based on the contributions set aside on account of "Outstanding Liability" to the phthisis funds. The companies are not anxious that estimated "lives" should be known, chiefly because even their own estimates are so often based on inadequate data; and for various reasons, the phthisis figures constitute a very uncertain guide. Estimates of "lives" of mines, whether based on this calculation or on any other, should be taken with the greatest reserve.

The report of the Public Debt Commissioners, just published, shows that at March 31, 1929, the Public Debt of the Union amounted to £244,044,513. This figure has been attained by steady increases amounting in all to about £100,000,000 since Union in 1910. Of the total, £228.9 million is funded, £4.6 million is in Union loan certificates, and £10.5 million is in Treasury bills. £150.6 million was raised outside the Union and £93.5 million was raised within the Union. The average net interest paid on the Funded Debt was 4.208 per cent., a figure which compares with 3.378 at the time of Union, and which, presumably, will increase still more as the old issues fall to be repaid. £199.2 million, or 81.6 per cent., is productive debt. The report contains an interesting table of comparison betwen South Africa and other Dominions. In this country the net debt per European is £129 6s. 9d.; if one converts (for purposes of this argument) four natives and coloured people to one European, the debt per head on that basis is £69 5s. 7d. In Canada the debt is £55 10s. 9d., in New Zealand £172 6s. 7d., and in Australia (States and Commonwealth) £169 11s. 11d. The Commissioners administer sinking funds amounting to £16.4 million.

It is apparent that the Government—and specially the Minister of Finance—are not so comfortable as in the early years of their career. Still, even this year, Mr Havenga apparently anticipates a surplus, although it will be of extremely modest proportions. Producers are beginning to see that the future of the country depends on a substantial reduction in the cost of production, but the main bulk of Government supporters—even those who cannot sell their wool—are slow to learn economic lessons.

Letters to the Editor.

BUILDING SOCIETIES: RATES CHARGED TO BORROWERS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with considerable interest the Note entitled "Building Societies: Rates Charged to Borrowers," which appeared in your issue of March 22nd. In this you give statistics designed to throw an "interesting light on the average effective rates charged on mortgages" by a number of the leading societies. To some extent this light *may* be interesting. On the whole, however, it may easily be more misleading than interesting. May I be permitted in this connection to recall a dictum by Professor Bowley? "No one," he says, "should attempt to use statistics unless he is prepared to devote considerable time and thought to ascertain the exact meaning, nature and limitations of the particular reports which relate to the subject in question."

I refer especially to your table of "average effective rates charged on mortgages," attributed to individual societies. In brief, it may not in general be realised exactly what is meant by "average effective rates." And if I may hazard a guess, the writer of your Note does not himself appreciate all the limitations which attach to this ambiguous phrase. It is admitted, it is true, that "slight statistical errors may be involved in some cases," but in fact these are of a more serious nature than is apparently supposed. Is he, for instance, when using the figure of accrued interest brought into the profit and loss account, aware that it is a normal practice of many societies, while charging a uniform rate of interest on the balance of the advance for the time being outstanding, to allocate a slightly higher rate during the first few years of the mortgage, and a correspondingly reduced rate throughout the remaining term of the advance? This factor is obviously of the first importance, since interest on advances is, at the present time, particularly inflated owing to the great increase in the number of advances which have been made in recent years.

Perhaps you will reply: "The figures are sufficiently accurate for broad purposes of comparison." But broad is a relative term, and it seems to me that you have allowed rather more "broadness"—if I may be permitted the word—than is justified by the facts of the particular case.

In support of the foregoing, I may say that the rate of interest charged by the majority of the societies listed in section (h) of your table is 6 per cent. and not 6½ to 7½ per cent. as your table suggests.—I am, Sir, yours very truly,

HAROLD BELLMAN.

"Tree Tops," Dollis Avenue, Church End, Finchley.
March 31, 1930.

[We are accustomed to verify our published figures, both as regards accuracy and relevance to the matter in hand, and we can assure Mr Bellman that our usual precautions were followed in this instance. It is true, as he points out, that many of the London societies include a "premium" element in their interest charges for the early years of a mortgage. But whereas the majority of mortgages are made in the first instance, for comparatively long periods, such as fifteen years, in practice the average life of a mortgage is not much more than seven years, as a result of premature repayment, sales of the property by the mortgagor, etc. To the extent that this factor operates, many borrowers tend to pay the higher rate in the earlier years without obtaining the full benefit of the lower rates in the later years. For readers of statistical bent we append a list of other conditions attaching to our figures. This was, obviously, too lengthy and technical for inclusion in a short "Note." It will be seen that some of these factors tend to cancel each other:—

(1) Mortgage balances are taken as the arithmetic mean of the opening and closing balances. It is possible that these occasionally include some accrued interest which should not strictly be included as principal carrying interest. But as the greater part of the advances are repayable by monthly instalments, the amount of accrued interest at any time cannot be large.
(2) A more considerable error is liable to arise in the case of a rapid increase of advances if that increase is not evenly spread over the year. There are signs that there was an exceptionally large demand for advances in certain cases in the latter part of the year 1929. The true average balance outstanding in such cases would be less than the arithmetic mean, and the true rate of interest would be somewhat higher than that shown.
(3) The interest assumed in the calculations is the accrued interest brought into the profit and loss account. It is not quite clear how far this includes interest accrued but not payable, and interest payable but not paid, but the amount of either is almost certainly too small to affect the figures seriously.
(4) The interest generally does *not* include fines, entrance fees, or redemption fees. But certain societies, *e.g.*, Temperance, Hearts of Oak and Magnet, include premiums with the interest. It is not quite clear exactly how these premiums are brought to account, but it may be that their inclusion initates the apparent rate a little in years of special activity in advances.
(5) On the other hand, certain societies, e.g., Cheltenham, Eastern Counties and Hastings Permanent, bear all or some legal mortgage expenses themselves, and this might be regarded as reducing somewhat the rate of interest shown in the Table.
(6) Some societies pay or credit a bonus to borrowers, e.g., Eastern Counties, Principality and Hastings Permanent. This has been deducted both from the interest (except where disallowed), and in the third case from the principal also. For this and other reasons, the rates in the first and third of these cases are to a considerable extent estimates only.
(7) One society, the Coventry Permanent Economic, charges a share of working expenses to borrowers, and this has been added to the interest.
(8) It is understood that certain provincial societies making advances in London have special rates for London borrowers. It follows that the rate in the Table for certain provincial societies with branches in London is compounded of a higher rate and a lower. Apart from this, a number of societies charge different rates (a) in different areas, e.g., Northampton, which charges an extra ½ per cent. outside the town and county, or (b) on different classes of property, e.g., the Burnley, Borough, Leicester Temperance, and Keighley, which charge an extra ½ per cent. on larger houses and business properties; and the Leicester Permanent, which charges a lower rate on advances on houses for personal occupation within two-thirds of the valuation.
(9) The system of monthly repayments, while making no difference to the actual interest as compared with a half-yearly basis, increases the effective rate by about 1s. 6d. per cent., i.e., £6 per cent. payable monthly is equivalent to about £6 1s. 6d. per cent. payable half-yearly. Most Building Society advances are on a monthly basis.

Mr Bellman's letter does not explain the significant fact, suggested by our figures, that the total mortgage interest *actually received*, expressed as a percentage of the mean advances outstanding, is a full 1 per cent. higher, on the average, in the case of the London than in that of the provincial societies. Is there, in fact, an agreement not to lend in London at a lower over-all rate than 6 per cent? If this be the case, London borrowers may be impelled to ask the reason for this apparent discrimination.—ED., *Econ.*]

THE SUGAR PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The most fervent advocate of Government assistance to the sugar producers of the West Indies and Mauritius must feel that Lord Olivier's proposal can only be adopted after very careful discussion. Into that discussion I do not wish to enter; but only to suggest that the article in your issue of March 29th misconceives the problem.

First, as to the desirability of interference. The argument for this does not lie in the fact that the sugar industry is running at a loss, but in the thesis that the general prosperity of the Islands is, and must continue to be, entirely bound up with that of the sugar producers. The Commission adduces a considerable body of evidence in support of this thesis. If it be admitted, two questions arise: (1) political—how much are we prepared to spend in order to maintain the prosperity of the West Indian communities? (2) economic—is assistance (of any kind) to the sugar producers the best way of procedure? Your reference to "the British wheat farmer, the Australian wool grower, or the rubber planter in Malaya" ignores the political question entirely, unless we are asked to assume that each producer is of irremediably vital importance in the economy of his seat of operations.

Secondly, your reference to "the fact that the 'free' market price is the measure of the ratio between demand and supply" suggests by implication that we have to deal with a "free" market in the sense in which the phrase is used in pure theory. Arguments for assistance to the sugar industry are not based on an attempt "artificially to impede the restoration of lost equilibrium" in a "free" market. The artificial restrictions which cover so large a part of the market are a determining factor of equilibrium in the remainder, which cannot, therefore, be said to be "free." It is regrettable that the *Economist* should employ language which suggests that other people's restrictions are compatible with a "free" market—are in a sense "natural"—and not our own. The case for interference is that artificial factors of equilibrium can and should be employed to counter artificial factors. The case against interference based on this ground is surely strong enough without employing words that savour of unreality.

Finally, in a matter where international economic co-operation can offer the only hope of a really lasting settlement, I should like to emphasise, if I may, the leading part which the *Economist* has played in promoting the realisation of this ideal.—Your obedient servant,

H. C. B. MYNORS.

Bridstow, Herefordshire.
March 31, 1930.

[Mr Mynors, we are glad to note, does not suggest that further "artificial factors of equilibrium" should be introduced into the sugar equation at the instance of the British Government. Whether the residual price of sugar—*i.e.*, buyer's price less tariff protections—be referred to as the "free" or "open" market price is scarcely material. Whatever name it bears, that price, we repeat, *is* "the measure of the ratio between demand and supply," and if the vicious effects of tariffs and subsidies have "unnaturally" depressed the "open" market (which is not in dispute), the remedy is not to be sought in heavier doses of the same drug. As regards the "political" considerations, if it be decided that the West Indian communities should have their prosperity maintained at the expense of the British taxpayer, we should prefer to see a direct Treasury grant in aid given for that specific purpose. In that case Parliament would at least know what it was doing, and the limit of its liability.—ED., *Econ.*]

THE TARIFF TRUCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the article on "The Tariff Truce" which appears in your issue of February 15th last you argue that certain protectionists are basing their ideas on a false analogy with the U.S.A., urging that the U.S.A. possesses an area equivalent to 19.9 acres per head whereas Britain only has 1.29 acres per head.

Presuming that the *Economist* is really searching for truth and not merely trying to prove its own ideas of truth, would it not have been less misleading if it had been pointed out that the British *Empire* possesses an area of about 8,900 million acres against a population of about 450 millions (or 19.77 acres per head, as compared with 19.9 acres per head your claim for the U.S.A.)?

If the standard of living of the native races of the Empire were as high as that of the negro population of the U.S.A., could we not expect in the Empire a prosperity as great as that of the U.S.A.?

Does not the remedy lie in increasing the spending power of the tropical and sub-tropical labourer within the Empire? Can this be done without increasing the price of tropical products—foodstuffs and raw materials? Can this increased price be brought about except behind the walls of a tariff in favour of Empire produce?

Would not the demand for manufactured goods created by this increase in purchasing power of the 450 millions of the Empire (of whom over 300 millions are ill-paid "natives") so fully employ the manufacturing capacity (not only of Britain but of Canada and the whole Empire) as to eliminate from the discussion the conflict of interests between the old-established industries of Britain and the industrial ambitions of other parts of the Empire?—Yours truly,

FREDK. C. HARDING.

25, Queen's Park West,
Port of Spain, Trinidad, B.W.I.
March 4, 1930.

[We quoted the figures referred to for the benefit of those protectionists who believe that we can find employment for our people "by exploiting the home market" and to show that "a self-contained Britain would be desperately poor." This is quite a different conception from a self-contained Empire, though protectionists sometimes ignore this vital distinction. But if comparison of America with Britain is palpably false, that between America and the Empire is almost equally misleading. There is no analogy between a single territorial unit and a number of territorial units scattered at great distances apart over the world, some densely peopled, some almost empty, with more than two-thirds of the population living in a single area. There is no analogy between the Southern States—with their black and white populations of almost equal numbers—and India. Raising the standard of living of the "tropical and sub-tropical labourer" within the Empire would undoubtedly be the most effective stimulus to trade. But this is to be done by raising his productivity, not by raising the price at which his products sell in an artificially protected market.—ED., *Econ.*]

BANKS AND INDUSTRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your very interesting survey on "Banks and Industry in England and Germany" in the *Economist* of March 15th contains some doubtful statements. A German "*Aufsichtsrat*" is not a "counterpart" of an English "board of directors." It is something for which, as I know by personal company practice in England, no "counterpart" in England exists. The German *Vorstand* is the real "counterpart" of both the English board of directors and of the managing director. It is a further error to say that an *Aufsichtsrat* is "*entitled*" to demand information on the conduct of the company's business. The German *Handelsgesetzbuch* requires the *Aufsichsrat* to keep itself informed on that matter, to audit the accounts, sanction the balance sheets, and sanction the dividend and reserve proposals of the *Vorstand*. The members of an *Aufsichtsrat* are paid very large fees, up to £8,000 a year each for doing this work, and your contributor errs in thinking that a member can plead lack of time as an excuse for not fulfilling the functions imposed upon him by the *Handelsgesetzbuch*.—I am, your obedient servant,

ADOLF BENZIGER.

Fasanenstrasse 29I, Berlin.
March 17th.

[The writer of the article, in comparing the German *Aufsichtsrat* with the English "board," was at pains to bring out the differences which the comparison reveals; and he made it clear, we should have thought, that the *Aufsichtsrat* has certain obligations to perform. It is in the performance of these duties that it *is* "entitled" to obtain the necessary information from the *Vorstand*.—ED., *Econ.*]

Books and Publications.

"BURDETT."*

The Stock Exchange Official Intelligence, edited by the Secretary of the Share and Loan Department and approved by the Committee of the Stock Exchange, retains in 1930 the high standard of excellence for which, as "Burdett," it has become famous. Once again successful efforts have been made to condense the contents of this large tome without sacrificing anything of its efficiency. In the front of the book appear the usual chapters on Finance, County Finance, Indian Finance, Dominion and Colonial Finance, British and Foreign Finance and Company Law, the last-mentioned including the main new features introduced by the Act which came into force in November last. Particularly noteworthy, also, is the article entitled "The Reform of Local Government and Local Taxation in England and Wales," an authoritative review of the provisions of the Local Government Act, 1929, and a connected narrative of all the reforms which culminated in the Act of last year. In the concluding portion of the volume the customary information relating to stamp duties, trustee investments, income tax, Bank rate and the like has been duly revised and brought up to date.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Economic Aspects of Sovereignty. By R. G. Hawtrey. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 9s. net.

Mr Hawtrey's observations on international politics from the economic point of view lead, on the whole, to fairly hopeful conclusions.

The Basic Industries and Social History of Japan, 1914-1918. By Ushisaburo Kobayashi. (London) Oxford University Press, Warwick Square. 15s. net.

An economic history of Japan during the war, prepared with the clearness and thoroughness characteristic of the Carnegie Endowment publications.

A History of Indian Taxation. By Pramathanath Banerjea. (London) Macmillan and Company, Ltd., St. Martin's Street. 12s. 6d. net.

A comprehensive, critical history of financial policy in India.

Die Stabilisierung des Geldwertes als Ziel der Währungspolitik. By Dr. ver-pol. Alfred Tismer. (Berlin-Charlottenburg) Verlag von Gebr. Hoffmann, Schillerstrasse, 44.

A serious and considered contribution to the controversy on currency stabilisation.

History of Monetary Enactments in Greece. By L. C. Palamas. (Athens) Printing Office "Histia."

A summary of Greek monetary law, 1828-1885. A second pamphlet is to bring it up to 1928.

La Gestione delle Ferrovie dello Stato nel Sessennio 1923-24-1928-29. By F. A. Rèpaci. (Turin) Arti Grafiche Ditta Fratelli Pozzo.

A monograph on the working of the Italian State Railways which should form a useful contribution to the literature of railway economics.

Wall Street Ventures and Adventures through Forty Years. By Richard D. Wyckoff. (London) Harper and Bros., 90, Great Russell Street. 18s. net.

A vivid history of Wall Street in the form of the autobiography of a man who was almost a native of it.

In a Persian Oil Field. By J. W. Williamson. Second Revised and Enlarged Edition. (London) Ernest Benn, Ltd., 154, Fleet Street. 7s. 6d. net.

A most interesting illustrated history of the application of scientific methods in the oil industry.

The Anglo-American Year Book, 1930. Edited by H. Russell Amory. (London) American Chamber of Commerce, Aldwych House, Aldwych. 15s. net.

A very convenient book of reference for citizens of the United States or of Great Britain resident in each other's countries. It includes residential and commercial directories, and information on social, legal and practical matters of all kinds.

Bradstreet's Register, 1929, *London.* Fourth edition. (London) Bradstreet's Register, Ltd., Adelaide House, King William Street.

Presents to subscribers, in very compact form, a list of traders of repute in the United Kingdom whose financial standing conforms with certain minimum standards. They are rated by special code, according to their capital, resources and general standing, and also according to the past experience of suppliers.

Manual of Argentine Railways for 1930. By Sir Stephen Killik. (London) Effingham Wilson, 15, Copthall Avenue. 2s. 6d. net.

A handy booklet for the investor, with full particulars of each company.

Foreign Dollar Loans. (London) The National City Company, 34, Bishopsgate.

Contains particulars of each loan and essential statistics of the countries for which they were raised.

Empire Review, April, 1930. (London) Macmillan and Company, St. Martin's Street. 2s.

Includes an article by Lieut.-Commander Sir C. Dennistoun Burney on "The Real Issues in India."

Bulletin of the Imperial Institute. April, 1930. (London) John Murray, Albemarle Street. 3s. 6d. net.

Contains reports of recent investigations, including one on esential oils; and various other reports and articles on commodities of economic importance produced within the Empire.

RATIONALISING THE INVESTMENT PORTFOLIO.

THE following article examines a thesis, which, while frankly experimental, may be of interest to company directors at a time when "rationalisation" is in the air. The latter term may be briefly defined, for the purpose of this review, as the securing of the optimum earning power from all available assets. The earning assets of many well-conducted companies include certain funds which are invested outside the business. These are capable of being speedily transformed into cash in an emergency; but, in the meantime, they afford an appreciable annual income, in the form of interest and dividends. Experience suggests that these "outside" investments tend in numerous cases to acquire a semi-permanent character. This being so, any expedient which increases the income derivable from them (which, of course, forms part of the net revenue divisible among shareholders), without decreasing their liquidity or the safety of their principal, obviously offers tangible advantages to all concerned.

Some idea of the dimensions of the "outside" investments held by some of the largest British companies may be obtained from the following table, which shows in addition the increase in revenue which would follow a relatively moderate enhancement in the average "yield."

Company.	Amount of Stock (mainly gilt-edged) held at date of last Balance-sheet. £	Additional Revenue accruing if annual interest increased by 1 per cent. £
London Midland and Scottish Railway	17,302,117	173,021
Great Western Railway	17,010,212	170,102
Imperial Tobacco Company	9,862,441	98,624
"Shell" Transport & Trading	6,627,101	66,271
Southern Railway	6,175,410	61,754
London and North-Eastern Railway	4,509,277	45,093
Vickers	4,488,943	44,889
Arthur Guinness	4,400,779	44,008
Anglo-Persian Oil	2,784,887	27,849
Morris Motors	2,330,892	23,309
Harrods	1,228,437	12,284
British South Africa Company	1,062,106	10,621

Gilt-edged investment has undoubted advantages in the matter of realisability, since, apart from the fact that cash settlements are effected daily in the gilt-edged markets of the Stock Exchange (as distinct from fortnightly settlements in other markets), large amounts of gilt-edged can be sold in an emergency with much less disturbance of market prices than in the case of stocks less widely held. On the other hand, gilt-edged stocks tend to have a lower market value when money is "dear" than when it is "cheap." They have no "equity" in the future progress of industry and of the nation. There is a school of thought which holds that the idea that safety can be attained *only* by the exclusive holding of gilt-edged securities can no longer be regarded as tenable. The leading exponents of modern investment practice are, of course, the investment trusts, the guiding principles of whose policy are well known. Security holdings are widely "spread," both geographically and by industries, so that only a condition of international chaos can threaten their solidity. Their total is divided between bonds, preference shares and ordinary shares in proportions which experience has shown to be sound. The percentage distribution of the aggregate holdings of five "pre-war" and three "post-war" investment trusts is shown in the first table appearing in the next column.

Broadly speaking, both the "old" and the "new" trusts hold about half their total securities in the form of bonds and the remainder in preference and ordinary, with one or the other slightly in the ascendant, according to the predilections of the trust concerned. In all cases, however, the purchase and sale of securities is the affair of a full-time professional investment staff, subject to a proviso that not more than a limited percentage of the whole capital may be invested in any one security. Large transfers are made each year from revenue for reserves, part of which may be used to write down the book value of investments. Investment, in short, is treated as a specialised activity, the fruits of this policy being a yield, safe and well-secured, which may be one, two or even more per cent. over that obtainable on gilt-edged securities, and tends to increase as time goes on.

	Proportion of Total Holdings Invested in		
	Gilt-edged Bonds and Debentures. %	Preference Stocks. %	Ordinary Stocks. %
"Old" Investment Trusts:			
Anglo-American Debenture	51·00	23·32	25·68
British Investment	46·10	28·30	25·60
Debenture Corporation	74·40	10·60	15·00
Metropolitan Trust	48·00	23·90	28·10
Clydesdale Investment	56·92	28·62	14·46
"New" Investment Trusts:			
British and German Trust	50·14	13·85	36·01
Capital and National	54·51	26·60	18·89
City and International	49·60	13·10	37·30

The investment portfolios of many trust companies compare, in size, with the security holdings of the industrial concerns already mentioned, as may be seen from the next table:—

	Date of Balance Sheet.	Total Investments. Book Value. £	Interest and Dividends (after tax). £
"Old" Trusts—			
Anglo-American Deb.	Nov. 31, 1929	2,231,565	148,905
British Investment	Jan. 1, 1930	6,713,191	367,545
Debenture Corporation	Dec. 31, 1928	3,759,758	216,498*
Metropolitan Trust	Jan. 1, 1930	3,205,479	211,127
Clydesdale Investment	Sept. 30, 1929	2,265,140	165,410
"New" Trusts—			
British and German	Dec. 31, 1929	2,254,907	118,289
Capital and National	July 31, 1929	946,806	50,279
City and International	Aug 31, 1929	1,748,791	109,167

* Includes rents and other income.

None of these companies has a security portfolio anything like as large as that of the L.M.S., the Great Western Railway, or even the Imperial Tobacco Company. The income obtained by the eight trust companies shown in the table, last year, was 6 per cent., after tax, comparing with an income of, say, 4 per cent., after tax, from gilt-edged securities. There are, however, many reasons why the results achieved in the two fields of investment cannot be directly compared. The security holdings of trust companies are part of their fixed capital. No question arises of transforming the whole, or any substantial part, into cash, so long as the trusts remain "going concerns." An industrial company, however, holds a substantial share, at least, of its total outside investments as a liquid reserve, to be turned into cash, in an emergency, at short notice. No form of security can be realised so quickly, or with less upset to the market, than gilt-edged stock, which, for the minimum "iron" reserve of any company, must be regarded as an indispensable type of holding. The spreading of investment is applicable only to the residue, though in many cases the latter may be of ample dimensions to make the expedient worth while.

In practice, such a policy would probably be found to involve the setting up of a special investment department, with expert, full-time personnel. It would be necessary, also, to reassure shareholders that the investments would, as in the past, remain independent of the company's main business, or that of its subsidiary com-

panies, and that no personal prejudices or interests would enter into its administration.

There are many companies whose outside investments, while less than £1,000,000, are nevertheless substantial. A few examples are given below:—

Company.	Amount of Stock (mainly gilt-edged) held at date of last balance-sheet.	Additional Revenue accruing if annual interest increased by 1 per cent.
	£	£
Linen Thread Company	751,221	7,512
Telegraph Construction	733,600	7,336
Bolsover Colliery	624,952	6,250
Watney, Combe, Reid.....	484,361	4,844
United Serdang	430,694	4,307
Savoy Hotel	317,952	3,180
Borax Consolidated	278,819	2,788
Maypole Dairy	249,661	2,497
J. Sears and Co.	211,738	2,117
Bah Lias Rubber	145,844	1,458
Pinchin, Johnson	118,076	1,181

In such cases as these, while the economies of "rationalisation" of the investment portfolio might not be sufficient to support a full-time investment department, they might enable a company to pay a fee sufficient to give it a substantial call on the services of a well-organised independent outside investment agency, were such a body in existence.

We have endeavoured, in this article, to give a fair statement of the views of those who urge that investment policy, like industrial policy, should move forward with advancing knowledge. There is, of course, another aspect of the question. Nowhere is the fallacy of human judgment more readily or regularly demonstrated than on the Stock Exchange. The purchase of gilt-edged securities does, in fact, afford the best guarantee which has yet been discovered that interest on outside investment will be regularly forthcoming and the principal safeguarded, as far as possible, against the dangers of boom and slump, unfounded optimism, and axe-grinding. Many shareholders, in practice, would receive with feelings of dismay any suggestion to expose a substantial portion of their companies' liquid resources to the hazards of investment in other than first-class stocks, and no responsible observer would regard this conservative instinct as entirely at variance with economic fact. Holders of more "advanced" views, however, are entitled to point out that the trend of modern industrial practice is in the direction of increased production of saleable by-products, which were formerly regarded as waste matter, but to-day, while remaining subsidiary to a company's main business, represent a valuable source of revenue. Without endorsing the view that directors and shareholders should consider the application in the counting-house of a principle which has proved remunerative in the workshop, we have put forward the facts which form the framework of the article in order to assist our readers in forming their own conclusions on a matter of tangible importance.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
April 22.	April 24.

The Account which opened this week was of the three-weeks' variety, whose traditional unpopularity in the "House" was not redeemed by its inclusion of the Easter holidays and the Budget. The volume of business showed a considerable falling off, but prices were sustained, the prevailing note of quiet confidence being assisted by the firm tendency of New York. The hardening of money rates prepared the gilt-edged market for the absence of a further reduction in Bank rate, but though dealers were no longer able to buy in the morning with the certainty of a profit in the afternoon, quotations more than held their ground. A certain amount of cautious buying of the best industrial shares was effected on behalf of investment trusts—a parallel, on a small scale, of events in America. In the more speculative markets, a tentative renewal of interest in oil shares was the leading feature, accompanied by influential but unobtrusive buying of selected Rhodesians.

The week opened with a sharp reaction in gilt-edged securities, attempts to unload stock meeting with an unfavourable reception. Five per Cent. Conversion "A" and "B" were amalgamated after deduction of the May interest payments, and marked 103 ex-dividend. War Loan was fractionally higher, but Funding Loan, with its large foreign holdings, was erratic. India stocks were depressed by the Calcutta riots, and little interest was taken in Dominion and Colonial securities. Despite the gratifying reception of the Birmingham Loan, home corporation stocks were easier, though recent issues continued to stand at a premium.

The Foreign market was less active, but price changes were of narrow dimensions. Brazilians reacted at the outset, though little stock came on offer, but improved when the market learned that arrangements were being made for the renewal of the £5,000,000 credit which would otherwise have expired in a fortnight's time. China 1912's were sold by tired bulls in the absence of official news regarding the coupon, but issues secured on the Customs moved favourably on the official adoption of the Kemmerer Commission's recommendation of the gradual adoption of gold currency. European stocks hardened in a few cases, but less favourable expectations regarding the debt service caused a decline in Turkish Unified. Egyptians were firm after the official opening of the Treaty Conference between the British and Egyptian Governments.

Home Rails continued in a friendless condition. The traffic figures afforded comparison with the pre-Easter week of last year, but were regarded as distinctly unsatisfactory even after due allowance for this factor. North-Easterns were depressed by scattered realisations, and Midland and Scottish failed to maintain an early improvement. Undergrounds were steady on the encouraging traffic position. The resumption of normal services gave a better appearance to the Argentine figures, though receipts continued to run below last year's level. Prices improved after a further recovery in the peso exchange. Leopoldinas showed further improvement, but little interest was taken in the rest of the market.

The carry-over in the Industrial markets revealed a smaller open position than had been anticipated. The three weeks' account opened without enthusiasm, but a small amount of cautiously selective buying, from not uninfluential quarters, combined with the renewal of speculative activity in New York to sustain the average level of values. International stocks were marked up on New York dealings, though activity in the "Street," on most evenings, was not conspicuously animated. The report and bonus of United Molasses (discussed on page 783) were favourably received, though the shares showed only a moderate rise. The Associated Cement speech, signalising the completion of the group's programme of rationalisation, encouraged moderate activity in the shares, but the informative review of conditions by the chairman of Vickers was regarded by the market as distinctly less optimistic than its predecessor. Electrical equipment shares showed marked activity, special buying of General Electrics from the American side finding the market ill-supplied with stock. Gramophones and Columbias were in demand at the outset, but lost ground on the publication of a disclaimer regarding amalgamation, though the market was quick to point out that the latter did not expressly deny that negotiations were in progress. Brewery and tobacco shares remained dull under Budgetary fears. The Swedish Match group continued to harden, but the most noteworthy advances in the international group were scored by Hydro-Electrics and International Holdings, under American impetus, despite the none too satisfactory showing made by the latter's report. Iron and steel securities were quiet and irregular, but motor shares obtained fair provincial support. Little interest was shown in textiles, Courtaulds showing renewed weakness on Thursday. Imperial Chemicals again came on offer. Bank shares were neglected, prices being fractionally lower on balance, while the majority of insurance share quotations were unaltered.

The rubber share market had a distinctly harder appearance, though business failed to develop to any striking extent. The announcement that the May tapping "holiday" would be definitely put into operation produced a few speculative inquiries, Rubber Trusts rising steadily throughout the week. Tea shares were quiet, but a certain broadening of the market was discernible, and price changes were all upward. More confidence was displayed in the oil market, American news being favourable both as regards production and prices. Attention was chiefly concentrated, however, on dividend-paying stocks, Anglo-Persians being especially in demand.

Business was on a restricted scale in the mining markets, but the tone remained cheerful, and most changes were in favour of holders. Kaffirs were weak at the outset, only a few irregular movements being recorded, but the market later became comparatively firm, Brakpan, Durban Deeps and Anglo-French being inquired for. Rhodesians attracted some attention, and Chartered went ahead on Paris buying. Northern issues had a listless appearance, Congo Borders receding after opening strongly. Tin shares were easier following Tuesday's sharp drop in the metal, with Ipoh a notable exception, while Kamunting and Pangnga River both appreciated. Ashanti Goldfields were in strong demand, and advanced to 30s. 6d., the market being short of stock. Westralians were a firm market, Horseshoes holding an early rise to 2s. 9d., while Wiluna improved on a modest inquiry. Tintos were well supported, rising £1 to 45¾ on Tuesday.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The bull movements in the Markets continue, with an increased turnover, at present averaging around five million shares daily, and the average prices having reached new high levels for year, the 50 per cent. loss in the autumn break has been restored. Pool work was largely responsible for more unrestrained movements, but investment buying is still considerable and the best grade stocks are the leaders in the rise which has, altogether, been moderate with much irregularity each day. At the moment the general market is reactionary, owing to a weakening in the technical position, and some apprehension exists regarding the rise in brokers loans. Trade has not yet improved greatly. Steel shares are better, owing to increased operations in the industry after a few weeks' decline. Copper shares improved on renewed buying of the metal, and rumours regarding a pool to be formed, and an announcement of the determination to maintain the export price. Amusement shares are buoyant, although operations are largely speculative, but the earnings are good. Railroad stocks are inactive owing to the continued low level of the car loading figures, and there is a drop of about 25 per cent. on the February earnings with prospects of the same for March; however, dividends are well covered, and there is no danger of a reduction this year. Bonds are slower as a result of slightly firmer

PARIS.

During March the Paris Bourse has been completely lifeless. The volume of transactions has been inconsiderable and prices have continually fallen away. The three days of firmness and relative animation which followed the announcement of possible tariff reductions may be more accurately attributed to bear covering, and the improvement was very short-lived. On the one hand, the Bourse is inclined to pessimism with regard to present economic conditions, while on the other, despite the fact that several concerns have announced higher dividends than usual, the burden of taxation on transferable securities is so high that effective yields remain on a very moderate scale. Money has been fairly plentiful, as evidenced by the low carry-over rates at the end of March—1¼ per cent. on Parquet and 5 per cent. on the Coulisse, but the continual issue of fresh loans (Ville de Paris et Département de la Seine, Crédit Foncier de France, Chemin de Fer du P.L.M., Voitures à Paris) has removed a good deal of capital from the Bourse. The mobilisation of the Young annuities will probably further limit available resources in the future.

BERLIN.

There was a somewhat better feeling on the Berlin Bourse during the past month, and quotations were sufficiently improved to bring about a 5 points rise in the general index, thus making good the losses of February. The net result of the activities of the last week is extraordinarily disappointing to the Bourse public, the banks and capitalists. Liquidity in the money and capital market increased during March in Germany to a far greater extent than in the preceding months, but the repercussion of international developments on the stock quotations at least failed to show itself. In the last months of 1929 the price level of German stocks, mainly as a result of the then prevailing shortage of capital, suffered a drop of about 25 per cent., and it has not yet been able to reach the former figures. In numerous communications directed to the public, both at home and abroad, the German banks and bankers have been directing attention to the fact that this level of quotations is low in comparison with the actual values and investment returns, but it has thus far not been possible to attract any considerable number of buyers to the German bourses. The turnover in the stock markets remained small also in the last few months. A fairly strong demand existed for shipping shares (due to the fusion of the "Hapag" and North German Lloyd), for potash (due to favourable sales, despite the agricultural crisis), and for dyes and Continental rubber shares. Especially weak during the month were artificial silk and bank stocks, but the latter recovered later. The unsettled domestic political situation, with its conflict over tax legislation and then the change of Cabinet, together with the few satisfactory reports concerning German industrial operations, are regarded as the chief reasons for this stagnation. In contrast with stocks, interest-bearing securities—state and municipal loans, industrial obligations, mortgage bank certificates—gained strongly in March. They rose on the average about 5 per cent., but even at the present higher quotations they give a return of more than 8 per cent.

Official "Cash" Quotations in all cases.

x Dividend off in last month.

INVESTMENT NOTES.

Stock Exchange Dividend.—On Wednesday last, writes a Stock Exchange correspondent, the Stock Exchange trustees and managers declared a dividend of £9 per share for the final six months of the year which ended March 25, 1930. This payment, which will be due on May 2nd, makes £13 for the full year. Some 20,000 Stock Exchange shares are outstanding, credited as being £36 paid. The dividend is the same as that of a year ago, but apparently the Stock Exchange has not had quite as profitable a year as in 1928-29, when entrance fees were £190,467, against £80,634 for the year just ended. This figure compares with an average for the past three years of £88,000. The Stock Exchange invariably carries forward a very substantial amount. On this occasion the managers propose to devote £66,137 to this object. The pension fund receives £10,000, a similar amount is put to income-tax suspense account, and £15,000 is earmarked as provision for special expenditure. These three items are equivalent to 35s. per share, and the carry-forward to £3 6s. per share. The Stock Exchange accounts, which will be issued in the next few days, will reflect the extremely strong financial position of the "House." The managers have embarked upon a programme of structural expansion and rebuilding which is likely to prove expensive, but can, however, justifiably be charged to capital account. The new financial year is expected to show a further reduction in the amount of entrance fees, owing to falling off in business during the past six months, and to the losses of many people during that period—a factor which inevitably reacts upon applications for membership. The money received for entrance fees, however, is substantially less than that obtained by way of annual subscriptions from members and clerks, which in 1928-29, for example, totalled £283,000. A species of hidden reserve arises from the fact that Stock Exchange subscriptions have been steadily increased over a lengthy period of years. As the older members retire their smaller subscriptions are superseded by those of the newer classes of members. There are, for example, about 100 members who pay twenty guineas per annum, while, at the other end of the scale, about 350 pay a hundred guineas. The price of Nominations, it may be observed, is now about £750, comparing with a recent maximum of £1,800. Stock Exchange shares are quoted at 207, which includes the dividend just declared, and, allowing for income tax, yields £7 4s. per share net.

Preference Shareholders' Rights—the Wabash Case.—A decision recently given by the United States Supreme Court, is of direct interest to shareholders and boards of directors on both sides of the Atlantic. Holders of Wabash 5 per cent. (non-cumulative) preferred "A" stock sued to establish a so-called "dividend credit" in respect of earnings undistributed upon their stock in earlier years, and to restrain the payment of dividends on junior stocks until this "dividend credit" had been charged. The Court, however, held that such non-cumulative stock was entitled to a dividend only when the latter was actually declared out of annual profits. The decision did not represent merely the frustration of an ingenious attempt to invest non-cumulative stock with quasi-cumulative rights. It vindicated the complete discretion of directors as regards the declaration and recommendation of dividends, payments on preference shares being shown to be contingent, not merely on the availability of profits to meet them, but also on the willingness of the board to authorise them. A situation in which a single group of shareholders might successfully pit their judgment against the will of the board, and force the payment of dividends which might not otherwise be made, would be intolerable from every point of view. Though non-cumulative preference shareholders cannot assert a claim to dividends not distributed in past years, even though those dividends were earned, they have, of course, a remedy in a court of equity if they can successfully prove that such diversion of earnings is an abuse of power. The legal principles involved in the United States Supreme Court's decision commend general recognition as being in harmony with ideas and practice on this side.

Morris Motors.—If any practical evidence could reconcile investors to the system, followed by some companies, of obtaining public money by issuing non-voting preference shares while retaining the entire equity for inside interests, the report of Morris Motors for the year ended December 31 would be found most convincing. The report embodies commendably conservative practice to an extent rarely discoverable in British companies. Net income, at £1,285,181, shows a nominal decline of £28,908, but has clearly been arrived at after making generous provision for contingencies. The profit and loss account, published separately for the first time, shows that the figure was, in fact, struck after providing £413,542 for maintenance, depreciation, obsolescence, etc. (an amount equal to nearly a fifth of the present balance-sheet value of the fixed assets), and, setting aside £25,123 to reduce to market value the company's holding of £2,330,892 in Government securities, which has since appreciated to a total some £79,691 in excess of the balance-sheet valuation:—

Years ended December 31st.	1927.	1928.	1929.
Profit	1,334,907	1,314,089	1,285,181
Preference dividend	225,000	225,000	225,000
No. of times covered	*5·9*	*5·8*	*5·7*

To reserve fund	725,000	900,000	...
Increase or decrease in carry-forward	+ 193,922	− 70,147	− 35,882

† Free of tax.

The proprietors of the business, who hold all the ordinary shares, have allowed themselves a maiden distribution of 10 per cent., tax free, but have utilised £650,000 of available profits to write down goodwill, patent rights and trade marks, which are carried on the books at a "cost" figure of £1,641,043. The reserve fund remains at £2,000,000, and is equal to the total ordinary share capital outstanding. During the four years of its existence as a public concern the company has paid in dividends only £931,250 of total earned profits of £4,080,826. In this respect at least the major "unitary" motor concern of Great Britain is following, consciously or otherwise, the example of the premier American "unitary" concern—Ford Motors—and extending its scope by steadily feeding itself on its own profits. The 7½ per cent. cumulative preference shares stand at 21s. 9d., and give a well-secured yield of £6 18s. per cent.

United Molasses.—The report of the United Molasses Company for 1929 is by way of being a model of intelligent holding-company accounting. A consolidated income account and balance sheet is presented, and the directors' report includes a wealth of information which has previously formed part of the chairman's speech. The total

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

Head Offices: Liverpool and London.

annual production of molasses is from 6 to 7 million tons, of which the United Molasses Company handles approximately one-third. The company is primarily a transport and trading company, not a producer of molasses, and has developed sources of supply not only in the West Indies but also in Africa and the Far East. The necessity for providing cheap transport from the distant sources of supply explains the big shipbuilding programme of the company in the last four years, the company's fleet of tankers now having a total of approximately 300,000 tons dead weight, most of the tankers ranging from 13,000 to 17,000 tons. The total tank storage of the company is now in excess of 1,250,000 tons, as compared with 250,000 tons in 1926. The consolidated net profits have expanded as follows:—1926, £244,083; 1927, £266,249; 1928, £386,673; and 1929, £1,257,054. The report gives no explanation of the extraordinary increase of 650 per cent. in net earnings of the company proper last year: —

	1928.	1929.
	£	£
Ordinary share capital	1,496,590	2,984,087

Paid (subject to tax)	19%	25%
Reserve	*Dr. 92,000*	350,000
Staff superannuation fund	2,500	10,000
Carried forward	179,547	34,217

The company has declared a capital bonus of one new share for every two held by capitalising part of the reserve accruing from premiums on shares previously issued on bonus terms. The directors hope in due course to make a further bonus issue absorbing the whole of the premiums, but are retaining the balance of about £500,000 until the company has been able to build up a larger general reserve. The capital reserve will now stand at £1,159,137, making, with the general reserve, a total of over £1,500,000, as against a preference share capital of £1,650,000 and an ordinary share capital of £4,476,131. Resolutions are to be considered to increase the authorised share capital to £8,000,000 by the creation of 2,000,000 new shares of £1, half in preference and half in ordinary shares. The consolidated balance sheet gives a total of £2,540,990 for motor vessels, £3,120,297 for storage tanks and other plant and equipment, and £1,502,430 for stocks of molasses. These represent the normal stocks the company must carry to keep its customers supplied until new crop molasses become available—from the West Indies towards the end of February, from Africa and the East about June and July, and from Europe about October and November. The ordinary shares are quoted at $5\frac{9}{16}$, having been as high as $8\frac{1}{2}$ last year. Allowing for the capital bonus of 50 per cent., the shares return a yield of 4.5 per cent., assuming that the dividends are reduced proportionately to the increase in capital.

Cunard Steamship.—The directors' report for 1929 does not afford any clear explanation of the rise in gross income from £3,213,601 to £3,628,905, unless we are to assume that the successful winter cruises to which the report refers were exceptionally profitable. The Atlantic passenger traffic showed only a slight increase in volume, a falling off occurring in the cabin and second-class business, with an increase in the tourist third-class cabin. With regard to freight, there was a slight increase in the quantity of cargo carried, but revenue, outside the commodities controlled by "conference" rates, must have been affected by last year's drop in "free" freights. The increase of 12.9 per cent. in the gross income enables the net earnings applicable to the ordinary shares to show an increase of about 62.3 per cent. The financial results for the past three years are set out in the following table:—

	Years to December 31st, 1927.	1928.	1929.
	£	£	£
Gross income	3,339,713	3,213,601	3,628,905
Expenses	2,394,184	2,408,071	2,566,385
Debenture int. and discount, &c.	285,778	255,052	252,881
Pref. dividend	135,000	135,000	135,000
Earned for ord. dividend	*524,751*	*415,478*	*674,639*
Ord. shares *Earned subject to tax*	*11·75*	*9·25*	*15·4*
Ord. shares Paid subject to tax	7·5	7·5	7·5
General reserve	100,000	Nil	50,000
Carry forward	190,688	188,397	395,266

The balance sheet, as usual, discloses the curious situation of a deficiency of liquid assets to current liabilities (this year over £2½ million as against £846,000 last year), but a surplus of net assets equivalent to nearly 27s. per ordinary share. The outlook for the company is somewhat difficult to interpret. Freight traffic on the Australian services is bound to be affected by the fall in the value of wool and other primary products and the increased protective tariff which Australia has imposed. As regards passenger traffic, it is clear that the company will have to build new liners of the luxury class to maintain its position in the Atlantic service. At the present time it has only three liners of over 30,000 tons, the "Berengaria," which is 18 years old, the "Aquitania," which is 16, and the "Mauretania," which is 23 years old. The company's post-war building policy, which was concentrated on the 20,000-ton liner class, has been open to some criticism from this point of view. The ordinary shares, at 23s. 1½d. x.d., return a yield of 13.1 per cent. on earnings and 6.5 per cent. on dividends. The shares were as high as 34s. last year.

Coal Company Profits.—The reports of British colliery concerns, now being published, are gratifying inasmuch as they show that the increased activity of the trade last year, particularly on the export side, was not without effect on earning power. All but a very select minority of companies, however, have still some way to go before their shares are likely to interest the Stock Exchange investor. Some recovery was to be expected last year, seeing that the output of the industry rose from 239 million tons to 259 million tons, and coal exports (including bunkers) from 67 million to 77 million tons, while the average export price increased from 15s. 8d. to 16s. 1d. per ton. The following table, however, shows that, out of 12 companies whose results have been published in the last few weeks, only 5 have paid a dividend on their ordinary shares:—

Company.	1928.		1929.		Ordinary Shares (£1 unless otherwise stated).

(a) 2s. 6d. shares. † Free of income tax.

The 12 companies shown made an aggregate profit of £1,023,070 last year, against a loss of £649,550 in 1928. The results of Amalgamated Anthracite and Powell Duffryn were discussed in the *Economist* a fortnight ago (page 657). The various boards of directors, in their reports, show a natural disinclination to commit themselves as to future prospects. The companies in the Midland area are fairly unanimous in crediting the Five Counties Scheme with some influence in the partial restoration of affairs in their localities, but the opposition which the export districts are manifesting towards the Coal Mines Bill is clearly implicit in the directorial statements accompanying recent annual reports. Ultimately, heavy writing-down of capital must be carried out in most cases. It is probable, however, that the "cleaning up" process may be delayed until the future earning power of the industry can be more closely ascertained.

Baldwins.—Though the process of rationalisation is still far from complete, the accounts of this famous iron and steel concern for the year ended December 31st last are the first to be really representative of the reorganised company's affairs. The reconstruction of the capital position has now been carried through, ordinary shareholders having been allotted 512,975 shares for cash during the year, in the terms of the scheme of arrangement, while holders of 36,862 "B" preference shares and £240 6½ per cent. income debenture stock exercised their right of converting into ordinary shares. Meanwhile, in order to minimise competition and to make for the more economical working of the plants, a provisional agreement has been made for the amalgamation of certain properties with those of Guest, Keen and Nettlefolds as "The British (Guest Keen Baldwins) Iron and Steel Company," and it may be that this fusion will complete the process of recovery which the present accounts show to have begun. Trading profit for the year amounts to £352,042, compared with £220,107 last year and £121,278 for the six months ended December 31, 1927, while the trading results of the seven subsidiary companies also show, in the aggregate, a profit. Of the sum of £352,042, depreciation and expenditure on improvements take £99,735, income tax and income tax reserve £19,257, and directors' fees £4,758. Debenture interest, which, if paid in full, would require something like £240,000, takes only £179,986, the 6½ per cent. income debenture stocks receiving interest only at the rate of 3½ per cent. After these deductions, net revenue stands at £48,306, which may be compared with the amounts of £3,399 and £14,563 for the two previous accounts. The sum of £23,811 is set aside for writing off the discount on the issue of 6 per cent. debenture stock, and £27,894 is carried forward against £3,399 brought in.

* Six months.

The changes in the balance sheet for the current year are not considerable. During the year the remainder of the 4½ per cent. debenture stock, totalling £6,429, and the remainder of the Port Talbot debenture stock was redeemed, while £2,675 6½ per cent. "A" debenture stock and £15,570 6½ per cent. non-convertible income debenture stock was purchased and cancelled. Of the total capital liabilities, debentures and accrued interest now account for £3,889,988, or 62.8 per cent. of the whole, against £3,830,047, or 63.5 per cent. of the whole. Fixed assets, after writing off depreciation, show an increase of £52,938 and total £3,311,491, while stocks appear at £1,014,154, an increase of £199,549. Investments, including amounts owing by subsidiary companies, now aggregate £1,632,507, as against £1,569,737. The balance sheet reveals a fair degree of liquidity.

The Vickers' Meeting.—The speech of General Sir Herbert A. Lawrence at the annual meeting of Vickers' last Monday, was a valuable and exhaustive review of the prospects of this great organisation. In view of the dependence of the company on armament and shipbuilding business, Sir Herbert's remarks on the past year's construction were of special interest. Only one merchant ship was completed during the year—the 20,000-ton Orient liner "Orontes"—but three submarines and a submarine depot ship were handed over to the Admiralty. In addition to seven submarines and one destroyer and flotilla leader, which are now under construction, orders have been received for six merchant ships, including two for the Peninsular and Oriental Steam Navigation Company. These orders will necessitate the opening of the naval yard on the Tyne. Orders have been received from the Turkish Government for some 75 m/m. anti-aircraft equipment. Should disarmament conference proposals mature the ordnance works will naturally be affected, and the scrapping of certain machinery will be entailed. Referring to aviation, General Lawrence stated that the company had been closely connected with the construction of the R 100, and the winning machine in the Schneider race had been built by a subsidiary. Two other subsidiaries, the Ioco Company and the Whitehead Torpedo Company, had at long last become profit-earning properties, but owing to a paucity of orders, the Leeds Forge Company had been closed down. The steel interests of Vickers, Vickers-Armstrong and Cammell, Laird and Company, Ltd., are now fused in the English Steel Corporation, which has been reconstructed, but made a loss last year. Prospects for the future are, however, reasonably bright. Vickers is now entirely a holding company. While disclaiming any desire to be pessimistic, General Lawrence frankly stated his belief that the current year would be a difficult one. The financial position of the company, however, was such as to enable it to withstand a dull period without anxiety.

Harland and Wolff.—It is impossible to make any definite comparison between the latest accounts of this great shipbuilding firm and those of earlier years, since the present is the first occasion on which a profit and loss account has been rendered or the amounts allowed for depreciation have been disclosed. For what they are worth, the figures for the past three years are as follows:—

	1927.	1928.	1929.
	£	£	£
Profit	142,288	204,355	674,873
Depreciation	...	...	300,000
Written off investments	...	...	115,615
Earned for dividend	142,288	204,355	216,749
6% 1st pref. divs.	192,000	192,000	192,000
Carried forward	95,203	107,558	132,307

After the 6 per cent. cumulative dividends are paid on the first preference share capital of £4,000,000, which was issued to the public in 1924, the "A" preference capital of £3,095,094 ranks for a cumulative 6 per cent. (or not more than 1 per cent. over Bank rate), and £20,300 "B" preference shares (issued to employees) for a cumulative 6 per cent., after which the ordinary share capital of £3,090,000 is entitled to a non-cumulative 6 per cent. dividend and to division of the surplus equally with the "B" preference shares. It is clear that, under present conditions, the company is heavily over-capitalised. The report states that the shipyards at Belfast and Glasgow have been fully employed, but the yard at Greenock is still closed. The engine works at Belfast and Glasgow and the repair works at London, Southampton and Liverpool were fully engaged. No dividends have been received from the company's steel and coal interests in Scotland, but it is stated that the profits earned by some subsidiary companies making profits exceed the losses made by others. The shipbuilding output of the company in gross tonnage was 145,280 last year, as compared with 101,786 in 1928 and 94,700 in 1927. The 6 per cent. first preference shares at 11s. 6d. allow a return of nearly 10½ per cent.

Anglo-Portuguese Telephone. — Satisfactory results were obtained last year, the gross revenue being £19,419 higher at £189,437, while net profit rose by £8,054 to £50,941. The dividend of 8 per cent. was maintained, despite an increase of £152,517 in the share capital.

		1927.	1928.	1929.
		£	£	£
Gross revenue		174,999	170,018	189,437

	Paid per cent.	8	8	8
Addition to carry-forward		5,260	6,950	5,198

* On capital as at December 31st.

There are now 26,681 stations in operation, 3,665 more having been opened during the year. In June, 1929, new shares were issued to shareholders, and further offers are expected. In January, 1928, the Portuguese Government granted the company a concession covering 40 years, and allowing of possible extension for a further 25 years. The shares are secured by tangible assets, at book value, of £1 4s. per £1 ordinary and at their present price of 23s. 4½d. yield £6 16s. 11d. per cent.

United States Rubber.—The first annual report of the United States Rubber Company, under the new management installed early last year by the Du Pont interests, shows little change in the results of manufacturing operations. Unit sales of tyres were higher, but selling prices ruled lower, and the curtailment of automobile manufacture late in the year had an adverse effect. Sales of products in foreign countries, however, showed a substantial increase. Many changes in organisation and operation were initiated during 1929. These included the formation of a departmental type of administration and the concentration of manufacturing and distributing authorities. Six factories were closed during the year, and these, with other obsolete plants, are being offered for sale. Extraordinary expenditure for moving equipment, inventories and men was incurred during the period of change-over, and was reflected in a temporary increase in costs. As all projected improvements have not been completed these unusual expenses may continue, in part, during 1930, the company having appropriated $4,000,000 from surplus for the purpose. The company's plantations are the largest in the world, comprising 135,160 acres in Sumatra and Malaya, about 92,600 acres of which are planted and 64,000 acres in bearing. The consolidated income account of the company and its subsidiaries is as follows:—

	1927.	1928.	1929.
	$	$	$
Net sales	193,442,945	193,480,121	192,962,040
Operating profit	12,522,952	14,530,712	14,385,814
Interest on funded debt	6,290,900	6,097,547	5,918,063

Carried forward	114,313	*Dr10,781,255*	*Dr3,378,412*

* After credit of $8,000,000 transferred from surplus of U.S. Rubber Plantation.

The balance sheet at December 31st last shows current assets of $116,752,338, including inventories of $57,499,934, compared with current liabilities of $37,303,972. In the latter account are included $18,336,000 of 7½ per cent. ten-year secured gold notes maturing on August 1st next.

North American Company.—The accounts of this large Transatlantic holding company show that its control of five large groups of public utility companies is becoming increasingly profitable. The gross earnings of the company, at $147,779,869, represent an increase of $12,227,970, or 9 per cent. over the corresponding amount for last year. After the deduction of operating expenses, totalling $76,451,594, depreciation and other fixed charges, and the addition of $4,553,757, income from other sources, the amount available for dividends is $28,806,824.

Year.	1928.	1929.
	$	$
Gross earnings	135,551,899	147,779,869
Operating expenses	71,152,647	76,451,594
Net income from operation	64,399,252	71,328,275
Other net income	4,290,936	4,553,757
Total	68,690,188	75,882,032
Net revenue after deductions	24,402,753	28,806,824
Preference dividend	1,820,031	1,820,034
Earned for ordinary dividend	22,582,721	26,986,790
Amount of ordinary dividend	4,806,549	5,353,019
Carried forward	17,776,172	21,633,771

The balance sheet reveals a substantial reserve position, the reserve account standing at over $113 million out of a balance-sheet total of $908,759,283. The position as regards liquidity, however, is not over-satisfactory, available assets only just covering current liabilities of $31,734,093. Though the company already possesses property and plant valued at $776,497,853, its interests are still continually extending. Subject to the approval of the California Railroad Commission, it is proposed to consolidate the North America Company's California operating subsidiaries and the Pacific Gas and Electric Company, as a result of which the former company will become the largest stockholder in Pacific Gas. If the consolidation is brought into effect California will have one of the largest interconnected power systems under single ownership in the United States, and the scope of the North American Company's interests in that State will be substantially widened.

New Capital Issues in March.—In the table below we show the new capital raised in London by issue to the public or shareholders in March and recent periods:—

(000's omitted.)

Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	Total.
	£	£	£	£
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597
1928	21,965	5,263	3,526	30,754
1929	16,502	5,081	2,186	23,769

Monthly Average.	Govt.	Other.		
	£	£		
Jan.–Mar., 1929	*617*	*18,757*	*8,797*	*4,147* / *32,318*
Jan.–Mar., 1930	12,803	11,973	5,360	1,120 / 31,256
January, 1929	*650*	*14,080*	*24,897*	*2,983* / *42,610*
February, 1929	*950*	*22,427*	*372*	*1,760* / *25,509*
January, 1930	500	9,033	1,671	2,785 / 13,989
February, 1930	350	13,034	9,065	Nil / 22,449

The returns for the month of March reveal a marked advance on the February figures, the total amount of new money raised being £57,330,000, compared with £22,449,000 for the previous month and £13,989,000 for January. The 4½ per cent. Conversion Loan brought in net "new" money of £37,060,000, while sales of National Savings Certificates exceeded encashments by £500,000. Other issues in the United Kingdom totalled £13,852,000, an increase of £818,000 on those of February. A marked feature was the relaxation of loan terms in favour of the borrower, and the successive flotation of four corporation issues, which, with that of the Rhymney Valley Sewerage Board, accounted for over £10 million of the total. Important issues of debenture stock were made by the North Metropolitan Electric Power Supply Company and by Tate and Lyle. In the colonial market, £517,250 of inscribed stock was raised by the South African Government on a 5 per cent. basis. The change in the state of the market was further evidenced by the fact that ten companies made issues to the public, against only two in February. Five companies made issues to shareholders, totalling £862,781.

MINING NOTES.

General Mining Group.—Of the producing subsidiaries of this group the only one which can now claim real importance is the West Rand Consolidated. On the mining side, last year marked a notable step forward. Thanks to the operation of the enlarged plant—which started up in November, 1928—the tonnage milled increased by 400,300 tons to 1,043,300 tons. Costs were reduced by nearly 1s. 4d. per ton to 18s., while the revenue improved a trifle to 21.6s. per ton. As a result of these favourable factors in combination, the working profit rose £117,600 to £206,100. Interest on loans, with smaller items, absorbed £41,900, leaving a balance of £164,200, the whole of which was applied towards capital outlay. At 4,005,000 tons, the ore reserves indicate the substantial expansion of 503,000 tons, the total representing about three years' supply for the mill. Moreover, the report states, there is in the mine a fully developed tonnage of over a million, which, "although of lower grade than the ore included in the reserves can nevertheless be profitably worked on the present scale of working costs." Unfortunately, the financial position remains a difficult one. During the year the company's indebtedness has been reduced by £111,700 to £511,700; but a further expenditure of over £300,000 has to be met in connection with the sinking of a new shaft, and there seems little prospect of provision of the necessary money otherwise than out of earnings. Thanks chiefly to some improvement in grade, the profits of the Meyer and Charlton rose £6,400 to £30,800, but for the second year in succession no distribution was made. No estimates of ore reserves are given. The present price of the shares—10s.—is more than covered by the company's holding of Union Government stock. With the New Steyn Estate, licences and other outlays exceeded the income by £3,400, reducing the credit balance to £23,400. Seeing that the company has less than £8,000 cash against a liability of £38,000 on shares in the Fleur de Lys Gold Mining Company, it is a little remarkable that the directors should have been so reluctant to come to terms with the Durban Deep for the sale of dip ground. The accounts of the Witpoort Gold Areas (formerly the Rand Collieries) show that, of the £157,800 provided by the reorganisation £72,000 has been expended. The General Mining guarantees that £200,000 will be spent upon development and plant. Of 520 ft. sampled last year, 245 ft., or 47 per cent., were payable, averaging 15.9 dwts. over 28 tons (equal to about 440 inch-dwts.). These results may be regarded as encouraging so far as they go.

Modder Deep.—Once again little variation is shown by the operating results. The dividend remains at the reduced level of the four preceding years. Though a further small draft upon the carry-forward is thereby entailed, £143,300 being carried over as against £150,700 brought in.

	1927.	1928.	1929.
Ore crushed ... tons	529,300	530,000	531,500
Yield per ton	45/1	45/–	44/11
Costs per ton	15/5	15/10	15/8
Profit per ton	29/8	29/2	29/3
Total working profit ... £	785,160	773,600	777,400
Net profit	687,010	678,700	682,540
Earned per cent.	137·4	135·7	136·5
Dividends ... £	675,000	675,000	675,000
Rate per cent.	135	135	135
Ore reserves ... tons	3,560,000	3,000,000	2,550,000
Value ... dwts.	8·9	9·0	8·8

As compared with 664,700 tons extracted from the mine the ore reserves display a shrinkage of 450,000 tons, indicating that a certain amount of payable ore continues to be opened up or derived from reclamation. In addition to the quantity tabulated above, the consulting engineer states there are 110,000 tons in hanging wall ladder blocks valued at 4.7 dwts. over 60 in. The remaining life of the mine would appear to be about half a dozen years.

Geduld.—As foreshadowed in last year's "Note," this company earned increased profits during 1929; the necessity of a cut in the dividend arose from the expansion in capital made in connection with the company's commitments in respect of the East Geduld. It may be recalled that the issue comprised 132,800 shares at 62s. 6d. The results for the past three years are summarised below:—

	1927.	1928.	1929.
Ore crushed ... tons	983,500	979,000	1,008,100
Yield per ton	27/9	26/6	26/10
Cost per ton	16/7	16/7	16/6
Profit per ton	11/2	9/11	10/4
Total working profit	551,380	485,660	522,190
Net profit	503,520	450,000	477,000
Issued capital	1,328,050	1,328,050	1,460,860
Earned per cent.	37·9	33·9	32·7
Dividends ... £	498,020	448,220	456,520
Rate per cent.	37½	33¾	31¼
Ore reserves ... tons	6,020,000	6,100,000	5,900,000
Value ... cwts.	6·4	6·5	6·7

The reduction in tonnage and improvement in value shown by the latest ore reserve estimate is attributable to curtailment of the estimated stoping width by 2 in. to 58 in. On the basis of the 1929 dividend the yield shown is just over 9 per cent. gross. Having regard to the lengthy life of the Geduld property and to the company's interest in the East Geduld, the shares do not appear over-valued. The financial position is a strong one, the resources including £362,250 available for shares in the East Geduld. The work so far done on the latter area "has indicated payable blocks," partially developed and probable ore on December 31st amounting to 2,400,000 tons, value 6.75 dwts., over an assumed stoping width of 57 in. This is distinctly encouraging.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Scotland, Bank of Australasia, National Bank of India, Wesleyan and General Assurance Society, Marconi International Marine Communication, Anglo-Portuguese Telephone, Associated Portland Cement Manufacturers, Cheviot Rubber, Vickers, British Aluminium, and Kerr Stuart and Company. At the annual meeting of Associated Portland Cement Manufacturers Mr Malcolm Stewart reviewed the achievements of the past year in the light of the programme of reconstruction outlined in 1925. The company now had a productive capacity of a million and a half tons per annum from efficient rotary kiln plants, which was fully 250,000 tons more than that aimed at in the original programme. Last year, moreover, it exported nearly 800,000 tons, an increase of 45 per cent. over the quantity shipped abroad in 1924. Since the beginning of that year they had spent over £1,600,000 on reconstruction and new plant, yet today their fixed assets, at £6,020,000, stood in the books at £566,000 less than in 1924. Presiding at the Anglo-Portuguese Telephone Company meeting, the chairman said that during the year 3,665 stations were added, which represented approximately 16 per cent. above the total at the end of 1928. The report is dealt with on page 786. At the Kerr Stuart meeting the chairman said that on a five-day weekly run of 600 miles per week the K.S. Diesel lorry showed an annual saving of over £700 as compared with a similar petrol lorry.

CAPITAL ISSUES.

Though issues on behalf of foreign borrowers are still largely, though unofficially, *taboo*, in view of the preparations understood to be in progress for a Reparation Bond issue, the home capital market continues to show fair activity. The largest issue of the week, that of the *Birmingham Corporation*, was noteworthy not only for its magnitude but as the first this year made at a premium. The borrowing status of the city is of the highest, and the Loan met with rapid subscription. *The Rhymney Valley Sewerage Board* issue fell into the "public boards" class, the borrower being a local authority established by Act of Parliament. Its stock is of sound investment character, but the fact that it is not a trustee issue, accounts for the discount of 6 per cent. in the issue price, the stock giving a flat yield of £5 6s. 7d. per cent. Smaller issues by tender were made on behalf of *The Reading Gas Company* and *The Colchester Gas Company*. Among the commercial and industrial borrowers was *Odhams Press*, which issued 1,700,000 4s. Ordinary shares at a premium of 2s. 3d., the proceeds being required for additional premises, plant and machinery, and for subscription for debenture stock of the "Daily Herald,"—in the publication of which, in its new form, Odhams have a direct interest. The company's profits have shown a rapid increase from £89,000 in 1923 to £204,000 in 1929, and the ordinary received dividends of 17½ per cent. last year. The remaining issues were of cumulative preference shares. The *British Moulded Hose Company* has been formed under the auspices of two existing companies in Delaware and Great Britain respectively. The company has its way to make, but the shares are guaranteed by the sponsor companies, whose average profits for the last five years cover the dividend fourteen times. The preference shares of *Automotor Finance* convey no right in the equity of a company which, not having been in business for a year, has published no accounts, and, from the nature of its business, has little in the way of fixed assets. The issue is speculative in every sense of the term, save that subscribers will not share in any of the fruits of progress, should the company prove successful. The shares are to be dealt in at Glasgow, but not, apparently, in London. Belfast City and District Water issue is for £500,000 5 per cent. at 99½ per cent. redeemable 1950-1960.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to March 29, 1930, £87,732,429.
Total, including conversion, recorded January 1 to March 29, 1930, £144,225,447.

National Savings Certificates.
Net sales week ended March 29, 1930, £50,000.

Birmingham Corporation.—Issue of £5,000,000 5 per cent. redeemable stock, 1946-56, at £100½ per cent. The stock, which is a trustee security, will be redeemed at par on October 1, 1956, if not previously cancelled by purchase or agreement, but the Corporation retains the option of redeeming the stock in whole or part on or after October 1, 1946, on three months' notice. The total outstanding debt of the city is £42,710,000, and the rateable value £5,993,244. A rate of a penny produces £23,151. The proceeds of the issue will be used for municipal development.

Liverpool Corporation Bills.—Issue by tender of Liverpool Corporation bills to the amount of £1,000,000. The bills will be in amounts of £1,000, £5,000 and £10,000, and will be payable on April 11, 1931.

Rhymney Valley Sewerage Board.—Issue of £244,000 5 per cent. redeemable stock, 1954, repayable at par on July 1, 1954, unless previously cancelled by purchase or agreement. The board is a "local authority" established for the purpose of constructing a main trunk sewer and other works in the county of Glamorgan. The proceeds of this issue will be applied for the redemption of bank and mortgage loans and for construction purposes. The rateable value of the area served is £350,000, and a penny rate yields over £1,400.

Reading Gas Company.—Issue by tender of £22,900 5 per cent. perpetual debenture stock. Minimum price £97 per £100 stock. The proceeds of the issue are required to meet expenditure on extensions to the company's storage and distributing plant. The full rates of interest and maximum dividends have been paid by the company since its incorporation in 1862. Net profit for 1929, £29,200.

South Essex Waterworks Company.—Issue by tender of £400,000 ordinary (1928) 6 per cent. maximum stock. Minimum price of issue, £105 per £100 stock. Net revenue of the company for the year ended December 31st last was £98,818. After payment of interest and dividends on debenture, preference and ordinary stocks, totalling £67,033, surplus of £31,785. Dividend on present issue requires £24,000 at 6 per cent.

Odhams Press, Limited.—Issue of 1,700,000 Ordinary shares of 4s. each at 6s. 3d. per share, ranking *pari passu* with existing ordinary shares. The company was registered in 1920 to take over the printing business of William Odhams. The present issue is to be used for the purpose of completing payment for equipment of additional premises, for subscribing for debenture stock of Daily Herald (1929), Ltd., and for general purposes. Dividends on ordinary capital 1927, 12½ per cent.; 1928, 15 per cent.; 1929, 17½ per cent.

British Moulded Hose Company.—Issue at par of 100,000 7 per cent. cumulative preference shares of £1 each, redeemable at the option of the company at 22s. per share after the year 1934 on three months' notice. Dividends guaranteed by Electric Hose and Rubber Company, Inc., of Delaware, U.S.A., and Leyland and Birmingham Rubber Company. The company was incorporated in July, 1929, to develop the manufacture of braided and moulded rubber hose.

Automotor Finance, Limited.—Issue of 100,000 6½ per cent. cumulative preference shares of £1 each at par. Incorporated May 2, 1929, for the purpose of financing motor vehicles and other articles of commerce. The amount required to pay a full year's dividend is £5,200. Estimated profit would cover this three times.

Belfast City and District Water.—Issue at 99½ £500,000 5 per cent. Redeemable Debenture Stock, 1950-1960.

Particulars of the following are issued "for information only" with a view to Stock exchange introduction:—
William Whiteley, Limited. Issued capital, £950,100. Particulars are offered of an issue of £500,000 6 per cent. redeemable debenture repayable May 1, 1965, at 102 per cent. if not previously redeemed.

[Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, shorter notices, and dividend announcements will be found on page 805, under the heading "Company News."]

COMPANY MEETINGS, &c.

BANK OF SCOTLAND.

CONTINUED PROGRESS—STRONG LIQUID POSITION.
DIVIDEND OF 18 PER CENT. MAINTAINED.
SIR RALPH ANSTRUTHER ON THE POSITION AND PROSPECTS OF TRADE, INDUSTRY AND FINANCE.

The annual general meeting of the proprietors of the Bank of Scotland was held within the Head Office, Edinburgh, on April 1, 1930, Sir Ralph Anstruther of Balcaskie, Bart., deputy governor, presiding.

In submitting the directors' report, the Chairman said: My Lords, Ladies and Gentlemen,—It is a matter of regret to us that Lord Elphinstone, the governor of the bank, is unable to be with us to-day. He is on his way home from Ceylon, and is much disappointed that he could not be back in time for this meeting, but although he is not himself with us, those present have the opportunity of seeing the portrait of his lordship, authorised by the proprietors at the annual meeting last year, and painted for the bank by Mr de Laszlo. You will be pleased to hear that the portrait is to be exhibited in the coming exhibition of the Royal Scottish Academy.

I assume that, as usual, we may hold as read the report by the court of directors of the affairs of the bank as at February 28th last, a copy of which you have no doubt received.

The directors regret the death during the year of the Lord Forteviot of Dupplin and of Dr. John Turnbull Smith, two of the extraordinary directors of the bank. To fill the vacancies the board had pleasure in appointing the Lord Forteviot of Dupplin (in room of his father) and the Earl of Dalhousie, extraordinary directors of the bank.

To fill a vacancy on the board, the directors, in virtue of the powers contained in the bank's constitution, took the opportunity of inviting Mr John Craig, C.B.E., chairman and managing director of David Colville and Sons, Ltd., to become an ordinary director, and I am glad to say that he agreed to accept office. You will be asked to confirm his appointment by re-electing him to-day.

TRADE AND INDUSTRY.

When we met last year there were indications of an improvement in industry, and to a certain extent that took place. In the latter part of the year the coal trade considerably improved, and the steel industry showed a very distinct advance. The shipbuilding output was also decidedly better, but unfortunately during the last few months the conditions of trade and industry generally have rather altered for the worse. The proposed legislation in connection with coal is viewed with much misgiving in many quarters, and it will be a serious setback to the heavy industries generally if the fears of those opposed to the Bill materialise. Meantime, pending the issue of the Budget, there is considerable apprehension in the minds of those whose industries benefit by duties which safeguard the home market.

During the year a serious effort has been made to reorganise the cotton and other industries, and the Government has appointed a Committee on Finance and Industry to consider by what means the financial resources of the country can more fully be made available for the benefit of industry.

The past year for agriculture, as carried on by the arable farmer, has been a disastrous one owing to the collapse of the potato market and the importation of bounty-fed oats from the Continent. The textile and the fishing industries have both had a disappointing year, and serious difficulties have been encountered by the jute industry.

That the outlook in the immediate future for the trade and industry of the country cannot be regarded with much optimism is evidenced by the fact that there has been no improvement in the unemployment figures, which are distinctly worse.

The De-rating Bill has helped materially the industries affected, but on the whole we must look to diminished cost of production if we are to regain fully our export trade. The heavy burden of Imperial and local taxation continues to be a severe handicap in competition with countries abroad whose conditions are much more favourable in this respect, and it is to be hoped that a serious effort will be made to curb public expenditure, although there has been so far no indication of such a movement.

THE DISTRIBUTION OF ADVANCES.

It may interest you to have some figures as to the distribution of credit. From a recent return it appeared that the bank had advanced to the agricultural industry and livestock salesmen £1,200,000 amongst 2,170 customers. At the same time, a similar total had been advanced to produce importers and those in the grain trade, etc. Nearly £2,000,000 was in advances to merchants, and most of the well-known industries had credit varying from £1/900,000. One feature of special interest is that out of £16,000,000, £13,000,000 was lent on security of a varied nature to 6,800 customers, whilst £3,000,000 was lent out to 3,900 customers without any collateral security, the bank relying, in accordance with banking practice in Scotland, upon its knowledge of the character and resources of its customers. These figures give some idea of the way in which the bank uses the funds entrusted to it for the benefit of trade and industry.

FINANCE.

During 1929 the speculation which had been rampant in New York in the previous year continued until the autumn, when the boom broke and a devastating fall in prices of stocks took place. Meantime, however, Bank rate, which in February of 1929 stood at 5½ per cent., had been raised on September 26th to 6½ per cent. in consequence of the severe drain on our gold supplies. Fortunately, this step was taken at a time when it had become evident to all observers that a crisis was imminent, and the result was an unprecedented break on the Wall Street market. By the end of October the reaction had resulted in the Bank rate being lowered to 6 per cent., and it speedily fell by successive stages to 5 per cent. on December 12th. Since then it has come down step by step to 3½ per cent., and the whole money position has been completely altered.

It is very regrettable that trade and industry in this country should have been handicapped by the existence of abnormal rates for money during 1929, which were entirely occasioned by the speculation in New York. High rates are neither good for industry nor for the banks. As we have now come into a period of abnormal ease in money rates, the trade and commerce of the country should materially benefit by cheap credit, although we must not be misled by the idea that this alone will remove our difficulties.

SMALL DEPOSIT ACCOUNTS.

I am pleased to be able to say that the results of the system of small deposit accounts, arranged over a year ago for the benefit primarily of customers of moderate means, have been entirely satisfactory, and the facilities have been taken advantage of to a substantial extent.

THE BANK'S BALANCE SHEET.

Turning to the bank's report, you will see that deposits at £32,258,307 show a small increase of £189,922 over the previous year.

The note circulation at £3,040,542 shows an increase of £264,395, which is entirely caused by the substitution of the bank's small £1 note for the use of Bank of England £1 notes.

The drafts issued at £470,319 show an increase of £203,368, whilst acceptances at £802,407 show a small decrease.

STRONG LIQUID POSITION.

On the assets side, cash, bank balances, documents *in transitu*, and money at call and short notice amounted to £7,827,225, or fully 21 per cent. of our liabilities to the public. Bills discounted (including £1,335,000 Treasury Bills) and our investments amount to £13,440,118, or over 36 per cent., giving a total of £21,267,343, or 58 per cent. of our liabilities to the public in liquid assets.

A NEW RECORD FOR BUSINESS.

Advances at £17,852,283 show an increase of £622,566, which follows on an increase of £2,944,339 in the previous year. This is a new record figure for our balance sheets.

Our advances are well spread and every bad and doubtful debt has been fully provided for.

INVESTMENTS.

Investments at £11,336,387 show an increase of £393,910.

The investments are, with the exception of £172,941, all British Government securities. The market value is very substantially in excess of the value in our books.

BANK PREMISES AND HERITABLE PROPERTIES.

During the year the directors have continued to carry out reconstruction work in connection with the bank's branch premises, and at present are making extensions at the head office, to meet the requirements of our business there, as well as at a number of our branches. The bank has during the year acquired additional properties as premises and houses for agents. The whole properties of the bank, including let properties, now stand in our books at £430,000. It is hardly necessary to say that this figure is considerably below the market value.

LONDON—WEST END BRANCH.

During the year the premises which the bank acquired at 16-18, Piccadilly, for a new branch, were reconstructed and were opened in December last. The extended facilities thus made available to the bank's customers in the West End of London have been much appreciated, and we are satisfied that the business will steadily expand with new connections.

THE YEAR'S GOOD RESULTS.

	£
The net profits, a little under those of last year, are	365,872
Add : the balance from last year	170,084
	£535,956

Of that the board suggest the following allocations :—

	£	£
To reserve fund	117,500	
To bank premises and heritable properties	30,000	
In all	147,500	
Dividend, 18 per cent. per annum, less tax	216,000	
		363,500
Leaving to be carried forward ...		£172,456

With the above allocations the reserve fund has now reached the figure of £2,000,000, making, with the balance carried forward of £172,456, a total of £2,172,456, or £672,456 in excess of the paid-up capital.

COMPARATIVE STATEMENT, 1925-1930.

At this stage it may be interesting to give a few comparative figures :—

	1925.	1930.
	£	£
Deposits	31,429,270	32,258,307
Advances	12,726,366	17,852,283
Premises and properties ...	560,150	430,000
Paid-up capital	1,325,000	1,500,000
Reserve fund	1,050,000	2,000,000
Balance carried forward ...	128,824	172,456
	£1,178,824	£2,172,456

I think that these figures speak eloquently for the progress of the bank during the past five years.

BANK STAFF.

It is my pleasant duty, on behalf of the court of directors, to again express our cordial appreciation of the exceilent services rendered by the executive, managers, agents, and staff generally throughout the year.

DIVIDEND.

I have pleasure in moving that the report and balance sheet as submitted be adopted, and that a dividend for the past half-year at the rate of 18 per cent. per annum, less income tax, be now declared, payable on 15th current, making, with the dividend paid in October last, 18 per cent. for the year, less income tax, being the same rate as paid for the previous year.

The motion was agreed to.

The Lord Elphinstone, K.T., and Sir Ralph Anstruther, of Balcaskie, Bart., were unanimously re-elected Governor and Deputy Governor respectively for the current year. Mr. John Craig, C.B.E., The Lord Henry Scott, and Mr. John Rae were re-elected ordinary directors.

Mr H. L. Usher, C.A., and Mr C. E. W. Macpherson, C.A., were re-appointed to conduct the audit of the books for the current year, and a vote of thanks to the Chairman terminated the meeting.

VICKERS, LIMITED.

FUTURE OF THE SHIPBUILDING AND ARMAMENT INDUSTRIES.

The annual general meeting of Vickers, Ltd., was held, on the 31st ultimo, at the Hotel Victoria, London.

General the Hon. Sir Herbert A. Lawrence, G.C.B. (who presided), after referring with regret to the death of Sir Vincent Caillard, said that one of the most gratifying features of the operations of the past year had been the success achieved by the Vickers-Armstrongs Works at Barrow and Elswick. The works in the south at Erith and Dartford had also done well. The total net trading profits for the past year of these works, now controlled by Vickers-Armstrongs, before making provision for the loss of the English Steel Corporation, amounted to, approximately, £750,000, a result not unsatisfactory having regard to the present conditions of trade.

The proposals for Naval Disarmament, if successful, might naturally have an adverse effect on the trading results of Vickers-Armstrongs should any material reduction in armaments result. The production of armaments was a highly technical business, and the degree of accuracy required was only made possible by the employment of carefully trained workers. Shareholders in armament firms could not be expected to maintain that reserve capacity for the benefit of the Empire unless reasonable compensation were paid, nor could such firms train up the skilled workers and staff required unless sufficient work were found for them.

COMPETITION FROM FOREIGN STATE-AIDED COMPANIES.

A year ago he referred to the disadvantage they suffered compared with some of their foreign competitors who could give long-credit terms for naval and other armament work, because of the assistance afforded by their Government, whereas the British Government specifically excluded armaments from the export credit scheme. No reduction of armaments was obtained by that attitude, but work was diverted from British workshops.

It was to be regretted that the home railway companies still manufactured the greater part of their carriages and wagons; that action hindered the progress of the export trade as prices could be reduced given a larger volume of work. Considerable benefit had been obtained from the rationalisation of the German Railway Equipment Company.

They believed they had commercial aircraft as good as any foreign types, and by maintaining British standards they would obtain an increasing amount of work in this very promising branch of aviation.

THE OUTLOOK.

With regard to the future of the company, it was important that shareholders should realise the position and draw their own conclusions. Vickers, Ltd., was now a holding company. The armament business was in the hands of Vickers-Armstrongs, in which company Vickers were far the largest shareholders, and which, in its turn, was the largest shareholder in the English Steel Corporation, makers of heavy and light steel forgings, and other purely commercial steels. The interests are varied, but they were predominantly dependent upon armaments and shipbuilding.

For this year they should make fair profits in the Barrow and Newcastle yards, but next year would probably be a difficult one. If that were so they would have to fall back on the profits derived from the other industries—carriage and wagon, aviation and steel. The prospects for the first two were hopeful, but competition was severe.

The commercial steel business required so much reorganisation and consolidation that, although it was of great importance to their armament business, they could not look for immediate results and a period of careful nursing had to be gone through.

He was not pessimistic as to the future, but he warned shareholders that a difficult period was ahead. Their great strength lay in their financial position. That enabled them, with comparative equanimity to pass through even a prolonged period of bad trade and to be ready on the first sign of revival to make the most of the opportunities which might occur.

The report was unanimously adopted.

THE NATIONAL BANK OF INDIA, LIMITED.

DIVIDEND MAINTAINED IN DIFFICULT YEAR.
POSITION OF GREAT LIQUIDITY.
SIR CHARLES McLEOD'S REVIEW OF FINANCIAL AND TRADE CONDITIONS.

The ordinary general meeting of shareholders of the National Bank of India, Ltd., was held, on the 1st instant, at the Wesleyan Hall, Bishopsgate, London, E.C.

Sir Charles C. McLeod, Bart. (the chairman) presided.

The general manager (Mr W. Ross Munro) having read the notice convening the meeting and the auditors' report,

The Chairman said :—Gentlemen,—The report of the directors and the accounts to December 31, 1929, have been in your hands for some days, and I presume you will allow me, as usual, to take them as read. (Agreed.)

Before proceeding with the ordinary business of the meeting I wish to express our great regret at the loss we sustained by the death of our friend and colleague, Mr J. A. Toomey, who died on February 22nd last. He had been connected with this bank for the long period of 55 years, during which period he occupied the positions of inspector, London manager, general manager, and since 1913 was a member of the board of directors. We shall miss his wise counsel based on his ripe experience, and the absence of his kindly presence as a good friend will be deplored alike by the board and his many friends who are shareholders.

PROFIT AND ALLOCATIONS.

The result of our year's operations is a net profit of £511,132, compared with £530,829 for the previous year. The divisible profits amount to £788,461, and, in comparing results, I would ask you to note that, while the net figures are slightly down on a year ago, the disposable total is still some £13,000 in excess of that shown for the year 1926, notwithstanding the times through which we have passed in the interval, which cannot be characterised otherwise than as difficult for banking operations so far as India was concerned.

We propose to set aside £60,000 in reduction of premises account, to repeat our allocation of £50,000 to officers' pension fund, and to pay a further dividend at the rate of 20 per cent. per annum, free of income tax, which, together with the similar interim dividend, takes £400,000, leaving £278,461 to be carried forward—a slightly larger sum than was brought in. As usual, all bad and doubtful debts have been fully provided for before arriving at the results placed before you.

BALANCE-SHEET ITEMS.

The balance-sheet figures (the rupee assets and liabilities of which have been converted as usual at 1s. 6d. per rupee) show a contraction which, however, in some cases is due to certain unavoidable causes involving special movements of funds and to the opportunity given to individuals and concerns, so far as India was concerned, to invest funds for short periods on terms more attractive than it would have been profitable to us to offer, and, of course, as you are aware, a reduction on one side of the balance sheet involves a reduction in the items comprising the other. A year ago I pointed out to you that we had to look for fluctuations from time to time in the total of current, fixed deposit, and other accounts, and this is proved by the fact that the increase shown for 1928 has more than disappeared. The total figure of £31,467,322 is, however, a healthy one, and compares with £34,088,229 for the previous year. Bills payable and acceptances also show a contraction.

On the assets side cash and bullion figure at £4,914,509, against £5,333,827. Indian Government rupee securities at £5,804,641, against £6,589,807, while our British Government securities, Indian Government debentures, and other securities are £6,070,155, against £6,261,485.

It will be satisfactory to you to have our assurance that all our investments, totalling £11,874,796, are gilt-edged and short-term securities, and stand in our books at or under market value, and to note that while bills of exchange and discounts are down our assets consisting of cash, bullion, investments and bills of exchange stand at £24,239,631, against a liability in respect of current, fixed and other deposits of £31,467,322—a position the liquidity of which cannot be denied.

BUILDING PROGRAMME.

In addressing you a year ago I foreshadowed a considerable increase in our building programme in order to meet the requirements of our business. House property at £545,514 shows an increase on last year's figure, and as you have observed we propose an allocation of £60,000 on this occasion towards the expenditure to which we are committed. A survey of our balance sheet emphasises the extent to which conditions of Indian trading conformed with those prevalent all over the world, and we trust that in the circumstances the results placed before you will be considered satisfactory. (Hear, hear.)

I would like to say that we do not consider the slight falling off in any way attributable to political conditions in India, but to the general depression in trading conditions. It is true that certain uneasiness showed itself in this country on rumours from India that a repudiation of Indian liabilities might be attempted under certain eventualities, and, in consequence, Indian loans had a setback, but the statement from the Secretary of State for India reassured the holders that such a suggestion need not be taken seriously, and Indian stocks have recovered to a great extent.

INDIA'S TRADE FIGURES.

Considering the substantial fall in price of Indian commodities it is rather surprising that the balance of trade in India's favour has only dropped some two crores of rupees, according to the figures given by the Indian Trade Commissioner, in which, however, Council Bills are not included. If these are taken the balance of trade in favour of India is reduced to 19 crores. It may be of interest to you if I give you some comparative figures connected with the principal commodities. While the total of exports (including re-exports) are only down by nine crores we find very marked differences in some of these commodities. In wheat, for instance, the exported quantity has fallen to 14,204 tons, as against 115,422 tons in 1928 and 305,937 tons in 1927, and on the other hand India imported 706,331 tons in 1929, as against 149,175 tons in 1928 and 76,758 tons in 1927, a truly remarkable change due, no doubt, to the failure from drought in the 1928-29 crop in Northern India.

The exports of rice from Rangoon to India fell from 878,416 tons to 574,503 tons, but the total exports from all parts of Burma to India and foreign countries was practically the same as in the previous year, 2,940,822 tons. Imports of merchandise into India during 1929 were valued at Rs. 248 crores, against a similar value in 1928. Of this total cotton piece-goods accounted for Rs. 61 crores in both years. Exports of jute, raw and manufactured, show a falling off of nearly 7 crores due to the lower value to which these have fallen. On the other hand, cotton, raw and manufactured, shows an increase of some 4 crores. Cotton exports at one time occupied the highest figure in Indian exports, but jute now takes the premier place. Tea in both India and Ceylon shows considerable expansion. India at 380,000,000 lbs., against 355,000,000 lbs. the previous year, and Ceylon 251,000,000 lbs., against 236,000,000 lbs. in 1928.

GOLD AND SILVER IMPORTS.

As usual I will give you the net imports of gold and silver into India during the year. The imports of gold have fallen from £15,814,000 to £13,375,000, and silver has dropped from £8,596,000 to £5,480,000. The price of the latter commodity has receded in a marked manner from an average of 26d. per ounce in 1927 down to the record low value of under 19d. during last month. There has been some recovery from the lowest point touched.

There have been no severe fluctuations in exchange, which has moved within narrow limits round about 1s. 6d. The Imperial Bank rate has also shown little fluctuation, averaging 6.323 per cent., as against an average of 6.196 per cent. in 1928. The Indian Government issued Treasury Bills during the past year to the extent of 41 crores, as against 29 crores in 1928.

COTTON AND JUTE INDUSTRIES.

The monsoon was, on the whole, a favourable one, and Indian crops, in consequence, were satisfactory. As regards industries generally in India, the Bombay cotton mills continue in a very depressed state, partly owing to unrest among labour and to foreign competition, which has caused a disappearance of margins between the raw and manufactured material. As doubtless you have seen, with a view to benefiting the local industry the duties on cotton goods imported into India are to be increased from 11 per cent. to 15 per cent., with a further duty of 5 per cent. on goods not of British manufacture. As regards the latter, it is under-

stood that the object of the imposition of an extra duty over and above what goods of British manufacture will be called upon to pay is to enable Bombay to meet competition in special lines of goods imported in greatly increasing quantities from countries outside of Great Britain. It is sincerely to be hoped that the alteration in the duties may have the effect of giving much-needed assistance to the Bombay mill industry while not unduly penalising our own Lancashire business.

The jute industry in Bengal, after a protracted period of prosperity, has reacted very materially, and at the present moment, although the price of the raw material has decreased substantially, manufactured goods have decreased still more in proportion, and there is now little or no margin of profit.

TEA PRODUCTION AND PRICES.

The tea crop has been a record one owing largely to favourable climatic conditions in both India and Ceylon, and stocks have in consequence increased to a very large figure which tended to reduce the price to such an extent that many concerns were selling a few month ago at under cost of production. During the last two months, however, prices have improved considerably, so we have reason to hope that no permanent injury will have been caused to the industry and that these excessive stocks may gradually be reduced. There is little doubt that for the past year companies will not show such satisfactory returns as for the previous four or five years. The coal industry in India, which has been very depressed for some years, certainly shows signs of improvement.

EAST AFRICAN TRADE.

In East Africa conditions have not been so favourable. A pest of locusts last year did an immeasurable amount of harm while the rainfall was fitful and irregular. Expansion is taking place in sisal, maize and coffee, but prices of the two former commodities have fallen considerably. Cotton in Uganda reached the high figure of 816,229 centals (over 200,000 bales of 400 lb. each), but owing to excessive rain in January, which had an adverse effect on the crop, a low yield is expected this season. The coffee crop, on the other hand, has benefited and the coming season's crop is described as "extraordinarily good." It is interesting to note that tea growing in Kenya so far only on a small scale is quite promising. Given normal conditions we may see a revival in this part of the world.

THE OUTLOOK.

You will probably expect me to give you some views regarding the future. Well, while not being at all pessimistic, I am afraid I cannot be very optimistic as we are moving in uncertain atmospheres. We have an increase in Indian taxation, a proposal for an income tax on a 10 per cent. basis in Ceylon, and I am afraid we cannot escape an increase at home either directly or indirectly looking to the increase in our national expenditure, but as regards India I feel confident that if she is not too much disturbed by internal dissensions of a much more serious character than your board see any reason to fear we will see a revival of business sooner or later.

Very great interest is taken in the coming report of what is known as the Simon Commission, which is expected to be issued shortly after Easter. Let us hope that when it has been thoroughly examined it may bring home to those in India who are preaching extreme views that by so doing they are preventing the progression which they themselves are clamouring for.

In conclusion I wish to add on behalf of myself and the other members of the board our very great appreciation of the work and loyalty of our managers and staff upon whom we depend for the satisfactory results we are able to place before you.

THE RESOLUTION.

I beg to propose: "That the report of the directors and statement of accounts for the year ended December 31, 1929, be received and adopted, and that a dividend for the six months to December 31, 1929, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income tax, on and after April 2, 1930."

After this resolution has been seconded by Mr Langford James, and before I put it to the meeting, an opportunity will be given to any one who wishes to make any remarks or to ask any questions.

Mr R. Langford James:—Mr Chairman and Gentlemen, the chairman has traversed the ground so thoroughly that there is not, I think, any necessity for me to say anything beyond seconding the resolution, which I do with the greatest pleasure.

The resolution was carried unanimously.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS AND STAFF.

Mr J. Irwin Davis: Before proceeding with the resolution which I have to propose I would like to join with our directors in an expression of our deep regret at the loss we have all sustained in the death of Mr Toomey, who served the bank so faithfully for many years.

On behalf of the shareholders, I have the privilege of proposing a very hearty vote of thanks to the chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year, and also to the general manager, managers and staff for their valuable services.

We have listened with very great interest to the excellent address of our chairman. We can fully appreciate all the difficulties which have attended the operations of the bank during a year of depression and financial and political troubles. We have all read in the Press exaggerated reports of the state of India. These reports have caused considerable apprehension in the minds of thousands of genuine investors in Indian stocks and shares, resulting in serious market depreciation. Happily that phase is now passing away, and prices are gradually recovering. We should bear in mind that every word published here, tending to magnify the trouble in India, only aggravates the embarrassment of those who are responsible for the preservation of law and order and the carrying on of the business of the country. Those best acquainted with the conditions in India are not likely to be misled by the sensational stunts of the political press in this country, nor by the fantastic display of a comparatively small party of fanatical politicians in India. These grotesque exhibitions may cause some dislocation of the local traffic, but the great mass of the people merely look on with indifference at the passing show.

EXCELLENT RESULTS.

Notwithstanding the slight diminution in profits, the report is very gratifying, and the results excellent. In fact, the profits are not much below the highest previously reached. It is reassuring to learn from our chairman's remarks that the diminution is not due to the political situation, but to the general trading conditions, to which India is no exception. We congratulate our directors on such highly satisfactory results.

Now there is a matter I would like to refer to. It is the smallness of the directors' fees compared with those of other banks, now published for the first time in the balance sheets. I trust that before another year steps may be taken to rectify this. I think the amount of those fees was fixed many years ago and, in the meantime, the work and responsibility have greatly increased. Comparing the balance sheet of December, 1918, with that of to-day, I find the capital has increased from £1,000,000 to £2,000,000, and the reserve fund from £1,350,000 to £3,000,000, and the dividend has been steady all the time at 20 per cent., free of income tax, truly a remarkable testimony to the prudent policy pursued by the directors. Most businesses have their ups and downs. It has been said recently that the downs are in the ascendant. However that may be, you see we have never had any experience of it. The unfailingly good results for so many years surely merit some recognition on our part.

We are fully aware how much we are indebted to the general manager, managers and staff for the successful working of the bank, and I trust that the formal resolution which I have the pleasure of proposing may be taken by all concerned at home and abroad as a genuine expression of our gratitude and appreciation of the good work done during a very trying and difficult year.

Mr D. C. Lee seconded the resolution, which was carried with acclamation, and the Chairman having made a brief acknowledgment on behalf of the board, as well as for the general manager and staff, the proceedings terminated.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher "Economist Newspaper, Ltd.,"

6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

THE BANK OF AUSTRALASIA.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.
STRONG FINANCIAL POSITION.
THE FALL IN WOOL AND WHEAT PRICES.
EXCHANGE PROBLEMS.
MR C. G. HAMILTON ON THE OUTLOOK.

The ninety-sixth annual general meeting of the Bank of Australasia was held, on the 3rd instant, at the office of the Corporation, 4 Threadneedle Street, London, E.C.

Mr C. G. Hamilton presided.

The manager (Mr Edmund Godward) having read the notice convening the meeting,

The Chairman said: Ladies and gentlemen,—I hope you will consider the report a very satisfactory one, especially having regard to the difficult times Australia experienced during the year under review. I will refer to these difficulties later. You will notice that the form of our accounts is slightly altered. Though, as a chartered company, we are not under the Companies Act, we nevertheless thought it desirable to make our accounts conform somewhat to the balance sheet prescribed by the recent legislation.

DEPOSITS AND CURRENT ACCOUNTS.

For the first time we show in our balance sheet our fixed deposits and current accounts separately. The fixed deposits are deposits fixed for periods varying from three months to two years and carrying interest. The current accounts carry no interest. There are advantages and disadvantages in having a large amount of fixed deposits. It is advantageous to have most of your liabilities not at call, for it enables you to lend more of your resources to assist trade. On the other hand, you cannot make as much profit out of fixed deposits carrying interest as you can out of current accounts which carry no interest, even after allowing for the fact that you must keep larger liquid resources against deposits at call.

Our call liabilities in round figures stand at £11,891,000, and against these immediate liabilities we have in cash and legal tender notes no less than £7,183,000, or over 60 per cent., a position of great strength, and we have besides a large amount of Government securities which are readily realisable. The total deposits are £34,414,000—a record figure. We show for the first time as a separate item our liability on acceptances for customers which is balanced by a similar entry on the assets side. Our capital remains the same, but we have added £25,000 to our reserve, making it £4,475,000, or nearly equal to the capital.

ADVANCES.

On the assets side of the balance sheet most of the items explain themselves. Our advances are carefully scrutinised and, I believe, are well secured apart from the ample provisions we hold against possible losses. It is said in some Australian papers that banks are not helping industry in Australia. My answer, so far as this bank is concerned, is: "Look at our balance sheet, where our advances stand at a record figure." While on the subject of advances, I should like to point out that in most countries a large amount of advances are made in the form of bills discounted. In Australia bills are very little used, owing to the high stamp duties. The utility of bills in commercial transactions is beyond question, and I should like to suggest to the authorities that, by lowering these stamp duties, they would confer a great boon on the community and would probably lose no revenue.

Our premises, which include for the first time a substantial amount for sites bought but not yet occupied as bank premises and surplus properties let to tenants, stand at £278,372, a figure very much below their cost or real value. Different views are held as to the advisability of having premises standing at a large figure in the balance sheet. Personally, I see no objection to it, provided the figure is well below their real value. Premises are an essential part of the machinery of a bank for earning profits. The value of our premises in our balance sheet represents about 3 per cent. of our capital and reserve. If you look at the balance sheets of the five big London banks you will find that the value put on their premises varies from about 20 per cent. to over 30 per cent. of their capital and reserves. Our total assets amount to £49,323,596, a record figure.

PROFIT AND DIVIDEND.

Coming to the profit and loss account, the total profit shown, after making provision for all bad and doubtful debts and other contingencies, is slightly larger than last year. On the expenses side, taxes are a little down, but there is an increase in salaries, an item largely out of the control of the management, as most salaries are fixed by arbitration boards.

The final dividend which we are paying will absorb £315,000, making £630,000 for the year, or £35,000 more than last year, and; after transferring £25,000 to the reserve fund, there will be £22,183 to add to the amount brought forward, bringing the total carry-forward up to the very satisfactory amount of £161,943.

It has been frequently pointed out from this chair, and cannot, I think, be too often emphasised, that though nominally we pay 14 per cent. on our capital, we do not pay anything like that rate on the shareholders' real capital in the bank, for, in addition to the reserve fund, which is almost equal to the capital, there is a large amount of further capital belonging to the shareholders, represented by the carry-forward, the substantial surplus cost of our premises over the balance-sheet figure, and the contingency funds.

AUSTRALIA'S DIFFICULTIES.

I referred at the beginning of my remarks to the difficulties Australia has experienced. A large part of Queensland endured, for several years, a disastrous drought causing great losses. I am very glad to say the drought has broken, and there have been splendid rains lately in Queensland. New South Wales suffered, and is suffering, from a suicidal coal strike, which has completely paralysed the very valuable trade of the northern coalfield of New South Wales. There has also been a prolonged strike in the timber trade Then a still more severe blow to Australia is the heavy fall in the price of Australia's principal exports—wool and wheat. Wool is by far the most important production in Australia.

The value of the wool exported in 1927-28 was £66,067,000, while in 1928-29 the value had fallen to £61,615,000, though the production was greater, and since then the price has fallen further. I have always thought that the very high prices realised by Australian and New Zealand wool some years ago would prove a misfortune in the long run. It stimulated the production of wool, both in Australasia and in other countries until it was much greater than the demand.

Statistics show that from 1924-25, when Australian wool realised its highest average price of 26·32d. per lb., to 1929-30, the production of wool in South Africa and South America increased from 940,000 bales to 1,440,000 bales, an increase of over 50 per cent., and Australian and New Zealand wool production increased in the same period by about 35 per cent. The high price of wool also led to decreased consumption; the poorer classes could not afford to buy woollen goods, and thus the production and use of substitutes such as artificial silk was stimulated.

WHEAT AND WOOL POOLS.

The production of wheat in the world has also greatly increased. Australia produced 41,000,000 bushels more wheat last year than in the preceding year, and the world supply now is much greater than the demand—hence the fall in price. I see in the papers that wheat and wool pools are being established to withhold supplies in the hope of raising prices. I regret this policy, for, unless you can reduce production, as was done for a while in the case of rubber, so that the supply does not greatly exceed the demand, it must prove a failure in the long run.

Now, I do not believe that you can voluntarily reduce substantially the production over the world in the case of wheat, and still less of wool. Sheep have a meat and skin value in addition to the value of the wool clip, and they will continue to be bred, and it is inconceivable that pastoralists will destroy the wool.

Another objection to pools in the case of Australia is that any withholding of exports at present will only accentuate the exchange difficulties, which are now very acute. Most of you will understand what exchange difficulties mean, but as to some of our shareholders, exchange questions may be a mystery. I will try to explain the problem briefly.

THE EXCHANGE PROBLEM.

When a trader in Australia wishes to pay, say, £10,000 for goods bought from a manufacturer or merchant in Great Britain, he pays from his resources in Australia £10,000 to an Australian bank there, and the bank pays from its resources in London £10,000 to the merchant or manufacturer. Thus, the bank has £10,000 more in Australia and £10,000 less in London, and the opposite transaction takes place when, say, a Bradford spinner wishes to pay for wool bought in Australia. An Australian Bank, out of its resources in Australia, provides the money to pay the growers, and ultimately the bank receives in London, from the spinner, the equivalent amount. The common expression of "transmitting" money is misleading. Except when gold is shipped, which is an expensive and abnormal transaction, no money is transmitted. In times where, over a period, exports and imports are nearly equal, these contrary exchange transactions tend to balance each other, but the times are quite abnormal.

In the year ending June, 1929, the exports from Australia were slightly greater than the imports, but in the previous three years imports exceeded exports by some £29,000,000, and in the last six months of 1929 Australia imported about £16,000,000 more than she exported. In addition, Australia has to pay more than £25,000,000 a year in London for interest on loans borrowed in London by the Commonwealth and the States. The result of this large excess of imports over exports, plus the burden of the annual interest payable in London, is that the Australian Banks in London are asked to pay out of their resources in London far more than they receive in London in payment for exports from Australia.

The Australian Banks are thus augmenting their assets in Australia and depleting their free London resources, and the time has come when they cannot satisfy all the requests for payments in London, and exchange transactions have to be greatly restricted.

You must clearly understand that these exchange difficulties do not affect, in any way, the financial strength of this bank, whether its funds are mainly overseas or in London. Moreover, we are under no obligation to provide exchange. We desire to assist our clients to the best of our ability, but we have fixed deposits, current accounts and other liabilities in London, and we must keep adequate resources against these liabilities.

THE ONLY PERMANENT REMEDY.

The remedies for these exchange difficulties are not simple, and must take time. The only permanent remedy is for Australia to export far more than she imports. No doubt the large export of gold now being made from Australia will materially help the position. Another remedy is to float a large loan in London and so pay for imports and interest due; but that really does not solve, but only postpones, the difficulty, as the loan will some day have to be repaid in London.

The true solution is for Australia to reduce substantially her costs of production. Australia, with her wonderful sunshine, her millions of acres of fertile land, ought to be able to produce wool, wheat, meat, fruit and dairy produce as cheaply as, if not cheaper than, any other part of the world. She ought to be able to undersell her competitors, and, if she could do that, her exports would go up by leaps and bounds, and the exchange difficulties would be solved. Besides the industries I have mentioned, there are other industries, such as mining, which could be worked at a profit if costs could be reduced, and thus more exports would be created; but so long as taxes, wages and cost of living remain as high in Australia as they are at present, there is little hope of a great increase in the exports at profitable prices. Mr. Justice Beeby, who is a member of the Federal Arbitration Court, is reported to have said that "No matter what Courts or Parliament did, profits, prices, values and wages would have to come down to a lower plane."

If Australia cannot increase largely her exports she must restrict her imports. The difficulties in paying for imports, owing to exchange stringency, must automatically restrict imports. One does not want Australia to buy less from Great Britain, who also greatly needs exports, but I notice that in the year ending June, 1929, Australia imported from the United States no less than £35,308,000 of goods, while in the same period the United States bought from Australia only £5,831,000—a very one-sided trade and so much in favour of the United States that one is surprised to learn that they are about to increase their import duties on Australian wool. There seems to be room for a substantial decrease in imports from the United States.

Another essential requirement for Australia, as for all the world, is economy—economy in public and private expenditure. The Budgets for the last two years have resulted in substantial deficits.

FAVOURABLE FACTORS IN THE SITUATION.

Having referred to some of the factors adverse to Australia's prosperity, it is only fair to mention some of the favourable points. There have been splendid rains over most of the country. Production of wool, wheat and cotton is increasing. Rice was a new export in 1926; 23,000 tons were shipped last year. Her trade in frozen meat has great possibilities. There is said to be a shortage of beef in the world. From a letter in the *Times* I quote the following facts:—In 1925 the United States exported 4,250,000 lbs. of beef. In 1929 they imported 500,000 cattle and 120,000,000 lbs. of beef. All over the world cattle are decreasing, and every year the increasing population of the United States will require some 650,000 cwts. more beef. Now, Australia can produce and fatten unlimited numbers of cattle, so there is really a great opportunity for Australia in this field. The fruit, butter and cheese export trade has also great possibilities. Australian butter has world-wide reputation.

Her savings banks deposits increased by £10,000,000. The Budget for the current year shows an estimated surplus. Further import duties are to be imposed to check luxury imports. The recent conversion loan in Australia has been quite a success, and Australia is facing her difficult financial position with courage and determination. Two important Acts have recently been passed. Under the Financial Agreement Act a new sinking-fund scheme is to be established. On the net debts of the State the Commonwealth is to pay ¼ per cent. and the States ¼ per cent. for 58 years, and ½ per cent. is to be paid on all new loans. At the end of the last financial year the existing sinking fund for the redemption of the Commonwealth debts amounted to £31,000,000. Under the Commonwealth Bank Act the Treasurer, on the recommendation of the Commonwealth Bank, can prohibit the export of gold, and the Commonwealth Bank has, subject to certain conditions, power to commandeer the gold holdings of the trading banks in exchange for legal-tender notes. I do not think this will harm the trading banks much. Of course, we should prefer to have control of our own gold, with power to ship it, but the centralisation of gold is the fashion of the day.

NEW ZEALAND.

I have said very little about New Zealand, though it forms a very important field for our banking activities. New Zealand has, fortunately, in the two years ending June, 1929, exported £19,000,000 more than she imported. New Zealand, like Australia, is suffering from the fall in the value of wool, but it is not New Zealand's most important export. Her largest export is dairy produce, which is giving very good returns. Frozen meat is another important and successful export. The seasons are favourable and, generally speaking, the outlook in the Dominion is satisfactory. Of course, New Zealand is affected considerably by the Australian exchange difficulties.

The Superintendent's cable, recently received, reads as follows:

"Season's conditions throughout Queensland and New South Wales satisfactory excepting portions southern area Queensland and southern and western area New South Wales, where rain badly wanted. Elsewhere in Australia, except Tasmania, further autumn rains anxiously awaited. In New Zealand conditions favourable."

Since that cable was received, we have heard that there has been rain in various districts.

The Chairman concluded by moving the adoption of the report and accounts.

Mr Horace Peel seconded the resolution.

A SHAREHOLDER'S REMARKS.

Mr F. Tomkinson: I have no questions to ask, sir, but I should like to say how glad I am to find that you have stressed a point which I believe I was the first to call attention to many years ago, namely, that the dividend of 14 per cent. is not earned on the capital alone, but also on the reserves and various other sums allocated for various purposes. I have heard people carelessly remark that the bank pays a ridiculously large dividend, and therefore I was very glad to hear you refer to that in your very excellent speech. (Hear, hear.) I should like to add that I have heard many speeches by chairmen, but never one delivered so fluently and ably as the one which we have heard to-day. (Hear, hear.)

After other remarks by Major Horsfall and Mr Butterworth, the resolution was put to the meeting and carried unanimously.

The Chairman next moved the re-election of the retiring directors, the Rt. Hon. the Earl of Midleton, K.P., Mr T. R. Johnson, and Mr John Sanderson.

This resolution was also seconded by Mr Horace Peel and unanimously approved.

On the motion of Mr Jones, seconded by Mr Butterworth, the auditors, Messrs Deloitte, Plender, Griffiths and Co., were re-appointed.

TRIBUTE TO THE STAFF.

The Chairman: Gentlemen, it gives me great pleasure to move a hearty vote of thanks to Mr Healy and the staff in Australia and to Mr Godward and the staff in London for their services during the year. It is times of difficulty like the present that test the ability of your staff, and of how well they have stood that test I think the satisfactory report before you is good evidence, showing that Mr Healy and the managers and inspectors in Australia and New Zealand ably discharge the difficult task of seeing that our advances are well secured. Mr Godward not only manages the important London business, but also keeps a watchful and critical eye on our activities in every part of the world, and that is of enormous assistance to the board. (Hear, hear.)

The exchange difficulties have thrown an extra burden on Mr Healy and Mr Godward, both of them having had, in a sense, to ration their customers. I know that Mr Godward has done that with great tact and discretion, as our customers would admit, and I have no doubt that Mr Healy has done that also. Your thanks are due to them all and I hope that some shareholder will second this vote of thanks. (Applause.)

Mr J. Nissim: I have the greatest possible pleasure in associating the shareholders with this vote of thanks to the management and staff in London and the management, inspectors and staff in Australia and New Zealand. Your address, to which we listened with rapt attention, showed a complete mastery of the affairs of this bank and of the countries in which it operates, only served to deepen our sense of gratitude to the staff which is so admirably backed up our Board of directors. (Hear, hear.) This bank relies every day, every month and every year upon its staff. In Mr Godward we have a manager whom we trust implicitly for his judgment, his courtesy and his grasp of affairs, and he is a specimen of the staff whose services we command. (Hear, hear.) I have the greatest possible pleasure in associating the shareholders with this resolution. (Applause.)

The resolution was carried unanimously.

VOTE OF THANKS TO DIRECTORS.

Mr A. J. Waley: Gentlemen, I think that before we separate it is only right that we should record a vote of thanks to our chairman and directors. (Hear, hear.) The chairman has already been complimented upon the speech which he made and which covered so wide a range and enabled us to visualise the advantages and disadvantages under which trade is now carried on in Australia, and the difficulties with which the bank has successfully dealt. He also enlightened many of us regarding the conundrum of exchange and enabled us, perhaps, to understand the extra difficulties with which the directors and the management have been confronted. I feel sure that you will all agree with me that the wonderful balance sheet which has been disclosed is an indication not only of wise direction but also of careful and efficient management, and I beg to move a vote of thanks to the chairman and directors. (Applause.)

This vote was seconded by Mr Tomkinson and unanimously accorded.

The Chairman: Gentlemen, I have to thank you for the complimentary remarks which have been made about myself, and to thank you on behalf of my colleagues and myself for your vote of thanks to the Board. We have no permanent chairman of this bank and, if you are satisfied with the management, the tribute is due not to any one director but to the Board as a whole. (Applause.)

The proceedings then terminated.

PUBLICATIONS OF THE LONDON GENERAL PRESS.

A FINANCIAL PLAN
FOR THE PREVENTION OF WAR

By SIR HENRY STRAKOSCH, G.B.E.

The author of this pamphlet, a prominent banker of international repute and a member of the Finance Committee of the League of Nations, clearly explains the essentials of the Draft Convention for Financial Assistance drawn up by the Committee and comments on the objections to the convention. A synopsis of the Draft convention is appended.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.
SATISFACTORY RESULTS—IMPROVEMENTS IN ALL DEPARTMENTS.

The eighty-ninth annual general meeting of the members of the Wesleyan and General Assurance Society was held, on the 1st instant, at the Central Hall, Corporation Street, Birmingham.

In the unavoidable absence, through illness, of Mr B. Shirley Smith, president of the society, the meeting was presided over by the deputy-chairman, Mr Charles E. Murray:—

The chairman expressed regret that the society's president, Mr B. Shirley Smith, was unable to be with them that morning. He then proceeded to read the following speech, which had been prepared by the president, extracts from which are as follows.

am glad to be able to report that, although the past year has been one of considerable difficulty, the results, taking them as a whole, are very satisfactory, as they show improvements in all the departments of the society.

Dealing with the ordinary department first, you will notice there has been a steady and considerable volume of business. In the early part of the year your directors were a little concerned by the rate of mortality claims, due, no doubt, to what amounted to an epidemic among the population of these islands. You will remember that the early months of 1929 were very different from the early months of this current year, and the severe weather of last year was no doubt responsible for the heavy claim rate. I reported last year that we had been fortunate in having a steady increase in the average amount of the ordinary policies, and that for 1928 they had reached an average of £137 per policy. I am glad to be able to report that this has been increased during the year we are now considering, the average policy in the ordinary department amounting to £145, as against £137 in 1928.

Your society has had very considerable difficulties and strenuous competition to meet in the industrial department, but I have great pleasure in reporting that in that department we have issued 166,044 policies, insuring £3,322,863. This amount includes both the weekly and the monthly premiums, and shows a very substantial increase upon the figures for the year 1928.

The other departments of the society's business are comparatively both new and small, but they are all making progress, and all help to make the very satisfactory results as disclosed in the accounts of the society, now in your hands.

RESULTS OF COMBINED DEPARTMENTS.

Looking at all the departments, the net premium income is £1,790,365, being an increase over the previous year of nearly £45,000. In the carrying on of the society's business the investment of the society's funds is one of the most important of your directors' many duties, and they watch the markets from day to day and from week to week with a view to arriving at irreproachable data from which they can make their decisions with every confidence. The directors point out that the gross rate of interest is £5 4s. 11d. per cent., being 1s. 10d. per cent. more than in 1928.

The balance-sheet shows the assets altogether to be more than nine and a half millions sterling, an increase over last year of £662,256. Your directors are glad to be able to report that, notwithstanding all the difficulties, the year that has gone by shows such a steady growth and a steady accumulation of funds.

VALUATION REPORT.

Now that we have finished the balance-sheet, you would like to hear something about the valuation made by the actuary, whose report you will find with the statement of accounts now in your hands. Without going through the figures I have already commented on, you will notice that there is a surplus in each department, and that the profits are sufficient to justify the declaration of bonuses similar to those which were declared last year.

As regards the staff pensions fund, the actuary advises that the society is able to contribute £45,000 out of its profits. This fund, you will remember, is vested in trustees, who are directors of the society, and who look after the fund just as if it were part of the society's business.

Now, with reference to the industrial part of our business, you may remember that we started a profit-sharing scheme, which was announced and confirmed two years ago. It appears that the divisible profits of the industrial department last year reached the considerable sum of £93,693 6s. 8d., of which £56,216 is allocated to the industrial department policyholders and £18,738 13s. 4d. each to the outdoor staff and the ordinary department, subject to income tax. The method of division of these sums is set out in the report of the actuary now in your hands, and notice of the benefits will be furnished to the society's representatives with the least possible delay.

The report and accounts were unanimously adopted, and votes of thanks to the directors and staffs terminated the proceedings.

ANGLO-PORTUGUESE TELEPHONE COMPANY, LIMITED.

"YEAR OF VERY SUCCESSFUL OPERATION AND PROGRESS."

SIR ALEXANDER ROGER'S REVIEW OF THE POSITION.

The forty-third ordinary general meeting of the Anglo-Portuguese Telephone Company, Ltd., was held, on the 31st ultimo, at Winchester House, Old Broad Street, London, E.C.

Sir Alexander Roger (the chairman) presided.

The Secretary (Mr F. Hollyer) having read the notice convening the meeting and the auditors' report,

The Chairman said :—Gentlemen,—As the report and accounts have been in your hands for some days I presume you will take them as read. (Agreed.)

I am glad to tell you that a year of very successful operation and progress has been achieved.

Dealing first with the profit and loss account, our gross operating revenue at £189,437 shows the substantial increase of £19,418 over that of the previous year; as against this our expenses (which include a charge of £30,000 in respect of plant depreciation) increased by £6,749, giving a gross profit of £71,287, as compared with £58,618 for 1928. Adding to this gross profit figure of £71,287 sundry small receipts, and deducting the interest, tax, and share issue expenses, all detailed in the accounts, a net profit of £50,941 is arrived at, which is £8,054, or approximately 19 per cent. more than for 1928.

PROFIT AND DIVIDENDS.

Out of the year's net profit of £50,941 there has already been paid to the ordinary shareholders an interim dividend of 3 per cent., less tax, and your directors are now recommending a final dividend of 5 per cent., less tax, on the ordinary shares (making 8 per cent., less tax, for the year), and a dividend for the year of 8 per cent., less tax, on the "A" ordinary shares. These dividends amount in all to £45,743, which allows the company to increase its carry-forward by £5,198—namely, from £39,751 to £44,949.

On the assets side of the balance sheet the capital expenditure account has been amended to conform to the requirements of the Companies Act, 1929, and the net addition for the year is £91,732.

On the other side our renewals reserve increased from £68,722 to £72,567. In both the years 1928 and 1929 £30,000 was placed to the credit of that account, but in 1928 the debit to the account for plant withdrawn from service amounted to £15,420, whereas in 1929, owing to a larger amount of plant being retired in pursuance of our policy of keeping our plant generally in first-class repair, the comparable figure was £26,155. The increase of £3,845 is therefore appreciable. The other items of the balance sheet differ, of course, from the figures of last year, but the differences are entirely due to normal trading operations.

FURTHER EXPANSION.

To provide for the further expansion of the systems in Lisbon and Oporto the company has expended additional large sums on capital account. For many years the company was handicapped for want of capital to meet the demands of a growing telephone public, but conditions are now much more favourable, and your directors feel confident that fresh capital put into the business will continue to prove remunerative. Perhaps it is not out of place to mention here that telephone enterprises of late years are receiving a greater amount of recognition from the investing public. Probably the reason for this is that while it is appreciated that the telephone public in any country is no easy one to serve, nevertheless subscribers are generally willing to pay a reasonable tariff provided a first-class service is rendered in return.

As you may probably be aware, the company by the terms of its concession is empowered to operate in the districts of Lisbon and Oporto; in Lisbon within a radius of 30 kilometres (approximately 19 miles), excluding one small area, and in Oporto within a radius of 20 kilometres (approximately 12½ miles). The remainder of the telephone needs of Portugal are taken care of by the Government, the Government system and this company's systems by mutual arrangement being linked up, to the obvious advantage of the public generally.

EXTENSION OF GOVERNMENT TRUNK LINES.

The Government are to be complimented and congratulated upon the remarkable progress they have made during the last two years in extending their own network of telephone trunk lines. The majority of the areas of importance throughout the country are now in telephone communication with each other, the British Isles, and most of the countries of the European Continent.

Relations with all Government and Municipal Departments in both Lisbon and Oporto continue to be of the most friendly and cordial nature, and at all times it is our duty and our pleasure to co-operate with the Government to meet the telephone requirements of the people of Portugal.

The tariff rates which came into force on September 1, 1928, have been a great stimulus to new business. The basis of the tariff for all new subscribers consists of an annuity which includes a number of free calls, all calls above the number of free calls being paid extra for by the user. This method of payment has brought into the company's business a great number of people to whom the flat-rate system of tariffs had not in the past proved sufficiently attractive.

REMARKABLE INCREASE IN NUMBER OF STATIONS.

During the year 3,665 stations were added, which represents approximately 16 per cent. above the total at the end of 1928. I may tell you that the rate of progress in England is less than 10 per cent. The number of stations at the end of 1919 was approximately 13,000, whereas at the close of 1929 the number was 26,681. In other words, the company has more than doubled the number of its stations during the past decade, a record to be proud of.

The company has embarked upon a particularly heavy capital programme for 1930, involving over £200,000. A considerable part of this sum will be expended on new automatic equipment which is to be installed in the Trindade Exchange in Lisbon. It was not at first thought that it would be necessary to do this quite so soon, but, as the result of the rapidly increasing number of subscribers, the board was confronted with the alternative of purchasing additional manual equipment for the Trindade Exchange or accelerating the automatic programme which we had been preparing for some time. Guided by the company's technical experts, we decided on the latter course, and it is planned that at the end of August next the cutover from manual to automatic will be accomplished. Six thousand eight hundred lines will be brought into automatic operation then, which number will be further added to in the months immediately following, so that at the end of the present year there will be installed at Trindade Exchange 8,500 lines of automatic equipment.

This acceleration of the automatic programme means displacing some manual plant which still has useful life, but apart from the technical advantages which this development ensures, the company must keep pace with the progress of the telephone art. Lisbon, the capital city of Portugal, has substantial claims to be ranked with other great cities of the world, and the company has a moral obligation to see that the telephone communications for which it is responsible lack nothing in modernity.

NEW CAPITAL ISSUE FORESHADOWED.

With regard to the capital required, when borrowings reach such a proportion that it becomes desirable to liquidate them the board will, as before, do so from the proceeds of fresh capital issues. In June last new ordinary shares were offered to existing shareholders on a *pro rata* basis at par, which at the market rates then ruling represented a substantial bonus to members. It will be necessary soon to raise fresh capital, but as nothing definite has yet been decided upon regarding the form which this should take, I will not comment further on the matter now.

The beneficial effects of the plan of economic and financial reconstruction on which the Government of Portugal has been concentrating are being increasingly felt day by day, both by the nation and the countries with which it trades. Work is going on unceasingly in building up an excellent roadway system; the internal indebtedness of the Government has been reduced; schemes are in hand to provide greater facilities to shipping; the railway and the irrigation systems are planned to receive attention, and at the close of the 1928-29 fiscal years the Budget showed a surplus of receipts over expenditures, the first time for many years. This intensive campaign of internal reorganisation of the country's resources on the part of the Government Ministers, wholeheartedly backed up by the people, is doing much to raise Portugal to the plane of its former greatness. As evidence of the confidence which is now prevailing throughout the country, you will be interested to know that the Portuguese Government 6½ per cent. Internal Loan of 100,000 contos (approximately £924,000 sterling) for the construction and improvement of ports closed on Thursday last, having been covered three times.

As a corollary of the nation's improving financial stability the value of the escudo has remained steady round about 108 escudes to the pound sterling for over 12 months.

INTERCHANGE OF VISITS.

Your directors are in close personal touch with the company's activities in Lisbon and Oporto, and interchange of visits between the board and the company's technical advisers here and the management in Portugal are constant. The advantages to the company's welfare of these visits are too obvious to need stressing. Should any of you or your friends be visiting Portugal at any time I hope you will not neglect to pay a visit to some of the company's exchanges, for you will then be able to judge for yourselves how well the company's plant is maintained and to prove the efficiency of the service generally.

Summing up the past year, I think there is every reason to be gratified at the results, and that the company may look forward to the future with equanimity. I feel sure you would like me to thank Colonel Pope (our general manager in Lisbon), Mr Hincks (our Oporto manager), and their staffs of all grades, for the creditable manner in which they have carried through another year's strenuous work and the success which has attended their efforts. (Hear, hear.)

THE RESOLUTIONS.

I now beg to move :—"That the report and accounts be received and adopted, and that the dividends therein recommended be paid." I will ask Mr Kerr to second this resolution, but before putting it to the meeting I shall be glad to answer any questions you may have to put forward.

Mr F. W. Kerr seconded the resolution, and, in the absence of questions, it was put to the meeting and carried unanimously.

The election of Mr Harold S. Bennett, A.M.I.E.E., as a director of the London board was confirmed; Sir Alexander Roger and the Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O., of the London board, and Senhor R. Peixoto and Dr. Bento Carqueja, of the local board, were re-elected; and Messrs Futcher, Head, Ernest Smith and Company were reappointed auditors of the company for the ensuing year.

A hearty vote of thanks was accorded to the chairman for his interesting address, and also to the directors and to the manager and staff in Portugal for their services during the past year.

The proceedings then terminated.

BRITISH ALUMINIUM COMPANY, LIMITED.

SATISFACTORY VOLUME OF SALES.

The ordinary general meeting of the British Aluminium Company, Ltd., was held, on the 28th ultimo, at Winchester House, Old Broad Street, London, E.C. Lieutenant-Colonel Stephen H. Pollen, C.M.G. (chairman of the company), presiding.

The Secretary (Mr G. W. Jeffery, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report, after referring to the resignation of Mr A. W. Tait, said that the total net profit for the year was £443,102, as compared with £441,383 for the previous year. Twelve months ago, the Chairman added, he ventured to anticipate that there would be a satisfactory volume of sales during the year 1929, and that anticipation had been realised. The demand had been good, and their total deliveries for the year under review were well in advance of their previous record. Against this increased tonnage sold they had, unfortunately, to record a greatly intensified competition in the market for a number of their products, with a consequent reduction in their average selling price. In the face of the competition to which he had referred they had spared no pains to stimulate the demand.

A large part of their output was absorbed in the transport industries, namely, automobiles, railways, aircraft, and shipbuilding, because the outstanding property of aluminium and its alloys was their strength combined with lightness, which, by reducing deadweight, increased carrying capacity, decreased operating costs, and enhanced speed and acceleration without any sacrifice in mechanical properties. The electrical industry, like the transport and chemical industries, consumed an ever-increasing quantity of aluminium, and considerable strides had been made during the past year. In spite, however, of the conditions which prevailed during the past year, the results they were able to place before the shareholders were, he considered, satisfactory.

In regard to the current year, industrial conditions were somewhat obscure, but he did not see any signs of a decrease of demand for their metal at the present time, and they looked forward with confidence to being able to dispose of all their production, including that which they might expect from the new Lochaber works.

Major R. W. Cooper, O.B.E., M.C. (vice-chairman), seconded the resolution, which was carried unanimously.

CHEVIOT RUBBER, LIMITED.

PROFITS WELL MAINTAINED.

NEW CAPITAL ISSUE TERMS.

The twentieth annual general meeting of Cheviot Rubber, Ltd., was held, on the 2nd instant, at the Council Room, Rubber Growers' Association, 2–4 Idol Lane, London, Brigadier-General the Hon. Chas. Lambton, D.S.O. (the chairman) presiding.

Mr C. B. Hester, representing the secretaries (Messrs Guthrie and Company, Ltd.), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The feature of the year's working is that, in spite of the vicissitudes experienced in the rubber market, profit for the year has been maintained at practically the same figure as for 1928, the actual result being £32,667, against £31,023—a slight increase. This excellent showing is partly due to an increase of crop from 1,141,000 lb. to 1,694,000 lb., partly to a further slight reduction in cost per lb., and, finally, but to a smaller extent, to favourable forward sales.

The year 1929 was a remarkable cropping year for practically all rubber estates in the Malay Peninsula. In the case of our own property the crop harvested was a record, and amounts to 643 lb. per acre over the 2,635 acres of mature rubber at Cheviot. A natural question which might be asked is whether this high rate of cropping will continue, for many experts believe that the high rate of yields from rubber in Malaya is due to the resting which trees received during restriction. It is possible that, taking the country generally, there is some truth behind this view, but in the case of Cheviot, although the manager has taken a conservative view and has budgeted, on the basis of twelve months' tapping, for an output of 1,600,000 lb. in 1930, there is actually no sign of a diminution in the rate of production. Although the great bulk of Cheviot is mature and producing, it is, in fact, a young estate, and, in the opinion of the visiting agent, has even yet scarcely reached peak production. In these circumstances, it is probable that the present high yields will continue for some time.

Since the manager's forecast was made, the board, in conformity with the recommendations of the Rubber Growers' Association, has consented to cease tapping during the month of May, and this stoppage will, of course, affect the amount of rubber which otherwise would be harvested during the year. On the other hand, if the advocates of restriction are correct, the loss of crop and consequent slight increase in costs should be compensated for by an increase in selling price. This latter factor is, of course, problematical, and I am not in a position to prophesy.

NEW PLANTINGS AT MIDDLETON.

As regards Middleton estate, a further 500 acres, approximately, have been planted, raising the cultivated acreage to 1,486 acres, and it is proposed to complete our development programme by planting a further 400 acres this year. Development has been carried out on the most recently approved scientific lines with high-grade seeds, from Cheviot and budwood from proved high-yielding clones, and it is anticipated that when these areas reach maturity the rubber will be harvested at a cost considerably below that now current on most estates planted by earlier methods.

Our present cash position is strong, the balance sheet showing cash and British Government securities amounting to practically £87,000. Our development programme is, however, a comparatively heavy one, and upkeep of the new areas will call for the greater part of our liquid resources over the next few years. The directors therefore consider it advisable to issue a small number of shares now in order to conserve and maintain a strong cash position. It is proposed to issue 259,565 shares of 2s. each, raising the issued capital to £220,000. The issue will be made at the price of 2s. 6d. per share and will be confined to the company's shareholders in proportion to present holdings. When the planting programme of 400 acres for this year is completed, we shall have a total planted area of 4,943 acres. On the basis of an issued capital of £220,000 the cost per acre will amount to the very low figure of £44 10s. Taking into consideration the quality of the plantings at Middleton and the exceptionally high yields from the mature rubber at Cheviot, the Board feel that this company will be able successfully to maintain its position in face of a continued low price for the commodity and increasing competition from peasant planters.

It gives me much pleasure to record the efficient work of our manager and his staff on the estates, and of our agents at home and in the East in their sphere, and also the value of the comprehensive reports of our visiting agent.

The report was unanimously adopted, and a dividend of 10 per cent. was declared.

ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LIMITED.

SATISFACTORY TURNOVER.

MR P. MALCOLM STEWART'S REVIEW OF INDUSTRIAL CONDITIONS.

The thirty-first annual general meeting of the Associated Portland Cement Manufacturers, Ltd., was held, on March 31st, at River Plate House, Finsbury Circus, London, E.C.

Mr P. Malcolm Stewart (chairman and one of the managing directors) presided.

The Secretary (Mr J. A. White) having read the notice convening the meeting, and the report of the auditors having been read by Mr H. C. Howard, representing Messrs. Crewdson, Youatt and Howard, the auditors,

The Chairman said: Ladies and gentlemen,—I presume it is your wish to take the report and accounts as read.

INCREASED TRADING BALANCE.

Turning to the profit and loss account, you will see that the balance of profit on the trading account at £575,484 is more by £7,468 than last year's figure. This increase, however, is largely set off by the reduction in receipts from interests and dividends, which at £358,836 show a decrease of £6,421. The total revenue for the year at £935,115 shows a small increase of £536. We are able, after providing for debenture stock interest and sinking funds, the dividend on the five and a-half per cent. preference shares, and after making the same allocation to depreciation reserves as last year, to recommend again the payment of a dividend of 8 per cent. on the ordinary share capital.

The results obtained are due to the progressive reductions effected in the cost of manufacture and to the satisfactory turnover for the year, despite the serious setback sustained during the first three months, when building operations were almost brought to a sandstill by severe weather.

STATE OF BASIC INDUSTRIES.

The past year will long be remembered for the depressed conditions experienced in important industries, the collapse of the boom in speculation, and the severe financial losses suffered. For some it will stand out as a black year. Every avenue is being explored for an explanation of the wide extent of unemployment and the unsatisfactory state of our basic industries. Whatever the merit or outcome of the solutions recently offered, it is a good thing that many have been shaken out of a state of apathy and compelled to give a closer consideration to the fundamental causes of our industrial depression. Further, we have been helped to visualise the wide interests and responsibilities which we possess as citizens of a great nation and of an Empire offering unrivalled opportunity for commercial expansion. Nevertheless, it would be a fatal mistake to assume that any changes in our economic system can of themselves bring back prosperity. This cannot be achieved without we become less insular in our conceptions and more adaptable to the requirements of post-war conditions, less self-satisfied with past performance and better prepared to face the future with keener mental alertness and renewed energy and enterprise.

THE BANKS AND INDUSTRY.

The chairmen of the big banks rightly explain it is not their business to provide industry with permanent capital; they do not like frozen credits. There is no need for apprehension; there are ample financial resources and enough enterprise available in the City of London to help industries, ready for reconstruction on sound lines, whose management has not shown lack of vision with regard to policy or lack of understanding with regard to labour problems.

Recent references to the relations between the banks and industry give the impression that the banks have been backward in helping industry. Surely, this is far from being the case. Have not some of the banks been too generous in lending to plausible borrowers with little practical knowledge or experience, who, under the guise of helping industry, ply the trade of manufacturing share values on the Stock Exchange? (Hear, hear.) The operations of such borrowers are often aided by the astounding optimism of a section of the Press proclaimed to the accompaniment of personal paragraphs so flattering to vanity. Some journalists have shown an extraordinary aptitude for puffing new ventures and but little inclination for making intelligent inquiry or investigation on which to base a sound judgment for the benefit of their readers. We have passed through a period of boom flotations when almost anything could be pushed on to the gullible public. What a wonderful opportunity for the Press to have rendered service to its readers by sound commonsense advice, but how little it was availed of. It is not only the subscribing public that suffer, but also the industries concerned.

We are constantly being asked to interest ourselves in new processes and inventions. They sometimes look good on paper, but when tested by men of common sense and practical experience it is nearly always found impracticable to establish them successfully. Such propositions, however, often offer a ready opportunity for a rake off by the company promoter before their inglorious career ends in liquidation and extinction. How few inventions become commercially successful.

PRACTICAL EXPERIENCE NEEDED.

The salvation of industry will not come through its being run by the Government, banking institutions, or accountants; each of these may become an invaluable ally when rightly employed. Supreme control should be in the hands of those with practical experience and a record of successful management. Experience is one of the few things which cannot be found ready made. A good qualification for managing a big undertaking is to have made a success of a smaller one, and perhaps one of the greatest aids to expending wisely shareholders' money is to have had to expend money with the sure knowledge that failure touched one's own pocket. This experience automatically gives the feeling that it is one's own being ventured. Where industry needs reformation it must be reformed from within.

I do not believe any industry lacks men with the brains to reorganise. There are too many people pulling the strings of industry who have never been through the mill and gained a practical and technical experience. Those with practical experience should have a chance to work their way through. Do not call in a tinker to do a tailor's job or expect men eminent in the professions or clever theorists whose advice may be essential on particular issues, but who have not the experience or instincts of a manufacturer, to be best qualified to undertake the reorganisation of industry.

BOARD'S RECONSTRUCTION PROGRAMME COMPLETED.

The past year, the fifth since the reorganisation of the board and management, is an important one in the history of the company, because it marks the completion of the programme of reconstruction outlined when I first addressed you in 1925.

Before surveying the progress made during the period, may I again refresh your memory as to the programme itself and the policy on which it was based; for this purpose I will quote from my speech of that year. After reviewing the history of the company since its inception, pointing out the disabilities from which it suffered owing to over-capitalisation, I said:—

"What is the remedy? It appears to me there are two main methods of tackling such a problem. One is by the reduction of capital with corresponding depreciation of fixed assets; the other is by improving the value of the assets so that they more truly represent the figure at which they stand in the balance sheet. In our case I should like to see both these methods employed, but, frankly, under the present circumstances I consider there is no justification for writing down the capital.

"The policy advocated and adopted by the board is that we should improve the earning capacity of our assets by modernising our two largest works—Bevans and Swanscombe. I do not mean patching them up: I mean reconstructing them so as to give an efficiency at least second to none in the country."

That was the policy and programme promised. Let us now see how it has been fulfilled by our works control, by our selling organisation and what is the relative financial position of the company to-day as represented by the figures in the balance sheet in comparison with those of six years ago.

BEVAN, SWANSCOMBE AND CROWN WORKS.

At the Bevan works, which had been closed since 1921, 12 rotary kilns with a capacity of 250,000 tons per annum have been scrapped and an entirely new works constructed with four kilns having a capacity of 500,000 tons per annum. In addition, we have constructed a deep-water jetty which enables us to load direct cargoes for all parts of the world.

At Swanscombe we have replaced the original 16 rotary kilns by three modern kilns with a capacity of 400,000 tons per annum; further, the whole of the grinding and packing plants have been concentrated and modernised and electrically-operated excavators and up-to-date washing plant installed to handle the raw materials both there are at Bevans. In addition, the output of the Kent works, purchased in 1922, has been increased by 50 per cent.

At the Crown works, to avail of the best shipping facilities on the River Medway, the old plant has been scrapped and a modern rotary kiln has been installed. We have scrapped multiple steam and other power units by the installation of electrical power at our Thames, Medway and inland works.

PRESENT PRODUCTIVE CAPACITY.

Your company to-day has a productive capacity of a million and a-half tons per annum from efficient rotary kiln plants, which is fully 250,000 tons more than that aimed at in our original programme. (Applause.)

I do not want you to go away with the impression that we have merely modernised our kilns. Every stage in the process of manufacture has been tackled, and the complete plants brought up to date and to a state of efficiency second to none with the help of our research department and the adoption of our own technical methods, which are kept up to date by first-hand information from all parts of the world. At the same time that this heavy reconstruction work has been in progress we have improved our quality to a point that to-day Blue Circle products are a recognised standard. Our thanks are due to Mr. A. C. Davis, the managing director in charge of our works control, and to our engineering, technical and executive staffs for so successfully carrying through this programme. (Applause.)

THE SALES SIDE.

We will now see what has been accomplished on the sales side of the business, and it must be remembered it is more difficult to sell cement than to manufacture it. Since 1924 we have increased our sales in every department, and much enlarged the facilities for the prompt service of our customers. The hard task of maintaining an adequate margin of profit will be at once realised when I tell you that our group net selling price in all markets is 25 per cent. lower than five years ago. Because the raw materials can often be cheaply won it is wrongly assumed that the task of manufacturing and establishing a new brand of cement is a simple one. Few realise the slow rate of turnover of capital and other vital economic factors. I doubt if a single cement company established in this country within the last ten years has fulfilled the promises made in its prospectus. However, our sales organisation has increased the tonnage of Blue Circle cement sold, which to-day exceeds the aggregate tonnage of cement sold by all our competitors. A valuable goodwill and prestige has been established for all Blue Circle products.

FERROCRETE.

An outstanding sales feature is our successful marketing of Ferrocrete, the rapid-hardening cement. Ferrocrete has revolutionised concrete construction by the saving of time which it affords to users. We have, of course, had our imitators—this is the inevitable price of success—but Ferrocrete has easily maintained its supremacy. It is no longer a novelty but a necessity, as is proven by our rapidly increasing sales.

EXPORT TRADE.

Despite the keenness of foreign competition, aided by low wages, tariffs, favourable exchange rates, and sometimes by subsidies, we have expanded our export trade to a remarkable degree. Last year we exported close on 800,000 tons, an increase of 45 per cent. over the quantity shipped abroad in 1924. (Applause.)

This has been accomplished by improved overseas sales service. We have appointed representatives who reside abroad and study on the spot the requirements of our overseas customers. The sun never sets on the cement shipped from our works on the Thames to every part of the world. These results could not have been obtained had we not, by our works reconstruction, put ourselves in a position to compete by taking low prices. Our increased trade has absorbed to a considerable degree the reduction in the number of employees due to rationalisation.

THE HOME DEMAND.

The home demand for Portland cement has grown, stimulated by our intensive campaign of advertising and propaganda, supervised by General Critchley, for educating potential consumers as to the manifold uses of cement, but it must be remembered, if the picture is to be seen in the right light, that we have throughout the period laboured under an adverse condition common to the majority of industries in this little island. I refer to over-production, the nightmare of the manufacturer. It has been our constant evil companion through these years of effort. The productive capacity of the United Kingdom has increased at a higher rate than the growth of the consumption. We have had to contend with over-production, and, consequently, low prices. You will, I am sure, agree that the results obtained reflect the greatest credit on Mr Harold Anderson, our managing director in charge of our sales organisation, who is ably assisted by Mr Chapman in the export and Mr Charleton in the home market, and by an indefatigable staff and representatives. (Applause.)

SOME ILLUMINATING FIGURES.

I have outlined the nature of the improvements and extensions made at the works and of the expansion of sales in all markets. We will now see how the fulfilment of our programme has affected the financial structure of the company as set out in the balance sheet. Since the beginning of 1924 we have spent over £1,600,000 on reconstruction and new plant, yet to-day our fixed assets at £6,020,000 stand in our books at £566,000 less than in 1924. (Applause.) During the period the preference share capital has been increased by £35,000 and the ordinary share capital by £242,785 issued in 1927, and further by £500,000 issued in 1928, bringing up the total of the ordinary shares issued to £3,000,000.

We have increased the total share capital by £777,785, but we have, during the period under review, reduced the amount outstanding in debenture stocks, debentures and mortgages by no less than £777,182. The extinction of prior charges is thus within a few hundred pounds of the amount of fresh share capital subscribed. To get at the true position it is necessary to compare the surplus assets now available with those available five years ago. To-day our cash in hand, at bankers, on deposit, and investments in Government and other liquid securities at cost, less depreciation, stand at over £1,100,000, as compared with £44,000 six years ago, and the net improvement in our liquid assets position is some £375,000.

The investment account is a strong point in a sound balance sheet. All our investments in subsidiary and allied companies stand at a low valuation. The book value of our holding in British Portland Cement Manufacturers, Ltd., ordinary shares alone, is approximately £1,500,000 less than their market value to-day. (Applause.) No one is happier at the results obtained than Mr Alfred Stevens, who has for many years watched over our finances. (Applause.)

THE WORK OF THE LAST FEW YEARS.

To summarise the position, we have modernised and extended our plants, concentrating production in large units at economic sites, thus materially increasing the intrinsic value of our fixed assets; at the same time we have reduced the figure at which they stand in the balance sheet. Further, we have strengthened our financial resources. The net profits available last year for the service of the preference and ordinary share dividends were nearly three times as great as in 1924, although in that year £50,000 less was placed to depreciation. Lastly, but by no means of least importance, we have provided for our employees improved conditions.

While we have been steadily steering our good ship through the shoals we have had to ward off a heavy attack directed not only against our trade, but to capture the ship itself. During the fight we kept silent, confident in the ultimate issue. Now we are not only in port, but have refitted. (Applause.)

RATIONALISATION.

Thus have we rationalised our section of the industry; we set to work to do so before this term had become so hard-worked. What is rationalisation? The best simple definition I have seen is that it is the application of common sense to industrial problems. This definition certainly fits our case.

With our group of widespread works and reduced costs of production we are in a far stronger position than ever before to meet competition. During the early part of the period which I have just reviewed the operations of the Cement Makers' Federation enabled prices to be stabilised to a considerable degree. This was followed by a period of severe competition, from which the industry has not fully recovered. Price warfare is demoralising, and its effects are felt to-day. When I state we are in a strong position to meet competition it must not be inferred that we are looking for trouble; our record furnishes ample evidence that we appreciate the necessity for and the value of constructive work.

The tendency to-day is for rationalisation to displace the older methods of co-operation, such as gentlemen's agreements and cartels, which have proved invaluable. Rationalisation has already been successfully accomplished as far as our own extensive interests are concerned, and the ideal we hold steadily before us is to obtain the co-operation of others so as to extend it to the cement industry as a whole. Most objectives worthy of attainment take time and patience, but it is always well to have a goal to aim at.

OVERSEAS INVESTMENTS.

Just a word with regard to our investments in cement works situated in British Columbia, South Africa, Mexico and India. They have all done well during the past year, and their prospects are good. We are now engaged in doubling the plant of the Indian works, in which we are jointly interested with the British Portland Cement Manufacturers, Ltd.

The year has opened well, favoured by good weather. The demand for Portland cement is above the average for these early months, and there is evidence of much constructional work to be undertaken. Selling prices remain on the low side, but we should obtain from our reconstructed works the advantage of further economies provided these are not offset by increased prices for coal. Consequently, if the demand continues to improve, we hope to present to you a satisfactory report when we meet next year.

Before closing, may I again express our thanks to our staff, representatives, and employees at home and overseas for their hard work and loyal co-operation, which have been invaluable. I am sure that our shareholders will heartily support this. (Applause.)

The Chairman concluded by moving the adoption of the report and accounts and the approval of the dividends paid, and recommended to be paid, including a dividend of 8 per cent. on the ordinary shares.

TRIBUTE TO THE CHAIRMAN.

Sir Philip A. M. Nash, K.C.M.G., C.B. (the vice-chairman), said: Ladies and Gentlemen,—Before formally seconding this resolution I would like to make one or two remarks without which, I think, this occasion would not be complete. Our chairman, in a very interesting speech, devoted much of it to reviewing what we may call a five years' period of reconstruction, and he has, I am sure with our full approval, paid tribute to the able management and the able staff which have assisted in this reconstruction. As vice-chairman, I have been closely associated with the management throughout this period, and I would like, and I am sure I shall have the approval of the management and staff in doing so, to pay a proper tribute to the work of the chairman himself. (Hear, hear.) Mr Stewart has brought to us not only a wide experience of affairs generally, but he has brought to our counsels a long and unique experience of the cement industry. I hope that now that the period of reconstruction is over we may look forward to many years of his association with this company to show us the same powers of leadership and the same wide experience and good counsel that we have had during this vital period to this company. (Hear, hear.) I now beg formally to second the motion before the meeting. (Applause.)

The resolution was carried unanimously.

The retiring directors, Mr W. J. Firth and Mr P. J. Pybus, C.B.E., M.P., were unanimously re-elected, and the auditors, Messrs Crewdson, Youatt and Howard, were unanimously reappointed.

Mr R. B. Pearson, in proposing a vote of thanks to the chairman, managing directors and other members of the board, and all associated with the company, said that his task in doing this was rendered very much easier by reason of the admirable address they had just listened to from the chairman. (Hear, hear.) He expressed the hope that the widest publicity would be given to the admirable phrases Mr Stewart had used in regard to the sound policy required to be observed by all those interested in industry.

Mr E. G. Ridpath seconded the motion, and it was unanimously accorded.

A brief acknowledgment by the Chairman concluded the proceedings.

KERR, STUART AND COMPANY, LIMITED.

NEW TYPE OF DIESEL LOCOMOTIVE.

The nineteenth ordinary annual general meeting of Kerr, Stuart and Company, Ltd., was held, on the 31st ultimo, at Winchester House, Old Broad Street, London, Mr Herbert Langham Reed, the chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the year under review had proved very difficult for the company. Of the company's capital nearly a quarter of a million was invested in works which were laid out for the manufacture of heavy and light locomotives. The conditions prevailing in the industry had continued to be so depressed that it had become impossible for the company to secure orders of any magnitude except at unremunerative prices. As he stated last year, the fact that firms formerly manufacturing armaments had entered the locomotive industry had raised the manufacturing capacity to a point which far exceeded any possible demands. The normal output of the undertakings now manufacturing locomotives was estimated to be not less than 2,000 locomotives per annum, whereas the orders received in this country last year represented less than a quarter of that amount. As a result competition was very severe, and with prices at the present level it was impossible to get work at a figure that would show a profit. Continental competition remained acute Indian orders to the extent of approximately £1,000,000 had been placed with Continental manufacturers at an approximate price of 5 per cent. below prices of British tenders. To meet this difference in price, representations had been made by the industry in the proper quarter for some assistance, but so far there seemed little or no hope of any favourable response.

This year the position had shown improvement, and the works were now working to nearly full capacity, but in view of the very restricted nature of inquiries it was impossible to foresee any hope of continuity of the present position, and he feared that in the near future they might be without any serious heavy locomotive work in hand. During the year the company had put on the market the K.S. 7-ton Diesel Lorry, and this had met with considerable success. On a five-day weekly run of 600 miles per week the K.S. Diesel Lorry showed an annual saving of over £700 per annum as compared with a similar petrol lorry, and £670 over a steam lorry.

In the course of discussion the policy outlined by the chairman was generally approved, and the report and accounts were unanimously adopted.

MARCONI INTERNATIONAL MARINE COMMUNICATION COMPANY, LIMITED.

RECORD PROFITS.

The annual general meeting of this company was held on the 2nd instant, the Rt. Hon. F. G. Kellaway, P.C., J.P. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The balance of the profit and loss account is £203,111, the highest figure ever earned by your company. The measures which your board adopted when I became managing director, five years ago, for the improvement of your company's position, are now beginning to show their full effect—a very heartening augury for the future. At this point I hope you will permit me to give you the round figures of the company's profit for each year since 1923. In 1923 the profit was £85,000; in 1924, £83,000; the changes in the administration of your company were made at the end of 1924, and progress since then has been steady and satisfactory. In 1925 the profit was £118,000; in 1926, £126,000; in 1927, £179,000; in 1928, £193,000, and in 1929, £203,000. These encouraging results have not been secured by increasing charges to the shipowners. On the contrary, taking our contracts as a whole, there has been a decrease in our charges.

I will now deal with the appropriation account. The amount brought forward from the 1928 accounts was £36,688, from which is to be deducted the £1,500 additional remuneration voted to the directors at the last annual general meeting, leaving a net carry forward of £35,188. Adding to this the net profit for 1929, we arrive at a total of £238,299, of which £59,636 was distributed as an interim dividend on October 29th last. The net amount available for distribution as a final dividend thus becomes £178,663, from which the directors recommend there should be appropriated an amount sufficient to raise the general reserve account from £158,013 to £200,000. They then recommend the payment of a final dividend for 1929 of 10 per cent., involving the distribution of £119,272, and leaving a carry forward to the 1930 accounts of £17,404.

GENERAL MATTERS.

Passing now to more general matters. There was an increase during the year in the number of launches from British yards of vessels of 1,600 tons and over; *i.e.*, those which come under the compulsory wireless law. This increase is reflected in the present accounts. By the end of 1929 your company held maintenance and rental contracts in respect of 2,758 British ships, a large proportion of which carry direction finders and auto-alarm apparatus in addition to the main installations. The number of sea-going operators on the company's pay roll at the same date was 3,136. An unusual volume of non-recurrent expenditure was necessary throughout 1929 to enable the company to maintain the technical lead in marine wireless apparatus which it has always held. Provision had to be made to meet the requirements that any ship fitted on or after 1st January, 1930, should have interrupted continuous wave or continuous wave transmitters if an outfit of more than ½ k.w. power was required. Also in 1929 the use of short-wave telegraph apparatus became more general for the rapid handling of traffic to and from ships at sea, and gear had to be perfected to meet this growing need. Coupled with this came the necessity for design of a marine wireless receiver fulfilling the very searching requirements of sea-going conditions in all climates that would enable operators to receive signals on any wave length between 15 and 20,000 metres. It will be of interest to you, and will be a very valuable earnest of the position in which your company stands with its shipowner clients, when I say that a prominent personality in the shipping world co-operated with our technicians in the evolution of this piece of apparatus which is characterised by competent persons as the best marine receiver yet produced. It is to be adopted by your company as standard on all passenger vessels.

The utility of your company's short-wave wireless equipment is clearly demonstrated by results achieved with sets of only 500 watts power used by whalers in the Southern Seas, which communicate nightly with Bergen in Norway and Portishead in England, over a distance of more than 7,000 miles.

As in 1928, so in 1929, there were no labour troubles in the British shipping world, and the conduct of affairs proceeded smoothly. While at the moment there is nothing clouding the outlook for 1930, your directors are inclined to make a cautious forecast. The amount of business so far secured this year is in advance of last year, but there is a tendency to increase the number of ships laid up. Taking everything into account, however, and bearing in mind that the financial position of your company has never been stronger nor its potentialities more evident, your directors incline to a feeling of restrained optimism for 1930.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the nine days ended March 31, 1930:—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS	£
Supply Services	15,924	From Revenue	29,118
Interest, &c., on Debt	234		
Sinking Fund	1,157		
Sundries	2,303		
Decrease in Debt	6,081		
Increase in Balances	3,419		
	29,118		29,118

The revenue for the last nine days of the financial year amounted to £29,118,400. Income tax brought in £11,891,000, and surtax and super tax £5,770,000. Customs amounted to £2,634,000 and Excise to £900,000, while ordinary receipts yielded £257,100 and special receipts £1,426,400. The National Debt was reduced by £6,081,000, as shown below:—

(000's omitted.)

	£		£
National Savings Certificates	+ 50	Treasury Bills	− 10,004

INDIA COUNCIL REMITTANCES.

No remittances were made by the Government of India to the Secretary of State for India in Council during the week ending March 29, 1930.

BULLION.

The following statistics of imports and exports of gold for week ended April 3, 1930, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported int oGreat Britain and Northern Ireland.	£	Exported from Great Britain and Northern Ireland.	£
From—		*To*—	
France	1,820	Poland	1,710
Brazil	45,720	Germany	78,500
Argentine Republic	26,000	Belgium	1,490,036
British West Africa	37,642	France	9,860
British South Africa	968,296	Switzerland	15,360
		Austria	8,875
		British India	107,634
		Other countries	468
Total declared value of imports	1,079,478	Total declared value of exports	1,712,443

GOLD MOVEMENTS

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1930.	ARRIVALS.	£	1930.	WITHDRAWALS.	£
Mar. 28		Nil	Mar. 28		Nil
,, 29		Nil	,, 29		Nil
,, 31	Sovs. from abroad	25,797	,, 31	Sovs. for export	2,000
	Bars bought	40	Apr. 1		Nil
Apr. 1		Nil	,, 2		Nil
,, 2	Bars bought	11,600			
,, 3		Nil	,, 3		Nil
	Total	37,437		Total	2,000

Net arrivals, £35,437.

Messrs Samuel Montagu and Co. write on April 2, 1930, a follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £155,143,878 on the 26th ultimo (as compared with £153,458,058 on the previous Wednesday), which once more shows an increase (*i.e.*, of £1,237,563) over the holding on April 29, 1925—when an effective gold standard was resumed. In the open market yesterday £969,000 of South African bar gold was available. There was a resumption of demand for Germany and at the fixed price of 84s. 10½d. per fine ounce, about £932,000 was taken for that country. The small balance was absorbed by the usual Indian and trade requirements. Movements of gold as announced by the Bank of England show a net influx of £1,036,467 during the week under review. Receipts amounted to £1,038,467, which included £1,000,000 in sovereigns from Australia.

SILVER.

The market has been quiet during the week under review. Buying for the Indian Bazaars on the 27th ultimo raised quotations 3/16d. and ⅛d. to 19⅝d. and 19½d. for cash and two months' respectively, but subsequent movements were towards a slightly lower level. The demand from India has been both for covering bear sales and for early shipment, but purchases for the latter purpose have been offset to some extent by forward selling from the same quarter. Continental sales and re-sales of silver by China have added to supplies, but America has been perhaps less active as a seller, being inclined occasionally to give a little support. The following were the United Kingdom imports and exports of silver registered from mid-day on the 24th ultimo to mid-day on the 31st ultimo:—

IMPORTS.	£	EXPORTS.	£
Germany	20,776	Hong Kong	26,951
France	131,738	British India	107,629
British India	87,869	Other countries	8,208
Other countries	4,397		
	£244,780		£142,788

No fresh Indian currency returns have come to hand.

The stocks in Shanghai on the 29th ultimo consisted of about 95,000,000 ounces in sycee, 141,000,000 dollars, 22,400,000 Saigon dollars and 15,460 silver bars, as compared with about 94,600,000 ounces in sycee, 139,000,000 dollars, 23,500,000 Saigon dollars and 17,600 silver bars on the 22nd ultimo.

Statistics for the month of March last are appended:—

	BAR SILVER per oz. std. Cash delivery.	Two mos. delivery.	BAR GOLD. per oz. fine.
Highest price	20d.	19 13/16d.	84s. 11½d.
Lowest ,,	18⅝d.	18½d.	84s. 10d.
Average ,,	19·298d.	19·091d.	84s. 11·01d.

Company News.

REPORTS AND NOTICES.

The British North Borneo Company announce that Mr A. F. Richards, of the Malayan Civil Service, has accepted the appointment of Governor of the State of North Borneo in succession to the late Mr J. L. Humphreys.

The Guardian Investment Trust Company, Ltd., The Second Guardian Trust, Ltd., and The Third Guardian Trust, Ltd., move to new offices on February 17th at Crosby House, Great St. Helen's, Bishopsgate, E.C. 2. Telephone No. Avenue 7321/4.

Cordoba Central Railway Co., Ltd., announces that at a meeting of the board held on February 26th, Brig.-General G. H. Harrisson, C.M.G., D.S.O., M.Inst.C.E., was appointed a director of the company in place of the late Mr. J. Percy Clarke.

The Royal Exchange Assurance *announces that Sir Thomas* Sivewright Catto, Bt., a partner in the firm of Messrs. Morgan, Grenfell and Company, deputy-chairman of the Mercantile Bank of India, and a director of Andrew Yule and Company, Ltd., and Yule, Catto and Company, Ltd., has been elected to a seat on the court of directors at head office.

Captain George J. R. Cooper has joined the boards of the Reversionary Interest Society, Ltd., and the Equitable Reversionary Interest Society, Ltd.

We are officially informed that Mr. William McColin Kirkpatrick has joined the board of Allied Cement Manufacturers, Ltd.

MISCELLANEOUS.

NESTLE AND ANGLO-SWISS CONDENSED MILK COMPANY.—Profit for 1929 was 30,272,320.87 francs, to which is added brought forward from 1928 of 6,210,961.98 francs. The board proposes allocation to statutory reserve, 1,125,638.09 francs; preference dividend, 4,023,199.25 francs; statutory dividend for 1929 of 5 per cent. on the ordinary capital of 97,500,000 francs—or 10 francs per share—4,875,000.00 francs; to pension and provident funds, 1,500,000.00 francs; to special reserve, 8,000,000.00 francs. Of the balance, 10,748,483.53 *francs*, 5 per cent. will be utilised in payment of tantiemes to the board of directors, 537,424.18 francs, leaving 10,211,059.35 francs, *to which must be added the* balance brought forward from 1928, 6,210,961.28 francs—16,422,021.33 francs; payment on May 1, 1930, of a supplementary *dividend for 1929* of 22 francs per share on the 487,500 ordinary shares, 10,725,000.00 francs; leaving to be carried forward, 5,697,021.33 francs, of which the board of directors shall be authorised to distribute on July 1, 1930, and January 1, 1931, the amounts required for the payment of the half-yearly dividends on the preference capital of £2,000,000, which will require £160,000, or about 4,040,000 francs. The general meeting of shareholders will be held on Wednesday, April 16th, at Cham, Switzerland.

S.T.D. MOTORS, LIMITED.—*A series of meetings of* S.T.D. Motors, Ltd., was held on March 24th for the purpose of considering a scheme of capital reorganisation. *Mr James Todd* (the chairman of the company), who presided, explained that the scheme had for its objects the dealing with the arrears of preference dividend, and the adjustment of the balance sheet to accord with the true position. After utilising the reserves and the carry-forward, the amount necessary to provide worked out at £929,738, or the equal of 13s. 4d. per share of the issued ordinary share capital. The profits for the year ending September 30th last, subject to completion of audit, were shown to be £135,435. The necessary resolutions were carried by overwhelming majorities at each meeting, both on a show of hands and on polls.

SWAN AND EDGAR.—The scheme for the creation of preference shares referred to in *The Economist*, March 15th, page 595, and March 22nd, page 681, has been abandoned.

WEEKLY TRAFFIC RETURNS.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Spring sowings are nearing completion in most parts of the country under ideal climatic conditions, and with warm showers to assist germination, agricultural prospects could scarcely be better. All autumn and winter crops present a healthy appearance, and a full yield is anticipated. Offerings of native wheat continue on a small scale and prices continue to harden, though demand is slow to improve. On the import market, prices have maintained a firm tendency following the efforts on the part of North American holders to stabilise the position. Adequate supplies of grist, however, are available on this side, and consumers adopt a reserved attitude pending further developments regarding the disposal of large surplus stocks in Canada and the United States. France has renewed export licenses for considerable quantities of wheat and flour, and liberal sales of the former were made on United Kingdom account at attractive prices, while it is estimated that sufficient quantities are available to cover the needs of deficiency countries up to June. The increased German tax on imported wheat points to a cessation of overseas purchases, and with Russian offerings more in evidence, the marketing of North American supplies becomes increasingly difficult. It is reported that official measures are likely to be adopted, including the compulsory milling of a certain percentage of native wheat in this country, similar to regulations prevailing on the Continent, thus providing an outlet for native produce at remunerative prices. Some relief would be welcomed against the obviously unfair method of dumping surplus supplies of grain from near Continental countries on United Kingdom markets, under a bounty system, whereby growers here are frequently forced to compete at prices under cost of production. Of feeding stuffs, old crop maize commanded higher rates owing to scarcity of available supplies, but consumers operate cautiously regarding the new Plate crop, of which reports are satisfactory. Barley and oats firm, but business proceeded on quiet lines.

WHEAT.—Firmer. No. 1 Northern Manitoba (Vancouver shipment), ex ship, 44s. 3d.; No. 2 ditto, 43s. 6d.; No. 3, 42s. 6d.; No. 4 Manitoba, 41s. 6d.; No. 5 ditto (Atlantic shipment), 40s. 6d.; No. 6 ditto, 32s. 6d.; Rosafe, 62½ lbs., 40s.; Barusso, 62½ lbs., ex ship, to arrive, 39s. 3d.; Australian, 41s. 6d. per 496 lbs. English, 8s. 2d.-8s. 4d. per 112 lbs.

FLOUR.—Steady. London straight run, 36s. per sack for country deliveries and 35s. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 33s. 6d.-36s. 6d.; Australian, 31s.-32s., ex store on c.i.f. terms. Manitoba top patents, March-April, 33s.-33s. 3d.; export ditto, 30s. 6d.-31s.; Australian, 28s.; French, prompt, 26s.-27s. 3d. per 280 lbs. Argentine, low grade, March-June, £6 per ton.

MAIZE.—Easier, following reduced c.i.f. offers. Plate, landed, 29s. 3d.; ex ship, 28s. 3d.; March-April, 27s. 3d.; new, April-May, 26s. 3d.; May-June, 25s. 9d.; June-July, 25s. 9d. per 480 lbs. Yellow maize meal, £8 5s. per ton f.o.r. London. Yellow African, £6 5s.; white, £6 2s. 6d. per ton ex ship.

BARLEY.—Steady. Californian old, landed, 36s.-42s.; new, ex ship, 36s.-42s. as to sample; Chilian brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs. Black Sea on sample, landed, 20s. 6d. ex ship f.a.q., 18s. 9d.; Persian, landed, 18s. 6d. per 400 lbs. English malting, 7s.-11s. 6d.; feed, 6s. 6d.-6s. 9d. per 112 lbs.

OATS.—Firmer. Plate, landed, 15s. 6d.; ex ship, to arrive, 14s. 9d.; Chilian, white, 21s.; ditto, tawny, 16s. 6d.; German, landed, 19s.; ex ship, to arrive, 17s. 6d.; South Russian, ex ship, 14s. 9d.; North, ditto, 14s. 6d. per 320 lbs. English, 5s. 8d.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929–30, 1928–29, 1927–28, 1926–27:—

	1929–1930.	1928–1929.	1927–1928.	1926–1927.
Estimated sales of home-grown wheat—				
1 week to March 29	Qrts. 182,769	Qrts. 105,458	Qrts. 286,826	Qrts. 186,011
30 weeks to March 29	7,352,306	7,982,138	7,743,739	9,593,483
Average price of English wheat per cwt.	s. d. 8 3	s. d. 9 9	s. d. 10 0	s. d. 11 7

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Qrt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Qrts.	Qrts.	Qrts.	s. d.	s. d.	s. d.
Mar. 22	157,079	149,076	35,560	8 3	7 8	6 0
Mar. 29	182,769	125,678	29,852	8 3	7 10	5 11
Mar. 27, 1926	176,683	104,858	49,884	11 7	9 0	8 10
Mar. 26, 1927	215,752	107,409	68,150	11 8	11 0	8 2
Mar. 31, 1928	286,826	110,069	53,854	10 0	10 11	11 0
Mar. 30, 1929	105,458	61,881	30,310	9 9	10 3	9 9

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	Apr. 3, 1929.	Jan. 2, 1930.	Mar. 19, 1930.	Mar. 26, 1930.	Apr. 3, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	124½	148⅜	108⅜	108⅜	110½
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	118½	130⅞	104⅜	105½	111½

The visible supply of wheat in Canada at 75,266,000 bushels shows an increase on the week of 229,000 bushels. Supplies a year ago stood at 88,828,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Conditions at the South Yorkshire Collieries are worse owing to over-production, but the market has steadied somewhat, and there is no further easing of prices. Forward business continues as restricted as ever, although there is rather more inquiry on export account. The position continues irregular and uncertain. Consumers are holding off to enforce cheaper blast-furnace coke, and have succeeded to the extent of several shillings. New business was negligible through the last quarter of the year, and coke has been sold on the open market as low as 14s. 6d. per ton at ovens.

Our Glasgow correspondent writes:—Dullness in the Scottish coal trade is becoming accentuated by the seasonal falling-off in home demand. There has been no improvement in shipping trade, and a good many of the collieries are having to resort to short-time working. Prices are weak, and even navigation sorts, which up to the present had been one of the few steady spots throughout the present spell of dullness have now given way. To-day's prices for shipment are approximately as follows (all f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 9d.; splint best, 17s. 6d.-18s.; splint second, 16s. 6d.; navigation, 16s. 6d.; navigation second, 14s. 6d.; Hartley, 18s.; steam, 13s. 6d.; trebles, 12s.; doubles 11s. 6d.; singles, 11s.; pearls, 11s.; dross, 10s. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 12s. 9d.; third-class steam, 11s. 6d.; trebles, 12s.; doubles, 11s. 6d.; singles, 11s.; pearls, 11s. LOTHIANS.—Prime steam, 12s. 6d.; secondary steam, 12s. 3d.; trebles, 11s. 6d.; doubles, 11s. 6d.; singles, 11s. 3d.; pearls, 11s. 6d. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 11s.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—There has been no improvement in the situation on the Cardiff coal market. Current inquiries have been very inactive and collieries have depended almost entirely on their contracts. The supply of tonnage has slightly improved, notwithstanding the fact that rates continue extremely low, but the docks are only partially employed, and on Tuesday 26 tips were reported idle. Monmouthshire coals remain relatively the strongest feature of the large coal market, and a renewal of the Egyptian State Railways contract is anticipated this month. Prices have ruled generally in the neighbourhood of the minimum figure, but owing to the irregular working of some of the collieries, smalls are in diminishing supply and washed dry duffs are particularly firm at the moment. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 24s. to 27s. 6d.; machine-made cobbles, 41s. to 45s.; French nuts, 41s. to 45s.; stove nuts, 41s. to 46s.; rubbly culm, 11s. to 11s. 6d.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 26s. to 26s. 3d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Although the iron and steel markets continue quiet, there has been more inquiry of late. A great deal of this seems to be of a tentative nature, but it is considered an indication that there is a tendency for business in iron and steel to expand. The British works are still short of orders, but similar scarcity of new business is being experienced by the Continental steel makers. In the pig-iron department the reduction in the prices on the North East Coast led to a certain amount of buying; but this activity has been barely maintained. In the inland districts quiet trading conditions rule and iron is reported to be going into stock. Imports of Cleveland iron in Scotland, and to a smaller extent on the North East Coast, make matters difficult for the British producers. The demand for semi-finished steel materials is irregular, and consumers appear to be limiting their purchases to their barest needs. A certain amount of business has passed to the Continent, but British makers have obtained a fair share of the transactions. In the finished steel department most of the business passing has consisted of small orders for near delivery, and the export markets, although inquiring more freely, have bought only sparingly. A satisfactory feature has been the placing of a Canadian order involving between 2,000 and 3,000 tons of steel.

Our Middlesbrough correspondent writes:—The market for Cleveland iron is steady and a fair amount of business is being transacted with local and inland consumers at the recently reduced prices for delivery over this and next month. For delivery further ahead, however, little interest is shown, as buyers are waiting for the Budget. Scotch consumers have not responded to any material extent by making purchases at the reduced quotations, but a little business has been done and more is looked for as their contracts in other directions are worked off. Continental foundry iron, however, is still obtainable substantially below Cleveland delivered to the Scotch consumers' works. At the weekly market on Tuesday the tone was fairly cheerful. Makers reported a steadily improving business for early delivery at 67s. 6d. for No. 3, but there was only a very poor demand for forward. No. 1 was 70s.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s., f.o.b. or f.o.t. In the hematite trade demand is still of a hand-to-mouth nature. A few small parcels have recently been booked for export and also for home use, but consumers are acting very cautiously pending further light on the situation. Ordinary mixed numbers are again lower and are now obtainable at 75s. 6d. per ton, with 6d. per ton extra for No. 1. Shipments from Middlesbrough for March as compared with the previous month are as follows:—

	February.	March.
	Tons.	Tons.
Pig iron	16,168	20,208
Manufactured iron.....	1,404	2,204
Steel.....	48,019	58,579
Tons.....	65,591	80,991

There is little new business in the steel trade and in some departments orders are being worked off with nothing to follow on. In the heavy lines, however, there are still important contracts on the books and more are expected shortly. Prices are generally unchanged from last week. In the ore market there is no movement, consumers still holding off the market. Best Bilbao rubio is offering at 21s. 6d. c.i.f., and the current freight Bilbao-Middlesbrough is about 5s. 9d. Coke continues in abundant supply for early delivery, but there is little demand. Ordinary blast-furnace qualities are now obtainable at 19s. 6d. per ton delivered works.

Our Sheffield correspondent writes:—No indications of improvement in the steel trade are forthcoming, and there is a continued absence of contracts and inquiries, and a multiplicity of small orders. The only cheerful incident in trade has been the booking of large and valuable orders for seamless steel drums for high-pressure boilers. Two local firms specialise on this modern class of forging, and these have lately secured orders for 100 drums, representing 7,000 tons of steel and nearly £100,000 in value. One of the orders is for the Continent, and was obtained by Sheffield in the teeth of severe German competition. The present quietude extends to all classes of commercial steels produced in Sheffield. Supplies to the motor industry, although still considerable, are below last year's level. The pig-iron market is stagnant as regards forward bookings, and consumption, especially at the light castings foundries, is on a reduced level. The Lincolnshire iron and steel works continue busy, and are able to compete with Continental prices in sheet and steel bars.

Our Glasgow correspondent writes:—The position in the iron and steel industry in Glasgow and the West of Scotland generally is no worse. In the pig-iron market business remains quiet, with inquiries and orders somewhat scarce. In the steel trade production is at

much the same rate as during the past few months, with an irregular distribution of the work as between one plant and another. Sheet-makers report a better demand for black sheets for export, and this week there has been an increase in the number of mills in operation. Tube makers are able to keep plants going, but the bookings for forward delivery are not at all satisfactory.

Our Cardiff correspondent writes:—In the tinplate trade prices have been well maintained, and contracts have been placed on the basis of 18s. 3d. to 18s. 6d. per box well into the fourth quarter of the year. The firmness of tin has helped to expedite forward business. Galvanised sheets are unaltered at £11 17s. 6d. to £12 5s. per ton, and tinplate bars, foreign as well as native, are stationary at last week's prices of £5 9s. and £6 10s. respectively. Scrap prices are a shade easier.

OTHER METALS.

TIN.—The market opened with a firm tone on improved Eastern advices and a fair demand, but later prices reacted sharply on expected heavy shipments during April, causing buyers to adopt a reserved attitude. The decrease in total visible supplies at the end of March was less than anticipated, and which gives little evidence of the restrictive output now being adopted by producers. Statistics for March: U.K. stock and landing, 16,326 tons, against 15,012 in February and 8,790 at same period last year; total visible supplies, 32,328, against 32,891 in February and 25,621 last year. Shipments from the East amounted to 7,795 tons, of which 4,400 tons were to America, 625 United Kingdom, 2,015 Continent, and 745 other countries. Standard cash changed hands at £171 to £163 15s. and £165; three months, £172 15s. to £165 10s. and £166 10s. Sales in the East were reported at £172 7s. 6d. to £174 7s. 6d. and £169 17s. 6d. ton c.i.f.

COPPER.—Irregular and easier for near delivery, but forward positions fairly steady, with dealings on a fair scale. Standard cash, sold at £70 5s., £69 17s. 6d. and £70 2s. 6d.; three months, £68 5s., £68 15s. and £68 5s. ton.

LEAD.—In fair support and market generally steady. Good soft foreign pig, April sold, £18 17s. 6d.-£18 15s.; May, £18 16s. 3d.; June, £18 17s. 6d.-£18 15s.-£18 16s. 3d.; July, £18 18s. 9d.-£18 16s. 3d.; September, £18 17s. 6d. ton.

SPELTER.—Easier under liberal offerings. April, sold, £18 11s. 3d., £18 2s. 6d. and £18 5s.; May, £18 15s. to £18 7s. 6d. June, £18 18s. 9d., £18 13s. 9d.; July, £19 1s. 3d. to £18 17s. 6d. and £18 18s. 9d. ton.

ANTIMONY.—Quiet. English regulus, £40 to £46 10s.; Chinese, ditto, spot, £29 10s.; April-May, £26 10s. to £27 5s.; Chinese, crude, April-May, £17 5s. per ton c.i.f.

ANTIMONY OXIDE.—April-May, £26 5s. per ton c.i.f.

ANTIMONY ORE.—50 per cent., April-May, 3s. 6d.; 60 per cent., ditto, 4s. per unit c.i.f.

WOLFRAM.—Slow. Chinese, April-May, 26s. 6d.; Burmese, ditto, 26s. per unit c.i.f.

ALUMINIUM.—Steady. Home trade, £95; export, £100 ton.

QUICKSILVER.—Quiet. Spot, £22 10s. per bottle, less 3 per cent.

ZINC OXIDE.—Steady. Spot, £29 to £36 per ton, delivered London.

TIN PLATES.—Quiet. I.C. coke, prompt and forward, 18s. 3d. to 18s. 6d. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL: April 2nd.

Cotton prices show an appreciation of about ½d. per lb. from those ruling a week ago:—

	May.	July.	October.
Close to-day	8·38	8·48	8·40
„ Wednesday last	8·12	8·15	8·15
High prices for the week	8·41	8·44	8·42
Low „ „ „ „	8·11	8·13	8·14

Though the volume of business has shown a distinct falling off, short covering by the spot interests in America has been mainly responsible for the advance. The straddle difference of the near positions between here and America has narrowed considerably. The advance in prices has brought in practically no fresh business, and buyers seem to be waiting for further news of the Farm Board's intention and decreased acreage prospects. Spot sales for the week March 27th to April 2nd (inclusive) are 34,000 bales, of which 18,680 bales are American, 6,200 Brazil, 2,700 Peru, 4,050 Egyptian, 990 African, 900 East Indian, and 480 sundries. Imports for the same period are 34,070 bales, of which 17,736 are American, 172 Peru, 13,021 Egyptian, 1,110 African, 387 East Indian, and 1,644 sundries. Quotations to-day: American Middling, 8·83; Egyptian Sakel, 14·75, Uppers, 10·49; Brazil Fair, 8·30; Peru G.F. Smooth, 9·40; West African Middling, 8·75, and East African, 9·85.

MANCHESTER: April 2.

The tone of the market has been firmer, in sympathy with the further hardening movement in raw-material rates. The larger inquiry in yarn and piece-goods has been maintained and although many difficulties have been met with in arranging sales, the turnover has continued rather more encouraging. The most active outlet in cloth has been India and a considerable demand has been experienced. Steady buying has taken place from day to day in dhooties, light bleaching descriptions and fancies, the majority of the transactions being for Calcutta. Operations for China have been quite isolated, and trade developments on the other side are being checked by the uncertain political situation. Sorting-up lots for several minor outlets East and West have been rather more numerous, but manufacturers have complained of bids being very low and the prices ruling in all sections remain unsatisfactory. Some useful lines have been booked in home-trade fabrics. The turnover in American and Egyptian yarns continues rather better. Attempts on the part of spinners, however, to improve prices are seldom successful. The larger demand in ring beams indicates that preparations are being made to restart idle looms.

THE WOOL TRADE.

Our Bradford correspondent writes:—Notices of a general reduction in wages based on Lord Macmillan's recent report and recommendations have been posted throughout the West Riding industry, and as the union members have indicated that they will cease work rather than accept the reduced rates, it is probable that a stoppage will result. Many traders, however, are inclined to think that a strike will not last long, especially as the majority of the workers in the industry are not members of any trade union. That the outlook is not regarded with any serious misgivings may be gathered from the fact that since the notices were posted in the mills there has been quite an extensive buying movement in wool and tops. To some extent this may be due to the belief that wool prices are likely to be higher rather than lower in the near future,

EQUITY & LAW
LIFE ASSURANCE SOCIETY.
ESTABLISHED 1844.
18 Lincoln's Inn Fields, London, E.C. 2

QUINQUENNIAL ANNOUNCEMENT,
Extract from Bonus Report, 1929.

Amount of Life Assurance Fund as at 31st December, 1929	£8,704,234
Liabilities brought out by the Valuation ...	7,664,084
Surplus	£1,040,150
Surplus now divided	£803,474
Interim Bonus paid during Quinquennium with Interest thereon	83,509
Surplus divisible in respect of Quinquennium ending 31st December, 1929	£886,983

The rates of Bonus range from £2 2s. per cent. per annum to upwards of £4 per cent. per annum.

In addition to the reserves, as brought out by a very stringent valuation, the Society has made the following SPECIAL RESERVES:

INVESTMENT RESERVE FUND ...	£100,000
CARRIED FORWARD	£203,629

The sum of **£714,776** now apportioned to Policies participating amounts to two-fifths of the aggregate premiums paid, or assumed to be paid, during the quinquennium in respect of such Policies. The minimum rate of Interim Bonus has been fixed at **£2 2s.** per cent.

TOTAL FUNDS EXCEED	£8,900,000
NEW SUMS ASSURED in 1929	£2,043,719

FOREIGN AFFAIRS

25 West 43rd Street, New York, N.Y.

but those who have bought during the last few days evidently think that very little interruption will occur owing to the wages dispute. Prices have taken on a firmer appearance, nor is this to be wondered at in view of the cost of replacement based on values ruling in London. It seems probable that with the labour problem out of the way the industry would stand a fair chance to recover some of the ground that has been lost in recent years, for with cheap raw material and a low Bank-rate, there is some incentive to look more to the future than has been possible during the period of falling markets. There has been a spurt in the seasonal demand for piece-goods where delivery can be guaranteed, but in some cases manufacturers are having to turn down offers because of their inability to guarantee a date.

COLONIAL WOOLS.

[FROM A CORRESPONDENT.]

The demand for all classes of wool in London continues to be satisfactory. The improvement in prices is still in evidence, many descriptions being 5 per cent. dearer than at the opening. For crossbreds, the better prices are probably most in evidence in anything up to 48's quality, the call for coarse crossbreds being as keen as ever. It seems strange to find coarse crossbreds realising from 10d. to 10½d., and 50's only ½d. to 1d. more. The home trade has given excellent support this week, and there has been better demand from France and Germany. There is evidently a universal belief that wool is at the bottom, for all firms are disposed to buy freely. This better buying spirit is also in evidence in overseas markets, and there is now every likelihood of the balance of the Australian clip being easily absorbed. The improvement in prices is maintained, particularly in Australia, and the sales in New Zealand will close in about a fortnight with very little wool held over. The London sales will finish next Wednesday. It is to be hoped that the better demand for wool during recent weeks will prevent any more impracticable suggestions being made by Australian growers. It would be futile to ask the British Government to purchase a whole Australian clip. Pastoralists may be recommended to finance wool themselves if any such necessity arises. It may be safely expected that values will right themselves when trade revives. The low values now current will not last for ever, and a year or two of cheap wool will help to bring it back into public favour. Wool values have simply declined in sympathy with other commodities. The paramount need in manufacturing districts is the development of sufficient business to employ more machinery. Even now, with a strike hanging over the trade, there are prospects of improvement. Inquiries for tops have been made on a rather big scale, and there has been some quiet buying on the part of home-trade spinners.

HIDE, LEATHER AND ALLIED TRADES.

Hides from home-slaughtered cattle were inclined to be lower in price at the auctions held in the north during the early part of this week, second and third warbled ox and heifers making ⅛d. per lb. less money at the Manchester sales, while both clear and warbled cows were easier by ¼d. per lb. Calfskins were a trifle dearer for light weights, with others unchanged from the previous week. A better feeling is apparent in the market for imported hides. For the time being, tanners are confining their purchases to immediate requirements, and in view of the fact that for certain descriptions of African hides higher prices are being quoted, trade passing in these goods has inclined to contract. In the South American market a fair amount of business has been put through on account of the United States, and Argentine ox have been sold at 8¼d., with light ox realising 7⅜d., and Montevideo ox 8 5/16d. The Leibig Company held an inscription sale last week of 16,000 Colon hides which realised from 6⅝d. to 7¼d. for lights and from 7 3/16d. to 8d. for heavies. Better business has been done in dry River Plates, sales of B.A. Americanos having been effected at 8d., M.V. Americanos at 9d., and samour-haired River Plates at from 6⅜d. to 6¾d. Cape hides are quoted at 8¼d. and 7¼d. for first and second drys, with 7⅞d. and 6¾d. asked for dry salted. Sales of unbathed Adis Abebas, 12 lbs. and up, have made been at 6¾d., while Mombassas 30/40/30 have been on offer at 6⅝d. Australians are slightly dearer at origin. All things considered, a steady trade is being done in connection with most descriptions of bottom leather, and with nothing in the way of accumulations the majority of holders are firm on asking prices for the stock available. Manufacturers of footwear come into the market for limited quantities of light to medium weights in bends, while there has been an improvement in the call for lines suitable for the repairing trade. In connection with this latter section the tendency for buyers is to take the better qualities, with the result that common tannages in bends are not much in evidence. The market for offal is inclined to be a little quiet, and on certain substances of both bellies and shoulders prices have a tendency to be weaker. In the upper leather section a regular day-to-day trade which covers most classes is the experience of the majority of producers and merchants. The call for box and willow calf has not been quite so good, and in certain directions a slight falling-off in the inquiry for glacé kid has also been experienced. Patent leather maintains a fairly regular sale, while the recent improvement in the call for suede leather for shoe purposes has further developed, and at the present time quite a respectable trade is being done in this class of goods. Semi-chrome leathers are quiet, but curriers report a slightly better inquiry for kip butts and splits. Orders coming to hand for footwear are still on the small side, and in several of the producing centres a short working week continues to be the rule in some factories.

VEGETABLE OILS AND OILSEEDS.

Moderately active conditions rule, and markets generally are steady. Linseed, on passage to Europe, is comparatively small, and "spot" and near positions are at a premium over the more distant. Crushers, however, are only purchasing sufficient to cover immediate oil commitments, as stocks of oilcake continue heavy, despite reduced prices and an improved demand. Plate on spot and passage is quoted £18 2s. 6d., and for shipment £17 12s. 6d. Calcutta linseed to Hull has been done at £18 12s. 6d., April-May. The lower levels of cottonseed prices brought in buyers, but there is reluctance to follow the advance, though for black Egyptian to Hull, May loading, £7 15s. has been conceded. Spot is held for £7 18s. 9d., and May and June for £8. In the oil section linseed oil is steady, though inclined to be irregular. Raw oil on spot is quoted £40 5s., and for April delivery £39 10s. A parcel of over one thousand tons of linseed oil has arrived at Hull this week from Russia. Apart from this, imports continue high. Cotton oils are fully steady, and are quoted (ex Hull): Crude Egyptian, £28 15s., and common edible, £31 10s. Oil cakes and meals are in improved request.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There has been the usual small daily turnover, while all spot quotations were unaltered. Cables to hand were conflicting regarding the meeting held on Tuesday in Cuba, to decide the fate of the Single Seller Agency. Apparently, continuance carried a majority of nearly 1,800, but reconsideration is mooted with the likelihood of another meeting in ten days or so. Mr. F. O. Licht estimates European acreage including Russia, as 2,970,000 hectares, as against 2,650,000 last year. Raw sugars steady, quiet. Terminal sections continued in a quiet state, and prices the turn easier. Of raw, May, 6s. 10½d. to 6s. 9¾d.; August sold, 7s. 2¼d. to 7. 0¾d.; December quoted 7s. 6d.; March, 8s. 5¼d. Cuban receipts, last week, new crop, 176,866, against 228,643 last year; exports, 45,492, against 157,957; stocks, 1,399,271, against 1,296,744. Receipts, old sugar, 3,023, against nil; exports, 3,467, against nil; stocks, 12,712, against 1,615. Stocks of raw sugar in the three ports of the United Kingdom for week ending March 29th, amounted to 220,738 tons, against 129,947 last year.

COFFEE.—There is no new feature to record in this market. General trade is very quiet, in fact almost entirely confined to the few fine qualities on offer. Apart from these, trend of prices remains weak.

COCOA.—Small sales on spot include fine Grenada, at 50s. to 52s. 6d.; the larger quantities at the former figure. Forward quite steady. Accra, F/F, April-June, sold 36s. 6d. to 36s. 9d. f.o.b. Terminal, July, sold 41s. 9d. to 41s. 10½d.; December, 42s. 6d. to 42s. 4½d. to 42s. 6d.

TEA.—During the week, 51,600 packages Indian were brought to auction, and a generally quieter tone characterised the market. Medium and common teas declined ¼d. to ½d., but good liquoring and autumnal flavoured teas were about steady, allowing for quality being rather inferior, the best having already been marketed. Of Southern Indian, some high-grown Travancores made excellent prices. Ceylon sales of 21,547 packages experienced an active and buoyant market, particularly with regard to leaf teas, as export orders proved quite numerous. Standard of quality was fully maintained. Java auctions met a fair demand at steady rates. There is a steady inquiry for China qualities, and Lapsang souchong sold 3s. to 3s. 1d.; Keemuns, 1s. 10d. to 2s.

RICE.—Market conditions still quiet. Burma grain firm, owing to small supplies of paddy, which applies to Siam. A very firm position continues in Saigon in the process of adjusting a rather unwieldy short account. Spanish, quiet and easier, with small sales [illegible] oiled, April-May shipment at 14s. 7½d. c.i.f. London. Two Stars, [illegible]ot, London, 13s.; March-April steamer, 11s. 6d.; buyers, 11s. 3d. [illegible].i.f. London/Continent. No. 3 Burma to Levant quoted 11s. 7½d. [illegible].f. double bags. American blue rose from 23s. to 24s. c.i.f. [illegible]. to Cuba, 11s. 3d. Saigon No. 1 round grain, March-April, to [illegible]rop, 12s. Siam Super, March-April, 15s. 10½d. Californian [illegible]min[illegible]

[illegible]EN RICE quiet. Burma 1A, March-April, 10s. 6d.; [illegible]0s.; A2, 10s.; B2, 9s. 6d.; Saigon 1 and 2 mixed, 10s. 3d. Siam, C[illegible]0s.; C3, 9s. 9d. c.i.f.

[illegible]CE BRAN firm, quiet, and afloat sellers at £4; for shipment, [illegible] June, £4 2s. 6d.; July-December, £4 15s.; buyers and sellers, [illegible]er ton ex ship terms. Saigon, March-April, £4 c.i.f.

[illegible]EANS.—Butters in steady demand, and market firm, but others remain slow. Butters on spot, good colour, quoted 35s. to 35s. 6d.; parcels afloat steamer "Clan MacNeil," 35s.; per "Belgrano," 33s.; "Bourbonnais," 33s. 6d.; "Ville de Rouen," 33s.; and February-March, 3[illegible] 6d.; March-April, 32s. c.i.f. London. Rangoon haricots, spot, [illegible]ndon, 10s. 4½d.; March-April, 11s. 6d. c.i.f. Ohtenashi, spot, [illegible]ondon, 21s. 6d.; March-April shipment, 20s. 6d. c.i.f. Danubian L.P. spot, London, 22s.; March-April, 21s. 6d. To Glasgow, North African, March-April, 8s. 4½d. c.i.f. Chinese horse, spot, Glasgow, 8s. 6d. c.i.f.

PEAS.—Market much quieter and prices easier. Japanese old crop, spot, London, 14s. 6d.; new, 15s. Parcels per steamer "Altai [illegible]ru" afloat to London, quoted 14s. 3d. "Toyohashi Maru," 14s. 3d.; [illegible]ch-April, 14s. 3d. c.i.f. Dutch marrowfats, prompt, 15s. 6d.; [illegible]all, hand-picked, blues, 10s. 6d. f.o.b. terms. Calcutta, April-[illegible]ay, 43s. Karachi, April-May, 42s. 6d. c.i.f. Maples, quiet. [illegible]o. 1 New Zealand, March-April, old, 54s. 6d.; new crop, March-April, 56s. 6d. Tasmanian, A grade, new, March-April, 62s. 6d. [illegible].i.f.

SPICE.—Pepper market again dull, and prices in most positions, manifested increased weakness, Lampong spot, also black Singapore quoted 1s.; Tellicherry, 1s. 2d.; Aleppy, 1s. 1d.; white Muntok, 1s. 3¼d. Lampong, March-May, 10¾d.; May-July, sold, 10¼d.; August-October, at 9¾d. Muntok, white, March-May, quoted 1s. 1¾d.; May-July, sold, 1s. 1¾d.; August-October, at 11¾d. London stocks of black increased 31 tons on the week, and white receded 96. Black total, 981, against 1,120 same time last year, and white 878, against 493. Cloves firm. Zanzibar, March-April steamer quoted 11⅞d. Sago flour, April to the United Kingdom, quoted 11s. 4½d. c.i.f. Tapioca unaltered. African ginger dull. Pimento, spot, London, 8½d.; and April-May, 6¾s. c.i.f.

FRUIT (Dried).—Currants: Market firm for Greek; Australian in small supply. Pyrgos, quoted, 35s.-36s.; Amalias, 37s.-39s.; Patras, 39s.-42s.; Gulf, 42s.-46s.; Vostizza, 49s.-58s. Sultanas quiet of sale. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-75s.; Greek, 42s.-65s.; Australian, 34s.-48s. Dates dull. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s.-14s. Raisins neglected. Valencia, quarter-boxes, 40s.-42s. Figs quiet. Layers, 30s.-40s.; genuine, 26s.-33s.; good average, 23s.

EVAPORATED FRUITS.—The market maintains a steady tone, with improved inquiries generally. Both peaches and plums were in better request, the latter chiefly for large sizes, but apricots sold rather quietly. Plums: Californian, new crop, 30's-40's, 67s.; 40's-50's, 65s.; Oregon, 30's-40's, 55s.; 50's-60's, 51s. Apricots: South African Royal, 57s. 6d.-117s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 87s. 6d.; extra, 97s. 6d.; Australian, 65s.-85s. Peaches: Californian, choice, 55s. 6d.-60s.; fancy, 62s. 6d.-67s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-67s.; Canadian, 58s. Almonds quiet. Mazagan, 105s.; Mogador, 102s. 6d.; P.G. Sicily, 110s.; Majorcas, 107s. 6d.-125s.; Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 39s., new crop, c.i.f.; sweet, spot, 72s. 6d. Hazel kernels: Kerasunde, spot, 145s.; Barcelona, 136s. French (shelled) walnuts, 135s.-140s., ex wharf, London.

CANNED GOODS.

CANNED FRUITS.—There is a moderate spot trade passing, but Californian varieties for shipment fail to engage much attention in view of a large prospective new pack, and Australian also move off slowly. English sells steadily, but stocks are in moderate compass. Larger arrivals recently of Hawaiian pines met with quiet attention, but Singapore fruit sold more freely on spot at full rates, but buyers still reluctant to operate forward. Italian tomatoes experienced a quiet movement, despite the attractive prices ruling.

CANNED FISH.—Salmon: The demand fails to expand and prices barely steady. Alaska red talls, quoted, 47s.-49s.; pink talls, 24s. 6d.-25s. 6d.; and halves, 34s.-36s. Japanese crab dull and prices easy at 90s.-96s. as to quality. Lobsters in quiet demand, but supplies small. Halves range from 135s.-140s. Sardines in moderate request, but prices somewhat irregular owing to varied quality. Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEAT.—Market firm but trade restricted, available supplies being somewhat scarce. Lunch tongues, also cooked boned hams move off readily at full rates.

CONDENSED MILK AND MILK POWDERS.—Market occasionally easier. Dutch condensed milk: full cream, sweetened, 5-cwt. casks, 34s. 6d.; machine-skimmed ditto, 20s. 9d.; full cream, sweetened, 56-lb. drums (two in a crate), 52s. 6d. English condensed milk: Full cream, sweetened, 5-cwt. casks, 39s.; machine skimmed ditto, 23s. Dutch full cream milk powders, 26 per cent butter fat: Roller process, 1-cwt. cases, 64s.; spray ditto, 2 by 56-lb. tins, crated, 82s. 6d. Dutch machine-skimmed milk powders Roller process, 1-cwt. cases, 27s. 6d.; spray ditto, 2 by 56-lb. tins crated, 38s. 6d.; ditto, 1-cwt. cases, 36s. 9d.; all per cwt. All

English prices basis carriage paid nearest station. Dutch prices are net, ex store, London-Hull or Goole, and cover prompt or gradual delivery to the end of June, 1930. Stocks available in: Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. Minimum 1-ton lots. Smaller lots, 6d. per cwt. extra. On the grocery side, full-cream, sweetened, 18s. 9d.; machine-skimmed, sweetened, 9s. basis per case; usual packing.

HONEY.—Market dull, especially for inferior grades. Jamaica, white, 56s.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s.; fine white, Cuban, 49s.; San Domingo, good, 45s.; manufacturing, 38s.; Californian, 55s.; light amber, 50s.; New Zealand, light amber, 50s.-85s.; white and water whites 65s.-87s. 6d. per cwt.

RUBBER.

Business again conducted quietly and market showed but little change. Standard sheet, spot and April sold, 7 9/16d. to 7¼d.; May, 7 5/8d.-7 11/16d.; June, 7 13/16d. to 7¾d.; July-September, 7¾d. to 7 15/16d.; and October-December, 8⅛d. to 8 3/16d. London stocks on the week increased 829 tons; landings, 2,093 tons; deliveries, 1,264; stocks, 69,233, against 28,077 last year. Liverpool stocks, 11 up; landings, 210; deliveries, 199; stocks, 21,198, against 4,433 last year.

GENERAL.

JUTE.—A steady tone prevailed though business was confined to moderate limits. Firsts, March-April, Continent, quoted £24 7s. 6d.; April-May at £24 7s. 6d.; May-June, £24 10s.; new crop, August-September, £26; September-October, £25 17s. 6d. *Lightnings*, May-June, quoted £23 7s. 6d.; Hearts, £21 10s.

HEMP.—Manila sparingly offered and firm with a fair demand. J2, April-June, quoted £30 5s.; K, January-March, sold, £30; ditto, April-June, £29 15s.; L1, April-June, buyers, £29; L2, quoted £26; M1, February-April, sold, £26 10s.; M2 quoted £24 10s. Sisal steady, unaltered. Receipts last week cabled 29,000 bales, against 33,000 last year and 36,000 in 1928. Estimate for next week 36,000, and week after 34,000. Manila shipments last week: 15,000, U.K.; 9,000, Continent; 11,000, U.S.A.; 4,000, Japan; and 1,000 other countries. Stock now 171,000 bales.

SHELLAC.—Rather unsettled. T.N., spot, 122s. 6d.; May, sold 113s. to 115s.; August, 117s. to 118s.; October, 121s.

COPRA.—A steadier market, as buyers were more prominent. Straits S.D., April-May, Rotterdam, quoted, £21 12s. 6d.; Dutch East Indies, ditto, £21 12s. 6d.; Ceylon, held for £23; sundries *South Sea, £20 15s. To Marseilles: mixed Dutch East Indies* sold £20 12s. 6d.; smoked, South Sea, quoted, £20 10s.; Manila in bulk, buyers, £20 5s.

PALM KERNELS afloat to Hamburg, quoted, £15; April-May, £15 2s. 6d.; May-June, £15 5s. c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 19s. to 25s. per 1,000. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43; Ceylon bristle, £19 to £25; cinnamon leaf oil, 5s. 6d.; for shipment March-April, 4s. 6d.; citronelle, Ceylon, 2s. 5d.; Java, 2s. 4½d.

METROPOLITAN CATTLE.—April 2.

THE MONEY MARKET.

CHANGEABLE conditions have prevailed during the past week. Over the week-end three months' bills were quoted as high as 2 9/16 per cent., the rise in the rate being partly due to the cessation of French buying. Since Monday,

THE BACKGROUND OF THE ANGLO-EGYPTIAN NEGOTIATIONS.

WHILE the convulsions of the Five-Power Naval Conference have been going on in full publicity, we have had no report of progress from the Anglo-Egyptian Conference, which has been in simultaneous session in the same city of Westminster. In this case, we may perhaps take it that no news is good news, and when in due course (and there is no hurry) an announcement is made, we may hope to hear that the representatives of the British and Egyptian Governments have agreed upon at least the main lines of a settlement of those issues which still divide the two peoples.

This is actually the fourth attempt at a settlement since the end of the Great War. The first attempt was made in the Milner-Zaghlul conversations of 1920, which came nearer towards success than any subsequent attempt before Nahas Pasha's arrival the other day. The second attempt was made in the MacDonald-Zaghlul conversations of 1924, which broke down at the outset after revealing with disconcerting clarity how far apart the two standpoints were at that time. The third attempt was made in the Chamberlain-Sarwat conversations of 1927—a sustained and praiseworthy effort which failed in the end because Sir Austen Chamberlain could not carry his colleagues in the Conservative Cabinet of the day further than a point which Sarwat Pasha, on his side, was only able to reach by going beyond the limits within which the Wafd was willing to support him. These are the failures which the Henderson-Nahas negotiations have now to retrieve. Let us briefly remind ourselves of the Anglo-Egyptian situation as the present negotiators found it when they held their first meeting the other day.

Juridically, Egypt has been a sovereign independent state since the coming into force of the Peace Treaty of Lausanne between Turkey and the Allied Powers in 1924. Before that, right back to the year 1517, Egypt had been always formally a province of the Ottoman Empire, though since 1841 the governorship of this province had been hereditary in the House of Muhammed 'Ali, in virtue of an Imperial *firman* which had the sanction of the Concert of Europe behind it and was therefore practically an international charter. In fact, since 1882, Egypt has been under British military occupation and the Egyptian Government under the control of the British Government—a control exercised by a Resident responsible to the Foreign Office. Throughout the whole of this period, the position of Great Britain in Egypt has been irregular. It was never sanctioned by the Ottoman Government; and in the autumn of 1914, when we found ourselves at war with Turkey, we made shift by declaring a British Protectorate over Egypt—avowedly as an emergency measure. This unilateral act of the British Government was undone by another unilateral act on February 28, 1922, when, in anticipation of a surrender of sovereignty by Turkey, we recognised Egypt forthwith as an independent sovereign State. But this recognition was made subject to four reservations which held it in suspense in regard to a great many things which would otherwise have come within the sole discretion of a sovereign independent Egyptian Government.

The four matters which were reserved by the British Government in 1922 for bilateral settlement " by free discussion and friendly accommodation on both sides " at some future date were the security of the communications of the British Empire in Egypt; the defence of Egypt against all foreign aggression or interference, direct or indirect; the protection of foreign interests in Egypt and the protection of minorities; and, finally, the Sudan. Simultaneously, the British Government informed the other sovereign independent Governments of the world that they would not allow the " special relations " between Great Britain and Egypt " to be questioned or discussed by any other Power," and that they would " regard as an unfriendly act any interference by another Power in the affairs of Egypt." There has never been any doubt that this notification would be respected so long as the situation created by the Declaration of February 28, 1922, continued. But this does not alter the fact that this situation rests on an arbitrary unilateral act of the British Government for which the ultimate sanction is British naval and military force. In both Great Britain and Egypt, it has long been recognised as a truism that both countries have a common interest in replacing this irregular situation by a treaty relation resting on a diplomatic instrument freely negotiated between constitutional Governments in both countries. The stumbling block has been, not a difference of aim, but disagreement in regard to the terms on which that common aim is to be attained.

It is evident that the four points reserved by the British Government in 1922 differ greatly from one another both in importance and in degree of difficulty. The second point can be disposed of by a military and naval convention (within the framework of the League Covenant and the Kellogg Pact) which would be equally honourable and advantageous to both parties. As for the third point, the Coptic minority in Egypt really needs no protection, since it is an entirely Egyptian community and is not an " unredeemed population " of a foreign nationality. As a matter of fact, Copts have taken a prominent and a combative part in the activities of the Wafd. Nor, again, should the protection of foreign interests in Egypt prove more difficult than it has proved in other non-Western countries such as Turkey, Persia, Siam and Japan, where the institution of extraterritoriality has once existed and has subsequently been abolished. The difficult points are British Empire communications and the Sudan.

It was these two points that arose at the outset of the MacDonald-Zaghlul conversations in 1924 and caused those conversations to break down. At an early stage of the Chamberlain-Sarwat conversations of 1927 the question of the Sudan was postponed for future consideration by common consent; and these conversations broke down over the questions of how long, and within what geographical limits, a British military force was to remain on Egyptian soil, and by what authority, under what conditions, and at what dates the position in regard to this was to be reviewed for continuation or modification as the case might be. The great achievement of Mr Henderson and Muhammed Pasha Mahmud last year was that they found a provisional agreed solution for this crux; and it is to be hoped that their provisional agreement on this point will be accepted by Nahas Pasha and by the Egyptian party which he represents. There remains the problem of the Sudan. Without an agreed settlement of this, no Anglo-Egyptian understanding can be complete. We therefore presume that it is under negotiation now and that it is the most difficult business which the present negotiators have to tackle.

In this matter of the Sudan, theory and fact have to be distinguished. In theory, the Sudan was an Ottoman province, the governorship of which was made hereditary in the House of Muhammed 'Ali by a *firman* simultaneous with, but separate from, that which conferred upon them the hereditary governorship of Egypt. Again, in the Sudan, as in Egypt, Ottoman sovereignty was not extinguished in theory until the coming into force of the Treaty of Lausanne. In fact, the Sudan was conquered by Muhammed 'Ali in 1820 on his own initiative and with his own forces, lost by his successors to the Mahdi in 1881-5, and reconquered jointly by British and Egyptian forces under British leadership in 1896-8. The *de facto* situation thus created was reflected in an Anglo-Egyptian agreement of 1899, to which the Ottoman Government was not a party, and by which the Sudan was placed under an Anglo-Egyptian condominium. Now that Turkey has dropped out, the Agreement of 1899 represents the *de jure* as well as the *de facto* " *status quo* " as far as the British and Egyptian Governments are concerned. Meanwhile, the actual situation established in 1899 has undergone two changes. On the one hand, the whole problem of the regulation and allocation of the Nile Waters has been settled in detail, and to the satisfaction of all parties, by an Anglo-Egyptian Convention which was freely negotiated in 1926. On the other hand, since the assassination of Sir Lee Stack at Cairo, in November, 1924, and the outbreaks of Egyptian and Sudanese troops in the Sudan in the August and December of the same year, all Egyptian troops and officials have been evacuated from the Sudan and the Sudanese units formerly belonging to the Egyptian Army have been reorganised as a Sudan Defence Force. Juridically, this has not affected the condominium. In practice, it has left the exercise of the condominium entirely in the hands of one of the two partners. It is at this point that we may expect Mr Henderson and Nahas Pasha to find the greatest difficulty in their attempt to seek a comprehensive and final settlement of Anglo-Egyptian relations.

The New York Trust Company

Capital, Surplus and Undivided Profits . . . $45,000,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 BROADWAY NEW YORK CITY

THE B.I.S. AND PRICES.

ADDRESSING the Institute of Bankers on April 3rd, Sir Charles Addis, one of the originators of the scheme for the establishment of B.I.S., gave a brief account of the history, constitution and functions of this new institution. His address was of very special interest as revealing the point of view of one of those who have been appointed to carry out the scheme in the capacity of director. In a short reference to reparations, Sir Charles revealed the fact that in 1918 he suggested that Germany might be able to pay and transfer annuities equivalent to an indemnity of £1,200 millions. After twelve years, the Young Plan brings the total from the fantastic £24,000 million of the Hughes Committee to a series of annuities representing a present value of £1,700 millions — still £500 million above Sir Charles' figure. Whether Sir Charles thinks that the payments are yet low enough, he does not say, but Mr Young and Mr Lamont, both of whom have been ventilating their views on the Plan with which they were both so intimately connected, seem satisfied.

Sir Charles is at pains to reassure those who regret that the Bank was not established in London. After explaining the reasons for the choice of Basle, he adds that he thinks too much importance has been attached to the question of site. " The operations of the bank will, in fact, be attracted to the cheapest and most convenient market, quite irrespective of where its registered offices may be, and, fortified by their belief that London is still the cheapest and most efficient international money market in the world, the British delegates accepted their defeat with a tranquil mind, and readily assented to a compromise by which their second choice, Basle, Switzerland, was finally selected as the seat of the new bank. Provision is made for opening agencies in other countries, provided the Central Bank concerned does not object." In reply to those who think that the banking prohibitions are so stringent as to immobilise the bank altogether, he points out that these limitations are primarily to ensure that the bank shall operate through other central banks. At the same time, the B.I.S. is not a super central bank in the ordinary sense. It will issue no notes; it will be the custodian of no particular currency; it will not lend to governments or keep government accounts in general. In fact, "there has never been anything like it in the world before." While reparation is the occasion for its creation, " its chief function is to act as a centre of co-operation for central banks."

Sir Charles proceeds to ask himself what form this co-operation will take and what the results will be. In this connection he refers to " the menace of falling prices," and while he does not assert that the monetary factor is always dominant in this matter, or that there are no other causes at work that may render banks powerless to affect prices, he does consider that monetary policy is always an influence, and, whether we like it or not, cannot be dissociated from prices. " Consciously or unconsciously, money is always being managed, and to say that you cannot do much to control it is no excuse for doing nothing at all." The B.I.S., in Sir Charles' opinion, " cannot by itself create credit, but it can do so through central banks." The objection that this may mean inflation leaves Sir Charles cold, for " after the powerful dose of deflation from which we are still suffering," a rise of prices resulting from such a very minor dose of inflation as the highly conservative board of the B.I.S. are likely to administer need cause no alarm. The power of central banks in co-operation has never yet been put to the test, and the general tone of Sir Charles' speech shows that he, at all events, does not expect the B.I.S. to embark on any wild or revolutionary courses. But the problem of the monetary policy as he sees it " is how to adjust the supply of monetary gold to the market in such a way as to maintain the value of gold at an approximately stable level."

It is, however, evident that we are clearly a long way from any cut-and-dried solution. Even if the B.I.S. secures agreement as to policy and the central banks prove that they are able to influence prices, the fact remains that we are not yet agreed on the objective. There are very few to-day who would deny that it would be desirable to check what Sir Charles calls the menace of falling prices, but writing in a recent number of Lloyds Bank *Review*, Professor Cassel declares that this means in practice that central banks should attempt to stabilise wholesale prices. In the current number of the same *Review*, Professor Gregory questions this conclusion. In view of the disparity of various index numbers for the same country, he doubts whether statistical technique is sufficient to give a sure guide, even for this limited objective. He recalls the suggestion that possibly the right policy is to attempt to stabilise wage levels, and points out that it may be desirable that prices should fall with increased production to avoid the harm done to individuals with fixed incomes. He refers to the fact that among the main difficulties of the day are the divergence between the prices of raw materials on the one hand, and finished goods on the other, and the disharmony between wages, or wage costs, and prices.

We would point out, however, to Professor Gregory that these disharmonies, at all events in the form in which we know them to-day, arise largely from abrupt

changes in world trade resulting from the war, from violent movements of the price-level, and from the chaotic movements in recent years of various national currencies which have arrived at stability at all sorts of levels. In spite of practical difficulties, therefore, we agree with Sir Charles Addis that the world would be very much better off even if the central banks of the world merely agreed negatively that instability of price levels is highly detrimental and that monetary policy should at least avoid action tending to precipitate violent changes. We believe that we are not far from at least this measure of agreement, and that, therefore, the B.I.S., with its increased opportunity of co-operation, will be capable of immediate good. As to the more remote possibilities, such as doing away with the transfer of gold, abolishing gold points and the evolution of an international monetary unit of account, we are prepared, with Sir Charles, to wait and see.

INDUSTRIAL PROFITS.

In considering the following results of our usual quarterly analysis of British industrial profits, it is important to bear in mind that the majority of the 516 company reports forwarded to us during the past three months relate to financial years ending between September 30th and December 31, 1929, with the later date predominating. That is to say, the working periods escaped entirely, or almost entirely, the existing trade recession, whose effects did not begin to be felt until towards the close of the fourth quarter of last year. Having regard to the favourable course of indices of British production during 1929, it is not surprising to find that the aggregate net profits of the companies covered by our present analysis show, at £62,021,337, an increase of £1,132,840, or 1.9 per cent., as compared with the earnings of the same concerns in their previous financial year. The following table summarises the results of our last four quarterly surveys:—

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in 1928.	Reports Published in 1929.	Increase (+) or Decrease (−).	
		£	£	£	%
First quarter	454	58,965,712	59,869,638	+ 903,926	+1·5
Second quarter	639	78,662,794	78,079,238	− 583,556	−0·7
Third quarter	257	24,039,327	23,327,747	− 711,580	−3·0
Fourth quarter	420	32,948,898	33,404,593	+ 455,695	+1·4
	1,770	194,616,731	194,681,216	+ 64,485	+0·0
		1929.	1930.		
First quarter	516	60,888,497	62,021,337	+1,132,840	+1·9

The rate of increase recorded for the past quarter is not appreciably different from that disclosed a year ago; and it is of interest (particularly with reference to forthcoming Budgetary calculations of the prospective yield of direct taxation) to examine the quarterly fluctuations in net earnings over a period of years, as shown by the next table:—

	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	%	%	%	%	%	%	%
First quarter	+ 8·7	+ 9·1	+ 7·6	− 4·0	+15·2	+ 1·5	+ 1·9
Second quarter	+ 3·0	+11·1	+ 8·3	− 5·7	+ 1·3	− 0·7	...
Third quarter	+ 2·3	+ 4·8	+ 2·8	+ 2·4	+ 9·7	− 3·0	...
Fourth quarter	+13·3	+ 6·4	+ 3·8	+ 0·3	+ 3·1	+ 1·4	...
Year	+ 6·6	+ 8·7	+ 6·3	− 3·0	+ 7·2	+ 0·0	...

Disregarding the results of our surveys in the first quarters of 1927 and 1928, when decline and recovery were a legacy of the special industrial troubles of 1926, it will be seen that the upward curve in the January-March period of the past two years has been strikingly "flattened," in comparison with the pronounced rising tendency of 1924-26. Moreover, the next table, which analyses last quarter's net earnings in different industrial groups, reveals a considerable irregularity of trend:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Companies.	Reports published in Quarter ended March 31. 1929.	1930.	Increase.		Decrease.	
		£	£	£	%	£	%
Breweries	19	1,865,960	1,962,237	96,277	5·2	...	...
Elec. lighting & power	26	4,409,105	4,807,433	398,328	9·0	...	...
Gas	42	3,524,226	3,472,565	...	...	51,661	1·5
Hotels, restaurants, &c.	8	357,432	327,295	...	...	30,137	8·4
Iron, coal and steel	28	1,529,591	3,008,723	1,479,132	96·7	...	...
Land mortgage, &c.	19	1,156,379	957,080	...	...	199,299	17·2
Motor and cycle	9	1,264,350	1,515,193	250,843	19·8	...	...
Rubber, &c.	36	449,514	569,329	119,815	26·7	...	...
Shipping	10	437,417	350,423	...	...	86,994	19·9
Shops and stores	34	5,689,705	6,053,700	363,995	6·4	...	...
Tea	1	57,589	59,791	2,202	3·8	...	...
Textiles	28	8,017,537	5,663,053	...	...	2,354,474	29·4
Tramways	9	421,076	614,243	193,167	45·9	...	...
Trust	60	4,423,726	4,946,912	523,186	11·8	...	...
Waterworks	19	789,328	793,813	4,485	0·6	...	...
Miscellaneous	168	26,495,562	26,919,537	423,975	1·6	...	...
Total	516	60,888,497	62,021,337	1,132,840	1·9	...	...

The most noteworthy increase shown is that of the iron, coal and steel group. It should be pointed out, however, that the nearly doubled net profits earned by the 28 companies in this category are a reflection, not of a general improvement in heavy industry, but of the recovery made by a limited number of colliery concerns after the extremely adverse showing of the previous year. Thus, of the £1,479,132 increase in this group, over £1¼ million is accounted for by changes in the net earnings of the Bolsover, Powell Duffryn, Fife Coal and Amalgamated Anthracite Companies. Among the other increases disclosed, that in the motor and cycle group is due mainly to the results of Austin and Leyland Motors; the higher earnings in the tramway section reflect mainly the growth of motor-coach business; and the comparatively small increase in the large miscellaneous group is the net result of many minor fluctuations up and down, prominent increases being shown by tobacco and cement. Trust companies, it will be seen, recorded a satisfactory improvement; there was a sharp recovery in rubber profits; and net earnings of electric lighting and power concerns continued to grow. On the other side of the account, the large decline in the earnings of the textile group represents chiefly the diminution in the profits of Courtaulds, Ltd., although the net earnings of Bradford Dyers and several other undertakings were also lower. The drop in the profits of the land mortgage group was largely due to less favourable results obtained in Australia.

In the next table we set out the distribution of profits during each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.		Preference Dividend.		To Reserve, &c.	
1929.	£	£	%	£	%	£	%
First quarter	59,869,638	36,336,626	60·7	10,896,063	18·2	12,636,949	21·1
Second quarter	78,079,238	47,216,888	60·4	18,006,913	23·1	12,855,437	16·5
Third quarter	23,327,747	14,368,539	61·6	4,159,124	17·8	4,800,084	20·6
Fourth quarter	33,404,593	22,054,466	66·0	5,356,375	16·0	5,993,752	18·0
	194,681,216	119,976,519	61·2	38,418,475	19·8	36,286,222	19·0
1930.							
First quarter	62,021,337	38,408,282	61·9	12,233,520	19·7	11,379,535	18·4

The last column includes not only specific allocations to reserve, but also the net increase in balances carried forward. As compared with the corresponding quarter of last year, the tendency to leave a smaller proportion of net earnings "in the business" is somewhat marked.

The apportionment of profits by the individual groups is set forth below:—

	Net Profits.	Ordinary Dividend.		Preference Dividend.		To Reserve, &c.	
	£	£	%	£	%	£	%
Breweries	1,962,237	1,062,019	54·1	337,165	17·2	563,053	28·7
Electric lighting and power	4,807,433	1,912,474	39·8	942,391	19·6	1,952,568	40·6
Gas	3,472,565	2,970,219	85·5	350 966	10·1	151,380	4·4
Hotels, restaurants, &c.	327,295	142,135	43·5	34,892	10·7	150,268	45·8
Iron, coal and steel	3,008,723	1,230,033	40·9	825,116	27·4	953,574	31·7
Land mortgage, &c.	957,080	655,826	68·5	134,869	14·1	166,385	17·4
Motor and cycle	1,515,193	318,403	21·0	828,605	54·7	368,185	24·3
Rubber	569,329	402,328	70·6	2,168	0·4	164,833	29·0
Shipping	350,423	187,333	53·5	18,975	5·4	144,115	41·1
Shops and stores	6,053,700	3,428,825	56·6	1,564,098	25·9	1,060,777	17·5
Tea	59,791	45,044	75·3	3,784	6·3	10,963	18·4
Textiles	5,663,063	3,915,235	69·1	1,014,701	17·9	733,127	13·0
Tramways	614,243	342,250	55·7	96,600	15·7	175,393	28·6
Trusts	4,946,912	2,641,956	53·4	1,522,348	30·8	782,608	15·8
Waterworks	793,813	483,626	60·9	252,089	31·8	58,098	7·3
Miscellaneous	26,919,537	18,670,576	69·4	4,304,753	16·0	3,944,208	14·6
	62,021,337	38,408,282	61·9	12,233,520	19·7	11,379,535	18·4

As compared with a year ago, when only 14 per cent. of net profits was placed to reserve, the present showing of the iron, coal and steel group is very satisfactory. In contrast to this, the "reserved" proportion of the land mortgage companies has fallen from 35.7 to 17.4 per cent., and that of the motor and cycle group from 61.2 to 24.3 per cent. The figure of 14.6 per cent. "reserved" by the miscellaneous group, compares with 18.5 per cent. a year ago.

Turning to earnings on capital, we show in the next table the ratio of net profits and of amounts reserved to total share capital in each of the past five quarters:—

	Total Ord. and Pref. Capital.	Net Profits.		Carried to Reserve, &c.	
1929.	£	£	%	£	%
First quarter	537,360,324	59,869,638	11·1	12,636,949	2·3
Second quarter	793,972,918	78,079,238	9·9	12,855,437	1·7
Third quarter	209,191,686	23,327,747	11·2	4,800,084	2·3
Fourth quarter	323,129,955	33,404,593	10·3	5,993,752	1·9
	1,853,654,883	194,681,216	10·5	36,286,222	1·9
1930.					
First quarter	595,281,227	62,021,337	10·4	11,412,186	1·9

The ratio of net earnings to capital last quarter compares with an average of 11.6 per cent. two years ago, when the reserved proportion was 2.7 per cent. The average rates of interest and dividend paid on the nominal value of debenture, preference and ordinary capital in each quarter of the last four years are summarised below:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital			
	1927.	1928.	1929.	1930.	1927.	1928.	1929.	1930.	1927	1928.	1929.	1930.
	%	%	%	%	%	%	%	%	%	%	%	%
1st quarter	4·80	4·78	4·89	4·89	5·1	5·3	5·4	5·8	10·4	11·3	10·9	10·0
2nd ,,	5·30	5·43	5·10	...	5·9	6·0	5·9	...	11·8	10·0	9·8	...
3rd ,,	4·98	4·90	4·88	...	5·2	5·4	6·0	...	10·2	10·7	10·3	...
4th ,,	5·19	5·04	5·29	...	4·9	4·9	4·7	...	10·1	10·3	10·6	...
Year	5·08	5·02	5·15	...	5·3	5·4	5·5	...	10·8	10·6	10·5	...

The average rate of ordinary dividend is continuing to decline. Changes, as compared with a year ago, are shown in detail in the concluding table. The increase in the average rate of preference dividend in the motor and cycle group was due to the payment of large arrears on the cumulative preference shares of Austin Motors:—

	Debenture Capital.	Rate of Int.	Preference Capital.	Rate of Int.	Ordinary Capital.	Rate of Div.	Rate of Div. a Year Ago.
	£	%	£	%	£	%	%
Breweries	8,467,137	4·5	6,796,243	5·0	8,095,162	13·1	15·7
Elec. lighting & power	27,510,825	5·4	16,445,652	5·7	27,401,508	7·0	7·0
Gas	22,301,514	4·3	7,649,778	4·6	50,558,022	5·9	5·6
Hotels, restaurants, &c.	1,934,600	5·1	2,145,554	1·6	1,638,060	8·7	10·0

Westminster Bank Leaflets

¶Points before Travelling, *Notes on the Protection of Travellers from Loss.* ¶Thirty-nine Advantages *of an Account with the Bank.* ¶The Saving Habit, *an outline of the Home Safe system.* ¶The Postal Account, *a service for those living in outlying rural districts.* ¶The Financial Machinery of the Export and Import Trade, *or the function of the Documentary Credit.* ¶Foreign Exchange, *with particular reference to Forward Exchange.* ¶Safeguards for Travellers, *a warning against carrying foreign notes.* ¶Securities, *their Custody and Supervision.* ¶Wills, Trusts, and Settlements, *the Bank as an Executor.*

Copies may be had by asking at almost any branch or from the Secretary, Westminster Bank Limited 41 Lothbury, London, E.C.2

The average rate of ordinary dividend in the large miscellaneous group, though lower than a year ago, is still higher than in the first quarter of 1928, when a figure of 14.2 per cent., as compared with 15 per cent. in 1929, was disclosed. Viewing as a whole the results of our quarterly survey, we are inclined to doubt whether Mr Snowden would be justified in budgeting for a yield from existing direct taxes on this source of income any higher for 1930-31 than for the previous financial year. It is to be feared, moreover, that the company reports issued during the remaining quarters of 1930 will reflect emphatically the repercussions of the recent slump in wholesale prices and the general trade setback indicated by recent returns of unemployment and of overseas trade.

THE INDIAN BANKING INQUIRY.

(BY A CORRESPONDENT.)

The first stage of the banking inquiry instituted by the Government of India is drawing to a close. In 1928, when the Legislative Assembly rejected the Bill for the creation of a Reserve Bank, which had been recommended by the Hilton Young Commission, it was evident that an interval must be allowed before further action. The Reserve Bank Bill, discussed while feelings were excited by the appointment of the Simon Commission, had not been considered entirely on its merits; and since the Government was willing only to promote a "sound" (*i.e.*, non-political) bank, and only when the public were ready to support it, the proposal for an inquiry into banking was accepted in the hope that it would guide and formulate public opinion.

India has insistently demanded the improvement of banking facilities, especially in respect of agricultural credit, and is also, on the whole, in favour of a central institution. These are the two leading questions with which the present inquiry has to deal. With a view to collecting evidence as to rural credits, the provincial committees, which are to report to a central committee, have conducted a series of village investigations through a more or less specialised staff. Burma, which is already in possession of figures of rural debt, collected for another purpose, has appointed two graduates in economics, each to study one village; Bengal, on the other hand, contemplates disposing of 100 villages in two months through a variety of official and unofficial helpers, who will examine methods of finance, obtain figures of indebtedness, and draw up family budgets. The material collected is likely to differ widely in accuracy and relevance.

The reports of these investigators, and the replies to the questionnaire issued to bankers and other individuals, are now being received. They indicate that this problem

of agricultural finance, and in particular the necessity of bringing the indigenous rural banker (the village grain-dealer, moneylender, or *sahukar*) into closer connection with the joint-stock banks and the Imperial Bank of India, is the principal preoccupation of those who are interested in the banking question. The indigenous bankers, who numbered 341,000 at the census of 1921, include a minority of highly intelligent Marwaris or other *shroffs*, working in the larger towns, who have nothing to learn in banking, and deal freely in bills (*hundis*) of the native type. The majority, on the other hand, consists of rural *sahukars* who, though shrewd, are primitive in their methods, and prefer the use of cash and notes to cheques and bills. They are the most widespread agency for marketing the crops and financing the farmer; co-operative credit societies, though gaining ground, supply only a fraction of the total money required. Drawing their funds on open credits from an urban *shroff* the rural dealers are reluctant to write trade bills which their financing houses can discount with a bank. The result is an annual scarcity of currency at the time of moving the crops, which raises both the Imperial Bank rate and the bazaar or *hundi* rate to an excessively high figure and hampers trade.

The suggestions offered by those who recognise this evil are directed towards an increase in the number of joint-stock banks in the countryside or towards persuading the indigenous banker to change his methods. Apart from the 160 branches of the Imperial Bank, and from the 18 Exchange Banks in the larger centres, there were in 1927 only 77 Indian banks, with balance sheets amounting to £60,000,000 in all, for a population of 330,000,000, and three-quarters of the Indian towns with a population of 10,000 upwards have no bank whatever. The existing joint-stock banks, however, show no inclination to open rural branches. They lack that intimate knowledge of the farmers, which the *sahukar* and the co-operative credit society possess, and such ventures as they have made in rural banking have not always been fortunate. The local *sahukar* himself is not likely to organise a bank which will compete with his activities, or to surrender his own independence by accepting employment under such an institution.

The indigenous banker must, therefore, be retained, and be induced to economise currency by using bills instead of cash. It will be instructive to see what schemes for securing this end are laid before the committees. Those who advocate the policy have hitherto failed to devise an effective means of carrying it out. One of the objects of the Reserve Bank was to create a bill market, and the Bank was to re-discount trade bills endorsed by the major banks. Whether such a market would come into being, is a matter for speculation. The establishment of the Federal Reserve system in America brought about in two years a rapid growth of bills, but the Reserve Bank created in South Africa in 1920 was not equally successful, and it is by no means certain that the Indian *sahukar* will welcome the idea. The rise in the Bank rate after the harvest does not cause him serious inconvenience; he passes on his burden to the producer. Nor has he anything to gain by raising local deposits. He is criticised for not encouraging the saving habit in this way, but the increase in his business is seasonal, and deposits for a term extending beyond that of the temporary shortage will cause him embarrassment. It is true that the exemption of trade bills from stamp duty, as recommended by the Currency Commission, may render them slightly more popular, but the *sahukar* is conservative, and only time and education will effect an appreciable change in him.

Indian opinion further presses for the creation of institutions of long-term credit, in the form of industrial banks and land mortgage banks. Industrial banks fall within the sphere of the central committee, which is now receiving replies to its own questionnaire, and will consider them, with the reports of the provincial committees, during the coming summer. Those who pin their faith to industrial banks tend to forget that of 100 Indian banks, which failed during the six years from 1922 to 1927, a large percentage were brought down by investment in industrial enterprises. Industry requires long-term credits, and must be financed by the issue of debentures, a form of security with which the Indian market is unfamiliar. What many advocates of industrial banks appear really to intend is that they shall be financed by the State.

Enthusiasm for mortgage banks is general in India. They are looked upon by insolvent debtors as a way of escape from their misfortunes, and by political theorists as a sign of a progressive nation. Hitherto they have been organised only on a co-operative basis, which under the Indian law provides a measure of cautious control. The central committee will no doubt be urged to frame a comprehensive scheme for State mortgages, but will be imprudent if they pursue such a will-o'-the-wisp. The Burmese organisation of this type, projected four years ago, appears to have been been dropped after careful examination. The central committee is to be assisted by expert financiers of international standing, who will convince the members of the economic and political dangers of imposing a State mortgage debt on the land of unbusinesslike peasants.

ITALY AND THE NEAR EAST.

(BY OUR STAMBOUL CORRESPONDENT.)

DESPITE the perturbation created on the local and Continental stock exchanges and money markets by the threatened default of the Turkish Treasury over the service of the Unified Debt, and notwithstanding the breakdown of the negotiations between the Turkish Ministry of Finance and the Ottoman Bank over the latter's participation in the share capital of the projected State Bank, the Turkish Government have carried to a successful issue the transactions initiated some month or two ago with an Italian group of capitalists with a view to providing financial accommodation for the Turkish Treasury. The semi-official Press of Angora was able to announce early in March that, thanks to this agreement, the Treasury would be placed in funds to the extent of one million sterling, and that this sum *might* eventually be increased to five millions. Since then, however, the papers have made no further allusions to the matter—either as a result of a *mot d'ordre*, or simply by reason of the abundance of copy dealing with other aspects of present-day Turkish financial and fiscal activities.

There are good grounds, however, for hazarding the conjecture that the agreement which has just been concluded is the outcome of the visit paid some three months ago to the Turkish Capital by Count Volpi, the Italian ex-Minister of Finance, who is now at the head of a powerful syndicate of Italian bankers and industrialists. Although the ostensible reason for inviting Count Volpi to visit Angora as the guest of the Turkish Government was commonly reported to be the desire of the Treasury officials to consult the Italian ex-Minister on the practicability of imparting stability to the Turkish currency, it was generally surmised in local financial and diplomatic circles that there lay behind the invitation a great deal more than appeared on the surface; and this view is borne out by the evidence which is accumulating from day to day as to the nature of the *quid pro quo* obtained from the Turkish Government by the Italian syndicate.

The financial part of the agreement does not turn on a loan or an advance properly so called, nor is there much probability, despite the forecast of the Turkish Press, that the original figure of one million sterling will be increased eventually to five millions. The form which the accommodation is to take would appear to be the opening in favour of the Turkish Government of a million pound sterling credit, probably in London, which could be utilised by the Turkish Treasury in the event of any sudden and unforeseen break in the value of the Turkish lira, until, with the anticipated seasonal resumption of the export trade next autumn, the danger of a sensational fall in the value of the national currency be definitely averted. In return for this friendly and timely intervention, the Italian syndicate has obtained a concession for the construction of the port of Mersina on the Caramanian coast, and for the intensive development of the cotton-growing industry throughout the rich alluvial Cilician plain, of which Mersina is the natural outlet.

The concessionary rights thus acquired are of particular interest when examined in the light of past history. Before the war the interests of foreign Powers in the Cilician Plain were preponderantly German. Practically the whole of the cotton-growing and ginning industry was in the hands of the "Deutsch-Türkische Baumwollgesellschaft," while the main arterial railway, a section of the "Bagdad-bahn," was controlled by an international group in which the German element predominated and at the head of which was the Deutsches Bank. By the terms of a tri-partite agreement entered into between Great Britain, France and Italy after the Great War, as a preliminary to the projected but abortive Treaty which was to put an end to hostilities with Turkey, a sphere of influence was marked out for Italy in the region of Adalia, whereas the Cilician Plain was apportioned to France, Great Britain herself making no claim to any particular area within the Anatolian confines of the territories of the old Ottoman Empire. That the French continued to take an interest, even if only a sentimental interest, in the development of Cilicia, may be inferred from the fact that, up to the signature of the Franco-Turkish Political and Commercial Agreement a few months ago, a French group continued to administer and exploit the Mersina-Tarsous-Adana Railway, which crosses the Cilician Plain and which was at one time a purely British concern. On the signature of the recent Agreement, the administration of this line was relinquished by the French in favour of the Turkish State Railways, by which Department it is now exploited.

Italy now comes nearer the forefront of the stage. Although the Italian syndicate will not be concerned with railway construction or exploitation, the execution of the harbour works at Mersina and the development of cotton growing in the Adana Vilayet will be entrusted to Italian engineers, artisans and agricultural specialists who will employ Italian labour. It has been stated, moreover, as having special significance in view of the Italian Government's declared policy of finding suitable outlets for Italy's redundant population, that one clause of the agreement between the Turkish Government and the Italian syndicate provides that, should any of the artisans and labourers eventually elect to settle in Turkey, they may do so on condition that they adopt Turkish nationality. It is, as yet, impossible to obtain any corroboration of this statement, but there does not appear to be anything inherently improbable in the proviso.

The negotiations with the Turkish authorities, since Count Volpi's departure for Italy, have been carried through by the Constantinople managers of the Banca Commerciale Italiana, assisted by delegates from the Head Office of that establishment in Italy. This bank, which has so far restricted its activities in Turkey solely to the Constantinople market, is credited with the intention of opening branches in Adana and Mersina. The latter port already enjoys the regular service of an excellent line of Italian steamers—the Lloyd Triestino—which places the whole of South-Eastern Anatolia in touch with Syria, Egypt and the Continent of Europe.

Notes of the Week.

The Naval Conference.—Our considered comments on the statement made by the Prime Minister late on Thursday, epitomising the results of the Naval Conference, must be reserved till next week. For the time being, at least, it is clear that a Three-Power Treaty is the maximum which can be attained, so far as the main purpose of the Conference is concerned. Before Mr MacDonald's announcement the only tangible achievement of the week was the publication of the "agreement" of the First Committee of the Conference on the submarine question. The Committee has decided to report that no agreement can be reached on the proposal to abolish submarines; that 2,000 tons should be fixed as the limit of the unit size of submarine, and 5-inch guns as the maximum armament, with the qualification that any Power shall have the right to build not more than three 2,800-ton submarines armed with 6-inch guns; and that "in their action with regard to merchant ships submarines must conform to the rules of international law to which surface vessels are subject." The last proviso, which represents no more than a reassertion of what was regarded as international custom sixteen years ago, is an achievement scarcely calculated to inspire enthusiasm in those who desired to "humanise" submarine warfare. As for the limitations of unit size and armament, all one can say is that if the precedent of the 10,000-ton cruiser limit is to be followed, and if the Powers are going to build uniformly up to the proposed maximum (which far exceeds the tonnage and gun power of all but a few existing submarines), the agreement is likely to be of the greatest possible disservice to the world.

Slum Clearance.—The debate on the Second Reading of the Housing (No. 2) Bill revealed a high degree of zeal in all parts of the House for the promotion of slum clearance, and members vied with each other in the citation of instances illustrative of the urgency of the need. The principal lines of criticism were three: that the raising of the subsidy to local authorities would defeat its ends by raising building costs; that injustice would be done to owners of good property in clearance areas, who would be placed on the same level as owners of condemned property in receiving no compensation except the site value; and that the payment of the subsidy in respect of persons instead of in respect of houses would lead to difficulties and unfairness. To the first point, which was emphasised particularly by Sir Kingsley Wood, Miss Lawrence replied that the fall in the cost of Addison houses preceded the removal of the subsidy, that the removal of the subsidy on private houses last September did not cause any divergence between their cost and that of public enterprise houses, and that the new demand for very small houses will only replace the now almost satiated demand for larger houses, so that there is, in her view, no need to anticipate a rise in costs. On the question of injustice through the pulling down of churches, shops, houses in good repair, and other sound property in clearance areas, it appeared that there was much misunderstanding as to the intentions of the Bill. From Miss Lawrence's statement at the end of the debate it is clear that such buildings will not be regarded as forming part of the area, but will be "land surrounded by a clearance area." As the language of the Bill in this connection gave rise to misapprehension on the part of several members, including Mr Chamberlain, it is to be hoped that it will be made more lucid in Committee. The free hand given to local authorities to allocate the subsidy (which reaches them in the form of a grant proportionate to the number of persons rehoused), on any principle they may wish, so long as it goes in reduction of rents, was the cause of some mystification. Mr Chamberlain, while approving the departure from the percentage grant, regretted the attaching of the subsidy to the person instead of to the house as unnecessarily complicated and confusing. As Mr E. D. Simon pointed out, however, this is the means adopted by the Government for making possible the carrying into effect the principle of children's allowances in aid of rent. The actual determination and application by individual local authorities of the principle on which rents are to be differentiated may present some difficulties in practice, but they are hardly likely to be so great as some members, who visualised the creation of a hereditary caste of subsidised ex-slum dwellers, appeared to imagine. Among other objections raised against the Bill were complaints that it imposed no obligations as to town planning, and that it did not require local authorities to find alternative accommodation for persons displaced. Apart from the indirect compulsion afforded by the varying of the Exchequer grant, not with the number of persons displaced, but with the number of those rehoused, there seems ample safeguard in Clause 7 of Part I of the Bill, which enables the Minister to require an undertaking from the local authority to "carry out such rehousing operations within such period as the Minister may consider to be reasonably necessary." The Bill was accorded, as it deserved, a Second Reading without division.

The "Tax on Employment."—The debate in the House of Commons last Friday on the Government Bill increasing the borrowing powers of the Unemployment Insurance Fund from £40 million to £50 million was redeemed from complete sterility by one element of interest. The House appeared to be impressed with the increasing urgency of the need to make an effort to save the insurance principle, even if it were powerless to do more than maintain by dole those whom a system based on that principle failed to cover. The anomalous nature of the present situation was well illustrated by Mr Graham White, who pointed out that, between 1924 and 1928, not only had a vast deficit accumulated, but there was a striking disparity between the net balances of withdrawals and payments by different groups of industries. The figures which he gave may be summarised as under:—

	£ Million.
Creditors—	
Food, drink and tobacco trades	1·25
Distributing trades	9·62
Banking and Commerce	2·25
Government employment	8·80
Debtors—	
Shipbuilding	10·25
Coal mining	8·80
Cotton	3·25

Though insurance by separate industries would not be practicable, the principle of making the strong carry the weak has clearly been pushed to lengths never contemplated when the Unemployment Insurance scheme was framed in 1911, and we welcome Miss Bondfield's intimation that she is prepared to consider favourably an administrative change dividing those in receipt of actuarial benefit from those whose relief is a responsibility which should not devolve upon the Fund. Unless the finance of Unemployment Insurance is quickly rationalised, there is the danger that the sense of injustice felt by prosperous industries—saddled with a "tax on employment" in order to subsidise in effect the personnel of the depressed trades—may give a disastrous impetus to the drift towards abandonment of the whole contributory principle.

King Tafari of Abyssinia.—As Regent, Ras Tafari has long been responsible for the Government of Abyssinia, and he now ascends the throne in succession to the late Empress Zauditu, who has just died—some reports say of paratyphoid and others of shock at the news of her former husband having met his death in an unsuccessful rebellion. Abyssinia is a remarkable country in many ways. It shares with Liberia the distinction of being that *rara avis:* an African State that is really independent, without being subject to any form of political control from Europe. It also resembles Liberia in being a Christian country; but whereas the Liberians are returned emigrants from Africa who acquired their Christianity in the New World, the Abyssinians are immigrants into Africa from Asia who acquired their Christianity after they had settled in their present African home. This happened very long ago—the immigration some centuries B.C., the conversion between the 4th and the 6th centuries of the Christian era. Yet a Semitic language and a Monophysite Church still hold their own here as witnesses to the extraordinary tenacity of this people in this stronghold. It is, indeed, in some sense the country that has made the nation; for the Abyssinians occupy the largest and choicest piece of that chain of highlands—stretching up and down East Africa from the Red Sea to the Cape—in which European settlers have also been attempting latterly to make themselves at home. Abyssinia is, so to speak, a Semitic Kenya Colony, which now has behind it a history of more than two thousand years. But Abyssinia is not only a natural fortress in which a temperate climate breeds a vigorous race. It also holds a key position among the countries situated in the Nile Basin under modern conditions of irrigation and river control; for the Blue Nile rises in the centre of the Abyssinian plateau, and Lake Tana, from which the river issues, has all the makings of a natural reservoir if and when certain works are carried out at the exit. If Egypt and the Sudan are to have enough Nile water between them for all their possible future needs—Egypt drawing principally from the White Nile and the Sudan from the Blue Nile—it is highly desirable that the Lake Tana causeway works should be carried out forthwith. The project has been under consideration since 1902, and the Abyssinian Government is pledged not to interfere with the flow of the Blue Nile except in agreement with the Government of Great Britain and the Sudan. In 1925, the British Government —tactlessly, if not incorrectly—tried to arrange about Lake Tana, not with Abyssinia but with Abyssinia's neighbour, Italy, with the result that the Anglo-Italian Agreement on the subject was placed in an invidious light by a clever use of the publicity of the League of Nations (Abyssinia is a member of the League and knows how to take advantage of it). Friendly negotiations on the Tana Dam project are now taking place between the Abyssinian and Sudan Governments and an American firm of contractors whom the Abyssinian Government is entrusting with the work.

The Constitutional Issue in Poland.—The constitutional —or unconstitutional—crisis in Poland is a matter of the same general interest as the present political situation in Spain; for in these matters Europe is a unity, and there is a close interaction between the parts and the whole. The forms of Parliamentarism have been established in Poland since the Republic re-emerged on to the political map of Europe at the end of the Great War; but hitherto the reality has been lacking. In the first phase of the remaking of the Polish state this condition of affairs was neither surprising nor reasonably censurable. For, after all, the working of parliamentary institutions presupposes a certain margin of internal and external security which Poland sadly lacked in the throes of her re-birth out of the chaos in which Eastern Europe was left by the war. By this time, however, in the twelfth year after the Armistice, Poland's position has changed very greatly for the better. One sort of stability on one frontier was established by the ratification of the protocol which brought the Kellogg Pact into being, in anticipation of its general entry into force, as between Poland and the U.S.S.R. And more recently, on the opposite frontier, another kind of stability has been established by the conclusion of the commercial treaty with Germany. Even the feud with Lithuania is dormant, though not dead. Thus the position is better all round. Meanwhile, Marshal Pilsudski's dictatorship has continued; and since March 14th, when Monsieur Bartel resigned the premiership, the dictator would seem almost to have gone out of his way to reduce constitutional forms as well as realities to absurdity. Monsieur Bartel did somehow manage to act as a liaison—or at least as a buffer—between the Polish Dictator and the Seym; but during the last month even the fiction of co-operation has broken down. Already Monsieur Bartel has had three successors. The first of them, a civilian, had short shrift —his offence being an attempt to carry on Monsieur Bartel's difficult *rôle* by working with the Seym as well as with the Marshal. The second was the Marshal's brother. His task was to take long enough in forming a Cabinet to keep the country without a Government until only a few hours were left for passing the Budget—the object being that the Budget should be voted without debate. His real task performed, the cadet of the Dictatorial house dutifully announced his failure to perform the Cabinet-making job which he had nominally been commissioned to carry out; and his place was promptly taken by a colonel. No doubt Colonel Slawek is a Prime Minister after the Marshal's heart, but the Seym is becoming restive at this humiliating suppression of its rights. Will the Polish Parliament really show fight? And if it does, will Pilsudsky turn out to be a Mussolini or a Primo de Rivera?

The Governor of the Bank.—Mr Montagu Norman's re-election, on Tuesday, as Governor of the Bank of England, marks the beginning of the second decade of his tenure of office. In the ten difficult years which have elapsed since 1920, Mr Norman's untiring services to the cause of reconstructing the financial machinery which was shattered over a large part of Europe by the war have earned for him a prestige and influence unique in the history of the Bank. That there should be no question of reverting to annual changes of Governor until Mr Norman, in the fullness of time, desires to relinquish a burden whose weight must be considerable is not only a reflection of general desire to preserve continuity in our central banking policy, but a well-deserved tribute to the confidence which the present Governor commands, both in London and in all the world's great monetary centres.

American Bankers and the B.I.S.—We discuss in a leading article the recent address delivered by Sir Charles Addis on the functions and possibilities of the B.I.S. In this connection it is of interest to note that the importance of the new institution as a medium for effecting co-operation among the world's central banks is endorsed also in a statement issued this week by the American Bankers' Association, in which Mr Traylor, President of the First National Bank of Chicago, and one of the two American members of the B.I.S. Organisation Committee, outlines his views. Mr Traylor is at pains to dispel the notion that the bank might obtain undue control over the financial destinies of the participating countries. Every safeguard, he considers, has been provided to prevent the B.I.S. doing anything to which the Central Bank of a given country may object. With regard to the bank's profits, Mr Traylor estimates that, having regard to the agreed rate of payment for the bank's services in handling reparations, the bank should be able in all probability to meet a 6 per cent. cumulative dividend from the beginning of its operations. Meantime, the German appointments to the bank have been made. As President of the Reichsbank, Dr. Luther is an *ex-officio* director (Dr. Vocke of the Reichsbank being appointed to act as his "alternate" when necessary), and he has nominated as additional members of the Board, Herr Melchior, the Hamburg banker, and Herr Reusch, the head of the Gutehoffnung iron and steel concern. Both these appointments should command confidence in Germany.

Young on the Young Plan.—Mr Owen D. Young, writes a correspondent, made his first big pronouncement upon the reparations Plan which bears his name in a recent speech at San Francisco. It was a very important speech, not only for its incidental comments on the recent history of reparations, but also for its general theme of the relationship between politics and economics and for its references to the international economic position and the United States. After relating the disastrous dominance of politics over economics in the reparation field before 1924, Mr Young described the Dawes scheme as a receivership for Germany, not a plan of permanent re-organisation, adding a warm tribute to the receiver, Mr S. Parker Gilbert. The great achievement of the Young Plan was to end that receivership. Germany, said Mr Young, is free. She has a debt to pay, but that is all. Her honour, not her freedom, is at stake. Mr. Young asserted his firm confidence in Germany's capacity to pay, based on a reservoir of capacity for scientific research and the ability to apply it and organise it in production. "If Germany does make the payments out of such a reservoir, the rest of the world must be careful to avoid the enervating effects resulting from the receipt of such payments." As for the Bank for International Settlements, it was created for the specific purpose of removing the transfer of reparations from the political field, but it might turn out to be an essential and useful piece of machinery for an economic world which is becoming more and more closely integrated. "Politics becomes dangerous on a stage so small unless economics functions well. Fortunately the bank has the power of growth, and it will grow only as our needs compel it. It will grow only as the central banks of the world wish to use it." The bank must be kept free of identification with the League of Nations, because economics must at all costs be kept free of politics. "America," he added, "as the greatest creditor nation, is more interested than any other in economic integration. . . . Let no man think that the living standards of America can be permanently maintained at a measurably higher level than those of the other civilised countries. Either we shall lift theirs to ours or they will drag ours down to theirs. Tariffs and other petty political barriers, temporarily justifiable, will, in the long run, only accentuate the trouble. . . . America is too rich to be loved. She is well enough off to be envied. The attitude of the world toward her will be largely influenced by her spirit." After the bombast of Big Navy politics and the log-rolling of tariff manipulation in Congress, it is a relief to hear such sentiments from an American whose prestige in his own country steadily grows.

Coal Mining Results in 1929.—Combining the last four statistical summaries issued by the Mines Department (that for the three months ended December 31st last was published this week) we show in the following table comparative results of the coal industry's working during the past three years and in the year immediately preceding the 1926 stoppage:—

	1925.	1927.	1928.	1929.
Tons disposable, millions...	214·4	221·8	211·5	230·4
	Mn. £.	Mn. £	Mn. £	Mn. £
Wages	137·1	117·8	100·2	105·7
Stores and timber	20·2	20·2	17·0	18·0
"Other" costs	29·6	29·2	27·4	26·6
Total "net costs"*	192·3	172·9	150·0	156·0
Proceeds	183·1	167·5	140·2	160·2
Profit or loss	−9·2‡	−5·4	−9·8	+4·2
Miners employed† (000's)	1,040	961	881	894
Output per manshift, cwts.†	18·00	20·60	21·29	21·69

* Including royalties, and after deducting proceeds of miners' coal. † Mean of quarterly averages. ‡ Before crediting subvention.

It will be seen that last year's expansion of 19 millions in the disposable tonnage, accompanied by an increase of £20 million in revenue, against a rise of only £6 million in "net" costs, substantially improved the industry's immediate position. The next table shows the quarterly trend of results per ton disposable:—

Quarter ended.	Per Ton Disposable. Proceeds.	Costs. Wages.	Costs. Total.	Profit.	Loss.	Thousand Miners Employed	Output Per Shift.
	s. d.	s. d.	s. d.	s. d.	s. d.		Cwts.
Dec., 1927	13 9½	10 0½	14 10½	...	1 0½	945	20·82
Dec., 1928	13 5½	9 2½	13 8½	...	0 3	851	21·80
Mar., 1929	14 0½	9 0	13 3	0 9½	...	881	22·13
June, 1929	13 7	9 3½	13 10½	...	0 3½	897	21·45
Sept., 1929	13 8½	9 3½	13 9	...	0 0½	894	21·40
Dec., 1929	14 3	9 2	13 3½	0 11½	...	904	21·78

In the December quarter the rate of output per man-shift was not so good as in the first quarter of the year, but though wage-costs rose in consequence by 2d. per ton, there was a satisfactory economy of 1½d. per ton in other costs, and proceeds per ton were 2⅜d. higher. Disposable tonnage in October-December amounted to 60 millions, as compared with 59 millions in the three months ended March 31st, and an average of about 55½ millions in the two summer quarters. The concluding table gives comparative results for the principal districts in the December quarter of 1928 and 1929:—

District.	Quarter ended December 31st. 1928. Proceeds.	Net Costs.	Profit (+) or Loss (−).	1929. Proceeds.	Net Costs.	Profit (+) or Loss (−).
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Scotland	12 4½	12 6½	− 0 7½	13 1½	12 4	+ 0 9½
Durham	12 0½	12 8½	− 0 8	13 2	12 5	+ 0 9
S. Wales	14 3½	14 10½	− 0 7	15 4½	14 5½	+ 0 11
Yorkshire	13 3½	13 5½	− 0 2	14 0	12 8½	+ 1 3½
N. Derby & Notts.	13 6½	13 0½	+ 0 5½	14 0	12 9½	+ 1 2½
Lancs. & N. Staffs.	16 7½	17 1	− 0 5½	17 0	16 4½	+ 0 7½

It is interesting to note that in the foregoing districts the greatest reduction of costs during the year has been

achieved by Yorkshire, Lancashire and North Staffs., but it would be premature on this account to draw conclusions wholly favourable to the working of the Five Counties scheme, since the dominant feature in the table above is the increase (shared by all districts) in proceeds per ton. The question for 1930 is whether that increase can be maintained in the face of general trade depression and the unemployment of much coal-burning steamer tonnage.

Wool Wage Crisis.—To judge from current indications, a stoppage in the wool textile industry seems inevitable, and in some cases the employers' notices have already expired. It will be recalled that the effect of Lord Macmillan's award last month was that time-workers' wages should be reduced by about 9¼ per cent., and piece-workers' wages by approximately 8¾ per cent. These recommendations, which were a compromise between the employer's original claims and the unions' refusal to consider any reduction, were accepted by the employers, but for some time the unions refused to give way. Finally, a week ago, after notices of the reduction had been posted, the unions yielded to the extent of offering to accept reductions equivalent to 5.8 and 5.34 per cent. for the two classes, together with certain minor concessions. This time, however, the employers proved adamant. They decided to adhere to the terms of the Macmillan award, and when representatives of the Trade Union Congress offered their services as mediators, their assistance was rather summarily rejected. And so the deadlock persists, and matters are pursuing only too familiar a course. In principle, it is difficult not to hold that the employers are in the right, for, after all, they have done nothing but accept the terms of the Macmillan award, which represents an impartial attempt to do justice and fell short of the employers' original demands. Still, it is just when you are in the right that you can best afford to explore every possible means of reaching an agreement, and many people will regret that the employers did not see fit to avail themselves to the offer of the Trade Union Congress to act as mediators.

The Forty-Eight Hour Week.—The decision of the Government to give first place to the Slum Clearance Bill confirms the impression that the three measures of special interest to the trade unions, the ratification of the Washington Hours Convention, the amendment of the Trades Union Act of 1927, and the Factories Bill, are to be delayed much longer than was anticipated by the unions when the Government came into office. It is understood that, as a result of discussions with Ministers, and after an explanation of the Government's difficulties, the trade union leaders have become reconciled more or less gracefully to the demands of the Parliamentary situation. There is also good reason to believe that the Bill to ratify the Washington Convention will at least be introduced this Session and then carried over. For some time consultations have proceeded with the officials of the unions who feared that some of the provisions of the Convention might adversely affect their own agreements with employers' organisations. The most serious view of this possibility was taken by the railway unions, whose working-time arrangements for locomotive men and some other grades are of a complicated nature to fit in with operating requirements and the guaranteed week. The draft of the Bill, however, seems to have satisfied the union officials that what they regarded as menaced interests have been fully safeguarded by the interpretation of the clauses of the Convention providing for elasticity in certain circumstances. Agreement has, therefore, been reached, and the draft has also received the approval of the General Council of the Trade Union Congress. When the text is published, it will undoubtedly be submitted to exceptionally close scrutiny by the employers' organisations in the industries affected, and the attitude of their representatives during the discussions at Geneva last year on the question of revision suggests that an effort will be made to rally strong opposition.

Switzerland and the Gold Standard.—The text of the law dealing with the gold standard in Switzerland, to which we referred in a recent issue, read in conjunction with the annual speech of the Governor of the Swiss National Bank, shows that the clause which authorises the bank to exchange its notes for gold coin and thus reinstate a gold currency in circulation is largely window-dressing. It is true that the report of the Federal Council, accompanying the law, repeatedly represents a gold currency as the ideal, and declares that Switzerland must be prepared for this contingency whenever it may arise; but in the meanwhile the bank may maintain an exchange or bullion standard as it may think fit, for the report recognises that it is a practical impossibility for Switzerland to secure and retain enough bullion to keep gold in circulation while her neighbours are on the gold exchange basis. In such conditions it would tax her utmost resources—including the drastic use of a high Bank rate—to retain her gold and maintain a favourable exchange. She would, in fact, have to penalise her economic life for the sake of the ill-conceived idea that a gold currency is a hall-mark of national wealth and prosperity. Dr. Bachmann also made it clear that he has no intention of attempting an impossible task, and plainly indicated the disadvantages of the serious deflation that would be involved if the countries of the world were to attempt to put gold into circulation. He, too, speaks of a gold currency as the ultimate goal of Switzerland, though he thinks its attainment very remote, and regards gold in circulation as having no real advantage over other forms of the gold standard. It is, however, unfortunate that it should be necessary in the new currency law of Switzerland to do lip-service to the prejudice in favour of gold coins which still appears to prevail among the Swiss peasantry. This declaration of principle may one day be difficult to explain away.

Real Burden of the National Debt.—In our Budget Supplement last week we traced recent changes in the National Debt. The growth of the real burden of the Debt is, to some extent, obscured by changes in the price level. The following table shows the movement of the Debt in terms of money of fixed value, the outstanding total of the dead-weight Debt and the annual charge for interest and sinking fund being reduced to " 1913 " pounds by means of the *Economist* index number of wholesale prices.

April 1.	Net nominal Deadweight Debt. £'s mill.	Interest and Sinking Fund. £'s mill.	*Economist* Price Index.	Debt in Values of 1913. £'s mill.	Debt Service in Values of 1913. £'s mill.
1914	650	245	100	649	24
1920	7,829	350	260	3,011	135
1921	7,574	332	173	4,391	193
1922	7,654	324	154	4,970	210
1923	7,742	347	156	5,011	225
1924	7,641	357	166	4,598	215
1925	7,598	358	161	4,722	223
1926	7,559	379	149	5,059	254
1927	7,555	379	144	5,257	264
1928	7,528	369	141	5,343	262
1929	7,500	355	133	5,665	267

The table shows that, measured in " 1913 " pounds (so far as this revaluation can be made by use of a price-index), the weight of the National Debt has increased continuously since 1924. The increase in the real burden in 1929, as compared with 1920, is 88½ per cent.; even as compared with 1924 it is 23½ per cent. Similarly, the real burden of interest and sinking fund charges has increased, and in 1929 it was almost twice as large as in 1920.

French Iron and Steel Situation.—French iron and steel production figures for February, writes our Paris correspondent, show an appreciable increase under each heading as compared with corresponding months in previous years. Steel, however, was below the monthly average of 1929 and 1928, as the result of the European Steel Cartel's general cut of 10 per cent. last November in all countries belonging to the cartel for the purpose of maintaining prices in the export market. The February output of pig iron was 810,000 tons, against 782,000 tons in February, 1929. The output of crude steel was 773,000 tons, against 743,000 tons a year ago. Blast furnaces in

operation numbered 154, against an average of 190 in 1913. The French metallurgical industry, although suffering appreciably less than that of perhaps any other country, is now feeling the influence of the world economic crisis. Plants are still working to capacity, with plenty of orders in hand, but new orders are rare. Domestic demand remains steady, but the chronic shortage of skilled labour is limiting production in certain categories and causing delays in deliveries. At the recent steel cartel meeting here it was decided to keep production at its present level throughout the second quarter of the year. It was also agreed to prolong the cartel in its present form until October next, with every probability of its continuance after that date. The new system of common sales agencies is to come into operation on August 1.

Shipping Freight Index Number.—During February " tramp " shipping freights were steadier after the prolonged and violent decline of recent months. The current figure of our index number, 87.9, represents a fall on the month of 1.2 per cent., as compared with a recession of nearly 6 per cent. in February. Contrasted with the corresponding month of last year, the average level of freights is lower by 26.4 per cent. The following table summarises recent movements of the index number:—

AVERAGE 1898–1913=100.

	Average, 1913.	Mar., 1929.	Jan., 1930.	Feb., 1930.	Mar., 1930.
European Waters	110·0	123·8	104·2	98·1	96·3
North America	113·1	122·7	94·2	92·6	87·7
South America	123·4	118·5	95·1	95·5	91·9
India	106·3	112·2	99·8	93·4	94·2
Far East and Pacific	117·4	118·3	85·2	78·9	77·8
Australia	127·9	121·1	88·1	75·7	79·2
Total	116·3	119·4	94·4	89·0	87·9

The volume of idle tonnage in Europe is now estimated to be not far short of three million tons gross, and the freight market in March, relieved—at a cost—of this immediate surplus capacity, was somewhat more stable, particularly in the case of outward coal freights. Grain chartering, however, was still very restricted, and homeward business in general showed no real signs of expansion. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade.....	77·6	− 2·5	South America—outwards	117·6	− 2·8
Bay—outwards	104·6	− 1·8	South America—homewards	66·3	− 4·2
Bay—homewards ...	125·8	...	India—outwards	109·5	− 2·1
Mediterranean — outwards	95·3	− 0·4	India—homewards ...	78·9	+ 3·7
Mediterranean— homewards	97·0	− 3·3	Far East, &c.....	77·8	− 1·1
North America	88·0	− 4·6	Australia.....	79·2	+ 3·5

Expressed as a percentage of the average for 1913, the total figure of our index number for March works out at 75.5, as compared with 76.5 in February and 102.6 a year ago. The outlook is dominated by uncertainty with regard to the course of grain prices. Tonnage should soon be required for the Argentine maize crop, but there will have to be much ampler buying of wheat before any substantial proportion of the world's present idle fleet is re-absorbed.

INSURANCE NOTES.

Standard Life Assurance Company.—Although there was some reduction in the volume of new business last year, a truer test—that of periodical premium income—shows that the Standard made satisfactory progress in all departments. The actual new life business secured amounted to £2,800,470, compared with £2,989,766 in 1928, but the chairman stated at the annual meeting that the falling off in the total, apart from single premium

FIRE WILL BE EVER PRESENT

while there is property upon which it can feed, but Insurance provides the means of indemnifying the unfortunate. If you arrange your Fire Insurances through the Legal & General you can be content in the knowledge that the Security is unquestionable, claims will be promptly and equitably settled and the premium rates moderate. Cover given immediately by 'phone.

Legal & General Assurance Society Ltd.
10 FLEET STREET, LONDON, E.C.4
Assets exceed £21,000,000
General Manager—W. A. Workman, F.I.A.

policies, was not more than £80,000. Consideration money for annuities purchased reached the considerable total of £531,000, or some £36,000 in excess of the corresponding figure for 1928, while, in addition, a substantial sum was collected in annual premiums for new deferred annuities. New business totals are chancy things, and annual reports rarely furnish any indication of the composition of the totals; but in the case of the Standard they conceal the fact that the company is rapidly building up an important diversified business, recent developments being the transaction of group insurance and of staff life assurance and pension schemes. These developments at least are in part the reason and the justification for the expense ratio, which, at 18 per cent., is comparatively high for a life office. The results of the annual valuation, which has been made on the same basis as before—a basis, incidentally, which is exceeded in stringency by no other British office—are set out below:—

	1927–28. £	1928–29. £
Surplus earned during the year	342,617	363,988
Surplus income transferred from guarantee fund	26,091	30,923
Brought forward from previous year	34,967	21,811
	403,675	416,722
Allocations:—		
To bonuses to policyholders	281,864	291,005
„ Guarantee fund	100,000	100,000
„ Carried forward to next year	21,811	25,717
	403,675	416,722

The guarantee fund referred to in this table now amounts to £1,550,000. It was created four years ago in connection with the " mutualisation " of the company and the surrender of voting and participation rights by the shareholders in return for £850,000 of 5 per cent. perpetual stock. This stock, though nominally secured on the guarantee fund, is, in fact, subject to the prior charge of the policyholders in the inconceivable event of a deficiency arising in the life assurance fund. The allocation to policyholders permits of the maintenance of the reversionary bonus to with-profits policies at the rate of 42s. per cent. per annum compound.

British and Foreign Marine Insurance Company.—The following table epitomises the experience of this company in respect of the last five closed accounts:—

Year.	1st and 2nd Year Claims and Premium Income. £	Transfer to Suspense Account. £	Expenses. £	Surplus. £
1924	592,961	455,558	123,395	14,007
1925	489,382	343,807	92,015	53,560
1926	469,493	366,979	96,462	6,052
1927	502,387	385,100	93,152	24,134
1928	611,729	461,141	99,239	51,349

The 1928 account, now closed by a transfer to suspense for the purpose of meeting any claims likely to emerge hereafter, has therefore yielded on the enlarged premium income a profit of almost 9 per cent. This is an excellent achievement. The British and Foreign was founded in 1863 and is one of a number of old-established Liverpool companies; and in the results exemplified by the above table it has strikingly upheld the high reputation of

Liverpool for extracting a profit from the difficult business of marine insurance. As regards the account now current, *i.e.*, the 1929 account, the premium income is lower at £550,408, but the first year claims are some £13,000 heavier, with the result that the fund in hand with which to meet second year and subsequent claims is only 53 per cent., compared with 59 per cent. for the 1928 account a year ago. It will therefore hardly be surprising if the outcome of the 1929 account is less favourable than that of the 1928 account. An interesting feature of the 1929 report is the capitalisation of a large sum of £536,000 for the purpose of paying up the remaining uncalled liability on the shares. This sum has been found by releasing £240,000 from the underwriting suspense account, an account which has obviously concealed a substantial reserve for some time past, the balance being drawn from the profit and loss account. A small fire reinsurance account has been inaugurated with premiums in the first year of £42,000, and a further sum of £50,000 has been deducted from underwriting suspense account in order to show an additional reserve over and above the usual 40 per cent. In spite of these large capital transfers the total reserves are very imposing. The combined total of the underwriting funds, general reserve fund, and profit and loss balance, amounts to £1,952,000, compared with a total premium income of £592,000. Dividends for the year 1929 have been declared, costing £140,700 net (compared with £134,000 net in 1928), this sum being within the net interest earnings last year of £142,000. The British and Foreign Marine is controlled by the Royal Insurance Company.

World Auxiliary Insurance Corporation.—When this company was established in 1919 with a capital of 600,000 shares of £1 (10s. paid), 100,000 shares were subscribed for at par by the World Marine and General Insurance Company. Since the World Marine and General is a subsidiary of the "Northern," the World Auxiliary is, therefore, closely associated with the "Northern" group of companies. The year 1928 was notable for a remarkable increase in premium income in Fire, Accident and General account; and although 1929 premiums of £274,000 are slightly lower than those of 1928, they represent a considerable increase over the corresponding figures for previous years. Unfortunately the claims ratio was as high as 75.6 per cent., and although commissions have been further reduced, the account was closed with a small loss of £211. The main source of profits, however, has always been the Marine account, and in 1929 this account has again yielded a profit. The total results for the past two years are set out below:—

	1928. Amount of Profit. £	1928. Percentage of Prems.	1929. Amount of Profit. £	1929. Percentage of Prems.
Fire, accident and general.....	10,632	3·8	*—211*	*—·1*
Marine	12,500	7·3	15,000	9·1
	23,132		14,789	
Less items debited to profit and loss account	3,956		9,674	
Total net surplus	19,176		5,115	

Ever since 1923 a dividend has been paid, and for the last three years this has been at the rate of 6¼ per cent. free of tax. The cost of this dividend is £18,750, an amount which leaves a comfortable margin compared with interest earnings of £33,500.

Guildhall Insurance Company.—The year 1929 marks the completion of the first ten years in the history of this company, and it was therefore natural that the chairman in his speech at the annual meeting should review the progress made during this period. The conditions during these ten years have admittedly been extremely difficult at times. Four years ago the company entered the dividend list with a maiden declaration of 5 per cent., a rate which has since been maintained, notwithstanding that in 1929 the cost absorbed less than one-quarter of the total interest earnings. The company can point also to a satisfactory achievement in the expansion of premium income obtained. In 1925 the total premium income amounted only to £296,000. In 1929 the corresponding figure was £818,000, and the underwriting profit in the latter year amounted to £11,289, a result which has not been reached in any of the last five years. After allowing for various items debited direct to the profit and loss account, the total net trading surplus in 1929 worked out at £1,038, compared with a loss of £625 in 1928. For a mixed fire and general account this result, in the conditions which existed last year, is not unsatisfactory. The expansion in premium income in 1929 was very marked, the figure being £180,000 in excess of that for 1928, and the increase appears to have been common to all departments. Moreover, the chairman was able to record that a smaller proportion of the premium income is now derived from reinsurance business—a branch which yields a very small margin of profit—and a larger proportion from direct business.

University Life Assurance Society.—This society operates within a very limited field and its clientèle is definitely restricted to "members of the Universities, Public Schools, Theological Colleges and other approved educational institutions." Naturally, therefore, its progress has been very slow. On April 30, 1925, the fund amounted to £1,109,000, and nearly five years late, on December 31, 1929, the amount was barely £200,000 greater, at £1,318,000. Again, during the same period, the periodical premium income has grown by only £3,000, from £71,000 per annum to £74,000. No commission is paid for the introduction of new policies and the expense ratio is therefore very low, the average amount being about 8½ per cent. On the other hand, interest earnings are also on the low side, and last year worked out at £4 4s. 10d. per cent. net of income tax. The year 1929 marked the close of another valuation period and the results of the valuation made at the end of that year are as follows:—

	1920–24. £	1925–29. £
Trading surplus earned during quinquennium	123,858	146,354
Capital profits from investments	50,300	3,087
Brought forward from previous quinquennium	1,444	48,793
	£175,602	£198,234
Allocations:—		
To Bonuses to policyholders	114,128	118,031
„ Shareholders	12,681	13,115
„ Carried forward to next quinquennium	48,793	67,088
	£175,602	£198,234

The reversionary bonus to policyholders has been maintained at the same rate as before, namely, 50s. per cent. per annum simple. The dividend to shareholders is made up of two parts—the annual dividend at the rate of 5 per cent. and a quinquennial bonus declared as the result of each valuation. On this occasion the quinquennial bonus has been raised from 30 per cent. to 35 per cent. The capital is nearly all held by the "old Equitable" and, if this quinquennial bonus is converted into an annual rate of dividend, the total yield to the Equitable in respect of this investment, works out at about 8½ per cent. per annum.

At the meeting of the Royal Statistical Society, on the 15th inst., Mr J. H. Richardson, M.A., B.Sc., will read a Paper on "International Comparisons of Real Wages." The meeting will be held in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C. 2, at 5.15 p.m.

Capital Issues — Stock Exchange — Business — Tariff.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 28.

BUOYANCY in the security markets has continued to give the lie to statistical evidence of business conditions. The money market has recovered from its sinking spell due to the March tax-date payments, and rates are now firmer, with call money at 3½ to 4 per cent. The bill rate has risen from 2½ per cent. asked for 90-day maturities to 2¾ per cent., and no disappointment was caused by the failure of the Federal Reserve Bank to lower its discount rate. Current conditions in money are more nearly normal than were those of a week ago, but the tone may be even easier after next week.

Dividend and interest payments in April will be the largest ever recorded, being estimated at $575,000,000, of which $80,000,000 will be Government interest disbursements on the 15th. About half the total will be dividends. Reinvestment of this money is counted on to help to sustain security prices a little longer, and a fresh flood of new capital issues is expected shortly. This week the total dropped to around $150,000,000 after running in excess of $200,000,000 for the two preceding weeks, and there have been some signs of temporary indigestion. In the first quarter new financing through public offerings and subscription rights to stockholders has totalled approximately $2,450,000,000, exclusive of Treasury offers. This compares with $3,128,700,000 in the first quarter of last year. More pronounced than the drop in the total has been the swing from stocks back to bonds. Whereas stock offerings in the first three months of 1929 amounted to $1,826,574,000, in the corresponding period this year they were only $332,000,000.

A drop of $21,000,000 in brokers' loans this week came as an agreeable surprise. The share market trading had risen to around 5,000,000 shares daily, and a great many stocks were climbing to new high levels for the year. A substantial increase in loans had been expected, and apparently the character of the buying has been better than was supposed. At any rate, there has been great activity among the odd-lot houses, which do business for the small investor, and the investment trusts have been active in the market. Considerable buying also has come from abroad, particularly France. Stock yields are still higher than those for bonds, and, from an investment standpoint, the market looks higher. It cannot be denied, however, that the recovery has widened the spread between prices and current earnings, and that it also has been greater than merely easy money might have suggested. But the country is naturally optimistic, the stock crash of last autumn has been largely forgotten, and the market is looking ahead.

Suggestions that the authorities at Washington are displeased with the rise in securities and that the Reserve system may tighten up credit may be disregarded. This week's statement of the System shows a turn in the recent downward trend in total central bank credit, the amount rising by $40,220,000, due entirely to purchases of bills. Government securities fell, and member bank discounts were stationary. The Reserve System, in the face of its earlier efforts to force out credit and bear down the bill market, is extending only $1,001,090,000 in credit, or $408,622,000 less than a year ago. Member banks, on the other hand, are rapidly increasing their loans on securities and last week their investments rose substantially. Commercial banks have bought the recent new bond issues heavily, finding it desirable to employ their funds to better advantage than in the call and time money markets. It is hazardous to guess on discount rate action, but in good quarters the view is that the Reserve authorities are prepared to go as low as 3 per cent., for the New York Bank, at any rate.

Business improvement is still a matter of hope rather than an actuality. Railroad car loadings continue smaller than for corresponding periods since 1922. The majority of the roads have published their earning statements for February, and their decline in net earnings amounts to more than 25 per cent., about the same as the January drop. The showing for March will be little, if any, better. The steel trade, which experienced a secondary reaction in February and early March, is now a shade better, the operating rate for the industry as a whole being about 76 per cent. The motor trade, having successfully cut into the second-hand and unsold car stocks last month, is looking for a busy April. Building industries are counting on the recent considerable increase in savings bank deposits and real estate mortgage money, plus the advent of warmer weather, for stimulation.

Income and corporation tax collections for March were estimated at more than $550,000,000, or fully up to the Treasury estimates made before the stock market break. Losses sustained then have cut down individual payments, but increased tax payments by companies have largely offset the reductions. If there is no further excessive expenditure by the Federal Farm Board, a fairly substantial Treasury surplus is indicated for the expiration of the fiscal year on June 30th, possibly $200,000,000. The next Treasury financing will come on April 15, to meet interest payments. It will be a non-interest bearing Treasury bill issue, running to at least $100 million.

Congress is about to appropriate $236,000,000 to carry out the Government's building programme, for the purpose of stimulating business. Only a small portion of this amount can be spent in the next few months. Work on the tariff is speeding up somewhat and it is hoped that a Bill may be ready for President Hoover's signature in another month. The provisions of the Bill voted by the Senate are generally a victory for the high tariff proponents, chiefly the manufacturing interests of the East, with sops here and there thrown to the agricultural West. The Bill is displeasing to all except those industries directly affected, and it is not expected to live long. However, it will undoubtedly be signed by the President in whatever form it reaches him, and it must be recognised that its worst features are made possible by the business slackness, which many think will be overcome once the tariff duties are settled.

Radio broadcasting by Chairman McFadden, of the House Committee, on banking and currency, is causing no great stir. Congressman McFadden is denouncing the International Bank and warning the country against the forthcoming Germany annuity bond issue, but he is so notoriously ill-informed on international finance and ordinary economics, and his most recent statements are so full of absurdities, that little attention is paid to him.

FRANCE.

Politics — Taxation and Share Yields — Reparation Bonds.

(FROM OUR CORRESPONDENT.)

PARIS, April 9.

BOTH Chambers are now putting their shoulders to the wheel, but whether the increased effort is not more due to a desire to bring the session to a close for the Easter recess than (in so far as the Lower House is concerned) to make up for time lost by sterile political warfare is an open question. The Senate is expected to finish with the Budget on Monday, and it is hoped the two Houses will be able to bring their views into accord in regard to the Finance Bill, and also put through various other measures in the programme, in time to enable a large number of Parliamentarians to leave on the 19th and accompany the President of the Republic on his official visit to Algeria, to preside over the forthcoming centenary celebrations. These "other measures" include the Bill for the much revised national insurance scheme, which is to come into operation early in July; the convention between the State and the Compagnie Française des Pétroles (which concerns in part the handling of the

French share of the yield from the Mesopotamian oil wells), the Bill for reform of the judiciary, and another authorising the eagerly expected 1,500,000,000 francs of reductions of taxation, particularly on securities and Bourse transactions.

The extent of the latter reductions is generally regarded in financial circles as being a matter of first importance, so far as the Paris Bourse is concerned. The average volume of Bourse business since the war has in most years worked out at about 50 per cent. of its pre-war importance. During the past few months, in spite of the relief accorded during the second half of 1929, business has fallen off further to an enormous extent, as the revenue returns confirm. For this the cumulative effect of the annual *taxe de transmission* (which is not a transfer tax at all, but a yearly direct burden on the yield from the coupon) is largely blamed. A striking current example of the onerousness of this impost is announced to-night. The dividend distributed by the Boleo copper concern in 1928 was entirely absorbed by arrears due in regard to this tax, in respect of previous years in which no dividend had been paid. This still left a debit balance of over 13 francs to be collected from the coupon of 1929, with the result that (income taxes and other imposts taken into account) Boleo holders this year are receiving barely 3 francs in respect of a dividend of 20 francs gross. The transmission tax (which is levied on the mean quotation of the scrip during the year) was reduced by .4 per cent. last December, and it is understood that it is about to be lowered to .25 per cent., which is still regarded as unduly heavy, in view of the other imposts on coupons. The reduction to one-half of the present tax on Bourse operations appears to have been definitely decided upon, and the rate of income tax on French issues is to be brought down from 18 per cent. to 15 per cent., and on *non-abonnée* foreign scrip from 25 per cent. to 22 per cent.

Whether these concessions will restore prosperity to the Paris market remains to be seen. The effect of the proposed relief, as concerns a large number of French issues, bought at the quotations recorded on April 1, has been worked out by *La Situation Economique et Financière*, and shows that the net yield (for instance) from Bank of France shares, which, under the present rates of taxation, is 2.06 per cent., will be increased to 2.13 per cent.; from P.L.M. railway shares 3.99 per cent. instead of 3.67 per cent., and from Aciéres de Longwy shares 3.10 per cent., in place of 2.90 per cent.

New bond issues and increases of share capital are at last slowing down in volume, but it has been noted latterly that, whereas during the past year of so there was a tendency for the quotations of existing issues of companies engaged in fresh borrowings to decline, new capital issues have had no appreciable effect on Bourse quotations of issuing companies' scrip. This week's new bond issues are notable for the fact that the rates of interest offered range from 5 per cent. to 6½ per cent., *deminet* (that is, free of all taxes, except *taxe de transmission*). Out of the thirteen principal issues announced last Monday, only one is at 4½ per cent. (Forges & Aciéries du Nord et de l'Est, which is making an issue of 50,000,000 francs mortgage bonds), whereas recent previous issues have in the majority been mostly between 4½ per cent. and 5½ per cent.

Unofficial statements are published here to the effect that the first $300,000,000 instalment of the pending international reparations loan will be distributed among the various countries of issue on the following basis—

	$ $
France	75,000,000 to 80,000,000
United States	75,000,000 to 80,000,000
Great Britain	40,000,000
Germany	25,000,000
Holland	25,000,000
Switzerland	15,000,000

and that the remaining $45,000,000 will probably be allotted in varying proportions between Italy, Belgium and, perhaps, Sweden, in which latter country the Kreuger and Toll group (which is closely identified with the "Swedish Match Trust," and which has been interested in several recent international loans) may play an active part in the operation. Publicity has been given to these figures, it is suggested in some quarters, in consequence of the difficulty that is asserted to have arisen (1) in regard to the rate of interest to be offered, and (2) owing to the American banking group, which is to handle the United States portion of the loan, having expressed the fear that it will be unable to take up the $100,000,000 or more which it was originally asserted they were prepared to place in New York. In official quarters here the utmost reticence is being observed in regard to the operation.

The crux of the matter seems to lie in the fact that out of the produce of the $200,000,000 (say £40,000,000) which will constitute the reparations part of the issue (as distinct from the $100,000,000 which is to constitute a direct loan to Germany for her own internal purposes), France is to receive five-sixths, or in round figures £32,000,000, which would apparently involve heavy gold shipments to Paris. If the New York and London issues are to correspond to the above proportions, the United States and Great Britain would be required to absorb between them rather over $76,000,000 of the reparations part of the total issue, out of which about $63,350,000 would have to be moved to this country, in satisfaction of the French share of five-sixths of the total. The high ratio of the French share of the produce of the loan is due, of course, to the fact that the money thus raised is to recoup this country as speedily as possible for her expenditure in reconstituting her devastated regions.

It is stated here that the scrip issued in the various countries is to be of the same nature, wherever issued, and that it will be equally negotiable in all the world's financial markets. Interest and repayment of capital are to be in gold, and to be feasible in all countries alike, irrespective of the place of issue of any given bond. This appears, however, to be in direct contradiction with the assertions made here that the American bankers are standing out for the United States portion of the issue to be given an interest yield of 7 per cent., while the French are admittedly asking for the rate to be fixed at 5 or 5½ per cent. It is to be hoped that the pourparlers are now sufficiently advanced for an official announcement to be very shortly made that will enlighten potential investors on the matter.

GERMANY.

Politics — Financial Programme — Unemployment — Capital Market — Railway Rates — Bank Results.

(FROM OUR CORRESPONDENT.)

BERLIN, April 8th.

THE new Chancellor, Herr Bruening, achieved an unexpected victory in the Reichstag when the vote of lack of confidence, proposed by the Social-Democrats, was defeated. His clever move in entrusting Herr Schiele, the leader of the Agriculturists, with the post of Minister of Food Supplies, brought the German National Party face to face with the danger of a split for several days. The agrarian wing of the party was determined to retain the new Government in all circumstances in order to permit Herr Schiele to bring his plans into effect, while the party leader, Herr Hugenberg, still, as always, desired a purely nationalistic *régime*. But the agrarian interests won; in order to preserve the unity of the party, Hugenberg was compelled to permit it to vote solid against the no-confidence motion. At the same time, he made a speech full of the sharpest attacks on the Government, but that does not alter the fact that he helped the Bruening Cabinet to victory. Of almost more importance for the moral victory of the Cabinet was the factt hat a number of Social-Democrat deputies abstained in order not to be compelled by party discipline to vote against the Government. Thus Herr Bruening was able to avoid the dissolution of the Reichstag, which would have had to follow an unfavourable vote, and which he certainly did not desire.

The most difficult tests, however, still confront the Ministry. It must induce the Reichstag to accept its extensive economic programme, the finance bills with their

reform of the method of securing funds for unemployment insurance, and the agrarian programme worked out by Herr Schiele. The Cabinet's financial programme includes an increase of the tax on beer by 75 per cent. Three of the smaller parties belonging to the Government bloc have already declared that they will oppose this increase in all circumstances. One of these is the Bavarian People's Party, which regards the Government's proposal as imposing a special burden on Bavaria, since this part of the Reich produces and consumes a disproportionately large part of all beer brewed in Germany. Even if these parties should not go to the extent of withdrawing their Ministers from the Cabinet, their opposition nevertheless creates a difficult situation for Herr Bruening, for he is in any case without a majority for the financial measures. It is true that the Socialists under the Mueller Cabinet voted for an increase of the beer tax, but they did this only in return for concessions made by the other parties, and especially in respect of unemployment insurance. Since then they have gone over to the Opposition precisely because the concessions made in the interest of this insurance did not satisfy them, and now they refuse to vote for the increase of the beer tax.

Hence Herr Bruening must turn to the German Nationals for help. And here he is again compelled to contend with Herr Hugenberg, who would like to see the Government overthrown and is therefore unwilling to grant it any further assistance; and he will also have to contend with other strong opposition, for the beer tax is far from popular among the rural supporters of the German National Party. The Chancellor will undoubtedly again make use of the same method that won his initial victory: he will play off the interests of the farmers against Herr Hugenberg. The Government has already intimated that it can carry through its programme for relieving the farmers only if its financial programme be accepted and the necessary funds be thus provided. In the meantime, Herr Bruening is endeavouring, both by promises and threats, to induce the Social-Democrats if possible to support him or at least to observe neutrality. His speech at the party congress of the Centre was directed almost solely to the Social-Democrats. He endeavoured to dissipate any suspicion that he had deliberately brought about the overthrow of the Cabinet, he spoke kindly of the Ministers of the last Cabinet, and tried in every way to avoid all appearance of cherishing any unconstitutional plans against democracy. But he also warned the Social-Democrats not to adopt too aggressive a manner towards the Centre unless it wanted to burn all its boats. His allusion was obviously to the Social-Democrats' sorest point, the coalition in Prussia, where the Socialist Prime Minister, Herr Braun, is completely dependent on the alliance with the Centre, which has so far proved very firm.

The financial programme of the Bruening Cabinet contains no surprises. The new Government simply takes over its predecessor's measures, except that in the matter of unemployment insurance it accepts, in the place of the original proposal, the compromise that was finally accepted by the bourgeois parties and was overthrown by the opposition of the Socialists. Little, however, is still known as to the agrarian measures, although they have already been accepted by the Cabinet. But it appears to be certain that fixed import duties on farm products are in very large part to be replaced by the Government's plan to assure legally established minimum prices in the domestic market, and to lower or raise the duties in so far as is necessary to this end. The sliding-scale system of duties on breadstuffs has been in effect in Germany for several months. The original plan, which is in accord with the basic principles of this system, contemplated making the alterations of the duties automatically dependent on price variations. But this idea was soon abandoned in favour of establishing only the desired price by law, and of leaving it to the discretion of the Government to vary the duties. Now the sliding-scale system in this form, which leaves wide scope for the discretion of the Government, is also to be extended to cover other agricultural products. Further relief measures for the farmers include extensive subsidies, which will naturally be a heavy further burden on the national Treasury, already suffering from the steady deterioration of the economic situation.

This situation still shows no signs of recovery. The reduction in the number of unemployed is much smaller than in previous years at this season. In the middle of March, 3,278,000 unemployed for whom no employment could be found were still registered in the State employment agencies. Of these, 2,258,000 were in receipt of benefit. From February 28th to March 15th the number fell only by 88,000, despite the fact that ordinarily at this season of the year requirements for farm labourers and workers in the building trades bring about a much greater improvement. At the same time, the liquidity of the money market has at last influenced the market for long-term capital, and has above all brought about a lively turnover in mortgage bonds. This improved condition of the capital market is the strongest and, indeed, the only hopeful sign of an approaching economic revival. The private discount rate has dropped in the last few days to 4½ per cent., and the Treasury was able to place one-year Treasury certificates at 6¼ per cent. The money liquidity also affected the Bourse, and stocks were firm throughout the week.

For a year the Reichsbahn has been trying to secure the Government's permission for a new increase of rates. The most urgent reason for this is the competition from road transport, which is severely damaging the State railways and all other railways. Only a part of this competition is explained by the natural superiority of the motor vehicle. It is used in general for passenger traffic only where it is more convenient or cheaper than the railway. But in freight traffic, on the other hand, motor trucks are found not only in local traffic, where their employment offers great technical advantages, but also for transport over long distances, as, for example, between Berlin and Hamburg. Here the motor vehicle merely takes advantage of the rate system of the railways. The German railways have comparatively low rates for raw materials and semi-manufactured goods, which do not fully cover their fixed operating costs. The losses on these have to be compensated by the freight rates for finished goods. The rates of the railways in other countries are fixed along the same lines, since raw materials and semi-manufactures cannot bear such high rates as the more valuable finished goods. But the gap between the respective rates in Germany is especially wide. This did not matter so long as the railway had a complete monopoly of transportation. Now, however, it is precisely the goods on which the rates are higher that are conveyed by motor lorry, which, of course, imposes no special charge on them in favour of bulk goods, and on many sections of the railways there remain only the commodities that pay low rates. Hence the Reichsbahn does not wish to raise all its freight rates; what it desires is to leave the higher rates as they are and to place heavier burdens on mass goods, that is, to narrow the gap. In addition, it wishes to have motor traffic more heavily taxed.

The Darmstädter and Nationalbank leaves its dividend unchanged at 12 per cent., which is comparatively easy for it, since, with 60 million marks, it has only a small capital, and has accumulated open reserves to the same amount. But the balance for 1929 contrasts sharply with that of the other large banks, and especially that of the Dresdner Bank, with which it can best be compared. The gross profits are given as only 75.77 million marks, against 82.93 millions in the preceding year; the net profits are 11.8 millions, against 16.71 millions. As a result no addition is this year made to the reserves, to which 5 millions were added in each of the last two preceding years, and 10 millions in 1926. The Deutsche Bank and Disconto-Gesellschaft, which was the last of the big banks to make public its annual report, the first since the fusion of the two banks, declares a dividend of 10 per cent., the same as those declared by each bank last year. The current business account showed about the same profits in 1929 as in the preceding year, but the profits from the securities and issue activities were very small and were devoured by the amounts written off the bank's holdings of securities.

HOLLAND.

Money Market — Stock Exchange — Capital Issues — Foreign Trade.

AMSTERDAM, April 2nd.

THE last reduction in the discount rate was not reflected to any degree in the money market. Market discount rates fluctuated during the last week of March round 2⅛ to 2¼ per cent. Even the end-of-month settlements brought about no higher open market discount rates than 2¼ per cent., that is to say, ¾ per cent. below the official discount rate, which has been 3 per cent. since March 25th. It is thus evident that the supply of money is still ample, although call money did tighten somewhat during the last few days, and from the record low level of ½ per cent. in the second half of March it advanced to 3 per cent. last Monday, while yesterday the quotation was 2¾ per cent. It would be reasonable to expect some recovery from the recent low money rates with a tightening in the supplies of money, in view of the fact that the reviving speculation the last few days in Wall Street forced call money there up to 4½ per cent., which induced many lenders to seek employment on the New York call money market for the surplus funds they had there. Money was therefore again being transferred to New York; but to what extent this exodus of money will continue and lead to a stringency in money supplies in this country will, of course, depend partly upon how the speculative movement in Wall Street develops.

There is no evidence as yet that the recent plentiful supplies of money have had any stimulating effect on business. The listless, waiting attitude is particularly reflected on the Stock Exchange. Just as during last year's boom speculation was apparently immune from any effects of the high money rates, it now appears that the low money rates are not stimulating any activity. These circumstances are, of course, closely related to the situation in industry, where the tendency continues to be dull on account of the uncertain and in many cases sombre prospects.

The same conditions were reflected in the issue market. The tendencies observed since the boom broke last autumn were even more pronounced last month than in the preceding months. Since the beginning of this year the market has been favourable for the issue of bonds bearing a fixed rate of interest, and with the extraordinarily low money rates prevailing the month of March provided a particularly good opportunity in this respect, so that another increase was recorded in the issues of debentures and bonds. In January these issues amounted to 43.7 million guilders, in February to 52.5 million guilders, and they increased in March to 71.2 millions—a figure that was not reached either in 1928 or in 1929. The total of issues in March increased to 72 millions (February 55 millions), the highest amount recorded since February, 1929. In that month the total was 100.9 million guilders, 69 millions of which were for shares and 31.8 millions for bonds.

At the same time the depression prevalent in industry is amply illustrated by the declining curve of the shares issues. In January, 1930, these amounted to 6.3 million guilders, in February to 2.7 millions, while in the month past the total of only 0.76 million was reached. The division of the amounts issued in shares and bonds in March is summarised on the following table:—

	(Guilders.)		
	Shares.	Bonds.	Total.
Domestic	760,000	54,112,237	54,872,237
Foreign	—	17,154,000	17,154,000
	760,000	71,266,237	72,026,237

The amounts absorbed on the Netherlands capital market during the first three months of 1930 and 1929 are, in round figures, as follows:—

	(In Million Guilders.)					
	Domestic.		Foreign.		Total.	
	1929.	1930.	1929.	1930.	1929.	1930.
January	53	45	5	5	61	50
February	61	11	39	44	100	55
March	5	55	20	17	25	72

In contrast to the situation in February, when the issues by public authorities amounted to a trifle more than one-third of the private issues, the proportion was the reverse in March, the private issues amounting last month to two-thirds of the issues for public authorities. An important part of the large amount for public loans is accounted for by the 1930 issues of the Netherlands Indies Loan, 1923, E, for 37,880,000 guilders, of which 21,750,000 already allotted, so that only 16,130,000 at 96 per cent. was offered to the public. Two foreign Governments availed themselves of our capital market, viz.: Chile, for a loan of 8 million Swiss francs 6 per cent. bonds at 88⅛ per cent., and Luxemburg, for 3.6 million guilders 5 per cent. bonds at 93½. Considerable interest was centred in the issue of 40 million dollars 4½ per cent. debentures by the Royal Dutch in New York, of which a parcel of 6.6 million dollars at 90 per cent. was offered here. In addition, the Preussische Pfandbriefbank marketed 3 million gold marks 7 per cent. mortgage bonds at a price of 91. The only American funds which appeared on our market in March were the 5 per cent. debentures of the American and Foreign Power Company, $2,250,000 of which were offered at 90½.

According to the official statistics for February, 1930, the value of imports into the Netherlands during that month was 201,130,459 guilders, that of exports 144,517,072 guilders, and that of the import balance 56,613,387 guilders; for the first two months of the year the figures were 421,590,221 for the imports, 296,374,679 for the exports, and 125,215,542 for the import balance.

For the first two months of the years 1927-1930 the values were:—

	(In Million Guilders.)			
January–February:	1927.	1928.	1929.	1930.
Imports	378·0	434·0	410·0	421·6
Exports	270·3	291·2	275·8	296·4
Import balance ...	107·7	142·8	134·2	125·2

Comparisons with the first two months of 1929 are rather misleading, because February, 1929, was a month of low exports and imports on account of the suspension of navigation on the canals and rivers during the severe frost. The value of the imports of manufactured articles advanced from 164.2 million guilders in January-February 1929, to 188.9 this year, and the value of the exports of this description of goods rose from 123.2 millions in January-February, 1929, to 135.4 millions in January-February, 1930.

AUSTRIA.

Trade Union Legislation — Capital Issues — Business — Railways — Bank Results — Commercial Treaty.

(FROM OUR CORRESPONDENT.)

VIENNA.

FOR some time domestic politics have caused no disturbance to economic conditions in Austria. The Radical wing of the Social-Democrats and that of the Christian Social Party have been forced into the background, and, when a conflict has seemed rife, as over the Anti-Intimidation Bill, Federal Chancellor Schober has managed to steer a middle course. The economic significance of the Anti-Intimidation Bill lies in the fact that in the future it will be difficult for Social-Democratic workers to declare that they will not work in a shop where men not belonging to their trade union are employed. This practice has led in the past to repeated conflicts, to strikes and to lockouts, but it can now be punished. Trade unions, other than the Social-Democratic trade unions, are now to have rights which they were previously unable to attain. Furthermore, works managements will no longer be compelled to made deductions from wages for party purposes. Agitation for strikes or lockouts is also to be circumscribed, and, under certain circumstances, the Bill will make those responsible liable to pay damages.

The Social-Democratic Party was disposed to be accommodating in various matters, because the new Government tried to keep as much as possible above party, and a number of opponents of the present Cabinet also adopted a moderate attitude for fear of a return of the former Federal Chancellor, Dr. Seipel. Disappointment was caused by the circumstance that the investment loan is still distant.

For a time the project of issuing it before the German loan was contemplated, but, on advice from America, the plan was abandoned, and the issue will take place in June at the earliest. In regard to the housing bonds, also, a change has taken place; the issue has been postponed, and is hardly likely to take place before autumn. Fifty million schillings of this loan was to have been taken over by Austrian banks, savings banks and insurance companies, but the banks have declared their readiness to make an advance, which will provide the Government, or the Credit Institute for public works, which is looking after the finance of the building, with the necessary funds to carry on without issuing this loan before the big investment loan has been floated.

Building activity is rather satisfactory, except that the procuring of mortgage credits causes some difficulty. Nevertheless, it is a remarkable fact that for house-building money is far more easily obtainable than for the purposes of commerce and industry. In regard to the latter, creditors have had most unhappy experiences. Their present diffidence is further justified by the fact that in the month of March there was an increase in the number of compulsory compositions and bankruptcies, the respective figures being 206 and 64, which constitute the highest weekly average for the last three years. The explanation lies in the greater severity of creditors; banks, too, are not so patient as they used to be. The process of concentration in banking gives rise to the disadvantage that it is easier to get big credit than such moderate credit as is needed by medium-sized industrial and commercial concerns.

The Government recently convoked a conference to consider the complaints and recommendations made by the various economic interests. As a result of this conference a stricter check upon the quantity of unemployment benefit will probably be instituted. It appears that serious abuses have been practised, for seasonal workers and the sons of farmers have been drawing benefit not due to them, and persons in receipt of poor relief have represented themselves as unemployed. The number of unemployed has, however, fallen, and is now recorded at 330,000 persons in the whole of Austria and 86,000 in Vienna alone.

The long-postponed changes in regard to the Federal Railways have at last taken place. A provisional management has been appointed to carry out a further reduction in the staff, to attend to certain necessary investments and to execute measures of economy. A bitter disappointment was suffered by many old shareholders over the balance sheet of the State Railway Company, which showed a loss of 11.9 million schillings, whereas a dividend of 3.50 schillings was distributed last year. The new management of the State Railway Company, which was formerly one of the concerns of the Bodencredit Anstalt, considered it necessary to write off a large sum. It is intended finally to wind the company up, provided the Hungarian annuity can be disposed of satisfactorily.

The Steyr Works, too, will not continue in its present form. Even now the production of automobiles has been considerably diminished, the costly attempt to bring out fresh types each year has been given up, and more workmen are being discharged. In regard to the arms manufacturing department, which is at present making sporting guns, an agreement has been arrived at with the Hirtenberg Cartridge Factory and the Rhenish Metalware Factory, Düsseldorf. In conjunction with these two groups a Swiss company is said to intend taking the arms department over.

How difficult it is to reduce overhead costs is to be seen from the recently published balance sheet of the Wiener Bankverein. The bank has an expense ratio of 88.8 per cent., even though the number of clerks has been reduced during the last year and the management cut down. The result of the last year of business was not found satisfactory, and the dividend has, therefore, been reduced from 1.50 schillings to 1 schilling. Salaries amount to 14.3 million schillings, expenses 3.4, taxes and imposts 3.2, and net profit only 2.9 millions. The group of the Deutsche Bank und Disconto Gesellschaft, of the Société Générale de Belgique, and of the Basle Commercial Bank has increased its interest in the Bankverein. This group has taken over the shares of the Bankverein, which the Bankverein itself was obliged to buy up in recent years, and has placed on the board of directors as its trustee General-Director Alexander Weiner, who some years ago left the Bodencredit Anstalt after a serious conflict. The balance sheets of the other banks will probably be published in the course of April. From all the balance sheets of the banks it is clear that the Stock Exchange and issue business is completely stagnant, and that the interest item is the only favourable one. The modification of interest rates which resulted from the relaxation of tension on the international money market will certainly make itself felt during the current year. The shortage of money, about which the weaker concerns in particular complain, is connected with the falling-off in deposits at the savings banks and also at the banks. As there are investment values bearing nearly 8 per cent. and also shares bearing from 6 to 7 per cent. guaranteed for the next year, the public is not satisfied with 4½ per cent. on deposits.

Important commercial treaty negotiations will probably begin shortly. The difficult position in agriculture and in certain branches of industry will lead in the near future to the introduction in Parliament of a new Customs tariff, which will include several big increases. The farmers go so far as to demand that a grain monopoly should be created; others want to have a minimum price of grain guaranteed. From Germany Austria demands export facilities for cattle, horses, firewood and ready-made clothing. From Yugoslavia she demands the right to export to that country larger quantities of certain sorts of grain. As, however, the Yugoslavian treaty is not terminable before autumn of 1931, Yugoslavia wants Austria, in return, to permit her to raise the Customs duty on certain articles exported by Austrian industry to Yugoslavia. From Czechoslovakia the Austrian textile industry demands permission to increase duties on certain yarns and textile goods, and justifies this request by indicating the privations actually being suffered by the Austrian textile industry. Important agreements have recently been made in the metal industry. With the co-operation of the Krupp Works at Berndorf, a general price agreement has been concluded in the metalware industry. So far this has not had financial effect, but the difficult position of individual factories clearly showed the danger arising from the price-cutting carried on up to the present.

HUNGARY.

Public Finance — State Enterprises — Budget — Foreign Trade — Tariff Truce.

(FROM OUR CORRESPONDENT.)

BUDAPEST, March 23.

THE Finance Minister, Dr. Wekerle, introduced on March 18th the Budget for 1930-31 in the House of Deputies. The Budget estimates for the next fiscal year show expenditure amounting to 895.7 million pengös, as against an estimated expenditure of 920.8 million for the present financial year, and an actual gross expenditure of 964.5 millions in the provisional accounts of the Budget year 1928-29. Economy in expenditure is an imperative necessity, because the revenue returns for the present financial year show a falling tendency. As the Finance Minister declared that the taxation burden of the country cannot be further increased, the cutting down of public expenditure was inevitable. The estimated revenue for 1930-31 is returned at 896.7 million pengös, as against 923 millions for 1929-30 and against an actual revenue of 964.9 in 1928-29. According to the last report of the Finance Minister, the realised revenue for the first seven months (July, 1929-January, 1930) of the present financial year amounted to 546 million

VIENNA.

Englishman with journalistic and selling experience in Vienna, seeks position as contact man for English or American organisation, or other suitable work.— Address: HJ-13, c/o "The Economist," 6, Bouverie Street, London, E.C.4.

pengös, as against 589.2 million pengös in the corresponding period of the previous Budget year. The deficit of the present fiscal year amounts now to 32.3 million pengös, but according to the report of the Finance Minister the deficiency will be made good in the following five months, partly from the proposed economies and also because the expenditure of the second half of the fiscal year is less than in the first half. There is little doubt that the new Budget estimates were drawn up on the lines of the diminishing Treasury receipts of the present fiscal year. Therefore it may be safely assumed that if the estimated expenditure is not increased budgetary equilibrium is amply safeguarded, as the Treasury has enough latent reserves from previous years.

An analysis of the Budget for 1930-31 shows that the ratio of expenditure on personnel and pensions to total expenditure amounts to 54.1 per cent., as against 51.7 per cent. in 1929-30. The main items of the estimated expenditure are as follows:—

	1929-30.	1930-31.
	In million pengös.	
Personnel	299·3	303·4
Pensions	121·7	125·6
Contributions to local authorities	55·2	55·6
Material expenses	314·3	284·9
National debt services	92·8	92·8
Reparation payments	7·5	8·7
Investments	30·0	24·7
Grand total	920·8	895·7

It is much to be regretted that the expenditure on current investments had to be curtailed, but the present state of public finance did not allow more for that purpose. In his Budget speech the Finance Minister emphasised the fact that the proposed State Loan will be devoted to those investments only which will allow a safe margin for interest and amortisation. Road building, railway material and agricultural public works are the main items of the Government's capital investment programme for which a long-term loan will be contracted before long. However, no State Loan could be issued before the ratification of the Hague Agreement, and, therefore, it is probable that recourse will be had to an intermediate short-term loan of £4 to £5 million. The Finance Minister promised to help the agriculturists by cheap loans. To that purpose some 100 million pengös will be devoted partly from the balances of the Swedish Match Trust loan and partly from other sources through the intermediary of the altruistic agricultural institutions.

The Budget of the State Enterprises, which was presented to the House of Deputies together with that of the Administration Services, discloses that all public services have balanced their accounts. The Budget of the State Railways shows ordinary expenditure amounting to 302.5 million pengös, and capital investments are returned at 12.5 millions. Considering that passenger rates were increased by 20 per cent. in February, it is expected that the estimated revenue of 313.2 million pengös will be surpassed, and that there will be a sufficient margin for the proposed loan services for capital investments.

Foreign trade returns are very satisfactory. In the first two months of 1930 exports amounted to 140.7 million pengös, as against 106.1 millions in January-February, 1929, and imports totalled 128.9 millions, as against 153.6 millions a year ago. Thus the adverse balance of trade of 47.5 million pengös in January-February, 1929, was transformed into an active trade balance of 11.8 million pengös in the same period of 1930. The increase of exports is due partly to the export facilities granted by the Minister of Commerce, and also to the low price level of Hungarian agricultural products. The falling off of imports is explained by the cessation of foreign borrowing.

Business — Bid for South American Trade — Trade with New Zealand — Western Natural Resources — Prices — Finance.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 11.

EXPRESSIONS of confidence that the advent of spring will produce an immediate improvement in conditions are, for the most part, half-hearted, and the pessimists are now predicting that a lean year lies ahead. One of the chief sources of the depression is found in the plight of the three prairie provinces, where the purchasing power of the farmers is lower this spring than it has been at any time since the great post-war agricultural depression. Since the non-pool farmers mostly sold their crops for cash, and it is now practically certain that the members of the pools cannot expect any large instalments over and above the initial payment which they received on delivery of their grain, there is little hope of much more money being distributed in the prairies until the new crop is garnered. So prospects of a revival of business in this quarter are very slim, and manufacturers and merchants in the East are compelled to shorten sail until orders again begin to flow freely from the West.

The car-loading figure for the week ending March 1st, placed at 59,840 cars, showed an improvement of 2,400 cars over the figure for the previous week, but it was as much as 9,230 cars below the figure for the corresponding week of 1929. Railway earnings remain low, and the gross revenues of the Canadian systems for the week ending March 7th were placed at $4,249,770, which is a decline of $800,773 compared with the corresponding week of last year. Both the great railways, however, are going ahead this spring with a large programme of expansion, and the absorption of labour, and the demand for materials which their construction work will entail, will be exceedingly welcome. But the grain impasse is still unsolved, and the Bureau of Statistics placed the volume of Canadian grain in store on February 28th at 211,141,277 bushels, which is a decline of only some half-million bushels from the previous week's figure. No serious export demand has materialised to relieve the situation, and wheat prices have been more or less stationary for the past week. The statistician of the Federal Grain Commission places Canada's available exportable surplus at 180 million bushels, and intimates that a large carry-over is inevitable at the end of the crop year. The existence of a large carry-over of wheat will tend to make the prairie farmers decrease their wheat acreage, and as, unfortunately, the American market for store cattle is about to have stiff barriers placed around it, the outlook for farming in the West is not auspicious. Moreover, the brokerage scandals have dealt the mining industry a hard knock, and the newsprint industry has not solved its difficulties.

It appears that Canada for some time ahead will have to rely largely upon her industrial centres to maintain national prosperity, and, as the home market will be contracted, they will be disposed to push more and more into foreign markets in competition with British and American exports. For Canadian manufacturers striving to build up an export trade the Smoot-Hawley Tariff Bill may be helpful, as its effects will be to increase costs of production in the United States and diminish them in Canada, where foodstuffs will be cheapened by it. A strong bid is being made by Canadian manufacturers for a larger share of the South American market, and the Canadian Government has just arranged to distribute motion pictures descriptive of Canadian life and enterprise in 200 cities of South America. New trade commissioners have been placed at Lima and Panama, a Canadian bank has opened fresh branches at Panama and Colon, and a direct steamship service to Buenos Ayres has been established.

The Conservative Opposition have made an attack upon the existing trade arrangements with New Zealand. A Conservative member, who is a dairy farmer, moved that a treaty on more equitable terms should be negotiated. He and other Conservative speakers expatiated upon the harm which had been done to Canada's dairy industry by

heavy imports of butter from New Zealand, which last year amounted to more than 34 million pounds. Mr Dunning, the Finance Minister, deprecated the Conservative motion, but announced that, since certain Canadian interests had represented to the Government the desirability of a permanent commercial treaty with New Zealand, it had begun negotiations with the Ward Ministry of New Zealand for this purpose and had met with a sympathetic response to its overtures. The debate is still proceeding, but the Conservatives are proclaiming triumphantly that they have forced the hand of the Government to accept their policy in regard to better protection for Canadian dairymen.

Further progress has been made with the settlement of the ancient problem of the natural resources of the Western provinces. The Saskatchewan Government has now reached an agreement with the Federal Ministry. From this settlement there is an interesting outcome. As long as the Federal Government controlled the Western lands on which new settlers were chiefly located, it of necessity had to assume direction of immigration policy, but the problems connected with it have become increasingly troublesome. So the Government has virtually reached a decision to divest itself of all but very limited responsibilities for immigration. It will supervise the admission and rejection of immigrants, and it may help to bring in British boys for farms and a certain number of trainees, but it proposes to leave to provincial administrations henceforth the responsibility of determining how many immigrants each province wants in a given year and of negotiating agreements for bringing them in.

Commodity prices show a downward tendency, and the wholesale index of the Bureau of Statistics for February (on the base 1926=100) is 94, as compared with 95.6 in January. Thirty-three quotations were lower, 110 were higher and 359 remained unchanged. The Federal revenues, as the result of the business depression, have been showing a marked decline, and, although at one time they were running substantially ahead of last year's figures, at the end of the first 11 months of the present fiscal year on February 28th they were only placed at $402,822,733, which is a decline of nearly $6,000,000 from the total for the corresponding period of the last fiscal year. In the same period the total of the expenditure is given as $310,148,104, which is an increase of $10,500,000 over the parallel figure. The Government has now submitted to Parliament its estimates for the coming fiscal year, which are given at $399,358,101. This is a decrease of, roughly, $5,000,000 as compared with the total estimates for 1929-30, but the supplementary estimates are certain to bring it in excess of last year's total.

JAPAN.

Parliament — Gold — Prices — Foreign Trade — Bank Dividends.

(FROM OUR CORRESPONDENT.)

TOKYO, March 10.

THE Ministerial party has won a signal victory in the general election, returning to the new Parliament with a clear majority of close on 100 over the chief Opposition party and of 80 over all possible combinations. Of 460 contested elections, besides 6 unopposed returns, the Ministerial party has obtained 273 seats, the Opposition 174, Labour 5, and other minor factions and independents 14. The relative position of the Ministerial and the Opposition parties has thus been more than reversed. The Labour and other candidates have been singularly unsuccessful, and they have virtually ceased to be an effective Parliamentary force in the new House. In the public eye the election resolved itself into a single issue between deflation and inflation, or, in the popular version of the Opposition party, "depression and prosperity." The verdict of the country in favour of a deflationist policy is clear enough, if the returns of the polls reflect public opinion accurately. Having thus secured the clear mandate, the victorious Government is in a position to continue those lines of policy which have achieved the restoration of an effective gold standard. But the Government is to introduce no important legislative measures into the new Parliament which will meet in the latter part of April for a short session of three weeks.

The efflux of gold continues. A further 92 million yen of gold was shipped during the second month of the gold standard, bringing up the total withdrawal since the removal of the gold embargo to 152.6 millions. With the gold drain there eventually appeared signs of strain in the money market, which had for a time been relieved by the far heavier decline in the demand for credit.

The downward movement in the general level of commodity prices also continues, though at a less rapid pace than in the preceding months. Following a substantial fall of 1.8 per cent. in January and of 2.9 per cent. in December last, the Bank of Japan's wholesale index number for February registered a further drop of 0.8 per cent. on the month, the average level being 11.7 per cent. lower than a year ago. Wheat, sugar, raw silk, cotton yarn, iron and steel, and timber, among other things, contributed to the decline. Much concern was expressed in all markets over the continuous fall in prices of important commodities. The silk-reelers have been discussing the maintenance of raw silk prices with the aid of the Silk Credit Act. A severe depression is ruling in the stock market. Security prices have suffered a wholesale depreciation and a number of leading shares, particularly in industrial sections, are now quoted at far below their par value.

The foreign trade returns for last month reveal heavy falls in both import and export values in comparison with February, 1929, after all allowance has been made for lower prices, particularly on the import side. The February returns show that the value of imports at 160,705,000 yen was 76.7 millions lower than in the corresponding month of last year, and exports at 118,886,000 yen fell by 28.4 millions, the excess of imports over exports being 41.8 millions, as against 90.1 millions. Nearly half of the decline in imports is accounted for by raw cotton, the other half by wool, timber, wheat, iron and steel. On the export side raw silk, silk manufactures and wheat flour are mainly responsible for the decrease. Cotton goods alone held their own, owing to a great extent to increased Chinese takings for the purpose of forestalling duties to be levied on a gold basis as from March 1st.

The statements of the Japanese joint-stock banks for the past half-year, which are now available, again make poor showing. The net profits for the December half-year of the five leading banks amount to only 17.3 million yen in the aggregate, as compared with 19.3 millions for the preceding half-year, and 22.2 millions for the corresponding half of last year. But there was no change in the customary rates of dividend, which were paid in some cases out of undivided profits of the previous years. The decreased banking earnings are mainly ascribable to the heavy fall in the demand for credit during the period due

to the anticipation of a return to gold. On the other hand, the two Colonial banks show increased earnings. The Bank of Chosen recorded an increased profit of 939,000 yen and paid a regular 4 per cent. dividend, while the Bank of Taiwan earned a larger profit of 503,000 yen, which was used to make good the loss brought forward from the preceding years.

Letters to the Editor.

DE-RATING IN PRACTICE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In my constituency of North-East Bethnal Green, during the London County Council Election of 1928, the supporters of the Conservative candidate circulated leaflets among the electors claiming that the Local Government Bill then under discussion would ensure a reduction in the local rates of something in the neighbourhood of 1s. 3d. in the £. During the General Election, a year later, the same supporters of the same Conservative candidate assured the same electors that the same Bill—by then an Act—would bring about a reduction in local rates of something in the neighbourhood of 7d. in the £—a reduction of 50 per cent. in the sanguine hopes and bold anticipations of a year before. Another year has now passed, and prophecy has given place to the stark reality: the local rates are not down by 1s. 3d., or even 7d.; they are up by 8d. in the £. And why?

The amount to be raised by rate is £31,740 less than last year; yet the rate required will be increased from 6s. 8d. in the half-year just ended to 7s. 4d. in the half-year now beginning. "This is due" (I quote the financial statement of the Borough Treasurer presented to the Borough Council) "to the effect of the de-rating of industrial property, which has reduced the rateable value of the borough from £605,702 to £507,033, and the product of a 1d. rate from £2,385 to the estimated figure of £1,975."

Be it observed that Bethnal Green is a particularly poor borough—with a single exception the product of 1d. rate in Bethnal Green produces less than in any other London borough—the pre-de-rating figure of £2,388 being comparable with, for instance, £4,706 for Battersea, £7,117 for Stepney, £12,282 for Kensington, and £39,573 for Westminster.

The de-rating of industrial property reduces the rateable value by £100,000—an insignificant reduction in a wealthy borough; in Bethnal Green it means a heavy additional rate, which will fall in the shape of increased rentals upon the already overburdened shoulders of the shopkeeper, the householder and the tenement dweller, where, apart from the operation of the Local Government Act, the ratepayers might confidently have looked forward to a continuance of a progressive reduction in the rates already begun under the administration of a careful, prudent and business-like borough council.

Thus are the critics justified by the event.—Yours, etc.,

H. L. NATHAN.

House of Commons, S.W. 1.
April 9, 1930.

A PROTECTIONIST FALLACY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The suggestion made by the Safeguarders that the restriction of competitive imports might lead to an increase in non-competitive imports requires an answer.

The broad feature of our overseas trade is the import of food and raw materials paid for by the export of our manufactured goods. But a great change has taken place since 1914 in the relative values of these two classes owing to the very great advance in labour charges; so that whereas the bulk of our imports now only average 30 per cent. or less above pre-war, the products of our cotton, woollen and engineering industries are valued at about 75 per cent. above pre-war.

The result is that, after we have taken in all the food and all the raw materials we require in exchange for our high-priced manufactures, there still remains 25 per cent. of our pre-war exports which are not required. If we are to resume the export of the old volume of manufactures, we must be prepared to extend the range of our imports.

There is not enough scope in food and raw materials, much less in uncompetitive imports. The fact is that, as we are getting a more advantageous exchange, we must, like a family that gets richer, either treat a larger part of our exports as investments or employ outsiders more to pay for our dearer goods or services; and as there is no great shortage of food in this country, and additional raw material can only be used by greater activity in our manufacturing trades, we must be content to take additional imports in the form of manufactured goods.

Our two largest exports are cotton and woollen goods. To-day it takes only two suits of clothes to pay for the weight of wheat which in 1914 exchanged for three suits; similarly, nine yards of calico will now pay for as much Argentine beef as required twelve yards in 1914; and whereas we needed to send six to eight yards of cotton cloth to pay for one pound of rubber, we now need scarcely send two yards.

Our cotton, woollen and engineering industries have all been developed for export trade far beyond the needs of our home population. Is it, then, surprising that as long as we refuse to widen the area of our exchanges there results an unemployed surplus of production?—Yours truly,

GILBERT BEARD,
Hon. Sec., North-Western Free Trade Union.

5, Cross Street, Manchester.
April 9, 1930.

FRANKFURTER ALLGEMEINE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The issue of March 22nd contains, on page 642, a short article on Frankfurter Allgemeine Versicherungs-Aktien-Gesellschaft. In this article there is a mistake, inasmuch as the term "board of directors" is used in two different senses. Obviously it is difficult to give the correct English term for the German "Aufsichtsrat," and "Vorstand," as the exact equivalent of either of these institutions does not exist under English Corporation Law, a fact to which attention has been drawn in an earlier issue of the *Economist* (*Economist*, September 21, 1929, page 509). In the first part of the above-mentioned article it is said the German banks were represented on the "board of directors," whereas in the second part of the same article you say that "the board of directors also violated the law, and will have to answer for it in the criminal courts." These two statements taken in conjunction are not correct, as the banks were only represented on the "Aufsichtsrat" and not on the "Vorstand," whose actions will be subjected to investigation in the criminal courts. Of course, there is no question of any representative of the banks having violated the law.

Further, it is stated that a settlement of 40 per cent. is guaranteed to the creditors. As a matter of fact, only a quota of 20 per cent. has been guaranteed.—Yours faithfully,

DEUTSCHE BANK UND DISCONTO GESELLSCHAFT.

Berlin, W. 8. April 7, 1930.
30, Mauerstrasse.

[We regret that owing to the ambiguity of the term "board of directors" when applied to German companies our Berlin correspondent's note on this subject should have given the impression that German banks were represented on the *Vorstand* ("board of management") of the Frankfurter Allgemeine. The facts are, of course, as stated by the Deutsche Bank, that banks had representation only on the *Aufsichtsrat* ("supervisory board") of the company.—ED., Econ.]

MR RUNCIMAN ON MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Runciman, if he will allow me to state it, was in error in saying to the members of the United Kingdom Provident Institution that the return to the gold standard was too precipitate. The return was gradual, as the following figures show. In 1920, the height of the inflationary period, the Bank of England notes were £115,000,000, and the Currency Notes £354,000,000. In the following years the figures were:—

	£'s million.			
	1921.	1922.	1923.	1924.
Bank Notes ...	127	121	123	126
Currency Notes ...	324	295	285	288

In 1925 the return took place, when there was an expansion in both Bank of England notes and Currency notes.

It will be observed that in 1922, '23 and '24, previous to the return to the gold standard in April, 1925, there was very little movement in the total volume of currency, the principal contraction having taken place in 1920 and 1921. This contraction took place after the fall in prices of commodities, and was not the cause of the fall, although no doubt the cessation of further inflation was a contributing factor in hastening the fall. In the latter part of 1924 the Dawes scheme was made effective, and this involved a loan to Germany of £40,000,000; the bulk of this sum came from America. The effect of this loan and other loans from the United States to Europe had a favourable effect on the New York rate of exchange on London, with the result that the rate steadily rose to nearly parity in the early part of 1925 and made possible the return to the gold standard. The whole operation was gradual and as little disturbing as possible under the circumstances. The example of Great Britain led to the Continent following suit, with the result that we have now secured a sound foundation in stability of exchange on which to build a prosperous foreign trade. The return to the gold standard was none too soon, and I entirely agree with you that having decided to take that course it was advisable to return as "quickly as possible."—I am, Sir, your obedient servant,

March 24, 1930. D. M. MASON.

Books and Publications.

A WAY THROUGH FOR INVESTORS.

THAT investors in the very safest class, such as Consols or the debentures of British railways, have seen not only their capital but their real income halved during the present century is unfortunately too true. The decline was already in progress long before the war, owing to the altering value of money and the widening of the scope of trustee investments. But since the war the immense multiplication of Government loans and the crushing burden of direct taxation to meet hugely increased expenditure, together with a new and dangerous doctrine that Governments can produce prosperity by spending borrowed money, sufficiently explain the further shrinkage. The lesson that has been learnt is that no low fixed-interest-bearing security should be bought unless it has a due date not too far ahead for repayment of the principal. Subject to that condition the old-fashioned principle of "safety first" still seems to be sound advice.

With regard to investment in ordinary shares, Mr Withers, in a stimulating and very timely book,* gives the results of investigations carried out in America by Mr E. L. Smith and in this country by Mr H. E. Raynes, a Fellow of the Institute of Actuaries. In both cases they showed a large margin of income in favour of ordinary shares over debentures in the same companies when spread over widely diversified undertakings and taken over a considerable period. Taking nine groups, including British railways, shipping, textile, gas, electricity, telegraph, iron and coal, land, and financial trusts, Mr Raynes found that £54,000 invested in their shares in 1912 would have appreciated by nearly 100 per cent. in 1927, while the same sum placed in the debentures would have depreciated by 21 per cent. These are certainly striking figures, but it is admitted that specialised knowledge is required for investments in "equities," as also the ability to spread them over a wide area. This is where the small saver is in a difficulty, for he has not the requisite knowledge to analyse balance sheets nor sufficient capital to spread his risks widely enough. Indeed, as Sir Mark Webster Jenkinson put it in an address nearly two years ago, "to gauge the earning power of a business it is essential to know how, where and why the profits were earned; no balance sheet will afford any reliable guide on these matters. You may teach rationalisation . . . you may introduce artificial aids such as State-aided finance . . . but in the end the value of a business depends on the men who run it."

If the man with leisure, plenty of capital and in a position to secure good advice cannot always back the right horse, what chance is there for those without these advantages? And this brings Mr Withers to suggest that the haven for small savers may be found in the creation of purely investment trusts that would carry more weight than those, excellent as they are, that have been formed under the Industrial and Provident Societies Act, in which individual holdings are limited to £200. In illustration of what can be obtained from soundly managed trust companies an illuminating table shows that from 1909-10 to 1928-29 the average income received by a holder of ordinary stocks in nine such concerns has risen from 5.4 to 14.3 per cent., while the average market price had advanced from 100 in 1909 to 304 on September 30 last. These were all high-class investment trusts with no eye to promoters' emoluments, where a substantial portion of the divisible profits was placed to reserve year by year, thus constantly increasing the profit-earning fund. Their present high prices are a deterrent to the small saver. The new trusts dreamed of by Mr Withers would be on similar lines sponsored by the leaders of the financial world, including that already overworked gentleman, the Governor of the Bank of England.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Economic Aspects of the History of the Civilisation of Japan. By Yosoburo Takekoshi. In three volumes. (London) George Allen and Unwin, Ltd., 40, Museum Street. Vol. II, 3 gns. net.

These three volumes contain a detailed survey of Japanese economic history, which forms a substantial and valuable contribution to English-speaking readers' knowledge of the East.

The Land and the Peasant in Roumania. By David Mitrany. (London) Oxford University Press, Warwick Square. 20s. net.

This volume is a very worthy representative of the Carnegie Endowment Series. It examines the effect of the war and of the land reform upon every aspect of rural economy in Roumania, and in so doing throws light upon many more general agricultural problems.

Heutiger Protektionismus in der Weltschiffahrt. By Dr. Max de Vries. (Berlin) Wilhelm Christians Verlag, Unterwasserstr. 8.

The thesis is that the present world depression in shipping is due to State subventions and other forms of protection to the shipping industry.

Analysis of Industrial Securities. By Carl Kraft and Louis P. Starkweather. (New York) The Ronald Press Company, 15, East 26th Street. $5.

A most elaborate and thorough exposition of the technique of analysing industrial companies for the purpose of estimating the desirability of their securities as investments.

The Federal Anti-Trust Law. By Charles Wesley Dunn. (London) Oxford University Press, Warwick Square. 5s. net.

A series of lectures, in pamphlet form, constituting a valuable study of the Sherman, Clayton and Federal Trade Commission Acts.

State Income Taxes. Vol. II, Analysis of Income Taxes in State Fiscal System. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. $2.50.

This volume and its predecessor are a remarkably exhaustive source of detailed information on the various income-tax systems obtaining in the different States of the United States of America.

CHINESE LOANS.

THE Chinese bond market presents a species of Chinese puzzle to the majority of investors. Quotations range from rubbish prices, which indicate the outright gamble, to "gilt-edged" prices which carry the mark of genuine investment buying. Clearly, the layman needs to know his way about this market, and it may help him to remember that Chinese loans fall generally into four distinct classes—those secured on the maritime customs, which are of high standing; those secured on the salt tax revenues, which are less secure; those secured on the railways, which, with two exceptions, are of doubtful standing; and, finally, unsecured loans, which have no standing whatsoever.

To set out the merits of the loans secured on the customs revenues it is necessary to give a few historical facts and figures. The Maritime Customs administration was established about the middle of the last century to collect import and export duties at the Chinese ports open to foreign trade. It has always been under the direction of foreigners, and by an agreement of 1898 the Chinese Government undertook to retain a British subject as Inspector-General as long as British trade in the treaty ports exceeded that of any other nation. In addition to its rights as regards imports and exports, the Maritime Customs Administration is charged with the collection of customs on coastwise trade in foreign-built bottoms, and since 1901 with that of the native customs (at the treaty ports) which were hypothecated for the service of the Boxer Indemnity. The customs receipts are paid into a bank attached to each customs office, and the funds required for the interest and sinking funds of the loans are remitted to the agents, the balance being returned to the national exchequer. By the trade treaty of December, 1928, China's claim to tariff autonomy was accepted, and an increase in the customs duties, which were formerly 5 per cent., to 12½ per cent. *ad valorem*, was immediately authorised and came into effect on February 1, 1929. The receipts of the Maritime Customs in the past three years have been as follows:—

	Revenue. Haikwan Taels.	Average Rate of Exchange.	Sterling Equivalent £
1927	68,735,000	2/9 13/16	9,684,000
1928	82,332,000	2/11 1/16	12,028,000
1929	152,760,000	2/7 13/16	20,428,600

The remarkable increase in the receipts last year shows the effect of the new rates, which were expected, however, to provide an increase of over 80,000,000 taels. The increase in the 1928 receipts, in spite of the civil wars of that year, was mainly due to the abnormal imports of goods in the last quarter, which were made to escape the higher tariffs from February 1, 1929, onwards. Nevertheless, full credit should be given—to quote the report of the Department of Overseas Trade—to the "Chinese genius for carrying on business with the odds heavy against them."

These customs receipts provide a satisfactory security for the three loans directly charged, which, in order of priority, are the 4 per cent. of 1895, the 5 per cent. of 1896, and the 4½ per cent. of 1898. There are two other loans secured indirectly on the customs receipts—the 5 per cent. Reorganisation, 1913, and the 5 per cent. Boxer Loan. There is some doubt as to which of these two loans enjoys the better security. Whereas the 5 per cent. Reorganisation, 1913, is definitely a charge on the surplus of the customs if the salt tax revenues are insufficient, the 5 per cent. Boxer Loan is charged on the French portion of the Boxer Indemnity, which in turn was secured (a) on the revenues of the Maritime Customs subject to prior charges, (b) on the revenues of the native customs administered by the Maritime customs, and (c) on the revenues of the salt tax subject to prior charges. The next table shows the present prices of these five loans, the amounts outstanding and the interest and redemption yields:—

	Drawings.	Amount Outstanding.	Redemption.	Price.	Yields. Flat.	Yields. With Redemption.
		£			£ s. d.	£ s. d.
4% 1895	March	1,571,666	1931	99½	4 1 3	5 8 0
5% 1896	February	1,797,950	1932	98	5 2 6	*6 5 0
4½% 1898	January	8,087,425	1943	82½	5 5 9	†6 12 0
5% Re-organisation 1913	March	23,326,840 §	1960	64½	7 18 3	‡8 7 6
5% Boxer	December	41,000,000	1947	72½	7 0 3	§8 2 9

* If redeemed April, 1932; £7 6s. 0d. if redeemed April, 1931.
† £7 11s. 0d. for average life to 1938.
‡ £8 18s. 3d. for average life to 1951.
§ £9 10s. 0d. for average life to 1940.

The first and second of these loans are virtually commercial bills, and the second is peculiarly attractive because, on account of the heavy sinking fund available, the chances of a holder being drawn for redemption next April at par are about one in two.

With regard to the salt tax loans, no funds were available in 1928 for the service of the loans on account of the civil wars and the depredations of the Tuchuns, but later in that year an arrangement was made by the Ministry of Finance for all revenues from the salt tax to be credited to the Government's account in the Chinese collecting banks (*i.e.*, the Government took over the custody of the funds) and the Ministry of Finance undertook to transfer monthly in respect of each district a quota to make up $10,000,000 per annum to meet the loans secured. In September, 1929, the Nanking Government announced that the salt tax quotas were being regularly remitted by the different districts, and that arrears of interest which had accumulated were being made up. The interest payments on the loans secured directly on the salt tax (4½ per cent. of 1908 and 5 per cent. of 1912) were, in fact, made in October, 1929, and have since been continued, but there are certain drawings still in default, and interest coupons are in arrears on the 5 per cent. Hukuang 1911 loan, secured on certain provincial revenues, including the salt tax. The present prices and yields of the salt tax loans (shown in order of priority) are found in the next table:—

	Drawings.	Redemption.	Price.	Yields. Flat.	Yields. With Redemption.
				£ s. d.	%
4½% (Anglo-French) Gold Loan 1908*	August	1938	55	8 4 0	13½
5% 1912 (Crisp loan)†	March	1952	47½	10 11 0	14
5% Hukuang 1911‡	December	1957	30	...	...

* Drawn bonds due October, 1928, were paid in October, 1929, but the drawn bonds due October, 1929, are still in default.
† The coupon due in September, 1928, was paid in September, 1929, when the Government announced that four quarterly interest payments would be made during 1930, bringing the interest up to date by the end of that year. Drawn bonds due in March, 1928, and subsequently, have not been paid, but the Government announced that instalments would be paid annually in 1932 and all arrears paid up by December, 1934.
‡ Coupons due June 15, 1926, of German Issue and December 15, 1926, of English French and American Issues, paid July 23, 1929, but subsequent coupons are in default. On September 18, 1929, the Ministry of Finance announced that arrears would be paid off at the rate of one coupon in June each year. Drawn bonds due June 15, 1925, and subsequently of German Issue and June 15, 1926, and subsequently of English, French and American Issue are in default.

The railway loans have suffered most from the civil wars, and the services of most of them are in default. Traffics are interrupted, and the lines are seized by military commanders whenever it suits the latters' military or private exchequer purposes. Nevertheless, the 5 per cent. Imperial Railway Loan of 1899, although the line owes large sums for rolling stock and material and is in default on its loan from the British and Chinese Corporation, has been kept up to date as regards its interest payments. The railway administration pays to the Hong Kong and Shanghai Bank, by monthly instalments, the amounts necessary for the service of the loan. The Shanghai-Nanking and the Shanghai-Hangchow-Ningpo have also been able to meet their liabilities, though payments have sometimes been delayed. The Council of Foreign Bondholders takes the view that as regards the railway loans in default, the continuance of more settled Government renders the prospect of resumption of regular payments more hopeful. The prices and yields of the railway loans are shown in the next table:—

Loan.	Redemption.	Price.	Flat. £ s. d.	With Redemption. £ s. d.
5% Imperial Rlys. 1899 ...	1944	71	7 1 0	8 12 0
5% Shanghai-Nanking ...	1953	62	8 6 0	8 7 6
5% Shanghai-Hangchow-Ningpo ...	1938	74	6 18 5	9 18 0

NOTE.—The following railway loans are in default: 5% Honan Rly. 1905 from July, 1926; Canton-Kowloon 5% 1907 from December, 1925; Tientsin-Pukow 5% 1908 and 5% 1910 from April, 1926, and November, 1925, respectively; and Lung-Tsing-U-Hai 5% 1913 from January, 1926.

With regard to the unsecured loans, the 8 per cent. Marconi, 1918, and 8 per cent. Vickers, 1919, are still in default as from 1921 and 1922 respectively, and there seems no prospect of improvement until a general consolidation of China's unsecured indebtedness is organised.

While the position of Chinese loans has, on the whole, improved of recent months, there are none the less serious risks inherent in the general situation. The last report of the Department of Overseas Trade, for example, referred to the increase in domestic loans, of which $100 million were bequeathed by the old Pekin Government. Since May, 1927, the National Government has issued domestic loans aggregating $334 million secured on the tobacco tax, the German Boxer Indemnity and the increased Customs revenues. These internal loans have been given preference over foreign loans regardless of the claims of the latter, and their interest payments have been regularly met. Another possibility to be borne in mind is the question of a revision of the extra-territorial rights of foreigners. The National Government at Nanking has already attempted to abolish these rights. At the end of last year it announced that extra-territoriality was abrogated as from January 1, but left a loophole by saying that legislation would be enacted in due course, but meanwhile an opportunity would be available for international discussion. The British Government's reply was a polite refusal of the *immediate* abandonment of extra-territoriality, but a declaration that it welcomed the Chinese Note as a first step towards *agreed* revision. The wording of the British reply is worth repetition. "So long as these conditions (the interference of military chiefs and others in Chinese courts of justice) subsist, there appears no practicable alternative to maintaining, though perhaps in a modified form, the treaty port system that has served for nearly a century to regulate the intercourse between China and British subjects within her domain. . . . The problem as it presents itself to His Majesty's Government at the present moment is to discover what further modifications would be desirable and practicable to effect." The security of the loans secured on the Customs revenues is due entirely to the fact that the Maritime Customs office is administered by foreign officials at the treaty ports, where, in case of emergency, foreign warships can command the situation. While a Chinese civil war—the so-called "punitive expedition," which the "model governor" of the Shansi province has just undertaken against General Chiang Kai-Shek, may be the beginning of another outbreak—is not, possibly, of serious consequence to the holders of the National Customs loans (it may affect, of course, the salt tax and railway loans, according to the duration of the trouble), any alteration of the system of foreign extra-territoriality and the collection of Customs by foreign officials at the treaty ports would clearly have far-reaching effects on the Chinese bond market, which no investor can afford to ignore in estimating the outlook.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 22.	April 24.

THE Stock Exchange's expectations this week were framed on moderate lines. No large accession of business was looked for in the week preceding the Budget speech. Nor was the "House" at all sanguine of a fall in Bank rate, despite the optimism of Lombard Street. That business was generally well maintained was regarded, in the circumstances, as highly gratifying. The strength of New York, though its wisdom was questioned on this side, was an immediately helpful factor, especially where "internationals" were concerned, while Paris was a more or less consistent buyer of her favourite stocks. The reports of domestic industrial concerns, published during the week and dealt with on succeeding pages of this issue, were, for the most part, of satisfactory tenour, and in the new capital market various issues of high investment status were favourably received.

The gilt-edged markets opened under the shadow of the Budget, but became firmer as the week progressed, on the favourable monetary outlook, the flow of Australian gold to the Bank, and, partially, on specialised foreign interest. Funding Loan, with its extensive foreign holding, remained erratic, but gained ground on balance. War Loan was supported and the new 4½ per Cent. Conversion Loan, partly paid, was in demand. India stocks showed a further recovery on the absence of spectacular results following the opening of the "disobedience" campaign. Australian loans reacted, the market being by no means happy regarding Mr Scullin's Draconian tariff proposals.

The outstanding feature in a dull foreign market was the revival of interest in Chinese Loans. The 1913 Customs Issue found speculative buyers and various railway bonds were in demand. The outlook for Chinese securities is considered in a leading article on page 836. The rally in Brazilian bonds was temporarily halted, but Argentine stocks were firm on a small volume of investment business. European stocks showed only fractional changes.

Home rails met with modest support, less on the week's traffic figures (the increase in which, as compared with 1929, was discounted by the latter's post-Easter character) than on expectations that next week's holiday traffic would be of favourable dimensions. The market, however, failed to respond to a further rise in Underground gross revenue. After a dull opening, Argentine rails were given a sharp upward twist by a rise in the exchange and a rumour that the Government had secured a large loan. Elsewhere, Central Uruguays were strong, but little interest was taken in Brazilians.

In the industrial markets, interest was chiefly centred on international stocks, which showed a steady advance on Wall Street activity, broken by intermittent profit-taking in that centre. The consistent firmness of Kreuger and Toll was vindicated by an eminently satisfactory report, discussed in a Note on page 842. Brewery and tobacco shares were again irregular, market opinion hardening on the Budgetary question, but rayon shares recorded a perceptible advance on bear closing and nebulous rumours regarding next week's possibilities. Interest was shown in commercial motor shares, particularly Leyland and Dennis, the latter's name being unofficially associated with that of the Associated Equipment Company. A tentative improvement in Imperial Chemical Industries, on numerous small buying orders, brought out more than ample supplies of stock. Only a moderate interest was taken in Gramophone and Columbia issues in the absence of any official merger announcement, the H.M.V. interim dividend leaving the position exactly as before. Little interest was taken in iron and steel shares, the market finding certain features of the Guest-Keen-Baldwins fusion terms somewhat difficult to understand. An interpretation of these proposals will be found on p. 840. Nitrate shares came for a few brief hours into the centre of the stage, a sharp rise in Lautaros following the announcement that a com-

mittee had been formed in London, under official auspices, to effect an increase in consumption of the Chilean product. Bank shares attracted a moderate business at fractionally higher prices, but insurance shares were irregular.

Exceptional quietude prevailed in the rubber share market, after a reaction in quotations at the end of last week. Despite the imminence of the May tapping "holiday," and rumours of a pending revival in American buying, the commodity was dull, and lost ground. A few sales of Rubber Trust followed the reduction of the dividend. Dealings in tea shares also fell off, despite the announcement of final arrangements for restriction of production and "finer plucking" in the industry. The oil share market showed fair, though intermittent, activity, New York and Paris being buyers on balance. Attention was concentrated mainly on Shell, Royal Dutch, and other leaders, with some speculative interest in Eagle issues.

The mining share market was irregular throughout the week, with a few bright spots. Kaffirs opened strongly on Paris buying, and Brakpan went ahead sharply, though the gain was not held. Geduld and East Geduld were in evidence, the latter's new capital issue serving to focus favourable attention on Union Corporation, while Johnnies showed some weakness in connection with adverse rumours regarding the Potgietersrust Platinums. Among Rhodesians several improvements were recorded, Congo Border again leading the way with an advance to 15½, while N'Changa and Rhodesia Broken Hill hardened. The price of tin advanced £2 15s. on Wednesday, but the market was irregular with some profit taking. A number of Indian descriptions were marked down on reported labour troubles, and Mysore and Nundydroog both finished lower.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The new issues of the week totalled $260 million, the largest sum since early January. The Argentine $50 million short-term loan was heavily over-subscribed, but some offers went slowly. Existing bonds are quieter in competition with shares, which are rapidly regaining their old popularity. More optimistic reports are being received from the motor industry, but the steel trade is slightly less active, with a 2 per cent. drop in the operating ratio, although the Steel Corporation's unfilled orders showed a rise of 90,000 tons during March—the seventh consecutive monthly rise. Railroad traffic remains at the 1922 level. Public utility shares are the most active market, but practically all descriptions of industrials are buoyant. Rails, however, are being left alone in view of their unsatisfactory earnings and the investigations into holding-company finance which are being carried out by Congress. The volume of dealings is the highest since last autumn, averaging over 5,000,000 shares daily. The public and the pools are both active, and profit-taking is insufficient to stop the advance, although the market is quite irregular each day, and a good deal of in and out business is probably being wrongly taken for strength. No change in the discount rate is anticipated until quieter conditions prevail in the share market. Farm implement shares are higher on rising exports. Steel shares are marking time, but chemicals were higher and tobaccos resting at their high level. A bull market exists in food shares, and aircraft stocks are being manipulated to a high figure. The commodity markets are steadier.

INVESTMENT NOTES.

The Price of Corporation Loans.—The fruits of cheap money are being rapidly gathered by British municipalities, whose loans account for the lion's share of the current business of the issue market, and are obtaining an excellent response. From many points of view this phase of the capital market's activity is highly desirable. The loans now being issued are of full trustee status and high intrinsic investment quality. The proceeds are being utilised for large capital works, of a public character, which economists are wont to advocate as employment-providers in periods of industrial depression, such as the present time. A story has been obtaining currency, however, that home corporations are obtaining their money too "cheaply"—that they are, in fact, borrowing at lower rates than at any time since the war. How far is this borne out by fact? Of this year's corporation loans only one has been priced to yield the investor less than 5 per cent., as the following table shows:—

HOME CORPORATION BORROWERS IN 1930.

	New Money Involved (at Issue Price). £	Yield, including Redemption (%). £ s. d.
5% *Bank Rate*—		
Brighton	1,094,500	5 0 6
4½% *Bank Rate*—		
Hastings	742,500	5 1 2
Hull	1,485,000	5 1 3
4% *Bank Rate*—		
Southampton	1,633,500	5 1 3
Swansea	1,485,000	5 1 5
3½% *Bank Rate*—		
Bristol	1,734,482	5 0 9
Birmingham	5,025,000	4 19 3
Rhymney Valley	229,360	5 7 9
Belfast	497,500	5 0 9
Barnsley	1,000,000	5 0 0*
Sunderland	1,000,000	5 0 0
Total to date	**15,926,842**	**5 0 8**

* Exclusive of "turn" involved by payment of full half-year's interest in September next.

Approximately £16,000,000 of new money has been raised by home corporations this year (including Belfast, but excluding Dublin), at an average price of £5 0s. 8d. per cent. The effective yield has not fallen even approximately in proportion to Bank rate this year. How do these figures compare with those of corporation borrowing in earlier post-war days? The following table supplies an answer:—

CORPORATION BORROWING, 1924-1929.

Calendar Year.	Average Level of Bank Rate. %	No. of Corporation and Public Board Loans.	Total Amounts Involved (at Issue Price). £	Average Yield. %
1924	4·0	9	10,265,000	4·81
1925	4·55	21	21,329,000	4·84
1926	5·0	31	41,833,900	5·02
1927	4·65	24	27,114,400	4·96
1928	4·5	7	14,871,000	4·75
1929	5·5	4	8,316,000	4·96

On the last occasion when Bank rate was as low as it is to-day, not a single home corporation loan was issued. This applies both to the period from June 15 to July 13, 1922, when Bank rate was 3½ per cent., and from July, 1922, to July, 1923, when it reached its lowest post-war level of 3 per cent. During the following years, however, it was only in the abnormal period of 1926, under the Coal Stoppage and a 5 per cent. Bank rate, that the average yield on new corporation stocks was as high as at the present time. In 1928 and 1929, the ill-fated "Hatry" company, Corporation and General Securities,

OTIS & CO.
Established 1899

Underwriters of Stocks and Bonds

Cleveland New York
Chicago Philadelphia

made a number of issues which were not publicly advertised. As these were all at " cut " rates, however, their inclusion would lower rather than raise the average " yield " figure. The conclusion is that the price of current corporation offers is definitely advantageous from the investor's point of view.

Australian Stocks.—The gravity of the economic situation in Australia, which is referred to in a leading article on page 815, is causing many holders of Australian securities to consider its possible bearings on the investment outlook. The recent proposal of Mr Scullin's administration to prohibit the import of certain goods altogether, to limit the import of others and impose a surtax of 50 per cent. on the import tariffs generally, will undoubtedly tend to curtail the trading profits of the agency and finance companies and the banks. The present market prices of the shares of a number of these companies and the highest prices recorded in 1929 are shown in the next table.

	Highest 1929.	Present Price.	Earnings on Ord.	Dividends.
			%	%
English, Scottish and Australian Bank £5, £3 paid	9⅛	6½	19·7	12½
Bank of Australasia £5	15 3/32	11⅞	15·1	14
Union Bank of Australia £15, £5 paid	...	10⅞	15·3	15
Commercial Bank of Australia 10s.	1½	1 1/32	18·6	15
Australian Bank of Commerce £1	1⅞	1 3/32	9·9	8
National Bank of Australasia £10	9 29/32	6⅞	12·2	10
Australian Mercantile Land and Finance £5	9¾	6¾	17·8	10
Australian Estates and Mortgage, Stk	72½	52½	6·8	5
Dalgety and Co. £20, £5 paid	16	11	20·8	17*

* Tax Free.

The Australian Bank of Commerce and the Union Bank of Australia have already reduced their interim dividends—the first from 4 per cent. to 3½ per cent. for the year ending June 30th next, and the second from 7½ per cent. to 6¼ per cent. for the year ending February last. The Commercial Bank and National Bank (and, possibly, the Bank of Australasia) are also expected to reduce their dividends. The chairman of Dalgety and Company warned his fellow shareholders at the general meeting last November that they must expect declining profits (which implies lower dividends) this year. The same applies to the Australian Mercantile Land and Finance Company. Australian Government stocks have also reflected the anxiety felt by investors at the economic and financial situation of the country. The present market prices compared with those on October 30th, when we last examined the position (*Economist*, November 2, 1928), are shown in the next table:—

	Price, Oct. 30, 1929.	Present Price.	Red. Yield %
			£ s. d.
Australia, Commonwealth 5% 1945–75	95¼	93½	5 9 0
Queensland 5% 1940–60	93½	91	5 13 0
S. Australia 3% unredeemable	57¾	55	*5 10 6
W. Australia 5% 1935–45	95½	94½	5 14 0

* Flat.

There is a general belief that Australia will pull through its present difficulties, but the recent measures of Mr Scullin's Government, designed to prevent the flow of imports, should cause holders of bank and agency stocks to think twice.

Brazilian Bonds and the Coffee Position.—We referred in the *Economist* of December 7, 1929, to the steps taken by the San Paulo Government to remedy the coffee situation by permitting an increase in the daily entries of coffee into Santos for export. We now learn with satisfaction that the private bankers who arranged the recent advance of £2,000,000 for the San Paulo Government, are taking a decidedly more hopeful view of the outlook. A number of reassuring statements are made. The coming 1930-31 coffee crop of San Paulo will not, it is expected, exceed 8,000,000 bags, and will probably be under 7,000,000 bags, as compared with an estimated production for 1929-30 of 18,000,000 bags. Thus the estimated 1930-31 crop for the whole of Brazil may be under 12,000,000 bags—which is about 2,500,000 bags less than the normal deliveries. Secondly, the existing stocks of coffee in Brazil are of a better average quality than for many years past. The number of trees cultivated has been greatly reduced. Finally, the Government of San Paulo has openly avowed its abandonment of the principle of artificially maintaining a high price of coffee and is turning its attention exclusively to the problem of how to realise the accumulated stocks over a period of years. The problem, naturally, will not be solved immediately. The 1929-30 Brazilian crop is expected to result in a surplus of between 5,000,000 and 6,000,000 bags. Exports, however, have been speeded up and the figures for January disclose an export from Santos alone of 1,100,000 bags. At the present low level of prices Brazilian coffee should compete effectively with the mild coffees of Central America, especially as Brazilian costs of production are reputed to be 20 per cent. below that of other producing countries. Any scheme which the Government may put forward to deal satisfactorily with the disposal of existing stocks of coffee will require the co-operation of international finance—a statement which may foreshadow the flotation of a new Brazilian loan in the relatively near future. The market in Brazilian loans has, significantly, been firmer recently, the San Paulo Coffee 7½ per cent. loan being quoted at 95½ against 91½ last December.

Baldwins and Guest, Keen Merger Details.—The further details now available of the Baldwins-Guest, Keen scheme confirm the favourable impression which the original announcement produced. The general principles of the plan were outlined in the *Economist* of January 11th last (page 80). " British (Guest, Keen, Baldwins) Iron and Steel " is to be the name of the new company, to which each of the parent companies will transfer its heavy iron and steel branches. Its issued capital will be divided as follows:—

	Baldwins. £	Guest, Keen. £
5 per cent. income notes	180,000	320,000
5 per cent. redeemable cumulative preference shares	502,403	671,763
Ordinary shares	1,575,000	2,100,000
	2,257,403	3,091,763

Of the first £25,000 of the new company's earnings, therefore, Baldwins will be entitled to 36 per cent. and Guest, Keen to 64 per cent., but when profits suffice to pay the preference dividend, which requires another £58,708, Baldwins' share of the total distribution will rise to over 40 per cent. Thereafter Baldwins are entitled to three-sevenths and Guest, Keen to four-sevenths of the equity. Control, however, is to be equally shared. The directors on behalf of Guest, Keen will be Sir John Beale (chairman of Guest, Keen), Messrs. W. Simons and I. F. L. Elliot; and on behalf of Baldwins, Sir Charles Wright (chairman of Baldwins), Colonel Neilson, and Mr. J. S. Hollins. The income notes represent the benefit of ore contracts; the preference shares represent stock in trade, work in progress, and stores at the end of December, 1929, while the division of the equity has been determined by the sensible device of proportioning it to the amount of trade which the heavy branches of each of the companies obtained during a recent normal period (from January, 1928, to October, 1929). Operating in competition, neither had been making a profit, so that a valuation based on earnings was not possible. The plan solved a notorious problem in mergers of this order. The plan requires the consent of Baldwins' first mortgage debenture stockholders and 6½ per cent. " A " debenture stockholders (to whom certain of the assets proposed to be transferred are specifically charged), but the debenture trustees, Lloyds Bank and the British Shareholders Trust, declare that the scheme is in their interests. It is to be hoped that the plan will be rounded off by the vesting of certain colliery properties also in the new company, a matter which has formed part of the negotiations, but presumably offered special complexities, for a decision has not yet been reached. Otherwise the company controls all its own materials, ore, limestone and silica, and, of course, it will operate its own coke ovens. It is disclosed that the nominal amount of the notes and shares coming to Baldwins is in excess of the value at which the assets stood in its books, but it will be the path of prudent finance for Baldwins and Guest, Keen at first to value their respective interests in the subsidiary well below the nominal values, especially as the scheme will involve the permanent abandonment of surplus plant. Finally, investors should remember that though the financial rearrangements have been drawn up with commendable skill, the quality of the management of the new business must determine its ultimate success.

Cunard Meeting.—To the surprise and regret of shareholders the speech of Sir Thomas Royden at Wednesday's meeting of the Cunard Steamship Company had the character of a valedictory oration. Since Sir Thomas succeeded Sir Alfred Booth as chairman in 1922 the company has made gratifying progress under difficult world conditions, and his resignation, owing to the pressure of private affairs, was the occasion of a warm and deserved tribute from shareholders. His address was interesting for its explanation of the rise in Cunard profits last year, which was shown to be due partly to reduced voyage expenses—particularly as regards fuel oil consumption—and partly to the fact that charges incurred by laying up vessels for annual overhaul were lower than in 1928. This saving, however, is not necessarily of a recurring nature, its incidence varying from year to year, and this factor may have a bearing on the potential results for the current year. Though the company, for the sixth year in succession, carried the largest number of passengers of any company in the Transatlantic trade, the number of first-class passengers was actually less than before the war. The " tourist third " passenger traffic has, of course, increased in the meantime. Sir Thomas confirmed the report that the company was in consultation with shipbuilders with regard to a new steamer for the Atlantic express service, but declared that some time must elapse before a definite contract was signed. He gave no indication of the probable tonnage or cost of the vessel beyond saying that it would " bear favourable comparison with anything afloat " and " prove a great attraction to the travelling public and a profitable investment for the company." A vessel, competitive in size, speed and comfort, with the " Europa " or the " Bremen " would probably cost the company something like £4,000,000, but the necessary finance would doubtless be arranged in several stages, as building progressed.

International Holding Company.—The report of the International Holding and Investment Company, Ltd., for the year ending December 31, 1929, certainly shows a great improvement on its predecessor. Having regard, however, to the company's capitalisation, of 4,882,530 shares of nó par value, the revenue position does not yet appear very satisfactory. Three dividends of 10c. each were paid during last year, absorbing $978,018. The total ordinary income came to $1,808,415 (including $6,266 stock dividends retained), while expenses and guarantee of dividends took $428,073, making the net ordinary profit $1,380,342, which is equivalent to 28¼ cents per share. The extraordinary income, being profits from the realisation of investments, came to $3,899,748, which, together with $402,323 surplus from the ordinary income and the $6,575,222 undivided surplus at December, 1928 (making a total of $10,877,293), has been applied to writing down the company's investments. The report stated that the company's investments in artificial silk shares, which were acquired in the early part of 1928 at a cost of approximately $30,000,000, had a market value, at December 31, 1929, of under $12,000,000—a depreciation of 60 per cent. The depreciation would have been greater had not the directors realised in the intervening period a part of the investment originally made in that industry. The proportion of the company's investments in artificial silk has now been reduced from 69 per cent. to below 30 per cent. The largest investments in the company are now in the electric light and power industry, being represented by holdings of Hydro-Electric Securities Corporation preferred and common and Electric Shareholdings Corporation preferred and common shares. The company's total investments, which cost $50,517,186, were valued at December 31, 1929, at $26,447,956, but this depreciation has been entirely wiped off by the appropriations to depreciation this year of $10,877,293, by the amount of $5,275,000 already standing to investment reserve, and by the appreciation in the Hydro-Electric shares acquired as a result of the exercise of the company's option on 529,756 shares at $25. The break-up value of International Holding shares—supposing its Hydro-Electric holding could be realised at market values—would be approximately 7¼. The shares at the present market price of 8½ return a yield of 3.53 per cent. on dividends of 30 cents.

Snia Viscosa.—The 1929 report of this great Italian producer of artificial silk and wool (" sniafil ") shows a decline of over 50 per cent. in net profits, which the directors attribute to the fall in prices and increased competition in the world markets. The results for the year compare as follows with those of 1928:—

	1928. Lire.	1929. Lire.
Profit on sales of rayon and " sniafil "	84,959,776	45,085,495
Dividends on shares	8,306,552	2,580,637
Sundry profits	6,414,484	...
Total receipts	99,680,812	47,666,133
General expenses, discounts, commissions, rates and taxes	27,451,914	12,658,471
Net profits	72,228,898	35,007,662
Depreciation on plant	35,228,898	33,883,389
Available for ordinary shares	37,000,000	1,124,273
Paid on ordinary shares	Nil	Nil
To depreciation on shares and investments	37,000,000	...

In spite of the decline in profits the balance sheet shows considerable improvement. Stocks have been reduced by nearly 25,000,000 lire, while cash, credits, and bills receivable amount to 230,000,000 lire, the surplus of current assets over current liabilities being 257,000,000 lire. As regards the future, the directors state that the day of big profits in the artificial silk industry is past, but the company is in a stronger position than before to meet competition. The Italian manufacturers of artificial silk have formed a consortium to agree on prices and export quotas, and it is hoped that world producers will also arrive at a similar agreement. The 120-lire shares (equivalent to 25s. 10d.) are at present quoted at 13s. 6d., having been as high as 29s. 1½d. in 1929.

CANADA LIFE ASSURANCE CO.

(Incorporated in Canada as a Limited Liability Company.)

No. 28, Canada Life Building, 2 ST. JAMES'S SQUARE, LONDON, S.W.1. *Estd.* 1847.

Kreuger and Toll.—The report of this powerful Swedish finance company for the twelve months ended December 31 last, once more proves to be a document of unusual interest, and from its preliminary survey of the dominating features of an " entirely abnormal " year, it is possible to obtain some idea of the factors which have contributed to a very material increase in prosperity. Net profits amount to Kr. 27,118,840, compared with Kr. 19,853,870 for 1928 and Kr. 18,737,795 for 1927. The consolidated earnings of Aktiebolaget Kreuger and Toll, and N. V. Financieele Maatschappij Kreuger and Toll, including those of the Swedish American Investment Corporation, total Kr. 108,563,918, an increase of 38 per cent. over the corresponding figure of Kr. 78,455,179 for 1928. On the basis of a share capital averaging Kr. 150,000,000, this amount represents approximately 78 per cent. earned, while of the total net profits for the year roughly Kr. 53,000,000 may be regarded as of a recurring nature. As it is the policy of the company to limit the dividend payments to such an amount that the dividend and interest on the participating debentures can be paid out of recurring profits, the directors propose a dividend of 30 per cent. for the old " A " and " B " shares (against 25 per cent.), 5 per cent. on the new shares issued during the year, and 30 per cent. on the participating debentures.

	Year ending December 31, 1927. Kr.	1928. Kr.	1929. Kr.
General income	9,431,960	9,718,960	15,920,640
Dividends received	10,230,990	13,146,880	14,896,960
Gross income	19,662,950	22,865,840	30,817,600
Net profit	18,737,795	19,853,870	27,118,840
Dividends on " A " and " B " shares	7,000,000*	16,250,000	20,050,000
Earned %	*66·9*	*30·5*	*40·6*
Paid %	25	25	30
Reserve fund	133,700,000	133,700,000	167,574,870
Carried forward	21,537,815	25,141,685	20,148,980

* Plus 33⅓ per cent. capital bonus.

The year's results would seem to justify the belief that in a critical financial period, when the usual channels for raising money were wholly or partially blocked, this great finance house would reap a considerably augmented return. Among the more important transactions concluded during the past year were agreements with the Roumanian and German Governments regarding loans in connection with match concessions. The directors are confident that, even if no new assets are acquired, the recurring profits will in the future show a constant increase, and for 1930 the recurring profits are estimated at Kr. 75,000,000. That the market shares to some extent the optimism of the Swedish company's directors is demonstrated by the fact that the " B " shares were marked up to 33⅜, against this year's low point of 23.

Daily Mirror Newspapers.—Net profits for the year ended February 28, 1930, at £480,360, were £931 higher than in 1928-29. Dividends were unchanged.

	1928. £	1929. £	1930. £
Net earnings	374,600	479,529	480,360
Preference dividend	28,000	28,000	28,000
Number of times covered	*13·37*	*17·12*	*17·15*
Ordinary *Earned* %	*33·0*	*32·25*	*33·02*
Ordinary Paid %	30	30	30
Ordinary Amount	315,000	420,000	420,000
To general reserve	20,000	20,000	20,000
Increase in carry-forward	1,600	1,529	2,360

In 1928-29 special expenditure on advertising was provided out of the contingency reserve, but no such charge is mentioned as having been made last year. The balance sheet, a summary of which appears on a later page, shows that investments at £1,991,858 are down by £293,686, and debtors have risen by £216,348. As creditors and the contingency reserve are shown together it is impossible to state the actual amount of each of these items, but creditors appear to be £112,787 lower. The ordinary shares, at their present price of 23s. 6d. per share, yield £6 7s. 8d. per cent.

A Film Merger.—A merger is proposed between International Talking Screen Productions (issued capital £721,561), British Screen Productions (£131,900, 51 per cent. of which is owned by International Talking Screen Productions), British Filmcraft Productions (£125,000), and Argosy Film Company (£8,501). A new company is to be formed to acquire their assets and liabilities and the shareholders are offered shares of identical par value in the new company, but with only 3s. 6d. paid per 5s. nominal. The merger should effect considerable economies in management expenses, but the unpaid liability on the new shares is a feature which will scarcely commend itself to shareholders of the old companies, who have so far waited in vain for dividends. The merger has been described as important, but this aspect may appeal less strongly to shareholders than to the management, which secures a new lease of life and control in a very unstable industry.

Schweppes, Ltd.—This company has earned " record " profits in each of the last eleven years, except in the " strike " year, 1926. When the present management assumed control in 1918 the company's affairs were in a very unsatisfactory condition, but profits have subsequently risen from £55,000 to £180,000. Goodwill has been reduced from £1,039,000 to £425,000, and the financial position has been greatly strengthened. In 1928 heavy dividend arrears on the deferred capital were satisfied by an issue of bonus shares. Both the ordinary and deferred shares are cumulative, the former as to 8 per cent. and the latter as to 7 per cent., the ordinary being entitled to 25 per cent. of surplus profits and the deferred shares to 75 per cent. :—

(Years ended December 31st.)	1927. £	1928. £	1929. £
Net profit	157,659	172,851	180,285
Preference dividend	15,000	15,000	15,000
No. of times covered	*10·5*	*11·5*	*12·0*
Ordinary *earned subject to Tax*	**14%*	*14·7%*	*15%*
Ordinary Paid subject to tax	7%	£9/6/3%	£9/6/3%
Deferred *Earned subject to tax*	**31·2%*	*22·3%*	*23%*
Deferred Paid subject to tax	10%	10%	10%
To reserve fund	55,000	40,000	50,000
To writing-down goodwill	25,000	25,000	25,000
Carry forward	32,595	35,696	36,231

* Before capital bonus, in satisfaction of deferred dividend arrears.

No credit is taken for the profits of subsidiary companies, the balance sheet stating that there have been no losses. As, on balance, the subsidiaries are slightly in credit with the parent company it may be assumed that their finances are in a healthy condition. The present distribution of profits is in keeping with the conservative policy followed in recent years, the board having declared their intention of reducing goodwill further, rather than paying high dividends, though shareholders should eventually benefit as a result of the high rate of earnings. Overseas business is being actively developed, largely through a subsidiary, Schweppes (Colonial and Foreign), but no return has yet been received on this investment. In spite of large additions to properties account over the last three years, the financial position of the parent is satisfactory, surplus liquid assets, after providing for the dividends now declared, being nearly £400,000. The ordinary shares at 31s. 9d. and the deferred at 36s. 6d. return approximately 6 per cent. and 5¾ per cent. respectively.

Malayan Tin Proposals Abandoned.—There will be general satisfaction that the directors of the Malayan Tin Dredging and two related companies (Southern Malayan Tin and Southern Perak) have found it possible to withdraw the " British only " proposals on which we commented in our issue of March 29, page 714. Their decision does them credit in every possible way, and is satisfactory to all parties. The directors have obtained an explicit assurance from the foreign interests concerned that they will seek neither to control the company nor to disturb the management. Such a " gentlemen's agreement " may have more enduring force, in practice, than a restrictionist change in the companies' articles, which might have been abrogated by a determined controlling foreign interest in the future. The shareholders have been relieved of the somewhat invidious necessity of discussing the question of giving the directors a five-years' firm service contract—a new departure in company practice which might have been used as an undesirable, even dangerous, precedent by other concerns. Without proceeding to the lengths found necessary by American shareholders in the General Electric case, the oversea holders of Malayan Tin shares have been successful in preventing restrictive clauses being put on the companies' " Statute Book " by reiterating a policy which they have, from the start, professed to follow. In the circumstances, the need for the meetings called for Monday next, has disappeared, and with their cancellation by the directors the matter can be allowed to drop.

U.S. Steel Corporation's Good Year.—Unsurpassed demand from the automobile industry, and higher average prices for steel, contributed to the very favourable report of United States Steel Corporation for the year 1929. Earnings were higher than in any year since the war. Gross revenues increased from $1,374,443,433 to $1,493,505,485, and net earnings (before deducting interest, depletion and the depreciation reserves of subsidiaries) at $265,838,932, showed an increase of $64,852,633. The net income available for dividends was $197,592,060, equivalent to $21.9 per share on the common stock, against $12.50 per share in 1928. The year witnessed the virtual completion of the Steel Corporation's debt retirement programme. The company specially redeemed and retired during the year approximately $295,000,000 of bonds, the total reduction in funded debt being $344,344,437. Of this total the stockholders subscribed for $142,697,624, the balance being taken from surplus and reserves. The review of operations which accompanies the report shows aggregate shipments of steel products of 15,234,355 tons, an increase of 9.03 per cent., as compared with 1928. The average number of employees was 224,980, whose average daily earnings, exclusive of the general administrative and selling staff, were $5.84. The principal items of the income account are given below :—

	1928. $	1929. $
Earnings before interest	200,986,299	265,838,932
Interest on subsidiary bonds	7,681,371	7,116,478
Depletion and depreciation reserves of subsidiaries	55,621,494	63,274,162
Sinking fund on U.S. steel bonds	11,615,808	...
Interest on U.S. steel bonds	16,106,572	7,828,391
Balance for dividends	114,173,774	197,592,060
Preferred dividends	25,219,677	35,219,677
Common dividends	49,813,645	63,849,040
Carried forward	39,140,452	108,523,342

The balance sheet shows total assets, at December 31st last, of $2,286,183,654; current assets were $562,232,507, and property investment accounts $1,541,492,587. The current liabilities totalled $121,358,042. The bonded, mortgage and debenture debt of $112,257,977 was chiefly accounted for by the obligations of subsidiary companies. The capital stocks of Steel Corporation itself totalled $1,173,565,100, and the undivided surplus $434,711,117.

General Motors in 1929.—The report of General Motors for 1929 is a record of further progress in the extension of the Corporation's activities, but the earnings compare unfavourably with those of 1929, their total falling from $276,468,108 to $248,282,268. After payment of preferred dividends, the amount earned was equivalent to $5.49 per share on the common stock, compared with $6.14 per share in 1928. A large part of the corporation's surplus funds was used last year in purchasing additional properties, net working capital being reduced by $44,500,522 to $251,287,782. The total amount involved by additions to plant and new acquisitions was as much as $142,701,398. One of the most important of the latter was the 80 per cent. interest taken in Adam Opel A. G., of Rüsselsheim, Germany. This is carried on the books of the corporation at $25,965,196. The Opel works are to be maintained in every sense as a German institution. Sales of General Motors products by dealers to users totalled 1,860,403 units, an increase of 17,960, as compared with 1929, the corporation's car sales representing about 34 per cent. of the total production in the United States and Canada. Overseas sales amounted to 256,721 trucks and passenger cars, a decrease of 25,436. At the close of the year, inventories overseas were in excess of current necessities, and export schedules are being curtailed. A summary of the consolidated income account is given below :—

	1928. $	1929. $
Net sales	1,459,762,905	1,504,404,472
Net profit from operations and investments	332,486,160	301,857,725
Less provision for employees bonus, savings and investment plans	25,577,710	26,419,075
Net income after taxes	273,559,090	247,317,742
General Motors proportion of net income	272,344,269	245,970,393
Dividends on preferred and debenture stocks	9,404,756	9,478,681
Net available for common stock*	267,063,351	238,803,587

* Including equity in undivided profits of various affiliated companies and investments.

The balance sheet, as at December 31st last, showed current assets of $368,960,944, investments of $277,199,918, and fixed assets of $678,728,900. At the end of 1928 fixed assets were $606,213,265. Current liabilities were shown as $117,673,163, and reserves as $252,296,527. The corporation's capital stock on December 31st was $573,916,000, and its surplus $380,560,273.

MINING NOTES.

Rio Tinto.—The balance sheet for 1929 of this old-established enterprise, writes our mining correspondent, reflects the new phase of the company's existence, signalised by its participation in the important copper-mining industry of Northern Rhodesia. Last year an issue of 50,000 ordinary £5 shares was made at £50 for this purpose. Of the 2½ millions thus provided, the bulk had by December 31st been invested in Northern Rhodesian interests and in the Silica Gel enterprise of the United States. The total of investments at the latest date, as shown in our tabulation, is made up of £806,230 shares in, or amounts owing from, subsidiaries; the balance "other investments." Twelve months ago the items were £978,800 and £636,800 respectively. Appended is a summary of the results of the past three years:—

	1927.	1928.	1929.
	£	£	£
Trading profit	1,221,350	1,669,780	1,812,200
Net profit	1,016,840	*1,047,080	1,286,280
Issued capital	3,500,000	3,500,000	3,750,000
Dividends	1,018,750	831,250	1,250,000
Per cent. (ordy.)	50%	40%	55%
Carried forward	153,450	167,370	203,650
Property and plant	2,950,690	2,968,980	3,075,450
Investments	923,480	1,615,630	3,060,940

* Prior to deduction of amount carried to emergency account.

The expansion in last year's revenue occurred entirely under the heading of sales of produce. Interest and sundries brought in totalled £117,900, or substantially more than in either of the two preceding periods, but were not supplemented by adventitious balances. From the brief details given of mining operations, it appears that an increased quantity of ore was delivered during the past year, while the price of copper averaged £75 9s. 7d., as compared with £63 14s. 9d. for 1928 and £55 13s. 11d. for 1927. The current quotation is around £68 10s. On the basis of last year's distribution the ordinary shares, at 45¾ cum 30s. dividend, yield about 6¼ per cent. The preference, at 4⅝ cum 2s. 6d. dividend, return about 5¾ per cent. and may be regarded as fairly well secured.

Consolidated Mines Selection.—This company is a member of the Anglo-American group and holds much the same interests as its compeers: that is to say, in the Brakpan group of Witwatersrand gold mines, the Consolidated Diamond of South-West Africa, and the Rhodesian Anglo-American Corporation. Last year an expansion in "sundry profits" rather more than offset a small decline in the dividends received, the total amounting to £129,700, as against £114,600. Income tax now calls for only £4,900, as compared with £28,900; but directors' fees and percentages figure for £7,080. Maintenance of the dividend at 20 per cent.—the rate paid for each of the two preceding periods—swallows up the whole of the available balance. Accordingly a further £8,000 is withdrawn from the dividend equalisation fund, and carried forward to the credit of profit and loss. In respect of 1928, £22,000 was taken out of the fund in question, which has been reduced to £18,000. The market value of the company's shareholdings is stated to be largely in excess of the figure at which they stand in the balance sheet—£622,900. This represents only a small increase upon the 1928 total, but the surplus of liquid assets over both current and contingent liabilities is appreciably higher at £235,200. The market quotation of the 10s. shares is around 17s. cum dividend, showing the high yield of £13 per cent. This may be taken to cover a certain amount of risk.

Minerals Separations.—Last year's income showed only a small increase as compared with 1928, expansion in the receipts from royalties, etc., being partly offset by reduction in the interest and dividends—evidently due to the cut of one-half in the distribution of the Australian company. Depreciation requiring less than before, the net profit comes out at £60,000, against £58,600. Naturally, no change is made in the payment to the shareholders, the only difference being that on the present occasion the 25 per cent. will be disbursed all at once, whereas in respect of 1928 5 per cent. was paid as interim. In the current balance sheet the investments are to some extent segregated. Shares in subsidiaries figure at £21,600; sundry, £229,460, plus £110,360 calls made and premiums payable but not due at date. British Government securities stand for £129,100; twelve months ago the company held £225,200 Conversion Loan. Cash has jumped from £17,500 to £183,000. Some expansion is reported in the company's coal-cleaning processes in Spain, and in its metalliferous activities in various districts. But chief importance now attaches to the participation in the Northern Rhodesian copper industry. In this connection note may be taken of the erection in progress on the Alaska mine of the Southern Rhodesian Base Metals Company of a segregation plant capable of treating oxide and mixed oxide (sulphide copper ores). The successful operation of this plant will be a matter of importance for several companies. A cable published last week by the S.R.B.M. Company reports the intersection of a fairly high-grade sulphide ore on the Alaska No. 4 lode, previously carrying oxidised material of low value. The neighbouring Umboe property, belonging to the Rhodesian Corporation is under option—it is stated to the Rio Tinto Company. At the meeting of the Minerals Separation the chairman gave particulars of the principal holdings. They comprise: 76,700 Rhodesian Congo Border, 65,800 N'Changa, 26,500 Southern Rhodesia Base Metals, and some Luiris. These interests, with the surplus lipuid assets, fully cover the present market valuation of the company's capital at £7 per share.

Simmer and Jack.—A year ago the absence of a dividend was largely compensated for by a greatly improved outlook, due to the success which had attended an intensive development programme. The working profit had shrunk from £105,000 to £66,500, but the ore reserves had expanded from 1,615,000 tons, value 5.7 dwts., to 1,814,000 tons, value 5.9 dwts. In the course of the chairman's speech the resumption of dividends at the end of 1929 was promised. Unfortunately, the favourable anticipation has not been borne out by events. Last year's working profit showed an increase of only a few thousands, improvement in the average value of the ore crushed being about counterbalanced by advance in the cost ratio due to extra charges. The underground footage amounted to no more than 16,100, as against a nominal total of 24,270; and the ore reserves declined by 23,000 tons. This feature is attributed partly to shortage of native labour and various difficulties encountered in working; but chiefly, it would appear, to the circumstance that the improvement in mine grade, expected when the richer blocks of ore on the bottom levels came to be dealt with, was neutralised by "an unexpected increase in the stope and widths of these blocks, due to an exceptionally friable hanging wall." Measures are being taken to overcome this drawback; meanwhile shareholders must possess their souls in patience. The 1929 net capital expenditure amounting to £80,900, the carry-forward dropped from £66,700 to £46,070, barely represented by cash assets.

Chemical and Metallurgical Difficulties.—A malign fate frequently dogs the steps of enterprises formed for the purpose of exploiting on a commercial scale processes which have given highly satisfactory results in the laboratory. In few cases, however, have the proceedings extended over so long a period, or involved so heavy an expenditure, as with the Chemical and Metallurgical.

Since the formation of this concern, early in 1919, the ordinary share capital has been drastically cut down, the rights of the preference capital have been altered, and further resources have been provided by the issues of ordinary shares at a high premium upon their new face value of 2s. Much importance was attached to the fact that these issues were subscribed for by influential groups. At one time the quotation passed 10s.; it has lately descended to pence. In all, something like a million and three quarters of capital has been provided for this undertaking, and even now the prospects appear extremely dubious. The report for 1929 shows a trading loss of £41,900 before charging depreciation, and the total of expenditure in suspense, including this item, is £446,600. No doubt, far too much importance was attached to the company's installation for the treatment of platinum concentrates from the Transvaal, which are now dealt with locally; but with the company's main processes—the recovery of lead, zinc, etc., from complex ores—it is quite a different story. Certain of the larger shareholders, in order to provide for emergencies and the cost of the works reorganisation, have provided credit of £100,000, against 7½ per cent. secured notes. The shareholders generally may not be greatly impressed by the board's confidence in eventual success, but will doubtless find it to their advantage to support what may shortly be described as the Healy Committee—there being two in the field. Certain matters are *sub judice*, litigation pending with the former deputy-chairman and joint managing director.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Cunard Steam Ship Company, Harland and Wolff, Hellenic and General Trust, Llanelly and District Electric Supply, Para Electric Railways and Lighting, Garrard Engineering and Manufacturing, Gordon Hotels, Apollinaris and Johannis, John Barker, Schweppes, Balaghat Gold Mines, and Nundydroog Mines. At the Harland and Wolff meeting Lord Kylsant said that the output for 1929 had been over 145,000 tons (Board of Trade gross register), which, together with the output of two subsidiaries, made a total of 172,000 gross tons of vessels for the year. Sir Thomas Royden's speech at the annual meeting of the Cunard Steam Ship Company is dealt with on page 841. At the Llanelly and District Electric Supply Company meeting, the chairman affirmed that, despite several adverse factors, 608 new consumers had been added during the year and 23,675,600 units sold, compared with 21,843,400 in the previous year.

CAPITAL ISSUES.

The five capital issues of the week have been of the highest investment order—a home railway redeemable preference stock, three municipal stocks, and an important electrical power concern. The *Southern Railway* issue was interesting on account of the company's project for the electrification of its line to Brighton and Worthing. Great success has attended the electrification of the Southern suburban services, and the steady earnings of the company should provide good cover for the preference stock dividends. The new stock, which has trustee status, ranks equally with the existing guaranteed and redeemable preference stocks—that is, immediately after the debentures and prior to the other preference stocks. The redemption yield at the issue price of 98½ was £5 2s. per cent., but no "sinking fund" arrangements were set out in the prospectus. The "home" corporation issues—each for £1,000,000—were those of *Barnsley* and *Sunderland*—both 5 per cent. stocks at par, except that Barnsley stole a march on Sunderland by giving a bonus of about 10s. on the first interest payment. The moneys are being raised for water, electricity, tramway, education and other purposes, and for the redemption of existing loans. Barnsley's rates are 17s. 3d. in the pound and Sunderland's 16s. 8d. The *Dublin Corporation* issue of £800,000 was made by Messrs Guinness, Mahon and Company in the form of 5 per cent. stock, 1950-70, at 95½ to return a yield with redemption of £5 5s. 3d. per cent. The proceeds are to be spent on waterworks, draining and housing, in which connection the Corporation has placed large orders in this country. Both principal and interest are free from present and future taxation in the Irish Free State. The *Scottish Power Company's* issue of £1 ordinary shares at a premium of 7s. gave investors a small "turn" on the market price of 29s. for existing shares. The company is a dominant power in the electrical industry of Scotland, and has frequently appealed to the investor in connection with its extensive programme of recent expansion. The shares, which yield £5 18s. 6d. per cent., are a sound "equity" investment in a progressive public utility enterprise.

ISSUES OF THE WEEK.

Southern Railway Company.—Issue of £3,000,000 5 per cent. redeemable guaranteed preference stock at £98½ per cent., redeemable at par on June 30, 1957. No part of the issue has been underwritten. The stock will rank *pari passu* with existing 5 per cent. guaranteed preference stocks and immediately after the debenture stocks.

Barnsley Corporation.—Issue of £1,000,000 5 per cent. redeemable stock, 1950-60, at par. This is a trustee security, redeemable at par on March 31, 1960, unless previously cancelled by purchase or agreement, but the corporation will have the option of redeeming the whole at par at any time after

Grace National Bank
Hanover Square, New York, U.S.A.
A thoroughly organized international bank, giving special attention to the requirements of European banking correspondents.
Special Representative
148 Leadenhall St. London, E.C. 3.

March 31, 1950, on three months' notice. The rateable value of the borough is £308,469, and a rate of one penny will produce £1,183.

Slough Gas and Coke Company.—Issue by tender of £2,000 5 per cent. perpetual debenture stock, minimum price £97½ per cent., yielding at that price £5 2s. 7d., and £30,000 ordinary stock, minimum price par. Net revenue of the company for 1929 before deduction of loan interest, £15,743, covering interest on loan capital, including present issue, over eleven times. Ordinary dividends have been at the rate of 7 per cent. for past six years.

Sunderland Corporation.—Issue of £1,000,000 5 per cent. redeemable stock, 1950-60, at par. Trustees are authorised to invest in this stock. The stock will be repaid at par on April 1, 1960, unless previously cancelled by purchase or agreement, but the corporation retains the option of redeeming the same at par at any time on or after April 1, 1950, on three months' notice. The rateable value of the borough is £801,250, and a rate of one penny will produce £3,130.

Scottish Power Company.—Issue of 650,000 Ordinary shares of £1 each at 27s. per share. The company was incorporated in 1909, and has extensive interests in Scottish electric light and power companies. The proceeds of the present issue will be used for the development of the company's properties and towards expenditure on the Grampian Company's hydro-electric works. Ordinary dividends for the past eight years have been at the rate of 8 per cent.

City of Dublin.—Issue of £800,000 Dublin Corporation 5 per cent. inscribed stock, 1950-70, at £95½ per cent. Trustees in the Irish Free State are authorised to invest funds in the above stock. Redeemable at par on July 1, 1970, if not previously cancelled by purchase or tender, but the corporation reserves the right to redeem the stock, in whole or in part, at par at any time after July 1, 1950, on three months' notice. The public debt of the city on March 1, 1930, was £4,219,072. A rate of one penny will produce £5,025.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction. **Dominion of New Zealand, Auckland and Suburban Drainage Board** 5½ per cent., 1960 Loan. Issue of £81,300 in debentures to bearer of £100 each. The proceeds of the issue will be applied to redemption of similar loan maturing May, 1930.

[Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, shorter notices, and dividend announcements will be found on page 860, under the heading "Company News."]

SULPHIDE CORPORATION, LTD.—During the four weeks ended February 22, 1930, 10,364 tons of Central Mine ore were milled at the Central Mine, producing 1,880 tons of leady concentrates (including 58 tons from the de-leading plant), which assayed 49 ozs. silver and 65 per cent. lead, together with 2,517 tons of zinc concentrates assaying 6 ozs. silver, 3 per cent. lead and 50 per cent. zinc per ton.

FABULOSA MINES, CONSOLIDATED.—Production of tin barrilla for the past month was 3,906 quintals of 46 kilos. (approximately 177 tons).

BURMA CORPORATION, LTD.—During the month of February, 44,344 tons of ore were mined, including 2,985 tons of high-grade ore; 32,000 tons of ore were milled in the treatment plant, producing 10,450 tons of leady concentrates; 12,487 tons of lead-bearing material, including 3,264 tons of high-grade ore, were smelted in the blast furnaces, producing 6,834 tons of hard lead for treatment in the refinery. Refinery products were 6,750 tons refined lead and 607,945 ounces refined silver. Of silver production 28,974 ounces were recovered from the treatment of copper matte. Zinc plant produced 4,780 tons zinc concentrates, assaying 7·8 ozs. silver, 4·4 per cent. lead and 51·3 per cent. zinc. In addition to the above, 1,200 tons copper matte were produced from the treatment of accumulated smelter by-products and 7,003 tons copper ore; 100 tons of refined antimonial lead and 300 tons of nickel speiss were also produced. Included in the tonnage of refined lead is 95 tons recovered from the smelting of copper ore.

ANGLO-ORIENTAL MINING CORPORATION.—February production: Burma group, 57 tons; Cornwall, 64 tons; Japan, 20 tons. London Tin Corporation: Nigeria, 260 tons; Associated of Nigeria, 200 tons; Juga Valley, 16 tons; Tin Properties, 16 tons; Junction, 6 tons; total, 639 tons.

BROKEN HILL SOUTH, LTD.—For the four weeks ended March 8, 1930, 28,090 tons of crude ore were treated and produced 5,538 tons of leady concentrates, assaying 70 per cent. lead and 26 ozs. silver per ton; also 5,330 tons of zinc concentrates assaying 51 per cent. zinc.

NORTH BROKEN HILL.—February production: 37,170 tons of crude ore were treated, assaying 14·5 per cent. lead, 8·7 ozs. silver per ton, and 10·8 per cent. zinc, producing 7,910 tons lead concentrates, assaying 63·7 per cent. lead, 35·4 ozs. silver per ton and 8·2 per cent. zinc; also 6,200 tons zinc concentrates, assaying 49·7 per cent. zinc, 2·5 per cent. lead and 3·9 ozs. silver per ton.

ZINC CORPORATION.—Return for period ended March 8th: Lead concentrator treated 22,843 tons of ore, producing 4,788 tons of lead concentrates and 4,568 tons of zinc concentrates. Estimated gross profit, with lead at average price, for February (£21 2s. 10d.), zinc at contract flat rate, silver 2s., £15,850.

WORKING PROFIT, TRANSVAAL.—The total estimated working profit of the gold mines of the Transvaal for the month of February, 1930, amounted to: Witwatersrand, £985,152; outside districts, £34,330; total, £1,019,482. The estimated working profit in January, 1930, was: Witwatersrand, £1,070,717; outside districts, £33,001; total, £1,103,718.

COMPANY MEETINGS, &c.

CUNARD STEAM SHIP COMPANY, LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.
GROWTH OF ATLANTIC TRAFFIC.
UNITED STATES QUOTA REGULATIONS.
SIR THOMAS ROYDEN'S RETIREMENT FROM CHAIRMANSHIP.

The fifty-third ordinary general meeting of the Cunard Steam Ship Company, Ltd., was held, on Wednesday, April 9th, at the Cunard Building, Liverpool.

Sir Thomas Royden, Bart., C.H. (chairman of the company), presided, and the other directors present were Sir Percy E. Bates, Bart., G.B.E. (deputy-chairman), Mr Frederic Alan Bates, Sir Alfred Booth, Bart., Mr Herbert William Corry, Mr A. C. F. Henderson, Mr S. J. Lister, Mr Maxwell H. Maxwell, C.B.E., Mr Robert W. Reford, with Mr W. Dranfield (secretary), Mr Charles E. Fletcher (Messrs. Cooper Brothers and Company, auditors), and Mr Vivian D. Heyne (Messrs Hill, Dickinson and Company, solicitors).

The notice convening the meeting, together with the report of the auditors, having been read,

The Chairman said: Ladies and Gentlemen,—Before dealing with the general business of the company, I desire to refer to the loss we have sustained since our last meeting through the death of two of our directors—Mr James H. Beazley and Sir Aubrey Brocklebank, Bart. They were members of families whose names are household words in Liverpool in every sphere of useful activity. In particular, the Beazleys and Brocklebanks have for generations been actively associated as shipowners with the trade of this port, and our late directors were themselves closely identified with their own family shipping interests. The intimate knowledge of every side of the shipping business they thus acquired was of the greatest value to this company, while their personalities endeared them to all with whom they came in contact. In their place the directors have elected Sir T. A. L. Brocklebank, Bart., and Mr S. J. Lister, whose election will be required to be confirmed by the shareholders. A resolution to this effect will be submitted to you later.

Turning now to the report and accounts which are in your hands, is it your wish that they be taken as read? "Agreed."

THE ACCOUNTS.

Quite apart from the results of the year's working, there are various points in the presentation of this year's accounts which I think require some explanation. The accounts before you are the first which this company has issued in the form prescribed by the Companies' Act, 1929, and it has been the endeavour of your directors to comply with the requirements of that Act in the fullest possible manner.

In the profit and loss account the difference due to this is trifling, and is confined to the setting out as a separate item of the directors' fees instead of merging them with the fees paid to auditors and debenture stock trustees.

Dealing with the various items in the account, on the credit side you will notice that the total income from voyages, interest, dividends and other sources amounted to £3,628,904 15s., an increase over the corresponding income of 1928 of £415,303. This increase is due to a combination of several factors.

Taking voyage accounts, passenger receipts in the North Atlantic showed a net decrease as compared with those of 1928, for while there was an increase in tourist third cabin revenue both westbound and eastbound, there was a falling-off in every other class.

Our other passenger income, which includes world, Mediterranean and other cruises and the Cuban service, showed in the aggregate a satisfactory increase.

Freight earnings showed on balance practically no change, for an increase westbound was offset by a decrease eastbound.

Revenue from the carriage of mails records a decrease both westbound and eastbound. The decline in westbound earnings was not of much moment, but the falling-off eastbound was more marked though not unexpected, having in mind the increasing tendency for eastbound mails to be carried in vessels under the American flag.

Other sources of revenue in the shape of dividends, interest, etc., do not show any material change from the previous year, and on balance our total gross receipts for 1929 showed only a small increase over the receipts of 1928.

LARGE ECONOMIES IN WORKING COSTS.

It is on the disbursement side of the voyage accounts that the improvement in our net earnings is chiefly to be found. During the year our ships made more voyages and steamed over 53,000 more miles than in the previous year, and this, of course, is reflected in an increase in port charges, and in the cost of loading and discharging cargo. On the other hand, despite the extra mileage steamed, we were able to effect large economies in the consumption and cost of fuel oil, and in the cost of deck and engine stores and of repairs and renewals. In this connection you will recollect that I explained to you in my speech last year that the incidence of the lay-up periods for the annual overhaul of the steamers of our fleet was apt to bear unequally as between one year and the next, and I pointed out that the year 1928 had suffered rather severely in comparison with 1927 in this respect. The position is now reversed, and 1929, the year under review, has been distinctly more fortunate than 1928.

On the debit side of the account, depreciation, office and other expenses, total £2,554,429 4s. 2d., a net increase over last year of £156,908, due principally to providing a larger amount for depreciation on steamships.

The remaining items in the profit and loss account are almost identical to those of the previous year, and do not call for further comment.

PROFITS AND APPROPRIATIONS.

The total debits to profit and loss account equal £2,819,266 0s. 1d., which, when deducted from our income, leaves a net profit for the year of £809,638 14s. 11d., as compared with £550,478, the corresponding figure for 1928. If we add to the present profit the balance brought forward from 1928, namely, £188,396 14s. 8d., there is a total of £998,035 9s. 7d., out of which your directors propose to transfer £50,000 to the reserve fund, raising it from £1,450,000 to £1,500,000. There will then be left £948,035 9s. 7d., from which must be deducted the dividends on the preference stocks, totalling £135,000. There remains the sum of £813,035 9s. 7d., which enables us to pay a dividend at the rate of 7½ per cent., absorbing £417,769 11s. 6d., leaving a balance of £395,265 18s. 1d. to be carried forward to 1930.

BALANCE SHEET—WRITTEN-DOWN VALUE OF FLEET.

On the credit side of the balance sheet you will notice that the company's fleet was valued at December 31st at £8,529,746. There is no comparable figure in the balance sheet for the previous year, in which this item was merged with our shipping investments. The figure represents the written-down value of the fleet, the first cost of which was £25,189,255.

Freehold and leasehold properties were valued at £624,870, which is £14,300 less than the previous year's valuation.

Plant, machinery, spare gear and furniture, etc., stand at £77,000, against last year's figure of £77,026. During the year we increased the value of these assets by £16,329, and disposed of obsolete plant and fittings to the book value of £3,214, while depreciation absorbed £13,141.

SUBSIDIARY COMPANIES.

Shares in subsidiary companies are shown this year as a separate item and total £7,541,275 14s. 3d. The present figure does not show any change from the corresponding figure of twelve months ago, and, in my opinion, is a conservative estimate of the true value of these holdings.

Loan and balances due from subsidiary companies total £72,520 1s. 11d. This consists of a loan to a subsidiary company of £62,538 15s. 3d., and an amount of £9,981 6s. 8d. representing current balances on ordinary trading operations.

Another item is that of "Shares in other Companies and Deposits with foreign Governments, at cost, less Reserves," totalling £188,003 2s. 1d. These comprise various investments all held for business reasons and all written down to figures which your board believe to be absolutely safe.

Ships' stores, coal, fuel oil, etc., are shown as at December 31st last as £330,689 7s. 7d., as against £357,231 for the previous year.

Debtors, including agents' balances and open voyage accounts, stood at £528,748 1s. 11d., as against last year's comparable figure of £687,664, the decrease of £158,916 being due to the ordinary fluctuations of business.

Discount and commission outstanding on the 5 per cent. mortgage debenture stock has been reduced by a further £10,000, and now stands at £110,000.

Cash at bankers and in hand at December 31st last totalled £454,366, which is less than the previous year's figure by £8,565.

DEBIT SIDE FIGURES.

Turning to the debit side, the description of the 5 per cent. mortgage debenture stock has been enlarged by the statement "Secured on steamships marked with asterisk overleaf." Reference to the back of the balance sheet will show exactly what ships are mortgaged in support of this stock, and I think that this precision will be appreciated by shareholders and debenture-holders alike. A new item is that of £362,821 9s. 1d. under the heading "Loans and Balances due to Subsidiary Companies." This information is required by the new Act, and the figure represents loans from the subsidiary companies and open balances in relation to current business. The item of £3,140,267 12s. 4d. under the heading of "Creditors, Open Voyage Accounts, Deposits and Reserves" represents the remainder of the old item "Creditors and Credit Balances," with the addition this time of the employees' savings fund, the amount of which remains fairly stationary round about £110,000.

Capital and mortgage loans remain the same, but on December 1st last we liquidated our American indebtedness by redeeming the $2,500,000 two-year external gold notes.

THE ACCOUNTS—SHAREHOLDERS' SUGGESTIONS.

Before I deal with matters connected with the general business of the company, I might mention that, at our last meeting, a shareholder made a suggestion that, in our printed balance sheet, we should reprint the figures of the previous year, and another shareholder wrote asking for a more detailed statement of accounts. With regard to the first suggestion, I have been at pains to show that mere reprinting of the previous year's figures without explanation would lead to no useful conclusion, and I am not at all sure that the same may not be true in other years. The point will be considered again next year. With regard to the request for a more detailed statement of accounts, I would repeat that the main form of our accounts is governed by the conditions of the Companies' Act, 1929, and, moreover, we live in a highly competitive world, and it may not always be in the interest of the company to disclose too many details of our business, but beyond that I would say to both these gentlemen that it is well to remember that it is very easy to draw erroneous conclusions from a mass of figures even if set down in parallel columns.

NORTH ATLANTIC TRAFFIC.

Coming now to the general business of the company, the total volume of passenger traffic crossing the North Atlantic shows a slight increase in 1929 as against the previous year. In this connection it is pleasing to be able to record that, for the sixth year in succession, we have carried the largest number of passengers of any steamship company in the trade. A detailed perusal of the passenger statistics for the year discloses the fact that the first-class and tourist third cabin show an increase, whilst the other classes, viz., cabin, second-class and third-class, show a falling-off. Although there is a slight increase in the first-class numbers it is remarkable that the volume of this traffic has not even now reached its pre-war level. For example, last year the number of first-class passengers crossing the Atlantic was 199,738, but in 1909—twenty years ago—the total amounted to 202,921. With the addition of a number of new express steamers an increase in the first-class carryings might reasonably have been looked for, but instead of creating a larger volume of business, the additional express steamers have simply robbed the other steamers already in the trade.

The expenditure which we thought it expedient to incur in order to meet the increasing demand for tourist third cabin passages and to improve the accommodation on certain of our ships, to which I made reference last year, was fully justified by the results secured. The total number of passengers of this class carried in our steamers during 1929 westbound and eastbound was 41,078, and was the largest number carried by any line in the North Atlantic trade. In order to make still further provision for this growing traffic, we have recently decided to equip suitably the "Carinthia" and "Franconia" when these steamers are engaged in the regular North Atlantic service. The entire passenger fleet, with the exception of the "Mauretania," is now fitted for this type of travel, which has become so popular in recent years.

UNITED STATES QUOTA REGULATIONS.

You will notice in the report which you have before you a reference to the United States quota regulations, in which an important change was introduced and became effective last July. This was provided for in the United States Immigration Act, 1924, and reduces the total number of immigrants admissible annually from 164,667 to 153,714. Instead of determining the quota of immigrants for each nationality on the number of foreign-born persons of such origin residing in the country, the new quotas are allotted on the basis of the national origin of the population of the United States according to the census of 1920. The annual quota allocated to British nationals is nearly doubled, the increase being 31,714 over the number of previously admissible. The quotas for other countries also undergo revision, the most important changes being in the case of the Irish Free State and Germany, which are reduced by just over 10,000 and 25,000 respectively.

Our arrangement with the home and Canadian Governments, under which the British migrant can secure third-class ocean transportation to Canada at a flat rate of £10, still continues in effect. Since the introduction of this special rate last year there has been some increase in emigration from this country to the Dominion, but unfortunately present prospects seem to point to reduced movement this year.

WINTER CRUISES.

Cruising business continues to form a considerable part of our winter programme. Largely owing to the financial crisis in the United States towards the end of last year the numbers of our cruising passengers have considerably fallen as compared with the previous year. One chartered cruise, that of the "Scythia," had to be cancelled, but we were able to maintain all the other engagements on which we had embarked. It is in this field with cruises from the United States round-the-world, to South America, the East, the Mediterranean, or Africa, that we are able to employ a number of our vessels during the winter months without impairing our regular services, and while these are early days to prophesy what next winter's business actually will be, there are signs that we may hope for a return to more normal conditions.

ATLANTIC FREIGHT MARKET.

In referring twelve months ago to the Atlantic freight market I ventured to express a hope that a continuance of settled conditions on the other side of the Atlantic would result in the year 1929 proving more satisfactory than its predecessor. I coupled this, however, with a reminder of the risks attendant upon prophecy, and as events have turned out these risks have been only too evident.

The year opened fairly well in both westbound and eastbound directions. In fact, the westbound cargoes for the whole twelve months showed a slight increase over 1928, but the eastbound movement was not maintained, and, by the end of the year, there was a falling off. We can only hope that, before the end of this year, some definite improvement may be manifested in the eastbound traffic.

MEDITERRANEAN AND AUSTRALIAN SERVICES.

In our Mediterranean and Havre trades we have again maintained the services with regularity, and I am glad to be able to record a slight increase over the traffic in the previous year.

In the Australian and New Zealand trades, where our associated company, the Commonwealth and Dominion Line, has a deservedly high reputation, the services have been maintained with accustomed regularity and success. During the year a number of the company's steamers have undergone extensive alterations to their machinery in order to increase their speed and enable them to maintain a more uniform service with the new motor vessels which have been added to the fleet in the past few years and which have proved eminently satisfactory.

LEADENHALL STREET BUILDINGS.

Reference has been made in the Press to the fact that we are moving our London City staff into a new building which is being erected in Leadenhall Street. It has been felt for some time that it would be of considerable advantage to the general working if the staffs of all the companies associated with us were housed together instead of being scattered over different parts of the City. The erection of a new building in Leadenhall Street provides the opportunity of bringing about this very desirable change. The building, which will occupy a site of nearly half an acre, and will consist of eight storeys, will be known as "Cunard House." After providing for the requirements of the Cunard and its associated companies' City staffs, the proprietors of the building still have a very considerable amount of floor space available for other tenants.

QUESTION OF NEW FAST ATLANTIC STEAMER.

When last I had the privilege of addressing you I told you that the question of new tonnage was one constantly in our minds, and that the company had never hesitated to build vessels of the highest class when, in its judgment, the conditions of its business demanded them. You will have seen recently in the Press the official statement that we were in consultation with certain shipbuilders in regard to a new steamer for the Atlantic express service. It will naturally be some time before the definite stage of entering into a contract is reached and final details are available for publication, but I can assure you that, when the time comes, it will be found that the Cunard Company, as in the past, has set its mind on the construction of a steamer which will bear favourable comparison with anything afloat. In deciding on the type of ship to be built our primary consideration is and must always be that of providing a vessel that will prove a great attraction to the travelling public and a profitable investment for the company. Mention of this brings to mind the wonderful record of the "Mauretania," which in August last, despite adverse weather conditions both on the westbound and eastbound voyage, made the fastest trips of her long and honourable career, and gave proof of her claim to be still considered a worthy competitor in the Atlantic trade.

AUDITORS' REMUNERATION.

This is an opportune moment to make some remarks in anticipation of the resolution which will be submitted to you later in connection with the remuneration of our auditors. I find that I last alluded to this subject in 1923. At that date the auditors' remuneration was increased from 1,000 guineas per annum to 2,000 guineas. I now find that the statutory work has still further increased and that your auditors are actually doing your work at an out-of-pocket cost to themselves. I feel sure that you will not wish this state of things to continue, and that you will agree readily to the increased remuneration which will be suggested. The work which is covered by this fee, as mentioned in 1923, comprises :—

(*a*) Audit work in connection with the preparation of the balance sheet, and

(*b*) A weekly audit of different portions of the company's expenditure.

This weekly audit, I may remind you, is designed to afford a real check again fraud or error in the operation of the company's business.

ADVANTAGE TO COMPANY.

It may be of interest to the shareholders to learn that, in addition to the work which I have described and which has been covered by the fee voted at the annual meeting, the directors have employed Messrs Cooper Brothers for many years past in a continuous audit of all stock and share transfer certificates, and, in fact, all the documents connected with the share registry. This precaution is one of very long standing, and the board will continue to follow the same policy in future. For further security your board arranged in 1926 for Messrs Cooper Brothers to conduct an audit of different portions of the company's expenditure and receipts at all offices in the United States of America under the supervision of experienced English personnel directly responsible to Messrs Cooper Brothers' head office in London. This arrangement has been of the greatest advantage to the company, and we feel that we have derived a greatly increased security therefrom. Since the close of the accounts we have also arranged for Messrs Cooper Brothers to perform similar work in Canada as they do in the United States, and we anticipate the same beneficial results in this case also. Messrs Cooper Brothers are also employed by the company in certain European countries. In other centres in Europe there are different auditors, mainly in conjunction with our friends the White Star Line, with whom we have several offices and agencies in common. I am glad to be able to assure you that the whole of the operations of the company and its associated companies from as far East as Moscow to as far West as Vancouver and as far South as Sydney and Wellington are covered by as good a scheme of audit supervision as we can devise.

SIR THOMAS ROYDEN'S RETIREMENT FROM THE CHAIRMANSHIP.

There is one personal matter to which I wish to make brief allusion.

This is the last occasion on which I shall preside at this meeting as your chairman.

The pressure of my personal affairs has compelled me to seek some relief in order that I may give more time and thought to them than I have been able to do since I became chairman of this company.

I have therefore asked my colleagues on the board to elect some other one of our number to the chair in my place.

During my years of office I have been indeed fortunate in having the unfailing and sympathetic co-operation of my colleagues and the enthusiastic support of the staff, to whom I owe a deep debt of gratitude.

While retiring from the chairmanship, it is my hope that I may retain my seat on the board.

TRIBUTE TO STAFF AFLOAT AND ASHORE.

Before concluding I am glad to have this opportunity of paying my personal tribute to the services so loyally and so efficiently rendered to the company by all members of the staff both afloat and ashore. The spirit of comradeship that comes from a common effort to a common end finds full expression in the keenness and desire to promote the interests of the Cunard Line that is the characteristic of all ranks from the highest to the lowest. We have had what may fairly be described as a successful year—we owe much of that success to the energy and ability of our staff, and I feel sure that you wish me to convey to those concerned your appreciation of their unfailing and wholehearted devotion to your interests.

THE RESOLUTION.

I now beg to move :—"That the report of the directors and statement of accounts for the year 1929 submitted to this meeting be, and they are hereby received and adopted, and that, as recommended by the board, a dividend of 7½ per cent. for the year ended 31st December, 1929, be and the same is hereby declared on the 5,570,241 ordinary shares of £1 each issued, and upon the Government share, and that the same be payable, less income tax, on and after the 14th April, 1930." (Applause.)

I will ask Sir Percy Bates to second the resolution.

BOARD'S REGRET AT CHAIRMAN'S RETIREMENT.

Sir Percy E. Bates, Bart. (deputy chairman) : I am rising at your request, sir, to formally second the resolution. I do formally second that resolution, but I do not think that I should sit down without making some allusion to the personal statement that you have just made.

Turning to the shareholders, Sir Percy continued : It is just a fortnight since Sir Thomas informed the Board of his desire to be relieved. The news came as a complete surprise to his colleagues, but they were unable effectively to combat his wish to retire. I am sure that you will all be glad to learn that no question of ill-health is involved. Sir Thomas's statement of his reasons means neither more nor less than what it says. I need hardly say that his colleagues regret his decision very sincerely, but they have the consolation that while they are to lose a most able and courteous chairman, they are to retain their colleague. (Applause.)

The Chairman : Before formally putting the resolution which you have heard proposed and seconded, I shall be glad to answer any question any shareholder present may desire to put.

There were no questions, and the resolution on being put to the meeting was carried unanimously.

The Chairman : I now beg to move : "That Sir Thomas A Brocklebank, Bart., Mr S. J. Lister, Mr Herbert William Corry and Mr Walter P. Tyser, who retire at this meeting, be and they a hereby re-elected directors of the company."

Sir Percy E. Bates : I beg to second the resolution.

The motion was carried unanimously.

Mr S. J. Leeming : I beg to move : "That Messrs Cooper Brothers and Company be reappointed auditors of the company for the current year and that their remuneration be fixed at £3,000 per annum."

Mr John Dempster : I beg to second that.

This was agreed to.

The Chairman : That, ladies and gentlemen, concludes our formal business. I thank you very much for your attendance this morning.

VOTE OF THANKS TO THE CHAIRMAN.

Mr Evelyn S. Parker : Before leaving the meeting I know that you will all wish to take the opportunity of thanking our chairman for his great services to the company. Normally, this would be perhaps only a formality, because we always pass a resolution of this sort, but, unfortunately, to-day we have heard the unexpected announcement that our chairman is unable to continue in that position. I know that his successor, whoever he may be, will not misunderstand me when I say that we are all extremely sorry that we are to lose Sir Thomas Royden as chairman of the company (Applause.)

Sir Thomas has been chairman for eight years, and everybody who knows anything about shipping knows that these eight years have been years of very great difficulty and trial, and it is due to Sir Thomas's ability, long-sightedness and unfailing tact that this company during that period has gone on from strength to strength until it occupies its present proud position. I think his services not only deserve the thanks of shareholders, but they deserve the thanks of a much wider public, the thanks of every citizen of Liverpool. (Hear, hear.) During the years succeeding the war, I am sorry to say that several of our large companies have been attracted by the lure of London, and they thought it better to go

there. Whether they have been right or not, whether they have done better in going to London, it is not for me to say. But the Cunard Company, under Sir Thomas Royden, has shown the world that the most successful and the greatest of the British steamship companies can be, and is, efficiently managed in Liverpool; and I think that the citizens of Liverpool owe a great debt to this company and its chairman for their loyalty to the city. While we all regret that Sir Thomas is leaving the chair, we are extremely glad to hear that he is going to remain one of our directors, and we hope he may be long spared to serve us in that capacity. I understand that this resolution does not require a seconder, and as for obvious reasons the Chairman cannot put it himself, I put it to the meeting.

The resolution was carried with loud applause.

The Chairman: Mr. Parker, ladies and gentlemen, the regret that one must inevitably feel on taking a step which I felt compelled to take is considerably mitigated by the exceedingly kind way first, in which Mr. Parker has spoken about my tenure of office, and, secondly, by the sympathetic reception that you, ladies and gentlemen, have given to what Mr. Parker has said. I can only thank you very sincerely. (Applause.)

The meeting then terminated.

SCHWEPPES, LIMITED.

RECORD NET PROFITS.

The thirty-third annual ordinary general meeting of Schweppes, Ltd., was held, on the 10th instant, at Marble Arch House, London.

Sir Ivor Philipps, K.C.B., D.S.O. (the chairman), said that the gross profit for the year under review was £330,000 against £317,000 for the previous year, and the net profit £180,000 against £172,000, which formed another record for the company. They could congratulate themselves not only on a satisfactory year's trading, but also on the splendid balance sheet which they had before them. They were recommending the payment of the same dividend as for the previous year, viz., £9 6s. 3d. per cent. to the ordinary shareholders and 10 per cent. to the deferred shareholders, but he would remind them that in 1928 the deferred shareholders had received a 50 per cent. free issue of shares in place of arrears of dividend, so that they were now actually receiving 15 per cent. on their original holdings.

In view of the recent happenings in the City and the question now before the public of the desirability of having share transfers and share certificates audited by the company's auditors, he would like shareholders to know that for the last 15 years all transfers and share certificates, before being passed by the board, had been certified by the auditors.

INCREASED SALES.

The sales of lemon and orange squash and other cordials and cider continued to show a satisfactory increase, although they noticed a tendency on the part of brewers to tie their houses for cider, in certain instances buying up cider manufactories themselves.

Since the last meeting, Mr A. H. Dudley, of Messrs Dudley and Son, who had been their sole agents in Ireland for a number of years, had died, and they were now taking the management of the Irish office into their own hands. They had recently erected a factory in Dublin, and now had in contemplation erecting a cordial factory there. They felt sure that by making that change they would add considerably to their trade in the Irish Free State. So far there was every prospect of their doing good business there.

SUBSIDIARY COMPANIES.

Shareholders would observe at the foot of the profit and loss account a note to the effect that no credit had been taken in the accounts for the profits of the subsidiary companies, but that there had been no losses. Investments in subsidiary companies stood in the books at £132,000. The only subsidiary companies in which they held shares directly were Schweppes (Colonial and Foreign), Ltd., and W. and J. Burrow, Ltd. Neither of those companies had paid a dividend during the year under review, but both of them showed small profits for the year. Although they had only two subsidiaries directly shown, Schweppes (Colonial and Foreign) held a controlling interest in Schweppes (Paris), Schweppes (South Africa) and Schweppes (Transvaal), and a 50 per cent. interest in Schweppes (Belgium). All those companies were working at a profit. All their subsidiaries were of recent formation, and the policy of the board was to build up and strengthen their financial position and to use such profits as they made for that purpose. When the financial position of those companies was more secure and their business more developed, they would, he hoped, in time be able to assist by dividends the profits of the parent company

The report and accounts were unanimously adopted.

HELLENIC AND GENERAL TRUST, LIMITED.

SATISFACTORY RESULTS—FINANCIAL CONDITIONS IN GREECE.

The second ordinary general meeting of the Hellenic and General Trust, Ltd., was held, on the 7th instant, at 41, Bishopsgate, London, Mr F. Alexander Szarvasy presiding.

The Chairman, in the course of his speech, said:—During the past year we have issued 100,000 shares of £5 each, and the issued and paid-up capital now stands at £1,000,000. The average capital employed, however, during the year has only been £639,500, or 63.95 per cent. The 100,000 shares having been issued at a premium, we have created a capital reserve, and preliminary expenses have been written off against this reserve, leaving a net balance of £6,644.

REVENUE AND DIVIDENDS.

Our income from all sources has been £61,852, and, after deducting all expenses, but before making provision for income tax, the net figure available is £50,211. This represents 7.85 per cent. earned on the average capital employed, against 7.29 per cent. for the previous period of thirteen months, for which accounts were issued, or against 6.73 per cent. for the equivalent proportion of the same period. You will notice that management expenses, including directors' fees, amount to less than 1 per cent. on the issued capital, which is the usual charge for companies like ours. The board recommend a final dividend of 3½ per cent., less tax (making 6½ per cent. for the year), leaving to be carried forward £22,312, or over 2¾ per cent. on our capital, subject to tax.

Although during the last few weeks, due to the advent of lower money rates, the general situation seems to have become more settled, I feel sure you will agree that a conservative policy is called for, and that we must look to the building up of reserves before embarking on a more adventurous dividend policy.

During the current year we shall have our full capital available, and as our investments on mortgages in Greece give us a fairly high return, and seeing that the rest of our capital is invested at an average rate of about 6¾ per cent., barring unforeseen circumstances, our income should again be very satisfactory.

As you are aware, a large part of our company's activities is connected with Greece, and perhaps a few words regarding recent developments in that country may be appropriate.

First let me remind you that that gallant little country has faithfully kept its engagements since 1898, in spite of the fact that virtually from 1909 until 1922 it was involved almost continuously in the turmoils of war or frequently a prey to internal dissensions. Military expenditure of over £160,000,000 sterling was piled up and provided for out of the nation's own resources, a truly formidable burden for a country with about 6,200,000 inhabitants.

It is pleasing, therefore, that a review of the economic conditions in that country as obtaining at the beginning of 1930 shows that the country is successfully emerging from its difficulties, and that it now enjoys political stability under its veteran leader.

NATIONAL FINANCE.

A very important factor which will favourably influence the financial situation of Greece is that she will receive from Reparations under the Young Plan an annual mean sum of £1,182,400, as against the £200,000 received up to the present from Germany, and the £37,000 from Bulgaria.

On balance, the Greek Budget will now benefit from Reparations by £706,000 annually for the next fourteen years and £344,000 for the next twenty-two years. Besides the foregoing sums the Conference granted Greece compensation for losses suffered by Greek citizens during the period of neutrality. Optimism is justified, seeing that, in spite of her difficulties, Greece is at present amortising national debt at the rate of over £2,600,000 per annum. The national debt service for 1930-31 represents about 35 per cent. of the State's expenditure, and requires about £10,000,000, but fully one-third—say, £3,400,000—is for redemption of debt, a most important consideration. The national debt per head is now about £17 and the debt charge per head about £1 12s. It is estimated that about 50 per cent. of the national debt, or approximately £50,000,000, will have been paid off within fifteen years. A large part of this amount belonging to Greece will remain in the country. The Budgets of the State have been leaving a real surplus since 1927, while the Treasury had a steady credit balance at the bank.

The immediate future seems more settled, and if cheap money continues and has the expected influence of revitalising trade, we may anticipate greater industrial activity and a decrease in the figures of unemployment, which have reached alarming proportions.

Mr A. R. Wagg seconded the adoption of the report and accounts, which was unanimously adopted, and the usual formal business was transacted.

At an extra-ordinary general meeting a resolution was passed sub-dividing the capital of the company into equal amounts of preference and ordinary shares of 10s. each, to be subsequently converted into stock.

HARLAND AND WOLFF, LIMITED.

FURTHER IMPROVEMENT IN RESULTS.
LARGEST OUTPUT OF VESSELS IN THE WORLD.
LATEST DEVELOPMENT IN MARINE MOTOR PROPULSION.
LORD KYLSANT'S REVIEW OF COMPANY'S ACTIVITIES.

The forty-fifth annual meeting of Harland and Wolff, Ltd., was held, on Monday, April 7th, at the London office of the company, 1a Cockspur Street, London, S.W.

The Rt. Hon. Lord Kylsant, G.C.M.G. (the chairman), presided.

The Secretary (Mr John Philp) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—As I mentioned when addressing you last year, the firm of Harland and Wolff was established in Belfast over three-quarters of a century ago, and has long been universally recognised as one of the greatest—if not the gratest—shipbuilding and engineering establishments in the world.

Thanks to our up-to-date equipment, our unrivalled geographical sites in some of the chief industrial centres, and the skill and application of our staff and men, we have so far weathered successfully the most prolonged and abnormal period of depression that the industry has perhaps ever known.

PAST YEAR'S OUTPUT.

I am pleased to say that, notwithstanding statements which have received some publicity concerning the position of other shipbuilding companies, our firm's output of vessels for 1929 exceeded that of any other shipbuilding organisation in the world.

The output from the yards of Harland and Wolff in 1929 was over 145,000 Board of Trade gross register tons, which, together with the output of the two yards of our subsidiary companies, makes a total of 172,000 gross register tons of vessels for the year.

The output of the engineering works of Harland and Wolff and its subsidiaries for the past year was over 182,000 indicated horsepower of marine engines, which was by far the greatest British marine engine output.

THE ACCOUNTS.

In presenting the accounts for the past year, the directors feel that the results, which again show considerable improvement over the previous year, are satisfactory, especially in view of the prolonged joiners' strike at Belfast last year, but for which we should have done still better.

After paying the dividend on the first preference shares and providing no less than £300,000 for depreciation of fixed assets and £115,615 for depreciation of investments, there is a credit balance of £132,037, which we propose to carry forward. The reserve remains unchanged at £1,000,000.

In these days the accounts of industrial undertakings are examined somewhat critically, but I think that those responsible for carrying on the industries of the country are entitled to ask that a comprehensive view should be taken on such questions as depreciation, etc. I have always attached great importance to the writing off of adequate amounts for depreciation, but when in good times valuations have been considerably reduced, this fact should not be lost sight of when adverse conditions prevail. In our case large amounts have been specially written off in the past, and it is satisfactory that, in the year under review, notwithstanding the difficult conditions, we have been able to set aside the substantial sum of £300,000 for depreciation of our fixed assets.

As a result of this conservative financial policy, the book value of the shipbuilding yards, marine engine works, foundries and repairing establishments now represents very little more than the amount expended on enlarging and bringing the works up to date since the war. This indicates in a striking manner the modern character of our works and equipment.

I would like specially to draw the attention of the shareholders to the fact that there is no amount in the books representing goodwill, which is a very valuable asset, and also that the company has no debentures or other charges on its assets. The loan of £1,500,000 advanced under the Trade Facilities Acts in 1929 has now been reduced to £1,044,000.

WORK IN HAND.

At Belfast all our slips are occupied, while at Govan four out of the seven slips are also occupied.

While the volume of work in hand is fairly satisfactory under present circumstances, it is still difficult to obtain fresh orders at reasonable prices and on satisfactory financial terms.

REPAIR WORKS.

The repair works at Liverpool and Southampton have been well occupied throughout the year.

At the repair establishment at Woolwich the volume of work handled is steadily increasing, and it is gratifying that a substantial amount of business has been developed by the construction of dumb barges for use on the Thames.

STEEL AND COAL.

Our important interests in steel and coal undertakings have not paid any dividends during the year, although these companies made small profits.

WAGES AND SOCIAL SERVICES.

As stated in the report, apart from its large subsidiary companies, the company, at its shipyards, engine works and repair establishments paid in wages during the year 1929 over £3,750,000. In rates we paid over £68,000, and for health and unemployment insurance and workmen's compensation over £107,000.

I think you will agree that these figures form a substantial contribution from one firm to the industrial activity as well as to the social services of the nation. Notwithstanding this, as mentioned in the directors' annual report, over six million pounds of share capital is not at present receiving any remuneration in the way of interest or dividend.

The combined firms of Harland and Wolff and its subsidiary companies are now employing over 40,000 men, or nearly 9,000 more than they were employing six years ago. Moreover, it should be borne in mind that in this key industry employment is afforded to a high class of skilled men in the different trades. It also includes the training of apprentices, and is thus a most important national asset. Consequently, those responsible for large organisations such as ours may claim to be doing much to maintain the national efficiency now and to ensure its continuance in one of our oldest and most vital industries.

FINANCIAL FACILITIES FOR SHIPBUILDING INDUSTRY.

An important factor in the maintenance of this great national industry is the necessity for the continuance of those facilities for finance which in the past have helped so materially, and which cannot be dispensed with in these days of extended credit, when in so many cases companies placing orders look to the shipbuilder to assist in financing the work of construction.

"BRITANNIC" AND SISTER SHIP.

The work in hand includes some notable vessels, but perhaps special mention might be made of the White Star liner "Britannic," of 27,000 gross tons. This liner, which is the largest British motor passenger ship, is approaching completion at Belfast, and may well be as epoch-making an instrument of commerce as the first vessel built by Harland and Wolff for the White Star Line—namely, the "Oceanic" in 1870, which was pioneer in the development of North Atlantic travel.

The owners are so confident of the merits of this vessel that a sister ship to the "Britannic" has been laid down at Belfast. These two vessels will represent the latest development in marine motor propulsion.

In addition to the White Star vessels under construction, we have been building large motor liners for the Union-Castle Company's South African mail service, as well as vessels for the Compagnie Generale Transatlantique, the Silver Line, Andrew Weir and Company, the Nourse Line, Hain Line and the Anglo-Saxon Petroleum Company.

We have within our organisation the capacity, and, in our staff, the knowledge and experience, to produce every phase of other forms of marine propulsion. For instance, we have recently carried out several large installations of high-pressure turbines with water-tube boilers in passenger vessels of the largest size.

ELECTRIC PROPULSION.

In regard to the electric propulsion of ships, which is developing in certain directions, I do not suppose there is another shipbuilding company in the world that is in a better position to carry through the whole installation on this principle. Having our own electric manufacturing department, we are peculiarly well equipped, both as to appliances and technical staff, to deal with the problems connected with this form of propulsion, in conjunction with either steam or motor engines.

During the strenuous and difficult years we have been passing through, close attention has been paid to the co-ordination of our various establishments, the standardisation of fittings, the installation of further labour-saving devices, the elimination of waste and the economising of every process, consistent with our high standard of work.

SHIPPING OUTLOOK.

Notwithstanding the prolonged shipping depression, I have no doubt as to the ultimate recovery of prosperity. Long experience encourages us to look for the inevitable revival and probably sooner than many people anticipate, and given adequate support, I am satisfied that the result of our shipbuilding operations will fully justify the confidence reposed in us as it has in the past.

I beg to move : " That the report and accounts to December 31, 1929, be approved and adopted."

The resolution was seconded by Mr F. E. Rebbeck and carried unanimously.

The retiring directors were re-elected and the auditors (Messrs Price, Waterhouse and Company), having been reappointed, the meeting terminated.

BALAGHAT GOLD MINES, LIMITED.

DIVIDENDS MAINTAINED.

The tenth ordinary general meeting of the Balaghat Gold Mines, Ltd., was held, on the 9th instant, at 6 Queen Street Place, London. Mr E. R. Woakes, A.R.S.M., M.Inst.M.M., presided in the absence, through indisposition, of Lt.-Col. Sir Donald Robertson, the chairman of the company.

Mr C. H. D. Garland, F.C.I.S., read the notice convening the meeting and the report of the auditors.

The Chairman said : Shareholders will have learned from the press that a strike of Indian workmen broke out at the beginning of the week on the mines of the Kolar Gold Field. I am glad to say the latest news received indicates that the position is somewhat improved.

During the past year there was an increase of 2,150 tons crushed at the mill and an increase of 2,490 ounces in the total return, the figures being 50,100 tons of ore, yielding 32,468 ounces of gold. The amount realised by the sale of this gold was £10,143 greater than that obtained in the preceding year.

The revenue account shows that the receipts from sales of bullion (less royalty), bank interest, rents, &c., amounted to £132,025, and the costs totalled £105,983, leaving a profit of £26,042, as compared with £24,153 in 1928. The working costs for the year, excluding development, showed a satisfactory decrease per ton, but, owing to extra development carried out, the total costs per ton milled were Is. 3d. higher.

The profit and loss account shows credits (which include the balance brought forward and interest and dividends on investments, &c.), amounting to £36,377, and debits, including the 10 per cent. preferential dividend paid in September last, of £21,601; this left a disposable balance of £14,776, out of which a final dividend for the year of 6d. per share on the Preference and Ordinary shares was paid on the 27th ultimo, which absorbed £7,698. The distributions by way of dividend were similar to those of 1928, and the balance carried forward—viz., £7,077—is very much the same.

The liquid assets of the company at December 31, 1929, deducting liabilities, were £74,621—an improvement of some £3,000—and in addition, materials, stores and goods in transit were valued at £28,662.

The report and accounts were unanimously adopted.

Established 1889.

LLANELLY AND DISTRICT ELECTRIC SUPPLY COMPANY, LIMITED.

CONSIDERABLE PROGRESS—IMPORTANT NEGOTIATIONS.

The annual general meeting of the Llanelly and District Electric Supply Company, Ltd., was held, on the 4th instant, at Winchester House, Old Broad Street, London.

Mr Morrice A. Edwards (deputy-chairman) presided.

The Secretary (Mr William C. Bryden, C.A.) having read the notice convening the meeting and the report of the auditors,

The Deputy-Chairman, in moving the adoption of the report and accounts, having expressed regret at the absence, through illness, of Mr A. H. Beatty (the chairman) said :—Gentlemen,—You are all aware that the important area supplied by your company is largely of an industrial nature, and you can readily understand that the year under review has been one of considerable difficulty. The conditions which have prevailed during the year have not been particularly conducive to industrial activity, especially in an area where the basic industries are coal, iron, steel, and tinplate.

In spite of these adverse factors the company has made considerable progress during the year; 608 new consumers were added and a total of 23,675,600 units were sold, as compared with 21,843,400 in the previous year, an increase of 8½ per cent. It is gratifying to record this increase, due largely to the growth of domestic consumption, which is an increasing section of our business and which we are doing everything we can to encourage. It is gratifying to note that this improvement in domestic and small power load has more than offset the reduced demand by larger industrial users.

With the power station plant, mains and transmission lines at present available, I can assure you that the company is in a position to reap the benefit of the increased demand when trade in South Wales becomes more active.

There has recently been published a scheme under the Electricity (Supply) Act, 1926, covering a large area in South-West England and South Wales, including the area of our company and of our subsidiary. Under the scheme as published our Llanelly station would continue to operate and be used by the Central Electricity Board.

A new super-station for South Wales is contemplated, but its locality is not yet indicated. It may, however, be of interest to the shareholders to know that our company has the rights to the best site available for the purpose. We have made proper representations to the Central Electricity Board with respect to the provisions of the scheme so far as they affect our plant and areas, and the matter is receiving the very careful attention of your directors and managers.

Negotiations of considerable importance have been conducted for several months which might result in considerably changing the scope and ramifications of the business. I can say no more at present, but any agreement arrived at would be subject to approval of the shareholders at a meeting which would be specially convened for the purpose. Meanwhile, I may tell you that no opportunity has been lost in consolidating and widening the scope of the company's interests.

TRACTION SIDE OF THE BUSINESS.

With regard to the traction side of the business, I need not repeat what was stated at the extra-ordinary general meeting which was held on February 21st last, when you gave your sanction to the introduction of the Bill in Parliament under which the company seeks authority to run trolley vehicles and omnibuses in the place of, and in extension of, the services of the light railways. The Bill is proceeding normally, and will come before a Committee of Parliament in due course.

The amount transferred to renewals and depreciation reserve of £15,000 is £4,000 less than last year. This is a matter which has occasioned much careful consideration by your directors, and we have endeavoured to strike a fair balance between our desire to have available a larger balance for dividends and the duty which we owe to the shareholders generally to make proper provision for depreciation, in all the circumstances known to us who are responsible for the management of the company's affairs.

I think this is a fair statement of the position and the answer to those of our shareholders who have been somewhat pressing for a larger distribution than we have recommended.

I am glad to report that the first two months' trading this year showed a very satisfactory increase over the corresponding period of last year, and if this increase is maintained, as we have every right to anticipate, the current year should show a satisfactory increase over the results for last year.

Mr A. A. Edward seconded the motion.

In the course of a discussion it was suggested that a larger dividend than 2½ per cent. might be paid on the ordinary shares, and an amendment to adjourn the meeting for one week to enable some of the shareholders to discuss the question with the directors was moved, but was subsequently withdrawn. The original motion was unanimously adopted.

GORDON HOTELS, LIMITED.

CONSIDERABLY IMPROVED RESULTS.

The fortieth ordinary general meeting of the Gordon Hotels, Ltd., was held, on the 7th instant, at the Whitehall Rooms of the Hotel Metropole, London.

Major-General Guy Dawnay, C.B., C.M.G., D.S.O. (the chairman), presided.

The Chairman, who was enthusiastically received, in moving the adoption of the report and accounts, said : We are again able to report a considerably improved year's working; and, again, it is true that the improvement in our business in England was off-set, both by the failure of our seaside hotels to respond to conditions which have caused improvement in the results shown by our hotels in London, and by the continued and even accentuated depression on the Riviera under which we suffer in common with—but not, I may say, in greater measure than—our competitors in the South of France. Sir Francis Towle told you last year that, in our view, the 13 per cent. tax on turnover was the most damaging single factor militating against a recovery of our French business. A similar tax, as I told you on a former occasion, was for a time imposed also in Italy; but the Italian Government withdrew the tax after a short experience of its demonstrable unsoundness. I only wish I saw prospects that the French Government was likely to follow a similar course. I do not wish to imply that your properties on the Riviera bring you no profit. But I do say this—that, in comparison with the profits which we are able to earn for you from the operation of your properties in London, the benefits which you reap from your French properties can hardly be called commensurate with the effort entailed and the relative capital involved.

As regards your seaside properties in England, our policy remains as I described it last year. The conversion of one wing of the Hotel Metropole, Folkestone, into flats has proved financially sound, and has *pro tanto* improved our Folkestone results.

If you will turn to the trading account for the year 1929 you will see that the figures are satisfactory.

The profit and loss account appears to require no comment, apart from the fact that the final result, a balance of £119,332, indicates a very satisfactory improvement over the figure of £98,548 for last year. This is an increase of 21 per cent. over last year and of 48 per cent. over the year 1927.

DIVIDEND AND BONUS.

With regard to the report, you will observe that our proposals regarding the appropriation of the balance at profit and loss include, as usual, the full annual dividend on the preference shares, the payment of our usual 5 per cent. dividend on the ordinary shares, and the transfer to general reserve of £20,000, being twice the amount which we have in recent years been able to allocate to that purpose. In view of the satisfactory increase in profit for the year, and in view of the double allocation to reserve, the board has decided, after much consideration, to propose to you the payment of an additional bonus of 1¼ per cent. on the ordinary shares, representing in respect of the year 1929 a 25 per cent. increase in all in the ordinary shareholders' dividend. We have put forward the proposal in this way because we feel that it is too early yet to forecast whether or not the ordinary shareholders may look forward to a regularly increased dividend except in unusually favourable trading years.

You will notice our report with regard to the May Fair Hotel. I told you last year that our best expectations had fallen short of the actual results. During the year under review this hotel has still further exceeded our hopes. It is very considerably the best unit of earning power in your whole organisation. But, further, in pursuance of the policy of development marked out by the acquisition of the May Fair Hotel, we have acquired for you an interest in the new hotel which is being erected on the Dorchester House site in Park Lane, on terms practically the same as those on which we acquired for you your original interest in the May Fair Hotel. Apart from your interest in the equity of the new Dorchester Hotel, when it is built, the hotel will be under the management of your company, under an agreement financially advantageous to you. There can be no doubt whatever—and the success of the May Fair Hotel has proved it, I think, beyond all question—that it is only by the provision of completely up-to-date units, designed to meet the most modern requirements of the present-day public, that we can develop—and I hope develop considerably—the earning power of your company.

Once again I record my appreciation of the most able management of your affairs by your managing director, Sir Francis Towle, in thanking whom I am sure you will wish to associate yourselves with me.

Sir Francis W. Towle, C.B.E. (managing director), seconded the resolution, which was carried unanimously, and a cordial vote of thanks to the chairman and directors terminated the proceedings.

JOHN BARKER AND COMPANY, LIMITED.

RECORD PROFIT—GOODWILL ELIMINATED.

The thirty-seventh ordinary general meeting of John Barker and Company, Ltd., was held, on the 8th instant, on the company's premises, 63-65 Kensington High Street, London

Sir Sydney M. Skinner, J.P., the chairman, said that the past year, although unfavourable in certain respects, had produced no outstanding exceptional difficulties so far as outside trading conditions were concerned. Internally they had had to face the difficulties of extensive alteration and rebuilding, and they felt it was no mean achievement to have earned an increase in net profit of no less than £23,784. This increase made the total net profit £468,685, after charging debenture interest, which constituted a record in the history of the company.

The balance sheet showed increase in the outstanding amount of employees' 5 per cent. tax free notes. The total nearly approached the limit of £50,000 fixed in the first instance, and the directors had decided to increase the maximum to £100,000. It might not be desirable to have too large a sum at this rate of interest, repayable practically on demand, but it was an exceedingly useful incentive to the staff to save, encouraging a practical interest in the business.

The reserve accounts had a total of no less than £1,035,000. The increase of £58,000 over last year was accounted for by the allocation of £125,000 for rebuilding, which it was proposed to take from the profits of the year, less £67,000 written off the book value of certain properties involved in rebuilding. The wise financial policy which had preserved these funds was the basic means of keeping the business well to the fore as one of the most modern and efficient department stores

Agreement had been made with the trustees for the debenture holders in respect of the 1894 and 1902 issues, whereby a substantial part of the two sinking funds would be merged in such a way as would be of immediate benefit to the company, by releasing about £90,000 in cash for their use, and it also provided for a long-term outside sinking fund policy for a considerable sum.

GOODWILL EXTINGUISHED.

Goodwill did not appear at all in the balance sheet now issued, as amongst the appropriations proposed out of the profits of the past year was a sum of £35,000, which would delete goodwill altogether. Shareholders were to be congratulated that the company had attained so strong a financial position that, at a time when the value of the name of " Barkers " had never stood higher with the public, they had a balance sheet in which any valuation of this important but intangible asset became conspicuous by its absence. Cash, which showed a further increase of approximately £93,500, was the most satisfactory feature of a strong liquid position Stocks at £592,000 showed a further decrease of £68,000 and were in a very healthy condition.

The year's gross profit, £1,716,433, showed an increase of approximately £10,000. A year ago he said they had adopted the policy of doing their utmost to make shopping in Kensington more than ever attractive to customers, as to both value and service, during the difficult rebuilding period This they continued to do, and the progress shown by the increased gross profit was evidence of their success in spite of increasing competition and difficult trading conditions.

From the net profit, the directors proposed to write £35,000 off goodwill, and £25,000 off fixtures, etc., to place £125,000 to rebuilding and modernisation reserve, and £10,000 to pension and benevolent fund; and, after paying the preference dividends, to declare a final dividend on the ordinary shares of 15 per cent., making 20 per cent. for the eleventh consecutive year. This would leave £297,254 to be carried forward, or an increase of £6,244.

The business was founded 60 years ago, and its progress had been amazing. Their diamond jubilee found them with a balance sheet showing goodwill entirely eliminated, combined reserves of over a million, and a record net profit.

The report and accounts were unanimously adopted

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, *6 Bouverie Street, Fleet Street, London, E.C.4.*

PARA ELECTRIC RAILWAYS AND LIGHTING COMPANY, LIMITED.

INCREASED GROSS EARNINGS.

SIR F. VOULES ON CAPITAL REORGANISATION.

The twenty-fifth ordinary general meeting of the Para Electric Railways and Lighting Company, Ltd., was held, on the 7th instant, at the Cannon Street Hotel, London, Sir Francis M. Voules, C.B.E. (the chairman), presiding.

The Chairman, in the course of his speech, said that the gross earnings of the tramways department had increased from 4,827 contos in 1928 to 4,940 in 1929, and those of the light and power department from 2,341 to 2,417 contos. As trading conditions were none too favourable, this increase, however modest, was not unsatisfactory. The sum of £10,000 had been transferred to depreciation and renewals reserve, and if the recommendation to pay a final six months' dividend at the rate of 6 per cent. per annum on the preference share capital was approved, there would remain £3,604 to be carried forward.

It was imperative that they should give every encouragement to prospective consumers, and the board had decided that a substantial addition to the generating plant must be provided. By the installation of two turbo-generators of 1,500 k.w. each they hoped to be in a position, in about a year from now, not only to satisfy any demand for electric supply in all departments for some time to come, but incidentally to realise substantial economies in the cost of production. In order to provide for the expenditure, which would amount to about £30,000, the directors proposed setting aside from month to month sufficient portions of the ordinary revenue to meet payments for this power plant extension as and when due. They were advised that the earning capacity of the company would be increased by some £8,400 per annum on an expenditure of £30,000—a highly satisfactory result—but they could not continue indefinitely to meet all capital requirements out of profits. The directors believed that the scheme submitted in 1928 for capital reorganisation, adjusted to changed circumstances, might be profitably reconsidered, and with this view they invited the co-operation of the shareholders.

The report was unanimously adopted, and a proposal to appoint a consultative committee of preference shareholders and ordinary shareholders to assist the directors in any scheme for the reorganisation of the company's capital was agreed to.

APOLLINARIS AND JOHANNIS, LIMITED.

STEADY PROGRESS.

The thirty-third ordinary general meeting of Apollinaris and Johannis, Ltd., was held, on the 7th instant, at the Holborn Restaurant, London. Mr Alfred R. Holland (chairman of the company) said it would be misleading to compare the figures with those of the last accounts, which had been for nine months only.

FURTHER INCREASE IN PROFITS.

A comparison with the last complete 12 months to March 31, 1928, showed an increased profit of £3,300, and as the amount carried forward was £96,829, after deduction of the amounts as set out in the report, it was evident that steady progress was being made, and that the results of the past year were the best that had been attained since the company resumed business after the war.

HANDICAP OF PROTECTIVE DUTIES.

He had at previous meetings referred to the manner in which the development of the Apollinaris export trade had been handicapped by the high duties imposed in South America; unfortunately, during the past year many other countries had increased their tariffs.

PRESTA A SUCCESS—A SECOND FACTORY TO BE BUILT.

In these circumstances the starting of a business in aerated waters sold under the name of Presta had been a wise step to take, and, in view of the success already obtained, the board had decided to extend their activities in this direction. A very suitable property had recently been acquired, and it was hoped shortly to commence operations in the North with a second model factory to produce Presta aerated waters. He trusted that the steady progress shown by the accounts would encourage shareholders to share the confidence which the directors had in the future of the business.

AMERICAN BUSINESS.

The managing director, Mr F. J. Schilling, referred to the setback caused by the financial crisis in the States in October last. Reports from the agency in New York asserted confidently that the latter was only of a temporary nature, and he was hopeful, therefore, that the current year would show satisfactory results.

The report and accounts were adopted unanimously, and, the dividend being declared, the proceedings closed with votes of thanks to the staff and the chairman.

GARRARD ENGINEERING AND MANUFACTURING COMPANY, LIMITED.

EMINENTLY SATISFACTORY RESULTS.

The fourteenth annual general meeting of the Garrard Engineering and Manufacturing Company, Ltd., was held, on the 10th instant, at the Criterion Restaurant, Piccadilly Circus, London.

Mr Charles E. Newbegin (the chairman), in the course of his speech, said: Our net profit, at £69,898, is practically the same as last year—a trifling decrease of £183 only. The balance-sheet shows a total of £104,691 in liquid resources. The reserve fund, at £35,000, will be increased by £30,000 if you agree to the board's proposal, and would then be equal to the ordinary share capital.

The results are, I trust you will agree, eminently satisfactory. It was almost too much to expect that we should succeed in maintaining our profits in times of such general depression as those through which we have been passing. That we have suceeded is a sound testimony to the high standard of our productions and the good service we give our customers.

NEW BUILDINGS AND PLANT.

The new buildings and plant referred to in the report were necessitated by a rapid change during the year in the character of the demand for our products. Prompt action had to be taken in redesigning and adding new features to older models, and in designing and producing new models, both spring and electrically driven, to meet the requirements of our customers, so that to-day we have practically an entire new range when compared with those we were selling at this time last year.

The cost of these works was, I am glad to say, financed from the company's own resources. The full benefit was, however, not secured in last year's trading, but without doubt the current year should reap to the full the advantages which we believe will be derived from these improvements.

FUTURE PROSPECTS.

As to the future, we are on the eve of a Budget statement, and until that is before the country I do not see how anyone can come to any definite conclusion as to the trend of trade. It is to be hoped that such legislation as may be necessary will not further interfere with industrial development, and, given ordinary settled conditions, I have no fear for our future. Our business so far this year has been good. Our export trade is beginning to add its quota to our returns, and is gradually extending.

The report was unanimously adopted, and a dividend of 27½ per cent. and a bonus of 10 per cent. on the ordinary share capital were declared.

NUNDYDROOG MINES, LIMITED.

INCREASED PROFIT AND DIVIDEND.

The ninth ordinary general meeting of the Nundydroog Mines, Ltd., was held on the 10th instant, at the Cannon Street Hotel, London.

Mr V. Herbert Smith (chairman of the company) said that the total production during last year of 80,120 ounces of gold was an increase of 4,693 ounces, and the realised value of the returns was £19,106 greater than that of the previous year. The average assay value of the ore milled was 15 grains per ton higher, which largely accounted for the improved returns. The profit of £108,081 was £14,914 more than was obtained in 1928. Working costs were 1s. per ton higher, owing to an unavoidable increase in the cost of stoping and heavier expenditure on ventilation work, but development costs were 6d. per ton less. The underground development work during the year measured 10,334 feet, and the estimate of ore reserves at the end of 1929 was 265,595 tons, an increase of 19,131 tons.

The directors were pleased to be able to make distributions by way of dividend amounting to 2s. 6d. per share, against 2s. in the preceding year, this distribution of 25 per cent. being the highest since 1917. A reserve fund had been started by the allocation of £10,000. The company had a balance of liquid assets of £114,446 in addition to materials and stores and goods in transit valued at £66,881. Shareholders would gather that the company had had a successful year, and it was additionally gratifying that the outlook was so promising, particularly at a time when the Nundydroog Company was celebrating its jubilee. The first dividend was paid in 1888, since when shareholders had received an unbroken succession of dividends, the total cash distributed amounting to nearly £3,000,000, and there was every reason to anticipate that the mine would continue to reward its proprietors for many years to come.

Mr Kenneth Taylor, referring to the strike on the Kolar Gold Field, said that the cabled information received the previous day and that morning reported that all was quiet. Negotiations were proceeding for a settlement.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the five days ended April 5, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts	£
Supply Services	9,800	From Revenue	18,775
Interest, &c., on Debt	16,031	Decrease in Balances	3,333
Sinking Fund	527	Increase in Debt	4,282
Sundries	32		
	26,390		26,390

The revenue for the week amounted to £18,775,400, as compared with £17,965,800 in the corresponding week last year. Income tax brought in £8,406,000, as compared with £8,199,000, and sur-tax £2,030,000, against £1,610,000. Customs and Excise were higher at £1,935,000 and £900,000, against £1,541,000 and £665,000 respectively. Miscellaneous receipts amounted to £1,900 as compared with £213,100. The National Debt was increased by £4,282,400, as shown below :—

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council during the year ending March 31, 1930, were £27,039,670, of which £15,215,000 was remitted by means of purchases of sterling in India and £11,824,670 transferred from the Paper Currency Reserve in England to the Home Treasury.

From April 1 to 5, 1930, £250,000 was remitted by means of purchase of sterling in India.

BULLION.

The following statistics of imports and exports of gold for week ended April 3, 1930, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	£	Exported from Great Britain and Northern Ireland.	£
From—		*To*—	
Germany	4	Poland (inc. Dantzig)	5,120
France	3,952	Germany	1,157,210
United States of America	39,800	Netherlands	2,093
Venezuela	4,000	France	5,976
British South Africa	383,595	Switzerland	5,100
Australia	3,000,000	British India	50,592
New Zealand	5,397	Other countries	642
Total declared value of imports	3,436,748	Total declared value of exports	1,226,733

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1930.	ARRIVALS.	£	1930.	WITHDRAWALS.	£
Apr. 4	Sovs. released	100,000	Apr. 4		Nil
	Foreign coin bought	39,808	,, 5		Nil
	Bars bought	89	,, 7	Sovs. for export	2,000
,, 5	Sovs. from abroad	1,000,000	,, 8		Nil
	Sovs. released	500,000	,, 9	Sovs. for export	2,000
,, 7	Sovs. from abroad	1,000,000	,, 10		Nil.
,, 8	Sovs. from abroad	1,000,000			
,, 9		Nil			
,, 10	Sovs.	20,814			
	Bars	9			
	Total	3,160,720		Total	4,000

Net arrivals, £3,156,720.

Messrs Samuel Montagu and Co. write on April 9, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £156,188,963 on the 2nd instant (as compared with £155,143,878 on the previous Wednesday), an increase of £10,228,879 since January 1st last. The bar gold from South Africa available in the open market yesterday, amounting to £375,000, was disposed of at 84s. 10⅝d. per fine ounce. Germany was again in the market and secured £285,000. Home and Continental trade requirements absorbed £60,000 and India £30,000. Movements of gold, as announced by the Bank of England, show a net influx of £3,635,997 during the week under review. Receipts amounted to £3,639,997, which included £3,000,000 sovereigns from Australia and £600,000 sovereigns "released."

SILVER.

On the 3rd instant, owing to an absence of support, prices fell $\frac{3}{16}$d. and ¼d. to 19$\frac{3}{16}$d. and 19$\frac{1}{16}$d. for cash and two months' delivery respectively; this, however, was followed by a sharp recovery on the next day, when bear covering operations by the Indian Bazaars and China raised quotations to 19$\frac{7}{16}$d. and 19$\frac{5}{16}$d. Movements have since been unimportant, the market remaining quiet with a fairly steady tone in consequence of reluctance on the part of sellers. Offerings from the Continent have been less in evidence, and American operators have been more buyers than sellers.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 31st ultimo to mid-day on the 7th instant:—

IMPORTS.	£	EXPORTS.	£
Germany	11,103	British India	97,500
France	80,751	Other countries	3,993
U.S.A.	16,830		
Canada	21,868		
Mexico	79,346		
Other countries	13,033		
	£222,931		£101,493

NOTICES.

Barclays Bank, Ltd., announce that they have opened a new branch at 28, High Street, Cosham, Hants.

Mr T. C. Riddell will retire, after long service, from the position of manager of the London office of the National Bank of Scotland, Ltd., on the 30th current, under provisions of the bank's pension scheme. Mr John Cowan, assistant manager, has been appointed his successor. Mr W. R. Gilchrist, inspector of branches, has been appointed assistant manager.

Lloyds Banks, Ltd., announce that branches of the bank are now open at Market Place, Swaffham; also at Aylesham.

The Midland Bank announces that the business now conducted at 6 Lothbury, London, E.C. 2, will be transferred to the Poultry and Princes Street branch on April 19th. The manager and

assistant manager at Lothbury will become assistant manager and deputy assistant manager respectively at Poultry and Princes Street, which will then be under the management of Mr J. C. Trotter, with Mr F. M. Whittam and Mr. E. L. Poole as assistant managers and Mr O. Mitchell as deputy assistant manager.

Barclays Bank, Ltd., announce that they have opened new sub-branches at 18, Grange Road, Ramsgate, and Whitworth House, Wellingborough Road, Northampton.

Lloyds Bank, Ltd., announce that a sub-branch of the bank is now open at 6, Southwell Road, Sneinton.

The National Provincial Bank, Ltd., announce that a branch of the bank is now open at 9, Market Place, Hampstead Garden Suburb, N.W. 11.

REPORTS AND NOTICES.

We are requested by the Committee of the Stock Exchange, London, to state that their attention has been called to the fact that a company called Union Securities Company, Ltd., has issued a contract note representing that it is a member of the Stock Exchange, London. We are authorised to state that the company in question is not, and never was, a member of the Stock Exchange, and that, being a limited company, it never can become a member of the Stock Exchange.

Sir Thomas Royden, chairman of the Cunard Steamship Company, has decided to retire from that position owing to pressure of his own personal affairs. The board have elected Sir Percy E. Bates, who has been deputy-chairman, to be chairman, and Messrs F. A. Bates, of Liverpool, and Herbert W. Corry, of London, to be deputy-chairmen.

At a meeting of the directors of Furness, Withy and Company, Ltd., held April 4th, the Right Hon. Lord Kirkley and Mr I. P. R. Napier, M.C., were elected to seats on the board.

The Royal Exchange Assurance announces that Mr Alexander MacDonald has been appointed joint secretary of the corporation with Mr E. de M. Rudolf. Mr Charles Stuart Malcolm, who at present represents the Motor Union and the United British in Canada, has also been appointed manager for that Dominion of the Royal Exchange Assurance, and the other companies of the Royal Exchange group operating in Canada.

Mr W. G. Waldron has been appointed chairman of the Brazilian Warrant Agency and Finance Company, Ltd., in place of Mr Edward Greene, whose approaching retirement at the end of last year was announced at the last annual general meeting.

Sir Alexander Roger has resigned his directorship of the Constantinople Telephone Company.

RAILWAYS.

CANADIAN NATIONAL RAILWAYS.—Net operating earnings for 1929 were 45,062,000 dollars, a decrease of 6 per cent. on 1928. The railway's wage bill for the year totalled 173 million dollars, with an average number of employees of 109,096. From the net operating revenue 39 million dollars were applied to paying interest due to the public on securities. The total assets of the system at the end of the year were 233 million dollars, an increase of 120 millions as compared with the end of 1928.

CANADIAN PACIFIC RAILWAY.—The Canadian Pacific have issued an illustrated booklet describing a number of holiday tours they have organised to Canada for the coming summer months. The tours range from short inexpensive trips, taking in visits to Quebec, Montreal, Ottawa, Toronto, Niagara Falls, etc., to a tour-de-luxe to the Pacific Coast, when many of the chief beauty spots and places of interest in the Dominion will be visited. A copy of booklet may be obtained post free on application to the Canadian Pacific Railway, 62-65, Charing Cross, London, S.W. 1.

MISCELLANEOUS.

BAIRD TELEVISION DEVELOPMENT COMPANY LIMITED AND BAIRD INTERNATIONAL TELEVISION LIMITED.—The result of the poll of all classes of shareholders of the above companies, taken at their meetings held at River Plate House on April 7th, showed an overwhelming majority in favour of the scheme of arrangement and amalgamation.

W. V. BOWATER AND SONS, LIMITED, have acquired the whole of the share capital of the Empire Paper Mills (1922), Ltd., whose mills at Greenhithe, Kent, have a productive capacity of approximately 45,000 tons of newsprint per annum. When Bowater's Mersey Paper Mills at Ellesmere Port, Cheshire, are completed at the end of this year the total annual productive capacity of the Bowater group of newsprint mills will amount to more than 225,000 tons.

RUBBER PLANTATIONS INVESTMENT TRUST.—The preliminary statement of the Rubber Plantations Investment Trust shows a profit for the year 1929 of £252,550 (compared with £310,564 for 1928). It is proposed to take £50,000 (same) from dividend equalisation reserve and to pay a final dividend of 7½ per cent. (less tax), making 12½ per cent. for the year, as against 15 per cent. for the previous year. The sum of £63,616 (against £67,580) is reserved for taxation, £11,400 (against £11,900) written off properties for amortisation and the carry-forward is £57,655, against £63,382 brought in. The value of the company's investments (apart from its properties) amounted on December 31, 1929, to £2,372,301, against £2,341,822 at which such investments stood in the balance sheet. The meeting will be held at the Cannon Street Hotel, E.C., on May 8 at noon. The report will be issued in a few days and dividend warrants posted on May 12.

SWEDISH INDUSTRIES FAIR.—The Swedish Industries Fair will be held at Gothenburg from May 10th to 18th. The most prominent feature of this year's Fair will be the industrial section.

UNION CORPORATION.—The preliminary statement of the Union Corporation for 1929 shows a realised net profit of £418,034 (against £428,582 for 1928). Including £116,595 brought forward there is £534,629 (against £531,595) to be dealt with. An interim dividend of 2s. per share was paid on November 21 last. The directors have decided to add £30,000 (same) to reserve, raising it to £660,570, and have declared a final dividend of 3s. 6d. per share, making a total of 5s. 6d. per share, or £385,000 for the year (the same as last year), leaving £119,629 to be carried forward.

BORAX CONSOLIDATED, LTD.—The directors have decided to postpone the consideration of payment of the dividend on the preferred ordinary shares until the accounts for the full financial year terminating September 30th next are available.

THE LONDON AND LANCASHIRE INSURANCE COMPANY, LTD.—The Directors propose to pay, on the 9th proximo, a further Dividend of 10s. per share, less Income Tax, making with the Interim Dividend of 9s. per share, less Income Tax, paid last November, a total for the year 1929 of 19s. per share, less Income Tax. It is the intention of the Directors to increase the Interim Dividend payable in November next by 1s. per share, less Income Tax. The Directors also propose to capitalise a part of the balance standing to the credit of the Profit and Loss Account to the extent of £1 per share, for the purpose of reducing the outstanding liability on the shares. The effect of this will be to increase the amount paid up on each share of £5, from £1 to £2.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions continued favourable for outdoor work, and seeding of spring cereal is practically completed in most parts of the United Kingdom. Winter crops are in fine condition and give every promise of full yields. Offerings of native wheat on the principal statute markets were in small compass, and in sympathy with overseas varieties, sellers required full to firmer prices. The import market generally presented firm features, the recent improvement being maintained following higher cable advices from Argentine and North America. Unseasonably dry weather over the United States spring wheat belt was mainly responsible for the upward movement, so that the future trend of prices will be largely governed by weather and crop reports. In these circumstances, Canadian sellers offered less freely while awaiting further progress of the new crops, despite the large surplus of old wheat available for export. It appears that the American Farm Board propose to give United States millers the advantage of cheap wheat and thus reduce surplus holdings, which will probably result in competitive offers of flour on this market in the near future, as supplies of grist are much in excess of domestic requirements. Plate shippers also displayed more reserve, while influenced by the higher Argentine exchange rate. European consumers, however, are reluctant to follow advancing prices to any appreciable extent, although business of late marked slight expansion. Large visible supplies, particularly in North America, still weigh heavily on the market, and shipments during the remainder of the season may prove much in excess of European requirements. Ploughing operations for the new crop are proceeding in Argentine and Australia under generally favourable conditions, and it is reported that a considerably larger area will be laid under wheat in the Commonwealth. Feeding stuffs maintained a firm tone, and substantial premiums were paid for Plate maize near at hand but new crop positions inclined to sag on increased offerings, also competition by European varieties.

WHEAT.—Quiet and easier. No. 1 Northern Manitoba (Vancouver shipment), ex-ship, 46s.; No. 2 ditto, 45s. 3d.; No. 3, 45s. to 44s. 6d.; No. 4 Manitoba, 43s. 9d.; No. 5 ditto (Atlantic shipment), 42s.; No. 6, 34s.; No. 2, hard Winter (Atlantic shipment), 42s. 6d.; No. 1 ditto (Gulf shipment), 44s. 6d.; No. 2 ditto, 43s. 6d.; No. 2, mixed Durum, 39s. 9d.; Rosafe, 62½ lbs., 42s.; Barusso, 62½ lbs., ex-ship to arrive, 41s. 9d.; Australian, 42s. 6d. per 496 lbs.; English, 8s. 6d.-8s. 8d. per 112 lbs.

FLOUR.—Quiet. London straight run, 37s. per sack for country deliveries; and 36s. London area. Of imported, Manitoba patents, 34s.-37s.; Buffalo, 34s.-37s.; Australian, 31s. 6d.-32s. 6d. ex-store. On c.i.f. terms, Manitoba top patents, April, 33s. 6d.-34s.; export ditto, 31s.-31s. 6d.; Australian, 29s.-29s. 6d.; French, April-May, 26s.-28s. per 280 lbs. Argentine low grade, March-June, £6 per ton.

MAIZE.—Again dearer for near positions. Plate landed, 32s. 6d.; ex-ship, 31s. 6d.; March-April, 29s.; new April-May, 27s. 9d.; May-June, 27s. 3d.; June-July, 27s. 3d. per 480 lbs. Yellow maize meal £9 per ton f.o.r. London. Yellow African, £6 10s.; white, £6 5s. per ton ex-ship.

BARLEY.—Firm. Californian old, landed, 36s.-42s.; new ex-ship, 36s.-42s., as to sample; Chilian brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s., per 448 lbs. Black Sea, ex-ship, f.a.q., 21s. 6d.; Persian landed, 21s. per 400 lbs. English malting, 7s.-11s. 6d.; feed, 6s. 6d.-6s. 9d. per 112 lbs.

OATS.—Maintained. Plate landed, 17s.; ex-ship to arrive, 16s. 3d.; Chilian white, 21s. 6d.; ditto tawny, 17s. 6d.; German landed, 21s.; ex-ship to arrive, 20s.; South Russian ex-ship, 16s. 6d.; North ditto, 16s. per 320 lbs. English 6s.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929–30, 1928–29, 1927–28, 1926–27:—

	1929–1930.	1928–1929.	1927–1928.	1926–1927.
Estimated sales of home-grown wheat—				
1 week to April 5	Cwts. 171,659	Cwts. 135,452	Cwts. 184,215	Cwts. 164,804
31 weeks to April 5	7,523,965	8,117,590	7,927,954	9,758,287
Average price of English wheat per cwt.	s. d. 8 4	s. d. 9 9	s. d. 10 1	s. d. 11 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	Apr. 10, 1929.	Jan. 2, 1930.	Mar. 26, 1930.	Apr. 2, 1930.	Apr. 9, 1930.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	122	124⅞	148⅜	108⅜	110⅛	115¼
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	120¼	130⅞	105⅝	111⅛	113⅜

The visible supply of wheat in Canada at 74,684,000 bushels shows a decrease on the week of 582,000 bushels. Supplies a year ago stood at 90,610,000 bushels.

Increasing Interest in South American Markets

Estd. *1862*

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branches in South America, in London, Bradford and Manchester; in France Belgium, Portugal and U.S.A. with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description Status reports are supplied on request, and a Monthly Review of Market information in English or French is issued free on application.

Affiliated to Lloyds Bank Limited

THE COAL TRADE.

Our Sheffield correspondent writes:— Rather more inquiries are circulating on export account, but not much new business has yet been arranged. Supplies for export are plentiful and values continue to show an easy tendency. Hards are quoted at 15s. 6d. to 16s. f.o.b. Industrial demand is steady. The decline in the coke market has been checked, and nothing can be bought now below 15s. at ovens. A week ago there were transactions at 14s.

Our Glasgow correspondent writes:—Prices have given way further this week in several directions. Both domestic and shipping trade is slack, and coal is accumulating. Tonnages of any quality can be had in weight at attractive prices. Prices for shipment are approximately as follows (f.o.b. district ports):—Lancashire.—Ell best 14s. 6d.; splint best, 17s. 6d.; splint second, 16s. 6d.; navigation, 16s. 6d.; navigation second, 14s. 6d.; Hartley, 18s.; steam, 13s. 6d.; trebles, 12s.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 6d.; dross, 10s. Fife.—Screened navigation, 16s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 9d.; trebles, 11s. 9d.; doubles, 11s. 3d.; singles, 10s. 9d.; pearls, 10s. 6d. Lothians.—Prime steam, 12s. 3d.-12s. 6d.; secondary steam, 12s. 3d.; trebles, 11s. 3d.; doubles, 11s.; singles, 11s.; pearls, 10s. 9d. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 11s.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent states:—Quiet conditions continue to prevail on the Cardiff coal market, and stocks have seldom been so high. Stocks of one combine alone are estimated at between 200,000 and 250,000 tons, while the total quantity stocked in wagons is estimated at nearly a million tons. The low level of outward freight rates remains ineffective in stimulating demand, and it is only the operation of the marketing scheme with its minimum price schedule that is preventing ruinous inter-competition between colliery salesmen. The exports of coal from the South Wales ports in March were the smallest since last August, and the average daily rate of shipment was only 75,183 tons, as against 93,201 tons in February, and 92,381 tons in January. Compared with February, the shipments show a decrease of 280,000 tons, and of 202,000 tons compared with the corresponding month last year. Monmouthshire coals are still relatively the best feature of an extremely depressed market. The following are the current best: Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite best large, 36s. to 37s .6d.; Red Vein large, 23s. 6d. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 45s.; rubbly culm, 10s. 9d. to 11s. 6d.; foundry coke, 32s. 6d. to 35s.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 26s. 3d. to 26s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—There are general complaints of the dull conditions ruling in the iron and steel trades. The business passing in Great Britain for some time has been spread unevenly over the market and while some firms have sufficient orders to keep their works going for some time, others are finding it difficult to get together a working programme. Orders have been few and far between and for the most part have been limited to small tonnages. Some improvement, however, is anticipated after the introduction of the Budget. Export business for the past week or two has been particularly poor, and the inquiry which developed recently from some of the overseas markets has failed to materialise to any extent into actual business. The position on the Continent is further complicated by the strained relations which exist between merchants and Continental manufacturers as a result of the sales policy of the European Steel Cartels. The demand for pig iron has not expanded and the recent small buying movement which followed the reduction in the price of Cleveland iron has not been maintained. In the semi-finished steel department the British works have taken orders in competition with Continental steel makers, but the amount of business passing has been small. Business in finished steel has run on narrow lines, and for the moment there is a general tendency to mark time.

Our Middlesbrough correspondent writes:—Deliveries of Cleveland iron are on an improved scale due to the additional purchases recently made and a steady outlet is assured over a month or two. Local consumers are taking good quantities of iron and moderate deliveries are going to inland destinations. Although there is some little improvement in the demand from Scottish consumers, it is not up to expectations, but as current contracts for other irons are worked off it is expected that Cleveland will be able to secure an increased share of the Scotch trade. The tone of the weekly market on Tuesday was steady and a moderate amount of business was transacted at the ruling figures, viz., No. 1, 70s.; No. 3, 67s. 6d.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s. f.o.b. or f.o.t. The hematite market continues weak and with stocks increasing there is keen competition for any business that comes along, with the result that prices have been further cut, and it is now possible to buy mixed numbers from makers for early delivery at 75s. per ton and second-hand holders would accept even less. Transactions are still confined to early requirements, consumers maintaining a waiting attitude in regard to forward business. Shipments of pig iron are only on a poor scale so far, the clearances to 8th inst. being 3,400 tons, against 9,674 tons to March 8th. In the steel trade there is little new business reported, but local firms are tendering for different important contracts from which it is expected some business will result. In the meantime there is a considerable amount of work still to execute against old contracts, but some departments are feeling a want of new orders and are not fully employed. Prices under rebate scheme for home use are unaltered, viz., plates, ⅜-in. up, £8 15s.; sections, £8 7s. 6d.; joists, £8 10s. In other lines prices for home consumption are: Iron bars, £10 15s.; heavy steel rails, £8 10s.; 24-gauge galvanised corrugated sheets, £12; and 21/24-gauge black sheets, £9 15s. The ore market shows no change. Consumers are still holding off. Best Bilbao rubio is offered at 21s. c.i.f., and the current freight Bilbao-Middlesbrough for early loading is 5s. 6d. to 5s. 9d. Coke is being offered very freely but there is little demand. Good furnace qualities are now obtainable at 19s. delivered works, and less would be possible for a good order. The number of furnaces in blast in the district is unchanged at 40.

Our Sheffield correspondent writes:—A condition of extreme dullness pervades all kinds of commercial steel and also pig iron and iron products. There is no improvement to record and none is expected until after the Easter stoppage, which is to be longer than usual. Production of open-hearth steels has been curtailed and there will have to be a further reduction at Easter unless more business is placed. An absence of tonnage orders continues to be the leading feature of the local situation. The export markets are particularly disappointing, and the new Australian scheme for controlling imports will affect adversely the demand for various kinds of steel. Cutlery, spoons and forks are not affected, but the new regulation will put a stop to Sheffield's Australian trade in silver and plated hollowware. Tool makers complain of the smallness of the orders and there is a good deal of competition. Makers of stainless steel suitable for cutlery have formed an association to stabilise and control prices. The new scale is higher than the old one.

Our Glasgow correspondent writes:—On the whole, business is a little brisker. Steelmakers, at least those specialising in sections for structural engineers' requirements, are receiving more specifications, although the demand for shipbuilding material remains poor. Continental competition is very keen, but it is believed here that Continental prices will be increased at an early date to a level which will bring them very near our own prices. The sheet trade improvement is maintained, the increased demand for galvanised sheets for export being quite considerable. In other branches business remains dull and plants in operation at present are able to meet all demands.

Our Cardiff correspondent writes:—Shipments of tinplates from Swansea last week were considerably below the average and stocks in warehouse consequently increased to 224,514 boxes. Business, however, was reported to be moderately active with prices stationary at 18s. 3d. to 18s. 6d. per basis box. Galvanised sheets are unchanged at £11 17s. 6d. to £12 5s. Tinplate bars are also unaltered at £6 10s. for Welsh and £5 9s. per ton for foreign makes.

OTHER METALS.

Tin.—The downward movement in prices made further progress during the early part of the week following selling pressure and lower Eastern cables, but later the tone became firmer and the initial loss was fully recovered. Offerings generally proved in excess of requirements, small dealings being attended by a good deal of irregularity. Attempts to restore market stability is rendered difficult by heavy estimated shipments for April, the disappointing statistical position, and a tendency for stocks still to accumulate. Closing tone firm. Standard cash changed hands at £162 12s. 6d.-£162 5s. and £166 10s.; three months, £164-£166 and £168 5s. Sales in the East were reported at £166 17s. 6d.-£166 12s. 6d. and £169 5s. per ton c.i.f.

Copper was accorded moderate support at slightly fluctuating prices, cash being somewhat reservedly offered, while the general position marked no material change. Standard cash sold at £69 to £68 10s.; early April, £69 5s.; mid-May, £68 5s.; and three months, £67 5s. to £67 2s. 6d. to £67 10s.

Lead opened easier, but subsequently improved on a better demand. Good soft foreign pig, April, sold £18 2s. 6d. to £18 11s. 3d.; June, £18 7s. 6d.-£18 5s.-£18 11s. 3d.; July, £18 7s. 6d. to £18 12s. 6d. ton.

Spelter steady, with dealings on a fair scale. April, sold £18 3s. 9d. to £18 6s. 3d.; May, £18 8s. 9d. to £18 10s. and £18 7s. 6d.; June, £18 11s. 3d. to £18 15s. to £18 12s. 6d.; July, £18 16s. 3d.-£18 18s. 9d. and £18 12s. 6d. ton.

Antimony largely nominal in absence of definite offers from China. English regulus, £40 to £46 10s. Chinese ditto, spot, £29 10s.; April-May, £26 15s. to £27 5s.; Chinese, crude, April-May, £17 10s. ton c.i.f.

Antimony Ore, 50 per cent., April-May, 3s. 6d.; 60 per cent., 4s. 3d. per unit c.i.f.

Antimony Oxide.—April-May, £26 15s. ton c.i.f.

Aluminium steady. Home trade, £95; export, £100 ton.

Quicksilver quiet. Spot, £22 10s. per bottle, less 3 per cent.

Zinc Oxide steady. Spot, £27 to £34 per ton as to quality, delivered London.

Tin Plates quiet. I.C. coke, prompt and forward, 18s. 3d. to 18s. 6d. per box f.o.b. Swansea.

THE COTTON TRADE.

Liverpool: April 9th.

There has been a slight falling off in values from those of a week ago, with the distant positions mostly affected. Very little fresh business is going through and the action of the American Farm Board has, at least, caused the near months to improve considerably against the distants. Sellers of the May and July positions have covered for fear the Farm Board may ask for the cotton. New crop prospects have been rather favourable, but drought in Texas has been complained of and absence of any immediate relief may possibly have restricted planting, especially in the extreme west. The East is reported to have had too much rain. Spot sales for the week 3rd to 9th (inclusive) are 34,000 bales, of which 16,650 are American, 7,700 Brazilian, 10 Argentine, 3,800 Peru, 2,610 Egyptian, 1,500 African, 1,080 East Indian, and 650 sundries. Imports for the same period are 38,015 bales, of which 10,146 are American, 4,255 Brazil, 1,348 Peru, 10,988 Egyptian, 3,496 African, 7,722 East Indian, and 60 sundries. Quotations to-day are: American Middling, 8·80; Egyptian Sakel, 14·20; Uppers, 10·30; Brazil Fair, 8·16; Peru Smooth, 9·26; West African Middling, 8·61; and East African G.F., 9·71.

Manchester: April 9th.

Prices in the market have not shown much change. On the whole, demand in yarn and piece-goods has been rather quieter. Buyers are not prepared to go very far ahead and operations have been somewhat discouraged by a tendency towards easier rates in the raw material. Political news from India has been unfavourable; it is reported that dealers in Bombay and Delhi have decided to boycott foreign goods. Inquiry for Calcutta, however, in light fabrics has kept up fairly well, and some fair contracts have been arranged for delivery up to August next. Isolated transactions have taken place for Bombay. The news from China has not been encouraging and trade remains limited. Some advices from South America have been rather better and more orders have been placed in fine finishing goods. Very little has been done for Egypt and the Near East. Rather varied advices are coming through from the home trade, but clearances throughout the country are not

unfavourable. Here and there idle looms are being restarted, but more cases are reported of firms going out of business. Prices in American and Egyptian yarns continue steadier, chiefly owing to the fact that most spinners have more orders on the books than a month ago. Sales this week have been rather smaller and there are loud complaints of margins being very unsatisfactory.

THE WOOL TRADE.

Our *Bradford correspondent writes*:—An eleventh-hour attempt on the part of the union leaders to effect a compromise on the wages question failed, the employers stating that they were not prepared to discuss any settlement except on the basis of the Macmillan recommendations. With the expiration of the period of notice the strike has started in various mills, and by the end of this week it will be more or less general. It is stated that considerably less than half the employees are members of unions, but in many cases those who are willing to work may be unable to do so if the pivotal or key men—such as overlookers—come out. The opinion is still held that the strike will not be of long duration, but the employers, both federated and non-federated firms, have made it clear that they are not prepared to make any concessions on their last proposals which, in effect, are the recommendations of Lord Macmillan. So far the trouble has had no adverse effect upon the market; indeed, some very big weights of wool and tops have been sold during the last fortnight, and quotations for tops are firm in sympathy with the better tone in the raw wool markets. Moreover, there are signs of returning confidence in the Continental centres, the view being generally expressed that wool prices have definitely touched bottom. In the meantime, of course, business in the West Riding will dwindle with the stoppage of production, and it is probable that orders will go elsewhere if an early settlement of the strike is not effected. There has been a rush to deliver piece goods for the spring trade, and signs are not wanting that wholesale fabric buyers are more disposed to place orders for future delivery, being evidently impressed with the recovery in the wool position.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The second series of London sales finished last Wednesday in a most satisfactory fashion. There has been a recovery of fully 5 per cent. in both merinos and crossbreds compared with the opening. Indeed, the advance in crossbreds is 5 to 7½ per cent., particularly in super halfbreds and coarse wools, the latter still being very scarce. The probability is that low crossbreds will continue to sell at relatively higher prices for the remainder of this year than medium and fine crossbreds. Often 10½d. has been paid for good condition 40-44's greasy fleece, and only ½d. to 1d. more for 50-52's. This shows that the quantity of coarse crossbred wool is not large enough to provide for all requirements, particularly in view of the fact that this description is being admitted into the United States for carpet manufacturing purposes free of duty. The home trade has bought crossbreds very freely, and some fair weights of combing merinos have gone to the West Riding. There is far more confidence to-day in the future of the raw material than has been seen for the past twelve months, the general opinion now being that values have touched the lowest point. The quantity carried over for the next series is decidedly less than at one time seemed likely. France and Germany have bought extensively, and their competition has been welcome, particularly in the finest merinos. There has been a distinct margin between super 70's and upwards compared with ordinary 70's and below, and it is gratifying to find that the trade is still in a position to purchase the better-class wools liberally. The finish of the sales must be regarded as calculated to inspire confidence. The fly in the ointment is the threatened strike of operatives in the Bradford district. Some think the workpeople will act reasonably by falling in with the recommendations of the Macmillan Report. If so, no harm will have been done by the free expressions of opinion on the whole subject. Rather will an important principle have been established, and the way made for the industry to settle down to the increased consumption needed to give permanent stability to wool values.

HIDE, LEATHER AND ALLIED TRADES.

Supplies of clear hides from domestic slaughtered cattle are not large, with the result that prices are firm to a slight advance on last quotations. Warbled, on the other hand, are inclined to be weaker at the auctions held in the North this week. Calfskins steady in face of a satisfactory demand. In the foreign hide market inquiry is fairly well maintained, but some difficulty is experienced in obtaining further business owing to the fact that some sources of supply are asking higher prices for certain of the lines most wanted at the moment. So far these efforts to obtain better figures have met with little success, as only here and there have the advances been paid. In the South American market prices for frigorific hides have inclined to be easier, sales of Argentine ox having been made on the basis of 7¾d., with light ox selling at 7⅞d., and Montevideo ox at 7⅝d. The bulk of the business done has been on account of the United States trade, with only a few trifling sales for Europe. Dry River Plate hides are also weaker, and here a fair amount of business has transpired, including sales on behalf of home tanners. B.A. Americanos have changed hands at 7⅞d., B.A. Inservibles at 4⅝d., and Sierra Cordobas at 8⅜d. Fair sales have also been made in Cape hides, which have realised 8¼d. and 7¼d. for dry, and 7¼d. and 6½d. for dry salted. Unbathed Adis Abebas have sold at 6⅝d. for heavies, and Mombasas, 30/40/30, 6¾d. The Australian market is slightly stronger, with less business passing. Conditions in the sole-leather market are not what one might expect at this time of the year, and considering the nearness of the Easter trade in footwear business is quiet. Shoe manufacturers continue to limit their requirements in bends to small parcels of light weights in the medium to better grades, while the repairing trade has been in the market for supplies of English and wet-salted rather more freely than of late. The position of offal is better than that of bends, and both bellies and shoulders are a fairly satisfactory sale. Although trade cannot be considered as up to the average, prices for most descriptions remain on a very level basis and in most instances asking quotations are firmly adhered to. There is, however, a feeling in certain quarters that lower values may eventually rule, and this, it is considered, is restricting purchasing to a certain extent. Steady trade is the general experience of the upper leather section, with no great amount of business passing in any particular class. Willow calf and glace kid has, if anything, experienced a slightly less call, while the inquiry for patent leather has dropped off considerably. Suede leathers, however, have marked further improvement, and a fair amount of business has been put through again this week. Semi-chrome leathers remain quiet, while the small business being done by curriers is confined to the home trade, and is usually in connection with waxed kip butts and splits and coloured offal. Reptilian and other novelty leathers move off steadily in small quantities. Shoe manufacturers are still disappointed with the size of the orders coming to hand; although in certain centres a fairly decent run of business is being experienced, others are still hoping for a better inquiry.

THE JUTE TRADE.

DUNDEE: April 2, 1930.

For a week past the Indian Jute Mills' Association has been negotiating with mills not in the Association for a combined movement to curtail production of jute goods. The latest news regarding the situation is to the effect that all the mills, with the exception of two not in the Association, are willing to work only 54 hours per week. There are hopes that a favourable decision will be given out shortly. Meanwhile, the whole market is in such a state of uncertainty that business is seriously interrupted, though a decided improvement took place on the news of these negotiations. It is stated that the stocks of jute goods in India are accumulating to such an extent that accommodation for them cannot be found, while at consuming centres there are also sufficient stocks to last for months, even on a normal demand, and demand is at present very much reduced. It is admitted that a long time must elapse before any material benefit can accrue to the jute industry through curtailment of production by Calcutta, but the decline in prices would be stopped. Raw jute has ruled very irregular, advancing in sympathy with the Calcutta goods market, and declining again because of the uncertainty surrounding the situation. The quoted rates are £29 for best First Marks and £26 for Lightnings, March/April, while Daisee assortment has been sold this week at £24 5s., and four's at £22, same shipment. Tossa assortment is at £26, and four's at £24 5s., March/April. New crop offers have been very scarce, sellers displaying great reserve. A very good business in jute yarns has resulted in an all round increase in prices. Common 8 lb. cops, sold at 2s. 6d., have risen to 2s. 8d. freely paid, and the quotation now 2s. 9d. Twist is back again to 4⅞d. lowest for 3 ply 8 lb., while sacking 24 lb. weft is firm at 3½d. and 8 lb. chains at 4½d. Rove is dearer at £27 for 48 lb., and £17 for 200 lb., while a very good business in finer yarns for export has been concluded at 2s. 11d. for 8 lb. weft, and 3s. 0d. for warp, of fourth grade Rio. Carpet yarns have also come in for some attention. Cloth business has improved, but not to the extent desired. Manufacturers have raised their terms to 3 5/16d. to 3⅝d. for 10¼ oz. 40 in. hessians and 2 5/16d. to 2⅝d. for 8 oz., and the situation all round is brighter. Linoleum hessians have been bought more freely, and heavy goods are inclined to be dearer. The Calcutta hessian market has weakened, owing to the protracted negotiations for shorter working hours. Prices rose to 24s. 3d. for 10 oz., and 19s. 6d. for 8 oz., April/June, but present rates are 22s. 9d. and 18s. 6d. respectively.

VEGETABLE OILS AND OILSEEDS.

Markets are much more active, and a firmer tone prevails practically all round. A feature has been the heavy purchases of linseed on the Continent, and this, together with comparatively small supplies and the movement in the Argentine rate of exchange, has caused a sharp appreciation in value. Plate linseed, on spot, has advanced to £18 15s., while for seed on passage to Hull £18 5s., and for April-May loading £18 have been paid. And to Antwerp, for seed loading up to £18 14s. 6d. has been conceded. Calcutta linseed to Antwerp has been done up to £19 11s. 3d. April-May, and bold Bombay £20 10s., April. A brisk business in Egyptian cotton seed to Hull has also been done, £8 being paid for black on passage, April and May, and £8 2s. 6d. June. In the vegetable oil section, linseed oil is in fair request and, after declining, has recovered to £41 10s. per ton, naked, ex Hull, spot, and £41 April. Cotton oils are also firmer, Crude Egyptian on spot being held for £29 10s., ex Hull, and common edible for £32. The improvement in the demand for oilcakes and meals continues.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Spot business is at a minimum pending the Budget. Prices meantime remain unaltered. All raw refining kinds meet a quiet trade, and the Cuban Single Seller Agency shows more disposition to meet the U.S.A. market. Java markets quiet, steady. Terminal sections generally steady and a fair amount of business resulted in raw, including May delivery, at 6s. 8½d. to 6s. 9¾d.; August, 7s., 6s. 11½d. and 7s. 1½d.; December, 7s. 1½d. to 7s. 2½d. to 7s. 3¾d. Cuban, 96 per cent. centrifugal, April-May, quoted 7s. 4½d., c.i.f. U.K. Czecho granulated, April, to the U.K., quoted 9s. 1½d., f.o.b. Hamburg. Cuban receipts last week, 179,804 tons, against 185,431 last year; exports, 31,958, against 135,720; stocks, 1,545,940, against 1,345,590. Centrals at work total 148, as compared with 141 same time last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending April 5th totalled 216,226 tons, compared with 142,770 at corresponding period last year.

COFFEE.—A generally steady market obtained during the week and business made fair progress. First sizes of Kenya, however, met a dull market, seconds and thirds selling more rapidly. Representative quantities of Costa Rica were brought to auction. East India descriptions steady, quiet.

COCOA.—A steady market for spot goods and good fermented Accra sold 42s. 6d. Forward positions steady, quiet. Accra, F/F, April-June, with guarantee, sold 37s. f.o.b. Terminal, May, sold, 40s. 6d.; July, 41s. 7½d. to 40s. 9d.; December, 41s. 9d. to 41s. 6d.

TEA.—Indian auctions during the week totalled 48,955 packages. Competition was somewhat erratic, due undoubtedly to quality of northern consignments marking a falling off. With the exception of a few finest invoices selling at late rates, prices ruled easier in most instances. Ceylon sales of 20,363 packages aroused active competition, as general run of quality was decidedly attractive though prices disclosed slight irregularity. Medium brokens experienced a strong market, also finest leaf, the latter being well sought after by exporters. Low medium and common steady. Java and Sumatra auctions firm, with a good demand. Of China, Keemuns at 7d. to 8d. per lb. in request, while showing excellent value. Fine Keemuns scarce.

RICE.—General demand is quiet, but market firm. Spanish oiled, April-May shipment, quoted 15s., c.i.f. London. Two Stars, spot, London, 13s.; April-May steamer, 11s. 9d., c.i.f. London/Continent. No. 3 Burma to Levant, quoted 11s. 9d. c.i.f. double bags. American blue rose from 23s. to 24s. c.i.f. S.Q. to Cuba, 11s. 7½d.

BEANS.—Market steady, but demand rather quiet. Madagascar butters, spot, London, 35s. 6d. to 36s.; parcels per "Bourbonnais," 33s. 6d.; "Ville de Rouen," 33s. 6d., and February-March, 33s.; March-April, 32s. 6d., c.i.f. London. Rangoon haricots, spot, London, 10s. 9d.; April, 11s. 3d. c.i.f. Ohtenashi, spot, London, 20s. 6d.; March-April shipment, 21s. 6d. c.i.f. Danubian H.P., spot, London, 22s.; March-April, 22s.; April-May, 22s. To Glasgow, North African, new, July-August, 8s. 4½d.

PEAS.—A quiet but steady market. Japanese old crop, spot, London, 14s. 6d.; new, 16s. 3d.; parcels per steamer "Altai Maru," afloat to London, quoted 15s.; "Toyohashi Maru," 15s.; March-April, 14s. 9d.; April-May, 14s. 9d. c.i.f. Dutch marrowfats, prompt, 16s.; small hand-picked blues, 11s. f.o.b. terms. Calcutta (per 504 lb.), April-May, 42s. 6d. Karachi, April-May, 42s. c.i.f. Maples quiet. No. 1 New Zealand, March-April, old, 52s. 6d.; new crop, March-April, 55s. 6d. Tasmanian "A" grade, new, March-April, 60s. c.i.f.

SPICE.—Pepper received fair support and general steadiness governed the market. London stocks for black, 20 tons higher on the week at 1,001, against 1,020 same time last year; white reduced by 69 to 809, against 565. Lampong, March-May sold, 11½d.; May July, 11⅝d. to 11½d.; August-October, 10⅝d. Muntok, white, March-May, quoted 1s. 2½d.; May-July, sold, 1s. 2½d.; August-October, 1s. 1½d. Cloves firm but generally quiet. Pimento, spot, 8½d., and to arrive, 6¼s., c.i.f. London. Sago flour and tapioca, also African ginger, quiet, unaltered.

FRUIT (Dried).—Currant market steady with fair general inquiries. Pyrgos, quoted, 35s.; Amalias, 37s.-38s.; Patras, 39s.-42s.; Gulf, 42s.-46s.; Vostizza, 47s.-58s. Sultanas quiet of sale. Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-75s.; Greek, 42s.-65s.; Australian, 31s.-45s. Dates in better request. Hallowie, spot, 19s.-21s.; Khadrowie, 15s.; Siar, 12s.-13s. 6d. Raisins dull. Valencia, quarter boxes, 40s.-42s. Figs quiet. Layers, 30s.-40s.; genuine, 26s.-30s.; good average, 18s.-20s.

EVAPORATED FRUITS.—Demand is slow to expand, but with supplies in manageable compass late rates were maintained for most descriptions. Apricots experienced a steady sale, but peaches in less demand. Pears are mostly cleared, only limited supplies of Australian being available. Plums: Californian, new crop, 30's-40's, 67s.; 40's-50's, 65s.; Oregon, 30's-40's, 55s.; 50's-60's, 50s. 6d. Apricots: South African Royal, 50s.-117s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 87s. 6d.; extra, 97s. 6d.; Australian, 65s.-85s. Peaches: Californian, choice, 55s.-60s.; fancy, 62s. 6d.-67s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 55s.-65s.; Canadian, 58s. Almonds slow of sale. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 105s.; Majorcas, 102s. 6d.-115s.; Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 35s. c.i.f.; sweet, spot, 72s. 6d. Hazel kernels: Kerasunde, spot, 145s.; Barcelona, 136s. French (shelled) walnuts, 135s.-140s. ex wharf London.

CANNED GOODS.

CANNED FRUITS.—A better demand was dealt with for most varieties of Californian fruits on spot, but shipment parcels still hang fire. Australian descriptions also move off more freely at the revised prices. English in fair request but stocks light. Singapore pines move off slowly and prices barely steady for shipment, but South African and Hawaiian remain steady under moderate inquiries. Italian tomatoes fail to attract attention despite the comparatively attractive prices ruling.

CANNED FISH.—Salmon: A moderate demand prevailed for the limited assortment available. Alaska red talls, quoted, 47s.-49s.; pink talls, 24s. 6d.-25s. 6d.; and halves, 34s. 6d.-36s. Japanese crab steady at 90s.-96s. as to quality. Lobsters in small supply. Halves range from 135s.-140s. Sardines in moderate request, but fine quality scarce. Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEAT.—Market firm but quiet on restricted offerings. Lunch tongues, also cooked boned hams, realise full rates with buyers covering their requirements for the season.

CONDENSED MILK AND MILK POWDERS.—Market easier. Dutch condensed milk: Full cream, sweetened, 5-cwt. casks, 33s. 6d.; machine-skimmed, ditto, 20s. 9d.; full cream, sweetened, 56-lb. drums (two in a crate), 52s. 6d. English condensed milk: Full cream, sweetened, 5-cwt. casks, 38s.; machine-skimmed, ditto, 22s. 9d. Dutch full cream milk powders: 26 per cent. butterfat, roller process, 1-cwt. cases, 62s. 6d.; spray, ditto, 2 by 56-lb. tins, crated, 81s. Dutch machine-skimmed milk powders: Roller process, 1-cwt. cases, 27s.; spray, ditto, 2 by 56-lb. tins, crated, 38s. 6d.; ditto, 1-cwt. cases, 36s. 9d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are net, ex store London/Hull or Goole, and cover prompt or gradual delivery to the end of June, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. Minimum, 1-ton lots. Smaller lots, 6d. per cwt. extra. On the grocery side: Full cream, sweetened, 18s. 6d.; machine-skimmed, sweetened, 9s. per case, usual packing.

HONEY.—Market dull and prices weak for inferior grades, but fairly steady for the better kinds of Jamaican. New Zealand firmly held, and owing to failure in production shipments for next years are likely to be on a much reduced scale. Jamaica, white, set, 50s.; good amber to fine pale, 40s.-49s. 6d.; dark to fair amber, 37s.-40s.; fine white Cuban, 45s.; San Domingo, good, 40s.; manufacturing, 36s.; Californian, 52s.; light amber, 48s.; New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d. per cwt.

RUBBER.

A moderate amount of business was effected, but the market is generally dull and without new feature. Sheet spot and April sold 7½d. to 7 7/16d.; May, 7½d.; June, 7⅝d.; July-September, 7½d. to 7 13/16d.; October-December, 8 1/16d. to 8d.; January-March, 8 5/16d.; July-September, 8⅜d. London stocks 2,244 tons higher on the week; landings, 3,197; deliveries, 952; stocks, 71,477, against 28,934 last year, Liverpool, 810 higher; landings, 996; deliveries, 186; stocks, 22,008, against 810 last year.

GENERAL.

JUTE.—A smart upward move took place, due to stimulating cables to hand from Calcutta, and where native mills are reported to have come in with the Mills Association on the question of reduced working hours. Closing tone quieter. Firsts, April-May and May-June

THE MONEY MARKET.

MONEY was stringent on Tuesday, and up to 3 per cent. was paid over-night. At one time it looked as if the market might be driven into the Bank, but the situation was relieved by the Government broker, who made heavy

purchase of Funding Loan and other gilt-edged securities, and so released Government money. There was also some heavy buying of May bills from an official quarter at rates running from 2¼ to 2 5/16 per cent., and this further eased the position. Consequently money on Wednesday was down to 2-2¼ per cent. It is believed, however, that the majority of May maturities are now held outside the market, which may create some stringency next month.

* * * *

The three months' discount rate has been steady at 2½ per cent., or possibly 1/32 under. Little French or other Continental buying has been in evidence, and according to one authority the disappearance of this demand is now counteracting the effects of the recent big reduction in the volume of Treasury Bills. A more disquieting feature is the sudden appreciation of the French exchange from Frs. 124.16 to Frs. 124.02. This is due to causes which became familiar last summer, namely, a home demand for francs to provide for tax payments and tourist expenditure, and a consequent withdrawal of London balances held on French account. There is some disposition to trace this withdrawal to the impression created by the Budget, but whatever the truth of this theory, there is at least a possibility that it will continue to the point where France will once more take gold.

* * * *

The fall in the franc rate, and the fact that many foreign exchanges have moved against sterling seems for the moment to have disposed of any suggestion of a 3 per cent. Bank rate in London, though there seems to be no ground yet for expecting a rise. It is true that Germany again took the week's supply of Cape gold, but once more only a minimum price was paid, and were it to rise to anywhere near the Bank's selling price Germany would be unable to buy at the present rate of exchange. At the moment the Bank of England is adequately supplied with gold, and there is still more to come from Australia. Any further reduction in Bank rate, however, seems unlikely in the near future.

	Mar. 27, 1930.	Apr. 3, 1930.	Apr. 10, 1930.	Apr. 16, 1930.	Previous Rate and Date Changed.

The March statement of the nine British clearing banks shows that, since the preceding month, deposits have fallen by £32.2 million, and discounts by £36.8 million. Cash has risen by £0.7 million, call money by £4.9 million and advances by £2.5 million.

	Mar., 1929.	Dec., 1929.	Jan., 1930.	Feb., 1930.	Mar., 1930.

Total assets	2,092·2	2,073·6	2,062·4	2,004·5	1,971·9

During the past year cash has fallen by 1.8 per cent. from £239.5 to £235.3 million. This cannot be described as evidence of severe monetary deflation. Investments are 5.8 per cent. lower on the year, but whereas in previous months this percentage corresponded roughly to the intervening fall in gilt-edged prices, the latter last month were slightly above their level of a year ago, and so the correspondence no longer exists. Advances have only contracted fractionally, but there was a pronounced shrinkage of £32.8 million or 15.3 per cent. in discounts.

NEW YORK

Our New York correspondent cables:—Money is easier after its firmness at the middle of the month as a result of Government interest payments amounting to $150 million and the disbursement of corporation dividends and interest. Call rate is down to 3½ per cent., and the rise of one-eighth in market bill rate, quoted by some dealers, is not being followed by the largest houses, and may not last. The allotment to Morgans of $31 million 4 per cent. Serial Bonds issued by New York State means that the State has received money at 3.78 per cent., while the purchasers obtain 5.27 return, allowing for tax redemptions. It is understood that Morgans will hold the Bonds as an investment.

THE STOCK MARKETS.

The Budget proposals had a somewhat unfavourable effect on gilt-edged securities, despite inside support, on Tuesday. The market, however, was inclined to preserve an open mind as to the eventual effect of higher direct taxation, holding its hand in the meantime. Attention was therefore concentrated chiefly on securities *not* prejudiced by Budgetary changes, the motor group showing strength, though artificial silk, oil and road transport shares were less markedly affected. Business was on a meagre scale in the rubber and tea markets, and mining shares were dull throughout the week.

THE COMMODITY MARKETS.

The coal export market is a shade steadier, but home demand remains stagnant and prices are still weak. The iron and steel trades show no definite signs of revival, though the market for semi-finished steel is slightly better. Trade in Manchester is quieter, largely owing to the unsatisfactory position of the Oriental markets. Raw wool is a much better market, but owing to the wages dispute the wool textile industries have a great deal of machinery idle. Calcutta jute manufacturers are endeavouring to reach an agreement for limitation of output. Holiday business in footwear is not up to the usual level. The vegetable oils and oilseeds markets are quieter. Wheat is several points lower.

THE FOREIGN EXCHANGES.

The foreign exchange market was again quiet, with no great turnover, but nearly all the leading exchanges fluctuated to some extent, and the tendency generally was against sterling. The feature was the sharp appreciation of the franc. Sterling on New York fell away during the week from 4.86½ to 4.86 5/16, after 4.86 7/32 on Tuesday. Montreal improved to 4.86⅜. Paris gained eighteen points at 124.04 after 124.02 on Wednesday morning. Brussels was better by ½ at 34.84 after 34.85⅝. Milan was again firm at 92.75, and the peseta was steadier and gained 13 points on balance at 38.82. Amsterdam moved sharply against us from 12.11 to 12.09¾. Berlin, after some movement, was unchanged at 20.37¾. Switzerland gained a point at 25.08½. The Scandinavian exchanges all moved against this country, but not in any great degree, Stockholm improving to 18.9, Oslo and Copenhagen to 18.16¼. The South American exchanges reacted somewhat from their recent improvement, Rio losing 1/32d. at 5 25/32d., and Buenos Aires slipping from 44 7/16d. to 43 11/16d. after 43½d. on the previous day. Montevideo also declined by ⅝d. to 45⅞d. The Far Eastern exchanges were very steady and firm, the rupee and yen remaining at 1s. 5 27/32d. and 2s. 0⅜d. respectively, but Batavia was fractionally weaker at 12.09½. In the forward market dollars were more offered at wider discounts of 3/32 and ¼ cent. The premiums on forward Paris declined from 7 and 13 centimes for one and three months to 2 and 14 centimes. Milan lost a point at 11 centesimi discount for one month, but was two points worse at 30 centesimi discount for three months. Amsterdam declined from premiums of ¼ and ⅜ for the two periods to ⅛ discount for both deliveries. Berlin was a shade better at lower discounts of 1¼ and 4 pfennigs for the two periods respectively. The silver market was very quiet, with small offerings and no great support. Prices fell by ⅛d. to 19 9/16d. for spot and by the same margin to 19½d. for forward, but the China silver exchanges were unaffected, Hongkong remaining at 1s. 6⅜d. and Shanghai at 1s. 11¼d.

AN AUSTERE BUDGET.

MR SNOWDEN'S second Budget was a concise and workman-like, if uninspiring, affair. The speaker sprang no surprises on his very attentive audience, rigidly abstained from rhetoric, and packed so many figures and explanations into an hour and a half that he almost gave the impression of dullness. It was certainly not a revolutionary Budget, and contained nothing to appeal to the imagination of the enthusiasts of the Labour Left, but for the House, and for the public, it was a blunt disclosure of the realities of our financial position and a sharp reminder of the need of paying the piper. Little wonder that the House was subdued as the Chancellor, with calculated severity, set before the country the problem of meeting a total expenditure which, with the exception of the war and early post-war budgets, is the highest in the history of the country.

But if there was nothing exciting in the Chancellor's figures, he made a number of statements of policy, each of which in its own sphere is of importance. The first, which he made with almost caustic brevity, was that relating to protective duties. His announcement followed general expectation. The safeguarding duties, which expire this year, will not be renewed. This means that lace, gloves, cutlery and gas mantles will lose their protection—lace at midsummer, the rest in December. On the other hand, the revenue from the McKenna and silk duties cannot at the moment be spared, and the duties will continue, though the Government maintains its declared intention of removing them before the end of its term of office four years hence. In the next place, a fresh move in the perennial warfare between the Treasury and the taxpayer is to be made in the shape of legislation to prevent the formation of private companies for the purpose of evading death duties, while steps are to be taken to prevent the loss of revenue through certain tax-evading types of single-premium insurances.

Mr. Snowden began with the Debt, and, in calling attention to the fall in its nominal value during the past year, emphasised the very substantial reduction that has taken place in the floating debt, whose total, £637 million at March 31st, was the lowest figure recorded since the war. It was expected that he might have had something to suggest as to future conversion plans, but on this subject he was silent. Instead, he went on to speak of the Sinking Fund, and had no difficulty in pointing out the inadequacy of the fixed £355 million provision made by Mr Churchill two years ago. In the first of the two years in which this plan has been in operation, there was a free balance of £7,407.000 for debt redemption after providing for statutory sinking funds, but this was only achieved by bringing in as revenue the reserve of the Currency Note Account, amounting to £13,423,000. Thus, in fact, there was a deficit of £6 million. Further, in the second year just completed, interest amounted to £7½ million more than was expected, and the total expense of the debt, including statutory sinking funds, to £359,819,000. Thus, the provision proved inadequate to meet the statutory obligations by nearly £5 million.

In these circumstances the Chancellor might have been expected to increase the provision; but he was in a tight place, and, casting around for a way of escape, found it in the fall in money rates, which has enabled him to budget for a reduction of £11½ million in interest on the floating debt. He therefore felt justified in leaving Mr Churchill's scheme unchanged. This was not very heroic and clearly left him with an uneasy conscience that he was giving himself an extremely narrow margin. His provision will barely cover his current Savings Certificate interest plus statutory sinking funds; it assumes that cheap money will continue; and in any case it leaves the actual debt redemption total at a figure which the Colwyn Committee declared to be inadequate. The scheme may reduce the debt in large amounts twenty years hence, but it will work very slowly in the early years. Moreover, Mr Churchill took the occasion to abolish the rule that the surpluses of any year must be used to redeem debt and provided that they might be carried forward to the following year's budget. But if this is to happen to surpluses, what should be done in years like that just completed, when there is a deficit? The answer given on Monday was that the Chancellor of the Exchequer should be obliged to carry over any such deficit to the following Budget unless Parliament otherwise determines. In other words, he is given a general instruction, but is reminded that it is easy to break the rule. Mr Snowden even showed how it might be done, for he found £14½ million too heavy a burden to shoulder now. He therefore proposed to add £5 million to this year's debt redemption, and charge £5 million next year and £4½ million the year after. Since April, 1928, we have failed by £25 million to meet the Statutory Sinking Funds out of revenue, and the Chancellor is only overtaking £5 million of these arrears in the present year. Well might he say that we have slackened our efforts in recent years. Mr Snowden's provisions in this respect are disappointing. The spirit is doubtless willing, but the flesh is weak.

The figures for the year, which are fully analysed in a later article, showed that, on the basis of a fixed charge of £355 million for debt, the Budget total which the Chancellor had to meet was £781,909,000 (or, if self-supporting services and the Road Fund are included, £865,834,000, which compares with £790,026,000 in the Budget of 1924). Towards this, total revenue on the existing basis of taxation is estimated to yield £739,645,000, this figure including an increase of £6 million on the tax revenue of 1929-30, of which Customs was responsible for over £2¼ million, income tax £1½ million, and stamps £1½ million. This revenue estimate leaves a deficit of £42,264,000. To this has to be added the £5 million of last year's deficit to be provided this year, plus £180,000 representing the last vestiges of what he called the " inglorious " betting tax, now finally abolished, £20,000 in respect of minor remissions of motor duty and £250,000 from stamp duty remissions in connection with company amalgamations.

Towards meeting this total deficit of £47,714,000 Mr Snowden brought in £16 million from the Suspense Fund that had been provided by Mr Churchill when he made preparation for the de-rating scheme; but the Chancellor warned the House that this nest egg would not be available thereafter, and that, therefore, he had to contemplate taxes which would ultimately provide this further £16 million. He proposed to meet the balance of this year's deficit, viz., £31,714,000, by increasing taxation on beer by 3s. a barrel—a sum which will yield £2¾ million this year, but is not sufficient to justify a rise in the retail price of beer; by adding sixpence to the standard rate of income tax, which, after allowing for additional abatements in the early ranges, will yield £21 million this year; and by increases of the Surtax and Death Duties, which will yield £7½ million and £3 million respectively. These increases will give him £34¼ million of additional revenue this year —leaving a margin of £2¼ million for contingencies—and will produce £47 million next year. He is thus able to claim that he has not only balanced his Budget, but has practically covered his contingent liability next year.

This claim is well founded, for the revenue seems to us to have been conservatively estimated and the balance has been struck—in what may well be described as the simplest budget of recent years—without any resort to temporary expedients or digging out hidden reserves. Whether the Chancellor was wise to place so large a proportion on direct taxation has not unnaturally been hotly debated, but that he was right to cover expenditure by definite increases of taxation cannot be contested, for it has to be remembered that such items as the late Government's de-rating scheme, which costs the Budget £15 million this year and £30 million next, and the increase of £6 million in widows' and old age pensions, are permanent items of expenditure which are likely to rise rather than to fall. Whether the beet sugar subsidy, which rises by £2½ million to a total of £5⅓ million, and the increase of

£14½ million in the grant to the Unemployment Insurance Scheme, are to be regarded as temporary or permanent changes the event will show, but it would not be prudent finance to attempt to ignore obligations of this character in view of the automatic growth of our national pensions bill. The White Paper, indeed, reveals the illuminating fact that, in spite of the automatic fall of over £2 million in War Pensions, the cost of National Pensions and Insurance combined has risen by £19 million and now stands at £151½ million, or, excluding War pensions, at the good round sum of one hundred millions.

So far as the £30 million for de-rating is concerned, this is not a net addition to the taxation of the community, but is a transfer from local rates, and there is a good case to be made out for placing a burden, which has, to a large extent at all events, been lifted from the shoulders of industry, on to the direct taxpayer. In raising this money by local rates, industrial undertakings had to pay according to their fixed assets, whether they were prosperous or not; in the income tax industrial concerns only pay when profits are made. Whether the case for increased direct taxation is equally strong in other respects is more open to argument. High direct taxation undoubtedly affects saving, and the rates of duty on large estates and on large incomes now in force are undoubtedly very high. Mr Snowden boldly claimed that he had not put a tax on industry. Broadly speaking, he is right, but we cannot afford to prejudice the growth of new capital, and the raising of the income tax does indubitably affect industry in so far as it falls on that very important source of industrial development—the undivided profit which companies put back into their business. Moreover, we are not among those who think that the poorer part of the nation should enjoy the advantages of increased social services without bearing part of the burden of taxation.

Mr Snowden's raising of the standard rate of income tax, however, has the considerable merit of having brought home clearly and forcefully to the nation that it has moved on to a higher basis of expenditure, for this tax has universally and quite reasonably come to be regarded as the barometer of the public finances of the country. His action in this matter must be read in conjunction with the very important remarks with which he closed his speech. If business enterprise, the life force of national progress and well-being, is to grow and increase, there must be some respite from increasing burdens, some finality in taxation. The Chancellor declared himself alive to this need and endeavoured to allay apprehension by declaring that though " No man can speak of the future with certainty . . . the steps which I have proposed for balancing this year's Budget will be sufficient to ensure, in the absence of unforeseeable calamities or of heavy increases of expenditure, that no further increases of taxation will need to be imposed next year." As in all his statements, the Chancellor here confined himself to the minimum of words; but, read in conjunction with his recognition that there are limits to taxation, his statement, as we read it, means, in effect, that the burdens on the direct payer—whether individual or corporation—have reached a point beyond which it would be inexpedient to go; that if new taxation has to be raised, it will have to be by indirect taxation, of whose disadvantages the Chancellor is acutely aware; and that, therefore, it is only by reducing other items of expenditure that any substantial margin can be found for new expenditure.

There is, of course, a vast difference between remunerative expenditure, which increases wealth and taxable capacity, and expenditure which is eleemosynary in character; but when taxation becomes a deterrent to enterprise, affects savings, creates a feeling of " defeatism," or drives investors to invest all their resources abroad, or leads to widespread evasion, it is time to put on the brake and to examine proposals, not on the basis of whether they are desirable in themselves, but from the point of view of relative urgency and advantage, and to decide that before new claims can be considered less essential items must be pruned from the Budget. If this is the meaning to be attached to Mr Snowden's statement he will undoubtedly have the backing of public opinion.

THE CONFERENCE ENDS.

Though the final plenary session will not be held till next week, it is evident from the reports of the First Committee, published on Tuesday, that the Naval Conference will end in a Five-Power Treaty serving as a façade for a more solid edifice in the shape of a Three-Power Treaty behind it. The French and Italian delegations associate themselves with none of the essentials of the agreement, and negotiations between the countries they represent are theoretically to continue in a shape and manner still to be decided. Actually the disarmament discussions, as regards land and air as well as sea, will in the normal course revert now to Geneva, whence they were temporarily transferred to London for the convenience of certain of the major naval Powers.

Of the agreements reached on the Five-Power scale there is little to be said. The only one of real substance concerns the prolongation of the " holiday " in capital ship construction, though there may be some value also in the compromise suggested as a solution of the old controversy between the exponents of the limitation by categories and the limitation by total tonnage methods. Even though Italy is making reservations regarding the proposed *via media*—limitation by categories but with some provision for transfer from one category to another—so that it cannot be actually embodied in the Treaty, the London solution seems pretty certain to be accepted at Geneva as the basis for the naval clauses of a general " disarmament " pact. If so, an obstacle that has effectively impeded progress hitherto will disappear.

The capital ship " holiday " is only in name an achievement of the London Conference, for the pre-conference negotiations had made it a foregone conclusion, so far as Great Britain, the United States and Japan were concerned; and France and Italy had already demonstrated their own opinion about new capital ship construction by refraining from making use of the right conferred on them by the Washington Treaty of laying down new vessels of this type as long ago as 1927. Since this country, if the Washington Treaty provisions had been carried out, would be preparing to lay down ten capital ships before the end of 1936, it is claimed that the " holiday " results in a saving of some £50,000,000 to the British taxpayer—this being the cost of the vessels to have been completed or begun in the period. That calculation rests on the assumptions—both of them fallacious—that but for the Conference we should have built our full tale of capital ships, and built them all on the 35,000 ton basis. But that the continued suspension of capital ship construction will result in considerable economies to all the Powers concerned is undeniable, and it is equally welcome for psychological reasons, though France, it is to be observed, with an eye on the German " *Ersatz Preussen* " class, reserves the right to observe the holiday only in part, building, if necessary, up to 70,000 tons out of the 175,000 allowed her under the Washington Treaty. A useful step has also been taken in limiting the smaller type of aircraft carriers, but the other items in the Five-Power section of the treaty—the limitation of individual submarines to a tonnage marking, all things considered, an actual advance on existing figures, and the watered and weakened revision of the Root Resolutions of 1921 on methods of submarine warfare—may be said to add bulk rather than substance to the agreement.

The Three-Power Treaty is an achievement of a different order, though here again, as in the case of the capital ship holiday, the agreement had been achieved in principle before the conference met, and all that remained was to give it precision and put it into final shape. It covers the period to the end of 1936, and provides for limitation rather than reduction, except in the matter of capital ships. In respect of these the Washington Treaty scrappings are accelerated, so that the basic figures of 15, 15, 9 are to be reached next year instead of 1936, as contemplated at Washington. The present figures are, Great Britain, 20; United States, 18; Japan, 10. Nine vessels, therefore, almost up to the age limit, will be scrapped in the next twelve months, a measure satisfactory so far as it goes, but a good deal less drastic than

was generally looked for both in this country and the United States. No delegation seems to have so much as proposed anything below the 15, 15, 9 figure, though if Mr MacDonald had suggested it, the American delegation could not have withheld assent without repudiating Mr. Hoover's public pronouncements.

In cruisers, the British total for 1936 remains at the figure provisionally settled last summer—339,000 tons, or slightly higher than the tonnage of vessels of that type in commission when the Conference opened. The American total of 323,500 tons is enormously higher than her cruiser tonnage at the beginning of the Conference, though considerably less than what was in contemplation or in actual process of construction. Japan's 1936 total will show a slight reduction on her present tonnage, which, however, is inflated by the inclusion of a certain number of obsolete or obsolescent vessels. In destroyers the treaty totals—150,000, 150,000 and 105,000 respectively—represent a slight decrease for Great Britain and Japan, and a very considerable decrease for the United States, which had concentrated on the construction of this type of vessel in the later years of the war. The submarine figures, 52,700 for each Power, are rather higher than the present British total, but substantially lower than the American or Japanese.

If, therefore, attention is to be concentrated on figures alone, the results of the Conference must be received with a very chastened satisfaction. A discussion on armaments, conducted as it were under the very shadow of the Pact for the Renunciation of War, has ended, broadly speaking, by stereotyping naval armaments—other than capital ships—at their present level. Indeed, when allowance is made for improvements in naval construction the combined strength of the cruiser, destroyer and submarine fleets of the three contracting Powers can hardly fail to be greater in 1936 than it is to-day, if the provisions of the London Treaty are carried out. It does not follow of necessity that they will be. The London discussions, after all, are only an interlude in the Geneva discussions, and it is still hoped that the general " disarmament " conference may be held some time in 1931. The purpose of that conference will be that every State shall agree to accept certain figures for its land, sea and air forces; and the naval figures need not be those embodied in the treaty now awaiting signature. The lapse of another eighteen months may have brought about some change of atmosphere, making a downward revision of the London figures possible. That contingency ought at any rate not to be ruled out, particularly in regard to types of such debateable value as capital ships.

But, even if the treaty runs its full appointed course, and each of the Powers concerned builds up to the level permitted by the London agreements, the psychological value of the check to competition between this country the United States and Japan will be considerable. So far as the two Anglo-Saxon countries are concerned, competition, there is every reason to hope, is not merely checked but ended. That will rob the Big Navy school in both countries of an argument they have often found serviceable, for in some quarters at any rate the protestations of indifference to American naval construction would not long stand the strain of a touch of political friction with America coupled with the spectacle of an American navy substantially stronger than our own. That spectacle will not now be available as a weapon for mischief-makers. Much the same may be said of the effect of fixing a definite ratio between the navies of the United States and Japan.

One unsatisfactory development, no doubt, is possible still. France might carry her naval construction to such a level as to provoke demands in this country for a revision of the British figures in the London Treaty, and, if they were revised in answer to the real or imagined challenge from across the Channel, the United States and Japan could, in turn, claim release from the London limitation. Provision for this is being actually made in the treaty. That can only be regarded as a depressing culmination to a conference which has spent three months discussing in terms of war the relationships of five nations that have pledged themselves to renounce all war for ever. But it is at any rate permissible to hope that the so-called safeguarding clause in the treaty will never have to be put in operation. A great deal will depend on France, and the strange fact is that at the end of the Conference France's real convictions and aims remain as obscure as ever. We shall have occasion to discuss again the wider issues involved in the French claim to a superiority of 200,000 tons or more over Italy, and Italy's claim to at any rate a theoretical parity with France. Clearly, the problem raised by those conflicting demands has to be solved before the movement for reduction of naval armaments can get much farther. Unfortunately, it is by no means clear whether the London discussions have improved the prospect of its solution.

THE BUDGET ACCOUNTS.

The financial statement for 1930-31, circulated by the Chancellor of the Exchequer in amplification of the details contained in his Budget speech, enables a clear picture to be obtained of the immediate problem which confronted Mr Snowden and of the steps which he has taken to balance his accounts on the basis of an estimated surplus of £2.2 million for the current financial year. In the first of the tables which follow we compare the expenditure forecast for 1930-31 with the estimated expenditure and actual issues from the Treasury in 1929-30:—

Expenditure (000's omitted).

	Estimate 1929–30.	Actual Issues in 1928–29.	Estimate 1930–31.	Estimate for 1930–31 compared with 1929–30 Estimate.
Consolidated Fund Services:—	£	£	£	£
National Debt:				
Interest, &c.	304,600	307,252	304,600	...
Sinking Fund	50,400	47,748	50,400	...
Total	355,000	355,000	355,000	...
Payments to Local Taxation Acs.	15,000	13,314	Nil	− 15,000
Payments to N. Ireland Exchequer	5,400	5,526	5,700(a)	+ 300
Other Consolidated Fund Services	3,500	3,312	3,300	− 200
Total	378,900	377,152	364,000	− 14,900
Supply Services:—				
Army Votes	40,545	40,500	40,500	− 45
Navy Votes	55,865	55,750	51,739	− 4,126
Air Votes	16,200	16,750	17,850	+ 1,650
Civil Votes	238,885	246,535	295,686	+ 56,801
Revenue Dept. Votes	11,569	12,025	12,134	+ 565
Total	363,064	371,560	417,909	+ 54,845
Grand Total (excluding P.O. and Road Fund)	741,964	748,712	781,909	+ 39,945

(a) Subsequently increased to £6 million; making the final figure of total expenditure £782·3 million.

To the excess of £2.6 million shown by the actual, as compared with the estimated, cost of interest and management of the National Debt in 1929-30, there must be added £4.8 million, representing interest on National Savings Certificates in excess of the provision in the Permanent Debt Charge. Including this sum, which had to be borrowed, the total interest charges were actually £312,071,000, as compared with Mr Churchill's somewhat optimistic forecast of £304,600,000. The excess of £8.5 million over Budget estimates in the Supply Services represents almost entirely the increased cost to the Exchequer of the Unemployment Insurance Scheme.

Turning to the estimates for 1930-31, it will be seen that the same aggregate provision for interest and management of the debt is made as a year ago. The cost of the Floating Debt is put at £17.2 million, against last year's estimate of £26 million, and actual issues of £28.7 million; for

Savings Certificates' interest £23 million, against £16.6 million, is provided; and the provision for other debt interest and management charges is £264.3 million, as compared with £262 million a year ago. The saving of £15 million in payments to Local Taxation Accounts represents a purely book-keeping transfer, these payments—fused with the new grants in relief of local rates—now figuring in the Civil Votes, whose total increase of nearly £57 million, as compared with last year's Budget estimate, has already been fully analysed in these columns and in the Special Budget Supplement published with our issue of April 5th. The chief changes, it may be recalled, are increases of £29 million (gross) on de-rating account, of £5 million on account of Contributory Pensions, and of £14.5 million for Unemployment Insurance.

Our next table compares the estimates of revenue on the basis of existing taxation with last year's estimates and actual receipts:—

REVENUE (000's omitted).

	Estimate for 1929-30.	Actual Receipts in 1929-30.	Estimate for 1930-31 on basis of existing Taxation.	Estimate for 1930-31 compared with 1929-30 Receipts.
	£	£	£	£
Customs	119,850	119,888	122,500	+ 2,612
Excise	130,550	127,500	127,500	...
Total	250,400	247,388	250,000	+ 2,612
Motor Duties, Exchequer Share..	4,700	4,920	4,970	+ 50
Inland Revenue:—				
Income Tax	239,500	237,426	239,000	+ 1,574
Surtax	58,000	56,390	57,000	+ 610
Estate Duties	81,000	79,770	80,000	+ 230
Stamps	31,000	25,670	27,250	+ 1,580
E.P.D. and Corporation Profits Tax	1,700	2,250	1,700	— 550
Land Tax, &c.	800	880	800	— 80
Total	412,000	402,386	405,750	+ 3,364
Total Tax Revenue	667,100	654,694	660,720	+ 6,026
P.O. Net Receipts	8,900	9,200	10,125	+ 925
Crown Lands	1,250	1,290	1,300	+ 10
Sundry Loans	30,550	32,640	33,000	+ 360
Miscellaneous	38,500	36,365	34,500	— 1,865
Non-Tax Revenue	79,200	79,495	78,925	— 570
Total Revenue (apart from P.O. and Road Fund)	746,300	734,189	739,645	+ 5,456
Self-Balancing items:—				
P.O.	58,110	58,900	60,275	+ 1,375
Road Fund	22,600	21,882	23,650	+ 1,768

In his Budget speech Mr Snowden explained that in 1929 there had been a substantial postponement, "probably over £1,000,000," of revenue from Customs duty on sugar. Allowing for this, he has budgeted for an increase of £1.5 million in the yield of duty on imported sugar, which accounts for the bulk of the otherwise somewhat sanguine forecast of expansion in Customs revenue. The inland revenue estimates lie broadly within the limits of reasonable probability. As regards non-tax revenue, a substantial increase in the Post Office net receipts is anticipated; the higher receipts, as compared with last year's estimate on account of Sundry Loans, are the result mainly of larger payments due in respect of French War Debt; while the decline—again comparing estimates—of £4 million in Miscellaneous Receipts represents the reduction from £19.3 to £15.5 million in reparation annuities receivable by this country from Germany under the new Plan. When the totals, excluding the self-balancing accounts, in the foregoing tables are compared, it will be seen that Mr Snowden was faced with estimated expenditure of £781.9 million, against a prospective revenue on the basis of existing taxation totalling £739.6 million. The difference to be made good is reduced from £42.3 to £26.3 million by appropriating £16 million from the £20 million standing nominally to the credit of the Rating Relief Suspensary Fund, but, as Mr Snowden pointed out, this device means simply increased present borrowing on the plea that a surplus of that amount was realised in the past; for the Fund does not represent actual accumulated cash. An addition, however, has to be made to the figure of £26.3 million thus reached. Having regard to last year's deficit, special provision for additional debt redemption is proposed—£5 million this year, £5 million next year, and £4.5 million in 1932-33.

To bridge the gap of £31.3 million thus disclosed the Budget imposes the following fresh taxation:—The Beer Duties are increased by 3s. per standard barrel; increased rates of Estate Duty are levied on estates exceeding a net principal value of £120,000; the standard rate of income tax is raised from 4s. to 4s. 6d., with the proviso that the relief given by the deduction of tax at half the standard rate on an amount not exceeding £225 of income will be increased to deduction of tax of five-ninths of the standard rate on an amount of income not exceeding £250; and, finally, the rates of surtax on incomes exceeding £2,000 are progressively steepened, and made applicable—a departure from previous policy—to the current financial year.

These additions to direct taxation are of sufficient importance to merit close study, and the following tables extracted from the financial statement illustrate their incidence:—

ESTATE DUTY (Specimen instances.)

Principal Value of Estate.		Existing Rates.	Proposed Rates.
Exceeding	Not Exceeding		
£	£	%	%
120,000	140,000	21	22
300,000	325,000	25	30
600,000	750,000	28	36
1,000,000	2,000,000	30	40
2,000,000	...	40	50

The next table shows the altered scale of the rates payable by persons assessed for surtax:—

SUR-TAX.

	Existing Rates.	Proposed Rates.
	s. d.	s. d.
On the first £500 of excess of income over £2,000 (to £2,500)	0 9	1 0
On the next £500 (" £3,000)	1 0	1 3
" " £1,000 (" £4,000)	1 6	2 0
" " £1,000 (" £5,000)	2 3	3 0
" " £1,000 (" £6,000)	3 0	3 6
" " £2,000 (" £8,000)	3 6	4 0
" " £2,000 (" £10,000)	4 0	5 0
" " £5,000 (" £15,000)	4 6	5 6
" " £5,000 (" £20,000)	5 0	6 0
" " £10,000 (" £30,000)	5 6	6 6
" " £20,000 (" £50,000)	6 0	7 0
On the remainder (above £50,000)	6 0	7 6

The effect of these stiffer surtax rates, coupled with the increase in the standard rate of income tax on the one hand, and the greater reliefs for small incomes on the other, is shown in the next table, which gives the net changes in the tax payable by specimen incomes, earned and investment, according as the recipient is single or married with three children:—

INCREASES OF INCOME AND SURTAX.

	Earned Income.		Investment Income.	
	Single Persons.	Married. 3 Children.	Single Persons.	Married. 3 Children.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
500	— *1 14 2*	...	0 7 6	...
600	0 7 6	...	2 17 6	...
700	2 9 2	...	5 7 6	— *0 17 6*
800	4 10 10	— *1 14 2*	7 17 6	1 12 6
900	6 12 6	0 7 6	10 7 6	4 2 6
1,000	8 14 2	2 9 2	12 17 6	6 12 6
1,500	19 2 6	12 17 6	25 7 6	19 2 6
2,000	31 12 6	25 7 6	37 17 6	31 12 6
5,000	181 12 6	175 7 6	187 17 6	181 12 6
10,000	481 12 6	475 7 6	487 17 6	481 12 6
50,000	3,481 12 6	3,475 7 6	3,487 17 6	3,481 12 6

A single person with an investment income of £100,000 will now pay £55,695 in income and surtax, as compared with a previous levy of £47,207.

The next table summarises the effect of these changes in taxation, additional minor alterations being the repeal of the duty on bookmakers' certificates, small concessions (originally proposed in last year's Budget) in the duties on motor cycles and on goods vehicles of 2 to 2½ tons unladen weight, exemption from capital duty in the case of certain companies "formed for national purposes," and disallowance of interest on certain classes of single-premium

insurance policies—a question recently discussed in these columns:—

EFFECT OF CHANGES IN TAXATION.

Change.	Estimate, 1930-31. Increase + or Decrease —.	In a Full Year, Increase + or Decrease —.
	£	£
Customs:		
Beer	+ 210,000	+ 220,000
Excise:		
Beer	+ 2,540,000	+ 2,880,000
Bookmakers' Certificates	— 180,000	— 200,000
Total Excise	+ 2,360,000	+ 2,680,000
Total Customs and Excise	+ 2,570,000	+ 2,900,000
Motor Vehicle Duties	— *20,000	— *20,000
Inland Revenue:		
Estate Duty: Increase in rates of duty	+ 3,000,000	+ 7,000,000
Stamps: Exemption in favour of certain companies and minor amendments	— 250,000	— 50,000
Income Tax: Increase of 6d. in the Standard Rate	+ 23,500,000	+ 29,000,000
Change in graduation	— 2,500,000	— 5,000,000
Net	*+21,000,000*	*+24,000,000*
Sur-tax: Increased rates	+ 7,500,000	+ 12,500,000
Disallowance of interest in connection with certain policies of assurance	Nil	+ 250,000
Total Inland Revenue	+ 31,250,000	+ 43,700,000
Grand Total	+ 33,800,000	+ 46,580,000

* This is the loss to the Exchequer. The loss to the Road Fund will be £40,000 in respect of motor cycles and £50,000 in respect of goods vehicles.

The question whether, with the increases now imposed, income and sur-tax will be as productive as hitherto, remains to be proved. If Mr Snowden's estimate in this respect is justified by the event, the foregoing arrangement secures for him—after allowing for an increase, already noted, of £300,000 in payments to the Northern Ireland Exchequer—an anticipated surplus of £2.2 million for 1930-31, as may be seen from our final table showing the re-adjusted balance sheet for this year:—

I.—ORDINARY REVENUE AND EXPENDITURE, 1930-31.

ESTIMATED 1930 REVENUE.	£ Mn.	ESTIMATED 1930 EXPENDITURE.	£ Mn.
Inland Revenue—		Interest and Management of National Debt	304·6
Income Tax	260·0	Payments to Northern Ireland Exchequer	6·0
Sur-tax	64·5	Miscellaneous Consolidated Fund Services	3·3
Estate Duties	83·0	Total	313·9
Stamps	27·0	*Supply Services—*	
Excess Profits Duty, Corporation Profits Tax	1·7	*Defence, Excluding Pensions:*	
Land Tax, &c.	0·8	Army	32·1
Total Inland Revenue	437·0	Navy	43·1
		Air Force	17·6
Customs and Excise—			92·8
Customs	122·7	*Pensions:*	
Excise	129·9	Army	8·4
Total Customs and Excise	252·6	Navy	8·7
		Air Force	0·2
Motor Vehicle Duties—			17·3
Exchequer Share	4·9	*Civil:*	
Total Receipts from Taxes	694·5	I. Central Government and Finance	2·1
		II. Imperial and Foreign	5·9
Post Office net receipt	10·1	III. Law and Justice	15·9
Crown Lands	1·3	IV. Education	55·1
Receipts from Sundry Loans due to British Government	33·0	V. Health, Labour, Insurance (including Old Age and Widows' Pensions)	97·0
Miscellaneous	34·5	VI. Trade and Industry	12·3
TOTAL 1930 REVENUE	773·4	VII. Buildings, Rates, &c.	8·5
		VIII. War Pensions and Civil Pensions	54·3
Appropriation from Rating Relief Suspense Account	16·0	IX. Miscellaneous	0·1
		X. Exchequer Contributions to Local Revenues	44·5
			295·7
		Tax Collection:	
		Customs and Excise and Inland Revenue Votes (including Pensions, £898,000)	12·1
			417·9
		TOTAL 1930 EXPENDITURE	731·8
		National Debt—Sinking Fund	55·4
		Surplus	2·2
	789·4		789·4

II.—SELF-BALANCING REVENUE AND EXPENDITURE.

	£ Mn.
Post Office	60·3
Road Fund	23·5
Total	83·8

BANKERS to world-renowned Swedish industrial and financial concerns.

Skandinaviska Kreditaktiebolaget

KREDITBOLAGET

III.—RATING RELIEF SUSPENSE ACCOUNT.

	£ Mn.		£ Mn.
Balance on April 1, 1930	20·1	Estimated Balance of Cost of anticipation of rating relief for Agricultural Land	0·1
		To be appropriated in aid of Revenue, 1930	16·0
		Estimated balance to be appropriated in aid of Revenue, 1931	4·0
	20·1		20·1

For 1931-32, since the balance remaining in the Rating Relief Suspensory Fund is estimated at only £4 million, there will be automatically an additional £12 million to be found for de-rating account out of that year's revenue. Against this increase is to be set the difference of £12.4 million between the estimated net gain of revenue from the present tax changes in a full year, as compared with their yield in 1930-31.

THE BANKS AND INDUSTRY.

A FURTHER step in developing plans for financial assistance to industry is signalised by the registration, last Tuesday, of the Bankers' Industrial Development Company. The nominal capital of the new concern is £6 million, divided into forty-five "A" shares and fifteen "B" shares of £100,000 each. The "A" shares have been subscribed by banking and financial institutions, including practically every home bank and issuing house of first-rate importance, while the "B" shares have been subscribed by the Securities Management Trust, Ltd., which, as our readers know, is a creation of the Bank of England. As the "B" shares have three times the voting rights of the "A" shares, the Bank of England will control fifty per cent. of the voting strength. The new concern is thus in effect a partnership between the Bank of England on the one side, and the City on the other. The directorate of the new company is as follows: The Rt. Hon. Montagu Collet Norman, D.S.O. (chairman); Sir Guy Granet, G.B.E., who will also act as alternate to Mr Norman; Baron Bruno Schroder, with Major Albert Pam as alternate; Mr A. R. Wagg, with Mr Nigel Campbell as alternate; Mr E. R. Peacock; and Mr C. Bruce Gardner, managing director of The Securities Management Trust, Ltd. In addition to the Board of Directors, the company will have the services of an Advisory Council, upon which a number of influential persons, engaged in financial business, will be invited to serve. The Advisory Council will have no executive duties to perform, but their services, either collectively or individually, will be available to the Board of Directors in a consultative capacity.

The object of the company is to examine schemes of rationalisation submitted by the basic industries of the country, and, as an indication that it is not the purpose of the new concern to enter into competition with the ordinary business of existing financial institutions, it is intended that the new company shall not deal with individual companies but only with industries as a whole, or with regional sections of industries. If schemes are approved, the good offices of the company will be available for assisting the industry to secure the necessary capital; but this will be done through existing agencies,

and not by the new company itself. Its purpose is rather to ensure that if satisfactory schemes are framed they will have the co-operative assistance of the City. The approval of the company will be evidence that the scheme in question has been endorsed by the best expert advice which the company can secure, and that the demand for capital that the scheme involves, without being guaranteed in advance, will have the support of the institutions most competent to ensure that it will be forthcoming. It is hoped, therefore, that the formation of the company will encourage industries to work out satisfactory plans. It has, however, been clearly indicated that it is not the intention of the promoters of the scheme to find money for buying out old concerns, but that the new capital found shall be used for the reconstruction of plant and for placing our basic industries in the forefront as regards technical equipment and organisation.

As it is not intended that the company shall itself directly finance rationalisation schemes, only 25 per cent. of the nominal capital will be called up. One and a-half million sterling is, obviously, a totally inadequate sum for putting British industry on its feet, and this fact alone shows that the purpose of the company is in no sense to become an industrial bank. Indeed, the amount of its capital is regarded as of no special significance, though it had to be sufficient to permit of the participation of a considerable number of important institutions, and to give it an appropriate financial standing.

It is no secret that the initiative in endeavouring to make available for British industry, in its difficult but necessary task of reorganisation, the amplest resources that the City of London can provide has been taken by Mr Norman himself. In a recent article we pointed out that the association of the Bank of England with such a plan was an extension of the Bank's functions which needed to be very carefully considered. The special privileges which appertain to a Central Bank, either by law or by tradition, place it in a unique position of strength compared with other institutions, impose upon it the necessity for absolute impartiality between clients, and have given rise to the general practice that a Central Bank carefully avoids impinging on the sphere normally occupied by private institutions. Indeed, such restraints have been imposed on many Central Banks by statute. The constitution of the new company is clearly designed to furnish safeguards against dangers that might arise from such extension of the bank's activities. The bringing in of the other main institutions of the City, the limiting of the functions of the new company to investigation and assistance in securing finances, and the assurance that it will not deal with individual concerns, but only with groups, will allay any suspicion that the Bank of England will compete for business that is being done quite competently by others. This intermediary character of the new institution is perhaps best illustrated by the fact that it is not intended that profits should be made, and that the directors are giving their services without fees. It is, in fact, an experiment in co-operation in which the Bank of England is providing the leadership. Indeed, the company is formed for five years only, and though this period may, of course, be extended, this time-limit indicates that the scheme is experimental. It should at least ensure that, during this critical period, schemes of rationalisation will not be held up by rivalry between various banks and finance houses.

Whether the new company will hasten the process of rationalisation, time alone will show. The new concern can never be in the position that joint-stock banks to-day occupy in relation to many industrial undertakings, namely, that of creditor; and it cannot, therefore, exercise the financial pressure which the joint-stock banks are able to do. Nor can it be said, speaking broadly, that schemes of rationalisation have hitherto been held up for want of financial backing. The long delay has rather been due to personal difficulties, the absorption of British industrial leaders in their own particular problems, their lack of experience of big associations, and traditional individualism. These hindrances are breaking down under the pressure of circumstances. We have recently seen schemes mooted not only for Lancashire, but among shipbuilders and in the woollen industry, while large amalgamations have recently taken place in the steel trade and, if the Coal Bill passes in its present form, Government pressure will be applied to produce the same result in the British mining industry. Things are moving in the direction which the founders of the company have in mind; if it can smooth away financial difficulties and ensure that schemes of rationalisation are based upon the all-important condition of more economical production, it will have fulfilled a *rôle* of the utmost national importance.

INDIA AND EMPIRE FREE TRADE.

The raising of the duty on cotton goods in the current Indian Budget, in spite of representations by the British Government to the Government of India as to the serious effects which the change would have in Lancashire, the demand which Lord Rothermere has been making in his recent campaign that we should insist that British goods should be admitted free of duty into the Indian market in return for the services which we have rendered to India, and Lord Beaverbrook's more general campaign for Empire Free Trade, have brought to the fore the question of Anglo-Indian fiscal relations. The following article by a well-informed correspondent explains the evolution of the present situation in this matter and the way in which India has used the fiscal freedom which she has gradually acquired.

EXPORTS of the produce of this country to British India, which is by far our largest market, amounted in 1929 to £78.2 million of British produce, a figure which represents nearly 11 per cent. of our exports to all countries and about 25 per cent. of our exports to the British Empire. Obviously, therefore, India is a vital factor in any proposals for closer fiscal union within the Empire, and it is worth while to explore India's powers in fiscal matters, together with the direction in which such powers are being used. Much has recently been heard in this connection about the Indian Fiscal Autonomy Convention, by which is generally understood an unwritten pact that when the Government of India (*i.e.*, the Viceroy and his Council) are in agreement with the Indian Legislature on any fiscal measure, the Secretary of State and the British Parliament shall not interfere. This is not quite an accurate conception, for conventions are subject to evolution by the impact of changing circumstances, and a brief history of the Convention is therefore essential to a true understanding of the present position.

India's demand for fiscal autonomy is of long standing. It reflects the inherent tendency of the Indian peoples to look to a paternal Government for protection in all walks of life. Hence, for example, the settled policy of the nationalisation of the railways and the tendency to blame Government for all kinds of sins of omission and commission on matters with which in England the administration would be held to have no concern. The demand that India should be freed from all external control in fiscal matters was intensified by the history of the cotton excise duties, which were imposed on Indian produced goods to counterbalance the duties levied for revenue purposes on imported cotton goods. These excise duties, since abolished, were regarded in India as evidence that the Lancashire vote counted more with all political parties at home than did the welfare of India. Discussion of fiscal matters was consequently deflected into political rather than into economic channels, with the result that both in India and in England somewhat bitter feelings have been generated.

After preliminary skirmishes extending over many years, the movement towards fiscal autonomy began to take definite shape at the time of the Montagu-Chelmsford Report, in which it is stated that the exclusion of tariff matters from the purview of the Industrial Commission then sitting had been the matter of some "legitimate criticism" in India, though the Montagu-Chelmsford Report itself refrained from making any recommendations on the subject. The Joint Select Committee

of Parliament on the Government of India Bill went further, and in its report, dated November 17, 1919, recommended a definite advance towards fiscal autonomy, in the following words:—

"Nothing is more likely to endanger the good relations between India and Great Britain than a belief that India's fiscal policy is dictated from Whitehall in the interests of the trade of Great Britain. That such a belief exists at the moment there can be no doubt. That there ought to be no room for it in the future is equally clear. India's position in the Imperial Conference opened the door to negotiation between India and the rest of the Empire, but negotiation without power to legislate is likely to remain ineffective. A satisfactory solution of the question can only be guaranteed by the grant of liberty to the Government of India to devise those tariff arrangements which seem best fitted to India's needs as an integral part of the British Empire. It cannot be guaranteed by statute without limiting the ultimate power of Parliament to control the administration of India, and without limiting the power of veto which rests in the Crown; and neither of these limitations finds a place in any of the statutes in the British Empire. It can only, therefore, be assured by an acknowledgment of a convention. Whatever be the right fiscal policy for India, for the needs of her consumers as well as for her manufacturers, it is clear that she should have the same liberty to consider her interests as Great Britain, Australia, New Zealand, Canada, and South Africa. In the opinion of the Committee, therefore, the Secretary of State should, as far as possible, avoid interference on this subject when the Government of India and its Legislature are in agreement, and they think that his intervention, when it does take place, should be limited to safeguarding the international obligations of the Empire or any fiscal arrangements within the Empire to which His Majesty's Government is a party."

The next stage was marked by a resolution passed by the Council of State in Delhi on February 23, 1921, in the following terms:—

"This Council recommends to the Governor-General in Council that His Majesty's Government be addressed through the Secretary of State with a prayer that the Government of India be granted full fiscal autonomy subject to the provisions of the Government of India Act."

This resolution, which was duly forwarded to the Secretary of State, elicited a reply in which His Majesty's Government accepted the principle recommended by the Joint Committee to which reference has been made above. This was confirmed in a reply made by the Secretary of State to a deputation from Lancashire on March 23, 1921. He said:—

"After that report by an authoritative Committee of both Houses and Lord Curzon's promise in the House of Lords, it was absolutely impossible for me to interfere with the right which I believe was wisely given and which I am determined to maintain—to give to the Government of India the right to consider the interests of India first, just as we, without any complaint from any other parts of the Empire, and the other parts of the Empire without any complaint from us, have always chosen the tariff arrangements which they think best fitted for their needs, thinking of their own citizens first."

Turning our attention now to the vexed question of Imperial Preference, we find the Indian Fiscal Commission stating its views in no ambiguous terms:—

"There is a fear that, if India accepted the principle of Imperial Preference, she would find that she had parted with the newly-won privilege of fiscal autonomy; that, in the name of Imperial Preference, the tariff policy of India would be directed, not in her own interests, but in the interests of other parts of the Empire; that, if India signified the acceptance of the principle, the details would be dictated to her regardless of her own interests and wishes."

The Commission's further remarks are interesting in view of recent controversies, for the report continues:—

"Many regard Imperial Preference as meaning a unified tariff policy of the whole Empire, dictated, if not by the Mother Country, at least by binding resolutions passed at periodical Imperial Conferences. This is a complete misunderstanding of the real principles which underlie Imperial Preference. We have shown above that Imperial Preference implies no kind of interference in the tariff policy which the various Dominions have chosen for themselves, and no idea of a system of free trade within the Empire or any uniform tariff policy. It is true that, as a result of the Paris Economic Conference of 1916, . . . the question of the organisation of the Empire as an independent economic unit seemed for a time to be coming into practical consideration. But the ideas to which the war gave rise did not long survive its termination, and the policy of Imperial Preference developed on its original lines. Each part of the Empire took such steps as it felt could reasonably be taken consistently with its own interests to promote inter-Imperial trade and the manufactures of the Mother Country. This is the meaning which we attach to the policy of Imperial Preference, and all our recommendations must be read as referring to such a policy, and not to any idea of a joint tariff policy for the Empire imposed on the various component parts.

"But the doubters think that, whatever may be the policy in regard to the Dominions, India stands in a different relation, and that the principles of Imperial Preference may be utilised against India to interfere with her fiscal autonomy. We would remind them that the principle of permitting India to decide her own fiscal policy has been stated in the most explicit terms."

And again:—

". . . we would put the matter beyond all possible doubt by asserting . . . that no preference should be granted on any commodity without the explicit approval of the Indian Legislature."

As recently as March 24th this year, in referring to some of the facts mentioned above, the Secretary of State, Mr Benn, pointed out that: "India has been promised by Secretaries of State of all three parties in this country that no interference by His Majesty's Government will take place in India's fiscal arrangements," adding on the following day, in answer to a question: "I am called upon to protect the fiscal rights of India, and that I intend to do."

This brief historical survey would not be complete unless attention were drawn to the speech of the Finance Member when introducing his Budget at Delhi on February 28th last. Dealing with his proposal to raise the import duty on cotton goods, as a measure of protection for the Bombay cotton mills, Sir George Schuster said: "Let me make it clear at the outset that the Fiscal Autonomy Convention is a reality, and that decisions on matters of this kind are left to the Government of India"; and again, in referring to communications that had passed between the British Cabinet and the Government of India, he said:—

"It affords striking evidence that the fiscal autonomy convention has become an integral part of the constitution and that, even when British interests are most profoundly affected by tariff changes in India, the intervention of the British Government is restricted to representation and appeal."

But he even went a step further, beyond what has been described above as the scope of the Fiscal Autonomy Convention, when he declared:—

"We made it clear (in the Government of India's despatches to London) that in a matter of this kind, after frankly stating our conclusions, we should desire to put our carefully considered views before the Legislative Assembly with whom the final decision must rest."

Such is the history of the Convention, and to complete the picture it remains now to give a short account of the way in which India has used her fiscal freedom, since the appointment of the Indian Fiscal Commission in October, 1921. That Commission reported in July, 1922, recommending "in the best interests of India the adoption of a policy of protection to be applied with discrimination along the lines indicated" in the report. There were men of free trade principles on the Commission, who doubtless felt that any scheme of indiscriminate protection would react injuriously on the inarticulate tillers of the soil, and the report, adopted by the Government and the Legislature in respect of its main recommendations, stipulated for a searching examination by a permanent Tariff Board into the claims of any industry putting forward a case for assistance. The industry had not only to prove that protection would assist its rapid development, but that assistance for a temporary period would enable it to face world competition without protection. Several industries have failed to establish their case and, in the event, the protective duties imposed have been few in number. Indian industrialists, through the mouthpiece of their political friends, have chafed under the restrictions mentioned and would naturally much prefer a policy of protection applied without inquiry or discrimination.

The hard logic of facts drove the Fiscal Commission to inevitable conclusions. The revenue accounts of the Indian fiscal year just closed show, for instance, that customs and salt duties accounted for 57 crores of rupees out of a total estimated revenue (including the profit on railways) of 132 crores. Countervailing excise duties, besides being unpopular, are difficult and expensive to collect in a vast country like India administered by a minimum number of responsible officials and, except in the case of the large Indian and European business houses, with primitive methods of book-keeping which are the despair of the income-tax collector. The problem before the Fiscal Commission thus became one of devising machinery to ensure that these import duties, so essential to the revenue side of the accounts, should be

levied with as little possible harm to India as a whole and with as much healthy stimulus to industry as was consistent with the interests of the masses.

The wisdom or otherwise of the Fiscal Autonomy Convention, and of the use to which India has put her newly acquired powers, lie outside the scope of this article, as do also the merits of the case now being put forward in England for the establishment of Empire Free Trade. The intention has been to set out the facts in regard to India so that those who desire to take sides in the present controversy may do so with a knowledge of the standpoint of our largest individual customer within the Empire. It must be left to those with an intimate knowledge of India to say whether it is practical politics to discuss the annihilation of the Fiscal Autonomy Convention or, alternatively, the possibility of persuading India to recede from her present fiscal system and to look in other directions than import duties for nearly half her revenue.

Notes of the Week.

The Reception of the Budget.—Mr Snowden ought to be well satisfied with the reception accorded to his Budget. It was not to be expected that he could produce any programme that would receive the approval of Mr Churchill, and the main burden of the latter's attack was, in effect, a defence of his own stewardship. Nor, without either a full purse or an independent majority, could the Chancellor hope to satisfy the Labour Left Wing, whose bitter disappointment at a " capitalist " Budget and the indefinite postponement of " Socialism in our time " was strongly voiced by Mr Maxton. The equal ferocity of attack from these two political antipodes gives a guide to moderate opinion. The House and, we believe, the country, while naturally disliking additional taxation, are inclined to harbour three main feelings: First, one of relief that the rod was not applied more severely; secondly, one of satisfaction at Mr Snowden's hope—almost promise—that no further taxation will be required next year; and, lastly, one of approval of Mr Snowden's absence of improvisation and the stern facing of hard facts with a determination to pay his way by straightforward means. These were very much the feelings which, at a Liberal luncheon in the City on Wednesday, were expressed by Mr Runciman, who also interpreted another widespread sentiment in his eloquent plea for retrenchment both in public and private expenditure. There is a tendency to think that, as regards the necessity for increased taxation, Mr Snowden is " more sinned against than sinning," and to deduce from the concluding sentences of his Budget speech a determination, so long as he remains Chancellor, not to allow rope to the advocates of profligate expenditure.

Mr Gandhi's Campaign.—Though the outbreaks of disorder in Calcutta during the *hartal* organised as a protest against the imprisonment of Mr Sen Gupta and Pundit Jawarharlal Nehru are an ugly reminder of the danger lest *Satyagraha*, preached as an inflammatory doctrine to emotional crowds, may only too easily lose its " passive " character, it is important that, in viewing the Indian situation as a whole, we should maintain, above all things, a sense of proportion. The essential factor appears to us to be that the objective of Mr Gandhi's campaign was to counter the growing tendency of Congress to swing in favour of a Round-Table Conference by mobilising a demonstration of Swarajist opinion which would force back-sliders from the policy of irreconcilability once more into line with the extremist vanguard, and would create an atmosphere as hostile as possible for the reception of the Statutory Commission's report. We see no evidence yet, despite sporadic violence on the part of mobs in Calcutta and Karachi, to show that Mr Gandhi is on the way to achieve this objective. In the Bombay Presidency, up to April 16th, only 317 out of 2,774 village officers had actually resigned; there are no signs of the Congress leaders being ready to throw themselves irrevocably into the present campaign; even in a country where a sense of humour is not a general characteristic, the theatricality of the salt-making on Dandi beach seems to have fallen a little flat; and Mr Gandhi's pained surprise at his own freedom from arrest indicates probably his recognition of the fact that he is thus losing his best chance in a political gamble whose failure must do much to lower his prestige. The position of the Viceroy is one of great difficulty, but if sane counsels prevail both in Delhi and at Westminster we do not think it necessary to take too tragic a view of this week's events, though it would be foolish to minimise the danger of a position in which sparks, capable of starting a grave conflagration, are flying about so freely.

Poland and her German Minorities.—The recent conclusion of a commercial treaty between Germany and Poland raised hopes of better relations between these two countries—a local change which would have an appreciable effect for good upon the whole international situation in Europe. But commercial treaties, however advantageous to both parties they may be recognised to be, appeal to the head rather than to the heart; and if this opening for an improvement in German-Polish relations was to be followed up, some human touch was required. Happily, just such a touch has now been given by the acquittal, on appeal, of the leader of the German Minority in Polish Upper Silesia, Herr Ulitz. Herr Ulitz had been charged in the Polish Court of First Instance and convicted of an offence against the Polish State. That judgment has now been reversed in the higher court to which the appeal was carried. The re-trial of the case has brought out several important facts. In the first place, a Polish judge has not hesitated to give just judgment, though he might have been misled not only by a misguided sense of patriotism but by pressing considerations of personal self-interest, since in Poland the Judiciary is by no means independent of the Executive Power. In the second place, public servants and employees of the Polish State have been revealed not only as employing disreputable methods—running from corruption to forgery—in order to obtain convictions against Polish citizens who happen to be *personæ non gratæ* to the powers that be, but as actually boasting of their patriotic zeal in these activities. In the third place, it has been shown that the German Minority in Upper Silesia has not been guilty of any treasonable acts against the Polish State, though the improper practices of the Polish Secret Service were efficient enough to lay bare any true evidence if such had existed. It was necessary to forge false evidence in order to secure conviction at the first hearing of the case. Thus the German Minority in Upper Silesia is vindicated in the person of its leader, while the Polish nation is presented to the world in a double light. Which is to be regarded as the typical son of his country? Dr. Zechenter, the just and courageous judge? Or Moses Perlstein, the Secret Service agent, and Captains Zychon and Lis, the officers of the Military Intelligence Department? The Polish people have the choice in their hands. For what has happened so far, it would be pharisaical to censure them too severely. They are struggling with the tremendous task of building a new State out of bad traditions of government—those Russian, Prussian and Austrian traditions which are all that they know in their own experience. The Ulitz trial is as startling an event in Europe as the notorious Friedjust trial in Austria which was one of the premonitions of the Great War. But Austria was old and Poland is young. All depends on whether the people of Poland take this revelation to heart. If they do, Dr. Zechenter's judgment will be not merely a notable act of personal uprightness but a European event of historic importance.

The Food Tax Muddle.—The position of food taxes in, or outside, or on the fringe of Conservative policy becomes more and more bewildering. A few weeks ago it was thought that the *impasse* between Lord Beaverbrook and Mr Baldwin had been solved through the adoption by the latter of a vigorous Empire policy and the relegation of the food tax question to a referendum, which was to follow the next General Election in the event of a Conservative victory. In his speech at Nottingham last Friday Lord Beaverbrook summed up his agreement with Mr Baldwin by saying: " We understood Mr Baldwin would plough a straight furrow through the General Election—through a referendum—and that he would not look back until he had given us our keystone—a tax on foreign foodstuffs." Assuming that to be Mr Baldwin's position, and deeming that position satisfactory, Lord Beaverbrook decided that he could work inside the Conservative Party and actually proceeded to return the money subscribed for his Empire Free Trade Party. In the current political jest of the day, " the monkey was caged." Very soon, however, the monkey began to be restive in captivity. Last week he decided that separate funds for propagating Empire Free Trade were, after all, necessary, and appealed for the return of the repaid subscriptions. Now he has made a further bid for independence by addressing to the Press on Wednesday a letter which amounts to an accusation of betrayal against Mr Baldwin. His complaint arises out of a Conservative official leaflet headed " This is Baldwin's Pledge to You," in which Conservative policy is explained as follows:— " To go into conference with the Dominions in order to make a bargain which will enable us to sell more manufactured goods to them," adding that if then the Dominions ask us " to help them by putting taxes on foreign foodstuffs and allowing theirs to come in free, the question will be put to the country by means of a referendum." This, says Lord Beaverbrook, is " not in consonance " with his policy or " with the arrangement under which we accepted the referendum." Consequently, his lordship finds " the present position extremely difficult." This brings matters to a head, and perhaps we shall now get from Mr Baldwin an unequivocal statement as to whether or not food taxes are inside the policy of his Party. The country, as well as Lord Beaverbrook, has the right to expect something much more definite than anything that Mr Baldwin has yet said.

Charing Cross Bridge.—If the electorate is as disillusioned about the workings of Parliamentary government as some recent writers on democracy would have us believe, it may well take heart from the performance of the Private Bill Committee of the House of Commons on the London County Council's Charing Cross Bill. Here is a spirited committee which, refusing to accept the *non possumus* of its advisers, announces: " When the promoters tell us that any alteration in the scheme is impossible, we, on behalf of the public, have to exercise our judgment, and we do not feel that we can accept that view. We think that something better can be done." This refers to the part of the plan which proposes to put 33 acres of railway station at the bridgehead on the Surrey side, thereby permanently disfiguring the Embankment and choking the future development of Lambeth. While accepting that part of the scheme which affects the north side of the river, subject to the widening of St. Martin's Lane before the new road bridge is opened, the Committee refused to accept the plan for the southern side. They recognised that the Southern Railway, which would have preferred to keep its station where it is, had agreed to move on condition it should move to the site on the Surrey side most convenient to itself, and that a site further back from the river might involve inconvenience to passengers. The Committee expressed the view, however, that, in so far as this caused loss to the railway, it could be covered by compensation, and that the railway could evolve an alternative plan which would be satisfactory to itself and more compatible with the general good of London. It is difficult to see why the interposition of a few more hundred yards between the station and the river should seriously incommode passengers. With the cooperation of the Underground Railways movement to and from the new station should be no more difficult than to and from Waterloo. In order to give time for the London County Council and the Southern Railway to find a different site, the Committee adjourned till May 6th. Public opinion just now is keenly alive to the dangers of degradation which threaten both the countryside and the capital, and the determination of a committee which expressed itself reluctant " to go down to posterity as the people who held up the whole development of this place by putting these 33 acres of railway station in this position " will be widely approved.

A Quarter's Overseas Trade.—The disquieting character of the February trade returns is, unhappily, more than maintained by those for March. Imports, exports and reexports are all very substantially below the level of March, 1929, and for the first quarter as a whole there has been a decline of £22½ million in imports, with a fractionally larger decline in total exports. It must, however, be borne in mind that our overseas trade reflects not purely the state of British industry, but also the condition of the countries with which we do business, and there is no doubt that a large part of the present decline is due to general world conditions.

MONTH OF MARCH.
(000's omitted.)

	1930.	Inc. or Dec. on March, 1929.		Inc. or Dec. on March, 1928.	
	£	£	%	£	%
Imports	93,420	− 5,153	− 5·2	−17,097	−15·5
British exports	53,946	− 4,678	− 8·0	−11,012	−17·0
Re-exports	7,660	− 2,326	−23·3	− 3,607	−32·2
Total exports	61,606	− 7,004	−10·2	−14,619	−19·2
Excess of imports over total exports	31,814	+ 1,850	+ 6·2	− 2,478	− 7·2

FIRST THREE MONTHS.
(000's omitted.)

	1930.	Increase or Decrease as compared with 1929.		1928.	
	£	£	%	£	%
Imports	283,484	− 22,479	− 7·4	−26,279	− 8·5
British exports	164,132	− 17,036	− 9·4	−17,805	− 9·8
Re-exports	24,481	− 5,617	−18·7	− 8,758	−26·4
Total exports	188,613	− 22,653	−10·7	−26,562	−12·3
Excess of imports over total exports	94,871	+ 174	+ 0·2	+ 284	− 0·3

The bulk of the diminution of re-exports during the past three months is accounted for by raw cotton, wool, hides and skins. The decline in imports, as compared with the corresponding period of last year, occurred entirely in the food and raw materials classes, while manufactured imports rose by nearly £5 million. The biggest declines were in grain and flour, " other food and drink," raw cotton and cotton waste (from £26 million to £17 million), and raw wool, etc. (from £22 million to £18 million). This last is, however, very largely due to the fall in prices. Increases, on the other hand, were spread thinly over a large number of articles, the most marked being a rise from £10 million to £12 million in manufactured oils, fats and resins, and a rise from £5.2 million to £6.9 million in iron and steel. The following table, which shows the volume of some of our principal exports, contains few encouraging features:—

SOME LEADING EXPORTS.
(Quantity.)

		First Three Months.		
		1928.	1929.	1930.
Coal	tons	12,022,994	13,125,958	15,012,511
Railway material	,,	189,398	134,320	127,062
Total of iron and steel	,,	1,058,513	1,151,404	983,841
Textile machinery	,,	31,573	31,712	26,681
Total machinery	,,	144,878	142,063	131,421
Cotton yarns	lbs.	44,889,301	44,166,600	38,106,500
Cotton piece-goods	sq.yds.	153,903,100	126,582,400	110,726,100
Wool tops	centals	97,575	87,597	71 332
Woollen tissues	sq.yds.	36,763,200	30,912,600	25,572,200
Worsted tissues	,,	9,732,300	14,299,500	11,409,900
Linen piece-goods	,,	21,583,900	18,152,500	19,703,000
Jute piece-goods	,,	45,608,100	45,114,700	34,548,200
Boots and shoes	doz. prs.	269,642	208,737	230,938
Leather	cwts.	120,546	76,080	71,963
Locomotives	tons	7,754	9,592	11,286
Motor cars and chassis	number	7,342	10,385	8,789

Coal still shows an improvement over each of the two preceding years, and linen piece-goods and boots and shoes are better than in 1929. Exports of locomotives have continued to grow, but all the other items show sharp declines. In considering the returns as a whole, it is necessary to bear in mind that aggregate values have been seriously affected by the slump in the price of many commodities, as compared with a year ago. The Board of Trade's quarterly estimate of the physical volume of foreign trade will on this account be awaited with interest.

Export Trade—a New Committee.—Mr Gillett, Secretary of the Department of Overseas Trade, has announced the appointment of a " special organisation " which is " to examine the problems of export trade, study present and potential markets, constantly review the volume and trend of trade, investigate reasons for decline in exports by trades and markets, and ascertain possible remedies with the object of the profitable expansion of British trade." The organisation consists of a council, with Mr Gillett as chairman, and includes several departmental chiefs and four " representatives of commerce," including Sir Gilbert Vyle and Mr Hugh Lewis, recently general manager of the Liverpool and London and Globe Insurance Company. This council is to " work in the closest co-operation " with Mr J. H. Thomas, and behind it will be a panel of industrial representatives. Among those who have consented to serve on this panel are Sir Arthur Balfour, Lord Barnby, Sir William Larke, Sir Kenneth Lee and Sir Ernest Jardine. In a speech delivered to the Association of British Chambers of Commerce on April 10th Mr Gillett described the new council as " a council of action," and stated that it was already at work and had already consulted with Lord D'Abernon and the members of his recent mission to South America. This plan for greater concentration upon export needs and possibilities is a step in the right direction, and is refreshing at a time when so much thought is being wastefully expended on the other side of the nation's trade balance sheet. That the help of leaders of important export industries has been enlisted is all to the good, but it must be remembered that they are all very busy men, and it would be unreasonable to expect that the new organisation will be able to play a role in helping the British exporter comparable to that played by the Department of Commerce in America.

Shipbuilding Progress.—The returns issued this week by Lloyd's *Register* for the quarter ended March 31st, show a further small increase in the work in hand in British yards. At the end of the quarter the tonnage under construction in Great Britain and Ireland totalled 1,615,000 tons, as compared with 1,560,000 tons at the end of December and 1,357,000 tons a year ago. The work in hand abroad, 1,651,000 tons, also shows an expansion, the increase on the quarter amounting to 100,000 tons. In view of the extreme depression of the cargo freight markets, a decline in the tonnage under construction might have been expected; but it should be appreciated that the British expansion reflects partly a large increase in oil-tanker building, there being now 559,000 tons of this class of vessel under construction in this country—an increase of 161,000 tons on the quarter—and partly a slowing down in the rate of output. Launchings in Great Britain and Ireland for the quarter amounted to 345,000 tons, against 473,000 tons in the fourth quarter of 1929, while the figure of tonnage commenced, at 427,000 tons, shows a decrease on the quarter of 72,000 tons. The outlook for the industry, once the specialised demand for tankers has been satisfied for the moment, has not brightened, and it is satisfactory to note that National Shipbuilders' Securities, Ltd., whose objects, discussed in the *Economist* of March 8th, are to eliminate redundant yards and secure more economical costs by concentrating production, is to have an exceptionally strong board. The chairman will be Sir James Lithgow, and the directors will include, among others, the chairmen of Swan, Hunter and Wigham Richardson, Ltd., the Fairfield Shipbuilding Company, the Burntisland Shipbuilding Company, and members of the boards of Vickers, Wm. Gray and Company, and Harland and Wolff, Ltd. The aims of the new company should thus be pressed with vigour.

Chinese Currency Reform.—Various schemes for the reform of the Chinese Currency system have been formulated from time to time. An international currency commission discussed the position as long ago as 1903, and published a valuable report on the subject. Nothing came of it. In 1913, the joint proposals, which had been made by Dr. Vissering and Dr. Roest, led to the formation of a Chinese Commission under the chairmanship of Dr. Chang Tsung-yuen. As a result, draft regulations were drawn up for the reform of Chinese currency and banking, and these received the approval of the President and the Cabinet early in 1914. The whole question, however, was again shelved. There have since been spasmodic attempts made to deal with the problems presented, and there is no doubt that China lost a valuable opportunity to reform her currency when, owing to the appreciation of silver, the value of her currency unit had attained in 1920 the high value of 8s. 9d. Now, after the movement in the value of silver in the opposite direction and, *pari passu*, a record depreciation in the exchange value of the tael to 1s. 11d., there emanates from the Commission of Experts under the ægis of Professor Kemmerer, a draft law for the introduction of a uniform gold standard currency system. The Kemmerer report states that the chaotic condition of currency in China is a serious handicap to trade and to the development and prosperity of the country; previous commissions have come to exactly the same conclusion. The handicaps are apparent: Government receipts are almost wholly in terms of silver, while a large part of its payments are fixed in terms of gold. The gold monetary unit now suggested is the " Sun " of 60.1866 centigrammes fine gold, which is equivalent to 1s. 7.7265d. sterling, to 0.8025 Japanese gold yen, and 40 U.S. cents. The reason given by the Commission for the selection of this unit is that it is of approximately the same value in terms of gold as the silver dollars now current in China, *i.e.*, the Yuan Shih Kai dollar, which is 900 fine, and should contain 23.9775048 grammes pure silver. The draft law has been submitted to the Chinese Minister of Finance, and it provides also for silver coins of one sun, 50 cents and 20 cents, with subsidiary nickel and copper coins. The scheme in some respects resembles that of Dr. Vissering, which provided for the adoption of a gold exchange standard. It is stated that although the project gives the option of redemption in gold bullion, it is not expected that this form of redemption will be utilised. It is not clear just how contraction of the currency on the one hand and expansion on the other will be achieved, though presumably contraction is to be accomplished by the maintenance of a gold standard reserve held in foreign countries, upon which drafts will be sold as occasion requires. This reserve will amount to at least 35 per cent. of the value of coins in circulation. There is much speculation as to the greater or less possibilities of China's adoption of the suggested law, and, if she does attempt currency stabilisation, whether the idea of a currency reform loan, a contract for which was signed many years ago and has since lapsed, will be resussitated. The defect in the Kemmerer proposals appears to be failure to appreciate the ingrained love of the Chinese for silver, a love which, despite the ever-present troubles arising from adherence to a silver standard, it will be difficult, if not impossible to eradicate.

Anglo-German Coal Relations.—A correspondent writes:—Leading Ruhr colliery owners and Syndicate officials have usually referred to the possibility of an international understanding on coal markets and prices in a guarded and non-committal manner. It is significant, therefore, to find Herr Fickler, general director of the Harpener Company, welcoming, without the slightest reserve, the prospect of formal negotiations on the subject in the near future. Speaking recently, at the annual meeting of the company, he referred somewhat gloomily to the new curve of depression, mainly attributable to the milder winter and the abnormal stocking of coal throughout the Continent in the autumn, and to its effect on prices. The view of the management, he declared, was that an improvement in prices depended primarily on an understanding with Great Britain. The time for an effort to reach such an understanding, he added, would come as soon as the new coal law became operative in England, and the Westphalian Syndicate was reconstituted on a permanent basis. He expressed the hope that the discussions now proceeding would bring an agreement between the " pure " and " mixed " concerns before the expiration of the month for which the present syndicate has been extended by ministerial decree. The importance of this statement lies in the fact that the Harpener Company, with an annual production of round about eight million tons, is the largest of the " pure " concerns, that is, the companies which produce entirely for sale, with no quota for their own use. The German Syndicate officials are watching events in this country very closely. The recurrence of intense price-cutting competition, and the necessity for keeping the monthly levy (from which the syndicate's losses in the export market are met) at the high level of 2.20 marks per ton on the total production of the coalfield, explain the desire for some means of avoiding this loss. The expectation is now fairly general in the Ruhr that, as soon as the British owners' national committee is constituted and functioning, an approach will be made either formally or informally. There will, no doubt, be hard bargaining on both sides, and a speedy agreement is hardly likely. The beginning of negotiations, however, will mark the opening of a new phase of the international coal situation.

Foreign Funds in Wall Street.—The fact that over $3,087 million of foreign short-term funds were invested in the American market at the end of last year is disclosed in a report of the United States Department of Commerce. Against this sum, American short-term funds were loaned abroad to the tune of $1,484 million, leaving a net indebtedness to foreigners of $1,603 million. In spite of the great size of these aggregates, there was comparatively little change in the net indebtedness over the year, namely, an increase of $12,836,000. It must be remembered that the year 1929 witnessed a strong inflow of foreign money into Wall Street on account of the stock market boom, and an even more rapid exodus when the boom broke; this great turnover is scarcely, if at all, reflected in the Department of Commerce figures, which would have told a very different story if the annual period had closed on, say, October 1, 1929. The following is a summary of the results of official inquiry:—

American Exports and Imports of Short-Term Capital in 1929.
(000's omitted.)

	Dec. 31, 1928.	Dec. 31, 1929.
Due from Foreigners—	$	$
American deposits abroad	198,588	189,740
Liabilities on unmatured bills	508,822	768,942
Overdrafts by foreigners	255,373	202,348
Other short-term loans	318,762	285,460
Funds " put out " in foreign markets	24,077	37,357
Total due from abroad	1,305,622	1,483,847
Due to Foreigners—		
Foreign deposits in U.S.	1,580,481	1,652,858
American-drawn bills discounted abroad	93,356	72,238
Overdrafts by American banks	36,297	24,550
Other short-term borrowings	10,855	294
Foreign funds " put out " in U.S.:		
(*a*) Into American acceptances	564,601	891,132
(*b*) Into brokers' loans	332,888	270,627
(*c*) Into Treasury Certs.	166,319	61,827
(*d*) Other	12,176	8,817
Undiscounted foreign-drawn acceptances	99,247	104,938
Total due to abroad	2,896,220	3,087,281
Net short-term indebtedness to foreigners on banking account	1,590,598	1,603,434

The last item of the debt to foreigners, representing undiscounted acceptances held for collection by American banks, offsets the liabilities for bills not yet due, drawn by foreigners and accepted by American banks. There was a notable increase of $326,531,000 in the total of foreign funds invested in American acceptances; although bankers' acceptances outstanding in the U.S.A. at the end of 1929 reached the record total of $1,732,436,000, foreign banks had bought up 51.4 per cent. of that total. The most striking item in the table is, however, the figure of foreign deposits with American banks, which was nearly nine times as great as the total of American deposits abroad. Regarding these huge foreign deposits, Dr. Ray Hall writes in an accompanying memorandum, "while theoretically foreigners might withdraw them almost overnight, they cannot in fact do so. Much of these deposits are part of the cash reserves of the approximately 30 central banks, which legally count foreign exchange holdings as cash reserves. . . . Many of the deposits are required by individual long-term foreign borrowers in preparing to make payments on account of dividends, sinking funds or bond redemption. Other deposits are required by thousands of banks abroad, each of which must stand ready to sell dollar exchange to its customers." It would be highly interesting to compare the position of London with that of New York in this respect, but unfortunately no attempt has been made by Government departments or by the banks themselves to secure comparable figures. They would do well to bestir themselves to remedy this statistical deficiency.

Trade and the Floating Debt.—This month's Midland Bank *Review* contains an interesting and somewhat controversial article on the effects of the recent large reduction in the volume of Treasury bills. The burden of the argument is, briefly, as follows:—The redemption of Treasury bills in the hands of the banks does not release money for industry, as bankers' advances have already reached their limit; if the banks have these bills repaid all they can do is to buy more investments. Next, Treasury bills to-day form the money market's main stock-in-trade. There is no logical reason why the supply of bank or trade bills should increase to compensate for a decrease in Treasury bills, and in any case the predominance of Treasury bills is so pronounced as to make them the chief factor governing the total supply of bills. A curtailment of the supply of Treasury bills does not entail a curtailment of the funds available for taking them up. Consequently, discount rates fall, and the margin between open market rates and Bank rate widens. This expels foreign short money from London and attracts foreign bills to London for discount. This last factor compensates a little for the shrinkage in Treasury bills, but, even so, market rates remain low, and the foreign exchanges move against us. Furthermore, Bank rate has been made ineffective, and this is a condition which the Bank shortly seeks to remedy, in the time-honoured manner, by restricting credit, even though its own rate, if the margin is very wide, may have to be lowered. The net result is the strange combination of cheap money and restricted credit supplies, leading to an actual scarcity of accommodation for industry and trade. In other words, the reduction in the floating debt has led in the end to further deflation. Thus stated, the argument seems to us to need qualification. Suppose the Government redeems £10 million of Treasury bills belonging to the Midland Bank, who simultaneously apply for and get £10 million of the new Conversion Loan. Is anyone deprived of the power of borrowing a penny piece by the transaction? It is true that recent events suggest that the Midland Bank reasoning holds good in so far as it concerns bills held by the money market, but the last few months represented the period of heavy revenue collection, when money is normally tight. There is weight behind the Midland Bank's suggestion that the Bank of England can ease matters by a proper subdivision of its note reserve between Treasury bills and long-term Government securities (though conceivably the idea had already occurred to the Bank, and, for all that is known, may already have been put into practice), but we suggest that the last three months represent too short and abnormal a period for their experience to be used as the

basis for conclusions from which the inference may be drawn that there is no advantage in reducing the size of the floating debt. If the rate of reduction is such that its reactions on monetary rates lead to an excessive efflux of foreign balances, it may be fair to say that the operation has been too hurried; but, apart from this factor, there is no proof that the gradual curtailment of Treasury bills would have a deflationary effect on domestic banks' lending powers.

Monetary Prospects in Italy.—Our Turin correspondent writes:—The Bank of Italy's Hall was thronged when Governor Stringher delivered his annual speech to his shareholders, and leaders of finance and industry were glad to hear him concluding that "money matters are such that one feels inclined to believe that perhaps we are at the beginning of a new period of lower rates." The phrase was guarded, as Signor Stringher's utterances always are; but hearers, eager for lower rates, interpreted it as a sure prognostication of reductions in the official rate of discount. To those who have read with attention his speech in the full text, Governor Stringher's cautious words appear well founded. In 1929 note circulation averaged 16,496 million lire, as against 17,150 in 1928; and there was a decrease of 729.5 million lire in gold reserves, following a similar decrease in 1035.1 million in 1928. Business is quieter and calls for smaller amounts of means of payment. Clearings, after increasing from 1,089,344 million lire in 1925 to 1,297,636 in 1926, decreased to 769,586 million in 1927, 780,509 in 1928 and 741,946 in 1929. Owing to the reduction in wholesale prices, money is less needed. Can we, from these figures, draw the conclusion that money is becoming a drug in the market and that the Bank of Italy will shortly take the lead and reduce the official rate of discount? The conclusion would be obvious if Governor Stringher's speech did not include also figures of discounts and advances. While circulation, cheques, reserves, clearing house operations, in short the best indices of financial activity, are undergoing a process of restriction, the yearly averages of discounts and advances, excluding the frozen credits toward the Winding-up Institute (Instituto di Liquidazion) have been as follows:—

(Million lire.)

	Discounts.	Advances.	Day-to-day Clearing House Loans.	Total.
1924	3,254·1	2,056·6	262·4	5,573·1
1925	4,390·3	2,699·0	313·2	7,402·5
1926	5,325·0	2,897·9	324·0	8,546·9
1927	4,929·1	1,581·5	130·6	6,641·2
1928	3,161·6	1,208·2	98·7	4,468·5
1929	3,741·0	1,429·5	102·5	5,273·0

From 1926 to 1928 the restriction policy was certainly a strong instrument toward the revaluation and the stabilisation of the lira. But in 1929 the tide seems to have turned. Notwithstanding the 7 per cent. rate which prevailed during the greater part of the year, people have increasingly applied to the bank for discounts and advances. As demand was not fostered by speculation (reduced clearing-house transactions point the other way), nor by the legitimate needs of trade (as is evident from the reduced circulation and falling prices), the cause of the increase in discounts and advances is obscure. It may be that Governor Stringer feels uneasy in encouraging applications. If the official rate of discount is reduced applications will be closely scrutinised so as to exclude all operations which may build up a new frozen credit account. The process of liquidating unsound concerns must be carried to its conclusion if we are to avert inflation of credit.

The Progress of the Five-Year Plan.—Statistics have recently been made public by the State Publishing Department in Moscow showing, in certain aspects, the extent to which the Five-year Plan of economic development has been carried into effect in 1928-9. According to the figures given, coal output exceeded the 1927-8 total by 4,300,000 tons, or 12.6 per cent., and represented an increase of nearly 10 million tons on the output for 1913. Crude oil production advanced by 17.7 per cent. on the previous year, and was 43.5 per cent. higher than in 1913. Pig-iron production was still slightly below the pre-war level, but showed an increase of 22.4 per cent. on the previous year. In the following table are set out the production figures for 1927-8 and 1928-9 of the most important groups, together with the estimated output for 1932-3, the last year of the Plan.

	1927-8.	1928-9.	1932-3.
Coal (000 tons)	34,126	38,426	75,300
Oil (000 tons)	11,506	13,543	26,000
Pig iron (000 tons)	3,282	4,017	10,000
Steel (000 tons)	4,157	4,718	10,840
Cotton fabric (in mill. metres).....	2,539	2,829	4,700
Woollen goods (in mill. metres)...	97	115	270

The average percentage increase in the production of the above commodities for 1928-9 in comparison with the previous year is put at 20.3 per cent., or a trifle less than the increase in the total gross industrial production of the country.

Egyptian Cotton Spinners' Organisation.—Our Manchester correspondent writes:—An important development in the Lancashire cotton industry during the past year has been the increasing depression in the fine spinning branch, that is, the mills producing yarns from Egyptian cotton. Most of these firms are in the Bolton area, and at the annual meeting of the Bolton Master Cotton Spinners' Association, held in Manchester, this week, the President, Mr William Howarth, said that the last six months had been one of the worst periods in the history of the trade. The Bolton Master Spinners' Association has under consideration a scheme for the closer working of firms in the Egyptian spinning section. A sub-committee has been appointed to work out the details and it is evident that an attempt is about to be made to control prices and regulate production. Out of the 56,000,000 spinning spindles in Lancashire, about 18,000,000 are usually engaged on Egyptian cotton. There are, however, about 2,000,000 spindles which change from American to Egyptian according to the state of trade, and if a price-fixing scheme is put forward it is possible that many mills now on American cotton will turn on to the Egyptian staple. To a large extent the depression in the fine spinning trade is due to a falling off in demand rather than increased world competition, and it is urged that the unsatisfactory state of trade is chiefly owing to internal competition and that something should be done to stop the cutting of prices, which means losses for all concerned.

Agricultural Credits. — The Agricultural Mortgage Corporation has just issued its first report. It will be recalled that it was formed in pursuance of the Agricultural Credits Act of 1928, with the dual object of extending long-term advances to landowners and farmers desirous of purchasing their holdings and of enabling farmers to obtain short-term advances on their stock, crops, and other assets. The company's capital of £650,000 was subscribed by most of the leading banks, while a £5,000,000 5 per cent. debenture issue was made in the summer of last year. The actual administration of the corporation's affairs is in the hands of the banks. The report now issued shows that the corporation has been well managed and has filled a real need. A profit of £33,000 has been earned, but, as may be expected from the ownership of the share capital, all this is retained, and devoted to such objects as writing off preliminary expenses, and building up reserves. On March 31st, the concluding date of the period to which the report relates, mortgage loans actually granted amounted to £4,169,000, while a further £1,138,000 had been approved. Cash in hand amounted to £1,443,000. The prevailing depression in agriculture means both that the corporation has to adopt a generous attitude and also to be particularly careful as to the position of applicants for loans and the securities lodged with it. The report states that the securities behind the mortgage loans of £4,169,000 amounted to £6,605,000, so that there should

be an ample margin in hand. The comparatively large cash holding is also both an ample safeguard against possible losses and a fund out of which further requests for assistance can be met. Altogether the position is strong, and the debenture holders are well covered.

Employment and Cost of Living in March.—Unemployment continued to increase throughout March. According to the *Ministry of Labour Gazette*, among the 12.1 million workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed (wholly or partially) at March 24th, was 14.0, as compared with 13.1 per cent. at February 24th, and 10.0 per cent. a year ago. The total number of registered unemployed at March 31st was approximately 1,731,000. This compares with 1,582,000 a month ago, and 1,168,000 at March 28, 1929. It must be observed, however, that of the total increase during March in the numbers of those recorded as unemployed, a large part was due to the operation of the Unemployment Insurance Act, 1930, and not to an actual increase in unemployment. With regard to the cost of living, a substantial fall was recorded during March. At April 1st the index number of the Ministry of Labour stood at 57 per cent. above the level of July, 1914, as compared with 61 per cent. at March 1st and 62 per cent. a year ago. For food alone, the index registered 43 per cent. at April 1st, as compared with 50 per cent. a month ago and a year ago. The fall in the percentages during March was largely due to seasonal influences, substantial reductions being made in the prices of dairy produce, bread, flour and potatoes.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during March amounted to 889,370 ozs. of fine gold, as compared with 818,188 ozs. produced during February. In March, 1929, the output amounted to 866,529 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	July, 1929.	Aug., 1929.	Sept., 1929.	Oct., 1929.	Nov., 1929.	Dec., 1929.	Jan., 1930.	Feb., 1930.	March, 1930.
Gold mines	190,031	190,062	190,567	189,739	186,941	184,280	190,663	196,752	200,134
Coal mines	15,914	15,867	15,733	15,533	15,320	15,326	15,288	15,495	15,250
Diamond mines	4,845	5,071	4,814	4,555	4,561	4,811	5,889	6,584	7,002
	210,790	211,000	211,114	209,827	206,822	204,417	211,840	218,831	222,386

There was an increase in the number of natives employed in the gold and diamond mines during March.

INSURANCE NOTES.

Sun Life Assurance Company of Canada.—The rate at which this company has expanded its business since the war is amazing. Five years ago new business transacted totalled £41,500,000 and the total funds amounted to £60,000,000. In 1929 fresh liabilities under new policies were underwritten greatly in excess of the total funds, the approximate figures being new business of £134,500,000 and funds of £112,000,000. However impressive a testimony these figures may be to the new business organisation, the possibility cannot be ignored that the pace may be too hot. Be the internal administration never so efficient, the task of assimilating this vast world-wide flow of business on so unprecedented a scale must tax it to its utmost. Unfortunately, the information supplied in the annual report and the form of the published accounts do little to assist the formation of a clear picture of the situation. It is, at any rate, undeniable that the price paid in expenses is very heavy and that it is increasing. The expense ratio in 1928 was 30.7 per cent. of the premiums, and, at this level the favourable effect of the admittedly high rate of interest earned is very largely counterbalanced. But it is on the investment side more particularly that the company has challenged orthodox opinion by hitching its wagon to the star of equity stocks on the American continent. Holdings of common stocks constituted 54 per cent. of the total assets in 1928 and 61 per cent. at the end of 1929. Extreme fluctuations in the values of the total assets are unavoidable with an investment portfolio containing so large a proportion of ordinary shares. Nevertheless, at the end of 1928 there were investment reserves, mainly concealed, but partly disclosed, amounting to £20 million. On the worst day of the New York slump of last year these reserves were reduced to £7 million; but the President, Mr T. B. Macaulay, has recently announced that the whole margin of £20 million was again intact on February 11th last. "The blow has fallen, the slump has come, the values are marked down and we are in a stronger position than ever before in our history." Since, on any general index of American security prices taken up to that day, the recovery from the lowest point is only about 40 per cent. of the previous fall from end 1928 prices, this can only mean that the Sun Life of Canada investments have been chosen with extraordinary perspicacity. The company is probably the largest investor in ordinary shares in the world and the list of holdings is, therefore, extremely interesting. The largest holdings and the approximate amounts invested in each are as follows:—

	$
American Telephone and Telegraph Co.	18,000,000
Consolidated Gas Company of New York	27,000,000
Detroit Edison Company	10,500,000
Electric Bond and Share Company	12,000,000
General Electric Company	15,500,000
Imperial Oil Ltd.	15,500,000
Montreal Light, Heat and Power Consolidated ...	20,500,000
Public Service Corporation of New Jersey	12,000,000

The total holdings of £71 million are distributed among 145 different companies, thus giving an average investment in each of approximately £½ million. Only three British companies are represented, British American Tobacco Company, with $292,000, Carreras with $82,000, and Courtaulds with $1,307,000. Generally speaking, public utilities predominate, though investments in American railroads are unimportant and the holding in Canadian Pacific Railways is conspicuously small at $1,226,000.

Wesleyan and General Assurance Society.—Perhaps the most notable feature of the 1929 report of this company is the large expansion of new business transacted both in the ordinary and the industrial branches. In the ordinary branch the 1928 new business figures were rather unsatisfactory, but 1929 has restored the position with an increase from £969,236 to £1,149,558. The increase in the industrial branch is still greater, the total having risen from £2,614,914 to £3,322,864, and it is the more welcome since it follows upon a number of years during which the new business has been almost stationary. Of still greater importance is the fact that the premium income in both branches has exhibited a substantial increase. Interest earnings have been maintained at a very high level, the rate being £5 4s. 11d. net, compared with £5 3s. 1d. net in 1928. A great deal of the benefit from high interest rates is offset by the unfavourable level of expenses, to which attention has been drawn in previous years. In view of the expansion of new business little importance attaches to the fact that the 1929 expenses are slightly higher, but, so long as the absolute level remains as high as 17.9 per

cent. for the ordinary branch and 40.7 per cent. for the industrial branch, the necessity for reduction is obvious and urgent. In both branches an annual valuation is made and the results of the last three valuations are as follows:—

	1927.	1928.	1929.
Ordinary—	£	£	£
Surplus earned during the year	116,700	112,911	125,682
Investment profits realised	1,878	1,878	25,462
Transferred from industrial branch ...	14,800	16,600	18,739
Brought forward from previous year	48,967	69,056	74,890
	182,544	200,445	244,773
Allocations—			
To bonuses to policyholders	99,188	104,555	111,256
„ Investment reserve fund	...	...	41,800
„ Staff pension fund	14,300	21,000	21,000
„ Carried forward to next year.....	69,056	74,890	70,717
	182,544	200,445	244,773
Industrial Branch—			
Surplus earned during the year	101,213	113,223	139,462
Investment profits realised	2,052	2,061	28,452
Brought forward from previous year	12,768	26,333	34,617
	116,033	141,617	202,531
Allocations—			
To bonuses to policyholders	44,400	49,800	56,216
„ General reserve fund	...	...	...
„ Investment reserve fund	...	...	47,000
„ Staff pension fund	15,700	24,000	24,000
„ Bonus to outdoor staff.....	14,800	16,600	18,739
„ Ordinary branch	14,800	16,600	18,739
„ Carried forward to next year.....	26,333	34,617	37,837
	116,033	141,617	202,531

A reversionary bonus has been declared in the ordinary branch at the same rate as before, namely 48s. per cent. simple for whole-life policies and 42s. per cent. simple for endowment assurances. The profits made in the industrial branch are divided, in accordance with the terms of a profit-sharing scheme inaugurated two years ago, in the proportion of three-fifths to the policyholders and one-fifth each to the ordinary branch and to the outdoor staff respectively. In regard to this policyholder's proportion, it is the directors' declared intention to utilise this for the purpose of ultimately waiving payment of all premiums after age 65, and so to bring existing contracts into line with those now offered for new policies—necessarily a lengthy process. The effect of this year's allocation will be that instead of ceasing at age 73, after 23 years' premiums have been paid, premiums will in future cease at age 72 after payment of 22 premiums. The Wesleyan and General is the only ordinary-cum-industrial office constituted on the mutual principle and enjoys the distinction of being the first office (after the Prudential) to institute participation in profits for the industrial policyholders.

Equity and Law Life Assurance Society.—Chief interest in the 1929 annual report centres on that portion of it which describes the recent quinquennial valuation. The results of this valuation, which was made on the same basis as formerly, are as follows:—

	1920–24.	1925–29.
	£	£
Trading surplus earned during quinquennium	487,201	816,421
Profits on investments and on reversions	272,983	190,603
Brought forward from previous quinquennium	33,357	116,635
	£793,541	£1,123,659
Allocations:—		
To Bonuses to policyholders	539,451	798,285
„ Shareholders' account	59,939	88,698
„ Investment reserve fund	50,000	...
„ Staff Pension fund	27,516	33,047
„ Carried forward to next quinquennium	116,635	203,629
	£793,541	£1,123,659

The amount allocated to " with profits " policyholders is approximately 50 per cent. greater than five years previously, and has been declared in the form of reversionary bonuses at varying rates in accordance with the system of distribution practised for many years by the company. The actual rates of bonus range from 42s. per cent. to over 80s. per cent., and average 53s. 11d. per cent., compared with a corresponding average five years ago of 42s. 9d. per cent. It is also of interest to notice that the bonus has on this occasion been entirely earned from trading profits—albeit the margin is a small one—whereas five years ago capital profits had to be drawn on for this purpose. The shareholders have as much cause for satisfaction as the policyholders, for their one-tenth share of profits has enabled the directors to fix the dividend for the ensuing five years at the rate of 8s. 6d. per share, free of tax, equivalent to an increase of 37 per cent., as compared with the five years just ended. At the present price of £11 the shares yield the high return, for a first-class insurance company, of £4 16s. per cent. gross of income tax. Turning now to the figures for 1929, the balance sheet shows a large increase in mortgages—a type of investment which the company's high-class legal connection enables it to secure on favourable terms—and a more or less corresponding decline in British Government securities. The traditional policy of the Equity and Law has always inclined it towards reversionary securities, in one kind or another of which 26 per cent. of the total assets is invested. Of the remainder, 48 per cent. is represented by loans and mortgages, and the comparatively small percentage invested on the Stock Exchange explains why total depreciation written off last year was equal to less than ½ per cent. of the funds. Incidentally, the chairman stated at the annual meeting that this has since been more than recovered this year. As to the future, the new business will undoubtedly suffer from the general suspension by all life offices of the issuing of single premium sur-tax saving policies—in the transaction of which the Equity and Law has collected over £2 million during the last five years. Indeed, it is a significant fact that, although the sums assured and bonuses in force have increased during this period from £12,438,000 to £15,767,000, the yearly premium income has remained absolutely stationary at £374,000.

Provincial Insurance Company.—Having regard to the difficult conditions ruling in 1929, the underwriting results for that year of this successful non-tariff company are very satisfactory. Leaving out of account the marine department, premium income expanded from £635,000 to £713,000, just under £100,000 of which is derived through a subsidiary, the Drapers and General. The underwriting profit on the total fell from £68,130 to £39,405. The creation of the marine department represents the work of the last three years, and it has proved a costly experiment. In 1927 the business of the Hull Underwriters' Association, with a then premium income of upwards of £100,000, was acquired at a cost of £68,000 in cash. At first the income was further increased, but the 1929 accounts show that it has been subsequently reduced and now stands at £119,000, against which there is a fund of 82 per cent. Losses during the three years 1927-1929 have aggregated £59,751, thus nearly doubling the original cost. The details of the underwriting profits in all departments during the last two years are as follows:—

	1928. Amount. £	1928. Percentage of Premiums. %	1929. Amount. £	1929. Percentage of Premiums. %
Fire	19,215	12·7	12,458	7·6
Employers' Liability, Accident & General	48,915	10·1	26,947	4·9
Marine	— 24,849	—14·4	— 14,902	—12·6
	43,281	...	24,503	...
Items debited to profit and loss account ...	19,345	...	10,580	...
Total net surplus ...	23,936	...	13,923	...
Interest earnings	26,940	...	29,325	...
	50,876	...	43,248	...
Less Preference dividend	4,000	...	4,000	...
	46,876	...	39,248	...
Ordinary dividend ...	14,400	(20%)	14,400	(20%)
Net increase in surplus assets	32,476	...	24,848	...

Thus, in spite of the decreased underwriting profits, the addition to net surplus assets is again a substantial figure. On this occasion it has been dealt with by transferring £25,000 to create a contingency fund to look after depreciation in investments (much of which has been recovered since the close of the year), and the profit and loss account credit balance has, in consequence, been slightly reduced. The year 1928 coincided with the 25th birthday of the " Provincial," and in 1930 the " Drapers and General " celebrates its 21st birthday. As already announced, the double event has been signalised by the introduction of a staff profit-sharing scheme, and of a generous staff pension scheme on a semi-contributory basis.

Marine Insurance Company, Ltd.—in commenting on the 1928 report of this company a year ago we wrote:—" The Marine would do well to turn its attention towards publishing more complete information as to the results of its operations. At present its annual report consists merely of an abbreviated balance sheet, from which it is quite impossible to estimate the true profits except over a series of years." The coming into force of the new Companies' Act has compelled the company to issue more informative accounts, though this should have been done years ago. From the new form of accounts it appears that each underwriting year's transactions are kept open for the unusual period of three years. Thus, in the 1929 report the 1927 account is closed with a substantial balance of £118,423 transferred to profit and loss account. In respect of the 1928 account there remains a balance of £281,518 wherewith to meet third year claims and transfer to suspense account in respect of an original premium income of approximately £870,000. The current account, namely, that of 1929, appears to exhibit a reduced premium income, the amount being £829,000, and the first year's experience has been extremely favourable, the amount left in hand at the end of the year representing over 75 per cent. of the premium income. The whole of the share capital is held by the London and Lancashire, and, in addition to a normal dividend of 26⅔ per cent., a special dividend of 40 per cent. has been declared for 1929.

Security Market — Money — Gold Movements — Industry — Tariff.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 4.

CONTINUED strength in security markets, while surprising most sober observers, has undoubtedly created confidence in ultimate business recovery. Share markets, measured by average prices, have recovered approximately half the loss sustained in the September-November break. There is little disposition to dispute the claim that recovery has gone far beyond any mild improvement discernible in trade, and a pretty good case can be made out for the side which maintains that the market has now discounted everything there is any reason to expect for the remainder of the year.

However, the bulls maintain with a good deal of precedent to back them that the stock market always goes too far in either direction, that last autumn's decline was too severe and that much of the current rise is merely restoration of unnecessary losses. On top of that there is an abundance of investment money in the country, interest rates are low, and the general public has largely forgotten its unhappy experiences of a few months ago. Finally, the actual recovery has been less than indicated by average prices. A tabulation of market price for 225 representative and railroad stocks shows a total decline from September to November of approximately $20,000,000,000. The same stocks rose $3,416,000,000 last month, $1,140,000,000 in February and $1,998,000,000 in January. That appreciation, with a smaller gain in December, restores only a third of the autumn loss.

Money during the week has held moderately firm pending the disbursement of record-breaking dividend and interest payments. Call rate has been steady at 4 per cent., but, as the week closed, funds became available outside the Stock Exchange at 3½ per cent., and easier rates are anticipated for the remainder of the month. Time money is a shade firmer, but no one wants it. Since the readjustment of bill rates to the 3 per cent. Federal Reserve Bank buying level, the central institutions have bought a good many bills. This week's statement shows an increase in holdings of $35,000,000, virtually all being short-life documents which will mature in the next few weeks, and which it was more profitable for dealers to sell.

Although there is now less expectation of an early reduction in the New York discount rate, the central banks are holding to their easy money policy. Deducting the increase in member bank discounting due to the end of the month, the reserve institutions added, on their own account, $45,000,000 to outstanding credit, which is now about $125,000,000 higher than a fortnight ago. Gold imports have played an important part in the rapid decline in interest rates. The arrival this week of $9,000,000 from the Orient makes the net gain in gold since the beginning of the year about $134,000,000. Of this total $15,500,000 was metal released from earmark at the reserve banks and $88,000,000 came from Japan. The heavy outflow in the closing months of last year reduced our net gain to $119,500,000 for 1929, so that since January 1, 1929, we have added $253,500,000 to our gold stock. Obviously there is no desire to bring in more.

Bond price movements have been less bullish this week, but the market has had to digest a heavy volume of new capital issues. The result is that current offerings are lighter, this week's issues being less than $100,000,000. For March, bond offerings totalled approximately $650,000,000, compared with stock issues of only $85,000,000. For the same month of last year bonds made up $455,000,000 and stocks $300,000,000. Foreign bond isues were about $15,000,000 higher than March, 1929, and totalled $105,000,000. No great quantity of new financing is on the way for the next two or three weeks, and bankers are hoping that the reparation issue will come along before the market is again spoiled by too many new bonds. Reports from your side that the American portion of the first reparation issue may have to be trimmed somewhat under first estimates possibly have some basis in fact. However, no attention need be given to the mouthings of " political bankers " regarding the legality of the issue. They are of a piece with recent attacks on the alleged menace to the financial independence of this country of the Bank for International Settlements.

Business signposts point to better weather, but the improvement has been mild, and in some directions none seems to have taken place. Railroad traffic is still at the lowest levels for this season since 1922, business failures last month were the highest for March since 1922, and, outside New York City, where the Stock Exchange business is a big factor, bank clearings and bank debits to individual accounts have shown no improvement. Shippers' regional advisory boards have estimated for the railroads that freight-car requirements in the second quarter will be about 4.2 per cent. below the same period of last year. That will mean about 15 per cent. decline in railroad earnings, but it suggests improvement over the first quarter. Loadings for the first three months were over 6 per cent. under a year ago, against the shippers' estimates of less than one per cent.

On the other side of the picture, income tax collections for the March 15th date totalled $559,503,000, a reduction of only $42,000,000 from last year, and substantially above estimates. Considering the lower rates in effect, it is apparent that the effect of the stock market break on individual payments was either not considerable or was offset by higher corporation earnings. It now looks as

though the tax cuts may be retained, although extra appropriations for the Farm Board may cut the surplus for the fiscal year to around $100,000,000.

The steel industry has increased slightly its operating rate, which is now 76 per cent. of capacity, and pig-iron output in March was the highest since last November; but the daily rate of 104,450 tons compares with 119,822 tons in March, 1929. Prices have begun to decline again, but mill costs are lower also, except in so far as reduced quantity increases them, and earnings are not suffering greatly. Motor output for March is estimated by the National Automobile Chamber of Commerce at 400,000 cars, which figure is 36 per cent. below last year, but 18 per cent. higher than February. Actually the country is buying freely, but dealers are pressing the sale of used cars and old models, and meanwhile manufacturers are holding back on new production. This month is expected to be much better than March.

The Treasury will have to meet interest payments on Liberty bonds of $150,000,000 on April 15th. However, the recent cessation of borrowings by the Farm Board and the unexpectedly large income tax collections may mean postponement of a Treasury bill tender intended for that time, or at least a substantial reduction in the issue. In May, at any rate, the Treasury must borrow, for in that month the $50,000,000 bill issue of February falls due.

The Tariff Bill has now been sent to conference, where it is hoped that within the current month an agreement may be made with the Senate on the 1,250 changes made by that body in the House Bill. These hopes may be too optimistic, but at least the Republican leaders for the moment are in control of the situation. It is fairly certain that a much higher Tariff Bill will be passed and that President Hoover will sign it. The first reaction of business men will be one of relief that the measure is out of the way, but the new law is not destined to live long.

FRANCE.

Budget — B.I.S. — Prices — Production — Railways — Money.

(FROM OUR CORRESPONDENT.)

PARIS, April 15.

THE Senate completed its examination of the Finance Bill on Friday night, and the measure has since gone backwards and forwards several times between the two Houses for the purpose of finally settling various minor points of difficulty between them. M. Tardieu has determined, however, that the Bill shall be definitely disposed of before either House is allowed to rise for the Easter recess, and there is, at the time of writing, every probability that, by Wednesday night, his desire will be satisfied. The final serious remaining obstacle was apparently got over this afternoon, when the Chamber, by a majority of 59, on a vote of confidence, adopted the Government's views in regard to the Opposition proposal that all pre-war pension scales shall henceforward be automatically equalised, on the basis of a coefficient of 5. The question is an exceptionally thorny one—to such an extent that the Minister for the Budget, M. Germain Martin, twice told the House roundly that, if the opposition were persisted in and adopted, the technical difficulties that would follow would be so great that he would prefer to resign his portfolio forthwith. It is now confidently expected that, once the Budget is out of the way, the Government will be able to fulfil its promises to pass into law before Easter the proposed 1,500,000,000 francs of taxation reductions, a substantial proportion of which will be for the relief of investors and others who are interested in Bourse transactions.

It is unofficially announced to-day that the constitutive assembly of the Bank of International Settlements is to take place at Basle on April 22nd, or thereabouts, and that the institution will be in a state to begin actual operations early in May. Before the bank can open its doors, ratification of the Hague agreements by four out of the five creditor Powers is necessary, and on this point there seems to be little danger of delay. France has already ratified the agreement, and Belgium has arranged to do so. Great Britain and Italy have power to take a similar step without seeking Parliamentary authority beforehand, and are expected to take the necessary measures at any moment. In the circumstances it is expected here that formal publication of authority for the issue of the French portion of the pending loan will take place on April 28th. It is reported that the Bank of France will offer for public subscription the whole of 16,000 shares in the B.I.S. for which it is stipulated that it shall subscribe. These shares will have a nominal value of 2,500 francs (Swiss) each, or 12,312 French francs, of which 25 per cent. will be paid up. They will have a fixed yield of 6 per cent., plus a right to 20 per cent. of the profits, to the equivalent of a further 6 per cent. It is considered that any call for the remaining 75 per cent. of the capital is unlikely. It is asserted by the Agence Economique et Financière that subscribers will be expected to forward the total amount of the nominal capital with their applications for the shares; and as the issue will total about 50,000,000 francs, this may lead to a slight tension in this market. It is now expected, although no definite decision has yet been come to on the point, that the yield to be offered in regard to the coming international reparations loan will be 6 per cent. net (instead of from 5 to 5½ per cent. previously suggested), and that the rate of interest of the various portions of the issue will vary slightly, according to the special circumstances prevailing in the respective countries. Norway, Sweden and Denmark are now stated to be among the neutral countries in which a portion of the loan will be issued, in addition to those mentioned last week.

The general index figure for wholesale prices at the end of March is returned by the Statistique Générale as 565, representing a drop of ten points on the month, and as compared with a mean of 623 during 1929 and of 634 in 1928. The detailed comparative figures (based on 100, as representing the corresponding commodity prices in July, 1914) are as follows:—

	Articles.	End of Jan.	End of Feb.	End of March.
General index figure	45	576	575	565
French products.....	29	604	611	600
Imported products.....	16	524	510	501
Foodstuffs	20	526	529	523
Raw materials	25	620	615	601

Reduced to gold values, the French figure for March works out at 115. The retail price figure for Paris (13 articles of common necessity) is returned as 591 (equivalent to 120 in gold), or seven points lower on the month, against 607 in March, 1929, and 524 in March, 1928. The figure representing the cost of living for Paris working-class family of four persons is returned, for the end of February, as 565 (against a mean of 556 in 1929 and 619 in 1928), equivalent to 115 in gold. Curiously enough, the figures for wholesale prices and cost of living are on this occasion identical.

Industrial production remains, as far as can be seen, practically unaffected by the slump in raw material prices and the general slowing down that marks most other countries. The general index figure for February, which has just been issued, is returned as 143 (as compared with 100 as representing production in 1913). This is a single point lower than the January and February figures, five points higher than the mean figure recorded during 1929, and six points ahead of the mean for 1928. The textile industry remains still below its 1913 level, with a general figure of 88, as against a mean of 92 in 1929 and of 99 in 1928. All other industries are now well above their pre-war output level, and some enormously so. The rubber industry figure for February is returned as 918, against the high record figure of 957 in November last, a mean of 861 in 1929, and one of 587 in 1928. Motor-car production shows a seasonal jump of 65 points since November to 663, against a mean of 657 in 1929 and one of 610 in 1928, and has not yet reached its zenith for the current year. Most of the other leading industries show improvement on the month. Metallurgy stands four points higher, textiles and building each one, leather five, and paper six. Engineering fell off three points, and extractive industries one.

Labour continues scarce in the heavy industries and in agriculture, while in the retail trades there is less activity. The number of persons in receipt of unemployment pay on April 5th was 1,524 for the whole country, against 1,683 in February and 396 in October.

The French railways last year showed a combined net profit of 302,700,000 francs, against 592,900,000 francs in 1928 and a deficit of 2,901,000,000 francs in 1920. There was a deficit of 286,500,000 francs on the Ouest Etat system, which was partly compensated for by a profit of 67,800,000 francs registered by the Alsace-Lorraine system, which, since 1921, has been worked as one of the State lines. The five privately-owned companies showed a combined profit of 570,800,000 francs, notwithstanding a loss of 49,400,000 by the Midi Company (against 26,000,000 francs deficit in 1928). Under the convention of 1921 the whole of the lines are now being worked as a national economic instrument, under a Superior Council, comprising representatives of the Government, the companies, the working staff and the great industrial and consumers' associations. The shareholders' dividends are guaranteed by the State, and all profits are paid into a common fund, so that deficits on the weaker lines are recouped from the results attained by the undertakings which show profits. The 1929 deficits will, therefore, necessitate no extra charge on the Budget.

Money for carrying-over purposes at to-day's mid-monthly Bourse settlement had a rate of 2½ per cent. in the official market, against 1½ per cent. a fortnight ago. The volume of transactions involved was so small, however, that this occasioned no inconvenience. The amount of cash available was substantially smaller than it has been lately, as lenders have reduced the disposable amount to the minimum, owing to the smallness of the yield of late. Moreover, the market has been accumulating funds to meet the demands of industry towards the end of the current week, when industrial taxation amounting to something like 1,000,000,000 francs will become due for payment. At the same time, a good deal of money has been withdrawn from circulation in liquidation of recent gold purchases abroad. Sterling fell away to-day in Paris on Mr Snowden's Budget speech, and closed at 124.06½, against 124.18 last night.

GERMANY.

Agrarian Programme — Effect on Commercial Treaties — Berlin Municipal Scandal — Nitrogen Cartel — Steel Output — Bourse.

BERLIN, April 14.

THE Bruening Government has won a great victory by a narrow majority. It has induced the Reichstag to adopt its economic programme, the change of taxes and of agrarian import duties. But it is merely an outward, not a moral, victory, for in order to secure the necessary number of votes the Government was compelled to make a number of concessions which cannot be justified on their merits, and which in part are even at variance with the Government's own aims. One such concession is almost the whole agrarian programme, which was intended, through its exaggeratedly Protectionist character, to win for the cabinet votes from the German National Party, and which did have such an effect. But in the taxation programme there are also items that found their way in only under the pressure of the political situation. One of these is the special tax on department stores and co-operative stores, demanded by the "Economic Party of the German Middle Class," whereas, on the other hand, the increase of the beer tax, the kernel of the whole programme, had to be set at 50 instead of 75 per cent., because the Bavarian People's Party would otherwise have refused to support the Government's programme.

The chief purpose of the agrarian programme is to increase the price of rye, for since rye, along with potatoes, is the main crop of Eastern Germany and cannot for the most part be replaced by any other crop, owing to the peculiarities of the soil, profitable farming is dependent on the price of this grain precisely in those sections where the agriculturists are most heavily oppressed by debt. But as a result of the decline in the consumption of rye bread, rye has already been forced into the role of a fodder stuff in wide degree. Its price is to-day regulated by competition with other fodder stuffs, especially barley and maize. Hence the basic idea of the new German agrarian policy is to raise the price of rye by duties on fodder barley and by prohibition of the import of maize. An essential of the Schiele programme is thus a further increase of the maximum duties on fodder barley, which were already sharply increased a few months ago.

But this raising of the price of fodder has two unfortunate results. In the first place, it menaces all those undertakings that must import fodder to breed swine, poultry, etc., to compete with the breeders in Holland and Denmark. Whereas the East German farmer mainly uses only fodder raised on his own farm, imported barley is the most important fodder in many undertakings in North-west Germany, and in South Germany imported fodder to eke out the domestic supply also plays an important part. The second danger is the menace to existing commercial treaties and the increasing of the difficulties of making new ones. Germany, like most European States, has concluded a number of treaties which, in addition to the most-favoured-nation clause, also contain lists of fixed duties which may not be exceeded by either of the contracting parties. Germany is now endeavouring to extend this system of contractually fixed tariffs, especially eastward, and she is now carrying on negotiations with Czechoslovakia, Hungary and Roumania. But these countries have a great interest in the export of grain, and especially of barley, to Germany, and it is unlikely that a satisfactory agreement can be reached with them on the basis of the new German tariff policy. Grain plays only a subordinate role in the existing commercial treaties with the western and northern States—Switzerland, Holland, Denmark, Sweden and Finland—but cattle and animal products are correspondingly more important. The new agrarian programme includes substantial increases of duties on these products, since it is desired to give the cattle-breeding German farmers at least a small compensation for the increase in the cost of fodder.

The commercial treaties with Poland and France play a particular part. The treaty with Poland was concluded only a short time ago after years of tariff war. It has not yet been ratified. Poland feels herself hard hit above all by the duty on swine, which has also been increased, and it looks as if the opponents of ratification would gain ground as a result. The German-French treaty—the cornerstone of commercial politics not merely for Germany but for the whole European continent—is, it is true, not directly affected by the new German tariff policy. But the new law doubles the autonomous duties on wine, which are of especial importance for France. The new rate cannot go into effect as long as the present treaties with France, Italy and Spain run. But the German viticulturists possess much political influence, and there is reason to fear that the Government will be compelled to denounce the treaty with France, which can be done at three months' notice, in order to give the German vine growers the benefit of the increased duties. It is possible that a corresponding regulation as to Italy and Spain could be introduced without a cancelling of the treaties. It was anxiety concerning the system of commercial treaties that moved the Reichsverband der Deutschen Industrie (National Association of the German Industry) to make a vigorous public protest against the agrarian programme, since a large part of Germany's export business is dependent on these treaties.

A serious new case of corruption in the municipal administration of Berlin appears to have been discovered. Last year the public were aroused by the frauds of the Sklarek brothers, who had a monopoly of the supply of articles of clothing to city departments and who took advantage of acquaintanceships thus formed with city officials and members of the Council to obtain, in part by

bribery, millions of credits from the city bank, which sums were later for the greater part lost. The new revelations have to do with purchases of real estate by Berlin. Since 1924 the city has added greatly to its holdings of real estate. In this period it has bought far more than 100 million marks' worth of land for settlement and traffic purposes. This was without doubt in the interest of properly planned and co-ordinated city expansion, and it is also not to be regretted that big profits were thus barred to private speculators and flowed into the city's treasury. In the long run this policy will assuredly turn out to have been good business for the city, for it bought only unimproved agricultural land and, after arranging for new lines of traffic to establish the necessary connections, it has been selling it for building purposes, and has received a materially higher price than it paid. But it is alleged that City Councillor Busch, in whose hands the conduct of these transactions rested, has been guilty of grave misdemeanours. The accusation is that he repeatedly rejected favourable offers of sale from the owners of property themselves, but bought the same lands at much higher prices when they were offered by middlemen. The investigation of the matter by a sub-committee of the Prussian Diet, to which the partial clearing up of the matter is due, has not yet been concluded, and Herr Busch himself is ill and has therefore not yet been able to answer the allegations. The political importance of the affair lies in the fact that there has been in Germany for a considerable time a strong demand that the municipalities limit their economic activities in all directions.

While the negotiations for an extension of the Rhenish-Westphalian coal syndicate have still made no progress, a complete agreement has been reached concerning the German nitrogen cartel, which was due to expire on June 30th of this year. A round 98 per cent. of the German nitrogen producers have agreed to market their product for a further seven years through a common sales organisation. The quotas of the producers were fixed according to their producing capacity. The I.G. Farben naturally heads the list with a yearly production of 750,000 tons of synthetic nitrogen, and a quota of 250,000 tons was granted the coal industry in the Ruhr district, inclusive of the new plants planned or now building. Since the consumption of nitrogen on the whole world market in the last few years has increased more slowly than the production, the German cartel can now employ only from 75 to 80 per cent, of its capacity. Almost half the entire output is exported.

A good idea of the production and sales of coal and iron products in Germany is afforded by the quarterly reports of the United Steel Works (Vereinigte Stahlwerke), which produce almost 50 per cent. of the entire steel output. The total sales of this concern amounted in the first quarter of 1930 to 327 million marks. The highest figure was reached in the summer of 1929—roundly 400 million marks per quarter. Since then sales have been falling off, chiefly as a result of lessened requirements of the domestic iron-working industry for rolling mill products. In the fourth quarter of 1929 the sales still amounted to 356 millions.

Last week was uneventful on the Berlin Bourse. The upward trend, both for bonds and shares, was checked; as a result of the uncertainty of the political situation the attitude was one of waiting and no business. But the liquidity of the money market continued. Bankers' acceptances dropped as low as 4½ per cent. and daily money was offered first-class borrowers for 2 per cent. Short-term foreign credits probably flowed into Germany in the last few days to considerable amounts. The large German banks now pay about 4 per cent. for three months' money. The receipt of gold—50 million marks in the first week of April—would make possible a further lowering of the discount rate, but the Reichsbank prefers just now to let the present figure stand.

BELGIUM.

Public Finance — Repayment of the American Loan — Industry — Stock Exchange.

(FROM OUR CORRESPONDENT.)

LOUVAIN, March 30.

ACCORDING to the most recent statistics the financial situation is still particularly strong. The results of the fiscal year 1928, which was finally closed on October 31, 1929, have just been published. Despite a serious increase in current expenditure and in expenses for productive extension works (ports, telephone system, etc.), the financial year 1928 has yielded a surplus of 1,052 million. In addition, 1,200 million francs were allocated to the sinking fund of the public debt and 600 million were expended on other repayments, so that, in fact, the surplus available reached 2,852 million on a budget totalling 12,000 million francs. This brilliant result has been attained by particularly abundant taxation receipts. After deduction of the anticipated amortisations, the ordinary budget left a surplus of 1,333 millions.

The results of the financial year 1929 are not yet known, since final accounts of both receipts and expenditure cannot, according to Belgian law, be drawn up before the end of the tenth month following the end of the year. It is anticipated that the fiscal year 1929 will leave, after deduction of the amount allotted to the sinking fund and a 650 million franc allocation for other amortisations, a surplus amounting to 700 million francs; the surplus from the ordinary budget will reach 766 millions. Probably the final results, which will be known in ten months, will prove even more favourable.

These surpluses have been used mainly for the enlargement of the Treasury's reserve which, non-existent five years ago, amounted at December 31, 1929, to 4,645 millions, as appears from the following table:—

TREASURY ASSETS AT DECEMBER 31, 1929.

(In million francs.)

Current account at the National Bank	447
Portfolio of inland bills	478
Bank deposits and bills in London	2,520
" " " in New York	1,181
" " " in Berlin	14
Miscellaneous items	5
Total	4,645

These funds made up, in part, the *per contra* item to the postal cheque deposits and of the 20- and 5-franc note circulation, which are both pledged by the State. Though invested at short-term, the reserve returned 180 millions for 1929, that is more than 5 per cent.

By means of these cash assets the Belgian Government will redeem the outstanding balance of the 1920 loan issued in New York. This loan of a capital amount of 50 million dollars was contracted at 91.25 per cent. by the bankers and issued for public subscription at 97. As it bears 7½ per cent. interest, and is to be repaid at 115, it is very burdensome, contracted, as it was, at a time when Belgium was very short of money. On March 10, 1930, the balance due (the capital debt outstanding is of 30 million dollars), amounting, inclusive of the premium, to 34½ million dollars, was remitted to the American bankers. It was necessary to withdraw part of the London deposits, since the funds at the Treasury's disposal in New York must have been insufficient.

The Belgian Government has created a so-called "Monetary Fund" in order to guarantee the 20- and 5-franc note circulation, as well as the future issues of 5-franc divisional money which is about to be coined. The total nominal amount of these notes and coins may not exceed 1,200 million francs. Besides the redemption of the loan referred to above, a semi-official intimation implies that Belgium intends to pay off gradually her foreign loans before starting the repayment of internal funded debt. Nevertheless, this does not exclude the conversion of the 6 per cents., which stand already above par (they are at present quoted at 102.50) and are convertible from 1931 onwards.

The business trend is no longer as brilliant as the present state of public finance. Though it would be exaggerated to call it an industrial depression, an indisputable setback is felt throughout the whole country. Up to now statistics do not show any unemployment, but it is expected that unemployment will soon become inevitable, though on a moderate scale.

The position of the Belgian coal industry is less favourable, since the coal market is growing steadily duller. Prices have fallen 10 and 20 francs per ton. On receipt of tenders for next quarter's coal supply the National Railways Company, Ltd., ordered 150,000 tons from England, tenders of the Belgian coal companies being less favourable. This is regarded as a warning. Stocks have increased 200,000 tons on the month; it is anticipated that they will amount at the beginning of April to not far from 1 million tons, which means a serious hindrance to recovery. Trade will perhaps become more difficult than at present, if the wage increments gradually granted in 1929 to pitmen are to be continued. Taxation receipts for February, especially those from the sales tax, show a perceptible abatement in transactions; the figures of railway traffic by rail have reflected a similar trend.

The Brussels Stock Exchange slumped in February, but in March there was some improvement. People who suffered from heavy losses in the last stock crash are now preferring bonds and Government securities to shares. This has not, however, given rise to new issues of industrial bonds, since there is not yet any demand for them. For example, 5½ per cent. bonds were issued in February at 97; in March the subscription price has been 98. It is long since such facilities for raising money were available here. Last year the "Crédit Communal" issued bonds bearing 6.2 per cent. interest.

NORWAY.

Discount Rate — Bond Market — Stock Exchange — Foreign Trade.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, March 29.

THE present Norwegian Bank rate of 4½ per cent. has not previously been in operation since the period October, 1926, to October, 1927, the immediate reason for the introduction of this rate at that time being an exceptionally heavy influx of foreign exchange. The present foreign balances of the bank are considerably lower than they were at the turn of the year, though there has been some increase during recent weeks, and loans and advances have been increasing during the first half of this month. The recent reduction in the bank rate is, therefore, primarily a consequence of the development of the international market, where the tendency is still in the direction of cheaper money. Whether there will be further reductions in the Norwegian Bank rate, if London or New York rates should be reduced again, there is, of course, no possibility of saying; but the Governor of the Norges Bank has at least hitherto been able to carry out to a quite extraordinary degree the policy outlined in his speech at the annual meeting of the Norges Bank last month, of keeping the discount rate as low as possible. The deposit rates of the private joint-stock banks (as well as those of the savings banks) usually follow automatically the movements of the bank rate, but in this case the Oslo banks and most of the other private banks in Bergen, Trondhjem and other towns have decided to maintain the rates prevailing before the reduction, at any rate until conditions have become more settled.

The recent bank rate reductions have greatly stimulated the bond market and produced a considerable rise in the prices of nearly all types of bonds. A new series of 5 per cent. bonds of the Kongeriket Norges Hypothekbank to the amount of 30 million kroner is being offered at 99.5 per cent., while the price of this type of bonds during last year was as low as 94.5 per cent. The Municipalities Bank (Kommunalbanken) has also opened a new series of 5 per cent. bonds to the amount of 15 million kroner, at a price which is also very favourable to the bank. The 6 per cent. loan of 1920 is convertible on June 1st next, and it is likely that the Government will exercise their right of conversion in the present favourable circumstances, although as yet no definite step has been taken to this effect.

Activities on the Bourse during the month have also been much influenced by the declining Bank rate, public interest being chiefly concentrated on Government and other bonds. As might be expected in the present circumstances, however, sellers have been rather reluctant. Whaling shares have been firm on account of favourable reports from the expeditions still operating, banking shares are very quiet with very little business done, while shipping shares are weaker.

According to the trade returns for February, the value of imports and exports amounted to approximately 78 and 58 million kroner, as against 75.7 and 53.8 million kroner respectively in February, 1929, the surplus of imports being thus 20 million kroner against 21.9 million kroner in the corresponding month of 1929. The value of the chief import items was as follows, the figure in brackets representing those of February last year: Cereals, 7.4 (5.1); drapery goods, 10.1 (8.6); and vessels, 4.6 (8.1) million kroners. The value of the chief exports was as follows: Pulp, 9.3; paper, 7.2 (6.6) million kroner.

As the freight market has continued rather dull for an extended period, a comparatively large percentage of the Norwegian mercantile fleet has been inactive for some time, and it is stated that the immediate prospects are not very encouraging. That this poor condition of the freight markets, which also prevailed during the greater part of 1929, has affected our shipping companies is evidenced in the reports of nearly all those companies which are engaged in foreign markets. A typical example is furnished by the report of the Norway-American Line, from which it appears that while the line carried a total cargo from the United States and Canada of 195,000 tons in 1928, the corresponding figure for 1929 was 133,000 tons only. This decline is practically entirely accounted for by reduced shipments of grain, flour and sugar. It is further mentioned in this connection that while the total export of grain from the United States and Canada amounted to 30.8 million quarters in 1928, the figure in 1929 totalled only some 13 million quarters.

The herring catches now in progress on the western coasts of the country are said to be the richest ever recorded in Norway. The greater part of the fish caught is being exported as salted herring, but a large quantity is also being sold to the herring oil factories or exported as fresh herring.

CEYLON.

Revenue and Expenditure — Public Debt — Income Tax Proposal.

COLOMBO, March 12th.

THE question of taxation is engaging attention in Ceylon, particularly on account of the Government's proposal to impose income tax as from April 1, 1931. There has been in recent years considerable support for income tax to provide a change in the incidence of existing taxation, but the Government seeks to impose it rather as a way out of its financial difficulties, as it has been necessary to borrow 14 million rupees to balance the budget of 1929-30. All the financial measures of the past year show that the Government is greedy for revenue to continue a progressive developmental policy. The Customs duties were revised to bring in an additional revenue of four million rupees, to-day a 2½ per cent. betting tax is being discussed in the Legislative Council, and on top of it all income tax is threatened. The root question is whether the Government can justify its demands, and this calls for a survey of the colony's financial position. Beginning with the financial year 1920-21 (when there was a deficit of twenty million rupees and no talk of income tax but of drastic

retrenchment) the revenue and expenditure for each financial year have been as follows: —

	Revenue. Rs.	Expenditure. Rs.
1920–21	70,619,061	91,767,691
1921–22	79,270,116	77,359,068
1922–23	93,720,169	85,583,909
1923–24	102,363,115	100,713,868
1924–25	115,539,669	106,365,684
1925–26	124,516,155	112,943,821
1926–27	129,358,916	123,621,897
1927–28	134,134,952	152,107,200
1928–29	134,947,464*	149,455,512†

* Including railway receipts, less interest paid to general revenue.
† Including railway revenue expenditure.

As from 1928-29 the Railway Department has been budgeted for separately, and the colony's revenue total of 107,818,274 rupees and expenditure total of 125,896,034 rupees for that year are adjusted above to provide a true basis of comparison with the previous year's returns. Thus, the colony's revenue has progressively expanded during the past eight years, and yet the colony has arrived at a financial position necessitating heavy new taxation. The reason will be found in the heavy expenditure in 1927-28 and in the new commitments involved in the years of profligate expenditure. While the surplus balance of the colony amounted to 49,696,242 rupees on September 30, 1927, this balance was rapidly dissipated, and it was found necessary to borrow 14 million rupees for revenue purposes for 1929-30 in order to maintain the minimum reserve of 10,000,000 rupees.

A detailed examination of the accounts discloses that the allocation of expenditure against revenue and against loan funds has been carried out in a haphazard manner. There is no statement of the amount diverted from revenue for extraordinary expenditure on public utility undertakings, and until Government gives an undertaking that the amount of the present value of the public utility undertakings will be borrowed on loan account and refunded to revenue, the revenue figures give a false idea of the position. There is therefore no justification in stating that there is any shortage of revenue at the present time.

On September 30, 1929, the public debt of the colony stood at 171,589,745 rupees, against which assets amounting to 61,146,688 rupees were held, showing a net debt of 110,442,557 rupees. Even allowing for the borrowing which has taken place since then (38,840,000 rupees), it is reasonable to assume that the present value of the assets of all public undertakings greatly exceeds the amount of the public debt. If a statement were made of the assets of all public undertakings, it would undoubtedly be shown that the colony is in a sound position to attract further investments in the shape of loans, and further that this course should be followed in order to capitalise the amount already spent from general revenue on capital items of a permanent and revenue-producing nature.

The revenue from income tax, which is estimated at 25,000,000 rupees in a normal year and 40,000,000 rupees in a boom year, would only encourage further extravagance, if not at first, then in later years when surplus balances had again accumulated. Unfortunately, however, the Legislative Council has set its face against loans, except for revenue-producing schemes, and the Government is determined on continuing the intensive internal development of recent years. In the circumstances, without a businesslike appropriation between loan and revenue expenditure, income tax would seem inevitable.

IRISH FREE STATE.

Agricultural Production — Dairy Farming — Revenue.

(FROM OUR CORRESPONDENT.)

DUBLIN, April 2.

INTERESTING statistics of the value of the Free State's agricultural production in 1926-27 have recently been published. It is estimated that the total value of the agricultural output was £64,767,000, of which £23,071,000 was consumed by the agricultural community, £11,569,000 was consumed by non-agriculturists in the Free State, and £28,400,000 was exported. The balance, £1,717,000, represented the increase in the value of stock during the year. It is pointed out that every Free State agriculturist consumes £12 14s. worth of Free State agricultural produce, as compared with £10 per head sold to Free State non-agriculturists and 13s. per head sold to inhabitants of Great Britain. These figures indicate, first, the importance of the Irish market for home-grown produce and, secondly, the room that exists for expansion in the British market. The output per worker employed in the Free State was £96, as compared with £104 in Northern Ireland, £169 in England and Wales, £184 in Scotland and £196 in Denmark. It is obvious that the Irish farmer has still much to learn from farmers in other countries and that he has not yet made adequate use of the advantages which he possesses in respect of climate, soil and situation. The Danish figure, in particular, suggests that there is a possibility of great improvement in output along the lines of mixed dairy farming, thus endorsing the Government's official policy, which is to develop that type of farming in preference to others.

The average milk yield per cow is shown to be 487 gallons, compared with 654 in Switzerland, 645 in Denmark, 535 in England and Wales, and 498 in Sweden. It must be remembered that the Irish farmer devotes his attention to the production of a dual purpose type of animal rather than a high milk-yielding cow, and that he is wise in so doing because of the importance of the live-stock trade. The yield per cow in the dairying countries is much higher than the average, and points to a very high standard of cattle. There is no doubt that the dairying industry is the principal hope of the future of Irish agriculture. Success will depend upon the production of high yielding cows, standardisation of butter, and orderly marketing. The first two of these objectives are being gradually achieved with the assistance of the Government, and the third by the Irish Associated Creameries Company, Ltd. The annual report of this company shows that in 1929 it handled 16,000 tons of butter, valued at £2,672,532, and that as a result of bulk marketing considerable economies were obtained in packing, chilling and transport. The price of Irish butter was 4s. 6d. per cwt. nearer that of Danish butter than in the previous year, the resulting additional profit to the farmers being reckoned at £200,000.

The Exchequer statement for the year ending March 31st shows that the revenue amounted to £24,172,639, £48,407 less than in 1928-29, but £228,522 more than the estimated revenue, and that expenditure amounted to £25,050,061, £344,573 less than in 1928-29, but £1,125,061 more than the estimated expenditure. The principal items of revenue are customs £7,337,000, excise £6,437,000, income tax £3,966,000, estate duty £1,180,000 and motor tax £868,000. The floating debt has grown to the large sum of £3,231,000, the additional borrowing being mainly on account of the Shannon Scheme, the total expenditure on which now amounts to £5,496,250, to which must be added the sum of £956,974 advanced to the Electricity Supply Board.

Letters to the Editor.

LORD BEAVERBROOK'S POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the first article in the current issue of the *Economist* you compare the tariff policies of the Australian Prime Minister and Mr Baldwin with mine, and of mine you say:—

"Lord Beaverbrook takes a little wider view," *i.e.*, than Mr Scullin's, "but still believes that we can create a self-contained Empire by taxing food and thus increasing our own costs of production."

What I do believe is something very different, namely, that by taxing imports from foreign countries and admitting Empire products free, we shall create new and large markets in the only place in which it is now possible to create them—the Empire overseas. You may disagree with the policy, but that is no impediment to describing it accurately when submitting it to the judgment of your readers.

The assertion that the taxing of foreign foodstuffs, while admitting Empire foodstuffs duty-free, would increase our own costs of production, is not even correct as a proposition in abstract economics while the practical advantages of the policy in increasing the purchasing power of the home market and in extending our Empire markets are self-evident. — Yours faithfully, BEAVERBROOK.

29, Bury Street, St. James's, S.W. 1.
April 16, 1930.

[If we have misrepresented Lord Beaverbrook's view, we regret it; and we welcome any assistance he cares to give us in stating his policy with accuracy. Frankly, however, we are at a loss to understand how it is possible to escape the conclusion—not an abstract, but a very practical conclusion—that a tax on foreign food, even though Empire-produced food were admitted free, would raise the cost of production in this country. Lord Beaverbrook is well aware that in recent years we have spent nearly twice as much on food purchased from foreign countries as we have spent on food produced in the Empire. Does he think that a change-over of the sources of supply on the vast scale which these proportions imply can be made without the inducement of higher prices for Empire and home producers of food over a long series of years? During this period, while foreign food continues to come into the country, does Lord Beaverbrook think that the foreign producer will be obliging enough to bear the whole of the tax, and that none of it will be paid by the British consumer? If not, and if food prices are raised—even if by a proportion only of the amount of the tax—can Lord Beaverbrook suggest any means of preventing the increased cost of living being reflected, through wage rates, in higher costs of production?

Finally, while we are entirely at one with Lord Beaverbrook in desiring to see the expansion of the Imperial market, has he considered what effect it would have upon the rest of our trade if we ceased to buy the £250,000,000 of food from foreign countries which now purchase in return 60 per cent. of our exports?—ED., *Econ.*]

MONEY AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It seems to me that the economic progress of England at the moment is hung up by doubt on the whole fundamental theory of the use of money by the State.

Mr J. H. Thomas tells us that the problem is *not* just one of spending money, and enlists considerable support in saying this, while the majority of more definite Socialist opinion feels, rather vaguely, that there is a catch somewhere—that when men are not producing because "there is no money" to pay them to produce, and others are unable to consume this potential production because "they have no money" to pay for it, the essence of the solution *must* lie in pumping a sufficient amount of new money into the system to link up the two.

"But," the more orthodox reply, "that would be inflation," and so the essential, and apparently unsolved, point appears to be to what extent money can be introduced into the cycle without raising prices to neutralise its effect. *A priori*, one would imagine that as long as there are unrealised potentialities in both production and consumption, as there so obviously are, new money *could* be absorbed in this way and, in its absorption, cause to be produced sufficient new goods to leave the goods-money ratio (*i.e.*, prices) unaltered, and that only when production and consumption both reached their limit would new money necessarily raise prices.

I should like to ask you for a more detailed explanation than I have ever seen anywhere, *why* it does not in practice work out like this, and whether it is really impossible, if new money is introduced at the right point, to make it fulfil its purpose of bringing consumption and production potentialities into touch, to the benefit of all and the detriment of none. The arguments of "Can Lloyd George do it?" carried on to their logical conclusion, would seem to lead to an attitude very like the extreme Socialist one.

Is not the problem as much psychological as economic? In the cotton trade, for instance, the individual producer would say that he would be only too glad to sell larger quantities of cloth at his present prices, and the essence of the idea of mass production is that larger quantities can be produced at a smaller cost per unit. Yet in actual fact "the market" insists on quoting "firmer" prices at the first sign of increased demand.—Yours, C. H. BROWN.

Cotton Research Board, Giza, Egypt.

Books and Publications.

ECONOMIC REFORM IN ROUMANIA.*

THE new tendency towards agrarianism in Roumania is reflected in a book recently published by Professor Madgearu. The author places due emphasis on the inadequate development of the natural resources of Roumania, and, consequently, stresses the economic policy which has been advanced with the object of rendering these profitable. He makes it clear that the trend at present is towards the raising of the national revenue, and that the only way to achieve this is believed to lie in a continuous support of the main section of the working-class, the peasantry. Roumania is therefore unwilling to continue her aspiration after self-sufficiency. Industry has been fostered in Roumania in a greater measure than the natural advantages warranted. The result was uneconomic production at the expense of the consumer, with the aim of achieving the "chimerical ideal of economic self-sufficiency," as Professor Madgearu puts it.

A lowering of the Customs duties for the first time by the tariff of 1928, complete freedom for foreign investments, free zones in the neighbourhood of the main ports, and the improvement of transport are the first features which, during a period of fifteen months—since the National Peasant Party has been in power—show clearly Roumania's desire for international economic co-operation.

The innovation in the policy of agricultural credit consists in preparing the ground for a maximum benefit from the assistance given. It is suggested that the two conditions necessary are: on the one hand, farms of an average size of 25 hectares cultivated by a well-to-do class of agriculturists, and, on the other, a credit organisation, headed by the Central Co-operative Bank.

This institution will have the supervision of the credits granted, and will be responsible for such credits being used for effective production, and it will also be required to facilitate the direct export of agricultural products, thus curtailing the distance between producers and foreign markets. An area of land of 25 hectares is thought to be the most suitable, as it would permit of an adequate agricultural equipment, and make it possible for the assistance of the State to be more successfully apportioned in order to secure rationalisation.

The framework seems to be well constructed, but the problem is not yet solved. It depends partly on how the Central Bank will be able to function, but its solution is chiefly bound up with the fluctuation of international prices. For the moment, it is in the exploitation of the public properties by foreign capital that the promise of more immediately effective results lies.

As regards the Tariff policy, it seems rather risky to assert that Roumania, whose tariff walls were in 1929 still the third highest, will be among the first to reduce her Customs duties, at a stage when a national industry has already been built up on the basis of inadequate natural advantages and when appeal is made for the intensification of foreign co-operation in production. Nor is there much probability of a regular reduction, as any decrease will have to be a consequence of a previous progress in the efficiency of internal production, and will, moreover, be dependent on the Customs policy of the countries with which Roumania has commercial relations.

On the whole, the book presents a systematic summary of the economic policy of a new political party during its first year of office. Anyone who knows the natural advantages that Roumania offers, and the manner in which they were taken into consideration for the promotion of industry up till the present day, can easily see that this time the problem is being tackled in a spirit of practical common sense. The policy dealt with here means in fact a new economic trend in Roumania. In the last resort it will be dependent on its capacity for adaptation to the international economic trend, as

* "Roumania's New Economic Policy." By Dr. Virgil Madgearu. (P S. King & Son, Ltd.) Price 5s.

economic matters go far beyond the foresight and legislation of a single country, and happily the political party at present in power in Roumania seem fully aware of the fact that international economic co-operation is indispensable.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Future of Empire. By William Harbutt Dawson. (London) Williams and Norgate, Ltd., 38, Great Ormond Street. 12s. 6d. net.

This is essentially a book on peace. The British Empire is kept somewhat to the forefront in consonance with the author's belief that the Empire and the United States hold the key to the world's peace, but the point of view is that of world, rather than of Imperial, politics.

The Shifting and Effects of the Federal Corporation Income Tax. Vol. II. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. $3.00.

Examines the possibilities of shifting the federal corporation income tax when levied on certain classes of corporations, discusses its social and economic effects, and concludes with an inquiry into its effects upon the policies of financing corporate enterprise.

Communist and Co-operative Colonies. By Charles Gide. Translated by Ernest F. Row. (London) George G. Harrap and Company, Ltd., 39, Parker Street. 7s. 6d. net.

Professor Gide briefly sketches the history of the communities which were founded, for the most part, during the nineteenth century, and reaches the conclusion that they meet a permanent human need.

The Workers' Share. By A. W. Humphrey. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. net and 3s. 6d. net.

The thesis of this little book is that the problem of poverty has made no appreciable progress towards solution, and that it cannot be solved within a capitalist system. The book is based on authoritative investigations of such standing as those of the Royal Commission on Labour, Dr. Bowley, and Mr Seebohm Rowntree.

The Annals, March, 1930. (Philadelphia) American Academy of Political and Social Science, 3622-24, Locust Street. (London) P. S. King and Son, Ltd., Great Smith Street. $2.00.

This volume of the *Annals* is devoted to real-estate problems.

International Labour Review. April, 1930. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Includes an article on "Industrial Relations in the London Traffic Combine."

The Political Quarterly. April, 1930. (London) Macmillan and Company, Ltd., St. Martin's Street. 14s.

Includes an article by Dr. Gregory on Empire Free Trade.

Foreign Affairs. April, 1930. (New York) Council on Foreign Relations, Inc., 25, West 43rd Street. $1.25.

Includes an article on the final Reparation Settlement.

The Hibbert Journal, April, 1930. (London) Constable and Company, Ltd., Orange Street. 2s. net.

This issue contains a very interesting collection of articles, including one on "Russian Communism as a New Religion."

The Wesleyan Movement in the Industrial Revolution. By Wellman J. Warner. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 15s. net.

A very well-documented analysis of the interaction of religious and political and economic influences in a period in which the relation of the churches to social theory was particularly interesting.

Materials for the Study of Public Utility Economics. By Herbert B. Dorau. (London) Macmillan and Company, Ltd., St. Martin's Street. 21s. net.

An American anthology of theses, lectures and papers on different aspects of public utility economics, so arranged as to constitute a text-book of the subject.

Les Comptes Internationaux de la France. By Jules Perquel. 2nd edition. (Paris) Editions du "Capital," 11 bis, Boulevard des Italiens. 5 frs.

A valuable booklet, of some 55 pages, on the French balance of payments.

Misadventures of a Working Hobo in Canada. By G. H. Westbury. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 6s. net.

The author took every precaution to give himself the status of an ordinary English immigrant with neither means nor special qualifications. His experiences therefore represent as nearly as may be those of an average working man, and his account of them makes agreeably instructive reading.

Investment. By L. L. B. Angas. (London) Macmillan and Company, Ltd., St. Martin's Street. 20s. net.

An attempt to equip the reader with the economic knowledge and mental agility necessary for successful speculation.

Sources of Investment Information. (Chicago) Investment Bankers' Association of America, 33, South Clark Street.

A most useful and comprehensive bibliography.

Tin. (London) Anglo-Oriental Mining Corporation, Ltd., 31-33, Bishopsgate. 2s. 6d.

Contains statistics of production, consumption, stocks, prices and supplies of tin over a period of several years.

Inwood's Tables of Interest and Mortality for the Purchasing of Estates and Valuation of Property. Thirty-third edition. By Sir William Schooling. (London) Crosby, Lockwood & Son, Stationers' Hall Court. 9s. net.

Over 400 pages of tables with a generous provision of "bookwork" on the mathematics involved. They include a large number of compound interest and sinking fund tables, moneylenders' tables and tables of a large variety of annuities.

European Finance, April 4th; Birthday Number and U.S.A. Supplement. (London) Bouverie House, 154, Fleet Street. 1s.

An international economic periodical which contains a very wide variety of articles.

Sell's Directory of Registered Telegraphic Addresses. 1930. (London) Business Dictionaries, Ltd., 8 and 9, Johnson's Court, Fleet Street.

Contains telegraphic and postal addresses, telephone numbers and trade descriptions of firms throughout the country. There is also a trades section and the information is throughout cross-referenced. Other useful features are a list of newspapers and periodicals with their place of publication and charges for space, and a list of members of the London and Provincial Stock Exchanges.

Report of the Superintendent of Insurance of the Dominion of Canada. Vol. II, Life of Insurance Companies. (Ottawa) Department of Insurance.

Contains full statistics of everything directly or indirectly related to life insurance in Canada, with the fullest details of the activities of individual companies, and a record of the year's legislation and legal decisions.

The Countryman, April, 1930. Edited and published by J. W. Robertson Scott, at Idbury, Kingham, Oxford. 2s. 6d.

This third birthday number contains a very wide variety of pleasant reading. The completely urbanised ought to read it. Everybody else will want to.

The Stock Exchange.

BRITISH SHIPPING INVESTMENTS.

THE investor in British shipping shares must envy Theseus his task of penetrating the inextricable maze, since that mythical hero had at least a single thread to guide him. In no major industry are published accounts more uninformative, or external data more difficult to come by. Shipping is notoriously depressed, our "tramp" freight index number showing a drop of 26½ per cent. over the last twelve months alone. But the investor is chiefly interested in "liner" concerns, which depend largely on freights fixed at special "conference" levels, and on passengers (including pleasure-cruising voyagers). There are other reasons for regarding published balance-sheets with a jaundiced eye. The direction of the great British concerns has always been in the hands of Napoleonic personalities, with an autocratic tradition. Past acquisitions of subsidiary companies have made every leading concern the centre of a complex solar system. Finally, the respective fleets are invariably valued on a *cost* basis (less depreciation), which may have little or no direct connection with earning power. All these conditions are of long standing, but only during the last nine months has the catastrophic decline in Royal Mail stocks revealed the full extent of the disadvantage at which they tend to place the investor.

We propose, in the following article, to deal with the position of the four largest groups—Royal Mail, Cunard, Peninsular and Oriental, and Furness Withy—and to begin with the least controversial factor, namely, the trend of recent earning power. Our first table shows how profits, dividends and prices have fluctuated in recent years:—

Declared net income (before debenture interest, but after depreciation):	Royal Mail.	Cunard.	P. & O.	Furness Withy.
	£	£	£	£
1922–5 average.....	792,844	675,312	1,130,556	427,226
1927 ,, ...	737,293	935,530	1,204,409	403,511
1928 ,, ...	729,366	795,530	1,224,267	427,750
1929 ,, ...	...	975,310	1,241,602	403,392
Total Preference dividend:				
1922–5 Average ...	217,250	135,000	152,000	56,249
No. of times covered	*2·4*	*2·8*	*5·6*	*7·6*
Last complete year	233,500	135,000	152,000	60,000
No. of times covered	*2·0*	*6·0*	*5·4*	*6·7*
Ordinary:				
Earned %, 1922–25 average	*5·95*	*5·4*	*20·4*	*9·3*
Paid %, 1922–25 average	5·75	5·6	11·5*	8·1*
Earned %, last year	*4·4*	*13·2*	*14·6*	*10·7*
Paid %, last year ...	5	7·5	12·0*	10
Stock Exchange price	£25†	23/6	52/-	36/-
Yield on last dividend %	£20	£6 7s. 8d.	£4 12s. 3d.*	£5 11s.
Yield on last earnings %	£17 12s.	£11 4s. 9d.	£5 7s. 8d.	£5 19s.

* Free of tax. † Per £100 stock.

Profit figures are affected by financial arrangements between parents and subsidiaries, by the extent of provision for depreciation and by other special factors. After making generous allowances under all these heads, however, the comparison between average earnings in a fairly "normal" post-war period (1922-25) and in recent years strongly suggests that (1) the P. & O. is slowly but steadily improving its position; (2) Cunard earnings are liable to wide annual fluctuations (due, apparently, to the varying incidence of charges for overhauling vessels); (3) Furness Withy profits are more or less static; (4) Royal Mail earnings have not been maintained of recent years. In every case but the last-named preference dividends are well covered. The best "cover" for ordinary dividends is shown by Cunard. Furness Withy is distributing profits much more closely "up to the hilt" (a policy, however, which should be read in conjunction with the satisfactory reserve position of the subsidiary companies). The last Royal Mail dividend was not fully earned, and in December last both preference and ordinary interim payments were postponed.

These figures suggest that *internal* as well as external factors must needs be taken into account in estimating the present position of British shipping concerns. Available information throws a dim and uncertain light, but we propose to grope our way towards a conclusion as regards three points: the valuation of tonnage, the relations of parents and subsidiaries, and future financial commitments. The Cunard values its ships at £36 3s. 5d. a ton, the P. & O. at £30 6s. 11d. The Cunard has written down its fleet from a first cost of £25,189,255 to £8,529,746, while the P. & O., last December, was in a position to pay all debts, repay its debentures, and leave the holders of £7,632,518 preferred and deferred stock with £3,000,000 in cash and 318 unencumbered steamers, of which £23,000,000 would represent a decidedly conservative valuation. The Furness Withy fleet is not valued separately in the accounts, but is believed to be on a conservative basis. As regards Royal Mail, all that the investor knows is that the *combined* fleets are valued by the group at £6¾ million below a figure representing cost less the (inadequate) 4 per cent. for depreciation allowed by the Board of Trade for income-tax purposes.

Until British company law insists on every holding company publishing a consolidated balance sheet, the investor cannot hope to form even an approximate idea of the real financial position of the great shipping combines. We have endeavoured, however, to obtain some slight insight into the position by ascertaining the nominal value of the shares held, directly and indirectly, in the largest subsidiaries, according to the returns of large holdings given in "Fairplay's Annual Summary of British Shipping Finance, 1930." We do not claim that our figures are in any sense complete or exhaustive:—

	Royal Mail.	Cunard.	P. & O.	Furness Withy.
Tonnage owned by parent co.	352,956	235,803	568,272	75,081
No. of subsidiaries examined.....	19	3	12	15
Total tonnage of those subsidiaries	1,740,784	376,888	1,832,442	537,416
Total tonnage, parent and subsidiaries	2,093,740	612,691	2,400,714	612,497
Total capital:	£	£	£	£
Parent.....	8,800,000	8,070,261	7,632,518	5,500,000
Subsidiaries.....	47,930,000	1,492,000	13,266,770	11,551,986
Ownership of subsidiary capital:				
By parent co.....	10,302,174	801,986	6,710,493	5,720,240
By directors of parent co.	1,912,762	...	496,320	825,894
By other subsidiaries.....	15,862,658	100,000	649,960	1,615,294
*Total**	*28,077,594*	*901,986*	*7,856,773*	*8,161,430*

* This necessarily involves duplication of various amounts.

For what the figures are worth, the capitalisation per ton of shipping (parent and subsidiary companies combined), shown in the above tabulation, is £27 16s. in the case of Furness Withy (which has, however, the largest interests outside shipping proper); £27 5s. in the case of Royal Mail; £15 12s. in that of Cunard; and £8 14s. in that of P. & O. The Cunard comes the nearest of the four companies to being a "unitary" concern; the Royal Mail has much the largest and most complex collection of subsidiaries.

All the subsidiaries of Furness Withy (except the Prince Line and the Red Cross Line, acquired last year

by a subsidiary) were purchased before the war. Many of the P. & O.'s outside interests were obtained during or immediately after the war. The Royal Mail alone has continued to follow a policy of making new large-scale acquisitions right up to recent times. Thus, while the financial commitments of the other three groups for the near future are restricted mainly to new and replacement tonnage programmes, the Royal Mail group has various obligations, maturing over the next few years, by way of payment for the White Star Line, Shaw, Savill and Albion, and other recent acquisitions, and in respect of loans made by outside authorities to R.M.S.P. Meat Transports, etc., and guaranteed by the parent company. The position is discussed in a separate "Note" on page 896. Some of the Royal Mail subsidiaries have large building programmes in hand (the Meat Transports, Nelson and Union-Castle companies having registered aggregate mortgages and charges of £6,260,569, mainly on this account), though building operations on a new super-Atlantic liner were recently declared to be suspended. The company is under the necessity of conserving its resources to the utmost extent.

Furness Withy has spent over £7,000,000 on new tonnage in the last four years, and in any case has over £3¼ million of marketable "outside" investments. The P. & O. took £1,000,000 last year from a "reserve for new tonnage construction" (not shown in the balance sheet) to pay for a new 19,648-ton vessel, the *Viceroy of India*, delivered during the year, and last December Lord Inchcape announced that orders were to be placed for two further ships of 20,000 tons. The Cunard, again, is shortly to build a new liner for the "luxury" Atlantic service which will "bear favourable comparison with anything afloat." Since the war the company has concentrated on vessels in the 20,000-ton class, but in view of German competition, and in view of the fact that no Cunard liner over 30,000 tons is less than sixteen years old, the new vessel may be of the "super" class, costing not less than £4,000,000.

The conclusion suggested by this review would seem to be that the investor should exercise considerable discrimination when purchasing shipping shares. The material for an informed judgment is meagre, elusive and unsatisfactory. It reveals, however, beyond a peradventure, that while all companies must be affected, to some extent, by depression in the industry, and all must incur significant expenditure in keeping their fleets abreast of the times, the extent to which earning power can be regarded as "assured," at current levels, is far from identical in all cases.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
April 22	April 24.

The Budget, the holidays and the end of the Account combined to give markets an abnormal character. The "House" had been conveniently shelving the Budget, and, when its presentation compelled members to face its consequences, neither first nor second thoughts proved adequate. The immediate effects of Mr Snowden's proposals on market prices are discussed in another column (page 896). It is obvious, however, that this week's business is no guide to the real nature of the reprecussions the Budget must undoubtedly have on the future of security prices. The course of dealings after the holidays will be followed with close, and slightly anxious interest, by large investors.

Gilt-edged securities opened shakily after the Budget, recovered on Tuesday (after considerable purchases were said to have been made by the Government broker), and again showed a tendency to relapse the following day. The last-named movement particularly affected 4½ per cent. Conversion scrip, but War Loan fell off after a good showing on Tuesday, and Funding Loan was sold, despite the immunity of these two stocks from income tax in the hands of foreign holders. The course of India stock prices reflected nervousness at the spread of civil disobedience and the serious Calcutta rioting, the 3 per cents. being particularly affected. Little business was done in Dominion and Colonial descriptions, and Home Corporation issues had a duller tendency.

Foreign stocks showed scattered fractional losses on a very small volume of dealings. Brazilians found few buyers. Reports of financial difficulties in Tokio caused dullness in Japanese bonds, while, nearer home, a fresh setback in the Turkish negotiations produced a further fall in Turkish Unified.

Movements in Home Railways were undistinguished, though buyers apparently predominated in a quiet market. Undergrounds, however, quickly recovered after Mr Snowden's declaration that the petrol tax would not be increased. Among Foreign Railways, Argentine stocks showed little movement, though some observers professed to see evidence of a transfer, on a small scale, from lower to higher income-yielding securities. Unwelcome political developments had no disturbing influence on Indian Railway prices.

Interest in the industrial market centred chiefly on shares affected by Mr Snowden's proposals. Among McKenna Duty beneficiaries, whose special facilities were given a further year's lease of life, motor shares were prominent, Austin and Leylands rising sharply, while Dennis was bought, from influential quarters, on Wednesday. The leaders of the tobacco market also made a firm showing in the absence of new imposts on the commodity. Brewery shares, on the other hand, were undecided, though there was general agreement that the higher duty should not have any effect on dividends. The retention of the silk duties had been fully discounted, and Courtaulds had an easy tone on "cuts" in selling prices (announced on Wednesday). The publication of the British Celanese circular was a signal for profit-taking, the company's increased turnover and profits being regarded as insufficient to cover any dividend on the ordinary shares. Gramophone issues continued firm, the market refusing to believe that the smoke-cloud of amalgamation rumours concealed no fire in the shape of a coming agreement between Columbia and H.M.V. Electrical equipment shares lost ground and internationals were undecided in the absence of American support. Bank shares were easier, but few alterations were made in insurance shares.

Rubber shares remained in an idle and uninteresting condition. The commodity was dull, with a slight recovery on Wednesday, the near approach of the May "holiday" proving no stimulus to American buying. Tea shares were marked higher, in a number of cases, on scattered support. Business in oil shares was restricted, and unresponsive to the factor of unchanged taxation, the opinion of various leaders of the industry being that an increased duty would, in any case, have had little effect on British consumption.

Dullness enveloped the mining markets early in the week, practically all changes being downward. Kaffirs opened fairly firm, with Union Corporation a strong feature, following the publication of the report (dealt with on page 898), but neither Paris nor the Cape would support their favourites, and on Tuesday not a single improvement was recorded throughout the list. Rhodesian issues were also subject to fits of depression and many descriptions finished on the wrong side. Globe and Phœnix received some support on statements made at the meeting regarding recent developments, and Wankie Colliery strengthened. Tin shares suffered, following a further recession in the price of the metal, and a sharp fall in copper to £61 17s. 6d. led to some selling of Tintos from Paris and declines in other directions.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Share markets are highly irregular, but the trend continues upward under the force of investment trust buying and pool activity. That public speculation is probaby not so large as supposed is suggested by the fact that brokers' loans rose by only $26 million last week. Sentiment is more cautious. Public utility issues are ahead of most groups, but oils are also a feature. Rails, on the other hand, are dull on poor traffic anticipations. Reports on industrials for the first quarter of 1929 generally show decreases in earnings as compared with a year ago. The market is looking to the future, but dividends are beginning to be reduced or passed. Copper shares have been weak, but they rallied well after the announcement of a cut in the price of the metal to 14 cents. Foreign buying was reported to be unusually good, and producers are hoping later to put prices up again. The American Telephone Company's new stock offer gives valuable "rights," quoted at from $20 to $25 each, but the price has dropped on profit-taking when the news was known. The foreign trade figures for March show exports at $374 million, the lowest March figure since 1926, but slightly above the February level. The net imports and releases of earmarked gold in first three months of 1929 amount to $144 million. Bonds are irregular and less active, with new offerings heavier; but most of the new issues are going well. The steel industry is running at 77 per cent. of capacity.

INVESTMENT NOTES.

The Stock Exchange and the Budget.—The initial reception by the stock markets of Mr Snowden's Budget proposals was frigid. It was felt that increased taxation in Great Britain, coinciding with a reduction in other countries, might cause a mild "flight from the pound," and the concentration of the new burdens on recipients of relatively high incomes was regarded as likely to diminish the fund available for national saving. Second thoughts were somewhat more favourable, the provision made for debt service and redemption being accounted satisfactory, while what was considered as a virtual pledge by Mr Snowden—that no higher taxation would be introduced next year—came to be regarded as the most reassuring feature in the whole Budget. After an initial marking down, prices recovered on Tuesday afternoon, but were easier on Wednesday :—

Shares affected by the retention of the McKenna duties were, naturally, firm, though holders paid due attention to the Chancellor's plain intimation that, revenue permitting, the duties would go by the board next year. Tobacco shares, which had been sold in confident anticipation of an increased duty, quickly recovered. The initial impulse to mark down brewery share prices was arrested by the reflection that the extra duty would probably be more than counterbalanced by the benefits of derating. Motor shares, which were firm before the Budget, rose further, but rayon share prices were found to have fully discounted in advance the retention of the duties. The recovery in Undergrounds was the natural outcome of the absence of an increase in the petrol duty. The general verdict was that the Budget lifted the Government over an awkward stile, but lessened the Treasury's chances of an early and profitable War Loan conversion issue. Whether it will induce a slight shifting of the centre of gravity from lower to higher yielding stocks, and, by causing investors to seek non-taxable capital profits rather than income, hasten the next equity share boom and defeat the purpose of cheap money, are questions to which the future must be left to supply an answer.

Stock Exchange Annual Meeting.—The annual meeting of the proprietors of the Stock Exchange, held on Tuesday (writes a Stock Exchange correspondent), opened with an appreciation by Mr Sidney Ricardo, the chairman, of the services of Mr Archibald Campbell, Chairman of the Committee for General Purposes, during the Hatry crisis. Dealing with the report and accounts, Mr Ricardo dwelt upon the excellence of the main source of Stock Exchange income. Subscriptions from members, on their own behalf, and in regard to clerks, together amounted to £297,561, and showed an increase on the year of £14,400. The decrease of £29,000 in entrance fees he described as not particularly surprising in view of the exceptional conditions of the previous year, when the high water mark of £109,400 was reached. The Stock Exchange revenue account showed a credit balance of £276,000 (£14,000 less than in 1928-29), but the dividend was to be maintained at £9 per share, making £13 for the year, less tax at 4s. 6d.—thanks to the new Budget. There were 3,925 members, 742 authorised clerks, 1,453 unauthorised clerks, and 594 settling-room clerks. Abolition of dual control is being automaticaly effected by the gradual increase in the number of proprietors, which now number 2,913. The greatest difficulty experienced by the managers at present is that of providing necessary space for the staff of officials or for members' offices. Rebuilding operations have been in progress for some time, and a new freehold recently acquired, at a cost of £77,000, has been charged to capital account. Some 88 members now pay the lowest subscription of 20 guineas, while 404 pay the maximum of 100 guineas. The largest class of members (1,594) pays 40 guineas a year. The price of Stock Exchange shares remains about 206 cum dividend, giving a yield of 6½ per cent.

Royal Mail Position.—The accounts of the largest British steamship organisation—the Royal Mail Company—are due to be presented in less than a month's time. Preference and ordinary interim dividends were postponed last December, and the market is sceptical regarding any distribution next month, judging by present quotations :—

Stock.	Amount Quoted.	Highest, 1929.	Lowest, 1930.	Present Price.	Yield on 1928 Dividends.
5% Red. Deb.	5,100,000	96½	52	65	7 13 9

5% Non-Cum. Pref.	900,000	81½	20	25	20 0 0
Ordinary	5,000,000	76	21	25	20 0 0

There are rumours of impending changes in high quarters, but the public has had no definite announcement since Lord Kylsant's extraordinary declaration, in reply to a Lamport and Holt shareholder last month, that he hoped eventually to see all his shipping directorates "as one." Meanwhile, the opinion is steadily gaining ground that the group's most pressing problems are concerned less with matters of earning-power (though the latter, as we suggest in a leading article on page 893, does not appear

to have been fully maintained) than with impending capital liabilities. As will be seen from the following table, the parent company has interests in a number of decidedly large subsidiaries, for certain liabilities of which it has in many cases made itself responsible.

ROYAL MAIL HOLDINGS.

This picture is not, of course, complete. According to *Fairplay*, the companies in the group number 33, with a paid-up ordinary capital of £43,202,875, a preference capital of £26,935,375, and debentures totalling £20,115,720. Some of the subsidiaries have, in the last week or two, registered a number of new debentures, mainly in favour of Harland and Wolff, the Midland Bank and the Belfast Banking Company, covering an aggregate sum in excess of £5,330,000. These are understood, however, to be merely supplementary security for earlier advances, incurred in respect of new construction. The parent concern, however, has numerous pending liabilities. A Trade Facilities Loan to R.M.S.P. Meat Transports of £2,550,000, guaranteed by the Royal Mail, falls due in September-October this year. The company, it has been stated, will ask for an extension of time. A sum of £1,485,000, due on December 31st last, by the White Star Line to the Commonwealth Government (representing part of the purchase price of the Australian Commonwealth Line, payable in nine annual instalments) has probably been met. The group has other engagements—including £2,350,000 to be paid before December, 1936, to the International Mercantile Marine of New Jersey, for the White Star Line, and, possibly, a balance of the purchase price of the Shaw, Savill and Albion Company's shares. The Trade Facilities obligation, however, is clearly the most pressing. The Trade Facilities Act Advisory Commitee will presumably have regard to the company's importance as a leading British concern. They would, however, be on strong ground in making special treatment contingent on the utmost conservation of resources (including available earnings). Stockholders may draw their own conclusions.

Tin Restriction.—Last month the Tin Producers' Association announced (see *Economist*, March 15th) that producers with a normal output of 137,799 tons of metallic tin a year were curtailing output to the extent of 24,096 tons, and that an aggregate curtailment of 30,000 tons a year should not be unobtainable. A fresh circular was issued by the association last week, calling a meeting for April 16th to consider revised methods of restriction of output. Under the various methods already adopted it is stated that producers controlling a present normal output of 140,994 tons will be "restricting" to the extent of 26,739 tons a year. It is suggested that regulation of output by the time factor, which was the method applied in the East, is not the most economical or certain way of bringing about the desired restriction, and it is therefore proposed (1) that all plants in operation during the twelve months of 1929 shall be so regulated as to produce not more than 80 per cent. of their 1929 output; (2) that plants which began operations at dates subsequent to January 1, 1929, shall be so regulated as to produce not more than 80 per cent. of their estimated production for 1930, and (3) that where such methods are inapplicable regulation on a time basis (provided the maximum working time does not exceed 80 per cent. of the normal) shall apply. These proposals were unanimously carried. It is claimed that the adoption of these formulæ would increase by approximately 3,751 tons the curtailment now in force for 1930, making the aggregate curtailment in excess of 30,000 tons. The success of all output restriction schemes depends upon leaving out of restriction only a negligible proportion of the world's producers. The association states that producers of 50,028 tons, many of them operating in remote territories and at present inaccessible to the association, have not yet agreed to restrict. These represent 26 per cent. of the world production in 1929—a high enough proportion to upset the plans of the "restricting" producers unless it can be assumed that, instead of increasing their output, these outside producers will be forced by the prevailing low price of tin automatically to restrict. The circular of the Tin Producers' Association gives some valuable statistics of world production which are worthy of record: —

WORLD TIN OUTPUT.

	(In tons.) 1926.	1927.	1928.	1929.
F.M.S. :—				
Non-Chinese	20,216	21,393	30,248	40,894
Chinese	25,730	30,786	31,687	26,146
Dutch East Indies ...	33,006	33,934	34,943	34,950
Other Easterns	19,678	19,446	20,457	23,065
Nigeria.....	7,417	8,056	9,132	10,412
Bolivia.....	30,060	35,808	41,410	43,033
Others	8,769	9,135	9,084	9,238
World total.....	144,876	158,558	176,961	187,738
Average price, ton...	£291	£289	£227	£204

The circular also gives statistics showing the reduction in visible supplies during March this year :—

	Visible Supplies. Tons.	Carry Over in Straits. Tons.	Total. Tons.
January, 1930	29,032	4,730	33,762
February ,, ...	33,581	4,330	37,911
March ,, ...	32,972	3,085	36,057

Assuming that the output of the "outside" producers remains at 50,028 tons and allowing for a "restricted" output of 110,504 tons, the total world production of tin this year is estimated at 160,532 tons, which shows an actual reduction on last year's output of 27,206 tons. This is not unduly large in proportion to the existing visible supplies.

The Affairs of R. E. Jones.—The long-overdue reorganisation of the catering and garage business of R. E. Jones, Ltd., has been temporarily held up by a heated directorial dispute. At the annual meeting held on March 5th, Mr J. Moxon and Mr T. Bickerton (a director of Slaters and Bodega, Ltd.), who joined the board in February last, secured the acceptance of a resolution inviting Mr R. A. R. Field, chairman and managing director of Slaters and Bodega, Ltd., to occupy the position of chairman and managing director of R. E. Jones, and to act in that capacity with the assistance of not more than four directors acceptable to himself. It was further decided, on a motion by Mr Moxon, that the number of directors should be reduced to a maximum of six and a minimum of three, and that the present directors should be invited to tender their resignations. The meeting was then adjourned to the 12th, on which date a resolution was carried to pay the directors the sum of 1s. each as fees for 1929. On the refusal of four of the directors to resign their seats, Messrs Moxon and Bickerton issued a circular with a view to requisitioning a special meeting for the purpose of removing Sir T. G. Jones, Sir N. Grattan-Doyle, Mr A. J. Howell, and Mr A. Batchelor from the board. These four gentlemen, together with the chairman, Mr E. Harris, have now issued a statement to shareholders in which they affirm

that, in the view of the Registrar of Joint Stock Companies, the resolution proposed by Mr Moxon to reduce the number of directors was in the nature of a special resolution requiring twenty-one days' notice, and the decision arrived at at the adjourned meeting *ultra vires*, so that the directorate remains as before both in composition and number. A vigorous attack is made upon Messrs Moxon and Bickerton, who are accused of "handing over the whole direction and control of this valuable company to Mr Field and his three tame directors," and thus bringing the company under the complete control of Slaters and Bodega. The circular also states that "on the question of their future fees and remuneration we can only refer you to what Messrs Field and Bickerton have done in Slaters and Bodega, Ltd., and the Brighton and Hove Supply Association, Ltd." Mr Moxon and Mr Bickerton have since replied that "the reason for insisting on a reduced directorate is that the present board is unwieldy, unnecessary and costly" and that as a result of the board's refusal to tender their resignations, Mr Field has been prevented from beginning the urgently needed reorganisation of both the London and South Wales businesses of the company. There now follows a further circular, emanating from the John Smith reorganisation committee, strongly supporting the candidature of Mr R. A. R. Field for the managing directorship and emphatically denying that there is any question of the shareholders losing control of the company. Meanwhile, the resolutions to remove the present board, put before members at the extraordinary meeting on April 17th, must be passed by the vote of three-fourths of the shareholders present or represented by proxy. One good result of the controversy should be that shareholders will have time to form a more considered and less heated judgment on the record of the present board. If they have decided, in the meantime, that in the interests of good management the control of the company should be transferred to Messrs Moxon, Bickerton and Field, their decision will, necessarily, wear an added air of finality in a controversy which many shareholders must regard as having been prolonged *ad nauseam*.

Unilevers.—The second report of this powerful margarine combine goes some way to console those who found material for criticism in the results for 1928. Following the practice of last year, the accounts of Unilevers, Ltd. (formerly Margarine Union) and of Unilever N.V., of Rotterdam (formerly Margarine Unie), are dealt with in the same report, since "the two companies are so intimately connected that the members of each company may be considered to be equally interested in the position and results of either." The net profits of Unilever, Ltd., have increased from £378,898 to £580,383, while the revenue of the Dutch company is up from £1,287,951 to £2,944,401, an increase of well over 100 per cent. Preference dividends are covered in the case of the English company 8.3 times, and in that of the Dutch company 14.8 times. Unilever, Ltd., have increased their earnings on ordinary capital from 17.2 per cent. to 24.2 per cent., and Unilever N.V. from 16.8 per cent. to 20.6 per cent., so that the distribution of 10 per cent. made by both companies is amply covered.

* 13 months.

Unilever, Ltd., sets aside the sum of £250,000 to reserve, preliminary expenses having been written off last year, while the sister company makes an allocation to the same fund of no less than £1,250,000, bringing reserves to over £6½ million. The Dutch company sets aside £62,500 as reserve for dividend tax, while the combined carry-forward at £194,269 exceeds by £114,970 the amount brought in. Amounts owing to creditors, which figure in the balance sheets at £4,787,132, or £1,284,392 more than last year, are attributed to "the natural growth of business, which entails the financing of larger stocks of raw materials on behalf of subsidiary and associated companies." The issued capital has been increased in the course of 1929 for the purpose of acquiring new businesses, including very extensive Schicht and Hartog interests. The investments of the two companies in subsidiaries show an increase of £8,035,190 for the year. Meanwhile the third partner in the combine, Lever Brothers, announces a net profit for the year of £6,373,842, compared with £5,274,075 for 1928. Preference and preferred ordinary shares take £4,895,533, and the ordinary shares receive a dividend of 10 per cent., requiring £240,000, against 5 per cent. for the previous twelve months. The sum of £500,000 is placed to general reserve, and £500,000 is appropriated to writing off the balance of the cost of the Rotterdam company's note issue. Co-partnership dividends, rights in which have now been commuted by the ordinary shareholders, take £119,116, and £119,192 is carried forward.

Metduro, Ltd.—This company was formed by the Metropole Gramophone group to exploit an invention for the manufacture of a liquid plastic substance suitable for use in the cabinet-making, electrical and other trades. A public issue of 450,000 7 per cent. participating preference shares of £1 and 450,000 ordinary shares of 1s. was made in March, 1929, at the end of the new issue boom. The preference shares are still only 10s. paid. The prospectus contained a statement, *inter alia verbosa*, that the process of manufacture and the plant required were extremely simple. The directors' first report, which has just been issued, states that the commercial manufacture of Metduro has proved to be a more difficult problem than they were led to believe. No material has, in fact, been turned out in commercial quantities. Instead, the directors have purchased the British rights of a German company called Herold A.G. of Hamburg, which manufactures a range of materials similar to "Metduro." Orders for these materials are at present being executed from the Hamburg factory, but the Metduro factory at Waltham Abbey is being equipped for their production. The German and British rights of another process, "Papyroplast," have been purchased, and a factory in Saxony has been acquired to turn out 2,000,000 tubs a year, suitable for packing merchandise. The directors appear to have been active, but shareholders will certainly ask for an explanation regarding the statements in the prospectus of March, 1929. Inventions, licences and patents stand in the books at £117,619, and preliminary expenses and commissions at £31,363. There are amounts due to associated companies of £103,216. The balance sheet at March 15, 1930, discloses a cash holding of £64,274, which, at least, is something.

Union Corporation.—The publication of the accounts of this prosperous holding company for the year ended December 31st last marks the first occasion during eight years on which net profit has not revealed an improvement on the results of the previous twelve months. At £418,034 net revenue for 1929 is £10,548 less than for 1928, and on a capital of £875,000 represents a percentage-earning capacity of 47.8, against 49.0. The distribution on the 12s. 6d. ordinary shares of 44 per cent. is still satisfactorily covered, however, the final dividend of 3s. 6d. per share making 5s. 6d. per share for the year. A further sum of £30,000 is placed to reserve account, which now stands in the balance sheet at

£660,570, and the carry-forward of £119,629 exceeds by £3,034 the amount brought in.

Year ends December 31.	1927. £	1928. £	1929. £

Carried forward	103,013	116,595	119,629

The South African interests of the Corporation appear to have given very satisfactory results. The Modder Deep figures show little change as compared with those of the previous four years. Though working costs are down from 15s. 10d. to 15s. 8d. per ton, and working profit has increased from £773,605 to £777,402, or from 29s. 2d. to 29s. 3d. per ton, dividends remain unchanged at 6s. 9d. per share. The mine has been virtually fully developed as regards its Main Reef Area, ore reserves at December 31st amounting to 2,550,000 tons, assaying 8.8 dwt. per ton, over a stoping width of 79 inches, compared with 3,000,000 tons, assaying 9.0 dwt. over 79 inches at the end of 1928. Geduld Proprietary has increased its working profit from £485,663 to £522,188, on a greater capital, so that, though its dividend payments total £456,518, against £448,218, its distribution per share has declined by 6d. Development work at the East Geduld Mines has continued to progress satisfactorily, the capital having been further increased to £1,500,000, while the published figures of the companies concerned in the development of the Northern Rhodesia copper field show that ore reserves have increased from 92 million tons, averaging 3.83 per cent. at the end of 1928, to 235 million tons, averaging 3.90 per cent., at the end of 1929, and, in anticipation of the future which should lie ahead of this new field, the corporation has added considerably to its interests during the year. San Francisco Mines have increased their working profit by £48,951, but though dividends have increased from £281,992 to £286,284, there has been no change in distribution per share. The corporation's holding in Polyphonewerke continues to prove a source of profit, but the British Enka interest has not turned out so happily, the company having made a loss of £157,276 for 1929, owing to the unsatisfactory condition of the rayon market. Union Corporation shareholders will shortly be asked to pass a resolution permitting of the extension of the company's borrowing powers. The corporation, like most similar undertakings, accepts deposits from allied companies and others, and these, which are of a profitable character, are covered by the resolution.

MINING NOTES.

Consolidated Diamond.—Our mining correspondent writes:—Last year was an eventful period in the history of the Consolidated Diamond Mines of South-West Africa. The capital was largely increased by the subscription of shares under option, and was divided into equal parts of ordinary and 7½ per cent. cumulative preference shares of 10s. each. Out of the proceeds of the new issue, by arrangement with the Anglo-American Corporation, £987,700 of second debentures were repaid, in addition to £93,700 redeemed under the terms of the Trust Deed. The balance of the first mortgage debentures was exchanged for shares or converted into the second issue. As a result, on December 31st, the issued share capital stood at £4,480,000, and the balance of second debentures at £141,800. These remarkable results were secured by the development of what are known as the Marine Terraces in the Southern portion of the Orange River area. These, it is stated, have been proved for a continuous length over 20 miles, and it is estimated that the diamond contents of the ground so far trenched represent 1,750,000 carats. Although mechanical treatment plant has yet to be erected, the yield from this locality, "added substantially" to the outputs from other districts, including Elizabeth Bay, where additional equipment is in course of installation. Diamonds account stands at £1,810,500, against £1,471,200 in 1928, while the surplus is £582,500 against £457,600. At £98,050 the depreciation allowance shows a small increase, but debenture interest absorbed only £46,300 in place of £81,400. Of the available surplus at latest date, the dividends required £364,000—the rate on the ordinary being 12½ per cent., as compared with 10 per cent. on the undivided capital previously. The bulk of the surplus brought forward from 1928 is dealt with by the transfer of £168,000 to preference reserve and £105,700 to ordinary reserve. The former amount represents one year's requirements; the latter raises the fund to half a million. Premium on debentures absorbs £80,250; the carry-forward now figures at £150,200. Investments are slightly higher at £990,000. The cash position is an extraordinarily strong one, no less than £950,300 being on loan to the associated South-West Finance Corporation. Obviously, the company is in a position to supply a largely-increased quota of diamonds if and when required; but the recent news as to the shutting down of diamond-cutting factories in South Africa, and the initiation of short time in Amsterdam, does not suggest any great hope for the early future. The preference shares are quoted on the Stock Exchange at 8s. 3d. and the ordinary at 9s. 9d.

THE CHATWOOD SAFE

Life is useless without investigation, because investigation means improvement, and therein lies continual progress.

Those who produce work of quality ask for investigation and welcome comparison, fearing nothing in competition.

They build up their business through the ears of the public as well as through their eyes.

The Chatwood Security is work of quality and is exactly what we say it is without any "ifs" or "buts." There is nothing just so good for less money.

Because something costs little money it does not follow that it is cheap. The fundamental principle of purchase is value received for money paid.

The Chatwood Security has always been just the little more that can reasonably be asked for work of quality. It will stand investigation.

J. E. S.

THE CHATWOOD SECURITY

THE CHATWOOD SAFE CO., Limited, Bankers' Engineers, SHREWSBURY, ENGLAND.

Globe and Phœnix.—Last year's profit of £103,800 shows a substantial falling off, but does not account for the cut in the dividend from 3s. to 1s. per share. The explanation is that in respect of 1928 the directors adopted a very liberal policy, drawing upon the carry-forward to the extent of £12,000; whereas on the present occasion they are placing £25,000 to development reserve and carrying over the somewhat enhanced balance of £19,450. Undoubtedly, the position of the mine is one calling for energetic prospecting; at the same time the already existing fund of £75,000 appears ample for the time being. Possibly there is another factor—such as litigation—to which no reference is made. At the date of the balance sheets the surplus of cash assets exceeded £100,000, irrespective of the investments, which comprise £10,000 Rhodesia Railways 3 per cent. debentures and 61,500 shares in the Phœnix Mining and Finance; the latter company paid 5 per cent. for 1927-28 and nothing last year. Underground work had the result of increasing the ore reserves by 13,800 tons to 100,500 tons, but the average value declined 2.7 dwts. to 2.3 dwts. The quantity represents about 18 months' supply. Since the end of 1929 encouraging discoveries have been made in the deepest levels. The consulting engineer describes the geological conditions as favourable to the deposition of ore. Whether a deposit of important extent has been come upon cannot yet be judged. Meantime the quotation of the 5s. shares at over 14s. makes a substantial allowance for the possibilities of the future.

Tharsis-Mason and Barry.—Striking divergencies are shown by the results of these two copper-sulphur propositions for the past year. After writing off a substantially larger amount than before, the former made a net profit of £182,700, against £122,000, and 12½ per cent. is being paid in place of 10 per cent. The difference in the dividend by no means absorbs the increase in the profits. On the present occasion £125,000 is placed to general reserve, following on £25,000 a year ago. Part of this appropriation represents additional earnings, the balance coming out of the rather unwieldy carry-forward, which thereby is reduced to £24,900. At the date of the report, investments and cash stood at £278,500, debtors £87,570, and creditors, "including the provision for special purposes," £227,060. In compliance with the provisions of the new Companies Act, certain modifications have been made in the balance sheet. The directors report that the market for the company's ores increased steadily, and that the supply of pyrites is still far short of the quantities required to keep the works in full operation. The Mason and Barry net profit amounted to only £20,240, as against £35,340, and the dividend had to be cut from 4s. to 2s. 6d.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher "Economist Newspaper, Ltd.,"

6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name ....

Address ....

....

St. John del Rey.—The outstanding feature of the 1929 report of this wonderful old Brazilian gold mine is the jump in the ore reserves. The latter are estimated at 1,455,200 tons, a record total, compared with 1,171,500 tons twelve months previously. The quantity represents about eight years' supply for the mill; the increase would appear to be chiefly due to the new ore body mentioned in the 1928 report. An export report on the geology and prospects of the mine is definitely in favour of the continuance of the lode in depth, and as soon as certain further development work has been completed plans for operating the mine at still lower levels will be considered. As regards production, last year's earnings display a moderate expansion, due to advance both in the tonnage of ore treated and the average yield. No change is, however, made in the dividend rate of 10 per cent. on the ordinary shares, the difference being chiefly employed in additional development or transferred to capital account, the last-named appropriation being £10,000 up at £30,000. Owing to the condition of the coffee industry, the company, the directors mention, "appears to have a better prospect of obtaining an adequate supply of labour than it has had for several years." Del Rey shares have a market price of about 18s. 9d. cum final dividend of 1s. 6d.

Rezende.—The report for 1929 reveals the rather surprising feature of an expansion in the ore reserve tonnage —surprising, that is, in view of the information regarding the development position given in the preceding annual statement. The explanation is that in actual stoping the ore proved to be payable over a greater width than allowed for in the estimate. At 184,000 tons the quantity shows an increase of 19,000 tons, although in the meantime 76,400 tons have been extracted; the value of 8.8 dwts. compares with 9.6 dwts. previously. The consulting engineer reports that no payable values were opened up by the reduced amount of development work performed; but it is obvious that the mine can go on working for, at any rate, another couple of years. A decline in the average yield was counterbalanced by lower costs, due to the factor just mentioned, the working profit of £60,080 being almost identical with that of 1928. Dividends totalling 5s. per share have again been paid, leaving the slightly enhanced balance of £4,000 to go forward. The surplus liquid assets amount to £90,000. No reference is made in the report to the proposed return of capital of 2s. 6d. per share. The distribution would absorb only £18,750 of the surplus; nevertheless, its advisability at the moment is open to question in view of the acquisition of joint options over two blocks of claims in the Umtali district, Portuguese East Africa. The testing of these properties has only just begun.

Transvaal Consolidated Land.—At £64,700 last year's profit exceeds that of 1928 by £22,400. On the present occasion, however, the "profit suspense account" balance —receipts on account of farm and township sales—is substantially less than before, while taxes absorb £6,740 in place of £700. Accordingly, maintenance of the dividend at the rate of 1s. 3d. per share entails a small reduction of the carry-forward. During the year the company's land holdings were added to under various headings. The acreage sold was 39,500, against 43,450, the average price received being 12s. 3d. in place of 15s. 5d. per acre. The crops were again adversely affected by shortage of rain, and less timber was sold than in the preceding year. The company's holding of 521,000 Onverwacht Platinum has been written down to 1s., the reserve fund of £400,000 being thereby reduced to £333,300; the current market price of the shares is about 9d. It will be recalled that operations have been suspended, the payable ore being exhausted. Undoubtedly, the financial position

of the T.C.L. is exceedingly strong. The surplus of liquid assets amounts to £363,000, mortgage bonds and other securities figure for £272,000, property for £447,200. Nevertheless, the quotation of the 10s. shares at 34s. appears excessive. It represents a valuation of nearly a million and a half for the capital, and gives a yield of only 3¾ per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Banca Commerciale Italiana, Sun Life Assurance Company of Canada, World Auxiliary Insurance Corporation, Agricultural Mortgage Corporation, Beira Railway, County of London Electric Supply, Monte Video Waterworks, Consolidated Water Works of Rosario, London County Freehold and Leasehold Properties, Morris Motors, United Molasses, Paquin, British Thomson-Houston, London Electric Wire and Smiths, Godfrey Phillips, Ooregum Gold Mining of India, Consolidated Mines Selection, and Rio Tinto. At the Rio Tinto meeting Sir A. Geddes told shareholders that the company was directly interested in the processes for producing by-product sulphur and the constituent elements of pyrites of all grades, in marketable form, and they were adjusting their mine working in Spain in order to draw a larger proportion of copper from porphyritic ores and less from pyrites. Presiding at the fourth annual meeting of Morris Motors, Ltd., Sir W. R. Morris said that the introduction of two new six-cylinder models—the 15-h.p. Morris Oxford and the 18-h.p. Morris Isis—has done much to strengthen the position of the company's products in home and overseas markets, and both models had been extremely well received. At the United Molasses Company meeting the chairman expressed the view that molasses could never be replaced by substitutes or by synthetic processes, and that synthetic alcohol could never do more than prevent molasses prices from rising beyond economic limits.

CAPITAL ISSUES.

The week preceding the Easter holidays is normally a close season for new issues, and its coincidence with the presentation of the Budget reinforced the quietude of the market. Only one issue made its appearance, Hambros Bank and Messrs Schroders offering £1,000,000 of Six per cent. Sterling Mortgage Bonds, of the *Industrial Mortgage Bank of Finland*, unconditionally guaranteed by the Finnish Government. The bonds are a relatively high-yielding foreign investment, offering subscribers £6 6s. 4d. per cent. flat and £6 8s. 2d. per cent. on the basis of redemption in 1955. The annual interest which is being paid by the Finnish authorities is £6 14s. per cent. and £6 18s. per cent. respectively, the difference representing British Government stamp duty and issue expenses.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Industrial Mortgage Bank of Finland.—Issue of £1,000,000 6 per cent. Sterling Mortgage Bonds at £95 per cent. unconditionally guaranteed as to principal and interest by the Government of the Republic of Finland. Redemption is to take place by April 15, 1955, by the semi-annual operation of an accumulative sinking fund, commencing in the half-year ending on April 15, 1931. The sinking fund is to be applied half-yearly to the redemption of bonds by purchases at or below par, or by drawings at par. The proceeds of the bonds are required for the granting of further mortgage loans to industrial enterprises to enable short advances made in England to be liquidated. Profit of the bank in respect of the year 1928 was 268,077 F.Mks., and in respect of the year 1929, 466,476 F.Mks.

The following particulars are issued "for information only" with a view to Stock Exchange introduction:—**Repartitioned Public Debt of the Former Ottoman Empire.**—Particulars of an issue of 199,890 5 per cent. 1928 Consolidated Treasury Bonds to bearer of £20 each, and 726,251 "A" Bonds, 61,690 "B" bonds, and 245,381 "C" Bonds, representing arrears of the Ottoman Public Debt.

[*Other Stock Exchange information, including the latest profit and loss figures, shorter notices, and dividend announcements, will be found on page* 917, *under the heading "Company News."*]

COMPANY MEETINGS, &c.

SUN LIFE ASSURANCE COMPANY OF CANADA.

(Incorporated in Canada in 1865 as a Limited Company.)

GREAT AND INCREASING PROSPERITY.—STRIKING ADVANCE IN NEW BUSINESS.
ASSURANCES IN FORCE OVER £493,000,000.
SUBSTANTIAL EXPANSION IN PROFIT EARNINGS.
PROFIT DISTRIBUTION OF £4,645,000 TO POLICYHOLDERS DURING YEAR.
FINANCIAL POSITION STRONGEST IN HISTORY.
REVIEW OF YEAR'S ACHIEVEMENTS.—COMPANY'S INVESTMENT POLICY.
ASSETS £116,000,000.—PRESIDENT MACAULAY'S ADDRESS.

The annual general meeting of the Sun Life Assurance Company of Canada was held in Montreal.

Mr T. B. Macaulay (the president), in the course of his address, said: The investor who buys for permanent holding is but little concerned as to the prices which may be bid for his stocks by those who frequent the exchanges. What interests him is to know that his dividends will not only be paid regularly, but will gradually increase with the passing years. Applying this test to the Sun Life of Canada's investments in stocks, he pointed out that since the slump in the stock market began about October 1st the dividends received by Sun Life of Canada had actually increased.

£20,000,000 BULWARK.

He also declared that the company, even on the blackest of the black days in the stock market, had about £7,191,000 of excess valuation on its securities intact, while to-day the company's securities are valued at £20,000,000 more than the figures at which they are carried in the company's accounts. Thus, although the company's investment policy has been tested by one of the worst financial reactions in history, the company's securities are buttressed by a margin of excess valuation as great as it was able to report a year ago.

The practice of undervaluing our securities is now a permanent feature of our investment policy. I look forward to the time in the not distant future when we will have an undisclosed margin so huge that even the present large figure will seem comparatively small.

The President, continuing, said: It is with very special pleasure that I move the adoption of this 59th annual report of the company. We have grown accustomed to great and increasing prosperity, but the achievements of the past year surpass all previous records in even our history.

The new assurances paid for reached the huge total of £134,476,000. Even more impressive, however, is the fact that this is an increase of more than 48 per cent. over last year.

The assurances in force now exceed £493,000,000, an increase of over £103,000,000. But a few years ago we rejoiced at reaching the £200,000,000 mark; we now have passed the £400,000,000, and are well on towards the £500,000,000.

The income has reached £35,518,000, and the assets are now £116,752,000.

More important still, the profit earnings of the year have risen to nearly £8,807,000. We have, as usual, applied a considerable proportion of these earnings to further strengthening the position of the company.

Another £2,054,000 has been deducted from the market values shown in the report, raising that item to £6,164,000; £205,000 has been written off the company's buildings, while over £410,000 has been added to our various special reserves.

The sum of £4,645,000 has been distributed as profits to our policyholders, and in addition to all this over £1,200,000 has been added to the undistributed surplus, now more than £12,392,000.

This wonderful showing is, as always, based on a valuation of our securities enormously below the market quotations actually existing at the close of the year, so that the real strength of the company is only partially disclosed.

STOCK EXCHANGE A MERE AUCTION MART.

That such results should be achieved in the face of the Stock Exchange panic, of which we have heard so much, may at first appear strange. It is, however, not so surprising, for we are apt to over-estimate the importance of that crisis, serious though it was. What is the Stock Exchange? It is merely a place where public auctions are held. It differs from other auctions only in the articles sold and in the volume of the transactions. It is no more true of this auction than of other auctions that the prices bid are an infallible index of the real value of the articles dealt in. The quotations fluctuate with the optimism or the pessimism of the bidders. They are frequently much better evidence as to the bank accounts and credit of the bidders than of the value of the stocks bought and sold.

That was exactly the situation during the recent price reaction. It was purely a Stock Exchange panic. It was not caused by any trouble in general business. We did not see the closing down of factories, wholesale discharges of employees, and other symptoms of business distress such as market the great depressions to which our minds revert. Outside the ranks of the unfortunate speculators there was little to show that anything unusual was happening in the Wall Street auction rooms.

CONTINUED EXPANSION OF GREAT UNDERTAKINGS.

On the wildest days of the reaction the business of the country went on as usual. Men continued to work, children continued to be born, the population continued to grow, the great electric companies continued to increase their output, enlarging their power houses or building new ones. The great corporations whose stocks we own continued to expand, continued to prosper and to earn even larger dividends, just as if there were no dealings in their shares at all. What happened was merely that last June, in a wild burst of enthusiasm, speculators bid up prices beyond normal levels, and this, in turn, produced a wave of selling which began as profit-taking, but ended in a panic which carried prices as much below normal levels as they had previously been forced above them. The prices of November last, of course, showed a great drop from the quotations of mid-September, but in reality that great reaction did little more than remove the temporary bulge caused by the over-enthusiastic bidding of the previous months of the year. The actual intrinsic value of the shares was, of course, not affected by the fact that the speculators had exhausted their bank accounts and had had to lower their bids.

DIVIDENDS ON SECURITIES GREATLY INCREASED.

The investor who buys for permanent holding is but little concerned as to the prices which may be bid for his stocks by those who frequent the Exchanges. What interests him is to know that his dividends will not only be paid regularly but will gradually increase with the passing years. I will apply this test to our own holdings. At the present time the dividends actually being paid on our stocks are £693,000 in excess of the dividends payable on those same shares when we purchased them. This is equal to one and a quarter per cent. per annum on the book value of all our holdings. We have also received rights and stock privileges worth about £3,493,000. And the end is not yet. Ever since the slump began on, say, October 1st, the dividends payable on our stocks have increased about £308,000, and we have received rights with a value even in these markets of £226,000.

NO LOSSES BY PERMANENT INVESTORS.

To imagine that loss was caused to any except those carrying shares on margin because the market prices in 1929 marched up a hill and then marched down again, is to remind me how an old friend told me mournfully some years ago that he had lost over £200,000 during the preceding 12 months. When I replied sympathetically, he added with equal mournfulness:—"Yes, I have lost over £200,000 by not buying stocks a year ago when they were low." The losses supposed to have been suffered by permanent investors, such as the Sun Life of Canada, are like those of my jocular friend—they are not losses at all, but merely profits which we might have made had we known just when the peak was, and had altered our practice so as to sell out at that time.

COMPANY'S INVESTMENT POLICY.

When investing our funds, we look always to the distant future—10, 20, 30 years hence. Through our large stockholdings we have become permanent partners in the great utility and other corporations which furnish such essential service that they may almost be said to be part of the national life. We believe in the future of Montreal, of New York, of Chicago, and of all our great centres of population. We believe even more in the future of our entire nations—both Canada and the United States. What will they be 50 years from now? Does anyone doubt their future? We have hitched our investment policy to the star of this Continent, and in particular to our great cities, and just as surely as they continue to grow and prosper so surely will our investments grow and prosper. What need we care for the moods or pocket-books of in-and-out speculators? Why should we reverse our policy and throw our great holdings on the market for some possible temporary gain? Could we be sure that we would ever get our shares back? We prefer to continue as permanent partners.

UNDERVALUATION OF SECURITIES.

We must, of course, consider market quotations when preparing our annual report, but our policy is so to under-value our holdings that there can be a tremendous drop in prices without even reaching the figures at which our securities are carried in our accounts. Last year we announced that we had a margin of £20,000,000 to provide for just such a possible market crisis as we have experienced. We expected a reaction, but I confess that we did not expect one of such severity. Our assets have now been tested by one of the worst financial reactions in history, and you will be interested to know that the provision made by us for such a contingency proved more than ample, for even in the blackest of the black days we still had about £7,000,000 of the amount intact as a margin of excess valuation still remaining to protect our surplus.

I am now able to say that, even after distributing the large profits which we have announced, after making the further reserves to strengthen our position, and after adding over £1,200,000 to our declared surplus, we have to-day the entire margin of £20,000,000 again intact. The blow has fallen, the slump has come, the values are marked down, and we are in a stronger position than ever before in our history.

This practice of undervaluing our securities is now a permanent feature of our investment policy. I look forward to the time in the not distant future when we will have an undisclosed margin so huge that even the present large figure will appear comparatively small. It is our ambition that the values placed on our securities will always be buttressed by safeguards so great that market fluctuations will affect us no more than the winds that whistle around our building.

SECURITIES COMPARED.

I would not have you suppose that I am blind to the merits also of well-selected bonds and mortgages as investments. There is much to be said for them. Their values, nominally at least, do not fluctuate greatly. They are particularly attractive at times when stock quotations appear unduly high, as in the latter part of last year. But while they offer greater resistance to price reactions, they have no power of growth. Personally I prefer securities that live and advance, that keep pace with national growth and development—securities with a future, rather than securities which, even if protected against deterioration (not always successfully) by gold caskets, can, at best, only remain stationary and unchanging by the side of the road while the army of progress marches past. There is a happy medium. I think that our company should always have a large amount invested in choice bonds, but I also think that, in the best interests of our policyholders, a considerable proportion of our assets should always be invested in high-grade, progressive common stocks.

A FUTURE THAT DEFIES PROPHECY.

It is a wonderful report that we present, but I always think of the present as a mere vantage ground from which to get an even further vision into the future which must be planned for. What is the future to be? The realities of the present are far in advance of anything that we even imagined possible but a few years ago, and the outlook now is brighter than ever. I hardly dare to make a prophecy. If any of you care to calculate what our position will be if we can maintain anything like our present rate of progress for even the next few years, the results will surprise you. We already occupy a remarkable position. We have a character and an individuality all our own. We have an enthusiastic army of policyholders, and we enjoy the confidence of the public in a very unusual degree. We can, I think, look forward to a future so glorious that even the achievements of the present will then seem small. And let us never forget that every extension of our business is an extension of service and blessing to humanity.

PAQUIN, LIMITED.

CONTINUED PROSPERITY—LARGER DISTRIBUTION.

The thirty-third annual general meeting of Paquin, Ltd., was held, on the 15th instant, at Cannon Street Hotel, London, Sir Harry K. Newton, Bt. (the chairman), presiding.

The Secretary (Mr Charles Beavis) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said that the directors were very pleased to be able to meet the shareholders after a year which—it was the universal experience—had been exceedingly difficult for business, and had contained a General Election, a financial crash in America, a City crisis in this country, and a good deal of inclement weather, with results so excellent as fully to justify the distribution of a bonus of 20 per cent. on the ordinary shares, thus bringing the total distribution up to the satisfactory figure of 30 per cent. for the year. During the seven years which had elapsed since the capital of the company had stood at its present figure, the distributions by way of dividend and bonus had been:—1923, 10 per cent.; 1924, 12 per cent.; 1925, 12½ per cent.; 1926, 20 per cent.; 1927, 20 per cent.; 1928, 22½ per cent.; 1929, 30 per cent. The gross appropriation required to meet the ordinary dividend during the same period had increased from £17,500 for 1923 to £52,000 for 1929, and during that time they had increased the company's reserves by the net sum of no less than £104,000. This, shareholders will agree, was a remarkable and a consistent rate of progress, and was the result, of course, of the great expansion which had taken place in the volume of the company's trade throughout the world.

VITALITY OF THE BUSINESS.

The House of Paquin had now been trading as a limited liability company for just a third of a century. That was a long time, in the realm of Fashion, for any house to maintain a leading position, and they might, indeed, congratulate themselves that the older they grew in years the younger and more vital did their business prove itself to be. Its worldwide supremacy and financial position enabled it to attract the best creative artists in each branch of their trade—or, perhaps, he should more properly say, Art. Their workmanship, their materials, were the best that money could buy, and they were able to hold stocks—of the choicest furs, for example—that no other competing house could carry. The magnitude and variety of their business enabled them to attract and hold a clientèle of ladies some of whom a few years ago would have thought the creations of the House of Paquin were quite beyond their means. In a word—he knew he might say that, although the reputation of the house had always stood high, it had never stood higher than it did to-day.

The increase in net profits for the past year was upwards of £11,000, and in addition to paying the dividend and bonus on the ordinary shares, it was proposed to place £15,000 to reserve account, to write £10,000 off goodwill, and to increase the carry-forward by £2,000, a total internal appropriation of £27,000, or, with the usual contribution to staff benevolent fund of £1,000, a total of £28,000 retained in the business to still further strengthen its reserves and its resources. This was a policy of conservatism, and it was a policy of wisdom which he felt quite sure they would endorse and approve.

THE FUTURE.

With regard to the future, he had already referred to the financial crash in America, which had been felt, and very appreciably felt, in Paris. During the last eight or ten weeks of the year the repercussion on the company's Paris turnover was very considerable, and this continued during the first weeks of the current year; but during the last few weeks there had been a welcome change, and there was now every indication that they were once again in their stride and were "getting over" what, while it lasted, was undoubtedly a matter of anxiety to the board.

The company's houses in London and Buenos Ayres had begun the year well, and there was every reason to anticipate a substantial expansion in their trade and profits.

Taking all things into account, and remembering that the French Government had, as from January 1 last, halved its turnover tax—which naturally had acted as a heavy drag upon the wheels of business—and had the wise intention of still further lightening the burden of taxation in the next Budget, he felt that it was not unreasonable to look forward to the results of the current year's trading with confidence, and he sincerely hoped that the directors might be able to meet the shareholders a year hence with results no less satisfactory than those submitted on the present occasion.

M. Francois Debray (the managing director) seconded the resolution, which was unanimously adopted. Sir Harry Newton, the retiring director, was re-elected, and the usual formal business terminated the proceedings.

Cowley MORRIS MOTORS LTD. Oxford

THE FOURTH ANNUAL GENERAL MEETING OF MORRIS MOTORS LTD.

Excellent Year's Results.

Strong Position Still Further Consolidated.

Tangible Assets Exceed Preference Share Holdings by £3,327,700.

The fourth annual general meeting of Morris Motors, Ltd., was held at 9.15 a.m. on April 12, 1930, at the registered offices of the company at Cowley, Oxford, Sir William R. Morris, Bart. (the chairman and managing director of the company), presiding.

The Secretary (Mr S. G. K. Smallbone) read the notice convening the meeting, and the auditors' report to the shareholders having been read,

The Chairman, in proposing that the report and balance sheet for the year ended December 31, 1929, be approved and adopted, said :—

" I presume that I can take the accounts and report now before you as read. From them you will have noted that the balance sheet of the company for the year 1929 shows that the net profits on trading and the interest received on investments for the year amounted together to £1,285,171 7s. This is a result with which, I feel sure, we can be very satisfied. It has been arrived at after making full provision for depreciation of assets and for all possible contingencies. Moreover, although the sum of £25,123 6s. 10d. has been provided to reduce our Government securities to their market value at December 31, 1929, the actual market value of these securities at the date of publication of the balance sheet was no less than £79,690 15s. 5d. higher than the figure taken into account.

NET PROFIT £1,285,181 7s.

" To the net profit on trading and the interest and dividends received on securities amounting to £1,285,181 7s. there has to be added the balance brought forward from last year of £154,634 10s. 1d., making a total of £1,439,815 17s. 1d. After payment of the preference dividend of £225,000 and the provision of £246,062 13s. 9d. for income tax for the year 1929, there remains a disposable balance of £968,753 3s. 4d.

" In the balance sheet now before you the reserve fund stands at £2,000,000, and in these circumstances your directors have recommended the declaration of a dividend of 10 per cent., free of tax, on the ordinary shares.

" I am sure you will agree that the financial position of the company is still further consolidated by the writing down the balance-sheet value of goodwill, patents and trade marks by the sum of £650,000, thus reducing this item on the balance sheet to considerably less than one year's average profits of the business.

" In reviewing the financial position of the company to-day it is gratifying to be able to point out that since the formation of the company our average yearly earnings have exceeded by £161,170 the average shown in the prospectus; that our tangible assets are now £3,327,700 in excess of the holdings of the preference shareholders; that we hold Government securities to the value of £2,330,892, and that during the past four years the earnings of the company exceeded the preference dividend by more than five and a half times.

" These excellent results have been obtained in the face of active competition, and have been achieved by the company adopting a strong policy of progressive development.

" Both in regard to the nature of the company's products and the maintenance of plant and equipment much progress has been made. In addition to the sum of £216,821 14s. 5d. spent on repairs and maintenance of buildings and equipment during the year 1929, no less a sum than £196,720 8s. 1d. was provided for making changes in buildings and machinery in order to economise in production costs and to improve the saleability of the products and for future renewals of plant, equipment and buildings.

SUCCESSFUL NEW MODELS.

" The introduction of two new six-cylinder models—the 15-h.p. Morris-Oxford and the 18-h.p. Morris Isis—has done much to strengthen the position of the company's products in home and overseas markets, and both models have been extremely well received. All the preliminary costs of introducing these models have been met out of revenue.

" The 15-h.p. six-cylinder Morris-Oxford can justly claim to be the most highly developed car of its type. So great has been the demand for this model that the company has on its books to-day a large number of unexecuted orders, despite the constantly increasing rates of production that have been operative since its introduction. Further arrangements have been made that will shortly enable all demands to be met.

" The other models produced by the company—the Morris Minor and Morris-Cowley—due to improvements in their design, finish and equipment, continue to command highly satisfactory sales, and I am glad to be able to report that the current season shows every likelihood of being by far the busiest in the history of the company.

" A great deal of development work has been undertaken with a view to ensuring greater safety and comfort for motorists. We realise that motoring has become an accepted amenity in the daily life of the public, and it has constantly been the endeavour of your directors to introduce measures that will add to the safety and convenience of travel on the road. We adopted for this season a policy of standardising Triplex safety glass on all our models, and this, together with the provision of powerful four-wheel brakes, light and accurate steering, simple controls, and the fitting of bumpers fore and aft on all models, is a safety-first policy which has received a great deal of commendation from the public.

" There has been erected and put into operation during the course of the year at the company's radiator factory one of the largest chromium finishing plants in the country, and the adoption of this durable, untarnishable and practically self-cleaning finish on all external bright parts is another measure that adds to the saleability of our products.

(*Continued on next page.*)

MORRIS MOTORS LTD. Cowley Oxford

WIDE APPEAL OF PRODUCTS.

" I would here like to emphasise the wide range of models that are now listed by the company. Our standard productions range from economical and lively 8 h.p. touring cars selling at £130 to fast, high-powered six-cylinder saloons which present remarkable value at under £400. This versatility of appeal adds strength to the company's position. Varying markets, both home and overseas, are covered, and it is noteworthy that the policy of the company has always been such that a proper degree of flexibility of production is available, so that variations in demand for different types of cars as necessitated by public taste can be accommodated.

" A point which I now want to bring out concerns the all-British policy that has long since been adopted and maintained by this company. There has arisen at various times the question ' What is a British car? ' Competitive concerns with their main plants in foreign countries have endeavoured to justify the appellation ' British-built ' by publishing figures that aim at convincing the public that a considerable percentage of the cost of their cars is represented by British labour and material. Morris cars are British throughout. Every penny spent on materials and labour in their construction helps to swell the volume of British trade and employment. The Morris car was bred and born in this country, and all the finance behind it is British. This is something on which we can reflect with a feeling of patriotic pride and is a point that intending purchasers of cars will, I hope, bear in mind.

" I do not want here to dwell too much on political matters, but I feel that I must touch upon the very important fact that the success or otherwise of the British motor industry must be dependent to a very large extent on the attitude of the Government towards the retention of safeguarding duties. During the existence of the McKenna duties the organisations that I have developed and controlled have undoubtedly been greatly assisted in their expansion and development by these duties. Morris Motors, Ltd., employed fewer than 200 men in 1919. To-day the total number of employees on our pay roll approaches 10,000. This is direct employment. Additionally, there is a vast number of British workmen engaged in producing materials and making component parts that we purchase for our cars.

BENEFITS OF SAFEGUARDING.

" I am no scaremonger, but I do say definitely that if the McKenna duties were removed our progress and expansion would be seriously hampered, that we should not have such opportunities for increasing the number of people that we employ, and that there would be every likelihood of seriously decreased employment. I fail to see how any Government which, on the one hand, is seeking for means to alleviate unemployment in this country, and, on the other, is endeavouring to find revenue to meet the nation's excessive taxation, can find any justification whatsoever for the cessation of these beneficial measures.

" One direct result of any decreased sales and production of British cars in the home market must be to increase very largely the difficulties which British manufacturers have to face in finding outlets in markets overseas. The factory price of any manufactured article is to-day very largely dependent upon the quantity produced. Any reduction in the number of British cars produced and sold in the home market, brought about by the cessation of the McKenna duties, must definitely increase their costs of production, and consequently decrease their saleability both at home and overseas.

" Under Safeguarding, British manufacturers have consistently reduced prices and improved values. In 1919 a Morris-Cowley two-seater—the popular car its day—sold at £390. To-day a very much improved model of the same general classification sells at £162 10s., and we are producing a powerful six-cylinder saloon car that has every possible item of equipment and an exceptionally fine road performance for £100 less than the price we charged for that little two-seater in 1919.

GREATLY IMPROVED VALUES.

" This is concrete evidence that the McKenna duties have not artificially inflated prices. In the British motor trade there will always be sufficient internal competition to ensure equity in the matter of values to the public.

" During the year 1929 we made good progress in overseas markets, both our four- and six-cylinder models finding an encouraging response from overseas buyers. We are doing our utmost to develop this side of our business, leaving no stone unturned to assist in the expansion of British trade in our Dominions and elsewhere overseas.

" We have members of our sales and service staff in most of the important markets of the world, and have developed effective and widespread dealer organisations.

" I personally have visited a number of overseas countries during the past four years, and the experience and knowledge of local motoring conditions thus obtained is proving of very great value to the company.

" Once more I should like to pay a high tribute to the work and support of our executive, staff and workpeople. As you know, all the directors of the company are active executives, with no other interests than the affairs of the company. The spirit of willingness to work and the determination to succeed that imbues the whole of this organisation is well reflected in the financial results that we obtain, and is one of the most valuable assets of the company.

" The development of this company, judged by ordinary commercial standards, has been very rapid, but our progress has been cautiously made, step by step. The company has never been in such an active and sound position as it is to-day—a complete justification of the conservative basis on which our finances have been managed—as reflected in the report and balance sheet now before you, the adoption of which I have pleasure in formally moving."

Mr E. H. Blake (deputy-managing director) seconded the resolution, which was carried.

The following were re-elected to the board of directors :—Mr H. Landstad, Mr A. A. Rowse, Mr H. A. Ryder, Mr H. Seaward, Mr S. G. K. Smallbone, Mr W. M. W. Thomas, Mr F. G. Woollard and Mr H. W. Young.

Messrs Thornton and Thornton, of Oxford and London, were re-elected auditors for the ensuing year.

MONTE VIDEO WATERWORKS COMPANY, LIMITED.

PROGRAMME OF EXTENSIONS STARTED.

The fifty-first ordinary general meeting of the Monte Video Waterworks Company, Ltd., was held, on the 15th instant, at 52, Moorgate, London.

Mr James Anderson (the chairman) said :—At every annual meeting for many years past it has been my duty to explain to the stockholders the serious position that had arisen through delay on the part of the authorities in allowing the company to proceed with extensions of the works very urgently required. The long-requested permission to augment the supply was at length granted in November, 1928, and the company immediately set to work. It is hoped that we may be able to supply water through the new main by the close of the year, although the whole of the new works is not likely to be completed for some months later.

Besides the mains to which I have just referred, the extension programme includes new pumping engines, filters, and storage reservoir, all of which are being rapidly proceeded with.

Our first estimate of the cost of the extensions required, made some years ago, was £750,000. Since then the programme of new works to be carried out has been considerably enlarged, and the estimated cost is thereby increased to £920,000. Towards meeting this sum we have :—(1) The proceeds of the British Government and other securities we had at the close of 1928; (2) the amounts received in respect of the issue of 239,062 ordinary shares made last year; and (3) the proceeds of the new issue of shares about to be made; the three items making a total of £632,750. This leaves an apparent shortage of nearly £300,000, which amount we shall probably find by exercise of our borrowing powers, which we have been very slow to touch on, the last issue of debenture stock having been made as far back as 1914.

Turning now to the accounts for the past year, I would point out that the gross receipts for the year amounted to £381,799, a decrease of £11,863, and the working expenses to £197,373, a decrease of £5,180. The net receipts consequently amounted to £184,426, a decrease of £6,682. This decrease in net revenue is entirely due to the reduction in tariff granted a year ago, and would have been substantially greater but for an increase in the consumption of water. The consumption increased by 8.6 per cent., notwithstanding the fact that no additional services had been taken on during the year.

This proves the elasticity of our business and confirms our belief that a very large increase in the consumption may be looked for when the extensions now in progress are completed. The charges on the net revenue this year are substantially heavier than a year ago, owing to the additional amount required to pay the dividend on the new shares issued last year, amounting to £11,953, and there is also an important adverse item of £14,296 for loss on exchange. The latter item is one which has happily been absent from our accounts for some years past, and it is to be hoped will presently disappear.

After providing for all charges and for the usual dividends on the ordinary stock, the available balance of net revenue enables us to place £40,000 to the reserve, against £50,000 last year, and to carry forward £120,067, against £116,278 brought in from last year.

The report and accounts were unanimously adopted.

BANCA COMMERCIALE ITALIANA.

[LIMITED COMPANY INCORPORATED IN ITALY.]

NET PROFIT AND DIVIDEND.

SENATOR CRESPI'S REVIEW OF POSITION AND PROSPECTS.

The thirty-fifth annual general meeting of the Banca Commerciale Italiana was held, on March 29th, at the head office of the bank, Milan, Senator Crespi (Chairman of the Board of Directors), presiding.

The Chairman, in presenting the report for 1929 said: Gentlemen,—We should like to preface our usual survey of your bank's activities during the past year with a few comments on two highly significant developments which have just taken place in the realm of national finance. We refer, of course, to the recent reduction of the Italian Bank rate and to the removal of State control over the foreign Exchange market. Both decisions were highly desirable and have come at the right time. We, on our part, most heartily welcome these steps, not only for the sake of their immediate and practical utility, but also on account of their importance when they are viewed from the broader angle of financial policy and of the present general conditions. They demonstrate that the stabilisation of the lira is a definite and unchallengeable reality and that our circulation now rests on foundations which enable it to participate freely in the international movements of capital, or, in other words, that Italy is definitely taking up her place again in the normal working of the world's economic system.

EFFECTS OF MONETARY STRINGENCY.

Quite naturally, the acute monetary stringency of the past months has had an influence on the distribution of credit in many of the various fields and domains which go to form the economic structure of the country. Its effects were particularly felt among the smaller trades, which, more than others, were already suffering from the general decrease in consumption. Many were forced out of business. The long list of liquidations at times caused some dismay, but the fact cannot be gainsaid that this process of elimination is part and parcel of the final stage of recovery through which the country is now passing. There is, however, another and more impressive side to the picture: it is the progress of industrial rationalisation to which we have referred on many occasions and the pace of which has been accelerated in numerous directions. Banking itself has made a fresh advance on the road to greater concentration and efficiency.

Italy is thus bringing her economic organisation into line with that of the other great nations with whom she is about to co-operate in the Bank of International Settlements.

RESULTS AT FOREIGN AND HOME BRANCHES.

Our foreign branches and affiliations abroad — they now cover large parts of Europe, Africa, Asia Minor, as well as of North and South America—have given us full satisfaction. Their results have shown the strength of our organisation. As to the results of our home branches, they have, on the whole, been better than during the previous year; this in spite of the difficulties under which they had to work and notwithstanding the many failures in certain classes of customers which so far have never been a source of particular concern.

On June 7, 1929, there came into force the Treaty of the Lateran, signed early in February between the Italian Government and the Holy See. Simultaneously there was created in the Vatican City the Special Administration of the Holy See. You will be gratified to learn that our institution has had the honour of being called upon to act on behalf of the said Administration in Italy and abroad.

PROFITS AND ALLOCATIONS.

The profit and loss account, based as usual on the strictest and most conservative principles, shows a net profit slightly in excess of the previous year and enables us to maintain the dividend at the rate of Lire 65 per share, *i.e.*, at 13 per cent.; this, after passing to the reserve fund an amount of Lire 20,000,000, leaving a carry-forward of Lire 28,500,000.

We trust, therefore, that you will approve of the distribution of profits on the following lines:—

	Lire.
Net profit as per balance sheet	114,350,899·50
10 per cent. to the ordinary reserve, in accordance with Article 3 of the Royal Decree of September 7, 1926, No. 1511	11,435,089·95
	102,915,809·55
5 per cent. dividend on the capital of Lire 700,000,000	35,000,000·00
	67,915,809·55
5 per cent. to the board of directors	3,395,790·50
	64,520,019·05
out of which we propose paying an additional dividend of 8 per cent. on the paid-up capital ...	56,000,000·00
which will leave a balance of	8,520,019·05
to which is to be added the amount carried forward from previous years	28,481,934·00
	37,001,953·05
out of which we propose transferring to the ordinary reserve fund (in order to increase it altogether by the round figure of Lire 20,000,000) a further amount of	8,564,910·05
leaving a balance to be carried forward of ... Lire	28,437,043·00

The balance sheet was passed unanimously.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED.

RESULTS AND PROSPECTS.

The ordinary general meeting of the Ooregum Gold Mining Company of India, Ltd., was held, on the 16th instant, at the Cannon Street Hotel, London, E.C.

The Hon. Lionel Holland (the chairman) said that this meeting marked the company's fiftieth anniversary. The first crushing of 40 tons in 1880 had since expanded to nearly 4,900,000 tons. The initial output of 42 ozs. had grown to over 3,080,000 ozs.; and the first dividend of some £24,000 paid in 1890 had been followed by distributions exceeding £3,750,000.

At £76,555, the past year's profits showed a reduction of over £23,000 as compared with 1928, for reasons which did not come upon them unawares. A year ago he referred to a contraction in the length of the ore shoots in the deeper levels, a decline in the grade of ore stoped, and a call for increased development to avoid rapid depletion of reserves pending further discoveries.

The year's return of fine gold from all sources—82,483 ozs.—showed a decline of over 8,000 ozs. The revenue, after deducting royalty, was £340,053, or a fall of £34,000. On the other hand, working costs fell by over £10,000—a creditable achievement, especially as the tonnage increased, labour tended to become more costly, and rockburst damage had involved expenditure for repairs.

The balance of revenue over expenditure was £76,555, against £99,926 in 1928, increased to £88,156 by dividends received and the balance brought forward. They allocated £12,000 to depreciation of buildings, machinery and plant, £1,000 to writing down a holding in an Indian mining exploration syndicate, and £3,000 to the insurance and contingency fund. A final dividend of 6d. per share on the preference and ordinary shares made the year's total distribution 2s. and 1s. per share respectively—*i.e.*, 20 per cent. and 10 per cent. Some £13,000 would remain to be carried forward.

Interests in gold mining in Canada had been substantially written down from the reserve fund, but this must not be taken to imply that the more recent developments in the Central Manitoba Mines were wholly disappointing. Indeed, in some respects the achievements of the property at so early a period in its history had been distinctly encouraging.

At Orregum the development policy aimed at new discoveries at depth rather than exhausting the possibilities of each successive level. The payable ore reserves, estimated at the close of the year at over 270,000 tons—apart from a large tonnage of dumped tailings—were reduced by no more than 24,000 tons last year, but they must anticipate a larger diminution of ore reserves in the current year. Alternations of poor and rich horizons were a well-known feature of the Kolar mines, and there were indications that favoured the anticipation of the levels which they were approaching again registering an improvement in value.

Mr Kenneth B. Taylor described the mining position in detail and observed that in the 70th level the length of payable ore was 1,736 ft., averaging 1 ft. 8 in. in width and 22·5 dwt. in value. In the 71st level the length was 1,352 ft., the width 1 ft. 7 in., and the value 17 dwt., while in the 72nd level for 1,131 ft. the value remained at 17 dwt. over a width of just under 2 ft. They looked forward to a continuance of the improvement which was being developed in the centre of the property, and in Bullen's section it was not unlikely that the shoot would lengthen again once they got below the pegmatite zone which had intruded into the lode channel upon the last three levels on the northern fringe of it. The driving of the 73rd level would test some areas which had not been explored for 300 ft. in depth and in which it was hoped new ore shoots might be found to replace those which had become unproductive.

The report and accounts were unanimously adopted.

THE AGRICULTURAL MORTGAGE CORPORATION, LIMITED.

FACILITIES TO FARMERS AND LANDOWNERS.

WIDESPREAD DEMAND THROUGHOUT THE COUNTRY.

SIR HARRY GOSCHEN'S SPEECH.

The first annual general meeting of the shareholders of The Agricultural Mortgage Corporation, Ltd., was held on the 16th instant, at Stone House, Bishopsgate, London, E.C. 2.

Sir Harry Goschen, Bt., K.B.E. (chairman of the company), presided.

The secretary (Mr C. B. Palmer) read the notice convening the meeting, and the manager (Mr S. A. Bonner) read the report of the auditors.

The Chairman said: Gentlemen, the report and balance sheet have been in your hands for some time, but, before I move their formal adoption you will probably be interested to have some further particulars of the working of the corporation during its first year.

We opened for business on January 14, 1929, and it at once became apparent that the facilities which the corporation was formed to provide, met with a ready response from the agricultural community; indeed, the amount of applications we received in the first few weeks of our existence taxed the capacity of our staff to the utmost. Had it not been for the admirable arrangements which had been made in advance as the result of the forethought of our manager, Mr Bonner, and our accountant, Mr Jennings, the number of applications we received might have caused us considerable embarrassment. The organisation, however, I am glad to say, stood the strain well and we were able to deal, as far as the office in London here was concerned, expeditiously with all applications that were made to us.

There must of necessity be some delay between the receipt of an application for a loan and the final payment to the borrower of the amount granted. The examination of the title to the land pledged as security for the loan often entails the scrutiny of numerous and intricate documents and the inspection and valuation of the properties, as well as the legal formalities connected with the preparation and execution of the mortgage, involve time, care and attention. I think it is a matter for congratulation, however, that delay in the completion of our transactions has now been reduced to a minimum, and all formalities connected with loans are dealt with very expeditiously. For instance, money has been actually paid over to borrowers within thirty days of receiving the first application, but such expedition is only possible when all documents connected with the transaction are quite simple and devoid of all complication.

FIRST ISSUE OF DEBENTURE STOCK.

By the middle of May, 1929, all our funds available for lending on mortgage had already been paid out in long-term loans, and during the latter part of June the corporation decided to make its first issue of debenture stock. This took the form of a 5 per cent. stock redeemable between the years 1959 and 1989 to a total of £5,000,000. This debenture stock, which, I may remind you, is a full trustee security, was issued at par, and I am pleased to say proved an immediate success, the whole of the stock offered being readily absorbed by the public, and it is now, I am glad to say, quoted at a substantial premium.

VOLUME OF LOANS GRANTED.

Up to March 31st last we had completed 1,374 long-term loans on mortgage amounting to £4,168,590. The valuations of the properties forming the security for these loans totalled £6,605,495 and show not only a substantial margin on the amount lent, but, in addition to the other resources of the corporation, ample security for our debenture issue. In addition to the sums I have just referred to as actually paid out, further loans, totalling £1,137,655, have been granted by the directors, subject to the satisfactory completion of the legal formalities.

The applications for improvement loans have been somewhat small in number and amount, but advances totalling £8,781 had been completed by March 31st, and, in addition, the directors had sanctioned further loans to the amount of £12,991, subject to the completion of the improvements to the satisfaction of the Minister of Agriculture and Fisheries.

Up to the close of our financial year, 2,692 applications for loans amounting to a total sum of over £9,000,000 had been received by the corporation; of these, 243 were withdrawn by the applicants for various reasons, and of the remaining 2,449, loans in respect of 1,703 had been approved by the directors and accepted by the applicants; 144 were granted but were not accepted by the applicants, usually because the amount we were able to grant was insufficient to repay existing indebtedness; while 291 of the applications received proved unsuitable, and 311 are still under consideration.

Payments by the farmers of interest and principal have been punctually made, and already amount to £67,873, while payments overdue for more than seven days total less than £650.

Our loans are well spread over the whole country and advances have been made on the security of land in every county of England and Wales except one, but perhaps the counties of Lincolnshire, Yorkshire, Somerset, Northumberland and Cambridgeshire have appreciated the facilities offered to a greater extent than other districts.

The smallholder has had consideration equally with the owner of a large acreage; indeed, we have granted loans of even £100; and advances have been made on properties as small as two or three acres.

THE ACCOUNTS.

Turning to the balance-sheet, I think that most of the items are self-explanatory. The special reserve is set up in accordance with the articles of association of the corporation to accumulate in sixty years by half-yearly instalments, with interest at 4 per cent., an amount sufficient to repay the Government loan of £650,000, which is free of interest for that period. Among the other investments is included an amount of £4,838 12s. 11d. of the corporation's own debentures, which have been purchased under par to form the nucleus of a sinking fund for the repayment of the corporation's own debenture stock.

The profit and loss account shows, after charging all expenses and making provision for income tax, a net profit of £33,034 11s. 7d. which I think must be regarded as a very satisfactory result of our first year's working, particularly in view of the fact that we paid on January 1st a full six months' interest on our debenture stock at the rate of 5 per cent. per annum, notwithstanding the fact that the proceeds of the debentures were only received by us in instalments spread over some months (a concession to the debenture holders which we estimate cost the corporation some £21,000).

We have appropriated the above-mentioned balance of profit and loss as follows: To writing off the whole of the preliminary expenses of the company, £6,918 8s. 3d.; to writing off a portion of the expenses of issue of our debenture stock, £7,801 9s. 4d.; in eliminating the entire cost of furniture and fittings, £3,249 2s. 4d. We transfer £2,664 to the special reserve fund, as is required by our agreement with the Ministry of Agriculture, and after transferring £10,000 to the general reserve fund, we are left with a balance of £2,401 11s. 8d. to carry forward to next year's account.

We have felt that it is a far sounder policy in the first year of our existence to make these allocations, and to initiate a general reserve fund rather than to pay our shareholders a small dividend; but, although one is unwilling to forecast the future, there is no reason to suppose that, given normal conditions, we should not be in a position in future years to make our shareholders some return for the money they have provided for the enterprise.

CONTINUED DEMANDS.

Applications for loans continue to reach us by every post, and I think I may say that the volume of business which has been submitted to the corporation affords an ample justification for the opinion of those responsible for the scheme that there was a real demand among the farming and land-owning community for facilities for obtaining long term loans on the security of land, and I venture to think that the experience of our first year has shown that the formation of the Agricultural Mortgage Corporation has done much to meet the requirements of an important and hardly-pressed section of our industries.

I cannot close these few remarks without paying a well-deserved tribute to the work of our manager, Mr Bonner, and indeed to the whole of our staff. The work has been entirely new to them all, and at times very arduous, and it is only by their loyal co-operation and zeal that we have been enabled to surmount the difficulties which a new class of business presents, and thus achieve the smooth running and efficient service we are able to afford our clients.

Gentlemen, I now beg to move: "That the report and accounts, as audited and certified by the corporation's auditors, now before the meeting, showing the position of the corporation's affairs as at March 31, 1930, be approved and adopted."

Sir Otto E. Niemeyer, G.B.E., K.C.B. (deputy chairman), seconded the resolution, which was carried unanimously.

Sir Harry Goschen, Bt., K.B.E., and Mr William Gavin, C.B.E., were re-elected directors of the corporation, and the auditors (Messrs Peat, Marwick, Mitchell and Company) were re-appointed.

A hearty vote of thanks to the directors and staff for their services during the past year, and to the chairman for presiding, concluded the proceedings.

UNITED MOLASSES COMPANY, LIMITED.

SOUND AND REMUNERATIVE DEVELOPMENTS.

FREE BONUS ISSUE.

The fourth annual general meeting of the United Molasses Company, Ltd., was held, on the 11th instant, at Winchester House, Old Broad Street, London, E.C., Mr F. K. Kielberg (chairman and managing director) presiding.

The Acting Secretary (Mr James Don) read the notice convening the meeting and the auditors' report.

The Chairman, who on rising was received with applause, said: The report this year is so informative that I propose to confine my remarks to answering questions raised by shareholders in connection with the report and accounts.

The only point that has been raised in connection with the accounts refers to the difference between the profits remaining in associated and subsidiary companies as at December 31, 1928, amounting to £170,659 17s. 3d., and the balance of undistributed profits remaining in subsidiaries as at December 31, 1929, amounting to £115,919 1s. 3d. This difference is accounted for, and more than offset, by the fact that £137,043, representing trading profits earned by subsidiary companies during 1929 prior to the date of acquisition by us, have been carried to capital reserve in the consolidated accounts.

The other points raised mainly refer to the possibility of molasses being replaced by other articles, the rates allowed for depreciation, the company's policy of making transport of oil a definite part of our business, and the wisdom, or otherwise, of the bonus issue.

To your directors it appears inconceivable that the use of molasses can ever be replaced by substitutes or by synthetic processes. Molasses is a by-product that will continue to be produced irrespective of the price at which it can be sold, for the simple reason that sugar cannot be manufactured without producing molasses. We feel satisfied that synthetic alcohol can never do more than prevent molasses prices from rising beyond economic limits, and a regulating factor of this nature would benefit rather than endanger our business. In this connection may I once more remind you that we are not producers of molasses, but primarily a transport and trading company.

ALLOWANCES FOR DEPRECIATION.

In replying to questions relating to depreciation, I should like to state that the suggestion that our new motor tankers will last for only 14 or 15 years need not disturb you in the least. Based on our own experience and that of other molasses companies, we have no hesitation in claiming that our new ships will have a life of at least 25 years. Our rate of depreciation of 6 per cent. on first cost is therefore ample, and, as a matter of fact, considerably in excess of the rate of depreciation adopted by most companies.

The Oil Transport Company, referred to in letters received from several shareholders, do not depreciate their ships at the rate of 13 per cent., but at the usual rate of 5 per cent. on first cost, as will be found by reference to the report of that company's last annual meeting. There is, strictly speaking, no reason why we should charge a higher rate except that in matters of depreciation we like to be ultra-conservative.

I regret that no reference was made in the directors' report to the rate of depreciation adopted in connection with the company's storage tanks, plant, machinery, etc. The rates allowed under this heading vary in accordance with the nature of the assets, from 4 per cent. to 12½ per cent. based on original cost, and are in all instances liberal and in full accord with the conservative policy the company is following in these matters. A list of the rates of depreciation is not given because it would convey no useful information without lengthy explanations.

REVENUE FROM DIFFERENT SOURCES.

I regret that we cannot see our way to analyse the various sources of income which make up the company's total net profits. Some shareholders would like to know what proportion of our profits arises from each of the four main uses of molasses, others would like an analysis showing the profits made in different parts of the world, and others inquire what profit is made on carrying oil. It would obviously not be in the best interests of the company to supply such an analysis, but I may mention that profits from carrying oil last year only accounted for a comparatively small percentage of the company's total profits, as, owing to the limited tonnage at our disposal, we were unable to carry more than a few cargoes of oil. You will have realised from the directors' report, however, that the carriage of oil has become a definite part of our business and, thanks to our increasing fleet, we hope, from this year onwards, to derive greater revenue from this source.

Some shareholders feel concerned about the size of our shipbuilding programme because they have heard that too many tankers are being built, but I feel certain that no one with first-hand knowledge of the tanker market feels any anxiety on this score. The recurring periods of high tanker freights have since the war invariably led to building programmes in excess of the immediate needs of the market, and have been followed by periods of low rates of freight. The present outburst of building activity is likely to have the same consequence, and I think it is fair to say that most people expect lower rates to prevail during the coming twelve to eighteen months until the requirements of the expanding oil trade again overtake the available supply of tanker tonnage. We are regulating our transport of molasses with this in mind.

BOARD'S SHIPBUILDING POLICY.

In this connection I feel it will interest you to know that our building programme was based exclusively on our own requirements, and was not influenced in any way by boom conditions. On the contrary, practically all our tankers were ordered at times when freights were low.

Our tankers form a very important part of our equipment, and their future profitable employment does not cause us one moment's anxiety or doubt. We have the very great advantage of owning a fleet of entirely modern motor tankers of an average age of less than two years. This is an advantage which will probably be fully appreciated only by owners who have experience of operating old and new tonnage. Our fleet will compare favourably with any fleet of tankers afloat, and it is so much more efficient and economical than at least one-third to one-half of the available tanker tonnage that it seems hardly possible that for years to come freights could fall to a level where our vessels, even outside our own business, could not make a profit sufficient to provide for depreciation and a very fair return on the capital invested in them.

PROPOSED BONUS ISSUE.

The next point with which I should like to deal is the question of the proposed issue of one free bonus share for every two held. As a precautionary measure, during our years of development, we adopted the customary practice of issuing ordinary shares at a premium to our shareholders, who thus provided a large capital reserve, available in case of unexpected difficulties in connection with our programme of expansion.

Your directors now feel satisfied that the various extensions and developments for which the capital was raised have proved themselves sound and remunerative, and the proposed bonus issue is naturally based on the conviction that it is in the best interests of the company that the amount of capital ranking for dividend should be brought into line with the capital actually subscribed by the shareholders and employed in the company's business. Personally, I believe that there is more to be said against than in favour of the practice of issuing shares at a premium to shareholders.

I now beg to move "That the directors' report and accounts for the year ended 31st December, 1929, be received and adopted, and that a final dividend for the year of 12½ per cent., less tax, together with a cash bonus of 2½ per cent., less tax, be declared payable on the 30th April, 1930, to the holders of the 2,984,087 ordinary shares entitled to participate therein, registered in the books of the company as on the 11th April, 1930."

Sir James A. Cooper, K.B.E., seconded the resolution, which was carried unanimously.

BONUS RESOLUTIONS.

The Chairman: I now beg to propose the following as an extraordinary resolution:—"That the share capital of the company be increased from £6,000,000 to £8,000,000 by the creation of 2,000,000 new shares of £1 each, of which 1,000,000 shares shall be 6 per cent. cumulative preference shares ranking in all respects *pari passu* with the existing 6 per cent. cumulative preference shares in the capital of the company, and 1,000,000 shares shall be ordinary shares, and that the said additional preference and ordinary shares may be issued at such times and on such terms as the directors may determine."

Mr H. T. Schierwater seconded the resolution, which was unanimously adopted.

The Chairman: I now beg to propose the following as an ordinary resolution:—"That it is desirable to capitalise the sum of £1,492,044, part of the sum standing to the credit of the capital reserve account, and accordingly that such sum be capitalised by applying the same in paying up 1,492,044 ordinary shares of £1 each and by distributing such ordinary shares as fully paid up amongst those persons who were registered as the holders of the issued ordinary shares in the company's capital on the 11th day of April, 1930, in proportion to the number of such shares held by them respectively. No fractions will be issued."

Sir James A. Cooper seconded the resolution, and it was carried unanimously.

On the motion of Mr William Blackwood a cordial vote of thanks was accorded to the chairman and directors.

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES, LIMITED.

NOTEWORTHY PROGRESS.

THE CONTINUED DEMAND FOR FLATS.

The twentieth annual general meeting of the London County Freehold and Leasehold Properties, Ltd., was held on the 16th instant, at Winchester House, London.

Mr A. C. Bourner, F.C.A., the chairman of the company, who presided, said that the accounts for this, their fifth year as a public company, clearly illustrated their continued prosperity and progress. The annual net revenue of the company had increased in that space of time from £43,510 to £175,025, and their dividend from 8 per cent. to 10 per cent. on a very much larger capital, and large reserves had been accumulated. The company was in a stronger financial position than ever before.

The recommendation of a dividend of 10 per cent. per annum, while reserving and carrying forward out of the past year's net revenue £49,036, was a very conservative policy, they would agree, but the directors considered it wiser to conserve the company's resources rather than pay maximum dividends. The company's income was in no sense whatever due to dealing in or reconditioning property for a profit on sale, and they did not own converted or service flats. Their success was not the result of a landlord acting harshly towards tenants in obtaining immoderate rents, but was due to careful selection of properties, and to losses on empties being quite nominal.

On the directors' valuation of the subsidiary properties there was a surplus of assets over liabilities of £852,753, represented by 561,500 shares of £1 each, and these shares the company had acquired for £736,001, or some £116,752 less than their value of the surplus. The pre-war cost must have been materially in excess of the value now put upon the properties. In addition to the freehold and leasehold properties, the subsidiary companies had "other assets" of a liquid character (cash, gilt-edged investments, etc.) of the net value of £180,000, so that the purchase money for the equities on the properties might be taken at £550,000, for which the company held 561,500 £1 shares. If they were to consolidate the assets and liabilities of the subsidiaries with their own, the joint position would be as follows: Assets, £4,639,271; liabilities (other than share capital) £2,400,037; surplus, £2,239,234, representing the £1,500,000 shareholders' capital and a surplus of £739,234; or with the undisclosed estimated further surplus on valuation of £328,828; a total surplus of £1,068,062.

DIVIDEND PROSPECTS.

The directors, while continuing a conservative policy, hoped to increase the next interim dividend from 4½ per cent. to 5 per cent., and anticipated paying a final dividend of 6 per cent. next year, making 11 per cent. The board found that the demand for the company's flats continued; with their subsidiary companies they now controlled over 4,000 flats, of which 1,064 with rentals under £300 per annum, were occupied by statutory tenants, indicating the existence of a secret reserve of a valuable character when the Rent Restrictions Acts no longer operated. That the company's tenants were satisfied that their rents were moderate, was evidenced by the fact that on March 25th last there were less than twenty sets of premises available for letting. The company had had an exceptional year of development and progress, and their available funds would now soon be fully utilised. The directors recommended shareholders to authorise, accordingly, the increase of the share capital by a further 500,000 shares, so that they might be in a position to deal with propositions as they might be available.

UNBROKEN RECORD OF EXPANSION.

The directors suggested that this company's history of unbroken expansion and progress for over twenty years warranted scrutiny and that its policy of expansion was justified by its past records and its present organisation to deal with it. Being a company capable of raising capital they had submitted to them almost every flat property proposition for sale, and therefore had unique opportunity for selection. Members should realise the importance of the following facts: (*a*) The revenue was over 8 per cent. on the total value of their properties, proving that the funds had been invested remuneratively; (*b*) only 42¾ per cent. of the value of their assets had been borrowed on debenture or mortgage, which was undoubtedly a very low average; (*c*) the net revenue was over 13 per cent. on the share capital for the time they had had it in use; (*d*) their annual dividend might be looked on as reasonably stable at not less than 10 per cent., with a good margin for the creation of large reserves; (*e*) the company's flats were in demand and not over-rented.

The report and accounts were unanimously adopted and the proposed increase in the capital was unanimously approved.

BEIRA RAILWAY COMPANY, LIMITED.

AMALGAMATION APPROVED.

A meeting of the holders of certificates of title to shares in the Beira Railway Company, Ltd., issued by the British South Africa Company under a deed poll in 1893, was held, on the 16th instant, at Winchester House, Old Broad Street, London, E.C., to consider a resolution approving a draft agreement in connection with the proposed amalgamation of the Beira Railway Company, Ltd., and the Beira Junction Railway (Port Beira to Fontesville), Ltd.

Baron Emile B. d'Erlanger, who presided in the absence of the chairman, Sir Henry Birchenough, said that the British South Africa Company and the Moçambique Company, being the registered holders of almost all the Beira Railway shares, could have carried the amalgamation through, subject to a certain consent of the court, without calling any meetings of the certificate holders, but they felt that the proper course was to ascertain if the proposals met with their approval. The scheme had been the subject of long and careful deliberations, and the amalgamation of the two lines was obviously desirable. If the ownership by two separate companies of a trunk and direct line between the seaboard and the Rhodesian frontier had at any time been an anomaly, it had ceased to have any sense whatsoever after the sale of the Port assets to the Port company; hence the amalgamation scheme, which obliterated the danger of conflicting interests between the larger company and the one holding direct access to the Port.

The scheme was, in effect, a purchase by the Beira company of the undertaking of the Junction company for £596,000. The income which the Beira company would thereby obtain gave a return of approximately 7½ per cent. on the purchase price—a not unattractive investment. There were also greater advantages. It was obviously advantageous to own and control a continuous line of railway from Umtali right down to the Port of Beira. If the traffics went on increasing, the Beira route would undoubtedly require more capital, which it would not expect to procure or raise on favourable terms unless its financial position was strengthened. The amalgamation would strengthen the whole structure of the Beira company, from the assets point of view, from the earning point of view, and from the reserve and dividend point of view. The fixed capital charge per mile of line would be reduced; the surplus earnings of the Beira company would be increased, thereby providing a margin of 80 per cent. over and above the £175,000 required for the prior charges, whereas the present margin was only 60 per cent.

The resolution was adopted.

WORLD AUXILIARY INSURANCE CORPORATION, LIMITED.

BOARD'S SOUND DIVIDEND POLICY.

The eleventh ordinary general meeting of the World Auxiliary Insurance Corporation, Ltd., was held, on the 15th instant, at Winchester House, London.

Captain the Right Hon. C. C. Craig, D.L. (the chairman), said said that with regard to the fire, accident and general account, the fund brought forward from 1928 amounted to £130,478, to which was added premiums £274,341, and interest £5,160, which latter was transferred to profit and loss account. After deducting claims paid and outstanding, and expenses, there remained a balance of £129,713, or 47.2 per cent. of the premium income, against 47.3 per cent. in the previous year. He thought those figures were satisfactory when they remembered the depressed condition of the fire market during the past year.

As to the marine account, after deducting claims and expenses and transferring £22,776 to profit and loss account, there remained £189,952, or 114.8 per cent. of the year's income, to bring forward. To be able to make that transfer to profit and loss and at the same time retain a larger fund than in the previous year, notwithstanding that the difficulties in the marine market still continued, was a matter for congratulation.

The balance brought into the profit and loss account was £29,916, and the available total was £80,688. They had transferred £20,000 to investment reserve fund and £5,000 to reserve for Government taxation and other charges. That left £48,743 from which they recommended the payment of a dividend of 6¼ per cent., free of income tax. The balance sheet showed that their investments, taken at cost, amounted to £844,634, an increase of about £5,000. The account also showed an increase of over £40,000 in their cash on deposit. The market value of the investments on December 31st showed a depreciation of £33,000, which had since been entirely wiped out owing to the subsequent increase in the value of their securities.

They regretted that for another year they had been unable to recommend the payment of a higher dividend, but they felt that, so long as the difficulties in the marine and fire markets continued, and until the outlook for insurance generally became brighter, they were bound to continue their policy of prudence and caution and of building up of larger reserves.

The report and accounts were adopted.

GODFREY PHILLIPS, LIMITED.
VERY SATISFACTORY TRADING RESULTS.

The twenty-first annual general meeting of the ordinary shareholders of Godfrey Phillips, Ltd., was held, on the 16th instant, at the registered offices of the company, 112 Commercial Street, London, E.

Mr Arthur I. Phillips (the managing director) occupied the chair.

The Secretary (Mr A. Morris Phillips) read the notice convening the meeting, and the report of the auditors.

The Chairman said: Ladies and gentlemen,—To-day we come of age—this is the completion of twenty-one years of the limited liability company, and the eighty-sixth year of the firm of Godfrey Phillips and Sons, and I am glad to be able to welcome you, but regret that owing to severe illness and an accident the full board is not present with me to meet you, to receive the congratulations on our majority and upon the very satisfactory balance-sheet and trading results of the past year. The profit we are able to show you, after deducting directors' remuneration, amounts to £183,741, against £158,463. (Hear, hear.)

MORE BUSINESSES ACQUIRED.

These are days of rationalisation, and your directors, alive to this fact, have in the past, and again at the end of last year, secured control of a few of their most important independent competitors, thus reducing the multiplicity of factories, and obviating the duplication of staffs, selling depots and management. I would like to refer to the recent acquisitions. First is that of Messrs. Fairweather of Dundee, a business which was established in 1835, and whose reputation for quality goods in North Britain stands equally high with that of Messrs. Thomson and Porteous, whose share capital, I might mention in passing, is 100 per cent. ours to-day.

Towards the end of last year, the opportunity presented itself of acquiring Messrs Cohen, Weenen and Company, Ltd., and at the same time of securing for this company the services of Mr Arthur Donn, the chairman and managing director, whose considerable knowledge of the buying of raw material, and knowledge of the tobacco trade generally, will be of inestimable advantage to this company. Messrs Cohen, Weenen and Company, Ltd., as you know, is a company formed some two or three years ago, to succeed the original partnership, and has been even more successful as a company than it was in the days of the partnership. At the same time, and as Mr Donn is chairman, we purchased the control, that is to say, more than 50 per cent. of the ordinary shares of the United Kingdom Tobacco Company (1929), Ltd., a company which owns the businesses hitherto known as Major Drapkin and Company, Ltd., the manufacturers of the justly celebrated "Greys" cigarettes; Messrs Sarony and Company, the manufacturers of "Sarony" cigarettes; Messrs. Marcovitch and Company, the manufacturers of "Black and White" cigarettes, and other high-class cigarettes; and Messrs B. Muratti and Company, Ltd., who, with the last-mentioned firm, were the only manufacturers of importance in this country of cigarettes of the highest class except Messrs Abdulla.

CAPITAL INCREASE FORESHADOWED.

We have financed these purchases out of the resources of the business, and by the issue at a premium of the authorised 100,000 £1 ordinary shares which remained on the last balance-sheet to be issued. This is not the time for an issue, except on expensive terms, of shares of any denomination, but we shall wish at the opportune moment to increase the capital of this company to be able to repay the loan from the bank, and to be in a position to acquire by means of a transfer or exchange of shares, any competing business of which it might be advantageous for us to secure the control. With this in view, we have resolved and will send out notices convening a meeting to increase the capital by the creation of 200,000 "C" preference shares and 300,000 £1 ordinary shares, making the ordinary capital £1,000,000.

Your company and its associates have been doing a very big business in Australia, but their goods have been selling at 50 per cent. more than locally-made cigarettes, and just recently it has been enacted that we be allowed to trade only to the extent of half of our last year's volume. After careful consideration, I decided to manufacture in Australia itself. To avoid double taxation, it is necessary to trade as a separate entity there, so Godfrey Phillips (Australia) Proprietary, Ltd., has been formed.

Where general trading conditions are concerned, I am by no means a pessimist. I fully believe that the slump we have been experiencing will be followed by a gradual sound improvement, and I see no reason, therefore, to contemplate a less satisfactory year on the whole. Though we may have to contend with considerable difficulties for some time, the economies we are putting in hand, the large dividends we shall receive from our subsidiaries, our strengthened position, the result of a conservative policy in the past—makes me believe with confidence that we shall do as well in 1930 as in 1929. (Applause.)

The report and accounts were adopted.

THE BRITISH THOMSON-HOUSTON COMPANY, LIMITED.
DIVIDEND RAISED TO 5 PER CENT.
INCREASE IN ORDERS AND SHIPMENTS.

The thirty-fifth ordinary general meeting of the British Thomson-Houston Company, Ltd., was held on Thursday, the 16th instant, at the offices at Crown House, Aldwych, London, W.C. 2.

Mr William C. Lusk (the Chairman) presided.

After the notice convening the meeting was read, the chairman referred with great regret to the resignation of Mr H. C. Levis, who had been connected with the company for nearly 28 years and had been chairman from September, 1916, to June, 1929.

He also referred to the appointment to the board of Sir Felix J. C. Pole, Chairman of Associated Electrical Industries, Ltd., and of Mr Gordon M. Campbell.

THE YEAR'S RESULTS.

He then reviewed the figures in the balance sheet and profit and loss statement, and observed—The profit for the year after deducting all expenses and charges other than interest on debentures and loans, was £458,381 (as compared with £422,729 for the previous year), to which there is to be added the amount brought forward from the previous year, £203,066, making the total to be dealt with £661,447. After deducting interest on debentures and loans, £136,621, depreciations £153,863, and directors' fees £1,700, there is a balance left of £369,262. Out of this a dividend on the preference shares at 7 per cent. per annum less income tax has been paid, amounting to £84,000, which leaves £285,262, and the directors recommend the payment of a dividend on the ordinary shares at the rate of 5 per cent. per annum less income tax (as compared with 4 per cent. per annum for the previous year) which amounts to £80,000 and leaves to be carried forward to the new account £205,262 as against £203,066 for the previous year.

The expenditure for additions during the year amount to £149,720 (as compared with £137,030 for the previous year) and against this there was written off for depreciation £140,125 (as compared with £105,930 for the previous year).

EXCESSIVE COMPETITION.

Both the orders received and the shipments from the factories during the year were greater than for the previous year, but the continuation of excessive competition at home and abroad resulted in an unreasonably low level of prices.

This is the only important electrical manufacturing country in which the manufacturers receive no protection in their home market and one has only to examine the balance sheets of the large electrical manufacturers in other countries to see the advantage to them of a protected home market and the disadvantage at which the British manufacturer is placed. Not only is the product of the labour of our workmen not protected in our home market against competition from outside, but due to the protection of the markets in the other important manufacturing countries, it is next to impossible for the British manufacturer to sell his products there. In addition to this manufacturers in Continental countries have the advantage of lower rates of wages than are paid in this country.

The new Budget, particulars of which were announced yesterday, places serious additional burdens upon the already heavily handicapped British manufacturer.

Co-operation with the other companies of the Associated Electrical Industries Group was pursued during the year, and that policy would be steadily followed and extended. One result of that policy which might be mentioned was the transfer of the wiring supplies and radio businesses to the Edison Swan Electric Company, Ltd., in August last. Many articles of these lines continue to be manufactured by the B.T.H. Company, but all selling and distribution is now done by the Edison Swan Electric Company, Ltd.

RECENT ACTIVITIES.

The company continues to maintain the position it has long held as a leader in development in the electrical engineering field, a few examples of its recent activities being as follows:—

The turbo-alternator set now being manufactured at Rugby for an important lighting and power company in America which will use steam at a temperature of 1,000 deg. Fah., the highest temperature for which a steam turbine has ever been built.

The manufacture for the Ford Motor Company's new plant at Dagenham of a turbo-alternator set of 30,000 kw. capacity to operate at a steam pressure of 1,200 lbs. per sq. inch, this being the largest turbine yet built in this country for such a high steam pressure.

The manufacture for the London Power Company's Station at Battersea of a turbo-alternator set of 67,200 kw., or about 100,000 horse power, a twin set being manufactured by an associated company, the Metropolitan-Vickers Electrical Company, these being he largest generating units yet built in a British factory.

ELECTRIC PROPULSION OF SHIPS.

The Chairman stated that the company had been pioneers in this country of electric propulsion for ships, and referred to turbo electric propelling equipment supplied ten years ago to the first of the electrically driven ships of the United Fruit Company, and to the turbo electric equipment supplied to the P. and O. Company for the "Viceroy of India," the largest passenger liner yet equipped for electric drive, which was put into service during the past year, the results obtained being so highly satisfactory that Lord Inchcape had decided to employ the same form of drive for two still larger vessels for the P. and O. Australian service, the turbo electrical equipment for which the B.T.H. Company are now manufacturing.

The company also had in hand orders for other ship owners for turbo electric equipment for three fruit carrying ships, and two equipments for Diesel-electric driven oil tankers, these being repeat orders of similar equipment previously supplied.

The company received during the year a share of the orders placed by the Central Electricity Board for 132,000 volt switchgear and transformers and the first of the 132,000 volt sub-stations to be put into service, namely, the Bonnybridge Sub-station of the Scottish Grid, was equipped with switchgear of the company's make.

AN ELECTRIC TOTALISATOR.

In collaboration with the engineers of the Automatic Telephone Manufacturing Company, Ltd., the company had developed and successfully demonstrated an all-electric automatic totalisator, and the Racecourse Betting Control Board have placed contracts with them for totalisators for Cheltenham, Leicester, Wolverhampton, Pontefract and Newmarket.

The company's well-known "Mazda" lamps continued to increase in popularity and in use.

Finally, the Chairman referred to the hearty appreciation of the spirit of loyalty and the excellent work of the company's employees in all departments, who have at all times endeavoured to promote the company's interest.

The report of the directors, together with the company's accounts to December 31, 1929, were approved and adopted.

Colonel T. W. Pragnell, D.S.O., was elected a director of the company, and the retiring directors and auditors were re-elected.

LONDON ELECTRIC WIRE COMPANY AND SMITHS, LIMITED.
CONTINUED PROGRESS.

The twenty-first annual general meeting of the London Electric Wire Company and Smiths, Ltd., was held on the 15th instant at the Hotel Victoria, Northumberland Avenue, London.

Sir George H. Fisher-Smith, J.P. (the chairman), after referring in detail to the accounts, said: if our Investments were realised at current market prices the total obtained would be higher than shewn on the Balance Sheet. The total cash at December 31 1929, amounted to £115,259, which, considered together with the easily realisable investments previously mentioned, shows a very strong liquid position.

I think you will agree with me that the results are very satisfactory. The business of your company has continued to expand during the year under review, in face of increasing competition.

Throughout the year competition in home and overseas markets has increased, and it has been necessary to meet this increased competition by making a thorough review of each undertaking and every department which it contains, introducing, wherever necessary, improved methods and the most up-to-date machinery, whilst at all times exercising the strictest economy.

I think you can look to the future with every confidence, knowing that the financial position of this company is extremely sound, and those who are responsible for its management are ever watchful of changing conditions which may affect your interests.

The report and accounts were unanimously adopted.

The London Electric Wire Company and Smiths Limited was formed in 1909, to amalgamate the copper department of Frederick Smith and Company, Wire Manufacturers, Limited, of Halifax, established in 1859, and the London Electric Wire Co., Limited, founded in 1879.

The company has modern and well-equipped factories in Leyton and Manchester, and is the parent company to The Liverpool Electric Cable Company, Limited, in Bootle, Liverpool.

At the Leyton Works are produced all kinds of electric wires insulated with cotton, silk, enamel, asbestos and paper, and these products are recognised in the industry as representing the highest standard of quality.

A newer feature is the rapidly extending range of "Lewcos" (regd.) wireless accessories, which, in common with the other products of the company, are the best of their kind.

THE COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED.
CONTINUED PROGRESS AND PROSPERITY.
NEW FIELDS OF OPERATIONS.

The thirty-sixth ordinary general meeting of the County of London Electric Supply Company, Ltd., was held at River Plate House, Finsbury Circus, London, E.C. 2, on Wednesday, April 16, 1930. Sir Bernard E. Greenwell, Bart., presiding in the unavoidable absence of the Chairman and Managing Director, Sir Harry Renwick, Bart., K.B.E.

The manager and secretary, Mr John C. Dalton, having read the notice convening the meeting and the auditors' report, Sir Bernard Greenwell read the speech prepared by Sir Harry Renwick as follows: You are no doubt aware that the ideal electric supply undertaking is one that can show the greatest diversity over the widest area, and I venture to claim that virtue for your company, seeing that we have an area of approximately 1,500 square miles. If we include the areas of our associated companies to whom we give bulk supplies, the total area over which your company has supply rights is upwards of 3,200 square miles. (Hear, hear.)

ACCOUNTS.

There is an increase of 51,448,147 in the units sold for the year, making a total for all purposes of 374,910,784 units. There is an increase of over 46,000 kilowatts in the new business secured, as compared with some 40,000 kilowatts for last year, making a total of over 333,000 kilowatts connected, while there is an increase of over 40,000 in the number of new consumers obtained during the year, as compared with an increase of 20,000 consumers for the preceding year.

The net revenue is satisfactory, seeing that we are proposing to pay an increase of one per cent. in the dividend, and that the carry-forward is some £80,000 in excess of last year's figure.

The revenue from sale of current, after making provision for bad and doubtful debts, is £1,678,522, while the receipts from other sources amount to £195,526, being a considerable increase over last year's figure, with the result that we get an increase of £14,889 in the total revenue.

To the reserve account for taxation we are placing the sum of £10,000, and to the reserve for investments we are placing the sum of £15,000, while the reserves for depreciation and sinking funds under the 1925 Act absorb the sum of £284,953. This leaves a balance for appropriation of £1,003,058, out of which the interim and final dividends on the preference shares, amounting to £199,291' have been paid, and the interim dividend on the ordinary shares, and we are proposing to pay a further 8 per cent. on the ordinary share capital of the company, making 11 per cent. for the year on the capital as and when issued and paid up, thus leaving a balance to be carried forward of £445,036 10s., which, as you know, is subject to the operation of the 1925 Act.

I agree that our consumers should share in our prosperity, the reductions made during the past year both in our flat rate and two-part tariff charges amounted approximately to no less than £265,000.

BALANCE SHEET.

It will be found that the net amount expended under the Acts and Orders of the company at December 31st last was £12,569,950.

The company's investments show an increase of £343,074, which is due to the acquisition of further interests and further advances to subsidiary companies.

Turning to the liabilities side of the balance sheet, it will be found that the preference shares stand the same as in the previous accounts, while the ordinary share capital issued has increased by £1,323,845.

ENGINEERING ASPECTS.

As to the technical and engineering side of your undertaking the Barking power house is, as you know, the heart and pulse of your business, around which most of the problems we have to deal with revolve, either directly or indirectly. The second section of the power house was not in full commercial use before the close of the year, but I am able to record now that it has since been practically completed, and is to-day running satisfactorily.

In connection with distribution, I may add that a considerable amount of work has been done in our Essex area during the year, and supplies have been established at a number of points, so that there again we are more than fulfilling our statutory obligations, and I venture to say that only an organisation such as ours could have put into being the development of the county of Essex in so short a time.

PROGRESS OF THE COMPANY.

We have acquired control of the Folkestone undertaking. We have also purchased the Wickford undertaking, and have obtained

a Special Order for Burnham-on-Crouch and district, while, under a friendly arrangement with the Barking Urban District Council, we have taken a transfer from that council of part of their area of supply.

Turning again to the figures of our own company, you will see that we show an increase for 1929 over 1928, as regards units sold for all purposes, of 16 per cent. This compares with the national increase of 13 per cent.

You will see on the fringe of London small places which were, at the end of the war, just mere villages or small settlements. To-day Coulsdon and Purley, Sanderstead, Morden, Buckhurst Hill, Romford, Woodford and similar places in our areas of supply are now highly urbanised, and have a large share of the 123,000 new houses which have been built since 1926, and a correspondingly large share of the new population of over 600,000 people who have settled on the outskirts of London and in our areas of supply.

You will gather, therefore, that we have not all our eggs in one basket, and that the most intensive efforts have been made to popularise electricity supply for domestic purposes, with great success, and that effort is to be continued throughout our areas, for, as you see for yourselves, the potentialities of our areas are such as to be beyond calculation.

PROGRESS FOR THE CURRENT YEAR.

As to the progress for the current year, I am still optimistic, and in spite of the extraordinarily mild winter which has been experienced, I find that, as a matter of fact, for the first three months of this year ended March 31st there is an increase of 20 per cent. in the units sold over the corresponding period last year, an increase of 10,051 in the kilowatts of new connections, while the number of new consumers has increased by 4,447. Our head office recently dealt with 500 new applications for supply in one day, mainly from our outside areas which are proving so productive. (Applause.)

The report and accounts were adopted, and a vote of thanks to the directors, staff and employees was unanimously carried.

RIO TINTO COMPANY, LIMITED.

INCREASED INCOME AND A BONUS.

The fifty-seventh ordinary general meeting of the Rio Tinto Company, Ltd., was held, on the 14th instant, at the Cannon Street Hotel, London.

The Rt. Hon. Sir Auckland Geddes, G.C.M.G. (the chairman), in moving the adoption of the report and accounts, said :—In the revenue account you will see that we have considerably reduced our administrative expenses as compared with last year; that we have allowed £278,512 for depreciation, and that our income is better. Here I must pause for a moment to contradict a statement I have seen in print that part of our profit resulted from the sale of stocks and shares. It did not. Appreciations and depreciations of capital value realised on the sale of investments are applied to the book cost of the remaining investments.

As a result of our happier experience in 1929, I shall have to propose to you that, in addition to paying the usual dividend on the preference shares, we pay a final dividend of 25s., plus a bonus of 5s. per share on the ordinary shares, both less tax.

We have suggested the payment of a bonus this year by way of celebrating a jubilee.

I look for a period of anxiety and difficulty in the pyrites trade, and your company can escape neither the anxiety nor the difficulty. For years we have been preparing for it, and we have taken all the steps that we can think of in advance to meet it. We are directly interested in what look like being the successful processes for producing on the one hand by-product sulphur, on the other the constituent elements of pyrites of all grades, in marketable form, and we are adjusting our mine working in Spain to draw a larger proportion of our copper from our porphyritic ores and less from the pyritic. We shall be ready to begin the marketing of by-product brimstone, if we have to, this year.

In conclusion, he dealt with the copper situation. There was going to be, he said, more copper wanted than the world had ever dreamed of using, and, if the work of developing new sources of copper supply did not proceed regularly, there would be a copper famine in the world by 1935-40 at latest. That brought him to Rhodesia, where the Rio Tinto Company was one of a group which now controlled Minerals Separation, Ltd., the Rhodesian Congo Border Concessions, and the N'Changa Company, and he believed that the position was that no one nation could dominate the Rhodesian field, but that its development was in the hands of companies representing practically all the world, American as well as European. He was satisfied that that was the best arrangement possible.

The report was unanimously adopted.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED.

CURRENT YEAR'S PROSPECTS.

The meeting of the Consolidated Mines Selection Company, Ltd., was held, on the 15th instant, Mr Walter McDermott (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said the profit and loss account, including the credit balance of £7,757 carried over from 1928, showed a profit of £120,057. The directors recommended increasing this unappropriated profit to a total amount of £128,057 by a transfer to the profit and loss account of £8,000 from the dividend equalisation account, reducing this latter from £18,000, now on the books, to £10,000, which would be continued as a reserve for any future needs. The directors recommended that a dividend be declared of 2s. per share, less tax, making 20 per cent. for the past year, absorbing £120,000 and leaving a sum of approximately £8,000 to be carried forward into the accounts for 1930.

The very large interest the company held in the new ordinary 10s. shares of the Anglo-American Corporation of South Africa made this concern a most important item in their list of holdings, and the Corporation's yearly operations and future permanent returns of profits depended on very large interests it had in gold, diamond, and copper investments. Its gold-mining investments were confined to the wonderfully regular producers of the Rand, and were for the most part in Brakpan, Springs, West Springs, and Daggafontein Mines, in the development of which the Consolidated Mines Selection Company took so prominent a part for many years. Year by year the Anglo-American Corporation had increased its investments and influence in the diamond mining and marketing industry until it now occupied a leading position in its relations with all the great producing mines.

As to prospects for the current year, the directors were satisfied with the general investment position, without daring to venture on making any guesses as to profits by the end of 1930. The company had lived through many fluctuations and these were natural to their business : no one would venture to say that this year of grace was a safe time in which to prophesy on industrial or political affairs quite capable of affecting mining results.

The cash position, after payment of the proposed dividends, was sufficiently strong to enable the directors to take advantage of any promising new business offering.

The report was unanimously adopted.

CONSOLIDATED WATER WORKS COMPANY OF ROSARIO, LIMITED.

The thirty-fifth ordinary general meeting of the Consolidated Water Works Company of Rosario, Limited, was held, on the 15th instant, at 52 Moorgate, London.

Mr James Anderson (the chairman) said that the progress of the business which had been manifest for a good many years past had continued unabated during the year 1929. The number of services connected to the company's mains at the close of last year was 50,916, an increase of 7.3 per cent., and the gross income from those services had amounted to $3,196,247, an increase of $156,764. As to the development of the business over an extended period, in 1920 the services numbered 26,631, against 50,916 in 1929, an increase of 91 per cent. in 10 years. During the same period the gross revenue had risen from $1,623,695 to $3,196,247, an increase of 96 per cent. The increasing business so strikingly evidenced by those figures had, of course, necessitated constant additions to the company's pumping and filtration plant and to the arterial and distribution mains, and the capital account was consequently being constantly called on to meet the outlay on extensions.

As to the current year the outlook was not altogether favourable. Crops of wheat and linseed recently harvested in the district, of which Rosario was the centre, had been very disappointing, and would probably have the effect of putting a check on the expansion of the city. The board had, however, no reason to fear the loss of any material part of the company's present revenue. There was another adverse feature—namely, the depreciation since the beginning of the year in the value of the Argentine dollar. It was to be hoped that those adverse conditions would be only temporary, and that with the return of better times the depreciation in the country's currency would gradually disappear.

The report was adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, *6 Bouverie Street, Fleet Street, London, E.C. 4.*

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 12, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts	£
Supply Services	5,600	From Revenue	10,299
Interest, &c., on Debt	1,007		
Sinking Fund	495		
Sundries	206		
Decrease in Debt	2,853		
Increase in Balances	138		
	10,299		10,299

Ordinary revenue for the week ended April 12th amounted to £10,299,000, compared with £9,144,200 for corresponding period a year ago. Income tax yielded £2,833,000, compared with £2,571,000. Surtax produced £1,340,000, against £1,220,000. Estate duties yielded £1,770,000, against £1,430,000. Customs revenue amounted to £2,582,000, against £2,569,000, and excise to £1,300,000, against £1,136,000.

The National Debt was reduced by £2,853,000, as shown below :—

	Total	55,833

Net withdrawals, £55,783.

Messrs Samuel Montagu and Co. write on April 16, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £159,829,239 on the 9th instant (as compared with £156,188,963 on the previous Wednesday), an increase of £13,869,155 since the 1st January last. In the open market yesterday gold from South Africa to the value of £411,000 was available and was disposed of at 84s. 10½d. per fine ounce. Germany secured £336,000, India £40,000 and the Home and Continental trade £35,000. Receipts of gold by the Bank of England totalled £55,833 and withdrawals £20,873, a net efflux of £34,960 during the week.

SILVER.

Offerings have continued to be restricted and the market has remained steady, prices having shown a slight improvement as compared with those of the previous week. A rise of ¼d. to 19 11/16d. and 19½d. on the 10th instant was followed by a reaction of 1/16d. the following day, otherwise daily fluctuations have been small. China and the Indian bazaars have been the chief support and the Continent has sold moderately. America has offered to sell occasionally but on the whole has still been more disposed to buy. Prices were quoted level at 19 5/16d. on the 12th and 14th instant, but yesterday the 1/16d. premium for cash delivery was regained.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 7th instant to mid-day on the 14th instant :—

IMPORTS.	£
France	113,284
British India	49,964
Other countries	48,981
	£212,229

EXPORTS.	£
China (including Hong Kong)	236,847
British India	164,584
Other countries	4,556
	£405,987

NOTICES.

Major P. C. Anderson, European representative of the Commercial National Bank and Trust Company of New York, announces that his address is now 9, Clements Lane, E.C. 4 (instead of 25-27, Bishopsgate).

Mr Frederick Craufurd Goodenough, chairman of Barclays Bank, Ltd., has been elected chairman of the committee of London Clearing Bankers and Mr J. W. Beaumont Pease, chairman of Lloyds Bank, Ltd., deputy-chairman for the ensuing year.

Hambros Bank, Ltd., announce the receipt of formal confirmation of the opening in Reykjavik, on Saturday, April 12th, of the New Islands Fisherybank (Utvegsbanki Islands H/F). The new bank will take over the assets and liabilities of the Islands Banki, which ceased to function early in February last.

The Midland Bank announces that during the past week-end the head office has been transferred from 5, Threadneedle Street to Poultry, London, E.C. 2. All correspondence for head office officials and departments should henceforward be addressed to Poultry. The telephone number will remain National 1234. The change in the location of the head office will not involve any alteration in the conduct of business at the 5, Threadneedle Street office, which will continue to be under the same management as hitherto.

Company News.

REPORTS AND NOTICES.

Mr A. Batchelor has been appointed chairman of R. E. Jones, Ltd.

Mr C. J. Bonnard has joined the board of the Trowbridge Tyre and Rubber Company (1929), Ltd.

Sir Adam B. Ritchie has joined the board of directors of the Borneo Company, Ltd.

Mr Desmond Abel Smith has joined the board of the Equitable Life Assurance Society.

Mr Claude Bishop and Mr J. A. Brewin have joined the committee of first preference shareholders of the Inveresk Paper Company, Ltd.

The registered office of Carmelite Trust, Ltd., has been removed to 32, Old Jewry, E.C. 2. Telephone : Metropolitan 9351.

The Royal Exchange Assurance announces that, as from March 29, 1930, the address of its Liverpool branch will be :—Royal Exchange Court, 26, Exchange Street East, Liverpool.

The address of Grand Trunk Junior Stocks, Ltd., is now 40, Grosvenor Place, London, S.W. 1. Telephone : Sloane 8323.

The Scottish Provident Institution state that a new branch will be opened on May 1 at 52, Lime Street, E.C. 3, under the charge of Mr. J. R. H. Lazenby, presently agency superintendent at the London City office.

The registered office of the British Cement Products and Finance Company, Ltd., have been removed from 5, Lothbury, to 23, King Street, London, E.C. 2.

BANKS.

BANK OF AUSTRALASIA.—We are asked by the Bank of Australasia, in connection with an article on "Australian Stocks," which appeared in our issue of April 12th (page 840), to point out that the bank has just paid its usual dividend, and there is therefore no question of any reduction in the rate of distribution.

MISCELLANEOUS.

BRITISH CELANESE LIMITED.—The annual report will not be published until towards the end of September. The directors state that for year ended February 28, 1930, the turnover was more than 50 per cent. in excess of the value of the previous year, and very substantially more than that percentage in weight. The trading profit also shows an increase of over 50 per cent., and, after charging the excise duty and all expenses, but before providing for the debenture services, depreciation, research and other appropriations, the estimated profit is in excess of £1,100,000.

CAMMELL LAIRD AND COMPANY.—Profit of £11,810 for 1929 contrasts with a deficit of £80,694 on operations for the previous year. With regard to investments in the books the directors state that it is too early to form a reliable judgment in regard to actual values. It is considered unwise to attempt any scheme of financial reconstruction of the company until earning capacity is more clearly established. Holders of the 5 per cent. first mortgage debenture stock and the 4½ per cent. debenture stock falling due for repayment on July 1, 1930, are being asked to extend the repayment date for five years.

THE CHARTERED INSTITUTE OF SECRETARIES.—The Preliminary, Intermediate and Final Examinations will be held on June 13th and 14th in London, Birmingham, Bristol, Cardiff, Hull, Manchester, Newcastle-on-Tyne, Leicester, Bradford, in Edinburgh, in Glasgow, in Belfast and in Dublin. Entries by May 13th. Particulars may be obtained from the Institute, London Wall, London, E.C. 2, or from Branch Secretary, R. Miller, F.C.I.S., Love Lane Sugar Refinery, Liverpool.

LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES.—Net revenue for the year ended March 31, 1930, is £175,025, compared with £133,489 for the previous fifteen months. After deduction of the interim dividend of 4½ per cent. paid on November 1st, absorbing £55,061, there is left for appropriation the sum of £167,210. Of this, £6,000 is allocated to debenture redemption account, £8,000 for amortisation of leaseholds, £8,000 for maintenance of properties, and £10,000 to contingencies account. A final dividend of 5½ per cent., making 10 per cent. for the year, absorbs £70,929, leaving £64,282 to be carried forward, against £47,246 brought in. Assets free from specific encumbrance amount to over £1,148,378, showing that surplus and reserves are well represented by assets. The board are seeking powers to increase the share capital by a further 500,000 shares, so that the company might be in a position to deal with propositions as they should arise.

OIL OUTPUTS.

ANGLO-ECUADORIAN OILFIELDS, LTD.—Production for March is 17,978 tons.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of March are as follows :—Production of oil, 31,010 tons; deliveries, 32,950 tons.

THE ATTOCK OIL COMPANY.—Production for March 19,988 barrels.

THE BRITISH BURMAH PETROLEUM COMPANY.—The production of crude oil by this company for the month of March, 1930, was 38,918 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended March 19th : Venezuela, 40,479 barrels; Trinidad, 10,694 barrels; total, 51,173 barrels. Production for the week ended March 26th :—Venezuela, 38,859 barrels; Trinidad, 13,209 barrels; total, 52,068 barrels. Production for the week ended April 2nd : —Venezuela, 38,674 barrels; Trinidad, 11,825 barrels; total, 50,499 barrels. Production for March :—Venezuela, 173,548 barrels; Trinidad, 52,533 barrels; total, 226,081 barrels. Deliveries for March :—Venezuela, 162,411 barrels; Trinidad, 78,222 barrels; total, 240,633 barrels. Production for the week ended April 9 : Venezuela, 38,804 barrels; Trinidad, 16,062 barrels; total, 54,866 barrels.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Production fc March, 5,026 tons.

HECTOR WHALING, LTD.—Catch report to April 6, 1930 :—

	Season 1928-29.	Season 1929-30.
Number of expeditions reporting...	Three	Four
Catch for week ending March 23rd in barrels of oil	2,100	4,300
Catch for week ending March 30th in barrels of oil	2,100	7,700
Number of expeditions reporting ...	Three	Three
Catch for week ending April 6th in barrels of oil	2,500	2,200
Total catch to date in barrels of oil	120,400	*190,500

* Including expedition returned.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian Cor pany for March is cabled at 28,497 tons.

MEXICAN EAGLE OIL COMPANY.—Production for the week ende March 15, 1930, was 268,000 barrels. The production for the wee ended March 22, 1929, was 265,000 barrels. The production fc the week ended March 29, 1930, was 260,000 barrels. Productic for the week ended April 5, 1930, was 253,000 barrels.

THE HOME AND FOREIGN INVESTMENT TRUST, LTD.—At a Meeting of the Directors held on Tuesday it was decided to recommend payment of a balance Dividend on the £200,000 old Ordinary Stock of 4% actual, making with the 3% Interim Dividend paid on 11th November 1929, 7% for the year to 31st March, 1930, and a Dividend of 4% actual on the £1,0.000 new Ordinary Stock for the six months to 31st March, 1930. These Dividends will be paid along with the Dividends on the old and new Preference Stock on 13th May next.

Commercial Reports.

Mark Lane, Wednesday evening.

THE CORN TRADE.

Unsettled and showery weather prevailed over the United Kingdom during the past week, but field work has progressed satisfactorily, and a spell of warmth and sunshine is now desired to *germinate spring sowings*. English wheat continues in small supply, and is held for steady prices. On the import market, prices gave way sharply in sympathy with lower American and Canadian advices occasioned by beneficial rains over the United States North-west, thus fears of damage by drought to the winter wheat crop is removed. The future course of prices will be largely influenced by weather and crop news from now onwards until harvest, despite the large quantities of old wheat available. The latter fact, however, again looms up in view of the favourable outlook for new crop sowings both here and abroad, while the disposal of large North American holdings must cause serious apprehension to both the Canadian and United States authorities. Shipments will be materially increased when the spring movement is resumed, and the question of finding an outlet on this side must depend on selling prices, as restricted requirements this season indicate a general reduction in order to stimulate consumption. In any event, importers are assured of plentiful and cheap supplies of grist for somewhile ahead, and meanwhile are confining purchases to immediate needs pending further developments in the situation. Quiet conditions prevailed in the flour section, and prices are easing in sympathy with wheat. If the intention of the American Farm Board to pass cheap wheat to local millers is correct, competition from this quarter is likely to become intensified in the near future. Feeding stuffs met a quiet sale, and values of new crop Plate maize marked a heavy decline, owing to acute selling pressure from the Danube. Old crop supplies, however, still command a substantial premium, especially for parcels near at hand, owing to consumers' depleted stocks. South Africa will join sellers ranks later in the season with what promises to be a record crop for that country.

WHEAT.—Easier. No. 1 Northern Manitoba (Vancouver shipment), ex ship, 44s. 9d.; No. 2 ditto, 44s. ; No. 3, 42s. 6d.; No. 4 Manitoba, 41s. 9d.; No. 5 ditto (Atlantic shipment), 40s.; No. 6, 32s. 6d.; No. 2 hard Winter (Atlantic shipment), 40s. 9d.; No. 2 ditto (Gulf shipment), 42s. 6d.; No. 2 mixed Durum, 37s. 6d.; Rosafe, 62½ lbs., 40s. 6d.; Barusso, 62½ lbs., ex ship to arrive, 39s. 6d.; Australian, 42s. 6d. per 496 lbs. English, 8s. 9d.-9s. per 112 lbs.

FLOUR.—Dull. London straight run, 37s. per sack for country deliveries and 36s. London area. Of imported, Manitoba patents, 34s.-37s.; Buffalo, 34s.-37s.; Australian, 31s.-32s. ex store. On c.i.f. terms, Manitoba top patents, April-May, 34s.-34s. 9d.; export ditto, 32s.-32s. 6d.; Australian, 28s. 6d.-29s.; French, April-May, 25s. 6d.-27s. 6d. per 280 lbs. Argentine low grade, March-June, £6 2s. 6d. per ton.

MAIZE.—Easier. Plate, landed, 32s.; ex ship, 31s.; March-April, 27s. 3d.; new, April-May, 25s. 9d.; May-June, 25s. 3d.; June-July, 25s. 3d. per 480 lbs. Yellow maize meal, £8 15s. per ton f.o.r. London. Yellow African, £6 10s. per ton, ex ship.

BARLEY.—Weaker. Californian, old, landed, 36s.-42s.; new, ex ship, 36s.-42s. as to sample ; Chilian, brewing, 36s.-44s. ; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs., Black Sea, ex ship, f.a.q., 19s. 6d.; landed on sample, 22s. ; Persian, landed, 19s. 6d. per 400 lbs. English malting, 7s.-11s. 6d.; feed, 6s. 6d.-6s. 9d. per 112 lbs.

OATS.—Easy. Plate, landed, 16s. 9d.; ex ship, to arrive, 15s. 9d.; Chilian, white, 21s. 6d.; ditto, tawny, 17s. 6d.; German, landed 20s. 6d.; ex ship, to arrive, 19s. 6d.; mixed Canadian feed, 14s. 6d.; South Russian, ex ship, 16s. 6d.; North, ditto, 16s. per 320 lbs. English, 6s.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to April 12	Cwts. 155,042	Cwts. 119,087	Cwts. 217,983	Cwts. 89,922
32 weeks to April 12	7,679,007	8,236,677	8,145,937	9,848,209
Average price of English wheat per cwt.	s. d. 8 7	s. d. 9 10	s. d. 10 1	s. d. 11 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929 :—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
April 5	171,659	123,919	28,355	8 4	7 7	6 0
April 12	155,042	113,678	29,994	8 7	7 10	6 3
April 10 1926 ...	134,246	64,561	30,602	11 9	8 10

April 14, 1928 ...	217,983	57,802	39,235	10 1	10 9	8 2
April 13, 1929 ...	119,087	38,329	32,877	9 10	10 3	9 9

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929 :—

Nearest Future.	Jan. 2, 1929.	Apr. 17, 1929.	Jan. 2, 1930.	Apr. 2, 1930.	Apr. 9, 1930.	Apr. 15, 1930.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	122	125⅜	148⅛	110⅛	115½	107⅜
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	120⅜	130⅜	111⅛	113⅜	106½

The visible supply of wheat in Canada at 74,681,000 bushels shows a decrease on the week of 3,000 bushels. Supplies a year ago stood at 91,380,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes : Business in South Yorkshire coal on export account has steadied, and former prices are maintained with the exception of washed singles, which have given way sixpence. With a large tonnage surplus on offer, the position still favours buyers. Best hards are quoted at 15s. 6d. f.o.b. The supply of secondary coal is greatly in excess of demand. Contracts for coke are few and unimportant, although it is realised that buyers are unlikely to gain by holding off the market.

Our Glasgow correspondent writes : Demand generally runs on small lines, and prices continue weak, though among nuts trebles have steadied up a little lately. Round coal generally is a drug on the market, and buyers with firm orders to place could doubtless secure some concession on the market rates. Prices for shipment are approximately as follows (f.o.b. district ports) :—Lanarkshire. —Ell best, 14s. 6d.; splint best, 17s. 6d.; splint second, 16s. 6d.; navigation, 16s. 6d.; navigation second, 14s. 6d.; Hartley, 18s.; steam, 13s. 6d.; trebles, 12s.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 6d.; dross, 10s. Fife.—Screened navigation, 16s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 9d.; trebles, 12s.-12s. 6d.; doubles, 11s. 3d.; singles, 10s. 9d.; pearls, 10s. 6d. Lothians.—Prime steam, 12s. 3d.-12s. 6d.; secondary steam, 12s. 3d.; trebles, 12s.-12s. 6d.; doubles, 11s.; singles, 11s.; pearls, 10s. 9d. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 11s.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes :—The approach of the Easter holidays has had a stimulating effect on the shipments of coal from the South Wales ports. The Great Western Railway Company returns for last week give a total of 601,400 tons, compared with 534,000 tons in the previous week, and with 603,940 tons in the corresponding week last year. Loading has continued active during the present week, but business on the Cardiff coal market has remained practically stagnant. There has been an almost entire absence of new inquiries and prices generally have ruled round about the minimum schedule figures. Monmouthshire coals are the best feature of the market, but Cardiff steam coals have lacked support. Current approximate quotations are as follows :—Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 23s. 6d. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 45s.; rubbly culm, 10s. 9d. to 11s. 6d.; foundry coke, 32s. 6d. to 35s.; patent fuel, 20s. to 22s.; pitwood, ex ship, 27s. 3d. to 27s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange :—Inquiry has been irregular, but there is a growing belief that stocks in most of the important markets have reached an unusually low level, and that some improvement in export buying may be expected. At the moment, however, there is no sign of this and overseas buyers continue to limit their purchases to comparatively small tonnages for early delivery. In the British market, also, buying has been on a small scale for some time and hopes are entertained that trading will improve after the Easter stoppage. In the pig-iron department conditions are causing some concern to the producers, as buying has been on a disappointing scale practically all this year. This is to some extent a consequence of the lessened requirements of the consuming trades, but the imports of continental and Indian iron are an important factor. The demand for semi-finished materials has shown some improvement, and the British works have taken a fair share of the business. In several cases they are reported to have competed successfully with the Continent. In spite of this improvement, however, the actual volume of business has been less than is usually transacted at this season. The demand for finished steel materials remains disappointing, the works best employed being those which specialise in shipbuilding material.

Our Sheffield correspondent reports that business is largely at a standstill this week, as works have arranged for a longer holiday stoppage than usual. The position here undergoes no change worthy of note, but the downward trend seems to have been checked, and there is some hope of improvement after Easter. Conditions of overseas trade, however, are very bad, depression being conspicuous with all the markets abroad. The returns for March showed some increase of exports of iron and steel compared with February—a shorter month. Increased imports of pig iron and part-manufactured steel were a feature of the returns. The output of steel in the United Kingdom in March was considerably larger than in January and February.

Our Glasgow correspondent writes : At the steel works little improvement can be looked for until there is some increased activity at the Clyde shipyards. The demand for other material is fairly well maintained. Makers of semis are finding things quiet, and in their case the demand is likely to remain poor for some little time, as users have accumulated stocks on account of the prolonged dull period in the manufacturing trades. In the sheet trade business is not yet sufficient to keep all plants fully employed, but there is a better demand for galvanised sheets for the Indian market than has been in evidence for some time, and in the black sheet department there is a steady flow of business, both on home and export account. No improvement is noted in the tube trade.

Our Cardiff correspondent writes :—The general position in the South Wales iron and steel trades is unchanged. The tinplate works have been fairly regularly employed and shipments are normal, with prices stationary on last week's basis. Imports of foreign partly-manufactured iron and steel goods are heavier, supplies of blooms, billets and bars, &c., totalling nearly 25,000 tons in the week ended April 11th last, as against less than 14,000 tons the previous week.

OTHER METALS.

Tin.—The market displayed generally dull features, and with offerings in excess of requirements a weaker tone resulted, while influenced by lower Eastern advices. The outlook is somewhat uncertain, but in some quarters it is felt that the more depressing factors have been already discounted, while latest reports regarding restrictive measures indicate a curtailment of over 30,000 tons for the current year. Standard cash changed hands at 165s. 10s.-£165 15s. and £164 7s. 6d.; three months, £167-£168 10s. and £166 10s. In the East, sales were reported at £170 10s. to £167 5s. ton c.i.f. terms.

Copper.—Market depressed in face of liberal offerings and a slow demand for near positions, though forward rates attracted attention at the lower prices current. Standard cash sold at £67 10s. to £59; three months, £65 15s.-£66 10s. and £58 7s. 6d. ton.

Lead.—Quiet and barely steady on increased reserved offerings. Good soft foreign pig, April, sold, £18 13s. 9d. to £11 18s. 3d.; July, £18 15s. to £11 12s. 6d. ton.

Spelter quiet with slight irregularity in attendance. May, sold, £18 6s. 3d. to £17 18s. 9d.; June, £18 11s. 3d. to £18 10s. and £18 6s. 3d.; July, £18 16s. 3d. to £18 8s. 9d.

Antimony slow of sale. English regulus, £40 to £46 10s.; Chinese ditto, spot, £29 30s.; ditto, April-May, £26 15s.; crude, April-May, £17 per ton, 10

Antimony Oxide, A ... 26 15s. per ton c.i.f.

Antimony Ore.—5(4 pril-May, 3s. 6d.; ditto, 60 per cent., 4s. 3d. per unit 7

Wolfram maintai 10 nese, April-May, 25s. to 25s. 6d.; Burmese ditto, 25s.] t c.i.f.

Aluminium quiet 0 Home trade, £95; export, £100 per ton.

Quicksilver quiet. Spot, £22 10s. per bottle, less 3 per cent.

Tin Plates steady. I.C. coke, prompt and forward, 18s. 3d. to 18s. 6d. per box f.o.b. Swansea.

Zinc Oxide steady at £29 to £36 as to quantity, per ton delivered, U.K.

THE COTTON TRADE.

Liverpool : April 14th.

United States Cotton Cloth Statistics for March show sales 111·8 per cent. of production, deliveries 101·6 per cent., stocks decreased by 1 per cent., unfilled orders increased by 7·4 per cent. Garside estimates United States consumption in March at 533,000 bales. Official figures for February were 495,000 bales, and for March, 1929, 632,000 bales. Spot sales for the period 10th to 14th (inclusive) are 25,000 bales, of which 12,490 American, 4,000 Brazil, 20 Argentine, 2,000 Peru, 4,700 Egyptian, 900 African, 500 East Indian and 390 sundries. Imports for the same period are 45,467 bales, of which 14,328 bales are American, 12,320 Egyptian, 1,505 African, 16,866 East Indian, and 448 sundries. Quotations to-day are : American Middling, 8·60; Egyptian Sakel, 13·90; Uppers, 10·32; Brazil Fair, 8·11; Peru G.F. Smooth, 9·06; West African Middling, 8·56, and East African G.F., 9·66.

Manchester : April 15th.

The market diring the past week has presented a quieter appearance. Trade developments have been adversely affected by the easier movement in raw material rates and the worse political news from India. The general inquiry in piece goods has fallen off. Merchants are much concerned at the latest developments in India, and except in Calcutta there is now a general boycott of foreign goods. Fresh business has not been quite at a standstill, as fine cloths and fancies have been sold in fair quantities, but demand in standard makes has fallen very flat. No improvement has shown itself in the business offering for China, and operations have been

confined to sorting up lots. Some makers of bleaching and finishing styles have booked fair orders for the West Coast of Africa and South America. Very few new contracts have been mentioned for Egypt and the Near East. Fairly favourable reports are coming through from the home trade section. Quotations in American and Egyptian yarns have shown rather more irregularity, and to secure orders spinners have had to grant price concessions to buyers. Margins remain very unsatisfactory.

THE WOOL TRADE.

Our Bradford correspondent writes : The meeting on 'Change last Monday was quite as large as could be expected, as many principals were at home watching their mills, and where they have running machinery giving any protection necessary to their hands. The strike of operatives, though not such a united and progressive movement as some of the leaders' statements might lead the public to believe, is making the situation sufficiently serious. It would have been far better if the suggestion emanating from a trade union source, that the time was not opportune to resist reductions, had been followed, for nothing but sheer necessity is inducing the masters to stand out for lower wages. At the employers' meeting, held in Bradford, when it was unanimously decided to reduce wages, it was stated that over 470 firms with machinery had gone out of existence since 1927, and the quantity of standing machinery is serious. For months past only 70 per cent. of the machinery in the West Riding has been running, and a large part of that is only occupied three or four days per week. Nobody seems to expect that the reduction in wages will bring about any substantial increase in activity, but it will help the industry to get on to a sounder footing. The experience of Bradford dress goods manufacturers is that while they have done a good share of the home trade for the forthcoming season, every overseas market is in a most unresponsive mood. The quantity of fabrics taken is much less than manufacturers and export houses have been accustomed to. Notwithstanding these adverse factors, prices for wool and tops remain quite firm. A substantial amount of business was done in the latter right up to the commencement of the strike, and deliveries were freely made to the end of last week, but for the time being business is held in abeyance, some combers having all their machinery standing.

COLONIAL WOOLS.

[from a correspondent.]

It is the unanimous opinion in the trade that real good was done to the position of wool by the last series of London sales. There were certainly a few "soft" nights, but, generally speaking, the competition and values forthcoming for both merino and crossbred offerings created real satisfaction. The opening did not indicate that anything great was going to happen, but the increased buying of the second week led to the series being continued into the fourth week. Many buyers were of the opinion that the somewhat scrappy offering for the last three days might have been put in with those of the two previous weeks, but there was certainly nothing wrong with those sales, prices being maintained at the highest point right to the end. All buyers realised that this would be a great stimulus to the manufacturing end of the industry. A very useful cable was received from Sydney last week. It contained information which the National Council of Wool Selling Brokers might very well send at the end of each month. It stated that at the end of March the quantity of wool received in store in Australia was 2,402,300 bales compared with 2,517,678 bales in the corresponding period a year ago. The sales were 1,530,100 bales, and the quantity awaiting sale 701,000 bales. At the end of March, 1929, the latter totalled 292,657 bales. If all the wool available—701,000 bales—is to be sold by June 30, 54,000 bales will have to be catalogued weekly. We cannot expect this to be done, and no one need be surprised if 50,000 to 75,000 bales are carried forward into next season. This would not be an excessive quantity, and we anticipate buyers being ready to absorb all the available offerings.

HIDE, LEATHER AND ALLIED TRADES.

Prices for hides varied somewhat at the auctions held over the week-end; at some markets advances were recorded, while in others the tendency was downward. At this week's northern sales the position was rather stronger, and advances were made on some weights in both clears and warbled. The market for calfskins remains steady, with only slight variations here and there. Small day to day business is being done in foreign hides at more or less steady figures, with any alteration in favour of buyers. In the frigorific market the tone is slightly easier, and sales of Argentine ox have been concluded on the basis of 7⅞d., while cows have realised 6¾d., and Montevideo cows 6¼d. Values are steady for dry River Plates, sales of B. A. Americanos having been made at 7¾d., M. V. Americanos at 8⅞d., and Inservibles at 4⅝d. Offers of Capes are now coming to hand more regularly, and business has been done in drys at 8⅛d. and 7⅛d. for firsts and seconds, with dry salted quoted at 7⅝d. and 6⅝d., 20/30 lbs., and 7¼d. and 6¼d. for 30/40 lbs. Mombasas are changing hands at 6¾d. for 30/40/30. Australian hides are firm at origin. The demand for sole leather has slowed down on account of the holidays, and the majority of producers and distributors are not expecting much in the way of buying until the shoe factories get into their stride after the Easter. Bends suitable for ladies' light footwear have changed hands this week in small parcels, while a slight increase in the turnover of weights suitable for the repairing trade has also been experienced in some quarters Offal continues to be a satisfactory market, but doubt is expressed as to its soundness on account of the fact that low-priced Continental supplies are now being offered with some degree of success. Prices for most descriptions of home-produced leather are steady with very little alteration in any direction. Conditions in the upper leather market are also inclined to be quiet, with only a limited amount of business covering most descriptions. Inquiry is mainly concentrated on black and brown glacé kid, while in some quarters a further improvement in the demand for suède leather is reported. Willow calf still sells in small lots, as is also the case with lower grade patent. Curriers continue to find business on the slow side; the call for kip butts and waxed splits being only for just sufficient to meet immediate needs. Orders for footwear are still for small quantities only, and the general impression seems to be that holiday business in this direction is not up to the standard of previous years.

THE JUTE TRADE.

Dundee : April 15th, 1930.

The jute market is on tip-toe of expectation that the Calcutta mills will come to some agreement to curtail their output and bring production more into line with present consumption. Stocks of goods at all producing and consuming centres are growing apace, and the situation has become acute. During the past three weeks the Indian Jute Mills' Association has been endeavouring to prevail upon a number of mills, mostly owned by natives, who are outside the Association, to join the Association with a view to an agreement to cut down production. It is understood that several of these native-owned mills are willing to curtail, provided all the mills in India can be brought together to do so. It is admitted that the task of uniformity is not an easy one and a decision on the matter may take some little time; but it is realised that, whether all the mills agree or not, something must be done, and that soon, to adjust supply to demand. A depressed state of industry throughout the world has resulted in a poor demand for jute goods for months past, and there are so far no signs of improvement. All producing centres with exception of Calcutta have been compelled to resort to short-time working, and in Europe production has been curtailed by about 50 per cent. The raw jute market has maintained a fairly steady tendency and sellers appear unwilling even to offer the fibre. This despite the fact that the new crop prospects are reported to be very satisfactory. Several small sales have been made of new crop fibre, which is offered at £29 10s. for good lightnings, £26 10s. for Daisee assortment, and £28 for Tossa assortment. Old crop lightnings are round about £27, Daisee assortment at £25 5s., and Tossa assortment at £27. Little business is being done in jute yarns. Spinners are quoting from 2s. 8d. to 2s. 9d. for common 8-lb. cops and 2s. 9d. to 2s. 10d. for 8-lb. spools, but buyers are holding off after their recent purchases, which sent the respective prices of cops and spools from 2s. 6d. and 2s. 7d. Twist is firm at 4⅞d. to 5d. for 3-ply 8 lb., and sacking yarns are steady at 3½d. for 24-lb. weft and 4 7/16d. to 4½d. for 8-lb. chains. Efforts are being made to raise the prices for rove to £17 10s. for 200 lb., and

FIGURES OF ASSURANCE

AMP

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £74,000,000. Annual Income £10,500,000. Full particulars on application.

£27 10s. for 48 lb., after business done at £17 and £27. Fine yarns are very firm and in fair request, but carpet qualities are quiet. Buyers of jute cloth are awaiting a decision of the deliberations of the Indian jute mills in regard to short-time working, in consequence of which only the merest trifles are being bought. Prices are very steady at from 3 $\frac{9}{16}$d. to 3$\frac{5}{8}$d. for 10$\frac{1}{2}$-oz. 40-in. hessians, and 1d. less for 8 oz. Linoleum hessians are quiet and heavy goods are meeting with only a moderate support.

VEGETABLE OILS AND OILSEEDS.

Rather quieter conditions now rule in the markets for both seeds and oils. Crushers on the Continent who recently bought freely of linseed, appear to have satisfied their immediate requirements, and with less demand and the rectification of the Argentine exchange, prices have been on a lower level. Seed on spot and near at hand is scarce, and at a good premium over shipment. Current value of Plate on spot is around £18 10s., and for shipment £18, while Calcutta to London, April-May, is reported done at £19 7s. 6d. The quantity of linseed afloat for Europe is now 95,600 tons, an increase of 6,000 tons on the week. Cottonseed is in fair demand, and business in black Egyptian to Hull has again been done at £8 spot and May loading. In the oil section linseed oil is not so firm, and on spot ex Hull mill is quoted £41, and for April delivery £40 10s., later positions being at a small discount. Cotton oils are quiet, crude Egyptian ex Hull offering at £29 5s., and common edible at 32s. 6d. spot. Other seed oils are quiet, and show little change. The improvement in the demand for oilcake persists, and stocks are being gradually reduced.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Only a quiet business was arranged as trade buyers had purchased liberally some little time back, and doubtless will be occupied some time ahead in taking delivery of same. With a large majority in favour of dissolution of the Cuban Seller Agency, liquidation should be speedy, and it appears that the President is to be approached to rescind crop control laws. The market in forward positions suffered slightly in consequence, as sellers were inclined to meet buyers. Cuban receipts last week, 160,630 tons, against 211,530 last year; exports, 37,880, against 129,010; stocks, 1,667,430, against 1,427,318. Centrals at work, 135, against 132 same time last year. Terminal markets easier, with business on an extended scale. Of raw, May delivery sold, 6s. 9$\frac{3}{4}$d.-6s. 11$\frac{1}{4}$d.; August, 7s. 0$\frac{3}{4}$d. to 7s. 2$\frac{1}{2}$d.; December, 7s. 3$\frac{3}{4}$d. to 7s. 5$\frac{1}{4}$d.; January, 7s. 11$\frac{1}{4}$d.; white, April, 9s. 4$\frac{1}{2}$d.; May, 9s. 4$\frac{1}{2}$d.; August, 9s. 10$\frac{1}{2}$d. Cuban, 96 per cent., April sellers, 7s. 6d.; May, 7s. 6$\frac{3}{4}$d.; June, 7s. 7$\frac{1}{4}$d.; July, 7s. 9d. c.i.f. U.K. Stocks of raw sugar in the three principal ports of the United Kingdom for week ending April 12th totalled 194,237 tons, against 148,981 last year.

COFFEE.—A moderate amount of business was effected on the spot, and prices remained steady, especially for the finer liquoring qualities.

COCOA.—Business on the spot generally quiet while under holiday influence. Forward positions quiet and easier. Accra, F/F, May-July, quoted 35s. 9d. f.o.b. Terminal, July sold, 40s. 3d.; September, 40s. 10$\frac{1}{2}$d. to 40s 9d.; December, 40s. 4$\frac{1}{2}$d.

TEA.—Indian sales produced 28,000 packages. A rather quiet and irregular market was evidenced. Really fine teas in small supply sold well, also clean common, but most other kinds frequently favoured the buyer. Ceylon sales of 25,192 packages

THE PENNSYLVANIA RAILROAD

SUMMARY OF ANNUAL REPORT FOR 1929

THE 83RD ANNUAL REPORT of The Pennsylvania Railroad Company, covering operations for the year 1929, will be formally presented to the stockholders at the annual meeting on April 8, 1930. The report shows that net income in 1929 exceeded that of any year in the company's history and was $18,952,324 greater than in 1928. Last year was the fifth successive year in which the net income exceeded that of any previous year.

Net income, amounting to $101,378,518, was equivalent to 17·64% upon the outstanding capital stock at the close of the year as compared with 14·69% upon the amount outstanding at the close of 1928. Net Income per share (par $50) was $8·82, compared with $7·35 in 1928.

OPERATING RESULTS

	1929	Increase over 1928
TOTAL OPERATING REVENUES were	$682,702,931	$32,135,615
TOTAL OPERATING EXPENSES were	493,150,592	12,978,958
LEAVING NET REVENUE of	$189,552,339	$19,156,657
TAXES amounted to	40,518,595	2,672,238
EQUIPMENT, JOINT FACILITY RENTS, etc., amounted to	15,894,118	451,779
LEAVING NET RAILWAY OPERATING INCOME of	$133,139,626	$16,032,640
INCOME FROM INVESTMENTS AND OTHER SOURCES amounted to	48,791,500	4,255,842
MAKING GROSS INCOME of	$181,931,126	$20,288,482
RENTAL PAID LEASED LINES, INTEREST ON FUNDED DEBT AND OTHER CHARGES amounted to	80,552,608	1,336,158
LEAVING NET INCOME (Equal to 17·64% on Capital Stock) of	$101,378,518	$18,952,324

After providing for the payment of 8% dividends to the stockholders and for sinking and other reserve funds, $48,925,596 was credited to Profit and Loss Account.

* * *

Last year's satisfactory results were attained through the helpful co-operation and friendship of the shippers, patrons and stockholders and the continued efforts of the officers and employes to conduct the company's service to the public expeditiously, efficiently and economically.

W. W. ATTERBURY,
President.

Philadelphia, Pa., March 31st, 1930.

received active and generally well-distributed competition, and quite a steady market resulted At times, broken orange pekoe sold quietly. China kinds in demand and firm, with supplies getting into narrow compass

RICE.—General demand is quiet, but market firm. Spanish oiled, April-May shipment, quoted 15s. c.i.f. London Two Stars, spot, London, 13s.; April-May steamer, 12s., c.i.f. London-Continent. No. 3, Burma to Levant, quoted 12s. c.i.f. double bags. American blue rose from 22s. 6d. to 23s. c.i.f. S.Q. to Cuba, 12s. 6d. Saigon No 1 round grain, April-May, to Europe, 12s. 9d. Siam Super, April-May, 16s. 10½d.

PEAS quiet. Japanese, old crop, spot, London, 14s.; new, 15s. 9d. to 16s. Parcels per steamer "Altai Maru," afloat to London, 15s. 3d.; "Mitre Maru," 15s. 3d.; "Tsuruga Maru," 15s. 3d.; March-April, 14s. 6d.; April-May, 14s. 1½d., c.i.f. Dutch marrowfats, prompt, 16s.; small hand-picked blues, 11s., f.o.b. terms. Calcutta (per 504 lb.), April-May, 44s. Karachi, April-May, 42s. c.i.f. Maples quiet. No 1, New Zealand, March-April, old, 52s. 6d.; new crop, March-April, 55s. 6d. Tasmanian "A" grade, new, March-April, 60s. c.i.f.

BEANS.—Market quiet for butters, with a drooping tendency. Madagascar, spot, London, 35s. to 35s. 6d.; parcels per "Ville de Rouen," 34s.; per "Haliartus," 34s.; March-April quoted, 33s. 6d., c.i.f. London. Rangoon haricots, spot, London, 10s. 6d.; April, 11s. 3d. c.i.f. Ohtenashi, spot, London, 18s.; forward nominal. Danubian H.P., spot, London, 21s.; April-May, 21s. To Glasgow, North African, new, July-August, 8s. 4½d. c.i.f.

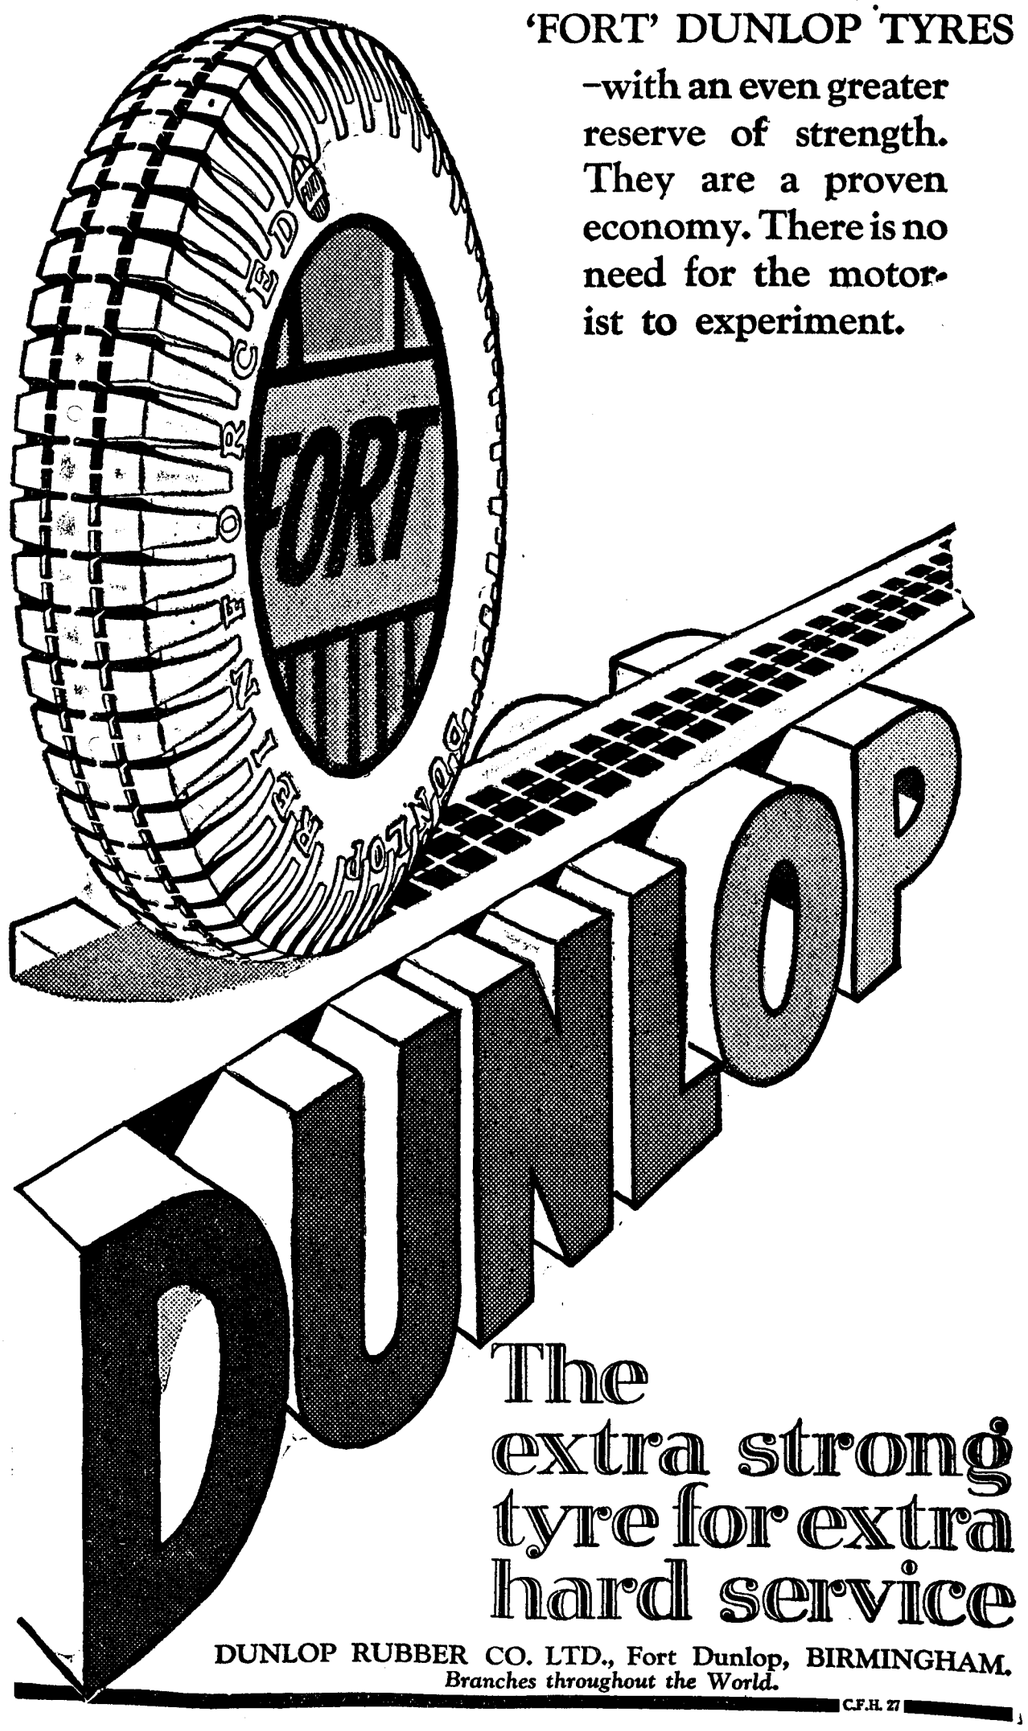
SPICE.—Pepper dealt in to a moderate extent, but forward positions weaker, as sellers were inclined to meet buyers. London stocks of black reduced 4 tons on the week to 997, against 1,015 last year; white, 10 tons down at 779, against 592. Lampong, March-May quoted, 10⅞d.; May-July, sold, 10¾d.; August-October, 9⅝d. Muntok, white, March-May, 1s. 1⅜d.; May-July, sold, 1s. 1⅜d. to 1s. 1⅝d.; August-October, at 1s. 0⅞d. to 1s. 0⅜d. Cloves quiet, unaltered. Sago flour, April-May, to the U.K., 11s. 3d. c.i.f. Tapioca slow, unaltered. Pimento, forward, 60s. c.i.f.

FRUIT (Dried).—Currants in fair demand and market steady. Pyrgos, quoted, 35s.; Amalias, 37s.-38s.; Patras, 39s.-43s.; Gulf, 42s.-46s.; Vostizza, 47s.-58s. Sultanas: Spot market quiet, but Smyrnas firm to arrive. Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-75s.; Greek, 42s.-65s.; Australian, 31s.-45s. Dates steady. Hallowie, spot, 19s.-21s.; Khadrowie, 15s.; Siar, 12s.-13s. 6d. Raisins neglected. Valencia, quarter-boxes, 38s.-40s. Figs quiet. Genuine, 26s.-33s.; good average, 20s.

EVAPORATED FRUITS.—The general position remained unaltered, with trade operations confined to immediate wants. Apricots were in less request, but pears firm on scanty offers. Of plums, there is moderate spot business passing at full prices, but market rather easier for parcels to arrive. Plums: Californian, new crop, 30's-40's, 67s.; 40's-50's, 65s.; Oregon, 30's-40's, 55s.; 50's-60's, 50s. 6d. Apricots: South African Royal, 50s.-110s.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 84s. 6d.; extra, 95s.; Australian, 65s.-85s. Peaches: Californian, choice, 55s.-60s.; fancy, 62s. 6d.-67s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 55s.-65s.; Canadian, 52s. Almonds firm, especially for Sicilian, in view of crop damage, prices being already advanced by 13s. to 14s. cwt. from recent lowest point. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 107s. 6d.; Majorcas, 102s. 6d.-115s.; Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels; Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 35s. c.i.f.; sweet, spot, 72s. 6d. Hazel kernels: Kerasunde, spot, 145s.; Barcelona, 136s.; French (shelled) walnuts, 135s.-140s. ex wharf London.

CANNED GOODS.

CANNED FRUITS.—With supplies more than adequate for requirements a quiet tone prevailed regarding Californian fruits, but Australian met with better support at recent amended prices. A spell of fine weather is needed to stimulate consumption, and trade is expected to develop on broader lines after the Easter recess. Singapore pines are moving off more freely on the spot, and a better inquiry is showing up for shipment parcels. Italian tomatoes were slow of sale both for new pack and spot supplies.



CANNED FISH.—Salmon: Market steady, but trade rather restricted. Alaska red talls, quoted, 47s.-49s.; pink talls, 24s. 6d.-26s.; and halves, 34s. 6d.-36s. Japanese crab steady for best quality at 90s.-96s. Lobsters in limited supply. Halves range from 135s.-140s. Sardines steady and fine quality scarce. Portuguese clubs, quarters, 4s.; 1-lb., 12s. per dozen tins.

CANNED MEAT.—Market quiet but tongues firm on limited offerings. Lunch tongues, also cooked boned hams, sell readily at full rates for forward deliveries.

CONDENSED MILK AND MILK POWDERS.—Market fairly steady. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 33s.; machine-skimmed ditto, 20s. 6d.; full cream, sweetened, 56-lb. drums (two in a crate), 52s. 6d. English condensed milk: Full cream, sweetened, 5-cwt. casks, 38s.; machine-skimmed ditto, 22s. 6d. Dutch full cream milk powders, 26 per cent. butterfat: Roller process, 1-cwt. cases, 61s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 80s. Dutch machine-skimmed milk powders: Roller process, 1-cwt. cases, 27s.; spray ditto, 2 by 56-lb. tins, crated, 38s. 6d.; ditto, 1-cwt. cases, 36s. 9d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are net, ex store, London-Hull or Goole, and cover prompt or gradual delivery to the end of June, 1930. Stocks available in: Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s., minimum 1-ton lots. Smaller lots, 6d. per cwt. extra. On the grocery side, full cream, sweetened, 18s. 6d.; machine-skimmed, sweetened, 8s. 9d. per case, usual packing.

HONEY.—Market remains quiet, with prices tending in buyers favour, especially for the lower grades. Jamaican, white, 48s.-50s.; good amber to fine pale, 40s.-47s. 6d.; dark to fine amber, 37s.-40s. White Cuban, 40s.-42s. 6d.; San Domingo, good to fine, 37s.-40s.; manufacturing, 35s.; Mexican, 35s.; Californian, 50s.; light amber, 45s.; New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d. per cwt.

RUBBER.

A moderate business was arranged, but with sellers in evidence prices proved a shade lower. Sheet, spot and April, also May, sold, 7⅞d. to 7 5/16d.; June, 7 1/16d.; May-June, 7⅞d.; July-September, 7⅞d. to 7 1/16d.; October-December, 7 1/16d. to 7⅛d.; December, 8d.; and January-March, 8 1/16d. American consumption for last month, 35,914 tons; arrivals, 45,430; quantity afloat, 63,646; stocks, 143,500. London stocks increased 856 tons on the week, landings being 1,997; deliveries, 1,141; stocks, 72,333, against 30,446 last year. Liverpool increased 668, landings, 838; deliveries, 170; stocks, 22,676 tons, against 4,591 last year.

GENERAL.

JUTE.—The turn steadier with moderate inquiries and which were met with some reserve. Firsts, April-May, Continent, quoted, £25; May-June, £25; new, August-September, sold £27; September-October, £27; Lightnings, May-June, £24 5s.; Hearts, £22 5s. c.i.f.

HEMP.—Manila dull. J, No. 2, May-July, quoted, £29 5s.; K, ditto, £28 10s.; L, No. 1, £27 15s.; L, No. 2, £25; M, No. 1, £25 10s.; M, No. 2, £24; H, £29 10s.; G, £30 5s. c.i.f. African sisal: No. 1, f.a.q., March-May, sellers, £33; Marks, £33 15s. c.i.f. Receipts last week cabled 29,000 bales, against 36,000 last year and 34,000 in 1928. Estimate for next week 32,000 and week after 28,000. Manila shipments last week: 11,000 to the U.K.; 4,000, Continent; 18,000, U.S.A.; 4,000, Japan; and other countries, 2,000 bales.

SHELLAC.—Steady. T.N., spot, 130s.; May, 126s.; August, 130s.; October, 133s.

COPRA.—A subdued tone predominated and prices fell back owing to sellers being more in evidence. Straits S.D., April, to Rotterdam, quoted, £21 17s. 6d.; May, £21 15s.; Dutch East Indies, April, sellers, £21 15s.; South Sea, smoked, April-May, to Marseilles, £20 7s. 6d.; Manila, in bulk, £20 5s.; mixed Dutch East Indies, March-April, £20 15s.; April-May, £20 10s. Palm kernels weaker.

MISCELLANEOUS.—Coconuts, quoted, 19s. to 25s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43; Ceylon, bristle, £19 to £25 5s.; cinnamon leaf oil, 5s. 6d.; for shipment, April-May, 4s. 6d.; citronelle, Ceylon, 2s. 6d.; Java, 2s. 6d.

METROPOLITAN CATTLE.—April 9.

DAGGAFONTEIN MINES, LIMITED

(Incorporated in the Union of South Africa.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1929.

To be submitted at the Fifteenth Ordinary General Meeting of Shareholders, to be held in the Board Room, "Anmercosa House," Johannesburg, on Friday, the 16th day of May, 1930, at 11.15 a.m.

To the Shareholders,
DAGGAFONTEIN MINES, LIMITED.

Gentlemen,

Your Directors beg to submit their Report and the audited Financial Statements for the year ended 31st December, 1929.

CAPITAL.

During the year 69 of the options issued to shareholders were exercised. Under date 4th March, 1929, a circular was issued to shareholders informing them of the decision of the Directors to proceed at once with the sinking of No. 3 Shaft on your Company's property. In order to procure funds to carry out the extended programme of operations, shares in the Capital of the Company were offered at 22s. 6d. each to shareholders registered on the 15th March, 1929, in the proportion of one new share for each two shares held. The Anglo American Corporation of South Africa, Limited, underwrote the whole of the new issue for a commission of 2½ per cent., and in addition subscribed for a further 49,552 shares at 22s. 6d. The response of shareholders to this offer was very satisfactory. In terms of the offer, 308,993 shares were issued at 22s. 6d. per share, and the issued capital of the Company at the 31st December, 1929, was therefore £827,945.

In addition, the following options at par to 24th November, 1930, are outstanding:—

(1) On shares issued in satisfaction of loans and interest	171,872
(2) On working capital shares	204,998
(3) To underwriters of working capital shares	205,185
(4) To Cassel Clydesdale (Springs) Gold Mines, Limited	40,000
	622,055

PROPERTY.

The property of the Company is as follows:—

Freehold portion of the Farm Daggafontein No. 9, situated in the Mining District of Johannesburg, Transvaal, in extent 4,367 morgen 183 square roods. The farm was proclaimed on the 22nd November, 1921, and the Company has been granted Owners' Reservations over areas totalling 2,401 morgen 66 square roods.

The claim holding of the Company is:—

Mynpacht Area No. 657, in extent 1,848·68 acres	1,257·785	claims.
Discoverers' Claims	178·999	,,
Leased from the Government (1st Lease)	448·898	,,
Leased from the Government (2nd Lease)	778·176	,,
Acquired by Purchase	172·604	,,
Cassel Clydesdale Mynpacht	172·900	,,
	3,009·362	claims.

OPERATIONS.

Technical matters are dealt with in the attached Reports of the Consulting Engineers and Mine Manager, *to which your attention is directed.*

FINANCE.

The cash receipts and expenditure from the inception of your Company to the 31st December, 1929, after making allowance for sales effected, were as follows:—

RECEIPTS.

	£	s.	d.
Working Capital—505,185 Shares at 20s. each	505,185	0	0
308,993 Shares at 22s. 6d. each	347,617	2	6
Shares Issued against Options exercised at 20s.	250,187	0	0
Cash and Cash Assets taken over from Vendors	2,437	15	4
Sundry Revenue received to date	42,736	1	11
Sales of Surplus Water	8,253	17	0
Owners' Share of Licences	12,756	8	1
Loans	450,000	0	0
	£1,619,173	4	10

EXPENDITURE.

	£	s.	d.
Transfer Duty, &c.	11,879	9	8
Shaft Sinking, Permanent Haulage Ways and Equipment	939,069	3	0
Estate Buildings and Improvements	668	8	11
Development	166,444	2	11
General Expenses	135,317	16	4
Guarantors' Commission—Loans	25,000	0	0
Interest on Loans paid and accrued	251,684	3	1
Cash and Cash Assets, *less* Creditors	326,596	16	2
	1,856,660	0	1
Less—Guarantors' Commission and Interest, settled by Shares issued	237,486	15	3
	£1,619,173	4	10

DIRECTORATE.

Early in the current year Sir Ernest Oppenheimer resigned his seat on the Board, and Mr. R. B. Hagart was elected to fill the vacancy. You will be asked to confirm this appointment.

In terms of the Articles of Association, Messrs. J. Davidson and A. F. Mullins retire by rotation, but are eligible and offer themselves for re-election.

AUDITORS.

You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. Alex. Aiken and A. E. Page, retire, but are eligible and offer themselves for re-election.

GENERAL.

In 1925 your Company paid the whole of its liability to the Miners' Phthisis Fund up to the date of closing down in August, 1921. With the resumption of operations the Mine was again Scheduled, and the Reserve of £392 shown in the Balance Sheet for Liability under the Miners' Phthisis Act represents the new total estimated liability of the Company to the Compensation Fund.

Johannesburg,
14th March, 1930.

SPRINGS MINES, LIMITED.

(Incorporated in the Union of South Africa.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1929.

To be submitted at the Twenty-first Ordinary General Meeting of Shareholders, to be held in the Board Room, "Anmercosa House," Johannesburg, on Friday, 16th May, 1930, at 12 noon.

To the Shareholders,
SPRINGS MINES, LIMITED.

Gentlemen,

Your Directors beg to submit their Report and the Audited Financial Statements for the year ended the 31st December, 1929, accompanied by the Reports of the Consulting Engineers and the Mine Manager.

CAPITAL.

The Capital of the Company remains unchanged at £1,500,000 in shares of £1 each, all fully paid and issued.

PROPERTY.

The position of your Company's holdings at 31st December, 1928, was as follows:—

Mynpacht No. 637, in extent 1,675·693 acres, equal to	1,140·09	claims.
Railway Area (leased from the Government)	20·63	,,
Discoverer's Rights	171·60	,,
Claims on Farm Rietfontein No. 8 (leased from the Government)	2,235·60	,,
	3,567·92	claims.

Of the sixteen freehold stands in Springs Township owned by the Company, two were sold during the year and fourteen are still held.

OPERATIONS.

Technical matters are dealt with in the attached Reports of the Consulting Engineers and Mine Manager, to which your attention is directed.

FINANCE.

	£	s.	d.
From the Working Expenditure and Revenue Accounts it will be seen that the profit from operations for the year amounted to	785,455	12	4
Deduct—			
Donations	3,236	0	4
Add—	782,219	12	0
Dividends on Shareholdings, Interest, Commission and Exchange, and Sundry Revenue	15,693	10	11
Leaving a net balance of Revenue over Expenditure for the year of	797,913	2	11
Add—			
Balance to credit of Appropriation Account at 31st December, 1928	49,220	6	1
Making a total available credit of	847,133	9	0
Against which the following amounts have been appropriated:—			
Government Taxes	73,750	7	4
Government Participation in Profits	151,727	16	7
Capital Funds	23,249	8	3
Reserve for Liability under Miners' Phthisis Acts	7,646	14	4
Dividend No. 20	262,500	0	0
Dividend No. 21	281,250	0	0
	800,124	6	6
Leaving a balance unappropriated at 31st December, 1929, of	£47,009	2	6

The Capital Expenditure for the year amounted to £42,663 1s. 4d., made up as follows:—

				£	s.	d.
Shaft Sinking and Equipment, as per Schedule attached to Balance Sheet				42,867	8	4
Less Credits—Shares and Interests in other concerns	£	s.	d.			
	61	17	0			
Property Account	142	10	0			
				204	7	0
				£42,663	1	4

The Union Government's participation in the profits of the Company, in terms of the Mineral Lease, is estimated at £151,727 16s. 7d. This sum is equivalent to 19·016 per cent. of the total profits of the Company for the year.

Expenditure on development for the year amounted to £116,008 17s. 1d., which has been charged to Working Expenditure and Revenue Account.

In connection with the annual reserve in respect of the Company's liability under the Miners' Phthisis Act, the amount set aside for 1929 is £7,646 14s. 4d. This, with the previous figure of £15,116 5s., and interest accrued, gives a total reserve of £23,443 3s. 11d. The Company's ultimate assessment is estimated at £130,371.

DIVIDENDS.

Two dividends were declared during the year, as follows:—

	Per Cent.	Rate per Share.	Total Amount.
Dividend No. 20	17½	3s. 6d.	£262,500 0
Dividend No. 21	18¾	3s. 9d.	281,250 0 0
	36¼	7s. 3d.	£543,750 0 0

DIRECTORATE.

Your Directors have to record with deep regret the death of Mr. F. R. Lynch, who was for many years a Director of your Company. Mr. R. B. Hagart was elected to fill the vacancy thus caused on the Board, and you are asked to confirm this appointment.

Early in the current year Mr. A. F. Lyall resigned from the Board owing to ill-health, and Sir Ernest Oppenheimer also resigned owing to pressure of other duties. Messrs. J. Boyd and F. A. Unger filled the vacant seats on the Board, and these appointments you will also be asked to confirm.

In terms of the Articles of Association, Messrs. R. B. Hagart and W. E. Hudson retire from the Board by rotation, but are eligible and offer themselves for re-election.

AUDITORS.

During the year Mr. F. W. Diamond, one of your Auditors, died, and, in terms of the Articles of the Association, Mr. M. Spier, a partner of the late Mr. Diamond, was appointed to fill the vacancy thus caused.

You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. A. E. Page and M. Spier, retire, but are eligible and offer themselves for re-election.

We report that we have examined the above Balance Sheet with the Books and Vouchers of the Company, and the audited returns from the London Office, and certify that it is in accordance therewith. We have obtained all the information and explanations we have required. The Company has kept proper Books and records. In our opinion, such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Company.

BRAKPAN MINES, LIMITED. (Incorporated in the Union of South Africa.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1929.

To be submitted at the Twenty-seventh Ordinary General Meeting of Shareholders, to be held in the Board Room, "Anmercosa House," Johannesburg, on Friday, the 16th May, 1930, at 2.30 p.m.

To the Shareholders, BRAKPAN MINES, LIMITED.

Gentlemen,

Your Directors beg to submit their Report and the audited Financial Statements for the year ended 31st December, 1929, accompanied by the Reports of the Consulting Engineers and the Mine Manager.

CAPITAL.—The capital of the Company is unchanged at £1,020,000 in 1,020,000 shares of £1 each, fully paid and issued.

PROPERTY.—No alterations have taken place during the year in your Company's claim holdings, which remain as follows:—

Mynpacht No. 490/1919, in extent 405·754 acres, equal to	276·06	Claims.
Mynpacht No. 543/1906, in extent 888·936 acres, equal to	604·80	,,
Claims on Farm Benoni No. 3, with Coal Rights on 73·326 Claims	201·59	,,
Claims on Farm Weltevreden or Brakpan No. 5	68·00	,,
Claims on Farm Weltevreden or Brakpan No. 5—leased from Union Government	1,811·70	,,
Claims on Farm Koolbult or Schapenrust No. 7	424·90	,,
	3,387·05	Claims.

The undermining rights of seven stands and four portions of stands on Farm Benoni No. 3.

Twenty-one freehold stands in Brakpan Township, on which are erected quarters for the Company's employees.

OPERATIONS.—Technical matters are dealt with in the attached Reports of the Consulting Engineers and Mine Manager, to which your attention is directed.

	£	s.	d.	£	s.	d.
FINANCE.—From the Working Expenditure and Revenue Account it will be seen that the profit amounted to				660,530	5	9
Deduct—Donations				3,295	4	0
				£657,235	1	9
Add—Dividends on Shareholdings	970	15	10			
Interest, Commission, Exchange, etc.	12,545	10	10			
				13,516	6	8
Leaving a Net Balance of Revenue over Expenditure for the year of				670,751	8	5
Add—Balance to Credit of Appropriation Account at 31st December, 1928				59,536	12	3
Making a total available Credit of				730,288	0	8
Against which the following amounts have been appropriated:—						
Government Taxes	£67,025	3	9			
Government Participation in Profits	90,368	6	7			
Reserve for Liability under Miners' Phthisis Acts	17,355	11	0			
Dividend No. 34	242,250	0	0			
Dividend No. 35	255,000	0	0			
				671,999	1	4
Leaving a Balance unappropriated at 31st December, 1929, of				£58,288	19	4

The Capital Fund shows a credit for the year of £1,964 13s. 10d. which is mainly attributable to the refund by West Springs, Ltd., of their proportion of the cost of the joint Ventilation Fan, previously charged out to Capital Account. The net credit is made up as follows:—

	£	s.	d.
Shaft Sinking and Equipment, as per Schedule attached to Balance Sheet—Credit	2,204	13	4
Less—Expenditure on Shares and interests in Other Concerns	239	19	6
	£1,964	13	10

The unexpended balance of Capital Funds has been increased accordingly.

The amount payable to the Government for the year under the terms of the Mineral Lease Agreement is estimated at £90,368 6s. 7d. This figure represents 13·473 per cent. of the profits for the year as compared with 9·423 per cent. for 1928. This increase is due to a smaller allowance for amortisation being authorised than that for last year.

The amount charged to working costs for development was £99,605 5s. 10d. In connection with the annual reserve in respect of the Company's liability under the Miners' Phthisis Act, the amount set aside for 1929 is £17,355 11s. This, with the previous figure of £25,960 13s. 6d. and interest accrued, gives a total reserve of £44,484 9s. 1d. The increase in the annual amount as compared with the previous year's figure is due to the adoption of a new basis of calculation. The Company's ultimate assessment is estimated at £199,714.

DIVIDENDS.

Two Dividends were declared during the year, as follows:—

	Per Cent.	Rate per Share. s. d.	Total Amount £ s. d.
Dividend No. 34	23¾	4 9	242,250 0 0
Dividend No. 35	25	5 0	255,000 0 0
	48¾	9 9	497,250 0 0

DIRECTORATE.

It is with deep regret that your Directors have to record the death of Mr. F. R. Lynch, who was for so many years a Director of your company. Mr. R. B. Hagart was elected to fill the vacancy thus caused on the Board, and you are asked to confirm this appointment.

Early in the current year Mr. A. F. Lyall resigned from the Board owing to ill-health, and Sir Ernest Oppenheimer also resigned owing to pressure of other duties. Messrs. J. Boyd and F. A. Unger filled the consequent vacancies on the Board, and these appointments you are also asked to confirm.

In terms of the Articles of Association, Messrs. F. A. Unger and J. Boyd retire by rotation, but are eligible and offer themselves for re-election

AUDITORS.

You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. A. E. Page and P. Whiteley, retire, but are eligible and offer themselves for re-election.

THE MONEY MARKET.

MONEY this week has been fairly easy, 2 per cent. being charged on Wednesday, and rather less the following day. Despite recent withdrawals, there is still a large quantity of French money in London, and as maturing bills in French hands are not at present being replaced, this tends to make money more plentiful. The

banks, too, are well supplied with money, partly because the Stock Exchange is not employing anything like its normal quantity. At the moment, therefore, money is plentiful, but next month, when the final call on Conversion Loan has to be paid up, and when several foreign loans are likely to have appeared, the position may alter.

* * * *

Three months' bills were quoted on Wednesday at $2\frac{9}{16}$ per cent., with four months' at $2\frac{5}{8}$-$\frac{11}{16}$ per cent., and six months' at $2\frac{13}{16}$-$\frac{7}{8}$ per cent. Rates eased fractionally the following day. June bills, however, were appreciably dearer than the longer-dated maturities at $2\frac{1}{8}$ per cent., this being due to heavy purchases by the clearing banks. Brokers consequently have been selling short bills and buying long bills. It will be recalled that immediately before Easter, the Bank of England was reported to have bought large quantities of May bills, and that most of next month's maturities are believed to be held outside the market. It looks, therefore, as if the market may find itself occasionally short of funds during the next two months.

* * * *

The fall in the French exchange to 123.90 francs, which occurred early this week, put France in a position to bid for the week's supply of new Cape gold, while the Swiss franc at 25.08¼ francs was also near the export gold point. Consequently keen competition developed at this week's market, which was held on Wednesday. The price was forced up to 84s. 11½d., or within ⅜d. of the Bank's selling price, and Germany, who previously had been taking each week's supply of gold, found herself outbid. Of the £706,000 in the market, £100,000 went to France and £500,000 to Switzerland. It is stated that there were buyers present for as much as £2,500,000.

* * * *

Fortunately the exchange rates concerned responded to these gold purchases, while the dollar rate has also improved from the standpoint of sterling. The sharp fall in sterling against the franc is ascribed, in addition to the causes enumerated last week, to the French withdrawing from Germany the loans made some months previously. When this money was borrowed no steps were taken to cover the exchange, and so its withdrawal meant that the necessary francs had to be purchased in a hurry. These withdrawals of French money from Germany are due mainly to the recent decline in German deposit rates.

	Apr. 3, 1930.	Apr. 10, 1930.	Apr. 16, 1930.	Apr. 24, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%

Market rate (3 months' bills)	2⅜	2 7/16-½	2½	2½-⅝	...

While the monetary outlook is not very clear, there is no ground for anxiety. This week's Bank return shows an increase of £3,055,000 in the Bank's gold stocks, due to further arrivals from Australia, and, while there is some disposition to belittle the significance of this increase, on the ground that these shipments are of a special character, the fact remains both that the Australian gold exports are due to well-known economic causes and that their arrival in London has the same effect as that of gold from any other quarter. In any case, the Bank's gold now amounts to £163,843,000, which is an amount well above the margin of safety.

NEW YORK

Our New York correspondent cables:—Money is easier, with call money plentiful at 3 per cent. outside the Exchange, and long-term time funds are down ¼ to 4 per cent. The Reserve bill-buying rate remains unchanged, and maturities this week are heavier than replacements, which fact is largely responsible for a drop of 60 millions in the total Reserve credits. Discounts have fallen nominally, and the reserve ratio is up at 81.8 per cent. The New York ratio stands at 82 per cent., and City Member Banks are now borrowing only 10 millions. It is believed that recent heavy new financing, together with the American Telephone stock issue, which forced convertible bond holders either to convert with part payment in cash or to sell, are partly responsible for higher loans. There is some suggestion that a lower discount rate is possible, due to concern over stagnation in trade, while share market weakness has removed one obstacle to a lower rate. Bonds are sluggish on heavy new offerings, but Government securities are strong. Corporation earnings for the first quarter are running 18 per cent. under a year ago. A hundred million Japanese refunding loan is under negotiation.

THE STOCK MARKETS.

Business in the Stock Markets showed a decided falling-off in volume, and prices were marked lower in many cases, though little selling occurred. The prevailing tendency was attributed to psychological rather than economic factors, afterthoughts on the Budget, by general agreement, exerting but a minor influence. Gilt-edged prices were lower, with a firmer trend on Thursday. Home rails declined, the Easter traffic figures affording unfavourable comparison with last year's. Caution was the dominant note in the industrial markets. Business remained on a meagre scale in rubber and tea shares, but oils had a firmer appearance. The mining markets were overshadowed by a new break in base metal prices.

THE COMMODITY MARKET.

The outlook is, if anything, a shade brighter. Coal stocks are high, and though there are more inquiries for forward business, they have not yet developed into orders. Some important new steel contracts have been placed, but orders are by no means generally forthcoming, and the outlook for pig iron is not considered very promising. The cotton situation is unchanged, but the position in the wool textile industries is distinctly less gloomy. The hide and leather trades are quiet but fairly steady. Vegetable oils and oilseeds are in poor demand. The timber market is in a very satisfactory condition. Wheat prices are on balance unchanged.

THE FOREIGN EXCHANGES.

The Foreign Exchange market has only been moderately active. The tendency generally was against sterling in the early part of the period under review, with a recovery, especially against the dollar, at the close. New York, after falling to 4.86 1/16, recovered to last week's level of 4.86 5/16 as a result of American bidding for sterling. Montreal fell away from 4.86⅜ to 4.86¾. Paris improved from 124.04 to 123.98, after touching 123.90. Brussels was considerably firmer at 34.82⅜. Milan lost three points at 92.78, and the peseta, after some irregularity, fell away from 38.82 to 39.06. Amsterdam went rather sharply against us from 12.09¾ to 12.08⅜. Berlin was ¾ better at 20.37. Switzerland gained ⅜ at 25.08⅛, after 25.07¼. Stockholm lost ⅛ at 18.19⅛, but Oslo and Copenhagen both improved by the same margin to 18.16⅛. Of the South American exchanges, Rio was firmer at 5 13/16d., but Buenos Aires lost 7/32d. at 43 15/32d., and Montevideo ⅛d. at 45⅜d. The Far Eastern exchanges were very firm, the rupee remaining at 1s. 5 27/32d. and the yen at 2s. 0⅜d. Batavia was a point better at 12.08½. In the futures market dollars were more wanted at narrower discounts of 1/16 and 5/32 cent. Paris was little changed at 2 and 3 centimes premium, but Brussels was ½ centime weaker at 1½ and 3½ centimes discount. Milan was fairly steady around 11 and 32 centesimi discount. Amsterdam was more on offer at increased discounts of ¾ and 1¼ cents against ¼ cent discount for both periods last week. Berlin remained around 1¼ and 4 pfennigs discount. Prices in the silver market rose by 3/16d. for both spot and forward, at 19 13/16d. and 19¾d. respectively, chiefly as a result of demand from the Indian bazaars. The Chinese silver exchanges were unaffected, Hong Kong remaining at the previous quotations of 1s. 6⅜d. and Shanghai at 1s. 11¼d.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

THE PROGRESSIVE PARTIES.

WHEN two friends part company it will usually be found that each accuses the other of having "changed." This common proclivity to mutual recrimination is exemplified by the relationship between the Government Front Bench and the I.L.P., whose Easter conference may prove to have been an event of some political significance. Whereas Mr MacDonald, severing his connection with a party which he had done much to create, protested that the I.L.P. had lost its grip on Socialism and its appreciation of the meaning of "comradeship," the Birmingham conference was mightily concerned to demonstrate that the actions of the Labour Party's official leaders, during their ten months of office, had been a complete derogation of the Socialist professions contained in the party's electoral programme. "The Lord Privy Seal," said one speaker at the conference, "has worked hard. He has done more for British capitalism in ten months than the Tories did in five years." The Government's attitude towards the unemployed and the miners, and particularly the "failure" of Mr Snowden's Budget to impose sufficiently "drastic" direct taxation on the rich, in order to finance more expensive social services, were roundly condemned as betrayals of the true Socialist faith.

The precise rights and wrongs of the Labour Party's domestic quarrels are not in themselves a matter of great public concern. Socialism, like all political tenets, is a doctrine presumably capable of modification with the years, and the question whether Messrs MacDonald, Snowden and Thomas merit the pillory as "recreants," or whether the I.L.P. deserves excommunication for being, in an inverted sense, *plus royaliste que le roi*, is no great matter. In fairness to Mr Maxton and his supporters, let us say that, having refreshed our memory by reading again the lushly-pledged pages of *Labour and the Nation* we recognise in the attitude of the Front Bench greater signs of change than in the proceedings of the I.L.P. conference, whose resolutions on policy with regard to work and maintenance, taxation and public control of banking and industry conformed, in fact, to the letter, if not to the intention, of official Labour Party doctrine. The point, however, of real public interest in the cleavage, whose depth the I.L.P. conference served to emphasise, is that it reveals, from two points of view, the growth of disillusionment in Labour's political and economic outlook.

The first stage in that disillusionment was the abject failure of the General Strike four years ago, when the futility of "direct action" as a means to social progress was brought home to the minds of nearly all the movement's industrial leaders. It is now the politicians' turn. Less than a year of office, we imagine, has sufficed to convince the members of Mr MacDonald's Ministry that there are no short cuts to prosperity, and that doles, high wages without correspondingly high production, and taxation whose proceeds are squandered uneconomically all aggravate unemployment and fetter industry. If it be the case that the Government's apparent inclination quietly to shelve the embarrassingly socialistic elements of its electoral programme in favour of a "moderate progressive" policy is widely endorsed, not only by the rank and file of the party in the House but by its supporters in the country, then clearly the fundamental conditions exist which might enable the rumoured *entente* between the Labour and Liberal leaders to be translated into a definite alliance for co-operation during the life of the present Parliament. Though the working of party machinery is naturally inimical to such co-operation, and though the idea of any sort of Liberal-Labour coalition would probably be repugnant to the majority of both parties, Mr. MacDonald may well be alive to the strategic advantage of keeping on good relations with a party which commands at least five million more or less "progressive" votes. His foreign programme is scarcely as attractive from an electioneering point of view as it bade fair to be last summer; if he is to win *réclame* for successfully handling the Egyptian and Indian problems he may think it essential (as, indeed, it is) that he should feel himself firmly in the saddle; and the situation of trade and employment makes an early appeal to the electorate uninviting from his standpoint. Finally, if the Maxton revolt were to lead to the formation of a virtually hostile fourth party, Mr MacDonald's tenure of office would be short-lived in the absence of active and consistent Liberal support.

For such support what price can be suggested whose payment Mr MacDonald is in a position to guarantee? The answer is not simple. "Ideologically," said a speaker at the I.L.P. conference, "there is nothing that now separates the Labour Front Bench from the Front Bench of the Liberal Party." Even if that statement, which we are disinclined to accept, were true, the fact remains that, apart from the I.L.P. thunder on the left, there is little as yet to show what the mass of Labour voters are thinking either about a *rapprochement* with the Liberal Party in the House, or about the Government's almost pathetic reliance on "capitalist" reorganisation to pull the country round.

According to current, though unsubstantiated rumour, a measure of electoral reform has been mooted as part of the price to be offered by the Prime Minister in return for Liberal backing in the House. From the Liberal Party's point of view, such an offer might hold attractions, though it is questionable whether Mr MacDonald could do more in the end than submit an electoral Bill to the doubtful test of a free vote of the House; but it is difficult to conceive that this could be the sole *quid pro quo* in return for Parliamentary co-operation. Apart from the question of an armistice in the constituencies (a matter of party advantage with which the *Economist* is not concerned), it seems to us to be essential in the national interest that any agreement between the Liberal and Labour Parties for the purpose of maintaining the Government in power must be conditional, not only on common adherence to sound fiscal policy, but on an absolute undertaking by Mr MacDonald that no additions will be made to the burden of taxation. Such a promise was made somewhat guardedly by Mr Snowden, if we understand him aright, in his Budget speech—at least so far as next year is concerned; but, for the continuance of the Government in office to be an advantage to the country, a definite pledge is wanted that in framing the remaining Budgets of this Parliament aggregate expenditure will not be increased, *i.e.*, that there will be a sound and trenchant pruning combined with carefully-thought-out priority in the outlay on social services.

On the basis of such an undertaking, and given a programme of legislation frankly non-Socialist in complexion, we conceive that co-operation between Labour and Liberalism in this Parliament might result in a tolerable administration, always provided that in such controversial questions as the Trades Disputes Act Mr MacDonald were willing to defer within reason to his allies' views. The question is whether such a basis could, in fact, be reached. The I.L.P.'s bid to secure the real leadership of the Labour Party may not be regarded by the present Front Bench as a grave menace (the actual secession of the "Maxtonites" is unlikely), and the Labour rank and file may be disposed to accept with unprotesting disillusionment the vision of a Socialist Commonwealth receding beyond "our time." But in default of the full-blooded (and, let us add, never explicitly repudiated) programme of "anti-capitalist" legislation to which *Labour and the Nation* committed the official leaders of the Labour Party, will Mr MacDonald's Cabinet be strong enough to resist the temptation to console their disenchanted electorate with increasing slices of a cake whose prodigal consumption must end by undermining the foundations of the country's economic structure? "The fair distribution

said Mr Maxton at Birmingham, " of what already exists is a more urgent question than the increasing of production." For how many of the Labour electorate does he speak in uttering this disastrous fallacy? And if the Labour Party managers tell Mr MacDonald that insistent echoes of this siren voice are to be heard throughout the constituencies, will he and his colleagues be able to adhere in political practice to what we credit them with having learnt at heart—that the limits of unproductive expenditure based on direct taxation have been reached? Failing a guarantee of sound policy on the crucial issue of national finance, the country's interests would be ill-served were the Liberal Party, allured simply by the hope of electoral reform—desirable though such reform may be—to surrender any of its rights and functions as an independent critic of the Government's actions.

THE NAVAL TREATY OF LONDON.

THE actual text of the Naval Treaty of London, which was signed on behalf of Great Britain, the United States, Japan, France and Italy on Tuesday, revealed no last-minute surprises. There is little noteworthy, therefore, to add to the description of the concrete agreements actually reached, which was given in an article in last week's *Economist*. The publication, however, of the full text and the speeches of the statesmen at the ceremony of signature suggest certain broader reflections on the significance of what has been achieved and what has been left undone.

In counting up the achievements it is not sufficient merely to enumerate the " battleship holiday," the agreement on rules of submarine warfare, or even the complete and comprehensive agreement on all naval armaments between the three great Naval Powers of the world. If we cast our minds back a year to the preliminary conversations between General Dawes and Mr MacDonald, out of which this Conference was born, we become aware of an achievement greater than any of these—namely, the overdue restoration of Anglo-American relations to a basis of goodwill and understanding. But, on the other hand, in counting up the shortcomings, it is not sufficient merely to mention the fact that France and Italy failed to come into line.

The task of assessing what has been done requires a sense of proportion and also the remembrance that all achievement is relative. We should have been jubilant if Part III of the London Treaty of 1930 had emerged, by some miracle, out of the Geneva Conference of 1927. And we should have been vastly relieved if, at the outset of the Anglo-American conversations last summer, even this result could have been confidently foreseen. It is rather hard on Mr MacDonald and President Hoover that there has been a six months' interval between the provisional Anglo-American Agreement which preceded the Prime Minister's visit to the United States in October and the signature of the Treaty this month. During this interval British and American public opinion has grown so accustomed to the achievement which now at last has been formally embodied in the London Treaty, Part III, that we are inclined to take it for granted and ask, somewhat greedily, for more. This is perhaps a human, but certainly a distorted, point of view. We have to correct it by reminding ourselves that, though the achievement in the way of tonnage reduction may, on paper, be disappointingly small, the limitation agreement, embracing Japan as well as the British Empire and the United States, is now available as a new cornerstone in the building of world-peace.

In another way, too, the agreement is remarkable, almost unprecedented. For what is the usual sequel to a general war, like that of 1914-18, which ends in one group of belligerents receiving " a knock-out blow "? History shows that the usual sequel is an almost automatic redistribution of the Balance of Power by a division of the principal victors between the opposing scales. In the present instance, it was to be expected that as soon as the German Navy had been eliminated, the British, American and Japanese navies would begin to compete among themselves; and, now that this danger has been surmounted, we can afford to admit quite frankly that the tendency duly appeared. Between the Armistice of 1918 and the meeting of the Washington Conference in 1921 the lists were set for a three-cornered competition between Great Britain, the United States and Japan. This was a real menace to future peace, because if this tension between the three " Oceanic " Powers had continued, it would have made itself felt over the whole navigable and habitable surface of the world. The Washington Conference took the first steps towards exorcising this spectre; but after the failure of the Geneva Conference the ugly apparition still stared us in the face. We may fairly congratulate ourselves, and thank our statesmen that, at London in 1930, this ghost has been laid. This is indeed a good augury for the future.

Yet, even so, we are confronted with a strange and disquieting spectacle. This strong desire for disarmament and peace—a desire expressed, not only in fine sentiments, but in repeated efforts to obtain practical results, which have now met with partial success—is evinced by the three greatest Powers in the world, the " Oceanic " Powers which, between them, control most of the material resources except on the European Continent and in Russia. On the other hand, no similar desire is apparent in the minds of the two lesser Naval Powers, France and Italy, whose aggregate range of control is limited to the European continent, the Mediterranean, and North-West Africa. Both the French and the Italian delegations to the London Conference are now receiving ovations at home because they have succeeded in retaining for their countries a free hand to carry on unrestricted naval competition against each other and all comers. In terms of navies this is odd. Translated into terms of pre-war armaments on land, it is as though, at the Hague Conferences, Imperial Germany had pressed for disarmament and had been successfully frustrated by Switzerland and Belgium. One sees a vision of the mouse boasting that it has defeated the insidious proposal of the cat for a filing down of claws all round.

What is the explanation of the French and Italian state of mind? It is important for the rest of us to understand it—important, in the first instance, for ourselves, because we are a European as well as an " Oceanic " Naval Power and should, therefore, be the first to be affected if an unrestricted competition in non-capital-ships between Italy and France were to drive up their establishments in these categories within an uncomfortable distance of the tonnages to which we have limited ourselves in agreement with our " Oceanic " partners to the London Treaty, Part III. Great Britain would be affected rapidly and disagreeably by substantial increases in French naval strength in the Channel, or in French and Italian naval strength in the Mediterranean; but the United States and Japan would be likewise affected not less surely, though indirectly, since the third part of the London Treaty contains a safeguarding clause providing for reconsideration of the figures agreed upon if, at some future date, one of the parties to the treaty feels itself menaced by the naval programme of some non-participant Power. In the circumstances, this proviso was inevitable, and it is also salutary. It underlines the truth that, when once a group of Powers have agreed upon a limitation of armaments with one another, they have thereby acquired a common interest in persuading other Powers to come into line.

Thus, it is of common interest to the British, Americans and Japanese to understand the French and Italian point of view. Is it a case of *amour propre*? Partly, no doubt, but only partly, for that motive has not been decisive

in the Japanese mind, though the Japanese nation is as ancient, and as proud as the Italian or the French. Is it environment? It almost seems as though the traditional Continental European atmosphere must be the explanation of this psychological puzzle. For Continental Europeans, their continent has always been the world, and military power on the Continent has been the title to universal supremacy. Is it just that the French and Italians, acute though they are, are not sufficiently acute to view the world of to-day absolutely as well as relatively? We in Great Britain are so placed that the absolute view is imposed upon us without much mental exertion being demanded on our part. From our standpoint we are aware that, in due course, mere European Powers of even the largest European calibre may well be dwarfed by Powers on an utterly different scale in other parts of a now unified world. At the moment, the United States is the only Power of this calibre that has actualised its latent strength; but what the United States did yesterday may be done to-morrow by other countries of great population and resources. A distant prospect, perhaps; but one which the spectacular rise of America as a World Power should teach the Continent to contemplate. The results of the unsparing and praiseworthy efforts of Mr MacDonald, President Hoover and Mr Stimson, and of the Japanese delegates at the London Conference will depend in large measure on the Continent's awakening to its ultimate need to sink domestic differences if its old power, strategic and economic, is not to pass into other hands.

AUSTRALIA'S VICIOUS CIRCLE.

ECONOMIC conditions are awry to-day in many parts of the world, but in few countries do present troubles lend themselves so easily to diagnosis as in Australia. The chief symptoms, such as the exchange weakness, the growth of unemployment, and the movement of the trade balance, are patent to every eye; and equally clear are the leading causes, some of old standing, some new and fortuitous, which have turned an economic position of growing instability into one to which the overworked word " crisis " may not improperly be applied.

Let us look at some of the symptoms first. The readings of the exchange barometer are arresting. The Australian banks' selling rate for sterling on demand (Australian pounds to £100 English) rose steadily from 99¾ at the end of March, 1927, to 100⅝ at the end of March last year, and to over 106 at present. The rise last month (March) was from 102 11/16 to 106 1/16, and so large a movement is itself sufficient indication of serious maladjustment in Australia's economic relations with the rest of the world. A glance at her recent overseas trade figures provides confirmatory evidence. Australian imports and exports during the five years ended June 30, 1929, are shown below:—

AUSTRALIAN FOREIGN TRADE.

(In thousand £'s.)

	1924–5.	1925–6.	1926–7.	1927–8.	1928–9.*
Imports:					
Merchandise	146,600	151,217	164,128	146,937	143,271
Specie and bullion	10,543	421	589	1,008	357
Total	157,143	151,638	164,717	147,945	143,628
Exports:					
Merchandise	159,987	143,283	132,837	139,472	140,854
Specie and bullion	2,043	5,489	12,303	3,741	3,927
Total	162,030	148,772	145,140	143,213	144,780

* Provisions.

This table shows that, excluding gold movements, the visible balance of trade, which has fluctuated violently in the last five years, though much less " unfavourable " in the last two years than in 1926-27, has been adverse since 1924-25. The statistics for the first seven months of the current financial year showed a further violent movement against Australia. Imports of merchandise were £87.1 million, against £86.2 million in June-January, 1928-29; exports of merchandise, £56.3 million, against £80.9 million. In considering this formidable increase in the merchandise import balance—the reasons for its recent acute accentuation we will come to in a minute—it is necessary not to lose sight of another important item in Australia's balance of payments with the rest of the world, namely, the very large interest payments on overseas borrowings. At June 30, 1928, the total public debt of the Commonwealth and the States was £1,095 million, of which £544 million, or, roughly, half, was borrowed overseas. Total interest charges were in the region of £52 million, of which, presumably, about one-half had to be remitted abroad, in addition to remittances of interest and dividends on British and other " outside " capital invested in Australian municipalities and enterprises. We cannot, in this brief review, enter deeply into discussion of Australia's borrowing policy and problems, but significance is added by recent events to an observation made in the report of the British Economic Mission:—

> Loan moneys raised overseas can only come to Australia in the form of goods. These goods are subject to the Customs duties . . . and are in this way taxed to an extent estimated at 15 to 20 per cent. of their value. The result is that this proportion of moneys borrowed abroad for capital purposes comes to the Commonwealth as revenue and is spent accordingly. This diversion of capital funds to revenue is obviously bad finance.

The point, however, with which we are here mainly concerned is the important part played by interest on foreign loans in Australia's balance of payments, and the necessity of curtailing unnecessary or unremunerative borrowing, towards which the new loan agreement between the Commonwealth and the States was a welcome step. In recognition of the present crisis the borrowing pro-

gramme for 1930 has been cut down from £43 million to £30 million; but a pressing problem is provided by the maturing this year of £118 million of internal debt, and there is talk of the London market being asked to provide a loan of perhaps £10 million towards this purpose.

The swing of the trade balance which we have illustrated has been met by vigorous efforts to curtail imports and by large exports of gold. In the first seven months of the current financial year net gold exports were over £9½ million, against some £1¼ million in the corresponding period of the previous year. The situation required and received bold action in the banking sphere, and last December the Commonwealth Bank Act was amended in order to enable the Commonwealth Bank to commandeer the gold held by the other banks. This measure has been followed by resolute use of gold reserves and, since January, over £20 million has been consigned to London from Australia.

Any attempt to summarise the causes of the present crisis must recognise that they fall into two categories—those that have been at work for years, and are hard to eradicate, and those that have recently developed, some, at least, of which may be expected to pass away automatically, if slowly. In the latter category the chief is the pronounced fall in world prices of the primary commodities which form the predominant part of Australia's exports. The decline in wool prices has been almost catastrophic. The price of " Queensland scoured supercombing," for example, which in December, 1927, was 48d., had fallen to 41d. by March, 1929, to 31d. by the end of October, and, after a slight recovery, is now down to 25d. This was a sufficiently devastating movement in the price of a commodity which forms nearly half Australia's export, and it is made worse by the fact that, far from receiving compensation for the lower price by a greater bulk of sales, growers have been selling very much less during the current season than in the corresponding period last year. From July 1st to February 28th last, sales amounted to 1,489,014 bales, at an average price of 10.18d. per lb., against 1,916,896 bales, at an average of 17.14d. per lb. in the corresponding period of 1928-29. According to the report of the Bank of Australasia, Australia and New Zealand together have only increased their wool production by 35 per cent. since 1924-25, whereas South Africa and South America increased theirs by over 50 per cent., so that Australia finds herself confronted with a declining market for her principal commodity simultaneously with an increase in the output from other sources. The value of Australian wool exports fell from £66,096,000 in 1927-28 (an exceptionally good season) to £61,613,000 in 1928-29, and the current season will show a much more severe decline.

The next most important Australian export is wheat, exports of which amounted to £35 million in 1924-25, £17 million in 1925-26, £21 million in 1926-27, £15 million in 1927-28, £20 million in 1928-29. During the first half (ending January 31st) of the current year, she exported 27.2 million bushels, as compared with 44.1 millions a year ago, and her remaining exportable supplies are 93.8 million bushels, against 103.9 millions last year. The price of wheat parcels afloat to London, which at the beginning of March, 1929, was 47s. 6d., had fallen to 39s. 9d. by the end of March, 1930, and had only recovered 1s. by the middle of April. The price decline is even more marked when compared with earlier years. July prices of parcels afloat were: 1923, 45s. 6d.; 1924, 59s. 6d.; 1925, 57s. 6d.; 1926, 59s.; 1927, 55s. 6d.; 1928, 52s. 3d.; 1929, 44s. 3d. It is therefore evident that Australian income from wheat export must show a by no means negligible fall in the current year.

Attempts are being made to restrict sales of both wool and wheat, with a view to checking the collapse of prices, but expedients of this nature, particularly when they cannot include control of output, at best only postpone the evil day, and are not a remedy. The crux of the matter is that Australia has her eggs in a very limited number of baskets and that these baskets are all in an exceptionally exposed position. Her principal products are very much at the mercy of the weather, and as the demand for them is very inelastic, a good season, if it does not coincide with bad seasons elsewhere, may be almost as disastrous as a bad one. Moreover, the rise in the standard of living and the changes in public taste of late years are rendering these staple commodities a more and more uncertain source of income. What Adam Smith called " the narrow capacity of the human stomach " makes other foods a serious rival to wheat and meat, while silk and artificial silk have displaced wool from many of its strongholds.

It is, therefore, understandable that Australia should have sought to diversify her production by developing her manufactures, but, unhappily, she has defeated her own ends by adopting policies which have impaired her own competitive power in the world markets. Tariff policy is at the root of the matter. High, rising, and indiscriminate tariff schedules have caused a steady rise in production costs, and these, too, are enhanced by burdensome labour legislation. A committee set up by Mr Bruce, when Prime Minister, to examine the economic effects of the tariff, in a report which we discussed in the *Economist* of November 16th last, estimated the net burden of the tariff upon export industries, after allowing for the special government assistance which they receive, at about 8 per cent. A large part of this cost reaches them in the form of increases in wages, which, as they are very largely regulated with reference to the cost of living index, are inextricably bound up with the tariff in a vicious circle of higher duties—higher prices—higher wages—higher costs, and therefore a demand for yet higher duties.

Warnings of the inherent instability of this position have been uttered with increasing urgency, by the Tariff Board in its annual reports, by the British Economic Mission, and by the Australian Tariff Committee already referred to. To quote only the last-named: " The people of Australia must soon face the question of how far this can go. At present almost every unsheltered industry is demanding assistance to meet the costs of assisting other industries, and each alleges that its difficulties are due to these costs. . . . Clearly we might reach the stage when the Government would be promoting each industry by taxing all the others," Again, " . . . once begun, tariff protection extends over other industries until any possible benefit is lost in the increased cost due to the protection of inefficient and naturally uneconomic industries." And lastly, " . . . in our (admittedly rough) judgment, the excess costs of protection are as much as the richness of our resources justify, and probably somewhat in excess of that limit." In the view of competent Australian economists, favourable to protectionism *per se*, provided it were scientifically applied, the position has for some time been one of unstable equilibrium, and the past few months have brought events which, as was prophesied, have shaken it severely.

There is, we believe, a growing body of enlightened opinion in Australia, which recognises the nature of the vicious circle and where it may best be attacked. But for the moment its voice is not strong enough to prevail; and in the meanwhile the adverse exchange movements have driven the Australian Government into the superficially attractive policy of attempting to restore trade equilibrium by sterner import restriction. This may prove a temporary palliative, but it is merely equivalent to taking a still stronger dose of the drug which originally produced the symptoms. And so the vicious circle goes on. In some way it has got to be broken, if Australia is to regain prosperity, and it can only be broken by a return to saner fiscal policy. Australia's troubles are an object lesson to the world of what happens when protection runs wild, and we sincerely hope that that lesson and its implications will quickly dawn upon the majority of Australians and create an irresistible demand for the adoption of policies that are so constantly advocated by many of her own leading experts in economics and finance.

FOREIGN CAPITAL IN GERMANY.

(BY A CORRESPONDENT.)

DURING the last year participation of foreign capital in German undertakings has grown to such an extent that it now represents a powerful factor in the economic structure of the Reich. According to a recent estimate published by the *Institut für Konjunkturforschung*, the holdings of German shares by foreign firms, excluding those bought in the open market for investment or speculation, increased during 1929 by about 350 million marks; and, of this amount, shares to the value of at least 230 million marks were acquired in sixty individual German firms having a total share capital of 570 million marks. These figures represent the nominal capital, the actual amount paid by the purchasers being considerably higher. The extent of influence accorded by these share holdings varies. There are minority holdings designed to promote a limited co-operation—large minorities with representation on the board giving a more or less powerful influence over the company's policy—and there are several important cases of majority holdings according dominating control over the administration.

Indeed, foreign influence by financial participation has now reached such a degree that the majority of German business circles have given up the hope of retaining complete control of industry in German hands by means of protective measures, such as were strongly favoured even a year ago. It is widely realised that, in view of the barrenness of the home capital market, and of the fact that foreign markets are almost saturated with German loans, it has become inevitable that a substantial amount of shares should be transferred to foreign interests. The change of attitude is remarkably demonstrated in the case of Siemens Halske A.G., the great electro-technical concern. In October last Herr von Siemens made a vigorous public attack on " those leaders of German industry who have relinquished too early the wheel of their ship and called on board foreign pilots who will only watch for the moment when they can seize control." A few weeks ago Siemens himself permitted the American General Electric Corporation to take over a substantial part of a new debenture issue, and stated significantly that he welcomed the opportunity for closer co-operation afforded by the transaction.

It is in the motor industry that foreign interests have made the deepest inroad. General Motors took over last year about two-thirds of the share capital of the Adam Opel A.G., the largest German motor-car manufacturer. The financial transaction was quickly followed by the Americans taking over active control of production and administration; and the former proprietors retain only a limited influence in this company, which last year produced 45 per cent. of the total German car output. General Motors' great rival, the Ford Company, pursued different methods in its invasion of Germany. It had been originally intended to float a public issue for the establishment of the German Ford Company, but, to the general surprise, the I.G. Farbenindustrie took over the whole of the German issue. This was followed by an exchange of directors. Thus, while establishing an independent company in Germany, Ford has achieved co-operation with the I.G. Farbenindustrie as the largest producer in Germany of many materials essential to the manufacture of his cars. At the same time, the I.G.F. are the greatest suppliers of manure to German agriculture, and Ford has thus also secured a valuable sales link for the marketing of his tractors.

Besides the outstanding cases of Ford and General Motors, mention should be made of the Neckarsulm concern (leading manufacturers of cars, motor cycles and bicycles), control of which has been acquired by the Fiat Company; and the establishment by the French Didier firm of their own German company, Alag A.G., in Berlin, should also be noted. There will soon be an opportunity to test the extent of power which these financial transactions have brought to the foreign interests concerned. The German motor manufacturers are vigorously pressing the Government for an increase in the import duties, or, as an alternative, for the introduction of a quota system for imported cars, which would subject a considerable part of the present motor-car imports to almost prohibitive duties. It should be remembered that General Motors, besides producing four-cylinder Opels in Germany, imports a very large number of its six-cylinder Chevrolets.

It was shortly after the largest German motor manufacturing concern had come into American hands that the greatest electro-technical firm opened its doors to the Americans. Thirty per cent. of the ordinary shares of the A.E.G. were given to the American G.E.C. in connection with a comprehensive agreement on financial and commercial co-operation in the international field. The A.E.G. had reason to fear that, in view of the existing monetary conditions in Germany, a considerable emigration of their shares could not be prevented; the precedent of the English G.E.C. was significant; and the company took the resolute step of forestalling such a development by offering a large block of shares to the Americans at a time when they could still get some advantage in exchange. By agreement it was made impossible for the foreign shareholders ever to acquire a majority of the voting shares. But nothing prevents the G.E.C. from extending their holdings from 30 to 49 per cent., and it is quite possible that they have already gone some way in this direction. Even with a holding of 30 per cent., the G.E.C. became the largest individual shareholders in the A.E.G., and the five seats accorded to them on a board of 37 directors do not by any means indicate the full extent of their influence. Moreover, the position of the A.E.G. as one of the most representative concerns of German industry, renders this American incursion of outstanding importance.

About the same time, the G.E.C. also acquired by agreement 16 per cent. of the shares of the Osram G.m.b.H., the well-known lamp manufacturing company originally founded jointly by the A.E.G. and Siemens; and the latest addition to American participation in the German electro-technical industry—the taking over of a large part of the recent Siemens and Halske debenture issue—has already been mentioned. In this case, although the debentures are of a type almost identical with shares, except that they carry no voting power, there is no question of the G.E.C. acquiring seats on the board or a direct influence over the policy of the company; but their holdings will be so considerable that in some important directions Siemens will hardly be in a position to disregard the wishes of the American company. In the low-tension branch of the industry the two leading firms, Schuchhardt and Mix und Genest, recently came under the control of the Standard Electric Corporation, a member of the Western Electric group, which has thus been able to organise a sufficiently strong competition to the Siemens concern. Finally, as regards allied industries, mention should be made of the share participation in various German companies acquired by the Aeonic Radio Company of London, the British Baird Television Company, and the British Kolster-Brandes Company.

Turning from electricity to other industries, a remarkably complete success was achieved last year by Swedish interests in acquiring control over more than three-quarters of the roller-bearing industry in Germany. The A.B. Svenska Kullagerfabrieken of Gothenburg (S.K.F.) had already established their own manufacturing branches in Berlin and Stuttgart. In 1928 their share in the total German output was almost 30 per cent.; but the German industry was working at a loss, largely on account of its lack of sales organisation. When the Swedish firm last summer notified its intention of ending the international price convention, some of the largest German firms considered their chances of further competition hopeless, and sold their works to the S.K.F., which is at present busy reorganising the group of firms which it has purchased. Apart from a number of small firms, who will scarcely be able to hold out much longer, there are only two important concerns left independent.

In other groups of manufactures, the acquisition last year by the Imperial Chemical combine of 25 per cent. of the shares of Hirsch, Kupfer and Messingwerke A.G. was an important event. Hirsch is an outstanding concern in the production and sale of non-ferrous metals. As in the

cases referred to above, the urgent need of fresh capital supply was the prime motive behind the offer of the German share to the British group. In the German paper-manufacturing industry British holdings also represent an important factor. The Combined Pulp and Paper Mills, Ltd., have bought share majorities in a number of German concerns said to have a joint annual producing capacity of 150,000 tons, the group thus being the fourth largest paper-producer in Germany. In the artificial silk industry, international interchange of shares has become so general that the holdings of German shares by foreign firms usually represent the counterpart of German holdings abroad. Other textiles, however, have partly come under foreign influence, as, for instance, the important velvet manufacturers of Linden, in which Americans hold 25 per cent. of the shares, while British capital is invested in several important textile firms in Frankfort and in Saxony. Another trade in which foreign interests are prominent is confectionery. The Sarotti A.G. has sold a share majority to the Swiss Nestlé Company, and the Goldina A.G. is chiefly owned by a Czeck group. British and Dutch concerns have important holdings in other German firms in the provisions industry, while a number of large hotel companies are partly owned by American and Swiss interests. The glass industry may also be cited as having been subjected to a considerable extent to British, French and Belgian influence, partly through the purchase of shares in existing German firms, partly through the establishment of new enterprises. Finally, the insurance business has absorbed a large amount of capital from abroad, so that foreign influence, though its precise extent is difficult to estimate, may be safely said to be very considerable over a wide range of Germany's economic activities.

THE LANCASHIRE COTTON OUTLOOK.

(BY OUR MANCHESTER CORRESPONDENT.)

COTTON spinners and manufacturers in Lancashire have not made any progress towards better times since the beginning of the year; indeed, the depression has deepened and is reflected in increased unemployment among the operatives and in the decline of exports compared with the same period of last year. Although curtailment of production in spinning and weaving is on a large scale, the supplies on the market are more than sufficient to meet the needs of customers, and owing to the intensity of competition for orders most of the prices now ruling show a definite loss. The leaders of the industry continue to put forward various proposals, but the action so far taken has not had the desired result of lifting the trade out of its grave difficulties.

The past three months have not brought any marked change on balance in the prices for raw cotton, but during the period fairly wide fluctuations have taken place. On January 2nd the quotation for Middling American on the spot in Liverpool was 9.46d. During the last week of January there was a rather sharp decline, bringing the quotation to 8.85d., and there was a further fall by February 8th to 8.37d. After a recovery to 8.78d. on February 15th, there was another decline, and on March 11th the price was 7.88d. This was followed by a recovery to 8.70d. on March 22nd, but the price again sagged; on March 31st the quotation was 8.57d.; and on April 22nd 8.53d. Recently prices have been dominated by the policy of the Federal Farm Board and the work of the co-operative associations in the United States. The support given to May and July futures in New York has created an abnormal situation, and owing to the uncertain outlook traders and speculators have been inclined to act with caution. The parity between New York and Liverpool is now exceedingly narrow, and this will have to be adjusted before trading on ordinary lines can take place. The outlook for the new crop is fairly favourable. It is not anticipated that the decrease in the acreage will be more than 5 per cent., but the deciding factor with regard to output will depend upon the weather in the belt later on.

With regard to Egyptian cotton, the quotation for Fully Good Fair Sakellaridis on the spot in Liverpool on January 2nd was 14.15d. February brought rather lower values, the quotation at the close of that month being 13.55d. There was a recovery towards the end of March, the figure on the 31st being 14.25d., and the quotation on April 22nd was 14.15d. The situation with regard to Egyptian cotton has been complicated by the Egyptian Government's buying policy. The authorities are now responsible for very big supplies, and amongst traders there is some nervousness as to what will be the end of this action.

The past quarter has been an unsatisfactory period for manufacturers of piece-goods. The following table of exports shows very clearly the trend of events:—

EXPORTS FOR THREE MONTHS ENDED MARCH 31ST.

	Linear yards.	£
1913.....	1,773,424,100	24,040,540
1928.....	1,072,050,200	29,266,463
1929.....	1,065,280,300	27,917,484
1930.....	907,097,200	22,507,208

It is evident from the above figures that Lancashire is still losing foreign trade. An event of importance has been the increase in the Indian duties. When it was first announced that British goods were to receive a preference of 5 per cent., some satisfaction was expressed; but the adoption of the amendment which provides for a duty of 3½ annas per lb. on plain grey goods is a serious blow for Lancashire's trade in standard cloths. Another unfortunate development has been the increasing political unrest in India, which has had a bad effect upon trade demand. Notwithstanding these adverse factors a revival of buying, especially for Calcutta, has taken place in light bleaching cloths and "fancies," and some substantial contracts have been arranged carrying delivery up to the end of August; but a disappointing feature is that demand has not spread to medium or heavy cloths, while the decision of dealers in several centres to boycott foreign goods must have a vital effect upon fresh buying during the next few months.

The outlook with regard to China has not changed for the better, and owing to poor sales at the auctions in Shanghai very little new business has been done. There is little hope of favourable developments in that part of the world until the political situation improves and there is greater stability in the price of silver. Nor have shippers to the several minor outlets East and West been in the mood to operate with any freedom. Our customers in Egypt appear to be well supplied, and buying has been confined to small lots. Although the financial position in Brazil remains unsatisfactory a fair amount of business has been done in printing and finishing styles for the countries of Central and South America, but European demand has been restricted. Clearances at home have been fairly encouraging, and, on the whole, the home trade has been better than export. Unemployment in Lancashire weaving towns continues on a big scale, and production is curtailed by fully 25 per cent.

Conditions in the yarn market have also continued to be very unsatisfactory. At the beginning of March there was a revival of inquiry, and, owing to the very low prices ruling, buyers were inclined to place orders more freely. The activity was maintained, however, for only about three weeks, and the demand has now fallen off. It has been practically impossible to improve prices and, in some counts and qualities, margins have been cut further, as sellers could not secure adequate advances to meet the cost of raw material. An attempt is now being made to control production and prices in the Egyptian yarn section. It is understood that the scheme will be proceeded with if support can be obtained from 90 per cent. of the employers. The following table illustrates the decline in our export trade in yarn:—

EXPORTS FOR THREE MONTHS ENDED MARCH 31ST.

	Lb.	£
1913	53,067,000	3,725,282
1928	44,889,300	5,974,900
1929	44,166,600	3,979,070
1930	38,106,500	4,241,679

In view of what has happened during the last three months it is difficult to be optimistic with regard to the future. It is not much consolation for Lancashire to know that the depression in the cotton trade is now world-wide and that even Japan is passing through a very bad time. It remains to be seen how soon the big restriction of output of cotton goods will create a shortage. Some authorities believe that by the autumn of this year the position in Lancashire will be much better. Developments are to some extent dependent upon the course of prices, and it is suggested that signs of any rise in raw material costs would quickly elicit substantial orders from dealers and merchants. Meanwhile, the elimination of inefficient machinery and firms in Lancashire is now going on at a rapid pace. This process is causing suffering, but it is recognised that staffs will have to be reduced if production costs are to be cut down and the price of goods lowered to a competitive basis.

BROADCASTING: BRITISH AND FOREIGN SYSTEMS.—I.

(BY A CORRESPONDENT.)

THE latest accounts offered by the British Broadcasting Corporation to the public, with the necessary commentary and explanation, are those, for 1928, given in the current "B.B.C. Year-book." There has been, however, no remarkable change in the allocation of income since that date, and it is safe to base any general considerations upon the figures there given. The revenue account gives the B.B.C. an income of just over a million pounds (£1,002,506). Of this, by far the greatest portion is derived from licences—£871,764. Sundries came to just over £10,000, and revenue from publications to £120,000. The chief figures of interest upon the expenditure side are:—Expenditure on programmes, £538,991; maintenance of plant, etc., £160,456; rent, rates, upkeep of premises, etc., £78,000; and salaries, £56,212. In the revenue appropriation account there is the significant first sum of £100,000 set aside for capital expenditure on regional stations. This famous regional scheme, connected in the public mind with the name of Captain P. P. Eckersley, has during the last month been brought into full operation in London and the Midlands; and the changes it has forced upon the sets of innumerable listeners have excited wide and sometimes unjust comment upon the policy of the B.B.C.

The licence fees, which constitute the great mass of the B.B.C.'s income, are collected by the Government and handed over to the corporation; but the ten shillings extracted from the listener are not paid integrally to the B.B.C. At first 75 per cent. of this sum was paid over, but this percentage declines slightly as the number of licences issued increases. In March, 1929, the amount given to the B.B.C. was 7s. 1d. per licence, the licences then issued totalling just under three million. Shortly before then, at at least one big meeting held under B.B.C. auspices, public attack was made upon this principle of the declining percentage. The action of the corporation, which is a semi-public body, in thus countenancing attacks upon the arrangement by which it drew its funds and received its monopoly, was severely criticised. The principle was not abandoned, and it is not now generally expected that the B.B.C. demand for a fixed and undiminishing percentage of the licence money is likely to be conceded. The B.B.C.'s total income, however, is going up, as the number of listeners shows a steady increase.

There is room, however, for some doubts about the permanence of this source of revenue. Portable wireless sets are now almost undetectable. Clothes-pole aerials are no longer necessary, and the House of Commons has declined to grant the drastic powers of search which, it is claimed, are necessary to enforce the payment of licences. If a listener has once paid for a licence, then the Post Office will indeed "chase" him each year, and some hard lying may be necessary if he wishes to economise by evading the law. But if he has never taken out a licence, it is almost impossible to catch the owner of a set with an indoor aerial. A year or more ago the daily Press printed highly coloured tales of a "wireless-pirate-detector van" which toured the streets of a Scottish town, making a buzzing noise and sending hundreds in guilty haste to the nearest post office. But there is no known device that can detect a set which the owner is acute enough to switch off when the detector is about. It is quite possible, therefore, that non-payment of licences may become so prevalent as to cause the present financial arrangements of the B.B.C. to require drastic revision.

The corporation is a self-governing body operating under a royal charter and a licence. This licence, issued by the Postmaster-General (who is required by Parliament to watch that the B.B.C. does not exceed the limits of its licence and charter) can be withdrawn, but the P.M.G. does not otherwise interfere in the activities of the B.B.C. He has, as it were, the power of life and death, but no other power. Thus, in effect, the B.B.C. is autonomous. It has a chairman, vice-chairman, three other governors, and an almost all-powerful director-general, so that its constitution is of a kind which frequently recurs in British history, not always with satisfactory results—that of the chartered company. It differs, however, from the British South Africa Company and similar bodies, not only in its function, but in the fact that its income is, as to more than three-quarters, compulsorily extracted from members of the public by the Government. It is, therefore, wholly legitimate to inquire how far the public receives an adequate return for its money.

It is very difficult to compare the finances of the B.B.C., and the service it offers the public, with the financial arrangements of any other great national broadcasting system. The B.B.C. operates in a manner peculiar to Great Britain. The nearest parallel to this system is perhaps to be found in the nationalised wireless stations of Soviet Russia, but for these there are no satisfactory figures available for comparison, and the Russian problem of vast distances and sparse population is in any case not comparable with our own. Nearly all the national systems with problems resembling ours are financed by a system of leasing the time of the various stations to commercial enterprises, as in France and the United States. In certain cases (for example, the WEVD station in New York, or Huizen and Hilversum in Holland) it is political or religious bodies who either maintain or otherwise secure claims upon a station. In any event, in these cases the exploitation of the ether has not been regulated from the beginning, but has been left to unrestricted private enterprise up to the time when chaos resulted or threatened to result. On the Continent regulation was imposed largely as a result of the international agreement at Prague; in the United States it was enforced by Federal authority, in certain cases fairly ruthlessly. The wealthier, and, therefore, better-equipped stations, naturally tended to be preferred, and the lesser stations were forced on occasion to share one wave-length between two. For example, the Socialist station WEVD already mentioned was vexed at being compelled to share its time with a station devoted to a rather vehement form of Protestant propaganda.

Ostensibly, the New York listener (if we take America for our comparison) receives his wireless programmes for nothing, while the London listener pays ten shillings per annum. But it is, of course, immediately clear that as a financial statement such a description is wholly misleading. When the British listener has paid his ten shillings he has, as the figures given above show, pretty well seen the end of the matter. No further contributions of any importance are required from the public. And the citizen who dislikes the wireless programmes can refrain from taking out a licence. But the sums which are paid by the great American trading corporations for the right to broadcast their "hours" from the big New York stations are not produced from the private purses of the directors; they are included in the overhead charges of those enterprises, and thus "passed on" to the public—listeners or not—in the usual way. Nor is there any obvious method of estimating how high this expenditure is. The rates charged by the various stations (which vary, of course, not only from station to station, but from hour to hour) are usually only ascertainable by inquiry for

business purposes, and the corporations which spend money in this form of advertising do not commonly itemise this expenditure in their published accounts. That the total real cost of New York wireless, falling on the listener and the unheeding alike, is greater than that of London is a probable assumption.

Notes of the Week.

The Unrest in India.—Mr Gandhi's futile attempt to conduct a campaign of civil disobedience without violence has produced the inevitable consequence of further outbreaks of disorder, which culminated last week in an organised attack on the police arsenal at Chittagong, near Calcutta. Several lives were lost, including those of two Europeans, buildings were gutted, rifles were carried off, and the insurgents escaped into the hills. Prompt action has been taken to deal with the situation; a force of police is endeavouring to round up the law breakers; the Government at Delhi promptly renewed by ordinance the expiring provisions of the Bengal Criminal Law Amendment Act, which gives the provincial government the right of arrest and detention without trial; and in Calcutta itself Europeans have been enrolled in a force of special constabulary. Mr Gandhi, while deploring the Bengal and other disturbances, is apparently more concerned to upbraid the Government for its " lawlessness " in arming itself with special powers. His attitude, indeed, and that of Pundit Motilal Nehru, by excusing acts of violence and attributing them to the high-handed action of the long-suffering police, is almost to be described as " praising with faint blame." Salt-making demonstrations continue in spite of arrests and imprisonment of the leaders. Incidents in connection with the breaking up of these demonstrations are magnified in the local Press, and it would seem that in the Bombay Presidency Mr Gandhi's campaign, in spite of the failure of his rash promises that victory would be achieved in a few days, has succeeded in creating a restless state of public opinion, which will make it more difficult for the local Moderates to secure support for the policy of co-operating in the round-table conference. Violent disturbances have occurred in Peshawar, and even in Madras, where the attempt to observe a *hartal* was defeated by the local shopkeepers, who appealed for police protection, the demonstrators were only dispersed by the charging of the crowd and the arrest of a number of the ring-leaders after they had attempted to stone the police. Thus, even in the least disaffected of provinces, the line between civil disobedience and violence is inevitably becoming blurred, and the action of the Viceroy in renewing the exceptional powers of the Government of Bengal is timely warning to the whole of India that he is prepared to check lawlessness with a firm hand.

The Anglo-Russian Trade Agreement.—On Wednesday, April 16th, a provisional trade agreement was signed in London—by Mr Henderson for the United Kingdom and by Mr Sokolnikov for the U.S.S.R.—as a *modus vivendi* pending the conclusion of a full treaty of commerce and navigation. The agreement is based on the principle of most-favoured-nation treatment, except that the U.S.S.R. reserves the right to give more favourable treatment to States whose entire territory formed an integral part of the Russian Empire in August, 1914, to Continental border States in Asia, and to any third country that may form part of one customs union with the U.S.S.R. There is to be a Russian trade delegation in London again, and the Soviet trade representative and his two delegates are to be reckoned as part of the staff of the Soviet Embassy and to enjoy all diplomatic privileges and immunities. Immunity is also to attach to the offices of the trade delegation on the understanding that this immunity is to be used exclusively for commercial functions. An additional protocol provides that diplomatic privileges and immunities enjoyed by the trade delegation shall not be claimed in connection with any proceedings before the British courts arising out of commercial transactions entered into by the trade delegation. Another protocol safeguards the U.S.S.R. against being excluded, on political grounds, from enjoying, in its trade with Great Britain, the benefits of the Trade Facilities Act and other legislative or administrative measures of the same kind. We welcome the agreement, which ought to repair the damage to British trade which was done when diplomatic relations between Great Britain and the U.S.S.R. were broken off in 1927 after " the Arcos raid." The inevitable scare that the door will now be opened again to Russian Communist propaganda may be dismissed by the answer—based on a dozen years' experience—that the state of the official relations between the two Governments, while it does have a direct effect on trade, has little effect on propaganda, either for good or for evil. The stumbling-block in the path of Russian Communist propaganda in Great Britain never has been the non-existence of diplomatic relations between the two Governments. It always has been, and is, the non-existence of a militant revolutionary temper in the minds of the overwhelming majority of the British people. As for the economic benefits which we may expect from the new agreement, much, of course, depends upon the outcome of " the Five Years' Plan " of economic reconstruction upon which the U.S.S.R. is now engaged. The execution of the plan is not yet far enough advanced for any prophecy to be made about it with confidence; but one thing can be said here and now in the light of the past. The economic development which took place in Russia during the two centuries preceding the war was just as much a factor in the contemporary economic development of Western Europe as was the opening up of North and South America; and it is, therefore, unlikely that Europe will recover her pre-war economic position unless and until Russia becomes a " going concern " again. Let us assist her efforts in this direction in every way possible. The new trade agreement is an excellent first step.

The B.I.S. Starts.—The board of directors of the B.I.S. met for the first time in Basle, on Tuesday last, and received a welcome from the Swiss Government and from the Canton of Basle. The board's first business was to receive from Sir Charles Addis, as vice-chairman of the organisation committee, a report of the action taken since the Hague Conference by him and by the small sub-committee which was then appointed to secure the passing of the bank's charter, to arrange for the subscription of the necessary capital, to obtain premises, and to take other necessary steps for the setting up of the bank. The board then elected Mr Gates McGarrah president of the bank, and proceeded to discuss the election of a director-general. Dr. Luther, on behalf of Germany, protested against the appointment of M. Pierre Quesnay on the ground that, in view of France's special interest in reparations, a Frenchman ought not to hold this important post unless there was room for a German on the staff in a situation of equivalent status. This objection, however (subsequently met to a large extent by the appointment of Dr. Hülse, a director of the Reichsbank, as head of the banking department and deputy director-general), was not supported by the other members of the board, and M. Quesnay was duly elected. The appointment is one which will certainly be approved in banking circles in London and New York, where M. Quesnay is well known to those concerned with international finance. Associated with the Austrian reconstruction scheme in its early years and later as a member of the secretariat of the League, he has first-hand knowledge of the financial work at Geneva. Since he joined the staff of the Bank of France, he has been in close personal touch with M. Moreau, and was intimately connected with all the discussions of the Young Committee which led to the creation of the bank. It is, indeed, doubtful if there is anyone who has a greater knowledge than M. Quesnay of the later phases of the reparations problem in all its aspects. This knowledge, combined with practical experience of central banking problems, with energy, with imagination, and, above all, with a truly international outlook, gives him a very exceptional equipment for the responsible task he has now undertaken. Any who fear that M. Quesnay's enthusiasm might lead him to run too far ahead of world opinion may reassure themselves with the reflection that the new director-general will have to carry with him a very conservatively-minded board, whose policy will be in the safe keeping of Mr McGarrah. Our best wishes to the new team and to the institution whose infancy has been entrusted to their care.

The Washington Convention.—Prominent among the imposing list of pledges to which the Labour Party committed itself in *Labour and the Nation* was a promise to ratify the Washington Convention establishing a 48-hour week in industry. After considerable delay—occasioned, apparently, by the need to satisfy certain trade unions that their members' earnings would not be prejudiced by the enactment of a statutory 8-hour day and 48-hour week—the Hours of Industrial Employment Bill, to implement this pledge, has now been introduced. The explanatory memorandum prefacing the measure states that it " is based upon the Washington Hours Convention of 1919," but the Bill is so complicated and contains provisions for so many exceptions that it seems questionable whether its terms will be regarded in all countries as being within the four corners of the Convention. Ordinary working hours in industrial undertakings (excluding persons employed underground in coal mines, in agriculture, or at sea, home workers, clerical workers, and persons engaged in supervisory capacities) are limited to eight in any day and forty-eight in any week; but extensions of these limits are allowed as follows:—Workers who are employed for less than eight hours on any day of the week—*e.g.*, Saturday—may be employed up to nine hours on all or any of the other days, subject to the weekly maximum. Where workers are employed in shifts, the daily statutory limit may be exceeded if the number of working hours does not exceed ninety-six in a fortnight or one hundred and forty-four in three weeks. Finally, in the case of workers employed upon continuous process, both the daily and weekly statutory limits may be exceeded provided that working hours do not exceed one hundred and sixty-eight in three weeks. Considerable elasticity is thus provided, and, inasmuch as in 90 per cent. of British industry the 8-hour day obtains as a result of collective agreements, the Bill, at first sight, gives the impression of being unlikely to prove onerous to industrial employers. Moreover, a curiously wide latitude is given in Clause 3, which empowers the Minister of Labour, if satisfied that the statutory limits cannot appropriately be applied in any case, to decide by Order that the statutory limits may be replaced by such other limits as may be agreed by the organisations of employers and workers in the industry, always provided that the working hours permitted by such an Order " shall not exceed a weekly average of forty-eight, the average being taken over such period as may be specified " in the Order. The precise implications of this fresh instance of the delegation of powers to a Department clearly requires elucidation in debate. Presumably the terms of the Bill satisfy the Trades Union Congress, but one is inclined to speculate what would have been the attitude of the Labour Party if a measure drawn in this form had been introduced by the late Government.

Co-operators and Rationalisation.—There is food for thought in the proceedings of the Easter conference of the Co-operative Party, at Buxton, and particularly in the attack which was delivered by one of the principal speakers on the idea of the rationalisation of British industry. It would be appropriate enough if co-operators, whose movement was founded for the protection of the consumer, should voice fears of exploitation under any threatened monopoly, and it is good that such voices should be raised. But, as far as can be judged from meagre reports, Mr Davies's speech and the resolution passed by the conference took a different and a rather puzzling line. In them there seemed to be, unless we are mistaken, a disposition to regard co-operation as the alternative to rationalisation. The former system may achieve large-scale production of certain products and economical purchasing on a wholesale scale, but it is not in itself an assurance of economical production. Many, perhaps most, of the C.W.S. factories may be economically worked—incidentally, on the lines followed by private enterprise—but we do not remember hearing many claims on behalf of the C.W.S. that it has succeeded in achieving much towards improved methods of production. We are left wondering by what arguments co-operators could sustain the thesis that the extension of their system of production could in any way perform for British industry the services in the direction of increased efficiency which rationalisation is designed to produce.

Wei-Hai-Wei.—The signature last Friday in Nanking of the agreement for the retrocession of Wei-Hai-Wei to China is, in one sense, an indirect reflection of the altered attitude on the part of the Great Powers which made possible the signature of the London Naval Treaty. The cessation of naval rivalry in Far Eastern waters has robbed of their original *raison d'être* as bases the ports for which the Powers competed so vigorously thirty years ago when the Chinese Empire lay a-dying. Kiaochow has already been reincorporated in China; Port Arthur, though still a possession of Japan, is of significance as a health resort rather than as a naval base; and the same applies to Wei-Hai-Wei, which Great Britain has now retroceded. Its voluntary return to China is an earnest of British desire that that country should be united and strong enough to develop its civilisation in the enjoyment of peace both within and without her borders. The hope that internal order can be quickly restored in China will be felt by none more keenly than by the Chinese population of Wei-Hai-Wei, now handed over to the uncertain chances of government in a land still torn by civil dissension.

The Colonial Development Committee.—The first interim report of the Colonial Development Advisory Committee (Cmd. 3540) is in many ways an interesting document. The Committee, whose chairman is Sir Basil Blackett, was appointed under the Colonial Development Act, 1929. This Act, which applies mainly to the non-self-governing colonies, and provides annual grants, not exceeding £1,000,000, for colonial development, is framed on generous lines, and a wide range of activities can be promoted under it. In September, 1929, the Advisory Committee also took over the functions of the East African Guaranteed Loan Committee. The Colonial Office has taken vigorous steps to bring the importance of the assistance thus offered to the attention of colonial administrations. On the whole, a considerable success has been achieved. During the period of seven months covered by the interim report over sixty applications from about 25 separate colonial administrations have been considered by the Committee, and forty-one schemes in thirteen widely separated areas have been approved for grants out of the Colonial Development Fund. The estimated total cost of these schemes is £5,629,494; of this total, the estimated amount to be expended in the United Kingdom is £2,228,187; the direct cost to the Treasury should amount to, roughly, £781,633, spread over a period of five years (£172,888 being free capital grants and £608,745 being free grants of interest), while direct loans amount to a further £587,850. In addition, recommendations up to £2 millions' worth of schemes have been deferred. Additional allocations totalling £1,641,866 have also been made by the Committee out of the East African Guaranteed Loan. The most important schemes are those for the Zambesi bridge and connected services in Nyasaland

(total cost £3,062,354; expenditure in the United Kingdom £1,146,690), and the development of iron ore deposits at Marampa, Sierra Leone, including the construction of fifty-five miles of railway to deep-water and port facilities (total cost £1,000,000; expenditure in the United Kingdom £395,000). Other schemes include aerial, road, triangulation and vegetation surveys; railway developments and improvements in Tanganyika and Uganda (*not yet approved*); road construction in Swaziland, the Seychelles, British Guiana, Antigua and St. Lucia; water supply; improved drainage and sanitary works; research into native dietary problems, and so on. The Committee has undertaken its work in a big and imaginative way, and " in framing its recommendations . . . it has envisaged a long-range policy of colonial development." While " it is not part of the functions of the Committee to put forward development projects on its own initiative," and while its activities depend on the extent and speed with which colonial governments seize the opportunities offered to them, the Committee is considering sending selected emissaries with special engineering, agricultural, scientific or other qualifications to particular colonies in order to assist the local governments in reviewing the potentialities for development. In the dispatch notifying colonial governments of the Colonial Development Act, Lord Passfield describes it as " a very important advance on previous measures." The present report amply justifies this description.

Iron and Steel Production in March.—Iron and steel production in March was surprisingly well maintained. The output of pig iron amounted to 665,800 tons, compared with 607,000 tons in February, and steel production to 826,100 tons, compared with 776,400 tons in the previous month. In the case of pig iron the increase was, roughly, proportional to the longer month, but in the case of steel the increase was not quite commensurate. Although the production figures do not yet reflect a falling off in the volume of business, the number of furnaces in operation at the end of the month, both on pig iron and steel, were less than at the end of February. In the case of pig iron the number of furnaces in blast fell from 162 to 157, so that production in April is likely to be less than in March, while in the case of steel the drop will be more marked on account of the Easter holidays. The following table shows the production, imports and exports of iron and steel in each of the first three months of 1930 compared with the corresponding months of 1929:—

	Production.		Imports.	Exports.
	Pig Iron.	Steel.		
1929:—	Tons.	Tons.	Tons.	Tons.
January	563,900	764,600	244,300	421,200
February	519,600	774,900	160,000	380,100
March	590,500	859,900	182,100	350,100
	1,674,000	2,399,400	586,400	1,151,400
1930:—				
January	650,000	771,100	310,300	351,800
February	607,000	776,400	259,400	294,300
March	665,800	826,100	280,300	337,700
	1,922,800	2,373,600	850,000	983,800

In the first quarter of 1929 production was on a rising curve, whereas production is now declining. Imports of iron and steel in the first quarter have been substantially higher than in the first quarter of 1930, partly because exports from the Continent in February and March of last year were interfered with by the severe weather conditions. Exports of iron and steel have fallen from 1,151,400 tons in the first quarter of 1929 to 983,800 tons in the past three months.

Coal Mining Hours and Wages.—While the Parliamentary omens point to a relatively easy passage for Mr Snowden's Budget, the Government have still to pilot the Coal Mines Bill through the troubled waters of the Upper House, and even if that questionable measure reaches the Statute Book in its present form, it remains to be seen whether a settlement of the wages payable in districts where the working day is shortened can be reached without an industrial conflict. The chances of such a struggle being avoided have been seriously lessened by the decision of the Executive of the Miners' Federation to have nothing to do with the Mining Association's proposal that the industry should unitedly ask the Government to insert in the Bill a proviso enabling any district, upon agreement between the owners and the miners, to vary the rigid 7½-hour day by fixing a weekly maximum of 45 hours, or a 90 hours fortnightly maximum. Under this arrangement for a permissive " spread-over " of working time it would be possible for mines either to retain an 8-hour shift on five days a week, working a 5-hour shift on Saturday, or to work 8-hour shifts on eleven days a fortnight, so that the miners would have every alternate Saturday as a complete holiday. The economic advantages, from the point of view of production costs, in retaining 8 hours, so far as possible, as a full day's shift are obviously considerable; and since the Bill merely specifies 7½ hours as the maximum working period (plus one winding-time) in 24 hours, it might be asked why the miners have rejected a 45-hour week in favour of a Statute whose application to six weekdays would produce the same result. The answer is that, in most districts which now have an 8-hour shift, hours on Saturdays are shortened by amounts ranging from one to two and three-quarter hours, while in Northumberland only 11 days per fortnight are at present worked. The calculation of the miners, therefore, appears to be that the 7½-hour day, when imposed on the present 8-hour districts, will mean, given the continuance of existing Saturday practice, a working week ranging from 42½ to 44½ hours. Hence the refusal to consider a 45-hour week. But unfortunately there is no guarantee that, if and when the Bill becomes law, the mineowners will consent to continue the " short Saturday "; nor will they now be readily disposed to increase piece-workers' rates for tonnage by the amount necessary to compensate for the shortened daily working time. The miners in the 8-hour districts have still to face the reckoning in wages of the cost of gaining a half-hour's curtailment of the shift; and though it is understandable that they should dislike the idea of a proviso in the Bill giving the owners power to " spread " hours within the limits of a 45-hour week, subject only to " agreement " with the miners, who might in some districts be powerless to refuse, there seems no valid reason why the " spread-over " system should not be sanctioned by the Bill, provided that its operation in any district were made conditional on a ballot vote of the miners showing a majority in its favour. In declining to bargain with the owners for the best wage terms obtainable for this concession the M.F.G.B. Executive have once again demonstrated their signal shortcomings as industrial negotiators.

Laid-up Shipping.—The latest quarterly return of idle tonnage issued by the Chamber of Shipping is an eloquent reflection of the depression which, as the *Economist's* monthly index number of freights has shown, has characterised the cargo freight market during the past winter. At the beginning of this month 416 vessels, representing an aggregate of 892,154 net tons, lay idle in the principal ports of Great Britain and Ireland, an increase of 539,495 net tons during the quarter. Comparative figures for earlier years are given below:—

Shipping Laid-up in U.K. Ports.

	Net Tons.		Net Tons.
April 1, 1922	836,619	April 1, 1927	239,681
„ 1923	546,555	„ 1928	363,355
„ 1924	410,356	„ 1929	236,242
„ 1925	393,062	Jan. 1, 1930	352,659
„ 1926	359,848	April 1, 1930	892,154

Apart from the exceptional situation which existed at the end of June, 1926, when 859,739 net tons were idle as a result of the coal stoppage, the present total has not been nearly approached since 1922. During the past fortnight there have been signs of slightly better demand for grain tonnage, but the unemployed surplus is so great that recovery of freights is likely to be a slow process.

Manchester and Tariffs.—Our Manchester correspondent writes:—At a recent meeting of the directors of the Manchester Chamber of Commerce the fiscal issue was considered. The board had before them various representations from individual members and different sections of the chamber with regard to the question of changing British fiscal policy by imposing a tariff on imported manufactured goods. The point was raised that the Europe section of the chamber lately adopted a resolution which was published and resulted in criticism at the annual meeting of members. The board, therefore, decided that it was not desirable to pass and publish views of groups or sections or even of the directors themselves on a controversial question on which members of the chamber might be strongly divided. It was accordingly agreed shortly to submit the question by referendum to the whole of the members of the chamber. It is recognised that the framing of the question is a matter of difficulty, and, in order to give the board the opportunity to consider any suggestions from sections or individual members, the actual wording will not be decided for another month. In local trade circles there has been much interest in this decision of the board to ascertain the view of the rank and file. It is recognised that on fiscal policy it will not be an easy matter to draw up the necessary questions for a referendum, and in any case the result may not be very satisfactory or convincing.

Depression in Swiss Watchmaking.—Our Geneva correspondent writes:—The unsatisfactory economic situation throughout the world is reflected in the depressed state of trade and industry in Switzerland. The crisis is deeply felt in watchmaking, which is the chief exporting industry, and sells abroad 95 per cent. of its production. The monthly average of exports was £1,023,333 last year, but it only reached £550,000 for the first two months of 1930, and the number of unemployed is now over 3,500, out of a total of 48,000 hands employed in the industry. Losses suffered in consequence of the Wall Street slump last year caused several factories to give notice to their employees; and three La Chaux de Fonds factories, occupying altogether 600 workers, were compelled to close down as a result of the failure of the Tenshodo firm in Japan. Many manufacturers are working five days a week, some only four days, and, though there has been a slight improvement in February, prospects in the industry are by no means encouraging. The depression is not seasonal, and is far more important and widespread than was at first supposed. Some economic experts declare that in the watchmaking industry there is a crisis every ten years, and that it takes place after a boom year. It is true that the previous big crisis was recorded in 1920-21, but this is no sufficient proof in favour of the regular recurrence of depressions. The present crisis may be ascribed to various causes: firstly, to the continuous raising of Customs duties in countries which used to buy Swiss watches; in the second place, to the reduced purchasing power of countries such as Germany, Italy, Austria; and, thirdly, to the slackness of the Far Eastern and South American markets. So far, the only country to which watch exports have not dwindled is France. The depression is mainly felt in cheap watch manufacturing, while there is a demand for expensive and decorated watches, so that unemployment is practically non-existent in the factories where high-grade watches and chronometers are produced. Meanwhile, the industry is pursuing its reorganisation. In many places two or three small factories have combined; three big manufacturers have formed a holding company, whose seat is in Geneva; and joint measures have been taken, on the one hand to foster export, and on the other hand to limit the export of rough watch movements and spare parts, which made possible the manufacture in foreign countries of so-called " Swiss watches."

London Assurance.—The London Assurance shares stand at £10, and at the current rate of dividend of 45 per cent., which has been maintained unaltered since 1925, the yield is relatively high at 5⅝ per cent. gross. The reason for this is due to a combination of an almost stationary, and in some departments, a declining premium income, and recent unfavourable results of the marine account, the premiums in which represent an unusually large proportion, namely, 33 per cent. of the total. The 1929 report is prepared in a different form to that of its predecessors in that the revenue accounts now exclude the figures of two subsidiary companies—the British Law Insurance Company and the Manhattan Fire and Marine Insurance Company. A direct comparison with previous years is, therefore, not possible, but it is clear that there has been a further falling off in fire premium income; and the underwriting results are exceptionally poor in all departments except employers' liability, where the size of the account is comparatively unimportant. The detailed results of the past two years are shown below:—

	1928.		1929.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
	£		£	
Fire	63,995	3·7	17,886	1·3
Accident.....	729	4·3	— 1,110	— 7·6
Employers' liability...	10,896	14·2	10,006	20·5
General accident	— 4,765	— 1·2	— 55,675	—15 4
Marine	— 43,517	— 3·8	— 45,516	— 5·0
Life	12,500		12,500	
	39,838		— 62,609	
Less items debited direct to profit and loss account	54,436		28,293	
Total net trading surplus	— 14,598		— 90,902	

The cost of the usual 45 per cent. dividend was £226,067, an amount which was covered by interest earnings with a margin of £21,671, and the total result of the year's operations has, therefore, been a reduction in surplus resources of £27,422. The life department pursues a steady and uneventful course. Last year there was an increased new business amounting to £1,978,653, compared with £1,746,180 in 1928, and the fund now amounts to £5,901,966. The next quinquennial valuation of this fund —in connection with which post-1910 " with-profits " policyholders will be entitled to 90 per cent. and pre-1911 " with-profits " policyholders to 80 per cent. of the profits —will take place at the end of this year.

Atlas Assurance Company.—Much more so than is commonly the case in the composite offices, the Atlas Life Department is expanding at a high rate, and the contribution which it now produces towards profit and loss is a steadily rising and substantial figure. Last year there were issued policies for new sums assured amounting to £3,919,560, compared with £3,482,611. Partly because of the existence of a large hidden reserve in the value of the assets, and partly because the fund includes a large amount of annuity business, virtually free of tax, the total net interest earned is as much as £5 10s. 3d. per cent. net. The expense ratio is moderate, being 13.4 per cent. In addition to the life business, sinking fund policies are issued under a separate fund for an amount which hitherto has been comparatively unimportant. In 1929 the premium income rose in one year to £2,962,481 from £146,709 in 1928. This tremendous expansion has been due entirely to the issue of a small number of large five-year term policies for single premiums, 97½ per cent. of which is borrowed at the outset for the purpose of evading surtax. It is the emergence of this particular type of policy that has caused the Chancellor to institute means for stopping in future this now substantial loss of surtax revenue. The fire, accident and marine departments have again produced excellent results, more particularly the former, where a profit ratio of 8.3 per cent. of the premium income has been earned. The marine department is a comparatively small one, the premium income being only £167,000; but, since the account was opened in 1920, no transfer either to or from profit and loss account has been made. Consequently the fund is exceedingly strong, amounting to nearly 200 per cent. of the premium income, and at the meeting last year the chairman acknowledged that it contains a substantial

hidden earned profit. The detailed results of the past two years are shown below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	221,854	9·3	194,090	8·3
Accident	31,836	7·2	19,445	4·1
Marine	...		...	
Life	19,681		21,689	
Sinking fund	2,013		...	
	275,384		235,224	
Less items debited direct to profit and loss account	100,117		92,899	
Total net trading surplus	175,267		142,325	

A portion of the year's surplus has been applied as to £55,000 transferred to reserve against uncalled capital and as to £54,000 written off the cost of businesses acquired. The dividend is maintained at the same rate as in 1928, namely, 32 per cent., free of tax, and the normal increase in interest earnings has reduced the gap between this item and the cost of dividend to £27,180. "Atlas" shares stand at £13½, and yield approximately 3 per cent., free of tax.

World Marine and General Insurance Company.—The total premium income of this company is small, amounting only to £344,000, represented by £180,000 in the fire and accident department and £164,000 in the marine department. The feature of the company's business has been the strikingly successful results achieved in the marine department throughout the general depression which has overtaken this section of the business. During the last five years, including 1929, the premium income collected on account of marine insurance has totalled £871,000, and during the same period £150,000 has been transferred from the account to profit and loss, equal to no less than 17 per cent. of the premium income. The fire and accident department was inaugurated shortly after the war, but the results so far achieved are very moderate indeed, and last year a loss of £15,000 was experienced. Combining the results in both departments, and allowing for items debited direct to profit and loss, the total net trading surplus of the year worked out to £13,102, compared with £33,334 in 1928. Interest earnings account for £44,000, and the dividend, which is maintained at 65 per cent., free of tax, cost £65,000. Consequently surplus assets were reduced as regards the year's operations by £8,000. The company is a subsidiary of the "Northern" by virtue of the ownership of the entire share capital.

National Guarantee and Suretyship Association.—This small but successful company is another member of the "Northern" group. The company's head office is situated in Edinburgh and its activities are confined to the transaction of fidelity guarantee insurance. The trading results of the past two years are as follows:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Underwriting profit	15,087	24·6	16,949	25·6
Less items debited to profit and loss account	1,248		3,762	
Total net trading surplus	13,839		13,187	

The dividend has been increased from 11¼ per cent. to 12½ per cent., and the cost from £9,000 to £10,000.

A lecture on "The Functions and Differing Legal Character of International Treaties" will be given at the London School of Economics by Dr. A. D. McNair, C.B.E., LL.D., M.A., at 5 p.m., on Wednesday, May 7, 1930. The chair will be taken by Professor H. C. Gutteridge, K.C., LL.D., M.A. The lecture is addressed to students of the university and to others interested in the subject. Admission is free and without ticket.

Overseas Correspondence.

UNITED STATES.

Industry and Trade — Mergers — Security Markets — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 15.

SOME further indications of improving trade are heartening the financial community, but it is not yet certain that definite recovery is under way. Cheap credit, increased savings bank deposits and the spring weather are stimulating building construction. Some seasonal increase in motor sales is reported, but it is not impressive. Meanwhile the steel industry has dropped back to 76 per cent. of capacity, after reaching 78 per cent., and railroad freight traffic is still running at the lowest rate since 1922. On the other hand, the United States Steel Corporation's unfilled orders on March 31 showed an increase of 90,000 tons on the month, against an expected decline, and mill owners are confident of better times before the year is out.

Enough statistical evidence is now available to show that the first quarter was poor compared with last year, but that it was fair, measured by more normal standards. However, the turn in the business tide and the shock of the stock market break made it difficult for many corporations to adjust themselves to less active business, with the result that earning reports for the first quarter are running below last year in most cases and are quite unsatisfactory in many. The General Electric Company was among the few to do slightly better. American Telephone and Western Union, on the other hand, report smaller gross business and lower profits, though at present their earnings are improving. General Motors is expected to turn in a rather poor earning statement in a week or two, and the Steel Corporation, which publishes its report at the end of the month, earned at a rate of about 40 per cent. of last year's level.

In contrast to the industrial and railroad results, the banks, in spite of lower interest rates, had a satisfactory first quarter. Their statements, issued in response to the Comptroller of the Currency and the State Banking Board's call for "condition" as of March 31st, show a sharp drop in deposits, but earnings were well maintained. Deposits for New York City banks dropped about 15 per cent. from the totals of the end of the year. Bank shares have done almost as well as industrial and public utility shares in the past two months, recovering much of their losses of last autumn.

A good deal of diversion is being created by contests over control of various corporations. In some cases internal strife is brought about by merger proposals, in others by dissatisfaction with management, and in still others by rivalries among banks for financial plums. Two particularly hard fought battles were settled recently, when the interests opposed to William Fox accepted a plan for his withdrawal through sale of his stock to a third party. More important was the Bethlehem-Youngstown merger. The Bethlehem Steel Corporation had submitted its merger proposals to the Youngstown Sheet and Tube Company board, which approved them and called a stockholders' meeting, at which a two-third vote was necessary for ratification. Cyrus H. Eaton and associates of Cleveland, already large shareholders in Youngstown and busy building up the Republic Iron and Steel Company, attempted to block the merger. They were outvoted, after a bitter fight. With Youngstown, Bethlehem strengthens its position as the second largest steel company, but it controls only about 20 per cent. of the country's producing capacity.

Over a dozen other contests of various sorts remain to be settled. They are largely symptomatic of falling profits. These in many cases were no fault of the management, but stockholders have been spoiled by several years of mounting earnings. At least one case is significant of the growing control which the investment trusts are acquiring in American industry. A trust which has a large minority interest in the Rock Island Railway is attempting to prevent bond financing, which the road's bankers are proposing. Inasmuch as the trust in question is itself controlled by a rival banking house, the case opens up possibilities of future quarrels.

Security markets are still churning about on a large volume of transactions without making much real progress. The sentimental effect of poor earning statements is slight, but some apprehensions are being raised lest substantial dividend reductions take place. In most quarters no heavy losses in that direction are anticipated, but each week brings a few. Motor company dividends, in particular, are vulnerable, and talk is heard of some further cuts in copper company payments. Few, if any, copper companies earned their current dividends in the first three months, and few are likely to do so in the second quarter. Meanwhile, after long delay, the price of the metal has been reduced four cents a pound. Maintenance of 18 cent copper in the face of slack business and falling commodity prices presented something of an anomaly, and with a further increase of nearly 25,000 pounds in stocks of copper during March, and the corresponding addition to the burden of carrying charges which the large producers and smelters had to bear, the pressure for a cut in the hope of stimulating sales became too much for the faction seeking to maintain prices. The large producers hope that consumption at the lower price will result in better prices before long.

The credit position is little changed. Three more regional Federal Reserve Banks have cut their discount rates to 4 per cent., that rate being uniform for the system, with the exception of the New York Bank, which has a 3½ per cent. rate. No further reduction here is now expected, unless stock market activity declines considerably; but the Reserve authorities are doing nothing to promote firmer money. At the moment the combined effects of the mid-April tax payments, the Treasury disbursement of $150 million in interest on Liberty bonds, the sale of $50 million of Treasury bills, distribution of heavy corporation dividends and interest and some demand for holiday cash are giving money a slightly firmer tone. This will be over next week, when a return to ease is expected. Call rate ranges between 3½ and 4 per cent. and other sections of the market are steady.

Of the $50 million Treasury bill offer, $132,377,000 was applied for, and $51,316,000 accepted at an average of 99.267, or about 2.93 per cent. discount, the lowest rate the Treasury has yet obtained on its bill issues. New capital issues were fairly heavy last week, totalling $256 million, the largest since early in January, but the approach of the holidays cut down this week's offers. The bond market is showing some signs of indigestion, and bankers do not expect great activity until the reparation issue is out of the way.

FRANCE.

Parliament — Insurance — Budget — Tax Reductions — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, April 23.

THE Chambers, instead of rising before Easter for the customary recess lasting until June, are still in session. M. Tardieu has succeeded in keeping both deputies and senators steadily at work over the Easter holidays through sheer necessity to make up for the time lost through two Ministerial crises earlier in the session. The short summer session, which lasts from the first week in June till the univeral exodus into the country on the eve of the Fourteenth of July national holiday, will leave barely sufficient time to dispose of the important projects concerning the nation's petroleum supplies, the pending great colonial loans, and the vast scheme for promoting the national economic development machinery, which will complete the long programme of reforms comprised in the programme set forth in the Tardieu Cabinet's Ministerial declaration. Moreover, the national insurance plan, which has already been recast twice and postponed once, must now come into operation in July, and further adjournment of its application is impossible.

The insurance proposals, although very different from the hasty scheme rushed through both Houses immediately before the General Elections of two years ago, are still generally admitted to constitute very much of a leap in the dark. Unemployment benefits have been cut out of the scheme, but the actuarial soundness of the sickness, accident, maternity and life insurance provisions, and of the old age pension clauses, is still regarded as extremely questionable. A strong effort was made yesterday to exempt agricultural workers from the scheme, but this, although supported by representatives on both sides of the Chamber, met with no success. The confusion that exists as to the actual cost of the scheme may be gauged by the fact that, even among experts, estimates as to the increase in the cost of living that will result from its application range from 2 per cent. to between 12 and 14 per cent. The outstanding improvement which marks the re-revised plan is that its working is now to be left largely to the friendly societies, which has enabled the grandiose and costly system put forward by M. Loucheur to be brought within less ambitious limits. Industrial interests are unanimously opposed to the scheme, in view of the certainty that exists of its resulting in dangerously large increases in production costs. It seems likely, however, that the Bill will leave the door open for many of the existing insurance schemes already applied by a large proportion of the industrial organisations to remain for all practical purposes outside the Government net, so far as actuarial bases and actual management are concerned. Most of these private pension and insurance schemes have successfully stood the test of many years of operation.

The Budget for 1930-31 was finally disposed of last week, and became law forthwith. The ultimate result, as set forth officially at the end of the text of the measure, is as follows:—

Estimated revenue ...	50,465,079,318	francs.
Estimated expenditure	50,398,167,195	francs.
Estimated surplus ...	66,912,123	francs.

Judging from previous Budgets, these figures—which register a new high record in French finance Bills—may be regarded as merely provisional, as they are already certain to be substantially swollen, both as to revenue and expenditure, before the end of the new financial year. The outstanding features on the expenditure side are substantial increases of both civil and military pensions, in accordance with the drop in the franc (the minima in some categories of civil service and military pensions having now been fixed at the equivalent of five times the pre-war scale); substantial credits for road and canal development, rural electrification, etc., and expenditure on maternity benefits and the war against tuberculosis and cancer. No new taxation has been imposed, while several existing taxes, particularly affecting articles of common consumption, have been revised downwards. The various reductions under the Budget itself are estimated to amount to 763,000,000 francs, and thus bring the total taxation relief accorded since March 30, 1929, to 3,528,000,000 francs.

To this will shortly have to be added a further 1,877,000,000 francs of relief which is proposed under the special Bill laid before the Chamber since the Budget was disposed of; it is proposed that 1,100 millions of this shall represent reductions in taxation on securities and on Bourse transactions. The Government proposals include the reduction from 18 per cent. to 16 per cent. in the income tax levied on dividend coupons of French issues, and from 25 per cent. to 18 per cent. in those on dividends from foreign issues quoted here; the lowering of the annual *ad valorem taxe de transmission* on scrip from .40 per cent. to .25 per cent.; the reduction of stamp duties on scrip by 50 per cent. and of the tax on Bourse operations from 1 franc per 1,000 francs to 50c. per 1,000 francs on the value of scrip either bought or sold for the account; while it is proposed to bring down from 50c. per 1,000 francs to 10c. the *ad valorem* impost levied on carrying over transactions. The relief proposed, it will be seen, is considerable, as compared with existing rates, and should result in substantial and much-needed

stimulus to the Bourse, if carried into effect. The cutting down of the tax on Bourse transactions to one-half, however, would still leave buyer and seller, in a transaction for the account involving 100,000 francs of stock, each with 100 francs of impost to pay, as against 20 francs in New York, 12 francs 42c. in London and 100 francs in Berlin or Brussels. The tax at present imposed here for carrying over 100,000 francs of stock is 50 francs (as in Brussels; against 37 francs 50c. in Berlin, 12 francs 42c. in London and nil in New York), which the Government proposes to reduce to 10 francs. Meanwhile, the Bourse is merely marking time, and no real activity is likely until the expected taxation relief is actually voted.

In addition to reducing taxes that directly affect the Bourse and holders of scrip dealt in there, the Bill proposes to lower by 150,000,000 francs the turnover taxes now levied on cream, butter, cheese, fish, game, fresh and dried vegetables and other perishable commodities, the reduction proposed being from 2 francs per cent. to 55c. With a view to encouraging trade, reductions are also proposed to the extent of 430,000,000 francs in the various luxury taxes. The luxury tax imposed on all motor cars sold at over 7,500 francs is to be brought down from 12 per cent. of the sale price to 6 per cent. (The Citroen Company is already advertising a reduction of 4 per cent. in its prices.) The luxury tax on first-class hotel bills and on the more costly furs, jewellery and perfumery is to be lowered from 12 per cent. to six. These reductions are not expected to result in any real loss of revenue, as it is expected that the increased volume of business in the various commodities concerned will largely, if not entirely, compensate for the lower rates imposed. This result has already followed the lowering of the special tax on property transfers and other imposts. In any case, owing to the policy that has been consistently followed in recent years of under-estimating the yield from practically all taxes, no doubt is felt as to the practical certainty that this financial year, like its predecessors, will show a realised surplus more than sufficiently large to wipe out any apparent losses of revenue that may occur.

The foreign trade returns for March indicate that the monthly adverse balance is again sinking to more normal figures. Total imports for the month had a value of 4,431,115,000 francs, against 4,807,926,000 francs in February and 4,777,565,000 francs in January. Visible exports totalled 3,958,428,000 francs, or 244,000,000 francs more than in January, although 59,000,000 francs less than in February. The summary for the first three months of the year shows that exports were 294,477,000 francs less than in the corresponding period of 1929. The falling off was entirely due to a decline of 361 millions (or over 11 per cent.) in exports of raw materials, exported foodstuffs and manufactured goods both showing an appreciable increase. Imports for the three months show a drop of 1,223½ millions, or about 9 per cent., entries of raw materials and foodstuffs having fallen off about 1,000 millions each, while manufactured goods show an increase of 741½ millions, or about 34 per cent. The total adverse balance on the first three months of the year was 2,326,000,000 francs, as compared with 3,295,000,000 francs during the corresponding period of 1929. In tonnage, during the three months, imports exceeded exports by 5,787,500 tons, as against 3,912,800 tons in the first quarter of last year. Imports of coal during January, February and March totalled 8,084,000 tons, against 6,794,100 tons in the corresponding period of last year, and 5,565,300 tons in that of 1913.

GERMANY.

Politics — Finance — Cruiser Appropriation — Grants to Thuringia — Coal Syndicate Renewal — Capital Market.

(FROM OUR CORRESPONDENT.)

BERLIN, April 22.

AFTER the hard fights in the Reichstag on the tax programme and the agrarian duties, it might have been expected that the tension in the domestic political situation would relax somewhat, and that, at the beginning of May, the Reichstag would be able to devote itself in peace to the details of the 1930 Budget. Neither the Government nor the Socialist opposition has any particular reason for desiring new elections in the near future, for the Cabinet is too little united to embark with a light heart on an election campaign, and through the latest increases in taxes it has made itself—at least as far as city dwellers are concerned—very unpopular. The Social Democrats would like to wait until the masses have realised how much they lost through the withdrawal of the Social Democrats from the Cabinet. For since the main issue between Socialists and Communists is whether a Labour Party may participate in the government of a capitalistic state, the lesson that, without the participation of the Socialists, a number of measures are carried through which appear most undesirable to the wage earners must redound to the benefit of the Socialist Party in its battle against its Communist competitors. Hence everybody concerned was happy at having avoided an immediate dissolution of the Reichstag.

But as the politicians, greatly relieved, were about to leave for their Easter holidays, the situation once more became tense. In the Reichsrat, which includes, in addition to the representatives of the different German states, representatives of the self-governing Prussian provinces, the Province of East Prussia presented a motion to include in the Budget for 1930 the first instalment for the building of a second 10,000-ton armoured cruiser. It is probable that the representative from East Prussia, who is a member of the German National Party, did not act on his own initiative. He was probably actuated by the Ministry of Defence, and perhaps also by the right wing of the Government. Be that as it may, the Cabinet, after the Reichsrat had accepted the proposal, refrained from raising any objection to this increase of expenditure. The Budget which the Government will submit to the Reichstag will contain the appropriation for the cruiser. This means a revival of the struggle that was fought out in 1928 and 1929 about the first 10,000-ton cruiser. The overwhelming majority of the German people feel that Germany, who alone among the larger countries was compelled by the Treaty of Versailles effectively to disarm, must create, so far as that treaty permits, the means necessary for protecting herself against enemy aggressions. But there are very many who doubt whether warships have any value for Germany in her present situation. The Right, it is true, asserts that the series of armoured cruisers demanded are required for the defence of East Prussia against Poland—which accounts for the remarkable manner in which the proposal was laid before the Reichsrat—and this argument has not been without effect on public opinion. Finance Minister Moldenhauer obviously feared to arouse great displeasure in his own party by objecting to the construction.

But the Government's position in relation to the Left is rendered very difficult. The Socialists, to be sure, are also handicapped in respect of the cruiser issue, for their originally very heated opposition to the first of these ships—especially in the election campaign of 1928—was not consistently carried through, and they have not been able to make their electorate understand why the election promise was not kept. Hence they will be afraid to evoke too many recollections of that situation. However, the position to-day is much less ambiguous. The Government has just demanded that the people assume heavy new burdens. None the less, it is not at all certain that the 1930 Budget has been balanced. The financial situation has never been so tense; all sources of taxation have been exhausted; and although the first instalment for the cruiser is low, amounting to only 2,500,000 marks, the amount needed in 1931 will necessarily be much higher, and thus a part of the surplus, with the help of which some intolerably high taxes were to be reduced next year, will be used up in advance. Even many of those who regard the cruiser as desirable in itself will not be convinced that its construction is necessary just at this time.

In the conflict with Thuringia, which the Bruening Government took over from the former Cabinet, the new Government has also exposed itself to attack from the Left. In Thuringia the Ministry of the Interior, which is responsible for police and education, is in the hands of the National Socialist Frick, a Hitler follower, who was also found guilty by a Bavarian court of participation in a counter-revolutionary uprising in Munich in 1923. At the very outset of his official activities Herr Frick distinguished himself by unseemly remarks concerning the National Government, and since the other members of the Thuringian Cabinet took no action in the matter, while at the same time Press reports were circulated to the effect that National Socialist elements were finding their way into the Thuringian police force, Herr Severing, then Minister of the Interior in the Government of the Reich, stopped the payment to Thuringia by the Reich of grants in aid of the State police and other State expenditure. He undoubtedly felt that he must take sharp action against the Thuringian Government of the Right. In 1923 the Reich Government proceeded against Thuringia because Communists were included in its Government. Since then the Government majority there has changed, but the Centre has remained weak, and extremists of the other wing now belong to the Government coalition. But since that year the whole political situation in Germany has altered completely, and to-day the exceptional law—with whose help it was then possible to place executive power over Thuringia in the hands of Reichswehr—no longer exists. However, very many of the public would not understand it if the National Socialists, the counter-revolutionaries of the Right, were to be treated differently from the Communists, the revolutionaries of the Left. Dr. Wirth, the new Minister of the Interior, has now resumed the payments to Thuringia, after discussion with a member of the Ministry of that State. Thuringia was obliged, it is true, to promise that it would permit a high official of the Reich to investigate its police conditions, but the impression that the Government of the Reich has abandoned its position and suffered a moral defeat is not removed by this. This impression is very serious, as Dr. Wirth was hitherto the one man in the Bruening Cabinet whom even the parties of the Left regarded as a guarantee of a constitutional, non-reactionary policy.

After long negotiations it has been possible to renew the Rhenish-Westphalian Coal Syndicate, the most important coal cartel in Germany. The syndicate expired, after a life of five years, on March 31, 1930, and was compulsorily extended by the Minister of Economics until April 30 in order to make possible a voluntary agreement. This has now been reached, although only for a short period. The new contract, which has thus far been signed by only 82 per cent. of the producers, will expire on March 31, 1931, unless a complete agreement can be reached by December 31, 1930, concerning the most important issue. This is the question of the so-called "Umlage"—the fine imposed on every ton of coal mined to create a fund which is used for financing the syndicate's sales in competitive markets. The coal mines that possess their own blast furnaces wanted to secure exemption from this fee for all coal used in them, but thus far they have only been able to secure an agreement that such coal need pay only 70 per cent. of the "Umlage." Even this reduction from 100 to 70 per cent. means a reduction of about 12 million marks a year in the funds at the disposal of the syndicate for meeting under-bidding by competitors. It may therefore be expected that there will be no more forcing of deliveries to markets that are unfavourably situated for the Ruhr district in respect of freight facilities.

The German long-term capital market remains in a very unsatisfactory condition in spite of great liquidity in the Berlin short-term money market, very slight demands on the Reichsbank, and considerable receipts of gold in the last few weeks. The upward movement of bonds has almost stopped since the end of March; the average yield of first-class loans still amounts to about 8 per cent.; and the only big Reich loan, the 6 per cent. loan of 1927, is quoted at 87. The banks continue to refuse to take over long-term emissions; only small offers—5 to 10 million marks for individual municipalities—are placed at 8 to 9 per cent. In these circumstances the plan, now under consideration in international negotiations, of placing a not inconsiderable part of the great reparations loan in Germany, is very sceptically regarded here. The Reichsbank has also decided to keep back, at least temporarily, that part of the shares of the Bank for International Settlements taken over by it. It is felt here that, in the interest of the success of the great reparation issue, it will be necessary to be content with assigning only a very small part of it to Germany, and that this part be retained or placed by the leading private banks, but not thrown open for public subscription.

SWEDEN.

Exchanges — Money Market — Discount Rate — Foreign Trade.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, April 18.

IN Sweden, as everywhere else, the consequences of falling interest rates have recently been the centre of discussion. Indeed, the tendency to cheaper money has been just as marked here as in the great monetary centres, though the symptoms are more difficult to interpret in Sweden because she has no open money market. Nevertheless, it is possible to point to certain circumstances which very clearly characterise the decreases which the Riksbank has been reluctantly compelled to introduce.

This is most clearly seen on the exchange market. Naturally, quotations for the Swedish krona are determined by the balance of foreign trade payments. During the winter and spring months they usually become unfavourable in consequence of the marked passive balance during those months when the export of staple articles is prevented by ice. When shipments are again in full swing the tendency is reversed, as a rule in June, and the krona steadily rises in proportion as the balance of payments improves. This tendency culminates towards the end of the year. Since of recent years Sweden has exported capital and has had intimate connections with the international capital and stock markets, this curve may sometimes be varied. But, in the main, the above-mentioned influences prevail.

Looking at the developments of the year against this background, it is striking how very abnormal the position has been during recent months, and especially in March. In spite of the fact that in January and February (March statistics are not yet available) the balance of payments followed more or less the normal course, the Swedish krona has appreciated. Whereas last year sterling rose between January 1st and April 1st from 18.13 to 18.17½, and the dollar from 3.73½ to 3.74⅝, this year sterling stood at 18.13¾ at the beginning of January and had fallen by April 1st to 18.09½, whilst the dollar exchange rose slightly from 3.71¾ to 3.72, after having been down for some days to 3.71½. At the moment all foreign currencies, except belgas and Swiss francs, are below par in Stockholm. If this tendency continues, gold imports are not impossible, as the gold point for sterling is about 18.08. The prohibition of the import of gold is withdrawn as from April 1st.

There can be no doubt that these abnormal conditions for the time of the year were due to a too high discount rate. As has been said, Sweden not only normally exports capital, amounting last year to 103 million kronor, but her net mobile balances abroad, which formerly were of the nature of exchange reserves for levelling seasonal variations, have risen to such an extent that they have lost that character and must now be regarded as ordinary short-dated loans abroad. Sweden's net balances abroad at present amount to half a milliard kronor. It is evident that the interest on these investments must play a much more important *rôle* than formerly and falling rates

of interest abroad must, therefore, stimulate withdrawals if rates in Sweden are appreciably higher than abroad.

This is a phenomenon which typifies recent developments. As a rule the Riksbank at this time of the year furnishes the market with the necessary foreign exchange. This year the commercial banks have done it instead. And not only that. The latter have found it more advantageous to realise their exchange holdings to the Riksbank than to procure the necessary ready means by ordinary rediscounting. The last week in March threw great light on the situation from this point of view. At the end of the quarter the commercial banks reduced their rediscounting at the Riksbank, whereas normally there is a sharp increase. Instead they realised foreign exchange, as in preceding weeks, and the Riksbank was thereby compelled to appear in the market as a buyer in order to prevent rates falling still lower. Since the middle of February the Riksbank holdings of foreign exchange have risen uninterruptedly from 231 million kronor to about 265 million kronor, an abnormal sum for the time of year. Simultaneously the usual rediscount credits of the Riksbank have fallen to 218 million kronor, while a year ago the figure was 309 million kronor.

It is evident that under such circumstances a lowering of the discount rate was inevitable. Curiously enough, the Riksbank has followed the tendencies of the international money market very slowly and reluctantly. Whereas in the autumn London lowered its rate three times from 6½ per cent. to 5 per cent., Sweden made only one reduction, from 5½ per cent. to 5 per cent. From January 1st it was lowered to 4½ per cent., the rate which ruled from August, 1928, to September, 1929. Again, while London reduced its rate three times in the first quarter of 1930 from 5 to 3½ per cent., Sweden did not reduce its rate until March to 4 per cent., and to 3½ per cent. on April 3rd.

As has been said, there can be no doubt that these reductions reflect the growing depression of the past months. Although it is clear that the Riksbank ignored the effects of the lowering of international rates, it may be said that the discount policy of the Riksbank was logical in so far as the depression was less in evidence in Sweden than in other countries. If we look at the economic data, such as statistics of foreign trade and the index of production of the leading industries in February, we find, on the one hand, that the situation in Sweden is obscure and difficult to appraise, and, on the other hand, that the symptoms of depression are gathering force. Both exports and imports in February were large, as is seasonable, despite the fact that shipping conditions were not as favourable as in January. Sales were very good in the chief industries, and imports of industrial raw materials also reached a high level. But an unsatisfactory feature in this picture of continued activity in overseas trade is afforded by the figures for shipments of iron and steel and electrical machinery. To what extent the last of these is due to the depression it is difficult to say, though there is no doubt in the case of the iron and steel industry. The decline has continued since the autumn and it is emphasised by a comparison with the February production figures, which show an almost general reduction in excess of what may be attributed to seasonal influences. The timber industry, on the other hand, shows a marked increase in production, whereas unemployment stands at a lower level than a year ago.

BULGARIA.

General Economic Situation — Budget — Foreign Trade — Credit — Bank Amalgamations.

(FROM OUR CORRESPONDENT.)

SOFIA, April 11.

THE predominating feature of the situation remains the severe crisis affecting almost every department of the economic and financial structure of the country. According to the statements of responsible and trustworthy observers, trade and industry are experiencing the greatest difficulties they have had to deal with for over twenty-five years. Sales are at a complete standstill, and orders for goods abroad are being more and more frequently cancelled. Important firms, especially in the leather and textile industries, are practically on the eve of closing down, or at least of stopping production. At Gabrovo, one of the chief industrial centres, 34 factories out of 75 are no longer running normally; and a great number of industrial undertakings are throwing their products on the market at absurdly low prices, thus causing the ruin of many distributing agents and retail traders.

The peasant population is also badly hit by the absence of demand for grain and other produce. Maize is selling on the land at 184 leva (about 5s. 6d.) the quintal of 100 kgrs. after being quoted at 16s. last year. The curtailment of credit and shortage of ready money all over the country is only increasing the evils of the situation, and a widespread resentment, exploited by selfish politicians, is gradually raising unfriendly feelings towards the present Government, although a closer examination of the position shows that these unhappy circumstances are mainly the result of the wrong direction private credit, trade and industry have been following for many years, and partly a consequence of general economic conditions abroad. It is generally admitted that the party in power has been losing much ground lately, and that the political situation requires careful handling. As things stand at present there is little hope that any Government action could effect the relief so eagerly awaited. Nothing but an exceptionally good crop could bring about even a partial improvement.

The position of the Treasury, however, remains satisfactory. The total receipts from April 1, 1929, to February 28, 1930, at 401,670,000 leva, are greater than last year, though it is anticipated that later on Customs duties, Excise, railway and other revenue depending on trade and on consumption of goods will fall short of the provisions of the Budget now under consideration in Parliament. The general outline of the Budget for 1930-31, as submitted to the Chamber, shows little difference in comparison with the figures of the previous year. Receipts and expenditure are 6,917,800,000 leva and 6,917,000,000, as against 6,740,000,000 leva and 6,752,820,080 respectively. Apart from an increase of 184 million leva in the public debt service, there are only minor differences in the various items of the two Budgets on the expenditure side. The position is much the same with respect to the receipts estimates. Slight reductions appear in indirect taxation, railways and ports revenue, while unimportant increases are foreseen in direct taxation, fines and confiscations, posts and telegraphs, etc. It must be admitted that there is not much trace of constructive budgeting in the figures as disclosed in the Budget Bill placed before the Chamber. At any rate the present situation would appear to require a somewhat firmer financial policy.

Foreign trade figures for January and February during the last three years are as follows:—

	Imports. Leva.	Exports. Leva.
1928	997·2 millions	1,010·6 millions
1929	969·3 „	763·5 „
1930	722·8 „	884·8 „

The fall in imports is indicative of the general state of the market, and the opinion prevailing in business circles is that the declining movement will continue for some months to come. According to preliminary statistics, the shrinkage of trade imports proper, after deducting manufactured goods imported for the account of the State, is very considerable, and quite in keeping with the all-round slowing down of economic activity. Another illustration of these circumstances is the abnormally low level of coal consumption throughout the country. The Pernik and other collieries had to stop work for various periods and to dismiss some of their workmen. The railroad figures are also following a downward trend.

The money market and the credit position are clearly showing the effects of the bad times. The note circulation is still kept under severe control by the National Bank. Indeed, this is the only practical means of maintaining the cover ratio within legal limits as the adverse balance of payments continues to deplete the foreign exchange reserves of the bank. Larger advances and discount facilities granted by private banks before the crisis are being

gradually liquidated, rather slowly and with difficulty. A certain number of banks are at last realising the uselessness of continued overlending, duplication of risks and heedless competition. A widespread tendency towards amalgamation and concentration has recently developed. Three of the older local banks, the Bulgarska Banka, the Banque Franco-Bulgare pour le Commerce International, and the Bank for National Credit, are amalgamating into a new company, the Union de Banques Bulgares. Many smaller local banks all over the country are liquidating or combining into sounder and more powerful undertakings. The National Bank's intervention will probably prove of great help in this direction, as the Bank insists on assets being brought into the new concerns only after substantial writing down of losses and bad debts. The same concentrating tendency is beginning to make itself felt in trade and industry, although the difficulties in this case are much greater. Success is, therefore, much more problematic.

CANADA.

Crop Prospects — Grain Markets — Business — Parliament — Liquor Export Bill — Australian Trade Treaties.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 26.

THE Western farmers are reported to be in a mood of great depression as the result of their recent experiences, and it is being suggested that this spring may see a considerable reduction in the acreage sown with wheat. Last autumn, owing to the dry conditions which prevailed, less ploughing than usual was done, and, if the spring is late, there may not be time to make up the leeway. Normally such a situation would mean an increase of seeding on stubble, but stubble crops require very favourable conditions to give either a heavy yield or a high quality of grain, and, as the subsoil in most parts of the prairies is still abnormally dry, the farmers may decide not to risk much seed upon stubble ground, and to be content with a smaller acreage. It is unlikely that the wheat pools or the provincial Government will make any effort to secure a reduction of wheat acreage by propaganda, but the same result may follow the conditions just mentioned.

During the past week the wheat market in Winnipeg has experienced the first real upward movement for some months, and, although it has had a setback and has not brought prices to what is regarded as a satisfactory level, it has done something to lift the atmosphere of gloom which has prevailed. The holders of wheat expect that steady buying by Europe will go on during the next three months and relieve them of considerable stocks, but they are now reconciled to the fact that the carry-over of Canadian wheat into the next crop year is bound to be heavy, probably not less than 100,000 bushels. There is little danger now that the pools will come to financial disaster, but they may next year find the bootlegging of grain a very serious problem as the banks will not be disposed to allow the initial payment to be fixed at any risky figure and a certain number of pool members may try to dispose of their grain surreptitiously to private traders who will pay the full market value in cash.

Business conditions still remain cloudy and there is no assurance that the advent of spring will bring any great stimulus. There has been a general curtailment of factory operations and some of the farm-implement firms are not employing more than half the people they were a year ago. The movement of merchandise is at a lower level and the car-loading figure for the week ending March 15th, placed at 60,305 cars, was 820 cars below the figure for the previous week and 6,148 cars below the figure for the corresponding week of 1929. There is also evidence of an ominous decline of exports in other lines than grain; in February, for instance, the exports of vehicles, which are chiefly motors, were only valued at $1,860,701, as compared with a value of $4,746,289 in February, 1929. The recession in business in the United States, which is affecting the volume of advertisements, has also been responsible for lessened demand for newsprint, and the exports of newsprint in February were only valued at $9,418,742, as compared with $10,615,726 in February, 1929. The production of steel in February likewise, placed at 108,612 tons, was 11,000 tons below the figure for February, 1929, and the output of pig iron was down by 25 per cent. Inevitably, under such conditions, the foreign trade returns are going frob bad to worse, and in February, exports valued at 66½ million dollars and imports valued at 89 showed declines of 15½ and 16 millions respectively compared with the totals for February, 1929. For the first eleven months of the current fiscal year an adverse trade balance of, roughly, 125 million dollars has now piled up, as compared with a favourable balance of 130 million dollars a year ago.

The new building programme is not as large as a year ago, but it is still of fairly substantial dimensions, and a decline in contracts for residences and office buildings is largely offset by a gain in engineering works. Despite the large sum which is tied up in unsold wheat, the credit situation presents no difficulty, and there is apparently an abundance of money available for investment. The last bank statement, covering up to the end of January, showed a contraction of 58 million dollars in call loans, a result of the stock market *débâcle*, and current loans were reduced 19 million dollars in January, although they still remained 162 million dollars above the figure for January, 1929. One pleasing development is the righting of the exchange situation in New York, where the Canadian dollar during the past week reached par for the first time for many months.

It is still doubtful whether Mr Dunning, the Finance Minister, will be able to produce his first Budget before the Easter recess, which begins on April 12th, and there is great speculation about its contents. In it is involved the whole question of the King Ministry's strategy for the balance of the session and the approaching general election. If it is decided to hold an election in the summer the Budget will probably contain extensive tariff revisions, probably in the direction of an increase in the British preference, designed to curtail American imports. But, if it is deemed advisable to await the results of the Imperial Economic Conference and not sacrifice beforehand possible bargaining power, the Budget will probably be, in its tariff aspects, a comparatively humdrum affair.

The two most important issues which have occupied the House of Commons have been the Bill designed to stop official clearances for liquor exports to the United States and trade arrangements with the United States. The Progressives and Labourites supported the former measure, and, although the Conservatives disliked it and criticised it severely, most of them voted for the third reading. One of the chief criticisms was that the matter of liquor exports should have been dealt with by treaty rather than by domestic legislation, and Mr King surprised the House by suddenly announcing, on March 24th, that he had begun negotiations with Washington for just such a treaty as the Conservatives suggested. The Bill got its third reading by 173 to 11, but the liquor interests, who have a well-organised lobby at work in the capital, are not without hopes of compassing its defeat in the Senate. The opponents of the Bill will take the line that it is inadvisable when a treaty is being negotiated to concede by domestic legislation the very thing which the Hoover administration desires above everything else, and that the Government's hands will be freer if the Bill does not actually become law.

A controversy about trade arrangements with the two Antipodean Dominions has been going on intermittently for more than a fortnight. The Conservatives began by demanding measures which would halt the inflow of cheap New Zealand butter, and the Government intimated that it was negotiating with New Zealand for a direct treaty. Subsequently the Progressives shifted the ground of debate by a frontal attack upon the Australian treaty itself, which had been made applicable to New Zealand by Order-in-Council. Their spokesmen contended that, by the terms of the treaty, Canadian agriculture had been sacri-

ficed and exposed to unfair competition in order that concessions might be obtained for the motor, pulp and paper and other industries. Special complaint was made about the increase of the Canadian raisin duties, which was made for the purpose of transferring as much as possible of the Canadian market for raisins from the Californian growers to their Australian competitors, and it was argued that its only effect had been to increase the cost of living for the people of Canada to the extent of about a million and a-half dollars per annum. Mr Gardiner, the Progressive leader, moved an amendment asking for the immediate abrogation of the Australian treaty. But Mr H. H. Stevens, of Vancouver, who served as Minister of Trade and Commerce in the last Conservative Ministry, was not prepared to join in any wholesale condemnation of the treaty, and moved a sub-amendment to the effect that, instead of the treaty being abrogated, negotiations for its revision should be begun. One interesting revelation of this debate was the statement that the Maypole Dairy interests were behind a large merger of creameries which is under way in Ontario.

The House of Commons' permanent committee on railways, canals and telegraphs has given its approval to the Bill which confers authority upon the Canadian Pacific Railway to split its common stock in the ratio of four shares to one. President Beatty, in giving evidence, expressed the view that the effect of the split would be to secure a larger proportion of Canadian shareholders.

NEW ZEALAND.

Foreign Trade and Balance of Payments — Money — Business — Unemployment Report.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, March 1.

RETURNS of overseas trade during 1929 state that exports for the year exceeded imports by £6.8 million, but indicate that an unfavourable turn in the trade balance is to be expected. The year's exports, £55.6 million, were the second highest on record, being £600,000 less than in 1928. Imports reached £48.8 million and were nearly £4 million higher than for 1928. Imports, however, increased rapidly towards the end of the year, while exports declined. In the case of wool alone the decline amounted to £1.3 million, and wool, which commanded £23 a bale at the opening sales in 1928-29, brought less than £14 a bale at the same sales in 1929-30. But exports are usually light in the latter half of the year, the bulk of produce being shipped from January to May, and, though the season's prices have been appreciably lower for butter, cheese, meat, hides, skins, and tallow, as well as for wool, the full effects of these lower prices on the year's exports will not appear in the trade returns until the end of the season. But the decline in prices is such as to indicate a heavy fall in the total value of exports. Meanwhile, imports are increasing, and unless they are curtailed with unusual rapidity, the balance of trade may become unfavourable within a few months.

Already the banks have taken action which will undoubtedly result in the contraction of imports. The minimum rate on overdrafts has been raised to 7 per cent., and the exchange rates have been raised until the banks will now sell demand drafts on London only at a premium of 2½ per cent. These are unusual steps and generally indicate an acute stringency of funds on London and an urgent necessity for limiting credit in New Zealand. Normally, the state of bank funds in London and of credit in New Zealand is governed mainly by the trade balance plus the net balance of State payments overseas. For 1929 the recorded trade balance was favourable to the extent of nearly £7 million. This is probably an overestimate as, on a falling market, exporters are likely to declare values which fail to be realised when their produce is sold in its overseas market. State payments of interest abroad are probably below £7½ million annually and the net increase on State indebtedness abroad for 1928-29 was £9½ million, most of which was probably made available during 1929, hence the balance of State payments should also have been decidedly favourable. But bank returns show definitely that during 1929 bank customers paid out over £4 million more than they received, hence the actual balance of payments was decidedly adverse.

The discrepancy between the favourable balance of trade and State payments and the adverse balance of total payments may be due partly to over-valuation of exports and to a decline in immigrants' capital owing to the decrease in immigration, but it appears to be due in greater measure to the unrecorded export of private capital, particularly to Australia. Owing to the fall in wool prices, a poor season, curtailment of public borrowing, and industrial strife, Australia has had an adverse balance of trade and payments. Credit has been restricted, rates for money have been high, security prices correspondingly low, and funds in London scarce. These Australian conditions have affected New Zealand closely. Though definite records are lacking, there is some evidence that considerable sums have been attracted to Australia, either for purchase of securities there, or in payment of securities sold here, or in the form of floating balances transferred for more profitable temporary investments. This movement has brought a considerable increase of bank advances in New Zealand, and overdrafts in the December quarter reached record high levels. Should an adverse trade balance develop during the next few months and public borrowing overseas be restricted, the contraction of credit would be severe. But it seems probable that the banks' action will result both in the curtailment of import orders, and in the return of some, at least, of the funds that have been transferred abroad.

It is somewhat curious that, though the credit scarcity to date has been occasioned rather by the Australian position than by any shortage of New Zealand funds in London, the banks' rates for exchange on London have moved to a point where sterling is abnormally dear, while rates on Australia remain at par. The effect of the Australian situation in New Zealand might have been much less had the New Zealand-Australian rates been adjusted to discourage the flow of funds to Australia. Apparently the Associated Banks tend to regard New Zealand and Australia as a single exchange market, and this practice in fixing exchange rates means that New Zealand must be very closely influenced by changes in Australian conditions. At the present time conditions in New Zealand hardly justify the existing high exchange rates, but their effect should be salutary in forcing a reduction of imports, which is needed in view of the contraction in the value of exports.

Apart from the external trade and the financial situation, which indicate plainly a lower level of business activity during the coming year, conditions in the Dominion remain fairly good. Despite a dry spell in the early summer, followed by a wet Christmas season, farm production has continued to expand and the lower prices received this season will be compensated somewhat by the larger quantities produced. Politics are quiet for the time being, but a commission is kept very busy adjusting hardship cases under the recent increases in land taxation, and a final report has been presented on unemployment. This report rejects unemployment insurance as impracticable for New Zealand, owing to the incalculable nature of the risk, but proposes a special low tax falling on the whole community to produce a fund for bare sustenance of the unemployed, and an employment board to be charged with the duty of finding or creating jobs for workless men. The report has been widely discussed and freely criticised, but no action is likely to be taken until Parliament meets, probably early in June.

Letters to the Editor.

A PROTECTIONIST FALLACY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am frankly puzzled by the extraordinary letter from Mr. Gilbert Beard which appears in your issue of April 12th. Because export prices have risen more than import prices he suggests that we require 25 per cent. less exports in order to pay for the imports we need. However true this statement may be, looked at statistically, it is not true in any other sense. Surely Mr Beard must be aware that every politician, irrespective of his views on the fiscal question, is urging the British manufacturer to increase his exports, and the British manufacturer, without the politician's urging, is doing all he can in that direction. But if we are to believe Mr Beard, when they succeed, the only consequence must inevitably be a further increase in the imports of manufactured goods. In other words, Mr Beard's only conclusion on the subject is that the ships of the world should be engaged in conveying vast quantities of identically similar goods at enormous speeds in opposite directions. Quite frankly, I think it would save time if they put one lot of goods permanently on one ship and instructed that ship to convey them backwards and forwards without unloading them, because the net result would be exactly the same.

The reason I make these remarks is that Mr Beard suggests that the only way in which we can take payment for an increase in exports of manufactured goods is by an increase in the imports of manufactured goods, on the ground that we are incapable of absorbing any further quantities of imported foodstuffs and raw materials.

Of course Mr Beard is writing nonsense, for without the slightest difficulty I could produce for him enormous quantities of small boys who would be perfectly willing to consume large additional quantities of oranges and bananas if their parents only had the wherewithal to pay for them. Oranges and bananas are, of course, from our point of view, entirely non-competitive imports. The fathers and mothers, to a very large extent, are unable to pay for the oranges and bananas because they have been deprived of their employment by the importation of competitive manufactured goods which we could produce ourselves.

Where we have safeguarded industries the results have been an increase in production and employment, reduced costs of production according a lower selling price to the consumer, and, in respect of the supplies which will come in despite of duties, a substantial revenue for the Exchequer, the burden of which clearly has not been borne by the British consumer. —Yours truly,

HERBERT G. WILLIAMS.

Books and Publications.

THE OIL INDUSTRY IN GREAT BRITAIN.*

THOSE who are interested in economic and industrial affairs should not be put off by the title of Mr C. T. Brunner's text-book. It has nothing to do with politics. It is a straightforward and authentic account of the growth and organisation of the oil-refining and marketing industry in this country. The refining branch does not perhaps receive from Mr. Brunner the attention which its size demands. Oil refining in this country has grown up to commercial importance only since 1920. Last year, about 18 per cent. of the total new supply of motor spirit (853,410,000 gallons) was accounted for by the manufacture of refined petrol from imported crude oil. Mr Brunner, however, is more concerned with distribution, which he rightly regards as the most important side of the British oil trade. When it is found that the consumption of motor spirit has increased from 371,000 tons in 1914 to 831,000 tons in 1921, to 1,537,000 tons in 1924, and to nearly 3,000,000 tons in 1929, it will be appreciated that a miracle of organisation has been achieved by the big petrol distributing companies.

An interesting, and we believe unique, analysis is given by Mr Brunner of the motor spirit trade in 1929, which is worth quotation:—

SALES OF MOTOR SPIRIT, 1929.

	Tons.	Tons.
Private cars taxed on horse-power ...	950,000	
Motor cycles ...	150,000	
Private vehicles ...		1,100,000
Omnibuses and charabancs ...	420,000	
Other commercial passenger vehicles...	180,000	
Commercial goods vehicles...	1,200,000	
Miscellaneous vehicles...	100,000	
Commercial vehicles ...		1,900,000
Grand total ...		3,000,000

Of this total probably 1,500,000 tons were sold through garages, and 1,500,000 tons delivered direct to the consumers by the distributing companies. To deliver 3,000,000 tons of motor spirit a year the petrol companies have had to scrap their petrol cans for a bulk system of distribution and to come to a sensible working arrangement with the retailers. The basis of this arrangement is that the national distributors sell only to recognised dealers or commercial consumers (not to private motorists), fix a standard profit for the retailer (it is now 1½d. per gallon), and sell their No. 1 and No. 3 brands at a fixed price throughout the country (according to zones). This is a statesmanlike trading arrangement which reflects credit on both the big petrol combines and the retailers. From time to time the harmony of the trade has been upset by the "piratical" incursions of independent petrol companies, but by an agreement of January 1, 1929, the national distributors came to the following terms with the independents:—(1) The national distributors ceased to discriminate by way of a 1d. per gallon loyalty rebate to retailers against the brands sold by independent conpanies, and (2) the independent companies agreed not to supply any fresh premises which were not approved of by the retailers' organisation (Motor Trade Association), and to allow the retailer the same rate of profit as the national distributors. There are, however, a few "pirate" companies left, which, according to Mr Brunner, "are content to skim the cream of the easy business and to leave the less profitable to concerns whose object it is to render some public service in addition to taking profit." Such companies, Mr Brunner declares, are "fortunately losing ground, and it is gradually being borne in on the public that their products are usually not reliable."

It should be observed that Mr Brunner does not class the Soviet Government with the "pirates." The Soviet Government markets petrol in this country through a subsidiary called Russian Oil Products, Ltd., and also sells kerosene in bulk to the Medway Oil and Storage Company, which "cracks" it for the manufacture of petrol. A year ago Russian petrol was causing the oil trade in this country much more trouble than the "pirates." At the beginning of 1929 the price of petrol had advanced in America, but the national distributors did not dare to follow it up because of the Russian competition. The Anglo-American Oil Company finally entered into negotiations with Russian Oil Products, Ltd., and eventually secured an agreement on behalf of all the petrol companies (including the independents), under which the Russians undertook to sell petrol in bulk to the national companies at 5 per cent. below the market price, "while restrictions were placed on their trade in the British market." Mr Brunner is not explicit on the subject of these restrictions, but we understand that the Russian Oil Products trade in this country was fixed last year at about 60,000,000 gallons, although it was left free to sell at prices below the fixed prices of the combines.

In a wholly admirable book Mr Brunner makes one unfortunate slip. Nearly 70 per cent. of the world's oil, he said, is produced in the United States of America. In another place he adds: "Oil is, broadly speaking, produced in backward and undeveloped countries." This is rather hard on the United States, particularly when it is feeling a little sensitive about its Chicago.

* "The Problem of Oil." By C. T. Brunner (Ernest Benn, Ltd.). 15s.

THE NAVAL BLOCKADE AND THE FREEDOM OF THE SEAS.*

THIS book is probably the clearest, most orderly, and most concise survey of the blockade of Germany during the world war that has yet been written. M. Guichard has thoroughly mastered his material, and writes with the most generous and chivalrous appreciation of his late enemies. A Frenchman who even to-day can state that he is "unwilling to conclude this study without paying . . . tribute to the German people, which they certainly deserve," and who can say that "the remembrance of her protracted economic siege during which she withstood a host of enemies is still a source of patriotic pride to the Germans *with which we cannot but sympathise*" (the italics are ours) is a gallant sailor who contributes more to the foundations of peace and international security than the makers of a dozen treaties.

* "The Economic Blockade." By Lieut. Louis Guichard. Translated and edited by Christopher R. Turner. London: Philip Allan & Co., Ltd. Price, 15s. net.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Liberty in the Modern State. By H. J. Laski. (London) Faber and Faber, 24, Russell Square. 7s. 6d. net.

Professor Laski's writing is always stimulating, and these two lectures, on a subject of evergreen interest, are no exception to the rule.

An Introduction to the Social Sciences. By C. Delisle Burns. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. and 3s. 6d. net.

A readable little book, from which, as from most "Introductions," the reader most likely to profit is the one who has already read most widely in the subject.

A Select Bibliography of Modern Economic Theory, 1870-1929. Compiled by Harold E. Batson. With an introduction by Lionel Robbins.

A very conveniently arranged bibliography, classified both under subjects and under authors. The works referred to are confined to those in the English, French, German and Italian languages, and the subjects of money and banking are not included.

Bibliography of Unemployment. 2nd edition. (London) P. S. King, 14, Great Smith Street. 4s. net.

An extremely comprehensive bibliography, of worldwide scope, prepared by the International Labour Office.

Provincial Finance in India. By Pramathanath Banerjea. (London) Macmillan and Company, Ltd., St. Martin's Street, W.C. 2. 10s. 6d. net.

A valuable study of the history and present problems of public finance in India.

Der Finanzausgleich Eine Begriffliche Untersuchung. By Dr. Jur. Georg Jacoby. (Münster i. Westf) Helios-Verlag G.m.b.H. 6.25 mk.

A monograph on the relations between State and federal finance.

Modern Steelwork, 1930. Edited by W. R. Gilbert. (London) British Steelwork Association, Artillery House. 5s. net.

A profusely illustrated review of current practice in the employment of structural steel.

Protection of Workers Operating Metal-Working Presses. (London) P. S. King, 14, Great Smith Street. 5s.

This report, prepared for the International Labour Office, constitutes a very detailed, fully illustrated account of various safety devices.

The 100 Best Investments. (London) British, Foreign and Colonial Corporation, Ltd., B.F.C. House, Gresham Street. 2s. net.

Contains details of the past results and present position of 100 selected first-rate investments.

The World's Rubber Position. March 31, 1930. Compiled and published by W. H. Rickinson and Son, 3, Great Winchester Street, E.C. 2. 4s.

A valuable little booklet containing a large collection of rubber statistics.

The Latvian Economist. Compiled by J. Bokalders. (Riga) Ministry of Finance.

A collection of articles on Latvian economic problems considered from an international point of view.

Manuel de l'Economie Suisse. Edited by Arthur Katz-Foerstner. (Berlin-Halensee) Internationale Verlags-Gesellschaft.

An abundantly illustrated account of the economic activities of present-day Switzerland. There are some useful statistics.

In Defence of Capitalism. By Adolf Weber. (London) George Allen and Unwin, Ltd., 40, Museum Street. 4s. 6d. net.

A reasoned and restrained argument, with a German background.

L'Accumulation du Capital. By Lucien Laurat. (Paris) Librairie des Sciences Politiques et Sociales, 31, rue Jacob. 25 fcs.

A critical *résumé* of the ideas of Rosa Luxembourg, the purpose of which is to throw light on the development of Marxian theory after Marx' death.

"Profits versus Price Cutting." Arranged by William M. Benney. (New York) National Association of Manufacturers, 11, West 42nd Street.

Two papers, by leading American firms, entitled "The Problem of Depressed Price Levels" and "Can a Manufacturer Get a Fair Price for His Products?"

Greater London. First Report of the Regional Planning Committee, December, 1929. (London) Knapp, Knapp, Drewett and Sons, Ltd., 30, Victoria Street, S.W.1. 5s. net.

Includes, in addition to the report proper, memoranda on open spaces, ribbon development, additional town planning powers, and the proposal for a regional planning authority for Greater London.

Outline of Costing. By Wm. A. Smith. (London) Moore's Modern Methods, Ltd., 12, St. Bride Street. 5s. net.

An outline of the principles of job-costing for factories.

Flood. By Robert Neumann. Translated from the German by William A. Drake. (London) G. P. Putnam's Sons, Ltd., 24, Bedford Street. 7s. 6d. net.

A novel of post-war Vienna by an author whose profession at the time of the currency *débâcle* left him exceptionally well qualified to write realistically and with inside knowledge of the events of the period and their disastrous effects.

The Incorporated Accountants' Year Book, 1930. (London) Society of Incorporated Accountants and Auditors, Incorporated Accountants' Hall, Victoria Embankment.

A complete directory and source of information about societies, members and firms.

Notes on Income Tax. By William S. Carrington. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street. 3s. 6d. net.

A handbook for students' revision purposes.

The Stock Exchange.

SOUTH AFRICAN GOLD MINING.

FROM time to time reports are current that the humdrum experience of the Kaffir market will be enlivened, during the next upward surge of Stock Exchange sentiment, by attempts to create an atmosphere for another "boom." Whether the turbulent days of the 'nineties are likely to return is as doubtful as the wisdom of efforts to resurrect them. To many investors, however, the best South African shares have an appeal which is quite independent of special market "operations." It may, therefore, be opportune to review the main features of the present-day position, in the light of recent developments on the Rand.

South Africa has been for many years the chief gold-producing country in the world, and its share in the total output is now 53 per cent. Last year (1929) is noteworthy in the annals of goldmining owing to the fact that the grand aggregate value of all the gold produced in South Africa, from small beginnings in or about 1880, reached the extraordinary figure of £1,050,000,000; and, at the same time, prices of shares in the goldmining companies fell to the lowest level ever known, representing a total decline in capital of nearly £8,000,000. The output of gold last year was 10,537,175 ounces, valued at £44,723,671. In 1926 the output nearly reached the ten-million-ounces stage, and in the same year the greatest depth ever attained in any gold mine was reached, namely, 7,224 feet, in Village Deep. It is possible that future workings may go to still greater depths, even to 10,000 feet, and on this possibility will, of course, depend the ultimate life of the mines. Various estimates have been made from time to time of the amount of gold remaining to be extracted, ranging from the low figure of £325,000,000, given by Mr Hamilton Smith in 1893 (down to depths of 3,500 feet), to £1,233,000,000, made by Leggett and Hatch in 1902 (down to depths of 6,000 feet). The Transvaal Chamber of Mines in 1913 gave a much lower figure, namely, £500,000,000, and this was clearly too low, for gold to more than the value of that amount has been already mined since 1913.

The Witwatersrand ("Ridge of White Waters") goldfield is by far the most important in South Africa, and is located on an elevated plateau nearly 6,000 feet above the sea. The Rand itself projects somewhat above the level of the plateau, and the outcrop of the conglomerate reefs may thus be said to be the dividing watershed between the Atlantic and Indian Oceans. This conglomerate is composed of quartz pebbles bound in a siliceous cement containing iron pyrites, and is often known locally as "banket." The gold content is not often visible, and occurs mainly in the matrix, or cement, in a series of reefs which, starting from the lowest geological horizon, are known as the Main Reef series, Bird Reef, Kimberley series, Elsburg and Black Reefs. So far, only the Main Reef series has justified extensive exploitation, and only within certain limits. Improved mechanical methods and labour organisation have gradually brought all the chief gold mines to a similar basis as regards both mining and metallurgy, and a very satisfactory extraction is obtained throughout the whole banket series of reefs. The success in working these comparatively low-grade ores is due to (1) use of the cyanide process, (2) uniformity and character of the gold-bearing deposit, (3) cheap, unskilled labour, (4) proximity of coal, (5) absence of heavy pumping charges, and (6) good water supply. Actual mining is also greatly assisted by a very strong roof, which supports all excavations made within reason, with a minimum of timbering and other supports in the shallower workings. Nevertheless, this roof has lately been severely strained, this development involving much sand-filling and causing numerous earth tremors. But, despite these favourable and for the most part technical features, there are other factors of an economic or political nature which are not quite so favourable, such as scarcity of native labour (a subject on which Mr John Martin had a good deal to say at the annual meeting of the Transvaal Chamber of Mines), high railway rates and high cost of social insurance or welfare schemes. Nor is it possible to speak in general terms of the whole industry in view of the wide differences between the individual mines or groups of mines.

This is well illustrated by a consideration of the distribution of dividends, which increased from £7,160,000 in 1921 to £8,090,000 in 1929. The mines of the Far East Rand, which crushed only about 40 per cent. of the total tonnage, yielded no less than 86 per cent. of the total dividends. The older mines of the Central Rand, crushing 60 per cent. of the total tonnage, yielded only 14 per cent. of the total dividends. It is obvious that many of these older mines are working without profit and some at a loss. Mr John Martin pointed out, at the Transvaal Chamber of Mines meeting, that these mines produced 49 per cent. of the whole gold output, spent 65 per cent. of the total sum distributed in wages, and 60 per cent. of the amount expended on stores. In 1929 there were ten producing goldmining companies unable to pay any dividends at all, yet these mines gave employment to 7,400 Europeans, and 63,500 non-Europeans, and distributed almost £5,000,000 in wages alone. Of their total working costs, amounting last year to £9,500,000, about 84 per cent. was spent in South Africa.

The mines that are not prosperous or are experiencing less than the average prosperity are the mines where there is only a small margin between yield and costs, either because the yield of gold is low or because the working costs, owing to difficult mining conditions, are high. In either event only ore of a certain grade can be handled at a profit. Working costs, on the average, have been reduced from 25s. 8d. per ton in 1921 to 19s. 7d. per ton milled in 1929, and the importance of this may be realised when it is stated that no less than seventeen mines in 1929 had yields of gold per ton which were below the average working costs level of 1921, and these mines crushed, last year, 14,500,000 tons of ore, yielding £15,500,000 worth of gold. The decline in average working costs has apparently been due to a general reduction all round and not to any spectacular fall in working costs of one or two mines, and this has so improved the outlook that not only is the scale of current operations 40 per cent. greater than it was in 1921, but the development footage accomplished throughout the industry (*i.e.* the work done by means of drives, winzes, raises, and incline shafts to open up new ground, disclose payable areas and make them available for subsequent stoping operations), amounting in 1921 to only 586,000 feet, reached in 1929 the tremendous total of 1,110,000 feet. As Mr John Martin pointed out in his very informative survey, several new mines have been started and others have enlarged their mining areas; but it is necessary to remember that the remarkable expansion of the industry in recent years is due to a more rapid using up of the available payable ore. Dividends to shareholders—representing return of capital, since gold mines are a wasting asset—have shown much less than a corresponding rate of increase.

The future prospects of the world's goldmining industry are obviously of considerable moment to the investor in South African mining shares. Since 1924 the world's gold production has been practically stationary at about £82,000,000 per annum. Mr Joseph Kitchin, a pre-eminent authority, has computed that for the next five years it will probably remain at or about this figure. A gradual falling-off will, he believes, characterise the succeeding three years' operations, followed by a rapid decline in ensuing years. The question whether such a condition would react upon the operation of the gold standard is important, but falls outside the scope of the present article. In ten years' time, however, it is

believed that the Rand will be producing at the rate of about £35,000,000 per annum. Shareholders, especially in the older mines, might be advised duly to consider the implications of this possibility.

The gold-mining industry remains the greatest and best-organised industry in South Africa, and may long remain so if accorded proper treatment by the Government. The latter, during the past year or two, has been well-nigh overwhelmed by good advice and innumerable suggestions as to " proper treatment." There is no doubt that the Union Government's responsibility in many ways is a heavy one, but this fact is now clearly recognised in official quarters.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
May 6.	May 8.

The course of the markets was perplexing. Business was quite definitely of smaller dimensions and sentiment more pessimistic than before the holiday. But no large volume of selling was in evidence, and the Budget was generally scouted as an explanation of the prevailing tendency. The truth would seem to be that the " House " even yet has not fully made up its mind on that question, most members having treated the Easter holiday as an opportunity to forget rather than to meditate upon its implications. Though a few brokers were reported to be transferring clients' funds elsewhere, under instructions, no " flight from the pound " was in progress, so far as British holders in general were concerned. Altogether, the week's movements had a psychological rather than an economic basis, and were of uncertain value as a guide to the course of prices in the near future.

Gilt-edged securities made a disappointing showing, partly as a result of the letting out of stock by jobbers, who were, in effect, stale bulls of a 3 per cent. Bank rate. A firmer tendency obtained on Thursday following the previous day's improvement in sterling. New 4½ per cent. Conversion was sold, Funding Loan and 5 per cent. War Loan also losing ground. India stocks were weak on the ominous development of " civil disobedience." Rumours of a fresh internal issue gave Australian loans a heavy tendency. Fractional declines were recorded in all the new Home Corporation issues.

The foreign market had an idle appearance, with few price changes. Preparations for a new San Paulo loan, underwritten on Thursday, gave a firm appearance to the majority of Brazilian issues, though San Paulo Coffee Bonds were realised to finance prospective applications for the new loan. European stocks were overshadowed by the forthcoming Reparations issue. Underwriters were left with approximately 60 per cent. of the Industrial Mortgage Bank of Finland bond issue, the scrip opening at 3½ discount and rising to 1 discount.

Easter weather was a bear point for the Home Railways, the publication of traffic figures comparing unfavourably with Good Friday week last year being a signal for a general marking down of prices, though no large volume of selling resulted. Though business was sparse in the Argentine Railway market, a firmer tone was induced by better crop news. Great Western of Brazil improved on the declaration of the first ordinary dividend for sixteen years.

The industrial markets were in a cautious mood, professional operators refusing to take a definite line and the public showing little interest. Brewery shares obtained some support, Benskins and Allsopps being in demand. Motor shares, however, were affected by a general profit-taking tendency which particularly affected Leylands, Austins and Guys. Among rayon shares, the rumour that Courtaulds were about to undertake film and viscose paper production failed to affect the shares, and British Celanese gave way on the consensus of agreement that the figures mentioned in the company's circular did not foreshadow any speedy dividend payment on the ordinary. Cables and Wireless were heavy on a revival of disquietude regarding the first year's accounts. International stocks were, in general, easier, the exception being Columbia Graphophone, which rose 10s. to 6 13/16. Textile shares were little affected by the dispute in Yorkshire, few changes being recorded apart from a small rise in J. and P. Coats. Electrical power securities held their ground, but manufacturing shares were less active, General Electric suffering a sizeable reaction. Bank shares showed small changes, and dealings in insurance shares were insufficient to test prevailing prices.

Despite the near approach of the tapping " holiday," the market price of rubber continued to decline, and an easier tendency developed in the shares. A fair business was done, at unchanged prices, in Rubber Trusts (whose report is dealt with on page 956), but Anglo-Dutch lost ground. Transactions in tea shares were on a limited scale, with scattered declines in quotations. The oil market had a more assured appearance, on an agreement for further restriction and higher crude prices in California. Lobitos was bought from strong quarters, as a presumptive beneficiary under its short sales contracts.

The tone of the Mining share markets remained dull after the holiday, though a certain liveliness later pervaded the Rhodesian section. The fall in base metals, particularly copper, lead and zinc, was an all-pervasive influence. An analysis of the copper position will be found on page 954. Bwanas receded 1s. 1½d. to 17s. 9d. on Tuesday, despite the publication of more good borehole results at Mindola. N'Changas, Anglo-American and Roan Antelope were all weak, and even Chartered did not escape the prevalent tendency. Rezende were a strong feature. Among Kaffirs few changes of importance were recorded. Tintos were naturally weak, but hardened in the later dealings, while numerous tin counters offered a creditable resistance to the chill wind from the Metal Exchange.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market was weak and sentiment rather more bearish on the inability of prices to advance consistently, while loans continued to gain, indicating that stock was passing from strong to weak hands. With this week's gain of 92 millions in brokers' loans the total for the past four weeks is up 400 millions, with stock market averages virtually unchanged. It is also evident now that less than the normal seasonal recovery in business took place during the first quarter, and that a recession may take place in some industries during the second quarter, bringing home the realisation that the market has over-discounted the business position. Only stocks sponsored by pools are able to advance. Railroads were dull on March earnings,

which were running 25 per cent. under a year ago, and on carloadings, which have risen during the past three weeks, but are still the lowest since 1924. Public utilities are marking time owing to the drop in telephones on a new issue of stock. Oils were the brightest feature, with coppers at new low levels as a result of the cut in the metal, lack of domestic demand, and further dividend reductions. More of the latter are likely, but a further price cut in the metal is not expected.

AMSTERDAM.

A gradual improvement took place on the Amsterdam Stock Exchange during the past month, and, although turnover remained limited, quotations nevertheless rose to a decidedly higher level, particularly for industrial descriptions. The improved tendency can be attributed very largely to the anxiety of bears to cover their engagements, increased by the fact that recent company reports of industrial undertakings revealed satisfactory

results for the past year. An additional stimulating factor was the firm tendency of Royal Dutch, due to greater optimism as to the effects of restriction. Artificial silks were in more favour, and A.K.U. registered a marked advance. Rubber shares were firm in view of the restriction measures coming definitely into operation during May, and the effect on 'Change was reassuring. Sugar shares suffered losses at first, as a result of the unsatisfactory position of the sales of V.I.S.P., there being no less than 150,000 tons of the old crop still to be sold. In succeeding weeks, however, the V.I.S.P. made several sales and the Stock Exchange responded to the stimulus. The announcement that the Trading Company Amsterdam would distribute a dividend of 30 per cent. was an additional strong feature. Shipping shares were firm on the not unsatisfactory results attained in 1929. Tobacco shares followed an irregular trend, corresponding to that of the Amsterdam tobacco sales.

INVESTMENT NOTES.

Company Law Enforcement.—Many investors are awaiting with interest the findings of the special sub-committee of the Stock Exchange, which for the last few weeks has been investigating possible amendments in the procedure relating to "Permission to Deal." The main lines of the report may now be said to have taken definite shape in the minds of the members, but some weeks may possibly elapse before the final document is in the hands of the Stock Exchange Committee. Meanwhile action has been taken in another quarter which harmonises well with the Stock Exchange Committee's efforts to make investment safer for the investor. The Board of Trade has successfully initiated a prosecution against the Dynamic Electrical Company, Ltd., and its two directors, for making default in forwarding to Somerset House the annual return of the company and a copy of the list of members, as required by the Companies' Act. The concern is a small one, formed to harness the tides of the Wash, with an original issued capital of 1,500,000 shilling shares. It is clear, however, that the Board of Trade intends its action to be interpreted as a declaration of policy. Its counsel stated, for example, in the course of his speech, that the Board regards defaults in filing returns as "of great gravity," since many matters which come into Court relating to company frauds would never arise if the provisions of the Companies' Acts were properly observed. This is a view which many responsible observers have been pressing on the Board for years past, and its acceptance marks a definite forward step. While magistrates may be reluctant to impose the severe maximum penalty provided in the Act—£5 for every day of default—fines of the order imposed on the Dynamic Electrical Company (£120 with £31 10s. costs) will probably be a sufficient stimulant to tardy managements. It remains to be seen, however, whether they will be equally effective when a company desires to hide some fundamental defect in its position.

The Fall in Copper—Share Market Reactions.—Exactly twelve months to the day since electro-copper fell to 18 cents per lb. an end came to months of waiting, and, on the Wednesday before Easter, the price quoted by Copper Exporters, Inc., was reduced to 14 cents f.a.s. New York, or 14.30 c.i.f. European ports. This involved a sterling price of £66 per ton, which compared with a previous price of £84 5s., at which level, or within a few shillings of it, exporters held the price for a year in spite of ample evidence that business in the red metal was slowly being destroyed. The effect on the share market values may be inferred from the following figures:—

	Highest. 1929.	Highest. 1930.	Tues., Apr. 15.	Thurs., Apr. 17.	Thurs., Apr. 24.
Rio Tinto (£5)	66	47½	44	43¼	42¾
S. Amer. Copper (£2)	5/32	3/32	1/32	1/32	1/32
Tharsis (£2)	6¾	5¼	4⅜	4⅛	4 1/16
Namaqua (£2)	1 11/16	7/16	3/16	3/16	2/16
Mount Lyell (£1)	2 3/16	1 13/16	1 9/16	1½	1 7/16

The causation of such a severe break is complex, but no doubt the evident unpopularity of output restriction, considered in the light of an increase in stocks of refined copper to a quarter of a million tons, has gone a long way towards compelling a decision. In London during the week preceding the reduction in values there were persistent rumours that the Export Association was on the verge of disruption, and there can be little doubt that grave differences have arisen among the members, and that, had no cut been made, a breakaway by certain interests would have occurred. As a matter of fact, severe price-cutting had already taken place by outside interests, and the Custom Smelters were giving trouble, as they did in the spring of last year, owing to their inability to dispose of the daily intake. In making one bold cut to 14 cents exporters have shown wisdom, for half measures at a time like the present would only have led to a continuance of distrust and dissatisfaction among consumers. European consumers have responded more heartily to the new price than American domestic users, and Copper Exporters, Incorporated, have been able to sell upwards of 20,000 tons, mostly for fairly early shipment. In the United States manufacturers have no great quantity of copper either in stock or to come in, but after having suffered from the imposition of 18 cents for twelve months, during half of which their trade has been very depressed, they are endeavouring to get their own back and compel a further reduction in the selling price. In this they have been assisted by the London market, which fell to £55, but now shows a better tendency. Should the Association break up under the burden of excessive stocks, a temporary slump to 9 or 10 cents might easily follow, but the reaction would be rapid, and for a period 12 cents might obtain, with an ultimate recovery to about 14 cents, which must be accounted a reasonable level from every viewpoint. On the whole, the American Association may be able to maintain this price for the next two months, by which time it should be possible to see how consuming trades are reacting to the new level.

Cammell, Laird Debenture Scheme.—The report of Cammell, Laird and Company for 1929, issued last week, intimated that the company would be unable to pay off the principal of its 5 per cent. first mortgage debenture stock and its 4½ per cent. mortgage debenture stock falling due on July 1 next. Holders were asked for a maximum of five years' delay in return for interest of 5½ per cent., in both cases, in the interim. The result of the meeting to be held on April 25 is not available as we go to press, but efforts have been made to organise opposition to the plan in some quarters on the ground, apparently, that the company could, if it would, find the amounts required, or, alternatively, that the "considera-

tion" for postponement is inadequate. Something like £804,000 would be required to pay off the two stocks, and as the company's last balance sheet showed net liquid assets (including stock-in-trade) of less than £453,000, the operation would clearly depend on the obtaining of cash from an outside source. To make a public issue of new debentures or shares is not a practical proposition for a company which last year earned £5,121 on £4,459,285 of share capital (after making losses of £112,046 and £80,694 in 1927 and 1928 respectively), and its financial advisers (Messrs. Lazard Brothers) would presumably be reluctant to recommend any short-term advance, in view of the unlikelihood of its early funding. The results of the reconstruction arrangements, which have brought Cammell, Laird into active alliance with Vickers-Armstrong through the English Steel Corporation, may be far-reaching and beneficial, but will need considerable time to fructify. The debenture holders could, of course, quite legitimately argue that their immediate interests centred less on keeping in being an important "heavy" steel concern than on obtaining hard cash with the least possible delay, and might proceed, next July, to put in a receiver. Such a step would involve a clash of interest with the holders of 5 per cent. ("Junior") mortgage debenture stock (of which £800,500 is outstanding, but is not due until 1947), and its ultimate financial wisdom would be doubtful. It would, in practice, involve an effort to realise part of the company's holdings of English Steel Corporation ordinary shares and Metropolitan-Cammell ordinary. No more inappropriate time than the present could be devised for such an operation. Neither of the last-named companies has as yet paid a dividend, neither enjoys a Stock Exchange quotation for its shares, and neither can be even approximately assessed as regards future earning power. While refraining from firing the last shot in their locker, however, the debenture stockholders may naturally be expected to drive as hard a bargain regarding "compensation" as possible, and closely to scrutinise the appointment of new trustees for the 4½ per cent. and the 5 per cent. "Junior" debenture stock. The proposal to increase the borrowing powers of the English Steel Corporation, again, would appear to be of concern to Cammell, Laird holders. The placing of an extra £2,000,000 in front of the former's ordinary shares must clearly bear on the status of the Cammell, Laird debenture stock charged upon them.

Babcock and Wilcox.—The accounts of this famous engineering firm for the twelve months ended December 31st last, though showing a drop in trading profits from £783,814 to £676,196, nevertheless appear, on closer examination, not unsatisfactory. The directors report that "the reduction of profits for the year is in a large measure accounted for by an exceptional accumulation of uncompleted orders, due to circumstances beyond our control," a statement which, coupled with a remark of the chairman at the last annual meeting that "for some time past there had been a difficulty in executing orders as quickly as they were wanted," seems to suggest a necessity for plant overhaul or extension. The dividend of 15 per cent., free of tax, is maintained.

"In view of the very satisfactory volume of orders," the directors feel justified in placing only £48,000 to reserve fund, which now stands at £852,000, in addition to a dividend equalisation fund of £400,000. To make possible this allocation, the carry-forward item has been further decreased from £118,363 to £75,992, while £8,786 has been put to staff pension fund, against £32,000, following the adoption of a new contributory system. Investments are shown in the balance sheet at a cost price of £1,588,847, against a market value on December 31st last of £1,530,779, but in view of the fact that on March 31, 1930, they were worth more than the original cost, "it is not considered necessary to make any provision out of profits for this decrease." At the present price of 3 3/32 the £1 ordinary shares give a yield of about £5 per cent. free of tax, allowing for a final dividend of 8 per cent.

Imperial Chemical Industries.—It is unfortunate that the directors of Imperial Chemical Industries, Ltd., still do not see their way to publish a consolidated income account and balance sheet. As the income of this company is derived from dividends received from its subsidiary and associated companies, it is impossible to ascertain the combine's real earnings. After deducting £575,479 for the central obsolescence fund (against £509,138) and providing £146,653 for income tax (against £275,540), the net profit comes to £5,780,208, against £5,212,703 in 1928, an increase of 10.8 per cent. The directors' report declares that while the volume of trade was generally good in 1929, the persistent downward trend of world prices adversely affected the profits. In Great Britain trade was maintained, depression in certain sections being offset by increased activity in others. The distribution of profits for the last three years is shown:—

account. The total reserves at December 31, 1929, amounted to £16,725,000, against £11,009,138 twelve months ago. These reserves included £9,725,000 capital reserves (increased by £4,195,979 by share premiums, *less* the expenses of the new issue); £3,000,000 free reserves (including £529,020 appropriated out of the 1929 profits); and £4,000,000 central obsolescence fund (increased by £575,479 out of 1929 profits and by £415,383 by the transfer of the Synthetic Ammonia and Nitrates, Ltd., balance as at December 31, 1929). The balance sheet now shows separately the holdings in subsidiary and associated companies and other investments. The total of these holdings amounted to £85,290,948, compared with £68,498,933 a year ago. This increase is due to the reorganisation of the control of subsidiary companies on a group basis which involved the transfer to Imperial Chemical Industries of a number of investments standing in the names of its subsidiary companies. The holdings in the subsidiary companies amounted to £70,469,303 and those in associated companies to £6,875,122. The marketable securities amounted to £7,946,523, with a market value at December 31, 1929, of £6,963,176. The directors do not refer to the heavy depreciation in the market value of the company's own shares, which are now quoted at 26s. 10½d. for the ordinary and 8s. 6d. for the deferred, against maximum quotations in 1929 of 45s. 6d. and 17s. 1½d. respectively. At the present market price the ordinary shares return a yield of 6.15 per cent. and the deferred shares of 2.4 per cent.

Associated Electrical Industries, Ltd.—The 1929 report of this company, the old Metropolitan-Vickers Electrical enlarged by the control of British Thomson-Houston, Edison Swan and Ferguson Pailin, shows the earnings of the £2,282,817 new capital subscribed at the end of 1928 for the purposes of the amalgamation. The dividends are maintained at 6 per cent. on the increased ordinary capital of £3,498,900, but the margin of surplus earnings is reduced, as the following table will show:—

	Years ended December 31, 1927.	1928.	1929.

* Tax deducted.

The profits shown include only dividends declared by the subsidiary companies. The directors state that the works of the group were "comparatively well employed" in 1929 and that orders in hand show an increase over those of the previous year. The balance sheet shows a strong liquid position, the surplus of current assets over liabilities amounting to £1,880,000. The retirement of Mr Bernard Docker and Sir E. Wylbore-Smith may or may not be connected with the large interests in the company of the American General Electric Company. The shares at 28s. 6d. compare with a high level of 58s. 6d. in 1929 and return a yield of £4 7s. 2d. per cent.

Howard and Bullough.—The latest report of this leading company of textile machinists makes, frankly, depressing reading. Since the halcyon days of 1922-23, when nearly 60 per cent. was earned on the company's then ordinary capital, profits have steadily dwindled and last year all but disappeared. After deduction of debenture interest, the profit and loss account for the year ended March 31st last reveals a debit balance of £8,390, against last year's net profit of £61,447. The carry-forward, which in 1929 was drained away from £66,021 to £3,093 in an effort to maintain dividends at a reasonable level, of necessity remains insignificant, while, despite the fact that £55,000 is taken from dividend equalisation account, the directors are unable to recommend any addition to the first quarterly dividend of 2½ per cent., paid in October last.

The company still carries reserve funds aggregating £650,000, a feature of strength if and when a recovery takes place. At the last annual meeting the chairman informed shareholders that on the average the works had been employed only four days a week, and it seems probable that during the past financial year the falling off in orders, both home and foreign, has continued. Shareholders will look to the chairman, at the forthcoming meeting, for a clear review of the difficulties against which the company is struggling, even if the facts are in some cases unpalatable. They will also learn, doubtless, whether conditions have changed markedly since October, when the 2½ per cent. interim dividend was paid.

Rubber Plantations Investment Trust.—The complete report for 1929 shows that the fall in net profit was due mainly to declining tea and rubber prices. Dividends received were only £15,525 lower at £167,372, but produce from the company's own estates, at £96,040, showed a decline of £43,188. The directors have transferred £50,000 from the dividend equalisation reserve and declared a very liberal dividend of 12½ per cent.:—

	1927.	1928.	1929.
	£	£	£
Net profit	335,852	222,646	170,503
Ordinary — Earned per cent.	14·92	9·89	7·58
Ordinary — Paid per cent.	16·0	15·0	12.5
Ordinary — Dividend	288,000	270,000	222,012
To reserve	50,000	*Dr.50,000*	*Dr.50,000*
To carry forward	*Dr. 2,148*	2,646	*Dr. 1,509*

Of the company's investment holdings of £2,341,822, 53½ per cent. is now represented by rubber shares, as compared with 36 per cent. in 1927. Over the same period the investments have risen from 24½ per cent. to 29 per cent., while British Government securities have fallen from 29 per cent. to 8 per cent. of the total. The directors clearly have every confidence in the ability of the plantation industries to work out their own future salvation, and are prepared to back their faith by purchasing promising securities when prices are low. The chairman, at the meeting on May 8th, will doubtless have much to say on the question whether rubber prices have touched bottom. Shareholders will also be interested to hear what, in his opinion, would be a "permanent" economic price for the commodity, and what the industry proposes to do if the May "tapping holiday" fails to bring about any marked and immediate improvement in quotations. The shares, at 37s. 3d., yield approximately 6¾ per cent.

Fox Film and Gaumont-British.—The re-financing of the Fox Film Corporation is of considerable interest to shareholders of the Gaumont-British Corporation. From particulars in the American Press and the annual report of the British, Foreign and Colonial Corporation (a large shareholder in Gaumont-British), it may be seen how the control of the Gaumont-British can be held by the Fox Film Corporation without violating the articles of association which ostensibly safeguard British ownership. It is understood that of the 5,000,000 ordinary shares of 10s. of Gaumont-British, 3,200,000 are held by the Metropolis and Bradford Syndicate, which in turn are held as to 50 per cent. by Mr William Fox and 50 per cent. by the Ostrer Brothers. Mr William Fox, however, has stated that he paid $19,000,000 for Gaumont-British control. If the price paid for the shares was 24s. 6d.—the price at which the Ostrer Brothers took over the unissued block of shares—this statement may be taken to imply that 2,743,500 shares in Gaumont-British are held on Mr Fox's behalf. Of the remaining shares of Gaumont-British the British, Foreign and Colonial Corporation hold, it is believed, 300,000, while other large holders account for about 100,000, leaving a comparatively small block in the hands of the outside British public. As regards the Fox Film Corporation, the re-financing plan enables all indebtedness to be met. The Fox Theatres Corporation is to exchange 660,900 shares of Loew Inc. stock for 1,600,000 shares of Fox Film "A" stock plus $27,000,000. These 1,600,000 shares of Fox Film "A" stock are to be sold to General Theatres Equipment for $48,000,000, and the General Theatres Equipment is to finance this deal by selling $30,000,000 convertible 6 per cent. notes. This plan is sponsored by the banking firms of Halsey Stuart and Dillon Read. Mr Fox himself has relinquished control to these banking interests, and has perforce to content himself with a salary of $100,000 a year for five years as chairman of an advisory committee.

Swedish Match.—The report of the Swedish Match Company for 1929 is mainly concerned with Russian competition, which has existed for a great number of years, but has only recently assumed its present fierce character. The Swedish Match directors allege that the Russian propaganda is designed not so much to further the sales of Russian matches, as to create a "nuisance value" in the hope of inducing the Swedish Match Company to make a working arrangement and grant a loan. Such a working arrangement the Swedish Match directors regard as neither feasible nor desirable under present conditions. The German market, which, last year, receiver half of the total quantity of matches exported from Russia, is now entirely closed. Under the new German agreement a selling company, which will have the sole right to sell matches, whether imported or manufactured, will be owned as to 50 per cent. by the Swedish Match and as to 50 per cent. by the German manufacturing interests. The business of the International Match Corporation showed satisfactory progress last year and, beginning with the last quarter of 1929, the company was put on a dividend basis of $4 per annum instead of $3.20 as previously. The earnings of the Swedish Match Company showed an increase of nearly 10 per cent. last year and amounted to over 20 per cent. on the Kr. 270,000,000 capital in "A" and "B" shares, as the following table shows:—

Years to Dec. 31.	Earned for Div.	"A" and "B" Shares Earned.	Paid.	Reserve.	Carry Forward.
	Kr.	%	%	Kr.	Kr.
1927	36,481,544	20·2	15	1,000,000	20,183,895*
1928	48,961,568	18·1	15	Nil	28,645,463*
1929	54,242,103	20·1	15	...	37,229,909*

* Subject to interim dividends for following year.

The balance sheet shows a strong liquid position, cash being Kr. 31,521,924, debtors Kr. 76,775,628, and stock of matches Kr. 1,534,895, against sundry creditors Kr. 86,789,610. The foreign investments are shown at Kr. 124,527,215 and bonds Kr. 113,001,012. Holdings in associated companies are given in detail and amount to Kr. 297,582,841. These include 999,190 ordinary shares in International Match and 1,856,250 ordinary shares in British Match Corporation. A final dividend of 10 per cent. is paid, making 15 per cent. for the year, which has been the rate of distribution for the past four years. An interim dividend of 5 per cent. is paid in respect of 1930. The ordinary shares at the present price of 17½ compare with a high level of 23¾ last year and return a yield of £4 17s. per cent.

R. E. Jones's Next Step.—In last week's *Economist* (page 897) we described the differences of view represented on the board of R. E. Jones, the South Wales caterers, and the failure of successive attempts to cut the Gordian knot. At an extraordinary general meeting held on Thursday, April 17th, the shareholders once more debated the question. After close on six hours' discussion the extraordinary resolutions proposed by Mr T. Bickerton and Mr J. Moxon were put to the meeting. The resolution to remove Sir N. Grattan Doyle and Sir T. G. Jones from the board was carried, but on a show of hands the requisite three-fourths majority was not obtained, while Messrs Moxon and Bickerton failed to carry their other resolutions to remove Mr A. Batchelor and Mr A. J. Howell, or to appoint Mr R. A. R. Field, of Slaters and Bodega, Ltd. In each case a poll was demanded, but the results are not available as we go to press, though there would seem to have been some indication that the feeling of the meeting was somewhat more favourable to the present board than on previous occasions. Whatever the outcome, it is to be hoped that the result of the poll will provide a final decision on the subject of future management, and enable the long-overdue reconstruction of the business to be carried out.

General Electric Company (of New York).—The orders received during 1929 by the General Electric Company (of New York) increased by 28 per cent., reaching a record high total of $445,802,519. The net income amounted to $8.97 a share on the 7,211,481 shares of no par common stock outstanding at the end of the year, as compared with $7.15 in 1928. The undistributed equity in subsidiaries' earnings represented an additional $1.74 per share. On the shares outstanding after the recent four-for-one division of the common stock, the earnings were equivalent to $2.4 per share.

KANSALLIS-OSAKE-PANKKI
(National Joint Stock Bank)

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND
Established 1889.

The balance sheet shows a strong working capital position, although current assets, at $255,876,006, were slightly less and current liabilities, at $42,664,322, slightly more than at the end of 1928. In the foreign field, the company extended its interests in France, Germany and Holland. The net book value of its manufacturing plants stands at $49,236,288, against a total expenditure of $313,659,221. Substantial expenditure was incurred last year for consolidating the manufacture of related products on single sites instead of in two or more factories, a considerable improvement in efficiency and reduction in costs being thus effected. Unfilled orders at the end of 1929 totalled $94,623,000, an increase of 30 per cent. The average number of employees was 87,933, with average annual earnings per employee of $1,855.

Western Union Telegraph.—Continued growth in revenues and plant is reflected in the annual report of the Western Union Telegraph Company for the year 1929, but the net income available for dividends showed an increase of only $7,000 over the preceding year. Earnings were $15,474,893, equivalent to $15.11 per share on 1,023,789 shares of capital stock, against $15,467,659 or $15.10 a share on 1,023,781 shares in the previous year.

	1928. $	1929. $
Gross revenues	136,449,512	145,667,195
Net revenue	16,139,256	16,302,299
Other income	2,937,808	2,782,659
Interest charges	3,609,405	3,610,065
Net income	15,467,659	15,474,893
Dividends	8,084,634	8,188,206
Carried forward	7,383,025	7,286,687

Capital expenditures of an unusual character have been incurred in connection with the new building in New York City, for purchase of real estate, ocean cables, printer telegraph apparatus installation, and the acquisition of control of various related companies. The company has spent $33,000,000 for these purposes and contemplates further expenditure of nearly $30,000,000 during the next two years. The president, Mr Newcomb Carlton, definitely predicts lower earnings for 1930. "It is obviously impracticable," he declares, "to reduce expenses proportionately without serious impairment of service. Moreover, a considerable part of the capital outlay made in the past few years is not yet on a full earning basis, but it is expected that these extraordinary capital expenditures will be productive in 1931." The company's current assets, on December 31st last, were $23,070,108, and its current liabilities $22,857,495. The company, however, has subsequently sold $35,000,000 of thirty-year five per cent. bonds. A quotation "ticker" of increased capacity is being installed to handle the heavy trading on the New York Stock Exchange, and will be in operation later this year.

Insurance Share Index.—In common with the shares of industrial companies, insurance shares have shown an appreciable recovery from the low levels reached at the end of last year. This may be attributed not only to the stimulus of cheap money and generally improved market sentiment, but to the reassuring character of the annual reports so far published this year. The table below exhibits the history of an investment in 1913 of £1,000 in ordinary shares of each of 25 leading insurance companies and an index also of the total. Columns have been added to show the values as at December 31, 1928, December 31, 1929, and March 31, 1930. The figures are then ordinary the mean of the highest and lowest prices in each year all except in the case of the last three columns, which are interest, to the middle market price on the dates ended March 3

* Caledonian, 1923.—£25 shares split into £5 shares, 1 new £5 share at 6 premium for each £25 share. † Guardian, 1917.—£10 shares split into 2 £3 shares and 1 £4 preference share each. ‡ Commercial Union, 1927.—New shares of £2 10s. offered proportion of 1 share for each 5 held at £16 per share. § Royal Exchange, 1927.—New shares £1 offered in proportion of 1 share for each £5 stock held at £6 10s. per share. ‖ Caledonian, 1929.—New shares £5—1 new share for every 5 held at £14 per share. ¶ Yorkshire, 1929.—New shares £1 offered 1 new share for every 14 £5 shares held at £12 per share. ** Prudential, 1929.—New shares £1 offered 1 new share for every 4 shares held at £5 per share.

The index as a whole has advanced from 3,139 on December 31, 1929, to 3,337 on March 31st last—an increase of 198 points. Thus exactly half of the total depreciation of 403 points during the year 1929 was regained. The daily index of prices of 30 industrial ordinary shares compiled by the *Financial News* shows that industrials generally recovered only 9 per cent. of their 1929 losses. The comparison is a testimony to the inherent strength and soundness of insurance shares. The recovery has, however, been unequally spread. The shares of two companies, the Gresham Fire and the Life Association of Scotland, have actually depreciated further this year, while the Scottish Life has shown no movement either way. In a few cases, however—the General Accident, Gresham Life, Legal and General, Prudential "A" and Scottish Life—prices are now actually on a higher level than at the beginning of 1929.

Brakpan.—Of the gold-producing subsidiaries of the Anglo-American group, whose annual reports are now to hand, Brakpan claims attention by reason of the recent sharp fluctuations in the price of the shares. Following the publication of a cabled summary of the ore reserves, which showed an appreciable falling off in both quantity and value, the quotation went under 2½. A bout of buying—chiefly for French account—subsequently initiated a recovery to over 3. The demand would appear to have been founded on the improved developments during the first quarter of the current year, when the payable percentage was nearly 37, as against 22 for the December period, and the values represented 526 inch-dwts., compared with 427 for the whole of 1929. This is one of several matters upon which the future largely depends. We contrast the results of the past three years:—

	1927.	1928.	1929.
Ore crushed ..... tons	942,500	1,016,500	1,028,300
Yield per ton	34/–	32/4	33/–
Cost per ton	20/4	19/9	20/2
Profit per ton	13/8	12/7	12/10
Working profit .....£	643,470	639,760	660,530
Net profit	645,890	644,100	670,075
Earned per cent.	*63·3*	*63·2*	*65·8*
Dividends	510,000	497,250	497,250
Rate per cent.	50	48¾	48¾
Carried forward	59,340	59,540	58,290
Ore reserves ..... tons	3,069,620	2,938,050	2,531,440
Value ..... dwts.	7·93	8·21	7·89

The advance in last year's costs is attributable to the increase in the development performed and to heavier outlay in the reduction department. As the position requires a further extension in underground work, a fresh small advance in expenses must be looked for, together

with some decline in average yield owing to the lower grade of the ore reserves. Two significant phrases occur in the report. The consulting engineers intimate that "the information now available with regard to the Western area seems to indicate that payable ore is found in disconnected lenses rather than in the continuous and lengthy shots which are a feature of the Eastern area." The directors state that the increase in the amount set aside for miners' phthisis (the allowance being £17,360, in place of £8,800) is due to "a new basis of calculation"—in other words, to a shorter life expectation.

Springs.—The features presented by the Springs Mines statement are a falling off in the earnings and an improvement in the development position—the precise opposite of those indicated by Brakpan. The setback in profits is attributable mainly to expansion in costs, additional outlay occurring under several headings, including the operation of a new shaft. That in these circumstances the company should have been able to pay a higher rate of dividend than before is due to the smaller requirements for capital outlay and for the Union Government's participation in profits. The latter, of course, is a natural corollary of the lower scale of earnings. Capital outlay for the current year is estimated at £10,000 maximum, or less than one-quarter of the 1929 amount; its result will be seen in better metallurgical practice. Our usual table follows:—

	1927.	1928.	1929.
Ore crushed ..... tons	799,000	830,600	825,600
Yield per ton	38/7	41/4	41/2
Cost per ton	20/5	20/9	22/1
Profit per ton	18/2	20/7	19/–
Working profit .....£	727,600	853,850	785,460
Net profit	736,310	865,220	797,910
Earned per cent.	49·1	57·5	53·1
Dividends	506,250	506,250	543,750
Rate per cent.	33¾	33¾	36¼
Carried forward .....£	59,950	49,220	47,010
Ore reserves ..... tons	3,198,420	3,008,640	3,250,240
Value ..... dwts.	8·58	9·10	9·30

While no reduction is anticipated in working costs, "the yield per ton should be at least maintained; and, with an adequate native labour supply, the profits outlook may be regarded as very satisfactory," observe the consulting engineers. On the basis of last year's dividends the gross yield is slightly under 11 per cent.

West Springs.—Expansion in the tonnage crushed by this company and a reduction in the cost ratio—due to further enlargement of the treatment plant—almost offset a sharp decline in average grade. As in the case of the Springs, the increase in the disbursements to the shareholders is attributable to the smaller special appropriations; moreover, a fresh expansion in the carry-forward is shown. Appended is a comparison of the results of the past three years:—

	1927.	1928.	1929.
Ore crushed ..... tons	587,700	647,300	763,500
Yield per ton	30/11	27/9	24/8
Costs per ton	19/3	19/8	18/2
Profit per ton	11/8	8/1	6/6
Total working profit ...£	343,850	260,600	248,480
Net profit	343,820	261,650	250,560
Earned per cent.	19·2	14·6	14·0
Dividends, amount	179,300	156,890	179,300
Rate per cent	10	8¾	10
Carried forward	39,260	67,190	92,540
Ore reserves ..... tons	2,638,220	2,695,520	2,752,680
Value ..... dwts.	7·23	6·8	6·34

Last year's development results were of a disappointing character. It is true that the ore reserve tonnage is 57,000 tons up despite the decrease of the stoping width by nearly four inches; but then an additional 6,000 ft. of work was performed (total, 33,400 ft.). The payable percentage figures at 22, against 25½, and the inch-dwts. at 484 in place of 497. All things considered, it is expected that the profit total of the current year "should not differ greatly" from that of 1929; but note must be taken of the intimation that the grade of ore in the western section of the property (adjoining the Brakpan) is not as high as in the north-eastern section, which was the first to be opened up. The £1 shares are quoted around 14s. 6d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—La Guaira and Caracas Railway, Army and Navy Co-operative Society and Nestlé and Anglo-Swiss Condensed Milk. At the La Guaira and Caracas Railway meeting the chairman informed the shareholders that the company had been successful in meeting road competition, the number of passengers carried having increased from 130,000 to 140,000 in the past year, though receipts had decreased from £23,000 to £21,500. At the annual meeting of Nestlé and Anglo-Swiss, the chairman referred to the company's scientific research and the recognition accorded to the laboratories, particularly those at Vevey, by professional authorities in Switzerland and elsewhere.

CAPITAL ISSUES.

An unusual conjunction of circumstances is making for uncertainty in the new issue market. While it is clear that conditions continue to favour fixed interest as distinct from variable dividend securities, the Budget has combined with a less favourable immediate outlook in the money market to render conditions slightly less promising for issuing houses. On foreign flotations there is a semi-embargo, pending the issue—probably next month—of the London *tranche* of the Reparations Loan. The latter is not, so far, being viewed with undue enthusiasm in British banking circles. Among the limited number of exceptions to the general ruling are the San Paulo Loan, of approximately £7,500,000, underwritten in London on Thursday, and a Hungarian Government Loan of £4,000,000, which follows on the non-German Reparations settlement agreed upon at the Hague Conference. The only home corporation issue this week was that of *West Ham*, which offered a running yield of £5 1s. 6d. per cent. and a redemption yield of £5 1s. 9d. per cent. The average rate in West Ham for 1929-30 was 17s. 6d. in the £.

† Taken at price of 83½.

East Hull Gas Company.—Issue by tender of £20,920 5½ per cent. redeemable debenture stock, minimum price par. Redeemable at par on July 1, 1955. The net revenue of the company for the year ended December 31 last was £17,252, covering interest on loan capital, including the present issue, 2.7 times. The company was incorporated by Special Act in 1867, and the increase in business during the past 10 years exceeds 73 per cent.

West Ham Corporation.—Issue of £800,000 5 per cent. redeemable stock, 1948-68, at £98½ per cent. The principal will be repaid at par on October 1, 1968, unless previously cancelled by purchase or agreement, the Corporation having the option of redemption at par at any time after October 1, 1948, on giving six months' notice. The rateable value of the Borough of West Ham is £1,381,037, and a rate of one penny is estimated to produce £5,552.

The following particulars are issued "for information only" with a view to Stock Exchange introduction:—

National Mortgage Bank of Greece. Particulars of an issue of £1,000,000 7 per cent. sterling mortgage Series "B" bonds. The Mortgage Bank was incorporated in May, 1927, to take over long-term mortgage business from the National Bank of Greece.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices, summary of balance sheets, and dividend announcements, will be found on page 968 under the heading "Company News."]

COMPANY MEETINGS, &c.

NESTLÉ AND ANGLO-SWISS CONDENSED MILK COMPANY.

VERY SATISFACTORY RESULTS.

POLICY OF EXPANSION.

MR LOUIS DAPPLES'S REVIEW OF THE POSITION.

The sixty-third annual general meeting of Nestlé and Anglo-Swiss Condensed Milk Company was held, on the 16th instant, at Cham, Switzerland.

Mr Louis Dapples, president of the company, who was in the chair, after referring in moving terms to the great loss the company had sustained in the deaths since their last meeting of two members of the board—Dr W. C. Escher and Mr Fred H. Page—reminded shareholders that he had in his speech last year outlined in a very detailed manner the industrial programme and the policy of expansion that the company had in hand. This programme and policy remained the foundation of their activity, and so long as they were able to continue its development with efficiency, energy, and the necessary prudence they had every reason for confidence in their ability to maintain their leading role in the industries with which they were concerned.

In accordance with this fundamental policy the shareholders had agreed upon the amalgamation with P.C.K., which had been carried through in a perfectly normal manner, and the chocolate factories absorbed had benefited in various ways from the assistance rendered by the company's technical services, while the selling organisation had derived further strength from the amalgamation, which had rendered practicable the intensive advertising activity which was called for to meet the formidable efforts now encountered in all directions and exceeding anything that they had previously come across.

NEW INTERESTS ACQUIRED.

Similar considerations had prompted them in acquiring an important interest in the Sarotti Company, and they had also participated in the increase in the capital of the Hollandia Anglo-Dutch Milk and Food Company, the most important of the Dutch milk-producing companies, with whom they were working in a spirit of the most intimate co-operation, and as a result of which they had obtained still greater opportunities in the Dutch milk market, one of the most important sources of supply from the point of view both of cost and quantity; while at the same time they believed that they were in a position to render good service to Hollandia in manufacturing questions.

They had only been able to draw temporary advantage from the general decrease in cost of raw materials (sugar, cocoa, tinplate, and, in certain markets, milk), for such decreases had pretty rapidly provoked a reduction in price of manufactured goods. However, the directors did not regard this state of affairs as being altogether against their interests, as they felt that the very small individual profit margin earned by their products was in reality one of the elements in the consolidation of their business as a whole and was a much more satisfactory feature than the high prices of the war and post-war periods, facilitating as it did the further development of their sales without affecting to any appreciable extent the purchasing power of the public. The intensification and improvement in their production capacity must naturally be accompanied by an extension of their enterprise and activity on the selling side, especially in times of low selling prices like the present, and they were devoting their very particular attention to this most important aspect of their business.

PRESIDENT'S VISIT TO FAR EAST, AUSTRALIA AND NEW ZEALAND.

He (the chairman) had had an opportunity during the year under review of making his long contemplated visit to all the depôts of the company in the Far East, as well as to their good friends in Australia and New Zealand. Shareholders were aware of what important interests they had in Australia and of the problems that had necessarily arisen in the course of the reorganisation of that undertaking from the position that had grown up during the war and post-war period into a co-ordinated and complete organisation. To-day the conversions and eliminations called for by such a reorganisation were generally completed, and their Australian friends now had an organisation which would compare favourably with their own. The highly capable management was in the hands of men in whom they had every confidence and who had lived all their lives under Australian conditions, and they could look forward with no misgivings to the active part that their Australian and New Zealand companies would take in the ultimate economic expansion of this young continent.

Dealing with the company's numerous establishments in the Far East, the chairman remarked that he felt some pride in stating that he did not think any one possessed agents so well qualified, zealous, and capable as the Nestlé and Anglo-Swiss Condensed Milk Company. He had undertaken this long voyage with the desire to obtain a yet more intimate contact and a more close collaboration with all their agents so that the company could be in a position to give the fullest satisfaction to all their requirements and to comply even better and more promptly with the demands of their numerous markets. He hoped sincerely that his visit would have assisted in cementing and improving the excellent understanding that already existed between them.

They must not lose sight of the fact that an enterprise like theirs could no longer be satisfied with the relatively simple organisation of an exporting house. "Service" had become their watchword of to-day, signifying by that that they did not aim at any form of monopoly but that their paramount desire was to be in every way the servants of the public. The time had gone by when, practically alone in the market, it had been sufficient for their purposes to sell their goods through independent agents to good export houses. To-day they had to do everything they could to assist their customers, both wholesale and retail, by a continually more intensive advertising among consumers in all countries and of all races and customs.

RESULTS OF YEAR'S OPERATIONS.

Their annual report had already given a very detailed explanation of the figures shown on their accounts, and there was, therefore, no necessity for him to deal with the balance sheet at length. He would like to point out, however, that the item participations, which the directors recognised occupied too important a place in their balance sheet, was not of a nature to give rise to any feeling of uneasiness provided they continued, as in the past, to pursue their policy of consolidation.

The results for 1929 would doubtless be found very satisfactory by all the shareholders, especially by their friends of the late P.C.K. Company, and it was very gratifying to the directors to be in a position to propose a distribution of 32 francs per share while maintaining on their normal scale, bearing in mind the increase in capital and staff, the allocations to reserves and to provident funds for the benefit of employees. The relatively short time separating these results from the period of crisis in their affairs was evidence of the strength of their organisation, and it was their duty to continue to develop and consolidate this "goodwill" to an ever-increasing degree. To this end it would be absolutely necessary to stabilise—at any rate for some time—the dividend at the rate proposed for this year if, as was to be hoped, the trading results should justify such a course, and to defer any consideration of an increased distribution until such time as the company's means should have been still further strengthened to a considerable extent.

On March 1st of this year they had repaid 25,000,000 francs of their obligations, and they trusted they would be able to continue this sound policy while providing at the same time their commercial and technical services with the necessary resources for the development of their activities in all countries, thus putting them in a position to look forward to the future with confidence even under the difficult circumstances which attend business in general at the moment. The directors would not like to assume responsibility for any other policy.

GOOD WORK OF COMPANY'S LABORATORIES.

They had frequently advised shareholders of their efforts in the purely scientific domain to continue to provide their products with the benefits of the most up-to-date improvements; and the work of the laboratories, particularly at Vevey, had on several occasions received flattering appreciation from professional authorities of Switzerland and abroad. Naturally their bacteriologists and

chemists had to keep in constant contact with medical authorities and especially with the University of Lausanne. It was well known to what an extent the faculty of medicine was dependent on the good progress of well-organised hospital research, and they had regarded it as a duty to assist the Government of the Canton of Vaud in the improvement and completion of the Cantonal hospital by a new building, for which purpose they had made a donation of 1,000,000 francs.

TRIBUTE TO MANAGEMENT AND STAFF.

After reviewing briefly the period of reorganisation and consolidation during the past eight years while he had been directing the affairs of the company, the Chairman paid a tribute to the very valuable assistance he had received from the management of the company and the younger elements of its various services, and stated that he felt that the time had come when he could relinquish his duties at the head of the general management of the company and devote himself to the less executive and more consultative functions of director and president. In those capacities it would give him great pleasure to continue, in accordance with the wish of the board, to give his services to the company to the best of his ability, but from now on it would be for the younger members of the general management to assume the responsibility for the business of the company, and he would like to mention that, during his long absence, they had proved brilliantly that they were quite capable of carrying out this task.

To ensure the closest possible collaboration between the general management and the board of directors they proposed the election of Mr Edouard Muller to replace the late Mr Fred H. Page on the board and to appoint this gentleman managing director: *Mr Muller*, who had passed the whole of his business career in the services of the company, had fully merited the honour thus conferred upon him by his indefatigable industry, his complete knowledge of the company's business, his clear-sighted initiative and the absolute confidence of his colleagues and collaborators which he enjoyed.

In conclusion, the Chairman referred in appreciative terms to the zeal and devotion of the staff and placed on record the company's sincere thanks for their past efforts and encouragement for the future.

The resolutions contained in the notice convening the meeting were duly passed.

DISCOVERY.

¶ Over 400 years ago, Balboa crossed the Isthmus of Panama from the Atlantic Coast and discovered the Pacific Ocean.

¶ To-day, the Isthmus is traversed by the Canal, while other vital arteries of modern commerce are provided elsewhere by the great railway systems which link the two Oceans.

¶ The great and growing trading development of the New World is also largely dependent upon complete international banking facilities, and these are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST, LONDON, EC2

ARMY AND NAVY CO-OPERATIVE SOCIETY, LIMITED.

INCREASED PROFIT IN A DIFFICULT YEAR.

The annual general meeting of the Army and Navy Co-operative Society, Ltd., was held, on the 23rd instant, at Caxton Hall, Westminster, London.

The Rt. Hon. Lord Ebury, D.S.O., M.C. (the chairman), said that when he addressed the shareholders on the last occasion he expressed some doubts as to the outlook for trade in 1929-1930. At that date a general election was in view, and there had been the risk of a period of uncertainty and instability involved in the result. They had only to reflect upon the present position to realise how well-founded had been the doubts then expressed. The crisis on the New York Stock Exchange and the Hatry failure in this country had been further detrimental factors. All those adverse influences had made themselves very definitely manifest, and, but for a very welcome advance in Christmas trade and an improvement in their Indian business, he would have been in the position of presenting trading results less satisfactory than for the previous year.

There were some very encouraging features none the less, and one of the most marked had been a big increase in the number of orders, albeit the increase in turnover had been disproportionate, and on the one hand, of course, reflected what, after all, in these times was only to be expected—the inability of the individual to sustain the burden of expenditure, but, on the other, was very gratifying evidence that they were increasing their service to their customers and an eloquent illustration of that which he had emphasised in previous speeches, namely, that the more hampered the conditions under which the purchaser exercised his vocation, the more satisfaction and relief would he obtain from his or her dealings with their society. And here he felt impelled to interject that the proclamation of a competitive house after the Budget only served to emphasise the advantages and economies to be obtained by purchasing at their stores. Not only were prices with them down on last year, but he was again in a position to inform them that on the average their competitor's prices were 10 per cent. higher than theirs.

YEAR'S RESULTS.

The net result was a profit for the year of £245,067, or £1,547 more than for 1928-29. They proposed to pay a final dividend of 1s. 10½d. per share, making 2s. 6d., or 25 per cent., for the sixth year in succession.

With regard to the Indian business, the steps taken had proved to a large extent effective. The timely visit of Sir Frederick Gascoigne and Mr Wastie, the society's chief accountant, had done much to consolidate the improved state of affairs, and the work of the latter had been invaluable in cementing such improvements already introduced under the heading of System and Counting House control and instituting others which were urgently needed. As a consequence he (the chairman) had found a greatly improved position and a much better atmosphere. He could only hope that in the interval which would elapse between now and the next time they met there would be such an improvement in the outlook in India as would give an impetus to trade and produce a still more tangible result to their efforts.

SERIOUS POSITION AT HOME.

With regard to the position at home, if he took a serious and none too optimistic view of the situation in this country, he did not want them for one moment to come to the conclusion that he was a confirmed pessimist. Their business had been steadily increasing since 1923, and he had just the same supreme confidence in the business and in the people who worked in it to overcome the difficulties of the future as had been the case in overcoming the difficulties of the past. He regarded the position so seriously as to conceive it his duty, not only to the shareholders of the society, but to those persons and their dependents who derived their livelihood from it, to take stock of the general situation somewhat closely.

The first objectives in the programme of modernisation of the business had comprised the reconstruction of the Victoria Street block. The next in urgency had been the reorganisation and improvement of staff accommodation. All that had been done, but the remainder of the programme was equally vital to the consolidation of their position, embracing, as it did, the reconstruction of the Francis Street premises. The programme was perforce more than less entirely suspended. It was a fact that the present situation was such as to render the outlay of large capital sums entirely unjustified. Neither the shareholders of the society nor those who worked for it should be deluded into thinking that that could be attributed to international causes beyond the control of the Government. It was not particular to their business; it was going on throughout the country, and would continue to do so to an increasing extent with disastrous results. The latest Budget, with its increased expenditure and consequent increase in taxation, was a setback which was having, and would have, a directly detrimental effect on trade generally.

The report was unanimously adopted.

LA GUAIRA AND CARACAS RAILWAY COMPANY, LIMITED.

SUCCESS OF ELECTRIFICATION.

The forty-eighth ordinary general meeting of the La Guaira and Caracas Railway Company, Ltd., was held, on the 23rd instant, at Moorgate Hall, London, E.C.

Mr J. A. Goudge, C.B.E. (the chairman), said he ventured to think that the report was a satisfactory one, as it enabled the directors to continue the payment of a dividend of 6 per cent. net for the year. Some four years ago, when the Government of Venezuela commenced to construct a first-class concrete road alongside the railway from one end to the other, the company was faced with the prospect of very severe competition. They had, however, adopted the bold course of putting all their money into the electrification of the line, and they were profoundly thankful they had done so. They were quite holding their own—and perhaps a little more—in the competition for traffic. They had now had two years of intense competition, and the report showed how that competition had affected them. The number of passengers carried had increased from 130,000 in 1928 to 140,000 in the past year, but the receipts had decreased from £23,000 to £21,500. Those figures told their own tale—that they had met the competition and had succeeded in attracting passengers from the cart road. They hoped to attract still more passengers to the line, and improvements were being made, not only in the train services, but also in the passenger accommodation. As regarded goods traffic, they carried 2,400 tons more, but took slightly less for it. There, again, the rates had been reduced. They had run 18 per cent. more train miles and 1,600 more trains for £4,000 less expenditure.

The directors believed they had got goods rates down to an economic level at which it was very difficult indeed for the lorry owner to compete. The statement of traffic for the last 10 years showed that the receipts, expenses, and profits had remained at almost the same figure, but they had carried 123,000 tons last year, as against 92,000 tons in 1920, and during the same period the number of passengers carried had increased from 92,000 to 140,000. They were, therefore, rendering very much greater service for the same money than they did 10 years ago. They had sent out one new electric locomotive and 11 new wagons, and they hoped to be able to send more when required. In order to provide funds for the payment of this rolling stock, and for other purposes, they had made an issue of Five-Year Notes, which they were advised was the best way to deal with the present situation.

As to the prospects, there was every reason to believe that with settled conditions in Venezuela the company would pursue their even course during the current year as they had done during the year under review.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

	Total	3,268,462		Total	5,000

Net arrivals, £3,263,462.

Messrs Samuel Montagu and Company write on April 23, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £159,822,774 on the 16th instant (as compared with £159,829,239 on the previous Wednesday), an increase of £13,862,690 since the 1st January last. About £708,000 of gold from South Africa was offered in the open market to-day. At the fixed price of 84s. 11½d. per fine ounce £500,000 was taken for Switzerland and £100,000 for France; £43,000 was absorbed by the usual Indian and trade requirements, leaving a small balance still to be disposed of. Receipts of gold by the Bank of England totalled £3,068,403, which included £3,050,000 in sovereigns from Australia, and withdrawals £5,000, a net influx of £3,063,403 during the week under review.

SILVER.

Owing to the Easter holidays the week under review has been restricted to three working days. Although prices have shown little movement a steady tone has been maintained, the limited offerings being absorbed by the Indian Bazaars for prompt shipment and to cover bear sales. Neither China nor America has been active, but Continental sales have continued on a small scale. There are no indications of any important change.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 14th instant to mid-day on the 19th instant :—

Imports.	£	Exports.	£
Mexico.....	71,243	British India.....	27,556
France	37,517	Other countries	6,608
Irish Free State	39,147
