The Economist

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CX.

BEING FROM JANUARY TO JUNE, 1930, INCLUSIVE.

LONDON:
PUBLISHED AT THE ECONOMIST OFFICE,
6 BOUVERIE STREET, FLEET STREET, LONDON, E.C.4.

MCMXXX.

INDEX TO THE ECONOMIST

THE MONEY MARKET.

CONTRARY to anticipations, the turn of the year passed more easily than usual, and while rates on Tuesday, December 31st, ran up to 5 and 6 per cent., only a small amount had to be borrowed from the Bank on the final day of the year. Preparatory borrowing during the last week of the year, and heavy discountings of short bills at the

Bank were reflected in an increase of discounts and advances by £33.3 million during the last three weeks of the year, but the total sum of £42,171,000 outstanding on January 1st under this heading was £5½ million less than that for January 2nd last year, when the market had also had a day longer in which to get out of the Bank. It is also reported that this year the latest comers to the Bank only had to borrow for eight days at the most, which again shows that the pressure was less severe than usual.

* * * *

There are several possible explanations of this relaxation at the last minute. Anticipations rife immediately before Christmas that the end-of-the-year squeeze would be unusually severe led the market to discount an unusual number of short bills at the Bank, and, as events showed, these preparations were rather carried to excess. Again it is known that the banks and the market missed last week's issue of Treasury bills which mainly went to a special quarter. The banks, too, showed a certain readiness to buy bills immediately before the end of the year, and even to lend money into January, and this further eased the position.

* * * *

Apart from Tuesday, money has been almost unlendable, but as the Bank is gradually repaid, rates are expected to harden. Meanwhile there has been a sharp fall in discount rates from 4 11/16 per cent. for three months' bank bills immediately before Christmas to 4 5/16 per cent. this week. This fall is partly due to the banks' failure to secure any of last week's Treasury Bills, which is forcing them to replenish their portfolios in the market; but the Continental banks are now having to buy bills heavily in order to replace maturities.

* * *

The franc exchange has remained on either side of the lower gold point, and the shipment of gold made to Paris on Christmas Eve was followed by further shipments amounting to nearly a million of gold during the last week of the old year. It is thought that the Banque de France's decision to make short loans against approved bills has not so far borne much fruit, simply because of the lack of bills drawn on Paris. Drawers apparently are showing some reluctance to make use of Paris, and it will clearly take time for Paris to develop as a bill market. This means that the Paris market may remain inelastic for a time, and that French banks may have to continue to draw upon their foreign balances.

	Dec. 12, 1929.	Dec. 19, 1929.	Dec. 24, 1929.	Jan. 2, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5	5	5	5	5½ (Dec. 12, '29)
Banks' Deposit Rate	3	3	3	3	3½ (Dec. 12, '29)
Discount { Call	3	3	3	3	3½ (Dec. 12, '29)
Discount { Notice	3¼	3¼	3¼	3¼	3¾ (Dec. 12, '29)
Market rate (3 months' bills)	4 11/16–¾	4 13/16	4 11/16–¾	4 5/16	...

Against the French withdrawals, the Bank gained nearly £500,000 in sovereigns from Buenos Aires, and also secured £516,000 of Tuesday's new gold, so that the Bank's gold stocks are unchanged on balance. Nearly ten millions of notes returned from circulation during the last week of the year, so that the reserve, too, is practically ten millions higher. So far, the Proportion has not responded, as market borrowings have expended the Bank's liabilities, but once the Bank is repaid it should show a much stronger position.

NEW YORK.

Our New York correspondent cables:—This week's Federal Reserve statements are complicated by the conclusion of the holidays and by year-end settlements. The first influence is reflected in a substantial drop in the circulation and in an increase of reserves; the second in an increase of $96 million in brokers' loans. There is also a large drop in discounts, which are some $500 million below their level of a year ago. The reserve ratio is up 2.0 per cent. on the week at 69.6 per cent., and up 7.7 per cent. on the year. Doubt is being expressed as to whether easy money can be expected in view of the rapid loss of gold, but on the whole the view prevails that the System is strong enough to avoid tight conditions.

THE STOCK MARKETS.

The customary psychological features associated with the New Year combined with the firmer tone of America to give a better tone to the stock markets. Gilt-edged securities were firm on the outlook for still cheaper money and the reinvestment of money disbursed in dividends, but events at Lahore proved a bear point for India Loans. The year's home railway traffic figures were, on the whole, favourably regarded. Among industrial shares "internationals" were better, while brewery, tobacco and textile shares made an improved showing. Paris buying produced unexpected activity in Kaffirs, while that country's favourite oil, copper and other stocks also benefited. Silver-producing company shares, however, were depressed by the low price reached by the metal.

THE COMMODITY MARKETS.

Owing to the holidays, it is impossible to make any effective estimate of the position this week. The export market for coal remains firm, but home demand is not lively for the time of year. In some branches of the steel trade makers appear fairly confident of the outlook, but the iron market is by no means satisfactory. A certain New Year optimism is expressed in the cotton trade, but it is difficult to discern on what it is founded. The prospects of the wool trade remain uncertain. A temporary quietness in the hide and leather trades is not regarded as symptomatic of this year's prospects. Vegetable oils and oilseeds remain a slack market. Wheat is firm.

THE FOREIGN EXCHANGES.

A fair volume of business was witnessed in the foreign exchange market in respect of end-of-the-year requirements, and rates were in many cases inclined to be irregular as a result of the reaction after these special needs had been met. Sterling on New York declined from 4.88¼ to 4.87 31/32, and Montreal improved from 4.94½ to 4.93¾. Paris lost five points at 123.90, and Brussels weakened with the reduction of the Bank rate from 34.86¼ to 34.88. Milan was four points better at 93.21. Madrid was again erratic, and went from 35.80 to 36.40, after touching 36.80. Amsterdam lost ⅛ at 12.09¾, Berlin depreciated from 20.37¾ to 20.43½, as also did Switzerland, moving with the turn of the year from 25.09⅜ to 25.13¼. The Scandinavian currencies all moved in our favour, Stockholm from 18.10¼ to 18.13⅜, Oslo from 18.19½ to 18.20½, and Copenhagen from 18.19 to 18.20⅜. Of the South American exchanges, Rio and Buenos Aires were irregular, the former losing 1/32d. on balance at 5 13/32d., while the latter gained 1/16d. at 45 15/16d. after 46⅜d. Montevideo gained ¼d. at 46¼d. The premiums for 90 days Lima on London declined by ⅛ per cent. to 20 per cent. In the Far East, the rupee was firm at 1s. 5 61/64d., and the yen gained 1/16d. at 2s. 0 5/32d. Batavia lost ¼ at 12.13¼. In the forward market New York was more sought at 9/32 cent and ¾ cent premium. Paris was quoted at par and 3 centimes premium, as against 2 centimes discount and par. Madrid was more offered at lower premiums of 8 and 24 centimos. Amsterdam was rather weaker at lower quotations of ⅛ and ¼ cent premium. Berlin was decidedly firmer at reduced discounts of 1¾ and 4½ pfennigs. The silver market established two new low records, spot falling at one time to 21 5/16d. and forward to 21⅜d., the previous lowest spot price recorded being 21 9/16d. in 1902. In the end spot was 5/16d. lower at 21¼d. and forward ⅜d. lower at the same figure. Steady selling by China and the absence of support were the cause. The China silver exchanges declined in sympathy, Hongkong losing ½d. at 1s. 8⅜d. and Shanghai also ½d. at 2s. 1⅜d.

ECONOMIST INTELLIGENCE BRANCH.

We have pleasure in announcing that our Intelligence Branch has recently been amalgamated with Moody's Investors Service, Ltd., the British counterpart of the well-known and old-established American investment service. A new company has been formed under the title of Investment Statistics, Limited. Requests from our readers for economic, statistical or other information will in future be handled by the new company, which will have at its disposal the records both of the Economist Intelligence Branch and of Moody's Investors Service, Ltd.

THE CHOICE BEFORE INDIA.

We shall all do well to wait a little before making up our minds as to the meaning of this week's events in India. Almost every chapter of our Imperial history is a warning of the danger of underrating a demand for political liberty by a large body of opinion. It is true that, in comparison with the hundreds of millions of India's population, the numbers for whom the Nationalist Congress speaks are a mere handful. But the mass is passive, and of the active element in India the Congress represents no inconsiderable part; and, so long as its programme is vague and indefinite, it is able to make a strong appeal to the common denominator of Indian psychology, namely, the consciousness of a difference between Indian and European.

This does not mean that we need take matters too tragically or imagine that we are faced with a situation comparable with that of America a hundred and fifty years ago, or of Ireland in our own time. The story of the Lahore Congress, with its theatrical demonstrations, its confused procedure and its cross-currents of opinion, is sufficient to dispel any such idea. A year ago the older leaders in the Nationalist movement endeavoured to persuade the Congress to adopt the form of constitution set out in the Nehru Report. The influence of the younger school, however, proved too strong, and, after prolonged debate and negotiation, the Congress adopted a resolution that, unless a Dominion constitution were granted by the end of December, 1929, the party would adopt the policy of "independence." There was never any possibility that the Statutory Commission could report in time to enable Parliament to pass any constitution, whether satisfactory to the Nationalists or not, in the time allotted. But Mr Gandhi at various times intimated that the time-table need not be adhered to rigidly if it were clear that steps were being taken to move towards the goal. A renewed assurance that Great Britain is genuinely seeking a solution in accordance with the pledge of 1917 was, indeed, given at the end of October in the form of the offer of a Joint Conference as soon as the Statutory Commission's report is ready. But, whether because of the strength of the opposition, or because he genuinely despairs of getting adequate results from the Joint Conference, or because he feels himself literally bound by the decision of a year ago, or because he thinks that he may thereby drive Great Britain further and more rapidly along the road to Dominion status, Mr Gandhi has taken the lead in advising the Congress to refuse the Viceroy's offer and to declare for independence.

The Lahore resolution lays down, firstly, that the policy of the Congress is henceforth to complete independence of India; secondly, that members of the Party are to resign from the various legislatures, which are hereafter to be boycotted; and, thirdly, that the Working Committee is to draw up a plan of civil disobedience to be enforced as and when they think fit. The story of the Congress, however, shows that this very important and far-reaching programme has been launched by anything but a united or well-organised body. On the one hand, the opposition to the Gandhi resolution in the Committee proved unexpectedly strong, while, on the other hand, the extremist section, represented by the President, Pandit Jawaharlal Nehru, who, in his presidential address, declared his belief that the Congress must adopt a programme of social revolution and declare war against the Indian Princes, landlords and Indian capitalists of all kinds, proved themselves little amenable to discipline. The doctrine of violence was openly preached during the debate, and Mr Gandhi, who only succeeded by a narrow margin in obtaining the passage of a resolution congratulating the Viceroy on his recent escape from assassination, was defeated in a proposal to make the committees of Congress more workman-like bodies. Finally, when the Congress had risen, after declaring that free India would repudiate all debts imposed upon it by a foreign administration unless on investigation an independent tribunal declared them to be fair and just and undertaken in the interests of India, a split occurred in the Congress Committee on the question whether the Working Committee should include minority members who were not fully in sympathy with the Congress programme. On this point certain members walked out, and have decided to form a Congress Democratic Party within the Congress.

What will happen from all this remains to be seen. The call to boycott the legislatures is not popular. It is said that Mr Patel, President of the Legislative Assembly at Delhi, has already decided that he does not feel that he is called upon to resign, and the temptation to members of Congress all over India to remain will be strong. Indeed, the moderate members of Congress have appealed to members of the Legislative bodies not to take action until a meeting to consider the position has met in Delhi on January 18th. Presumably some attempt will be made by the Committee to organise civil disobedience and non-payment of taxes during 1930; but even in this matter there is doubt as to the application of the resolution, one view being that action should only commence if the Government takes any repressive steps. Nor can anyone confidently foresee what the results would be were the programme of non-co-operation put into effect. Non-co-operation under Mr Gandhi's leadership has been tried before, and it is not to be wondered at if his supporters have lost a little of their belief in its efficacy. Indeed, speakers at the Congress openly derided the vacillating policy of first walking in and then walking out of the Legislatures.

But the incident which perhaps reveals most clearly the weakness of the Congress situation was the negotiations which took place between the Congress and the Sikhs who marched to Lahore. These stout warriors came to demand a larger representation in the Government of the Punjab than they have been granted by the Nehru Report. They were told that as the Congress had abandoned the Dominion solution the Nehru Report is now dead, that all the bitter feelings that have been aroused by the alleged inadequate safeguards for this or that community in the Nehru Report can now be forgotten, and that everybody may rely on Mr Gandhi's assurance that in the new India no communal solution would be made which did not satisfy the Sikhs and other minorities. In other words, the one serious attempt by the India communities themselves to solve the great problem of minority rights is abandoned, and everyone can now, ostrich-like, bury their heads in the sand and happily pretend that the problem does not exist.

Thus, the proceedings of the Congress present a picture of vociferous agitation and irresponsible enthusiasm in abundance; but certainly not one of a united national will or a constructive practical policy.

In the meantime the Liberal Federation has been meeting at Madras, and, under the leadership of Sir Tej Bahadur Sapru and Mr Srinivasa Sastri, has welcomed the Viceroy's announcement as confirming the view that Dominion status for India was intended by the declaration of 1917, as recognising definitely that British India and the Indian States should together form a Greater United India and as conceding India's claim to confer on a footing of equality with the British Cabinet on the form and the future constitution of India. An appeal has been issued by the Federation stating that the only rallying cry that can unite "Hindus, Mohamedans, Christians, Sikhs, Parsis and Europeans, the propertied classes and the labouring and depressed classes, can be Dominion status for India, not as a distant goal or ideal, but as an object capable of achievement within the shortest possible limit of time." They add that there should be no difficulty in making provision against both internal and external trouble during the necessary transition period. They deplore that any section of the people should raise the cry of independence and involve the future of India in turmoil and confusion.

How will India divide as between these two points of view? The *Times of India*, putting a good face on the situation, welcomes the fact that the absence of the Nationalist leaders will mean that the Joint Conference will be a serious and businesslike affair instead of degenerating into a futile disputation with men who are tied by previous commitments. There is no doubt that the action of the Liberals will provide a rallying point for many elements in the active life of India and will, moreover, have the sympathy of many in the Nationalist Party who will secretly, if not openly, associate themselves with these efforts.

At the same time, India, like more advanced countries, may easily become the prey to phrases. We have spoken of the great mass of the India people as politically passive; the only man who can stir these deep waters, not by political conceptions, but by the power of his personality and his appeal to the soul of India, is Mr Gandhi. It matters little what the issue may be, the villager is on the side of the holy man. The Viceroy evidently cherished the hope that his great influence might be used to help India in her peaceful progress along the road of political self-realisation. Mr Gandhi's refusal to play this *rôle* may make the task much harder and longer; but, as a compensation, it may well be that his presence among the irreconcilables may save India from the more serious disturbances that might have been her fate if the opposition had been left in other hands.

In any case the end remains the same. The promise of 1917 was made by a country grateful for the assistance of India during the war and convinced that political freedom is the only tolerable condition for nations. It is a thought still far from the mind of the British nation that it is possible for a free country such as ours to continue to hold in political subjection, indefinitely and against its will, a vast country such as India. On the other hand, no party in this country would contemplate the abandonment of our responsibilities towards India or leave her to chaos and confusion. For us there is only one policy, and that is to pursue the course marked out. We regret that Mr Gandhi and his associates will not co-operate; but we must continue with those who will.

THE NATIONAL ACCOUNTS.

THE revenue return to December 31, 1929, covering the first nine months of the State's financial year, confirms the doubts which we expressed when Mr Churchill opened his fifth Budget last April. Though it is hazardous to frame positive conclusions from the figures of these three quarters, since influx of revenue is always heaviest in the three months to come, the results up to date suggest strongly that in certain directions at least the late Chancellor's anticipations were unduly optimistic as regards both income and outgoings.

Excluding the self-balancing Post Office and Road Fund accounts, which show an increase of £1,534,243, there is a net decrease of £18,086,287 in revenue, as compared with receipts in the corresponding period of 1928-29, while ordinary expenditure, i.e., apart from allocations to the New (1928) Sinking Fund and the self-balancing accounts, is £17,717,449 higher, the current deficit being £133,434,294, against £97,630,558 a year ago. Excluding again the self-balancing items, Mr Churchill budgeted for a net decrease of £12,044,000 in revenue. Non-tax revenue, in whose case a decrease of £14,766,000 was anticipated (receipts in 1928-29 having been swollen by the non-recurring windfall of over £13 million from the Currency Notes Reserve), shows a decrease to date of £7,855,000. Since, however, the progress of receipts under this head is notoriously erratic, the nine months' figures give little indication what the final results for the whole year will be, and greater interest attaches to the course of revenue from taxation. Here the Budget forecasted a net increase of £2,722,000, but up to December 31st there has been a decrease of £10,231,000, a discrepancy which might well give Mr Snowden pause.

Examination in greater detail of the main heads of tax revenue discloses several features of interest. In the following table we show receipts for the first nine months of the current and previous financial years, together with actual receipts in 1928-29 and Mr Churchill's estimate (after allowing for the effect of tax-remissions enacted) for 1929-30:—

(000's omitted.)

	Whole Year's Receipts.			Nine Months' Receipts		
	Actual 1928-29.	Estd. 1929-30.	Inc.(+) or Dec.(−)	to 31st Dec. 1928.	to 31st Dec. 1929.	Inc.(+) or Dec.(−)
	£	£	£	£	£	£
Customs	118,972	119,850	+ 878	90,404	90,787	+ 383
Excise	134,000	130,330	− 3,670	103,735	98,400	− 5,335
Estate Duties	80,570	81,000	+ 430	60,360	58,700	− 1,660
Stamps	30,060	31,000	+ 940	20,460	17,280	− 3,180
Income Tax	237,620	239,500	+ 1,880	75,413	75,340	− 73
Super Tax	56,150	58,000	+ 1,850	15,140	15,120	− 20
Total Tax Revenue (including other items)	664,138	666,860	+ 2,722	367,819	357,588	− 10,231

When the three quarterly returns for the current financial year are contrasted it will be found that Customs, after greatly exceeding expectations in the first quarter, lost a little ground between June 30th and September 30th, and suffered a severe setback in the quarter now concluded. Receipts under this head, which were estimated by Mr Churchill to show an increase of £7,028,000 (less £6,150,000 remitted on tea) appear unlikely, unless the forthcoming quarter is much more prolific than the last, to realise the Budget anticipation, while Excise seems to be well on the way to a much larger decrease than was forecast. The cause of the decline in these two items is necessarily a matter for speculation, but the drop in revenue from Estate Duties, after the spurt recorded in the first quarter, will occasion little surprise, since Mr Churchill's continuous reliance on the beneficence of death in wealthy homes was clearly an attitude of "flukey" optimism, while the heavy decline in Stamp receipts—reflecting Stock Exchange depression—is a lurid commentary on the recklessness with which the late Chancellor budgeted for an increase of £940,000 from a source of revenue which the boom of 1928 had unexpectedly and precariously swollen by £2 million over the previous Budget estimate. How far probable losses under these four headings can be made good in the final quarter by Income and Super Tax remains to be seen. Here influx of revenue is normally heaviest in the second and fourth quarters of the financial year, and the loss at December 31st of an increase recorded at September 30th—which itself probably reflected acceleration under duress of payments of the second instalments of last year's assessments—may partly be recovered by the end of March if the screw is applied with sufficiently pitiless vigour. To expect, however, that a decrease of £10 million in tax revenue will be converted by March 31st into an increase of nearly £3 million calls for considerable optimism.

Unhappily, when we turn to the other side of the account, consolation is not to be found in decreased expenditure. Consolidated Fund services show so far an increase of £2.2 million, interest, etc., on the Debt being up by nearly £2 million, whereas Mr Churchill cheerfully anticipated a reduction of £7 million on the whole year. Compared with this discrepancy, the Supply expenditure is progressing more closely in accord with the Budget estimate; but the Army, Navy and Air Force votes show an increase up to date of over £2½ million, for which no provision was made, while the Civil and Revenue votes, for which an increase of £14.9 million (the net effect of the De-rating Act) was forecast, have already realised nearly £13 million of the anticipated expansion.

Under these circumstances Mr Snowden will be lucky if he succeeds in covering for 1929-30 the statutory sinking funds, to say nothing of the £50.4 million which Mr Churchill optimistically estimated as the aggregate which would be available for debt redemption, and we are unable to endorse the view of our distinguished contemporary, the *Times*, that the insufficiency of revenue for this purpose should be regarded as a factor "fortunately" qualified by the ability of receipts, at any rate, to meet fresh expenditure. If we entertain, as we do, serious doubts as to the present Government's grasp of the principles of sound national finance, it is because the past Session has led all thoughtful observers of politics to note that, despite the palpable difficulty which will confront the Chancellor of the Exchequer next April in providing out of a barely maintained revenue adequate

provision for the essential task of debt redemption, fresh financial commitments—many of a non-productive nature—are being entered into on a scale which involves the risk of a seriously increased deficit for 1930-31. In reply to a question in the House of Commons on Christmas Eve, Mr Snowden, on whose Parliamentary duel with Mr Churchill we comment in a later column, stated that in the next financial year the estimated additional expenditure from the Exchequer under last year's Pensions Act and Unemployment Insurance Acts would be £19.3 million, in addition to £1.7 million under miscellaneous heads and such liabilities as Mr J. H. Thomas may incur under his various schemes for providing work. Unless the balance can be restored by unexpectedly drastic reductions in armaments expenditure, the outlook for the tax-payer is manifestly unpropitious. The psychological effect of a heavy increase in direct taxation would be extremely unfortunate, and there are signs already that fears of unpalatable developments next April are having a restrictive influence on business. In short, we should welcome reassurance that the Government will have the courage, now that a fair proportion of their costly pledges have been redeemed, to refrain from cutting an ampler coat until they have definitely saved some cloth.

MONEY IN 1929.

THE salient facts of what have proved to be the most eventful twelve months in post-war monetary history can be set down very shortly. The year witnessed no less than five changes in the Bank of England's rate. It saw the Bank lose £23.0 million of its gold during the first nine months, and recover during the final quarter about £16 million of its losses. On the Continent it witnessed the steady repatriation of French foreign balances, a movement which was the cause of heavy French gold imports, first from London and then from New York, while last, and most important of all, it saw the Wall Street boom rise to its culminating point in early September only to end a few weeks later in a sudden and catastrophic collapse.

It was the course of events on Wall Street that gave the key-note to the monetary history of the year. January opened with the Wall Street boom making what was then regarded as "normal progress." Call rate stood at about 7 per cent., and brokers' loans at $5,559 million. In London, January was a quiet month, and hopes were even entertained that the gold drain to America, which had cost the Bank nearly twenty millions of gold during the last half of 1928, had finally been checked. Money was comparatively easy as the Treasury was at that time redeeming in advance some imminent debt maturities, and on the whole the market was taking a calmer view of the situation than subsequent events warranted.

In February came a sudden change. The gold efflux to America began again, and in the first week of the month the Bank lost £3,000,000. With Call rate still at 7 per cent., and the prospect of the drain continuing, the Bank took immediate action, and raised its rate from 4½ to 5½ per cent. Thus the frontier between cheap and dear money was definitely crossed. There followed several weeks of extreme anxiety. During March, New York Call rate averaged nearly 10 per cent., and the dollar exchange was barely above the export gold point. The London market was living under the shadow of a further increase in Bank rate, and market rate rose to within ⅛ per cent. of Bank rate. Revenue collection, as usual, added to the stringency, and the whole position was one of great discomfort.

April proved an easier month. For one thing, the Bank was beginning to gain gold, while the increases in the Dutch Bank rate (from 4½ to 5½ per cent. on March 23rd), and in the German Bank rate (from 6½ to 7½ per cent. on April 25th), came as valuable reinforcements to the Bank of England in its stand against the absorption of short money by Wall Street. Moreover, in the early spring the American banks themselves were placing obstacles in the way of foreign short money seeking employment in the New York call market. May, too, was on the whole a quiet month. Trade was waiting on the result of the General Election, and so money was in fairly ample supply, with the three-months' discount rate down to 5½ per cent. The Bank continued to add to its gold stocks, and between February 7th—the date of the rise in its rate to 5½ per cent.—and June 12th it increased its gold from £149.9 to £164.2 millions. The end of the month, however, brought this period of comparative peace to an end. The first sign of warning was the decline of the dollar and mark exchanges to the export gold point, and in the middle of June a renewed outflow of gold began. During the last three weeks of June, £8,500,000 of gold were lost, and the Bank's stocks were reduced from £164.2 to £155.7 million. Nor was this the end of the trouble. By the middle of July the gold demands of New York and Berlin had been satisfied, but a new demand for gold sprang up, this time from Paris. This French demand lasted for the rest of the year; it proved in no respect amenable to discount rates; and, in short, it was the most serious drain of all.

The cause of the French demand for gold may be summarised very briefly. Before the stabilisation of the franc, French banks and other interests had accumulated large balances, mainly in London and New York. In 1928, some of these were repatriated, this accounting in part for New York's gold losses during that year. Early in 1929, the repatriation movement was off-set by exchange purchases on French Government account in preparation for the repayment of the American commercial debt in August. The conclusion of the debt agreement in July, with the funding of the commercial debt, removed this counterweight, and henceforward the repatria-

tion movement operated on the exchanges without a check. The cause of this movement was simply that the French banks were short of francs. Lack of fluidity in the Paris money market means that Treasury balances—augmented last year by heavy tax collections—are taken out of the market and lost to the banks and to the country as a whole; and in order to fill the void, and to meet the normal demands of traders and tourists, the banks had to draw on their foreign balances. There is no need to attach any political significance to this repatriation movement, and no ground for connecting it with the August Conference at the Hague.

The French drain of gold placed the Bank of England and the money market in a very difficult position. The Wall Street boom continued, and with call money at 8 per cent. and brokers' loans up to $6,217,000,000 no relief could be expected from New York. Indeed, when on August 7th the New York rediscount rate was raised from 5 to 6 per cent., a renewal of the gold efflux to America seemed a probability. In any event it had become clear that a 6½ per cent. Bank rate was inevitable, and the only question that remained was how soon it would come. It must be conceded that in August and September the Bank's decision each week was a difficult one. There was grave reason for fearing that a 6½ per cent. rate would kill all chances of an autumn trade revival, while the 5½ per cent. rate had already given Stock Exchange prices a downward turn and arrested new capital issues. A 6½ per cent. rate would also increase the cost of the floating debt, and in July Mr Snowden had taken the rather unusual step for a Chancellor of publicly expressing the hope that an increase in Bank rate could be avoided. Finally, there was no guarantee that a 6½ per cent. rate would check the outflow of gold to France. On the other hand, gold was still going, and by the end of August the Bank's reserves were under £140 million. Also, the uncertainty as to when the rate was going to be raised was a grave source of disturbance to the money market and even to the country. In the market, discount rates were raised right up to Bank rate, and the week's quota of new Treasury bills was only placed with increasing difficulty. In the country, the uncertainty during September definitely affected trade.

Rightly or wrongly, the Bank decided to delay raising its rate as long as possible, and when the New York rediscount rate was raised in August, the Bank immediately let it be known that no increase in its own rate was imminent. Bank rate was finally raised to 6½ per cent. on September 26th. By that time the Stock Exchange was in the throes of the Hatry crisis, and while there was no connection between this disaster and the increase in Bank rate, their coincidence was unfortunate. In any case, now that it is possible to look backwards, it is conceivable that if Bank rate had been raised in early August, it would have saved the country some weeks of suspense.

The 6½ per cent. rate took effect very quickly. It was accepted as a signal that London was prepared to go to any length to put an end to the indefinite absorption of short money by New York. With brokers' loans up to $6,761,000,000 at the end of September, including $3,860,000,000 from "others," and with stock prices establishing similar high records, Wall Street was in a state of very unstable equilibrium; and the reaction on New York of the Hatry crash, the withdrawals of short money which the 6½ per cent. Bank rate in London immediately stimulated, and finally a Massachusetts decision affecting public utility shares proved sufficient to send it tottering to its fall. In a few weeks, during late October and early November, Wall Street prices and brokers' loans were cut approximately in half, and this set free all the short money, American as well as foreign, that had been dammed up in the New York call market. The effect on London was instantaneous. Sterling bills, both commercial and Treasuries, found themselves in keen demand, and during October alone the return of short money to Europe drove the dollar exchange up from $4.85 to $4.88, or nearly across the whole of the range separating the two gold points.

The Bank was quick to respond to the altered situation. The sole purpose of the 6½ per cent. rate was to draw money back to London. Once the world showed itself ready to buy sterling bills at lower rates the justification for the higher Bank rate had gone, and, recognising that fact, the Bank made two reductions in its rate, to 6 per cent. on October 31st and to 5½ per cent. on November 21st. In one sense these reductions represented a bold step, as even by the last of these two dates the Bank had only regained £2.5 million of its gold losses. The Bank, however, rightly recognised that so long as money was flowing to London gold could be relied upon to follow.

The final reduction in Bank rate to 5 per cent. on December 12th was due to a different cause. Partly owing to the fact that the November depreciation in the dollar made gold shipments from New York to Paris profitable, and partly owing to the initiation of reforms in the Paris market designed to promote greater freedom, the Paris rate rose above the export gold point. The Bank seized upon this as the occasion to reduce its rate, especially as during December gold was at last arriving in substantial quantities. In addition to shipments from Australia and Buenos Aires and new gold from South Africa, the dollar exchange rose to the point at which several millions could profitably be brought from New York—an amazing reversal of the position obtaining only three months before. Thus, though the franc again relapsed and Paris took some gold from London during the last week of the year, the reduction to 5 per cent. was fully justified.

The issue of the new Conversion Loan at the beginning of November inevitably drew a large quantity of money off the market, while the pre-Christmas expansion in the note circulation also added to the stringency. The result was that although bills were in keen demand, and discount rates on the low side, money was usually difficult during the last two months of the year, and once or twice the market found itself in the Bank. During the last fortnight of December preparations for the end of the year were in full swing, and as usual money was abnormally easy. It remains to be seen how plentiful money will turn out to be when normal conditions prevail once more, but the approach of the revenue collection period does not suggest that any great ease is to be expected.

In the tables below we give daily average money rates for the past six years:—

BANK RATE.

Whole year	2 12 5	3 9 3	4 1 1	3 15 0	3 12 6	4 12 3

The normal deposit rate paid by bankers was £2 below Bank rate for the whole of this period.

For 1929 the margin between Bank rate and market rate was 4s. 8d. per cent.; between market rate and the rate for short loans 13s. 1d. per cent.; and between the last rate and deposit rate £1 2s. 3d. per cent. The Bank's open-market policy continued to be that of neutralising changes in its reserve by appropriate purchases and sales of Government securities. This kept the supply of credit constant, but the unusually narrow margin between Bank rate and market rate measures both the strain imposed on the market by passing events and the efforts rightly made to keep the market in hand. The margin between market rate and that on short loans is relatively big. From that standpoint brokers had a good year.

The final table shows changes in Bank rates in foreign centres:—

As many foreign central banks follow the Bank of Enlgand's lead, it was inevitable that a year in which London Bank rate was changed five times should also have witnessed an abnormal number of changes abroad. The table clearly shows how the peak of dear money was reached at the end of last September, and also reveals the extent of the downward movement that has since taken place.

RECONSTRUCTION IN RUSSIA.—IV.: REVOLUTION BY TRACTOR.

(BY A CORRESPONDENT.)

CO-OPERATIVE farming grew out of propaganda started by the Government with a view to securing more and better crops. "The Khlebocentre," the Department which deals with the collection of grain, and the "Semenovod," the Department responsible for improving, grading and selecting seed grain, had for some time been endeavouring to establish contractual relations with the peasants with this object in view. As an inducement they offered to provide them (preferably whole villages) with selected seeds, agronomist aid, and implements including tractors, if they agreed to sell to the Government, at a fixed price, all their surplus grain. They also recommended, if they did not stipulate, that holdings should be pooled for purposes of rational cultivation. A monetary advance on the contracted grain was also provided by the scheme.

These methods, which go under the name of "Contractation," were responsible for the formation of thousands of "Grain Associations," most of which, in course of time, developed into *Colhos* proper. These grain associations, as well as *Colhos* formed in 1927, embraced usually only fifteen or twenty holdings and, therefore, were too small to be mechanised—their motive power remaining the horse. The attempt to introduce tractors and complicated agricultural machines into these farms was disappointing. It became increasingly clear that before tractors could be employed on a collective farm it must multiply its acreage many times and absorb dozens of villages. This difficulty, although not unsurmountable, seemed hardly likely to be overcome in the near future, when suddenly an experiment made on the Shevtchenke State Farm near Odessa, demonstrated that the manager, A. Markevich, had grappled successfully with the problem.

Before giving an account of this experiment, it may be as well to explain that all this time the Government was not only trying to organise the *Colhos*, but to establish large scale estates of its own. These big Government farms—the *Sovhos* (Soviet estates) are a remarkable episode in Soviet Russia's attempt to rationalise agriculture. The State Farms of to-day have nothing in common with those established immediately after the Revolution. The present *Sovhos* is a big mechanised estate run on commercial lines similar to those on which big estates are conducted in the U.S.A. and other capitalist countries. They are run for profits, in this case for an independent supply of grain, and they employ hired labour. In addition to their main object of supplying the Government with grain, the *Sovhos* are also experimental farms where new methods and new machines are tested and the cultivation of selected grain is undertaken on a large scale. Another mission of the State Farms is to disseminate ideas of modern agricultural methods among the peasants.

The Shevtchenke Farm is one of those State Farms—furnished, like most of them, with an abundant supply of tractors and agricultural implements. In the spring of 1928, Markevich, finding that the 100 tractors at his disposal were only in incomplete use, proposed to the neighbouring villagers that they should hire some of them to till their land if they agreed to pool their holdings and pay 25 per cent. of the harvest to the farm. In the first year only nine whole villages out of 26 which received his invitation and some holders in six others accepted Markevich's offer; their joint area under cultivation was over nine thousand hectares. In the autumn of the same year 16 whole villages and holders in ten others, with a joint area of 24,000 hectares, entered into the scheme.

The success of Markevich's experiment consisted in his discovery that tractor energy applied to large scale agriculture can be supplied from a central station just as easily as electricity. This simple discovery, and its implications when properly understood, were hailed with the greatest enthusiasm by the Bolsheviks, who believed that the high road to Socialist agriculture had at last been found, and, indeed, it is more than probable that Markevich may take his place in the history of Socialism by the side of the "Rochdale Pioneers."

With their customary vigour and quickness of grasp, the Bolsheviks have since concentrated all their energies in organising tractor stations and mobile tractor "columns," and have planted them in all suitable areas. These energetic measures have been so successful that in the spring and summer of 1929 the number of *Colhos* has doubled, the holdings which they embrace have increased fivefold and the area under cultivation sevenfold. There are at present nearly one hundred tractor stations active all over the country.

The *Colhos* movement has so far established itself mainly in grain-bearing districts. And naturally so, because mechanisation can more easily be applied to "extensive" cultivation and has, moreover, a more immediate effect. Persistent efforts, however, are now being made to extend the principles of collective farming to cattle-breeding, dairy and poultry and the growing of sugar-beet, flax and cotton.

The simplest and loosest organisations for collective farming are the "Grain Associations," which impose on their members the sole obligation of co-operating in all the necessary operations of sowing, reaping and threshing, each member eventually receiving his proportion of the produce. These loose combinations generally come into being at harvest time when they borrow from the co-operative societies threshing, sifting and other simple machines and so are initiated into the advantages of collective farming. Many such grain societies cease, of course, to exist after harvest time; but most of them

develop into *Colhos* proper. During harvest time of the present year over 20,000 such grain societies are said to have sprung up.

The *Colhos* proper can be divided into three categories: "Societies for Joint Tilling of the Soil," *Artels*, and Communes. The last two kinds belong rather to the earlier years of the Revolution and constitute at present less than one-third of all collective farms. The difference between these three kinds of *Colhos* is concerned first with the extent to which the property of its members is pooled. In the "joint tillage societies" the holdings, implements and draught cattle only are pooled; the rest—houses, pigs, cows and poultry—remain private property. In the *Artels* all domestic animals are pooled—as is also labour, industrial as well as agricultural—but members retain and live in their houses. In the Communes members live in communal houses and pool everything they possess. The second difference has regard to the manner in which members in each group get their share of the produce. Roughly speaking, members of the joint societies receive in accordance with what they contribute in the way of holdings, cattle, implements and labour; members of an *Artel* receive in accordance mainly with the labour which they put in; while members of the Commune benefit more or less in accordance with their needs.

Obviously there are other differences as well, differences of social life, for instance. Life in a *Colhos* of the looser kind is on the whole similar to life in any other village; though it must not be forgotten that work done in common is likely to lead, and actually does lead, to certain innovations. In a commune life is radically different from what it is in an ordinary village; the common kitchen and dining-room, on the one hand, and the common nursery, on the other, inevitably put their stamp upon it.

The organisation of the *Colhos* is similar to that of a co-operative society. It is run by a board elected by members. Each member of the board represents about twenty holders, and is the intermediary between the board and members, especially for the transmission of orders respecting labour. The organisation of labour in a *Colhos* is a very delicate and important business; for all the members are equal in their status, while the tasks to be performed vary in many ways. The first principle of organisation is, therefore, strict discipline; every member has to perform the task assigned to him. No hired labour must be employed by any member, except by widows and by soldiers on active service. Every member is expected to do a share of the work proportioned to what is required for the cultivation of his holding in the *Colhos*. For all work beyond that, repair or building of a communal character, members receive a wage.

The working capital of a *Colhos* is made up of entrance fees and yearly subscriptions. In 1928 the average capital of a *Colhos* was about 781 roubles in Russia and 348 roubles in the Ukraine. This share capital, as well as all pooled property, is called "The Divisible Fund." It is in collective use, but remains in individual possession. That is to say, members leaving the *Colhos* are entitled to get back their share holding, cattle, implements and money. But there is also "The Indivisible Fund," which represents the socialist accumulation of a *Colhos*, and is earmarked for one purpose only—the development of collective agriculture. This fund is not considerable yet, but efforts are now being made to increase it. Regular contributions to it come from various sources. In some cases part of the profits is invested in this way. In others it represents part of the exemption from taxation which the *Colhos* usually get from the Government. But the chief source is the capital value of flour mills, butter and cheese factories erected in the territory of a *Colhos* and handed over to it by the State or the co-operative movement. Tractors and machines sold to a *Colhos* on a three and five years' credit basis are also entered as part of "The Indivisible Fund."

The division of income in the *Colhos* is by no means uniform. In some cases, mostly in small *Colhos*, the division between the members is strictly equal. In larger *Colhos*, however, it is proportioned to the holding of each member. In some others again it is based, not on holding, but on the labour which the holder has contributed. But the principle of division, such as it is, applies equally to the monetary part and the part received in kind. After the harvest has been gathered, and the grain threshed, the marketable surplus is handed over to the Government at fixed prices. The rest of the grain is divided into two portions: seed grain, which is stored under the supervision of the board, and victualling grain, which is distributed among the individual holders. Thus the *Colhos* combines the principles of both socialist and capitalist accumulation.

The success of the *Colhos* movement has aroused great expectations, both as a short cut to Socialism and as a means of increasing the sources of marketable grain in the country. The latest reports show that over 7 million hectares of *Colhos* land were ploughed this autumn; and it is calculated that over one and a half million tons of grain will come from this source next year. It is expected that nearly as much will be supplied by the State Farms, which will mean that next year the State will have nearly one-third of its requirements furnished by the "Socialist sector" of agriculture.

Even so, individualist agriculture remains and will remain for some years the predominant form of Russian cultivation, and the general prosperity of the country will depend on raising the productivity of this sector. Such an increase presents no unsurmountable difficulties; for the main difficulty, the resistance of the peasants to agricultural reform, is rapidly being overcome. The technical revolution which Russian agriculture calls for is nearly at its door. But even without a technical revolution, the introduction of simple and practical reform would be sufficient to raise Russian agriculture to a considerably higher level. The abolition of wooden ploughs, of which there are still over five million in the country; the replacement of unsifted and ungraded seeds by selected seeds suitable to the particular areas; the preservation of a two months' interval between ploughing and sowing; the introduction of even the most elementary sowing machines—the application of these and similar remedies would soon increase the land's productivity by anything from 20 to 40 per cent. The task which the Soviet Government has set itself, however, is more arduous than this. It is nothing less than the doubling of agricultural production by the end of 1938. The immediate object is to increase production at least 35 per cent. in the period covered by the "Piatiletka." Whether or not this hope be realised, the Russian agrarian revolution is still gathering impetus, and the experiments which are now being made in the one million Russian villages constitute one of the most important events in modern economic history.

THE YEAR'S PRICE CHANGES.

DURING the past month the decline in the wholesale price level, which had continued without interruption since the end of July, was arrested, our index number for the end of December, at 88.3, showing no change as compared with the figure for the end of November. Fluctuations in the indices of each of the five groups, compared with a month ago, a year ago, and two years ago, are summarised below:—

	Increase (+) or Decrease (−) per cent. compared with		
	Month ago.	Year ago.	Two years ago.
Cereals and meat	+ 1·9	− 5·4	− 5·2
Other foods	− 0·5	− 7·3	− 14·9
Textiles	− 1·2	− 18·8	− 19·4
Minerals	—	− 1·8	− 1·8
Miscellaneous	− 0·7	− 2·4	− 12·1

It will be seen that last month a rise of nearly 2 per cent. in the index figure for cereals and meat balanced declines which occurred in textiles, and, to a minor extent, in the "other foodstuffs" and "miscellaneous" groups. The chief movements during December in the first-named group were advances in the price of imported wheat, flour, English beef, and both English and New Zealand mutton.

Among "other foods" the price of butter registered a further decline, but coconut oil was slightly dearer. In the textile group cotton prices weakened further, and both wool tops, silk and flax were cheaper. Among metals changes were few, somewhat lower prices in the case of tin and copper being offset by an advance in the value of lead. In the miscellaneous group sulphate of ammonia declined in price.

Our next table shows the course of our index number throughout the past year, together with the annual geometric averages for each year since 1924:—

1927 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	114·2	106·7	136·8	119·4	105·6	115·7
,, 1925	114·1	101·0	124·0	111·8	108·7	112·0

,, Dec., ,, ...	92·3	83·6	82·6	92·4	89·2	88·3
Average, 1929	96·9	85·8	92·2	95·6	90·5	92·4

A fall in the average level of wholesale prices amounting to approximately 4 per cent. in 1927 and 2 per cent. in 1928 has been followed by a decline—comparing annual means in each case—of nearly 6 per cent. last year. The only exception to the downward movement is furnished by the minerals section, in which higher prices for coal, iron and steel during the first nine months raised the average for the year. When the figures for the end of last month are contrasted with those for December 31, 1928, a fall of approximately 7 per cent. is disclosed in the complete index, cereals and meat having declined by 5.4 per cent., "other foods" by 7.3 per cent., and textiles by about 19 per cent., while the minerals and miscellaneous groups are also slightly down on balance.

To illustrate further the course of prices during the year we summarise in the next table the actual price-quotations of a number of typical commodities at the end of each of the past four quarters, adding, for purposes of comparison, the prices ruling at the end of each of the past three years:—

	End 1926.	End 1927.	End 1928.	1929. End March.	1929. End June.	1929. End Sept.	1929. End Dec.
Wheat, Canadian, per qr.	57/6	58/-	49/3	50/3	48/3	54/9	55/6
Potatoes, per ton	£6/10/0	£6	£6	£6/5/0	£3	£4/10/0	£3/15/-
Beef, English sides, per 8 lb.	4/10	4/8	5/4	5/4	6/-	5/1	5/8
Mutton, New Zealand, per 8 lb.	4/3	4/9	5/-	5/-	4/8	4/7	4/10
Tea, Indian auction average, per lb.	1/3¾	1/6⅜	1/5½	1/5½	1/3	1/3⅜	1/1½
Sugar, granulated, per cwt.	34/1½	29/9½	24/7½	23/6	23/5½	24/2	22/9
Cotton, American Middling, per lb.	6·90d.	11·06d.	10·59d.	10·96d.	10·30d.	10·14d.	9·42d.
Cotton yarn, 32's twist, per lb.	12·37d.	15·25d.	15·50d.	16·00d.	15·00d.	15·00d.	13·87d.
Wool, Australian, per lb.	45d.	46d.	44d.	41d.	41d.	32d.	33d.
Jute, per ton	£31/5/0	£31/15/0	£32/5/0	£33/10/0	£30/5/0	£29/17/6	£27/15/-
Pig iron, Cleveland No. 3, per ton	87/6	65/-	66/-	67/-	72/6	72/6	72/6
Coal, best Welsh, per ton	29/3	19/1½	19/4½	21/6	20/0	20/0	20/1½
Tin, Standard, per ton	£300/7/6	£265/2/6	£225/15/0	£220/10/0	£201/10/0	£203/2/6	£178/2/6
Petrol, No. 1, per gallon	15·50d.	11·50d.	15·25d.	17·50d.	17·50d.	17·50d.	17·50d.
Linseed oil, per ton	£31/5/0	£28	£29	£29	£30/10/0	£44	£45
Rubber, plant, sheet, per lb.	19·12d.	20d.	8·69d.	11·00d.	10·62d.	9·75d.	8 06d.
Cement, Portland, per ton	60/9	54/-	47/-	47/-	47/-	47/-	47/-

In comparison with a year ago the prices of Canadian wheat, pig iron, petrol and linseed oil are appreciably higher, whereas there have been heavy falls in the case of potatoes, tea, cotton, wool, jute and tin. Other price changes during the past twelve months, not shown in the foregoing table, are substantial declines in the case of Argentine beef, flax, copper, spelter, hides, leather and creosote.

When the past year's trend of prices as a whole is reviewed, it will be noted that, between the end of December, 1928, and the end of April, 1929, the position was one of comparative stability, a declining tendency on the part of textile prices and those of "other foodstuffs" being counterbalanced by a slightly higher figure during February and March in the case of cereals and meat. From April onwards, with the exception of the "miscellaneous" group and apart from a temporary upward fluctuation during July in the case of "cereals and meat" (the cause being a speculative upward movement of grain prices), the decline was of a general character, reflecting in some part, it may be suggested, the influence of dear money. The fall was headed by the textile group, which sagged steadily from the end of March until the close of the year. Between July and November grain prices also slumped heavily, the collapse of the speculative boom in Wall Street being a contributory factor in the decline; and the same influence was responsible for a sharp reaction in the prices of non-ferrous metals, which produced a fall in the index figure for the mineral section between September and November, notwithstanding the firmness of coal and iron quotations.

In the next table we give the figures of our index number converted to a percentage of the average level of the last pre-war year:—

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1925	168·4	204·2	194·6	139·8	126·2	160·9
,, 1926	151·7	195·3	152·6	149·8	120·7	149·4
,, 1927	147·6	202·2	157·0	125·1	116·1	143·7
,, 1928	152·9	189·7	165·0	115·2	111·2	140·9
End June, 1928	166·4	187·3	172·3	114·2	111·3	144·5
,, Dec., 1928	144·0	182·4	159·6	117·7	106·1	136·5
,, June, 1929	140·3	170·1	145·5	120·4	103·6	131·7
,, Dec., 1929	136·2	169·1	129·6	115·6	103·5	126·9
Average, 1929	143·0	173·5	144·7	119·6	105·0	132·8

It will be seen that a great disparity continues to exist between the indices of the "other foods" and "miscellaneous" groups and the complete index number, the miscellaneous group being affected largely by the alteration since 1913 in the value of rubber. On the other hand, the index of textile prices is now considerably nearer the general average than was the case a year ago.

In the concluding table is shown the course of our index number calculated with 1924 as the base year:—

1924 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1926	90·0	90·6	71·1	100·3	98·4	89·9
,, 1927	87·5	93·8	73·1	83·7	94·7	86·4
,, 1928	90·7	87·9	76·8	77·1	90·7	84·8
End March, 1929	88·4	81·9	73·7	83·5	86·5	83·1
,, June, 1929	83·3	78·8	67·8	80·6	84·6	79·2
,, Sept., 1929	83·9	81·2	64·1	80·6	86·7	79·3
,, Dec., 1929	80·8	78·4	60·4	77·3	84·5	76·3
Average, 1929	84·8	80·5	67·4	80·0	85·7	79·9

Since 1924, it will be observed, by far the largest decline has been registered by the textile group, with a fall of 32.6 per cent. Judged by comparison with the movement of prices during the 50 years which preceded the war, the decline of over 20 per cent. in the average price level, disclosed by the foregoing table as having taken place during the past five years, must be regarded as a development of major significance. From the point of view of producers, signs of greater stability in the long-period trend of prices would be welcome.

THE CANADIAN FUR TRADE.

(BY A CORRESPONDENT.)

THE place that the fur trade held in the early history of what is now the Dominion of Canada is a familiar commonplace to all students of history. It was the great economic buttress of the French colony which first planted civilisation in the northern half of North America; indeed, it was fur that first took the French to Canada in hopes of supplying the urgent demands of the *habitués* of the French court. Basque and Breton fishermen, who had gone on fishing expeditions to the coasts of North America, began trading in furs, and eventually, in 1599, certain French adventurers established the post of Tadoussac as a base of operations for trading with the Indians of the Saguenay region. Later the fur traders penetrated further inland, and Quebec and Montreal were founded as trading posts.

Originally the French Government conferred monopolies of the fur trade upon a special company with the condition attached that it should bring to Canada a certain number of settlers, but agricultural settlement and the fur trade have never been good bedfellows, and, as the shores of the St. Lawrence became settled, the French fur traders ventured further afield into the interior. It was about 1632 that English adventurers began to take an interest in Canada, and thirty years later the first English fur trading ships arrived in the Hudson Bay at the instigation of two French *coureurs de bois*, Radisson and Groseilliers, who had quarrelled with the authorities of New France. The charter of the "Adventurers of England trading into Hudson Bay," now familiarly known as the Hudson Bay Company, was obtained in 1670. After the Seven Years War the fur trade definitely passed out of the hands of the French, and the Hudson Bay Company became the dominating factor in it. But it was faced with formidable competition from one great rival, the Northwest Company, and from various independent traders, and the history of the Canadian Northwest is full of the feuds and bickerings which were a concomitant of the fur trade. Eventually, in 1821, the Hudson Bay Company absorbed the Northwest Company and secured legal recognition of a monopoly of the fur trade. Its rights of exclusive fur trading, however, expired in 1859, and since that time competition has prevailed.

In recent years the fur trade has experienced great changes. For one thing, the railway has pushed settlement into the Northern hinterland and made communications with the fur-bearing areas infinitely more simple. Now the railway has been reinforced by the aeroplane, and the radio has helped to mitigate the loneliness of many trappers' lives. On the other hand, the projection of agricultural settlements and of lumbering and mining operations into the wilderness has driven fur-bearing animals farther and farther afield, and the decline in the numbers of some of the most important kinds of fur-bearers in districts where they were once common has caused the institution of close seasons. A system of auction sales has been established, and rising prices have led to new methods of treatment and to the utilisation of furs once rejected. The beaver, which once held premier place in the fur trade, is still important, but muskrat and silver fox have now outstripped it with higher annual values.

But one of the most noteworthy changes has been the development of a domesticated fur industry; for this purpose the silver fox, which is mostly black, has proved the most suitable, but other kinds of fur-bearers—mink, racoon, skunk, marten, fisher, muskrat and beaver—are now being raised with increasing success. The successful breeding of the fox on fur farms was first started in the time of rising prices about 1890, when the introduction of woven wire fencing facilitated its development. Its chief scene was the little province of Prince Edward Island, and before the war it began to enjoy there a remarkable boom which brought fortunes to a number of fur farmers. Prince Edward Island is still the main seat of the fox industry, but to-day there are fox farms in every province of Ontario. There have also been established in the prairie provinces karakul sheep farms, from which astrakhan and broadtail are secured, and the muskrat industry, which requires swampy territory, has been growing steadily. Some of these muskrat farms carry enormous stocks, and the Russian Government has recently placed an order with one of them for no less than 10,000 live muskrats, which are to be shipped in January. Experiments in the breeding of rabbits for their fur have resulted in the evolution of some valuable types, of which the best is a rabbit whose fur is closely akin to that of the Bolivian chinchilla which, under the name of "the Chinchilla rabbit," has attained importance in the fur trade.

The latest figures for raw fur production of Canada are for the season 1927-28, when it had a total estimated value of $18,758,177, as compared with $18,864,126 and $15,072,244 in the two preceding years. These totals represent the value both of ranch-bred animals and of animals taken by trappers, and the value of the former constituted roughly 11 per cent. of the total as compared with 6 per cent. and 5 per cent. in the two preceding seasons respectively. Comparison of the numbers of the seven principal kinds of furs in 1927-28 with 1919-20, the first season for which accurate returns were available, shows that in the nine-year period, whereas muskrat and beaver pelts declined in number by 17 per cent. and 65 per cent. respectively, silver fox pelts increased by 532 per cent., white fox pelts by 89 per cent., and red fox pelts by 77 per cent. The highest priced fur in 1927-28 was silver fox, with an average of $101 per pelt; cross or patch fox was second with $70; fisher third with $57; white fox fourth with $45, and lynx fifth with $41.

A century ago furs formed easily the most important item in Canada's export trade, and, although they are now far surpassed by other commodities, they are still of considerable importance. In 1667 Canada's exports of furs to France and the West Indies were valued at 550,000 francs, and in some years before the French regime terminated they attained a value of more than a million francs per annum. Records during the early years of British rule are somewhat unsatisfactory, but in 1850, the first year for which the trade tables of the Canadian Customs Department are available, the value of raw furs exported was placed at $93,872. Thereafter there has been a steady record of gain, subject to occasional setbacks through unfavourable trapping seasons, and in the twelve months ending June 30, 1928, their value was placed at $23,598,259.

During the war the London fur market lost its position of dominance to the United States, and in the year 1919, out of $13,300,000 worth of furs, only $3,700,000 went to England. The United States still takes the largest share of Canada's fur exports, but Britain has gone a long way to regain her old position as an outlet for Canada's fur exports and in 1927-28 took $10,000,000 worth as compared with $13,000,000 worth sent to the United States. After the war Montreal began to develop an international fur market, and a system of auction sales has been established. Fur auction sales are now also held in Winnipeg and Edmonton, but they are of lesser consequence. In connection with the fur trade, there has also developed in Canada an important industry in the dressing and drying of furs, and in 1928 eleven plants were devoted to it. They treated altogether 6,844,309 skins, which was 50 per cent. more than the number treated in 1925, and the prospects are that shipments of raw furs will henceforth steadily decline because a growing proportion of them will be treated at home.

The importance of the fur industry as an economic factor is fully recognised by the Government, and it has received special attention in Government policy through the organisation in 1916 of the Advisory Board on Wild Life Protection, whose purpose is the co-ordination of the various departments and branches of the Federal Government in matters relating to the conservation of the wild life resources of the Dominion. The Board investigates and studies all problems relating to the protection and better utilisation of fur-bearing animals as well as big game and bird life, and it has authority to impose regulations governing the capture of fur-bearers. Every two years the Department of the Interior holds a conference of the Provincial and Federal game protection officials, and every effort is made to conserve the wild life resources of the Dominion.

Notes of the Week.

The Honours List.—The lop-sided appearance presented by the House of Lords under a Labour Government gave a not unnatural currency to rumours that Mr MacDonald would avail himself of the opportunity presented by the New Year to strengthen his position in the Upper House. These prophecies have not been fulfilled, and the Prime Minister has shown marked restraint in elevating to the ranks of the peerage only two of his supporters, Major Leigh Aman and Mr Arthur Ponsonby. He has, however, honoured also a distinguished worker for the cause he has most at heart; Sir Willoughby Dickinson receives a peerage "for public services and for services in the cause of peace." Shipping and the oil industry gain two new peers in the persons of Sir Wm. Noble and Sir Charles Wakefield. The barony conferred upon the retiring Chief of the Air Staff will be generally approved, to judge by the reception accorded a few years ago to Sir Hugh Trenchard as a guest of honour at the Oxford Encaenia. Sir William Middlebrook, who receives a baronetcy, is an active local administrator, and was a popular Lord Mayor of Leeds. The ex-Vice-Chancellor of London University also becomes a baronet and educational services are further recognised by the conferring of knighthoods upon two professors, of music and education respectively, and upon the Secretary of the Welsh department of the Board of Education. The arts are further honoured in the persons of a past Master of the Art Workers' Guild and trustee of the Wallace Collection, and of the Chairman of the Governors of the Shakespeare National Memorial Theatre. The various public and social services receive similar recognition, and the rounding off of a discreet but adequately representative list, which includes a K.C.M.G. for Mr Leith-Ross for services in connection with Reparations, is completed by the bestowal of a knighthood upon the Secretary of the Football Association.

Mr Snowden and Mr Churchill.—Christmas Eve in the House of Commons was enlivened by a vivid exchange of personalities between Mr Snowden and Mr Churchill. This pre-Budget skirmish, crowded as it was with acrid chastisement and seasonable bouquets, elicited two important statements on financial policy. The Chancellor of the Exchequer elaborated his earlier announcement with regard to protective and semi-protective duties. He denied that he had foreshadowed the abolition in the next Budget of the McKenna, the silk and the sugar duties; what he had said was that these duties would be removed as soon as was practicable, whenever that might prove to be, and that the safeguarding duties would be allowed to lapse as soon as their term under the Act expired. Any uncertainty was involved not by his policy but by that of his predecessors in imposing the duties; tariff disturbances could, indeed, only be avoided by abolishing tariffs. In short, what Mr Snowden's pronouncements demand of the trades directly concerned is that while still protected they should organise themselves as if they had shortly to stand upon their own feet. But the debate was chiefly notable for an astonishing passage in Mr Churchill's speech, in which he denounced the Chancellor for not taking the opportunity presented at the Hague by his acceptance of less than our claim under the Balfour Note to withdraw from the self-denying obligations of the Note. This is an amazing statement, especially when it is remembered that in the last Parliament Mr Snowden himself declared that if the Balfour Note were challenged in any future settlement (it was thought at the time that he was thinking of a possible failure of the French Chamber to ratify the Caillaux-Churchill debt agreement) he would not hesitate to escape from the onerous aspect of the Note, and that on that occasion Mr Churchill was the most thunderous in his denunciation of a pronouncement which undermined British financial credit and sapped confidence in our international good faith. The effect of the Young Plan and Mr Snowden's stand at the Hague was not to render any less obnoxious a repudiation of an international declaration so long accepted, but to bring explicitly within the scope of the Balfour Note the arrears of our war debt payments. If Russia were to pay a dividend on her war debt, or if the United States were to ameliorate the terms of our debt settlement, it would not in honesty be open to a British statesman to refuse to apply our standing policy of accepting only debt cover from war debt and Reparations combined; it would be open to him to withhold remissions to our creditors until the full amount of the arrears had been covered.

The Hague Conference.—The British delegation has left for the Hague to attend the resumed Reparations Conference. Once again it will be headed by Mr Snowden, the Chancellor of the Exchequer, and Mr William Graham, President of the Board of Trade. The Chancellor will be assisted by his Parliamentary Private Secretary, Mr J. H. Hudson, M.P., while his technical experts will be headed by Mr F. W. Leith-Ross, of the Treasury, who received a knighthood in the New Year Honours List. The French delegation will be an extremely strong one; four Ministers, M. Tardieu, M. Briand, M. Chéron and M. Loucheur, will be accompanied by the Governor (M. Moreau) and MM. Moret and Quesnay, of the Bank of France, as well as by a host of official experts. The Italian delegation will be headed by Signor Mosconi, Signor Pirelli, and Signor Suvich. The omission of Dr. Schacht from the German delegation is very significant; after his recent protest against the reparation "concessions" allowed by the Reich Government he could scarcely accept a position which might imply in the public mind his endorsement of the decisions to be reached at the resumed Hague Conference. Without him, the delegation is weaker in bargaining power, but stronger in homogeneity and popular responsibility. Dr. Schacht will be prepared to assist with his advice on matters affecting the Bank for International Settlements, in which institution he expects to co-operate. The German delegation will be headed by Herr Curtius, who succeeded Dr. Stresemann at the Ministry of Foreign Affairs, supported by Herr Moldenhauer, the Finance Minister, Herr Schmidt, Minister for Economic Affairs, Herr Wirth, Minister for the Occupied Territory, Dr. Bocke, a director of the Reichsbank, Dr. Melchior, Herr von Schubert, and other experts. One of the most controversial tasks of the Conference will be the non-German Reparations settlement. The main outstanding difficulty in the latter is the refusal of Hungary to accept the connection of Reparations with other claims arising out of the Peace Treaties, involving an extension of her reparation schedule for the benefit of the "optants." Bulgaria is reported to have acquiesced in the 12,500,000 gold franc schedule, and the objections raised by Roumania to her participation in the pool of debits and credits are not expected to prove insurmountable before the Conference opens. Naturally every party involved in the settlement is anxious to press for better terms until the last possible moment. Meanwhile the Governments of the Reich and of the United States have concluded a separate agreement for the payment of Reparations, but no announcement has been made regarding the crucial question of priority. The refusal of the United States to participate in an inclusive reparation settlement is part of a general policy which has also involved her failure to share officially in the constitution of the International Bank. In view of this attitude, the criticism of M. Georges Bonnet in the French Chamber, which gave the Government a vote of confidence in its policy towards the Bank, after being warned by M. Bonnet that the Bank would be used by the United States as a medium of financial domination, seems quite out of relation to the facts.

French Naval Aims.—The French memorandum on the coming naval conference created short-lived but very genuine consternation in certain quarters in the United States, the *New York World* going so far as to declare that the publication of the document made the convocation of the conference useless. That was a quite unwarrantable conclusion, but it is obvious enough that the views of the United States and France, respectively, represent the two poles of opinion among the nations attending the conference. The American Government is prepared to give no undertakings apart from the agreement to limit its fleet to a certain figure provided other nations take like action. France, taking her stand on the League of Nations Covenant, insists that if armaments are to be reduced, peace must be definitely organised on the basis of perfectly watertight agreements. France is emphatic on the interdependence of land, sea and air armaments and on the provisional character of the London Conference agreements pending their confirmation as part of a larger scheme approved by the ultimate Disarmament Conference at Geneva. The United States, while quite willing to work through the League of Nations so long as that produces no inconveniences, regards the London Conference as essentially an end in itself, and is bent on concluding there a definite three-power agreement, even if the hoped-for five-power agreement proves unattainable. France regards the Freedom of the Seas as a vital factor in the conversations. The United States would rule it out altogether for the present. These divergences of view, and many others that could be instanced, throw a considerable responsibility on the British delegates, on whom it will naturally devolve to reconcile Washington and Paris so far as they can be reconciled. The task should be by no means impossible, given the requisite minimum of genuine goodwill on either side. It must not be forgotten that the French proposal of April, 1927, for a combination of the principle of limitation by global tonnage with the principle of limitation by categories has been officially welcomed by American spokesmen as providing an acceptable basis for the solution of that difficult problem. And if agreement can be reached on this point it can be reached on any other. It would be a profound mistake either to dismiss the French memorandum lightly or to subject it to unduly hostile criticism. It is an extremely able document, and most of its contentions—apart from the demands it foreshadows of a quite excessive tonnage for France—are logically unassailable. But logic, as Sir Austen Chamberlain has so incessantly pointed out, and as it may be necessary to convince the French in this case, is not the determining factor in international conversations. If all parties at the London Conference rate the attainment of a working agreement higher than the obdurate vindication of their own pretensions, then a working agreement will in due course be obtained. And in one respect the French may be found to have done some real service. It is very doubtful wisdom for Europe, and to a less extent the rest of the world, to organise itself in a body like the League of Nations and then be ready to push all obligations in that field into a secondary place when it is a question of bringing the United States into some general negotiations. Such an attitude wins no respect in America itself, and the necessary adjustments can quite well be made by methods perfectly compatible with that resolute defence of the League system on which France lays such persistent stress. But an essential corollary is that France on her side should recognise the demands which the League system makes in the direction of a genuine reduction of armaments.

The "Unequal Treaties."—The action of the Nanking Government in declaring the abolition of extra-territorial privileges in China as from the beginning of this month needs prudent and diplomatic handling, and there is fortunately evidence that the British Government at any rate is approaching the question in that spirit. The purport of the treaties at present in force is not open to question. They state explicitly that "in mixed cases in China [i.e., cases between a Chinese and a foreigner] the case is tried by the official of the defendant's nationality," and, further, that "the law administered will be the law of the officer trying the case." Quite apart from questions of prestige, which count for more in China than in most regions of the world, it is obviously a serious matter to have a dozen or more legal codes applicable in particular cases all over China, and the fact that a foreign defendant in inland districts may have to be tried by an official of his own nationality who may be hundreds or even thousands of miles distant, means grave practical disabilities. But treaties cannot be denounced by unilateral action, and this particular question has been too fully and constantly discussed—most notably since the Mackay treaties of 1902 declared Great Britain's willingness to abandon her extra-territorial rights when the Chinese legal and administrative system justified it—for arbitrary denunciation by China to be tolerated. The United States, which is always studiously sympathetic towards Chinese aspirations, has declared itself as firmly on that point as anyone. Fortunately, the British Foreign Office appears to have found a formula that will ease the situation considerably. The Nanking administration is, after all, a revolutionary Government, which has somehow to justify itself to its supporters. It cannot remain simply otiose in regard to a matter which touches the susceptibilities of China as closely as extra-territoriality. On the other hand, Nanking's control over China as a whole is so precarious, and progress towards the evolution and application of a modern criminal code, to say nothing of the development of measures for its application, has been so slow—if, indeed, there has been progress at all—that the moment can hardly be said to have arrived for subjecting foreigners throughout China without reserve to the doubtful chances of Chinese justice. Under those conditions the British Government has suggested that "January 1, 1930, should be treated as the date from which the process of the gradual abolition of extra-territoriality should be regarded as having commenced in principle." The precise meaning of that declaration should perhaps not be pursued too closely, but that is not to say that it means nothing. It is a new pledge that the abolition of extra-territoriality is being taken seriously by Great Britain, that the principle is conceded decisively and finally, and that all that remains is to work out the modalities. This is a suggestion quite reconcilable with statements of the Chinese Foreign Minister, Mr C. T. Wang, on the position, and it has been received with appreciation by the Chinese Minister in London, to whom it was made. It may provide a happy issue from a delicate situation. If not, it might well be China's wisest course to carry the whole question to Geneva.

Changes in Spain.—Although details of the Spanish political programme for the coming six months, which has emerged from the conversations of the past week between the King and the Prime Minister, are not yet before us, it is undoubtedly most disappointing to those who saw in the omens an indication that General Primo de Rivera had seriously reconsidered his recent declaration that the return to a normal *régime* was becoming too rapid. On the other hand, the fact that King Alfonso has established contact with some of the party leaders who have been abstaining perforce from any political activity for the past six years is of unmistakable significance. General Primo de Rivera is probably anxious to drop his dictatorial powers if a practicable way can be found of doing it. The past year has not been of good omen for him, and the criticisms evoked by his draft of a new constitution, coupled with the universal refusal of practically every individual or organisation that counted to take part in the discussion of the constitution in the Consultative Assembly, are clear indications that where public opinion can express itself it is definitely adverse to the dictatorship. But the transition to some different *régime* does not become easier as time goes on, and King Alfonso has to reckon particularly with signs of the steady growth of the republican movement. Talk of abdication need not be taken seriously, but it is of some significance that the talk exists. While the success of the recent internal loan told to some extent in the present administration's favour, the continued depreciation of the peseta tells much more against it. The present indications denote considerable instability, with the future outlook distinctly unsettled.

Bankers' Clearing in 1929.—The return of the Bankers' Clearing House for last year showed that town clearings amounted to £39,936 million, as against £39,311 million in 1928, metropolitan clearings to £1,882 million, as against £1,854 million, and country clearings to £3,079 million, as against £3,039 million. The grand total came to £44,897 million, as against £44,205 million, and constituted a record for any single year. The increase in town clearings is somewhat surprising in view of the recession on the Stock Exchange and the recent dearth of new issues, and the report admits that clearings on Stock Exchange settling days were only £4,439 million, as against £4,427 million in 1928, and that clearings in respect of new issues were in 1929 only £285 million, or £84 million less than in 1928. The expansion in aggregate town clearings is ascribed mainly to the increasing daily turnover of money in the short loan market. Country clearings, which are rightly accepted as a better index to the course of trade, have risen since 1928 by £39.3 million, which is equivalent to 1.2 per cent. As the general price-level averaged 5.8 per cent. less in 1929 than in the preceding year, this increase in country clearings suggests an expansion in the volume of trade of 7.5 per cent. Unfortunately this optimistic view is not borne out by the provincial clearing figures. Only three of the eleven centres, namely, Leeds, Newcastle and Sheffield, recorded increases, and such important cities as Birmingham, Bradford, Bristol, Liverpool, Manchester and Nottingham were numbered among the declines. The shrinkage in the case of Bradford was as much as 13.3 per cent., which is a significant commentary on the state of the wool textile industry. The new record achieved by the aggregate London figures is in no respect adequate compensation for the shortcomings of provincial clearings.

The Floating Debt.—The nine months' revenue return, whose general significance we discuss in a leading article, shows that since March 31st there has been a net increase of £120.3 million in the floating debt. As compared with the position a year ago, the net increase amounts to £41.3 million, a decline of £7.7 million in the total of Treasury Bills outstanding being outweighed by an increase of £49 million in Ways and Means advances, which include £24.2 million borrowed from the Bank of England during the last ten days of the calendar year. Receipts from Treasury Bills issued during the nine months totalled £2,382 million, against £2,021 million in the corresponding period of 1928, and repayments amounted to £2,302 million, as compared with £1,760 million. Repayment of the principal of Treasury Bonds called for £29.4 million, against which £26.3 million was received from 4½ per cent. (1932-34) Bonds, and £56.6 million from the 5 per cent. Conversion Loan. Sales of National Savings Certificates to the public realised £29,150,000, an increase of £50,000, but encashments at £33,800,000 were nearly £3 million heavier than in the last financial year at this date. The natural increase in the number of certificates becoming 10-year maturities is apparently leading, as might be expected, to more frequent transfers of money from this to other forms of investment.

Coal Mining Costs and Proceeds.—The statistical summary, issued this week by the Mines Department, of output, costs of production and proceeds in the coal mining industry for the quarter ended September 30, 1929, shows a slight improvement in the position, as compared with the previous quarter. Output was over a million tons higher, whereas the average number of persons employed fell by 2,670. Production per manshift was barely maintained; average earnings per shift (9s. 2½d.) and wage costs per ton (9s. 3¼d.) were approximately the same; but, as a result of a slight reduction in "other costs," net costs of production (after deducting the proceeds of miners' coal) were 1½d. per ton lower at 13s. 9d., while proceeds rose from 13s. 7.07d. to 13s. 8.77d. per ton, the debit balance falling from £786,082 to £51,308. The course of output, costs and proceeds per ton since the beginning of 1928 is summarised quarterly in the following table:—

Period.	Tonnage Disposable (Mlns.).	Costs per ton. Wages.	Costs per ton. Total, Net.	Proceeds per Ton.	Profit per Ton.	Loss per Ton.	Output per Manshift.
1928.		s. d.	s. d.	s. d.	s. d.	s. d.	Cwts.
1st quarter	56·8	9 8	14 2¾	13 5	...	0 9¼	21·24
2nd quarter	50·7	9 7	14 6	13 1	...	1 5	20·98
3rd quarter	49·5	9 6	14 4	13 0	...	1 4	21·13
4th quarter	54·5	9 2	13 9	13 6	...	0 3	21·80
1929.							
1st quarter	59·1	9 0	13 3	14 0	0 9	...	22·13
2nd quarter	55·1	9 3½	13 10½	13 7	...	0 3½	21·45
3rd quarter	56·2	9 3½	13 9	13 8¼	...	0 0¾	21·40

Northumberland and Durham realised credit balances of 6d. and 4d. per ton respectively during the September quarter, and the three Yorkshire-Midlands areas also showed a narrow margin of profit, but Scotland and South Wales each recorded a loss of, roughly, 2½d. per ton, while in the Lancashire, Cheshire and North Staffs. district the debit balance was as large as 1s. 2d. per ton. When comparison is made with the corresponding quarter of 1928, when losses ranging from 8½d. to 2s. 7½d. were made by the districts without exception, it is noteworthy that, whereas "other costs" generally have been reduced by a few pence per ton, the improved results have been due in the main to an advance in prices realised for sales. It would appear likely that seasonal expansion of output in the final quarter of 1929 will enable the industry's aggregate working to show a substantial credit balance, and, since the "average" figures in the Mines Department's summaries include the adverse results of many uneconomic producers, it is evident that a large proportion of the pits are now, temporarily at least, in a reasonably solvent condition.

Wholesale Co-operation.—The closing months of 1929, writes a correspondent, showed a substantial improvement in the turnover of the Co-operative Wholesale Society as compared with the corresponding period of 1928. There has been an increase of £323,105 in the Society's export trade in the thirteen weeks ended October 12th, the total being £420,028. Evidently the movement is spreading in South America; recently a society at Buenos Ayres was admitted to membership, and another at Rosario is applying for admission at the January meetings. The total sales of the C.W.S. for the past quarter were £21,772,195, an increase of £918,937, or 4⅝ per cent. From the Society's productive enterprises the supplies totalled £7,171,003, an increase of over £300,000, or 4½ per cent. In the C.W.S. Bank, where the trade union current accounts now number 8,682 and the deposit accounts 905, there was an increase of £7,802,835, or 4¾ per cent., in the deposits and withdrawals, which aggregated £171,189,735. The banking business is evidently growing as rapidly as the trading section, and there are now over 10,000 individual current

THE BRITISH LINEN BANK.
Incorporated by Royal Charter, 1746.
Capital and Reserve Funds, £3,400,000.
EXECUTOR and TRUSTEE DEPARTMENT.
Head Office: 38, St. Andrew Square, Edinburgh
The Bank is prepared to undertake the duties of Executor or Trustee, and to act as Trustee for Debenture Stockholders, Public Institutions, etc.
LONDON OFFICE: 38, Threadneedle St., E.C.2
Every description of Banking Business transacted.

accounts open. While the grocery section is responsible for a large portion of the turnover—£8,709,387 in the Manchester area, £5,724,730 in London and the South, and £1,828,315 in the Newcastle-on-Tyne district—there has also been an improvement in the drapery and tailoring departments. The supplies of tea reached 14,667,586 lbs., thus continuing the progressive development in the consumption since the removal of the tax in the Budget. In the milling of flour the eight C.W.S. mills reached a total of £2,467,895, an increase of nearly 3 per cent., the output being 986,833 sacks of flour and 734,097 of offals, etc. During the thirteen weeks 875,634 pairs of boots and shoes were sent out from the eight works, this being an increase of 150,086 pairs over the corresponding period of 1928. The C.W.S. has disposed of some property at Yarmouth following the removal of its canning factory to Lowestoft. Purchases of land have been made near Spitalfields Market for the purposes of the green fruit department and at Bristol for the establishment of a packing factory.

Cotton Trade Finance in 1929.—Mr Frederick W. Tattersall, of Manchester, has published his annual report on finance in the cotton trade. According to his records, 123 cotton companies went into liquidation during 1929, but 51 cases were formal for purposes of reconstruction or amalgamation. The firms comprise 40 spinners, 38 manufacturers, eight spinners and manufacturers, four finishers, etc., and 33 merchants and agents. Bankruptcies and deeds of arrangement numbered 54, with unsecured liabilities of £1,164,921, and net assets £361,529. These cases comprise one spinner, nine manufacturers, three finishers, etc., and 41 merchants and agents. Receivers were appointed in 34 cases, involving 10 spinners, 11 manufacturers, four spinners and manufacturers, one finisher, and eight merchants and agents. During the year 98 companies arranged mortgages, debentures and general charges amounting to £6,700,897, the cases including 18 spinners, 20 manufacturers, eight spinners and manufacturers, 14 finishers, etc., and 38 merchants and agents. During the twelve months 41 cotton companies, comprising 39 spinners, one manufacturer and one spinner and manufacturer, made calls on the shareholders for unpaid share capital, the total amount called up being £1,492,707. Registration of cotton companies amounted to 187, with a nominal capital of £5,869,290. These firms included 13 spinners, 26 manufacturers, three spinners and manufacturers, 18 finishers, etc., and 127 merchants and agents.

State Aid for Port Development.—Last July, when Mr J. H. Thomas was exploring various avenues whereby employment might be stimulated by the acceleration of constructional works, he suggested to the Shipowners' Parliamentary Committee that shipowners should re-examine their needs in the various ports of this country and make recommendations to the responsible authorities. As a result the Port Facilities Committee of the Chamber of Shipping, a committee whose membership includes representatives of the F.B.I. and the Association of British Chambers of Commerce, resumed the investigations which they set on foot in 1923-24, and surveyed both the progress made since that date and the possibility of carrying out further improvements. The Committee's report, issued recently, states that gratifying progress has been made by almost all the large ports. Government assistance (by way of loan, rather than subsidy) is recommended for projected schemes of extension and development at Glasgow, Leith, Newcastle, Middlesbrough, Hull and Swansea; but at London (save in the matter of road approaches), Liverpool, Bristol and Glasgow the needs of overseas shipping have been "largely, and in some cases entirely, met by substantial improvements." The testimony which the Committee pays to the "progressive policy" of Port Authorities is encouraging, though port users, whether shippers or shipowners, are entitled to call attention to the fact that British ports still rank among the most expensive in the world, and it would be unfortunate if the impression were created that little more remained to be done towards cheapening port costs and accelerating loading and discharging speed in the case of overseas vessels. It is with the smaller ports, however, and the particular needs of coastwise shipping that the Committee on this occasion is most concerned, and the proposal is made in the Report that as a necessary corollary to the efforts of the Royal Commission on Transport to co-ordinate to the greatest public advantage all methods of communication, the coastwise shipment of goods should be encouraged by developing and bringing up to date a number of the small ports whose geographical position as distributive centres is advantageous, but which have been allowed to fall into decay. The "natural traffic" of these ports, according to the Committee, has been diverted to "artificial channels" by reason of railway competition and discriminatory port-to-port rail rates; through obsolete equipment the advantages of numerous small ports are being lost; but relatively small expenditure on better facilities would enable much of the lost coastwise trade to be recovered. The suggestion merits careful consideration, though we should not be disposed to welcome a policy whereby traffic was to be "recaptured" from the railways (at the possible cost of loss of speed in transit) through artificial encouragement of coastwise shipping. At the same time, though the development of the small ports is a complex and debatable issue, the Committee's plea, that State assistance in port improvements as a whole is a sound method of providing employment, will be generally endorsed.

Lancashire Cotton Corporation, Limited.—Our Manchester correspondent writes:—The Lancashire Cotton Corporation, Limited, which was formed early this year for the purpose of amalgamating cotton mills, has now been in existence about nine months. During this period the directors and officials have examined about 200 concerns. To 135 of these companies offers of absorption have been made. Twenty-five companies have been refused as being units impossible to be turned into efficient plants. Negotiations regarding the remaining companies are still proceeding. Of the 135 companies for which firm offers have been made, 20 did not proceed further. Seventy-one companies, controlling 6,750,000 spindles and 20,000 looms, have definitely agreed to join the Corporation, and the necessary schemes of arrangements and agreements are being prepared. Forty-five companies are negotiating upon the offers made to them, and it is expected that in the next month or two half of these will agree to go forward. It is probable, therefore, that in a comparatively short time the Corporation will have absorbed mills containing 10,000,000 spindles. For the purchase of raw cotton an office has been opened in the Cotton Exchange, Liverpool, and a similar office has been organised in Manchester. The Corporation has applied for membership of the Liverpool Cotton Association and it is expected that the election will take place almost immediately. It is intended that all buying and selling shall be done centrally and officials have been appointed as yarn sales manager and cloth sales manager. Early in the New Year the capital of the Corporation will be increased to about £2,000,000, and at the same time an issue of income debentures of about £1,500,000 will be made to satisfy the purchase consideration of mills. An investigation of the trading position shows that the economies which were expected to arise from the Corporation's activities were very moderate and in several directions already arrangements have been made which will give much greater savings than were estimated.

Wool Clip in Argentina.—There are many features about wool growing and marketing in the Argentine, writes our Bradford correspondent, which distinguish it from the same enterprise in Australia and New Zealand. The Australasian wool season runs between July 1 of one year and June 30 of the next, whereas the Argentine season finishes on September 30th, all the "annual" statistics of wool exports being compiled in accordance with this seasonal requirement. During the past ten years shipments of wool from the Argentine have fluctuated considerably, but the total for 1928-29 was 37,000 bales more than in 1919-20. In the latter period the quantity exported was 305,524 bales, this being approximately equivalent to 302,468,760 lb. The following shows Argentine shipments during the past ten years:—

(In Bales.)

1919–20	...	305,524	1924–25	...	257,795
1920–21	...	313,714	1925–26	...	344,385
1921–22	...	476,217	1926–27	...	351,603
1922–23	...	365,683	1927–28	...	322,769
1923–24	...	294,866	1928–29	...	342,769

Argentine wool is mostly crossbred, the chief selling centre being Buenos Aires, to which clips are brought from the country. For many years Bradford users have been interested in B.A. crossbreds, and have always had keen competitors in the Continent and the United States, the former being the largest buyers. Last season Germany and the United States dominated the scene, but the financial crisis in those two countries has had disastrous consequences, and this time buyers on Bradford account have been able to operate at reasonable prices. The part played by this and other countries in purchasing Argentine wool during recent years is shown below:—

	1924–25. Bales.	1925–26. Bales.	1926–27. Bales.	1927–28. Bales.	1928–29. Bales.
United Kingdom	45,489	69,632	79,182	63,808	62,554
Continent	166,719	227,247	234,585	226,206	231,978
United States ...	41,090	40,627	30,261	23,083	39,740
Various	4,497	6,879	7,575	9,640	8,497
Total exports ...	257,795	344,385	351,603	322,737	342,769

That the United Kingdom has been an increasingly important buyer is shown in the fact that during the five years mentioned above the average annual purchases totalled 64,133 bales, compared with an annual average from 1909-10 to 1913-14 of 50,065 bales. The reason for this increase in United Kingdom purchases, which have all come to Bradford, is the improvement in the character of the wool and its preparation for market, this having overcome the prejudice of our users. Even yet there is not the reliability in the offering of clips bought in the country districts that is desirable, buyers having to exercise very great discretion, but in this respect there has been a great improvement, and the introduction of new blood from this country and New Zealand has been particularly beneficial.

Canadian Newsprint.—There have been frequent conferences in Montreal and New York on the subject of the price of newsprint for 1930, and Premier Taschereau, of Quebec, and Premier Ferguson, of Ontario, have taken an active interest in them. Canadian newsprint manufacturers are loud in their insistence that the present price of newsprint, ranging about $55 per ton, is inadequate to yield them reasonable profits, and some of them have announced that their price after July 1, 1930, will be $60 per ton. A further complaint is that, while the mills of the International Power and Paper Company have been operating at about 7 per cent. above their normal capacity, numerous Canadian mills have only been operating at between 70 and 80 per cent. of their capacity. Premiers Ferguson and Taschereau, on the ground that it is their duty to look after the interests, not only of the substantial population who are dependent for their living upon the pulp and paper industry, but also of Canadian investors in pulp and paper companies, have been vigorously backing the demand of the newsprint manufacturers for a higher price. They have suggested that $60 per ton would be an equitable price, and Premier Ferguson has also demanded that there should be enforced a rationing of the available business, whereby part of the business now enjoyed by the International Pulp and Paper Company could be allocated to Canadian mills to enable them to operate nearer capacity. But the Canadian daily newspapers, through their association, have joined the American newspapers in protesting against what they regard as an attempt at political interference with the normal play of supply and demand, and have announced their intention of resisting the alliance of the two Premiers and the dissatisfied newsprint manufacturers. They threaten, if the newsprint people persist in their attitude, to curtail the size of their papers and thereby lessen the demand; and, if a business slump were to materialise in the new year, such a policy would become feasible and might even come to pass in the natural course of things. The newsprint manufacturers in Canada are also somewhat handicapped in their stand by the attitude of the International Paper Company, which is playing a lone hand, and apparently there is no means of getting rid of its contracts with the Hearst Company, which are fixed at under $55 for a term of years. Another disturbing factor is the coming into production of the newsprint mill which the Mersey Pulp and Paper Company have erected at a cost of 14 million dollars at Brooklyn in Queen's County in Nova Scotia. The mill was formally opened on December 14, and as it is situated right on tidewater, it has to face lower transportation charges to the American market than any of its competitors. Consequently, it is in a position to undersell them, and the other newsprint firms claim that it is already doing so.

Industrial Developments in Italy.—A correspondent writes:—The debate on the Corporative Council in the Chamber of Deputies has ended with a vote favourable to the Bill, as summarised in the *Economist* of December 7th. The interesting point which emerged from the debate was the difference between the points of view of the representatives of the employers and the employees in the Corporative Chamber. Employees, such as Signor Razza, saw in the Bill a prelude to more and more direct intervention of the Corporative State in the control and organisation of industry. Employers, on the other hand, emphasised the principle of the Labour Charter that private initiative is the foundation of industry, and drew attention to the risk inherent in excessive State intervention. Signor Bottai endeavoured to keep a middle course, insisting on the experimental character of the Fascist legislation. The present economic situation is indeed not favourable to new experiments. The repercussions of the American slump are serious, and conditions in the South American, Levant, China, and Indian markets are not promising. The number of unemployed at the end of October is 297,382, not a big figure, but higher than that at the end of October, 1928, which was 282,379. It appears that rumours of discontent in the working masses are circulating, although newspapers in their Christmas edition reported that a meeting had been held in Milan between prominent employers and representatives of employees' syndicates at which all convened were happy to state that no disorder at all had taken place in the Milanese factories, that disputes were amicably arranged, and that the industrial situation was normal on the basis of the stabilised lira at the level of 19 lire to 1 dollar. It is evident, however, that the reorganisation process in Italian industry is not at an end. At the meeting of shareholders of the Flax and Hemp Corporation (Lanificio e Capanificio Nazionale, with a paid capital of 150 million lire), it was announced that for the first time, after 35 years, directors felt it their duty to advise the passing of the dividend. Keen internal competition, the partial loss of important markets, such as Argentina, the competition of foreign goods at a price lower than the cost prices, and the slump in the price of raw flax and hemp held in stock, were factors contributing to the unhappy result. In the motor car industry also there is some uncertainty. Motor cars exported in the first nine months of 1929 were 19,189, against 21,880 in the corresponding months of 1928. Prospects for the winter months are not good, owing also to the keen American competition. Introduction of short time on a vast scale was the inevitable outcome. Workers cannot, however, live on the wages of only four days' work, or less, weekly, and after consultation with the Prime Minister the president of the Fiat Company, Senator Agnelli, announced that workers will continue to receive, this winter, a minimum wage on the basis of 40 hours of work weekly. If

they work less, the hourly wage for hours not worked will be debited to the worker; and will be repaid afterwards when employment has improved, by means of a deduction, in the pay bill, of wages due for hours worked above 40 per week. The State has not made itself responsible for the future repaying of the sums paid and debited to the workers; but the solution arrived at appears to indicate that private industry is being transformed into a semi-public organisation.

Portuguese Banking. — The Banco Nacional Ultramarino has recently concluded a new contract with the Portuguese Government which has resulted in several important changes. Its privilege of Note Issue in the Portuguese Colonies has been renewed for a fixed period of thirty years, while the capital of the Bank has been raised from Esc. 50,000,000 to a maximum of Esc. 200,000,000. Of the maximum balance of Esc. 150,000,000, Esc. 85,000,000 are to be issued at once in shares of Esc. 90. The Portuguese Government are taking 200,000 of these shares at a premium of Esc. 80 per share, while the Portuguese Colonies are also to subscribe. The balance will be offered to the public. Hitherto, the Banco Nacional Ultramarino has combined the functions of an issuing and commercial bank, and in view of the present state of development of the colonies there is hardly room for separate banks performing each of these functions. It is now intended to emphasise a little more strongly the note issuing function of the Bank, and to bring it into closer relations with the Government. The new contract, therefore, provides that the State shall appoint two directors to the board of the Bank, and shall also confirm the nomination of the Governor and Vice-Governor of the Bank. Furthermore, it has been deemed hardly consistent with the underlying spirit of these changes that the Bank should itself directly own and operate offices in foreign centres. The London office of the Banco Nacional Ultramarino has, therefore, been transferred to a new company called the "Anglo-Portuguese Colonial and Overseas Bank, Ltd.," while the Paris office has similarly been transferred to a new company called the "Banque Franco-Portugaise d'Outremer." Both these new companies are registered in their country of domicile, but they remain subsidiaries of the Banco Nacional Ultramarino, whose Governor will be chairman of both the English and French banks. Including the chairman, the English bank is to have six directors resident abroad and on the board of the parent bank, but four English resident directors are to be appointed, and normally the supervision of the bank will rest in their hands. The reason for the change is clearly the undesirability of what is henceforward to be a bank of issue operating in foreign centres. At the same time the Banco Nacional Ultramarino could hardly have been expected to sacrifice its London and Paris business, and the creation of special British and French subsidiaries was the obvious solution to the problem.

Turkish Ministers' Default.—Our Stamboul correspondent writes:—A short time ago, through the intermediary of the Turkish dailies, the public learned to its surprise that Hassan Fehmi Bey, a former Minister of Finance in the Republican Government, stood charged with the misapplication of State funds amounting to about £10,000. This sum had been voted some four years ago by the Grand National Assembly for the restoration of the devastated area in the vicinity of Gumush-Hane, the ex-Minister's constituency, which district, situated on the old Caucasus front, had been the theatre of bitter fighting between Turk and Russian in the earlier stages of the great war. Following upon the investigations of the Government Auditing Department, it would appear that the bulk of this money was applied by the former Minister to the restoration of his personal property and that of his brothers situated within the radius of the devastated area. It was later announced that Ali Djenani Bey, a Deputy in the present Parliament and a former Minister of Commerce, had surreptitiously fled the country carrying with him about £7,000 representing the working capital put up by two or three of his friends in the Chamber with a view to securing Government building contracts. Djenani Bey, who, in addition to the foregoing is also debtor to the Treasury for some 200,000 Turkish liras, has been traced to Tripoli in Syria, and the Turkish Government have applied to the Franco-Syrian authorities for the extradition of the absconding Deputy. Turkish legislation governing matters of routine and procedure in the Grand National Assembly, as at present framed, however, would appear to preclude any possibility of bringing about the arrest and extradition of the fugitive, as members of the House are deemed to be on leave of absence for two consecutive months, during which they enjoy the benefit of parliamentary immunity from proceedings before the ordinary Law Courts of the country. In the course of the coming week, Ihsan Bey, a former Minister of Marine, is to be released after undergoing a term of two years' penal servitude for malversation and corruption in connection with a contract for repairs to the "Yavouz," the former German battle-cruiser "Goeben." Responsible Ministers are both shocked and incensed by the fact that these unsavoury particulars should have to see the light of day during the sojourn in Angora of M. Karakhan, the Soviet Under-Commissary for Foreign Affairs, who is the guest of the Republican Government whilst carrying on negotiations with his hosts for the elaboration of a new Russo-Turkish Trade Agreement.

New Life Assurance Business.—At this time last year the customary batch of new business announcements by the Life Assurance companies recorded a pleasing unanimity of expansion in amount. On this occasion it must be confessed that the returns so far are much more patchy. Although the complete official figures are not even yet available, it is estimated that the 1928 new business as a whole showed an increase over 1927 of approximately 11 per cent. It is already clear that the corresponding increase in 1929 will be substantially less. In addition to the continued trade depression in the major industries, Life Assurance last year had to combat the unfavourable effects of a severe Stock Exchange slump. This has probably been reflected in a scarcity of large policies, and possibly also of the single premium super-tax saving type of policy. Fifteen offices have so far published their totals of net new business for 1929 and they are as follows:—

Office.	1928.	1929.
Atlas	3,482,611	3,800,000
British Equitable	466,164	516,000
British General	405,616	482,131
Equitable	1,002,328	960,000
Equity and Law	1,807,749	1,708,219
Friends Provident	1,567,483	1,617,000
Law Union and Rock	1,977,388	2,150,000
Legal and General	7,646,900	7,881,150
London Life	2,502,925	2,927,608
National Mutual	906,089	859,635
Pearl	12,080,366	11,652,887
Phoenix	3,043,304	2,950,000
Prudential	17,401,001	17,600,000
Refuge	6,377,442	6,479,796
University Life	160,356	165,133
	60,827,722	61,749,559

This year there are no notable increases, the largest being that shown by the London Life with an increase of over £400,000. This non-commission mutual office publishes, in addition to the total figures, an analysis which shows that in 1929 the new business in every department contributed to the total growth. An interesting feature of the Atlas announcement, which does not reflect itself in the figures shown in the above table, is that capital redemption business was completed in 1929 for £3,400,000, compared with £220,000 in 1928. It is believed that this tremendous expansion has been due to the issue of a number of five-year term policies for single premiums for the purpose of super-tax saving. Of the fifteen offices whose figures are included in the above table, it will be observed that ten show increases and five decreases.

THE REVENUE.

I.—An Account of the Total Revenue of the United Kingdom, in the undermentioned periods of the Year ending March 31, 1930, as compared with the corresponding periods of the preceding Year.

	Quarter from October 1 to December 31, 1929, compared with the corresponding Quarter of the preceding Year.				Period from April 1 to December 31, 1929, compared with the corresponding Period of the preceding Year.

UNITED STATES.—STOCK EXCHANGE—INDUSTRIAL RECESSION—MONEY—PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 20.

AFTER a period of trading, during which the volume gradually declined close to the two million shares a day level, the share market has again turned distinctly weak on an increased volume. At to-day's close, industrial shares, as measured by the "averages," which on the rally had recovered 35 or 40 per cent. of the loss from the September highs, had lost about half the ground regained. The latest decline was helped by certain bad news, such as the receivership for the International Combustion Engineering Corporation, this being the final chapter in a chain of unpleasant developments which included unsuccessful speculation in shares by the head of the company. While the receivership was not of any great importance in point of size, it furnished material for the bears to work with. Another unsettling influence was a further sharp decline in the shares of the Fox Film Corporation, this coming about ten days after an announcement had been made of the appointment of trustees to take over Fox's personal holdings. The primary difficulty in this situation appears to have been the extensive commitments (approximating $90,000,000) into which Mr Fox had entered in the expectation of financing their conclusion by the sale of additional shares of his company. The break in the share market made the financing of this programme impossible, just as it did certain other mergers arranged in the early autumn. In any event, the bears became quite active and found their efforts well rewarded.

United States Steel common, which fell to 150 on the November break, and rallied to 189, to-day sold as low as 158, and closed at 162. Coppers sold very close to the earlier lows. Here the depressing influences are the uncertainty as to whether the 18 cent price can be maintained and the question how consumption of the metal will develop during the new year. Among the mail order concerns, Montgomery Ward broke to a new low for the year on reports of unsatisfactory earnings, which were connected with statements to the effect that the company's expansion into the chain store business has been carried on at too rapid a rate. However, the condition of the market undoubtedly had much to do with the emphasis given to the news. Moreover, it is not at all strange that the strong rally from the November lows should be followed by a secondary reaction. At the higher prices investment buying was discouraged, as shares obviously were no longer selling on a bargain basis; while speculative attraction was lacking because of the uncertainty that still exists as to the future of business.

Industrial news meanwhile indicates that the recession that started after the July peak is continuing and that it has been rather rapid since the stock market break. Production in the steel industry is down to about 60 per cent. of capacity, as against 100 per cent. in July. Automobile output is beginning to pick up again after the sharp curtailment of the autumn, but the resumption is cautious and will continue to be so until evidence has been furnished as to consumer demand by the January shows. Railway car loadings continue to recede even faster than would be called for by seasonal influences; and those for the first week of December were the smallest for that week in any year, with the exception of 1927, since 1923. Department store sales in this city, which before the break were running about 15 per cent. ahead of the year previous, are now somewhat under last year's showing. There are, of course, two ways of looking at this situation. One is that the sharpness of the recession indicates a serious decline in business. The other is that the very sharpness, in view of the conservative inventory and buying policies of the past year, makes for a quick cure. At the time of writing, opinion is divided as to whether the recession in business will be terminated by spring or autumn. Reverting to the steel industry, sentiment here has been somewhat better during the past week, despite the continued fall in output. The steel manufacturers feel that consumers will find it necessary to re-enter the market in January.

Money has been slightly firmer during the past two weeks, and bond prices have shown a tendency to decline. This situation is not unnatural in view of the seasonal demand for currency (which forces the commercial banks to sell investments or to rediscount at the Reserve banks), and of the recent large gold exports totalling, approximately, $85,000,000. This week's Federal Reserve statements disclosed a loss by the system of $84,000,000 in gold reserves, of which somewhat less than half could be attributed to gold exports; and an increase of $8,000,000 in note circulation. Discounts dropped moderately; and the system's open market operations were obscured by the persistence of a large part of the Treasury's overdraft in connection with the December 15th tax date. However, it is apparent that the Reserve system continues to be a liberal purchaser in the open market, its object being to help to supply the currency needed for the holidays and to compensate for the gold exports. At the moment, further considerable exports are anticipated, certainly to France and, perhaps, to England. Meanwhile the contingent liability on bills purchased for foreign correspondents continues to rise, the week's addition of $22,000,000 bringing the total to a new high of $539,798,000. The system's reserve ratio this week stands at 69.3 per cent., which compares with 71.6 the previous week, and with 64.5 a year ago. The local bank's ratio, at 65.5 per cent., is off 3.7 on the week and 2.7 on the year. A reduction in the Kansas City Reserve Bank rate to 4½ per cent. brought the number of banks on this basis up to six. The other six still retain a 5 per cent. rate.

A decline of nearly 2 per cent. in the level of wholesale commodity prices between October and November is disclosed by publication of the index prepared by the Bureau of Labour Statistics. At 94.4 per cent. of the 1926 average, the index was 2¾ per cent. below the level of November, 1928. The decline, as compared both with November, 1928, and with the 1926 average, is general; most of the groups making up the index participated in it.

FRANCE.—FOREIGN POLICY—TAX REDUCTIONS—INTEREST—IRON AND STEEL PRODUCTION.

(FROM OUR CORRESPONDENT.)

PARIS, January 1.

AFTER sittings of the Chamber which occupied the whole of the last Sunday of the year, the Government succeeded, at 3.30 on Monday morning, in bringing the autumn session to a triumphant close, and Parliament rose until February. The much-talked-of full-dress debate on the Government's foreign policy—which was welcomed by Ministers (in spite of the risks that attended it) as giving them an opportunity for gauging the opinion of the House in regard to the issues to be decided at the Hague Conference—proved fruitful in exciting incidents, as it was expected to do. M. Briand was very frankly interpellated by chosen representatives of practically every group in the majority, as well as by less dangerous spokesmen of the Opposition groups, and the whole of the series of "renunciations" and "abandonments," to which successive French Cabinets are alleged to have consented from the beginning of the Peace Conference onwards, were strenuously emphasised. M. Briand, in his reply, proved thoroughly equal to the occasion. Both he and M. Tardieu repeatedly urged the House to speak its mind plainly, and either refuse to approve of their going to the Hague as the representatives of France or give them a majority that would enable them to speak with full authority at the resumed conference. In the result, M. Briand's Locarno and subsequent policy was endorsed by an overwhelming majority of the Chamber (342 against 17, with the whole of the Socialists, the Communists, and 102 of the 118 Radical-Socialists abstaining). Analysis of the voting reveals that, even had all the abstentionists voted against the motion of confidence, the Government would have secured a clear majority of 91, which can leave no doubt as to their authority as the French representatives at the Hague.

The French deputation at the resumed conference will be exceptionally strong. It will be headed by the Premier, M. Tardieu, who will have with him M. Briand, M. Chéron and M. Loucheur, who may be regarded as the "big four" of the present Ministry. The Quai d'Orsay will also be represented by MM. Philippe Berthelot, Peycelon, Léger and five other leading permanent officials. M. Chéron's section will include several of the highest officials of the Ministry of Finance. The Bank of France is to send its Governor, M. Moreau; its Deputy-Governor, M. Moret; and M. Quesnay. Four official experts will bring the strength of the delegation to 28. Its composition speaks eloquently of the importance the French place upon the Hague meeting, and leaves no doubt as to the vigour with which the adoption will be pressed of the carefully planned programme which the delegation has decided to act upon.

M. Chéron has reaped added credit from the skilful manner in which he has carried through his policy concerning taxation reduction, without departing by one franc from the total he originally laid down as the limit of present relief to be accorded. There is a general outcry throughout the country for much more sweeping reductions than the Minister has been able to see his way to accord, and the justice of this demand is admitted even in official quarters. No more money is available, however, for the time being, as M. Chéron was eventually able to convince the House. The Finance Commission of the Chamber made a strong fight for substantial cuts to be made forthwith in the taxes on amusements, and also in the luxury taxes imposed on hotel accommodation and on restaurant meals, and in the turnover tax on dealings in milk by-products, wool and woollen yarns (in view of the present depression in that industry), potatoes and haricot beans. On these points the Minister was adamant, as also in regard to further relief for investors in interest-bearing securities. The list of reductions ultimately authorised by the Chamber provides for total relief, as from January 1st, amounting to 1,447,000,000 francs, under 13 different heads. The agricultural community benefit most, in the form of a new scale of exemptions in regard to family charges and other income-tax factors, estimated to be equivalent to 274,000,000 francs a year, plus 50,000,000 francs representing reduction of the tax on cultivated land. The same classes will benefit, also, by the reduction by 80,000,000 francs of the tax on the transportation of cereals, manure, potatoes and fresh fruit. Small tradespeople are given benefit totalling 144,000,000 francs in exemptions; 122,000,000 francs has been taken off the tax on incomes from wages, salaries and fees; and 26,000,000 francs from Excise taxes on pharmaceutical specialities. The luxury tax on motor-car sale prices is reduced by a fraction, and the general luxury tax of 12 per cent. on other categories of merchandise has been brought down to 6 per cent. A cut of 300,000,000 francs has been made in the succession duties. The relief afforded to investors by reduction of stamp duties and transmission tax on securities totals only 239,000,000 francs. This is much smaller than had been expected, but the psychological effect already made itself felt on the Bourse. Further reductions, it has been hinted, will be included in the Budget Bill for the new financial year beginning on April 1st. These, M. Chéron has announced, may possibly take the form of a "conditional" remission of 10 per cent. of all assessments levied in respect of direct taxation. The full amount, it is understood, will be levied, and the equivalent of 10 per cent. may be deducted on payment during the coming year or from the following year's totals.

These reductions, as well as others totalling 1,187,000,000 francs granted since last July (including 83,000,000 francs off the sugar tax), have been rendered possible by drawing on the surplus revenue recovered (in excess of Budget estimates) during the past twelve months (estimated to amount to 7,000,000,000 francs),

BANCO ESPAÑOL-CHILE
FOUNDED JULY, 1926
Capital & Reserves . . . $41,500,000
(English Currency £1,037,500)
Head Office: 222 Prat St., Valparaiso, Chile
Branches throughout the country.

plus 600,000,000 francs furnished by the Caisse d'Amortissement, and other sums taken from exceptional revenue earned by the employment in the money market of portions of the Treasury balances. The reductions of taxation, therefore, are entirely outside the purview of the Budget proper. The total relief accorded since July last has been approximately 2,900,000,000 francs, or about £23,000,000. Provision was also made before the Chambers rose for the recess for increasing (retroactively as from July last) by 687,000,000 francs the pay of certain classes of public servants whose scales of pay had not yet been brought to levels consistent with the depreciation of the franc.

Attention is to-day called to the fact (which had hitherto escaped public notice) that in one of the Finance Bills passed at the end of the session the Government secured authorisation to reduce, as from January 1st, from 5 per cent. to 4½ per cent. (and later on to 4 per cent.) the rate of interest payable to certain classes of *sinistrés* who received payment of their claims for war damages in 15-year 5 per cent. bonds, instead of in cash. The number of persons affected is very large, and the reduction has been received with a good deal of surprise. The measure is a further step in the carrying out of the effort which the Government and the Bank of France have been making since stabilisation to bring down still further the standard rate for money. The expected lowering of the Bank of France rate during January from 3½ per cent. (at which it has stood for over two years) to 3 per cent. will be another step with the same object, and will also assist in preparing the way for the great conversion and consolidation loans which it is planned to issue towards the end of 1930 and in 1931. In the case of the *sinistrés*, one of the arguments used is that Rentes have now reached such a level that they no longer bring in 5 per cent.; therefore, holders of bonds representing war losses cannot reasonably claim to receive more than the yield from the premier security. Money for carrying over at yesterday's end-of-the-year settlement was to be had in the Parquet at an average of 2⅜ per cent., against 2½ per cent. a fortnight before.

Steel and iron production figures for November register a fractional decline, due partly to the 10 per cent. cut in output, as from November 1st, which was decided on by the European International Steel Cartel at the end of October, and partly to the fact that November contained two less working days. The total output of crude steel in November was 790,000 tons, or 43,000 tons less than in October, against a monthly average of 791,000 tons in 1928 and 559,000 tons (Alsace-Lorraine plants included) in 1913. The output of pig iron was 856,000 tons, or 29,000 tons less than in October, against a monthly average of 832,000 tons in 1928 and of 749,000 tons in 1913.

Coal production in November totalled 4,705,865 tons, against 4,971,234 tons in October. The output of metallurgical coke by the colliery plants was 406,534 tons, or 160,000 tons more than in 1913. The home market remains firm and active, but deliveries are still hampered by transport shortage. Selling prices are expected to remain unchanged during the coming three months, as it is doubtful whether the increase of the tax, on both imported and native coal, from 2 francs 50 to 3.65 per ton (authorised by the law of April last, as from January 1st to provide for increased old age pensions for miners) will come into operation for some time yet.

DENMARK.—EXPORTS TO GERMANY—AGRICULTURE—FOREIGN TRADE—PRICES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, December 18.

THE question of Danish agricultural exports to Germany is very much debated just at present. The most important farmers' associations held a meeting recently at which the matter was discussed. A resolution was unanimously adopted in which the changes proposed by Germany in the conditions for the sale of agricultural produce in the German market were severely criticised. The recent German-Swedish commercial agreement is referred to, and the agricultural organisations declare that, according to the " most-favoured-nation " status granted to Denmark, they took it for granted that when Sweden obtained an agreement by which its future exports of living cattle would be received by Germany in greater numbers than in the past, against a Customs duty of 16 marks per double-hundredweight, this rate would likewise apply to the Danish cattle exports, at least to the same extent as in the past. The German interpretation of the matter, on the contrary, is that Denmark, like Sweden, would be entitled by the " most-favoured-nation " status to export 7,000 head of cattle annually to Germany against a low duty. The said number covers the normal exports of Sweden to Germany, but for Denmark this interpretation is quite unsatisfactory, as the annual exports to Germany are more than 250,000 head of cattle. Practically the entire exports would, accordingly, pay duty at the rate of 24½ marks per double hundredweight, and the agricultural organisations declare that this would make the rights referred to quite illusory.

The meeting strongly urged the Government to endeavour by negotiation to prevent the proposed increase of duty and the differential treatment of Danish goods. Finally, the resolution states: " Should these endeavours not be successful, the meeting unanimously urges Danish merchants and consumers, when giving orders for or making purchases of goods, to prefer that country which still receives our agricultural produce free of duty." It is further pointed out that by the Free Trade policy Denmark is giving Germany favourable conditions in our market, and that Denmark purchases German goods to a far greater value than *vice-versa*. It is, therefore, emphasised that Denmark must be entitled to expect some trade consideration and that it is regrettable that developments have not gone in this direction. If need be the Danish farmers desire to go over to the purchase of English goods, and, in this connection, it is noteworthy that the interest in goods from the United Kingdom has already been growing for some time. The entire problem is at present the subject of discussion in Government and Parliamentary circles.

New Year is approaching and, in several quarters, endeavours are already being made to form an opinion of the results attained in 1929. As far as agriculture is concerned it may be mentioned that production and exports have been considerable throughout the past year. In the first ten months of 1929 the exports of bacon were thus 203,500,000 kilos, against 227,000,000 in the corresponding period of last year, while the exports of butter in casks were increased from 122,600,000 kilos to 132,600,000 kilos. The exports of fresh eggs were 29,100,000 scores, against 29,600,000 scores in the first ten months of 1928, and finally the exports of preserved eggs rose from 3,100,000 to 3,800,000 scores. Of living cattle the exports in the first ten months of the year had a value of Kr. 75,500,000, against Kr. 72,900,000 in the corresponding period of 1928. The exports of pork, meat, etc., increased from Kr. 400,900,000 to Kr. 420,900,000, while the value of butter, cream and milk exported rose from Kr. 417,200,000 to Kr. 440,000,000, and finally the value of the exports of eggs rose from Kr. 69,100,000 to Kr. 69,600,000.

Generally speaking, the income of agriculture from exports has been increased, and this fact, in connection with another good crop, has brought about an improved position not only in agriculture, but also in other trades. It is evident that goods produced in the towns have found an increased sale in the country, because of the augmented purchasing power there. On the whole, the production of the year has undoubtedly been somewhat greater and rather more remunerative than for the last few years, and it may be maintained that Danish economy has a more favourable aspect now than a year ago. With regard to the balance of trade it may be mentioned that in January-October, 1929, imports aggregated Kr. 1,480,000,000, against Kr. 1,455,000,000 during the corresponding period of last year. At the same time exports have been increased from Kr. 1,362,000,000 to Kr. 1,412,000,000, and the total excess of imports has thus been Kr. 68,000,000 only, against Kr. 93,000,000 in the first ten months of 1928. The Danish wholesale price index showed a figure of 147 in November, 1929, against 151 in November, 1928. At the same time the proportion between the prices of import goods and export goods has been favourable, the figure for import goods declining in the course of the year from 146 to 143, while export goods have shown a rise from 147 to 159. Accordingly, the index for export goods is at present 16 points higher than that for import goods, while a year ago the difference was one point only.

NORWAY.—FOREIGN TRADE—BUSINESS—MONEY.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, December 21.

FOREIGN trade figures for November are not quite so favourable as those for November last year. It appears that the value of our imports during November this year amounts to 94,293,000 kroners against 80,746,000 kroners last year, while for October this year the figure was 95,918,000 kroners. This increase is only partially counterbalanced by a rise in the value of exports, viz., from 55,989,000 kroners in November last year to 60,520,000 kroners in the month under review. For October this year the amount was 70,133,000 kroners. The result is that the excess of imports over exports has increased from 24,757,000 kroners last year to 34,403,000 kroners in November, 1929. The alarm which may be felt at this rather heavy increase of the import surplus is somewhat alleviated by the fact that it is among the import items " raw materials and articles for production " that the heaviest increase is to be found, and not among articles of consumption. On the export side the most noticeable figures are those relating to paper, the value of this export article having fallen from 8.03 million kroner in November last year to 1.68 million kroner this year, which, to some extent at any rate, may be ascribed to a general decline in prices and sales rather than to a diminishing production. Comparing the first 11 months of this year with the same period last year, it appears that the excess of imports over exports has been reduced by about 3.5 million kroners. The fat herring fisheries which have just started have given very good yields, and there is at present a lively export to England, Denmark, Sweden, and especially to Germany and Poland. Very effective work has been done by the representative of the Norwegian State Railways in Berlin for the import into Germany (and Poland) of Norwegian herring and other fish.

Christmas trade this year has been tolerably good in most branches, though there is no very decided improvement of the general purchasing power as compared with last year. The general feeling in business circles was very adequately expressed by the Chairman of the Union of Oslo Merchants at a recent meeting, when he said that the progress of depression seems to have come to an end, but that the upward progress has hardly yet begun, or at any rate has not gained any speed, in spite of the fact that in most branches of trade and industry there is increased activity and growing initiative. It is to be hoped, he said, that political and economic developments in the country will be such as to contribute effectively towards a definite improvement next year.

The Norges Bank return as at December 16th shows that as a result of increased demands for Christmas financing, the amount of notes in circulation has risen from 302.7 million on November 30th to 314.4 million kroner, and deposits have been reduced during this period from 100.9 million to 70.8 million kroner, while foreign balances have fallen from 52 million to 43 million kroner. At the same time loans and discounts show a reduction of about 6.5 million kroner. On the whole developments at present hardly justify any hope of a reduction of the Norges Bank discount rate before the turn of the year, in spite of the move taken by the Bank of England on December 12th, which was followed by Sweden. The sterling quotation of the Norges Bank, which has been unchanged since July 9th last at 18.205, was suddenly reduced on December 18th inst. to 18.20 and again to-day to 18.195, a step which did not seem to be dictated by the position of the market. However, to-day the market fell off somewhat, operations taking place at rates a little below the quotation.

ROUMANIA.—BUDGET—STATE RÉGIES—TAX REDUCTIONS—ECONOMIC SITUATION.

(FROM OUR CORRESPONDENT.)

BUCHAREST, December 19.

THE Budget for 1930 is of special interest, not only because it is the first Budget after the legal stabilisation of the currency, but also because it presents the synthesis of the administrative reorganisation of the State as resulting from the number of administrative reform laws passed during the year. In these circumstances, a comparison with previous Budgets becomes an exceedingly complicated matter. It is accompanied by a number of Bills, such as Modification of Estate Duties, Modification of the Taxes on Petroleum Consumption, Modification of the Law of Direct Taxation, the law for preventing evasion of taxes, the modification of the luxury and business turnover taxes. It foreshadows, also, the reform of local finances and of direct taxation.

One of the features of the Budget is the separation of the commercial interests of the State from the Government departments by which they have so far been administered. These undertakings have become independent State Régies, with their own Budgets, the profits of which will be appropriated by the State, or which, in the case of deficits, will be subsidised. The new Public Régies are the following:—The Monopoly Institute, the Régie of the Ports and Waterways, the Fisheries and Districts subject to inundation, Prisons, Forests, Agricultural Exploitation, the Institute of Roads, the Public Commercial Régie of the Ardeal, the Official Gazette and the Petroleum Pipe Lines. It is hoped, by bringing them under a commercial administration, appreciably to raise their yield. A further important reform is that of the salaries and pensions of the Civil Servants. The Budget of 1931 is to form the basis of increases in salaries long overdue. The Minister of Finance lays stress on the necessity for State action towards a speedy recovery in the economic conditions of the country. In this connection it is intended that the State should contribute to the reconstruction of the railways, of the post, telegraph and telephones, and to the development of the seaports. For this purpose new foreign credits will be necessary, and it is hoped that, once financial equilibrium is assured and order in the accountancy established, it will be possible to realise a new State loan for the railways.

The budget for 1930 amounts to 37,450 million lei, comparing with 37,700 million lei of the previous budget. If, however, allowance is made for the separation of the State interests from the various Departments, this apparent diminution is converted to an increase of over 5,000 millions. Adding to the amount of 37,450 million lei the budgets of the various Régies and deducting their estimated net profits by which the State budget benefits, we arrive at the total of 58,700 million lei. The railways figure in this with 12,900 millions, the post, telegraph and telephones with 2,300 millions, the monopoly institute with 7,500 millions. The Profits of the Régies are estimated at 6,000 millions. Direct taxation is responsible for 9,300 millions, whereas the revenue from indirect taxation is estimated at 22,100 millions, certain parts of which, however, go to the Régies.

Although the loan raised in February this year was to provide for the outstanding debts of the railways and Government departments, it appears that the amount of 1,450 million lei remains unpaid on account of faulty estimates due to deficient accountancy. A further outstanding liability of 576 millions has been discovered, which is due to the distribution of imaginary budget surplus in the years of 1924 to 1927. There is a further sum of 250 millions to be paid on account of the loan contracted towards the end of July, 1928, for the relief of famished districts. The result is that the sum of 2,283 million lei must be found next year which is an exceptional charge on the budget. A further increase of the budget is due to the new arrangements between the railways and the Ministry of Finance on the one hand, and the Ministry of War on the other, for the payment of transport. These expenses were not provided for in former years except to a very small extent. Similar arrangements have been made between the Post-Telegraph-Telephones Services and various Ministries. This results in an increase of over 700 millions in the expenses. To provide in a certain measure for the exceptional expenditure next year, certain exceptional revenue has been found: this will be formed (1) by the liquidation of small estates, the administration of which by the Ministry of Agriculture was cumbersome and resulted in loss; (2) by the disposal of 260 hectares of petroleum lands belonging to the State; (3) by the sale of iron deposits of the metallurgical exploitations of the Ministry of Industry and of old material belonging to the Ministry of War; (4) by appropriating special funds which were held by various Government Departments and were not under proper control. By this means it is expected to realise the sum of 1,256 millions. Further special revenue will be obtained by the collection of overdue taxes of former years.

The expenditure is divided into two categories: ordinary and extraordinary. It amounts to 35,381 million lei to which must be added 300 millions reserved for supplementary credits. The balance of the revenue is to be used for the payment of the old debts, which will be effected only from such funds as are available from the exceptional revenue as outlined above. It is specially provided that one quarter of the sum reserved for extraordinary expenditure is only to be utilised after August 1st, and then only by the special authority of the Minister of Finance, who must assure himself that the normal receipts of the first seven months have attained 55 per cent. of the total revenue. Further regulations establish the closest supervision of the departmental expenses by the Ministry of Finance with a view to ensuring the strictest economy.

The Ministry of Finance has granted certain minor concessions, but appreciable diminution of taxation can only be effected when, owing to more active trade, the present taxes show an increasing yield.

Signs that the economic situation is slowly improving are not lacking, according to the report of Messrs. Charles Rist and Roger Auboin, the technical advisers of the National Bank. This report points to the increased Treasury receipts for the months of October and November, partly the result of the good harvest, the return to a favourable trade balance, the increased note circulation and the improved situation of the National Bank, which shows a 50 per cent. cover in gold and foreign bills of its liabilities. As the full effect of this year's harvest will be felt only next Spring, it is expected that conditions will continue to improve in the course of next year.

HUNGARY.—REPARATIONS—POLITICS—PUBLIC FINANCE—FOREIGN TRADE—DEPRESSION.

(FROM OUR CORRESPONDENT.)

BUDAPEST, December 15.

PUBLIC opinion awaits the coming conference at the Hague with keen interest. It is rumoured in the Press that Count Bethlen will head the Hungarian delegation and will fight for the case of Hungary to the utmost limit. Hungary will emphatically resist the contention of Roumania and Czechoslovakia, which found echo in the French Press, that the Young Plan cannot be applied so long as Hungary is not prepared to assume further reparation payments than those already fixed by the Geneva Protocol of 1924. Count Bethlen summarised the attitude of the Hungarian Government on the reparation question in the Upper House of Parliament, and said that Hungary is not willing to pay more on reparation account than the 200 million gold crowns fixed at the outset of the League of Nations' reconstruction scheme in 1924 for twenty years ahead averaging 10 million gold crowns per annum. Under no circumstances will Hungary consent to give up the protection secured in Article 250 of the Trianon Treaty for the property rights of her citizens, because the abandonment of the said article would deprive Hungarian citizens in the States of the Little Entente, viz., Czechoslovakia, Roumania and Jugoslavia of their only legal protection and would make them defenceless against sequestration of goods and expropriation of land, etc. Consequently, Hungary will firmly oppose the linking together of the private claims of Hungarian Optants against Roumania, etc., with that of the reparation question. The Prime Minister has declared also that, while Hungary will insist that the compensation claims of her citizens against Roumania, Czechoslovakia and Jugoslavia should be dealt with at the Mixed Tribunal as prescribed by the Peace Treaty, on the other hand the Hungarian Government is prepared to discuss claims of foreigners other than those settled under reparation account or by tribunals set up by the Trianon Treaty, and to endeavour to reach an equitable settlement involving payment of the possible balance in moderate annuities after 1943. As to the suggestion put forward in the Press of the Little Entente that Hungary, in exchange for the restoration of her financial sovereignty, should consent to pay further reparations, Count Bethlen emphatically refused to discuss such proposals because they are not in accordance with the spirit of the Peace Treaty. It is hardly necessary to add that the contention of the Government that Hungary cannot afford to assume further reparation burdens is unanimously backed by the country. Two Italian delegates recently spent a few days in Budapest and, according to the Press, inquired into the Hungarian situation with a view to facilitating the coming negotiations at the Hague.

The evil effects of the imminence of the eastern reparation question are already manifest in the strained political relations between Hungary and the States of the Little Entente. Trade relations have never been satisfactory among the Succession States of the Old Monarchy because the new national States have raised high tariff barriers and endeavoured to attain economic self-sufficiency under the long-desired political sovereignty. The conclusion of commercial treaties between the Successive States have somewhat improved the disturbed economic equilibrium of the Danube Valley in recent years, but it seems that the reparation question has given a new impetus to the national spirit, and on the eve of the Geneva Conference for the proposed two years' "tariff holiday" there is, unfortunately, more talk of raising than of lowering tariffs. It is much to be desired that the Hague Conference should inquire, in connection with eastern reparations, into the economic disturbances which still hamper the natural development of the Danubian States, because no lasting political or financial settlement can be achieved in Central Europe without solving its economic problems.

Revenue returns for the first four months of the fiscal year are not satisfactory. Treasury receipts in July-October amounted to 295.8 million pengös, as against 318.2 millions in the corresponding period of last year. On the other hand, expenditure has increased in the same period from 309.2 million to 324.9 million pengös, which has changed the actual surplus of revenue of 9 million pengös in the corresponding period of 1928 into a deficit of 29.1 millions in 1929. The deficit of the first four months of the present fiscal year, although considerably higher than was estimated for this period, will, it is hoped, be made good later on. The deficiency is due in the first place to the economic depression which occurred in the second half of the year owing to the absence of foreign credits and the low prices of agricultural products.

Foreign trade returns for the first ten months of the year show that exports have increased to 797.8 million pengös, as against 652.8 millions in the same period of 1928. On the other hand, imports have declined in the same period from 973 million pengös to 896.9 millions, reducing the adverse balance of trade to 99.1 millions against 320 millions in January-October, 1928. The increase of exports is mainly explained by the high money rates ruling in the autumn months, which caused farmers to part with their products at the earliest date. Unfortunately, much of the export has been carried on at an actual loss, because agricultural products command a low export price which in many cases does not suffice to cover the cost of production. The decrease of imports is due to the diminished purchasing power of the farmer population. Another factor responsible for the falling off of imports and of the prevailing economic depression is the absence of sufficient foreign accommodation. It should be remembered that Hungary borrowed about 400 million pengös from abroad in 1928, but the total commitments of the present year are scarcely more than 200 million pengös, about one-half only of last year.

Economic conditions are not satisfactory. The cheaper money rates ruling abroad have had little effect so far, because the short-term borrowing of Hungary cannot be increased, and new long-term credits are not available as yet. Insolvencies in October amounted to 204, against 105 in the same month of 1928; the number of unemployed, showed by trade union returns, was 15,182, against 13,115 a year ago, but this represents but a small part of the workless population. The outlook for the new year depends mainly on factors beyond the control of Hungary; that is to say, in the first place of the world export price level of grain and cattle, and, in the second place, of the trend of the international money market, as Hungary cannot develop her economic resources without the aid of foreign capital. But perhaps most depends on the outcome of the Hague Conference, because uncertainty has brought about an unhealthy psychological state of affairs, which seriously hampers business activities.

CANADA.—NEW FINANCE MINISTER—BUSINESS—CROP ESTIMATES—FOREIGN TRADE—MINERAL RIGHTS—PRICES.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 17.

THE first act of Premier Mackenzie King on his return from his western tour was to appoint Mr Charles A. Dunning, his Minister of Railways, as successor to Mr Robb in the Ministry of Finance. Mr Dunning's advent to the Ministry of Finance may have important political consequences. His predecessor, Mr Robb, never made any secret of his protectionist convictions and contrived successfully to stave off during his *régime* the demands of the Western Liberals and Progressives for drastic tariff reductions. Mr Dunning is a politician of completely different antecedents, temperament and outlook; he is on record in the most definite terms as a vigorous critic of protectionism, and he derives his political strength from the support of the Free Trade farmers of the prairies. He might be able to bring in one standpat Budget on the excuse that he had not had sufficient time to study the tariff problem, but he could not produce a second which did not give some substantial tariff reductions without forfeiting the confidence of his western supporters. The West, apart from Mr Bennett, who only held office for a few weeks, has never before supplied a Finance Minister to Ottawa, and Mr Dunning's advent to this post means that it will have an influence upon fiscal policy which it never before enjoyed. It is also now rumoured that before the parliamentary session begins there will be a considerable reorganisation of the Cabinet, and that Mr T. A. Crerar, the former leader of the Progressive Party, will be brought in *vice* Mr Forke, the present Minister of Immigration. The Conservative press is interpreting these moves and projects as an indication that at the next general election Mr Mackenzie King intends to make a bid for the support of the prairie provinces by a policy of downward tariff revision, and they are hoping that the industrial and financial interests of Quebec, feeling that their position is endangered, will force a political revolt against the Liberal Party in its great stronghold. The date of the meeting of Parliament is uncertain, but meanwhile the Cabinet is meeting regularly to discuss estimates and make other preparations. Nothing is yet known about the decision of the Tariff Board about the "Empire content" regulations as affecting cotton; after the hearing the impression here was that nothing would be done, but Mr Dunning's appointment may have altered the situation, as he would find the regulation very difficult to defend against Progressive criticism.

There has been no noticeable change in the general business situation during the past two weeks, but certain weaknesses are still apparent and the difficulties are not minimized by intelligent people. Unemployment provides by far the most serious problem and already it is much worse than it has been at the corresponding date in any year since 1921 when the post-war depression was acute. In Montreal the *Star* is providing free meals daily for a large number of unemployed, and the situation is even worse in Toronto. Indeed, there is no industrial community which has not a large contingent of workless. The unemployment is not confined to casual labour, but affects many highly skilled artisans from the automobile and other industrial plants. Moreover, it is calculated that the two railway systems have curtailed their staffs for the winter by about 15 per cent. This diminution of employment, added to the shortage of the Western crop, has undoubtedly had adverse effects upon the public's purchasing power, and as a result merchants everywhere assert that this year their Christmas trade promises to show a substantial reduction in volume. Merchants and manufacturers find themselves compelled to take cognisance of this situation and are pursuing a cautious policy until the trade outlook is clearer. Greater caution is being exercised in regard to instalment sales and steps are being taken to prevent factory production exceeding demand and producing a surplus of stocks. There is no evidence of any widespread trade slump, but, on the whole, business is on a lower level of activity than it was a year ago at this time. The carloading figure for the week ending December 7, 1929, placed at 59,531 cars, showed a loss of 1,892 cars, as compared with the previous week, and of 15,863 cars, as compared with the corresponding week of 1928.

From the Canadian point of view a heartening feature is found in the improved outlook for the result of the policy of holding wheat which has been pursued with such tenacity by the Western pools and their allies. They have been greatly encouraged lately by the publication at Washington of official figures which show great shortages in the wheat crops both of Argentina and Australia. It is true that any sharp up-turn in grain prices has usually been followed by a set back, but the holders of the wheat are now confident that Europe will, during the first half of 1930, have to buy a great deal of wheat from Canada and at higher prices than now prevail. It is, however, realised that, if prices were kept too stiff, Europe might exhaust the normal carry-over of other wheat-exporting countries before it resorted to Canadian supplies, and, therefore, the Canadian holders of wheat, if prices go up a little, may begin to sell. The Dominion Bureau of Statistics has just published an estimate of the total value of the principal field crops of Canada for 1929, which it places at $986,936,000, as compared with parallel values of $1,125,003,000 in 1928 and $1,173,133,000 in 1927. The decline in aggregate value is smaller than most people anticipated and the detailed estimates with the final figures for 1929 are given below:—

	1929. $	1928. $
Wheat	345,480,000	451,235,000
Oats	169,951,000	210,956,000
Barley	62,448,000	76,112,000
Rye	11,135,000	11,491,000
Flaxseed	4,795,000	5,748,000
Other grains	51,933,000	52,630,000
Potatoes	69,963,000	40,874,000
Hay, clover, alfalfa	202,922,000	194,363,000
Root and fodder crops	67,929,000	81,584,000

The foreign trade returns for November, just published, are again exceedingly unsatisfactory. Domestic exports which in November, 1928, were valued at $167,013,618, are down to $111,068,332, which is a decline of 56 million dollars, or, roughly, one-third. On the other hand, imports, which last November were valued at $102,960,710, rose to $108,578,136. As a result the adverse trade balance for the first eight months of the present fiscal year has now mounted to about 83 million dollars; in this period exports valued at roughly 802 million dollars, show a decline of 139 millions, and imports valued at 885 million dollars have gained 44 millions.

On December 14th there were signed at Ottawa two agreements which bring to an end very ancient controversies. Under their terms the Federal Government, which hitherto has retained control of the natural resources of the three prairie provinces, agrees, in the case of Manitoba and Alberta, to transfer these resources to provincial jurisdiction. This question has been a political football for many years, and now the two provinces are conceded what are admitted to be very generous terms. It is true that most of the good land has passed out of public control, but there remain very valuable oil and mineral rights which come into the possession of the provincial administrations. In addition, they will not be deprived of the federal subsidy which was paid them in lieu of revenue derived from the sale of natural resources. And in the case of Manitoba 4½ million dollars is to be paid as compensation for the revenue loss which the province suffered from the withholding of the resources. Alberta is also to receive compensation, but the amount is to be determined by arbitration—a plan which had been previously followed in connection with Manitoba. Concurrent legislation by the Federal Parliament and the two provincial Legislatures will be required to ratify the agreements, but the only difficulty likely to be encountered is at Ottawa, where Mr Bourassa, the old Nationalist leader, and his allies may raise an issue about the failure of the Government to safeguard in the agreement the claims of the Catholic minorities in regard to educational funds derived from the sale of school lands.

Commodity prices showed a downward tendency last month, and the wholesale index number of the Dominion Bureau of Statistics, on the base of 1926 equals 100, was 95.8 in November, as compared with 96.7 in October; 111 quotations were lower, 44 were higher and 347 were unchanged. In no group was there a decline of more than a point except in the case of vegetables and vegetable products which fell from 95.7 to 93.7. The compiler of the index expresses the opinion in a note that the downward tendency is the result of the stockmarket slump.

JAPAN.—GOLD STANDARD—PRICES—FOREIGN TRADE—MONEY.

(FROM OUR CORRESPONDENT.)

TOKYO, December 10.

ON November 21st the Japanese Government announced its decision to remove the gold embargo, to take effect, rather earlier than had generally been anticipated, as from January 10th. The step is understood to have been taken hastily, if not prematurely, for political rather than financial reasons. But the preparations for the return to the gold standard have been fairly thoroughly completed,

though it cannot be admitted that all the essential conditions for it have been established. Besides the arrangement of British and American stabilisation credits to defend the yen after the lifting of the gold ban, the Government has replenished the specie held abroad, which stood at a comfortable sum of 232 million yen on the eve of the announcement of the decision, and some 71 millions more will be added to it by the end of the year. These balances hoarded at foreign centres will be enough to meet the international payments and stem the rapid outflow of gold during the first year of the restored gold standard. It is not expected that the foreign credits will be needed, and they will not be used unless very great strain is put upon the resources. As the Finance Minister stated in his declaration, there is room for little doubt as to our ability to retain the yen at parity as far as all indications go for the present.

At the moment there is little disposition to anticipate the immediate results of this momentous step. No one feels very sure whether the resumed monetary standard will come to stay without any dislocation of industrial conditions. Industry in general must, of course, suffer in varying degrees, and certain industries have already felt adverse effects in the form of lower prices, and have taken measures to cope with the situation. The silk reelers, for example, have agreed to curtail operations by 20 per cent. of their theoretical capacity from February 1st next. The rayon industry, also, has decided to run short time at the rate of 95 per cent. of its capacity.

The downward movement of wholesale prices made further rapid progress last month. The Bank of Japan's wholesale index number for November registered a substantially large drop on the month of 2⅜ per cent. and of 8¼ per cent. since the opening of the year. But our current figure is still some 20 per cent. higher than British and American indices. In comparison, however, with Japanese and world prices the higher Japanese price-level is accounted for largely by such " sheltered " goods as red beans, miso, dried bonito, Japanese paper, mattings and tobacco (Government monopoly), prices of which, in most cases, are kept high for special reasons. The adjustment of prices to the world level, therefore, will not be so tremendous as our current figure suggests.

Although the heavy import season normally sets in in November, the trade returns for last month show a favourable balance of 24.5 million yen, imports totalling 146,041,000 yen and exports 170,610,000 yen. As compared with the corresponding month of last year, imports fell by 19.3 millions, while exports rose by 17.2 millions. This contraction in imports is partly explained by consumers holding off for the recovery of the yen to parity, while foreign importers' speeding up of takings while the yen is still at a discount is, in the main, responsible for the expansion of exports. Although almost all imports fell off, the decline is largely accounted for by raw cotton, wool, sugar and timber. On the export side of the accounts the two staples, cotton goods and raw silk, which dominate the Japanese export trade, are largely responsible for the expansion. The apparent adverse balance of trade during the first eleven months has been reduced to 68 millions, as against 127 millions and 94.8 millions respectively for the same periods of 1928 and 1927.

The money market is quiet, the general trend remaining unchanged. Despite the seasonal pressure, the Bank returns showed that the note circulation at December 7th, at 1,239,769,000 yen, was 28 millions lower than at the corresponding date of last year, while gold reserve, at 1,064,373,000 yen, was 1.3 millions higher. The year-end is thus expected to be negotiated without undue difficulty. The stock markets remain weak and depressed in the complete absence of a disposition to buy. There is less evidence than usual of the year-end shopping rush and business is unsatisfactory.

Books and Publications.

ECONOMICS AND ETHICS.*

THIS is not a book for an idle hour. It is an ambitious attempt to frame a comprehensive social philosophy and, incidentally, to put the economist in his proper place in this scheme of things. At times the book's reach appears to exceed its grasp in the sense that the author leaves the impression that he is trying to say something which will not get itself expressed. But even when Mr Hobson is obscure it is usually worth while making some effort to penetrate his obscurity.

In defining his conception of welfare Mr Hobson stresses the importance of social values. He does not share the disbelief in society as such which the reaction against nineteenth century idealism has provoked in our own time. He has also a firm belief in the organic unity of every individual, and is sceptical of the value of sciences which split the ordinary man into an economic man, a religious man, and so on, and attempt to isolate his activities in each sphere. This means that, for Mr Hobson, economics must be concerned chiefly with the description and interpretation of an objective economic system; but that what is generally called analytical economics must dissolve into a general social philosophy "embracing the whole of human conduct."

Mr Hobson does not admit that the individual is necessarily the best judge of his own welfare. There are higher things and lower things, and the higher things remain higher even though to some of our lower natures they appear otherwise. Moreover the higher things, he thinks, cannot be referred to any common standard by which they may be measured against the lower; they are therefore essentially non-economic. Mr Hobson does not here face the very real practical difficulty that since nearly all " the higher " activities involve an economic cost we are in fact compelled in some fashion to measure their utility against alternative "lower" satisfactions which might be had for the same cost. It may be impossible to measure the utility of religious devotion against that of eating. But since most religious activity requires the maintenance of at least a church and a parson the ordinary worshipper does have to weigh his contribution to these costs against the alternative possibility of extending his expenditure on " lower " satisfactions. The starving artist constantly deciding how far he will sacrifice his art to his stomach settles every day the problem of valuation which eludes Mr Hobson.

When he comes to look for ethical principles embodied in the existing economic system, Mr Hobson does not find a very pleasing state of affairs. Our method of dividing the product of industry is particularly at fault. Here bargaining strength is the determining factor; and this will not square with moral right. Mr Hobson arrives (very quickly) at the conclusion that distribution according to needs is the only ethically satisfying principle; but little heed is now paid to it. This leads him to an elaborate inquiry how far the economic system would be broken down if the distribution of the product of industry were radically changed so as to give more scope to this principle. In other words, how far are existing methods of payment necessary to evoke the supplies of labour and capital and inventive and organising ability required to keep the machine running? Less than many of us suppose, Mr Hobson thinks. Unhappily, however, this all-important question of the motives which actuate economic activity is one on which our precise knowledge is extremely small. We are obliged to fall back on generalisations which lose most of their value because nobody knows how far they are applicable. It is not surprising, therefore, that Mr Hobson is not able to say anything very new and significant about the matter. But he repeats many of the old things very convincingly.

* " Wealth and Life." By J. A. Hobson. Macmillan and Co., Ltd. 1929. 15s

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Survey of International Affairs, 1928. By A. J. Toynbee. Assisted by V. M. Boulter. (London) Oxford University Press, Warwick Square. 21s. net.

The salient points in the 1928 " Survey " are the negotiation of the Kellogg Pact, the development of the constitution of the League of Nations, the policy of Italy in South-East Europe, the history of the Islamic world and the changes in the foreign relations of China.

Documents on International Affairs, 1928. By John W. Wheeler-Bennett. (London) Oxford University Press, Warwick Square. 12s. 6d. net.

A collection of the most important treaties of the year; statements on foreign affairs made by premiers and foreign ministers before their respective parliaments, and domestic documents of more than usual international importance.

A Picture of World Economic Conditions in the Summer of 1929. (New York) National Industrial Conference Board, 247, Park Avenue. $2.50.

An analysis of the condition of industry and trade in twenty-three countries. Part I. is principally statistical; Part II. consists of special articles contributed by authoritative correspondents in each of nineteen countries.

Notes on the Theory of Profit. By George O'Brien. (Dublin) Hodges, Figgis, and Company. 5s. net.

A slim, well-documented volume whose contribution to a much-disputed subject in economic theory will be of great value to students of economic principles.

The Five-Day Week in Manufacturing Industries. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. $1.50.

A critical account of the experience of the five-day week in the United States. The data are collected and analysed with the usual thoroughness of the National Industrial Conference Board.

The Movement for a Sounder Money. (New York) Stable Money Association, 104, Fifth Avenue.

A pamphlet containing contributions by six distinguished financiers, including Mr Owen D. Young and Sir Josiah Stamp.

Kapitalismus und Sozialismus. By Karl Kumpmann. (Essen) G. D. Baedeker/Verlag. 7.50 mks.

Primarily an inquiry into what exactly is understood by these loosely used terms. The author has tried to avoid going over the ground already so thoroughly traversed by innumerable writers on capitalism and socialism.

The Commerce Year Book, 1929. *Vol. II. Foreign Countries.* (Washington) Government Printing Office. $1.00.

This is one of the few year books which enhance their value by a generous use of maps. It contains a concise account of the economic activity of each of sixty-five countries during 1928, with tables of statistics covering several years. The second half is devoted to comparative world statistics of crops, production, population, trade, shipping, insurance, telegraphs, prices, etc.

Anuario del Comercio Exterior de la República Argentina. Año 1927. (Buenos Aires) Talleres S. A. Casa Jacobo Peuser, Ltda.

An abstract of Argentine official statistics for 1927, with comparative figures for the two preceding years.

Migration Laws and Treaties. Vol. III. International Treaties and Conventions. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 7s. 6d.

A survey, conveniently classified, of international treaties and agreements governing emigration. A full list of the documents analysed is appended.

Forschungen zur internationalen Finanz- und Bankgeschichte. By Adolf Trende. (Berlin) Berliner Kommissionsbuchhandlung G.m.b.H., Berlin, S.W. 68.

A study of Barthold Georg Niebuhr as a banker and financier.

Grundriss der Sozialökonomik. (Tübingen) Verlag von J. C. B. Mohr. (Paul Siebeck.)

An advanced German text book on transport. A large section is devoted to the subject of means of transport and the State.

Das Roggenproblem und die Gerstenzollfrage. Von Dr. Karl Kolwey. (Bremen) Nordwestdeutscher Wirtschaftsbund. 1s. 6d.

A discussion, in German, of the present crisis in the production of rye and of the proposed remedies.

Production Organisation. By J. D. Black and A. G. Black. (New York) Henry Holt and Co., 1, Park Avenue. $3.75.

A text-book intended to cover a first semester's course of economics. It is arranged on lines rather different from those conventionally adopted.

Reminders for Company Secretaries. By Herbert W. Jordan. Fifteenth edition. (London) Jordan and Sons, Limited, 116 to 118, Chancery Lane. 2s. 6d.

The company secretary is embarrassed this autumn by a wealth of new handbooks for his guidance. This new edition of an old manual is very conveniently arranged.

Indian Chamber of Commerce, Calcutta: Annual Report of the Committee for the Year 1928. (Calcutta) M. P. Gandhi, 135, Canning Street.

Includes a survey of economic events during 1928. Excerpts from the more important correspondence of the Chamber during the year are reproduced in an appendix.

The East African Manual. Edited by C. Carlyle-Gall. (London) Mining and Industrial Publications of Africa, Limited, Africa House, Kingsway. 30s.

A profusely illustrated book of reference, designed primarily for traders.

The People's Year Book, 1930. (Manchester) The Co-operative Wholesale Society, Ltd., 1, Balloon Street.

A reference book relating principally to matters of particular interest to members of the co-operative movement.

New York Insurance Report. Part III. (Albany) Insurance Department.

This volume contains the usual exhaustive statistics of casualty, credit, employers' liability, fidelity, surety, mutual compensation, automobile casualty, real estate title and mortgage guaranty.

Versicherungslexicon. Edited by Professor Dr. Alfred Manes. (Berlin) Verlag von E. S. Mittel und Sohn. Rm. 62.

A German encyclopædia of insurance.

Great Western Ports, 1930. (Cardiff) Great Western Railway, Chief Docks Manager's Office.

This unique annual contains an immense amount of information for the use of shippers, together with plans and photographs of the various ports.

The Shipping World. January 1, 1930. (London) Effingham House, Arundel Street. 1s.

A useful review of shipping during the past year. There are also articles on such related subjects as " Marine Insurance " and " Wireless in 1929."

The Hibbert Journal. January, 1930. (London) Constable and Company, Ltd., Orange Street, 2s. 6d. net.

Contains, among other articles, " Beauty and the Machine," by Robert Swann; " The Place of Authority in Religion," by Canon T. A. Lacey; and two articles by C. G. Montefiore and Professor F. C. Burkitt which attempt to give some idea of the views held by Jews and Christians respectively about each other's religions.

International Conciliation, December, 1929. *Observations on Present-Day Russia.* (Worcester, Mass.) Carnegie Endowment for International Peace, 44, Portland Street. 5 cents.

Contains a special article on " The Culture Programme of Soviet Russia," by Paul Monroe, and reprints or translations of other articles which have already been published elsewhere.

Empire Review. January, 1930. (London) Macmillan and Company, Ltd., St. Martin's Street. 2s. net.

This issue includes, *inter alia*, articles on " Canada's Future," by H. Norman Bathgate, and " Britain and the Soviets," by Thomas Greenwood.

The Slavonic Review, December, 1929. (London) Jonathan Cape, Limited, 30, Bedford Square. 6s. net.

This issue contains a series of articles on aspects of Slavonic religious thought.

The Stock Exchange.

THE FUNCTION OF THE JOBBER.

THE jobber in the London Stock Exchange has by no means escaped the criticism which, during recent months of depression, has been impartially extended to all the component parts of the investing machine, including brokers, promoters, issuing houses, directors, and even the joint stock banks and the Stock Exchange Committee themselves. Such criticism has been none the less powerful, in the jobber's case, for being confined mainly to the larger investors, such as the trust companies, since to the small investor the jobber, whose business and personality are confined within the walls of the Stock Exchange, is a less familiar figure than the broker. The constitution of the London Stock Exchange differentiates sharply between brokers and dealers (the term "jobber" nowhere appears in its rules), laying down broadly, that a member may be one or the other, but not both at the same time, and that a dealer may not deal directly with the public. This division of functions has endured for many years in London, and as an analysis, made last October, showed that there were 1,510 jobbers out of about 3,700 Stock Exchange members in active business, it is not likely to be upset in the near future. It is sometimes contended, however, that the separation between the two classes is unduly rigid; that the size of the jobber's "turn" is occasionally out of proportion to his services in "making a price," and that he may even refuse to make a price at all at the precise moment when such a service is economically most desirable. We propose to discuss these charges in the following paragraphs.

The Stock Exchange view of the jobber's position has been well put to us by a "House" correspondent with a long inside experience. The technical position of a broker, he points out, is that of an agent, but the jobber acts as a principal. Upon occasion he may be an agent, but it is as a principal that he bases his plea for existence. He stands up in the market place to make prices, prepared to buy stock or shares at the lower, and to sell at the higher, of the two prices he quotes.

The first misapprehension which occurs in the public mind, our correspondent continues, is in connection with the necessity for the jobbers making prices. This misunderstanding becomes acute in days of "flatness," when nobody wants to buy. The jobber obviously cannot go on taking stock from all and sundry, and those who criticise him for refusing to do so ignore the fact that no man, however ample his resources and strong his credit, is able to take on more than a certain amount of responsibility. If a jobber imagined that a company in whose shares he regularly dealt was likely to go into liquidation, and his impression was shared by other people, no man in his senses would continue to make prices on the understanding that people could sell him shares simply because he quoted double figures. There must come a time when the jobber feels it is dangerous to make prices, because he does not know where to replace what he has sold, or to sell what he has bought, and must pay for.

Again, the fact that a jobber "makes a price" does not mean that the quotation is dependent upon his whim or fancy. The price, in fact, depends mainly upon public supply and demand. It may be unduly raised or lowered, according to the operations of people who are dealing in the shares, but, as a rule, these are outside the scope of the jobber, and he is just as likely to lose money by reason of them as is any member of the public. But his willingness, as a rule, to buy or to sell without knowing in which direction the man who comes to him wants to deal, offers a valuable "buffer" to the violence of such rises and falls as New York has recently witnessed. The jobber's province, in short, is to find stock with which to supply purchasers, and, as a necessary sequel, to discover purchasers who wish to take stock which is offered, and he must normally be prepared to take the ordinary business risks which attach to selling stock that one has not got and buying stock for which one knows of no immediate home. Jobbing may be defined as an art or an instinct. To those in close touch with British Stock Exchange practice, concludes our correspondent, the necessity for the presence of the jobber is as obvious as that of the broker, for while the latter acts as a client's agent, the dealer plays a part of equal consequence in imparting flexibility to all the markets around the House.

Few people would quarrel with this temperate statement of the jobber's responsibilities and limitations, but many who recognise that it is not his business to take on his book, in time of trouble, unlimited quantities of stock in the ultimate soundness of which he has no faith, frequently complain that in his anxiety to avoid personal loss he is sometimes unwilling to shoulder the ordinary trading risks inseparable from his position. Holders of these views declare, in fact, that there are an unnecessarily large number of jobbers on the Stock Exchange, and that not all of them possess the somewhat extensive financial resources which are indispensable to the efficient performance of their duties. As a Stock Exchange correspondent recently pointed out in our columns (see the *Economist*, December 14, 1929, page 1146) a man may become a member of the "House" for the modest sum of £2,225 (of which only £735 represents real "out-of-pocket" expenses, the remainder being the cost of a nomination and three Stock Exchange shares, which have a saleable value on a member's resignation), and sureties to a total of £1,500 for four years.

The essential functions of the jobber closely resemble those of a merchant. As a specialist, he is expected to have more than ordinary knowledge of the limited range of "wares" in which he deals. He should be in a position to keep, in his "warehouse," a sufficiently varied and extensive "stock" of those wares to satisfy the reasonable demands of his customers, or, if necessary, occasionally to provide a "line" which he may not possess at the moment, but may be able to obtain before the date of delivery. When trade is temporarily slack, he must be able and willing to carry an abnormally large "stock" which would otherwise press damagingly upon the market. These duties, it is argued, call for much more extensive financial resources than are presupposed by the Stock Exchange membership regulations. The presence in any market of numerous dealers who are virtually "men of straw" may be disadvantageous in two distinct ways. Their assumption of liabilities beyond their means involves the risk of a series of unsettling failures, while the much more common phenomenon of ultra-caution, evidenced by unwillingness to take stock, however sound, or the rush to "even their book" at the end of each day, tends to rob markets of the flexibility which is the jobber's *raison d'être*. The latter tendency may not be confined to periods of depression and liquidation. It has been asserted that some jobbers habitually refuse to deal in unquestionably sound investment stocks, which do not enjoy an active market, until they have assured themselves of a *contra* order from another customer. There would seem to be some force in the criticism that such dealers might well be superseded by a blackboard, which, incidentally, would not charge any "turn."

Whatever his contemporary shortcomings, the jobber remains an integral part of London's Stock Exchange organisation. His critics do not invariably define his functions with due precision. It may well be argued that the jobber should act as a cushion in respect of short-term fluctuations in prices—extending, say, over one, two or three accounts—but that the duty of carrying stock during a major swing in quotations, which may spread over many months, is essentially one for the outside speculative investor. The jobber may plead, again, that the banks and others who regularly supply him with "working capital" are liable at times to apply the screw for reasons outside his control. With all allowance, however, for the difficulties of his position and for his undoubtedly valuable services during such periods as last autumn (when, at one time, London was called upon to absorb masses of stock from every Bourse in North America and Europe), no serious observer, inside or outside the "House," would regard his *rôle* as incapable of improvement. The suggestion of a severer "means test" for new members of the Stock Exchange opens up many controversial questions, and must necessarily be left to the responsible authorities, who, it will readily be admitted, have, in the past, given many evidences of their realisation that the "House" was made for the public, not the public for the "House." In the long run, however, limitation of resources rather than of enterprise would seem to be behind many of the complaints that have been recently expressed. Whether the rigid segregation of the functions of the broker and the jobber, which is more or less peculiar to this country, might with advantage be modified, is another far-reaching question. In New York, for instance, the "specialist" and, to a less extent, the "floor trader," possess many of the attributes of the jobber, but may, and do, deal for outside clients, while brokers frequently deal directly with each other. The whole issue is primarily one for the Stock Exchange itself to decide, but its implications are so closely bound up with the investor's interests that those concerned would, it may be assumed, be the last to deprecate constructive criticism from any quarter.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
January 7.	January 9.

Though business remained of small dimensions, a more cheerful tone obtained in the "House," partly in sympathy with the increased firmness of New York, partly as a result of the distribution of year-end dividends and of the very favourable monetary outlook, and partly, it must be said, in response to the seasonal spirit of New Year optimism, which past experience has shown to be, unfortunately, of an evanescent character. Firmness was most in evidence on the investment side, the volume of dealings in more speculative stocks continuing very limited, and being likely to remain so until the incubus of the pending "Hatry" settlement is removed.

With money market conditions much easier than had been expected, the reinvestment of dividend disbursements was reflected more or less throughout the gilt-edged list. The Five per Cent. War Loan further strengthened, and both the Three and a Half per Cent. and the Five per Cent. Conversion issues were firm. The deliberations of the Lahore Congress, however, were naturally a bear point for India Loans, which gave way appreciably. Dominion and Colonial stocks attracted little interest.

Changes in quotations in the foreign market were few and irregular, though the pre-holiday demand for certain European stocks was again in evidence. Brazilian bonds showed no recovery. Chinese bond-holders were not, apparently, inclined to expect serious repercussions from the Nanking Government's unilateral denouncement of ex-territoriality, quotations being, if anything, firmer than before Christmas.

Considerable interest centred on the 52 weeks' traffic figures of the Home Railways, which are discussed on page 29 of this issue. While regarding increased dividends on the Great Western and the London and North-Eastern as a certainty, the market was more undecided as regards the Midland and Scottish and the Southern, though the more optimistic observers believed that economies in expenditure on both systems would wipe out the decrease in receipts and leave a margin for higher distributions. The "London" stocks continued to attract but a modicum of interest. The Foreign Railway market was quiet but dull, the Argentine stocks fluctuating in view of the prevailing uncertainty regarding the immediate economic outlook. San Paulo was a heavy feature among Brazilians, while the prospect of new restriction measures in the nitrate industry (discussed in a "Note" on page 31) induced a certain amount of selling of Chilean railway stocks.

Industrial shares opened in unexciting fashion, the accumulation of orders over the Christmas holiday being small. A better feeling prevailed, however, over the turn of the year, a moderate recovery occurring in various shares which had previously been on offer. Numerous international counters were marked up in anticipation of increased Wall Street interest. Support for Imperial Chemical drove a number of bears to cover, and Margarine issues gained further ground. Selling of Carreras having apparently come to an end, a rally ensued, and Imperial Tobacco shares were more in the picture than of late. American Celanese were in demand from New York, and Courtaulds had a stronger tone, the textile share market as a whole showing a slight but perceptible (and welcome) improvement. Though the speech at the Illustrated Newspapers meeting was somewhat conservatively interpreted, a number of buying orders produced a sizeable rise in Inveresk Paper. The firmness of Guinness was attributed to the success of the company's advertising campaign. Film company shares were weak, British International Pictures falling heavily on reports that no interim dividend would be paid this year. Bank shares were dull pending the dividend declarations, while insurance share values had an irregular trend.

The accumulation of orders in the rubber share market was appreciably in excess of anticipation, and a number of quotations showed improvement when the commodity rose to over 8d. a pound, with October-December rubber dealt in at 9¼d., though a reaction occurred on Thursday. Idle conditions obtained in the tea share market, no commodity auctions being held during the week. Business in oil shares was again limited, but Royal Dutch and Shell were firm, while Paris was a moderate buyer of Mexican Eagle. Anglo-Persian and Burmah were, however, indirectly affected by unfavourable Indian political developments.

Kaffirs finished the year with an unexpected burst of strength, emanating mainly from Paris, but regarded in some quarters as presaging an effort to bring about a revival of interest in these shares in the near future. Rhodesians, for once, held second place, though generally inclined to firmness, Rhodesian Congo Border showing marked strength. The low level of silver induced selling of Burma Corporation and other companies producing considerable quantities of the metal. Rio Tinto improved on support from Paris, but tin shares remained quiet despite an upward turn in the price of the metal.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Our New York correspondent cables:—The share market closed the year with a rally and started the New Year strongly, but then reacted in quiet conditions on renewed bear efforts, which were assisted by the weakness of Fox Film Corporation; the latter has been threatened with receivership proceedings by its Class "A" stockholders. However, there is a better feeling about the immediate prospects of the market, which resisted recent pressure rather well and which failed to develop any considerable bear volume on the occurrence of a reaction. It is also thought that call money will soon be quite cheap for a short time at least, as the Reserve Banks will be unable to offset fully the return flow of funds in early January by selling Government securities without damaging the market for the latter. Some difference of opinion is disclosed as to the subsequent course of the money market. One view held in good quarters is that money will be comfortable and that the banking situation can stand a loss of another $200 million of gold; another view is that the amount of "free gold," which has alre

been considerably reduced, will be still further reduced as soon as the volume of bills outstanding diminishes and the volume of eligible paper in the Reserve Banks available as reserve against notes is correspondingly reduced. According to this view, the Reserve System is quickly approaching a position where ability to expand the System's credit at the discretion of the authorities will have passed, and that the retention of a comfortable monetary position will then require the liquidation of the Member Banks' loans on securities. Some adherents of the second view feel that the System cannot afford to lose another $200 million gold now; however, it is probably the first view that prevails in the best quarters.

The output of the steel industry, which probably approximated 50 per cent. of capacity during the month of December, and which dropped to 40 per cent. last week, when many year-end stoppages occurred, is expected to approximate 60 per cent. early in January. Automobile manufacturers are gradually increasing their output. Department store sales in New York in the first 24 days of December totalled approximately the same volume as in the corresponding period of last year. This confirms the impression that, although the recession in industry has been very sharp, current consumption by the public remains good. There are many signs that manufacturing consumers of steel have already reduced their stocks of raw material to the absolute minimum and there is some disposition to believe that the rebound in production may be in proportion to the sharpness of the recession.

PARIS.

The affairs of the Paris Bourse during the month of December fall into two well-defined periods. During the first ten days, in spite of the depression of foreign markets, liquidation in Paris was on a more or less moderate scale, with business restricted in volume. But during the week which preceded the selling of December 15th, despite the New York recovery, a veritable "slide" in prices occurred; in three days share values gave way something like 10 per cent. in a fairly active market. On the day following this burst of liquidation there was a complete reversal of tendency. On the intervention of the banks, assisted by the Government, a hasty re-buying movement ensued, prices swiftly regaining their November level. Since then, apart from a few fluctuations, quotations have been maintained, sellers refraining from attacking a market where a desire for support was so clearly visible. The poverty of transactions seems to give a rather artificial character to the improvement in all cases, and the uneasy sentiment is aggravated by the general weakness of foreign stocks. There are no orders from clients, and professionals dare not risk bullish operations in a market of such uncertain equilibrium. A noticeable factor is the extraordinary firmness of rentes, which continue to advance in a lively market. A strengthening of the banking group, and particularly of the Bank of France, has come opportunely at the time of the mid-December slump. Money remains easy and plentiful at 2¼ per cent.

CANADA.

The Canadian stockmarkets have not attained anything which can be described as a state of buoyancy and although there has been a good recovery from the bottom prices which were reached at the end of the great slump, there is not much optimism about the immediate future. Probably there is not the same amount of cleaning up of *débris* to be accomplished in Canada as in the United States, but the same questions are heard about the position of some investment trust companies which had been buying stocks at peak prices. Brazilian Traction, which is a very popular Canadian stock, and is heavily held in Montreal and Toronto, has been erratic on disquieting reports about the coffee situation and the state of Brazilian finances. Some of the other public utility stocks, like Montreal Power, have been stronger, and the railway equipment stocks have been fortified by the announcement of large orders by both the railway systems. The public is doing some investment buying of good common stocks, but is averse from speculating, and has been turning its attention more and more to bonds, the market for high-grade securities of this class having been very firm. Trading generally has shrunk to modest dimensions and no real activity is now expected until after the holidays. The Western oil stocks have been weak and there has been a persistent and successful bear drive against a batch of important mining stocks known as the Lindsley group, which has carried them to very low levels and adversely affected the rest of the mining market.

INVESTMENT NOTES.

Home Railway Earnings.—Though the home railway stockholder has suffered this year in some cases a further loss in the capital value of his holdings, the position of the railways on the revenue side has, generally speaking, shown appreciable improvement. In the 52 weeks of 1928 gross receipts on the four group railways showed a decline of over £9,000,000 as compared with 1927. This tendency was definitely arrested last year, as the following table shows:—

(000's omitted).

Four "Group" Lines.	Passengers, &c.	Merchandise, &c.	Coal and Coke.	Total Goods.	Total Goods and Passengers.
	£	£	£	£	£
52 weeks, 1928	79,275	66,428	33,405	99,833	179,108
52 weeks, 1929	77,107	66,962	36,329	103,291	180,398
1929 compared with 1928 Amount	− 2,168	+ 534	+ 2,924	+ 3,458	+ 1,290
1929 compared with 1928 *Per cent.*	− 2·7	+ 0·8	+ 8·75	+ 3·5	+ 0·7

A fresh loss of 2¾ per cent. in gross passenger revenus has been more than offset by increased receipts on the goods side, particularly under the heading of coal and coke. The decline in passenger revenue reflects mainly the provision of further cheap facilities, especially the extended week-end ticket system, which came into force in August, 1928. The railways, as a whole, have lately carried more passengers than at any previous period in their history. No receipts from railway-owned or partly-owned road transport undertakings are, of course, included in the figures. Increased coal traffic, especially for export, has made a significant contribution to the enhanced goods receipts. In the next table we compare revenue of the four group lines and the two London lines during the past two years quarter by quarter:—

(000's omitted.)

Increase or Decrease as compared with 1928, in	Group Lines. Great Western.	London and North Eastern.	London Midland and Scottish.	Southern	Total. 4 Groups.	London Lines. Metropolitan.	Underground Electric.†

* Totals virtually same in both periods.
† Includes receipts from independent omnibuses acquired during 1929.

The comparison is affected as regards the first and second quarters by the fact that Good Friday fell in April in 1928 and in March in 1929. Broadly, the loss in gross passenger receipts in the two "heavy" quarters of the year (the second and third) was shared by all the group lines, though the third quarter witnessed a relative recovery on the Great Western and the Southern, the Continental traffic of the last-named having been affected in the previous quarter by the restriction of entry into France under temporary "health" regulations. The most satisfactory showing as regards total receipts was made by the North-Eastern and the Great Western, and the least satisfactory by the London Midland and Scottish. In this connection it is relevant to point out that export coal, in a recent period, accounted for as much as 25 per cent. of the total coal receipts of the North-Eastern and 45 per cent. of those

of the Great Western, but only 10 per cent. of those of the London Midland and Scottish. The last-named company was undoubtedly affected also by the continued depression in Lancashire, one of its most important traffic areas. Its goods receipts are to a comparatively large extent derived from high-grade traffic, which is most vulnerable to road competition. The actual showing made by the North-Eastern and Great Western is appreciably better than the figures indicate, since the latter do not include dock receipts, which were substantially better than in 1928, though on the Midland and Scottish they showed little movement. Among the London lines, the Metropolitan has continued to make steady headway, while the Underground, whose stocks have been much less active than in 1928, more than recovered in the latter part of the year the loss of traffic in the first quarter. In this case, of course, 'bus receipts loom largely in the total figures. It is expected that railway expenditure will show a further decline, though not on the same scale as in 1928. The outlook for home railway stockholders altogether is brighter in many ways than for some time past.

Rayon Shares and the Rayon Market.—The demand for rayon, writes an artificial silk correspondent, is seasonally dull at present, and during the next few months business will undoubtedly be limited by uncertainty as to the fate of the "Silk Duties." In the event of a repeal of the duties, Mr Snowden's willingness to introduce a scheme of rebates to meet the position of holders of duty-paid stocks would doubtless be helpful. But it might well be that those firms whose very existence resulted from the duties would not be able to carry on. Those firms in a position to turn out the highest quality yarns, such as the fine filament and dull-lustre viscose, and the acetate warps on beam, are able to do a fairly remunerative business in these grades. Apart from these special yarns the main demand is for cheap grade weft and knitting yarns, and the medium quality yarn is apparently disappearing from the market, its place being taken by yarns in which price is the first consideration. Since the introduction just over a month ago of a 150 denier weft on pirn yarn, which sells at 3s. 9d. a lb., the prices of other cheap-grade yarns have been reduced from 3d. to 6d. below this level, so that, after paying the Excise duty of 1s. per lb. it is difficult to see how any profit can be made. Apart from the effects of the cautious policy which must perforce be adopted while uncertainty regarding the duties remains, the outlook for the home market for woven and knitted rayon fabrics is encouraging, and a big business is anticipated with the Dominions. In the Eastern markets for mixtures of American cotton and rayon, Lancashire has steadily lost ground to Japan during the past year. Efforts are being made to regain this trade and are believed to have been the main factor behind the introduction by the leading producers of the cheap yarn mentioned above. At present, however, Lancashire prices as a whole would seem to be too high. The Japanese fabrics, moreover, are of good quality. How far these considerations have affected the market in rayon shares it is difficult to say, for very little is known on the Stock Exchange of the conditions in the trade. The weakness of both Courtaulds and British Celanese shares has been a feature of the market during the past account, as the following table will show:—

	Highest, Nov. 25, 1929.	1929.	This week.
Courtaulds, £1	5 3/8	3 1/8	2 11/16
British Celanese, 10s.	44/4½	20/–	16/3
" " 7½% Second Pref. (£1)	18/3	13/3	12/6

It has been rumoured in the market that British Celanese have been encroaching to some extent upon Courtaulds trade. If Courtaulds have merely maintained their position it is argued that the fall in rayon prices will appreciably affect their earnings. Last year Courtaulds earned nearly 20 per cent. and paid 15 per cent. tax free. The interim dividend in respect of 1929 was reduced from 5 per cent. to 4 per cent., tax free, and the market is looking for a final of 6 per cent. or 8 per cent., tax free, making 10 per cent. or 12 per cent., tax free, for the year. If the Chancellor removes the rayon Customs and Excise duties the market on the Stock Exchange would undoubtedly become reactionary, discounting the probability of a slump in rayon prices, the closing down of the smaller companies and the throwing on the market of large stocks of rayon at distress prices. Taking the longer view, the market is confident that Courtaulds will emerge successfully from the present depression in the trade, but is inclined to take a conservative view of the dividend possibilities of British Celanese.

Ebbw Vale Changes.—Share and debenture holders in the Ebbw Vale Steel, Iron and Coal Company have learned this week with considerable interest that Sir Frederick Mills, Bart., has resigned from the boards of the company and its subsidiaries. Sir Frederick came to Ebbw Vale as general manager in 1899, and has been chairman since 1918. The boards of the companies are to be reconstituted, and, as a first step, Sir John Beynon, Bart., has been appointed a director. Drastic changes have already taken place during the last three years. Sir John Beynon himself was a director until 1927, when he and three others resigned, leaving only Sir Frederick Mills and Captain C. E. Benson, the latter representing the noteholders. Mr L. D. Whitehead, chairman of the Whitehead Iron and Steel Company, and Sir Arthur Lowes Dickinson were appointed to the vacancies, but the former shortly afterwards resigned, and his place was filled by Sir W. R. Preston. Finally, Captain Benson announced his retirement a little time ago, on account of illness and absence abroad. Thus, save for the return after an interval of Sir John Beynon—who has all the while remained chairman of Ebbw Vale's sales agents, T. Beynon and Company—none of the pre-1927 directors retains his seat on the board, which now consists of Sir John Beynon, Sir Arthur Lowes Dickinson and Sir W. R. Preston. It has been intimated that Mr D. H. Allan, senior partner in a London firm of chartered accountants, is likely to join the board. The inner history of the happenings of the past three years has never been made public. Sir Frederick Mills, however, at the last general meeting, expressed regret at Mr Whitehead's decision to resign, not on any "real difference of opinion as to the requirements necessary for the success of the company, but rather as to the method, the time and the finance for putting them into execution." A writing down of the capital has seemed long overdue, and shareholders have pressed questions on the subject. The last balance sheet, dated March 31, 1929, showed bankers' loans, £784,709; other creditors, £543,955; and debit balance of profit and loss account, £957,636 (including £528,000 note interest accrued). Liquid assets then totalled £644,327, but though a capital reserve account of £1,350,348 and a special reserve of £871,836 appeared in the balance sheet, for several years past no depreciation has been provided on the properties and interests in subsidiaries, which stand at £9,948,681. A loss of £407,394 (including £240,000 note interest debited but not paid) was shown for 1928-29, and preference dividends are in arrear since 1923. At the meeting in June it was stated that arrangements were being made whereby the modernisation

of the iron and steel departments would be carried out over the next three or four years, but in September notices were issued to all officials and men employed in the iron and steel plant to terminate their contracts, owing to intensity of foreign competition. The neighbouring Guest, Keen works at Dowlais appear to be more fortunate. The steel plant still in operation at Ebbw Vale is only finishing the balances of contracts on hand; the small furnaces that are still in blast are merely using up the stocks of ore. It has been suggested that the company intends now to concentrate on its collieries, which have an annual output of 5,000,000 tons, and colour is lent to this view by the news that Sir John Beynon has appointed Mr T. L. Mort to be his mining adviser. Mr Mort has been serving in association with Sir John Beynon on the board of Fernhill Collieries, a small company owning pits at the head of the Rhondda Valley. Ebbw Vale has the advantage, as compared with certain others of the large South Wales coal companies, that its coal properties are not scattered, but grouped well together. Meanwhile, shareholders will be anxious to learn what is the attitude of the creditor banks to the company under the new *régime*. It is not yet clear who has taken the initiative in the appointment of Sir John Beynon.

Nitrate Prospects.—The lot of the nitrate shareholder has not of late been a happy one. We summarise, in a subsequent "Note," proposals for amalgamation of two Chilean companies on a basis involving a heavy writing-down of capital—a process which the Stock Exchange has already carried out as regards the industry as a whole, nitrate shares having lost, on the average, two-thirds of their value over the last few years, as the following table suggests:—

	1925 (Best recent year). Highest Price.	1925 (Best recent year). Lowest Price.	1929. Highest Price.	1929. Lowest Price.	Last Ordinary Dividend. Rate %	Last Ordinary Dividend. When paid.	Yield at present Price. £ s. d.

† Interim dividend.

The outlook does not promise any early improvement, increased consumption of Chilean nitrate of soda in Europe during the past six months having been more than offset by a falling off in deliveries in the United States of America, so that the 25 per cent. increase in consumption, postulated six months ago by Messrs. Aikman (London), Limited, as necessary to balance the probable growth in production during the nitrate year ending June 30th next, does not appear likely to be forthcoming. Visible supplies of Chilean nitrate have continued to rise, and were equal, on December 31st last, to about a year's consumption:—

SIX MONTHS, JUNE TO DECEMBER.

(Thousand Tons.)		1913.	1927.	1928.	1929.

* Estimated.

January to June is normally the period during which America's takings are heaviest, and it remains to be seen whether increased consumption during these months will largely retrieve the lost ground, as it did a year ago. In the meantime, Messrs. Aikman declare that "a very cursory glance at the situation shows the urgent necessity of a general and substantial restriction in the production of nitrogen at any rate until such time as consumption can be more accurately gauged." But such a policy involves peculiar difficulties in Chile's case, partly on account of the ever-present competition of synthetic nitrogen and partly because the triumph of the "Guggenheim" process over the older "Shanks" process has largely committed the dominant interests in the Chilean industry to a policy of massed production. A scheme, however, has been inaugurated, to operate from February 1st next, aiming at a 20 per cent. reduction by the voluntary suspension of operations in oficinas where the cost is high. Whether the Guggenheim interests, who have an ambitious programme of development in hand on the Lautaro properties, will agree to restrict their output is another question. In the meantime, further negotiations have been taking place between synthetic nitrogen producers on the Continent of Europe during recent months, with a view to making the existing nitrogen agreement more comprehensive, and a working basis has been reached between the I.G. Farbenindustrie and the principal Ruhr producers.

A Nitrate Fusion.—Taken in conjunction with the general nitrate situation, outlined in a Note above, the decision of the directors of the Lagunas Nitrate Company and the Lagunas Syndicate, to seek more effective utilisation of the resources of both companies by a fusion of interests, should cause no surprise. Lagunas Syndicate, which, on a capital of £550,000, has made only £20,000 profit during the last three years, is to be placed in liquidation and the whole of its assets and liabilities transferred to Lagunas Nitrate. The present capital of the latter company, £900,000 in £5 shares, is to be written down to £180,000 by the cancellation of £720,000 unrepresented by available assets, and the remainder divided into 180,000 shares of £1 each. A new capital issue of 27,500 £1 shares, ranking *pari passu* with the old, is to be appropriated as the purchase consideration for the assets of the Syndicate, the shareholders of which are to receive one such new share for every 20 £1 shares of the Syndicate held by them. Debenture holders of the Syndicate are advised by the trustees to accept the arrangement, by which their £59,470 6 per cent. holdings are to be exchanged for an equal nominal value of 6 per cent. debentures of the Nitrate Company, repayable in January, 1937. It is estimated that as a result of the proposed fusion the gross trading profits of the combined concerns should be about £30,000 annually, which would enable all the liabilities other than the debentures of the company to be paid off within two years and the necessary working capital to be provided.

Discount Company Dividends.—The announcements by Alexanders Discount Company and the National Discount Company of the dividends they propose to pay for the past year go to show that 1929 has been by no means an unfavourable period in the discount market. The directors of the National Discount Company recommend an increase of bonus on the £576,688 of "B" capital from 1s. 6d. to 2s. per share, which, together with the usual distribution of 5s. 6d. per share, brings the total dividend to 24 per cent., as compared with 23 per cent. last year. The customary rate of 10 per cent., less tax, will be maintained on the £423,333 of "A" capital. £25,000 is to be placed to reserve account, against £15,000, while an amount of £14,000, compared with £10,000 last year, is to be appropriated to the pension fund. The carry-forward item shows a drop of some £3,600 at £212,000. Alexanders Discount Company has maintained its customary distribution, the ordinary shares again receiving a final dividend of 7½ per cent., making 15 per cent. for the year, less tax, with, in addition, the usual bonus of 1s. per share, free of tax. The carry-forward is £53,000, against £47,989. The Union Discount Company announces similar distributions to last year, a final dividend of 7½ per cent. making 15 per cent. for the year, less tax. In addition there will be as before a bonus of 2s. 6d. per share. The £125,000 of additional capital issued in 1928 ranks for the whole of the past year. The premises account is reduced by £10,000, and a similar sum is again appropriated to the provident fund. £269,000 is to be carried forward, compared with £241,607 brought forward from the previous year.

COMPANY MEETINGS, &c.

ULSTER BANK, LIMITED.

NINETY-THIRD ORDINARY GENERAL MEETING.

The ninety-third ordinary general meeting of the Ulster Bank, Limited, was held at the head office of the Bank, Waring Street, Belfast, on Tuesday, December 31, 1929, at half-past twelve o'clock, p.m., when the report of the committee for the year ended November 30, 1929, was submitted to the proprietors.

REPORT OF THE COMMITTEE.

The net profits of the Bank for the past year amounted to £218,434 17s. 4d., and this sum added to £72,214 18s. 3d., the balance of undivided profits from the previous year, leaves an available total of £290,649 15s. 7d.

Two half-yearly dividends, amounting to £128,000, have been paid to the shareholders, £50,000 has been appropriated to the reserve fund and £50,000 to the contingent fund, and the balance remaining, £62,649 15s. 7d., is carried forward to undivided profits account.

All ascertained bad and doubtful debts have been written off or fully provided for.

The directors and committee have pleasure in referring to the annexed balance sheet, with the report thereon of the auditors, Messrs. Harmood Banner and Son, chartered accountants.

J. MILNE BARBOUR,

STANLEY FERGUSON,
A. H. MOODY,
W. M. FULLERTON,
JOHN GRAHAM, } Directors.

J. K. PATTEN, Secretary.
J. W. BLACKWOOD, Chief Accountant.

We have examined the accounts of the bank and the above balance sheet, and in accordance with the Companies (Consolidation) Act, 1908, we report that :—

We have obtained all the information and explanations we have required.

We have ascertained the correctness of the cash and bills on hand at the head office and in Dublin, and of the money at call and short notice, and have inspected the securities representing the investments of the bank, and find them to be in order.

We have also examined the above balance sheet in detail with the books at the head office, and with the certified returns from each branch, and in our opinion it is properly drawn up, so as to exhibit a true and correct view of the state of the bank's affairs, according to the best of our information and the explanations given to us, and as shown by the books.

HARMOOD BANNER AND SON,

ULSTER BANK, LIMITED.
Belfast, December 12, 1929.

E. W. TARRY AND COMPANY, LIMITED.

ABNORMAL TRADING CONDITIONS.

The annual general meeting of E. W. Tarry and Company, Limited, was held, on the 31st ultimo, at the Cannon Street Hotel, London, Sir J. Fortescue Flannery, Bt., D.L. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said he regretted that the board were unable to report an increase in profits, but the disappointment was due to abnormal circumstances, and to those peculiar and particular difficulties which accompanied the rapid growth of a business which, with a capital based on pre-war values, had to conduct an increased post-war trading. Until three years ago the company's operations had been confined to stores and engineering works, which met the requirements of mining companies, exploration companies, building concerns and the ordinary requirements of the public in respect of hardware requisites, builders' ironmongery and household purchases.

For 50 years the company had enjoyed a name to be envied, that of supplying immediately the best article and in a square deal. The fact that they had entered into the motor business and invested a large amount in that new trade was evidence of the directors' faith, not only in the company's name as an advertising medium, but in the ability of the executive in South Africa to uphold the traditions of the company. In less than two years after their entering the motor trade a very large turnover was established, and a position was reached with necessitated an overdraft quite out of proportion to the profits of that section of their operations. The directors had therefore decided that, if they stayed in the trade, it must be confined to more narrow limits well within the company's resources.

These facts and the slump which took place in Rhodesia, as the result of the over-production of tobacco, were largely the causes of the reduced showing of the year's trading. Changes were being made and steps were being taken that the future might be assured.

The balance at credit of profit and loss account at £8,321 was less by £16,513 than for the previous year. The board recommended a dividend of 3 per cent. on the ordinary shares, and after reserving £1,500 for income tax they would carry forward £2,795. The balance sheet showed that there were reserves totalling £64,000, but it was not proposed that these should be drawn upon even for the amount required as a reserve for income tax.

The report and accounts were unanimously adopted.

BANK OF MONTREAL.

SUCCESSFUL RESULTS OF YEAR.
STRONG FINANCIAL POSITION.
SIR CHARLES GORDON'S REVIEW OF ECONOMIC AND TRADE CONDITIONS IN CANADA.

The one hundred and twelfth annual general meeting of the shareholders of the Bank of Montreal was held in the board-room at the bank's headquarters, Montreal, on Monday, December 2, 1929.

THE PRESIDENT'S ADDRESS.

Sir Charles Gordon, G.B.E., in addressing the shareholders, said : Before moving the adoption of the report, it is customary for the President, to make a few remarks.

Since the last annual meeting we have had to mourn the death of Sir Vincent Meredith, Bt. His lifetime may be said to have been spent in the service of the bank, in which he rose to the highest position, and, as its president for ten years, guided its affairs with great ability and signal success. Two others of your directors also passed on during the year, the Honourable Sir Lomer Gouin and Mr Frederick W. Molson, who had brought to the deliberations of the board wide experience and ripe judgment. The vacancies thus created were filled by the appointment of Mr A. O. Dawson, Mr W. N. Tilley, K.C., Sir Frederick Williams-Taylor. I am sure you will agree that the bank is fortunate in having secured the services of the first two named of these gentlemen to assist in the direction of the bank's affairs, and in now having as a member of our board Sir Frederick, who for many years so ably filled the position of general manager.

You have before you the report of your directors for the year recently ended, as well as a statement of profits in that period and of assets and liabilities, which I trust will be deemed satisfactory.

An outstanding event in the affairs of the bank was the relinquishment by Sir Frederick Williams-Taylor in October of the office of general manager after a long term of able, assiduous and fruitful service. He has become a member of the board, in which capacity his profound knowledge of banking and intimate acquaintance with finance and commerce will continue to be available to the bank. Your directors deem themselves fortunate in having had on the staff a gentleman of the attainments and experience of Mr H. B. Mackenzie to succeed Sir Frederick. He was general manager of the Bank of British North America when that institution was absorbed by the Bank of Montreal, and since joining our staff has occupied positions of trust, in the discharge of the duties of which he has exhibited qualities of a high order.

In reviewing the commercial situation in Canada, it should be kept in mind that there have been five years of almost uninterrupted expansion. In that brief period Canada has achieved a degree of development quite unprecedented. Not in one or two directions, but practically in all, remarkable material progress has occurred—in agriculture, in many lines of manufacturing, in mining, forestry, trading, water-power production and building construction.

During the early part of the past year business, generally speaking, in nearly all lines remained active, and there was no serious check during the first ten months. Possibly the greatest advance in any direction was in mining. During the summer I had an opportunity of visiting, together with other directors, four of the great plants of the country, namely, the British Empire Steel at Sydney, International Nickel at Sudbury, Algoma Steel at the Soo, and the Consolidated Mining and Smelting Co. at Trail. One must visit these enormous developments to realise what they mean to the districts in which they are situated, to transportation interests, and to subsidiary interests all over the country. Other names which are becoming almost household words are Noranda, Flin Flon and Sherritt Gordon, and they, in turn, will mean much to the localities in which they are located, because they are not only great mining ventures, but propose to establish concentrators and refineries.

Favourable is the fact that there is no inflation apparent in any of the great basic commodities such as wheat, sugar, cotton, steel, and other raw materials, so that we had not to witness a slump in these prices as well as in the stock market.

The unfavourable features of the situation have been : first, the small crop of the Prairie Provinces and the slow movement of the grain towards the sea-board. This has affected United States exchange, which at times has ranged around 2 per cent. premium. It has also affected the earnings of the railroads and steamship companies, and has caused some check to business generally. The second unfavourable aspect of the situation was the crash in the stock markets. The call rate and other danger signals were out, but, with world-wide speculation rampant, these signals were not observed by many people until the situation got so top-heavy that a crash was inevitable. Fortunately, only a small proportion of the people are in the stock market, and so the losses will be confined to comparatively few. At the same time what has occurred is bound to have its effect on the purchasing power of the country as a whole.

For the first time in five years, grain crops were a partial failure in the Prairie Provinces, the yield of wheat—270,000,000 bushels—being one-half that of 1928, and that of other cereals correspondingly smaller. The harvest was gathered rapidly in propitious weather, and the quality of the wheat has graded exceptionally high.

Branch line railway construction has been considerable in the North-West during the year. New country is being opened to settlement, especially to the north, and it is apparent that, what the Great West is to the United States, the western provinces will be to Canada. Mining has been joined to agriculture and industrialisation to both. Manufacturing in the prairies in supplying no inconsiderable home market. Active operation of the Hudson Bay Railway is now within sight, and, true to its pioneer spirit, the Bank of Montreal was first to establish a branch at Fort Churchill.

Both a cause and a consequence of the marked trade activity of the last five years has been extensive building construction and the undertaking of important engineering works.

Water-power development is still going on and finding a ready market for the electric energy created.

Residential, office, warehouse and factory building will this year outstrip all previous records. In the first ten months of the year contracts awarded amounted to $498,727,500, being an increase of 17.6 per cent. over the corresponding period in 1928.

The visit to Canada of Rt. Hon. J. H. Thomas and the activities of other agencies, both at home and abroad, will, it is hoped, be successful in enlarging inter-Empire trade.

In conclusion, may I say there never was a time in the history of Canada when business as a whole has been at a higher peak than during the year under review, or when the developed sources of our wealth were more wide and varied than they are to-day, and never a time when the earning power of our people was sustained in so many channels of production. We must not allow a possible temporary reaction, the result of a collapse in a purely speculative orgy in the stock markets, unduly to distort our view. Fundamental conditions are sound, and there is no reason for apprehension as to the ultimate future of Canada.

THE GENERAL MANAGER'S ADDRESS.

Mr H. B. Mackenzie, the general manager of the bank, then made his annual address, as follows :—

Mr President and Gentlemen,—

It is my duty to present the annual balance sheet to you, but, before doing so, may I express to the President my appreciation of the generous terms in which he has been good enough to introduce me to you as general manager of your bank. I can assure you that I am deeply sensible of the responsibilities resting upon me. There are great traditions to uphold, and I follow a long line of eminent occupants of the office. I feel that I have been specially fortunate in enjoying for the past eleven years the advantage of a close association with my immediate predecessor, Sir Frederick Williams-Taylor, and I wish to pay tribute, not only to his great ability as a banker, but also to the unfailing human kindness which has been so notable a feature of his administration. There has grown up in the bank under him an *esprit de corps* that assures to me the support of a most loyal and efficient staff. We are happy in the knowledge that Sir Frederick in a higher office may now look forward to a period of comparative rest while the bank will continue to have the benefit of his ripe experience and counsel.

The balance sheet which I have the honour to present to you is a highly satisfactory one. It shows a healthy growth in the volume of our business, the strong liquid position it is our practice to maintain, and very good profits.

Our total assets now aggregate $965,000,000, against $873,000,000 a year ago, an increase of $92,000,000.

Our profits for the year are $7,070,000, as compared with $5,847,000 a year ago. Higher rates for call money in New York, and a larger volume of loans required by expanding trade in Canada, together with comparatively light mercantile mortality, account for the increase.

For several years we have been living under the menace of a rising fever of stock speculation. The collapse brought painful consequences to many individuals, but the real national wealth of the United States and Canada remains what it was. Business will perhaps be somewhat quieter while we are getting back to realities, but the realities in both countries afford firm basis for a healthy optimism.

In concluding, may I say with what a feeling of pride I have taken up the duties of general manager of the Bank of Montreal; not pride in my attainment of the office, but in the fame and the high traditions of the great institution which I have been called to serve in a position of such responsibility.

The Chairman then moved, seconded by Mr H. R. Drummond, that the report of the directors now read be adopted and printed for distribution among the shareholders.

The report was unanimously adopted.

An amendment to byelaw No. 4 having been agreed to, the auditors and directors were elected, and vote of thanks to the staff was unanimously carried.

The meeting then terminated.

PONTIAN (MALAY) RUBBER COMPANY, LIMITED.

INCREASED PROFITS DESPITE LOW MARKETS.

The annual general meeting of the Pontian (Malay) Rubber Company, Ltd., was held, on the 31st ultimo, at the offices, Finsbury House, Blomfield Street, London, Mr P. E. Gourju (chairman of the company) presiding.

The Chairman, in the course of his remarks, said that the figures showed a continuity of progress in the direction of low working costs, for, in spite of a very low market throughout most of the year, the profits were increased. When consumption more nearly balanced production they could expect better prices, and it was to higher selling prices that they must look for future increased profits, as there was a limit beyond which expenditure could not be reduced without danger to the estate.

The great increase in the percentage of rubber produced by small native producers, which formed at present about 45 per cent. of the total, was regarded by some people with apprehension. As conducted at present, the rubber planting was a simple industry within reach of any Asiatic owner of from 25 to 50 acres of land. They had no overhead charges and were able to sell at low prices if forced to do so.

Their planting, or, as he preferred to call it, their replacement, programme was on a very moderate scale. Budgrafting was generally talked about, and was being tried out on a small scale on all sides. They were in the happy position of having the experience and experiments of the other estates in their group at their disposal, so were partially planting their new lands with budgrafts, but taking care that should these prove unsatisfactory they could be cut out, leaving trees of selected strains to mature, thus losing no time in bringing those new plantings to maturity. The question of budgrafting was, of course, a possibility of the future, and if successful would undoubtedly reduce costs.

They might feel assured that they, with the co-operation of the other members of their group, were keenly alive to the necessity of improved methods for the planting of rubber, without losing sight of the importance of reducing costs in order to overcome the depressed market, which was, he believed, a temporary phase.

He did believe that things would gradually settle down, and that 1930 would see increased demand for rubber, especially from countries where motor transport had only started to make serious progress.

The report was unanimously adopted, and a vote of thanks to the Chairman, directors and staff in the East and London terminated the proceedings.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C. 4

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

LONDON TIN SYNDICATE, LIMITED.

RECORD OF IMPORTANT ACHIEVEMENTS.

The ordinary general meeting of London Tin Syndicate, Limited, was held, on the 30th ultimo, at the Cannon Street Hotel, London, the Right Hon. Lord Askwith, K.C.B., K.C., the Chairman, presiding.

The Chairman, in announcing his impending retirement from the chairmanship and the board, outlined at some length the great and rapid strides which the syndicate had made during his years of office dating from the inception of the company in 1925. Then, he said, they had a capital of £50,000 only, and their energies were directed towards the reawakening of the ancient tin mining industry in Cornwall. By the middle of 1926, however, they already had one foot firmly planted in Nigeria, and early in 1927 they obtained a footing also in the F.M.S., deploying thence into Siam and Burma and later in Japan.

By the end of 1927 the ever-increasing production coming under the Syndicate's control had impelled them to look more closely into the smelting side of the business, and so began their association with the Penpoll smelter. Needing in that connection adequate supplies of high-grade Nigerian oxide, early in 1928 the board were once more applying energies and resources towards the broadening of their sphere of influence in the tin fields of that colony, with the result that in March of that year their premier Nigerian subsidiary, Associated Nigerian Tin Mines, completed a consolidation which established the "Associated" company as the largest individual producer of alluvial tin in the Empire—a distinction since upheld. Realising the importance of co-ordination within the industry, they redoubled their efforts towards rationalisation in Nigeria as a stepping stone in the direction of a much wider rationalisation which, he dared to believe, was now at last in prospect.

OBJECTIVE ATTAINED.

The current year marked the definite attainment of their first big objective in Nigeria, arrangements being concluded early in the year whereby the "Associated" company had become largely interested in the Kurra Falls Hydro Electric Concession; cheap and dependable power and a reduction of costs must necessarily be an integral part of a policy to improve the status of the industry. It was unfortunate that the work of the board, while meeting with increasing success, should be temporarily set at nought by the long-continued recession in the price of the metal, yet savings already effected had enabled them to face a price which, only a year or two ago, would have brought nearly all the mining operations in Nigeria to a close, and would have thrown the industry back five years or more. In due course, however, the reward of their labours was certain to become more apparent.

In July of this year negotiations for the acquisition of the well-known Ropp areas were completed, and a few weeks later a similar agreement was concluded with the Bauchi Company, and still more recently the board had come to provisional agreements with the Mongu and Anglo-Bauchi companies, four absorptions which were eminently sound, technically as well as financially. With their affiliate, the Associated Company, they might together claim to constitute the vital factor in the Nigerian tin industry.

SITUATION SUMMED UP.

Summing up the situation, four years ago they had a capital of £50,000 and a perhaps precarious effective contact with the tin industry. To-day the issued capital of the syndicate was very little short of £1,000,000, with 6,500 individual shareholders. To-day the syndicate mined as much alluvial tin as any other producer in the Empire, and their output of metal had brought them together with the largest interests in the industry. Within a few weeks, moreover, the syndicate should be definitely established in a predominant position in Nigeria, reinforced by a situation in Malaya of even greater magnitude, and no lesser potentialities.

Dealing with the accounts, the Chairman said that, as was inevitable in such a year, revenue showed some appreciable set-back, but the balance of £192,872 transferred to the balance sheet compared not so unfavourably with the sum similarly transferred in last year's appropriation account. It was interesting to note, however, that they had received in dividends more than two and a half times the sum accruing from that source during the preceding year, though naturally revenue from dividends had suffered substantially by reason of the much lower price for the metal.

Dealing with the comprehensive amalgamation to be considered at a meeting in a fortnight's time, the chairman said that the scheme could not be discussed at the present meeting. It probably would be the case that the scheme did not find instant favour with everyone, and some might be at first sight disposed to question the equities involved. He would, however, ask all to take the broadest possible view.

The report and accounts were unanimously adopted.

THE UNITED STEEL COMPANIES.

GRADUAL IMPROVEMENT IN RESULTS.

CAPITAL REORGANISATION FORESHADOWED.

INDUSTRIAL PROBLEMS.

MR BENTON JONES ON THE ACTIONS OF GOVERNMENTS.

The twelfth ordinary general meeting of the United Steel Companies, Ltd., was held on Tuesday last at the Cannon Street Hotel, London, E.C.

Mr W. Benton Jones (chairman of the company) presided.

The secretary (Mr A. Blackmore) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—Before proceeding with the business of the meeting I wish to refer to the death since our last meeting of two members of the board, Mr Barber and Mr Mannaberg.

PURCHASE OF CAPITAL BY STEEL INDUSTRIES OF GREAT BRITAIN, LTD.

Before referring to the accounts I think it would be convenient if I were to say what I have to say with regard to the purchase of the securities and shares of your company by Austin Friars Trust, Ltd., and the subsequent conveyance of these securities and shares to a new holding company formed for the purpose, which has been given the title of Steel Industries of Great Britain, Ltd.

Your directors' report, which has been sent to every shareholder, reports that the offer was made and that it was accepted by a very large majority of the holders of each of the various classes of shares and securities of the company; it also tells you to what extent Austin Friars Trust, Ltd., carried out the terms of their offer, and it informs you that Steel Industries of Great Britain, Ltd., hope to complete what Austin Friars Trust failed to carry out.

The statutory meeting of Steel Industries of Great Britain, Ltd., was held on the 19th of this month, when I made a full statement to the shareholders of the present position and the intention of the directors as to the future. This statement has appeared in the Press, and I have no doubt that you will have seen it; in case, however, you did not see it, a copy was handed to you when you entered the room.

RELATIONS WITH AUSTIN FRIARS TRUST.

You will see from this statement that Austin Friars Trust completed their obligations to purchase the securities and shares of your company offered to them by the holders and gave these holders also the option to take preference shares in Steel Industries of Great Britain, Ltd., in full or in part payment of the purchase price in accordance with the terms of their offer, and that they handed over to the Steel Industries Company all the securities so purchased in exchange for ordinary and preference shares in the Steel Industries Company, and the Steel Industries Company is, therefore, the proprietor of almost the entire capital of your company. You will see also that I was in a position to state that the assets of the Steel Industries Company were not affected by the failure of Austin Friars Trust; that all the securities and shares of your company against which shares of the Steel Industries Company have been allotted had been delivered to the Steel Industries Company, and that transfers had been completed and were, at that date, in course of registration into the name of the Steel Industries Company.

If you will now refer to your directors' report, which is attached to the accounts, you will see in paragraphs 5 and 6 that Austin Friars Trust, Ltd., failed to carry out the terms of its offer in regard to the provision of the funds necessary to discharge your company's indebtedness to its bankers, but your directors intend as soon as these funds can be provided to proceed with the reorganisation of your company's capital and the writing down of its assets.

OFFER BY STEEL INDUSTRIES COMPANY.

You will see also from your directors' report, paragraph 7, that the Steel Industries Company has offered to purchase, and is purchasing, the securities and shares of your company from holders who did not sell to Austin Friars Trust, and that in case any such holder desires to retain an interest in your company he may do so indirectly by acquiring shares in Steel Industries of Great Britain, Ltd., which latter company owns no other properties, so that its capital in effect takes the place of the securities and shares of your company and United Strip and Bar Mills, Ltd.

Finally, I desire to state that the acquisition of the capital of the United Steel Companies, Ltd., by Steel Industries of Great Britain, Ltd., has involved no change in the policy or administration of the company, and that no such alteration is contemplated. The company will continue to trade under the name of the United Steel Companies, Ltd.

THE ACCOUNTS.

In view of the contemplated reorganisation of capital and writing down of assets I do not propose to take time in commenting on the balance sheet. In regard to this I have to say that, if the reorganisation of capital is carried through on the lines contemplated, the amount available for the writing down of these and other assets of the company will also be large and, in my opinion, sufficient to permit a writing down to figures which will represent sound values for the company's various properties.

As you have seen from the report, this reorganisation of capital involves the finding of means for dealing with certain bank indebtedness of the company and of its subsidiary and associated companies, but, in the meantime, the cash facilities which we have are ample to meet the ordinary needs of our business. The position of the combine as a whole in regard to working capital cannot be judged by reference only to the balance sheet now before you, as it contains, of course, no figures to indicate the large amounts of working capital employed in our principal operating companies—namely Steel, Peech, and Tozer, Ltd., S. Fox and Company, Ltd., and the Frodingham and Appleby Companies.

RESULTS OF THE YEAR'S WORKING.

With regard to the results of the year's working, I told you at our last annual meeting that your directors looked forward to a gradual and progressive improvement. I can say that during the year gradual improvement has taken place and, as stated in the directors' report, the combined trading profit is £145,333 better than in the previous year and amounts to £520,006. This represents the aggregate trading result, but it will interest you to know that of the 15 operating subsidiary or associated companies and branches whose results are included in that total only two failed to make a trading profit during the year, and the total amount required to be reserved by us in respect of losses of subsidiary and associated companies for the year was, in fact, only £15,570 16s. 7d.

Our Cumberland properties, which, as you know, have given us some anxiety in the past, have shown distinctly better results during the past year, and we have reason to believe that they have now reached a permanently better basis of operation and, therefore, that the improvement will be maintained. In Lincolnshire the Appleby Company has been able to increase its ouput with a corresponding reduction in cost of production, and the Frodingham Company had a better year than last year.

THE SHEFFIELD GROUP.

The Sheffield group, which covers Samuel Fox and Company, Steel, Peech and Tozer, including the new Templeborough Works, and Daniel Doncaster and Sons, show improved results except in the case of the Templeborough Works. In the Templeborough Works, as I told you last year, we had decided to operate as near full capacity as possible, in spite of the fact that the markets which they supply were subject to the full blast of Continental competition. We have continued this policy and propose to adhere to it, but it is yielding us no profit.

These works, as you know, have been completed since the war; they have a large capacity and are as economical for the work which they perform as any works in the country, but they are heavily handicapped by unfair competition. Large quantities of Continental steel are dumped into the markets which are served by the Templeborough Works at whatever prices Continental makers find it necessary to accept in order to supply their own works with orders sufficient to make up the difference between what they can make when operating at full capacity and what they can sell in remunerative markets.

COLLIERIES AND COKING PLANTS.

The operations of our collieries and coking plants show an improvement over the preceding year, but prices have remained at a low level and the profits earned are only small in relation to production. At our Yorkshire collieries, where we produce more than 2,000,000 tons of coal per annum, we have conducted the sales since November 1, 1926, by means of a joint selling agency company in co-operation with three other companies owning neighbouring collieries, the combined output of coal produced by all the members being 4,500,000 tons.

In addition to co-operating in selling our coal in this way, we have been members since its formation of the Central Collieries Commercial Association, or Five Counties Scheme, and we believe that this association has been of great benefit to its members and that it will continue to be so.

STEPS TOWARDS CONCENTRATION.

I should like to enumerate, without entering into details, a few of the steps which have been taken during the year towards concentration, together with one or two other matters which may be of interest to you. The older iron ore mines in Cumberland have been closed down, and all ore is now being mined from two mines. The rolling of railway rails, for which three of our works are equipped, has been concentrated at Workington.

In the Sheffield group substantial progress has been made in the concentration of the manufacture of heavy railway material other than rails at Steel, Peech and Tozer's works. Steel, Peech and Tozer, including the Templeborough Works and the United Strip and Bar Mills, have taken over a large proportion of the remaining heavy work, and all special steels and light work are being concentrated at Samuel Fox and Company's works. In addition to economies which will result from these steps, improvements and additions have been made to plant, and others are contemplated, all of which will assist in reducing costs of production.

SELLING AGENCY ASSOCIATION.

A selling agency association for the sale of certain steel products abroad under a common policy has been formed by the manufacturers of those products. Your company joined this association on its formation, and anticipates that it will bring benefits to all its members and increase export trade.

A local company has been formed in India under the title of the United Steel Companies (India), Ltd., for the sale of the company's products, and has completed 12 months' working. We are pleased with the progress which has been made by this company, and feel confident that it will continue to make progress and increase our oversea trade.

THE FUTURE.

With regard to the future, we have more work in hand now than at the corresponding period of last year, but prices remain, as they have been throughout the year, at a level which leaves only a small margin of profit per unit of production. We do, however, expect to continue the gradual improvement which has taken place during the last year. We found this expectation not on any anticipation of advance in prices or rapid growth in demand; to do so is merely to stand still. We found this expectation on the organisation which we have now in operation and which we shall continue to extend and improve, an organisation which we are confident will, on the one hand, increase the volume of our trade, and, on the other, not only show us where costs can be reduced, but in fact reduce them.

While we shall continue our quest of lower costs of production and larger volume of trade and wider markets, and while we are confident in our ability to make progress, there are factors beyond our individual control which may accelerate or retard our progress as they may accelerate or retard the progress of the industries of the country generally.

ACTIONS OF GOVERNMENTS.

The factors to which I refer are the actions of Governments. Every action of a Government, every policy formulated, every consideration of a policy by a Government, reacts either in favour of or to the detriment of the present or future volume of trade. The relations of the Government with a foreign State have a similar effect. The imposition of taxes, the levying of duties, have a similar effect. All these things are political actions and are outside the control of those engaged in the management of industy; they are controlled by Governments.

THE UNEMPLOYMENT PROBLEM.

The franchise has been greatly enlarged; the business of local and national government is widely reported and discussed and occupies the attention of a very large proportion of the population. Do those who are influencing the business of government—that is, the electorate—and those who are engaged in the business of government realise that everything they say and do has, and will have, an effect upon volume of trade, which, in turn, determines the amount of employment which will be available for the labour and capital of the country? I think they do not realise it; I think the outlook on what is called the problem of unemployment is sufficient evidence that they do not realise it.

The popular view of this problem appears to be that unemployment exists owing to natural causes or owing to some failure in the machinery of trade and commerce and that Governments can by some simple process remove unemployment. No Government can remove unemployment; all a Government can do is to influence the conditions which affect employment. The popular view is wrong from the commencement; it does not even understand what the problem is. The problem is not unemployment; it is not even occupation; the problem is *Employment*—that is, the employment in industry of the maximum quantity of the labour and capital available in this country.

I venture to think that, if all the thought and energy which are devoted to political theories and political actions in this country were diverted to the encouragement of employment, and every Government allowed its actions to be determined primarily by their influence on volume of trade, the so-called problem of unemployment would solve itself.

SAFEGUARDING OF MOTOR-CARS.

I have referred to unemployment as an illustration of the failure of the electorate and local and national Governments to realise how much they can influence volume of trade. I should now like to give three further examples which particularly affect your company. The first example relates to the safeguarding of the motor-car industry.

Safeguarding duties were imposed on the import of motor-cars for the encouragement of the motor-car industry by a Government having a certain party label in 1916; these duties were removed by a Government having another party label in 1924; they were reimposed by a Government having another party label in 1925. It is now proposed by the present Government that they should be removed again. I do not propose to make any comment on this example. It requires no comment.

The second example concerns the limitation of the hours of work in coal mines. In 1908 the hours of work were limited by statute to eight; in 1919 they were limited to seven; in 1926 they were limited to eight. It is now proposed to limit them to 7½ with an indication that in the near future they will again be limited to seven. This example also requires no comment.

POSITION OF THE STEEL INDUSTRY.

The third example is the application of safeguarding to the steel industry. We have in this country the necessary raw materials, the necessary plant, the necessary labour to manufacture all the iron and steel which we use ourselves and which we work up into finished products for export abroad. At the same time we allow other countries to send into our country some 3,000,000 tons of iron and steel every year. A Government could prevent the importation of this iron and steel and by so doing ensure employment for labour and plant at present unemployed; but, although the principle of safeguarding employment has been accepted and applied in the case of some industries, no Government has taken the steps necessary to apply it to the iron and steel industry.

I am aware of the arguments which have been used for and against this action. The most strongly emphasised argument in recent months has been the argument that safeguarding fosters uneconomic plants which it would be better to let die. Should we refuse to employ a workman because his tools were not of the latest pattern or not in the best state of repair? We should not: we should employ him, knowing that when he was able to earn enough money to buy new tools or have the old ones repaired he would do so in his own interest, because it would enable him to earn more in the future. No argument can be maintained to justify the purchase abroad of well over £20,000,000 worth of material per annum which we can make, and for the making of which we have plant and labour standing idle at home.

A SUGGESTION TO POLITICAL PARTIES.

I have said sufficient to suggest that those who are influencing the business of government and those who are engaged in the business of government do not realise the effect of their actions on volume of trade, and, consequently, on employment. I hope I have said sufficient also to encourage you to follow the line of thought which I have started. If you do follow it, I think you will appreciate what great powers this country has put into the hands of its Governments.

With this appreciation, you will see how easily actions taken in the exercise of these powers, without real knowledge and careful consideration, may impose heavy handicaps upon industry, and you will agree how necessary it is in the interests of every section of the population that the powers should be used so as to make possible and encourage the maximum employment of industry. I venture to conclude by suggesting that, the maximum employment of industry being the paramount necessity for the well-being of the country, the ideals of the several political parties are of secondary importance, and that all parties should consult with industry and adopt and maintain a single and common industrial policy.

The report and accounts were unanimously adopted.

BRITISH HOSIERY TRUST, LIMITED.
GOOD RESULTS—SOUND INTERNAL POSITION.

The second annual general meeting of the British Hosiery Trust, Ltd., was held, on the 30th ultimo, at the Grand Hotel, Leicester, Sir Arthur Wheeler, Bart., D.L., J.P. (chairman of the company), presiding.

The secretary (Mr Edward Hill) having read the notice convening the meeting and the report of the auditors.

The Chairman said: As you have already received the managing director's progress report, together with a brochure, which places you in possession of the fullest information as to our position and prospects, I intend to be very brief in my remarks this morning.

You will see from the directors' report that we have transferred a sum of £6,841 18s. 1d. to capital reserve, and are using most of this to wipe out the balance of preliminary expenses. Our articles of association provide that 10 per cent. of the net profits shall be placed to a special reserve, and that fund, therefore. receives this time £6,248 16s. 11d., making a total of £11,564 9s. 11d. In addition to this, we propose to establish a general reserve account by transferring £10,000 out of this year's profits. Out of the remaining profits it is proposed to pay 8 per cent. on our capital, and there still remains £7,566 19s. 2d. to be carried forward.

UNDISCLOSED RESERVES.

This information you have in front of you, but I would like to refer to the sound internal position which has been built up during the short period your company has been in existence. I refer to the other reserves which are not disclosed to you by the figures before you.

You might be excused for assuming that we have searched the pockets of our subsidiary companies in order to present as good a picture as possible to you in our own report. I assure you that such is by no means the case, for the total surplus remaining in our subsidiary and associated companies is actually in excess of £100,000. That, I am sure you will agree, indicates a very sound policy.

You will notice from the illustrated booklet that our interests are well distributed. By this I mean that we have not confined ourselves to one class of manufacture. We have a very firm determination that our eggs shall not be in one basket. If trade falls in one quarter it increases in another, and it is our policy to spread our holdings so that we may at least maintain an even balance of results.

BOARD'S SOUND MANAGEMENT POLICY.

Before acquiring an interest in any of the hosiery businesses we have investigated your board has carefully gone into the past history, the earning power, and the assets position of the various concerns. That alone, however, has not been sufficient for us. In every case we have been most careful to see that the management which has produced the excellent profits in the past should be continued. Management is the life-blood of the business, which ensures that all the parts of the organism shall be functioning properly, and without which a business becomes nothing more than a corpse.

We have gone even one step further. Not only have we seen that there should be this continuity of management, and thus ensured that the business in the future should be as well conducted as in the past, but we have effected a series of transfusions of blood. By the formation of our advisory council, which is made up of the brains of the various companies we now control, the ability and experience of each is pooled and placed at the disposal of all, so that to previous strength further strength has been added. It is because of this pooling of management ability that I feel so very certain of our success in the future.

TRIBUTE TO EXECUTIVE.

These results which have so far been achieved are due, I may say, in no small degree to the zeal and ability of the executive heads of our subsidiary businesses. These gentlemen form a technical council, and the excellent team work which they have put in deserves our fullest apreciation and hearty thanks. I have now to propose: "That the report and accounts for the year ended December 13, 1929, as now presented, be and the same are hereby adopted; that the sum of £10,000 be transferred to general reserve; and that a dividend for the year at the rate of 8 per cent., less income tax, be and the same is hereby declared payable to the shareholders standing on the register at December 17, 1929."

Mr Arthur F. P. Wheeler (managing director) seconded the resolution, and it was carried unanimously.

The retiring director, Mr George Victor Smith, was re-elected; the auditors, Messrs. Price, Waterhouse and Company, were reappointed; and the proceedings terminated with a vote of thanks to the chairman and directors.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED.
(INCORPORATED IN THE UNION OF SOUTH AFRICA.)
YEAR'S RESULTS EMINENTLY SATISFACTORY.
FURTHER RECORDS ACHIEVED.

The thirty-second ordinary general meeting of shareholders was held in Johannesburg, on Monday, November 25, 1929.

The Chairman (Mr A. W. Rogers) said:—I am sure you will agree that the results obtained were eminently satisfactory, fresh records again being achieved in the tonnage milled, the development footage accomplished, and in the profits earned.

The total profit for the period was £2,287,479, which, with the balance of £317,371 unappropriated at the beginning of the year and a small amount of £754 in respect of forfeited dividends, gave a total of £2,605,604 to the credit of appropriation account. As shown in the directors' report, this was disposed of as follows:—Dividends Nos. 45 and 46, of 70 per cent. each, absorbed £1,960,000; Government and Provincial taxation amounted to £315,982; capital expenditure, chiefly in respect of the annuity payable for certain undermining rights leased from the Government, accounted for the net sum of £12,561; and a further amount of £15,000 was set aside towards meeting the company's outstanding liability in respect of miners' phthisis compensation. The unappropriated balance at June 30, 1929, was £302,061, represented as to £161,749 by cash assets, mainly stores, materials and similar items, and as to £140,312 by net cash, after allowing for all current liabilities.

The company's proportion of the outstanding liability of the scheduled mines on account of miners' phthisis compensation was calculated at £341,580 as at July 31, 1929, an increase of £41,283 compared with the estimate made twelve months earlier. The sums provided up to June 30th last towards meeting this obligation, with accrued interest, total £57,462.

TONNAGE MILLED.

The tonnage milled during the past financial year averaged 142,750 tons per month, an increase of 7,250 tons over the monthly average for the previous year. Although the yield decreased by 0.7 dwt. per ton milled, working costs showed a satisfactory reduction of 1s. 8d. per ton milled, and, owing to the larger tonnage crushed, the total working profit was increased to £2,252,433, an improvement of £10,670. With regard to working costs, the consulting engineer points out in his report that, although operations were conducted on a larger scale during the year under review, the total working expenditure recorded a decrease of £62,414, by comparison with the preceding year's figure.

DEVELOPMENT WORK.

The development footage was increased to 74,982 feet, as compared with 58,565 feet during the previous twelve months and 47,300 feet during the year ended June 30, 1927. The increase was chiefly due to the larger footages driven on the Upper Leaders and the South Reef, as the result of the acceleration of development on these reefs in view of the approaching completion of the major development programme on the Main Reef Leader. Out of 19,545 feet sampled on the Main Reef Leader, 13,980 feet disclosed payable reef averaging 680 inch-dwts.; of 7,730 feet sampled on the Upper Leaders N.A. 1 and N.A. 2, 3,955 feet were classed as payable, with an average value of 384 inch-dwts.; of 12,554 feet sampled on the Upper Leader N.A. 7, 7,384 feet exposed payable reef averaging 373 inch-dwts.; and of 11,860 feet sampled on the South Reef, 7,070 feet gave payable values averaging 374 inch-dwts. The payable ore developed during the year on the Main Reef Leader amounted to 815,200 tons, averaging 9.8 dwts. over 48.9 inches; on the N.A. 1 and 2 Leaders it was 218,900 tons, averaging 6.1 dwts. over 44.5 inches; on the N.A. 7 Leader it was 296,300 tons, averaging 6.5 dwts. over 41.1 inches; and on the South Reef it was 220,900 tons, averaging 7 dwts. over 42 inches. The total payable ore developed on all reefs was thus 1,551,300 tons, an increase of 190,200 tons on the previous year's figure, although the average value at 8.2 dwts. per ton was 1.0 dwt. less. The ore reserve, as recalculated at June 30, 1929, totalled 9,097,600 tons, of an average value of 8.6 dwts. per ton over an assumed average stoping width of 50.2 inches. This included 1,240,000 tons or ore, averaging 6.7 dwts. per ton, included in shaft pillars, etc., which is not immediately available for stoping, but which sooner or later can be expected to be mined. Full particulars of the ore in reserve on each of the different reefs are given in the consulting engineers' report, and its location is shown on the plan accompanying this report.

I mentioned last year that the grade of ore going to the mill would probably be reduced in value as the proportion of ore mined from the Leaders was increased. That has been the case during the period under review. This tendency will continue to manifest itself. During the past year its effect was counterbalanced by the

larger tonnage milled and the reduction of working costs. The further increased rate of milling that will follow the proposed increase of the reduction plant will help to make up for the lower grade of ore that will, for the reason mentioned, be going to the mill, but the probability is that there will be some reduction in profits. While, however, the milling of a greater proportion of this lower grade ore will result in somewhat smaller profits than the recent high average, shareholders must not fail to take into account the influence which the opening up of additional tonnages of ore from the Leaders and South Reef will have in extending the profitable life of the mine.

As regards operations during the first four months of the current financial year, the tonnage crushed averaged 151,250 tons per month, an increase of 8,500 tons on the monthly average for the past year. The yield was slightly lower at 9.664 dwts. per ton milled, but working costs were reduced to 16s. 8d. per ton milled and the working profit totalled £742,432, or an average of £185,608 per month. Development was prosecuted at the again increased rate of 7,958 feet per month. The major development programme on the Main Reef Leader is now practically completed, and the footage at present being accomplished on that reef consists largely of internal development, for the purpose of opening up certain blocks of ore hitherto classed as unpayable. The results of this work are satisfactory. Altogether we hope to add something in the neighbourhood of 500,000 tons to the payable Main Reef Leader reserves.

In reply to a shareholder, the Chairman said it was impossible to estimate the life of the mine until it was known what the effect would be of the addition of the upper leaders and the south reef.

The resolution was carried unanimously.

LAKE VIEW AND STAR, LIMITED.
DISCOVERIES AND DEVELOPMENTS.

The nineteenth ordinary general meeting of Lake View and Star, Ltd., was held, on the 30th ultimo, at River Plate House, London.

Mr John A. Agnew (the chairman) said that the figures in the profit and loss account were not a criterion of what could be done in the future. Very little of the higher-grade ore opened up in the last 12 months had been treated, and that which had been dealt with had cost, owing to its location, a much higher figure than they would be prepared to see continue.

The policy of development had already been explained. They were taking up with the management the possibility of an alteration in their plans, suggesting that they should temporarily suspend the sinking of Chaffers shaft at a depth of approximately 2,600 feet and commence development work northwards in the Horse-Shoe ground. He would point out the overwhelming importance of any evidence confirming the belief that a block, containing probably several hundred thousand tons of ore, awaited development above the horizon of their present shaft bottom, and that such ore was of a grade approaching the value of double that of their present reserves.

Shareholders had been recently advised through the Press of a find of very rich telluride ore in the Lake View section, and another item of news published recently was the find of so-called alluvial on the property. It would be a welcome addition to their reserves if it was found to extend as anticipated.

The Lake View property as a whole was an aggregation of several mines, three of which had been producers of great magnitude and which still possessed potentialities of a continuance of a highly important production. Their scattered nature, however, meant the maintenance of a number of separate power plants, and they were very closely investigating the possibility of being able to establish on the mine a central power plant using oil for fuel. As an alternative, they were investigating the possibility of making a suitable arrangement with the Kalgoorlie Power Company for the supply of electric power. That, if completed, would obviate capital expenditure on their own account. They had decided to erect the first unit of a flotation plant of a capacity of about 5,000 tons monthly, and, if the results were confirmatory of test work, they would proceed with the erection of further units so as to provide for a total treatment capacity of about 40,000 tons per month.

The report and accounts were unanimously adopted.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the ten days ended December 31, 1929 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	10,575	From Revenue	9,305
Interest, &c., on Debt	2,134	Increase in Debt	4,624
Sinking Fund	920		
Sundries	263		
Increase in Balances	37		
	13,929		13,929

The ordinary revenue for the ten days to December 31st amounted to £9,304,800. Property and income tax brought in £2,693,000 and super tax £600,000. Estate duties yielded £1,590,000, customs £2,216,000 and excise £919,000. Ordinary receipts amounted to £121,400, but special receipts yielded only £400. The National Debt was increased by £4,624,000, as shown below :—

	Total	1,105,416		Total	1,126,438

Net withdrawals, £21,022.

Messrs. Samuel Montagu and Company write on January 1, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes on the 25th ultimo amounted to £145,848,399 (as compared with £140,504,845 on the previous Wednesday), and represents a decrease of £8,057,916 since April 29, 1925, when an effective gold standard was resumed. On the 24th ultimo about £586,000 was available in the open market. The price was fixed at 84s. 11¾d., at which the Bank of England secured £345,000 and France £210,000; the balance was acquired for Home and Continental trade. There was little inquiry for the £658,000 of South African gold offered in the open market yesterday, and the Bank of England obtained £576,000 at the statutory buying price. At the fixed price of 84s. 10d., India took £30,000 and the Home and Continental trade £48,000. Quite a cheerful note to the end of the year was given by the receipt on the 21st ultimo of £4,679,000 in bar gold from New York, which constituted the largest movement recorded at the Bank of England in any one day. The gold represented consignments from three steamers—"Berengaria," "Bremen," and "France"—which reached this country at the same time. Other receipts were about £920,000 bar gold from South Africa and about £1,000,000 in sovereigns from Argentina. Of the withdrawals, about £1,007,000 bar gold was for France and £250,000 in sovereigns "set aside."

SILVER.

Since our last letter silver prices have shown a marked decline. With the exception of that afforded by the Indian Bazaars, no support has been forthcoming, and free selling by China and America caused quotations to fall rapidly. From 22¼d. and 22 5/16 d. for cash and two months' delivery respectively on the 20th ultimo, the fall continued without a break until the 30th ultimo when 21 5/16 d. and 21⅜d. were quoted. The level thus reached established a new record for value of the metal, the lowest price previously recorded being 21 11/16 d., touched in November, 1902, and January, 1903. Hesitation on the part of sellers and further inquiry from India for silver for immediate shipment brought about a slight reaction yesterday and to-day, prices recovering to 21½d. for both deliveries. The market having been forced down to a point at which India is disposed to buy, there is a slightly steadier feeling for the moment, but the possibility of the demand from this quarter being intermittent renders the outlook still uncertain.

The following were the United Kingdom imports and exports of silver registered from mid-day on December 16th to mid-day on December 30th :—

Imports.	£	Exports.	£
Germany	41,304	Germany	64,867
France	77,604	China and Hong Kong	156,509
Netherlands	9,600	Other countries	15,545
British India	42,732		
Other countries	1,861		
	£173,101		£236,921

REPORTS AND NOTICES.

Mr Douglas David Seligman has been appointed a director of Seligman Brothers, Limited.

Mr R. Gore, Captain R. Gordon Munro, M.C., and Mr D. H. Scott have been appointed assistant directors of Helbert, Wagg and Company.

The Lautaro Nitrate Company has removed to Cory Buildings, 117, Fenchurch Street, London, E.C.3. Telephone : Monument 3946.

Mr V. W. Tyler, F.I.A., has been appointed assistant actuary of the Alliance Assurance Company, Ltd.

RAILWAYS.

GRAND TRUNK PERPETUAL PREFERENCE STOCKS.—The *Investors' Protection Corporation, Ltd.*, are advised that the word "Perpetual" attached to these stocks implies that they have some of the characteristics of perpetual debentures. They have also voting rights acquired in part consideration of the surrender of their original right of foreclosure on the Canadian and American lines. The forfeiture of these voting stocks constituted a serious breach of the agreement between the Perpetual Stockholders and the Grand Trunk Company. The Corporation is fully satisfied that the special rights and equities attaching to these stocks not only exist, but govern the position. Nearly two thousand signatures have been affixed to the Petition to the Canadian Parliament.

BRITISH RAILWAY TRAFFICS.—This table shows traffic receipts of four British railways for the week ended December 22nd, also for 51 weeks of 1929. Receipts for 52 weeks of 1929 will be found in our usual column of weekly traffic returns :—

MISCELLANEOUS.

BRITISH GOODRICH RUBBER COMPANY, LIMITED.—The fifth annual report and accounts shows a net profit for the year ended September 30, 1929, of £92,969 (last year £73,235), to which is added amount brought in, making total £102,703. Deducting preference dividends and £21,443 allocated to preference shareholders' reserve there is a balance of £66,242, from which it is recommanded that the balance of preliminary and formation expenses, £35,000, be written off. The B. F. Goodrich Co. having waived its right to receive £14,843 out of the profits, it will be necessary to alter the articles, and, subject to the passing of the consequent special resolution, the directors recommend the payment of a dividend of 4 per cent. on the ordinary shares, which would leave £10,461 to go forward.

BENGAL COAL COMPANY, LIMITED.—Figures for half-year to October 31, 1929, are :—Profit of Rs. 872,000, including carry forward ; depreciation, Rs. 125,000 ; dividend, Rs. 600,000 ; commissions, Rs. 65,000 ; carry forward, Rs. 82,000 ; dividend for the half-year, 15 per cent., making 30 per cent. for the year.

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES LIMITED.—The directors state that in connection with the recent offer to shareholders of 210,388 shares of £1 each at 25s. per share, over 97¼ per cent. has been subscribed.

BRITISH NORTH BORNEO (CHARTERED) COMPANY. By an oversight, a footnote was misplaced in our "Notice" regarding this company in last week's issue. The correct version is as follows :—

The financial results—Borneo and London—for the first nine months of the current year are shown below, together with the figures for the corresponding period of 1928.

		1928. £	1929. £
Borneo cabled figures	Revenue	345,328	344,832
	Expenditure	194,619	194,747
	Surplus	150,709	150,085
London	Revenue	18,857	21,983
	Expenditure	14,685	15,659*
	Surplus	4,172	6,324
Total surplus		£154,881	£156,409

* This figure includes the cost of the president's mission to Borneo and certain non-recurrent expenditure of an exceptional nature.

These figures are, of course, subject to deductions in respect of interest on debentures, depreciation, etc.

BENSKIN'S WATFORD BREWERY, LTD.—At an extraordinary general meeting on January 1st resolutions were unanimously agreed to capitalise £152,000 of the reserve fund by way of bonus shares to the existing shareholders in the proportion of one ordinary share for every two now held, and further approving the issue of 456,000 new ordinary shares. Letters of allotment in respect of the 152,000 bonus shares and also of the 456,000 will be posted in the course of a few days.

FABULOSA MINES CONSOLIDATED.—Production of tin barrilla for the past month was 4,350 quintals of 46 kilos. (Approx. 197 tons.) *Note.*—This figure s 29 tons higher than the previous record output.

MAZAPIL COPPER COMPANY.—Production for the month of November was as follows : Copper matte, 843 metric tons ; lead concentrates, 413 metric tons ; zinc concentrates, 772 metric tons.

ANGLO-ORIENTAL MINING CORPORATION, LIMITED.—November production of the affiliated tin companies in Nigeria : Associated Tin Mines of Nigeria, 250 tons ; Mongu (Nigeria), 70 tons ; Juga Valley, 25 tons ; Tin Properties, 25 tons ; Junction, 3 tons ; London Tin Syndicate, 255 tons ; total, 628 tons, making a total output for all affiliated companies of 1,517½ tons.

PODEROSA MINING COMPANY.—Production for November : 1,410 metric tons, estimated at 17½ per cent. copper. The estimated profit, taking copper at 17¾ cents, after deducting London and Chile administration expenses and depreciation of plant and machinery, but subject to British and Chilean taxation, would be £5,325. Shipments for the same period were 1,215 tons, estimated at 18¼ per cent. copper.

THE MOUNT LYELL MINING AND RAILWAY COMPANY.—During the four-weekly period ended December 4th the mill treated 17,603 tons of ore, producing 3,864 tons of concentrates.

NORTH BROKEN HILL, LIMITED.—For the month of November the production was as follows : 37,125 tons of crude ore were treated, assaying 14·2 per cent. lead, 8·2 ounces silver per ton, and 10·4 per cent. zinc, producing 7,820 tons lead concentrates assaying 63·3 per cent. lead, 33·4 ounces silver per ton and 7·5 per cent. zinc ; also 8,130 tons zinc concentrates assaying 48·5 per cent. zinc, 2·8 per cent. lead and 3·8 ounces silver per ton.

ELECTROLYTIC ZINC COMPANY OF AUSTRALASIA, LIMITED.—Production during four-weekly period ended December 11, 1929 : 4,212 tons zinc, of which 70 tons used at the works ; silver-lead product for shipment to Port Pirie for realisation containing 415 tons lead, 49,000 ounces silver.

WORKING PROFIT, TRANSVAAL.—The total estimated working profit of the gold mines of the Transvaal for the month of November, 1929, amounted to : Witwatersrand, £1,042,308 ; outside districts, £28,891 ; total, £1,071,199. The estimated working profit in October, 1929, was : Witwatersrand, £1,083,520 ; outside districts, £32,224 ; total, £1,115,744.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions generally were unfavourable for field work, heavy gales and rains rendering ploughing operations difficult owing to the sodden state of the ground. Native wheat continues in small supply at many of the provincial markets and a firm tone prevailed in sympathy with the international situation. The chief event on the import market was the publication of the surprisingly low official preliminary estimate of the Argentine crop. A yield of only 18 million quarters was indicated, which together with about 2 million quarters of old crop would provide an exportable surplus of 10 to 11 million quarters, compared with 32 million quarters actually shipped during the past twelve months. Prices immediately responded, and with buyers' attention directed to Canadian and American descriptions, sellers naturally took full advantage of the position to raise their limits. European consumers, however, were not disposed to follow the upward movement so that trade again relapsed into a quiet state, and the advance was difficult to maintain. It would appear that this is a favourable opportunity to market surplus holdings in North America, but in view of financial stringency both here and on the Continent, the question of price is the chief factor. Meanwhile, overseas purchases will be strictly measured by immediate wants until increased competition from the Southern Hemisphere is forthcoming, and the situation more clearly defined. Flour prices followed the course of wheat, London makes being advanced by 1s. per sack, and foreign offers are somewhat reservedly made for shipment. There is not much improvement in the feeding trade, consumers' demand being restricted, but Plate maize is moving rather more freely on Continental account, probably the result of a recent increase in the German import duty on barley, and the variable condition of Danubian shipments.

Wheat.—Firmer. No. 1, Northern Manitoba, ex ship, 57s. ; No. 2, ditto, 56s. 3d. ; No. 3, 54s. 9d. ; No. 4, Manitoba, 53s. 9d. ; No. 5, 50s. 3d. ; No. 6, 43s. 6d. ; No. 2, hard winter, 49s. 6d. ; Rosafe, 63½ lbs., 48s. 6d. ; Barusso, 63½ lbs., 49s. 3d. ; Australian, 51s. 6d. per 496 lbs. ; English, 9s. 7d.-9s. 9d. per 112 lbs.

Flour.—Steady. London straight run, 42s. per sack for country deliveries, and 41s. London area. Of imported, Manitoba patents, 38s. 6d.-42s. ; Buffalo, 39s. 9d.-41s. 6d. ; Australian, 36s. 6d.-37s. ex store. On c.i.f. terms, Manitoba top patents, January-February, 39s. 6d.-40s. 6d. ; export, ditto, 37s.-38s. ; Australian, 34s. 6d. per 280 lbs. ; Argentine low grade, February-March, £7 5s. per ton.

Maize.—Steady. Plate, landed, 31s. 3d. ; ex ship to arrive, 30s. 3d. ; January-February, 30s. 6d. ; February-March, 31s. ; new, April-May, 31s. ; May-June, 30s. 6d. per 480 lbs. Yellow maize meal, £8 15s. per ton f.o.r. London. Yellow African, £7 5s. white, £6 15s. per ton, ex ship.

Barley.—Maintained. Californian old, landed, 36s.-43s. ; new, ex ship, 37s.-46s. as to sample ; Chilian brewing, ex store, 37s.-43s. ; Chevalier, 40s.-45s. ; Australian, 41s.-42s. ; Smyrna, 40s.-42s. per 448 lbs. ; Algerian/Tunisian, ex ship, 26s.-27s. 6d. as to sample ; No. 2, Federal American, landed, 25s. 9d. ; Danubian landed, 26s. 9d. ; Black Sea, January, ex ship, 24s. per 400 lbs. ; English malting, 8s. 6d.-14s. 6d. ; feed, 7s. 3d.-8s. per 112 lbs.

Oats.—Quietly steady. Plate, landed, 19s. ; ex ship to arrive, 17s. 9d. ; black Plate, landed, 18s. 6d. ; Chilian white, landed, 24s. 6d. ; ditto, tawny, 20s. 9d. ; German, landed, 21s. 3d. ; ex ship to arrive, 20s. 3d. per 320 lbs. ; English, 7s. 4d.-7s. 8d. per 112 lbs.

BARCLAYS BANK
LIMITED
HEAD OFFICE : 54, LOMBARD STREET, LONDON, E.C.3
And over 2,000 Branches in England and Wales.

DRAWING ACCOUNTS are opened upon the terms usually adopted by Bankers.
DEPOSITS AND SMALL SAVINGS of any amount received, and interest will be allowed when the Deposit amounts to £1. Deposit Books are issued when required.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1928 :—

Nearest Future.	Jan. 4, 1928.	Jan. 2, 1929.	Dec. 18, 1929.	Dec. 26, 1929.	Dec. 31, 1929.
Winnipeg (No. 1 Manitoba)— Cents per 60 lb.....	156⅛	122	136⅛	140⅛	141⅜
Chicago (No. 2 Winter)—Cents per 60 lb.....	166⅛	116⅜	121⅛	126⅜	127⅜

The visible supply of wheat in Canada at 74,704,000 bushels shows an increase on the week of 141,000 bushels. Supplies a year ago stood at 70,384,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports that apart from holiday disturbances, the export coal market continues strong, and output is being fully shipped. The price of best hards continues firm, at 18s. 6d. f.o.b., Humber ports. New business has been scarce during the last two weeks. The demand for industrial coal is only moderate, and although an increased tonnage of house coal is being called for, the volume of business is below the average of previous years. The output of coke has increased but demand keeps brisk and prices are maintained.

Our Glasgow correspondent writes :—The collieries closed down on Tuesday for the New Year holidays, and production will not be in full swing again until next week. There has been next to nothing doing in the market. The total coal shipments from Scottish ports during the year amounted to 13,259,000 tons, which was an increase of 1,400,000 tons on those of 1928. The Clyde accounted for 4,746,000 tons, or 424,000 tons more than in 1928, the Forth for 4,110,000 tons, a gain of 583,000 tons, and the Fife ports, 4,403,000 tons, a gain of 392,000 tons. The market closed the week with prices nominally as follows (f.o.b. district ports) :—Lanarkshire.—Ell best, 16s. 6d.; splint best, 17s. 6d.; splint second, 16s. 9d.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; steam, 15s.; Hartley, 18s.; trebles, 17s.; doubles, 16s. 3d.; singles-14s.; pearls, 13s.; dross, 10s. Fife.—Screened navigation, 18s., 19s. 6d.; first-class steam, 16s.-16s. 6d.; third-class steam, 15s.; trebles, 18s. 6d.-19s. 6d.; doubles, 16s. 6d.-17s.; singles, 15s.; pearls, 13s. 6d.-14s. Lothians.—Prime steam, 15s.; secondary steam, 14s. 3d.; trebles, 18s.; doubles, 16s. 6d.; singles, 14s. 9d.; pearls, 13s. 3d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s. 6d.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 14s. 6d.; pearls, 13s.; dross, 10s. 6d.

Our Cardiff correspondent writes :—The holidays have greatly interfered with the transaction of business during the past week, and there has been little movement in prices. On Tuesday the companies producing the best house coal raised their prices by 1s. 6d. per ton to 26s. 6d. per ton as from January 1st, but so far the quotations for the more competitive second class house coals are unaltered. About 1¼ million tons of Monmouthshire and Rhymney Valley coals have been tendered to the Italian State Railways under the provisions of the Hague agreement, but no contracts have yet been actually placed. An announcement on the subject is expected next week on the return to Cardiff from Rome of the principal representative of the railways. The output regulation scheme came into operation in the coal field as from the beginning of the new year. Individual allocations to the collieries show that in the great majority of cases the quotas averaged from 3 per cent. to 4 per cent. below their rate of production last year, but that in a few cases the companies have at their disposal small surpluses over their 1928 production. Shipments at the South Wales ports last week fell, owing to the Christmas holidays, from 758,800 tons to 352,600 tons, but the latter quantity compares with 217,370 tons in the corresponding week last year. The following are the current approximate quotations :—Best Admiralties, 20s. to 20s. 3d.; seconds, 19s. 9d. to 20s.; best drys, 20s. 6d. to 21s.; Western Valleys, 18s. 6d. to 18s. 9d.; Mon. Black Veins, 19s. to 19s. 3d.; Eastern Valleys, 18s. to 18s. 6d.; best small steams, 14s. 6d. to 14s. 9d.; cargo smalls, 13s. 6d. to 14s.; cooking smalls, 14s. 6d. to 14s. 9d.; best anthracite large, 36s. to 38s.; Red Vein large, 27s. to 28s.; machine-made cobbles, 44s. to 46s.; French nuts, 45s. to 47s.; stove nuts, 44s. to 46s.; rubbly culm, 12s. 9d. to 13s. 6d.; foundry coke, 35s. to 37s.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 29s. 3d. to 29s. 9d.

IRON AND STEEL.

Our Middlesbrough correspondent writes :—There was littl serious attempt at business on Tuesday's market. Prices of Cleve land iron were unchanged : No. 1, 75s.; No. 3, 72s. 6d.; No. 4 foundry, 71s. 6d., and No. 4 forge, 71s., f.o.b. or f.o.t. Deliveries to home consumers will recommence on Thursday and by Monday next normal conditions will prevail. Makers are well provided with orders, and will be able to give prompt deliveries from accumulations of iron at the furnaces over the holidays. Further buying by home consumers is anticipated early in January, but there is no prospect of business with the near Continent at present prices. The official total of pig iron shipments for December amounted to only 12,619 tons against 21,518 tons in November and 25,711 tons in October. Hematite iron business has been held up with home consumers, but a few sales have been made on export account by merchants who have been willing to shade makers' prices. The latter are firm at 79s. for mixed numbers for January delivery, but are easier for January-March than hitherto. Makers are prepared to accept 80s. for good lines. They look for an expansion in trade as soon as the New Year is turned. In the steel trade it is expected that work will be fully resumed by Monday next, though some mills will start earlier. A fair amount of work is in hand, and additional contracts are under negotiation. Orders for five more good-sized steamers have just been placed on this coast, three on the Tyne and two at West Hartlepool, which will further increase the demand for shipbuilding materials. Prices are unchanged from last week. In the ore market there is almost nothing doing. Best Bilbao-Rubio is nominally 23s. 6d. for early delivery, and the freight Bilbao-Middlesbrough is 6s. 9d. to 7s. For forward up to 24s. is asked, according to period. Coke is offering rather freely and, good medium qualities can now be obtained at 22s. 6d. delivered furnaces. The number of furnaces in blast in the district is now 41, two having been blown out just recently, but two more will be started almost at once.

Our Sheffield correspondent writes :—The resumption of activities in the local industries at the beginning of the week was only partial, as a considerable number of workpeople are still idle. Conditions should be normal again next week. Prospects are being canvassed, but there are no indications at the moment of any change in an upward direction. The position continues mixed, with certain favoured branches doing well, and promising further expansion. The call for basic steel has improved a little, whereas the acid department continues to shrink. The sole remaining works in Sheffield producing wrought iron is to be closed next month. The railway waggon, axle and tyre plants continue short of work, particularly on export account. There is a steady demand for hand and engineers' small tools, but with no progress and the cutlery and electro-plate makers have finished a busy season with some orders on hand for new year execution.

Our Glasgow correspondent writes :—All the works in Glasgow and the West of Scotland are now closed down for the New Year holidays. In some cases works will not be reopened until January 13th. During the year 1929, business in the Glasgow district has been rather below the average of an ordinary good year. The pig iron trade has been unsatisfactory. Of the number of furnaces in Scotland, only about one-third are in operation, and throughout the year, that proportion has never been exceeded. Prices have advanced slightly, but the increase has been the result not of greater demand, but of the impossibility of carrying on at the former unremunerative figures. Steelmakers have been steadily employed during the greater part of the year, but have generally not had sufficient specifications for forward delivery on hand to give any feeling of confidence for the future. A gratifying feature is the larger tonnage of British steel that is being used by structural and other engineers. Tube makers were exceptionally busy in the early months of 1929, but there has been some falling off since then. On the whole, however, the year has been a busy one for this branch of industry and the outlook for the New Year is satisfactory. Bar iron makers and makers of re-rolled steel bars have had a quiet time, and the prospects are not encouraging. In the black sheet trade, business has been fairly well maintained and the plants well employed all year. Sheet galvanisers have also been almost fully employed, but during the closing months of the year there has been a falling off in export demand, and prices have been considerably cut. Competition from the Continent is on the increase in this trade. There are, however, signs of an improvement in demand, and sheetmakers have a fair tonnage on their books at the moment. Glasgow locomotive builders have secured some very good contracts during the year, but works are equipped for a much larger output than it has been possible to secure. Structural engineers in the Glasgow district have had a fairly good year, and have a considerable amount of work on hand. The shipyards on the Clyde have maintained the standard reached in 1928, and during the year some very fine vessels have been built and engined on the Clydeside.

Our Cardiff correspondent writes :—The South Wales tinplate works have resumed operations after the Christmas week's stoppage, and on the Swansea Metal Exchange on Tuesday prices were firm, and an optimistic view was taken of prospects over the new year. Belgian steel bars have recently been offered at between £5 2s. 6d. and £5 5s. 0d., compared with the minimum for the South Wales bar of £6 10s. 0d. per ton, and imports of the Continental material are, therefore, once again showing signs of expansion. Last week the Customs returns reported the arrival of 10,500 tons, but several additional cargoes are on the way. Galvanised sheets are fairly steady despite the continued paucity of inquiries from India. Shipments of tinplates last week were considerably below the average, but owing to the suspension of work at the mills, the deliveries to the dock warehouses were small, and stocks at the end of the week totalled 196,000 boxes.

OTHER METALS.

Tin.—The standard market opened with a quiet tone and values eased on liberal offerings combined with lower Eastern advices, though later marked a sharp recovery on buyers becoming more prominent. Standard cash sold £175 5s. to £175 2s. 6d. to £178 2s. 6d. and £180 5s.; three months, £180-£177 17s. 6d. to £180 5s. and £183 12s. 0d. In the East, sales were reported on the basis of £181 to £184 ton c.i.f. terms.

Copper in quiet demand at irregular rates, offerings being in excess of requirements, closing firmer, however, on improved buying orders. Standard cash sold £67 5s. to £71 7s. 6d.; three months £67 2s. 6d. to £66 16s. 3d. to £67 5s. and £70 per ton.

Lead quiet but fully steady. Good soft foreign pig, December, sold at £21 15s. to £21 18s. 9d.; January, £21 8s. 9d. to £21 10s. to £21 8s. 9d.; February, £21 7s. 6d.; March, £21 10s.; April, £21 10s. ton.

Spelter active, especially for January and March dates, but prices easier. January, sold, £19 17s. 6d. to £19 12s. 6d. and £19 15s.; February, £20 6s. 3d. to £20 and £20 1s. 3d.; March, £20 11s. 3d. to £20 5s. and £20 7s. 6d.; April, £20 10s. to £20 7s. 6d ton.

Antimony easier. English regulus, quoted, £45 to £52 10s.; China ditto, spot, £31 10s.; December-January, £28 to £28 5s.; China, crude, December-January, £19 to £19 5s. per ton c.i.f.

Antimony Oxide.—December-January, £28 5s. ton c.i.f.

Antimony Ore, 50 per cent., December-January, 4s.; 60 per cent., 5s. per unit c.i.f.

THE COTTON TRADE.

MANCHESTER, December 31st.

Traders in the market have not yet recovered from holiday influences and again there has been an inclination to defer the arrangement of contracts of importance. On the whole there is rather less fear of lower values. Although uncertainty exists with regard to trading conditions in outlets abroad the feeling is growing that increased activity will show itself early in the New Year. For the time being there is nervousness relating to political developments in India, but some fair lines have been booked in light cloths for Calcutta. Operations for China remain restricted and poor clearances are still taking place at the auctions in Shanghai. Printed and dyed goods have been sold in moderate quantities for South America and the Continent. A number of manufacturers have extended the usual holidays. A slow tone has prevailed in the yarn market. Only limited quantities of American and Egyptian counts have been sold, and the prices ruling are decidedly unremunerative.

THE WOOL TRADE.

Our Bradford correspondent writes:—The year opens with little of an encouraging nature in sight so far as the wool textile industry is concerned. Lack of confidence in values is still the outstanding feature, and no development can be expected until the raw material position has again been tested. If values could be stabilised on about the present basis, users everywhere would have confidence to go forward. That the year starts with prices on a very different level from that ruling for many years may be gathered from the following table, in which January quotations are given:—

	TOPS IN OIL.					
	1925.	1926.	1927.	1928.	1929.	1930.
	d.	d.	d.	d.	d.	d.
64's warp	79	50½	46	53½	48	32
60's super	75	46½	42¼	50	45	30
56's average	43	26	31⅜	38½	31⅜	24¼
46's carded	35	23	20¾	23½	24	18½
40's prepared	32½	21½	19½	22½	22½	18

Good business has been done in the past with prices on a much higher scale than that now current, but it has not lasted and the wild fluctuations have made steady and remunerative trade impossible. One might reasonably expect, therefore, that with cheap wool and stability—that is all-important—the present year will present opportunities for definite expansion.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

During the past fortnight cable information has been received in London to the effect that excellent rains have fallen over large areas in Australia. Coming at this time of the year the greatest possible good will be done, for feed and water will be provided for the summer, thus helping the sheep to maintain good physical condition. Another two inches general rainfall towards the end of the month would stimulate the growth of the clip, and the extra weight would be some compensation for the lower prices. It would be far better to have a good weight of well-grown wool to offer than a short clip, even if the price for the latter is 2d. to 3d. per lb. more. The prospects for the New Year cannot be described in glowing terms. Consumption will have to expand very considerably during the next twelve months if all the wool likely to be available is to be absorbed readily. The second half of the selling season will open next Monday, and there is nothing to indicate any recovery in values. These may be expected to move on about the same level as before the Christmas recess. Fair sales of tops have been made in Bradford without values being much influenced in an upward direction. Some topmakers have sold quite as much as they consider safe, and have advanced their quotations, but spinners are not yet willing to pay any more than fractional advances for such business as they have to offer. There is a fair amount of encouragement for users to continue buying wool at to-day's level, though the prevalent impression is that there is quite enough in sight to satisfy all requirements. The fact that during 1929 64's tops fell about 16d. per lb., 56's 9½d., 50's 7d., and 40's prepared 5d., shows that the year cannot have been profitable. This prevents users feeling enthusiastic about the future and the only hope of any substantial recovery lies in an expansion of manufacturing requirements. More trade is needed in tops, yarns and fully manufactured goods on both home and export account to find work for the standing spindles and looms. Until this comes no great improvement in values can be expected.

HIDE, LEATHER AND ALLIED TRADES.

Business in the leather and kindred industries has been quiet since the resumption after the holidays. In spite of this, however, there seems to be a feeling that conditions this year will be better than those during most of 1929. At the auctions for English hides held in the middle of the week prices were steady, with a slight appreciation for some classes, and it is expected that similar results will be forthcoming at the bulk of the sales held later. Imported hides, on the other hand, have been hardly able to maintain recent quotations, the one exception being Frigorifics, prices for Argentine ox now having touched 8¾d. Light ox have sold at 7¾d., while Montevideo ox have realised 8¼d. Practically the whole of the buying in this direction has been on account of the United States, European tanners not being interested in these goods at the present basis of values. Dry River Plates are inclined to be easier, and sales of B.A. Americanos have been made at 9⅜d., with M.V. Americanos fetching 10¾d. Cape hides are nominally steady at 10d. and 9d. for first and second drys, and one penny less for drysalted. The Chicago market is cabled as steady, with best native steers quoted at 16 cents. There has been very little doing in sole leather so far this week, and what orders have come to hand have mostly been in connection with repairing trade requirements. Shoe manufacturers have been looking about for future supplies of light and medium weight English and wetsalted bends, but very little actual business has been put through. Dry hide leathers are a poor sale and only interest a certain class of trade. Demand for upper leather has also been slow; here and there orders have come to hand for small parcels of box and willow calf leather, and it would seem that this line will be mostly in request when things become more normal. Inquiry has also been experienced for black and brown glacé in the cheap to medium priced skins, while the demand for most of the other lines has been negligible. Shoe manufacturers are now getting back to something like regular working conditions, and it is fully expected that the holiday sales will soon be reflected in orders for replacement of stock.

VEGETABLE OILS AND OILSEEDS.

Quiet and somewhat easier conditions have ruled in the markets since the holiday. Linseed oil offers only sparingly on spot, and prices are firm around £44 per ton naked ex Hull mill, with £43 10s. quoted for January and £42 5s. January-April. Consumers, however, are not displaying much interest. Cotton oils are quiet and neglected. Crude Egyptian ex Hull offers at £29 and common edible at £32 5s. for prompt delivery. Other seed oils are quiet and inclined easier. In the oilseed section linseed is in poor request here, but there has been some demand from the Continent for seed on passage and December loading, prices paid for Plate ranging from £19 3s. to £19 6d. Current value of old crop on spot at Hull is £21, December shipment of new seed being quoted £19 7s. 6d. and January £19 2s. 6d. Some interest in the new Bombay crop has been shown and £21 has been conceded for March. The official estimate of the new season's yield in Argentina, issued by the authorities, is less than expected, the gross total being 1,413,000 tons as against 2,103,000 tons harvested last season. Allowing for a small carry over and seeding requirements, the possible exportable surplus is put at 1,250,000 tons. Cottonseed is easier, black Egyptian offering at £8 2s. 6d. spot, passage and December, and £8 5s. January. Prices of oilcakes have been drastically reduced to attract purchasers.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market is dull with a weak tendency. Uncertainty as to the fate of the commodity at the forthcoming Budget, puts confidence at a very low ebb. Previous quotations were repeated for all spot goods, and moderate quantities of home-grown granulated are on offer. Imported descriptions call for no comment. All raw refining sugars are somewhat difficult to clear at the moment. The Java market fails to develop. Continental granulated for shipment, scarcely mentioned. Czecho granulated, ready quoted, 10s.; January-March, 10s. 1½d.; and April-June, sold, 10s. 3¾d. f.o.b. Hamburg. Peruvian, 96 per cent. afloat, 8s. 2½d. c.i.f. Terminal sections presented quiet features, and moderate sales in raw include March delivery, 6s. 9¾d. to 6s. 9d.; May, 7s. 9d. to 7s. 8½d.; August, 8s. 3d. to 8s. 2½d.; December, 8s. 5½d. White, August, 11s. 1½d. Peruvian, 96 per cent. afloat and arrived, sold, 8s. 0⅜d. c.i.f. Brazilian, ditto, February, 8s. 3d. c.i.f. London. Cuban receipts last week, 33,400 tons, against 26,280 last year; exports, 41,630, against 52,230; stocks, 181,460, against 124,400. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending December 28 amounted to 212,119 tons, compared with 100,886 at corresponding period last year.

COFFEE.—Business still partakes of a holiday character, but during next week the market should revive, as representative quantities from Kenya and Costa Rica are due to reach London. Of the latter, certain consignments from the Pacific slope will be included.

COCOA.—Only small transactions on the spot, but prices remain unaltered. Forward positions quiet. Accra, F/F, January-March, sellers, 39s. 6d.; February-April, 40s. f.o.b. Terminal, March delivery, sold, 44s. 1½d. to 43s. 9d.; May, 44s. 3d.; July, 45s. 1½d.

TEA.—No change to note in the private contract market, and business is conducted on quiet lines.

RICE.—There is no general improvement in demand, but sellers ask steady prices.

BEANS.—A feature of the market was quite a mild run upon Ohtenashi, and prices advanced. Butter beans at the moment move off slowly. Madagascar butters, afloat steamer "Clan Macindoe," quoted 28s.; November-December bill of lading, 27s. 3d.; December-January, 27s.; January-March, 26s. 9d. c.i.f. Ohtenashi, December-January, sold, 22s. to 22s. 3d.; March-May, buyers, 23s. c.i.f.

PEAS.—Steadier for Japanese, and afloat quoted 16s. 6d. to 16s. 9d.; November-December, 17s.; December-January, 17s. 1½d.; January-February, 17s. 3d. c.i.f. Dutch steady but quiet.

SPICE.—A firmer market for pepper, particularly in forward positions. Improved buying was met with reserve on the part of sellers. Lampong, January-March, sold, 11½d. to 11½d.; March-May, 11⅝d. to 11⅞d.; Muntok, white, January-March, sold, 1s. 4¼d. to 1s. 4⅜d.; March-May, 1s. 4⅜d. to 1s. 4½d. London stocks: Black, 1,324 tons, against 1,286 tons at same time last year; white, 1,468, against 262 tons in 1928. Cloves quiet. Zanzibar, spot, 10½d.; January-March, 9½d. Pimento to arrive, 87s. cwt. c.i.f. London. Tapioca dull at late rates. Sago flour steady. Sarawak, December-January, London, 12s. 9d., Liverpool, 12s. 7½d.; January-February, 12s. 6d. Liverpool, 12s. 7½d. London. Desiccated coconut, spot, medium cut, 33s. 6d.; fine, 36s.; halves forward, 31s. 6d. c.i.f.

FRUIT (Dried)—There has been very little movement in this market during the past week owing to holiday interruptions, and prices nominally unchanged pending the resumption of business early in the New Year.

EVAPORATED FRUITS quiet and trend of prices easier. Californian apples, extra choice, 60s. to 69s.; Canadian, 64s.; Californian pears, 87s. 6d. to 102s. 6d.; Australian, 65s. to 85s.; Oregon plums, 54s. to 60s. South African apricots range from 70s. to 112s. 6d.; Australian ditto, 67s. 6d. to 77s. 6d. Other descriptions unaltered. Almonds firm, and Bitter-Jordan range from 180s. to 195s.

CANNED GOODS, &c.

Business was unimportant and quotations mostly unaltered. The general tone, however, remained steady and offers somewhat reservedly made.

CONDENSED MILK AND MILK POWDERS.—Market occasionally the turn easier. Dutch condensed, full cream, sweetened, 5-cwt. casks, 39s. 6d.; machine skimmed, sweetened, ditto, 24s.; full cream, sweetened, 56-lb. drums, two in a crate, 50s. English condensed, full cream, sweetened, 5-cwt. casks, 42s. 6d.; machine skimmed, sweetened, ditto, 24s. 9d. carriage paid. Powders, 26 per cent. butterfat, full cream, roller process, 1-cwt. cases, 75s.; spray, ditto, 2 by 56-lb. tins, crated, 96s. 6d.; machine skimmed, sweetened, roller process, 1-cwt. cases, 28s. 9d.; spray, ditto, 2 by 56-lb. tins, crated, 43s. 6d.; ditto, 1-cwt. cases, 42s., all per cwt. All Dutch prices are net, ex store London/Hull or Goole, and cover prompt or gradual delivery to end of March, 1930. Stocks available in Newcastle, 3d. per cwt. extra, Liverpool 6d., Manchester 1s. On the grocery side: F.C.S., 19s. 6d.; M.S.S., 10s., basis usual packing.

HONEY.—Market quiet and prices unaltere.

RUBBER.

A firmer market, owing mainly to buying orders from New York. Thus, sellers were encouraged to adopt more reserve, but the improvement was not maintained. Sheet, spot and January, sold, 8 1/16d. to 7 15/16d.; February, 8 1/16d.; March, sold, 8¼d. to 8 3/16d.; April-June, 8⅛d. to 8 7/16d., 8⅜d.; July-September, 8⅜d. to 8⅝d.; October-December, 9d. to 8⅞d., and January-December, 1931, 9⅛d. to 9 1/16d. London landings for past week amounted to 870 tons; deliveries, 504; stock, 54,260 tons, against 19,727 at same time last year, being an increase of 366 tons on the week. Liverpool landings, 451 tons; deliveries, 88; stock, 19,059, against 2,854, an increase of 363 tons on the week.

GENERAL.

JUTE.—There is no improvement to note in this market. On the contrary, increased weakness was observable, and meantime trade remains very quiet, in keeping with slackness attending the sale of manufactured jute goods. Firsts, spot, Hamburg, sold, £28; ditto,

Now on Sale

The Journal of Commerce
ANNUAL REVIEW

The Leading Annual for the Maritime Industries

The contents will embrace a number of articles—all written by Experts—dealing with a variety of subjects of prime importance to those in any way connected with Shipping, Shipbuilding, Marine Engineering and associated branches of commerce, and will include:—

THE SHIPPING INDUSTRY. By WALTER HARDING (Chairman of the Liverpool Steam Ship Owners' Association).

THE LOAD LINE. By SIR CHARLES J. O. SANDERS, K.B.E. (Chairman of the Load Line Committee, 1927-29).

SAFETY OF LIFE AT SEA. By SIR WESTCOTT ABELL, K.B.E., M.Eng.

TRAMP SHIPPING. By T. C. CHRISTENSEN (Chairman of the Executive Committee of the Baltic and International Maritime Conference).

SHIP DECORATION AND FURNISHING. Foreword by LORD WARING.

THE N.D.L. LINER "BREMEN." By D. S. WHITEFORD, B.Sc., M.Inst.N.A.

SHIPBUILDING AND NAVAL ARCHITECTURE. By A. T. WALL, F.C.M.S., A.R.C.Sc., M.Inst.N.A.

MARINE STEAM ENGINEERING. By J. HAMILTON GIBSON, M.Eng., M.Inst.C.E., M.Inst.N.A., M.I.Mar.E.

THE BAUER-WACH SYSTEM. By DR. G. BAUER.

PULVERISED COAL FIRING. By A. E. ASH, M.Inst.N.A.

THE MARINE OIL ENGINE. By D. M. SHANNON, M.Inst.N.A., M.I.Mech.E.

THE FAST CARGO AND PASSENGER MOTOR-SHIP. By A. C. HARDY, B.Sc., F.R.G.S., A.M.I.Mar.E.

CORROSION OF OIL TANKERS. By H. C. T. BRYANT.

PORTS AND HARBOURS. By BRYSSON CUNNINGHAM, D.Sc., B.E., F.R.S.E., M.Inst.C.E.

ITALIAN SHIPPING. By Comm. Ing. E. FERRETTI, D.S.O., C.B.E., M.Inst.N.A. (Chief Inspector to the Registro Italiano).

THE SCIENCE OF NAVIGATION. By LIEUT. DONALD MACMILLAN, R.N.R.

MARINE INSURANCE. By D. KING-PAGE.

FREIGHTS IN 1929. By G. P. DE PALLENS.

Over 250 pages including numerous illustrations, photogravure and colour sections.

PRICE **2/-** per copy
Including postage 2/9.

Copies are obtainable from newsagents, bookstalls or direct from the Publishers.

THE MONEY MARKET.

By the middle of the week the Bank had finally been repaid its loans to the market over the turn of the year, while there were also signs that the influx of revenue was beginning to take money off the market. Money, therefore, though still comfortable, has become "usable"

from the lender's standpoint, and on Thursday 3¾ per cent. was being obtained for short money. The main event of the week, however, was the further fall in discount rates for all maturities. On Wednesday one house mentioned a level 4 per cent. for all dates, while elsewhere March bills were quoted at 3 15/16 per cent., while even the three months' market rate was barely 4 per cent. Demand for bills on both home and foreign account was very keen, and was intensified by such factors as the decision of the Argentine Government to keep the proceeds of the recent loan from Barings in London, while issuing notes against it in Buenos Aires.

* * * *

In these circumstances a five per cent. Bank rate, with a spread of a whole point between it and market rate had become distinctly anomalous, and on Wednesday it was universally anticipated that the week would witness a reduction in Bank rate to 4½ per cent. Much to the market's surprise, the Bank authorities when they met the following day decided to make no change. Discount rates, however, hardly moved, but with weekly fixtures at 4 per cent. and market rate at about the same figure, brokers and discount houses have no margin in hand out of which to pay their expenses. It is true that they have done reasonably well out of bills bought a few weeks ago, but even so the present condition of affairs cannot last indefinitely.

* * * *

It is not easy to understand why the reduction in Bank rate has been delayed. This week's Bank return shows that the Bank has gained just over three millions of gold, and the Bank's gold stocks to-day are £149,215,000, or only £5,264,000 less than a year ago. It is true that much of the week's gold arrivals represented the final shipments from Buenos Aires, while another £250,000 consists of nothing more than gold released from earmark. It is also necessary to add that this week the Bank had to bid up to £84s. 11d. for Tuesday's new gold, and that even so it was only able to secure £536,000 out of £746,000, while £100,000 was bought by France. Still, even these considerations hardly explain the Bank's decision. Wednesday's appreciation of the dollar to $4.86⅞ was purely due to the anticipation of a reduction in the Bank rate, for so soon as it was known that no change had been made the rate relapsed to $4.87¼. Nor does the French exchange at Frs. 123.90 leave any margin of profit on gold shipments. Finally, a return of £6,760,000 of notes from circulation has, in conjunction with the gold receipts, raised the Bank's reserve by £9,961,862.

	Dec. 19, 1929.	Dec. 24, 1929.	Jan. 2. 1930.	Jan. 9, 19 .	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5	5	5	5	5½ (Dec.12,'29)
Banks' Deposit Rate	3	3	3	3	3½ (Dec.12,'29)
Discount ∫ Call	3	3	3	3	3½ (Dec.12,'29)
Houses ⌊ Notice	3½	3½	3½	3½	3¾ (Dec.12,'29)
Market rate (3 months' bills)	4 13/16	4 11/16–¾	4 5/16	4 ¼	...

The market would welcome a reduction in the rate, as apart from more direct considerations, it would put an end to the present uncertainty. Again, tax collection and the impending payment of the final call on Conversion Loan mean that a period of stringency is likely, and the market would naturally prefer to face it upon a 4½ per cent. basis.

NEW YORK.

The week's Federal Reserve statements reflect the usual contraction in the figures of the System, the total credit outstanding being down by $163,000,000, and $218,000,000 below the figures of a year ago. The circulation has declined sharply, reserves showing a corresponding increase. The ratio is 72.9 per cent., showing a rise of 3.3 per cent. on the week and 6.6 per cent. on the year. Similar changes have occurred at the local bank, where the ratio is 67.4 per cent., having risen by 6.9 per cent. over the week and 0.4 per cent. over the year. Not much interest is shown here over the question of a change in the discount rate, but a cessation of gold exports would possibly diminish any resistance to a reduction which the Board might display.

THE STOCK MARKETS.

Hopes of a reduction in Bank rate gave a firmer appearance to the Stock markets, only a slight easing of prices ensuing on Thursday's announcement of the Bank's adverse decision. Activity centred mainly on stocks of an investment character, including British Government securities and bank shares, but home rails were bought in anticipation of increased dividends, and various domestic industries shares were in fair demand. The rubber and tea share markets, by contrast, remained idle. Among mining shares, Kaffirs were prominent in the early part of the week, but the position of the leading base metals remained inconducive to share activity.

THE COMMODITY MARKETS.

There has been little change in the general state of trade. New coal contracts are not very abundant. The iron and steel trades have not yet recovered from the holidays, but makers of finished steel anticipate an improved demand for their products. The chief event in South Wales has been the formation of a new company by Guest, Keen and Nettlefolds and Baldwins. Little improvement is evident in the cotton trade. Activity in the wool textile industries is being held back by the possibility of a further decline in wool prices, but it is believed that there is a substantial demand ready to materialise if prices appear firm. A general state of depression in the jute trade is attributed largely to overproduction by the Calcutta mills. The hides and leather market has improved slightly. Oilseeds and vegetable oils remain a quiet market though there is a somewhat better demand for cotton seed and its products. Wheat prices, after a rise, are back almost to the level of the end of the year.

THE FOREIGN EXCHANGES.

Steady trading characterised the Foreign Exchange Market last week, most of the principal exchanges, except the peseta, moving against this country in anticipation of a change in the Bank rate. Sterling on New York went from 4.87 31/32 to 4.87¼ on Thursday, after 4.86⅞ on the previous day. Montreal improved from 4.93½ to 4.92. Paris was unchanged on balance at 123.90 after being up to 123.96½. Brussels was weak at 34.92¼. Milan gained eight points at 93.13. The peseta was very erratic, and went from 36.40 to 40.20. Amsterdam improved from 12.09¾ to 12.08⅞, and Berlin gained four points at 20.39½, after 20.43¾. Switzerland was better at 25.13. Rio was shaky, but 1/16d. better on balance, at 5 11/32d. Buenos Aires was erratic, and lost ⅛d. at 45 1/16d. Montevideo lost a penny at 45½d. In the Far East the rupee was steady at 1s. 5 61/64d.; the yen was a little better, as a result of satisfactory trade returns, at 2s. 0 3/16d. Batavia improved by ¼ to 12.13. Future rates were rather of a nominal character in view of the anticipations of a change in Bank rate, but, roughly, dollars were at ⅛ and ⅜ cent premiums, and francs at 4 and 8 centimes premium. Brussels was at considerably wider discounts of 1½ and 3½ centimes. Milan was more on offer at discounts of 14 to 30 centesimi, nearly double those of last week. Berlin was weaker at 2½ pfennigs and 7 pfennigs discount, against 1¾ pfennigs and 4½ pfennigs last week. Silver prices tumbled sharply as a result of continuous sales by China, and new low records were touched for both spot and forward, at 20⅜d. and 20 9/16d. respectively. The China exchanges reacted in sympathy, Hongkong losing a penny at 1s. 7⅜d. and Shanghai 1⅜d. at 2s.

ECONOMIST INTELLIGENCE BRANCH.

We have pleasure in announcing that our Intelligence Branch has recently been amalgamated with Moody's Investors Service, Ltd., the British counterpart of the well-known and old-established American investment service. A new company has been formed under the title of Moody's-Economist Service. Requests from our readers for economic, statistical or other information will in future be handled by the new company, which will have at its disposal the records both of the Economist Intelligence Branch and of Moody's Investors Service, Ltd.

THE PRESS LORDS AND PROTECTION.

THE public have been treated to a New Year comedy. A short time ago the proprietors of the *Daily Mail* and of the *Daily Express* were engaged in a bitter struggle for journalistic supremacy. No weapon was overlooked and no ally ignored that might be used in the fight. This week the picture is completely changed. The former competitors appear to-day before the public in a close political alliance, and Lord Rothermere has opened an offensive with his morning, evening and Sunday batteries to make Lord Beaverbrook Prime Minister of England. By an oversight he omitted to give the names of the cabinet of Fleet Street peers, and, as their numbers are somewhat limited, the offices, in Mussolini fashion, would presumably be duplicated; but we may assume that Lord Rothermere himself would take the Foreign and India Offices, Lord Riddell the Home Departments, and Lord Camrose Labour and Trade.

It is true that there is some slight contradiction between the Rothermere policy of Protection and the Beaverbrook policy of Empire Free Trade, but it would be churlish to remind the noble lords that Joseph Chamberlain's great tariff reform campaign largely came to grief over precisely this difficulty of reconciling conflicting protectionist aims. If two different tunes have to be sung at once it is, after all, much easier for two performers than for one. To complete the cacophony it only requires a third performer to chime in about the virtues of a tariff for bargaining purposes. No one has yet shown how to reconcile the conception of preserving the home market for the home producer with that of opening it freely to Empire products, such, for example, as motor cars produced in the Canadian factories of General Motors, or with that of offering access to the British market in return for tariff concessions by foreign countries. But the popular Press has much too much experience of maintaining two or three conflicting views at the same time to be at all distressed by this trilemma, and it is in accordance with the traditions of these papers that they have both put their respective views forward in their crudest and least practicable forms.

It is difficult to know which to admire more: Lord Beaverbrook's persistence in adhering to a policy which there is not the slightest chance that the Empire will accept, or Lord Rothermere's audacity in claiming that a policy of high protection—amounting even to prohibition of trade—can increase the welfare of this country. Take the case of Canada, 90 per cent. of whose population lives within a hundred miles of the American border, whose trade unions are branches of the American brotherhoods, whose literature, sport, theatres, trains and all the material details of life are American rather than British. Is it thinkable that the increasing tendency in, say, the prairie provinces for economic intercourse to develop with the great and wealthy nation across the neighbouring border can be checked and the current of economic life diverted eastward to the coast thousands of miles away and across the ocean?

But Lord Beaverbrook is a man of resource. Meeting with no response from the self-governing Dominions, he is concentrating on the non-self-governing colonies. In a magnificent flight of imagination, in his speech to Lord Rothermere's editors and staff, he told us that if the imports of these non-self-governing colonies increased at the rate of recent years they would, in ten years' time, be importing £750,000,000 of goods, which is equal to the total which Great Britain exports to the whole world to-day. Here is a *suggestio falsi* indeed. The statement has little significance unless it is meant to imply that these countries could absorb a great part of British exports. But let us briefly examine the figures. Firstly, the rate of growth is calculated from a pre-war base, and the total for 1939, which in any case is greatly exaggerated, could, therefore, only be reached if we have another war to send up the level of prices. Secondly, the imports include, not only food, but oil and many materials which we cannot produce. Nearly half the total consists of imports into British Malaya; and, of these, nearly half consists of the produce of the Dutch and other East Indies, China, etc., in transit to Europe and other parts of the world. Of the rest a large part consists of rice. In the light of these figures it is fantastic to suggest that there is here a market for the products of Great Britain of the dimensions suggested.

Many other of Lord Beaverbrook's statements are of a similar kind, including the remarkable argument that the Dominion producer can get much higher prices for his products and yet not raise the price to the consumer in Great Britain. We shall have occasion to return to Lord Beaverbrook's argument with regard to foodstuffs from the Empire, but it may perhaps be useful to put in perspective the changes in the channels of British trade which his proposal would involve by enumerating the chief sources of our purchases and of our markets in 1928. We have added one or two of the non-self-governing Dominions for comparison:—

Sources of British Imports. (000,000's omitted.)	£	Markets for British Exports. (000,000's omitted.)	£
U.S.A.	191	India	89
India	78	Australia	56
Argentina	77	U.S.A.	48
France	67	Germany	40
Germany	63	Irish Free State	35
Holland	59	Canada	34
Canada	57	France	32
Australia	55	Holland	32
Denmark	53	Argentina	31
New Zealand	47	South Africa	31
Irish Free State	45	New Zealand	19
South Africa	24	West Africa	15
West Africa	11	Straits Settlements	11
Straits Settlements	10	West Indies	5
West Indies	5		

Lord Rothermere has had less time than Lord Beaverbrook to expound the details of his policy, but it is even more sweeping. Its salient features are:—

- A prohibitive tariff against all foreign manufactured goods.
- A subsidy which, it is estimated, will cost a mere £30,000,000, designed to ensure the farmer 55s. a quarter for wheat, £4 5s. a ton for potatoes, a bonus of £2 a head on all cattle reaching the age of two years, and a bonus of not less than 3d. a pound on all butter.
- India is to be compelled to admit British goods free and to put on high taxes against goods from other countries, in return for defence and the maintenance of internal security (for both of which the Indian taxpayer incidentally pays).
- The economic affairs of the nation are to be entrusted to a caucus of business men, whose decisions are to be accepted by the Government of the day.

We have no space this week for detailed comment on this arresting programme. It appeals strongly to an idea that is to be found all over the world, namely, that the fact that you buy from other people goods which you do not, and often cannot, make for yourself, is a sign of poverty and decadence. That idea is even prevalent in the happy country which has the highest tariff in the world, if we may judge from the *Emmitsburg Chronicle* as quoted in last month's *American Mercury*:—

> Nothing's wrong with Emmitsburg except—entirely too many of us get up in the morning at the alarm of a Connecticut clock, button a pair of Chicago trousers to Ohio suspenders, put on a pair of shoes made in Massachusetts, wash in a Pittsburgh tin basin, using Cincinnati soap and a cotton towel made in New Hampshire, sit down to a Grand Rapids table, eat pancakes made from Minneapolis flour, spread with Vermont maple syrup and Kansas City bacon fried on a St. Louis stove, buy fruit put up in California, seasoned with Colorado sugar, put on a hat made in Philadelphia, hitch a Detroit mule on Texas gasoline to an Ohio plow and work all day long on a Maryland farm covered with Pennsylvania mortgages, send our money to Chicago for auto tires, and at night crawl under a New Jersey blanket to be kept awake from a dern dog, the only home product on the place—wondering all the while why ready money and prosperity are not more abundant in this wonderful town of ours.

As to India, it is a little difficult to follow Lord Rothermere's mind, for he makes the curious remark that it is "the loose thinking of the Free Trade theorists" which has "led to a Dependency like India being allowed to impose a tariff on this country's cotton goods." As

a matter of fact, it was Free Trade theory that insisted for decades that the cotton import duty of India should be balanced by an internal excise which would put Lancashire on precisely equal terms with the Indian mills. It is not Free Trade, but protectionist ideas which have upset Lancashire. Lord Rothermere is right in thinking that the Indian problem is a vital one for this country. But to talk of putting back the clock and of taking away India's autonomy in tariff matters by abolishing the Fiscal Convention, shows that in his imperial ideas Lord Rothermere has gone back to the days of Lord North.

In comparing these two programmes we cannot help thinking that the extreme form in which they have been put forward betrays—in spite of the appearance of harmony—an element of that competitive spirit which recently produced even higher insurance bribes to readers. Their success in persuading a nation, whose very existence depends on the free exchange of commodities, to adopt a policy of trade restriction will be an interesting test of the real influence of the popular Press. But it will be no more than an experiment, for of the ultimate fate of these proposals there can be no doubt. It is no accident that in industrialised Germany the forces in favour of the removal of tariffs are gathering strength and that densely peopled Belgium was the first country officially to welcome *as an economic necessity* the Geneva policy of removing trade barriers. Our latest protectionists are up against the economic interests of the mass of consumers of this country and of the great industries and trades which depend for their existence on overseas commerce. Against these great vested interests even the press lords cannot hope to prevail.

WASHINGTON AND PARIS.

THE declaration in the new German-American Reparation agreement that "the United States Government agrees to regard Germany's loyalty and faith and credit as sole security and guarantee for the fulfilment of Germany's obligations under this agreement" introduces an unaccustomed note into a formal diplomatic document, and it is not surprising that pointed contrasts have been drawn in Germany itself between the attitude of the American Government and that of certain other countries a good deal nearer to Berlin, whose habit it is to raise the "sanction" issue wherever possible.

That contrast does, in fact, exist, and it springs from a divergence of outlook which finds expression in more fields than one. So far as Reparations go, it may be observed without suspicion of cynicism that the United States can well afford to be tender to German susceptibilities, for Germany's obligations are now being so largely commercialised that the whole national credit is involved in any case, and the last nation with which the German Government would willingly embroil itself financially is the State to which financial dominance has largely passed. By introducing into the agreement a passage expressly renouncing all idea of any but moral sanctions, America creates a general atmosphere of goodwill and establishes herself in particularly good odour in Berlin. Even from the purely business point of view there is sound sense in such a course, just as from the purely business point of view there was sound sense in America's renunciation of a considerable portion of her share of the Boxer Indemnity in 1908. In such matters American idealism is entirely genuine, but it is perhaps commended rather more than it otherwise would be to the average American mind by the fact that it has its uses as an asset in international relations as well.

Akin to the opposition of view between the United States and, for example, France over sanctions in regard to Germany is the same opposition of view between the same two countries over such larger questions as the Naval Conference and the relationship of the League Covenant and the Kellogg Pact. In all these fields Washington and Paris represent merely the poles of opposition. The questions on which they thus take position concern equally the other powers of the world, particularly those participating in the Naval Conference. All of them have their individual points of view, and the future evolution of their policies may have considerable influence on the immediate development of world relations. Broadly speaking, the contrast is between tight and loose understandings (a contrast, incidentally, which finds an interesting parallel in America's own history in the opposition between the literal and the loose construction of the Constitution), France standing, as she always does stand, for the system formally complete and worked out remorselessly in every logical detail. The Treaty of Versailles, with its specific provision against every possible contingency and its sanctions in reserve against every possible default, is characteristically French. So—paradoxically enough in view of its partially American origin—is the League Covenant as contrasted with the Kellogg Pact, which, to carry the paradox further, is characteristically American in tenour despite its debt to the initiative of a French Foreign Minister.

Fundamentally, the contrast is due to the difference of conditions on the two sides of the Atlantic. For France, and in lesser, or in some cases even in greater, degree, for other European States, security is a real and vital issue. For the United States it is not and never has been. The parallel often drawn between the relationships of the forty-eight States of the American Union and the relationships of the twenty odd States of Europe is so profoundly misleading that if deliberately considered it can impress none but the most superficial minds. But subconsciously it has none the less so far impressed itself on the average American citizen as to make it extremely hard for him to enter with any full understanding into the anxieties and perplexities that of necessity preoccupy responsible statesmen in most European countries. The inevitable intermediary and interpreter between France on the one hand and the United States on the other is Great Britain, a fact which imposes considerable responsibilities on a Government which has just sent its Foreign Minister to Geneva to carry a stage further the task of bringing the League Covenant into harmony with the Kellogg Pact, and will in ten days' time have four of its Cabinet Ministers sitting side by side with the French and American delegates hammering out the details of a naval limitation agreement.

Those two tasks are far more intimately associated than at first sight appears. Naval limitation raises immediately the security issue on which France lays such increasing stress. In American eyes France's views on security are no less than an obsession. Because of France's insistence on guns and aeroplanes and submarines as bulwarks of security, instead of on covenants of good faith between nations, the whole limitation of armaments is imperilled. So reasons Washington. Because America, Paris replies, will give no assurance that she will take her part in enforcing covenants if they are wantonly broken, France at least must take measures in other directions for her safety. She is a loyal member of the League of Nations, lacking though the League is in that material force with which the French delegation at the Peace Conference strove so hard to equip her. But even the Covenant of the League is insufficient for France, in view of the room it leaves for uncertainty as to whether war in violation of obligations will, in fact, be repressed by collective action. Hence the enthusiasm for measures like the Geneva Protocol, designed to tighten the Covenant up in this respect.

In contrast to the Covenant, with its palpable insufficiencies from France's point of view, America sets the Kellogg Pact. There is, fortunately, no sort of opposition between the two documents. If the Pact goes further in the direction of formal prohibition, or rather renunciation, of war, the Covenant goes further in the measures it embodies for the protection of the law-abiding nation against the lawless. In the former respect the Covenant is in process of being brought up to the level of the Pact. In the latter there is no visible prospect of the Pact being invested with the provisions for enforcement included in the Covenant. That matters little to signatories of the Pact who are also signatories of the Covenant, except in so far as it fails to give them an assurance that America will be in action at the side of the unoffending law-observer when attacked by a law-breaking aggressor. So far from that, there is not even the assurance that America will not interfere, in the interests of her own traders, with the measures the law-observers may find it necessary to take in concert against the law-breaker. It is under these conditions that France declares openly that, till the American attitude—and, to a much lesser degree, the attitude of various prominent members of the League of Nations, including Great Britain—changes, her eastern fortifications and her air squadrons and her super-submarines must be her safeguard.

These diversities of attitude are in some measure disturbing, particularly on the eve of an armaments conference, in the course of which each position is likely to be re-stated with fresh emphasis. At the same time, they need not be deplored unduly. To begin with, it is well to recognise them as inevitable. The Continent of America, thanks to various fortunate circumstances in its history, has advanced further towards the organisation of permanent peace than Europe, and can, therefore, dispense with certain safeguards and sanctions which a continent less assured against war still finds necessary. The process of increasing Europe's faith in the sanctity of covenants unaccompanied by any obtrusive menace of enforcement is developing. So is the process of the education of the United States in the lesson that world-citizenship means world-responsibilities. No one soberly reviewing the course of events in the past ten years can be blind for a moment to the progress achieved in both directions. The present attitude of the United States and France may present strong contrasts. But, at any rate, the roads the two States are taking are tending to converge steadily, not to diverge further.

FOREIGN EXCHANGES IN 1929.

THE foreign exchange history of 1929, like its monetary history, falls naturally into two parts, the dividing date being the end of September. During the first three quarters of the year, the dominating influence was the Wall Street boom, whose magnetic effect upon the world's supply of short money produced a steady efflux of funds from London to New York, representing either short money hitherto employed in London or Continental money remitted to New York through London. This explains the continued weakness of sterling against the dollar during the whole of this period, the highest rate touched being \$4.85 15/16 and the lowest \$4.84 23/32, or appreciably below the export gold point of about \$4.84 7/8.

The second period, consisting of the final quarter of the year, included the month of a 6½ per cent. Bank rate in London and the Wall Street collapse, which set free the huge supplies of short money hitherto dammed up in New York. It was also a period in which the prices of many agricultural products, such as wheat, maize, coffee and wool, were standing at extremely low levels. The result was that a very marked improvement in sterling against the dollar—so marked that the rate crossed the whole range from the export to the import gold point—was accompanied by the depreciation of the exchanges of Australia, Canada and Argentina, whose exports consist mainly of grain and wool. During this quarter, the American exchange rose from \$4.85 to a maximum of \$4.88 7/16. The Australian pound fell from 1¾ to 2¾ per cent. discount, the Canadian rate rose from \$4.89 to a maximum of \$5.01, and the Argentine gold peso fell from 47½d. to a minimum of 44d. To this must be added the fall during the year in the price of silver to a record low level of 21 5/16d.

Another major movement, which continued throughout the last half of the year, was the strength of the franc, first against the pound and latterly also against the dollar. During the year ending June 30, 1929, the Banque de France reduced its foreign balances by 9.5 milliards of francs, and most of this amount was taken over by the French banks, who added it to the foreign currencies already in their possession. With the turn of the half-year, the French banks in their turn began to dispose of these foreign balances, for reasons which have already been discussed in the *Economist*. The result was that during the second half of the year France imported 5 milliards of francs of gold, equivalent to £40,000,000. Most of this gold came from London, and consisted either of new gold from South Africa or gold from the Bank of England's vaults; but later in the year the depreciation of the dollar which followed the Wall Street collapse led to New York largely replacing London as the supplier of France's demands.

These were the major forces at work upon the foreign exchange market in 1929. As regards actual fluctuations, these are summarised in the following table, and little additional comment is needed:—

Country.	Method of Quoting.	Parity.	End 1928.	End 1929.	Highest for Year.	Lowest for Year.
New York	$ to £	4·86⅛	4·85½	4·88½	4·88 7/16	4·84 7/16

In March the Dutch rate displayed monetary weakness, rising to Fl. 12.12 5/16 and necessitating the immediate increase in the Dutch Bank rate from 4½ to 5½ per cent. This movement merely meant that the Netherlands Bank had delayed a little too long in coming into line with the 5½ per cent. rate in London. A month later the threatened breakdown of the Young Committee was the cause of a sudden weakening in the mark, whose rate rose to Mks. 20.58 and involved the Reichsbank in a loss during the month of Mks. 834,000,000, or £40,700,000 of gold. A recovery soon followed, and by June Berlin was taking gold from London. The Swiss rate was in favour of London early in the year, but latterly moved steadily against the pound, while the Swedish rate weakened in the spring, but stood definitely in favour of Stockholm during the last seven months of the year. The

allow; and, until this novel idea has become firmly settled in his head, a trained adviser, with knowledge alike of co-operative principles, of banking rules, and of the language and habits of the peasant, should be frequently beside him to discourage extravagance and to instill the lessons of prudence. The absence of such trained men, and the devolution of all guidance on an unstable group of elected villagers in a Union, was one of the leading causes of the troubles of the co-operative organisation in Burma, as revealed in a recent report of a special committee appointed by the Burmese Government.

In Burma, the growth of societies, chiefly of urban and rural credit and of cattle insurance, has been steady and encouraging since the introduction of the Co-operative Act in 1904; there were nearly 4,000 credit and 400 insurance societies on the register at the end of 1928. Over them stood nearly 600 local unions of societies, 21 central banks, and the Burma Provincial Co-operative Bank at Mandalay. The working capital amounted to £3,750,000. In recent years, however, a growing reluctance on the part of the peasant-cultivators to repay their debts to the small village societies, which finance their agricultural and domestic needs, had raised to an uncomfortable figure the percentage of "overdues" in the provincial and the central banks. The object of the rural unions was to secure, by a mutual guarantee, the loans advanced to their affiliated societies from the banks, and the committee members of a union should have denounced to their own general meeting and to the bank the name of any recalcitrant village society, while exercising all possible moral and social pressure on the defaulters. The social ideals of an Oriental country do not always include punctuality in repayment, and the duty of recommending so unpopular a virtue proved most unwelcome to the leaders of the unions. Consequently, little or nothing was done, and the example of unpunished default was infectious. The Registrar is provided with a staff of official inspectors, whose functions cover propaganda and supervision, and who should, on the complaint of an unsatisfied creditor, move him to bring a society compulsorily under liquidation. Here, too, the report of the Calvert Committee to the Burmese Government shows that there has been undue leniency, and insolvent societies have been allowed to remain on the register in the idle hope of their improvement.

The result is a crisis. The Burma Co-operative Bank in 1928 recovered only one-sixth of the principal debt and one-half of the interest due to it; a loss on the year's working was avoided only by writing up the investments to their market value; and it became necessary for the Government to guarantee a temporary overdraft of the Co-operative Bank with the Imperial Bank of India, and to accept responsibility for the full repayment of all deposits. The loss to the provincial revenues is officially estimated at Rs. 30 lakhs (£250,000). The Burma Co-operative Bank is to be wound up, several of the central banks will probably follow suit, at least three-quarters of the insurance societies will be closed, and 1,400 out of 3,800 rural credit societies are already in liquidation. The co-operative movement in Burma is not dead, but will require to be built up again on sounder lines. In the meantime, the shock is severe.

To what causes is the disaster attributed, and how is the restoration to be carried out? In the first place, there is no suggestion of bad faith. Audits have been imperfect, auditors' warnings have been neglected, local supervision has lacked courage and thoroughness, but dishonesty, with the exception of minor incidents, is not alleged. The chief weakness has been an excessive reliance on the Guaranteeing Union, a group of rural representatives who possessed neither the character nor the inclination to be strict at the price of unpopularity. Co-operation among Asiatics differs from that of Europeans in no point more sharply than in the capacity for facing an unpleasant duty and for insisting on rules of business. Certain Indian provinces, therefore, have laid on the official inspectors the duty of reporting to the financing bank on the condition and "credit worthiness" of its debtor societies, and of stimulating the latter to fulfil their obligations. Eager to evoke the power of co-operative self-government, the Burmese left this burden to the unions, which failed to shoulder it. The unions are now to be abolished. The inspecting staff, however, when working among a simple peasantry, must also be occupied in constant teaching and guidance, and for this purpose they must themselves be steeped in co-operative knowledge. A fuller course of training is in future to be given to the Burmese inspectors, equipping them as sympathetic guides of the villagers and as real sources of authority. Whether their opinion should be demanded by the financing banks on the fitness of applicant societies for further credit is a question on which the Government and the special committee have disagreed, the former rejecting the recommendation of the latter that such help should be sought. Theoretically it is undesirable, but in practice the banks will find it difficult to obtain from elsewhere the intimate information which they need. Villages are remote and villagers taciturn; communications are poor. If the policy of extending mortgage credit to the peasants, for clearance of old debt and for opening up new land, be adopted as is now proposed, special mortgage institutions will no doubt be required, and the ordinary co-operative banks will then confine themselves to advances of shorter term. Loans for the period of one agricultural crop are easily controlled, since full repayment will normally be made after the harvest, but intermediate loans for cattle-purchase, etc., will still call for information over a longer period. The banks may perhaps have recourse to the stronger step of asking the Registrar to liquidate an unpunctual society, but will be in the same difficulty, without the advice of his staff, in judging beforehand the real wisdom of an advance for which application has been made. Other Indian provinces foresaw at an early stage the need to strengthen village societies by the help of a trained supervisor. In Bombay the latter is often a non-official, who takes charge of a circle of societies and spurs them to activity. In other parts a full-time official is more usually employed, whether in the service of Government, of the co-operative banks, or of an organising and auditing union. The policy of high training has been carried farthest in the Punjab, which appoints Indian graduates of rural sympathies and requires a probation of 18 months in the field and study, culminating in an economic test of post-graduate standard. Several of the inspectors thus trained have proved capable, in addition to their ordinary duties, of conducting intensive or extensive economic inquiries into the welfare of the people, either under the Registrar of Co-operative Societies or under the Board of Economic Inquiry. It is held that an agricultural credit policy should be based on an exact and intimate knowledge of peasant economy, without which the most skilled economist, in advising the cultivator, is working in the dark. More than 100 of these specialists are now serving under the Punjab Government, and the best of them are able to grapple with the puzzling and multifarious problems of a country, in which all economic conditions, and above all the fortunes of the cultivator, are being affected and re-shaped by the change from a subsistence to an export system of agriculture.

The organisation, both of the cultivators and of the artisans and clerical classes, has thus been developed, with the assistance of the Government, until, not only credit societies, but also agricultural purchase and sale, cattle-breeding, and land improvement institutions are found in half the villages of the province. There are now no less than 20,000 societies of every kind, with a membership of 600,000 and a working capital of £12,000,000. Over the primary societies are 120 central banks and a provincial bank, the latter serving also as the financial agency for a dozen mortgage banks and attracting funds for their use by the issue of 25-year bonds. A thorough audit of the primary societies is annually conducted by the employees of the Provincial Union, and of the secondary bodies by chartered accountants. A European banker has been appointed by Government as financial adviser to the Registrar of Co-operative Societies, not only because a small proportion (about 1¼ per cent.) of the working capital has been lent by Government for special purposes, but also because the moral responsibility of the State for a movement to closely intertwined with the life of the people renders financial skill and caution indispensable. The managing officers and the directors of the central banks and the Provincial Bank gladly welcome technical advice, and, though certain of the minor banks have from time to time been closed for lack of wise policy, no central institution in this area has ever failed to pay its creditors in full or has required financial subsidies from the State.

Surprise has sometimes been expressed at the ability of Indian peasants and artisans to accumulate considerable funds from their own savings, and there is no doubt that, when the earliest societies were founded 25 years ago, the prospect of such thrift appeared to be dim. Confidence has nevertheless attracted the more long-sighted villagers towards the credit banks, and a sum of £3,250,000 represents the share money and other savings of the members in the Punjab. The remainder of the working capital is derived from deposits in the central banks, drawn, to a great extent, from the professional and clerical classes, who prefer to place their money in a secondary and well-managed institution rather than in a virtuous, but not highly educated, village society. Minor peculations in the latter undoubtedly occur, but are not numerous or alarming if it be remembered that 92 per cent. of the people cannot read or write; the central banks, on the other hand, are financially sound, and maintain for the most part a good level of accountancy. The banks, no less than the primary societies, manage their own affairs, being advised by the official staff in difficulties and checked in case of irregularity. Such a supervision, which would be irksome and superfluous in a European community, is desirable and convenient where business methods are less standardised and social pressure renders impartiality less easy to attain.

The clearest conclusions from the comparison of the stricter and the looser systems are that simple men in an Oriental country require prolonged guidance in their economic dealings from trained experts, and that financial laxity should be immediately corrected before it becomes habitual. It is on these principles that the more successful Indian provinces have erected their co-operative organisations, and the less fortunate will, if patient and courageous, be enabled to rebuild their own.

BRAINS AND BUSINESS.

It was recently decreed in Italy that quack doctors should no longer be allowed to practise, and in order to put the quacks out of action all men who wished to treat the sick were ordered by a certain date to produce their diplomas before a commissioner appointed to inspect them. The chief interest of the medical profession centred in one enormously successful quack and in his extremely lucrative practice, which must on his professional decease revert to the properly qualified brethren. The successful quack, it is said, obtained a special interview with the commissioner, and, greatly to the commissioner's surprise, laid before him unquestionable evidence that he was a qualified medical man. "But," he added, "let me implore you to treat this information in the strictest confidence, for should it leak out that I hold these qualifications my practice will inevitably be ruined."

This Italian doctor, or the person who invented the story about him, had mastered at least one secret of human nature: the deep mistrust of the "average man" in academic success and his pathetic belief that the brain space in heads which have never been filled with the lumber of book learning is likely to be replete with "sound practical sense." He likes to believe, and succeeds in believing, that boys who do best at school do worst in after life and that the world's work is really carried on by men who in their schooldays were never more than halfway up the form. If this be true, if it be a fact that boys who succeed at school commonly fail in the world outside, the fault does not necessarily lie with the school. It may equally well be in the world outside. Moreover, the bold, common-sense practical man who tells you that the clever schoolboy is "no good afterwards" must prove his thesis, and so far as we know no attempt has ever been made to support the general argument by an appeal to particular instances. But by chance there has fallen into our hands a copy of the modern register of one of England's oldest schools, a school that draws almost all its boys from homes in which there is neither wealth nor influence, but all the runners start from scratch. For this reason it is a specially good field for our examination, and a search of the register for the after-school successes yields interesting results.

Unhappily the only yardstick for measuring success is a poor thing, and no one with any sense of values could regard it as final. The unknown schoolmaster who sends into the world two or three hundred boys with high standards and keen, active minds must by decent people be held to have made a greater success in life than the man who makes a noisy million out of speculation; but these spiritual values are imponderable and beyond analysis, and when we talk of success we must think of a much smaller achievement, the filling with distinction of an important post, the conquest of some measure of wealth or influence or public consideration, the occupation, in fact, of a chief place in the synagogue. Working by these partial and defective standards, let us take up this school register and see what sort of school career lies behind the men who have achieved in the world greatness or success.

For convenience the specimens may be taken in two separate classes, first the Church and Letters, and second Business, Law and Administration. Looking through this modern register we find among the outstanding successes of the school the following: Two bishops, one popular cleric, two popular novelists, one world-famous author. This is the section in which one would naturally expect success at school to precede most surely success in after life, but, strangely enough, the school careers of these great men are rather mixed. Of the bishops one was undoubtedly wafted to his high place in the Church by a favouring gale of scholarship, for he did very well at school, and at Oxford got his first in Mods. and Greats without a slip; but the other bishop, best of fellows though he clearly was, climbed but a short way up the school and distinguished himself only by captaining both the cricket and the football sides. The popular cleric is still a youngish man, but has probably the largest personal following of any parson in the country, and may without undue risk be backed for a mitre before he dies. His school career was quite a good one, school scholarship, school prizes, and another good scholarship at the University. The men of letters are rather curious in their record. The world-famous author clearly never found his feet at school, for he got no scholarship (though he produced a prize poem), and at the age of eighteen he was scarcely halfway up the ladder which boys of no literary gifts were scaling so easily in front of him. The popular novelists were both scholars, but the elder of the two seems to have flagged in his scholastic interests, and academically the end of his career was second-rate. The other would appear from the register to have had the ordinary career of a normally clever boy.

So much for the Church and Letters. In Business, Law and Administration we get a mixed bag of successes:—One pro-consul, one eminent K.C., one banking magnate, one insurance magnate, two heads of Government Departments.

The MERCANTILE BANK *of* INDIA

In selecting the successes here we have taken no note of the boys who went into prosperous family businesses and continued their prosperity, for we are concerned not with the silver-spoon boys, but with those who carved the path to fortune for themselves. Of the six boys who make up this list, all have achieved real eminence in the world. Every one was a scholarship boy, and four had school careers of outstanding merit. The pro-consul is shown by the register to have been a clever boy, but his later success must be to some extent discounted, as he reached his eminent position by a successful venture in politics. The K.C., too, was clearly a clever boy, but we suspect from the register that he could, if he would, submit himself to a pretty damaging cross-examination on some aspects of his career at school. The banking magnate blazed with a never-ceasing brilliance throughout his time at school and the University, and in everything he touched foreshadowed the great career that he has achieved in after life. The insurance magnate is one of several brothers who went to the same school, and their family record at school is head and shoulders above that of any other family in the register. All the brothers showed themselves to be boys of unusual ability, and all crowned their school careers with great distinction and success in their professions. The two heads of Government Departments followed the scholar's normal round of a good school and 'varsity career, and steady, comfortable progress in the Civil Service. The register, indeed, is full of the names of boys now in the Civil Service, many of them doubtless in high and responsible positions, but an outsider is not competent to judge their relative degrees of success.

This reference to the Civil Service leads us to the general conclusion that may be drawn from the register:—The able schoolboy is likely to develop into the able man, and the development will take place not less surely in commerce than in the Church or at the Bar or in the Civil Service; but by a bad tradition the clever boys are treated as unfit for business and steered into the placid waters of the Civil Service, which has absorbed in the past fifty years far more than its proper share of the country's ability. It is a bad thing to starve a Government service of able men, but it is scarcely less bad to overfeed it, and we note with great interest that Sir Robert Waley Cohen, who speaks on this subject with unique authority, expresses in a letter to the *Times* the same opinion that we have reached by studying this school register. To head the clever type of boy away from business has always been a mistake, but if business units continue to increase in size and importance, it will not merely be a mistake; it will be a disaster.

Notes of the Week.

The Motor Duties.—Considerable pressure is being brought to bear on the Government to give an assurance that the McKenna duties, particularly those on motor cars, will not be changed; and the case is somewhat surprisingly supported in the columns of the *Nation* on the grounds, first, that the Exchequer cannot afford to lose the revenue which they yield, and, secondly, that this is not the moment to give a jolt to industry. With this policy we entirely disagree. As regards the financial argument, we have repeatedly pointed out that there are two ways of dealing with protective duties. One is to abolish them; the other is to impose a countervailing Excise on the home product—thus, at the same time, adding to the revenue and equalising the conditions of competition. As to the industrial argument, there is little doubt that, in conjunction with the horse-power tax, which has accustomed the British motorist to a very special type of engine, the duty has played some part—though not a very great one—in establishing the hold of the industry on its own home market. But, unfortunately, in concentrating attention at home it has led the industry into a backwater, and has had the result that we have missed the opportunity of getting a reasonable proportion of the immensely important and growing international trade in Europe. In countries with good roads, no less than in those with bad, the British car, on equal competitive terms, is badly outclassed. The result is shown in the figures contained in the Balfour report on Trade and Industry, according to which, whereas Great Britain before the war supplied 20 per cent. of the exports of cars of the five chief producing countries, our share in 1927 was only 11 per cent. of the exports of these countries. Or, again, whereas we exported 33 per cent. of our production in 1912, in 1924 (the only available census year) we exported only 12 per cent. of our output. The report goes on to compare this record with that in two unprotected sections, viz.: general machinery, in which in 1927 we secured 14 per cent. of the increase in international trade since 1913, and electrical machinery, in which we hold 31 per cent. of the increase in trade. Any visitor to European countries, the Dominions, India, Egypt, the Far East, will see the evidence that we have failed to win an appropriate share in this great section of world trade. The Balfour Committee were divided on this subject; but even the section which took the most favourable view of the duties observed that while the figures afford striking evidence of the expansion of production, employment and export, concurrently with a decline of prices, "it would be very rash to claim all these results as flowing from the normal operation of the duties," having in view the immense change that has been going on in the conditions of demand and production. It is reasonable to choose carefully the time and season for the alteration of any tariff, particularly one with duties so high as 33⅓ per cent., but in the interests of the trade, no less than of the country, the industry should get back to a competitive basis and meet and overcome it—as we have in many other cases so successfully done—by producing the right kind of article at the right price. It is said that the motor trade wants certainty. In one respect it has it in the categorical assertion of Mr Snowden that it is the policy of the Government to abolish the protection of these duties. A case may be made out for a sliding-scale reduction over two or three years or for the gradual increase of Excise, or a combination of both methods. But this is the only definiteness for which the trade can ask—it cannot expect from a Government elected to abolish protection to have a promise of indefinite postponement.

Difficulties at the Hague.—There has not been any hurling of bombshells yet at the resumed Reparations Conference at the Hague. Such explosions as have been heard above the hum of Treasury experts and other calculating machines at work have been chiefly the bursting of *ballons d'essai* sent up to satisfy press and public in the delegates' home countries. The opening session was unexciting, and the Conference proceeded at once to divide into two committees, on Germany and non-German Reparations. The way of neither has been particularly smooth. That of the Committee on German Reparations has been beset by two obstacles—"sanctions" in the event of Germany's wilful default, and a troublesome dispute about dates of payment. The Young Plan proposes that the annuities should be paid monthly; the Germans proposed to pay at the end of each month, but the creditor Powers insisted that the middle of the month was the proper date and declared that the schedule of annuities in the Young Plan was drawn up on this basis. The sum involved is estimated at between £250,000 and £400,000 a year. It will be remembered that last August Mr Snowden obtained an average additional annuity of £200,000 by an arrangement, which was stated to have been assumed in the Young Plan, to pay Great Britain her annuity in time to cover American debt payments. It is understood that only if Germany pays on the 15th of the month can this concession be covered out of her annuities, and that otherwise the Trust Agreement would have to provide for a contribution from the other creditors. Dr. Schacht and Dr. Kastl were summoned to the Hague to declare what had been the basis of the Young Plan schedule; the President of the Reichsbank, who prefers the *rôle* of dictator to that of expert adviser, replied that he could not come until January 12th, when the Organisation Committee for the International Bank meets, but Dr. Kastl arrived, only to renew the argument with the experts of the creditor Governments. The other problem that has faced the Committee on German Reparations need never have been raised, for neither France nor Germany really contemplates the eventuality to which it relates, namely the application of special coercive measures should Germany deliberately default on her Young annuities. A very small measure of good faith is needed to dismiss the whole question, but an unfortunate mention of Article 430 of the Treaty of Versailles by M. Tardieu before the Conference began has stiffened both German and French delegations with an effort to satisfy opinion at home. Article 430 declares the right of the creditors to re-occupy the Rhineland if the Reparation Commission declares Germany's default, but as the Young Plan abolishes the Reparation Commission the clause could have been allowed to die unnoticed and unmourned. Controversy is now concentrated at the Hague upon the method by which default is to be established in the event of disapproval, by the special advisory committee to be appointed by the Bank for International Settlements, of the postponement of the annuities by Germany; the plan put forward for consideration by the German delegation allows, in the last resort, an appeal by Germany to the Permanent Court of International Justice. If that appeal failed, the creditor Powers would be free to apply commercial, but not military, measures of retaliation. In the event, however, of a definite repudiation of the Young Plan by a German Government, all rights of the creditors under Article 430, including the re-occupation of the Rhineland, would be re-established. As it does not require the existence of a special agreement to permit the application of economic pressure, and as repudiation of the Plan would in any case re-open the whole Reparations question, this seems a reasonable compromise which should satisfy both parties. The Preamble to the final Hague Treaty will declare that the creditor Governments, in return for Germany's solemn word to observe her obligations under the Plan, undertake to regard the Reparations problem as thereby finally settled.

Non-German Reparations.—The Hague Conference may, unfortunately, have to decide whether the Young Plan can be definitively accepted while the problem of non-German Reparations and of the liquidation of the past in Central and Eastern Europe, remains unsettled, for there yet appears little prospect of a unanimous agreement on this matter. Both Germany and her chief creditors are anxious to bring the Young Plan into operation as soon as possible, and are unlikely to allow the obduracy of a few small States to thwart them in that purpose. The only essential objection to thus isolating the non-German Reparations problem is furnished by Italy's guarantee to Great Britain of £450,000 a year on the strength of her Liberation Debt receipts from Czechoslovakia. It seems unlikely that the latter will consent to pay the annuity proposed for her (£550,000) until she is assured of a general settlement of claims arising out of the war, as she has extremely valuable ceded properties to account for. All that has been done so far at the Hague is that the cases of Austria and of Bulgaria have been considered. Great Britain and the other chief creditor powers, as holders of Austrian Relief Bonds, have agreed that Austria should not pay Reparations or compensation before 1968, and are willing to wipe the slate clean for her; but Roumania, Czechoslovakia and Poland have specific claims against her on account of post-war deliveries which they refuse to abandon. For Bulgaria, the Paris Committee on the liquidation of the past proposed an inclusive annuity of 15 million gold francs, but in subsequent negotiations the creditor Governments reduced their claims to 12½ million gold francs (£500,000). At the Hague this week M. Buroff painted a very melancholy picture of Bulgaria's economic plight. Under pressure, the Bulgarian delegation then offered an annuity of "round about" 10 million gold francs, which is the annuity due from her this year, and it is believed that this phrase will be stretched to cover the 11 million gold francs (£440,000) which the creditor Governments are contemplating as a final offer. All these discussions are being conducted with one eye on the critical question of Hungarian Reparations; if that can be solved, the remainder of the committee's difficulties should not prevent a final settlement, but there is no sign of any relaxation of the attitude of the Governments most intimately concerned.

Naval Preliminaries.—As the date of the London Naval Conference approaches there are signs of an increase of public interest in its activities, not least of them a reasoned advocacy in more quarters than one of the reduction of the maximum tonnage of capital ships by some 50 per cent. That is satisfactory so far as it goes, but nothing has yet been written or said in public to call in question the soundness of Admiral Richmond's contention that no good case can be made for the maintenance of any war vessel (apart perhaps from aircraft carriers) of more than 10,000 tons, as against the 35,000 fixed as the maximum for capital ships under the Washington Treaty. Seeing that only three Powers possess capital ships at all, and that the function of such vessels is simply to fight one another, the abolition of this type, or rather its substitution by a new capital-ship type with a maximum of 10,000 tons, is a quite practical proposal to which the Conference delegates ought to apply their minds. Meanwhile, the head of the Japanese delegation, Mr Wakatsuki, has made a statement to which singularly little attention has been paid. "Japan," he said, "is now claiming 70 per cent. of the naval strength of the Power which holds the largest number of the larger types of cruisers." The insistence on a 70 per cent. ratio instead of a 60 per cent. was expected, and discussion of that demand, which neither the United States nor Great Britain is ready to concede, will be one of the chief preoccupations of the Conference. But much more important is Mr Wakatsuki's assumption that Japan is to have 70 per cent., not in relation to Great Britain, whose proposed allocation is 15 of the 10,000 cruisers, but to the United States, which is to have either 18 or 21. To allow Japan 70 per cent. of an American total of 21 would be to give her 14 Treaty cruisers against the 15 allotted to this country under the MacDonald-Dawes agreement. That would mean virtual parity between Great Britain and Japan instead of the 5:3 ratio laid down at Washington. Agreement would certainly not be reached on this basis. Even if the United States claim no more than 18 Treaty cruisers, Japan would get 12 or 13 on the 70 per cent. scale, which, again, would bring her too close to Great Britain for agreement to be probable. On either the 60 per cent. or 70 per cent. basis the position must be difficult if America gets more of the Treaty cruisers than Great Britain, and Japan claims, as she naturally will, to base her ratio on the American, not the British total. The cleanest way out of the difficulty on paper would be to revert to the 12:12:8 allocation, which

came near finding acceptance at the Coolidge Conference in 1927. The great merit of this would be that it would relieve Great Britain and Japan (so far as Treaty cruisers are concerned) of any new construction apart from ships already laid down. Its weakness—and this would probably prove fatal—is that it gives the United States and Great Britain equality in Treaty cruisers, whereas an essential feature of the tentative agreements so far reached is that the United States shall be accorded a superiority in large cruisers to counterbalance a British superiority in small ones. In spite of that, the 12 : 12 : 8 allocation might well be taken as a starting point for discussion.

The Five Fleets.—In view of the discussions impending at the Naval Conference which opens on January 21st, certain salient figures regarding the fleets of the five Powers concerned are of immediate importance. The capital ship totals were fixed at Washington in 1922 and no vessels of this description are building or projected in any country. (The new German 10,000-ton battleship stands in a category of its own.) France and Italy have not built up to the totals allotted them. Replacement under the Washington Treaty was due to begin in 1931, but it is probable that this arrangement will be modified in the course of the coming discussions.

The figures are based on British official returns, corrected where possible in the light of later information in the 1930 edition of Jane's "Fighting Ships."

The League Council.—The League of Nations Council meeting, which opens at Geneva on Monday, will suffer a little by being sandwiched in between the Hague Conference (now in session) and the London Naval Conference on the 21st. The most important questions arising are the tariff truce proposition and the proposed amendment of the League Covenant to bring it into harmony with the Kellogg Pact. Discussions on the latter point may be more important than was orginally expected in view of the contrasts drawn between Pact obligations and Covenant obligations in the French Note setting forth the policy of M. Tardieu's Government at the Naval Conference. The Council's actual task in this connection is simply to appoint a committee to frame the actual text of amendments to the Covenant in accordance with the principle already approved by the Assembly, but it is by no means impossible that with that as starting-point Mr Henderson and M. Briand will take the opportunity to discuss privately the whole important question of the steps to be taken, whether under Covenant or Pact, to suppress any outbreak of war anywhere. In regard to the tariff truce, the Council, again, is not expected to enter into the merits of the question. It will, however, have to make the important decision whether a conference such as Mr Graham proposed last September shall be summoned or not. There can be no serious doubt about the answer, for some twenty-five States, in the main European, have declared in favour of the Conference, and in that number are included Great Britain, Germany, France and Italy. There will be certain details of some importance to consider, not least of them the date of the Conference, for the longer its convocation is deferred the more danger there will be that some States will hurriedly raise their tariffs in advance of it, and so destroy much of the value of any agreement for the purpose in hand, viz., to create favourable conditions for negotiating general reductions. The fact that the British Chambers of Commerce have declared against the truce proposal ignores the fact that in the absence of something like a tariff armistice it is difficult to make real headway in such negotiations, which is after all the main object in view. In the circumstances this resolution will certainly not weaken the British Government's faith in its own proposal, which is only the first move in a policy which hardly fails to commend the assent of the Chamber.

The International Coal Conference.—At its Tenth Session, last September, the Assembly of the League of Nations, after considering the report of the Economic Committee on the problems of the European coal industry, adopted a resolution, proposed by the British and French delegations, inviting the League Council to request the Governing Body of the International Labour Office to consider the advisability of including in the agenda for the 1930 International Labour Conference questions relating to hours, wages and conditions of work in coal mines, "with the object of agreeing upon an international convention." The outcome of that resolution is The Preparatory Technical Conference, which has been in session at Geneva this week, convened to advise the Governing Body what aspects of the "labour-costs" side of the coal problem offer the best scope for international agreement. The reports of the proceedings so far do not encourage optimisim as to the prospects of a convention securing assent. With regard to wages, both the Government and the employers' delegates from France, Germany and Poland expressed the view, not only that regulation by international agreement is impossible, but that varying costs of living and allowances other than cash wages make international comparison of earnings impracticable; and at the close of Wednesday's discussion M. Albert Thomas admitted that it appeared that the question of wages was "unripe for definite action." The possibility of a convention with regard to working hours seems, on paper, to be less remote, but its utility, without agreement on the inter-related wages issue, would be doubtful.

Trade Unions and Politics.—Criticism of the policy of so-called "Mondism" in the industrial side of the Labour movement has so far originated largely from the attitude of blind suspicion (the "inferiority complex" of extreme class-consciousness), which induces the belief that conversations with "the enemy" are inevitably the prelude to betrayal. To such unreasoning opposition the General Council of the T.U.C. have rightly paid little heed in pursuing their determination to establish jointly with the employers' organisations a permanent mechanism for consultation on matters of common interest to industry. Their critics, however, have now received a considerable reinforcement. At the annual conference last week of the Oxford University Labour Federation, Mr G. D. H. Cole delivered an address roundly denouncing the project of a national industrial council as a potential spoke in the wheel of a Labour Government prepared to carry out a programme of "drastic economic and industrial reform." The council, he argued, would be a body having a strong claim to be consulted by Government before important legislation affecting industry was introduced; but, since the council's voice would be one of "fifty-fifty" co-operation based on a non-Socialist structure of industry, the result could only be to delay and hamper the Government's plans. In short, Mr Cole seemed to fear that the industrial Labour movement, disappointed by and drifting away from the political leaders, might enter into relations with the employers so close as to amount to an abandonment of Socialist aspirations and the completion of the divorce between the politicians and the trade unionists. One's reactions to this argument naturally depend to some extent on whether one judges co-operation in industry to be an end good in itself, or regards the organisations of industrial workers simply as means towards the achievement of "drastic" programmes. Whatever the end in view, we differ wholly from Mr Cole's estimate of the results likely to follow the realisation of the Melchett-Turner conference plan. The *rapprochement* between industrial Labour and a "capitalism" which is rapidly transforming itself from "ownership" into new and varied types of "control" is not calculated to act as a brake on Labour's political progress. Trade unionism may be turning its eyes away from Parliament; but that is because it is recognising the truth that in our complex economic system the task of securing for Labour the status to which it aspires cannot be achieved by any royal road of legislative enactment. If the T.U.C. can succeed in turning the projected national industrial council into a constructive body covering in its scope the whole field of industrial development, the Council is more likely to give the lead even to a progressively-minded Labour Government than to retard the programme which such a Government, on Mr Cole's assumption, will have prepared on its own account.

Exchanges, Prices and Money.—This month's Midland Bank Review contains a timely contribution to the theory of the foreign exchanges. Advocates of the purchasing power parity theory have for some time insisted that it is the relative level of commodity prices that governs the rates of exchange. This, however, is too narrow a view to take, for the balance of payments between different countries is composed not only of settlements in respect of the international movement of commodities, but also of the international movement of long-term capital and of short money. Thus, the foreign exchanges are susceptible to the relative level of interest rates as well as to the relative level of commodity prices, and, during the last two years, when the Wall Street boom and New York money rates were rising to their peak, it is generally agreed that the exchange value of sterling was governed by the international movement of capital and short money rather than commodities. The writer in the Midland Bank Review has seized the occasion to test out this theory over the past four years. He has plotted three curves, representing respectively the sterling-dollar exchange, the relative level of commodity prices in England and America, and the relative level of money rates in London and New York. From the autumn of 1925 to the summer of 1927 they all three moved in substantial agreement, while the results for the next nine months were indeterminate. From the spring of 1928, however, onwards the money and exchange curves are in striking agreement, while the price curve diverges. This indicates that it was the course of American money rates which governed the sterling exchange, and so provides confirmation of the theory. The writer, of course, would himself admit that this is not the whole story. The movement of long-term capital, stimulated by prospects of capital appreciation offered by American securities during the boom should have been brought into the picture, if only it had been possible. Again, the writer's curve of relative money rates excludes deposit rates offered by bankers for fixed periods, which, on the face of it, is a serious omission, even though there are once more obvious difficulties in the way of collecting the necessary data. A final and more important point is that the analysis necessarily corsiders London and New York artificially segregated from other centres. No regard is paid to the possible effect upon the curves of events in Paris or Berlin.

World Production of Iron and Steel in 1929.—We give below a table showing the estimated production of pig iron and steel in the chief producing countries for 1929, compared with 1928 and 1913. The world production of pig iron is estimated at 97,000,000 tons, and of steel 119,000,000 tons, which, in both cases, is the highest ever recorded. World pig-iron production represents an increase over 1928 of 11½ per cent., and over 1913 of 25 per cent. All countries show an increase compared with 1928, but, except in Germany, the rate of increase on the Continent is less than in the United Kingdom or United States, since France, Belgium and Luxemburg were working so near to capacity that there was little margin for expansion. Germany's high rate of increase in 1929 is due to the fact that there was a strike in the Ruhr towards the end of 1928. All countries except Great Britain show an increase in the production of pig iron compared with 1913. World steel production in 1929 is 11 per cent. higher than in 1928 and 58 per cent. than in 1913.

The increased use of scrap in steel making is evident from the much greater increase in steel production than in pig-iron production. Whereas in 1913 the tonnage of pig iron produced exceeded that of steel, in 1929 the tonnage of steel produced was 20 per cent. in excess of that of pig iron.

Lancashire Cotton Corporation, Ltd.—At a general meeting of the Lancashire Cotton Corporation, held in Manchester this week, it was decided to increase the capital of the Corporation by £1,651,317. This will be divided into £1,300,000 of ordinary shares, £87,795 in preference shares, and £263,522 in deferred shares. The increased capital is to enable the Corporation to absorb 29 mill companies, controlling about 2,500,000 spindles and 5,200 looms. There will not be any public issue, the shares being allotted to creditors and shareholders as payment for the mills taken over. It is understood, writes our Manchester correspondent, that the Corporation expects to make further increases of capital for the absorption of additional companies within the next few weeks. Lancashire spinning companies outside the Corporation are complaining of severe competition from mills in the Corporation. It is recognised that the concerns taken over by the Corporation are working on a very low capital basis and outside mills with heavy prior charges are being somewhat harassed.

Cash for Cotton.—Our Manchester correspondent writes:—On Monday last a special meeting of the members of the Liverpool Cotton Association passed a resolution requesting the Board of Directors to draft a new rule providing that payment for cotton sold on spot terms shall be made either by bankers' acceptance, bankers' confirmed credit or cash in exchange for delivery order—the system to be in force for a period of two years. A further meeting will have to be held in due course when the new rule will be submitted for approval, and it will be necessary for the alteration to secure the support of 75 per cent. of the members present before it can be put into operation. About two years ago there was a similar

movement among Liverpool brokers, but ultimately the proposal was abandoned. It may be pointed out that the new rule will not apply to Sea Island and Egyptian cotton. Consideration has also been given to the abandonment of weekly settlements for future contracts and the substitution of daily or semi-weekly settlements, but it was decided not to make any change. The action of the Liverpool firms has been criticised by spinners, but on behalf of the new proposals it is urged that it is not fair or just to the cotton merchants of Liverpool that it should be possible for cotton to be delivered to the mills and immediately come under the power of a receiver appointed by the banks or debenture holders. It is argued that Liverpool should be protected by the credit for cotton delivered being guaranteed by the source from which the mills' credit is drawn, namely the banks. In trade circles there is some doubt as to whether the alteration in the rules will obtain the necessary voting majority at the later meeting.

Shipping Freight Index Number.—Conditions of unrelieved depression characterised the whole-cargo freight market during December, and our index number of "tramp" charter rates records a further decline of over 2 per cent. The current figure, 100.3, which contrasts with an average of 116.3 in 1913, is nearly 24 per cent. lower than at this time last year. The following table summarises recent movements of the various group indices:—

AVERAGE 1898-1913=100.

	Average, 1913.	Dec., 1928.	Oct., 1929.	Nov., 1929.	Dec., 1929.
European Waters	110·0	122·1	130·4	124·9	117·3
North America	113·1	131·3	98·3	96·9	95·5
South America	123·4	125·6	103·1	97·6	94·6
India	106·3	126·8	117·4	110·7	109·0
Far East and Pacific	117·4	127·4	95·1	91·6	93·4
Australia	127·9	156·9	106·8	94·4	91·7
Total	116·3	131·7	108·5	102·7	100·3

The market last month suffered from the pressure in all quarters of unfixed tonnages seeking employment. Homeward rates from South America were steady at the low level previously established, but both from the Plate and other grain-exporting centres demand was meagre. In European waters freights weakened all round, an excessive supply of vessels being accentuated by the congestion caused by stormy weather and consequent delays at loading ports. Coal freights re-acted sharply both for South American discharge and to Continental ports. The month's changes in the index of each group and subgroup are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade	104·0	− 7·3	South America—outwards	103·9	− 7·1
Bay—outwards	139·4	−11·1	South America—homewards	85·2	+ 1·1
Bay—homewards	140·3	− 9·7	India—outwards	117·9	− 2·1
Mediterranean—outwards	108·8	− 5·2	India—homewards	100·2	− 1·3
Mediterranean—homewards	107·3	− 5·3	Far East, etc.	93·4	+ 1·8
North America	95·5	− 1·4	Australia	91·7	− 2·7

Expressed as a percentage of the average for 1913, the total figure of our index number for December works out at 86.2, as compared with 88.3 in November, and 113.2 a year ago. The annual mean of our index number (1898-1913 = 100) is 112.6 for 1929, as compared with 114.9 in 1928, and 118.9 in 1925.

The Estate Market in 1929.—A trade correspondent writes:—While the Estate Market was not entirely unaffected by the change of Government early in the year, the high Bank rate and the financial chaos during the past few months, there has been relatively calm confidence among property owners and investors. For some few years now there has been a steady increase in the number of investors in real estate, and there is no lack of funds for financing sound building propositions. An increased demand was shown for good sporting and residential estates for occupation, and the year 1929 shows a considerable increase in the sales of such estates, in a number of cases with large mansions where the cost of upkeep is considerable: unquestionably the year under review is the most satisfactory in this respect since the war. While grazing farms have sold readily at satisfactory prices, the demand for arable holdings has shown no improvement. For residential estates of the smaller size results are quite satisfactory. The market in country and suburban residences was without doubt adversely affected by purely problematical causes towards the end of the year, but, judged as a whole, the year 1929 has yielded a highly satisfactory volume of business. Prices of town houses have been well maintained. The metamorphosis of Mayfair has caused a greatly increased demand for houses outside this once exclusive residential area, and the districts adjacent to the Park, both North and South, extending into Belgravia and even into St. John's Wood have become increasingly popular. The demand for medium-sized, well-planned flats at any economic rent still exceeds the supply, but the super luxury suite, where the rent exceeds £1,000 a year, is possibly a little less in demand. As regards investment properties, taken as a whole, the year has been, under the circumstances, reasonably satisfactory. There has been no material fall in prices, and the volume of business is as large as in previous years. Although applications for shop premises have been up to average, a slight fall is revealed in the demand for the more highly rented shops. With regard to shops outside the central area, a great deal of building has taken place during the year. Rentals for this class of property have been quite well maintained and business has been good, but there is a danger of overbuilding in suburban shop premises. This is indicated by the large number of newly-built premises, for which tenants have not yet been found. The erection of new factories is continuing apace, which in itself is a very good sign, but new building makes it difficult to deal with old premises. The factory market has for some years been under a cloud, but a slight upward movement is taking place. The development of sites for commercial and private garages has proved a lucrative business where proper care has been exercised in the selection of the site. Building land which possesses sewerage and other public services and facilities for development has sold well during the year, and a great deal of building, particularly of small-type properties, continues. Many estates have been placed on the market, and very large areas, which a few years ago were under cultivation, have now been made potential building land by the construction of arterial roads, greatly adding to the amount of frontage available for development. Future development naturally depends a great deal on the distribution of the demand for houses. In general, 1929 has been a year of remarkable stability in face of financial and trade depression.

New Capital Issues in the United States.—Through the courtesy of the New York *Journal of Commerce* we are able to supplement our recently published statistics of British capital issues during the year 1929 with a comparative table for the United States:—

	1926.	1927.	1928.	1929.
Foreign—	$	$	$	$
Government	634,338,500	786,630,000	764,943,000	178,816,161
Corporate	725,877,040	601,563,375	811,550,482	284,503,847
Domestic—				
Municipal	1,922,007,101	1,867,230,449	1,123,940,316	1,074,476,451
Railroad	360,743,500	791,202,000	668,488,843	528,659,620
Public utility	1,667,750,950	2,405,298,382	2,427,790,217	1,559,144,726
Industrial	1,230,580,600	2,013,430,220	2,311,350,808	2,578,364,081
Others	770,520,400	1,132,307,589	1,783,542,833	2,550,867,842
Totals	7,311,818,091	9,597,662,015	9,891,606,499	8,754,832,698

Foreign borrowing in the United States amounted during the past year to $463 million, as compared with $1,576 million in 1928, this decline accounting for practically the whole of the reduction in the aggregate figure for the year. Domestic borrowing, the total of which came within $24 million of the 1928 level despite the violent check to new issues administered by the Wall Street slump during the last quarter. The growth of new issues for "others" reflects strikingly the boom in investment trust and holding company financing, a development which was largely overdone and contributed in some measure to the stock market collapse.

The Canadian Tariff Advisory Board.—Our Ottawa correspondent writes:—The very important hearing of the Tariff Advisory Board about the iron and steel schedules of the Canadian tariff occupied its attention for more than two weeks and brought to Ottawa representatives of practically every industrial interest which would be affected by a revision of the iron and steel schedules. The process adopted has been something of an experiment for Canada where tariff changes were in the past usually determined by backstairs pressure and negotiation. The Board had accumulated considerable data from the earlier stages of the hearing, and with this as a guide it had extracted the whole list of iron and steel items from the tariff, and rearranged, remodelled and reorganised them in conformity with the new industrial conditions and processes which had developed since most of the schedules were first framed. Before the hearing was resumed a draft reclassification with the rates left blank was distributed to the different interests and they were invited to attend with criticisms and suggestions for improvement. Nearly every interest which was affected availed itself of the opportunity and, while it was impossible to expect complete harmony and some sharp clashes of opinion took place, many difficulties have already been ironed out and substantial progress has been made in straightening out the tangle which the obsolescence and overlapping of many of the iron and steel schedules had produced. Inevitably there developed during the hearing the fundamental conflict of interest between the primary manufacturers of iron and steel who want more protection for their product and that of the secondary manufacturers like the tube and motor firms who want to get their iron and steel as cheaply as possible and dread any increase in their costs of production. It was asserted, for instance, by the manufacturers of tubes who import their raw material, skelp, from the United States, that the aggregate Canadian demand for this material was not large enough to make its production an economical enterprise in Canada, but the Dominion Iron and Steel Company announced their willingness to manufacture it if they were accorded sufficient protection. There was considerable discussion about the British preference and sardine canners and others complained that the preference on British tinplate was being used for the benefit of a rigid international cartel of tinplate manufacturers. Mr Moore, the chairman of the board, more than once expressed the view that in the process of revision it should be accepted as a guiding principle that when any commodity was not made in Canada, British goods of this type should be given as substantial a preference as possible. Most manufacturers endorsed this view, but there was also some criticism of the British preference and a group of manufacturers of machine tools came out flatly against it, laying down the doctrine that Canadians should look after their own interests first. A good proportion of the industrial interests professed satisfaction with their existing tariff protection and deprecated any changes. The motor schedules produced perhaps the sharpest controversy; a spokesman of the Montreal Automobile Owners' Association submitted figures showing that the prices of Canadian-made cars were exorbitantly high compared with American prices for the same type of car, and the accusation was made that the Canadian motor manufacturers had not kept their pledge to give the public the benefit of their release from the excise tax on cars under $1,200 in value. The motor manufacturers denied this charge and eventually it was decided to adjourn the hearing until January 22nd in order to secure time for a careful study of the evidence in this connection. Representatives of the Canadian Council of Agriculture and the Consumers' League were present, and adopted an attitude of critical vigilance.

Royal Bank of Canada.—The annual statement of the Royal Bank of Canada, relating to the bank's position on November 30th last, is summarised below. It shows that during the accounting year under review the bank's total assets were increased from $909,395,884 to $1,001,442,741. This is the first occasion on which the billion mark has been passed by a Canadian bank:—

	Nov. 30, 1928. $	Nov. 30, 1929. $
Capital	30,000,000	35,000,000
Reserve fund	30,000,000	35,000,000
Balance of profits	2,361,085	3,574,151
Total assets	909,395,884	1,001,442,741
Liquid assets	398,862,085	409,275,965
Cash holdings	180,321,670	157,632,114
Loans	539,874,360	636,026,432
Deposits bearing interest	523,651,908	591,380,470
Deposits not bearing interest	183,814,937	180,707,298

The ratio of cash to the bank's total outside liabilities is 18.07 per cent., a more than adequate figure. The bank's capital has been increased by $5,000,000, and as the new stock was issued at a premium it was possible to increase the revenue fund by a similar amount. The expansion of $96,000,000 in loans is a measure of the increased business that the bank has been able to secure. In view of the fact that the year included the Wall Street slump it is interesting to observe that call loans outside Canada have risen by $22,000,000. It is conceivable that, had the balance sheet been dated at the peak of the Wall Street boom, the increase would have been appreciably greater.

New Life Assurance Business.—During the past week six additional offices have published their figures as to the amounts of new business transacted during 1929:—

Office.	1928. £	1929. £
Caledonian	1,344,891	1,384,265
Commercial Union	4,105,082	3,976,036
Royal Exchange	2,496,040	2,277,646
Royal London Mutual	4,098,075	4,180,000
Scottish Provident	2,789,886	3,099,000
Wesleyan and General	969,236	1,149,058

The new batch of figures continues to display the uncertain and patchy tendency evidenced in the earlier announcements. Four out of the six offices show increases, while two show decreases. The most notable figure is perhaps that of the Wesleyan and General, which records an increase of almost £200,000, equivalent to nearly 25 per cent.

Scottish Automobile and General Insurance Company, Ltd.—Again the first of the year to appear, the report of this insurance company for 1929 is very favourable. The company was founded just after the war, with a head office in Glasgow, and transacts on non-tariff lines a select and increasing motor insurance business. In 1929 the premium income was again larger and amounted to £234,000, of which all but a very insignificant portion was attributable to motor business. The underwriting profit from the whole business worked out at 3.7 per cent. of the premiums. This, though moderate in itself, compares not unfavourably with results achieved by the large composite offices, though it is significant that the profit ratio has declined each year from 1926, when it was as high as 5.88 per cent. After allowing for various items in the profit and loss account, the total net trading surplus of the year worked out at £7,994, compared with £11,178 in 1928. The dividend was maintained at the same rate as in 1928, viz., 17½ per cent., and cost £5,250, a figure which was amply covered by interest earnings of over £7,800. The paid-up capital amounts to £37,500, made up of 150,000 £1 shares, on which 5s. has been called up. The general reserve amounts to £63,750, and out of this the directors

have decided to transfer £18,750 for the purpose of capitalising 2s. 6d. per share in respect of the uncalled capital. The only change on the assets side of the balance sheet relates to the acquisition at par of 25,000 £1 shares of Automotor Finance, Ltd.

Applications are invited for the post of Head of the Bureau of Economic and Social Studies at the International Institute of Agriculture, Rome. Particulars of the salary attached to the post and of the form of application which should be submitted will be found in an advertisement on p. ii of this issue of the *Economist*.

Overseas Correspondence.

UNITED STATES.—BUSINESS RECESSION—SHARE MARKET—GOLD EXPORTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 27.

SEASONAL quietness in trade and financial markets was accentuated this week by continued uncertainty over the probable extent of the business recession. Reports on holiday retail trade are conflicting, but on the whole buying seems to have been fairly well up to the average. However, in such basic industries as steel, automobile and transport, activity is well below that proper to the season. Building is always at a rather low ebb at this time of year, and the motor industry has failed to increase production as it was hoped some time ago that it might. With these two large consumers of steel withholding orders and with new demand from the mass of smaller consumers in suspense, partly because of the annual inventory taking and partly because manufacturers are disposed to wait to see what happens, operations have fallen to about half the capacity of the mills.

Curtailment of manufacture and stocktaking among all lines of business is, however, only revealing small stocks of commodities on hand. It is, therefore, confidently expected that replenishment demand will be substantial at an early date. Business men, though reluctant to predict for next year, are in general moderately optimistic over the chances of warding off a real business depression. Nevertheless, affairs may become somewhat worse before they improve substantially. Railroad traffic continues to decline, and, reflecting smaller car loadings in November, the railroad earning reports for that month are running about 25 per cent. under those of the same month of last year.

During the next two months the financial community will read corporate earning statements for the fourth quarter of the current year and for the past twelve months which may not be altogether pleasing. Earnings in the first nine months, however, were so well above any previous performance that a poor fourth quarter may be carried without too much difficulty. Anyhow, there has been a tendency among the timid to exaggerate the possibilities in trade and to overlook the very real prosperity which we have been enjoying.

The share market has been notable mainly for its dullness. Volume of trading at the worst fell below 2,000,000 shares, and only once during the week rose as high as 3,000,000 shares. Activity was lowest on declining prices, and the trading was largely of a professional character, interlarded with some liquidation by those who wished to sell at prevailing prices, so that they might mark off their losses on their income-tax statements. Finding the easiest way downward, the professionals were mostly on the bear side, but covering operations began after prices had lost about half their recovery from the bottom reached in November. To those of the public who still are in a trading mood, prevailing prices appear too high to encourage a long position and too low to stimulate short selling. On a yield basis stocks are competing with bonds, which have been irregular on the cessation of dealer demand in anticipation of reinvestment buying next month and firmer money rates. No special performance is to be expected of the share market until the business outlook clears up.

Were it not for the heavy gold outflow it could at least be said with assurance that money rates would be low for the next several months. However, after a loss of approximately $23 million on balance in November, the efflux this month, in addition to earmarking of metal at the reserve banks, will be around $90 million, the bulk of it going to France. It is estimated that gold earmarkings now total close to $135 million. Metal thus set aside plus shipments already made or in preparation before the end of the year threaten to cut down an early gain of $232 million of gold this year to less than $110 million. The narrowing of the credit base since the decline in the stock market began amounts to more than $110 million, or sufficient to support a burden of nearly $1,500 million of credit.

So far the gold outflow has had no effect on the money market, such firming up in rates as has taken place being due to the expansion of currency for holiday buying, window dressing by the banks and corporations, and preparations made for record-breaking year-end dividend and interest payments. But later on the loss of gold may be an influence, if the Federal Reserve Banks are unwilling to continue to offset it by release of a greater amount of their credit. This they are doing at present, the current statement showing a rise of about $23 million in total credit outstanding. Borrowing at the Reserve Banks by the member banks occurred for the first time in several weeks, and Reserve holdings of Government securities dropped. On the other hand, the Reserve added $45 million to its bill holdings, and there was a gain of a million in contingent liability on bills purchased for foreign correspondents.

Recent increases in this item, together with the rising balances of the Bank of France in the face of heavy gold exports to Paris, are interpreted as indicating that the withdrawals of funds for France have been for private account. By taking dollars and supplying francs the Bank of France has doubtless retarded the movement.

FRANCE.—HAGUE CONFERENCE—AMERICAN DEBT—BUDGET—BANK OF FRANCE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, January 8.

THE attention of all economic and political France is concentrated on the resumed Conference at the Hague. The feeling among all sections of opinion is generally optimistic, particularly in financial and other business circles. M. Tardieu has largely taken the place, in the imagination of the nation, held formerly by M. Clemenceau, and latterly by M. Poincaré. The nation has given every indication of confidence in the new leader's personal magnetism and proved ability to "get things done," and he has gone to the Hague with the faith of the country behind him. The preliminary skirmishes, according to the reports received here, have justified this trust. The nation's confidence may be summed up in the phrase that "Tardieu is a man who can say 'No,'" which is meant to imply that the period of concessions and "abandonments," of which M. Briand is accused, has come to an end. French interest centres mainly on the maintenance of Clause 430 of the Peace Treaty, which gives the Allied and associated Powers the right, in the event of Germany's "refusing during the occupation, *or after*," to observe the whole or part of her (reparation) obligations under the present Treaty, "to reoccupy the whole or part of the Rhineland immediately." This clause of the Treaty represents practically all that is now left, from the French point of view, in the way of security against German default in the future, and it seems almost certain, at the time of writing, that this country's delegates, M. Briand included, will resist to the end and at any cost any attempt of Germany to secure the abrogation of this safeguard. There is a confident belief here that Mr Snowden will take the same line.

Apart from this dominating Clause 430 factor, and quite secondary to it, is the ever-active undercurrent in the French collective mind stimulated by the *rôle* which is being played by the United States in all the fundamentals underlying the liquidation of the war. "When my country pays three marks to the Allies towards the restoration of the devastated regions," Dr. Schacht one day said to the experts in Paris, "two of them immediately leave Europe for the United States." "Great Britain," the French are now saying, "asks to be paid only the equivalent of what she has to pay to America. Every franc we have to pay to the British Treasury is therefore merely a second and indirect instalment which we hand to America by way of London." This was an outstanding thought in many French brains yesterday when the French Government paid over to the United States the first instalment of $12,067,934 under the Washington Agreement. The French are becoming conscious of the fact that more than one-half of the German reparation payments under the Young Plan already pass into American pockets, and that, during the last 22 of the 59 years covered by the Plan, neither they nor any other Allied Power will receive a single mark from the sums paid by Germany, these instalments going entirely to the United States. There are indications that the French obsession regarding the German debt to France may shortly be transformed into one regarding the European debt to America, which the increasingly unsettled economic situation of the United States itself can only accentuate. The possibility that France may shortly impose an import duty of 90 per cent. *ad valorem* on American motor cars (failing substantial concessions on French exports) is a symptom of the slowly developing European defensive attitude.

The Chambers will reassemble next week after the holiday, but whether much business will be actually taken in hand, in the absence of the Premier and three of his principal colleagues at the Hague, remains to be seen. A series of flying visits between Paris and the scene of the Conference is projected, and will doubtless have to be repeated when the pending Disarmament Conference follows; which may militate seriously against the prospect of the 1930-31 Budget Bill being taken in hand as speedily as is desired. The original 1930 Budget, designed to come into force on January 1st, provided (last March) for total expenditure of 48,665,916,000 francs and a revenue of 48,722,103,976 francs. This was subsequently modified to cover 49,248,732,000 francs of expenditure, with an estimated revenue of 49,267,798,000 francs. The extension of the financial year to March 31, so that the 1929 Budget will have to cover 15 months, would perhaps be an awkward factor but for the fact that the revenue is still coming in well in advance of normal expenditure. What the third edition of the Budget estimates will amount to is not yet clear, but there are already indications that substantial modifications will be required in both revenue and expenditure figures. The agitation for further reductions of the burden on all forms of scrip, and the operations attendant thereon, is steadily growing, and industry is also calling loudly for relief. On the other hand, the Finance Minister will apparently require a good deal less money than was originally provided for in regard to the initial cost of the national insurance scheme. This should come into operation early next month, but the law still requires much overhauling. The original scheme has already been shorn of many of its more costly features (including the complete elimination of the unemployment insurance section), but the law is still regarded by all classes (except Labour) as in many ways seriously unsatisfactory.

The Bank of France has declared a distribution of 634 francs per 1,000-franc share, which gives a net yield, after tax deduction, of 520 francs, or 52 per cent., as against 35 per cent. for 1928. The shares closed on the Bourse to-night at 24,900 francs, so that the actual yield at the present price works out at about 2⅛ per cent. Quite apart from the extraordinary inflation of the capital value of the shares, which has been common to all French pre-war issues, there are two reasons for anticipating that they will yet go to much higher levels. One is based on the remarkably strong situation of the institution itself, both from the trading point of view and its accumulated assets. The other is the fact that the dividend distributed probably represents less than one-half of the year's net profits.

The foreign trade returns for November indicate total imports valued at 4,789,413,000 francs, against exports of 4,267,785,000 francs. The total adverse balance for the first eleven months of the year amounts to 7,589,000,000 francs, as against one of 1,690,000,000 francs in the corresponding period of 1928, and a surplus of 2,098,000,000 francs in 1927. The average excess of imports before the war was about 15 per cent. of their total. During the first eleven months of 1913 the deficit on the visible exchanges was 714,000,000 francs (gold) equivalent to over 3,500,000,000 present-day francs, or about 9½ per cent. of the imports, against 14½ per cent. in 1929. The detailed figures are as follows:—

	First eleven months of 1928.	First eleven months of 1929.	Differences in 1929.
IMPORTS.			
Foodstuffs.....	11,239,643,000f.	12,182,730,000f.	+ 943,087,000f.
Raw materials	29,777,780,000f.	32,045,719,000f.	+2,267,939,000f.
Mnf'd. goods...	7,106,631,000f.	9,036,420,000f.	+1,929,789,000f.
Totals	48,124,054,000f.	53,264,869,000f.	+5,140,815,000f.
EXPORTS.			
Foodstuffs.....	5,576,836,000f.	5,497,647,000f.	— 79,189,000f.
Raw materials	11,957,522,000f.	11,585,842,000f.	— 371,680,000f.
Mnf'd. goods...	29,049,216,000f.	28,592,375,000f.	— 456,841,000f.
Totals	46,583,574,000f.	45,675,864,000f.	— 907,710,000f.

Two factors which should not be overlooked in considering the increase in imports are (1) that these figures include values of German reparation payments in kind (which will henceforward become of less importance, until they cease to exist in 10 years' time), and (2) that values of French exports are calculated f.o.b. French port, while imports are reckoned on a c.i.f. basis.

ITALY.—BUDGET COMMITTEE REPORT—TAX BURDENS—PROBLEM OF ARREARS.

(FROM OUR CORRESPONDENT.)

TURIN, December 26.

RECENT reports on the Budget by Signori Olivetti and Magrini, on behalf of the General Committee of the Chamber of Deputies, and by Signor Mayer for the Senate Finance Committee make interesting reading. They are more interesting because more critical than most analogous reports before the Fascist regime. Criticism is levelled, in the first place, against the increasing taxation burden. Here are reproduced the final figures of an interesting table by Olivetti and Magrini. The figures summarise the total revenue and expenditure of the State for the years from 1922-23 to 1927-28, for which accounts are closed. According to our budgeting system, the figures include all revenues and expenditures pertaining to the respective fiscal years (July 1st to June 30th), taking also into account revenue due but not received and expenditure due but not yet actually effected. The revenue figures which follow are net, and, owing to various other arrangements to make them comparable from year to year, they are not exactly the same as those published in the gross revenue accounts (in milliards lire):—

	Revenue.		Expenditure.		Deficit or Surplus.	
	Paper lire.	Present lire.	Paper lire.	Present lire.	Paper lire.	Present lire.
1922–23	16·7	14·8	19·6	17·3	— 2·9	— 2·5
1923–24	18·0	14·9	18·0	15·0	...	— 0·1
1924–25	19·1	15·2	18·2	14·5	+ 0·9	+ 0·7
1925–26	21·0	15·6	20·8	15·5	+ 0·2	+ 0·1
1926–27	21·4	17·2	21·0	16·9	+ 0·4	+ 0·3
1927–28	20·1	20·4	19·6	19·9	+ 0·5	+ 0·5

Revenues were received and expenditure made in paper lire at the value current from time to time. "Present lire" figures are added, however, in order to show what would have been the burden of taxation and the amount of expenditure if the same monetary unit, the present lira at the legal rate of stabilisation, had been current throughout the period. Viewed in this way, revenue was but slightly increased from 1922-23 to 1925-26, and expenditure was diminished in no small proportion, so that the

great feat of changing a deficit of 2,500 million lire (in present lire) into a small but highly significant surplus was achieved. Revaluation in 1926-27 and stabilisation in 1927-28 gave a rude shock to this process. Revenue and expenditure remained about the same, and even slightly decreased in actual paper lire; but in terms of " present lire " the burden greatly increased, expenditure going up about 30 per cent. and taxation becoming more and more burdensome. Signori Magrini and Olivetti conclude that State expenditure was not appropriate to the changed value of the lira. This is indeed the crucial point of every revaluation process. Revaluation means contraction of prices and of private incomes; but State expenditure is mostly fixed and cannot be contracted, so that the burden on taxpayers increases. Years must pass before the old equilibrium between private and public expenditure is restored.

The second criticism of the Budget Committee of both Chambers of Parliament relates to " arrears." This is probably something of a mystery for British readers, who are accustomed to their cash budgeting system. In Italy we budget on the basis of revenues which are actually received plus revenues which are due at the end of the fiscal year, and of expenditure made and remaining to be made. Therefore, side by side with the current yearly budget we carry on a separate budget of arrears to be received and expended. This double budget makes it possible, argue Parliamentary Committees, to charge a given expenditure on the arrears instead of on the current budget, making the latter appear better than it ought to be. It is not easy to estimate the importance of such a criticism; but it is certain that the condition of the exchequer is determined by the sum total of actual receipts and issues, whatever the year to which they refer, without regard to the revenue still to be cashed and expenditure to be made. The Chamber Budget Committee has made some interesting calculations, and we publish their final " adjusted " comparable figures (in milliard lire):—

	Exchequer Receipts.			Exchequer Payments.		
	Current Revenue.	Arrears.	Total.	Current Expenditure.	Arrears.	Total.
1923–24	16·9	2·8	19·8	11·8	5·1	16·9
1924–25	18·0	1·9	19·9	11·6	6·2	17·8
1925–26	19·7	1·4	21·1	13·2	5·9	19·1
1926–27	19·9	1·5	21·4	13·8	6·7	20·5
1927–28	18·8	1·5	20·3	13·5	8·0	21·5
1928–29	...	...	18·8*	...	...	19·4*

* Not adjusted.

In the total receipts arrears play a minor part, while about a third of the total payments are in arrears. Each year the exchequer pays only about two-thirds of the current expenditure, and passes on the remaining third as arrears. To obviate such a situation, section 6 of the statute of December 9, 1928, enacted that the fiscal year, though ended as usual at June 30th, should have a sequel in July, being finally closed at July 31st. During the month of July, 1929, we had thus for the first time a double budget—the old 1928-29 budget ended at June 30, 1929, but not yet closed, and the new 1929-30 budget. It is hoped to get rid in this way of a part of arrears which are received and paid shortly after the end of the fiscal year.

A third source of criticism by the Budget Committees is the growth of the habit of spreading certain expenditure to be made in a given period over a longer series of fiscal years. According to a table published by both Chamber and Senate Committee, the sum total of the expenditure to be thus charged on the budgets from 1929-30 to 1938-39 amounts to 28,858 million lire. This is wholly apart from permanent expenses, such as public debt interest, pensions, salaries, etc., and to that extent the elasticity of future budgets is impaired. These and other minor criticisms seem severe; but the Chamber of Deputies Budget Committee observe that it is the duty of the new Corporative Chamber to restore the financial control of Parliament to its ancient traditions, which were almost forgotten in the last years of the parliamentary regime. The Committee's strictures provoked some reaction in the Assemblies: Signori Zingali in the Chamber and Rava and Ranieri in the Senate maintaining that arrears on the expenditure side had already diminished from 43.06 at June 30, 1923, to 18.97 million at June 30, 1928, and were bound to decrease further; and that the taxation burden was not so grievous as it was made to appear in the Committee reports, as the national income had not decreased in proportion to the revaluation of the lira. Statistics are lacking on the respective variations of public expenditure and national income; but the parliamentary discussion very usefully pointed out the necessity of keeping a keen eye on the tendency of public departments to increase their expenditure. The hero of the debate was a man unknown to the public at large, the Accountant-General of the State, Signor De Bellis, to whom all orators paid homage as the man to whose lot falls the ungrateful task of saying " No " to all claiming a right to dip their hands into the public purse. Truly, in his capacity of watchdog, Signor De Bellis has saved billions to the public exchequer.

BELGIUM.—HOUSE RENTS—FISCAL REFORM—INDUSTRY.

(FROM OUR CORRESPONDENT.)

LOUVAIN, December 22.

WITH a view to solving the house-rent problem, the Government has drawn up a Bill, which is now before Parliament and will probably pass into law without notable modification. Like all European countries whose currency has undergone a serious degree of devaluation, Belgium limited rents to a gold value below the pre-war level. The last of the series of Acts regulating this was passed in December, 1926, and provided for the gradual decontrol of the highest rents, but there is still a large range of rents under control, as, for example, those of houses rented at less than 1,600 francs yearly pre-war in the communes of more than 100,000 inhabitants, and at less than 1,200 francs pre-war in the communes of 50,000 to 100,000 inhabitants, etc. Leases of houses subject to legal restrictions were extended and their rents limited to 50 per cent. of the gold value charge of 1914. Buildings erected since 1918 are exempt from this regulation on renting, and, in fact, many flats are more highly rented.

Complete freedom was to be restored in January, 1930, but in order, as far as possible, to avoid disturbance, the Government decided upon the establishment of a transition arrangement. France's example in prolonging her housing law, in certain cases to 1939, has had a perceptible influence here. According to the present Bill, which, though prudent and moderate, has given rise to protest from owners and tenants, the end of leases involved by this scheme will again be postponed; in the towns of more than 100,000 inhabitants the houses which rented in 1914 at from 600 to 1,200 francs per annum are regulated and the termination of the lease postponed for a period of one year; for rents below 600 francs postponement will extend over two years. Apart from specified exceptions, freedom is restored in communes of less than 50,000 inhabitants. In no case, even in the big towns, will the owner be obliged any longer to agree to a rent lower than the pre-war price, expressed in gold. This indicates decided progress in the direction of uncontrolled agreement. The consequent rise in rents will naturally affect the cost of living and the competitive power of Belgian industry. A rising level of rents is, however, unavoidable in a country with a sound economic system, and as a very considerable proportion of Belgian workmen own their own houses the increase will, to some extent, be an increase in appearance only.

The fiscal reform already discussed in a previous letter is now before Parliament, and will probably be passed in its present form. The vote will probably not be granted till next February, but most arrangements will be enforced retroactively from January 1, 1930. With this object a Royal Decree was issued for the re-scheduling of the sales tax, which is to be lowered from 2 to 1 per cent.; this duty is imposed upon internal transactions and imports. The Fiscal Reform Bill and its schedule are a very voluminous statement, from which the following data of interest to foreigners trading with Belgium are abstracted. Customs remain unchanged except for a few reductions concerning cacao and mineral oils. The duty on matches is lowered from 50 to 30 centimes per thousand shanks. In anticipation of the establishment of petroleum refineries an Excise duty of 40 centimes per litre (1¾ pints) of petrol is enlisted. The stamp duty imposed on trade bills is reduced to half the present amount; it is entirely abolished for bills arising out of transit trade. Bonds issued abroad by Belgian companies are also free from stamp duty.

Modifications in the income tax have been outlined in a preceding report. The tax on dividends is fixed at 22 per cent.; interest on loans, bonds or banking deposits is taxed at the rate of 16 per cent. Belgian loans issued before the war are exempt from this tax. Income from abroad continues to pay 6 per cent.; interest paid to aliens remains taxable at 5 per cent. The Government proposes to impose a special tax on income proceeding from directorships of " sociétés anonymes." This tax will vary from 10 to 18 per cent., but its imposition automatically frees this class of income from local taxes, and it will therefore still be moderately assessed. The Bill regulates according to equity the question of fictitious profits resulting from the devaluing of the franc; in the case of liquidation of companies only the surplus exceeding the paid-up capital expressed in gold values (instead of the paid-up capital in paper francs, the basis formerly adopted) is taxable as shareholders' income.

The business trend is less satisfactory. A slackening is, for instance, perceptible in the sales of automobiles and luxury items. The serious Stock Exchange crisis is in great part responsible for this. A few firms dismissed some hands, but they were immediately enlisted elsewhere. In the building industry activity remains strenuous, but new contracts seem less numerous than before. Recent reports from the metallurgical companies show their standing less favourable than in 1928, though order books are well filled. Purchases of toys for Santa Claus presents were at least as abundant as last year, according to the big shops.

Improvement in the diamond industry has not been maintained, and the industry has been at a standstill during half December (from the 7th to the 23rd). The annual output of Antwerp is £13,000,000 worth of polished stones and the industry employs 25,000 craftsmen. The fundamental cause of the crisis lies in the erection of cutting shops in South Africa and the aid granted to them by the Capetown Government in selling them uncut stones at low prices. Also the slump on the New York Stock Exchange caused a heavy decline in exports to the United States, which is a leading client of this industry. In general, it is anticipated that 1930 will be a less prosperous year for Belgian industry, though there is nothing in the nature of an acute crisis.

AUSTRIA.—INDUSTRIAL CONDITIONS—TARIFF POLICY—MONEY—STOCK EXCHANGE—TAXATION—TRADE.

(FROM OUR CORRESPONDENT.)

VIENNA, December 27.

THE serious fights in domestic politics have come to an end with the passing of the constitutional reforms. The Bill was not passed in the original form desired by the Government and the majority parties; nevertheless, State authority is strengthened by the reforms. A far more important matter than the reform of the constitution is the economic ruin which will overtake the country if the political parties insist on continuing hostilities and do not take definite steps to ward off further impoverishment. Up to the present, however, the Government has shown nothing but good intentions, and concrete measures are not yet in sight. The most striking outward sign of economic difficulty is the serious increase in unemployment. In the first half of December alone the number of unemployed in receipt of benefit advanced by 25,600, and of those receiving no benefit by 5,000. The number of unemployed in the whole of Austria is 226,000, which is 18,000 higher than last year. This aggravation of the evil is largely due to the fact that investment activity on the part of the Federal authorities, as also on the part of the Municipality of Vienna, is being kept at a minimum. The failure to float the foreign loan is also being felt. Furthermore, the Municipality of Vienna intends to avail itself in future of the credit support offered by the State to promote housing, and this will not be possible before next year. In consequence the Municipality is for the time being passing no contracts for new buildings.

The State Railways, which for a long time have been one of the best customers of Austrian industry, are also restricted in their commercial activities by the fact that the term of office of the chairman of the Federal Railways has come to a close and the Government has not yet appointed his successor. It will be necessary greatly to reduce the staff or to make a cut in salaries, for the revenue from the last increases in fares and tariffs has been almost completely swallowed up by increases in salaries and wages. The reserve exercised by the Federal Railways in the matter of orders is seriously affecting the iron industry, which was remarkably busy until the autumn. Since then, however, there has been a great falling off. In the production of crude steel the Alpine Montan Gesellschaft was working to 99 per cent. of its capacity, whereas now the figure is only 72 per cent. At the end of the year 1929 the electrical industry will have completed the current orders from the supply companies, and fresh contracts have not yet been given. A great number of workers are being discharged by the automobile industry. The Steyr Motor Works, which now belongs to the concerns of the Credit-Anstalt, will enter into a certain community of interests with the Austro-Daimler Works, whereby a saving will be made in both production and sale. In spite of the concentration of the shares, it is still difficult to see how the Steyr Works can reduce its debt to the bank. Poor business in the paper industry has led to sharp competition, and the cardboard factories have formed a ring in order to ease the situation.

The unfavourable situation in trade and industry in general is causing a demand for increased tariff protection. Higher duties are demanded on automobiles, cotton fabrics, furniture, glass, fancy goods, chemicals, electric machines. Agriculture, which has already succeeded in securing the addition of six gold crowns to the sugar duty, is demanding other increases, but the Hungarian farmers have expressed strong objection to any further Customs duty increases in favour of Austrian agriculturists, as they fear that such increases would result in diminished imports from Hungary.

GÖTEBORG - STOCKHOLM - MALMÖ

The National Bank has for the last few weeks been the only source of money, and it has also made preparations for an unusually heavy call at the end of the year. Within the last few days very considerable offers of foreign credits have, however, been made in Austria. In regard to contracts for special credits negotiations are being carried on. The result is that the National Bank is feeling a reduction of the pressure. The shortage of money is still being felt in commercial circles and in industry, for it is enhanced by the absence of capital formation. Whereas last year savings deposits increased by at least 500 million schillings, this year they have probably grown by less than 300 millions. In these circumstances, it is very important that the large capital which went abroad while the tension was so high in domestic politics and while the difficulties in regard to the Bodencredit-Anstalt were being dealt with, should gradually come back again into the country.

As far as Austrian shares are concerned, the past year was a prolonged catastrophe. One slump followed upon another, and the value of all the shares dealt in on the Vienna Exchange fell by 25 per cent. Part of these losses will never be recovered, for the syndicate shares of the Bodencredit-Anstalt may, in some cases, not make good even in a most favourable market. On the other hand, there are on the Vienna Exchange a number of shares which are quoted much below their real value, for they are bringing in as much as 8 or 9 per cent. In a quiet way interest is being shown in the real estate market. Domestic and, more especially, foreign capital is making excellent purchases from time to time. The economic stress is compelling house owners to sell, although rents will automatically advance next year and the following year, and even now some property is bringing in as much as 7 and 8 per cent., whereas a year to two years ago, before the reform of rents, property was bringing in nothing at all, or at most 1 to 2 per cent. It is calculated that, if houses are built under the State scheme, whereby only about 10 per cent. of the total building costs has to be paid down by the prospective owner, the owner's capital will yield from 15 to 18 per cent. It must be mentioned, however, that this calculation depends for its accuracy on the owner's finding tenants who are able to pay the rent. In these houses built with the aid of the State housing promotion scheme, a four-room flat, with the usual offices, will cost about 250 schillings a month in rent to the house owner. The question is whether such a rent can be afforded even by the middle class, if present economic conditions continue.

Next year the population will have to bear fresh burdens. For example, the Minister of Finance desires to collect 147 millions more in duties and imposts. Postal fees are expected to aggregate an additional 14 millions and the tax on sugar will total 9 millions more. The Municipality of Vienna has given notice that the price of electricity and gas will be increased, and municipal tramway fares are also to be raised. Altogether, this means the extortion of a further 200 million schillings. The state of the balance of foreign trade is unsatisfactory. November figures show a serious falling off. Austrian exports to Germany are still regressing, but commercial relations with Czechoslovakia are more satisfactory. Russian business is further depressed by the fact that not only the banks, but also the Municipality of Vienna is more reserved. Two years ago the Municipality of Vienna declared itself prepared to guarantee to an extent of 100 million schillings losses on shipments to Russia. As a matter of fact it has up to the present not guaranteed more than 71 million schillings, and in the coming year it will not release the remaining 29 millions. It will do nothing more than afford a secondary guaranty within the scope of the State subsidy, which grants far less assurance in case of loss. From the Hague Conference, which will be attended by Federal Chancellor Schober, people are expecting a certain amount of clarity in relation to the investment loan, and it is hoped that an advance, at least, will be available on account of this loan.

FINLAND.—THE MONEY MARKET—FOREIGN TRADE—DIET.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, December 18.

THE movement towards lower rates of interest and an easier tone of the money market which has appeared in the great financial centres after the crash on the New York Stock Exchange, has not yet extended to the Finnish money market. Here the level of rates remains unchanged, and the money shortage continues. To a certain extent the depression has spread to wider circles, and the usual winter unemployment appears to be taking on larger proportions than for a long time, though the number of unemployed on the books of the labour exchanges has not yet exceeded 10,000. There are, however, signs of an approaching improvement.

In the first place, the position of the Bank of Finland has grown stronger from month to month. The total credits granted by the bank on December 7th were 1,420.6 million marks, or 42.6 millions less than one month and 52.5 millions less than two months earlier. The reduction was entirely a result of a falling-off in rediscounted bills. The foreign balances rose simultaneously from 550.1 million marks on October 8th to 613.9 millions and 627.0 millions on the same day in November and December. As the falling tendency of the note circulation has continued without interruption, the note reserve of the central bank has been strengthened from 443.7 millions on October 8th to 471.0 millions on November 8th and 525.1 millions on December 7th. The percentage of the note cover has risen steadily from 54.1 to 56.5 and 58.5 per cent. For the sake of comparison it may be mentioned that the unused right of note issue on December 8, 1928, was 264.4 million marks, and the percentage of the note cover 53.7 per cent. It is especially in the former respect that the improvement in the position of the Bank of Finland is consequently considerable.

The rising tendency is not so clear in the case of the joint stock banks. Their deposits have dropped regularly month by month since last July, and the falling-off in October was 67.5 and in November 175.9 million marks. At the same time the banks' credits have been reduced from month to month, with the exception of October, when there was a slight increase of 12.7 million marks, but in November the reduction was again 133.5 millions. As usual at this time of the year, the difference between credits and deposits has increased slightly, but this increase has been appreciably smaller than during the previous years. In the position of the banks towards foreign countries the development was also normal during October and November; a slight increase of the net indebtedness is customary at this season.

Foreign trade has returned very favourable figures for the last few months, particularly compared with conditions last year. The value of imports for October and November amounted to 654 and 571 million marks, compared with 884 and 735 millions last year. The reduction in the value of imports for these two months was consequently 394 million marks. Exports, on the other hand, were at about the same level as last year, for October 731 and for November 595 million marks, compared with 740 and 625 millions a year ago. As the reduction in exports was only 39 million marks, the balance of trade was improved for these two months by no less than 355 million marks over the results for last year. While these months showed a surplus of imports last year amounting to 254 millions, there was a surplus of exports this year of 101 million marks, a result that is very satisfactory for this time of the year.

In regard to the balance of trade for the whole of the completed part of this year, there has been a similar improvement. The value of imports has been reduced by 964 million marks to 6,462 millions, while exports have been increased by 227 million marks to 5,975 millions. While the surplus of imports at the end of November last year amounted to the exceptionally high figure of 1,678 million marks, it has now dropped to 487 millions. Even this figure is less satisfactory than usual during recent years, but the improvement since last year is promising.

As is usual towards the end of the year, the interest of the Diet has been directed to the Budget for next year. This is, however, not quite ready. In connection with the Budget there has been a great deal of legislation. Changes have been made in several clauses of the Customs tariff, and higher rates of duty have been introduced on imported pigs and pork, grain, flour, potatoes, eggs, expensive motor cars and bricks. In addition, the Government was empowered to raise the import duty to a maximum of four-fold on various textiles and rubber footwear. The Diet passed certain amendments to the law regarding associations which facilitates the struggle of the authorities against subversive elements. These measures are connected with a strong movement among wide circles of the population, which demand resolute steps for putting down Communism and hooliganism.

AUSTRALIA.—BUDGET—TARIFF REVISION—SUPER TAX—COMMONWEALTH BANK AMENDMENT ACT.

(FROM OUR CORRESPONDENT.)

MELBOURNE, December 14.

THE new Commonwealth Government on November 21st introduced a revised Budget for 1929-30, modifying that introduced by the Bruce-Page Government last August. Taking the figures on a net basis, by which the Post Office, Commonwealth Railways, and Territories are reduced by cross-entries to net figures, the total revenue is now estimated at £64,589,000 (instead of £64,198,000 as previously estimated in August) and the expenditure, exclusive of sinking fund, at £64,575,442 (instead of £63,837,102), leaving an estimated surplus of £14,558 (instead of £360,898) on the year. The accumulated deficit will thus be reduced from £4,987,718 as at June 30, 1929, to £4,973,160 as at June 30, 1930. The late Government proposed to reduce the accumulated deficit still further by bringing in special receipts representing accumulated income arising from liquidation of ex-enemy properties, £1,200,000, but this proposal is now dropped.

The net expenditure is larger by £737,340 than that proposed by the late Government, after allowing for reductions of £150,000 in Defence, besides minor reductions, while the revenue is larger by £391,000. The estimate of Customs revenue has been enlarged by £1,154,000, making it £32,239,000, but the Excise estimate is reduced by £454,000, making it £12,211,000. The latter reduction is partly due to beer, the Excise on which under the August Budget was raised from 1s. 9d. to 2s. per gallon, but is now to be 1s. 10d.

Although the present list of alterations to the Customs tariff is not short, it was recently announced that the main work of making the tariff more highly protective will only be undertaken next year (1930). As regards revenue, the present Budget estimate of £32,239,000 from Customs (excluding Excise), when compared with £29,502,755 received in 1928-29, means that the volume of imports would require to be at least equally heavy. During the three months ended September 30th there has been an increase in imports; but, in view of the decline in the export trade now in progress, in consequence of the lower prices ruling for wool and the smaller wheat harvest, in addition to the difficulty of raising loans abroad, a substantial reduction in imports is required, and this might easily curtail the Customs revenue by some millions. If expenditure is to be maintained and Customs revenue declines, a much more serious recourse to other sources of revenue will be necessary to balance the Budget. In the meantime, the Government proposes a super tax of 10 per cent. on the taxable incomes of individuals from £201 to £1,500, 15 per cent. on individuals from £1,501 to £3,000, 20 per cent. on individuals from £3,001 upwards, and 20 per cent. on taxable income of companies. The super tax will produce £1,285,000 instead of £400,000 proposed by the late Government in August. The late Government proposed a general amusement tax of 5 per cent. on admission charges, to produce £600,000 (in addition to the existing entertainment tax), but the amusement tax is to be dropped. The picture theatre interests were very outspoken in opposition to it at the recent election. The super tax has not been welcomed, as for one reason it will curtail companies' net profits. Brewery and distillery shares, however, have hardened on the Exchange. The new tariff gives additional protection to local iron and steel goods, cotton and woollen goods, socks and stockings, and a variety of other articles.

An Act introduced by the Commonwealth Government has been passed to enable the Treasurer to authorise the Commonwealth Bank to require any person to furnish particulars of gold coin and bullion held by him, and to require any person to exchange the gold for Australian notes. The Treasurer can also, on the recommendation of the Commonwealth Bank, prohibit the export of gold. The letter from the chairman of the Commonwealth Bank, Sir Robert Gibson, which was quoted in the House of Representatives by the Treasurer, Mr Theodore, in introducing the Bill on November 28th, stated that, owing to various causes, including unfavourable borrowing conditions in London, reduced values of exports from Australia, due to unfavourable seasons and a large reduction in wool values, there had been a steady adverse drift against accumulation of funds in London. The Commonwealth Bank was faced with proposals "which must have the effect of depleting the reserve of gold, and further taking the control of the situation" out of the hands of the Commonwealth Bank board. The proposed legislation "would place the gold in Australia definitely in the control" of the Commonwealth Bank, and "there would only be one authority in control of the gold in Australia." As this legislation will enable the Commonwealth Bank to commandeer the gold held in Australia by the ordinary banks, the view of the latter is that the Commonwealth Bank should be prepared to provide exchange on London, if required, as notes if given in return for the gold are not available for export. The attitude of the Commonwealth Bank on this point is still uncertain. In the past it has been prepared to sell exchange on London up to the amount of its available resources, but not further. To deal with the unfavourable position of the balance of payments due to the causes above mentioned is not a matter for which the Commonwealth Bank is at present well fitted. The only real cure for the position is a curtailment of imports, and the attitude of the ordinary banks towards their customers is calculated to bring this about, though the process requires a little time.

Although the Act is based upon Section 11 of the English Currency and Bank Notes Act, 1928, some differences are to be noted. The English Act does not interfere with the holding of gold by or on behalf of foreign banks or foreign persons, and it has not stood in the way of gold exports. Under the Australian Act, however, according to the Treasurer's statement in the House, institutions will serve no object by presenting notes and demanding gold to the extent of £1,000,000 because the Commonwealth Bank has power to requisition it immediately.

Letters to the Editor.

RESIGNATIONS OF DIRECTORS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The frequency in the past year or two with which one has seen statements emanating from companies in the Press that a gentleman has resigned the managing directorship, or that one or more have simultaneously resigned their directorships, causes one to consider whether directors are the servants of the company or whether they are simply individuals solely out for their own gain.

I have, of course, no desire to make any comment as to the propriety of those gentlemen who resign for a cause such as age, "real" ill-health, or for some similar good reason.

We have seen too frequently, prior to the first annual general meeting of some of the companies that have been recently formed, the resignation of a director or directors whose name on the prospectus caused people to subscribe for shares. We have also observed that when shares have heavily depreciated in value on the Stock Exchange some directors resign, and yet rarely is any explanation given for their resignation.

The name of an influential man appears on the prospectus of a company when its shares are offered for subscription, and the subscribers believe that he has faith in its prospects and that in exchange for his fees he will, to his utmost capacity, do all he should both legally and honourably. He may discover that the company was conceived in fraud, or that it has little or no hope of a financial success, and to avoid the unpleasantness of being criticised or listening to criticism at the next shareholders' meeting he resigns, calmly leaving the company to its unhappy fate.

Sometimes, and too frequently, it happens that when a prosperous company has gone too far in its projects and reaches a stage at least of danger, or possibly has to be reconstructed, one or more members resign without a word of explanation.

If there be a dispute on the board so serious as to warrant a resignation or resignations, let the shareholders be told of it, so that they themselves may judge and consider what they should do; they are the masters and the directors are their servants.

I would ask you, sir, to use the influence of your columns with a view to insisting that when a gentleman retires from his directorship he should give a reason, and if there is some cause which he is not desirous of publicly avowing the company of which he is a director should themselves give the cause.—Your obedient servant,

J. S. BLANCKENSEE.

85, Fleet Street, London, E.C. 4.
December 31, 1929.

The Stock Exchange.

RETAIL TRADE PROMOTIONS.

LEST we should be accused of having deliberately confined ourselves to the worst examples of reckless company promotions in our series of inquests on the 1928 new issue boom, we propose in the following article to consider a group of issues of a less speculative order, *prima facie*, than the safety glass, film and gramophone flotations so far considered. We therefore propose to discuss the results achieved by eighteen companies engaged in various retail trades, which were floated in 1928 and have submitted their first reports to us for comment. These companies cover a variety of trades—laundries, dry cleaners, tailors, boots, shoes, chemists, drapery stores, tobacconists, fruiterers, restaurants and motor agents. The following table shows the results achieved by these companies in comparison with their respective prospectus estimates, and compares their present market prices with the highest prices recorded in 1929:—

	1928 Public Issue of	Highest Price 1929.	Present Price	Prospectus Estimates. of Profits £	Profits Shown in First Reports £

Before drawing conclusions from this statement of results we may reproduce the directors' explanations in the cases of those companies whose profits are noticeably less than was estimated in the prospectuses:—

Prospectus Statements.

Advance Laundries.—The advantages of amalgamation are manifest. Great savings can be effected in the purchase on a large scale of materials, fuel and general requirements.

Amalgamated Fruiterers.—The outstanding success that has attended multiple shop trading is common knowledge.

Beau Brummel (1928).—The economy resulting from the amalgamation will produce immediate results.

First Report Statements.

The directors consider that, taking into account the reorganisation expenses which must follow the amalgamation of 14 laundries, results are satisfactory.

The result . . . is attributable to the difficulties and expenses of changing the method of trading from private businesses to a multiple shop organisation.

Unforeseen delays have been experienced in taking over shops and businesses.

Kit-Kat Restaurants.—Centralisation in the catering and distributing departments . . . will result in considerable economy in administration.

John Lewis and Company.—Apart from the economies which should result from unification of administration and additional buying power, the combined profits should be materially increased.

Mortimers (1928).—The business is a cash one and will finance itself.

Chez Taglioni.—"I consider . . net profits should be not less than £10,000 per annum. This I consider to be a conservative figure which I confidently anticipate will be considerably exceeded." (Mr. Taglioni.)

The company during the first nine months of this period met with exceptional difficulties.

The sales of the second half of the year were inevitably affected by the disappointing slowness of the completion of the transfer of the business from the vendors to your company.

The amazing increase in the number of competing tailoring shops has resulted in the returns of some of your branches not reaching directors' expectations.

Redecoration and extension of premises caused a dislocation in business. Road repairs resulted in closing of Gerrard Street for several weeks. Dispute with underwriters resulted in underwriting contract not being carried out.

We deduce from these apologies that an appreciable risk is attendant upon the first stages of the process of rationalisation, and that the successful management of a small individual business affords no guarantee that the management of a combination of businesses will be equally efficient. The difference in the risk involved in turning a number of small private concerns into one large-sized public company, and in establishing an entirely new business, is obviously one of degree and not of kind.

One feature of the finance of these companies deserves especial notice. In the first place, the companies obtained their money by the issue of preference shares which had little of the character of "preferred" securities. For example, when Amalgamated Fruiterers was formed with a preference capital of £288,270 and an ordinary capital of only £52,230 in 1s. shares, the preference shareholders were clearly shouldering the lion's share of the risks of the business. In all these issues (with the exception of John Lewis and Company) the amount of preference was out of all proportion to the ordinary capital, which was invariably in shares of low denomination. In such conditions, when trade is good, preference shareholders must be content with their fixed interest; when trade is bad they must forego their dividends; and if the company is forced into liquidation their capital is lost. It is difficult to imagine a more unattractive type of security. It may be argued that the public was offered a participation in the equity shares of the companies, and that the dividends on the preference shares were high, varying from 7 per cent. to 12 per cent.; but the participation offered in the equity shares was always small, and the "high" dividend rates on the preference shares were a poor compensation for the doubtful security offered.

A second objection, resulting largely from the conditions described, emerges from the fact that, while the present market valuation of the shares offered to the public is £3,731,786, against a par valuation of £4,143,250—a depreciation of £411,464, or over 9 per cent.—the vendor interests obtained £3,053,151 of capital, which is at present valued at £3,551,734—an appreciation of £498,583, or over 16 per cent. The public, in fact, obtained, in many cases, an extremely low proportion of the "equity" shares:—

PERCENTAGE OF EQUITY SHARES OFFERED TO PUBLIC.

Advance Laundries	52·0	Kit-Cat	60·0
Amal. Fruiterers	21·5	John Lewis.....	Nil.
Beau Brummel	44·4	Melbourne Hart.....	Nil.
Bolsom Bros.	100·0	McIlroy Stores	69·4
Carlton Shoe	Nil.	Chez Taglioni	66·7
Cavendish House	15·0	Mortimers	34·1
Charles Finegold	26·6	Prices, Tailors	7·1
John Gardner	13·3	Sunlight Laundries	22·5
Henleys	37·5	Timothy Whites	16·6

However proper it may have been to raise capital for these trading companies by public subscription, it is obvious that the issue of an inordinate amount of "preference" capital, with an excessive amount of the equity shares of low denomination handed out to the vendor interests is, in many cases, a questionable type of finance, the perpetuation of which can scarcely be in the best interest of new companies, their promoters, or the reputation of the City of London itself.

Taken as a whole, these companies make a distinctly better showing than any group previously considered, two of the eighteen having fulfilled their promises, and four others having come within measurable distance of doing so. The disappointing results of the others reinforce the lesson, amply demonstrated by earlier experience, that to run a business profitably under private auspices is one thing, and to operate it with equal success when it has been enlarged, re-capitalised and metamorphosed as a public concern is another. When, in addition, such a business is, as it were, placed in a new context, by being amalgamated with other concerns under entirely different management, the speculative risks inherent in its reflotation are sensibly increased. The investor, of course, has the consolation that the companies to which he subscribes are, presumably, in operation on a commercial scale from the outset—a stage which many of the entirely "new" companies considered in earlier articles have as yet failed to attain, and may never attain. The retail concerns analysed this week may, eventually, establish themselves as sound, profit-earning bodies, though not, in all instances, on a scale sufficient to justify their present capitalisation. The drawbacks involved, however, in flotations of this order, from the investor's point of view, are twofold. In the first place, the change-over from private to public control involves the payment of numerous incidental expenses and, frequently, of substantial profits to the parties immediately concerned in the operation, which saddle the new company with a larger proportion of non-profit-earning capital than the old. Secondly, if the business has really been run on sound lines, and has a reasonably prosperous future before it, the inside parties are reluctant to allow the outside subscriber to share in the equity to any very considerable extent. The investor, therefore, is apt to receive a proportion of the fruits of future prosperity, and a share of voting power, which bear slight relation to the amount of new capital he brings to the business.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
January 21.	January 23.

Quite early in the week, the Stock Exchange made up its mind that a reduction of Bank rate was a probable contingency. Business, consequently, showed a tendency to expand, and though its dimensions, by normal standards, were never more than moderate, the tone of most markets was appreciably more hopeful than for some time past. Paris continued to buy its favourite stocks, particularly Kaffirs. The sensitiveness of the "House" to changed conditions was well demonstrated on Thursday, when the atmosphere became decidedly cooler *before* the Bank's "No Change" announcement was made. Prices eased slightly, but the decision was not regarded as likely to inflict any marked check on the tendency of prices to incipient improvement, the omens, in fact, favouring further cautious activity in anticipation of a reduction in money next week.

Gilt-edged stocks showed conspicuous strength pending the Bank rate decision. The older Conversion Loans were especially firm, while War Loan and Funding Loan gained ground steadily. The immediate effect of the Bank's decision was a shading of prices by about one-sixteenth. The Five per Cent. Conversion Loan, however, was sluggish, and was thought likely to remain so till the stock had become fully-paid and the market less professional. India Loans, the position of which is discussed in a "Note" on

LONDON ACTIVE SECURITIES.

page 79, experienced a certain recovery, the preceding fall having given them a cheap appearance in some eyes. Dealings, however, were not on a large scale. Dominion and Colonial issues remained inactive, apart from a decline in a number of Australian stocks.

The leading feature in the Foreign Market was the support given to certain Chinese bonds. Some slight inquiry was received for Japanese, and the tendency of Europeans continued firm, but no accession of activity was recorded in Brazilian bonds.

Home Railways experienced the broadening of business, which normally occurs between the publication of a year's traffic returns and the declaration of dividends. Midland and Scottish reflected the belief that the company would, after all, show an increase in net earnings in 1929, while Southern were strong on good New Year Continental traffic. Underground issues were a firm feature on Wednesday. After a quiet start, Foreign Railways shared in the mild optimism of other markets, Argentines enjoying a fair recovery, though Brazilians were quiet. Canadian Pacific gained a point or two. Indian railways were on offer at the outset, but became steadier as the week progressed.

In the Industrial markets the carry-over revealed a very small open account, a number of bear positions being, in fact, outstanding. A moderate revival of inquiry this week, mainly professional in origin, thus gave prices a measurable upward trend in a number of cases. Buying of Imperial Chemical drove the bears sharply to cover, the statement being made that the company's volume of business was greater last year than in 1928. Courtaulds further recovered and Celanese were harder, other textiles making headway under the lead of Fine Spinners. The Guest, Keen-Baldwins arrangements, described in an "Investment Note" on page 80, were well received, and, together with the statement regarding negotiations beween Dorman, Long and the "Furness" Companies, served to give the iron and steel share market an air of unwonted public interest. Rolls-Royce showed consistent firmness among motor shares. Associated Cement was a strong feature. Brewery shares obtained support, though Guinness encountered profit-taking after a sharp rise. Some overseas interest was evinced for Lautaro Nitrate. Cables and Wireless took an upward turn. Margarine Union was dealt in for the first time under its new style of Unilevers, the tendency of the shares being firm. Bank shareholders were gratified to learn that the "Big Five's" profits were more than maintained, despite last year's trials and tribulations, a revival of solid investment demand following the announcement of the figures, which are set out on page 79. Insurance shares were similarly firm in tone.

Inactivity reigned in the rubber share market, though the fresh weakness of the commodity did not provoke any large volume of selling. The position is discussed in an "Investment Note" on page 83. Tea share prices had a drooping tendency, buyers being at times difficult to discover, though fair competition for the commodity prevailed at the first auctions of the year. The leaders in the oil market were in moderate demand, but business was limited and largely professional.

The opening of the new account found the mining markets stirred by eager expectation, which later developed into a sizeable buying movement. With Paris and the Cape supporting their favourites, Kaffirs were again in the van of activity. The finance companies shared in the prevailing tendency, "Johnnies" gaining several points. On Tuesday the movement extended to Rhodesians, Bwana, Roan Antelope, and Rhodesian Selection reflecting private orders from New York and Montreal. The drop in silver to a new low level was a bear factor as regards Burma Corporation and other producers, while the partial improvement in tin had few repercussions in the share market. A quieter tone was noticeable at the close, with Tintos a firm exception on the continuance of orders from Paris.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Our New York correspondent cables:—After a somewhat disappointing opening to the New Year the share market showed ability to maintain itself against a small amount of selling pressure, and subsequently rallied to a moderate extent, reviving hopes of a January rally. The leading feature, however, of the past week has been the distinct improvement in the bond market. It is expected that the condition of this market will soon be tested in an important way. There is still some uncertainty as to how much liquidation may appear on later rallies, due to the existence of large bank loans on securities, but it is certain that any such securities will not be pressed on the market. Meanwhile, it is realised that a good bond market is normally one of the first symptoms of financial recovery. A rally in shares is hoped for, but anticipations are modest, and it is thought that any strong recovery is likely to await clearer signs of a recovery in business. Public utility stocks have been leading features on successive rallies, and copper shares have improved moderately on a partial break in the domestic buyers' strike, which has lasted since September, 1929. Motors have risen slightly on anticipations in advance of the local Show, but remain sluggish pending clearer indications of spring business. The strength of International Nickel is associated with rumours of buying from London. Call and time money are easy, a natural state of affairs at this time of the year, when funds return to New York faster than the Reserve Bank can sell Government securities. The output of the steel industry has increased after the holidays, production being about 60 per cent. of capacity, with some prospect of a rise to 65 per cent. Prices are somewhat ragged. Automobile output is increasing slowly. Good chain-store sales this month indicate a satisfactory volume of purchasing power, with some shifting of buying from the more to the less expensive shops.

INVESTMENT NOTES.

Progress Towards the "Hatry" Settlement.—The last few days have appreciably improved the prospects of an early Stock Exchange settlement in the "Hatry" securities. We understand that the question of "bad stock" does not arise in the case of Photomaton, the public holding of which, in any case, is not very considerable. The Associated Automatic Company will next week apply to the Court for the rectification of its share register. If the Court grants the application, a period will probably be fixed during which objections can be made. Presuming the period were, say, something like three weeks (its actual duration being, of course, entirely a matter for the Court's discretion), the Stock Exchange Committee might find its way clear at the end of that time to fix a Settlement in *all* the stocks concerned on a convenient early date—possibly towards the end of February. Meanwhile, the "unofficial" sub-committee which has been endeavouring to arrive at a concrete financial scheme, acceptable to all the parties closely concerned, would seem to be nearer success than at any earlier time, if the assent of certain remaining parties to its proposals is duly forthcoming. Broadly speaking, the amount involved is of the order of £1,000,000. The characteristic features of the proposed scheme are that the outside public, which dealt in the "Hatry" stocks in good faith, will not suffer; that the danger of prolonged and expensive litigation will be avoided; and that the possibility of a series of failures among members, which would have a damaging effect on the prestige of the Stock Exchange, will, if all goes well, be eliminated. In view of the unfortunate influence which uncertainty regarding the position has exercised during recent weeks, an official statement, in due course, of the date of the settlement will be welcomed by investors generally.

Bank Profits and Dividends.—The profits of the leading British banks in 1929 show a stability which is customary, but, in the circumstances, distinctly gratifying. As will be seen from the following table, published earnings showed a slight increase as compared with those of 1928, and dividend rates were unchanged in all cases except that of Williams Deacon's Bank, which showed a decline in profits from £305,340 to £297,901 and reduced its total "A" dividend from 13¾ per cent. to 13⅛ per cent.:—

	1927.		1928.		1929.	
	Profits. £	Div. %	Profits. £	Div. %	Profits. £	Div. %
Barclays	2,306,329	{A 10 BC14}	2,301,285	{A 10 BC14}	2,331,580	{A 10 BC14}

* On £20 shares and £1 shares respectively. † Figures not yet available.

The year, undoubtedly, was more difficult than its predecessor, though money rates were higher, deposits showed further expansion, and the demand for advances was keen, while a somewhat larger monetary turnover was indicated by the returns of the London Bankers' Clearing House. On the other hand, the recession on the Stock Exchange, while doubtless necessitating few allocations for writing down the older securities in the banks' portfolios (since British institutions do not write up their securities in times of high values), may conceivably have called for financial adjustments as regards more recently acquired securities. Various unfortunate developments in the Stock Exchange and in the world of industry, again, may have tended to make bad debts of somewhat larger dimensions than usual. The main factor in the stability of banking profits is, of course, the strength of the "inside" financial position of all the great British institutions, built up on a policy of conservative dividend distribution, maintained over many years, and continued on the present occasion:—

		Profits.	Dividend.	Reserve.	Premises.	Staff Funds.	Inc. or Dec. in carry-forward.

* Voted to general manager. † Figures not yet available.

Figures for Lloyds Bank are not available at the time of going to press. As regards the other members of the "Big Five," it will be noted that Barclays have distributed in dividends this year only 71½ per cent. of their earnings, the Midland 72 per cent., the National Provincial 78 per cent., and the Westminster 63 per cent. Bank shares have been firm this week, on the publication of the various statements, demand from the provinces being particularly in evidence.

The Position of India Stocks.—Certain holders of India stocks have been disquieted by the proceedings of last week's Lahore Congress, a serious fall in values having been only partially recovered during the last few days, as is shown by the following table of representative security prices:—

	Highest, 1929.	Lowest, 1929.	Dec. 2, 1929.	Jan. 2, 1930.	Jan. 7, 1930.	Yield at Last Price.

The heaviest decline occurred after the passage, at the Congress, on January 1st, of a resolution declaring that

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

" every obligation and concession which an independent India would inherit would be strictly subject to investigation by an independent tribunal " and " would be repudiated if it were not found by the tribunal to be just and justifiable." But there is a considerable difference between threats and ability to carry them out, and, when the Stock Exchange had had time to give second thoughts to the matter, it took comfort from the reflection that no responsible British Government would willingly place the framers of the above resolution in a position to carry it out. The assumption—which has been fostered by the inclusion of India loans under the heading of British funds in the Stock Exchange official list—that India's obligations are guaranteed by the British Government and should, therefore, be on the same yield basis as British securities, is, of course, unjustified, for though these loans are raised on the authority of a British Cabinet Minister—the Secretary of State for India—they are secured, not on British funds, but on the revenues of India. It, therefore, behoves investors in these securities to study a little more closely than is sometimes done the financial position of British India, and compare this position on its merits with that of, say, Canada or Australia. The comparison will be not unfavourable to India, for the financial administration of that country has from long tradition followed very sound rules, with the result that the unproductive debt of India is to-day very small in comparison with her wealth. Whatever may be done in regard to future loans, it is certain that in any change made in the direction of more responsible Government, the charge of these loans upon the resources of India will be maintained in its integrity. This security would, of course, disappear if India were to disintegrate as a result of the new Congress policy, but happily this contingency is very remote.

Stock Exchange Transactions: A Client's Duties.—A Stock Exchange correspondent suggests, with reference to our recent articles on the duties of the broker and the jobber (see the *Economist*, December 7, 1929, page 1096, and January 4, 1930, page 26), that it may be well to complete the picture by a brief reference to the position of the client himself. The first duty of a client towards a broker, declares our correspondent, is to trust him. He must feel that the broker is acting in his interest to the very utmost of his power, and that even if a transaction goes against the broker's personal interest it will be carried through for the client's sake. If the client feels undecided about any particular point with regard to the price at which he dealt, the mechanical routine connected with the obtaining of the transfer, certificate, etc., or the obtaining or the giving up of a dividend, he should never hesitate to write and ask for guidance. Every broker is willing to elucidate, as far as he can, the technicalities of his business, and knows full well that, to men unfamiliar with the practices of the Stock Exchange, much that appears to him as clear as day may be as dark as a London fog. For instance, a client who has been nourishing a grievance because a certificate has been overdue for a month or more will better understand the broker's difficulties if he learns that the directors of the company have not met for some time, or that some of them are ill. The second *sine qua non* for harmonious dealings between broker and client is that the latter shall be prompt in his business transactions, sending a cheque when it is due, or when he is asked to do so, furnishing certificates or bonds in the case of sales, returning transfer deeds with promptitude—regarding, in short, the business of the Stock Exchange as of equal consequence with his own. If he leaves an order to buy or to sell shares, he should renew it from account to account. He should make it plain whether the limit is capable of elasticity, *i.e.*, whether the broker may exercise a certain amount of discretion in executing his order. By carefully studying the certificate or other instrument testifying to the ownership of a particular security, a client can frequently avoid the necessity of troubling his broker for information on various detailed points in regard to that security. Goodwill, as between broker and client, is an asset of material value, and if it be carefully fostered, Stock Exchange business may develop a friendliness of personal relationship such as is found in few other branches of business.

Coal, Iron and Steel Profits.—Though 1929 was marked by a gratifying increase in the output of British pig iron and steel—production of the former during the first 11 months of the year showing a rise of 14.3 per cent., as compared with the corresponding months of 1928, and that of steel ingots a rise of 14.7 per cent.—the profit-earning capacity of the industry continues to leave much to be desired. The following table sets out the profits and dividends for the last two years of various representative companies which have published their accounts during the last two months:—

Although the aggregate profits of the 18 companies shown in the table increased from £555,889 in 1928 to £904,013 in 1929 only five companies paid ordinary dividends, while the amounts written off for depreciation were not, in all cases, on a large scale. The process of rationalisation, however, has made more rapid progress in 1929 than in any recent year, the past 12 months having witnessed, for instance, the final clearing up of the Armstrong Whitworth position and the merger of Bolckow, Vaughan and Dorman, Long. The last few days have brought the announcement of an agreement between Guest, Keen and Baldwins, discussed in a " Note " below, and reports of negotiations for closer relations between the Dorman, Long-Bolckow, Vaughan group and the " Furness " group on the North-East Coast. For the coal industry the year, though bringing no final solution of the trade's many present problems, was more profitable than 1928, as will be evident from an inspection of the coal company figures shown in the table. The " heavy " industries have naturally been out of favour on the Stock Exchange for some time past, but a firmer tone has been observable in this week's dealings.

Baldwins and Guest, Keen.—A noteworthy step towards the more economic organisation of the iron and steel industry in South Wales is revealed by the announcement that negotiations were completed last Monday for the promotion of a company to take over and operate, as from January 1, 1930, the coke ovens, blast furnaces, steel works, and heavy steel rolling mills of Baldwins and of Guest, Keen and Nettlefolds. The two companies, acting in conjunction, will hold the shares and appoint the directors of the new concern. Baldwins' contributions will be the Briton Ferry blast furnaces, the Port Talbot steel works, and the Margam works, which include coke ovens and by-product plants as well as iron and steel works. These all lie some distance west of the Guest, Keen properties concerned, which are at Cardiff and Dowlais. Presumably Baldwins' Cribbwr Fawr collieries (which produce coking coal for Margam) and its interests in the Oxfordshire Ironstone Co., as well as Guest, Keen's iron ore interests in Spain, will be brought in, for, according to the preliminary announcement, the new company will be assured of its own sources of supply of limestone, iron ore, and coking coals. The proposal is subject to the preparation of a detailed scheme, and to the consent of debenture holders, since the properties form part of the security of existing debentures. In principle, the plan is a sound one. It seeks to segregate from each of two rival composite undertakings those branches engaged on similar work, and to merge them, " like with like," into a single unit. Of two plants, each working far below capacity, the less economic can be closed down, with saving of overhead costs; while the other can be worked at full capacity, such capital expenditure as is necessary being concentrated upon it. If the final proposals appear equitable as between the interests concerned, share- and debenture-holders alike should welcome them—possibly with a regret that it was not found practicable to bring them about at an earlier date. The effect will be that Baldwins will have the new company as its principal subsidiary, carrying on all the heavy work, and will continue to operate itself only its lighter steel work, including the manufacture of tinplates. The Port Talbot and the Margam steel works (the latter erected as a war measure at the request of the Government, and continuously unprofitable of recent years owing to lack of demand) are already being operated as one unit. It had previously been intimated that the Briton Ferry works were to be disposed of when opportunity occurred. Guest, Keen shareholders deserve a full statement on the new position of their company's assets in South Wales. Apart from the present changes, the colliery properties are being transferred to Associated Welsh Collieries, Ltd., the formation of which was announced not many weeks ago. Meanwhile the anticipation, expressed in these columns last week, that the Ebbw Vale Company would close its iron and steel section and concentrate on its collieries, has since been confirmed by its new chairman, Sir John Beynon.

Inveresk Paper Affairs.—The formation by the first preference shareholders in the Inveresk Paper Company of a committee to protect their interests has now been followed by the constitution of a committee of ordinary shareholders. The latter have addressed to every holder of ordinary shares a request that they be given authority to act on their behalf at the forthcoming annual general meeting of the company. The committee state that they are informed " that the withholding of the preference dividend has not been brought about by reason of the profits being insufficient to enable payment, but for want of ready cash which had been utilised in anticipation by the further business acquisitions by the late board and the refusal of the bank to make further temporary advances. So far as the committee's investigation has gone, they have every reason for believing that the assets of the company are sound, but clearly require protection." In this connection considerable interest attaches to the first report, issued this week, of Provincial Newspapers, Ltd., the company formed to consolidate the provincial newspaper interests controlled either directly by the Inveresk Paper Company, Ltd., or indirectly through its control of the *Daily Chronicle* group, whose provincial papers were last year transferred to Provincial Newspapers in exchange for the latter company's shares. The accounts show profits for the period December 12, 1928, to November 30, 1929, amounting to £204,968, which contrast with Mr. Harrison's statement at the last meeting of the Inveresk Paper Company that the profits available for dividend, earned by the concerns to be amalgamated, had been nearly £240,000 for the four years ended December 31, 1927, and would be approximately £300,000 for the year 1928. At the date of the balance sheet the issued capital of Provincial Newspapers was £461,644 in 7 per cent. first cumulative preference shares, £1,000,000 in 7 per cent. second cumulative preference shares, and £1,000,000 in ordinary shares. From the statement made by Mr Harrison at the last meeting of United Newspapers, Ltd. (the operating company of the *Daily Chronicle* group), it may be assumed that approximately half of the second cumulative preference and of the ordinary share capital is held by United Newspapers, the remainder presumably having been allotted to shareholders of the amalgamated provincial papers or to Inveresk Newspapers as vendors. The fact, however, that there is a loan from bankers amounting to £750,394 implies that some at least of the other provincial journals were acquired by Provincial Newspapers for cash. On the other side of the balance sheet, freehold and leasehold land and buildings figure at £449,872, plant and machinery at £269,875, goodwill at £1,881,686, and shares in subsidiary companies, at cost, £656,347. A note appended to the balance sheet states that a guarantee has been given in respect of liabilities to bankers of the Inveresk Paper Company to the extent of £650,000, a corresponding guarantee having been given by Inveresk Paper in respect of Provincial Newspapers' bank loan. The decrease in profits and the non-payment of any further ordinary dividend will considerably affect the accounts of United Newspapers and greatly reduce the security behind the large nominal shareholding of Inveresk in the Daily Chronicle Investment Trust. The situation is one in which Inveresk's shareholders may well demand that the investigations of their committee should cover the tangled ramifications of the whole group.

British Cement Products.—The refusal of the directors of British Cement Products and Finance Company to agree to the appointment of a committee of investigation has had a sequel in an effort by dissatisfied shareholders to secure an inquiry by the Board of Trade. For this purpose it is necessary to produce applications from holders of not less than one-tenth of the shares. Shareholders who are interested in this development have been asked to write to the Secretary of the Shareholders' Committee at 4, Broad Street Place, London, E.C. 2. In the *Economist* of December 14th we analysed the accounts of British Cement Products, which showed a loss of £257,829 resulting from the realisation of some of its holdings, while £1,782,146 had been written off for depreciation on its remaining investments. It seems highly necessary that an independent investigation should be made into the position of the whole of the companies of the so-called Horne group, which are so interlocked as to make the study of individual accounts an inadequate and, possibly, misleading process. The results of a Board of Trade inquiry into the group might conceivably suggest important conclusions on the whole subject of the financial interlocking of companies.

Photomaton Parent Corporation.—The first accounts of Photomaton Parent Corporation make dismal reading. At one time last year the 5s. shares commanded a premium of 12s. 9d., giving a market value of over £4,000,000 to the £1,578,590 of capital. Before the suspension of dealings, last September, they were dealt in at 2s. 7½d. At the beginning of last year the directors issued a statement declaring the value of their assets at £4,671,000, of which £4,070,000 represented receipts in cash and shares from the Photomaton subsidiaries. The first accounts disclose net assets of £1,939,567, of which no less than £1,335,368 is represented by patent rights. The following is an analysis of the balance sheet:—

ASSETS.		£
Liquid assets (debtors *less* creditors)		27,375
Patent rights and trade marks		1,335,368
Investments (Photomaton Inc., Photomaton S.A., S.A. Photomaton Italiana, Far Eastern Photomaton, Photomaton (Lancashire and Midland))		857,044
Sundry trading assets		89,572
Stock of machines, parts, paper, etc., *less* manufacturer's claims		91,560
Deposit (repayable))		27,501
		2,428,420
LIABILITIES.	£	
Loan to bankers	47,100	
Austin Friars Trust	352,254	
Photomaton Inc.	19,599	
Photomaton Far Eastern	70,000	
	£488,953	
Net assets		£1,939,567

The trading account for the period from March 16, 1928, to November 15th, shows a loss of £97,557, which is charged against a paper profit of £458,525 arising out of an "assets adjustment account." This credit balance of £360,968 is all that is available for writing down the value of the patent rights. The directors in their report state that the Austin Friars Trust, which was responsible for the formation of the company, and owned about 90 per cent. of the share capital, has been unable to fulfil its obligations in regard to certain further developments. The failure has made it necessary to effect a complete change in the organisation, and, after consultation with the auditors and Price, Waterhouse and Company, the directors have prepared certain schemes which involve (*a*) the formation of a new company, British Photomaton Trading, which will absorb all the existing trading companies and trading assets; (*b*) the re-purchase from Far Eastern Photomaton of its rights and properties in exchange for income debentures and profit-sharing certificates. At Thursday's meeting, when the accounts were passed, the vice-chairman was strongly critical of the methods adopted in the past. Altogether, the company's position affords a striking commentary on the dangers of "parent and off-spring finance," which have been discussed *ad nauseam* in our columns. Whether the Stock Exchange Committee may find it possible to take effective steps against a possible future recrudescence of this objectionable type of finance is an interesting question.

Theatre Securities, Ltd.—A Guarantee Rescinded.—The increasing number of unsatisfactory reports of companies floated during the 1928 boom in new issues should cause greater vigilance to be exercised by shareholders. Vigilance, however, may be of little avail if resolutions are carried at a general meeting by the use of overwhelming proxies in the directors' favour against the manifest wishes of the shareholders present. Theatre Securities, Ltd., made a public issue in July, 1928, of 100,000 7½ per cent. preference shares of £1 and 2,000,000 ordinary shares of 1s. at 1s. 3d. The report of the company for the period July 14, 1928, to June 30, 1929, showed profits amounting to only £17,460, against a comparable figure for 1927 of £31,259. At the general meeting the directors submitted a resolution for the cancellation of the guarantee which they had given that certain expenditure would not in future be borne by the company. It was explained that the theatres had been run as privately owned businesses and that certain payments had been debited in the accounts which would not ordinarily be found in the accounts of a public company. The experience of the first year's working, according to the directors, had proved that the existence of the guarantee was acting against the best interests of the company, and that the directors, in justice to themselves, were forced to avoid, or hesitated to incur, certain expenditure which was both reasonable and necessary. The first year's accounts of the subsidiary companies showed sums aggregating £4,805 which the accountants had treated as falling within the purview of this guarantee. The shareholders at the general meeting naturally resented the cancellation of a guarantee which formed part of the promises on which they had subscribed to the issue in July, 1928. A heated discussion apparently took place. The shareholders proposed the appointment of a committee of investigation, which was carried on a show of hands. The Chairman then demanded a poll, stated that the votes were 100,471 against the shareholders' amendment and 15,191 for it, and then declared the resolution abolishing the guarantee carried, adding that if the shareholders wanted a poll they could have one and the same figures would serve. Apart from the circumstances of this, or any other particular case, the principle involved is of prime importance, and deserves careful consideration by all shareholders.

British American Tobacco Meeting.—That 1929 did *not* involve a break in the record of increasing profits earned by the British American Tobacco Company, despite the apparent drop shown by the company's published figures, was the most interesting fact emerging from this week's general meeting. The chairman, Sir Hugo Cunliffe-Owen, Bart., recalled that in October, 1928, shareholders had received shares in the Tobacco Securities Trust, which took over certain assets of the B.A.T. Allowing for dividends paid on the latter, the total B.A.T. distribution for 1929 was 26.821 per cent., against a comparable 1928 figure of 25 per cent. Without departing from the tradition of reticence which enshrouds the operations of this great concern, Sir Hugo made it clear that the year had been one of continued expansion in various directions. Despite the elimination of the Tobacco Securities Trust assets, shares and bonds in subsidiaries and associated companies showed a rise of £787,313, while loans to these companies were up by £1,397,883, the latter reflecting an increase in business, which, in the case of the parent company, had necessitated a rise of £2,539,090 in stock-in-trade, mainly to finance increased purchases of leaf tobacco. Part of the resources required had been obtained by drawing on cash, the company's bank balance having declined over the year by £1,584,633. Sir Hugo's summary, however, made no reference to the nature of the further expansion in the company's activities, actual or projected, which had induced the directors to obtain as much as £6,000,000 of new money last autumn by the issue of 6 per cent. second preference shares. For fresh light on this matter shareholders must, apparently, await the next annual balance sheet.

Liebig's Results.—The increasing popularity of meat extracts with the consuming public is reflected in the latest results of this well-known firm, despite the not altogether satisfactory conditions which have recently prevailed in the meat trade generally. Net profits, at £371,126, are the highest obtained during the sixty-four years of the company's existence, and for the seventh year in succession show an increase on those of the previous twelve months. Preference dividend absorbs £50,000, and from the balance dividend on ordinary shares is to be paid at the rate of 16 per cent., free of tax, which is, roughly, the percentage earned:—

	Years Ended August 31.		
	1927.	1928.	1929.
	£	£	£
Issued capital	2,500,000	2,500,000	3,000,000
Profit	325,086	344,863	377,126
Preference dividend	50,000	50,000	50,000
Ordinary, after tax: Earned	18·3%	19·6%	16·0%
Paid	16%	16%	16%
Amount	240,000	240,000	240,000
To reserve	25,000	50,000	...
Inc. or dec. in carry-forward	+10,086	+4,863	+1,126

In spite of the improvement in profits, no allocation has been made to reserve fund this year and the carry-forward item has increased by only £1,126. The practically complete absorption of profits by dividends would seem to suggest that the capital obtained by the issue of 100,000 new £5 ordinary shares to shareholders at a premium of 50 per cent. in October, 1928, has not yet become fully productive. Nevertheless, the balance sheet reveals an unmistakably sound position. Reserves total £1,625,000 on an issued capital of £3,000,000, while assets exceed current liabilities by £2,745,225, as compared with £1,999,949 this time last year. Cash is up £12,500 at £199,946, and stocks on hand are nearly a million higher at £3,645,790, while contingent liabilities are now only £215,446, as against £339,459 twelve months ago. The latest price of the £5 shares is £15 10s., which, allowing for a final dividend of 9s. per share, gives a yield of £5 6s. 3d. per cent., free of tax.

Malayan Rubber Shipments.—The rubber share market remains in the doldrums, after a disappointing year, with few omens of an early change for the better. The commodity has not only failed to regain the level of one shilling a pound, prophesied some months ago, but remains obstinately under 8d., and early this year touched its lowest point for seven years. The main cause of this disappointing state of affairs has been the phenomenal increase in shipments from Malaya, the world's largest crude rubber exporter:—

Month.	1928.		1929.	
	Total Exports.	Of which obtained from other Areas.*	Total Exports.	Of which obtained from other Areas.*
	Tons.	Tons.	Tons.	Tons.

	408,693	149,777	577,202	161,525

* Including a large proportion of "native" rubber, with a large moisture content.

The total exported has increased by 41 per cent. during the year, practically the whole of this expansion being attributable to Malayan-grown rubber, re-exports from other areas showing the comparatively negligible growth of 11,700 tons. Some increase was expected, since for ten months of 1928 restriction was operative, exports being limited to 60 per cent. of standard production. Heavy Eastern stocks, estimated at between 70,000 and 111,000 tons, remained for disposal in the last two months of that year and the opening months of 1929. The steady decline in the monthly shipments between November, 1928, and June, 1929, suggested the comforting thought that these stocks were being steadily liquidated. The subsequent rise in the figures, however, suggesting the semi-permanent "stabilisation" of exports between 45,000 tons and 55,000 tons a month, came as an unwelcome indication that the productive power of the industry under unrestricted conditions, particularly after a lengthy period of enforced "resting," had been greatly underestimated. The shock to confidence administered by the American share market slump thus came at a particularly unfortunate moment. Part of the increase in shipments has been taken up by higher consumption in America, and, more particularly, in Europe. London and Liverpool, however, have been called upon to carry about a third of the increase, stocks in these two centres having risen from 24,900 at the beginning of 1929 to 76,000 at the end of last week.

Silver and Silver Shares.—Our mining correspondent writes:—Although the recent drop in the price of silver appears to have come as a surprise to those interested in silver-producing companies, it merely represents the acceleration of a movement which has been in progress for some time; a movement largely due to the growing demonetisation of the metal. It may be recalled that in the report of the Royal Commission on Indian Currency and Finance, published in 1926, reference was made to this tendency. It was remarked that the increasing use of notes, and the resort to nickel and other base metals for subsidiary coinage, pointed to "a distinct diminution in the demand for silver in future." This naturally presaged a fall in the metal. From an average of 28 11/16d. in 1926 the price of bar silver declined to 25 15/16d. in 1927, rallied to 26¼d. for 1928, but is now under 20d. per fine oz. With some large producing companies silver is a by-product; for example, the Anaconda Copper Company turns out 20,000,000 ozs. per annum, the Aramayo 2,000,000 ozs. and the Burma Corporation approximately 7,000,000 ozs. With others it is the chief, or sole, source of income. Thus, in the year ended June 30th last, the Santa Gertrudis recovered 55,550 ozs. gold and 13,186,200 ozs. silver. For the latter the average price on the New York market was $0.567 per fine oz., as against $0.573 for the previous year, but at the conclusion of the latest period the quotation was only $0.524. To-day's level is under 44 cents. This difference of about 13 cents, or over 6d. per oz. as compared with the average for 1928-29, would represent more than the amount distributed for the year (3s.) by the Santa Gertrudis Company. In the case of an associated undertaking, the Fresnillo, a similar position exists. This company has recently paid 25 cents per share per quarter; the latest ore reserve estimate postulated oxide material containing 13,480 ozs. gold and 12,706,000 ozs. silver; sulphide, positive, 807,000 tons of complex ore. It may be recalled that the Lampa Silver Mining Company shut down a few weeks ago after having paid small dividends during the past two years.

Fanti Consolidated.—The promptly issued report of this mining-finance enterprise marks a distinct step forward, the profit of £135,200 comparing with £103,300 for 1928. Accordingly, the dividend rate is further advanced, the 1s. per share now declared making a total of 1s. 6d. per 8s. share, as against 1s. previously and 9d. in respect of 1927. On the present basis the yield shown is about 11 per cent. As the increase in last year's profits arose entirely from realisations, maintenance of the rate must not be too strongly assumed. The sum of £30,000 is transferred to reserve, increasing that fund to £60,000. The more notable changes in the portfolio comprise an increase in the number of Chartered shares from 50,000 to 100,000; a reduction in the Bwanas from 100,000 to 70,000 and in the Rhodesian Broken Hills from 50,000 to 20,000.

Resignation of Directors.—A correspondent whose letter is reproduced on page 73 of this issue voices a complaint frequently made by investors. For some time past unsound health and other ills have been exceptionally rife on the directorial boards of certain companies, particularly those which have failed to fulfil their prospectus estimates, or have over-traded, or have suffered heavy depreciation on the Stock Exchange. The position of a director who has lost faith in a concern, with respect to which he may be incurring legal liability without, in fact, having any deciding voice in its affairs, is naturally unenviable, but the investor who has subscribed for shares on the strength of the "sound names" on a prospectus has a legitimate grievance if the first onset of trouble produces a crop of directorial resignations. Our correspondent, however, appears to have overlooked the fact that under the new

Companies Act the position of the inefficient or ill-informed director has become much more onerous, and what has been described as a mild "flight of the guinea-pigs" would certainly appear to have been in progress during the last few weeks. Obviously, British company finance will be strengthened rather than weakened in the long run by the elimination of weak "figure-head" directors. A much more serious situation has arisen, however, in some recent cases in which a managing director, whose specialised technical knowledge or experience has been a company's chief asset, has voluntarily resigned at the precise moment when his services should, presumably, have been of maximum value. Whether, however, practical means can be devised of compelling full and frank disclosure of the real reasons for a director's resignation, as our correspondent suggests, is an open question, though the Stock Exchange Committee, with its unequalled powers for safeguarding the investors' interests, might conceivably examine its possibilities. Ultimately the most effective solution would be to ensure that pusillanimous directors were altogether excluded from company boards at the outset, either by the formidable nature of their legal liability or by the disappearance of the conception that directing a company is a "spare-time" occupation. The corollary of the latter would be the payment of a considerably higher scale of remuneration to much smaller boards of directors than are in existence, in many cases, at the present time.

CAPITAL ISSUES.

The brighter tone of the Stock Exchange has coincided with a tentative "trying-out" of conditions in the new issue market, after a protracted period of suspended animation. Three offers were made this week. The *North-West Midlands Joint Electricity Authority* issue of Five per Cent. Stock was made for the purpose of financing a stage in the progressive electrification of an area with large industrial potentialities. Though the stock is not a trustee issue, its security is unexceptionable—a condition which would seem to have been fully taken into account when its yield was decided upon. *E. S. and A. Robinson* offered a sound preference security, covered over seven times, in an old-established and profitable business. In this case, again, the yield was not over-generous, but prompt over-subscription was obtained, preferential allotment being promised to customers and shareholders. That the shilling deferred share has not become defunct during the recent slump is evidenced by its reappearance in the prospectus of *Taylors (Cash Chemists)*. The proceeds of this issue are to be used to extend a multiple shop business made into a public company in July, 1928. This issue falls into the category to which reference is made in a leading article on "Retail Trading Promotions," on page 76 of this issue.

North-West Midlands Joint Electricity Authority.—Issue of £886,000 5 per cent. stock, 1950-70, at £98 10s. per cent., the proceeds to be utilised in the acquisition of new generating plant belonging to the Corporations of Stoke-on-Trent and Stafford. An annual sinking fund will be established, sufficient to redeem the stock on or before July 1, 1970. The stock is repayable at par on July 1, 1970, but the authorities reserve the right to repay the whole amount at par at any time on or after July 1, 1950. The stock and interest thereon is charged on the undertaking and all the revenues of the authority. On payment of the purchase price of £631,081, the authority will have the monopoly of the public supply of electricity to the Corporations of Stoke-on-Trent and Stafford.

E. S. and A. Robinson, Ltd.—Issue at par of 400,000 6 per cent. cumulative preference shares, of £1 each, ranking for dividend *pari passu* with existing 6 per cent. and 7½ per cent. preference shares, redeemable at any time by special sanction at 10 per cent. premium. The company was incorporated as a limited company in 1893 to carry on the business of printers, paper bag and cardboard manufacturers. Net profits for the year ended February, 1929, were £336,058, covering interest on 6 per cent. and 7½ per cent. preference shares, including the present issue, 5.3 times.

Taylors (Cash Chemists) London, Ltd.—Issue at par of £250,000 7½ per cent. cumulative preferred ordinary shares of £1 each and 250,000 deferred ordinary shares of 1s. each. No part of the issue has been underwritten. Profits of the company for the year 1928-29 were £55,174, dividends being paid at the rate of 7½ per cent. on preferred shares and 25 per cent. on deferred shares. Interest on preferred shares, including the present issue, requires £56,250.

Particulars of the following have been issued for information only, with a view to Stock Exchange introduction. **Greek Exchanged Refugees Indemnity Loans, 1926 and 1928;** Issued loans £9,940,693 in 8 per cent. bonds and £1,350,973 in 6 per cent. bonds. Power is reserved to issue the balance of the 6 per cent. loan, standing at £3,049,027. The loans are the direct obligation of the Greek Government. **Field, Sons and Company, Ltd., Bradford;** Issued capital 3,571 cumulative preference shares of £1, 3,552 preferred ordinary shares of £1, and 77,469 ordinary shares of £1. Incorporated May, 1905, to acquire the business of printers and stationers carried on by M. Field & Sons. **Auto Rides, Ltd.;** Issued capital, 283,750 shares of 1s. each. Incorporated in March, 1929, to acquire property and assets of Midget Motor Ride, Ltd.

COMPANY MEETINGS, &c.

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED.

SATISFACTORY RESULTS.

PROFIT FIGURES EXPLAINED.

The twenty-seventh annual general meeting of the British-American Tobacco Company, Ltd., was held, on the 6th instant, at the registered offices of the company, Westminster House, 7, Millbank, London, S.W., Sir Hugo Cunliffe-Owen, Bart. (chairman of the company), presiding.

The Chairman said: As you are aware, it is usual at our annual meeting to go through the various items of the balance sheet and make some comments thereon.

BALANCE SHEET ITEMS.

Taking the assets side of the balance sheet first, you will observe that the item of real estate and buildings at cost, less provision for amortisation of leaseholds, £701,473, shows an increase of £132,414 as compared with last year. This is accounted for by the purchase of some leasehold property and by additional factory buildings which have been erected and are in course of erection.

Plant, machinery, furniture and fittings at cost or under, £821,079, shows an increase of £43,832. This increase is made up of items of additional machinery required in your factories.

Goodwill, trade marks and patents at the same figure as last year—namely, £200,000—and, in view of the great value of the company's trade marks, the directors remain of the opinion that this item should appear on the balance sheet, even if only at the nominal value of £200,000.

INVESTMENTS.

Investments at cost of under in (1) shares in subsidiary companies, £17,651,336, and (2) shares and bonds in associated companies, £4,067,058, making a total of £21,718,394, show an increase over last year of £787,313, and is the largest item on the assets side. This increase is after the deduction from investments of the book value of the Tobacco Securities Trust Company, Ltd., shares which were distributed to the ordinary shareholders in accordance with the extraordinary resolution of October 29, 1928, and is accounted for by the increase of your investments in subsidiary and associated companies and in the purchase of new businesses. As I mentioned last year, the actual value of your proportion of the net tangible assets of these subsidiary and associated companies considerably exceeds the figure at which the investments are carried in the books of your company.

Loans to and current accounts with your (1) subsidiary companies (less provision for doubtful accounts), £3,303,896, and (2) associated companies (less provision for doubtful accounts), £3,528,391, show an increase of £1,397,883. This increase is due to expansion in the businesses of our subsidiary and associated companies.

Investments in British Government securities and other investments, at cost or under, £47,509, show a decrease of £227,719 on September 30th last.

LARGER STOCKS.

Stocks of leaf, manufactured goods and materials at cost, or under, now stand at £8,808,580, or an increase of £2,539,090. This is chiefly due to the increase in the purchase of leaf tobacco to meet increasing business. The stocks of leaf, manufactured goods and materials have been carried at cost or under as in previous years.

Sundry debtors, less provision for doubtful debts, £2,429,735, shows a decrease of £1,922,840. This decrease is chiefly due to the short term deposits, £2,250,000, appearing under this heading last year having been absorbed in the development of our businesses.

Cash at bankers, in transit and at call, £1,172,188, shows a decrease of £1,584,633. This decrease is mainly accounted for by the increased requirement of our business, as previously mentioned, for stocks of leaf, etc.

Turning to the liabilities side of the balance sheet, the issued capital of 4,500,000 preference shares remains the same, but the issue of ordinary shares is increased from 23,540,236 to 23,574,036, an addition of 33,800 shares. This is due to the issue of shares to certain directors under a resolution passed at a meeting held on June 21, 1926. The new six per cent. second cumulative preference shares were not issued during the year under review.

Creditors—that is, subsidiary companies, £1,570,949; associated companies, £1,489,800, and other creditors, £4,672,378, making a total of £7,733,127, represents an increase of £2,008,761 on the figure at which it stood last year. The greater portion of these balances consists of provision for payment of taxation due to British, Dominion and foreign Governments, and moneys deposited by your subsidiary and associated companies.

The item of reserves for buildings and machinery now stands at £550,000, an increase of £25,000.

Premium on ordinary shares issued stands at £576,558, an increase of £16,900. This increase is due to the premium received on the shares issued to directors previously mentioned.

Provision for redemption of coupons now stands at £60,239, an increase of £1,276.

Special reserve has increased from £1,921,511 to £1,924,014, an increase of £2,503. As your chairmen have stated in speeches in previous years, this account was created in which to carry profits of a capital nature.

YEAR'S PROFITS.

This brings me to the last item—namely, profit and loss account. The accounts show a net profit for the year, after deducting all charges and expenses and providing for income tax, of £6,357,772, a decrease of £205,787. I will deal with this item later.

Last year we carried forward a balance of £4,736,173, out of which we paid a final dividend of 1s. 8d. per share (free of income tax), amounting to £1,961,686, which left us with a disposable balance of £2,774,486, from which is to be deducted £1,166,269, the book value of the shares of Tobacco Securities Trust Co., Ltd., distributed to you in accordance with the extraordinary resolution of October 29, 1928, leaving an amount of £1,608,217. To this must be added to the profits for the year as previous mentioned, £6,357,772, less the preference dividend of £225,000, and the four interim dividends paid on the ordinary shares for the year amounting to £3,927,714, leaving a disposable balance of £3,813,275, out of which the directors recommend the allocation of the sum of £100,000 to an employees' benevolent fund, and the distribution on January 17 of a final dividend (free of British income tax) on the issued ordinary shares of 1s. 8d. per share, amounting to £1,964,503, leaving £1,748,772 5s. 3d. to be carried forward.

DISTRIBUTION TO SHAREHOLDERS.

With regard to the decrease in the net profits, I would point out that it is not caused by a shrinkage in the actual profits of your company or your company's subsidiary and allied companies. You will remember that a substantial portion of your company's holdings in certain of those companies was sold to Tobacco Securities Trust Company, Ltd.

In October, 1928, you approved of the distribution to the shareholders of one ordinary share and one deferred share in Tobacco Securities Trust Company, Ltd., for every eight ordinary shares held by them, and, as you know, Tobacco Securities Trust Company, Ltd., paid a dividend of 16 per cent. (less income tax) on its ordinary shares and a dividend of 2.742d. (less income tax) on its deferred shares for the year ended October 31st last. Therefore if it is your pleasure to agree to your directors' recommendation as to the final dividend, any shareholder who has retained his shares in Tobacco Securities Trust Company, Ltd., will have received dividends from the two companies which would be equivalent to a total dividend at the rate of 26.821 per cent., free of tax, on his holding as at October, 1928, or an increase of 1.821 per cent. over the previous year's dividend.

Results for the year under review in nearly all parts of the world, were, I am glad to say, very satisfactory. This is greatly due to the good management and efficiency of the boards of directors of the subsidiary and associated companies and the loyalty of their respective staffs, and I am sure that you will join with me in congratulating them on the successful results they have achieved.

CURRENT YEAR'S BUSINESS.

I am very pleased to be able to tell you that your business for the first three months of the current year continues to be satisfactory.

I now beg formally to move the adoption of the report and balance sheet for the year ended September 30, 1929, including the payment on January 17th instant of a final dividend of 1s. 8d.

per share upon the issued ordinary shares, free of British income tax.

I may also mention that the directors have declared for the year 1929-30 an interim dividend of 10d. per share, free of British income tax, also payable on January 17th, so that the shareholders will receive on that date 2s. 6d. per share.

Mr J. D. Gilliam (one of the deputy-chairmen) seconded the resolution, and, in the absence of any questions or comments, it was carried unanimously.

TRANSVAAL AND DELAGOA BAY INVESTMENT COMPANY, LIMITED.

(Incorporated in the Union of South Africa.)

The ordinary annual general meeting of shareholders was held in Johannesburg, on Tuesday, December 3, 1929.

The Chairman (Mr S. C. Black), in the course of his speech, said :—The realised net profit, after making provision for depreciation, Government and other taxes, amounts to £81,663 7s. 11d. We brought forward last year £108,559 10s. 2d., making, together, £190,222 18s. 1d. Deducting the interim dividend of 1s. 6d. per share paid on June 7th last, £20,812 10s., and the sum of £10,000 placed to reserve fund, we bring forward a balance of £159,410 8s. 1d. to the credit of profit and loss account. We recommend payment of a final dividend of 3s. 6d. per share which, with the interim dividend mentioned, brings the dividend for the financial year to 5s. per share=25 per cent. free of Union of South Africa ordinary income tax. The financial position, it will be seen, is thoroughly sound. Cash and equivalent assets, *less* sundry creditors, amount to £233,277 1s., compared with £229,266 17s. last year.

Turning to our two producing collieries, the Transvaal and Delagoa Bay Collieries and the Douglas Colliery, Ltd., you will observe that their joint production was £864,303 tons, which is 9,204 tons better than the previous year. The increase is due to an expansion in the internal demand of the country. The arrangement concluded with the Douglas Colliery to work certain outlying portions of your company's property, near the workings of that colliery, is of mutual benefit. The Douglas Colliery's cash and equivalent assets on June 30, 1929, after paying a like dividend as in 1928, viz., 17½ per cent., aggregated £95,199 6s. 4d. Machinery and plant have been maintained in a state of high efficiency, and some few additions were made. The provision for depreciation is ample. The width of the seams in both collieries and the superior quality of the coal show no change.

LOURENCO MARQUES.

I am pleased to say that this important town at last shows signs of progress and that building operations are being undertaken in many parts, but chiefly in the central or business quarter. We have watched developments for many years, but did not feel justified in spending money on buildings while we were doubtful of an adequate return. The time has now arrived when we think it safe to change this policy, and we have decided in the first place to erect a substantial building on our "H" Block on the Avenidas da Republica and Aguiar. It will comprise a fine kinema theatre —which has been leased in advance for a number of years on satisfactory terms—and offices and shops which, facing two prominent streets, should command fair rentals. The building is to be completed next year, and we look forward to its proving a profitable investment.

The narrow gauge railway line laid across our concession ground from the town to Marraquene will be relaid with rails of the normal gauge of the main line, viz., 3 ft. 6 in. A deviation to suit the traffic demands was mutually agreed to, and when the new railway is completed it should have a considerable influence on the future value of our 2,500 acres freehold land, adjoining the township of Lourenço Marques.

Farm properties show an increase of 5,518 acres in freehold compared with last year's schedule. The greater portion thereof is comprised in the farm Hernhouse, in the Rustenburg District, which we acquired at a reasonable price. It is contiguous to our large land holding in that district called the "Two Rivers Estate," and squares off its south-westerly boundary, the whole making a fine compact block of 74,800 acres.

Notwithstanding the dry season and lateness of the rains, we reaped some 255 bales of cotton. The railway terminus at Middelwit Station, which was opened for general traffic in August last, brings the estate within 50 miles of the line of railway, and will make for speedier and cheaper transport.

THE MANHATTAN SYNDICATE OF MASHONALAND, LTD.

Our land holding is unchanged and of increasing value, as there is fair inquiry for good land and prices are likely to advance.

The South African Phosphates Exploration Syndicate, Ltd. (Northern Transvaal).—I referred to our participation in this undertaking at our last meeting. Sufficient development work has now been accomplished, and it is proposed to form a public company in the near future. Some valuable disclosures of the phosphate-bearing lodes were made of late, which give promise of a high percentage product when a plant is erected to deal with it on a commercial scale. We have taken a participation in an emerald prospecting venture in the Leydsdorp District of the Northern Transvaal. Work is proceeding on the company's claim holding and encouraging specimens of crystals have been found.

The report and accounts were unanimously agreed to.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the 4 days ended January 4, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	6,800	From Revenue	10,552
Interest, &c., on Debt	5,617	Increase in Debt	2,314
Sinking Fund	190		
Sundries	230		
Increase in Balances	29		
	12,866		12,866

The ordinary revenue for the four days to January 4, amounted to £10,551,900, as compared with £14,891,700 in the corresponding five days last year. Income tax and super tax were lower at £2,547,000 and £1,880,000, against £3,665,000 and £2,610,000 respectively. Customs amounted to £2,220,000, as compared with £2,242,000, and Excise to £458,000, against £823,000. Ordinary and special receipts were nil, as compared with £104,500, and £1,650,000 respectively. The National Debt was increased by £2,314,200, as shown below :—

(000's omitted.)

	£		£

RATIONALISATION

STATESMEN, Economists, Industrialists, and Trade Union Leaders have stressed the dire need for rationalising our great basic industries. Why does the Rationalisation Movement progress so slowly? The answer is plain. There has been no effective rationalising force. Everyone has been waiting for this force to appear from within the industries themselves, but it is now clear that there is little chance of rationalisation from within.

Where are we to look for such a force?

The answer is given in the January issue of "*The Banker*" in a fully reasoned argument that the banks, acting in co-operation, have the power and the leadership which are required to bring the plans of rationalisation into operation with the greatest expedition.

The importance of this article can hardly be overstressed, and it should be read by all who are concerned by the decline of British industry.

"*The Banker*" will be sent post free to any address for 2/6 on application to The Publisher, 20, Bishopsgate, E.C.2.

Net arrivals, £3,108,390.

Messrs Samuel Montagu and Company write on January 8, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £145,960,084 on the 1st instant (as compared with £145,848,399 on the previous Wednesday), and represents a decrease of £7,946,231 since April 29, 1925—when an effective gold standard was resumed. Gold from South Africa to the value of about £772,000 was offered in the open market yesterday and was disposed of at 84s. 11d. per fine ounce. France took £100,000, the Home and Continental trade £96,000 and India £35,000, whilst the Bank of England secured the balance of about £536,000. Movements of gold as announced by the Bank of England show a net influx of £3,088,955 for the week under review. Receipts amounted to £3,143,274, which included £1,824,000 in sovereigns from Argentina, £500,000 in sovereigns and £535,500 in bar gold from South Africa, and £250,000 in sovereigns released. Of the withdrawals, amounting to £54,319, £32,000 was in sovereigns taken for export.

SILVER.

The week has seen silver prices decline to a still lower level, with activities confined mainly to China and the Indian Bazaars. The weakness of the Shanghai exchange when the market opened after the New Year holidays led to further heavy sales of silver on China account and from 21⅜d. quoted on the 2nd instant prices fell so quickly that by the 6th instant 20⅝d. and 20 9/16d. for cash and two months' delivery were reached before the market found support. At this level there was a fair demand from the Indian Bazaars for silver for immediate delivery and this was responsible yesterday for a little more steadiness in the cash quotation, which recovered to 20 11/16d.; with sales of forward delivery by China continuing, however, the two months' quotation was depressed to 20½d. The establishment of a premium on cash delivery has been an interesting feature of the week as hitherto cash silver had not commanded a premium since May 15th of last year, when, however, it was only 1/16d. The last occasion on which it was as much as 3/16d. was on June 5, 1928. More pressure by China on a poorly supported market caused another sharp decline of ⅜d. to-day, bringing quotations to 20 5/16d. and 20⅛d. for the respective deliveries.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 30th ultimo to mid-day on the 6th instant:—

Imports.	£	Exports.	£
France............	75,773	Latvia	80,000
U.S.A............	12,890	Germany	42,732
Mexico............	71,019	British India............	175,771
British India	70,007	Other countries	5,136
Other countries	12,736		
	£242,425		£[illegible],639

NOTICES.

Barclays Bank, Ltd., announce that their sub-branch at Castle Cary has been converted into a full branch.

The National Provincial Bank announce that daily attendance is now given at their branch at The Nook, Anstey.

Lloyds Bank, Ltd., announce that a branch of the bank is now open at Cambridge Road, Churchtown.

The Standard Bank of South Africa, Ltd., announce that agencies will be opened on January 13 at New Amianthus Mine and Kaapsche Hoop, near Nelspruit, Transvaal.

Lloyds Bank, Ltd., announce that a sub-branch of the bank is now open at 621, Mansfield Road, Sherwood.

The National Provincial Bank, Ltd., announce that after a service extending over 45 years, Mr H. S. Eltenton, a joint general manager of the bank, has retired on pension. Mr A. S. Tawell, an assistant general manager, has been appointed a joint general manager, and Mr R. Norman Smith—manager of the City office—an assistant general manager.

Mr Edward Ralphe Douro Hoare has been elected a director of the Provincial Bank of Ireland in succession to Mr Walter S. M. Burns, deceased.

Company News.

REPORTS AND NOTICES.

The Consolidated Goldfields of South Africa, Ltd., announce that Lord Brabourne has been elected chairman of the company.

Mr C. M. Hill has been appointed to the board of British Drug Houses, and Mr Ralph K. Harvey and Mr Roger M. Harvey have retired from the board.

Mr E. Jolliffe has been appointed chairman and managing director of Bertram and Company, Ltd., and Sir Edwin Cornwall, Bart., D.L., J.P., and Sir Alfred James Hawkey, J.P., have also been appointed to the board.

Mr William Simons, general manager of Cardiff and Dowlais Works has been elected a director of Guest, Keen and Nettlefolds, Ltd.

It is announced that Mr J. W. England and Mr C. F. Entwistle have joined the board of the Decca Record Company, Ltd. Sir George Fowler, owing to his approaching departure for the Far East, has, with regret, tendered his resignation from the board, and the directors have reluctantly accepted same.

BANKS.

THE ANGLO-FRENCH BANKING CORPORATION, LTD.—The Report covers the first full year of operation of the Anglo-French Banking Corporation, and shows a net profit of £65,846. The profits are being applied in completely writing off preliminary expenses, stamp duty, installation, etc., as well as all furniture and fittings. Out of the balance tax liabilities are fully provided for, and £10,000 is set aside as the beginning of a reserve fund. Total liquid items amount to over £2 million, of which cash in hand, at short notice and deposits due within seven days, £1,200,000. Proportion of liquid items to total of current, deposit and other accounts about 75 per cent. Deposits increased over £1,100,000 as compared with last year. Acceptances more than doubled since last balance sheet. Meeting, Cannon Street Hotel, January 16th, at 12.30 p.m.

ANGLO-PORTUGUESE COLONIAL AND OVERSEAS BANK, LTD.—With reference to the recent announcement of the establishment of the Anglo-Portuguese Colonial and Overseas Bank, Ltd., which, as from January 1, 1930, has taken over the business in this City of the Banco Nacional Ultramarino, the Anglo-Portuguese Colonial and Overseas Bank, Ltd., notify that the following gentlemen have consented to join the board as resident directors:—The Rt. Hon. Sir Samuel Hoare, Bt., G.B.E., C.M.G., M.P.; the Rt. Hon. Thomas Wiles, P.C.; Mr Frederick George Sale; Mr William John Woolrich.

GUARANTY TRUST COMPANY OF NEW YORK.—Resources in excess of two billion dollars are shown for the first time by the Guaranty Trust Company of New York in the statement of conditions as of December 31, 1929. The following is a summary of the statement:—The company has *deposits, including outstanding cheques* of $1,309,289,553, an increase of $33,256,669.13 over September 27, 1929, the date of the last published statement; *undivided profits* totalling $32,636,023, which reflects a gain of $3,827,030.87 since September 27, 1929; a *capital* of $90,000,000, and a *surplus fund* of $170,000,000, give the company a *total capital, surplus and undivided profits* of $292,636,023. The statement shows *total resources* of $2,017,119,331 as of December 31, 1929, an increase of $158,462,786 over September 27, 1929, the date of the last statement.

THE NATIONAL CITY BANK OF NEW YORK.—Cable advice from New York states that all existing high records in American banking are exceeded with the publication by the National City Bank of New York of its statement of condition as of December 31, 1929, showing total resources of $2,206,241,170, against $1,847,705,548 on December 31, 1928, and $2,062,400,220 the previous high level recorded last June. Deposits total $1,649,554,260, against $1,349,024,386 a year ago and $1,470,891,893 last June. Total capital funds stand at $239,650,233, compared with $166,993,905 a year ago and $235,260,406 at end of last June.

GOVERNMENT, &c.

REFUNDS OF INDIAN INCOME TAX.—The Government of India have decided, pending further examination of the legal position, to resume the grant of refunds under Section 48 of the Indian Income Tax Act, in respect of dividends payable only outside British India, *i.e.*, by companies resident outside British India whose profits have been taxed in British India. The grant of refunds in such cases has been suspended since August 28, 1929, on the view that such dividends cannot be held to be income, profits or gains accruing or arising in British India. Claims that have been rejected on this ground will now be dealt with in Bombay as expeditiously as possible, and allowance for the interval of suspension will be made, if necessary, in reckoning the time limit in respect of fresh applications that have been delayed for this reason. Forms of claim and printed instructions may be obtained by claimants on application to the High Commissioner for India (Accounts Department), 42, Grosvenor Gardens, London, S.W. 1.

MISCELLANEOUS.

ANGLO-FOREIGN NEWSPAPERS, LIMITED.—An Extraordinary General Meeting will be held in February, when the position as at 31st January, 1930, will be fully reviewed.

NER-SAG, LTD.—The report for year ended September 30, 1929 shows that a large portion of the loss of £28,645 was due to the necessity of cancelling certain contracts made by the previous board. Included in this figure, there are also losses entailed in disposing of properties which were not required in the business. The suspense accounts are subjects of litigation. Cash on deposit amounts to £98,830. On current account, £16. On hand, £62. A debit balance of £42,908 is carried forward.

NER-SAG (OVERSEAS), LTD.—The first accounts which cover the period from July 14, 1928, to September 30, 1929, show a net loss of £17,727. This includes a loss of £2,937 in German trading, a loss of £11,349 on realisation of assets. Companies formed by the old board in America and Germany have been closed. Deposit account with National Provincial Bank, Ltd., and interest accrued amounts to £45,425. Cash in hand amounts to £8.

TURNER AND NEWALL, LTD., AND RHODESIAN AND GENERAL ASBESTOS CORPORATION.—Turner and Newall, Ltd., announce that as certificates representing 75 per cent. of the issued capital of the Rhodesian and General Asbestos Corporation, Ltd., have been lodged with the District Bank, Ltd., as assented shares, the offer for exchange will become operative. The offer remains open till January 14, 1930, and the remaining shareholders of Rhodesian and General Asbestos Corporation, Ltd., are requested to send in their certificates to the District Bank, Ltd., 75, Cornhill, London, E.C. 2, before that date.

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Production for week ended December 7th, 7,935 barrels (1,134 tons). Production for the week ended December 14th, 10,854 barrels (1,551 tons). Production for the week ended December 28, 12,934 barrels (1,848 tons). Production for the week ended January 4, 12,603 barrels (1,801 tons).

VIKING WHALING.—Output 41,500 barrels of whale oil to end of 1929.

VENEZUELAN OIL CONCESSIONS.—Production for the week ended January 4th was as follows :—Bolivar district, 118,331 metric tons; Maracaibo district, 6,238 metric tons; total, 124,569 metric tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Mild climatic conditions prevailed over the United Kingdom during the past week, and winter crops are developing rapidly, following an early and favourable start. A spell of colder weather is now desired to harden the plants against probable frosts. Trading in native wheat continues quiet, though light available supplies at the principal markets tend to keep values steady. On the import market, a moderate inquiry was dealt with, several cargoes being sold to Portugal, while United Kingdom millers are obliged to enter the market from time to time. India and Japan also made further purchases of Australian varieties. Prices, however, marked a downward tendency under increased offers from both Argentina and North America, though United States and Canadian sellers do not evince any desire to press sales. A feature was the re-entry of Russia as an exporter, and offers of prompt and early loading assisted the decline. Reports vary regarding the quantity available for export, and if any appreciable volume is shipped during the next two months the position of North American holders would become somewhat difficult in disposing of large surplus stocks. A certain quantity of the better qualities may be exported for financial reasons, particularly as the rye crop is in excess of home requirements, but the outlook is rather complicated by reports of Russian buying in Canada, presumably for seed purposes, and by inquiries for flour on United Kingdom markets. Meanwhile, European purchases are confined to immediate needs, and at the moment there is little to support any upward movement. Italy is practically out of the market, and France figures as an exporter to the United Kingdom and near Continental countries, while German purchases are withheld owing to the uncertainty arising regarding import taxes. Flour ruled easier in sympathy with wheat and trade generally moved on quiet lines. Feeding stuffs were depressed and only saleable at lower prices, though consumption of maize seems to be improving both here and on the Continent. Business however, is insufficient to stabilise prices, and competitive offers of barley militates against a recovery for the present.

Wheat.—Easier. No. 1 Northern Manitoba, ex-ship, 55s. 3d.; No. 2 ditto, 54s. 3d.; No. 3, 53s. 3d.; No. 4 Manitoba, 52s.; No. 5, 49s.; No. 6, 42s.; No. 2 hard Winter, 49s.; No. 2 mixed Durum, 46s. 6d.; Rosafe, 63½ lbs., 47s. 9d.; Barusso, 63½ lbs., 48s. 3d.; Australian, 50s. 6d. per 496 lbs.; English, 9s. 7d.-9s. 9d. per 112 lbs.

Flour.—Quiet and easier. London straight run, 42s. per sack for country deliveries, and 41s. London area. Of imported, Manitoba patents, 39s.-42s.; Buffalo, 39s. 9d.-41s. 6d.; Australian, 36s. 6d. ex-store. On c.i.f. terms Manitoba top patents, January-February, 39s. 6d.-40s. 6d.; export ditto, 37s.-38s.; Australian, 34s. 6d. per 280 lbs. Argentine low grade, February-March, £7 5s. per ton.

Maize.—Further declined. Plate, landed, 30s.; ex-ship to arrive, 28s. 9d.; January-February, 28s. 6d.; February-March, 29s.; new, April-May, 29s.; May-June, 28s. 6d. per 480 lbs. Yellow maize meal, £8 15s. per ton f.o.r. London. Yellow African, £7 10s.; white, £6 17s. 6d. per ton ex-ship.

Barley.—Dull. Californian old, landed, 36s.-43s.; new, ex-ship, 37s.-46s. as to sample; Chilian brewing, ex-store, 37s.-43s.; Chevalier, 40s.-45s.; Australian, 41s.-42s.; Smyrna, 40s.-42s. per 448 lbs.; Algerian-Tunisian, ex-ship, 26s.-27s. 6d. as to sample; No. 2 Federal American, landed, 25s. 9d.; Danubian, landed, 26s. 9d.; Black Sea, January, ex-ship, 24s.; Persian ditto, 23s. 6d. per 400 lbs. English malting, 8s. 6d.-14s. 6d.; feed, 7s. 3d.-8s. per 112 lbs.

Oats.—Easier. Plate, landed, 18s. 3d.; ex-ship, to arrive, 17s. 3d.; black Plate, landed, 18s.; Chilian white, landed, 24s. 3d.; ditto tawny, 20s.; German, landed, 21s.; ex-ship to arrive, 19s. 9d.; mixed Canadian feed, 16s. 6d.; South Russian, 18s. 3d. per 320 lbs. English, 7s. 4d.-7s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to January 4	Qrs. 151,162	Qrs. 74,850	Qrs. 109,912	Qrs. 178,693
18 weeks to January 4	4,646,346	4,870,534	4,313,930	6,600,897
Average price of English wheat per cwt.	s. d. 9 6	s. d. 9 5	s. d. 9 10	s. d. 11 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929 :—

Weeks ended.	Quantities Sold. Wheat.	Barley.	Oats.	Average Price per Cwt. Wheat.	Barley.	Oats.
1929.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Dec. 28	133,319	141,466	20,376	9 6	8 8	7 0
1930.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1928 :—

Nearest Future.	Jan. 2, 1929.	Jan. 9, 1929.	Dec. 26, 1929.	Jan. 2, 1930.	Jan. 8, 1930.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.	122	122½	140½	148⅝	141½
Chicago (No. 2 Winter)—Cents per 60 lb.	116⅜	116½	126⅜	130½	128½

The visible supply of wheat in Canada at 75,567,000 bushels shows an increase on the week of 863,000 bushels. Supplies a year ago stood at 76,331,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports that the year in the South Yorkshire coalfield has opened with moderately good prospects, and the tonnage being shipped is substantial. The booking of new contracts, however, is quiet for the moment, but prices of best steams are maintained at 18s. 6d. f.o.b. The demand for both industrial and house coal is none too brisk, and is below the average of this period of the year. The supply of coke continues to increase and consumption is maintaining former levels. Blast furnace sorts sell at about 17s. at ovens. Trade in small fuels is somewhat restricted.

Our Glasgow correspondent writes: The majority of the pits resumed working at the beginning of the week, and production is now in full swing again, and on a satisfactory scale. The market is, however, still very idle, and prices have scarcely been tested so far, although the tendency is definitely easier than in the final weeks of the old year. The quotations ruling for shipping business are about the following (all f.o.b. district ports): LANARKSHIRE.—Ell best, 16s. 6d.; splint best, 17s. 6d.; splint second, 16s. 9d.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; steam, 14s. 6d.-15s.; Hartley, 18s.; trebles, 16s. 6d.-17s.; doubles, 16s.; singles, 14s.; pearls, 13s.; dross, 10s. FIFE.—Screened navigation, 18s.-19s. 6d.; first-class steam, 16s.; third-class steam, 14s. 6d.; trebles, 18s. 6d.; doubles, 16s. 6d.-17s.; singles, 14s. 6d.; pearls, 13s. LOTHIANS.—Prime steam, 15s.; secondary steam, 14s. 3d.; trebles,

Increasing Interest in South American Markets

Estd. *1862*

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branches in South America, in London, Bradford and Manchester; in France, Belgium, Portugal and U.S.A.; with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. Status reports are supplied on request, and a Monthly Review of Market information in English or French is issued free on application.

The Journal of Commerce

ANNUAL REVIEW

The Leading Annual for the Maritime Industries

The contents will embrace a number of articles—all written by Experts—dealing with a variety of subjects of prime importance to those in any way connected with Shipping, Shipbuilding, Marine Engineering and associated branches of commerce, and will include :—

THE SHIPPING INDUSTRY. By WALTER HARDING (Chairman of the Liverpool Steam Ship Owners' Association).

THE LOAD LINE. By SIR CHARLES J. O. SANDERS, K.B.E. (Chairman of the Load Line Committee, 1927-29).

SAFETY OF LIFE AT SEA. By SIR WESTCOTT ABELL, K.B.E., M.Eng.

TRAMP SHIPPING. By T. C. CHRISTENSEN (Chairman of the Executive Committee of the Baltic and International Maritime Conference).

SHIP DECORATION AND FURNISHING. Foreword by LORD WARING.

THE N.D.L. LINER "BREMEN." By D. S. WHITEFORD, B.Sc., M.Inst.N.A.

SHIPBUILDING AND NAVAL ARCHITECTURE. By A. T. WALL, F.C.M.S., A.R.C.Sc., M.Inst.N.A.

MARINE STEAM ENGINEERING. By J. HAMILTON GIBSON, M.Eng., M.Inst.C.E., M.Inst.N.A., M.I.Mar.E.

THE BAUER-WACH SYSTEM. By DR. G. BAUER.

PULVERISED COAL FIRING. By A. E. ASH, M.Inst.N.A.

THE MARINE OIL ENGINE. By D. M. SHANNON, M.Inst.N.A., M.I.Mech.E.

THE FAST CARGO AND PASSENGER MOTOR-SHIP. By A. C. HARDY, B.Sc., F.R.G.S., A.M.I.Mar.E.

CORROSION OF OIL TANKERS. By H. C. T. BRYANT.

PORTS AND HARBOURS. By BRYSSON CUNNINGHAM, D.Sc., B.E., F.R.S.E., M.Inst.C.E.

ITALIAN SHIPPING. By Comm. Ing. E. FERRETTI, D.S.O., C.B.E., M.Inst.N.A. (Chief Inspector to the Registro Italiano).

THE SCIENCE OF NAVIGATION. By LIEUT. DONALD MACMILLAN, R.N.R.

MARINE INSURANCE. By D. KING-PAGE.

FREIGHTS IN 1929. By G. P. DE PALLENS.

Over 250 pages, including numerous illustrations, photogravure and colour sections.

PRICE **2/-** per copy

Including postage 2/9.

Copies are obtainable from newsagents, bookstalls or direct from the Publishers.

The Journal of Commerce

ANNUAL REVIEW

LIVERPOOL: 17, James Street. **LONDON, E.C.2:** 14-20, Bishopsgate. **GLASGOW:** 93, Hope Street.

18s.; doubles, 16s.; singles, 14s. 9d.; pearls, 13s. 6d. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s. 6d.; trebles, 17s.; doubles, 16s.; singles, 14s.; pearls, 13s.; dross, 10s. 6d.

Our Cardiff correspondent writes :—Inactive conditions have prevailed this week on the Cardiff coal market. The colliery companies are well sold, but tonnage arrivals have been disappointing, and the market has been unable to absorb the current outputs, with the result that stocks are accumulating and prices easier in those cases where they have been above the minimum schedule. The collieries are now working under the allocations made under the output and price regulation scheme which became operative as from the beginning of the New Year, and for the first quarter the authorised production of bituminous coal is approximately just over 10 million tons. Administrative difficulties are already being experienced, and applications for readjustments are numerous. The Italian State Railways have placed the first of their contracts for South Wales coals under the Hague Coal Agreement, and they involve the supply during the present year of at least 800,000 tons of large Monmouthshire and Rhymney Valley locomotive grades. It is understood that the collieries obtained their scheduled minimum prices for the whole of the business. The following are the current approximate quotations :—Best Admiralties, 20s. to 20s. 3d.; seconds, 19s. 9d. to 20s.; best drys, 20s. 6d. to 21s.; Black Veins, 19s. to 19s. 6d.; Western Valleys, 18s. 6d. to 19s.; Eastern Valleys, 18s. 3d. to 18s. 6d.; best small steams, 14s. 6d. to 15s.; coking smalls, 14s. 6d. to 15s.; cargo smalls, 13s. 6d. to 14s.; anthracite best large, 36s. to 38s.; Red Vein large, 27s. to 28s.; machine-made cobbles, 44s. to 46s.; French nuts, 45s. to 47s.; stove nuts, rubbly culm, 12s. 6d. to 13s. 6d.; foundry coke, 35s. to 37s.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 28s. 6d. to 28s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange :—The iron and steel markets have scarcely had time to settle down again after the Christmas and New Year holidays. Nevertheless, the New Year has opened with encouraging prospects for the British steel works. The shipbuilding industry on the North-East Coast anticipates a fairly prosperous period, and the British steelmakers will, of course, benefit to a considerable extent by the demand for shipbuilding material which should make itself felt early in the New Year. The demand from the engineering industry also gives promise of expanding. Trading in the more general descriptions of iron and steel, however, is not so active. Although business in pig iron has been quiet, it will probably improve shortly as the time approaches for contracts to be renewed. It is understood that some alterations in prices may be made at the end of January, and that these are scarcely likely to be in a downward direction. Considerable enquiries have been in the market for semi-finished material, but so far have not materialised into much business. They show, however, that the industry expects a better demand for iron and steel than was experienced in the latter part of last year. The Continental manufacturers are holding to the prices fixed in December, and consumers in this country appear more willing to pay the rates demanded. The actual tonnage of business placed, however, has not been large. There has also been a certain amount of enquiry for finished materials, but this branch of the trade for the time being is rather quiet.

Our Sheffield correspondent writes :—The prospects at the moment indicate a rather quiet month, taken as a whole, with the distribution of trade and work more mixed than in the past. Firms which possess good sales organisations and can afford to spend money on travellers to seek trade abroad are doing well, but the firms who rely upon business coming in of itself are short of work and likely to remain so. Local unemployment figures are high. They have been swollen owing to the closing of large departments under rationalisation schemes. A large number of open-hearth furnaces are idle, but several are expected to resume next week. Trade in the best tool steels is steady. There is a large output of special steels required in modern engineering practice, and Sheffield is still doing well in motor requisites. The position of the tool and cutlery trades has been improving over a long period following reorganisation to eliminate waste and to cheapen production. Great strides have been made in bringing these ancient crafts up to date.

Our Glasgow correspondent writes :—Business is not yet in full swing at the works in the West of Scotland, but it is expected that the beginning of next week will see most of the plants in operation. Locomotive engineers, structural engineers, carriage and wagon builders and, indeed, the bulk of the engineering trades are beginning the year with a considerable amount of work on hand and the prospects for future employment are fairly good. Steelmakers have also a good amount of work on hand with which to start the year. Considerable disappointment is felt in the Mossend district of Lanarkshire by the decision of Messrs. Beardmore to close their works there. The plant has been idle for some eighteen months, but the workers in the district had been hopeful of a re-start being made soon. Sheet makers have an accumulation of orders sufficient to keep going for some little time, but bookings for forward delivery are not satisfactory. In the galvanised sheet trade things are quiet and prices very keenly cut.

Our Cardiff correspondent writes :—In the South Wales iron and steel trade the outstanding event of the week has been the announcement of the formation by Guest, Keen and Nettlefolds, Ltd., and Baldwins, Ltd., of a new company to take over and operate as from the beginning of the present year the coke ovens, blast furnaces, steel works and heavy steel rolling mills of the two companies situated mainly at Cardiff, Dowlais, Margam and Port Talbot. The new company will have a capital of £5 million; it will control upwards of 600,000 tons of pig iron and about the same quantity of steel ingots (equivalent to between one-third and one-fourth respectively of the total output of South Wales and Monmouthshire), and the chairman will be Sir John Field Beale (chairman of Guest, Keen and Nettlefold's, Ltd.) and the vice-chairman, Sir W. Charles Wright (chairman of Baldwins, Ltd.). The directorate of the Ebbw Vale company has been reconstructed and steps are being taken to suspend operations at the few remaining operating branches of this company's iron and steel works. The position in the tinplate trade is satisfactory, with prices steady and the works well employed. There has been no change in quotations, except in foreign imported bars, which are firmer at £5 5s. per ton.

OTHER METALS.

TIN.—Market opened dull and easier following lower Eastern cables, but subsequently values marked some recovery on a renewal of buying interest. Dealings, however, were attended by a good deal of irregularity for forward dates, the market being rather sensitive and the outlook uncertain, depending largely on the amount of support, also the result of efforts made to balance supply, and demand by regulating output. Shipments from the Straits during December amounted to 8,849 tons, against 10,228 in the previous month. Total supply, 13,374, against 11,961. Total deliveries, 10,850, against 12,153; and visible supply 27,926, against 25,402 tons. Standard cash sold £174 10s. to £178 12s. 6d. and £176 10s.; three months, £177 10s. to £182 15s. and £179 15s. Sales in the East were reported at £179 10s. to £179 2s. 6d., £183 10s. and £181 ton c.i.f. terms.

COPPER values marked an upward trend and a fair demand was reservedly met, with slight irregularity at times. Standard cash sold at £70 to £71 12s. 6d. and £71 7s. 6d.; three months, £69-£70 10s. and £69 15s.

LEAD.—A dull market, but rates were generally maintained as sellers refrained from pressing. Good soft foreign pig, January, sold £21 7s. 6d. to £21 11s. 3d.; February, £21 10s.; March, £21 10s. to £21 11s. 3d.; April, £21 10s. to £21 12s. 6d. ton.

SPELTER firm, with a moderate business passing, but closed weak. January, sold £19 8s. 9d. to £19 15s. and £19 10s.; February, £19 17s. 6d. to £20 1s. 3d. and £19 16s. 3d.; March, £20 2s. 6d. to £20 6s. 3d. and £20 5s.; April, £20 3s. 9d.-£20 8s. 9d.-£20 3s. 9d.; May, £20 6s. 3d. ton.

ALUMINIUM quiet. Home trade, £95; export, £100 ton.

ANTIMONY quiet and tendency easier. English regulus, £45 to £52 10s.; China ditto, spot, £31; January-February, £26 15s. to £27 5s.; crude, January-February, £18 10s. to £19 per ton c.i.f.

ANTIMONY OXIDE.—January-February, £27 5s. to £27 10s. ton c.i.f.

ANTIMONY ORE.—January-February, 50 per cent., 4s.; 60 per cent., 5s. per unit.

WOLFRAM slow. Chinese, January-February, 35s.; Burmese, ditto, 30s. 6d. per unit c.i.f.

QUICKSILVER quietly steady. Spot, £22 17s. 6d. bottle.

TIN PLATES maintained. I.C. coke, prompt and forward, 18s. 9d. to 19s. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, January 8th.

Spot sales from December 23rd until to-day (inclusive), are 45,000 bales, of which 26,220 are American, 5,700 Brazil, 500 Argentine, 5,100 Peru, 2,950 Egyptian, 2,850 African, 1,000 East Indian and 680 sundries. Imports for the same period are 213,457 bales, of which 139,369 are American, 24,152 Brazil, 974 Argentine, 7,468 Peru, 25,456 Egyptian, 3,222 African, 12,079 East Indian, and 737 sundries. Quotations to-day are: American Middling, 9·42; Egyptian Sakel, 14·35; Uppers, 10·52; Brazil Fair, 9·07; Peru, G.F. Mod-Rough, 10·50; smooth, 10·07; East African G.F., 10·32; and West African Middling, 10·32. In the latter days of the old year, optimism carried prices 15 to 20 points higher than those ruling on December 21st. Since then poor trade advices have caused a decline and to-day values are about the same as on December 21st. Owing to the holidays trade was very restricted and the only feature liquidation of the January position. During the last two or three days the near positions have increased in strength owing to trade "calling" and switching of hedges into more distant deliveries. The New York Cotton Exchange Service has estimated the world's consumption of American cotton during November at 1,164,000 bales, against 1,349,000 bales in October, and 1,339,000 bales in November, 1928, and 1,419,000 bales in November, 1927. The total consumption for four months ending November, 1929, is estimated at 4,857,000 bales, against 5,083,000 bales in 1928 and 5,684,000 bales in 1927. The decline in consumption is largely due to the slackening of business following the New York stock market fall and the larger use of outside growths in European countries. It has been announced that the U.S.A. Federal Farm Board has approved the formation of a $30,000,000 cotton corporation and also intimated that it may not advance loans to farmers next season on the basis of 16 cents if acreage is increased. The markets continue to drag; there seems but little disposition to sell, and the buying power is very limited. Until such time as reports are received of new crop prospects and ideas of acreage are formed the situation seems to be a stalemate.

MANCHESTER, January 8th.

There has been some increase in the amount of inquiry in yarn and piece-goods, but sellers have complained of offers being very low, and not much progress has been made in the way of booking orders. Buyers are not afraid of any upward movement in values just at present, and commitments are restricted. There is rather less anxiety with regard to the political situation in India, but the possibility of an increase in import duties checks trade development. A miscellaneous business has been done, chiefly for Calcutta and Karachi in light bleaching descriptions. Demand for China continues to be adversely affected by low exchange rates and very limited clearances are reported at the auctions in Shanghai. Occasional sales have been put through for Egypt, the Near East and South America, but the minor markets as a whole have not given any general support. Some manufacturers are becoming more anxious about work for immediate execution. A slack feeling has prevailed in the yarn market. The prices ruling in American counts are worse than for a long time back. No increased activity can be recorded in Egyptian numbers.

THE WOOL TRADE.

Our Bradford correspondent writes:—There is still no sign of increased activity in any section of the wool textile industry, but conditions are certainly no worse than they were before the holidays. The outstanding feature is the lack of confidence, and although most traders agree that wool is now on a very reasonable level, few care to risk bulk buying so long as there appears to be any possibility of a further decline. Inquiries for tops and yarns suggest that a fair amount of business is being held in the background, and it seems certain that a considerable covering movement will develop immediately the raw wool market shows signs of hardening. The position may be a little clearer towards the end of the month when values have been tested in the Colonies and in London. Meanwhile there is a general tendency to restrict buying to the covering of immediate requirements, and it is significant that in practically all cases deliveries are wanted very quickly. No one seems to be carrying much stock, and this augurs well for the free movement of commodities when confidence is restored. Most of the large topmakers are quoting unchanged prices, though there and there concessions can be obtained by firms willing to sell forward on the chance of cheaper wool being obtainable. Consumption in all countries is restricted, and although in some quarters the outlook is viewed with more hopefulness than was possible a few weeks ago, no one expects any pronounced and rapid expansion in demand in the near future.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The commencement of the second half of the selling season in Australia, New Zealand and South Africa has enabled another test of raw material values to be made. Judging from the sales at Sydney and Christchurch, prices do not seem to have varied a great deal compared with those ruling before Christmas. Sydney is apparently a fairly firm market for all good wools, but ordinary and inferior merino fleece is somewhat irregular. Japan is still the principal supporter of the Sydney market, and no doubt the competition of buyers for that country is exerting a beneficial effect upon prices, though her takings up to the Christmas recess were considerably less than during the first half of the previous season. Whether Japan makes up for this reduction in purchases at a later date remains to be seen, but the support that is now being given will be welcome, not only in Sydney but also at Melbourne and Geelong. It would be a good thing if Japan could compete in South Africa. Sydney has been the best selling centre in Australia this season, largely due to the buying on Japanese account. The sale at Christchurch last Monday passed off most creditably, with prices fully equal to the market value of tops in Bradford. The low prices ruling in South America have unmistakably reacted upon New Zealand wool. Buyers are not keen enough to operate at Buenos Aires and Monte Video to influence prices in an upward direction. This can hardly be expected in face of very unsatisfactory conditions in manufacturing centres, though the present reasonable cost of wool should contribute something to the revival of demand among ultimate consumers. The probability is that current values will continue for several weeks. Mr George Whitaker, who was re-elected president of the British Wool Federation, made some trenchant remarks at the annual meeting of that organisation about the charge brought against Bradford by Australian and New Zealand selling interests of deliberately attempting to depress prices. Nothing could be further from the truth, and Mr Whitaker's statement has the support of the entire trade.

HIDE, LEATHER AND ALLIED TRADES.

All things considered, the turnover this week in leather has shown an improvement on that of last week, and, generally speaking, the outlook is better than it was this time last year. Market hides and skins have improved in value since the holidays, and although prices at some of the sales held so far in the North were unchanged, the tendency, if anything, is upward. Best ox and heifers are now selling at from 7¼d. to 6½d., and seconds at from 6½d. to 6¼d. With calf skins inclined to be scarce, the trend of values is upwards and prices for bests range from 6⅞d. to 11½d. Business in connection with imported hides is slow, and in most instances any alteration in values has been in buyers' favour. The exception to this is in connection with the South American market for frigorific hides, where a fair amount of business has been transacted on account of United States tanners at higher prices. This week Argentine ox have changed hands on the basis of 8 15/16d., with light ox selling at 8d., and Montevideo ox at 9 3/16d. The Liebig Company will sell 20,000 Colon ox hides by inscription to-day (Wednesday). With an easier tendency in regard to dry River Plates, rather more interest is being taken in these goods. B.A. Americanos have changed hands at 9½d. and Inservibles at 5⅞d., while summer-haired Sierra Cordobas have sold at 8d., and M.V. Americanos at 10½d. A limited amount of business has been put through in connection with Cape hides, which have realised 9⅞d. and 8⅞d. for first and seconds drys, and 8⅜d. and 7⅜d. for dry-salted. The United States market is cabled as steady, with Chicago heavy native steers selling at 16 cents. Considering the state of the sole-leather market during most of December last, the amount of business transacted this week has been satisfactory. Shoe manufacturers have been making inquiries for suitable stocks to meet their needs, and, although in the majority of cases orders are for small parcels only, a steady trade is being done. The repairing section appears to be active: orders for bends for this class of work have been more frequent and for larger quantities. A certain amount of liveliness has also been experienced in connection with offal, and certain weights in both bellies and shoulders are in rather short supply. Prices generally are steady at recent rates, but here and there very slight advances have been obtained. Upper leathers have not moved so well as bottom stock, and although fair deliveries have been made, quite a proportion of the goods sent out was in connection with orders placed towards the latter end of last year. Day-to-day inquiries are received for small parcels of box and willow calf, as is also the case with black and brown glacé kid. Semi-chrome leathers are inquired for, but at unsatisfactory figures. A shade better business has been done in connection with patent leather, but the bulk of the inquiry is for the cheaper grades. Shoe manufacturers have now got back to more or less normal working, and some of them are quite satisfied with the holiday sales. Orders are coming through for filling up lines, and inquiries for spring goods are being received.

THE JUTE TRADE.

DUNDEE, January 8th.

The jute trade has begun the New Year with no brighter prospects. Trade is very dull and a declining tendency on the part of Calcutta goods has practically stopped all business. The Calcutta mills continue to work their extra six hours per week, and the over-production is adversely affecting all commodities in the jute trade. There seems to be little hope of any improvement until the Calcutta mills signify their intention to revert to a shorter working period, but they seem to be determined to carry out their intentions to depress prices to such an extent that competitors will be driven out of the trade. At the present ruling rates for goods, they themselves must be losing heavily. The opinion of those outside India is that the Calcutta mills might easily have been content with the profits they were making of anything from 40 to 120 per cent. They have unfortunately increased their production in a season when the jute trade should have received all the encouragement possible, as, when general trading throughout the world is bad, the jute trade is one of those which suffer most. Apart from speculative operations, little interest is being taken in the raw material. Prices have been steadier, but without creating any real impression, and an easier tendency has again set in. Consumers' demand is of small account. The value of Daisee assortment is £26 to £26 10s., and for Tossa assortment business could be done at round about £28, January-February. White jute is quite nominal at from £32 10s. for First Marks and £29 10s. for Lightnings. Some cheap sales of spot Daisee have been recorded recently. Jute yarns are very quiet, and there is little or nothing being done to test prices. A few small quantities of common 8-lb. cops have been purchased at 2s. 10d. and 8-lb. spools at 2s. 11d., which are the best spinners can hope to obtain. Twist is not so firm and the rate of 5½d. has been broken for 3-ply 8 lb., while sacking yarns have been sold at less than 3⅝d. for 24-lb. weft and 4⅜d. for 8-lb. chains. Rove continues at £27 for 48 lb. and £17 for 200 lb. Fine yarns keep steady, and carpet qualities are nominal at from 4⅝d. for 14-lb. warp. Business in jute cloth is confined to the merest trifles. A few widths outside of the 40 in. goods are being bought at comparatively higher rates than those prevailing for the 40 in. makes, which are quoted at 3⅞d. for 10½-oz. 40 in. and 2⅞d. for 8-oz. Anyone with a good order would obtain a concession. Linoleum hessians are dull, and heavy goods are receiving little or no encouragement. The lowest prices quoted for Calcutta hessians are 23s. 9d. for 10 oz. and 19s. 6d. for 8 oz., January-March shipment.

VEGETABLE OILS AND OILSEEDS.

Quiet conditions prevail in the markets, and the volume of business done is small. The trade has bought linseed oil fairly freely for near delivery. With the prospects of better supplies prices are a shade easier, and business in raw oil on spot ex Hull is reported up to £43 15s.; January delivery is quoted £43, and January-April, £42. A little more interest has been shown in cotton oil, purchases of crude Egyptian, ex Hull having been made at £28 10s. on spot and £28 5s. forward, with sellers now asking above these figures. Other seed oils are quiet, and in certain cases rather lower. In the oilseed section, Plate linseed on spot has eased to £19 15s., with new crop from January to March shipment about 20s. below that figure. The shipment of the new Argentine crop is proceeding slowly. The quantity now on passage to Europe is 83,800 tons (including 8,100 tons from India), or 16,500 tons more than a week ago. A year ago the total was 168,700 tons. Cotton seed is quiet on spot, but steadier forward, with black Egyptian held for £8 10s. January loading. Demand for oil cakes and meals is rather better at the reduced prices.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Business in spot parcels was conducted quietly, trade buyers in general now being in possession of fair stocks after recent liberal purchases. No change however, was made in quotations. Cables from Cuba report that the Selling Agency for the island is getting into touch with representatives of American refiners in order to get rid of the balance of the old crop. In the event of business resulting, price obtained will not be divulged. Some eight

factories in the United Kingdom devoted to working up home-grown roots, have definitely closed for the season, and the remaining nine will finish in the next week or two. This should help to relieve any pressure of supplies likely to arise, though fairly liberal quantities of home-grown granulated have been recently consigned to London warehouses. Raw sugars dull. Continental parcels still quiet, with business reported in Czechoslovakian granulated, April-June shipment, at 10s. 2½d., f.o.b. Hamburg. The market in India fails to revive, in fact, quietness governs all Far Eastern markets. Verification of this is forthcoming in indicated Java shipments for last month of 201,000 tons, as against 291,000 in December 1928. Terminal sections generally quiet. Of raw, February delivery, sold 6s. 8½d. to 6s. 9d.; May, 7s. 9⅜d.; August, 8s. 3⅜d. to 8s. 4½d. and 8s. 3⅝d.; December, 8s. 6d. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending January 4th totalled 223,106 tons, against 105,430 last year. Cuban receipts last week totalled 13,064 tons, against 16,262 last year; exports, 28,159, against 37,778; stocks, 166,144, against 102,822.

COFFEE.—The chief feature is still strength of demand for all really fine liquoring qualities and in which Costa Rica and Kenya mainly figure. Full to rather dearer prices were secured. Medium and common grades, however, mostly neglected. Fine bold colory Kenya reached 159s. 6d. Good bold Costa Rica, 145s. 6d.

COCOA.—Spot market quite, and small sales include good fermented Accra spot, at 44. Accra, F/F, January-March, sold 38s. 9d.; February-April, 39s. 3d. f.o.b. Afloat Continent sold 41s. 6d. c.i.f. Terminal section manifested some irregularity. January sold 43s. 6d. to 44s. and 43s. 9d.; May, 43s. 10½d.; July, 44s. 4½d. to 44s. 6d.; September, 45s. 1½d.

TEA.—Indian sales were resumed on Monday last, and during the week, 57,154 packages were offered. Competition opened very quietly, but improved later, and all fine tippy teas also those possessing autumnal flavour cleared at firm to dearer rates. Useful medium ruled firm. Low medium and common grades maintained a fairly steady position. Ceylon auctions of 30,683 packages, came to a generally firm market, though some irregularity was observable in bidding. Leaf teas proved the weakest feature, being frequently 2d. to 1d. down under lack of sufficient export support. Java sales irregular and easier; 14,922 packages offered.

RICE.—Complete stagnation still holds sway in the market, and prices, especially for Burma grain, disclose marked weakness. Two Stars Rangoon, spot, London, 14s.; new crop, January, 12s. 1½d.; February, 12s. Spanish oiled, February-March, 15s.; Italian, 17s. 3d.; Fancy Blue Rose American, 20s.; extra ditto 20s. to 20s. 6d. c.i.f. No. 3 Burmah to the Levant, double bags, January, 12s. 3d.; February, 12s.; S.Q. to Cuba, 12s. 9d. Saigon No. 1 round grain, February-March, to Europe, 12s. 3d. Siam Super, January-February, 15s. 6d. Californian nominal.

BROKEN RICE.—Quiet. Burma, 1A, February-March, 11s. 6d.; B1, 11s.; A2, 10s. 9d.; B2, 10s. 3d. Saigon 1 and 2 mixed, 10s. 6d. c.i.f.

RICE BRAN.—Market dull. Burma January-March, £5 3s. 9d.; March-April, £5 6s. 3d.

BEANS.—There is no appreciable revival in trade. Madagascar buttners per "Eugene Grossos," sellers, 28s. 3d.; afloat steamer "Clan Macindoe," sellers, 27s. 9d.; November-December, 27s. 4½d.; December-January, 26s. 9d.; January-March, 26s. 6d. c.i.f. Other descriptions unaltered. Ohtenashi, March-April, quoted 23s. Rangoon haricots, ex store, 13s. 9d.; December-January, 13s.; January-February, 12s. 9d. c.i.f. London. Danubian, hand-picked, spot, 27s. to 27s. 6d.; January-February, 23s. 6d., c.i.f. London. To Glasgow, North African, January-February, 9s. 1½d. to 9s. 3d. c.i.f.; Chinese horse, afloat, 8s. 9d. c.i.f.

PEAS.—A dull market again in force. Japanese afloat, 16s. to 16s. 6d.; November-December, 16s. 6d.; December-January, 16s. 6d.; January-February, 16s. 6d. c.i.f. London. Dutch steady but quiet. Marrowfats, prompt, quoted 18s. 6d.; small blues H.P., 12s. 6d. f.o.b. terms. Calcutta, January-February, 57s. 6d. Karachi nominal c.i.f. Maples quiet. No. 1 New Zealand, January old, 57s. 6d.; new crop, March-April, 60s. Tasmanian, A grade, new, February-March, 68s. c.i.f.

SPICE.—Pepper in fair request and market steadier with regard to forward positions. Lampong, January-March, buyers, 10⅞d.; March-May held for 11d. Muntok, white, January-March sold 1s. 3⅝d.; March-May, 1s. 3¾d. lb. Tellicherry, January-March, sellers, 109s. Aleppy, 104s. cwt. c.i.f. London stocks on the week, 7 tons higher for black and 2 down regarding white. Black, 1,333, against 1,261 same time last year, and white, 1,466, against 281. Cloves dull on former terms. No change to note in the position of tapioco. Sago flour weaker, with sales in January-February to the United Kingdom at 12s. 1½d. c.i.f. and further sellers. Ginger steady.

FRUIT (Dried).—Currants: Market steady with a fair demand. Pyrgos, quoted, 38s -38s. 6d.; Amalias, 38s. 6d -40s.; Patras, 41s -45s; Gulf, 44s -53s.; Vostizza, 54s.-65s.; small ditto, 51s.-57s.; Australian, 38s.-45s. Sultanas quiet. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-80s.; Greek, 42s.-75s.; Australian, 35s.-52s.; Cape, bleached, 35s.-40s. Dates maintained. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 14s.-14s. 6d. Raisins: Valencia quiet of sale. Quarter-boxes, 45s. Figs quiet. Layers, spot, 35s.-45s.; genuine, 32s.-40s.; good average, 28s.-30s.

EVAPORATED FRUITS.—Market remains firm for Californian plums, with improving inquiries for all sizes, but other descriptions quiet and without material change. Plums: Californian new crop, 30's-40's, 72s 6d; 40's-50's, 67s. 6d.; 50's-60's, 63s. Apricots: South African new crop Royal, 55s.-117s. 6d.; Australian, 67s. 6d.-77s. 6d. Pears: Californian Lake County, extra choice, 87s. 6d.; fancy, 92s. 6d.; extra, 102s. 6d.; Australian, 65s.-85s. Peaches: Californian, choice, 60s.; extra choice, 65s.; fancy, 67s. 6d.; extra, 72s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-69s.; Canadian, 64s. Almonds steady. Mazagan, 110s.; Mogador, 107s. 6d.; P.G., Sicily, 125s.; Majorcas, 115s.-135s. Bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 75s.; China, bitter, for shipment, 39s., new crop, c.i.f.; sweet, spot, 77s. 6d. Hazel kernels: Kerasunde, spot, 140s.; Barcelona, 132s. 6d. New crop French (shelled) walnuts, quoted, 150s. ex-wharf London.

CANNED GOODS, &c.

Demand for Californian fruits is slow to open out, but an early improvement is anticipated, as retailers' stocks will need replenishing following a fairly extensive clearance prior to the holidays. Meanwhile prices are maintained. Singapore pines move off slowly, both for spot and shipment parcels, but Hawaiian are firmly held and South African steady on limited supplies. Italian tomatoes quiet of sale at late rates.

CANNED FISH.—Salmon steady and red talls reservedly offered, but trading somewhat restricted. Alaska red talls, quoted, 48s.-50s.; pink talls, 25s. 6d.-26s. 6d.; and halves, 34s. 6d.-37s. Japanese crab firm for fancy qualities at 97s. 6d.-100s. Lobsters quiet of sale, halves ranging from 135s.-140s. Sardines steady, especially for the better grades. Portuguese clubs, quarters, 4s; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Market quiet but prices firm, with only limited supplies of ox tongues available; lunch tongues tend dearer, and higher prices are ruling for tinned hams.

CONDENSED MILK AND MILK POWDERS.—Market occasionally the turn easier. Condensed, Dutch, full cream, sweetened, 5-cwt. casks, 39s.; machine-skimmed, ditto, 23s. 9d.; full cream, sweetened, 56-lb. drums, two in a crate, 50s. English full cream, sweetened, 5-cwt. casks, 42s. 6d.; machine-skimmed ditto, 24s. 6d., carriage paid. Powders, 26 per cent. butter fat, full cream, roller process, 1-cwt. cases, 74s.; spray ditto, 2 by 56-lb. tins, crated, 96s. 6d.; machine-skimmed, sweetened, roller process, 1-cwt. cases, 28s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 43s.; ditto, 1-cwt. cases, 41s. 6d., all per cwt. All Dutch prices are nett, ex-store London/Hull or Goole, and cover prompt or gradual delivery to end of March, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. On the grocery side: Full cream, sweetened, 19s. 6d.; machine-skimmed, sweetened, 9s. 9d. basis per case, usual packing.

HONEY.—Market quiet, especially for manufacturing grades. Jamaica, ivory white, set, 57s. 6d.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s. San Domingo, quoted, 50s.-55s. for fine grades, with manufacturing sorts at 42s.-44s.

RUBBER.

Market weaker, as buyers adopted reserve and lower cables came to hand from the U.S.A. and Singapore. Standard sheet, spot, and January, sold 7⅛d. to 7 7/16d.; February, 7⅛d.; March, 7 11/16d. to 7⅝d.; April-June, 7⅜d. to 7¾d.; July-September, 8¼d. to 8 1/16d.; October-December, 8⅜d. to 8 5/16d. London landings last week totalled 3,055 tons, deliveries 699, so that stocks increased 2,356 tons to 56,616, which compare with 21,953 last year. Liverpool stocks increased 379, landings amounting to 621, deliveries 242, and stocks 19,438, against 2,953 same time last year.

GENERAL.

JUTE.—Buyers again reserved and prices manifested a weaker tendency. Meantime, arrivals into Calcutta are increasing and quality improving. Firsts, January-February, continent, quoted, £27 7s. 6d.; February-March, sellers, £27 15s.; and April-March, quoted, £28 5s. Lightnings, February-March, £25 10s. c.i.f.

HEMP.—A quiet and rather featureless state of affairs continues in the market for Manila qualities, but, with no pressure to sell, prices for the main part ruled unaltered. J No. 2, January-March, quoted, £35 15s.; K, £32 5s.; L No. 1, £30 5s.; L No. 2, £27 10s.; M No. 1, £27 10s.; M No. 2, £25 10s.; G, £37 5s. c.i.f. Total receipts for last year are in the region of 1,600,000 bales, but adjustment is to follow. This constitutes a high level record, and beats previous record year of 1923 by about 113,000 bales. Receipts last week cabled 28,000 bales, against 25,000 last year and 27,000, 1928. Estimates for next week, 25,000, and week after, 25,000. Manila shipments during last week, 7,000 bales to the United Kingdom, 5,000 continent, 8,000 U.S.A., and 9,000 to Japan and other countries. African sisal meets a fair demand, as prices are relatively cheaper than those current for competing Mexican. No. 1 f.a.q., January-March, quoted, £36; good marks, £36 10s.; No. 2, £35 and £35 10s. c.i.f. respectively. Mexican: Good white, £38 15s. to £39 12s. 6d.; special, £41 5s. to £42 2s. 6d.; and special brushed, £42 5s. to £43 2s. 6d.

SHELLAC.—A dull market continues. Fair T.N., spot, 147s. 6d.; March, 136s.; May, 138s. cwt.

COPRA.—General quietness continues and prices ruled barely steady. Straits sundries, January-February, Rotterdam, quoted, £22 7s. 6d.; Dutch East Indies, £22 6s. 3d.; Ceylon, £23 17s. 6d. To Marseilles, mixed Dutch East Indies, Padang excluded, January February, £21 6s. 3d.; smoked, South Sea, £21 5s., sellers; sun-dried ditto, £21 10s.; hot-air dried and plantation Rabaul, £21 15s. Palm kernels, February-March, Hamburg, £16 15s. c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 16s. to 20s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £42 10s.; Ceylon, bristle, £19 10s. to £26; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 2s. 3½d.; Java, 2s. 9½d.

METROPOLITAN CATTLE.—January 8.

THE MONEY MARKET.

MONEY this week has been definitely more usable, and on Tuesday as much as 5 per cent. had to be paid, though by the following day the rate had relapsed to just over 4 per cent. The cause lay in heavy withdrawals on Government

account. Wednesday witnessed the end of the fortnight's "grace" allowed to motorists in respect of license duties, while income tax payments are already taking a fair amount of money off the market. In addition there are the payments of the final call on the new Conversion Loan, which amounted, according to the last revenue return, to £16 million on the week, and there remains a further £60,000,000 to be paid.

* * * *

This payment would be a serious matter for the market were it not for the fact that it is likely to be balanced by corresponding repayments of existing debt. Approaching maturities of short-term debt are likely to release £30,000,000 within the next few weeks, while this week and next Treasury bill maturities will exceed issues by £15,000,000. Thus, to some extent, as the Treasury takes funds off the market with one hand, it will restore them with the other. This does not mean that no stringency is to be anticipated, as lenders will naturally be cautious as and when these big transfers on and off the market are taking place.

* * * *

Once more Bank rate has remained unchanged at 5 per cent., and early this week the prevailing feeling was that in failing to reduce its rate to 4½ per cent. last week the Bank had missed its opportunity. Since then the principal foreign exchanges have moved against London, and on Thursday this week the dollar was $4.86\frac{15}{16}$, the franc Frs. 123.92, and the mark Mks. 20.38. On Tuesday £398,000 of the gold available in the market was taken by France, and after satisfying India and the trade the Bank only got £341,965. It is only fair to add that Tuesday's price was 84s. 11½d. per fine ounce, which shows that the Bank did not feel it necessary to bid up to its limit, but in spite of this fact and in spite of this week's reductions in the Dutch and German bank rates, the international position does not patently call for an immediate reduction in the Bank of England rate.

* * * *

With the failure of Bank rate to fall, discount rates have risen a little, and the three months' market rate on Wednesday was $4\frac{1}{16}$-$4\frac{1}{8}$ per cent. The gap between Bank rate and market rate remains wide, and some attempts have been made to raise the latter. The difficulty is that the supply of Treasury bills and of Continental trade bills is now dwindling, while the presence of heavy maturities means that there is a keen replacement demand for bills.

	Dec. 24, 1929.	Jan. 2. 1930.	Jan. 9, 1930.	Jan. 16, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5	5	5	5	5½ (Dec.12,'29)
Banks' Deposit Rate	3	3	3	3	3½ (Dec.12,'29)
Discount ∫ Call	3	3	3	3	3½ (Dec.12,'29)
Houses ⌊ Notice	3½	3½	3½	3½	3½ (Dec.12,'29)
Market rate (3 months' bills)	$4\frac{11}{16}$-¾	$4\frac{5}{16}$	$4\frac{1}{16}$	$4\frac{1}{16}$-⅛	...

This week's Bank return reveals several interesting changes. Tuesday's gold purchases and the arrival of £1,000,000 in sovereigns—it is believed from Australia—mainly account for the increase of £1,439,472 in the Bank's gold stocks. A further reduction of £10,978,857 in the note circulation, representing the completion of the return of the Christmas notes, explains the rise of £12,418,329 in the banking department's reserve. The fall of £5,410,067 in discounts and advances possibly represents maturities of short bills discounted at the Bank in preparation for the end of the year, while the Treasury operations discussed above amply account for the increase of £7,600,178 in public deposits, and the decline of £8,630,505 in Government securities. As a result of all these changes, bankers' deposits fell by £11,343,163.

NEW YORK.

Money remains easy and Federal Reserve statements show that there has been the usual January contraction in continuing systems, discounts falling off 125 millions. Circulation has dropped 54 millions, while reserves are up 49 millions. The ratio, at 75.4, is up 2.5 on the week and 8.9 on the year. Similar changes have occurred at the local bank. The small increase in brokers' loans indicates that this situation is stabilised. Meanwhile, Wall Street is watchfully waiting for indications as to the business outlook. Steel production has improved, with the industry at 65 per cent. to 70 per cent. of capacity, but prices remain somewhat ragged.

THE STOCK MARKETS.

The Stock Markets were less active, profit-taking following the modest gains of the previous week, while gilt-edged stocks reflected the harder conditions of the money market. Activity in Undergrounds was a feature of the Home Railway market. Industrials were irregular, with a decreased volume of business. Rubber shares showed a certain "psychological" hardening on Dutch proposals for restricting the output of the commodity. Little interest, public or professional, was displayed in the oil share market. Kaffirs were dull on the subsidence of French buying activity.

THE COMMODITY MARKETS.

The principal markets are still marking time. Export business in coal remains active, but there is no great volume of forward contracts and prices in some districts have a downward tendency. The anthracite market is strong. The demand for iron and steel is not yet showing the improvement for which makers hoped, though there is a shade more activity in certain classes. Raw cotton is a slightly better market, and more interest has been shown overseas in Manchester goods, but the increased turnover in yarn has been at very low prices. Business in the wool textile trades is still being withheld for fear of a further decline in prices. The improvement in the hide and leather trades is maintained. Vegetable oils and oilseeds are in poor demand. Wheat has again fallen.

THE FOREIGN EXCHANGES.

Considerable activity marked the earlier part of the week, but conditions became quieter later on. Sterling was erratic against some of the principal exchanges, and the tendency was rather against us. New York declined from 4.87¼ to $4.86\frac{15}{16}$ after being down to $4.86\frac{11}{16}$, and later up to 4.87. Montreal lost ½ at 4.92¼, after 4.91¾. Paris was two points worse on balance at 123.92 after being as low as 123.90¼. Brussels lost 3½ at 34.95¾. Milan was firm and steady, gaining a little on balance at 93.05 after 92.95. Madrid was again irregular, but improved, with the announcement of Government investigation and defensive measures, from 40.20 to 36.50. Amsterdam depreciated with the lowering of the Bank rate from $12.08\frac{7}{8}$ to $12.10\frac{7}{8}$. Berlin showed a similar tendency earlier and for the same reason, and depreciated from 20.39½ to 20.41, but recovered later to 20.38. Switzerland depreciated steeply from 25.13 to 25.16¼ with the retransfer of Swiss funds abroad after the close of the end of the year transactions. The South American currencies were again irregular, Rio being especially erratic, but gaining $\frac{3}{32}$d. on balance at $5\frac{7}{16}$d. The rupee was steady at 1s. $5\frac{61}{64}$d., and the yen gained $\frac{1}{32}$d. at 2s. $0\frac{7}{32}$d. In the futures market, fluctuations were frequent and pronounced, especially in the reichsmark and the dollar. Paris was weaker at 2½ and 6 centimes premium, a considerable decline on last week. Brussels was at rather wider discounts of 2 and 4 centimes. Amsterdam, from ⅛ cent discount and par last week, went to ½ cent and 1½ cent, premium in each case. Berlin was erratic but practically unchanged on balance at 2¾ and 7 pfennigs discount. Silver prices rose with Indian and Chinese demand by $\frac{9}{16}$d. to 21⅜d. for spot and by ⅜d. to 20¾d. for forward. The Chinese silver exchanges improved in sympathy, Hong Kong gaining ⅝d. at 1s. 8d. and Shanghai a penny at 2s. 1d.

ECONOMIST INTELLIGENCE BRANCH.

We have pleasure in announcing that our Intelligence Branch has recently been amalgamated with Moody's Investors Service, Ltd., the British counterpart of the well-known and old-established American investment service. A new company has been formed under the title of Moodys-Economist Services Ltd. Requests from our readers for economic, statistical or other information will in future be handled by the new company, which will have at its disposal the records both of the Economist Intelligence Branch and of Moody's Investors Service, Ltd.

BANKS AND BUSINESS.

Mr. J. H. Thomas had something of real significance to say to the Manchester Chamber of Commerce last week. After dealing with the causes of the slow rate of British industry's recovery in recent years, and pointing out the limitations of Government action and the danger lest expenditure in the form of doles should have the effect of sapping the forces of enterprise and initiative, the Lord Privy Seal went on to say that the Government intended to revive the commercial diplomatic appointments abroad that had been given up some years ago and to create certain new posts, in addition to sending overseas more trade missions similar to that which had recently been to the Argentine with Lord D'Abernon. But his most important announcement was on the subject of finance. Prefacing his remarks with a tribute to the work of the Governor of the Bank of England in steering the country through its post-war difficulties, he told his audience that he had been discussing with financial authorities the question of assistance to industry in reorganising itself and modernising its plant and equipment. As a result, he was able to make the following carefully prepared statement:—

"In considering the steps that might be taken to produce a better employment position by improving the organisation and equipment of British industries, I have found that a feeling exists that manufacturers are handicapped in bringing about the necessary reorganisation and re-equipment by the fact that the long-continued trade depression has pushed them to the limits of the credit which they can reasonably expect to obtain from their bankers or which the bankers can reasonably be expected to provide. As a result of consultations which I have had, I am now in a position to state that the City is deeply interested in placing industry upon a broad and sound basis and ready to support any plans that in its opinion lead to this end. Those in the City who have been studying this matter are convinced that a number of our important industries must be fundamentally reorganised and modernised in order to be able to produce at prices which will enable them to compete with the world. Industries which propose schemes that, in the opinion of those advising the City, conform to this requirement will receive the most sympathetic consideration and the co-operation of the City in working out plans and finding the necessary finance. In the case of individual undertakings the City will be similarly ready to help, provided that the scheme under discussion fits in as part of the general plans for the industry in question as a whole and gives reasonable promise that the changes will enable the undertaking to become an effective unit in combination and co-operation with other similar undertakings."

This declaration Mr Thomas described as an open invitation to industry to come forward with real schemes of reorganisation and as an intimation that the whole forces of British finance were prepared to stand behind industry in a forward move.

This pronouncement, which will certainly be considered by the leaders of British industry with great care, should undoubtedly act as an incentive to hasten a process which has been going on in recent years with painful slowness. But before we build too optimistic hopes upon it, or assume that it means immediate reform, it is important to analyse the situation and consider what *rôle* finance has played and can play in relation to industry.

At the outset there is a question of fact. To what extent is it the case that industrial stagnation is due to concerns having reached the "limits of credit" to which Mr Thomas referred? It is frequently asserted that the fault lies primarily with those who are in charge of industry to-day; that they have not shown the imagination, the will, the capacity for leadership or the experience of the methods of big business that is necessary; and that if really promising schemes had been forthcoming at almost any time during recent years, the means of financing them would have been found. There is a great deal of truth in this view. The inbred conservatism of British employers, adhering tenaciously to methods which have served them well in the past, and with an insufficient first-hand acquaintance with either methods or markets overseas, has been and remains the greatest obstacle to rapid change. The obstinate individualism of the coal owners is unfortunately not an isolated phenomenon, but is a more or less serious handicap that has to be overcome in every branch of trade. We have no doubt that there are many among the younger generation who have the required capacity; but it is still much too difficult for them to force their way to the head of affairs through the obstacles of tradition and heredity.

But the banks also have something to answer for. Well-designed as it is for dealing with the business of short-term commercial credits, the British banking system in its industrial loans policy has suffered from the absence both of appropriate mechanism and of what may be termed "constructive vision." Looking back over the history of the past decade, it is now fairly obvious that the process of reconstruction would have been much farther forward if the banks had faced their losses and allowed many concerns, which they have been keeping alive in the vain hopes that things would right themselves, to go out of business. We fully realise that drastic action would have involved hardship to workpeople and brought down upon the banks much unpopularity and criticism; but if the purge of bankruptcy had been more freely used, the conditions of the country would now unquestionably be in a much more healthy condition. If the banks now find themselves with their credit-giving power extended to its maximum, and with embarrassing commitments in many branches of industrial activity, it is largely the result of the view they have taken of the post-war situation as a whole and in this country in particular, combined with acute competition between themselves. It is well known that certain promising schemes of reorganisation have had to be abandoned owing to the difficulty, not merely of overcoming the special interests of individual firms or companies, but of reconciling the conflicting claims of the various banks. Hitherto the banks have been extremely cautious in using their influence to promote reorganisation and, even in such action as they have taken, they have been guided rather by the desire to secure their own position as creditors than to consider in a broad way the efficiency and future of the industry concerned.

The statement of Mr Thomas implies that a way will be found to reconcile conflicting banking interests; that some common viewpoint will be adopted; and that in spite of heavy existing commitments means will be found of furnishing fresh capital resources for industry. This deduction raises two further very interesting issues.

The first is: How far can, and should, the banking world take the initiative in promoting rationalisation? In the United States, the growth of many great concerns—for example, the Carnegie Steel Company, from which the United States Steel Corporation ultimately sprang, and Mr Ford's colossal enterprise—was in no way due to the initiative of financiers. On the other hand, probably a much larger number of giant enterprises are in great degree the creation of financial brains. It is also the case that in Germany and on the Continent generally banks have taken an active part, not only in promoting enterprises, but in guiding their destinies as going concerns. British banking has developed along a different tradition, owing to the fact that commerce has played so much larger a *rôle* in our economic life than in that of any other country. British banks have no highly organised industrial departments comparable with those of European banks, and one of the tasks that must be faced if the City of London is to take an active interest in industry is to find the necessary personnel and to develop the technique that will be required.

The case for financial initiative is that an outsider can weigh up the situation as a whole better than those in the business, who often cannot see the wood for the trees; that frequently heads of firms and directors of companies have a vested interest in preserving their situations; that if nothing is done the banks, in common with the rest of the community, suffer; and, finally, that the financiers have the indispensable means of smoothing the way. At the same time, the powerful weapon of financial pressure must

be used with great discrimination. The building up of great business units is a process which has often, unfortunately, been attempted for quite improper financial motives, and has ended in disaster. And, even when designed with the best of motives, a financial reconstruction may come to grief if it is not based on a sound technical foundation. While it is undoubtedly the case that waiting for the industrialists themselves to move has involved undue delay, it is none the less essential that industrial considerations alone must determine the size, form and character of the new organisations, and that the necessary experience and knowledge must be supplied from the ranks of industry. If the new move is towards a more intimate collaboration between the industrialist and the financier, well and good; there cannot be anything in the nature of a purely "financial" dictatorship.

The second question is as to the *rôle* of the Bank of England. It was freely rumoured that Mr Thomas's statement was to be made on behalf of the Governor, and, in a subsequent comment, the Lord Privy Seal revealed that it had the approval of the Bank of England, though he also intimated that it had a more general backing than that of Mr Norman alone. In one sense the business of refinancing rationalised industries (*i.e.*, inasmuch as it calls for new long-term capital) is not strictly the function of either the Bank of England or the joint stock banks, though both—by their experience and influence in the financial field—can be helpful. In a wider sense the problem of evolving the "finance of rationalisation," of collaborating with industry in reconstruction, and even guiding the flow of capital is a banking responsibility. But it is a problem which falls within the province of the joint stock banks, not of the Bank of England. The primary function of a central bank is to control currency and credit, and Mr Thomas should not expect the Bank of England to compete in any way with other institutions in banking business.

No indication has been given of the form in which the City will give effect to its undertaking; presumably, the eventual establishment of some corporation or organisation in which all the chief City institutions will be interested is contemplated. It is known that last November a private company was registered under the title of the Securities Management Trust, whose directorate includes Mr Montagu Norman and whose constitution resembles that of an investment trust with wide consultative functions. This concern, established under the auspices of the Bank of England, might play a useful part in providing a link between industry and the new capital market, and might well be the parent of a larger institution in which all interested sections of our financial organism would participate. The Bank of England may appropriately undertake the task of intermediary in bringing other institutions into collaboration. But Mr Norman is beyond doubt likely to recognise that it is undesirable for the Bank of England to be too directly concerned in the development and administration of plans that may involve the fate of many individual concerns. It is of the first importance that the central bank should maintain, and that the City should have complete confidence that it will always maintain, absolute impartiality in its dealings, whether with banks or industrial concerns. A great step is gained if we have the assurance that banking co-operation will be available for the end in view, but, except in so far as public utilities or other enterprises of a necessarily monopolistic kind are concerned, it would savour too much of dictatorship if either the Government or a semi-public institution such as the Bank of England were closely associated with the practical application of the plan.

Much remains to be done before the house of British industry is in order and our methods and equipment are fit for their task and abreast of those of our competitors. Labour conditions, technique and personnel have to be overhauled and adjusted to new needs—a task which requires the co-operation of labour and a long period of freedom from industrial strife. In the process, there will remain the problem of unemployment, for the absorption of labour may be slow and much displacement and rearrangement necessary. Mr Thomas has yet to show that he has envisaged means of dealing with this, his special, task. But it is to his credit that he has put into the forefront the fundamental importance of correcting underlying conditions, and we heartily welcome the new impulse that has been given to the essential task of industrial reconstruction.

THE NAVAL CONFERENCE.

The London Naval Conference opens on Tuesday with a single item on its agenda, "The reduction and limitation of war vessels on the basis of mutually accepted strength." That definition, given by the Prime Minister in the House of Commons, is sufficiently wide to cover any proposition that may be advanced, and sufficiently limited by its closing words to dispose of the suggestion that any one of the participating Powers is being required to discard its own instruments of security while possible enemies retain theirs.

The Conference is, in some respects, anomalous. Though convened to deal with essentially technical questions of tons and guns and "effective ship-life," it is to consist exclusively of politicians; and, although an existing political agreement—the Kellogg Pact—has been officially declared to be the starting-point of the discussions undecided political issues, such as the freedom of the seas, are to be rigorously banished from them. Whether that arrangement can be strictly maintained may be questioned. Already an interchange of Notes has taken place between France and Great Britain concerned mainly with political issues, and the possibility of the discussion of some kind of Mediterranean Pact has been conceded. All that is entirely wise, for any attempt to stereotype the Conference in advance would be disastrous.

But however that may be, the main purpose of the Conference will be to effect an agreement whereby the fleets of the five Powers concerned shall be reduced to a fixed level and kept there. What that level shall be remains to be decided. It must, of course, represent what Mr MacDonald calls "mutually accepted strength." No State can have reduction forced on it, or see its naval power fixed at any level but one which it freely accepts. But reduction as well as limitation there is to be, according to the Prime Minister, and, in his reply to the French Note, he declares that Great Britain is contemplating a substantial reduction in all types of naval vessels. That statement, clearly, is not to be pushed too far, for the 50 cruisers with which the Board of Admiralty is ready to content itself compare with 54 figuring in the Dilke Return for 1930, issued by the Admiralty itself last week, and the tonnage of 339,000 which that 50 is understood to represent is so close to what the British cruiser fleet amounts to to-day that the right term to use here is limitation or stabilisation rather than reduction. That fact has to be considered in the light of the Japanese view that the Anglo-American agreement on cruisers sets the figure too high, and President Hoover's declaration that no level to which other Powers are willing to reduce will be too low for the United States, provided, of course, that the Washington ratio, or some other agreed relationship, between the fleets is preserved.

The conclusions finally reached by the Conference will no doubt represent something falling far short of total success and going a good deal beyond total failure. Total failure would mean the breakdown of all attempts at reduction or limitation by agreement. Total success would mean approval of a convention providing, briefly, for the complete abolition of capital ships, the complete abolition of submarines, the limitation of cruisers at a level lower than has so far been contemplated, and the restriction of destroyers to a figure consonant with the conditions caused by the abolition of submarines. That total success, it may be conceded, has small prospect of being realised. Two of the five Powers taking part in the Conference—France and Japan—are opposed to the abolition of submarines. Three of the five—Great Britain, the United States and Japan—are assumed to be opposed to the abolition of capital ships. Here, however, some distinction must be drawn between official opinion and public opinion, and, since the capital ship is the type regarding which the prospects are most

The New York Trust Company

Capital, Surplus and Undivided Profits . . . $45,000,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 BROADWAY NEW YORK CITY

hopeful, and regarding which, also, the policy of our own country may be a determining factor, some examination of the capital ship situation is called for.

The case for abolition on financial grounds is overwhelming, and though Mr Snowden is not a delegate to the London Conference it would be astonishing if his influence were not thrown into the scale against any perpetuation of this type. New vessels like the 30-35,000-ton post-war capital ships would cost little short of £10,000,000 apiece, and the annual maintenance of the capital ships now in commission ranges from £450,000 a year downwards. If the Washington Treaty provisions stand, new construction of capital ships will begin next year. Those provisions, we trust, will not stand. The British Admiralty is understood to have agreed in the first instance to a reduction in size from a maximum of 35,000 to one of 25,000 tons; there is little doubt that at the Conference itself the figure could be driven considerably lower; and there should be no great obstacle to agreement deferring new construction.

We are glad to gather from Mr MacDonald's remarks on Wednesday to the journalists who have assembled in London to describe the progress of the Conference that the Government will propose that up to 1936 there should be no battleship replacement, and that after that date, if it is felt that replacement is necessary, the new vessels should have both a lower tonnage and a lower gun calibre. But is it necessary to assume that the capital ship is to survive at all? All the balance of argument in recent public discussions of the capital ship question is in favour of its non-survival. Of the three Powers most affected, Japan has never moved from her Coolidge Conference attitude of willingness to accept any agreement which means a reduction of expenditure on armaments, and the United States has indicated, in the words of President Hoover already quoted, that no level which other countries will accept is too low for America. Hence a British proposal for the abolition of capital ships should logically find support in the United States and Japan. Total abolition would to some extent alter the balance of aggregate naval strengths between the five Powers (*e.g.*, France has six battleships and Italy four), but it would be no more difficult to work out *de novo* the future ratio of fighting fleets with the 10,000-ton vessel as the maximum permitted unit, than with the issue complicated by the existence of capital ships, whose chief *raison d'être* is in any case to fight one another, and on whose strategic merits as the so-called "core" of battle-squadrons expert naval opinion is completely at odds. Given the abolition of the capital ship, the question of gun calibre on 10,000-ton vessels would clearly have to be reconsidered separately in the light of the right accorded to Germany by the Treaty of Versailles to mount 11-inch guns on the 10,000-ton "Ersatz Preussen" type, but the difficulties here are by no means insuperable.

As to cruisers, if the tentative Anglo-American agreement is to stand, and the figures of the other fleets to be brought into relationship with the two largest, there is little satisfaction for the advocates of reduction. The parity which is to be established by 1936 on the basis of 339,000 tons, represented by 15 large cruisers and 35 smaller ones, for Great Britain, and 285,000 (or 315,000) tons, represented by 18 (or 21) large cruisers and 15 or more smaller ones, for the United States, means that for the next five years the United States will be steadily building 10,000-ton cruisers and we shall be steadily building smaller ones—from 5,000 to 6,000 tons—and both fleets will be distinctly more efficient in 1936 than they are to-day. That, no doubt, constitutes limitation, but it is not a very striking example of reduction as commonly understood.

The other problems the Conference will have to face, notably the incompatibility between Italy's claim for absolute equality with France and France's claim to equality in the Mediterranean alone, cannot be discussed in detail here. They cannot be resolved on the basis of technical considerations alone. The ultimate deciding factor in the naval, as in the whole armaments issue, is the world's sense of security; and an encouraging lead has been given by Mr Alexander with his declaration that the signature of the Kellogg Pact reconciled not merely the Government but, it would appear, the Board of Admiralty itself, to a reduction of Great Britain's cruiser demands from 70 to 50. With talk of a Mediterranean understanding in the air, it may well be found before the Conference closes that the political questions, whose exclusion was considered to be necessary, have forced themselves in by more than one door.

INDUSTRIAL PROFITS.

Our latest survey of British industrial profits is based on the reports of some 420 companies which have been forwarded to us during the three months ended December 31st last. It affords tangible and welcome evidence of a check to the declining tendency of earnings suggested by the reports published during the second and third quarters of last year. The net profits of the 420 companies, after payment of debenture interest, amount in the aggregate to £33,404,593, an increase of £455,695, or 1.4 per cent., as compared with the net profits of the previous financial years. The following table summarises the results of our last four quarterly surveys:—

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &c.)

	Number of Companies.	Reports Published in		Increase (+) or Decrease (−).	
		1928.	1929.		
		£	£	£	%
First quarter	454	58,965,712	59,869,638	+ 903,926	+1·5
Second quarter	639	78,662,794	78,079,238	− 583,556	−0·7
Third quarter	257	24,039,327	23,327,747	− 711,580	−3·0
Fourth quarter	420	32,948,898	33,404,593	+ 455,695	+1·4
	1,770	194,616,731	194,681,216	+ 64,485	+0·0

The quarterly figures do not cover watertight periods, since the interval between the making up of a year's accounts and their publication varies considerably from company to company. For the most part, however, the reports issued during the past quarter relate to financial years ending between June 30 and September 30, 1929. The next table shows the quarterly fluctuations in net earnings shown by our surveys over the past seven years:—

	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%
First quarter.....	+41·4	+ 8·7	+ 9·1	+7·6	−4·0	+15·2	+1·5
Second quarter .	+22·1	+ 3·0	+11·1	+8·3	−5·7	+ 1·3	−0·7
Third quarter ..	+65·2	+ 2·3	+ 4·8	+2·8	+2·4	+ 9·7	−3·0
Fourth quarter .	+11·4	+13·3	+ 6·4	+3·8	+0·3	+ 3·1	+1·4
Year	+30·6	+ 6·6	+ 8·7	+6·3	−3·0	+ 7·2	+0·0

The rising trend of industrial profits, which was interrupted three years ago, after the coal stoppage of 1926, appears to have been brought to a halt last year. Lest this feature occasion disappointment in view of the rise in industrial productivity of something like 5 to 10 per cent., revealed by the Board of Trade's quarterly indices last year, it should be pointed out, firstly, that part of the latter increase should duly be reflected in company reports published during the next few months; and, secondly, that losses sustained by a small number of companies, in abnormal circumstances, have had a disproportionate effect on the aggregate earnings shown above. For example, the net loss of £2,063,682 shown in the last accounts of British Cement Products and Finance can scarcely be regarded as reflecting the trend of British industrial earnings as a whole. Were the results of this one company omitted from our calculations, the figures for the fourth quarter of 1929 would show a rise of 8.5 per cent. and those for the whole year a rise of 1.2 per cent., as compared with those of the corresponding periods of 1928. Even as the figures stand, only a minority of industrial groups showed a decline in profits in their last quarter's reports, as the next table shows:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &C.)

	Number of Companies.	Reports Published in Quarter Ended December 31.		Increase.		Decrease.	
		1928.	1929.				
		£	£	£	%	£	%
Breweries	46	3,357,924	3,627,100	269,176	8·0	...	...
Hotels, restaurants, etc.	10	454,929	391,412	...	...	63,517	13·9
Iron, Coal and Steel.....	33	807,128	1,473,966	666,838	82·6	...	...
Land, Mortgage, etc.....	24	1,785,798	2,120,703	334,905	18·7	...	...
Motor and Cycle	15	607,790	782,858	175,068	28·8	...	...
Nitrate	5	13,960	166,518	152,558	1092·8	...	...
Oil	6	798,227	838,524	40,297	5·0	...	...
Rubber, &c.	87	886,515	1,034,057	147,542	16·6	...	...
Shipping.....	9	1,658,084	1,775,278	117,194	7·0	...	...
Shops and Stores	6	1,058,864	1,182,611	123,747	11·7	...	...
Tea	10	249,518	271,596	22,078	8·8	...	...
Telegraphs, &c. .	2	27,311	32,416	5,105	19·1	...	...
Textiles	9	285,563	230,578	...	...	54,985	19·3
Tramways.....	5	138,231	131,803	...	...	6,428	4·6
Trusts	30	1,984,310	2,142,082	157,772	7·9	...	...
Miscellaneous ...	123	18,834,746	17,203,091	...	...	1,631,655	8·6
Total	420	32,948,898	33,404,593	455,695	1·4	...	...

The textile group does not on this occasion include sufficient companies to give its results a truly representative character. The largest group of all, "Miscellaneous Companies," would have shown an increase of 3.7 per cent. but for the unfortunate results of the single company referred to above. It is, therefore, legitimate to regard the reports of the last quarter as affording a gratifying indication of improving earning power in the majority of the industries. The recovery was most marked in certain "depressed" trades, such as iron, coal and steel, though in this case, as in other industries, such as shipping, rubber plantation and nitrate production, whose profits were previously at a low level, the general position as regards earning power still leaves much to be desired.

In the next table we set out the distribution of profits during each of the past four quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.		Preference Dividend.		To Reserve, &c.	
1929.	£	£	%	£	%	£	%
First quarter ...	59,869,638	36,336,626	60·7	10,896,063	18·2	12,636,949	21·1
Second quarter	78,079,238	47,216,888	60·4	18,006,913	23·1	12,855,437	16·5
Third quarter	23,327,747	14,368,539	61·6	4,159,124	17·8	4,800,084	20·6
Fourth quarter	33,404,593	22,054,466	66·0	5,356,375	16·0	5,993,752	18·0
	194,681,216	119,976,519	61·2	38,418,475	19·8	36,286,222	19·0

The last column includes the net increase in balances carried forward as well as special allocations to reserve. On the whole, the percentage of earnings distributed in dividends has tended to rise during recent periods, the proportion of total profits "left in the business" during 1929 being 19.0 per cent., as compared with 22.3 per cent. in 1928.

Similar figures for each group are set out below:—

	Net Profits.	Ordinary Dividend.		Preference Dividend.		To Reserve &c.	
	£	£	%	£	%	£	%
Breweries	3,627,100	1,872,563	51·6	653,839	18·0	1,100,698	30·4
Hotels, restaurants, &c. ...	391,412	189,289	48·4	160,683	41·0	41,440	10·6
Iron, coal and steel	1,473,966	629,822	42·7	242,040	16·4	602,104	40·9
Land, mortgage, &c.	2,120,703	1,164,780	54·9	345,041	16·3	610,882	28·8
Motor and cycle	782,858	564,953	72·2	74,866	9·6	143,039	18·2
Nitrate	166,518	11,096	6·7	Nil	...	155,422	93·3
Oil	838,524	596,368	71·1	Nil	...	242,156	28·9
Rubber, &c. ...	1,034,057	752,971	72·8	28,039	2·7	253,047	24·5
Shipping.....	1,775,278	841,961	47·4	442,899	25·0	490,418	27·6
Shops and stores	1,182,611	663,203	56·1	300,600	25·4	218,808	18·5
Tea	271,596	223,975	82·5	15,755	5·8	31,866	11·7
Telegraphs, &c.	32,416	8,766	27·04	8,766	27·1	14,884	45·9
Textiles	230,578	90,386	39·2	119,733	51·9	20,459	8·9
Tramways	131,803	80,632	61·2	Nil	...	51,171	38·8
Trust Comp'nies	2,142,082	1,129,454	52·7	613,530	28·7	399,098	18·6
Miscellaneous...	17,203,091	13,234,247	76·9	2,350,584	13·6	1,618,260	9·5
Total	33,404,593	22,054,466	66·0	5,356,375	16·0	5,993,752	18·0

Directorial conservatism was best exemplified by the nitrate, telegraph, iron, coal and steel, and tramway companies, which "reserved" one-third or more of their total earnings. At the other end of the scale stand the textile, hotel and tea companies, which, with those of the "miscellaneous" group, paid out approximately nine-tenths of the year's earnings in dividends.

In the next table we give the ratios of net profits and of the amounts "reserved" to the total ordinary and preference capital:—

	Total Ord. and Pref. Capital.	Net Profits.		Carried to Reserve &c.	
1929.	£	£	%	£	%
First quarter	537,360,324	59,869,638	11·1	12,636,949	2·3
Second quarter ...	783,972,918	78,079,238	9·9	12,855,437	1·7
Third quarter.....	209,191,686	23,327,747	11·2	4,800,084	2·3
Fourth quarter ...	323,129,955	33,404,593	10·3	5,993,752	1·9
	1,853,654,883	194,681,216	10·5	36,286,222	1·9

Taking the annual average of the quarterly figures, the ratio of net profits to capital in 1929 works out at 10.5 per cent., in comparison with 11.1 per cent. in 1928, 10.5 per cent. in 1927 and 11.8 per cent. in 1926. The ratio of amounts "reserved," 1.9 per cent., contrasts with 2.5 per cent. in 1928, 1.8 per cent. in 1927 and 2.8 per cent. in 1926. The average rates of interest and dividend paid on the nominal value of debenture, preference and ordinary capital in each quarter of the last four years are summarised below:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1926.	1927.	1928.	1929.	1926.	1927.	1928.	1929.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%	%	%	%	%	%
1st quarter	4·65	4·80	4·78	4·89	5·4	5·1	5·3	5·4	10·9	10·4	11·3	10·9
2nd ,,	5·14	5·30	5·43	5·10	5·8	5·9	6·0	5·9	11·7	11·8	10·0	9·8
3rd ,,	5·02	4·98	4·90	4·88	4·8	5·2	5·4	6·0	10·5	10·2	10·7	10·3
4th ,,	5·05	5·19	5·04	5·29	5·4	4·9	4·9	4·7	10·8	10·1	10·3	10·6
Year ...	4·96	5·08	5·02	5·15	5·4	5·3	5·4	5·5	11·1	10·8	10·6	10·5

The average rate of dividend paid on ordinary capital has tended to decline on the whole over recent years. That paid on preference capital, however, remains relatively steady, while the rate of interest on debentures has risen in the last four years from 4.96 per cent. to 5.15 per cent.

The concluding table shows the average rates paid during the past quarter in various industrial groups, together with the average rate on ordinary capital shown in our analysis for the corresponding period of 1927:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Interest.	Ordinary Capital.	Rate of Dividend.	Rate of Div. a Year ago.
	£	%	£	%	£	%	%

Total.....	85,931,591	5·3	115,246,329	4·7	207,883,626	10·6	10·3

Few striking changes are shown, nine groups having paid a slightly lower, and seven a higher rate of ordinary dividend in 1929 than in 1928.

Our figures suggest on the whole that the marked decline in industrial share values on the Stock Exchange during the past year has not been inspired by any significant change for the worse in the earning power of British companies. The concerns included in our survey are, however, in the great majority of cases old-established companies, whose shares seldom rose to more than a moderate extent during the so-called Stock Exchange boom; but were subsequently depressed, partly in sympathy with the calamitous decline in the share values of new and untried speculative concerns (whose results do not appear to any significant extent in our tables), and partly as a result of forced selling by holders whose speculative experiments in other markets had been unfortunate. When "mushroom" concerns are excluded, it is clear that industrial earnings as a whole have, in fact, been stable to a high degree.

GERMANY'S INDUSTRIAL PROGRESS.

(BY A GERMAN CORRESPONDENT.)

THE course of events during 1929 in Germany does not allow of a clear verdict on the economic state of the country. For, while exports have reached record figures and the staple industries have been fully employed, Germany has passed through a series of financial disturbances accentuated by an acute shortage of capital and by a number of sensational crises. Throughout 1929 the steady rise in German exports was continued; during certain months they exceeded those of Great Britain and ranked second in the world after the United States. The year's balance of foreign trade has been favourable for the first time since the war, with the exception of the year 1926 (that of the British coal stoppage). An analysis of the figures shows that the increase lay mainly in manufactured goods, which now form nearly three-quarters of the total German exports. The expansion of exports was, generally speaking, a natural reflection of the retarding of the influx of foreign credits and the increased outflow of money for the service of previous loans. But it should be noted that "high pressure" in foreign business has also been necessitated by the depressed state of internal consuming power; and a significant tendency is the increase in exports of means of production. For example, the engineering trades, which had raised their productive capacity to cope with the needs of German industrial modernisation, were forced by the falling-off in the home demand to seek more vigorously markets abroad.

A considerable part of the exports was, however, only made possible by the artificial raising of home prices through industrial cartels—in other words, the German consumer paid highly for the pleasant aspect of export figures. For instance, the domestic price of iron is, roughly, 30 per cent. higher than the world price, and it has recently been calculated that, during the last five years, the iron cartels have loaded the German public with an extra burden of 1,500,000,000 marks to make good the loss on exports. It may be said here that about 20 per cent. of German production is estimated to be included in monopolistic cartels. None the less, the export figures prove that German industry is well able to compete internationally and that the enormous capital invested in rationalisation has, on the whole, not been unprofitable to the country.

The productive capacity of industry generally has steadily grown. In Ruhr coalmining, production per man-shift has increased from 102 in 1925 (100 equals the highest figure for 1913) to 120 in 1928 and to 134 in 1929. In the iron-producing industry electric-power installations have risen to 18.7 h.p. per worker, compared with 11.1 h.p. in Britain and 17.5 h.p. in the United States. The cotton industry has increased the number of spindles between 1927 and the middle of 1929 by about 8 per cent., in addition to the considerable substitution of improved machinery. The modernisation of industrial plant has, however, in many cases exceeded the limits of demand to be reasonably expected for some time. The criticism, widespread in Germany, that rationalisation has been overdone is, perhaps, premature. Still, if productivity has risen high, profits have not followed suit. An inquiry into 1,065 undertakings with a working capital of 7,000,000,000 marks, recently published by the *Reichsverband der deutschen Industrie*, shows that even in the record year 1927 the average share yield of industrial companies (excluding some of the largest concerns) was only 4.2 per cent., after allowing about 4.5 per cent. for interest on foreign borrowings. No such complete statistics are available for a later period, but the impression from published figures is that, since 1927, profits in general have considerably decreased.

Partly for this reason and partly because of the prohibitive cost of fresh capital, "technical" rationalisation has on the whole come to a standstill. The general optimism of the "fat" years, 1925-27, led to elaborate programmes of plant extension, modernisation of machinery and perfection of processes which involve large capital investments over a number of years. The tendency to rationalise with the imagined certainty of drawing improved profits was not confined to the large and stable-concerns, but carried away many lesser undertakings, and even a large part of agriculture. It may be rash to conclude that any really considerable part of the 5,000,000,000 marks long-term and of the 7,000,000,000 marks short-term foreign capital invested in Germany during that wave has been misapplied. But it has been seriously questioned by many authorities whether the increase in efficiency justifies the terrible burden of vast indebtedness which it has loaded on the whole of German industry and agriculture. These doubts refer, of course, only to "technical" rationalisation, which requires extensive investment of capital. "Administrative" rationalisation, which costs little or nothing and effects immediate economies, is being vigorously continued in Germany. The outstanding example during the year was the fusion of the Deutsche Bank and Disconto Gesellschaft, the chief purpose and effect of which was economy in administration.

An important factor, contributing to the arrest of industrial expansion, has been the further rise in labour costs. The average wage for unskilled labour per hour had risen from 44.2 pfennige at the beginning of 1924 to 81.2 pfennige at the beginning of 1929, while during those five years the cost of living rose only from 125.9 to 153.1 per cent. of pre-war cost. During the last year wages have further risen to 83.7 pfennige for unskilled labour and from 108.1 to 111.2 pfennige per hour for skilled labour, while the cost of living has remained

constant and wholesale prices in certain industries have decreased. So far, the labour market has remained materially unaffected by recent industrial changes. At the end of the year the number of unemployed in receipt of relief was 1.3 millions, an increase of 200,000 on the figure for the same date in 1928, but roughly 360,000 new recruits have been added to the labour market during 1929.

An outstanding feature of the year has been the favourable condition of the coal industry. The report on German coalmining, recently published by the State Committee of Economic Inquiry, concludes that since 1927 profits have steadily risen and cost of production declined. In November, 1927, the average trading profit on coal, coke and briquettes in the Ruhr district was 0.19 marks per metric ton; for December, 1928, the profit on coal alone has been calculated on the basis of the Committee's figures at 1.30 marks per ton; and during the last year a further increase has taken place. Such favourable results were not attained in the other German coal-mining districts, but the depression suffered by some of these during the previous years has been definitely overcome during 1929. At the end of the year the coal output in the Ruhr district had increased by 23 per cent. since the end of the previous year, while coke and briquette output had risen by about 50 per cent.

Looking at the industrial situation as outlined above, it is difficult to understand the intense pessimism pervading the German business world. Political and financial events have been largely responsible for this state of mind. The revival last summer of the old Reparations uncertainties produced nervousness not yet wholly allayed. During the Experts' Conference in Paris, Germany was rudely reminded of the frail state of her financial system by the sudden withdrawal from Berlin of large foreign short-term holdings. The resulting brief currency crisis was soon overcome by emergency measures, but left a serious psychological after-effect. Confidence in the stability of the mark was severely shaken in Germany itself. The abnormal state of the world's money markets reacted with more than usual force on Germany, because a vast short-term indebtedness to foreign lenders makes her markets highly sensitive. The shortage of capital in 1929 became critical, since the supply of fresh foreign credits was insufficient. Savings fell off sharply, for reasons which were mainly psychological; for the same reasons, much German capital was left or sent abroad. On the average, the cost of money has risen during the year by one-half per cent. in spite of the recent relaxation in the international money tension. This figure does not, however, indicate the full force of the capital scarcity, which was accentuated by the incursions of the State and municipalities into the home money market. The extravagant borrowing policy of the latter was stopped towards the end of the year after violent public criticism, but their floating debt has been allowed to mount up to about 2,000,000,000 marks; and only after the second acute crisis in December was a reform introduced which is designed to put the finance of the State on a more stable basis.

To some extent the outlook for 1930 is clouded by the financial inheritance from last year. On the other hand, the prospect of easier money throughout Europe is encouraging, and though there is a certain amount of scepticism whether the Young Plan for Reparations will prove capable of ultimate fulfilment, a successful end to the Hague Conference will do much to promote in Germany a greater feeling of economic security. Confidence in the technical efficiency of German industry is great, and though belief in the merits of rationalisation is tempered with realisation that the process creates problems as well as solving them, there is no reason to conclude that the course of Germany's post-war reconstruction has suffered more than a temporary check.

THE YEAR'S OVERSEAS TRADE.

At the half-year, the trade returns indicated a definite, though modest, improvement on the trade of the first half of 1928. The figures for the complete year suggest that this has, on the whole, been maintained, but though they contain some very encouraging elements, they are not wholly satisfactory. The aggregate figures, which are shown in the first table, are a little disappointing:—

Calendar Year.
(000's omitted.)

	1929.	Inc. or dec. on 1928.		Inc. or dec. on 1927.	
	£	£	%	£	%
Imports	1,221,591	+ 25,993	+ 2·1	+ 3,250	+ 0·3
British exports	729,555	+ 5,976	+ 0·8	+ 20,474	+ 2·9
Re-exports	109,742	− 10,542	− 8·8	− 13,211	−11·0
Total exports	839,297	− 4,566	− 0·5	+ 7,263	+ 0·9
Excess of imports over total exports	382,294	+ 29,134	+ 8·5	− 4,013	− 1·0

The rise of nearly £26 million in imports was very widely spread over all groups of commodities, and the only conspicuous exceptions were raw cotton, hides and skins, and leather manufactures. It was accompanied by a small, but definite, improvement in domestic exports, and a decline of £10½ million in re-exports, of which over £7½ million was due to diminished re-exports of rubber. This was accompanied by a rise of some £5 million in rubber imports, and a consequent heavy increase in stocks. Total exports were over £4½ million lower than in 1928, but it must be borne in mind that wholesale prices averaged nearly 6 per cent. less in 1929 than in 1928, so that the physical volume of exports compared more favourably than their value with that of the previous year.

The next table compares retained imports and exports, by economic classes, with those of 1924 and 1928:—

	1924.		1928.		1929.	
	Retained Imports.	Exports.	Retained Imports.	Exports.	Retained Imports.	Exports
	£ million.	£ million.	£ million.	£ million.	£ million.	£ million.
Food, drink and tobacco	541·2	57·0	503·4	54·3	510·2	55·7
Raw materials and articles *mainly* unmanufactured	323·8	106·5	268·2	70·1	285·3	79·1
Articles wholly or mainly manufactured	266·0	618·9	291·8	578·9	305·5	573·8

When allowance is made for the fall of some 20 per cent. in prices which has occurred since 1924, these figures appear more satisfactory than they might seem at first sight. The rise in the figure of retained imports of manufactured goods is fairly evenly distributed and is substantial in iron and steel, non-ferrous metal manufactures, electrical goods, machinery, chemicals, oils and fats, leather and vehicles. In considering this increase, however, it should always be borne in mind that many imported articles returned as in the category of "manufactures" are, in fact, materials destined to be worked up in British factories. Moreover, when allowance is made for alteration of prices, the physical volume of retained raw material imports, which were £17 million higher in value last year than in 1928, probably exceeded considerably the volume of 1924.

The more detailed table which follows shows the changes during the last five years in our imports of certain principal foods and raw materials:—

Some Leading Imports.
Quantity (000's omitted.)

	1924.	1925.	1927.	1928.	1929.
Wheat cwts.	117,421	96,854	110,436	103,577	111,769
Beef cwts.	13,611	13,741	14,464	13,324	12,667
Sugar cwts.	35,095	42,302	32,913	38,611	42,225
Raw cotton centals	15,777	18,942	15,483	15,076	15,384
Sheep and lamb's wool centals	7,603	7,269	8,220	7,793	8,136
Raw silk lbs.	5,241	4,761	3,662	3,923	4,686
Flax, hemp and jute tons	339	336	400	332	352
Iron ore tons	5,927	4,382	5,235	4,495	5,755
Wood and timber, sawn, soft loads	5,137	4,993	6,026	4,605	5,221
Rubber centals	1,457	1,958	3,246	2,443	3,952
Crude petroleum galls.	464,363	569,082	664,810	498,002	487,634
Wood pulp tons	1,228	1,235	1,431	1,283	1,638
Hides, wet and dry cwts.	1,806	1,854	1,532	1,503	1,173

The increased imports of sugar correspond to a real increase in consumption and are suggestive of greater prosperity. Several raw materials, including iron ore and wood pulp have improved to a level above that of 1927, and even raw cotton was imported to a slightly greater quantity in 1929 than in 1928 despite the dispute in the textile industry last summer. Hides, on the other hand, show a very heavy fall. On the whole the 1929 figures in this list compare favourably with those of 1924.

Among the principal exports shown in the table below the most striking development is shown by coal, the figures of which are discussed in a Note of the Week:—

Some Leading Exports.
Quantity (000's omitted.)

	1924.	1925.	1927.	1928.	1929.
Coal tons	61,651	50,817	51,149	50,052	60,267
Pig-iron and ferro-alloys tons	600	559	331	455	545
Railway material tons	370	421	729	610	487
Total iron and steel manufactures tons	3,851	3,731	4,196	4,261	4,379
Textile machinery tons	104	123	119	125	127
Total machinery tons	463	516	512	566	562
Cotton yarns lbs.	163,056	189,532	200,465	169,207	166,637
Cotton piece goods sq. yds.	4,443,959	4,435,618	4,116,883	3,866,500	3,671,687
Wool tops centals	411	320	420	344	327
Woollen tissues sq. yds.	164,740	132,174	130,914	128,339	108,185
Worsted tissues sq. yds.	56,843	47,302	39,980	42,111	47,281
Linen piece goods sq. yds.	110,786	83,694	73,911	66,135	71,540
Boots and shoes doz. pairs	998	986	990	1,079	1,006
Leather cwts.	327	316	433	403	366
Paper and cardboard cwts.	4,757	4,989	4,317	4,539	5,047
Locomotives tons	24	30	27	41	40
Motor cars and chassis No.	15	29	36	33	43

Iron and steel manufactures have continued the slow but steady improvement of recent years, though exports of railway material again declined. Except for worsted tissues, all the principal cotton and wool exports showed a decline, but linen piece-goods recovered much of the ground lost in 1928. Leather and boots and shoes have not made a very good showing on the year, but both paper and motor-car exports were considerably greater than at any time during the last five years. Towards the increase of nearly 10,000 in exports of motor cars and chassis, Australia, which took over a quarter of our total exports in this class, contributed over two million. Exports of touring cars to New Zealand rose from 2,126 to 3,731, and to the Irish Free State from 3,457 to 6,045. The steady increase in our exports of motor cycles continued during 1929.

The movement of gold, shown in the following table, was the greatest since 1920:—

Movements of Bullion and Specie.

	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
	£	£	£	£
1922	34,542,157	44,838,292	10,099,890	13,235,269
1923	43,986,655	57,434,355	9,611,855	11,687,714
1924	35,791,664	49,419,607	13,931,746	12,422,661
1925	41,460,892	49,674,766	10,612,558	12,161,255
1926	30,547,498	27,188,223	11,198,113	10,957,801
1927	32,404,512	29,060,010	7,173,051	7,145,577
1928	47,800,890	60,523,701	10,205,998	9,187,712
1929	62,411,414	77,572,219	8,332,817	9,109,762

Net exports to France amounted to £32,972,000, to Germany £18,450,000, and to the United States £7,850,000. The excess of imports over exports of merchandise, coin and bullion in 1929 was £366,356,000, or nearly £8 million more than in 1928.

Apart from the unsatisfactory showing of the principal textile industries, the figures for overseas trade in 1929 suggest a fairly general, but hardly-won, improvement. Except in the case of coal, no striking developments occurred, but on balance the trend was slowly upward. Until this cautious advance is extended to the cotton and wood textile trades, however, it will be impossible to regard the statistics of overseas trade with more than a very qualified degree of satisfaction.

CONSOLIDATION OF THE AMERICAN RAILWAYS.

(By a Correspondent.)

Much publicity has recently been given to the large programmes of expansion and renewal undertaken by the great American railways as a means of tiding American production over a difficult period. Such a policy is not new, and has been pursued in Great Britain very energetically during the last few years; but embarkation on a programme of this nature in the United States was made more difficult in that an element of instability existed, owing to the expected publication of a Consolidation Plan by the Interstate Commerce Commission, as provided for by the Transportation Act of 1920. As recently as December 7th Mr Daniel Willard, president of the Baltimore and Ohio Railroad, stated publicly that:—

"Our immediate problem has been made more difficult of solution by the uncertainty resulting from the still unsettled status of railroad consolidation as provided for in the Transportation Act. The policy of consolidation of railroads as outlined in the Act did not originate with the railroads, nor was it recommended or urged by the railway executives as a whole. The idea originated with Congress itself and the legislation concerning consolidation was enacted from the standpoint of the public interest and not from the narrow or selfish standpoint of the railways. While the tentative plan was published in 1921, the Inter-State Commerce Commission has not yet published the final plan as required by the Act."

Actually the new plan was adopted by the Commission less than forty-eight hours later, and became public information on December 12, 1929.

Those who have followed American railroad finances during the last ten years will recall that Professor W. Z. Ripley, of Harvard, drew up an earlier report soon after the passing of the Act upon which the Commission based its tentative plan, made public on August 3, 1921. The new plan is, in reality, the original plan of 1921—altered beyond recognition as a result of the opposition with which it met—and is introduced with the statement that "the Commission does now proceed to prepare and adopt a plan as hereinafter set out for such consolidations of the railway properties of the continental United States into a limited number of systems" as required by certain sections of the Interstate Commerce Act. For several years the Interstate Commerce Commission had asked that Congress should amend the Act, to eliminate the provision that a plan should be prepared by it, and the Fess Bill, at present pending in the Senate, would have effected this desired object. Failing, however, to achieve its wish, the Commission last summer set about the formation of a plan which is to be regarded in part as a *ballon d'essai*, but is nevertheless likely to prove the basis upon which consolidation will take place, if it takes place at all; and any scheme of consolidation which runs directly across the lines of this new plan is not likely to meet with the approval of the Commission.

There are about sixty large and important railways in the United States, in addition to a large number of terminal lines and many smaller lines, mainly of local importance and often financially weak. The plan, which has not attempted to assign to any system about two hundred terminal railways, has split up the remainder into twenty-one systems, which include two of Canadian ownership. The British investor is probably most concerned with the railways in so-called trunk-line territory, that is to say, between New York, Chicago and St. Louis; therefore, these lines, such as the Pennsylvania and the New York Central, may be discussed first. It is in this area that the consolidation moves, mainly for position, have attracted the greatest attention during the last four years.

The history of the present situation is very complicated and indistinct, but in general the Pennsylvania has not disclosed its hand, though it controls; through stock ownership, the Lehigh Valley and the Wabash Railroads, acquired nearly two years ago from the Delaware and Hudson, which had been attempting to build up a fifth New York-Chicago system in addition to the Pennsylvania, the New York Central, the Baltimore and Ohio and the Nickel Plate-Erie groups. These last three systems had been popularly supposed to favour a four-system plan for

this territory, but the Commission's new plan definitely sets up a fifth Lehigh Valley-Wabash system, which would give a continuous mileage from New York to the Missouri River, serving Kansas City and Omaha, and thereby attaining more westerly mileage than any of the other four trunk-line territory systems. Admittedly such a line would be weaker than its competitors, in spite of the Lehigh Valley's universally recognised efficiency; this has been realised, for the plan gives this system the Norfolk and Western, now controlled by the Pennsylvania, and the Seaboard Air Line, by which it would reach to Savannah and Florida.

With the exception of the Norfolk and Western, the Pennsylvania system is almost unaltered, as is the New York Central system, with its Michigan Central, Boston and Albany and " Big Four " sections, though the important Virginian, a coal line, is added to it. To the Baltimore and Ohio are added the Reading and the Central of New Jersey Railroads, with which it already works very closely, as well as the Buffalo, Rochester and Pittsburgh, and the Chicago and Alton. The fifth eastern system, built up by the Van Sweringens of Cleveland, and commonly known as the Nickel Plate, already consists of the Erie, the Chesapeake and Ohio, as well as the Père Marquette Railway, while the Commission has added to these the very wealthy Delaware, Lackawanna and Western and the Bessemer and Lake Erie. Two systems are suggested for New England, the one formed around the Boston and Maine, and covering the area north of Boston, though it also includes the Delaware and Hudson; the other has the New York, New Haven and Hartford as its nucleus.

The large eastern carriers will thus have important interests in the South, through ownership of the Pocahontas coal lines, such as the Chesapeake and Ohio and the Norfolk and Western, not to speak of the Seaboard Air Line. The remaining southern lines are grouped around the Illinois Central, the Southern and the Atlantic Coast Line Railroads. The first of these, with its present controlled lines, remains virtually as it exists to-day, except for the addition of the " Cotton Belt," while the Southern is to lose its controlled line, the Mobile and Ohio, though it will receive strength from the acquisition of the Florida East Coast Railway. The Atlantic Coast Line system is, in reality, an Atlantic Coast Line-Louisville and Nashville group, and should be able to hold its own with the other two southern systems at least as satisfactorily as it does to-day. In brief, the separation of the Mobile and Ohio from the Southern is the most important feature in the plan as regards this area, and it is difficult to see what good reason calls for the transfer of this line, in company with the Chicago and Eastern Illinois, to the Chicago and North Western group, whose interests have always centred in the Middle West, except as a means of strengthening the latter against its competitors, namely, the Chicago, Milwaukee, St. Paul and Pacific (now commonly known as the Milwaukee), and the Chicago, Burlington and Quincy. Both these latter remain as the parent company of one of the new systems, while the other large group in this area is the Great Northern-Northern Pacific, which would seem to show that the application for consolidation of these two large carriers from the twin cities to the Pacific coast met with favour in the eyes of the Commission. It will be appreciated that the Burlington has been for many years controlled by these lines jointly, and it forms their link with Chicago. It will be interesting to see how the Commission proposes to deal with this case of joint control by non-competitive properties, for in such a case the Anti-Trust Laws could hardly be operative. As was to be expected, the other three important Transcontinental lines, the Union Pacific, the Southern Pacific and the Santa Fé, each form a system of their own; to the first-named is added the Kansas City Southern, and to the last-named the Chicago Great Western.

Two further large systems will remain in the south-west, one consisting of the present Missouri Pacific system with many small additions, and the other a combined Rock Island-Frisco group, with the Chicago, Rock Island and Pacific and the St. Louis-San Francisco as parent companies. The Missouri, Kansas and Texas has been allocated, in the plan just published, to the Burlington group, while the St. Louis South Western is to join the Illinois Central system. These changes are of considerable importance, as the influence of these two large systems will be extended into south-western territory, where the progress of development has been rapid during recent years.

Naturally, much criticism will be experienced in carrying out a plan of such enormous scope, and even the Commissioners themselves are not unanimous. Mr Eastman, while partly concurring, questions the real need for consolidation when railroad service is as good as it is at present; many of the lines, financially weak in 1920, have since become strong, either by development of the territory they serve, or by financial reorganisation. He also points out that a railroad system can be so large and so extensive that its executive cannot maintain adequate personal touch, so that it loses as much by its size as it gains in the standardisation and strength which that very size brings to it. Mr McManamy, now chairman of the Commission, and an old railway employee, voices much the same sentiment.

That large railways should serve more than one territory is regarded as of doubtful advantage, for each territory has its own classification of freight and rate structures, hence such a situation would make far from easy the regulation of charges to obtain a fair return upon property investment. While innumerable difficulties must be overcome before the plan is likely to take effect, it is probably the most important landmark in American railway history since 1920, if one excepts the O'Fallon valuation decision, also of 1929, for it shows the alignment upon which consolidation policy is most likely to be built, and brings back into practical politics the intention expressed in the Transportation Act.

Notes of the Week.

After the Recess.—Though the limelight, concentrated during the past few days on the Hague, may be turned in coming weeks on St. James' Palace rather than on Westminster, Parliament reassembles on Tuesday after the Christmas recess with a programme of work which is as important as it is contentious. The original time table planned by the Government has been seriously deranged by the protracted debates in the Commons on the Unemployment Insurance Bill, whose Committee stage in the Lords will begin on Tuesday, and the congestion of business threatens to become formidable. Apart from the fact that a number of major measures to which the Government is committed are still waiting to be considered —notably, the Bills to amend the Trade Disputes Act and to ratify the Washington Hours Convention, and the promised Factories and Slum Clearance Bills—progress with the Traffic Bill is likely to prove slow, and Supply will call between now and the Budget date for much of Parliament's working time. Above all, there is the ill-conceived Coal Mines Bill, a measure whose many imperfections are calculated to prolong the Committee stage to an extent difficult as yet to estimate. How far the amendments which the Government's draughtsmen have produced in an endeavour to meet the devastating criticisms launched by Sir Herbert Samuel and other Opposition speakers in the Debate on the Second Reading will succeed in removing the measure's more glaring defects remains to be seen. In any case, having embarrassed themselves with a pledge to the miners whose fulfilment requires, in fact, that Parliament should face the complex and intractable problem of securing by legislation the voluntary or enforced assent of an unwilling industry to achieve its rationalisation, the Government cannot complain if Parliament insists on having ample time in which to fulfil this difficult task. There must be no question of allowing a bad Bill to pass for lack of time to give due consideration to its amendment, even if the Third Reading has to be postponed until after the Budget.

Lord Grey and Liberalism.—In Lord Grey's speech to the Liberal Council on Tuesday we find much with which sound and enlightened political opinion of all shades should find it easy to agree. Detached as the *Economist* is from party considerations, we trust that Lord Grey's emphasis on the fatal effects of tariffs as the great drawback to the expansion of trade will command the attention which it deserves. In passing from commendation of the Government's foreign policy, accompanied by statesmanlike observations on the problems of Egypt and India, to a well-timed warning as to the dangers of parties outbidding each other in the race for expenditure —a race in which the Government have already shown disquieting signs of taking an unenviable lead—Lord Grey was expressing views which all who have the country's interests at heart should be ready to endorse. It is questionable, however, whether the insistence of the speech on the continuance of certain regrettable controversies within the ranks of the Liberal Party can be regarded as in the true service of the public interest. The tasks which confront the two Opposition parties during the next few months of Parliament in regard both to the Coal Mines Bill and to our future tariff and taxation policy, are so important and call for such clear thinking and careful consideration that we should have thought that the paramount need for Liberalism is to determine the alignment of a future united policy rather than to dissipate its energies in personal animosities which, if time cannot heal them, are at least of minor importance in comparison with the magnitude of the public issues with which all parties are concerned.

Progress at the Hague.—An agreed settlement is well in sight at the Reparations Conference. For a time it was thought that Dr. Schacht's action, which is dealt with in another Note of the Week, would have delayed or even prevented agreement, but the storm proved to be thunder without the deluge. Strong speaking by Mr Snowden, who asked the German delegation whether they really preferred to be left with the Dawes Plan still in operation, may have contributed to the advance. At any rate, the decisions reached on the outstanding points have been on the whole in favour of the creditor Powers. Germany agrees to make payment in full in foreign currencies on the 15th of the month, as the creditors declared had been understood at Paris, and also, in the event of a moratorium, to pay the amount postponed immediately upon the termination of the period of postponement. On the other hand, the request of the creditors for security on the assigned revenues, which was really quite hostile to the spirit of the Plan, has been tacitly dropped. Agreement has been reached between the French and German delegations on the " sanctions " question. Two declarations will be embodied in the final protocol, one by the chief creditor Powers and one by Germany. The first declares that the signatories are content to rely on the machinery provided by the Plan to ensure the faithful carrying out of the Plan; if, however, it were believed that Germany intended to default deliberately, then " the creditor Power or Powers which might regard themselves as concerned would submit to the Permanent Court of International Justice the question whether the German Government had committed acts revealing its determination to destroy the new Plan," and, in the event of an affirmative decision by the Court, would " resume their full liberty of action." The German Government, for its part, while regretting that an eventuality which it regards as impossible should have been contemplated, agrees that such a resumption of liberty of action would be legitimate. In this agreement two points call for notice: firstly, that no mention is made of Article 430 of the Treaty of Versailles, which embodies the right of reoccupation of the Rhineland, and, secondly, that independent action by one or several of the creditor Powers is obviously contemplated. If such a contingency as is here provided for did arise, the political situation might be highly dangerous, but it is, to say the least, extremely unlikely. One or two further points remain to be negotiated, notably the assurance demanded by France that the immediate mobilisation of annuities will in no way be hindered by Germany, but the chief obstacle to final success is the problem of non-German Reparations. The Little Entente, it is said, will not sign the Young Plan Protocol until this problem is solved. Discussions have been going on all the week among the Powers directly concerned, and the way to solution is a little clearer. An attempt is being made to detach the Hungarian Optants' case from the mass of claims in respect of commercial transactions, imperial and church property, and so on, but it is proving extremely difficult to agree upon figures. Even if the separation can be made the question of Hungarian annuities after 1943 must be tackled *de novo*. The work of the committees which are dealing with other outstanding questions, including the Bank for International Settlements and the Trust Agreement, has meanwhile proceeded steadily to a conclusion.

Dr. Schacht's Petard.—Dr. Schacht's letter to the Organising Committee of the Bank for International Settlements, indicating that the Reichsbank's participation was conditional on the character of the political settlement to be reached at the Hague, created considerable excitement, for the whole scheme of the Young Plan, as well as the documents prepared by the Organising Committee of the B.I.S., assumes the active co-operation and the direct participation of the Reichsbank in the new institution. The abandonment of the Agent-General's supervision, and the acceptance of the word of Germany that she will do her best to pay, imply that the institution controlling Germany's credit and currency—from whose General Council the foreign members are to be removed under the Plan—will play its part to facilitate the scheme, and it may be doubted whether other central banks would have accepted the responsibility that would have rested on them under any other conditions. But it was quickly recognised that the matter was one between Dr. Schacht and his Government, and the German delegates at once made it clear that Dr. Schacht could not be allowed to thwart the will of Germany to see the obligations of the Young Plan substituted for the much heavier burdens of the Dawes scheme. At first it was suggested that an alternative institution, such as the Reichscredit-Gesellschaft or a group of banks, should take the place of the Reichsbank, and the Government at once undertook that it would find some such alternative, Dr. Schacht having made it clear that he would be willing for the Reichsbank to act as agent for the B.I.S. and for the German Government and otherwise carry out the duties assigned to it in the plan. But this solution did not fully meet the case, and the German delegates then arranged with the delegates of the creditor Powers to alter the new bank law which is about to be passed, placing an obligation on the Reichsbank to participate in the organisation of the B.I.S. in all the ways contemplated in the statutes—the chief are that it should subscribe capital and that its Governor should sit upon the Board with two other directors named by him. Dr. Schacht immediately recognised that he must bow to this pressure, and it is not expected that the work of the Conference will suffer any further delay. It is not possible at the moment to anticipate what the relations of Dr. Schacht with his Government —or even with his directorate—will be as a result of this incident. It may be taken for granted that if he remains he will in fact co-operate fully with the B.I.S., in the designing and creating of which he has indeed played a very considerable part. But it is to be regretted that as a result of his action he has inevitably increased the tendency for the Government to strengthen its control over the Reichsbank. From his own personal point of view, though he has effectively repudiated responsibility for the Young Plan as interpreted at the Hague, he has lost in prestige and exacerbated the opposition to his financial power.

The League Council at Work.—The 58th session of the Council of the League of Nations has been chiefly occupied with current business of minor public interest. The date of the conference on a tariff truce was fixed; reports on small minority questions have been approved; the promotion of the international circulation of newspapers, and the " secrecy " of telegrams regarding opium smuggling transactions were discussed; that old soldier, the Hungarian Optants dispute, was dismissed for a while as the matter has been under discussion at the Hague. On the report of the Mandates Commission, Mr Henderson asked for a small commission to investigate the respective rights of Jews and Moslems at the Wailing Wall. The matter has given rise to some difficulty because the Permanent Mandates Commission expressed the view that the British proposal, by conferring on the Commission powers vested exclusively in the Commission for Holy Places, was not in conformity with the Mandate. Mr Henderson, however, emphasised the urgency of the problem, and the desire of the British Government that the Commission should be strictly limited in its scope; and in the end the Council approved the suggestion, leaving to Great Britain the choice of members of the Commission. Committees have been set up by the Council on the ratification of general conventions and on the amendment of the Covenant to accord with the Kellogg Pact. The British attitude on the latter question, as expressed by the Prime Minister last September and again by Mr Henderson this week is that the right of private war which the Covenant allows under certain circumstances has been abolished by the Pact of Paris, and that it is undesirable to leave the members of the League under two different sets of obligations. That is not quite an exact formulation of the position, since the rights under the Covenant are permissive and not obligatory. If by some other treaty such permission is renounced, there is no legal necessity for altering the instrument by which it is conferred; as a measure of psychological emphasis, however, upon the importance of the Kellogg Pact in international relations the British proposal is well conceived. If the Covenant is brought into line with the Pact then perhaps a much needed effort will be made to bring the Pact into line with the Covenant by the adoption of machinery to discover and declare where self-defence begins and what is " war as an instrument of national policy."

A Truce in Tariffs.—The Council of the League of Nations has fixed February 17th as the date of the conference on a tariff truce. Mr William Graham's proposal that such a conference should be held has received the support of every Government in Europe, with the exception of Albania, which has not replied. But that can scarcely be taken as a measure of the support forthcoming for the plan of a truce itself. The recent tendency of tariffs has been strongly upward, and the conference will not be helped by being almost entirely European. One of the latest countries to agree to be represented is Japan, but the British Dominions have been in open opposition all along—a rude commentary on the optimism of those who hope to obtain a reduction of Dominion tariffs against British goods in exchange for a wall of anti-foreign duties levied by the Mother Country. The Dominions are plainly more addicted to Protection than ever. The Empire Free Traders are themselves stiff in opposition to the proposal of a two years' truce in tariffs, on the ground that it would tie the hands of a British Government which desired to bargain either with foreign countries or with the Dominions. This opposition rests on the fallacy that tariff manipulation can ever result, in the long run, in a profitable bargain; on the contrary, experience has always shown that retaliation is the outcome, and it is grossly foolhardy to expect that such an addition to our overseas markets as the Empire is likely to afford us could compensate for the loss of foreign markets which Protection would entail. Great Britain has everything to gain from a tariff truce. The very opposition to the suggestion, and our own post-war experience, show the vital importance of checking the fatal tendency of tariffs to move upward. How difficult it is to lower them is sadly illustrated by the action of the board of the Manchester Chamber of Commerce, which (by 14 votes to 7) has asserted its opposition to the removal of the silk and McKenna duties on the ground that we cannot afford " disturbance " to trade. Thus the traditional home of Free Trade (lapsing into a short-sighted and mistaken view which we deplore) vindicates its former arguments by showing how hard it is to turn back from the primrose path of Protection. Not tariffs at home but a reduction of those abroad is what Manchester and the whole of British trade require. No effort should be spared by the Government to make the forthcoming conference a success. It has a chance if the Ministers of Finance or Commerce in the participating countries see fit to attend, and Mr Graham has set a good example by announcing that he will himself head the British delegation. One obstacle in the path of success is the failure of Czechoslovakia and Poland to sign the Convention for the abolition of import and export prohibitions. Their signatures alone are required to bring the Convention into force, and in the Council this week Mr Henderson made a strong appeal to the two Governments to adhere as soon as possible. We trust that the response will be prompt and favourable.

Egypt and the Treaty.—The Speech from the Throne on the occasion of the opening of the Egyptian Parliament, a week ago, referred to the proposed treaty with Great Britain in language that left nothing to be desired. The British proposals were spoken of as being dictated by a spirit of amity and conciliation, and negotiations, with a view to a solid and honourable accord, were described as imminent. The words chosen by the Prime Minister, Nahas Pasha, wear, intentionally or not, an air of studied cordiality, and it seems clear that the Wafd, now that it is in full control of Parliament, is prepared to enter the coming negotiations in a reasonable spirit. The difficulty is, as so often in these cases, that Nahas Pasha may feel it necessary, as a matter of political prestige, to extract better terms from Mr Henderson than his predecessor, Mahmoud Pasha, secured. That will not be very easy, for, quite apart from the fact that the British Foreign Secretary described the draft agreement he discussed with Mahmoud Pasha as representing the utmost he could offer, there is, in fact, little or nothing more that a British Government could reasonably concede. Neither is there anything more that Egypt either genuinely needs or seriously desires. If it had been possible for Mr Henderson to offer direct to Nahas Pasha what, through force of circumstances, he had to offer to Mahmoud Pasha first, Nahas Pasha would no doubt have accepted it with alacrity and hailed it as a considerable diplomatic victory. Now what is necessary is to find some concessions which will be sufficiently matters of form for Great Britain to be able to grant them without real sacrifice and sufficiently matters of substance for Nahas Pasha to be able to claim that he has secured better terms than Mahmoud did. Such adjustments have been effected before this in the history of diplomacy.

Prospects in Poland.—The declaration of policy by the new Polish Prime Minister, M. Bartel, indicates a change for the better in the Parliamentary situation. The late " Government of Colonels " regarded the Seym as simply a necessary nuisance—and necessary only because Marshal Pilsudski had for some reason stopped short of abolishing it. M. Bartel is in some respects a Pilsudski man. If he had not been he would not have been invited to return to office. But he is at the same time distinctly a Parliamentarian, and his purpose will clearly be to avoid the kind of crisis which led to the recent adverse vote and the consequent downfall of the Switalski Cabinet. The two tasks immediately before deputies are the adoption of the Budget and the amendment of the Constitution with a view to giving more power to the executive. The Budget will be dealt with by the appropriate committee, and the Government should have no difficulty in getting it through. As to the Constitution, a committee of the Seym has a Government draft and an Opposition draft before it, and the elaboration of a new document on the basis of the two proposals will continue. Discussion will be lengthy, and in the end the Bartel Cabinet will have to choose between accepting the committee's conclusions and laying before Parliament a new Constitution of its own. By that time the general political situation may have evolved in one direction or the other. There is every indication that M. Bartel will ride the Seym with as easy a rein as possible. He has no Governmental majority behind him, and will certainly not go out of his way to raise issues calculated to provoke a straight vote between Government and Opposition. Altogether the political sky in Poland is clearer, though while Marshal Pilsudski holds the stage it is never likely to be cloudless.

A Banker on Rationalisation.—The Hon. Rupert Beckett, deputy chairman of the Westminster Bank, used the occasion of his inauguration as President of the Manchester and District Bankers' Institute to refer at some length to the attitude of the British banks towards the rationalisation of industry. After pointing out some of the implications of rationalisation, including the writing off of existing superfluous assets and the need of the new combine for fresh financial resources, he gave it as his opinion that the banks would not only have to forego some portion of the advances made by them to individual firms in the past, but would also be asked to provide initial working capital for the new combine. Here Mr Beckett held that the banker was up against a difficulty. On the one hand, he had to preserve a due proportion between advances and deposits, and he emphasised this point by recalling that already the proportion has substantially exceeded 50 per cent. On the other hand, the success or failure of the rationalised concern must depend on its control, on the technical more than on the financial side; and here the banker was being asked to decide on information which usually was incomplete. Mr Beckett was clearly anxious to respond sympathetically to demands for help in connection with rationalisation, but he apparently considered that the extent to which the English banking system was based on deposits repayable on demand or at short date made it difficult for the banks to make long-term advances as was the practice in Germany. Again, he quoted figures showing that the proportion of capital to deposits was higher in German than in English banks, and this, too, rendered it easier for German banks to participate in industry. In short, his main thesis was that under the present system British bankers were near to saturation point as regards loans and advances. He admitted that the prosperity of the British banks was bound up with the legitimate developments of industry, but there he stopped. How far the British banking system can be developed to meet the changing needs of industry without sacrificing its present safety and elasticity is a question that is rapidly becoming one of the most important before the country to-day.

India's Economic Development.—The keynote of the important paper recently read by Sir Basil Blackett before the Indian section of the Royal Society of Arts was appreciation of the great potentialities of India. After reminding his hearers that British India is no more to be regarded as an economic unit than is the Continent of Europe, though one is obliged for convenience' sake to speak of it in this way, and is partly justified in so doing by the existence of a single government and a single tariff, Sir Basil Blackett proceeded to examine the causes of India's extreme poverty. Dismissing, as baseless, the prejudiced view sometimes put forward, that it is due to arrested political and economic development as a consequence of British rule, he attributed it broadly to the fundamental conservatism of India's social system and to the indifference to material progress which has its origin in religious causes. From the time of Lord Curzon onwards, however, the Government of India has set itself actively to encourage a better-balanced economic organisation, and statistics of production and consumption show the substantial progress of India's wealth since 1900. That India's external trade has grown by only 49.1 per cent. since 1913, while that of the world has increased 66.2 per cent. is regarded by Sir Basil Blackett as a sign, not of India's backwardness, but of her increasing self-sufficiency. In contrast to the fear expressed from time to time in some quarters that the growing industrialisation of India and the East in general constitutes a threat to the prosperity of older manufacturing countries, Sir Basil Blackett takes sound, long-sighted views. " The next few decades," he said, " may in all probability see the rapid growth in the world of a small number of large economic units, consciously moving towards more intimate economic union. There is no need to picture these units as mutually hostile and antagonistic. Even if they seem to be competitive, their differentiation may well be regarded as little more than a reasonable division of labour with a view to better economic results, valuable in helping mankind to avoid excessive standardisation, and part of the process of advance towards peaceful co-operation throughout the world." Sir Basil Blackett is anxious to see Indian co-operation secured with that goal in view. Among the great immediate needs which he outlines, in order that India's vast potential resources may be developed to the advantage of herself and the world, are closer co-operation between British and Indian business men, more capital, and, above all, the abandonment of what he calls " mediævalism " and the adoption of such Western methods and standards as are capable of the profound modification necessary to adapt them to Indian religious conditions and to enable India to profit by them while yet retaining her essential individuality. The results of the impingement of the West on India are slow to mature. It is doubtful, as Sir Basil Blackett remarked, if 20 million out of her 320 million inhabitants are aware of the passing of the Government of India Act of 1919, and the emphasis laid recently by Earl Russell—at the cost of a needless storm in the political teacup—on the length of the road towards her full economic and political development yet to be travelled by India indicated not " reactionary opinion " but a simple sense of reality. As recent history in Afghanistan has proved, attempts to accelerate injudiciously the modernisation of Eastern countries may have unexpected and unwelcome results. None the less, the economic Westernisation of India is a process which, however slow it may be, should ultimately bear fruit in kindling among the masses desire for an ampler and better material life. Given the awaking of that desire as a condition precedent, and given India's willingness to draw on England's assured goodwill for the help and co-operation which she needs and is likely to need, then India's economic growth may yet surprise the world by its rapidity.

December Overseas Trade.—The last month of 1929 was by no means satisfactory in respect of overseas trade, as the following table shows:—

MONTH OF DECEMBER.
(000's omitted.)

	1929.	Inc. or dec. on December, 1928.		Inc. or dec. on December, 1927.	
	£	£	%	£	%
Imports	106,575	+ 5,123	+ 5·0	+ 1,166	+ 1·1
British exports	58,430	− 1,964	− 3·3	− 404	− 0·7
Re-exports	7,938	− 1,142	− 12·6	− 2,372	− 23·0
Total exports	66,367	− 3,106	− 4·5	− 2,776	− 4·0
Excess of imports over total exports.	40,208	+ 8,230	+ 25·8	+ 3,844	+ 10·1

Of the increase of over £5 million in imports, as compared with the previous December, £3.3 million was spread over manufactured articles and there was a rise of only £0.3 million in the raw materials class. British exports were 3.3 per cent. less than in December, 1928, the principal falls occurring in textiles, vehicles and oils. The substantial fall in re-exports, as compared with the preceding December, occurred principally in the raw

materials class. Textile materials, hides and skins, rubber, timber and minerals were the chief contributors to this decline. The figures for the twelve months ending December 31st are discussed in a leading article.

British Coal Exports.—The trade returns for 1929, a general survey of which will be found in a leading article, enable an interesting comparison to be made between annual exports of British coal in the past three years and the corresponding results in the year preceding the 1926 stoppage:—

AVERAGE MONTHLY EXPORTS.

	Thousand tons.	Value per ton f.o.b. s. d.
1925	4,235	19 10
1927	4,262	17 10
1928	4,171	15 7
1929	5,022	16 2

Up to the end of 1928 the policy of price-cutting bore no fruit in a larger volume of shipments, but in 1929, after the stimulus given to demand by the abnormal frost in February-March and the consequent dislocation of Continental coal traffic, British exporters have won back a substantial proportion of lost ground, while average prices have shown a firmer tendency. The course of trade with our principal foreign markets is indicated in the following table:—

AVERAGE MONTHLY EXPORTS.

Destination.	Tonnage.				Value per ton f.o.b.			
	1925.	1927.	1928.	1929.	1925.	1927.	1928.	1929.
					s. d.	s. d.	s. d.	s. d.
Scandinavia (a)	605	492	366	498	17 2	15 9	13 10	14 1
Germany	347	353	447	460	15 6	14 8	13 3	13 9
Holland	127	193	203	260	17 2	15 5	13 10	14 2
Belgium	207	186	188	345	16 8	15 3	12 11	13 7
France	853	772	755	1,087	19 9	17 4	15 5	15 11
Italy	568	566	552	591	20 4	18 7	16 0	16 11
S. America (b) ...	351	400	398	420	23 4	20 1	17 5	17 11
Spain.....	146	197	156	149	21 10	19 4	16 7	18 1
Egypt	164	183	182	189	21 10	18 9	16 2	16 6

(a) Norway, Sweden Denmark. (b) Brazil, Chile, Uruguay, Argentina.

It will be seen that in 1929 the greatest increase occurred in sales to France, Belgium and Scandinavia. Purchases by the last-named market, however, were still much smaller than in 1925, despite a reduction of 3s. 1d. per ton in average prices, and it is significant that recovery of lost trade with Italy, South America, Spain and Egypt, is relatively slow. The figures disclose a curious absence of visible relation between the movements of price and volume of sales.

The Quarter's Shipbuilding.—The shipbuilding returns for the last quarter of 1929, issued this week by Lloyd's Register, disclose an increase in the volume of work in hand which is somewhat surprising in view of the acute depression which has ruled since October in the cargo-freight market. The total tonnage under construction in the world at the end of the year amounted to 3,111,000 tons (as compared with 2,817,000 on September 30th), of which 1,738,000 tons represented motor-ships and 1,350,000 tons, steamers. In British yards 499,000 tons (against 360,000 tons in the previous quarter) were returned as "commenced," and 473,000 tons as launched. Launchings abroad amounted to 370,000 tons, and commencements to 477,000 tons, in comparison with 301,000 tons in the September quarter. To a large extent the revival in the shipbuilding industry's activity is the immediate result of substantial orders for new tankers placed during the autumn, there being now 628,000 tons of this class of vessel building in the world, as compared with 401,000 tons three months ago. With reference, however, to the improved competitive power of British shipbuilders, it is interesting to note that of the 1,560,000 tons now under construction in British yards—a figure which compares with 1,448,000 tons at the end of September, and 1,243,000 tons a year ago—161,000 tons are intended for the Dominions, 243,000 tons for Norway, and 253,000 tons for other foreign shipowners or for sale.

Iron and Steel Production in December.—Owing largely to the Christmas holidays, but partly also to a definite recession, steel production in December, at 661,200 tons, was the lowest for any month of the year, production in November having been 815,000 tons, and in the previous December 683,100 tons. The production of pig iron, which is a continuous process, and therefore unaffected by holidays, showed a slight rise from 631,400 tons in November to 643,000 tons in December, but the rise was due to the extra working day. Comparison with October, the previous 31-day month, shows a decline of 45,700 tons; and the number of furnaces in operation declined by one during the month to 162. The December production brought the total for the year to 7,579,500 tons of pig iron and 9,654,700 tons of steel. In the case of pig iron this is the highest total since 1920, and, in the case of steel, the highest since 1917. The following table gives the production of pig iron and steel and imports and exports in each quarter of 1929 compared with 1928:—

UNITED KINGDOM PRODUCTION OF PIG IRON AND STEEL INGOTS AND CASTINGS, IMPORTS AND EXPORTS OF IRON AND STEEL

	Production.		Imports.	Exports.
	Pig Iron.	Steel Ingots and Castings.		
1928:—	(In thousands of tons.)			
1st Quarter	1,703·9	2,181·9	842·3	1,058·5
2nd ,, ...	1,718·3	2,104·8	700·0	1,069·2
3rd ,, ...	1,560·7	2,032·8	675·9	998·0
4th ,, ...	1,627·2	2,200·2	677·7	1,135·6
Total	6,610·1	8,519·7	2,895·9	4,261·3
1929:—				
1st Quarter	1,674·0	2,399·4	586·4	1,151·4
2nd ,, ...	1,923·9	2,483·3	753·4	1,089·4
3rd ,, ...	2,018·5	2,406·0	721·5	1,033·5
4th ,, ...	1,963·1	2,366·0	755·3	1,105·1
Total	7,579·5	9,654·7	2,816·6	4,379·4

Imports of iron and steel in December amounted to 256,400 tons, compared with 250,400 tons in November and 183,600 tons in December, 1928; the total imports for the year amounted to 2,816,600 tons. Imports of pig iron, though still less than 5 per cent. of the total, are apparently growing. Having averaged 7,300 tons per month in the first eight months of the year they have averaged 14,700 tons in the last four months, most of the increase being due to imports from India. Exports of iron and steel in December amounted to 332,000 tons, and were 50,700 tons less than in November. This brings the total for the year to 4,379,400 tons, which is the highest total since 1923, when exports, stimulated by the Ruhr occupation, amounted to 4,317,500 tons. Exports of pig iron in December amounted to 34,700 tons, and for the year to 455,600 tons. Excluding pig iron, exports of other iron and steel products are practically equal to exports in 1913.

The South-West England Electricity Scheme.—The South-West England and South Wales Electricity Scheme, published on January 13th, is the final regional scheme issued by the Electricity Commissioners and completes the national "grid." The area covered by it includes the whole of South Wales, the counties of Hereford, Monmouth, Somerset, Devon, Cornwall, Dorset, Wiltshire, and Southampton; parts of the counties of Berkshire, Gloucester, Oxford and West Sussex and the Isle of Wight. The few districts which remain outside the range of the national scheme are already adequately served by large single undertakings. The South-West England scheme is by far the largest in area, and covers about 17,234 square miles, whereas the areas covered by the preceding schemes range from between 5,000 and 9,000 square miles. Its population density is, moreover, comparatively small; at the last Census the average density was about 350 persons per square mile, compared with an average density of about 810 per square mile for the other schemes. The consumption per head of the population is

a little more than 85 units per annum, compared with an average of 172 units for the whole country. The task of developing this area will, therefore, necessitate heavy capital expenditure on transmission, and an adequate return to this capital may conceivably be postponed for a considerable time. The actual expenditure to be incurred by the board up to 1937 will amount to £4,163,484 for transmission lines and sub-stations and £764,450 for the standardisation of frequency. A further £1,934,360 is to be spent by the owners of existing selected stations on extensions, bringing the total expenditure by 1937 up to £6,862,294. The extensions after 1937 are to amount to 382,500 kw. at a cost of about £5.2 million, bringing the grand total for the scheme to about £12,000,000 for the next 12 years. In addition to the difficulties caused by the sparsity of population, is the fact that at present there exist 165 authorised undertakers in the area, owning between them 107 public generating stations of an estimated average capacity of 3,000 kw.; that is, considerably below the minimum capacity for economic operation. Of these, six stations are to be selected, these being Portishead (Bristol Corporation), Upper Boat (South Wales Power Company), Newport, Cardiff, Southampton and Hayle (Cornwall Power Company), while two new stations will be built, one at Southampton Water and the other in South Wales. Eleven other stations will operate under temporary arrangements, independently of the scheme. The estimated savings in capital expenditure to the undertakers resulting from the scheme will be in the neighbourhood of £1,400,000 up to the year 1937. These savings will result, according to estimates, in a fall in the price of current from 0.418d. per unit in 1931 to 0.380d. in 1936, a figure which is equal to that for North-West England and Mid-East England. The area covered by the scheme includes the mining and industrial centres in South Wales, the shipping centres at Portsmouth, Southampton and Bristol, and a vast amount of rural territory in the surrounding districts. These differences in the nature of the area to be served increase the difficulties in the task of distribution. An examination of the map of the scheme shows that the transmission lines have skirted the fringes of the area they are intended to serve. The connection between Southampton and Bristol, running through Salisbury and Bath, projected in the first annual report of the board, has not been carried out, in spite of the undoubted value of this line as a nucleus for developing the area of Wiltshire and Dorset. Other important areas which have not been touched are the whole of North Devon and the greater part of South Wales, except Glamorganshire. The scheme, therefore, in view of the area to be covered, appears singularly unenterprising, and seems to have failed to make full use of the opportunities afforded to it as a pioneer in electrical supply development.

Milk Prices.—The uneasiness felt by the public at the time of the publication of the 1929-30 contract between the London dairymen and the milk producers will be in some degree set at rest by the latest report of the Food Council. The details of the agreement differed very much from those of the preceding contract. In 1928-29 milk was divided into two classes, "liquid" and "manufacturing" milk. This year it is divided into three classes, based on the degree of variation between the quantity actually supplied by the producer and the quantity estimated by him at the beginning of the year as his probable daily delivery. It is therefore very difficult to compare the effects on producer, distributor and consumer of the two contracts, and as far as Class III. is concerned it is impossible, since the illustration appended to the 1928-29 agreement did not allow for such wide variations as it permits. Milk bought in this class is, however, an unimportant part of the London trade, and the Food Council, in undertaking the difficult task of comparison, feels justified in leaving it out of account. The conclusion drawn from the results of the comparison are:—First, that while the apparent reduction in price, under the 1929-30 agreement to producers in classes I., II. and III. is ½d., ½d. and ¾d. per gallon respectively, there is an increase of approximately 0.034d. in Class I. when the effect of the new terms is taken into consideration, and a decrease of only 0.102d. in Class II.; second, that if effect is given to the announcement by United Dairies, Ltd., that "unless anything unforeseen arises, the retail price of milk in London will be 1d. per quart cheaper for one month next summer," retail prices in 1929-30 will be the same as those recommended by the Food Council for 1928-29, and London producers who buy direct from producers in Class I. and II. will be involved in a reduction of their margin varying approximately between 0.222d. and 0.333d. per gallon, which amounts to from 66 to 100 per cent. of the reduction recommended for the preceding season.

The United States and Haiti.—President Hoover's recommendation to Congress that a commission be sent to Haiti, with a view to the formulation of a more definite policy, coincided with disturbances in Haiti which dramatically illustrated the need for such measures. For a century before the American occupation in 1915, the Government of Haiti had been as unstable and inefficient as may be expected when a population descended from imported negro slaves attempts to govern itself according to the democratic political system of France. There was certainly a case to be made out for American intervention, but it is difficult to defend the manner of that intervention, which, according to a special information bulletin of the Foreign Policy Association, was accompanied by the exercise of influence in the presidential election of 1915, the suppression of the National Assembly, the forcing on Haiti of a new constitution and the control of the Press. During the term of office of President Dartiguenave the Haitian authorities persistently resisted what they regarded as encroachments by the United States officials on powers not conceded to them by the treaty of 1915, but on the expiry in 1922 of his term of office he was succeeded by President Borno, who has co-operated cordially with the United States authorities, and has been by them in turn supported against Haitian opposition. Under this *régime*, it is generally conceded, order has been restored, an excellent system of communications established, an efficient public health service instituted, and great progress made in financial reorganisation. On the other hand, the Haitians contend that the development of their educational system has been hampered and that their foreign trade has declined under American control. The American defence against the allegation of failure to develop the educational system is that the native is trying to insist on a type of cultural education for which he is unsuited, and that their method of concentrating on technical instruction is in the true interests of the peasant population. The principle underlying this argument is also at the root of the fundamental defect of the American administration. Believing that the Haitians are inefficient and untrustworthy, the United States officials have conducted their efficient but complicated system of administration with little attempt to educate the natives politically, so that on the termination of the occupation in 1936 the Haitians will be left in charge of a complex machine without any trained mechanics to operate it. While some Americans view this situation without alarm, and others, as a council of despair, advocate immediate withdrawal before the natives are further demoralised, an intermediate view is well expressed by the *New Republic*, an American journal of liberal views:—

> "There is no time to lose if we are to evacuate the country by 1936. General Russell should be removed immediately in favour of a civilian of broad sympathies and tact; the Marine brigade should be withdrawn; the present system of administration should be radically organised so as to give greater responsibilities to Haitian officials; the Haitian Legislature and National Assembly should be restored. As long as the United States remains in control it should see to it that elections are fairly held. It may well be that the Haitian Government will ask the United States, after its withdrawal, to continue the collection of Customs. But the American people should make sure, if we undertake this task, that it is at the genuine request of the articulate portion of the Haitian people. . . ."

It is unlikely that the proposed committee of inquiry will go the whole way with this programme, but it is to be hoped that its findings will be along similar lines.

Profits in Canada.—The November issue of the Monthly Review of the Bank of Nova Scotia contains an original analysis of variations in Canadian corporation profits. The aim has been to portray, not the fluctuations in the actual profits of a given group of companies, but the varying "profitableness" of industry; thus changes due to the issue of new capital or to reorganisation of capital have been eliminated by the construction of chain indices from 125 reports. Net earnings were taken as the sum of bond interest, dividends on preferred and common stock, and surplus carried forward. It is difficult to see why reserve allocations and payments of preferred interest arrears were expressly excluded, since, with the exception of sinking funds against expiration of leases, etc., these payments have to be made out of net earnings; their exclusion obviously diminishes the amplitude of the variations, because in a year of good profits heavier allocations are made to reserves and interest arrears are paid off on preferred stocks. The compiler of the indices notes that as so large a proportion of Canadian industry takes the form of small private enterprises the results must be to that extent imperfectly representative of Canadian profits as a whole. The following are the summarised figures:—

Year.	Total net Earnings.	Common Dividends plus Surplus.	Dividends on Common Stock.	Surplus Carried Forward.
1920	98·0	129·3	96·2	154·9
1921	51·5	21·2	92·9	*deficit*
1922	81·3	79·6	89·3	54·8
1923	96·6	100·4	96·3	112·0
1924	91·3	90·5	92·1	86·9
1925	107·8	103·1	106·8	94·2
1926	125·7	126·5	116·3	152·1
1927	143·2	141·5	140·4	142·4
1928	161·4	165·2	158·6	178·8

In each case 100 = the mean of the period 1922-26. It must be remembered that these are chain indices, and that therefore the "mean" in this case is not an average profit but an average of what are already index numbers. Apart from the growing prosperity of Canadian industry, the most notable feature of this table is the steadiness of common dividends, which were conspicuously less variable than aggregate net earnings. The compiler of the analysis proceeds to make some very interesting statistical comparisons between these figures and other industrial indices. Noteworthy is the fact that "variations in the aggregate of common dividends and surplus agree more closely with variations of employment than with variations in either the volume of production or the volume of business." *Most important*, too, is the extremely close correlation between variations in the average rate of dividend and variations in the average price of common stocks. Indeed, if the respective indices are plotted in terms of "one standard deviation from the mean," the two curves almost coincide, but as statisticians well know this only indicates that changes take place in the same direction and bear roughly the same proportion to one another; in fact, if the curves are plotted in the ordinary way it is plain that prices of common stocks have been advancing more rapidly than common dividends. It will be highly interesting to observe the effect of the stock market break on these valuable figures.

The Canadian Exchange Situation. — Our Ottawa correspondent writes:—*Some light has now been thrown* upon Canada's relations to the gold standard which have been arousing critical comment abroad. On December 24th the *Toronto Mail and Empire* printed a despatch from its Ottawa correspondent showing that whereas on November 30, 1928, Canada's gold reserve had stood at $88,302,485, it had on November 30, 1929, fallen to $62,827,668, which is a decline of $25,474,817. Now the law prescribes that there should be a gold reserve of 10 per cent. against the deposits in the Post Office savings and Dominion savings banks, which on November 30 amounted to $25,837,536; on this account, therefore, a gold reserve of $2,582,753 was necessary. The Dominion note issue on November 30th was $211,577,626, and of this total $90,150,000 had been advanced to banks, leaving a sum of $121,427,626, for which the following statutory gold reserve should have been provided; 25 per cent., or $12,500,000 for the first 50 million dollars' worth of Dominion notes, and 100 per cent., or dollar for dollar, on the $71,427,526 worth of notes issued above the 50 million dollar limit. Therefore, on November 30th the gold reserve requirements were as follows:—

	$
For postal and Government savings deposits	2,582,753
For first 50 million Dominion note issue	12,500,000
For the balance of the Dominion note issue	71,427,626
Total	86,510,379
Amount of gold reserve	62,827,668
Gold deficit	23,682,711

The Government, therefore, admits by its own official figures that its gold reserve is more than 23½ million dollars, or nearly 27 per cent. below the statutory requirements, which were designed to keep Canada's note issue on a gold basis. The Finance Minister can expect an attack from the Opposition on this subject as soon as Parliament meets, but meanwhile the remedy is in the Government's own hands. It can either go into the market and buy enough gold to make up the deficiency or it can force a reduction of the note issue until the statutory requirements are conformed to. Mr Dunning, the new Finance Minister, evidently intends to rely upon the latter policy, and probably entertains the hope that sales of grain will release bank credits now immobilised, for in his first address since he assumed his new office he intimated that the Government intended to pay off a Dominion issue of 20 million dollars which matures on February 21st.

Indian Imports from the United Kingdom.—We discussed, a few weeks ago, a speech by the Senior British Trade Commissioner in India, in which he examined the British position in the Indian market. Detailed figures illustrating this position are now forthcoming in the latest report* on Indian trade. The percentage distribution of Indian imports by countries of origin has undergone substantial changes during the past few years, as the following table shows:—

IMPORTS.

Country of Origin.	Per cent. of Total. 1913-14.	1926-27.	1927-28.	1928-29.
United Kingdom	64	48	48	45
Japan.....	3	7	7	7
United States	3	8	8	7
Java	6	6	6	7
Germany	7	7	6	6
Australia	1	1	1	3
Belgium	2	3	3	3
China	1	1	2	2

Ground has been lost by this country in the supply of nearly all India's principal imports. In 1928-29 India imported 67,15,16 thousand rupees' worth of cotton goods, which, though much less than in the preceding year, still formed 26½ per cent. of her total imports. The United Kingdom's share in that part of this trade, which consists of piece-goods, was 97 per cent. before the war and fell from 78 per cent. in 1927-28 to 75 per cent. in 1928-29. On the other hand, the United Kingdom has since 1925-26 been ousting Japan as a source of Indian imports of cotton twist and yarn. In 1925-26 their percentages were, United Kingdom 31, Japan 65; in 1926-27, 41 and 54; in 1927-28, 39 and 32, and in 1928-29, 53 and 17. As far as iron and steel are concerned, the United Kingdom has been holding her own of recent years as an exporter to India. The subjoined table illustrates changes in the position:—

PERCENTAGE DISTRIBUTION OF INDIAN IMPORTS OF IRON AND STEEL.

	United Kingdom.	Belgium.	France.	United States.	Germany.
1913-14 ...	60	17	*a*	2	20
1920-21 ...	70	10	*a*	16	2
1925-26 ...	55	26	5	3	8
1926-27 ...	48	30	4	3	9
1927-28 ...	57	26	4	1	7
1928-29 ...	56	29	5	2	6

a Less than 1 per cent.

A similar analysis of the imports of machinery shows insignificant changes in the shares of countries other than Great Britain and the United States, but whereas these were 90 and 3 per cent. respectively in 1913-14 they were respectively, in 1928-29, 76.5 and 11.3 per cent. Imports of motor-cars from the United Kingdom are growing, but not as rapidly as those from the United States and Canada. Out of a total of 19,567 in 1928-29, 3,645 came from this country, 7,943 from the United States, and 6,568 from Canada. In hardware our principal competitor is Germany, whose share of India's imports has risen to 32 per cent. from 18 per cent. pre-war, while the United Kingdom share has fallen from 57 to 36 per cent. The remaining figures further illustrate the fact that the position of the United Kingdom in the Indian market is very much less satisfactory than before the war, and is still being challenged by several countries whose competition is serious. The causes and the possible remedies for this state of affairs were discussed in the speech already referred to.

* *Review of the Trade of India in* 1928-29. (Calcutta) Government of India Central Publication Bureau, No. 2188. 5s.

Canadian Bank of Commerce.—The balance sheet of this institution, dated November 30, 1929, reveals several interesting changes in comparison with a year ago. Deposits, it is true, are virtually unaltered, but there have been substantial increases on the liabilities side of the account in respect of letters of credit and balances due to banks and banking correspondents abroad. This last item in particular has increased from £10.0 to £14.9 million, and it is conceivable that foreign bankers have lately been induced by the depreciation of the Canadian dollar to let their balances with their Canadian agents accumulate rather than withdraw them and incur an appreciable loss on exchange. As regards the Bank of Commerce's assets, cash is £1.4 million higher at £27.6 million, but loans and discounts inside Canada have risen from £64.4 to £70.3 million and call and short loans outside Canada from £16.2 to £21.6 million. Other Canadian banks have had a similar experience during the year covered by the accounts, and it is clear from these net increases over the whole year that the expansion in Canadian business and also in business on Wall Street during the first ten months of the year had at the end of the year not yet been neutralised by the set-backs experienced first on Wall Street and then in Canadian business during the final six weeks. To judge the full measure of the Wall Street slump and its reactions upon business both in Canada and the United States, we must await the bank results of the current year.

Bank of New South Wales.—The outstanding features of the annual report for the year ended September 30th last was the fall of £199,118 to £994,825 in the net profit, and the payment of the usual 10 per cent. dividend without the bonus of 2½ per cent. which was declared for the three previous years. A summary of the accounts for 1928 and 1929 appear below:—

	Sept. 30, 1928. £	Sept. 30, 1929. £
Capital.....	7,500,000	7,500,000
Reserve Fund.....	5,900,000	6,150,000
Balance forward.....	168,654	163,478
Total assets.....	88,982,585	90,806,297
Liquid assets	87,757,585	89,356,297
Cash holdings	15,285,983	11,193,049
Loans and bills discounted	51,353,368	59,427,960
Deposits	64,514,555	66,056,052
Notes in circulation	633,262	584,091

The reduction in the dividend was not unexpected, as the year was a bad one owing to the industrial depression in Australia during 1929. The industrial situation of the country is reflected in three items in the balance sheet, viz., the slight increase of £1,541,497 in deposits, the growth of £8,074,592 in bills discounted and advances, and the decrease of £2,074,566 in investments. The percentage of liquid assets to liabilities has fallen from 122.7 per cent. to 120.9 per cent. The greater part of the chairman's speech was occupied in dealing with the effect of the recent Australian strikes on the country as a whole.

New Life Assurance Business.—Returns have been published during the past week by seven more offices of the new business results achieved during 1929. They are as follows:—

Office.	1928.	1929.
Alliance	2,922,678	3,026,938
Life Association	725,670	1,133,890
London Assurance	1,746,180	1,978,653
Scottish Amicable	1,267,028	1,235,026
Scottish Life.....	1,241,384	1,339,441
Scottish Widows	3,173,220	2,899,000
United Kingdom Provident	3,109,870	3,335,080

Five of these offices have succeeded in increasing their totals while two show declines. Of the latter the Scottish Widows' figure is some £270,000 less than in 1928, but the 1929 total is still well above the level of 1927. The decline in the case of the Scottish Amicable, though small, is the second successive decrease reported by this office. The most spectacular increase is that recorded by the Life Association, but here comparison is vitiated by the fact that the 1928 total is in respect of a broken period of nine months.

Friends' Provident and Century Life Office.—It has been announced by this company that in respect of the five years ended December 31, 1929, a reversionary bonus at the rate of 42s. per cent. per annum compound will be allotted to all with-profits policies then in force. This announcement is made in advance of the publication of the results of the valuation, and no figures are, therefore, yet available, but the fact that the rate of bonus exceeds by 6s. that declared for the preceding quinquennium is a sufficient indication of the directors' confidence in the outcome of the valuation. Moreover, an interim bonus payable in respect of claims occurring before the next valuation has been declared at the same rate, viz., 42s. per cent. per annum compound. Coupled with the announcement of the rate of bonus is the intimation that valuations will in future be made triennially instead of quinquennially. Consequently the next valuation will be due to take place as at December 31, 1932, and will therefore coincide with the centenary of the office, a circumstance which will give rise to pleasurable anticipations of a special distribution to mark that event.

The United Kingdom Provident Institution.—Periodical valuations by this institution are made triennially, and the last triennium ended on December 31, 1929. A preliminary announcement has just been made as to the rates of bonus to be declared in respect of that triennium, and these, together with the corresponding rates in the preceding valuation period, are set out below:—

	1924 to 1926.	1927 to 1929.
Whole Life Assurances:	%	%
Temperance section	40/–	45/–
General section.....	37/–	41/–
Endowment Assurances:		
Temperance section (original term 25 years or over).....	39/–	43/–
Do., do., under 25 years	37/–	41/–
General section, all terms	37/–	41/–

These bonuses will be calculated on the sums assured, and existing bonuses, and are therefore compound. The rates now declared represent increases varying from 4s. to 5s. per cent. over the corresponding rates declared at the preceding valuation three years ago.

At a meeting of the Royal Statistical Society, to be held in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C.2, at 5.15 p.m. on Tuesday, January 21st, Mr. Barnard Ellinger, C.B.E., will read a paper on "Japanese Competition in the Cotton Trade."

A meeting of the Royal Society of Arts, John Street, Adelphi, W.C.2, will be held at 8 p.m. on Wednesday, February 5th, at which Sir W. Clare Lees, O.B.E., will speak on "Some Aspects of the Question of Trade with South America."

Overseas Correspondence.

UNITED STATES.—SHARE MARKET—BUSINESS—MONEY.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 3.

THE share market is still continuing its indecisive movements on a small volume of trading. Smart little rallies have occurred from time to time with the shorts evidently finding a small amount of stock available on recessions; on the other hand, advances are curbed by profit taking, liquidation of stale holdings and by renewed short selling. Existing positions are well defended, but on the other hand buying is unhurried. Meanwhile, the year-end expressions of opinion on the business outlook recognise the sharpness of the recession that has already occurred, and generally take the view that a recovery will begin in the spring or the autumn. The magnitude of the setback is illustrated by the situation in the steel industry, where output during December probably did not amount to much more than 50 per cent. of capacity, compared with a peak rate of 100 per cent. reached during the summer. During the last week of the year the rate was probably not much above 40 per cent., as that week reflected the effects of year-end shutdowns and of consumers' desire to reduce stocks to a minimum at the end of the year. The steel trade feels more optimistic now, however, and expects operations to reach 60 or 65 per cent. of capacity during the near future. This activity will be based on current consumption and not on any desire to accumulate stocks. Demand from the automobile industry is increasing gradually as the motor makers are getting into production on new 1930 models. Structural steel business is excellent, and there is an ample supply of railroad business on the books. Prices are holding up fairly well; there is weakness in a few directions but no sign of a general decline. If steel prices can be maintained during the next month or six weeks, the trade will feel increased confidence in the outlook.

The customary late December tightening in the money market brought a 6 per cent. rate on the Stock Exchange, which to-day gave way to a 5 per cent. quotation. Further easing of this kind of money is expected soon, as the return flow of funds to this centre generally goes on during the early part of January at a rate greater than that at which the Reserve Bank can dispose of its government stocks without injuring the market for them. Part of the ease will probably be temporary. As to the longer-term outlook for money, anticipations are somewhat conservative. For one thing, gold exports, which are expected to go moderately further, will act as a check on ease. For another, the customary reduction in the volume of outstanding paper eligible for rediscount with the Reserve banks and so available as reserve against circulation, will tend to reduce the amount of "free gold" in the hands of the system. There is some difference of opinion as to whether as much as another $200,000,000 gold could be spared under existing circumstances. Aside from the assistance that the Reserve banks might give to a tendency towards easier money, which will be limited by the "free gold" position, any further progress towards a comfortable money position would have to come from liquidation of member bank loans on securities. These loans expanded rapidly during the share market panic and the subsequent reduction has left them at about the level existing before the break. The position of the large banks is quite strong in this respect; but there are many small institutions throughout the country that have probably lent almost to the limit of their capacity on collateral, on which the margin is not great. These loans are as a rule backed by assets or general credit rating in addition to the specific collateral pledged and their liquidation is not likely to be forced. At the same time the existence of these loans will probably continue to curb rallies for a while; and the gradual paying off of these loans will undoubtedly absorb some of the capital that might otherwise find its way into the new issues market. In fact, these loans are one reason why a conservative view is being taken of the prospects of the bond market.

This week's Federal Reserve statements are complicated by the holiday demands for currency and the year-end settlements. With the passage of Christmas trade circulation has fallen and reserves have increased. Discounts have fallen sharply; and increases in bills and governments purchased in the open market reflect the Reserve banks' willingness to help the market. The total volume of credit being extended is moderately down. Further contraction will be shown by the statements of the next few weeks. An increase of $96,000,000 in brokers' loans reflects year-end transactions.

FRANCE.—REPARATIONS—REVENUE—BANK STATEMENT.

(FROM OUR CORRESPONDENT.)

PARIS, January 5.

FRENCH opinion is now confident that a satisfactory agreement will be reached at the Hague, and that Dr. Schacht has received a definite quietus, so far as any possibility of his acting as a German financial dictator is concerned. In non-official circles attention is closely focussed on the preparatory steps that are being taken for the launching of the first part of the great international loan to be issued for the purpose of mobilising the "unconditional" portion of the German reparation payments. In reliable quarters here it is stated that there is every probability that the first portion of the big loan will be issued during May next, and the amount is asserted to have been provisionally fixed at 1,000,000,000 Swiss francs, or £40,000,000. This is a small proportion of the capitalisation of the "unconditional" part of the German payments, which is fixed by the Plan itself at 660,000,000 marks a year, though this has been slightly altered by the Hague Protocol of last August. When the total of the initial amount to be offered is divided between London, New York, Paris, Berlin and the other centres in which it is to be offered simultaneously, the several amounts allocated must necessarily be comparatively small. The policy to be adopted, apparently, is to utilise this first issue as a kind of test loan, with a view to securing a reverberating success that shall result in a favourable reception for the subsequent offers. Considered opinion here regards it as quite possible, in view of the present general financial situation of the world, that the whole of the "unconditional" portion of the annuities will be successfully placed within the next four years. Rates of interest at present under discussion are reported as from 5½ to 6 per cent. The issue price, it is stated, will be a trifle below par.

It will be recalled that by far the greater proportion of the "unconditional" part of the German annuities are to come to France in reimbursement of the cost of reconstituting the devastated regions. Out of each "unconditional" annual payment of 660,000,000 marks (which will be equivalent to about one-third of each of the first 37 annual reparation payments), France should receive about 500,000,000 marks. The immediate transformation into cash, by means of the pending international loan (or loans), of the German future "unconditional" payments, would permit of the reduction of the French national debt by between 45,000,000,000 and 50,000,000,000 francs of capital (after allowing for various readjustments of interest, etc.), and also substantially relieve future Budgets of recurrent debt service burdens. The enormous effect the successful flotation of the "unconditional" part of the German payments will have on the whole French financial situation is too obvious to need comment. The transformation, at the same time, of so large a proportion of the German political debt into a purely commercial once, due to holders belonging to every country in the world, instead of merely to the French Government, may be expected to have an even more important effect on the future prospects of European peace as a whole.

The revenue returns for the last month of the year prove to be as satisfactory as those of its predecessors. The total yield in December from all budget sources (exclusive of the Postal Department and of the yield from tobacco and the special taxes diverted to the Caisse d'Amortissation) was 3,934,870,000 francs, of which 3,842,433,000 francs was obtained from "normal and permanent" sources (as against 3,564,661,000 francs in December, 1928, and 3,274,922,000 francs in 1927). The increase was partly due to the recent general rise in commodity prices, which naturally improved the yield from all *ad valorem* duties. In a note attached to the return the Finance Minister states that the yield for December was 449,000,000 francs in excess of Budget estimates, and thus brought the total excess revenue for the year to 6,605,000,000 francs. The Minister adds that 5,882,000,000 francs of this total has already been absorbed by supplementary expenditure already voted or to be voted, and that the balance may possibly be required for other similar projects. M. Chéron points out that the 5,882,000,000 francs of surplus revenue already utilised includes cover for the taxation relief granted during 1929, 1,000,000,000 francs for frontier defences, 1,500,000,000 francs towards the cost of the programme of productive national public works, 687,000,000 francs for increasing the pay of the State's civil and military servants, 300,000,000 francs for sufferers from public calamities, 156,000,000 francs for increasing military pensions for disablement, 118,000,000 francs for improving the food of the army and navy, and various other similar items.

The total yield for the twelve months was 47,780,000,000 francs in respect of the General Budget, in addition to which the Caisse d'Amortissement revenue amounted to 7,812,000,000 francs. "Direct Taxation" (which in French fiscal terminology comprises practically nothing but revenue from income tax) yielded during the year 13,900,000,000 francs, representing 82 per cent. of the demand notes served. The Caisse d'Amortissement, on its part, in addition to assuring the service of the National Defence Bonds, was able during the year to extinguish Rentes representing a capital value of 5,000,000,000 francs, and substantially to stimulate the Rente market. Perpetual Three per Cents. are now around 89, seven other Rente issues are above par (in some cases substantially so), and the 1918 Four per Cents. are expected soon to join them. All these factors are admirably favourable to the joint movement by the Government and the Bank of France to bring still lower the cost of both long and short-term money, and to restore to this country the financial prestige which she shared with Great Britain down to the 1870 *débacle*.

Last week's Bank statement, which brings the situation down to January 3rd, contains several new high record figures of more than ordinary interest. The total note circulation is returned at 70,288,000,000 francs, an increase of 1,718,000,000 francs on the week. This unusually large increase has excited some surprise, as three of the seven days of the week were after the close of the year and outside the period when extra supplies of currency would normally be required. The gold reserve shows an increase of 765,000,000 francs on the week (or well over £6,000,000), and is returned at 42,433,625,000 francs, or nearly 47 per cent. more than was shown in the first weekly statement after legal stabilisation. A decline of 1,398,000,000 francs in the total volume of creditor current accounts (including those of the

THE PENSION PROBLEM

A booklet issued by the Legal & General will assist you to solve your Pension Problem. It is entitled "The Pension Problem in Industry," and is the reprint of an address delivered by the General Manager of the Society to an important body of manufacturers.

A copy may be obtained on application to the General Manager,

LEGAL & GENERAL
ASSURANCE SOCIETY LTD.
10 FLEET STREET, LONDON, E.C.4

Treasury and the Caisse d'Amortissement) probably explains the bulk of the increase in the note issue. In the result, the proportion of gold cover for the Bank's sight engagements (although the total of these is shown as some 300,000,000 francs higher) stands at 47.96 per cent., against 47.26 per cent. on December 27th.

The index figures representing wholesale prices at the end of December is returned by the Statistique Générale as 588, as against 596 at the end of November, and 100 (gold) in July, 1914. The French paper franc figure, translated into pre-war gold terms, works out at 119, therefore, as compared with November figures of 134 for Great Britain, 147 for the United States, 135 for Germany, 127 for Italy, 120 for Belgium, 140 for Switzerland. The detailed figures are as follows:—

	Articles.	End of months of Oct.	Nov.	Dec.
General index figure	45	602	596	588
French products.....	29	624	627	621
Imported products.....	16	563	540	530
Foodstuffs	20	558	555	546
Raw materials	25	640	632	625

The figure representing the cost of living of a Paris workman's family of four persons (food, heating, lighting, clothing, rent and sundries) is returned for November as 565, as compared with an average figure of 519 throughout 1928, and 100 in 1913. The effect of the recent upward movement in rents is seen from the fact that the figure representing the cost of housing, which averaged 287 in 1928, is now 350. The Paris gold index figure works out at between 111 and 112 for the cost of living by this class of the people, as against 113 in Vienna, 167 in Great Britain, 153 in Germany, and 149 in Italy.

SWEDEN.—DISCOUNT RATE—EXCHANGE RESERVE—INTEREST POLICY—TRADE—STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, January 3.

DECEMBER brought at long last the discount reduction which would have been fully justified in October, and has been daily expected since then. Thanks to the generally favourable economic developments in Sweden throughout 1929—making it in some respects a record year—the money market has been almost constantly buoyant. The gradual tightening, which has been the outstanding feature in the international capital market, has influenced the Swedish situation only in a very slight degree. The explanation is that the instability evidenced on the international money markets and stock exchanges has caused a diminution of capital export from Sweden which, without such a deterrent, would no doubt have shown a substantial increase over the preceding year. Hence, it may even be questioned whether the raising of the Swedish discount rate to 5½ per cent. from 4½ per cent. at the end of September (at which figure it had stood since August, 1928) was really called for. But it is highly probable that the extremely high rates in London and New York would otherwise have given an added impetus to capital investments abroad, which the Riksbank did not deem desirable, more particularly in view of the approaching maturity of the American dollar loan of 73 million kronor on Decem-

ber 15th. It became, however, clear at a very early stage that no occasion existed for retaining the 5½ per cent. rate, since the trend of the international money markets had changed after the New York crisis. Notwithstanding this, the Riksbank maintained its rate until December 12th, on which date the third successive reduction of the London rate forced the Riksbank to take similar action. This was only a half-measure, however, as it applied only to the discount rate, whereas other rates were left unaltered. Not until Christmas Eve was information received that all rates were to be reduced to the level which had obtained before the September increase.

It is obvious that this somewhat rigid discount policy must have left some very marked traces on the money and exchange markets during December. In anticipation of the discount reduction the private banks naturally limited their rediscounting at the Riksbank as much as possible and realised instead their foreign holdings. There was all the more reason to do this in view of the magnitude of these holdings, which, again, was due to the favourable balance of payments. The result was that the Swedish kronor rose to an unduly high level. This tendency is usually discernible in the month of December, but this year it was more marked than usual. The Riksbank exchange reserve, which had already reached the record figure of 221 million kronor at the end of the third quarter and in October and November had grown further to 232 and 255 millions, jumped in December to 266 million kronor, notwithstanding the disbursement of 54 millions for the U.S.A. loan and five millions for gold purchases. If these transactions had not taken place the reserves would thus have reached 325 million kronor, as against a previous maximum, already unnecessarily large, of 263 millions at the end of 1927. The bank could not avoid accepting these large offers, as otherwise it would have been forced to allow the quotations for foreign currencies to drop below their gold points. The purchase of gold referred to above affords a good illustration of the position, which is still more plainly shown by the exchange quotations for the leading gold currencies. Sterling was forced down to 18.09 (par=18.159) and dollars to 3.70⅝ (par=3.731).

The governors of the Riksbank have taken the initiative in bringing about a more uniform interest policy by the banking institutions in the country. Competition in recent years for the people's savings has been so severe as to create a variation in interest rates, which has been very trying for borrowers. On the one hand the local savings banks and the Post Office Savings Bank have been able to attract most of the fresh savings and capital by means of the high deposit interest they are able to offer, thanks to their low overhead charges and to the ease with which they can place money at profitable rates, particularly in the building industry. On the other hand, the influx of deposits to the private banks has fallen off considerably because their costly organisation, and lately also the Riksbank discount policy, have left them powerless to take up effectively the challenge of the savings banks. It is true that this has to some extent been possible by means of extended differentiation between interest rates, but the result has been an unnecessary lightening of the loan market and an invasion of this market by the savings banks, which can hardly be said to be qualified for such activities. Clearly, steps to prevent a further development in this direction are of the utmost importance. And the Riksbank's efforts are already showing results, for, at the same time as the private banks reduced their rates at the behest of the Riksbank, both the Post Office Savings Bank and the local savings banks followed their example. It remains to be seen how consistently this new policy will be maintained in the future.

The abnormally mild weather has continued, and the usual marked seasonal movements in production and export have in consequence not been so apparent. Exports have continued on a considerably more extensive scale than is usual at this time of the year, with the result that production in the staple industries has naturally been greater than would otherwise have been the case. There is as yet no statistical evidence of this fact, but the statistics for November speak very clearly. In that month, as in October, no effects of the American crisis were visible. On the contrary, *Svensk Finanstidningen's* index of production continued to rise from 134 in October to 137. This increase applied to all branches, including iron and steel, which in previous months had reflected the international setback in the iron and steel market. The average index of production for January-November was 135, while during the years 1925-1928 it rose comparatively slowly from 105 to respectively 108 and 113 in 1926 and 1927, and sank in 1928, the year of the labour dispute, to 106.

The month of November usually discloses an excess of imports. Last November, on the other hand, there was an active balance of seven million kronor, so that the first eleven months of the year show an export surplus of 35 million kronor, the most favourable result since the war. The November developments were due primarily to forced exports, but also to a cutting down of imports, due to reduced demand for grain as a result of the favourable harvest.

Developments on the Stock Exchange continued to contrast with the above favourable situations, principally under the influence of the American crisis. This influence extended, however, only to Swedish stocks quoted in the international market, as was inevitable, whereas the majority of the purely domestic stocks showed remarkable steadiness. The total decline in the value of shares on the A list during the last three months amounted to 228 kronor, 256 kronor and 63 million kronor respectively. Of these amounts domestic stocks amounted to 39 million kronor in October and 15 million kronor in November. December, on the other hand, showed an improvement of seven million kronor. These movements are, to a certain degree, symptomatic of the whole of the past year. The course of quotations in the year 1929 showed, indeed, a decline of 583 million kronor in the values of A list shares, but since Kreuger stock alone fell by 676 million kronor, the remainder, in fact, rose by 93 million kronor. It is interesting to compare these figures with those of 1928. The market value of the A list shares rose by 818 million kronor in all, of which 359 million kronor fell to the Kreuger concerns and 459 million kronor to other securities. This shows that the Stockholm Stock Exchange was able in a really admirable manner to keep a cool head amidst the violent exaggeration of international speculation. In the same way the course of quotations for purely domestic undertakings undoubtedly affords material for a safe and objective judgment of the situation. In spite of the fact that 1929 was in many respects a record year, there was no speculation tending to discount the improvement, probably owing to a clear anticipation of a slowing down or a stoppage in the almost uninterrupted expansion of recent years.

NORTHERN IRELAND.—SHIPBUILDING—LINEN INDUSTRY—AGRICULTURE.

(FROM OUR CORRESPONDENT.)

BELFAST, December 31.

THE tonnage of ships launched from the Belfast shipbuilding yards during 1929 was 144,977 tons, as compared with 78,538 tons in 1928. The output from Messrs. Harland and Wolff's yards comprised ten vessels, aggregating 91,077 tons, as against thirteen vessels, aggregating 78,181 tons, in 1928. The tonnage launched by this firm in 1929 was the highest for any year since 1919. The two largest vessels launched were the White Star liner "Britannic" (26,730 tons) and the Union Castle liner "Winchester Castle" (19,800 tons), and sister ships to both these vessels are expected to be launched in 1930. The principal factor in nearly doubling the output from the Lagan shipyards in the past year, however, has been the resumption of activity by the reconstituted Workman, Clark (1928) firm. Only one small sludge steamer, of 357 tons, was launched by this firm in 1928, but in 1929 seven vessels were launched with a gross tonnage of 53,900. Prospects for 1930 are considered quite good, and Messrs. Harland and Wolff have sixteen vessels on hand or on order, apart from the vessels launched in 1929, but not yet completed. Messrs Workman, Clark have six ships on the stocks.

The year in the linen trade has been comparatively uneventful. A development of some importance, however, has been the inauguration of an Irish Linen Guild, which aims at standardising certain popular classes of linens and making them known to the public through a widespread publicity campaign. In nearly all branches of the trade competition continues to be very severe, and an influential delegation of Irish and Scottish linen merchants visited the United States during the year to study market conditions there. There has been a considerable reduction in the price of both Irish and Continental flax as compared with last season, and yarns also have fallen in price. This reduction in the cost of raw material has engendered a fairly hopeful outlook for the future, at least so far as the better classes of linen goods are concerned. In the case of coarser linens and cheap fancy goods, Continental competition is expected to continue to be serious. In this connection a Belfast newspaper recently published an estimate that 78 per cent. of the looms available for fine linen are at work, but that probably not 50 per cent. of the looms for coarse linen are working.

Farmers have enjoyed an excellent season so far as weather conditions and yields of crops are concerned, but prices have shown a serious fall in the case of the three principal sale crops—potatoes, flax and oats. The heavy production of potatoes in Great Britain in 1929 has drastically curtailed the outlet for Northern Ireland potatoes, a large quantity of which are normally shipped to Lancashire and South Wales. During the first ten months of 1929 only 122,230 tons of potatoes were exported from Northern Ireland ports, as compared with 193,735 tons in the corresponding period of 1928. During December prices of some varieties of potatoes were ruling as low as 25s. per ton. Flax was selling at around 72s. to 75s. per cwt., as compared with 95s. to 100s. per cwt. a year ago, while the price of oats is about 6s. 6d. per cwt., as against 8s. per cwt. a year ago.

The agricultural depression in Northern Ireland appears to be quite as severe as in England and Wales. A recently published report upon the agricultural statistics of Northern Ireland shows that the index level of agricultural prices (base year 1923) was 89 in 1928, whilst the English agricultural index number, calculated to the same base, was 94. The value of the principal classes of agricultural produce sold off farms (or consumed in farm households) is estimated to have declined from £14,671,000 in 1925 to £13,456,000 in 1928, entirely owing to the fall in prices, for the volume of the agricultural output appears to have increased slightly during these years. There has, however, been no corresponding decline in the cost of the farmers' raw materials, and the index figure for agricultural requisites in 1928 was 101 (base year 1923). In the case of agricultural wages it is estimated that there has been a decline from £2,030,000 in 1925 to £1,875,000 in 1928 in the amount paid. Rates of wages have fallen about 1s. 6d. a week during these years, while the number of labourers employed (permanent and casual) has fallen from 39,951 in 1925 to 34,737 in 1928. With the fall in prices the burden of land annuity payments has become increasingly felt. The amount of land annuities paid by farmers in 1928 was £667,000. For the most part these annuities were fixed several decades ago, when the general level of prices was much lower than it is to-day. Nevertheless the decline in prices which has taken place since 1921 has meant that, so far as the present generation of farmers is concerned, the payment of the annuities has required an increasing proportion of the receipts from the sale of produce raised on the average farm.

CANADA.—WEATHER—UNEMPLOYMENT—BUSINESS—GRAIN MARKETS—RAILWAY EARNINGS—PARLIAMENT.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 30.

THE winter so far has brought an exceptionally heavy snowfall to Eastern Canada, and in some districts it is already as heavy as the aggregate fall for last winter. During the week ending December 19th a blizzard swept Central Canada for four successive days almost without interruption, causing great damage. Undoubtedly many people in the West are experiencing a hard winter, as not only is there a substantial volume of rural poverty owing to the shortage of the last crop, but unemployment in the Western towns and cities is really acute. When Mr Heenan, the Minister of Labour at Ottawa, issued a statement to the effect that he saw no need for calling a conference of the business and labour leaders of the country to discuss remedies for the employment situation, it evoked a flood of protests from the West, where the local authorities declined to share his cheerful optimism about the situation. There have been in Winnipeg, Vancouver and elsewhere demonstrations of the unemployed which the police had to disperse, and these men declared that their families were destitute and would starve unless they were given work or supplies of food. The situation in the East is less serious than in the West, but it is bad enough, and a severe strain is being placed upon the resources of relief organisations. It is notorious that the employment index published by the Dominion Bureau of Statistics takes little or no account of the large body of unskilled labour which finds employment in Canada's natural industries like agriculture and lumbering, but this index for September, on the base 1926=100, is given as 119.1, as compared with 124.6 for November, and notes appended assert that the seasonal curtailment recorded at the beginning of December was on a larger scale than in most of the last ten years and extended to all the provinces. Many of the unemployed are British immigrants, and several contingents of them, who were deemed unlikely ever to succeed in Canada, have been deported home at the public expense. They expressed almost unanimous delight at escaping from the Dominion, and the experiences of the past year have been generating throughout Canada a growing sentiment against State-aided encouragement of immigration.

Business conditions remain decidedly uneven. Merchants, however, report that, while there has been a great slump in the demand for luxury goods, due undoubtedly to the stock market losses sustained by the wealthier elements of the community, general Christmas trade has been more satisfactory than they anticipated. There has been a good demand for groceries, clothing and household equipment, and the trade in Christmas gifts showed no material reduction. In the industrial field there has been in many lines a gradual contraction of operations; a lessened demand for the motor plants and other establishments which use iron and steel has resulted in a curtailment of iron and steel production, but the heavy railway orders placed or planned by the railways will help to keep some plants busy through the winter. The December reports about building construction are also encouraging, as they estimate the value of contracts already placed during the month at 32½ million dollars, which, although 28.2 per cent. below the November figure, is an increase of 72.1 over the parallel figure for December, 1928. No solution has been reached in the controversy about the price of newsprint. The newspaper publishers of Canada and the United States are still declining to sign contracts at the higher price of $60, and, as the International Paper Company, which is tied by its low price contracts with the Hearst interests, finds itself unable to co-operate with the other Canadian newsprint mills and the Mersey Pulp and Paper Company, whose new plant at Tidewater in Nova Scotia has just come into operation, is playing a lone hand and cutting prices, the chances of success for the demand for a higher price are thought to be receding. The output of the industry shows no decline, but, until prices can be raised, the returns at least for mills whose location entails high transport costs to the American market will continue to be unsatisfactory. The carloading figure for the week

ending December 21st, placed at 54,089 cars, registers declines of 3,812 and 7,887 cars respectively compared with the figures for the previous week and the parallel week of 1928.

The wheat pool and its allies have derived great comfort and encouragement from the official figures of the Argentine Government about the local wheat crop and, as a result of it, wheat prices in Winnipeg rose 9 cents last week. The Canadian holders of wheat, while they admit that the Argentine report may have been given an unduly pessimistic tone for the purpose of keeping up prices, a game not unknown in Winnipeg, now believe that all the export wheat available in the world is in the shop window and that unless exporting countries are prepared to exhaust all their normal carryover, European buyers cannot stay out of the Canadian market much longer. Already there have been signs of an improved export demand and it is expected to gain momentum towards the end of January.

The railway earnings continue to be very unsatisfactory. For the first 11 months of the year ending November 30, 1929, the Canadian National railways had net earnings of $53,549,291, which is a decline of $10,421,826, as compared with the parallel period of 1928. During this period the operating ratio had increased from 78.84 to 82.10. The C.P.R. statement for the same period shows an almost parallel decline, net earnings having fallen from $48,537,678 to $39,991,275, a decrease of 8½ millions. However, both Mr Beattie and Sir Henry Thornton have recently made public statements to the effect that the circumstances which have caused this great decline in earnings are wholly abnormal and are unlikely to be repeated next year. Undoubtedly a great deal of grain traffic, which would normally have been carried on the railways this autumn, will be available next spring, and some of the leeway will be made up. Apparently the Government still plans to go ahead with its scheme for the reconstruction of the capital fabric of the Canadian national system. At any rate, Sir Henry Thornton, on his return from his recent visit to England, declared, in an interview, that his discussion with British bondholders, whose co-operation was necessary for the reconstruction, had been thoroughly satisfactory. Meanwhile it is also announced that the Interstate Commerce Commission at Washington has approved of a scheme for the consolidation of the American railway holdings of the Canadian Pacific and Canadian National railways.

The exact date of the opening of the Federal Parliament has not been announced, but the Prime Minister recently intimated that it would not take place before January 31st and February 8th or 15th is looked upon as a probable date. Agreements have been signed with Manitoba and Alberta providing for the transfer of the natural resources of these provinces to their local administrations from Federal control, but negotiations with Saskatchewan proved abortive. No information is available about the report of the Tariff Advisory Board upon the cotton schedule, but there is little expectation of any change in favour of Lancashire in the "empire content" regulation.

Letters to the Editor.

THE PRESS LORDS AND PROTECTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the issue of the *Economist* of January 11 there appears, in an article entitled "The Press Lords and Protection," an astounding pronouncement concerning the tendency of things political and economic in Canada. One need hold no brief for the cause of either Lord Beaverbrook or Lord Rothermere to take issue with this pronouncement.

The following is taken from one paragraph of the article referred to:—

> "Take the case of Canada, 90 per cent. of whose population lives within a hundred miles of the American border, whose trade unions are branches of the American brotherhoods, whose literature, sport, theatres, trains and all the material details of life are American rather than British. Is it thinkable that the increasing tendency in, say, the prairie provinces, for economic intercourse to develop with the great and wealthy nation across the neighbouring border can be checked and the current of economic life diverted eastward to the coast thousands of miles away and across the ocean?"

This statement is so mistaken in its premises and conclusions, so misleading in its inference and in its disposal of Canada, that it will be resented by Canadians from the Maritime Provinces to Vancouver Island. Canada is first and foremost British to the core.

The *Economist* has obviously overlooked many of the problems of the Prairie Provinces, which are singled out in support of its theory. It seems unaware of the Fordney-McCumber Tariff, a veritable tariff wall erected by the United States of America for the protection of its agricultural population and for the exclusion of the products of Canadian agriculture. It seems unaware that those Prairie Provinces have suffered so egregiously under the Fordney-McCumber Tariff in the period of post-war reconstruction that their hopes are now centred in inter-Imperial trade. Canada cannot accept Lord Beaverbrook's proposals—certainly not without drastic modification—but if there were a section of Canada that might, but for an unshakable adherence to the principles of Confederation which stand for the good of the whole, that section would be the Prairie Provinces.

If Canada has been subjected to peaceful penetration by the economic forces of the United States it is because the aggressive and progressive people of that country have perforce been given a clear field by British investors since the war. If Canada's imports from the United States have far exceeded her imports from Great Britain it is largely because the British manufacturer has hitherto been less adaptable to her requirements than the manufacturer of the United States. If British sentiment is to become diluted by disproportionate foreign immigration, it will mean that the post-war generation of Englishmen have lost the sense of romance and adventure and the spirit of the pioneer that inspired their forefathers to build an empire, which is inconceivable. If Canada should so far forget her heritage and traditions as to look southward for her destiny it could be due only to apathy at the heart of the Empire, which is unthinkable.

Canada will remain British and will decline, at the behest of any party, to become an adjunct of the United States of America.—Yours faithfully,

F. S. LONG.

London, January 15, 1930.

[We gladly give publicity to Mr Long's views as to Canadian sentiments, and are interested to note his statement that "Canada cannot accept Lord Beaverbrook's proposals."—ED., *Econ.*]

THE FIVE COUNTIES SCHEME.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The article on this subject from "A Yorkshire Correspondent" in your issue of January 11th is totally misleading.

Far from being a success this scheme has been a complete failure. It has, for example, diminished the mineworkers' earnings, increased the owners' losses, and arrested the natural growth of the trade in its area.

In Yorkshire a quota scheme has operated since April, 1928, with the result that the Yorkshire miner was only allowed to work 225 days during the whole of 1928; whereas the Scottish miner, free of quota restrictions, was allowed to work 289 days during 1928.

Further, the average earnings for mineworkers in Yorkshire for the same year were only £112 14s. 9d., whereas in Scotland, free of quota restrictions, they were £133 9s. 7d. These are official figures from the Mines Department Annual Report last issued.

As regards owners' losses, also, the effect of the Five Counties' scheme was to increase them in 1928 in excess of those of 1927 by as much as 10.34d. per ton in Yorkshire. In Scotland, on the other hand, free of quota restrictions, the 1928 results show 1d. a ton improvement over 1927. These are again official figures. The non-quota districts also have made the greater comparative increase in output.

Many other similar facts could be given to show that the coal restriction scheme in Yorkshire has been as complete a failure as either the rubber or cotton restriction schemes.

To standardise inefficiency cannot give other than these results.—Yours faithfully,

JOHN PRATT.

The Coal Consumers' Committee,
14-16 Cockspur Street, S.W. 1.
January 13, 1929.

[We are glad to publish Sir John Pratt's criticism of the policy of quota-restriction, a policy to whose dangers we are fully alive. "A Yorkshire Correspondent," however, writes:

"Sir John Pratt's comparison between Yorkshire proceeds in 1928 and in 1927 is—to use his own words—totally misleading, for two reasons. In the first place, at the beginning of 1927 there were four months of exceptionally high prices, due to the shortage caused by the long stoppage. From May onwards, when this artificial condition was removed, results were considerably worse than in 1928. In the second place, the Five Counties scheme operated only for nine months of 1928. It checked the fall in prices, and but for its existence the results for those nine months would have been worse than they were; but the real point is that no one ever expected the main results of the scheme to be apparent until 1929. The true comparison is not between 1928 and 1927, but between 1929 and 1928. In 1928, according to the wages ascertainment figures, there was a loss of 9.7d. per ton in Yorkshire; in 1929 there was a *profit* of 5.7d.—an improvement of 1s. 3.4d. The same figures show that the cost of production was 7¼d. per ton lower in 1929 than in 1928, and 4¾d. per ton lower in 1928 than in 1927. This drop of a shilling a ton has astonished even the promoters of the scheme. It is attributed mainly to the operation of the output quota. Bad districts and seams, formerly kept open on the off-chance of big orders being obtained, have been closed since selling capacity has been fixed, and production has been concentrated in the more economic workings. Sir John Pratt omits to say that much fuller time has always been worked in Scotland than in Yorkshire and the Midlands."—ED. *Econ.*]

THE MOTOR DUTIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with my usual interest in the economic views of the *Economist*, but without the least surprise, the article under the heading of the "Motor Duties" in your issue of the 11th. It would certainly be remarkable if the sane and wholesome views of the *Nation* on the subject of the McKenna Duties had been shared by the *Economist*, which has never lost the opportunity of an attack upon those duties by which British industry has been relieved of some of the strain of recent years. It is, however, somewhat odd that the *Economist* should base another assault upon the motor duties on the ground that either a removal of the Customs duties or an imposition of a countervailing Excise duty on the home product would serve to "equalise the conditions of competition"! By what process of reasoning could the reduction of the costs of foreign competitors or the deliberate increase in the price of the British article be called "equalising conditions of competition"? You lay a charge against the duty of failing to secure a larger proportion of the European market. Nevertheless, there is considerable significance in the fact that in 1924 total British exports of vehicles and chassis were 15,659, of a value of £4,869,459, while in 1929 the first six months alone saw 20,913 vehicles and chassis exported to a value of £4,214,834.

It would, indeed, be astounding if any reasonable man were to accept the theory that the immediate reopening of the British market to a flood of foreign imports, manufactured under whatever conditions, would be a help to the export trade of the British manufacturer. By such a reopening, competition of the unfairest kind would be thrust upon him; his home market would be restricted; and his costs of production would go up; unemployment, a portion of the cost of which he would be compelled to bear, would be increased, and in every direction he would be hampered in his endeavour to build up on a solid foundation an industry which has made substantial progress ever since the duties gave him a chance to meet the foreigner on more or less level terms.—Yours faithfully,

P. J. HANNON.

House of Commons,
January 11, 1930.

[Mr Hannon omits mention of the more "significant" fact that between 1924 and 1928 exports of cars from the world's chief producing countries increased, in round figures, from 342,000 to 708,000. His reference to "competition of the unfairest kind" through imports "manufactured under whatever conditions" is a somewhat disingenuous *suggestio falsi*, seeing that the competitor of chief account is the American motor manufacturer, whose labour enjoys conditions to which exception can hardly be taken on the score of low wages. It is precisely because the McKenna Duties (like all measures of tariff protection) have obscured for the British motor industry the need of organisation to "meet the foreigner on more or less level terms" that we advocate their repeal.—ED., *Econ.*]

Books and Publications.

THE FIVE-DAY WEEK.

IN a recent article in the *North American Review* John K. Roskob, formerly chairman of the Finance Committee of General Motors, predicted with glowing enthusiasm the establishment of the five-day week throughout American industry within the next few years. The authors of the present study*, an admirable example of the objective investigation of industrial questions to which the Conference Board is devoting itself, do not endorse this optimistic opinion. They offer, nevertheless, a discriminating welcome to the new industrial practice, but they submit the difficulties as well as the advantages to impartial and detailed examination, and look for only gradual extension of the practice as experience accumulates.

The study is based on information supplied by a large proportion of the firms which have adopted the five-day week. Although the first experiment was made as far back as 1908, the movement did not gain impetus until 1923, since when there has been continuous progress. The number of manufacturing companies now committed to the five-day week is just short of three hundred. They employ altogether nearly 250,000 persons, but this represents under 3 per cent. of the total industrial workers in the States.

The main problem is naturally that of maintaining or increasing productivity without adding to costs or retarding progress towards lower costs. The ability to do this depends on various factors—whether, for instance, the former weekly hours of work are spread over the five days; or whether, if the change involves a reduction in work time, sufficient counterbalancing effects can be secured by improvement of plant or processes, or by the willingness of the workers to concentrate more effort in the five days for the advantage of two days' continuous rest. In some plants Saturday morning work is regarded as uneconomic owing to the cost of starting up for only half a day's output, or because workers tend to be slacker on this day. The question of wages is also important, and demands for adjustment, especially in the case of time-rate workers, have to be faced.

The general conclusion is that on the basis of the experience already gained the advantages appear to outweigh the objections, but whether this would be confirmed by a general extension depends on the circumstances of various types of plant and processes. The benefit of two full days' rest for the workers, as the strain of modern machine production increases, is stressed from the human and social point of view, and though American industrial experience is not always applicable to British conditions, the study offers valuable guidance on a question which will certainly attract increasing attention in this country as rationalisation proceeds.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subseqent issue.]

Industrial Arbitration. By Lord Amulree. (London) Oxford University Press, Warwick Square. 12s. 6d. net.

This well-documented volume commands particular respect by reason of its author's long experience as an arbitrator. As a former President of the Industrial Court and Chairman of the National Wages Board for railways, Lord Amulree is in a position to illuminate his carefully collected body of facts with an unusual degree of personal knowledge of the subject.

The Economic Life of the Ancient World. By Jules Toutain. (London) Kegan Paul, 68-74, Carter Lane. 16s. net.

This interesting volume gives an account of agriculture, industry and trade in the Mediterranean countries from Homeric times to the downfall of the Roman Empire.

* "The Five-Day Week in Manufacturing Industries." Published by the National Industrial Conference Board, Inc., New York. 1.50 dollars.

The Bread of Britain. By A. H. Hurst. (London) Oxford University Press, Warwick Square. 2s. 6d. net.

A brief account of the British grain trade by one who has been engaged in it for many years. The purpose of the book is to show that under existing conditions the free flow of grain to the United Kingdom is interfered with. There are statistical tables and a bibliography.

Railroad Purchasing and the Business Cycle. By John E. Partington. (London) Williams and Norgate, 38, Great Ormond Street. 14s. net.

A Brookings Institution publication which analyses for a period of 56 years the time relationship between variations in the volume of railroad purchasing and the appearance of corresponding variations in general business activity.

Ten Years' Life of the League of Nations. Compiled by John Eppstein. With an Introduction by the Rt. Hon. the Viscount Cecil of Chelwood, K.C. (London) The May Fair Press, 3-5, Burlington Gardens. 7s. 6d. net.

A beautifully-printed and illustrated account of the League. intended for the general reader who has not time to read a detailed history. Chapters are contributed by Sir Eric Drummond, M. Albert Thomas, Lord Cecil and other individuals whose names are well known in connection with the work of the League of Nations.

Handbook of Labour Statistics, 1929 *Edition.* (Washington) Superintendent of Documents.

In addition to statistical tables, this invaluable work of reference contains summaries of the year's developments under some thirty main headings, including : Apprenticeship, arbitration, child labour, co-operation, employment, housing, industrial health, pensions, insurance, labour productivity, wages and hours, etc.

Beneficial Activities of American Trade Unions. (Washington) Superintendent of Documents.

A full, illustrated account of the achievements of the trade unions of the United States in connection with welfare, unemployment, housing, recreation, co-operation with employers, and the conduct of business enterprises.

History of Wages in the United States from Colonial Times to 1928. (Washington) Superintendent of Documents. 80 cents.

A most valuable collection of data consisting largely of tables setting out wages in industries and by districts.

Wholesale Prices, 1913 *to* 1928. (Washington) Superintendent of Documents. 40 cents.

A collection of tables and charts of prices of the principal commodities in the larger cities of the United States.

Wages and Hours of Labour in the Lumber Industry in the United States, 1928. (Washington) Superintendent of Documents. 15 cents.

A very detailed account of wages and hours of every type of lumber employee in each State.

Statistics of Industrial Accidents in the United States to the end of 1927. (Washington) Superintendent of Documents. 30 cents.

Proceedings of the Sixteenth Annual Meeting of the International Association of Public Employment Services. (Washington) Superintendent of Documents. 30 cents.

NAVAL DISARMAMENT

A Brief Record from the Washington Conference to Date.

By HUGH LATIMER,

Secretary of the Information Service on International Affairs

Preface by PHILIP H. KERR, C.H.

Reviews the Washington Conference and the Five-Power Naval Limitation Treaty, the establishment and work in connection with naval disarmament of the League Preparatory Commission for the Disarmament Conference, the Anglo-French Naval Compromise, 1927-8, the Geneva Three-Power Naval Conference of 1927, the U.S. Naval Construction Bill, 1927-8, the Anglo-American Conversations in 1929, the Invitations to the Five-Power Conference in London, the Replies of the interested Governments ; with essential documents, tonnage tables, and a short bibliography as appendices.

(8vo. viii + 112 pp. 3s. 6d.)

Published by

THE ROYAL INSTITUTE OF INTERNATIONAL AFFAIRS, Chatham House, St. James's Square, London, S.W. 1.

Die Zölle Nieder! By Dr. Wilhelm Grotkopp. (Berlin-Grunewald) Verlag Dr. Walther Rothschild. M. 5.

A discussion, in German, of the tariff policy of the Powers. The author advocates European customs union as a step on the way to world economic unity.

Mitteleuropäische Eisenbahnpolitik: Mitteleuropäische Wasserstrassenpolitik: Mitteleuropäischer Postverein. By Elemér Hantos. (Vienna and Leipzig) Wilhelm Braumüller. 4.50, 6.60 and 3.60 Rm. respectively.

These three first volumes in a projected series of publications by the Central European Institute deal with Central European policy in regard to railways, inland transport and postal and telegraphic communications respectively.

Agrarrevolution und Agrarreform in Ost- und Mitteleuropa. By Professor M. Sering. (Berlin) Verlag der Akademie der Wissenschaften. Rm. 1.

A report on the results of two inquiries, one into agrarian changes in Eastern Europe and the other into rural settlement in Germany.

L'Economia e la Finanza delle Prime Guerre per l'Indipendenza d'Italia. By Riccardo Bachi. (Rome) Angelo Signorelli.

This contribution to the economic history of the *Risorgimento* examines the war economics and finance of Italy during the years 1848-1866.

Moneta e Prezzi Nella Russia dei Soviet. By Jenny Griziotti Kretschmann. (Castello) Società Tipografica " Leonardo da Vinci."

An account, in Italian, of money and prices in Soviet Russia.

Prospettive Economiche, 1930. (Milan) Università Bocconi.

Four volumes of this series, dealing with the production of and trade in coal, cotton, wool and hemp respectively, in the principal countries during recent years, are now available. The series, when complete, costs 40 lire.

La Lithuanie en Chiffres, 1918-1928. *Album de Diagrammes.* (London) Lithuanian Legation, 10, Palace Gate.

An illustrated year book with maps, diagrams and statistical tables. The text is in both Lithuanian and French.

Commercial Directory for Siam, 1929. Third Edition. (Bangkok) Ministry of Commerce and Communications.

An illustrated work of reference which is much more than a directory. It includes accounts of the principal industries of Siam and statistics of her foreign trade, as well as lists of importing and exporting firms.

The Canadian Oil Book, 1929. (London) Thomas Skinner and Company, 330, Gresham House. $3.00.

Contains an abstract of the oil and natural gas laws, a directory of directors, and the usual information about the companies engaged in the Canadian oil business.

Practical Secretarial Work. By Henry I. Lee and William H. Barr. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

A substantial textbook for students preparing for secretarial examinations.

The Trust Accountant's Guide. By A. H. Cosway. (London) Effingham Wilson, 16, Copthall Avenue. 4s.

A useful handbook for the guidance of trustees and their accountants.

The Stock Exchange.

THE OUTLOOK FOR BREWERY SHARES.

THE 150,000 shareholders in British brewery companies fall into two main groups: those connected with " the trade," who hold their shares for personal reasons, and those outside investors who have been impressed with the consistent post-war earning-power, conservative dividend policy and large reserves of the chief concerns, and are assured that the industry will maintain its position in the future. Like numerous other of the " older " British industries, brewing has shown a significant falling-off in output since the war, only 24,530,000 bulk barrels being produced in England and Scotland in 1928-29, as compared with 34,026,000 bulk barrels in 1913-14. Unlike most other industries, however, " the trade " has so effectively tightened its finances and improved its organisation that its earnings, year in and year out, are considerably above the pre-war level. During the past year, however, brewery share prices have fallen, on the average, by something between 10 and 15 per cent. By comparison with the decline in Stock Exchange prices generally this reduction is not unduly disquieting, but the investor in brewery shares may well ask himself whether it does, in fact, reflect any unfavourable change in the earning power of the leading companies or in the outlook for the whole industry. We propose to discuss this question, taking as the text of our survey the most recent results of four well-known concerns—Guinness, Bass, Mitchells and Watney Combe. The first-named operates in Dublin, but sells a large part of its output in Great Britain, and has many British, as well as Irish shareholders. The other three are all located in Great Britain.

It may be useful to show the profits of these four companies against a " national " background. Accordingly, we set out in the following table the consumption of beer, the estimated national " Drink Bill " and the volume of industrial production in Great Britain for three recent yearly periods, as well as the net earnings of the companies in question. The last three columns of the table show the various amounts in the form of percentages of the 1927 figures :—

	Years to	Amounts.			*1927 = 100.*		
		1927.	1928.	1929.	*1927.*	*1928.*	*1929.*
Consumption of beer(*a*) —(standard barrels)	Sept. 30	20,962	20,642	20,435	*100*	*98½*	*97½*
National drink bill (*b*) (Million £)	,,	299·5	287·4	287·7	*100*	*96*	*96*
Volume of British industrial production(*c*) —(per cent. of 1924)	,,	107·5(*d*)	105·3(*d*)	110·2	*100*	*98*	*102½*
Net earnings: Guinness (£000)	June 30	2,265	2,312	2,209	*100*	*102*	*97½*
Net earnings: Bass	Sept. 30	479(*e*)	574(*f*)	543	*100*	*120*	*113½*
Net earnings: Mitchells	June 30	558	626	642	*100*	*112*	*115*
Net earnings: Watney Combe	June 30	1,188	1,213	1,263	*100*	*102*	*106½*

(*a*) Includes foreign imports, but not production of Guinness consumed in Irish Free State.
(*b*) As estimated by United Kingdom Alliance.
(*c*) From Board of Trade's quarterly estimates. (*d*) Calendar year. (*e*) To June 30th. (*f*) Profits fifteen months to September 30, 1928, £717,000; equivalent figures given for 12 months.

The consumption of beer has not kept pace, of recent months, with the increase in national industrial production as a whole. The earnings of the four companies, on the other hand, have shown, with one exception, a rising tendency. Apart from the absorption of other businesses, it would appear, either that these companies have obtained a larger share of a declining national beer consumption, or that they have reduced their working expenses so as more than to compensate for a decline in their total production. Their trend of dividends has been upward, on the whole, during the past three years, as the following table shows :—

EARNINGS AND DIVIDENDS.

	Company and Balance-sheet Date.							
	Guinness (June 30).		Bass (Sept. 30).		Mitchell's (June 30).		Watney Combe (June 30).	
Net earnings (after debenture interest) :	£		£		£		£	
1927	2,264,693		479,360†		558,111		1,188,181	
1928	2,311,601		716,903*		625,946		1,212,929	
1929	2,209,388		542,632		641,903		1,263,460	
	Earned %	Paid %	Earned %	Paid %	Earned %	Paid %	Earned %	Paid %
Ordinary shares (after tax) :								
1927	28·6	28	18·4	15	18·9	15	24·6	17‡
1928	29·2	28	28·3*	25*	21·5	15	25·1	19‡
1929	28·8	28	21·2	20	19·5	15	29·6	20‡
Earnings left in business :								
1927	44,689		76,014		106,434		434,998	
1928	91,601		72,993		174,269		396,038	
1929	13,388		27,504		154,971		414,714	

† Twelve months ended June 30, 1927. * Fifteen months ended September 30, 1928. ‡ Subject to tax.

The growth in absolute earnings did not, last year, in all cases, keep pace with the expansion of capital, so that while shareholders as a whole are receiving more than they were two or three years ago, a somewhat larger proportion of profits is being annually divided. The amount of the year's earnings left in the business by Guinness and Bass last year was relatively small, though in the case of Mitchells and Watney Combe it remained of significant proportions.

The financial position of most brewery companies is, however, liquid, as will be seen from the next table :—

BOOK VALUES AT DATE OF LAST BALANCE SHEET.

	Guinness.	Bass.	Mitchell's.	Watney Combe.
Breweries and plant, licensed properties and agencies	£ 5,728,630†	£ 3,576,725	£ 5,692,836	£ 14,126,270
Holdings in other companies	...	2,707,342	22,002	2,044,990

Net working capital* (excluding investments)	3,460,948	2,980,285	1,155,660	555,413
Visible reserves	2,200,000‡	1,480,299¶	1,050,000	1,559,455
Amount used for renewals and depreciation during year	157,479	176,615	?	332,758

* Excess of " quick " assets over current liabilities. † Including goodwill unstated. ‡ Subject to goodwill. ¶ Subject to goodwill, £800,000.

The net working capital of the companies shown, in most cases, bears a high relation to the valuation placed on such fixed assets as breweries, licensed properties and agencies. " Visible " reserves and saleable investments are equal to 137 per cent. of the total " fixed " capital, including holdings in other companies, in the case of Guinness, to 47½ per cent. in Bass, and to 20 per cent. in Mitchells. Messrs. Guinness hold a solid block of over £4,400,000 of gilt-edged securities. Bass and Watney Combe are holding companies on a considerable scale as well as operating concerns, the former having effected a fusion of interest with the Worthington company in 1927 and purchased three other businesses in the following year. For the most part, breweries and other fixed assets appear in the various balance sheets at a conservative valuation, and it is well known that the larger companies have considerable " inner reserves."

In a final table we show the amount of capital outstanding and dealt in on the Stock Exchange, the cover

for fixed-interest stocks, the recent course of prices, and the yield offered to the investor:—

	Amount outstanding.	Par value.	No. of times covered.	Prices. Highest, 1929.	Prices. Lowest, 1929.	Prices. Beginning, 1930.	Yields. On Divs.	Yields. On Earnings.

Debenture stocks, as a rule, are well covered by earnings, but even at their recent prices, which are not much above the lowest quotations of last year, their yield is under 6 per cent. Preference shares, also well covered, yield from 6 to 6¼ per cent. The return on ordinary shares varies considerably when calculated on the latest dividends, and the contrast, as between the various companies, is even more striking when the yield is expressed as a percentage of last year's net earnings. The investor would seem to base his judgment mainly on the dimensions of the actual dividend distribution, a practice which may be in some respects misleading, in view of the recent tendency to distribute dividends nearer "to the hilt" than before.

The above figures reveal a broadly satisfactory position from the investment point of view. Earnings, on the whole, have been well maintained, and show no sign of a serious setback in the near future. The outlook, however, is affected by two factors, neither of which can be ignored by the conservative investor. In the first place, there is attached to the industry, in the eyes of some observers, a distinct "political risk." At the present moment a Royal Commission is investigating the liquor traffic in Great Britain and its findings must necessarily have some effect on the future of the industry. Whether they will result in the placing of further restrictions on the sale of liquor, or will merely remove various anomalies in the matter of hours of opening, and bring under stricter control the sale of liquor in clubs and other "private" organisations, is a matter on which it is obviously too early as yet to hazard an opinion. Apart from all questions of State control, however, the changing customs and habits of the people present a potential problem of great significance to the brewing industry. The national consumption of beer per head has fallen from 27.76 gallons in 1913 to 16.55 gallons in 1928, and there would seem to be some ground for the assertion that beer consumption is largest in the middle-aged rather than in the younger sections of the community. The *Brewers' Journal*, in a recent issue, pointed out that "whilst periods of severely cold weather have a devastating effect on beer output . . . periods of exceptionally hot weather fail to produce that increased consumption which formerly could be looked for." The *Brewers' Journal* continues as follows:—

> "This brings us to the crux of the matter—namely, the changing customs and habits of the people. Fine weather means the dispersal of our ever-increasing urban population over the rural and seaside districts, and the absorption of vast numbers of those left behind in the multitude of outdoor sports and recreations, the growth of which has been a marked feature of the post-war period, and is likely to progress cumulatively. The increased facilities for travel and recreation unquestionably form . . . 'counter-attractions' to the licensed house."

The measures taken by the brewing industry to combat these changed conditions have been extensive. A series of amalgamations has reduced the total brewery concerns taking out licences in Great Britain from 3,912 in 1913 to 1,502 in 1929. As long ago as 1920 5 per cent. of the breweries turned out 60 per cent. of the total beer produced. The policy of buying licensed properties at high prices has been abandoned. A stricter control is maintained over the financial and trade relations of the breweries with their outside "houses." Freeholds are replacing leaseholds wherever possible, and leases by breweries to landlord tenants are being made for shorter periods and on more profitable terms than heretofore. In these and other ways much that was wasteful in the industry's economic organisation is being eliminated.

The efforts of the trade to counteract the change in national habits, already referred to, are taking, in the main, two forms. Public houses are being rebuilt and enlarged with the object of improving their standard of comfort and rendering them places for the sale of refreshment rather than of liquor only. Advertising by "the trade," which, until recently was on a small and primitive scale, is being more energetically exploited under the leadership of the larger firms, which have adopted modern publicity technique, and claim, in some cases, already to have obtained a response, in sales, not disproportionate to the heavy expenditure involved.

In all probability the industry will be compelled to proceed still further along these lines in the future. To endeavour to meet changed conditions by constructive measures is obviously a better policy than mere passive resistance, and "modernisation," before the war, was quite definitely overdue. An extensive rebuilding and advertising programme, however, will necessitate considerable appropriations from revenue by the chief companies during the next few years. The interests of holders of brewery shares may, therefore, be best served in the long run if the rise in the curve of future dividends lags somewhat behind that of profits, so that a generous proportion of earnings is left in the respective businesses.

"HATRY" SETTLEMENT: THE STOCK EXCHANGE POSITION.

(BY A STOCK EXCHANGE CORRESPONDENT.)

WITHIN the course of the next few days the four Stock Exchange members who have been working out a scheme for the "Hatry" settlement will have sufficient evidence in their hands to decide whether or not their proposals shall be put into operation. A meeting of jobbers was held last Tuesday, followed by three meetings of brokers on the next day, at all of which the scheme was laid before members, who were circularised later, and asked to state whether or not they were willing to consent to the plan placed before them. The proposals are summarised on page 129 of this issue. They inevitably involve loss of money in greater or less degree, according to the volume of trade which members or firms concerned had transacted in the shares of the Hatry group. The two brokers and the two jobbers who constitute the Committee have devoted much time and skill to the drawing up of the plan, which is designed to enable the Stock Exchange to keep faith with its clients, to obviate the necessity for a string of failures, such as followed the London and Globe Corporation smash, and to do away with the necessity for lengthy litigation. They received promises of substantial financial support before they placed their scheme in front of the members of the House who are interested. The money has been earmarked with the condition that it shall become available only if the scheme goes through. If the latter is rejected, the money offers are withdrawn. It is considered likely that opposition, however natural, to the scheme will give way in the general desire to have the matter settled, even though the method of its settlement is considered, by some people, to be open to grave objection on a variety of grounds. However, it is well recognised that the committee of four in charge of the affair have done their utmost to sift out from the various proposals placed before them a scheme that shall meet the exigencies of what, it is hoped, will prove to be a unique set of circumstances. The danger of creating a precedent is minimised by the expectation that a similar state of affairs will not again prevail, at all events within the experience of the present generation.

In view of the confusion of thought that exists in regard to the matter, it may be of service to set out, as simply as possible, the reasons that have led to the necessity for the provision of so large a sum of money as the £1,000,000 which the committee of four have deemed needful in the circumstances.

Going back to the events of last autumn, it may be recalled that large lines of shares were sold on account of various Hatry companies, for payment at the settling day of September 26, 1929. The sellers, however, asked that payment should be made, in some cases, without awaiting the settlement. Where this course was followed, brokers handed over the proceeds of sales of shares in exchange for the transfer and other deeds, which they expected to deliver in the ordinary way at the settlement for which the shares had been sold. The settlement was, in fact, suspended by the Stock Exchange Committee. The brokers then found that they had paid for shares they could not deliver until a settlement was fixed. Further, they have more than a strong suspicion that some, at all events, of these shares are not valid. The brokers, however, have paid for them, and, if the shares are of no value, they stand to make a total loss, because the Hatry interests for whom they sold the shares, and to whom they paid the money, are in no position to refund it. The sums involved are considerable, and represent a portion of the loss which will fall upon the Stock Exchange. On the other hand, some of the Hatry companies bought shares, and, when the appropriate account day arrived, were unable to pay for them. Brokers had sold shares, on behalf of their clients, to the jobbers in the market. The ultimate buyers being in no position to meet their liabilities, every client concerned—a member of the outside public—looks to his broker for payment of the shares he has sold. The broker, however, is an agent, and, strictly speaking, has no legal responsibility. A jobber might conceivably be unable to pay for large lines of shares, and, if nothing were to be done in order to render assistance, might be hammered, together with a number of other members—a state of affairs which would certainly involve the client in a loss.

The present plan has been evolved to uphold the inviolability of Stock Exchange bargains as regards the public and to ensure that no client shall suffer by reason of the suspension of a settlement after the Hatry collapse. The client may be a shareholder in the Hatry companies, and to this extent he may be a serious loser. Where, however, he dealt in stock or shares through members of the Stock Exchange, for the account-day when settlement was suspended, he will suffer no loss by reason of that suspension, because the Stock Exchange is shouldering the full extent of whatever damage has been wrought. The sum of money that is an integral part of the scheme will form a pool, to which will be delivered the shares good and bad alike. These shares will have to be sorted out, and the pool will be left nursing some shares that may in time become of value, and others which will be worthless from the start. Doubt is expressed as to whether the shares of the Hatry companies which are in the hands of the public are likely to be suspect. It is thought that the great bulk of the shares sold by ordinary clients are genuine, though where these are in companies which have gone into liquidation it matters little whether the certificates are good or bad. The fact which emerges is that the Stock Exchange, through the adoption of this scheme, will keep faith with the public—i.e., with its clients—though this involves a loss running into seven figures. Stock Exchange men having no interest whatever in the Hatry business have come forward and offered to put up large sums in order to preserve the good name of the House in the matter of keeping faith with the public. The issue must remain in suspense until replies have been received from Stock Exchange firms who are asked to give their assent to the scheme, but all the probabilities point in the direction of members, brokers and jobbers alike, consenting to bear the loss which the Hatry collapse has involved.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
January 21.	January 23.

In a somewhat dull and undistinguished week, during which business and prices tended to shade off, Paris failed to sustain its nascent revival of interest in Kaffirs, and Bank rate remained unchanged, attention was centred chiefly on the solid progress made towards a settlement of the "Hatry" impasse. The terms of the proposed scheme, which were made public on Wednesday evening, are summarised in a subsequent "Note," while a "House" correspondent describes their bearings as regards the Stock Exchange and the public in a leading article. The terms do not yet possess definitive force, but the fact of their publication was taken as sufficient evidence of the probability, amounting almost to certainty, of their proving acceptable to all concerned. The early holding of the postponed "Hatry" settlement will remove a damaging weight from the whole Stock Exchange and leave the way clear for such economic factors as may justify a revival of business in the future.

Gilt-edged prices reflected the less favourable turn of the monetary situation, and the emergence of a larger supply of stock. Victory Bonds were demonstrably firm over the week-end and on Monday, but a slight weakening of prices subsequently ensued throughout the list, with a fractional recovery on Thursday. Liquidation of India loans made an unwelcome reappearance. Dullness affected the market for Dominion and Colonial stocks, in which further selling of Australian issues was in progress.

The foreign market was quiet and irregular. Far Eastern issues held their ground with a few early gains, but Brazilians became easier on the less favourable appearance of the exchange. Among European securities, Polish Seven per Cents. were in demand, and French stocks steady. Egyptian Unified came on offer.

Business in home rails was much less active. The traffic figures were unexciting, and a heavy tendency developed in the "group" stocks. An outstanding exception was provided by Underground, all issues being in keen demand on rumours of a high forthcoming dividend and more nebulous impressions of possible London traffic developments in the future. Movements in the foreign railway market were disappointing, the Argentine lines failing to maintain last week's recovery, while, among Brazilians, Leopoldinas were conspicuously dull. Canadian Pacifics, however, had a much stronger tone, rising several points in mid-week.

The Industrial markets were almost featureless in the absence of sustained public interest. While evidences of a gradual revival of investment demand were not absent, the readiness of professional interests to take profits after last week's modest gains was an instructive commentary on conditions on the speculative side. America did not, as a rule, willingly respond to London's efforts to talk various international stocks higher, though International Nickel continued to be absorbed. United Molasses improved, and match shares were consistently firm on Continental support. The publicity given to a dispute between certain directors of Morris and Jones (discussed in an "Investment Note" on page 130) induced weakness in some of the shares of the "Harman group." The shares most closely affected by Mr Thomas's proposals—coal, iron, steel and textiles—were lower rather than higher on balance. Publicity was given to a report that the Royal Mail Company was making an issue of debenture stock, and the shares reacted. Benskins advanced sharply before encountering profit-taking, though breweries as a whole were harder. The recovery in Imperial Chemical was checked. Carreras again lost ground. Harrods were in demand in anticipation of a satisfactory report. The action of the Stock Exchange Committee in prohibiting markings in Phantestra (Renne's Gramophone and Wireless) and Sunfruit Products, following a campaign by outside houses to popularise these shares, was regarded as reflecting the Committee's determination that its facilities should

be used only in the public interest. Bank and insurance shares were less active after a firm start. The Midland capital proposal was well received.

The rubber share market, surfeited with bad news regarding the commodity's statistical position, was in a mood to welcome any psychological diversion. A statement that the Dutch growers were considering a workable policy of restriction, and that English representatives were conferring with the Dutch, thus sufficed to give a slightly better tone to numerous shares. Tea shares were idle, with prices a shade lower, where changed. Little interest was taken by insiders or outsiders in the oil share market, the upward trend of American crude production being an unfavourable factor.

Mining shares failed to hold any substantial part of the advance recorded last week, there being an almost general decline with little public interest. Markets opened fairly firm on Monday, Rio Tintos rising sharply on Paris orders, while Wiluna added a fraction on a satisfactory report, but later dropped back. Dividend anticipations helped to keep interest alive in Rhodesians, Bwana M'Kubwa proving a good market on rumours of Anglo-American conversations. Tin shares remained dull, despite the approval of amalgamation schemes by shareholders. Oceana Consolidated continued to decline on uncertainty regarding its holdings. African descriptions subsequently lost ground, though Bwanas and Congo Borders, exceptionally, were firm.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Our New York correspondent cables:—The share market has continued quiet and comparatively uninteresting, but with a rather good undertone. Utilities have proved to be strong features, while coppers have been adversely affected by the December statistics, which reveal a further increase in stocks. In this connection a future sharp reduction in production is anticipated, producers apparently being determined to maintain present prices. Oils have been dull on price cuts in Texas and in mid-continent crude oil. Meanwhile, the bond market has stood up well in the face of new issues during the past week aggregating three hundred and forty millions. In this connection it is noticeable that the best demand is for high-class issues. Great public interest has been exhibited at the automobile shows, but sales have been somewhat lower than a year ago, and manufacturing operations are being only slowly increased. Altogether the present view is that the sharpness of the industrial recession and the hand-to-mouth character of business during the past year suggests the possibility of an early improvement, which may be apparent by March. Meanwhile there is little general inclination to make commitments in the share market, where yields are not particularly generous.

CANADA.

The stock market situation in Canada showed no material change during the last weeks of 1929. The public is still shy of speculative operations, and trading is largely confined to the professional element and investment buyers. There was something of a rally in the middle of Christmas week, in sympathy with the upward movement in New York, but the movement was soon followed by a recession. The belief prevails, however, that distress selling has exhausted itself and many stocks have now worked into a good technical position, which offers hopes of substantial recovery before the summer comes. However, the sharp decline in railway earnings is a depressing factor, and falls in the earnings of some leading industrial corporations may have to be reckoned with. The mining market has had an improved tone, but is still far from satisfactory. For the week ended December 26th the Bureau of Statistics "Investors'" Index, on the base 1926 = 100, was placed at 194.0, as compared with 201.9 for the previous week.

INVESTMENT NOTES.

Details of the Hatry Scheme.—In a leading article on p. 126 of this issue a Stock Exchange correspondent describes the factors involved, from the point of view of "The House" and the public, in the proposed scheme for the solution of the "Hatry" difficulties. The details, which have been made public this week, were arrived at by an unofficial committee, consisting of two jobbers, Messrs. Claude Lemon and Urling Clark, and two brokers, Messrs F. I. Pitman and F. S. Cokayne, whose firms had had no dealings in Hatry securities. The committee is of the unanimous opinion that the only method of carrying through a settlement, by which all liabilities of the public will be met in full, and the danger of serious trouble minimised, is by the creation of a fund of approximately £1,000,000 for the purpose of taking delivery of all the shares which will have to be delivered and paid for when a settlement in these stocks is fixed. The committee suggests that contributions to this fund should be in the following proportions of the commitments of those concerned:—(1) Selling brokers, 30 per cent; (2) country brokers (who are almost entirely buyers), 40 per cent.; (3) London buying brokers acting for country brokers, 10 per cent.; (4) London buying brokers acting for other clients, 42½ per cent.; (5) dealers, on a sliding scale based on turnover. It is estimated that contributions on these lines will provide approximately £800,000. Voluntary contributions from members of the Stock Exchange and others who have no commitments in the unsettled account have been promised to make up the deficiency of £200,000. The fund is to be vested in trustees (the Royal Exchange Assurance), who, as soon as circumstances permit, will reimburse their contributions to those selling brokers who can satisfy them that they have delivered shares on behalf of the genuine public. Any selling broker who receives from the fund more than the amount advanced is to return to the fund the excess. Should the fund have insufficient valid shares to deliver to buyers, who are prepared to pay the full price of the ticket *plus* stamp, the trustees will have power to make good the shortage at the cost of the fund. If on the completion of these transactions the fund is left with any cash, the latter will be applied in making a rateable distribution to voluntary contributors. The securities concerned are those of the Associated Automatic Machine Corporation (ordinary shares), Corporation and General Securities (ordinary shares), Drapery Trust (preference shares), Far Eastern Photomaton (shares and debentures), Oak Investment (shares), Photomaton Parent (shares), Retail Trade Securities (shares), and Wakefield Corporation 4½ per cent. redeemable stock, 1949-59. The Corporation and General Securities, Oak Investment, and Retail Trade Securities companies are now in liquidation. An application was made in the Chancery Court this week for an order to rectify the share register of the Associated Automatic Corporation, but as the application was an *ex parte* one, the order was refused. This will not delay the completion of the Stock Exchange scheme of settlement, for the committee mentioned above has provided that, in the case of Associated Automatic shares, all certificates must be accompanied by a letter from the registrar of the company certifying their validity. Other documents of title will be accepted, although invalid, provided they are certified by the company on a date subsequent to December 1, 1929. The response of jobbers and brokers to the committee's scheme has so far been eminently favourable, and the plan would appear to have every chance of obtaining acceptance.

Client, Broker and Jobber.—We have recently considered in these columns the respective positions of the three parties to a Stock Exchange "deal"—broker, jobber and client. A Stock Exchange correspondent sums up the main conclusions of the matter as they appear to many members of the "House." He questions whether either the banker or the insurance company can be regarded as ideal factors in the situation from the investor's point of view since the former relies largely

OTIS & CO.

Underwriters of Stocks and Bonds

Cleveland **New York**
Chicago **Philadelphia**

upon Stock Exchange opinion for his judgment, while the aim of the latter is usually directed to investment which can be expected to produce good results over a longer period of years than the ordinary man thinks it is worth while to trouble about. The insurance company can take a view of what a company's prospects are likely to be in ten or twenty years' time. The average investor, though he may not demand a rise on the day following his purchase, usually hopes that his stock will appreciate within a reasonable time. The man who buys War Loan, for instance, may anticipate that, within the course of the next year or two, the growing ease of money will put up his stock to the neighbourhood of 102 or 103. Though a reasonable client does not expect his broker to be infallible, there are, in fact, numerous people who have few qualms in showing their resentment if the broker's advice should turn out to be wrong. A broker gives his client the best advice possible. He will buy for the client shares which he would like to have for himself, at the cheapest price at which they are obtainable. The client should be prepared to exercise consideration as regards stock, the market supply of which is limited. The broker will go to a jobber, and possibly buy the stock, though the jobber knows well enough that the prospects of his being able to get it within a reasonable time are very slender. If the stock does not come in within what the client regards as a reasonable time, impatience is useless, since neither broker nor jobber can manufacture the stock for themselves, and the jobber's willingness to sell at all, in the first place, was a gesture of grace. The client may complain that, after waiting long and vainly for delivery, his broker will hesitate to buy in the stock unless the client specifically orders this. The reason may be that the broker, knowing quite well that the jobber will be unable to get the stock, is reluctant to involve the latter in needless expense, without satisfying the intentions of the client. To say this, of course, is not to deny that more might be done, in some cases, to hasten delivery of stocks and shares by the broker's bringing judicious pressure to bear in his client's interest. The crux of the matter, concludes our correspondent, is that the interests of client, broker and jobber are identical, and none can benefit, in the long run, at the expense of the others. The client wants to buy his stock as cheaply, and to sell it as dearly, as possible. The broker is anxious that he shall carry out this desire. The jobber, as a business man, is eager to deal in such a manner as to leave with the public the conviction of having been given a perfectly frank and square deal. There are obvious difficulties in reconciling the interests of buyers and sellers, but the rules of the Stock Exchange, as well as its unwritten laws and usages, are framed with the intention of providing protection as well as satisfaction to the clients upon whose business the Stock Exchange depends for its existence.

Further Bank Profits and Dividends.—In an " Investment Note " last week (*Economist*, January 11, 1930, page 79) we discussed the profits and dividends of the leading British banks in respect of 1929. We show below the results of two institutions, Lloyds Bank and the Williams Deacons Bank, complete figures for which were not available when we went to press.

	1927.		1928.		1929.	
	Profits.	Divs.	Profits.	Divs.	Profits.	Divs.
	£	%	£	%	£	%
Lloyds.....	2,475,674	{A, 16⅔ B, 5	2,528,143	{A, 16⅔ B, 5	2,542,084	{A, 16⅔ B, 5
Williams Deacons	310,585	{A, 13⅓ B, 12½	305,340	{A, 13⅓ B, 12½	297,901	{A, 13⅓ B, 12½

Lloyds Bank, like the other members of the " Big Five," showed profits somewhat in excess of those published a year ago. Williams Deacons, on the other hand, revealed a slight contraction in profits, and reduced its " A " dividend. So long as managerial policy, as well as " trading " experience, is a factor reflected in the published statements of earnings of British banks, it is impossible to say which of the two is the more representative of monetary conditions in 1929. We show the distribution of profits, in the two cases, in the next table :—

	Profits.	Dividends.	Contingencies Account.	Premises.	Staff Funds.	Inc. or Dec. in Carry-forward
	£	£	£	£	£	£
Lloyds—1928.....	2,527,143	1,973,886	...	250,000	300,000	+ 4,257
1929.....	2,542,084	1,973,886	...	250,000	300,000	+18,198
Williams Deacons						
1928.....	305,340	253,906	50,000	...	...	+ 1,434
1929.....	297,901	244,141	50,000	...	...	+ 3,760

Lloyds Bank, it will be seen, distributed in dividends some 77½ per cent. of the year's earnings, and Williams Deacons some 82 per cent.

Morris and Jones and Mr Harman.—A circular has been issued by four of the directors of Morris and Jones, Ltd., referring to the policy pursued by Mr M. C. Harman, the chairman. Morris and Jones is a firm of Liverpool provision merchants with a capital of £600,000, which acquired last year the sugar and grocery departments of Lovell and Christmas (Liverpool), Ltd. Mr Harman became a director in 1928, and the management of the company was later placed in the hands of a finance committee, presided over by Mr Harman, and a trading committee. The four directors, in their circular, allege that on the day of the reconstitution of the management the finance committee, " without previous communication to the other directors," sold Government securities realising £138,662, and on the following day purchased eight large blocks of stocks and shares in various companies at a cost of £154,202, practically all of which were securities of companies described as being in the Harman group. Of one block of 40,000 shares it is said that 27,150 are not officially quoted, while serious losses on all the shares are reported to have been incurred. A committee of investigation, which was appointed by the Liverpool directors in October last, has dissolved the finance and trading committees, restored the old board, and appointed an additional director who is a solicitor. The directors signing the circular propose to convene an extraordinary meeting for the purpose of removing Mr Harman and two other directors from the board and appointing a shareholders' committee. Mr Harman, in reply, has asked the shareholders to reserve judgment until they have heard his statement. From a further statement of the four Liverpool directors it is not quite clear whether or not Mr Harman and his supporters on the board have in fact agreed to the holding of an extraordinary meeting. What the Harman group of companies embraces it is difficult to say, but the following is a list of companies in which Mr Harman and his associates are directors, showing the highest prices in 1929 and the present time :—

Name of Company.	Nature of Capital.	Amount.	Highest, 1929.	Present.

Textile Industrial Trust	£1 Ord. shares (10/– paid)	250,000	20/9	20/–
	6% Deb. stock...	50,000	95	93/–

This month the directors of Rock Investment announced that they had decided to defer payment of the dividends on the 5 per cent. cumulative preference stock. It has been found in a number of recent instances that where companies are interlocked by the taking-in of each other's shares, a depreciation in the shares of one company may be sufficient to cause depreciation in the shares of the rest. How closely the Harman group is interlocked it is impossible to say. In the case of Oceana Consolidated, shareholders were notified this week that the company had acquired 50,000 Chosen Corporation shares at 12s. 6d., at which price they were offered participation. An independent examination by accountants of the position set up by the necessarily intricate interrelations of a large group of companies may do much to reassure shareholders as to the soundness of the general position.

" Retail Trade Promotions ": John Lewis' Profits.—In an article on " Retail Trade Promotions " on page 76 of our last week's issue the first report of John Lewis and Company, Ltd., was stated to show profits of £95,542, against a prospectus figure of £175,920. The secretary of the company writes to say that the two figures are not, in fact, comparable. The prospectus gave figures for each of the six years ended January 28, 1928, and February 19, 1928, respectively of Messrs John Lewis and Company and T. J. Harries and Company, the two businesses which were being amalgamated. These were stated to be arrived at " after charging all working expenses, including management salaries, repairs and renewals, but before providing for income tax, interest, depreciation and directors' fees." The figure for 1927-28, on this basis, was given as £175,920. The first report of the company, from its incorporation to January 31, 1929, showed these results :—

	£
Profit on trading, after charging all working expenses, including management salaries, and repairs and renewals.....	167,549
Interest receivable, including interest on Peter Jones, Ltd., debentures	11,453
	179,002
Fees paid to directors of T. J. Harries and Co.	2,240
Interest payable.....	41,844
Income tax	20,659
Depreciation reserve	18,717
Balance, being net profit	95,542
	179,002

The net profit figure of £95,542 is, of course, of chief interest to the investor in the company's preference shares, since such charges as interest, depreciation, etc., must be met before arriving at earnings which rank for dividend. For purposes of comparison with the prospectus, however, the relevant figure is clearly the £167,549 profit on trading. We gladly give publicity to this fact, and ask our readers to amend our previous article in this sense—the more so since the effect of the change is to place the company, not among those " whose profits are noticeably less than was estimated in the prospectuses," but among those which approximately " fulfilled their promises." The report, nevertheless, bears out the main contention of our article that, even where entirely sound and profit-earning businesses are amalgamated, and turned into public companies, the early operations under the new *régime* are apt to reveal unexpected difficulties. In this case the completion of the transfer of the Harries business from the vendors proved disappointingly slow, so that the new company was unable to obtain control before October, 1928, when the season was already at its height. The report goes on to state : " Upon a strictly correct comparison, the year's results for the two houses together are less by approximately 10 per cent. than the previous average for a 52-week year in each house that was disclosed in the prospectus." We are also asked to point out that the ordinary shares of John Lewis and Company, Ltd., are all vested in trustees for the benefit of the staff, forming the basis of a co-partnership scheme.

The Amsterdam Stock Exchange in 1929.—The ups and downs of 1929 will long be remembered by all connected with the Amsterdam stock markets, writes a correspondent. Good brokerage profits have been reaped as a result of the heavy turnover brought about by successive boom and slump, while, during the first eleven months of 1929, the proceeds from stamp duty on transactions amounted to 8,242,000 guilders, compared with only 6,990,600 for the corresponding period in 1928, the greater activity being confined almost entirely to industrial shares. The practical desertion of other markets can be explained by the unsatisfactory trend of prices for such products as sugar, tea, tobacco, coffee, rubber, and oil. Moreover, an additional reason for the concentration on industrial stocks is the promising outlook for Dutch industries in general. Exports of industrial products have risen sharply, while the value of new capital put into industry has increased from 52.9 million guilders in 1927 to 161.5 millions in 1928 and 237.4 millions in 1929. Over 190 million guilders was accounted for by only five undertakings, viz. :—Philips, Margarine Unie, Aku, Accoustik, and Artificial Silk. Little interest was taken in bonds yielding a fixed rate, and the diminished foreign call for capital in Amsterdam has undoubtedly contributed to the dullness of gilt-edged securities. During the year bonds have been issued to the value of only 103.5 million guilders, compared with 183.3 millions in 1928. Of this considerably decreased figure no less than 57.7 million guilders were accounted for by municipal and Government loans. The firmer position of the money market in the autumn also exerted a retarding influence on investment enterprise, but the capital market was nevertheless amply supplied.

Cotton Mill Dividends in 1929.—Mr Frederick W. Tattersall, of Manchester, has completed his analysis of the stocktaking reports of Lancashire cotton companies for 1929. This shows that for 310 companies the average dividend on ordinary share capital was 1.91 per cent., against 2.30 per cent. in 1928. The directors of 243 out of

There is needless expenditure of *Money*, *Time* and *Effort* in an office which does not use MOODYS-Economist SERVICES.

the 310 concerns were not able to declare any dividend during 1929. The ordinary share capital of the 310 companies amounts to £52,722,745. It is also revealed that out of 195 companies, 44 made profits during the year of £411,406, and 151 made losses of £1,062,360. An analysis of the balance sheets of 286 cotton companies shows that 93 have credit balances amounting to £1,969,868, and 193 concerns have debit balances aggregating £10,140,090.

The Copper Position.—Copper shares, especially Rio Tintos, have shown some firmness recently, principally on the improvement in the values of standard copper on the London Metal Exchange.

	Dec. 2, 1929.	Dec. 31, 1929.	Jan. 14, 1930.
Price of Copper :			
(Standard, cash, per ton)	68/7/6	68/3/9	71/15/-
Share Prices :			
Rio Tinto (£5)	40	42¾	46
Tharsis (£2)	£4⅜	£4⅜	£5
Mount Lyell (£1)	38/3	36/6	36/6
Nanaqua (£2)	17/6	17/6	17/6
Anaconda ($50)	$16	$14 13/16	$15½

The sharp upward movement registered early in January was mainly due to the covering of open positions by bears disappointed that the main selling organisation, Copper Exporters Incorporated, made no reduction in price at the turn of the year, together with the fact that stocks of rough copper showed a further drop at December 31st to about 3,600 tons. Radically, the copper position is unchanged, and continues to present something of a deadlock, for the producers are holding stubbornly to their price of 18 cents, while consumers, believing that insistence upon this price level is not justified, are maintaining a policy of aloofness and buying on a strictly hand-to-mouth basis. European consumption has shown a decline, especially in Germany. In the United States, although the call from the electrical industries keeps up fairly well, the building trade and motor-car makers are not taking the tonnage they were six months ago. Last year, however, saw a new record set up in copper consumption, and some decline in the use of this metal need not be interpreted too pessimistically. Should the Copper Combine find it necessary to reduce their price—and the probability is that they will—mining companies will still be left with a very comfortable margin for distribution to shareholders.

London Tin Syndicate Fusion.—At an extra-ordinary general meeting, on January 13, the shareholders of the Tin Selection Trust adopted resolutions approving of the merger with the London Tin Syndicate. The terms were given in an article in the *Economist* of December 28, 1929, page 1255, but the scheme there outlined has been modified in one respect. It was originally proposed to split the £1 shares of the London Tin Corporation, after the merger, into one ordinary and one 8 per cent. non-cumulative preference share, each of 10s. Under the amended scheme, however, the preference shares will enjoy a somewhat more advantageous position, being entitled to a preferential dividend of 7½ per cent. *plus* participation in one quarter of residuary profits to a total dividend of 10 per cent. At the meeting a shareholder opposed the merger on the ground that it would reduce the element of safety inherent in the " spreading " of a trust company's risks over numerous operating companies, but the majority of those present apparently attached greater emphasis to the increased efficiency and economy in management which might be expected to follow the fusion. In view of an inadvertent misstatement in one place of the earnings of the London Tin Syndicate in 1928-29, we reprint below the table given in our issue of December 28th last :—

(Years to September 30.)	1926–27. £	1927–28. £	1928–29. £
Average capital for year	184,000	383,425	550,000
Net profit (subject to tax)	138,081	193,354	137,035
Ordinary { Earned	75·04%	50·43%	24·92%
Ordinary { Paid	50%	40%	20%
Ordinary { Amount of dividends	84,000	160,000	88,000
Carry forward	29,671	60,432	50,649

The shareholders of the London Tin Syndicate met on Thursday to give effect to the resolution for the splitting of the shares, and a further meeting was proposed to modify the rights of the preference shares as indicated.

Burma Corporation Meeting.—Quiet confidence in the future progress of the company was the note struck by Mr P. E. Marmion in his address to shareholders at the annual meeting of Burma Corporation, Ltd. The chairman asserted that the record production figures of 78,716 tons of refined lead and 7,376,841 ozs. of refined silver were obtained mainly because of the advance made in metallurgical efficiency. Notwithstanding the larger tonnage extracted from the mine, the lead content was only 3.6 per cent. more, and the silver content actually 1.3 per cent. less, than for the preceding year. Concurrently with the great improvement in recovery methods, the cost per unit of metal recovered had fallen to a record low level. During the period under review 511,275 tons of ore had been brought into reserve, against 463,057 tons extracted. In the meantime, steps were being taken to utilise the large tonnage of low-grade ore available by an extension of the capacity of the existing milling plant from 30,000 to 45,000 tons per month. Moreover, exploration carried out during the year had met with definite success in two directions. Old Chinese workings had been discovered in crosscut 3,702 with ore partially intact, due probably to the fact that the nature of the analysis must have presented grave smelting difficulties to the methods in vogue at the time of working. In addition, crosscut 3,302 had in the same manner revealed workings with a large residual deposit of high-grade zinc ore. The chairman reiterated his view that if the decline in silver were to be permanent it must be reflected ultimately in a rise in those non-ferrous metals with which silver is usually found in mineral association. In 1928, not less than 175,000,000 ozs. of silver emanated as an incidence of the production of copper, lead and zinc.

Rand Selection.—From one point of view last year's results may be regarded as disappointing: the employment of a largely increased capital gave a comparatively small expansion in the profits. During the year ended September 30, 1928, 600,000 5s. shares were taken up under option at 17s. 6d. each, bringing in altogether £525,000, and raising the issued capital to £900,000. At £274,000 last year's profits are up by only £28,800.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached :

To Publisher " Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C. 4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address .....

.....

The explanation is that the additional funds were invested in interests not of an immediately revenue-producing character—more particularly in the Northern Rhodesian copper industry now represented by shares in the Rhodesian Anglo-American. The portfolio now stands at £2,039,500, as against £1,301,800. Money on loan has fallen from £431,200 to £186,900, while loans with accrued interest figure at £435,300 in place of £14,100. Out of the earnings of 1928-29, dividends totalling 25 per cent. have been provided for, and, after meeting largely enhanced claims for taxation, £83,500 remains to go forward, as against £73,000 brought in. It may be recalled that from 1927-28 profits £100,000 was transferred to reserve—a procedure which involved the non-payment of a balance dividend. On the basis of a 25 per cent. distribution the yield indicated is about 8½ per cent.

Premier Diamond.—In the past financial year this company suffered much more from the prevailing conditions than the De Beers Company, which holds practically all the deferred capital. Owing chiefly to shortage of labour the number of loads washed fell short of the total for 1927-28, while the average yield decreased and costs rose. As a result of these and some minor adverse factors the production of stones, at 738,100 carats, showed a reduction of 65,000 carats. Diamond account figures for £930,300, as against £878,500 for the preceding period, when sales were suspended altogether for a time. On the latter occasion £72,300 was brought in from special suspense account; on the present, the expenses are debited with £39,200 in respect of equipment. The divisible balance for last year figures at £273,300, as against £356,800, the shareholders' proportion of which is 40 per cent., less taxes. In 1928-29 the latter item absorbed £23,500, or £28,100 less than before, but £9,000 is now appropriated for capital purposes. Once again, only the fixed preference dividend is paid, £48,800 going forward, as against £27,800 brought in. Economies are expected to follow the installation of additional power plant. The blue ground in sight above the 610-ft. level is estimated to be 18,000,000 loads. This represents about four years' supply on the 1928-29 scale of operations. The 5s. preferred shares are a rather nominal market at £5. On this basis the yield is 12½ per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies :—Anglo-French Banking Corporation, Cardinal Investment Trust, Burma Corporation, Apex (Trinidad) Oilfields, Fanti Consolidated Investment, Michael Nairn and Greenwich, Rio de Janeiro Flour Mills and Granaries, and Liebig's Extract of Meat. At the annual meeting of Michael Nairn and Greenwich, Ltd., the chairman admitted that the prosperity of the linoleum industry during the last few years, at least so far as this country was concerned, had been assisted by recent building schemes. Mr Richard Foster, presiding at the meeting of Rio de Janeiro Flour Mills and Granaries, Ltd., said that, as a result of the commercial troubles in Brazil, the amount of wheat ground was approximately 6.6 per cent. less than during the preceding year. The meeting of Burma Corporation, Ltd., is dealt with on the previous page.

CAPITAL ISSUES.

The results of the first " trying-out " of the new capital market in 1930 have been inconclusive. The sound preference issue of Messrs E. S. and A. Robinson, last week, was over-subscribed, but the underwriters of the North-West Midlands Joint Electricity Authority offer were reported to have been called on to take up 90 per cent. of the whole. This week the *Ceylon Government* made an issue of £900,000, giving a running yield of £5 1s. per cent. and a redemption yield of £5 1s. 3d. per cent. Its prompt oversubscription suggests that a fair accumulation of money is seeking investment, in the hands of trustees and others. In view of recent events, however, those concerned are insisting that the borrower shall be well-known in the market, and shall have a long-standing record of sound finance to back him in all cases. An issue of £270,000 seven per cent. redeemable and convertible debentures was made by the *Linggi Plantations*. The company is one of the oldest of Malayan producers, its average profits for the last three years covering the debentures more than three times. The issue, with its conversion rights, would seem to take account of the present difficulties of the rubber plantation industry.

Ceylon Government 5 per cent. Inscribed Stock, 1960-1970.—Issue of £1,250,000 5 per cent. inscribed stock at £99 per cent., of which £350,000 has already been placed on the terms of the prospectus, and £900,000 is offered for subscription. A first payment of £2 5s. per £100 stock will be made on August 1, 1930. The stock is a trustee security, and will be issued under the provisions of the General Loan and Inscribed Stock Ordinance of Ceylon and inscribed in accordance with the provisions of the Colonial Stock Act, 1877. The loan is raised to meet the cost of the construction or acquisition of certain public works in the colony. It is secured on the general revenue and assets of the Government of Ceylon and is repayable at par on February 1, 1970, but the Ceylon Government has the option of redemption at par on or after February 1, 1960, on six months' notice to stockholders. A sinking fund will be formed for redemption by half-yearly contributions of one per cent. per annum, commencing on or before August 1, 1933.

Linggi Plantations.—Issue at par of £270,000 7 per cent. first mortgage debenture stock, convertible later into ordinary shares. The new capital is required to bring the present planted area into full bearing, both as regards rubber and oil palms. Average profits for last three years £87,949, covering interest on whole of the authorised debentures more than three times.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction:—**The Scottish Motor Traction Company, Ltd.:** Issued capital, 600,000 £1 6½ per cent. preference shares and 400,000 £1 ordinary shares, fully paid. Incorporated August, 1929, to acquire as a going concern the business of the Scottish Motor Traction Co., established in Edinburgh in 1905.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices, and dividend announcements will be found on page 145, under the heading "Company News."]

SUMMARY OF BALANCE SHEETS.

MIDLAND BANK, LIMITED.

COMPANY MEETINGS, &c.

BURMA CORPORATION, LIMITED.

RECORD PRODUCTION AND PROFITS.
STRONG FINANCIAL POSITION.

The annual general meeting of Burma Corporation, Ltd., was held at the company's office, 104, Strand Road, Rangoon, on Friday, December 20th, at 11 a.m. Mr P. E. Marmion presided, and was supported by Messrs A. T. W. Paine, C. F. Clifton and M. L. Burnet (directors), and H. Ponsford (secretary).

The Chairman, in moving the adoption of the report and accounts, said: Once again it falls to me to represent our Chairman (Sir Robert Horne) at the annual general meeting, and to express to you the great regret he feels that the state of his health does not permit of his attendance here to-day.

The year has been one in which great progress has been made in all departments, and that the net earnings of the company have reached a figure never previously attained.

THE MINE.

The tonnage mined was 463,057, an increase of no less than 33,212 over the preceding year, while its average grade was 19.7 ozs. Ag, 22.6 per cent. Pb, 12.9 per cent. Zn and 1.07 per cent. Cu, which is somewhat less than the grade for last year. The ore was mined systematically from all ten operating levels, about 25 per cent. below Tiger tunnel and 75 per cent. above it, and no tonnage within the limits of the stoping areas worked was left in the mine, everything being extracted and railed to the treatment plants.

Since the start of mining operations at Bawdwin no less than 3,115,518 tons of ore have been extracted, and the continuous settlement of the filling over the large areas from which this great tonnage has been removed has imposed a heavy strain on much of the timber placed in the mine from year to year.

Our policy has always been to arrange for the main travelling ways, which constitute the avenues through which the ore is withdrawn and the means by which an adequate system of ventilation is preserved, to be as far removed as possible from the actual stoping areas, so that they will not be subjected to undue stress from this settlement, rendering their cost of maintenance unnecessarily high.

Having regard to the large tonnage of ore still remaining to be extracted from some of the upper levels, it has been considered advisable to provide new travelling ways yet further away from the operating stopes, and drives are being extended in the footwall country rock for this purpose.

In all mines where the size of the deposit is such that it takes years to extract fully the ore from any one level, the maintenance of adequate and safe travelling ways to ensure the complete extraction of the whole ore body is a matter of extreme importance, and the fact that we have found it advisable only now to review the location of some of our early workings after the extraction of over three million tons of ore speaks highly for the system of stoping adopted originally by the mine officials, and for the manner in which it has been conducted over a number of years.

I have had occasion during the last fortnight to examine carefully the underground workings throughout the mine and am pleased to advise that they are in a thoroughly satisfactory condition. A great deal has been done during the year to finalise the work of ventilation in the upper levels, which was entirely disorganised by the unfortunate mine fires, and direct connection with the ventilating fans installed at the surface has now been established in all sections underground.

PRODUCTION.

The production of refined lead at 78,716 tons reached the highest figure yet recorded, and represents an increase of 6,328 tons, or 8.7 per cent., over the preceding year, while the refined silver output at 7,376,841 ounces was also a record, being an increase of no less than 422,176 ounces, of 6.1 per cent.

These record productions were obtained mainly because of the progress made in metallurgical efficiency, for, notwithstanding the larger tonnage extracted from the mine, it contained only 3.6 per cent. more lead and actually 1.3 per cent. less silver than the preceding year. I am sure you will agree that this splendid result represents a great and real advance, for which your general manager and the responsible members of his staff are deserving of the highest credit.

Later on I will explain to you that, concurrently with this great improvement in the recovery of lead and silver, there has been a decline in the cost per unit of metal recovered, which makes the progress all the more real and valuable.

It has been our pleasure to be able to advise you of an increase in the efficiency of your operating plants each year for some time past, and it will be satisfactory for you to know that extensions and improvements to these plants are now in hand, from which we confidently expect to obtain on their completion a still higher degree of efficiency and, I hope, a still lower operating cost.

The tonnage of zinc concentrates fell from 62,195 to 60,180, due mainly to the reduction in the grade of ore milled from 16.1 to 14.1 per cent. zinc, and also partly to an improvement in the grade of concentrates shipped from 49.9 to 51.6 per cent. zinc. The production of concentrates from accumulated tailings was 5,780, against 3,973 tons in the preceding year.

The percentage recovery improved from 54.79 to 56.96 per cent.

The zinc content of the ore developed below Tiger Tunnel level is subject to great variations in grade from different sections of the mine, and generally is lower than the ore reserves above that horizon. Since an increasing tonnage will be mined below Tiger Tunnel in future years the grade of zinc in the ore to be treated is likely to fluctuate rather more than it has in the past.

As forecasted last year, the production of copper matte has been reduced from 12,388 to 10,719 tons, following the reduction in the grade of the ore mined to accord more closely with the reserves available.

There are considerable tonnages of copper ore of a somewhat lower grade available in certain sections of the mine, towards the profitable treatment of which attention is now being directed.

Regular shipments of antimonial lead and copper nickel speiss were made throughout the year, in both of which an increased production was recorded.

METAL PRICES.

Of almost equal importance to the actual production of metals is the price at which they can be realised.

Fortunately, the prices of those metals which concern our revenue remained fairly stable throughout the year, with the exception of copper, which improved very considerably.

The average price of lead was £22 13s. 6d., an increase of £1 4s. over the preceding year, which, together with our increased production, improved our revenue from this metal by no less than £286,000.

Only a slight decline was recorded in the price of silver, the effect of which was more than offset by increased production.

Spelter showed a decline of 12s. 4d. per ton, which, together with our decreased production, adversely affected our revenue to the extent of £57,000.

The price of copper had the very important gain of £14 4s. 3d. per ton, so that, notwithstanding a decline in production of 1,669 tons of copper matte, our revenue from the sale of this commodity was increased by over £50,000.

REVENUE.

The gross result of the sale of the whole of our production at the prices previously mentioned has been to increase our revenue by over £297,000, or Rs. 39,57,000, when compared with the preceding year.

In order that you might have some idea of the monetary value of the improved efficiency in the treatment plants to which I have already made reference, I have calculated that over £160,000 of this increased revenue is due to this cause, which is a striking illustration of the value and proper application to operating conditions of the economic conclusions established by continuous research work.

Situated as we are, far removed from personal contact with other plants operating on similar classes of ore, it is not possible for our technical staff to keep in close touch with world progress in the mining industry without periodical visits to other large mining centres.

It has been our policy, therefore, to arrange for competent members of our staff to pay periodical visits to all the important mining centres throughout the world, and to exchange information with those in charge of similar operating plant.

The result of this policy has had an influence on some of the methods adopted and on some of the plant installed by which our efficiency has been improved, and I have sufficient confidence in the ability of the men we have selected to undertake these visits to cherish the belief that the benefits resulting from their interchange of information have not been entirely one-sided. It gives me great pleasure, in any case, to express my thanks to our Australian, Canadian, American, and Continental friends for the courtesy, kindness and consideration they have always extended on these occasions to members of our staff; exhibiting as this does the international good-fellowship that has always existed among those following the mining profession.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, you will find that the total operating expenditure is about £8,000 less than the preceding year, notwithstanding the mining and treatment of an additional 33,212 tons of ore. This is equivalent to a decline in the total operating expenditure of almost 8s. per ton of ore mined

and treated, which highly satisfactory result, I am sure you will agree, is further evidence of the real progress made during the year.

Examination of the individual charges shows an increase in mining somewhat in excess of the increase in the tonnage mined; treatment has actually decreased notwithstanding the large increase in tonnage handled; freight, shipping and realisation charges are down because of the lower ocean freights that prevailed; the cost of the staff provident fund has increased and general expenses have declined considerably, following reduced expenditure on ironstone exploration, reports and experimental processes. Rangoon office expenditure remains practically unchanged, while that of the London office shows an increase, mainly in connection with important litigation, to which I will refer later.

The trading account discloses a gross profit of £1,566,733, and after providing for loss on exchange, depreciation, income and super-tax, the net profit resulting from the year's operation is £1,054,842, the highest figure ever recorded by the corporation.

Out of this amount dividends Nos. 12 and 13 were paid, absorbing, with bonuses, £1,015,626, leaving a balance of £39,216 to be added to the carry-forward.

The total of these dividends and bonuses was at the rate of one rupee per share, or 10 per cent., free of both Indian and United Kingdom taxes, and I am sure you will regard it as a matter for congratulation and pleasure that for the first time in the corporation's history the dividends paid for a single year have exceeded one million pounds sterling.

DIVIDEND.

I now pass on to the interesting subject of dividend payment, and I am sure you will all have been pleased to find that we were able to declare for the current half-year a dividend at the same rate as that paid for the first half of last year, notwithstanding the heavy fall in the price of silver and spelter meanwhile.

I drew your attention last year to the great strength of our financial position, and intimated the board's intention to use certain funds conserved from earnings of the past at their discretion for the purpose of equalising dividends.

The aggregate of the reserve fund and profit and loss appropriation account now amounts to Rs. 58 lakhs, equivalent almost to 7 annas in terms of dividend.

Without the reserves, which this conservative policy of ours has created, your position to-day would not be so favourable, for no company unprovided with reserve resources could possibly hope or attempt to maintain the same substantial dividends out of earnings in face of a fall in the prices of silver and spelter, and, to a lesser extent, lead, which, in the aggregate, and in the event of continuation throughout the year, may diminish our earnings by over a quarter of a million pounds sterling.

You will note that, as an offset to the fall in the price of silver and zinc, we were able to record an advance of 250 tons of lead in our output, starting with the month of October, and, in addition, we have the benefit of a substantial decline in the requirements for depreciation, as well as a progressive decline in the unit cost of production.

I would not like you to deduce from anything I have said that, whatever the fall in metal prices, our dividends will remain unaffected at any particular level. My intention is to convey to you that our earnings available for dividends can and will be supported from these funds as occasion may arise, so long as your board is of opinion that it can be done with prudence and proper justification.

SUMMARY OF POSITION.

In endeavouring to give you a complete picture of your company's affairs, my remarks have extended to greater length than intended, but, if asked to summarise the position in a few words, I would say the condition of the mine is sound and the outlook for the maintenance of our strong ore reserve position as favourable as ever. Our treatment plants are in course of extension and, wherever advisable, the latest and most efficient machines are being installed to supplement or replace existing units, and we are confident, when the time arrives for them to go into operation, that our expectations of treating a larger tonnage more efficiently and at considerably lower cost than in the past will be fully realised. All is, therefore, sound and well at the operating centre without any apparent sign of weakness. On the other hand, we all recognise that we are passing through a period of trade depression, which has not been without influence on the demand for metals as well as their prices, a condition which naturally does not leave us free from anxiety. Apart from this unfavourable feature, the general condition of our business is entirely satisfactory, and the strength of the financial position we have built up enables us to envisage the difficult times we are now experiencing with a degree of equanimity and confidence that otherwise would not be possible.

Mr. Clifton seconded the resolution, which was carried unanimously.

ANGLO-FRENCH BANKING CORPORATION, LIMITED.

A SATISFACTORY FIRST YEAR.

The ordinary general meeting of the Anglo-French Banking Corporation, Ltd., was held, on the 16th instant, at the Cannon Street Hotel, London.

Mr F. A. Szarvasy (the Chairman) said that the balance sheet represented the first full working year of the bank and it bore out the expectations he had entertained at the time they had met a year ago. He had foreshadowed then that their young institution would give a satisfactory account of itself, and it was pleasing that, in spite of the abnormal conditions which had prevailed in trade and finance in Great Britain and on the Continent of Europe, they had earned a satisfactory net profit, and that the total bad debts incurred during the year only amounted to £720, and that there was hope that they might even recover some portion of that amount.

The net profit, after providing for all outgoings and for rebates and contingencies and directors' remuneration, amounted to over £60,000, and the board proposed to apply that in writing off preliminary expenses and stamp duty, as well as all furniture and fittings, etc., and, after providing for taxation liability, the balance of £10,000 was set aside to form the nucleus of a reserve fund.

The board felt that at that stage of their existence it was preferable to strengthen the bank's international position, rather than make any distribution by way of dividend, but, if they could maintain their steady progress, as he believed they could, they ought to be able in a year from then to propose the distribution of a maiden dividend, after doing full justice to the need for building up reserves. (Applause.)

STRONG LIQUID POSITION.

They had a total of assets of nearly £7,000,000, out of which over £2,000,000 was represented by items of a completely liquid character, partly convertible into cash at call and partly within seven days. The proportion of liquid assets to deposit liabilities figured at somewhere in the neighbourhood of 75 per cent., a very satisfactory percentage. At the date of the balance sheet they had a consignment of gold in transit to this country, which was the first transaction of that nature undertaken by their bank. That deal was now closed and had resulted in a good profit.

A very satisfactory feature of their balance sheet was the growth in deposits, which now amounted to over £2,700,000, an increase of over £1,100,000 during the year. Customers' loans were as yet relatively unimportant, as they had felt that, until their institution was established on a broader basis, they should not seek to engage themselves too actively in that direction.

He had already referred to the imports of gold, which had reached, during the year, £76,000,000, and were taken almost in equal quantities from New York and London. That movement of the precious metal had been possible almost entirely by reason of the facts given, and not, as it was popularly supposed, by the Banque de France selling part of its foreign bill holdings and converting the credits into gold. In those circumstances, and seeing that France had the capacity by reason of ordinary commercial transactions alone to attract further large quantities of gold, it was satisfactory to observe that financial authorities in France wished to open their market to foreign borrowers, and, so far from scenting a menace, both New York and London should welcome the prospect of closer partnership directed, it was hoped, to provide more effective financial leadership in the elimination of needless instability of trade and credit, and the establishment of strong and enduring foundations for a wider diffusion of wealth.

AN INTERESTING DEVELOPMENT.

One interesting development had taken place when, with the aid of the Banque de France, and several big banking houses in Paris, a new bank had been created with the special object of doing acceptance business, seeing that a similar institution had not hitherto existed in France, but development must go further and the establishment of acceptance houses and institutions similar to English bill brokers must follow, as an active independent and quick moving discount market was just as much an essential constituent of any great monetary centre as the presence of an ample supply of loanable capital. To them the chief interest lay in the effect of that development on their own money market and on their bank in particular.

He held the view that in London they need not look upon that development as a danger, but, on the contrary, if, side by side with New York and London, Paris would become a third monetary centre of the first order, it could only be helpful in giving wider and consequently more regular bases to the big movements of capital which were necessary to secure general economic progress.

The report and accounts were unanimously adopted.

APEX TRINIDAD OILFIELDS, LIMITED.

LOWER PRICES OFFSET BY LARGE PRODUCTION. DIVIDEND OF 52½ PER CENT.

The tenth ordinary general meeting of Apex (Trinidad) Oilfields, Ltd., was held, on January 16, at Winchester House, London, E.C., Mr Walter Maclachlan (chairman and managing director) presiding.

The Chairman, in the course of his speech, said :—The oil profits earned during the year amounted to £447,650, to which falls to be added revenue from interest and transfer fees, which brings the total profit to £454,818.

This represents the profit after meeting all production and other charges excepting amortisation of the wells, in respect of which £132,349 is written off, and £9,260 of expenditure in London. The net profit for the year amounts to £313,208, an increase of £66,779 as compared with the previous year.

The directors now recommend the payment of a final dividend of 30 per cent., less tax, making a total dividend of 52½ per cent. for the year. As the income tax deducted from our dividends is at the rate of about 2s. in the £, the gross return for the year represents the equivalent of approximately 59 per cent., less full tax at 4s. in the £.

During the year under review a further general fall took place in the market value of oil, with the result that the prices realised from the sale of our production were materially reduced. As compared with the previous year, however, the increase in our production by 119,553 tons served more than to meet the fall in prices, so that our oil profits were increased to the extent of £99,127. As indicating the effect that the continually increasing fall in prices has had upon our profits, I would point out that, had we been able to realise for our last year's output the prices which we obtained three years ago, our profits, instead of being £313,000, would have amounted to well over 100 per cent. on our present capital.

However, in spite of these adverse conditions in the realisation of our production, which are common to all oil-producing undertakings, I think you will agree that we have good reason for considerable satisfaction with the results which have attended our operations for the year under review.

OIL PRODUCTION AND DELIVERIES.

The production of oil for the year was 414,328 tons, as compared with 294,775 tons for the previous years. This production constitutes a further record output, and was obtained from 110 wells. The production for the first three months of the current financial year has been 103,690 tons, thus maintaining practically the average rate of production for 1928-29. The total production of our oilfield up to December 31, 1929, has been approximately 1,800,000 tons, and it is anticipated that during the current year we shall produce about 35 per cent. of the entire oil production of Trinidad.

The oil delivered to Trinidad Leaseholds and that used in our own operations during the year amounted to 414,212 tons.

During the year 36,651 feet were drilled, making a total footage of 206,433 feet. Five wells which had been started prior to October 1, 1928, were drilled to completion, fourteen new wells were commenced and completed, two wells were deepened and again brought into production, and five wells further which had been started were in progress at the end of the year. Of the twenty-one wells which were brought in during the year none were failures, and the incidence of good producers was considerably better than during the preceding year.

AMORTISATION.

In accordance with our plan of amortising the wells in three years, £132,349 has been written off in respect of last year. Up to date, 88 per cent. (representing £682,966) of the total cost of all our wells has been written off under our amortisation plan. As a result, the whole of the wells now stand in the accounts at £95,851, which amount includes £28,881 expended on new locations and unfinished wells not due for amortisation, and the wells which yielded the production for last year, therefore, stand in our balance sheet at £66,970, representing only 82 days' output from our producing wells. The conservative policy in which you have supported us since our amortisation plan was initiated has resulted in the company now holding a very strong position in respect of the extremely valuable reserve which has thereby been created.

As to the outlook for the current financial year, our output is being maintained at practically the same rate as last year, and there is every prospect that the output for this year will not be less than that for the year under review. The continued general over-production, however, makes it difficult to deal with the outlook as regards the realisation of our output, as we are quite unable to make any forecast as to the course of prices. I can only express the hope that early success will attend the efforts for the restriction of output in the United States, upon which the oil industry is dependent for any material improvement in prices.

The report and accounts were unanimously adopted.

MICHAEL NAIRN AND GREENWICH, LIMITED.

HIGHLY SATISFACTORY RESULTS.

The eighth annual general meeting of Michael Nairn and Greenwich, Ltd., was held, on the 15th instant, in London, Sir Michael Nairn, Bart. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said : From the industrial point of view the year 1929 has been a difficult one, but I am glad to say that in our own case the results in the aggregate have proved highly satisfactory, and the profits earned fully justify the payment of the same rate of dividend as we declared last year. The balance sheet now before you calls for no special comment. The amount of dividends paid to the holding company shows a slight increase, and after the payment of a final dividend of 7½ per cent., making 12½ per cent. less tax for the year, the amount left to be carried forward is £56,037 2s. 4d., as compared with £44,729 15s. 9d. last year. This result has been achieved in spite of the fact that during the whole of the period under review our associated companies have sold their products at a lower price than those which ruled in 1928. The linoleum industry has been very prosperous during the last few years, but I think it only right to say that we have been assisted, at least so far as our own country is concerned, to a great extent by the very large building schemes which have been in operation.

OVERSEAS INTERESTS.

Building on the same scale, however, cannot continue indefinitely, and it is therefore the constant aim of our associated companies not only to maintain their position in the home trade but to secure the largest possible share of the linoleum business in markets beyond the borders of our own country. I should like to remind the shareholders that in addition to our large works at Kirkcaldy and Greenwich we have considerable interests in the manufacture of linoleum in our Dominions and in other countries of the world. These interests have been acquired without asking our shareholders to subscribe one penny in the way of fresh capital, and we value them very highly, both for their present and potential profit-earning capacity.

With regard to the future, while I do not wish to strike a pessimistic note, I am bound to say that I view with real concern the rate at which public expenditure is increasing in this country. It seems to me that, in view of our heavy financial responsibilities as a nation, we should conserve our resources in every possible direction and exercise the strictest supervision over disbursements from the public purse. I have never considered it within my province to make political references at our annual meetings, but I feel bound to emphasise the fact that the industrial prosperity of the country is intimately concerned with the economic policy of the Government. I propose to give you an illustration of what I mean to convey. In my speech last year I referred to the erection at the Nairn works at Kirkcaldy of a new central power plant, which involved a heavy expenditure. It is one of the finest plants in the country, and its installation has been fully justified by the very considerable economies effected in coal consumption. I am afraid, however, that, should the Coal Bill now before Parliament pass in its present form, a proportion of the reduction in costs will be lost by the increase in the price of coal. I respectfully suggest that the Government, in introducing legislation one of the effects of which will be to force the coal industry to increase prices to the consumer in order that that industry may improve its financial position, is turning backwards the hands of the industrial clock and undermining the prosperity of other industries who depend so much upon buying their coal supplies at the lowest possible competitive prices.

"HIGHEST POSSIBLE STANDARD OF QUALITY."

I might remind the shareholders here that our associated companies really comprise one self-contained unit, which can supply every grade of what our American friends call hard-surfaced floor coverings, from low-price floorcloths to the most expensive inlaid, parquet and marble productions in linoleum, and they are, therefore, admirably equipped from the competitive point of view. Through having interests in common these companies are able to economise in the purchase of raw materials, to share in the results of the work of research, and to take the fullest advantage of the markets of the world. As years go on, competition in the linoleum industry grows no less, but your directors are fully alive to the situation. Everything is being done to maintain and strengthen the position we hold in the trade, not only by the maintenance of the highest possible standard of quality for our goods, but by developing to their fullest extent the productive capacities of all the associated companies both at home and abroad, and at the same time conserving our strongly entrenched financial position, so that I can assure the shareholders that they can look forward to the future with absolute confidence.

Major Sir Robert Spencer-Nairn seconded the resolution, which was carried unanimously.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

A RECORD PROFIT.

The sixty-fifth annual general meeting of Liebig's Extract of Meat Company, Ltd., was held on the 16th instant, at the Cannon Street Hotel, London, E.C.

Mr C. E. Gunther (chairman and managing director) said that the profit of £371,000 was the highest in the company's history, and its attainment had been aided by the fresh capital issued during the past year. The full amount of new capital, however, was not available for remunerative employment throughout the period, and, in view of the strong position of the company's reserves and carry-forward, which stood at a total not far short of the ordinary capital, the directors had considered that they would be best interpreting the wishes of the shareholders if they were to forego on the present occasion any allocation from profit to the reserve fund. The directors recommended the maintenance of the dividend at the same total rate of 16s. per share, free of tax, on the increased capital.

EXPANSION OF TURNOVER.

Trade in their principal products had shown a healthy resilience, and a gratifying expansion of turnover had enabled them to counteract to a certain extent the advancing cost of raw materials. The company's business in general had continued to be satisfactory, although results had been affected by abnormally dry conditions on certain of the ranches and estancias, by low market values of produce, notably hides, and by a strike which had impeded the operation of one of their South American factories and the movement of produce therefrom. While hides had declined to the region of pre-war values, the cost of cattle had ruled at a figure considerably in excess of the pre-war range, and in the face of this, and the greatly increased charges in respect of labour, fuel, packing material, transport, taxation, &c., it was a remarkable fact and testimony to what could be achieved by efficiency, combined with a greatly increased turnover and output, that the company's canned meats should be available to purchasers at prices no higher than those of pre-war times. A farming, manufacturing and trading business such as theirs was liable to the ups and downs and the fluctuations inherent to all businesses of a similar nature, and perhaps the company's greatest security rested in the wide ramifications of their business and the fact that, if one branch failed to pull its full weight in any one year, another might be in a position to make good the deficiency.

During the year under review he had paid a visit to their River Plate factories and to some of the estancias, and he found everything going on smoothly and satisfactorily with the exception of conditions ruling at that time in Paraguay. The factories were fully maintained up to the high standard of efficiency required in their business, and this statement would, he was sure, be confirmed by his colleagues, Mr Follett Holt and Mr Alfred Grisar, who had also visited the River Plate factories and estancias since the last meeting. These visits afforded the opportunity of discussing with their colleague, Sir Herbert Gibson, who resided in the River Plate, and with the company's general administration, the many matters affecting their widespread interests in South America.

The climatic conditions during the past year were good on their Rhodesian property, and the cattle were making up the effects of the drought which had prevailed in the previous two years, while prices for all classes of slaughter stock had shown some improvement. Since the close of the financial year they had formed in this country a subsidiary company to take over their factory and business in South-West Africa as from September 1st last. The factory there had been enlarged and improved, and afforded a valuable outlet to the local breeders for the realisation of their surplus cattle, while making useful contributions to the company's supplies.

The first full year's operations of their Uruguayan subsidiary, whose main objective was cattle and sheep farming, had been successful, and it had contributed a satisfactory return on its capital.

PARTICIPATION IN ANTWERP EXHIBITION.

Referring to the fact that Belgium would commemorate in the present year the centenary of its independence by organising twin international exhibitions at Antwerp and Liege, the chairman said that the company owed it to their lifelong connection with the former City to participate therein in a prominent manner. They would have a handsome pavilion in the centre of the Antwerp Exhibition, and their trade activities in the numerous European countries would be suitably dealt with.

Trade in the company's chief products continued to show the most gratifying and encouraging expansion, and the high reputation and goodwill attached to their trade marks—Oxo, Fray Bentos, Liebig, Viandox, and others—had never stood better than they did to-day. Their products were enjoying to a fuller extent than ever the appreciation of their world-wide clientele.

The report and accounts were unanimously adopted.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED.

CONDITIONS IN BRAZIL.

The forty-fourth ordinary general meeting of the Rio de Janeiro Flour Mills and Granaries, Limited, was held, on the 14th instant, at River Plate House, London, Mr Richard Foster (the chairman) presiding.

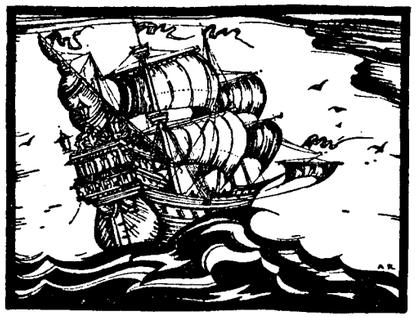
The Chairman, in moving the adoption of the report and accounts, said that at the termination of his contract as managing director Mr S. C. Sheppard was not prepared, after long years of arduous work in the company's service, to renew it, but had agreed to continue as a director of the company. After dealing at length with the items of the profit and loss account and the balance sheet, the Chairman said that if the shareholders were in agreement with these accounts the board would be able to pay their usual dividend of 1s. 9d. per share, free of income tax (making 3s. for the year), and carry forward £88,380, as against £88,557 last year. No doubt the company could have paid a bonus this year, but no shareholder who knew what the state of trade in Brazil was at the moment, or even any shareholder who had noted Mr Sheppard's and his own remarks during the last few years, would, after hearing what they had to say that day, expect a conservative board to do more than maintain the dividend until such time as the commercial troubles in Brazil showed signs of improvement.

Mr S. C. Sheppard seconded the resolution, and said that there was unfortunately no doubt that Brazil was still passing through a very trying period, at any rate, so far as commercial affairs were concerned. Naturally, the company's trade had suffered. The amount of wheat ground was down by approximately 6.6 per cent., as compared with the preceding year, while the output of the cotton mill fell off slightly under 9 per cent. As a country Brazil was certainly making substantial progress; although the conditions now were difficult, he looked for an improvement in the future.

The resolution was unanimously adopted, and the dividend recommended was approved.

The Chairman announced that, after thirty years' service with the company as a director and seventeen years' as their chairman, he had decided to retire from the board, and several shareholders expressed their great regret at his decision.

A resolution was passed to increase the borrowing powers of the company by £250,000, and the proceedings terminated.



ENTERPRISE!

¶ The intrepid enterprise of Columbus over four centuries ago opened up all the possibilities of an undeveloped Continent.

¶ Since then, the enterprise of succeeding generations has resulted in phenomenal development of the vast resources of the New World.

¶ To-day a great and growing volume of overseas trade is transacted annually by the Latin American Republics, and complete facilities for every description of modern banking business are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST., LONDON, E.C.2

FANTI CONSOLIDATED INVESTMENT COMPANY, LIMITED.

IMPROVED RESULTS.

The annual general meeting of the Fanti Consolidated Investment Co., Ltd., was held, on the 15th instant, at the Cannon Street Hotel, London, Sir Edmund Davis (chairman and joint managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—On July 27, 1929, we carried out our promise to pay an interim dividend; this amounted to 4½d. per share and a bonus of 1½d. per share, namely, £33,750. After deducting this amount and the relative proportion of the directors' and managing directors' percentage of profit, £3,037, and the £30,000 transferred to reserve account, making together £66,787, there is a balance of £78,896 available for allocation. Out of this sum the directors recommend the declaration of a final dividend of 4½d. per share and a bonus of 7½d. per share, equivalent to 1s. per share, less income tax, which will make a total distribution for the year ended December 31, 1929, of 1s. 6d. per share, or 18¾ per cent. (Applause.)

To summarise the position, at December 31, 1929, we will take the investments at the value at which they stand in the books, and the cash and debtors, less creditors, which together amount to £678,896, as compared with £654,022 at December 31, 1928, an increase of £34,874. Taking the investments held on Monday last, the 13th instant, at the market prices on that day where there was a quotation, and the unquoted securities at cost or the written-down value, and our holding of African Manganese debentures at par, the value works out at £984,991. Adding to this the cash and debtors, less creditors, at the same date, the total amounts to £1,014,906, which is equivalent to 15s. 0.4d. per share on our issued capital of £540,000. (Applause.)

Replying to a shareholder, the chairman said that he thought the directors had, on the whole, done very well indeed for the company. (Hear, hear.) Since December 31, 1918, they had paid to the shareholders a total of £710,166 in dividends on a capital of £540,000. He thought that they could claim to have served the company during very difficult times in a very satisfactory manner, and he would like to add that the company had not been hit in any way by groups which had been in trouble during the past year. As far as the future of the company was concerned, he hoped that as a result of the very careful handling of its affairs by the board of directors as at present constituted, they would have a satisfactory balance sheet to present to the shareholders again next year, and he saw no reason to doubt why they should not be able to submit their accounts as promptly as they had done on the present occasion. (Applause.)

The resolution was carried unanimously.

CARDINAL INVESTMENT TRUST, LIMITED.

SATISFACTORY RESULTS OF DIFFICULT YEAR.

The twenty-third ordinary general meeting of this Trust was held, on the 16th instant, at Winchester House, London, E.C.

Mr Gerald T. Moody (the chairman), in the course of his speech, said:—The gross receipts amount to £45,846, comparing with £39,597 for the previous year. The convertible debenture stock ranks for twelve months' interest, whilst we have not had the full advantage arising from the permanent investment of the money it represents; we have preferred to leave money with our bankers or invested in three months' Treasuries rather than buy at inflated prices. Notwithstanding all the adverse features of the year, our net revenue amounts to £30,005, and allows us to recommend a final dividend of 10 per cent. on the deferred stock, making 16 per cent., less income tax, for the year, that £5,000 be appropriated to reserve account, increasing this to £45,000, and that £8,168 be carried forward, as compared with £7,657 brought in. In my observations made at our annual meeting in January, 1929, I predicted that the then current industrial boom would be followed by a period of depression. A few weeks later the beginning of the collapse was heralded by a rise in the Bank rate and the prices of the shares of many mushroom companies crumbled, with the usual aftermath of revealed heavy losses and several grave scandals. To these I would not refer except to say we are quite free from entanglement with any of the notorious parties. The fundamental policy of our company is, and always has been, the wide spreading of risks and this has proved so successful in practice that I have reached the conclusion that Investment Trusts should be so constituted that the articles of association, or better still, the memorandum of association should prohibit the investment of more than 5 per cent.—or even a smaller percentage—of the funds of the company in any one undertaking. We are considering whether we should not make this policy compulsory by asking you to sanction the necessary changes in our articles.

Notwithstanding the persistent fall in price of investment securities throughout 1929 we are in the happy position of being able to assure our stockholders that valuation of our investments as at December 31, 1929, after allowing for the proposed dividend and other allocations, shows a substantial surplus over the issued capital and reserve account. As a supplement to our report we have this year given a complete analysis of the company's investments, 418 in number, which analysis fully bears out the statement already made regarding the spreading of our risks, and relying on this you will be justified if you conclude that at the close of the year into which we have now entered you may expect to receive a statement not less favourable than that we have the pleasure of placing before you to-day. (Hear, hear.)

The report was unanimously adopted.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 11, 1930:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	5,600	From Revenue	24,382
Interest, &c., on Debt	3,204		
Sinking Fund	734		
Sundries	383		
Increase in Balances	341		
Decrease in Debt	14,120		
	24,382		24,382

The ordinary revenue for the week amounted to £24,381,600, as compared with £23,399,400 in the corresponding week last year. Income tax was higher at £11,788,000, against £11,306,000, and super-tax at £3,180,000, against £2,930,000. Customs and Excise brought in £1,839,000 and £1,012,000, against £1,828,000 and £1,172,000 respectively. Ordinary receipts were lower at £170,600, against £209,900, but special receipts were higher at £400,000, against £800. The National Debt was reduced by £14,120,000, as shown below:—

(000's omitted.)

	£		£
5% Conversion Loan	+ 16,600	Treasury Bills	− 15,207
National Savings Certificates	+ 200	Public Dept. Advances	− 16,050
Sundries	+ 337		
	+ 17,137		− 31,257

The Floating Debt was reduced by £31,255,000 to £818,435,000.

Net arrivals, £1,381,778.

Messrs Samuel Montagu and Company write on January 15, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £149,061,137 on the 8th instant (as compared with £145,960,084 on the previous Wednesday), and represents a decrease of £4,845,178 since April 29, 1925—when an effective gold standard was resumed. About £907,000 of bar gold from South Africa was available in the open market this week. At yesterday's fixed price of 84s. 11½d. per fine ounce, £398,000 was taken for France, £25,000 for India, and £115,000 for the Home and Continental trade, whilst the Bank of England secured £342,000 at the statutory buying price. There was a net influx of gold of £1,399,602 during the week.

SILVER.

There have been wide movements in prices, which have recovered substantially from the low level reached last week. A break in the panic of selling from China and a continued demand from India for near delivery carried quotations to 20 13/16d. and 20½d. on the 9th instant—a rise of ½d. for cash and ⅝d. for two months' delivery The forward quotation eased 1/16d. the following day, but subsequently China turned a buyer and by the 13th instant prices had risen sharply to 21 7/16d. and 21 1/16d. Some re-selling on China account caused a fall to 21⅛d. and 20 15/16d. yesterday, but on a renewal of buying for the same quarter there was a recovery to 21⅜d. and 20⅞d. to-day. It will be noted that the premium on cash silver has widened during the week from 5/16d. to ½d., and this is due to the consistent demand for silver for early shipment to India. Cash silver had not commanded so large a premium as ½d. since January 24, 1924. America has been rather more active in this market, but has been more inclined to give support. Speculative activity in China renders the outlook uncertain.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 6th instant to mid-day on the 13th instant :—

Imports	£	Exports.	£
Germany	12,600	British India	313,453
Belgium	9,060	Other countries	6,177
France	56,007		
Mexico	49,671		
British India	69,591		
Other countries	2,070		
	£198,999		£319,630

Indian Currency Returns (in lacs of rupees.)

	Jan. 7.	Dec. 31.	Dec. 22.
Notes in circulation	17,952	17,941	17,919

THE BANK OF NOVA SCOTIA.—An issue of $2,000,000 new capital is to be made to shareholders on record December 31, 1929, the price of the new stock to be $250 per share and the allotment to be made on December 31, 1929, on the basis of one new share for five old shares. No fractions of shares will be allotted. The allotment notices will be sent out from the general office at Toronto as soon as possible after December 31, 1929.

CENTRAL HANOVER BANK AND TRUST COMPANY, NEW YORK.—The statement of condition on December 31, 1929, shows total assets of $769,258,940, an increase of more than $165,000,000 over the total of $603,900,542 shown at June 29, 1929. Substantial increases are shown in loans and discounts, which rose during the six months from $322,702,782 to $353,204,113, in holdings of United States Government bonds and municipal bonds and in customers' liability account of acceptances, the last-named item advancing from $34,590,660 to $59,790,468. On the liabilities side of the statement, deposits at the close of business on December 31, 1929, amounted to $598,326,397, compared with $463,586,558 on June 29, 1929. Acceptances increased from $35,452,256 to $60,656,808. Undivided profits are shown in the latest statement as $24,117,707, an increase of almost $5,000,000 as compared with $19,153,269 reported six months previously. The capital at $21,000,000 and surplus $60,000,000 remain as on June 29, 1929.

EXTERNAL DEBT OF PARAGUAY.—Tenders of Bonds of the loans of 1886, 1896 and 1915, and of the arrear coupon certificates issued in respect of the 1886 and 1896 bonds for amortisation, were opened on January 7th at the offices of the Council of Foreign Bondholders. Tenders were accepted as under :—Bonds of 1886 and 1896 : Tenders under £48 17s. 6d. per cent. were accepted in full, and those at that price to the extent of 60 per cent. Bonds of 1915 : Tenders under £48 19s. 9d. per cent. were accepted in full, and those at that price to the extent of 18 per cent. Arrear Coupon Certificates : Tenders at and under £89 17s. 6d. per cent. were accepted in full.

MISCELLANEOUS.

ANGLO-AMERICAN OIL COMPANY, LTD., LONDON, ENGLAND.—Shareholders are reminded that the offer to exchange their shares for shares of Standard Oil Export Corporation, on the basis of one $100 non-voting guaranteed 5 per cent. preferred share of the Standard Oil Export Corporation (callable at 110 at any time after December 31, 1935) for every five 5s. 9d. Anglo-American Oil Company share expires (subject to certain conditions) on January 31, 1930. Full details of the offer, together with necessary forms in connection with same, can be obtained from the Guaranty Trust Company of New York, 140, Broadway, New York, U.S.A., or 32, Lombard Street, London, England.

RHODESIAN AND GENERAL ASBESTOS CORPORATION, LTD., AND TURNER AND NEWALL, LTD. (EXCHANGE OF SHARES).—Turner and Newall, Ltd., state that, on the 14th instant, the day on which the offer made to shareholders of Rhodesian and General Asbestos Corporation became operative, the total number of shares assented was over 1,000,000 representing 96 per cent. of the total issued capital. Turner and Newall, Ltd., give notice that, in accordance with the terms of the offer, they have authorised the District Bank, Ltd., to accept deposits of share certificates under the deposit agreement at any time up to and including January 31, 1930.

NEU-FLAME (CANADA), LIMITED.—The directors of International Vacuum Power, Limited, and the directors of Neu-Flame (Parent), Limited, are notifying shareholders that, due to the default of the underwriters of Neu-Flame (Canada), Limited, it has been decided to put that company into voluntary liquidation.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions have been unsettled. Further heavy rains have fallen in some parts of the United Kingdom, and field work has been hampered by the sodden state of the ground. The crop outlook, however, is fairly satisfactory. English wheat continues in light supply and prices are easier, in sympathy with the general situation. On the import market values declined further on liberal offerings and a slow demand. India and Japan have purchased wheat from Australia, while a few cargoes from North America were taken by Portugal, but the general course of trade fails to improve and is the main cause of market depression. Although the exportable surplus is smaller, the Argentine is offering freely at lower prices and steadily forcing the hands of North American holders. Attention is again riveted on heavy stocks in Canada and the United States, and with the possibility of a large crop this year, the difficulty in finding an outlet for surplus supplies is apparently causing a good deal of anxiety. Continental wheat is still plentiful, and a plethora of feeding stuffs at low rates militates to some extent against increased overseas purchases. Fair quantities available from the Southern Hemisphere will be sufficient to cover consumers' requirements for some time ahead until a better estimate can be formed of the international situation. Meanwhile, demand is strictly confined to immediate needs. Flour prices have an easier tendency in sympathy with wheat, and imported descriptions are more readily offered for shipment at reduced prices. Of feeding stuffs, La Plata maize was obtainable at lower rates, as selling pressure and a poor consumptive demand coincided with liberal arrivals and also prospects of a very large Argentine production this year. Barley and oats were neglected, with prices moving in buyers' favour.

Wheat.—Quiet and easier. No. 1, Northern Manitoba, ex-ship, 54s.; No. 2, ditto, 53s.; No. 3, 52s.; No. 4, Manitoba, 51s.; No. 5, 48s.; No. 6, 41s.; No. 2, hard Winter, 48s. 6d.; No. 2, mixed Durum, 46s. 9d.; Rosafe, 63½ lbs., 46s. 9d.; Barusso, 63½ lbs., 47s. 3d.; Australian, 49s. 6d. per 496 lbs. English, 9s. 7d.-9s. 9d. per 112 lbs.

Flour.—Quiet. London straight run, 42s. per sack for country deliveries, and 41s. London area. Of imported, Manitoba patents, 39s.-42s.; Buffalo, 39s. 9d.-41s. 6d.; Australian, 36s. 6d. ex-store. On c.i.f. terms, Manitoba top patents, January-February, 39s. 6d.-40s. 6d.; export ditto, 37s.-38s.; Australian, 34s. 6d. per 280 lbs; Argentine low grade, February-March, £7 5s. per ton.

Maize.—Again easier. Plate, landed, 28s. 6d.; ex ship to arrive, 27s. 6d.-27s., as to position; February-March, 27s. 9d.; new, April-May, 28s. 6d.; May-June, 28s. per 480 lbs. Yellow maize meal, £8 10s. per ton f.o.r. London. Yellow African, £7 5s.; white, £6 15s. per ton, ex ship.

Barley.—Dull. Californian old, landed, 36s.-43s.; new, ex ship, 37s.-46s. as to sample; Chilian brewing, ex store, 37s.-43s.; Chevalier 40s.-45s.; Australian, 41s.-42s.; Smyrna, 40s.-42s. per 448 lbs; Algerian/Tunisian, ex ship, 26s.-27s. 6d. as to sample; No. 2, Federal American, landed, 20s. 3d.; Danubian, landed, 26s. 6d.; Black Sea, January, ex ship, 23s. 3d.; Persian ditto, 23s. per 400 lbs.; English malting, 8s. 6d.-14s. 6d.; feed, 7s. 3d.-8s. per 112 lbs.

Oats.—Depressed. Plate, landed, 17s. 9d.; ex ship to arrive, 16s. 9d.; black Plate, landed, 17s. 3d.; Chilian white, landed, 24s.; ditto, tawny, 19s. 6d.; German, landed, 20s.; ex ship to arrive, 19s.; mixed Canadian feed, 15s. 9d.; South Russian, 18s. per 320 lbs.; English, 7s. 4d.-7s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929 :—

Nearest Future.	Jan. 2, 1929.	Jan. 16, 1929.	Jan. 2, 1930.	Jan. 8, 1930.	Jan. 15, 1930.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.	122	125	148⅛	141¼	135½
Chicago (No. 2 Winter)—Cents per 60 lb.....	116⅜	119⅜	130⅞	128¼	124

The visible supply of wheat in Canada at 75,326,000 bushels shows a decrease on the week of 241,000 bushels. Supplies a year ago stood at 78,538,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports a steady day-to-day export demand for coal. Fair tonnages are going away with prices firm at former rates. Owing to the uncertainty of the outlook no great weight of forward business has been placed. Trade in house coal is poor and disappointing. Blast-furnace coke is selling freely at 17s. at ovens, and the output is increasing. Best steams are quoted at 18s. 6d. f.o.b. Humber ports.

Our Glasgow correspondent writes :—Production at the collieries is now in full swing again, and some activity has now opened up in the market. The trend of prices is, however, definitely downward, both in round coal and washed nuts, although for the moment singles and doubles among the latter are fairly well maintained, as there are one or two good prompt orders held for these qualities. The ruling prices for shipment are approximately the following (f.o.b. district ports) :—Lanarkshire.—Ell best, 16s.; splint best, 17s. 6d.; splint second, 16s. 6d.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; steam, 14s. 6d.-15s.; Hartley, 18s.; trebles, 16s. 6d.; doubles, 15s. 6d.; singles, 14s. 6d.; pearls, 13s. 6d.; dross, 10s. Fife.—Screened navigation, 18s.-19s. 6d.;

FIGURES OF ASSURANCE
AMP
By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £74,000,000. Annual Income £10,500,000. Full particulars on application.

first-class steam, 15s. 6d.-16s.; third-class steam, 14s.-14s. 6d.; trebles, 17s.-17s. 6d.; doubles, 15s. 6d.; singles, 14s. 6d.-15s.; pearls, 13s. 6d.-14s. LOTHIANS.—Prime steam, 14s. 6d.; secondary steam, 14s. 3d.; trebles, 17s.; doubles, 15s. 6d.; singles, 14s. 6d.; pearls, 13s. 6d. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s. 6d.; trebles, 16s. 6d.; doubles, 15s. 6d.; singles, 14s.-14s. 6d.; pearls, 13s. 6d.; dross, 10s.

Our Cardiff correspondent writes: Fairly normal conditions have ruled on the Cardiff coal market this week. The docks have been well supplied with tonnage, and outward freight rates continue low. The current volume of inquiry has not been very impressive, but the collieries are exceptionally well stemmed under contracts, and little short time working is reported from the various parts of the coalfield. The anthracite trade remains very active, and the position in the Monmouthshire coalfield has been strengthened by the placing of the contracts of the Italian State Railways for between 700,000 and 800,000 tons over the next seven or eight months. Quotations are nominally unchanged, but for smalls and sized coals they are still in excess of the scheduled figures. The Mines Department returns for the 52 weeks ended December 28th last, give a total output of bituminous and anthracite coal of 48·9 million tons, compared with 44·1 millions in 1928, and with 46·9 millions in 1927; while the Great Western returns of exports give total coal and coke shipments of 29·8 millions, compared with 26·4 and 27·9 million tons respectively. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 20s.; best drys, 20s. 3d. to 20s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. 3d. to 18s. 6d.; Eastern Valleys, 18s. to 18s. 3d.; best small steams, 14s. 9d. to 15s.; cargo smalls, 14s. to 14s. 3d.; coking smalls, 14s. 6d. to 15s.; anthracite best, large, 36s. to 38s.; Red Vein, large, 26s. to 28s.; machine made cobbles, 44s. to 46s.; French nuts, 45s. to 47s.; stove nuts, 44s. to 46s.; rubbly culm, 12s. 6d. to 13s. 6d.; foundry coke, 35s. to 37s.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 27s. 6d. to 27s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange. The iron and steel markets have experienced no relief from the quiet conditions which have ruled for the past six weeks. The British steel works have still a fair amount of work in hand, but are working off contracts more quickly than new business is coming forward, except in those works producing shipbuilding material, where specifications as well as new orders are coming in in fair volume. The general demand for iron and steel is disappointing, and complaints on this score are as frequent in Britain as on the Continent. Consumers of pig iron continue to restrict their purchases to hand-to-mouth quantities in spite of reports that prices are likely to be increased at the end of the month. The most active section of the market has been the semi-finished steel department, and considerable inquiries for this class of material have been circulated by British buyers amongst Continental steel makers. Only a proportion of this, however, has materialised into actual business, and reports current on the Continent of large orders having been placed in Luxemburg by British users are not accepted in this country. The strength of the inquiry, however, has created rather better feeling in the market. A revival of business in the finished steel market is long overdue. Unfortunately, however, the situation in some of the most important overseas markets is discouraging owing to economic troubles.

Our Middlesbrough correspondent writes:—Trade in pig iron is not expanding as quickly as was expected and business has been extremely quiet. In Cleveland iron consumers are taking out the full quantities due to them under contracts, but they hesitate about placing further orders of importance, although it is understood that they have a considerable amount of work to cover for the present quarter. In some cases efforts are being made to secure concessions in prices but without success. Makers are quite firm and at Tuesday's market small sales were made by them at 72s. 6d. for No. 3, although merchants were prepared to shade the price for destinations permitted under their contracts. Other qualities were unchanged, viz.: No. 1, 75s.; No. 4 foundry, 71s. 6d.; and No. 4 forge, 71s. f.o.b. or f.o.t. Shipments of pig iron are on a better scale than last month, the clearances to 14th instant being 8,731 tons, against 5,288 tons to December 14th. In hematite business is rather slow, but increased buying is anticipated at any time. There are several inquiries on the market, some for important quantities. Makers quote 79s. for mixed numbers for early delivery and 80s. up to the end of March, but might shade these prices for important business. Second-hand holders are reported to have accepted 6d. to 1s. per ton less for export business. In the steel trade the mills are fairly well off for orders, particularly in the heavy departments, and further business is under negotiation. Bridge builders and constructional works are well employed, and founders have a satisfactory amount of work in hand. Home prices for steel materials under the rebate scheme are: Plates, £8 15s.; sections, £8 7s. 6d.; and joists, £8 10s. Iron bars are £10 15s.; galvanised corrugated sheets, 24-gauge, £12 2s. 6d.; black sheets, 21/24-gauge, £9 17s. 6d.; heavy steel rails, £8 10s., all for home use. The ore market is practically idle, and consumers are holding off. Best rubio is nominally 23s. 6d. c.i.f., and the freight Bilbao/Middlesbrough for early tonnage is 6s. 6d. to 6s. 9d. Coke is still offering somewhat freely and medium furnace qualities are obtainable at 22s. 6d. delivered works. The number of furnaces in blast in the district is now 40, but an additional furnace of large capacity is about to be blown in on hematite at Consett Works.

Our Sheffield correspondent writes.—The quietude in the stee industry which manifested itself in December continues and no considerable revival this month is probable. The heavy branches report inquiries and orders as meagre, and the outlook for new bookings uncertain. The past year's overseas trade, as revealed by the Board of Trade returns, were distinctly unfavourable as regards two of Sheffield's most important branches of trade, namely, railway material and special steels. Exports of rails and rolling-stock material have been shrinking continuously since the Armistice, and there was a further decline last year, especially in Indian trade. "Special" steels, which comprise the modern high-speed and alloy-tool steel, fell off considerably, whereas imports were higher. The Penistone steel works of Cammell, Laird & Co., now owned by English Steel Corporation, are to be closed permanently to facilitate the concentration of production under the company's rationalisation scheme. The works comprise six open-hearth furnaces with a capacity of 5,000 tons of steel per week, a large modern tyre mill and a rail mill. The works were established in 1862 to make Bessemer steel, and have afforded employment for from 1,000 to 1,500 persons. Tool makers report increased sales in the home market, but the export trade, except for engineers' tools, is quiet. The year has started in the cutlery branches rather better than twelve months ago. Exports have been declining and imports increasing of la[illegible] Local ironfounding is a quiet trade.

Our Glasgow correspondent writes: Operations have now been resumed, with very few exceptions, at the works in and around Glasgow. Most of the works report a fair amount of work on hand, but no marked improvement is noted as compared with the position during the closing months of last year. There has been a little more business passing in the pig iron market, and steelmakers find a continued good demand for structural steel, but that for shipbuilding material is somewhat disappointing. Sheetmakers have fairly well-filled order books, but the export demand for galvanised sheets remains unsatisfactory, and prices are keenly cut.

Our Cardiff correspondent writes: On the Swansea Metal Exchange on Tuesday business in tinplates and bars was reported quiet, with some works in need of orders. Imports of steel bars from Belgium have recently been on an exceptionally heavy scale, and the closing down a few months ago of the steel furnaces and mills of the Ebbw Vale Company has this week been followed by the service of a week's notice on about 300 men employed at the steel mills of Guest, Keen and Nettlefolds at Cardiff. Quotations for tinplates are nominally unaltered at between 18s. 9d. and 19s. per basis box, but galvanised sheets are still relatively weak at £12 5s. to £12 7s. 6d. per ton. Welsh tinplate bars are quoted at £6 10s. 0d. per ton, and foreign bars at £5 5s. per ton. Shipments of tinplates were below the average last week, and stocks exceed 200,000 boxes.

OTHER METALS.

TIN.—Generally quiet conditions prevailed in the standard market, and prices declined under freer offers and lower Eastern cable advices, though at the lower level rather better support was forthcoming, which resulted in a recovery. Values, however, continue to fluctuate in an indefinite manner, being influenced to some extent by reports circulating regarding curtailment of production. Meanwhile these measures are being partly carried into effect and should exercise a stimulating influence. At the moment, however, stocks have accumulated, and demand shows no appreciable sign of expansion. The output of tin and tin ore from the Federated Malay States during December, 1929, amounted to 5,849 tons, compared with 5,249 tons in the corresponding period of 1928. Standard cash sold at £175 5s.-£174 5s. and £176 5s.; and three months, £179-£177 5s. and £179 10s. In the East, sales were reported at £182 to £179 12s. 6d. and £180 2s. 6d. per ton c.i.f. terms.

COPPER market slightly irregular, but generally firm, with dealings on a fair scale. A feature was the further extension of the backwardation, at one time standing at 52s. 6d. per ton, but closing 35s. under the cash price. Standard cash changed hands at £71 10s. to £72 and £70 15s.; three months, £69 5s. to £69 10s. and £69 ton.

LEAD firm but dealings somewhat restricted. Good soft foreign pig, January, sold, £21 11s. 3d. to £21 12s. 6d.-£21 10s.; February, £21 12s. 6d.-£21 10s.; April, £21 12s. 6d. to £21 10s. ton.

SPELTER active but values weaker on balance due to excessive offerings. February, sold, £19 12s. 6d.-£19 7s. 6d.-£19 8s. 9d.; March, £19 18s. 9d. to £19 13s. 9d.; April, £20-£19 17s. 6d. and £19 18s. 9d. and £20; May, £20 1s. 3d. per ton.

ALUMINIUM quiet. Home trade, £95; export, £100 per ton.

ANTIMONY steady. English regulus, £45 to £52 10s.; Chinese ditto, spot, £31 5s.; January-February, £27 5s.; Chinese, crude, January-February, £18 to £18 5s. ton c.i.f.

ANTIMONY OXIDE.—January-February, £27 ton c.i.f.

ANTIMONY ORE, 50 per cent., January-February, 4s.; ditto, 60 per cent., 5s. per unit c.i.f.

WOLFRAM quiet. Chinese, also Burmese, January-February, 34s. 6d. per unit c.i.f.

QUICKSILVER steady. Spot, £22 17s. 6d. per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 18s. 7½d. to 18s. 10½d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, January 15th.

There has been a little more activity in the market during the past week, and prices advanced under a more optimistic feeling, and the expectancy that the East Indian crop would be 400,000 bales less than was anticipated a short time ago. The U.S.A. figures of consumption were published to-day, showing 454,000 bales consumed in December, against 544,000 bales for November, 1929, and 534,000 bales in December of 1928. Spot sales for the week 9th to 15th (inclusive) are 37,000 bales, of which 17,560 are American, 7,700 Brazil, 650 Argentine, 6,000 Peru, 1,400 Egyptian, 2,350 African, 270 East Indian, and 1,070 sundries. Imports for the same period are 65,423 bales, of which 23,581 are American, 27,552 Brazil, 458 Argentine, 3,038 Peru, 8,966 Egyptian, 675 East Indian and 1,153 sundries. Quotations to-day are: American Middling, 9·55; Egyptian Sakel, 14·45; Uppers, 10·57; Brazil Fair, 9·21; Peru G.F. Mod-Rough, 10·50; Smooth, 10·21; West African Middling, 9·56; and East African G.F., 10·46.

MANCHESTER, January 15th.

The tone of the market has shown some improvement, and sellers have experienced an increased enquiry. Although buyers have been slow in raising offers, a rather larger turnover has taken place. Fluctuations are occurring in raw material rates, but there seems to be less probability of any definite decline in values. Cloth merchants with connections in India have reported more cables making bids, and rather freer operations have occurred in light whites and fancies for Calcutta, Bombay and Karachi. The political situation is considered better, with less fear of serious disturbances. Rather more encouraging advices have been received from China, and a few more transactions have been arranged in bleached shirtings and dyed goods. At the auction sales in Shanghai this week tael returns and exchange showed a rise, and prices for goods hardened. Miscellaneous cloths have attracted rather more attention for the Near East and South America, but Continental demand remains poor. The general prospects for manufacturers seem to be rather brighter. Enquiry in American and Egyptian yarns has continued on a larger scale, and a fair amount of business has been done, but wretched prices have had to be taken, and at the end of next week there is to be a mass meeting of American spinners for the purpose of discussing the state of trade.

THE WOOL TRADE.

Our Bradford correspondent writes: In all sections of the industry business continues to be conducted on restricted lines. Lack of confidence in wool values is still very pronounced, but it is hoped that the auctions which open in Coleman Street Wool Exchange next Tuesday will clear the air and enable traders to find a workable basis. It is realised that wool at current rates is very cheap, but users cannot rid themselves of the fear that the raw material may go even lower, and so they continue to buy small weights of tops and yarns just sufficient for immediate requirements. The low level of stocks suggests that a fairly extensive buying movement will develop when confidence is restored, but at present there is an almost complete lack of speculative buying. There is a fair amount of enquiry for merino tops, but offers are low, and mostly based on tops at 2s. 6d. per lb. This is at least 1d. below the price quoted by most topmakers for average tops, though some fairly good orders have been accepted on this basis for delivery about March. Very low offers are lso being made for crossbreds, and the recent decline in

ANGLO-AMERICAN OIL COMPANY, LIMITED.
LONDON, ENGLAND.

OFFER TO EXCHANGE SHARES, both Voting and Non-Voting, of ANGLO-AMERICAN OIL COMPANY, LIMITED (including Coupon No. 39 and subsequent attached) for Shares of the STANDARD OIL EXPORT CORPORATION.

To the SHAREHOLDERS OF THE ANGLO-AMERICAN OIL CO., LTD.

Shareholders are reminded that the offer to exchange their shares for shares of Standard Oil Export Corporation on the basis of one $100 non-voting guaranteed 5% Preferred Share of the Standard Oil Export Corporation (callable at 110 at any time after 31st December, 1935) for every 5⅝ Anglo-American Oil Company shares expires (subject to certain conditions) on 31st January, 1930.

Your Directors strongly recommend acceptance of this offer.

Full details of the offer together with necessary forms in connection with same can be obtained from the Guaranty Trust Company of New York, 140, Broadway, New York, U.S.A., or 32, Lombard Street, London, England.

values in New Zealand and in South America has prompted some sellers to accept very cheap prices for forward delivery. Demand for yarns is very poor, and prices continue to move in buyers' favour, especially in standard counts. Wholesale fabric buyers are following events with great interest, and judging from the number of enquiries, a considerable amount of business is likely to come on to the market when buyers feel that values have definitely touched rock-bottom.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

Cables received from overseas markets indicate a tendency in buyers' favour, though wool is being taken freely. Competition from Japan is apparently the mainstay in Sydney. It has been stated that Japanese purchases to the end of last year were about 30,000 bales less than for the corresponding period of the previous season, and it is possible that this explains the recent activity. In any case some of the best clips are being taken, and but for this prices would have fallen still more. There is less Continental competition in all Australian selling centres. Germany seems to be unable to buy very freely, probably because buying facilities are being restricted. The limits of home trade buyers are now around 2s. 6d. for good average 64's tops. The sale at Perth this week was almost entirely left to Bradford competition, and it is understood that wool was obtained at very reasonable prices. The first series of London sales will commence next Tuesday, the quantity available being 165,500 bales, compared with 103,200 bales at the corresponding series a year ago. A larger number of buyers have consigned their clips to Coleman Street than for many years past. It is expected that there will be an all-round decline of 7½ per cent. in merinos. It is not likely that buyers will pay more in London than corresponds with the level in overseas markets, where some very cheap wool is being picked up. There is talk in influential quarters of a large part of the current Australian clip being put on one side until the market improves. This was done to advantage in 1925. At the moment prices are dependent upon the revival of confidence among wholesale piece-goods merchants, and as soon as they think the bottom has been touched, an extensive movement in wool, tops and yarns may be expected. It is probable that crossbreds may decline about 12½ to 15 per cent.

HIDE, LEATHER AND ALLIED TRADES.

The demand for leather and leather manufactures is better than it was this time last year, and although there is still considerable room for improvement, prospects are brighter than they have been for a long time past. Market hides and skins continue to sell well, and in view of the good inquiry prices in several instances are firmer. This is more noticeable in connection with the lighter weights, which, at the sales held so far this week, have recorded further advances. Calfskins also are scarce and dear; in fact, most users consider their present value to be unwarranted in view of conditions ruling in the leather market. Imported hides, on the other hand, remain quiet, and with the exception of one or two descriptions values show further slight declines. For instance, with only a limited demand for Cape hides, prices have dropped to 9⅜d. and 8⅞d. for first and second drys, with 8¾d. and 7¾d. realised for drysalted. Mombasas have sold at 7½d. for heavies and mediums, with business done in Adis Abebas at 7⅜d. On the other hand, the South American market is firmer in view of the support accorded it by the United States, and Argentine ox have this week been sold on the basis of 9½d., and light ox at 9¼d. Dry River Plates have also been fractionally dearer, but with very little interest taken. B.A. Americanos are quoted nominally at 9½d. In connection with Saladero hides the Liebig Co. sold last week 20,000 Colon ox at prices which ranged from 8$\frac{29}{32}$d. to 8$\frac{31}{32}$d. for heavies and 8d. to 8¼d. for lights. The United States market is cabled as steady, with Chicago heavy native steers selling at 16½ cents. The sole leather market is better, and although actual business in this direction so far has not been large, a fair amount of inquiry for stock is experienced. Light to medium weights in bends of both English and wet-salted descriptions constitute the best part of the call while there is a steady flow of business for most kinds of offal. Stocks of the latter in shoulders are short, and as a large percentage of the supplies coming forward are already accounted for, prices all the time tend towards firmness. Values for most kinds of sole leather are well maintained, although at the Leeds Leather Fair held on Wednesday there was an inclination on the part of tanners to shade prices a trifle to induce firm orders for quantities. Business in the upper leather section consists of a steady day-to-day call for just sufficient to meet immediate needs. Demand still continues to run for the most part on willow calf and black and brown glacé kid, for both of which descriptions of leather full asking prices are being obtained. A slight improvement has been noticed in the inquiry for box calf and medium-grade patent leather. Novelty leathers are not selling well, although there has been a steady small inquiry for suède. Curriers report no improvement in the position, and only limited quantities of waxed kips and splits are asked for. Shoe manufacturers have experienced more movement, and fair orders are now coming along for Spring footwear. In addition to this, there is a regular inquiry for filling-up lines, and, generally, speaking, this section of the trade is fairly well off for business at the moment.

VEGETABLE OILS AND OILSEEDS.

Markets have had an easier feeling and not much business has been done. Linseed prices have continued to droop, following larger shipments from the exporting countries and the easiness in the grain markets. Crushers have hardly begun to purchase the new Plate seed and apparently are not satisfied that the market has touched a level to justify them in buying extensively in view of the stocks of linseed cake on hand and the modest demand for oil. Current value of Plate on spot at Hull is £18 10s., and for January-February and February-March shipment £18 5s. is quoted. Hamburg crushers have been buyers of January-February at £17 15s., while for bold Bombay to the Continent £21 10s. has been paid for January. The quantity of linseed on passage to Europe has advanced to 111,000 tons, or 27,400 tons more than last week. Egyptian cottonseed is neglected and nominally £8 2s. 6d. for black on passage and January and February loadings. Trade in Bombay cottonseed is at a standstill. In the oil section linseed oil is somewhat irregular, but current value for January delivery is £43 10s., for February £42, and March-April £40 per ton naked ex Hull mill. Cotton oils are steady, and crude Egyptian quoted £29 spot and £28 10s. January ex Hull. Other seed oils are quiet and rape oil marked lower. Oil cakes are in only moderate demand.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There is no improvement to note, in fact, increased weakness was observable in many directions with trade demand at the moment rigidly confined to pressing requirements. Home-grown granulated mostly marked down 3d. There seems to be nothing in the general situation to give the market a lift and ample supplies of raw and refined sugars continue on offer. As far as Continental are concerned, there is a tendency on the part of producers to hold off the market, and price required for 88 per cent. beet is too high compared with 96 per cent. centrifugals. This is due, in part, to the hope gaining ground that the forthcoming Budget will favour exports to the United Kingdom of refined sugars. In the raw terminal section, prices disclosed further slight weakness, but quite a large business resulted. March delivery sold 6s. 5½d. to 6s. 3¾d.; May, 7s. 6d. to 7s. 5½d.; August, 8s. to 7s. 11½d.; December, 8s. 3d. to 8s. 2½d. Cuban receipts last week 17,413 tons, against 113,923 last year; exports, 35,317, against 63,735; stocks, 147,805, against 159,316. Centrals working nil against last season, 151. Stocks of raw sugar in the three principal ports of the United Kingdom for week ending January 11th totalled 236,219 tons, compared with 146,609 at corresponding period last year.

TEA.—Indian sales during the week amounted to 58,590 packages. Fair competition existed for most descriptions and a very steady market prevailed. Common and low medium teas fully maintained. Some invoices from Dooar showing cold weather character were well sought after. Southern Indian sold steadily. Ceylon auctions of 31,000 packages. Fairly active competition was experienced, best liquoring qualities being wanted, and prices for these ruled firm to occasionally dearer. Medium about steady, but plain and common ruled frequently against the seller. Leaf grades for export better supported. Java and Sumatra met a fair demand at easier prices. Of China, there is a fair off-take, Lapsang souchong at 2s. 6d. to 3s.

COCOA.—Only small sales on the spot. Forward steady. Accra, F/F, January-March, sold 39s. 3d.; February-April, 39s. 6d.; March-May, 40s. 6d., f.o.b. Terminal: January sold, 44s. 3d.; March, 43s. 9d. to 43s. 7½d.; May, 44s. 3d.; July, 44s. 9d.

COFFEE.—In auction, a brisk demand ensued for all the finer qualities and in the case of Costa Rica, several shillings advance resulted generally. Kenya sold firmly. Common and medium qualities continue to meet a slow market.

RICE.—Extreme quietness continues in the London centre, but Continental buyers are in the market from time to time for Burma grain. Spanish steadier. Spanish oiled, Januafy-February, quoted, 15s. 9d. c.i.f. London, with Two Stars Burma, January-February, 12s.; Italian, 17s.; Fancy Blue Rose American, 20s.; extra ditto, 20s. to 20s. 6d. c.i.f.; No. 3, Burma to the Levant, double bags, January, 12s. 3d.; February, 12s.; S.Q. to Cuba, 12s. 4½d. Saigon No. 1, round grain, February-March, to Europe, 12s. 3d. Siam Super, January-February, 15s. 6d. Californian nominal.

BEANS.—Market dull, and prices weak for butters. Madagascar, per steamer "Mantola," quoted, 38s. to 40s.; per "Eugene Grossos," sellers, 27s. 9d.; afloat steamer "Clan Macindoe," sold at 27s. 6d.; "Clan Chatton," 27s. 6d.; per "Belgrano," 26s. 3d.; November-December, 26s. 9d.; December alone, sold 26s. 4½d.; December-January, sold at 26s. 3d. to 25s. 10½d.; January-March 25s. 6d. c.i.f. Other descriptions unaltered. Ohtenashi, March-April, quoted, 23s. Rangoon haricots, ex store, 14s.; December-January, 13s.; January-February, 13s. c.i.f. London. Danubian, hand-picked, spot, 27s. to 27s. 6d.; January-February, 23s. 6d. c.i.f. London. To Glasgow, North African, January-February, 9s. c.i.f. Chinese horse, afloat, 8s. 9d. c.i.f.

Almonds steady. Mazagan, 110s.; Mogador, 107s. 6d.; P.G. Sicily, 125s.; Majorcas, 115s.-135s.; *Bitter-Jordan,* new crop, 180s.-195s. Apricot kernels: India, new crop, sweet, spot, 75s.; China, bitter, for shipment, 39s.; new spot, 1.i.f.; sweet, spot, 77s. 6d. Hazel kernels: Kerasunde, walnuts 40s.; Barcelona, 132s. 6d.; *new crop, French (shelled)*, firm at 150s. ex-wharf London.

CANNED GOODS, &c.

There was rather more inquiry for Californian fruits, though business is still somewhat restricted. *Peaches are firmly held, also* apples and loganberries, the latter being reservedly offered; but apricots and pears were easier inclined. Singapore pines experienced better spot movement *at prices favourable to buyers,* while shipment parcels are held above spot parity. South African and Hawaiian held for full rates. Australian varieties moved off steadily. Italian tomatoes quietly steady.

CANNED FISH.—Salmon steady, but there is still a lack of demand. Alaska red talls, quoted, 48s.-50s.; pink talls, 25s. 6d.-26s. 6d.; and halves, 34s. 6d.-36s. 6d. Japanese crab firm for fancy qualities at 97s. 6d.-100s., with finer grades in short supply. Lobsters steady, but business restricted, halves ranging from 135s.-140s. Sardines in limited demand, but general position unchanged. Portuguese clubs, quarters, 4s.; 1-lb., 12s. per dozen tins.

CANNED MEATS.—Market quiet, but prices firm, *and tongues* realised extreme rates on scarcity. Full prices are also ruling for tinned hams.

CONDENSED MILK AND MILK POWDERS.—Market barely steady. Condensed, Dutch, full cream, sweetened, 5-cwt. casks, 38s. 6d.; machine skimmed, ditto, 23s. 9d.; full cream, sweetened, 56-lb. drums, two in a crate, 50s. English full cream, sweetened, 5-cwt. casks, 42s. 6d.; machine skimmed, ditto, 24s., carriage paid. Powders, full cream, English roller process, 28 per cent. butterfat, 2 by 56-lb. tins, crated, 82s. 6d.; Dutch roller process, 26 per cent. butterfat, 1-cwt. cases, 74s.; ditto, spray process, 26 per cent. butterfat, 2 by 56-lb. tins, crated, 96s. 6d.; Dutch, machine skimmed, roller process, 1-cwt. cases, 28s.; spray, ditto, 2 by 56-lb. tins, crated, 42s. 6d.; ditto, 1-cwt. cases, 40s., all per cwt. All English prices basis carriage paid nearest station. All Dutch prices are net, ex store London/Hull or Goole, and cover prompt or gradual delivery to end of March 1930. Stocks available in: Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. On the grocery side: Full cream, sweetened, 19s. 6d.; machine skimmed, sweetened, 9s. 6d. basis per case, usual packing.

HONEY.—Market remained quiet. Jamaica, ivory white, set, 57s. 6d.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s.; San Domingo, quoted, 50s.-55s. for finer grades, with *manufacturing sorts at 42s.-44s.; Californian, white, 55s.*; light amber, 50s.; New Zealand, dark amber, 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; white and water whites, 65s.-87s. 6d. cwt.

RUBBER.

A steady market resulted and business proved of fair dimensions. Standard sheet, spot and February, sold, 7¼d.-7⅜d.; March, 7 5/16d.-7⅜d.; April-June, 7¼d. to 7⅜d.; July-September, 7⅜d. to 7 11/16d.; and October-December, 8d. to 8¼d. London stocks increased 2,374 tons on the week. Landings, 3,439; deliveries, 1,065; stocks, 58,990, against 23,016 same time last year. Liverpool stocks, 202 tons higher. Landings, 442; deliveries, 240; stocks, 19,640 tons, against 3,520 last year.

"I did not think you could have excelled your last year's number but I believe you have actually done so," is one of the numerous congratulations received on

The Journal of Commerce

ANNUAL REVIEW

From among the many other letters we quote the following extracts:—

"We find its articles most lucid and concentrated on the best matter affecting Shipbuilding and Marine Engineering, and in every way well maintaining the fine standard of your former productions."

"I must congratulate you upon the very excellent production, which contains articles and information on most of the subjects in which we, as shipbuilders, are interested."

"It is a first-rate production both as regard form and matter, and as one of your readers I should like to congratulate you on your success."

"It must be a gigantic job to get so much material together, and *I think it reflects the greatest possible credit on your* management."

"The entire compilation is one of which you should be justly proud, and is a publication which cannot help but be of intense interest to Shipowners, Shipbuilders and Engineers."

"As usual, it is an interesting production, full of good matter and useful for reference. I venture to think that you have succeeded in making this issue as good as it could be, reflecting truly the maritime thought and activities for 1929. *Please accept my congratulations, particularly on the artistic* standard maintained by the Review."

"... has been got up in a very attractive and most appropriate fashion."

"... it is an excellent production all through."

"... it gets bigger and, so far as its self-imposed standard of quality permits, better. I am sure it is looked forward to by everybody interested in transport affairs, except, possibly, the postman!"

"... up to the usual high standard which we, who know *The Journal of Commerce* so well, are led to expect."

"... to compliment you on the excellent get-up of this issue."

"... congratulating you on such a wonderful production."

The Equitable Trust Company
OF NEW YORK

announces

THE EQUITABLE CORPORATION
OF NEW YORK

Capital $25,000,000

The Equitable Corporation of New York will conduct a general securities business.

The business, heretofore carried on by the bond department of The Equitable Trust Company of New York, will become a part of The Equitable Corporation of New York and will be developed and extended in accordance with the policies of that Corporation.

The Equitable Corporation of New York is owned by the shareholders of The Equitable Trust Company of New York. Its directors and officers are all identified with the latter company, assuring experienced and progressive management.

The British Steel Industry
A Step Forward

WITH the formation of the English Steel Corporation, Ltd., the British Steel Industry has taken an important step forward in the work of reconstruction and rationalisation.

The English Steel Corporation, Ltd., was formed in January, 1929, by an amalgamation of the steel business and steel manufacturing resources of Vickers-Armstrongs, Ltd., and Cammell Laird & Co., Ltd.

From Vickers-Armstrongs, the English Steel Corporation have taken over the Vickers Works at Sheffield, the Armstrong-Whitworth Works at Openshaw, and the Drop Stamping Department at Elswick.

From Cammell Laird & Co., Ltd., they have taken over the Cyclops and Grimesthorpe Works at Sheffield and the works at Penistone.

They have also taken over from Vickers, Ltd., the wheel, axle and tyre business of Taylor Bros. & Co., Ltd., at Trafford Park, Manchester.

With these resources the English Steel Corporation is one of the largest steel manufacturing concerns in the World.

The following are the chief manufactures of the Corporation :—

Accumulators, Hydraulic.
Air Ministry Steels, all specifications.
Alloy Steels of every description.
Armour Plate.
Axial Flow Pumps.
Axles, Crank, Forged Steel for Tramway and Railway Rolling Stock. Front and Rear for Automobiles.
Basic Steel.
Boiler and Superheater Drums, High Pressure (Forgings).
Cammell's "Supertough" Steel.
Castings, Steel up to 100 tons. Semi-Steel and Grey Iron up to 120 tons. Aluminium and its alloys up to 2 tons. Brass, Gunmetal, Bronze, &c., up to 2 tons.
Cranes, Heavy, Overhead, Electric or Hydraulic, and turning gears (50 tons capacity minimum).
Crankshafts, Marine and Land Engine Work, Automobile, Aeroplane and Airship.
Drilling Outfits, for Oil and Water Well Drilling, to 8,000 feet.
Drop Forgings, Steel of all descriptions Heavy and Light.
Duralumin and Special Alloy Stampings.
Engines, Pumping for Sewerage, Drainage, &c., Winding for Collieries.
Forging Presses, Hydraulic.
Forgings, Steel, up to 100 tons, including Marine Shafting, Cranks, Turbine, Gear Wheel Rims and Pinions, Hollow Boiler Drums, Loco. Cranks, and Engine Forgings, Automobile and Aeroplane.
Golf Club Heads, in Rustless Iron and Mild Steel.
Hydraulic Machinery : Accumulators. Presses. Intensifiers. Rivetter and Testing Machines. Turning Gears. Wheel Presses.
Hydraulic Pressure Pumps, Steam, Electric, and Belt Driven.
Hydro-Electric Turbines.
Ingots, Blooms, Billets, Bars. In Crucible, Electric, Induction, Basic, and Acid Siemens Steel.
Magnets of all classes, for the Motor, Telephone and Wireless Trades.
Manganese Steel Bars, Castings, and Forgings.
Mining Drill Steel, Hollow and Solid.
Non-Corrosive Steel.
Pelton Wheels and Buckets.
Percussion Tools : Chisels, Drills, Pick Points and Rippers.
Pilger Rolls.
Pressed Steel Frames, and other Pressings.
Pumps : "Gill," Axial Flow, Low Lift Pumps for Drainage, Irrigation, &c. Boving, for general purposes. Centrifugal and Turbine. Pumps for Oil Well Drilling, including Deep Well Pumps. Hydraulic.
Rails and Fishplates, for Permanent Way, Collieries, Quarries Rack Rails.
Rivet Snaps for Hydraulic and Pneumatic Rivetting Machines.
Roll Shells.
Rolls, Cast or Forged Steel.
Rudder Frames.
Rustless and Heat Resisting Iron and Steel.
Springs, Laminated, Coil, and Volute, also Spring Steel.
Steels, Alloy, Special : Cammell's "Supertough," "Vibrac," "Vikro."
Special Turning Tools and Holders.
Steel Sheets, High Grade Carbon and Alloy Steel.
Stern Frames.
Tubes, Weldless Steel (up to 4 in. outside diameter), in high-grade Carbon and Alloy Steels.
Turbine Castings and Forgings.
Turbines, Hydro-Electric.
Tyres : Acid Open Hearth, "Australia" and "Camel" Brands for Locomotives, Carriages, and Wagons.
"Vibrac" Alloy Steel for all parts subject to heavy stresses.
Winding and Hauling Engines, Collieries, and Mines.

The formation of the English Steel Corporation carries a step further the policy of amalgamating like with like which was followed in the formation of Vickers-Armstrongs, and places at the service of world industry resources of technical skill and manufacturing plant almost without equal in the world.

ENGLISH STEEL CORPORATION LIMITED

GENERAL.

JUTE.—Sellers asked steady prices, but buyers were rather reserved. Firsts, January-February, Continent, quoted, £27 12s. 6d.; February-March, £27 15s.; March-April, £28 5s.; Lightnings, February-March, £25 12s. 6d.; Hearts, January-February, £22 15s. per ton.

HEMP.—A very quiet market for Manila and any change in prices favoured the buyer. J.2, January-March, quoted, £35; K, sellers, £31 15s.; L.1, £30; M.1, £27; L.2, £27; M.2, £25 5s.; G, £36 10s.; C.2, £28 10s.; C.3, £24 5s. African sisal easy and No. 1 f.a.q., January-March, sellers, £34 10s.; marks, £35; and No. 2, £1 less in each case. Manila receipts last week cabled 24,000 bales, against 22,000 last year and 27,000 in 1928. Estimate for next week, 26,000, and week following, 28,000. Shipments last week to Europe, 14,000; U.S.A., 10,000; Japan, 3,000; and other countries, 1,000. Mexican: Good white, £38 15s. to £39 12s. 6d.; special, £41 5s. to £42 2s. 6d.; and special brushed, £42 5s. to £43 2s. 6d. Receipts for past two weeks, 22,000 bales; deliveries, 21,000; stock, 53,000.

SHELLAC was a firm market. T.N., spot, 150s.; March 142s.; May, sold, 144s. 6d.

COPRA.—Again reservedly offered and market quite steady. Straits S.D., February-March, to Rotterdam, quoted, £22 10s.; Dutch East Indies, £22 10s.; Ceylon, £24 2s. 6d.; to Marseilles, mixed Dutch East Indies, excluding Padang, January-February, £21 12s. 6d., smoked, South Sea, January shipment, sold, £21 11s. 3d.; sun-dried ditto, quoted, £21 12s. 6d.; for February-March and Plantation Rabaul, also hot air-dried, £21 17s. 6d. Palm kernels, to Hamburg, January-February, £16 17s. 6d. per ton.

MISCELLANEOUS.—Coconuts, quoted, 17s. to 22s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £42 10s.; Ceylon, bristle, £18 10s. to £24 10s.; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 2s. 3½d.; Java, 2s. 9d.

METROPOLITAN CATTLE.—January 15.

THE MONEY MARKET.

For another week money has remained abundant and bills in short supply. The reasons for the abnormal quantity of money available at this season of the year are firstly, that the Stock Exchange is only issuing about half of its normal requirements of short money, and,

secondly, that heavy repayments now being made by the Treasury almost offset collections in respect of taxes and the final call on the new Conversion Loan. Thus, in addition to the excess each week of Treasury bill maturities over issues, the Government is reported to be buying up the Treasury bonds maturing next May, and this action adds to the amount of money available. The result is that new money this week was quoted at 4 per cent. or even less.

* * * *

Discount rates have remained low, and February and March bills were quoted at 3⅞ per cent., with the three months' market rate at about 3 15/16 per cent. or possibly a shade lower. The shortage of bills persists, and is indeed being accentuated by the steady reduction in the volume of Treasury bills. The market has for so long been accustomed to rely upon Treasury bills as one of its main sources of supply, that now that efforts are being made to reduce the floating debt, it is inevitable that until trade revives and the volume of commercial bills increases, the market should frequently find itself short of bills. Thus the recent change in Treasury policy has presented the market with a new problem which so far it has failed to solve.

* * * *

As matters are, market rate is over a point below Bank rate, and is fractionally below the rate at which the market borrows the bulk of its money. This is an anomalous position that cannot last for long, and it explains the continued rumours of an impending reduction in Bank rate. Once more, however, the Bank refrained from making any change, but it is not easy to understand the grounds of Thursday's decision. It is true that the principal foreign exchanges are hardly as favourable as at the end of the year, and on Tuesday the market gold was divided between France and Germany. Still, the price paid was only 84s. 11d., and the state of the franc and mark exchanges was such that the Bank could have secured all the gold if it had chosen to bid for it.

* * * *

This suggests that the Bank is content with its gold stocks at their present level, and is also content to see discount rates at their present low level, without attempting to exert any pressure upon the market, though the Bank return shows that the Bank is following its neutralisation policy of the past few years. It is possible that the Bank believes that, as the influx of revenue continues, money will gradually become less abundant, and discount rates will rise, but, in view of the considerations stated above, it is not easy to justify so passive an attitude. Besides, if the Bank's existing gold stocks of £151,000,000 are deemed sufficient, there seems to be no reason why Bank rate should not have been reduced.

	Jan. 2, 1930.	Jan. 9, 1930.	Jan. 16, 1930.	Jan. 23, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5	5	5	5	5½ (Dec.12,'29)
Banks' Deposit Rate	3	3	3	3	3½ (Dec.12,'29)
Discount ∫ Call	3	3	3	3	3½ (Dec.12,'29)
Houses \ Notice	3¼	3¼	3¼	3¼	3¾ (Dec.12,'29)
Market rate (3 months' bills)	4 5/16	4 1/16	4 1/16–⅛	3 7/8–15/16	...

This week's Bank return shows that a further £5,544,000 of notes hav returned from circulation, and, allowing for a small increase of £634,000 in the Bank's gold stocks, the Reserve has risen by £6,178,000, and the Proportion to the fully adequate figure of 51 13/16 per cent. There has been a transfer of nearly £4½ million from Bankers' to Public Deposits. It thus appears that last week payments to the Treasury slightly exceeded disbursements. The rise in the Bank's Reserve has been neutralised by sales of Government securities and further maturities of short bills discounted at the Bank immediately before the end of the year.

NEW YORK.

Our New York correspondent cables:—Federal Reserve statements show that the usual January contraction in credit is slackening. Reserves are up $17 million, total credit is off $39 million. Circulation is off $43 million, and the ratio is up 0.9 on the week and 7.0 on the year. Meanwhile Member Bank loans on securities are still approximately at the same level as before the break and considerably above that of a year ago, but are falling slowly. The steel industry is operating at between 65 and 70 per cent., but prices continue weakish. Other reports indicate a pick-up in industrial activity, and, in general, business sentiment is hopeful and fairly optimistic.

THE STOCK MARKETS.

Despite the welcome news of the fixing of a date for the "Hatry" Settlement, the Stock Markets remained undecided and lethargic in the absence of sustained public interest at home or abroad. Gilt-edged were steady, though some disappointment was expressed at the absence of a reduction in Bank rate. Further realisation of India Loans was in progress. Among Home Rails, interest was centred chiefly on the "London" stocks. Industrial share movements had no feature of interest, except the strength of Imperial Tobacco after an unexpectedly good dividend announcement. Tea and rubber shares were, on balance, a shade firmer, and the oil market broadened on a falling-off in the American crude output, but mining shares were dull, with few exceptions.

THE COMMODITY MARKETS.

Reports this week are not at all encouraging. The weather is unfavourable to trade in house coal and furnace coke, and prices have an easier tendency. Quiet conditions continue in the iron and steel trades, and some uncertainty is caused by the position on the Continent. Very little business has been done in the cotton trade. Wool is cheap, but Bradford still appears doubtful as to whether it has touched bottom, and buying is consequently restricted. The jute trade is suffering from heavy over-production. The hide and leather trades are meeting a steady demand for their products, and shoe manufacturers report a continued improvement in their position. Vegetable oils and oilseeds remain a poor market. Wheat prices are practically unchanged on the week.

THE FOREIGN EXCHANGES.

The market in Foreign Exchanges was quieter last week as regards the volume of business, but many currencies were erratic, and the tendency in general was against this country. Sterling on New York lost 3/32 at 4.86 23/32, after being 4.86 9/16 on Tuesday. Montreal gained ⅛ at 4.92⅛. Paris was two points better at 123.90, and Brussels improved from 34.95⅜ to 34.93. Milan was rather better at 92.99, against 93.05. The peseta was again very uncertain, in spite of proposed gold shipments and the Government's suggestions for tackling the problem, and declined at one time to over 38.00 from 36.50, but recovered to 37.55. Amsterdam lost ⅛ at 12.11, but was at 12.11⅜ and 12.10 1/16 at different times. Berlin was very erratic, but gained ¾ on balance at 20.37¼; Switzerland also lost ground sharply from 25.16¼ to 25.18 after 25.19. Stockholm was ¾ stronger at 18.13. Copenhagen gained ⅝ at 18.19⅜. The South American exchanges continued their recent irregularity, although Rio was unchanged on balance at 5 7/16d., but Buenos Aires gained 3/16 at 44 15/16, after having touched 45⅛d. Montevideo lost ⅛d. at 45½d. The rupee was steady, but lost 1/64d. at 1s. 5 15/16d., the yen gained 1/32d. at 2s. 0¼d., but Batavia lost ¼ at 12.14¼. In the futures market New York was less in demand at 1/32 cent and 3/32 premium, exactly half last week's quotations. Paris was in short supply at 4 and 7 centimes premiums, against 2½ and 6 centimes last week. Milan was rather weaker at discounts of 12 and 35 centesimi. Brussels went from 2 to 4 centimes discount last week to 1½ and 2½ centimes premium. Berlin was fractionally better for both periods. Silver prices again fell as a result of a resumption of sales by China and the Indian bazaars, which brought down spot by ⅝d. to 20 13/16d., and future delivery by ½d. to 20 9/16d. The China silver exchanges declined in sympathy, Hongkong losing ⅛d. at 1s. 7⅛d. and Shanghai ⅜d. at 2s. 0⅝d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Enquiries should be addressed to Moody's-Economist Services, 6 Bouverie Street, London, E.C. 4.

THE GOVERNMENT AND THE NATION.

FROM the day on which Mr MacDonald, lacking a clear majority in the House of Commons, consented to form a Government, it has been obvious to the most casual observer of politics that sooner or later a situation was bound to arise in which the position of the balancing Party would become at once important and difficult. Indeed, it is probable that the future historian, when he writes the chronicle of the present Parliament, will prefer to dwell not on the *res gestae* of the Party in office, but on the policies and tactics of the two diversely-motived Oppositions. The destiny of the Government may well be determined less by its own positive acts than by its reactions to the attitude of the other Parties in the House.

It would be premature to infer from the Parliamentary record of the past eight months that Mr MacDonald's Administration is faced, as yet, with a dilemma wherein the choice of issues is decisive and fateful; but events, in our judgment, are shaping towards a climax in which the Prime Minister must choose between two alternatives—to implement realistically his declared intention of regarding Parliament as a Council of State, or to abandon statesmanship and appeal once more to the country on whatever question appears, in the Cabinet's opinion, to have the best chance of evoking mob-prejudice and ensuring the Party's return to power.

In any estimate of political probabilities one factor can be assessed with a considerable degree of certainty. The Conservative Party, or (more accurately) the titular leadership of that agglomeration of divergent opinions, has evidently decided that the winning tactical policy is to give the Government ample latitude to encompass its own downfall. In this decision the basis for calculation is sufficiently apparent. No matter how difficult it be to attack Mr MacDonald's foreign policy (and there is always a chance that the electorate, not realising that even a "successful" Five-Power Conference may entail a considerable increase in expenditure on cruiser construction, will be much disappointed at the financial results of a conclave from which so much is expected), domestic affairs are bound, it is argued, to reflect ultimate discredit on the Party in office. Then, give the Government full rein to fail in reducing unemployment, to squander money on relaxation of qualifications for "benefit," to face the ugly consequences of a syndicalist Coal Mines Bill abhorrent both to consumers of coal and to half the Government's own supporters, and, finally, to produce a Budget which, in the nature of things, will please nobody and may antagonise or alarm thousands—and, hey presto! with a wave of the magic clockwork wand, the old gang, the "safe" Conservative contingent, is swept back to office on a wave of popular revulsion from a "progressive" policy whose "faith" may be attractive but whose "works" are expensive without being efficacious.

Mr Baldwin's calculation—a calculation whose premises have led to the virtual self-effacement, save for Major Elliott's heroic single combats, of the Conservative Opposition on the Floor, and, even more, in the Lobby of the House—may, or may not, be well-conceived from the point of view of strict party politics. From the aspect of the national interest, it is a policy which has little to commend it. The present objective of all who desire the common good, irrespective of differences of traditional Party doctrine, must manifestly be an acceptable solution of the problem presented by minority Government; and in pursuance of that aim we prefer to turn to the speech delivered on Monday by Mr Lloyd George at the National Liberal Club.

Mr Lloyd George's remarks were significant, not so much in themselves, as in relation to the potentialities of the imminent Parliamentary situation. The course of the middle Party, he said, was always difficult, hazardous, and highly responsible. Among the many conceivable lines of action there were two—complete subservience to the Government, and determination to turn the Government out on the slightest tactical opportunity—which were "quite impracticable and quite unpatriotic," inasmuch as one of the country's chief needs at present was a stable administration. The next alternative was co-operation, which meant, not coalition, but "frank consultation beforehand on lines of policy . . . and concession to the views of those whose support was necessary to carry any measures through or to keep the Government alive." He disclaimed any desire to dictate to the Government, and emphasised the view that consultation and concession need not be at the expense of "forfeiting any great principle." Hitherto, he added, the conditions of co-operation had not been fulfilled, since the Government had neither consulted the Liberal Party on policy, nor refrained from attacking its members in their constituencies, nor given any promise that a measure of electoral reform would be introduced. The Liberal Party, therefore, was bound, in the absence of an "honourable understanding" on these lines, to adhere to the policy which it had so far pursued, *i.e.*, to "fall back on independent action, deciding each question entirely on its own merits."

It would doubtless be easy to make too much of the evident implication in this phrase that Mr Lloyd George regards complete independence of action as an unwelcome *pis aller;* but his insistence that, even in the absence of co-operation, the Liberal Party should be inclined to give the Government the "benefit of the doubt," and should be "ready to overlook faults which were not vital, offering every facility to the Government to develop its programme," is obviously significant. Whereas Mr Baldwin's policy is to give Mr MacDonald sufficient rope to hang himself, Mr Lloyd George clearly offers the Government, not a leading-string, but a life-line.

On their response to Mr Lloyd George's not ungenerous, though cautiously worded, *démarche* depends the Government's expectation of life. In this respect the indications are conflicting. Temperamental difficulties in the way of "consultation and concession," though much less in evidence than in 1924, cannot entirely be ignored; the Labour "Left" might well revolt from any formal acknowledgment even of limited co-operation with another Party; and the discovery, on the Second Reading of the Coal Mines Bill, that defeat is not inevitable even if the two Oppositions combine with almost complete unanimity in one Lobby, may tend to make the Cabinet less accommodating than ever to the balancing Party. On the other hand, there appear to be signs of a distinct disposition on the Government's part to meet—in practice, if not in form—the views of Liberal critics. Setting aside the fact that during the past eight months the programme for establishing the "Socialist Commonwealth" has been tacitly shifted to a higher, and still higher, shelf, the amendments which Mr Graham has tabled on the Coal Mines Bill are evidence, at least, of willingness to placate criticism of this questionable measure's worst faults. Similarly, in the case of the Unemployment Insurance Bill, the Government accepted, in a reasonably conciliatory spirit, the amendment—with regard to training for young persons unemployed—on which the Liberal Opposition was chiefly concerned to insist. And, finally, the announcement, made by the Prime Minister in Parliament on Wednesday, that an Economic Advisory Council, absorbing in its functions the existing Committee on Civil Research, is to be constituted, should clearly be regarded as earnest of the Government's desire to approach the country's major industrial and financial problems on other than purely partisan lines.

Whatever the Government's inclinations in this matter may be, there is little doubt, we think, as to the wishes of the great majority of the electorate. On the one hand, an early Election would be highly unpopular; a desire

that the Government shall have "full and fair opportunity" is still general; in its conduct of foreign affairs and in its approach to the problem of armaments the Administration continues widely to command confidence and support; and, further, there is a vast mass of what may be termed moderate, enlightened opinion in the country which would regard it as a real blow to the national interest if blunders or shortcomings in the Cabinet's handling of domestic issues were to lead to a violent reaction from any and every form of "progressive" policy to the pure negations of Labour's predecessors in office. On the other hand, co-existent with these sentiments, there has unmistakably developed during recent months a widespread tendency to regard the Government's future acts, if not its accomplished performance, with considerable nervousness and suspicion. There is a feeling, not confined to any one political Party, that in several issues, such as the problems of coal and unemployment, good intentions have been too much encumbered by past commitments to permit of really sound results, and disquieting signs have been noted of an inclination to fill the *lacuna* between professions and achievements by increasing drafts, for unproductive purposes, on the resources of the Exchequer. Recognising that up to the present the Government has been forced by Parliamentary circumstances to be on its best behaviour, the great majority of the electorate is certainly in no mood to see Mr MacDonald's Administration given a free hand.

In short, we believe that the "national will," so far as that abstraction can be detected, favours Mr MacDonald's continuance in office for a substantial term, provided assurance is forthcoming that the economic and social policy of his Government will be adequately tempered and modified in the light of friendly criticism and helpful suggestions from no matter which quarter of the House. Given acceptance of that condition, in itself neither unreasonable nor derogatory, the Cabinet's expectation of life may exceed (with advantage to the country) the somewhat pessimistic forecasts whose currency in Government circles is a curious feature of the present situation.

THE CONFERENCE STARTS.

Outwardly, at any rate, all the omens surrounding the opening of the Naval Conference have been propitious. The King's presence was clearly gratifying to the foreign delegates; his speech, which was broadcast to the most distant parts of the world, was short, businesslike and constructive; and of the subsequent declarations from or even divergent.

But this, after all, was a formal and ceremonial occasion. The Conference has now settled down to work on different lines, and if some difficulties are being smoothed out in preliminary conversations, others, no doubt, are being, or will be, accentuated. Even at the opening ceremony M. Tardieu and Mr MacDonald threw their emphasis in different directions. The British Prime Minister, while recognising theoretically the interdependence of land, sea and air armaments, on which the French ceaselessly insist, was clear that the three arms must be dealt with separately, and that it was proper to begin with the navies. His French colleague, on the other hand, stressed particularly the doctrine of national needs —which the Americans ruled out so decisively at Washington eight years ago on the ground that a nation's own views and those of its neighbours on that point would never accord—and was studious throughout to treat the London negotiations as simply an episode in the general work of the Preparatory Commission at Geneva. To this view Mr MacDonald would certainly take no exception, but he is clearly anxious not to dwell on it unduly, out of consideration for the susceptibilities of the Americans—who are probably not so susceptible, after all, seeing that they have for three years and more been participating as zealously as anyone in the work of the Preparatory Commission.

From some points of view the new aspect in the situation is public opinion. The recurrence, in speech after speech at the opening ceremony, of the declaration that "the eyes of the world are upon us," or words to that effect, was significant. It would appear that the American delegation in particular, arriving with the idea that the question of capital ship reduction was one for the experts and possibly the financiers, discovered with something of a shock that this was a matter on which the public of Great Britain had already developed decided views. That fact soon made itself felt across the Atlantic, and the hands of those who share the desire attributed to President Hoover himself to see the capital ship abolished or drastically reduced are being correspondingly strengthened. In that connection and in many others the newspaper and the radio look like playing a larger part in this Conference than in any before. The Prime Minister, impelled, no doubt, in part by a recollection of the friendships he made on his recent visit to the United States, has engaged in the rather delicate venture of launching a little propaganda by radio addressed to the people of the United States. His case for the relativity of armaments, which precludes a country from reducing independently of others, was well made. But the comparison between the numbers of ships in the British Navy in August, 1914, and those in commission to-day must be regarded as extremely doubtful wisdom, for it is manifest to everyone, American listeners included, that the British fleet of 1930 is in some ways a more efficient instrument of war than the fleet of 1914.

In any case, it is not in the light of figures of this kind or, at any rate, not wholly in the light of them, that decisions on such major questions will be taken. Some weight must, of course, be attached to what the experts have to say on the functions of capital ships in a national fleet. If navies are to exist at all the opinions of those whose life's business it is to understand navies is not to be summarily dismissed. But the capital ship question stands in a sense by itself. This Conference has to achieve something. The public opinion of all the world demands that. The field in which the hope of achieving is greatest is that of the capital ship. This, too, is accepted by expert and layman alike. Even if it be admitted that some small degree of risk is attached to a reduction of any kind—though that is, in fact, clearly not true if the reductions are proportionate and leave the rival navies in the same relation as before—there is a strong disposition, in this country at any rate, to take that small risk in order that the Conference may succeed instead of failing. It is, indeed, demonstrable to everyone that a successful conference with fewer capital ships means actually more security than a conference fiasco with every capital ship intact. Financial considerations, moreover, cannot be excluded. Mr Snowden is understood, quite naturally, to have made that point very clear to his colleagues. A British Government in the year 1930, most of all a British Labour Government, is expected to send naval estimates down and not up. Yet, even if not a single capital ship is laid down between now and 1936, the mere replacing of cruisers promises to inflate naval estimates by a clear £2,000,000 a year, merely on the basis of the fifty cruisers which the Admiralty is prepared to accept. That, of course, is not the fault of the present Government. It is, indeed, in part the result of a laudable slowing-down of building on the part of the late Government. But it so happens that after 1931 an abnormal number of cruisers will be reaching the twenty years age limit year by year, and if the total of fifty is to be maintained those vessels will have to be replaced, and by ships much more costly than themselves. Any saving, therefore, that can be effected, either by a lengthening of the age of cruisers or by a reduction in the total below fifty—which is unlikely—or by the scrapping of five or six capital ships, whose maintenance costs come to something like £2,000,000 a year between them, is going to be eagerly hailed by the Chancellor and those who share his financial anxieties.

Such a partial cut in the capital ship fleets is by no means impossible. Something of the kind has been suggested independently in America, while Japan—insistent at the opening ceremony of the Conference, as she has been throughout, on the need not merely for limitation but reduction—could hardly refuse to scrap three of her capital ships if Great Britain and America were ready to scrap five. All this, of course, concerns the more technical side of the Conference. So, too, does the controversy between measurement by categories and measurement by total tonnage, regarding which the French and Italian delegations still hold views opposed to those of the other three, though a solution is likely to be found in the bridge built by the French at Geneva in 1927 when they proposed that each country should declare its building programme for a period of years, with liberty for any one of them to transfer tonnage from one category to another on giving a year's notice to the League. The difficulty about that is that it involves the enunciation of a definite building programme by each nation, a plan much disliked by Italy on the ground that *amour propre* would compel her to commit herself to building plans as extensive as France's, in spite of her earnest desire to economise on armaments and use the money for social reform. Italy and France, indeed, show few signs as yet of rapprochement. But the position is by no means hopeless, for it should not pass the wit of some ingenious Englishman or American, even if it passes the wit of ingenious French and Italians, to devise a formula which should dispel the idea of giving France any contractual right to superiority while leaving her free to maintain a larger fleet than Italy chosses to build just as she does in actual fact to-day.

All these problems, however, have their political angle. If differences between Italy and France in North Africa, and still more Italian uneasiness about the Franco-Jugoslav alliance, could be cleared up, the task of negotiating a naval agreement would be sensibly simpler. The elaboration of the much-discussed Mediterranean agreement is, of course, another factor in the problem. The Conference stands so far only on the outer edge of discussions on these points, if, indeed, they are to be discussed seriously at all. The prospects are that they will be, but not, in all likelihood, unless the conclusion of a naval agreement proves impossible without them.

BANKERS' SPEECHES.

The past year has been an exceptional one in financial history and, with the question of the relation between banks and industry very much in the public mind, there are an unusually large number of topics for the bank chairmen to discuss in their annual addresses to shareholders. It is, therefore, particularly to be regretted that Mr McKenna, from whom the public usually gets a particularly interesting and sometimes challenging speech, should have felt that his membership of the Banking Inquiry Committee debarred him from publicly discussing questions of banking policy. This is the more to be regretted since that Committee has taken what we consider the mistaken decision of hearing its evidence in private, so that such discussions as are going on are taking place behind closed doors.

Mr McKenna, however, made such amends as he could by giving an historical retrospect of the banking and currency situation, and of his own bank in particular, over the last hundred years. Some of the details of the history of his own bank are of much interest, but, for the rest, the survey necessarily covered familiar ground. A clear analysis, however, served to throw up into sharp relief the relation between gold and the volume of currency and credit in 1844 and 1929 respectively. According to his estimate, the amount of bullion in the country in the former year, including gold coin in circulation as well as in Bank reserve, was between £50,000,000 and £60,000,000. In recent months it has varied between £130,000,000 and £150,000,000. In 1844 the active circulation of bank notes was just under £30,000,000, while the gold coin in circulation was approximately £40,000,000. That is to say, there was £70,000,000 of the currency in the hands of the public and in bank reserves other than those of the Bank of England. The comparable figure to-day is the £350,000,000 of notes outstanding, *i.e.*, there has been been a five-fold increase in currency. Bank deposits in 1844 were about £211,000,000; to-day the present total for England and Wales is approximately £2,000,000,000—a ten-fold increase. Leaving out the gold coin in circulation at the previous period, non-metallic money has thus increased from a total of £230,000,000 to £2,360,000,000. In other words, a ten-fold expansion of non-metallic money has been reared upon a two-and-a-half-fold increase in the stock of gold in the country. This is, as Mr McKenna pointed out, a conspicuous instance of economy in the use of gold and the beneficial effect of the concentration of banking resources.

In this connection, Mr McKenna pointed out the many important differences between the gold standard system of 1929 and that of 1844 and, in particular, the important fact that monetary policy to-day exercises for short periods an assured ascendancy over gold movements. "We can well imagine what enormous fluctuations in the supply of credit would have taken place during the past five years if the successive inflows and outflows of gold had been allowed to exercise unregulated influence upon the quantity of bank cash. We should have suffered repeatedly the evils of feverish inflation and drastic deflation, and trade would have been the plaything of these tremendous changes in monetary conditions." He drew the conclusion that the development of our monetary machine, despite its less popular appeal, is no less remarkable than that achieved in the physical sciences. It may be added that this note of appreciation of what has been accomplished in recent months by our monetary authorities is struck also by other speakers. For example, the Hon. Sidney Peel, at the meeting of the National Discount Company, after referring to the five changes made in Bank rate in 1929, observed that "We can be grateful to the authorities that we did not have even more."

In this connection, Mr Goodenough, on whom no such restraints were imposed as those which limited Mr McKenna's freedom of speech, also found cause for congratulation in the events of recent months, which, in his view, clearly illustrate the elasticity of our monetary system. Referring to the rise in Bank rate in September, he observed that "the effectiveness of the Bank of England rate should be regarded as amongst the most favourable features during the year. . . . There is cause for genuine satisfaction that our monetary system, which has proved so reliable in the past, when conditions may have been somewhat different, has shown itself again to be entirely effective, and there is no doubt that the prestige of London has been greatly increased by the satisfactory readjustment of the credit position through the operation of the Bank of England rate." It is possible to argue that the unhealthy situation would have been cured sooner if the Bank had raised its rate more promptly instead of trying to maintain a difficult position throughout the summer months. But, whatever answer the critics may make to this question, Mr Goodenough is certainly justified in congratulating the monetary authorities on having weathered an extremely severe storm and come through with enhanced prestige. In dealing with the events leading to the American crisis, and, in particular, with the flow of money into the American boom, the chairman of Barclays contributed the interesting fact that "Neither our bank nor, as I believe, the other banks, allowed their own balances to be dealt with in the manner above referred to, as we felt that our doing so would have prejudiced our own people. . . ."

The MERCANTILE BANK *of* INDIA
LIMITED.
Head Office: 15, Gracechurch St., London, E.C.3
Branches and Agencies throughout the East.
Correspondents in all parts of the World.
WORLD-WIDE LETTERS OF CREDIT AND DRAFTS ISSUED.

Mr Goodenough had something, also, to say on banks and industry. He pointed out that, since the war, the banks have given practical evidence of their desire to help businesses which have been in difficulties. "In very many instances, help given has been justified by results; in other cases, it has proved that it was not financial assistance which was required, but reorganisation to meet the ever-increasing competition." He added, however, that it lies with industry to reorganise itself, such reorganisation not being within the province of the banks. The provision of capital alone will not help, for it merely adds to losses unless businesses are efficiently organised and controlled. This point the chairman of Barclays developed at length in pointing out the different classes of influence which may cause the failure of a business. If fundamental conditions are not satisfactory, the provision of capital merely means throwing good money after bad. In this part of his speech Mr Goodenough did not, however, deal with or discuss one of the major criticisms made against the banks, which is that they have kept alive, or helped to maintain as independent units, concerns which either should have gone out of existence owing to the change in fundamental conditions, to which Mr Goodenough referred, or could only hope to carry on successfully by reorganisation and association with other concerns. Indeed, the charge may be brought against the banks that, by looking into the conditions of their individual customers and standing aloof entirely from the broader question of industrial policy, they have, in fact, proved an obstacle in the way of rationalisation. This is the case for plans such as those discussed last week. Though there can be no question of the banks dictating to industry, the industrial situation calls for a more positive policy on the part of our banking institutions; and we should have liked to have heard Mr Goodenough's comments on methods of realising that policy.

Although, as Mr McKenna pointed out, the hopes of improvement in general trade, with which 1929 opened, were disappointed, Mr Goodenough is justified in directing attention to the fact that, in spite of very great difficulties, the year's exports of British goods show some improvement, a further important step has been taken to improve industrial relations, the production indices show a substantial increase compared with 1928, and the depressed trades, particularly in the latter part of the year, show substantially better figures. Although there are factors—such as the industrial effect of the American slump and low prices due to a surplus of food stuffs and raw materials—there should be a better outlook for industry in the present year.

SUCCESS AT THE HAGUE.

Up to the very last moment it looked as though the adjourned Hague Conference must fail of complete success. It even seemed that the refusal of the Little Entente Powers to sign until agreement had been reached on the Hungarian question would prevent the signature of a final act at all, and that the mountains of statesmanship and expert knowledge which had been in labour at the Binnenhof would have brought forth no more than a *modus vivendi*. But M. Loucheur, Count Bethlen, and the Little Entente representatives sat all night till they were tired of disagreement, and when, on Monday, the fourteen agreements with twelve annexes which constituted the final act came to be signed, it was found that only one reservation had to be recorded, that of Czechoslovakia in regard to the Czech-German Mixed Arbitral Tribunals. This is not a very serious matter compared with the scope of the agreements actually reached.

The most difficult problem that the Conference had to face, and the one whose solution is perhaps its most notable achievement, is that of Hungarian reparations. The fact that Hungary's chief creditors, the Little Entente Powers, are also debtors for Liberation Debt, and that the reparations balance sheet in Eastern Europe is complicated by counter-credits for ceded properties, by relief credits, by claims of dethroned princes and expropriated churches, tangles the issues beyond the possibility of unravelment. As if that were not enough, the comprehensive liquidation of the past necessarily involved a settlement of the Hungarian optants question.

The claims of these optants (i.e., persons who retained their Hungarian nationality, but whose land was confiscated under agrarian laws in neighbouring states) run into very large sums. The initial Hungarian estimate at this Conference was 310 million gold crowns (about £12,400,000). But not only is it impossible to say how many of the claims are well founded; the issue, whether any compensation is due by intrenational law, has never been decided by any tribunal. For eight years all attempts at a settlement of the dispute, including protracted efforts by the Council of the League of Nations, have failed for want either of a principle to govern the trial of the cases or of agreement upon the composition of the tribunal.

The problem which the League Conference had to face was thus twofold. First, a sum had to be found sufficient to meet not only the agrarian but also the commercial, Church and Hapsburg claims; second, the parties must be brought to accept some court or other to adjudge the validity of the claims. In practice, however, the problem resolved itself into finding enough money. Hungary's pre-1943 reparation schedule, if protracted on the same scale until 1966, would have provided most of what was necessary, but not all. In the interest of a general settlement, the Great Powers came forward with a considerable contribution, and, with Hungary consenting to pay on an increased scale after 1943, the gap was bridged. Great Britain, France and Italy have a small net liability towards two funds which are to be set up—one for agrarian claims, one for the rest; the Little Entente Powers forego all participation in Hungary's post-1943 annuities, which are fixed at 13,500,000 gold crowns (£540,000).

The courts for adjudging the claims will be the ordinary Mixed Arbitral Tribunals, reinforced each by two neutral nominees of the Permanent Court of International Justice. It is curious that this is almost precisely the same arrangement as was proposed by Sir Austen Chamberlain two years ago and agreed to by Hungary, though rejected—save on unacceptable terms—by Roumania. The atmosphere of general compromise, and the provision of a sum of money, have worked wonders.

Once that matter was cleared up, the remaining business on the non-German side was not very difficult. Austria, as was expected, is to pay only a small annuity for claims other than reparations. Bulgaria's annuity is to be a compromise between the creditors' demand for 12½ million gold francs and her own offer of 10 million. She is to pay 10 million gold francs (£400,000) for ten years, 11 million for a further ten years, and 12½ million for the last 16 years of the reparation period—an average discounted annuity of about £465,000. Czechoslovakia, who was asked for £550,000 a year in settlement of her Liberation Debt, is to pay only £500,000.

It must be emphasised that this country and the other great Powers (except Italy) are financially very little interested in these settlements. Details of the division of the various payments are not yet to hand, but in any case the "Spa percentages" for Bulgaria give Great Britain only 11 per cent. of the annuities. For Liberation Debt, Italy is the principal creditor, and Greece, among the Eastern European states, is the chief beneficiary from the reparations pool.

As far as German reparations are concerned, the main decisions of the Conference have already been recorded in the *Economist*—the admission of the 15th of the month as the date of German payments, the agreement that a postponed annuity shall be payable immediately upon the expiry of any postponement period and not in instalments, the sanctions declarations approving resumption of full liberty of action by the creditor Powers in the event of a decision by the Permanent Court that a German Government intends deliberately to destroy the Young Plan, the abandonment of the creditors' demand for specific security on the assigned revenues. In addition, Germany has concluded agreements with Canada, Australia and New Zealand, as well as with Italy, regarding sequestrated property. These agreements, like that concluded with this country before the Conference began, provide for the return of property not yet liquidated but the retention of existing surpluses.

One further matter of importance in connection with German Reparations remained to be cleared up at the end of last week, namely the French demand for an assurance that nothing should be allowed to interfere with the mobilisation of the first portion of the unconditional annuities. The position was complicated by the recent Match Loan agreement between the German Government and the Swedish Match Trust, and by the desire of the German Post Office and Railways to float foreign loans. M. Ivan Kreuger travelled to the Hague to assure M. Tardieu that his loan could in no way interfere with the flotation of Reparation bonds, and an agreement was reached allowing the Post Office and Railways to participate to the extent of one-third in the first reparations issue, which is fixed at a maximum of $300 million. Germany undertakes to place no other State loan on the international market until October 31, 1930; if the issue is not made by that date the undertaking is extended till the following March.

The fate of the first mobilisation issue will be awaited with great interest, and in France no doubt with some anxiety. The present yield on the Dawes Loan indicates that borrowers cannot expect better terms than 6½ or even 6¾ per cent. It is doubtful whether, at that rate, the conversion of debt would be profitable to any of the chief creditor Governments, and a large proportion of the unconditional annuities is likely to remain unmobilised.

The time and terms of any reparation bond issue, according to the Trust Agreement between the creditor Powers and the Bank for International Settlements, are to be determined by the Bank. The Trust Agreement, which contains no big surprises, is an instrument whereby the creditors appoint the Bank as sole and joint trustee to receive, manage and distribute the German annuities (including the acceptance of the special long-term deposits from France and Germany, and the special measures to be taken in the event of a postponement of the conditional portion) as provided by the Plan and within the limits of the Statutes of the Bank, and whereby the Bank agrees to undertake these functions. In return, the creditor Governments undertake to remunerate the Bank on a scale which should prove satisfactory to putative shareholders in the Bank.

Throughout, pains have been taken to safeguard the Bank's independence. Article IV (*b*), for instance, provides that the obligations of the Trustee in regard to the balance of the German monthly payments after payment of the Dawes Loan Service shall be only those normally incumbent upon a banker for the execution of a trust agreement, and that in no case shall the Bank permit the accounts or credits of any creditor Government to be overdrawn. On the one hand, the German Government is no party to the agreement; on the other, the Bank discharges its responsibility, as far as reparation questions are concerned, when it has credited to the various Governments the sums due to them. To what extent it will be used by them as a bank for liquidating inter-allied obligations, including war debts and the special guarantees entered into last August, remains to be seen.

Only ratification and the actual setting up of the Bank for International Settlements have to be achieved before the Young Plan is put into operation. It is not too late now for some internal trouble in a Balkan country to invalidate a signature given at the Hague, but the parliamentary support for the Governments of the Great Powers seems secure and their determination to implement the Experts' Plan can scarcely be thwarted now. Thanks to those experts, and to the efforts of technical committees, as well as to statesmen of the stuff of Stresemann, Briand and Snowden, the past, like a shoddy company whose accounts are in disorder, has at last been liquidated.

RE-EQUIPMENT OF BRITISH INDUSTRY.

(BY A CORRESPONDENT.)

Anyone who has taken part during the past two or three years in discussions on the problems of rationalisation has speedily become aware of a remarkable diversity of opinion among those actually engaged in the direction of the depressed industries as to the extent of the need for changes in technical organisation and re-equipment. This diversity has been a notable feature of the comments of manufacturers and business men on the announcement of Mr Thomas relating to the provision of new capital for rationalisation. The managing director of an important shipbuilding firm, for instance, expresses agreement with a statement that much of the plant in this industry is obsolete. Another shipbuilder, with an apparently equal claim to speak authoritatively, declares that the industry is generally up-to-date and efficient. Colliery owners and steel masters commit themselves to similarly contrary views, and the man in the street may well feel bewildered as he reads these conflicting assertions.

The truth is that we do not possess adequate data on which to base anything approaching a full and reliable comparison between the present technical equipment of the depressed industries and that of the same industries in other countries which have been reconstructed to a greater or less degree in recent years. No research organisation capable of ascertaining the facts exists in this country. Even if we possessed one, it is doubtful if its staff would be able to gain access to all the sources of information, since—as Sir Josiah Stamp pointed out recently—traditional secrecy and conservatism prevent anyone "from knowing the total position of an industry, or the relation of its parts."

It is possible, nevertheless, to indicate in a general way some of the changes which are necessary if this country is to reach the competitive level dictated by what has already been accomplished on the Continent and in the United States. (To anticipate a certain kind of superficial criticism which is nearly always provoked by a discussion of this nature it may be made clear at the outset that the existence of many modern and highly efficient plants in this country is taken for granted.) Considering, first, the coking and by-product plants, with which both the coal and iron and steel industries are intimately concerned, one may say that here at any rate the urgent need for wholesale replacement is denied by only the wilfully ignorant. The broad facts relating to the most important coking centre—the Durham area—are sufficient to indicate the magnitude of this reconstruction task alone. Out of about thirty plants only two or three are not obsolete, judged by American and German standards. Ten or twelve modern plants would give an equal productive capacity and reduce operative costs far beyond the charges necessary for the new capital and depreciation allowances. The expenditure necessary for these plants would be between four and five million pounds, and probably an equal sum would be needed for the modernisation of the remaining plants in the country.

The necessity for blast-furnace reconstruction on a large scale is also generally admitted, even by those who deny that very much is lacking in the steel-making plants. The majority of the iron furnaces in this country are small and costly to operate. It is possible that, for some time to come, pending a large expansion of production and a much more drastic reconstruction of the whole industry than is yet envisaged, very few furnaces would be built with a daily capacity of 1,200 tons of iron—which now tends to become the standard for new construction in America and Germany—but the range would be extended to between 500 and 900 tons. With this rebuilding must go the provision of elaborate and costly accessory plant, if the full possible economies in production are to be realised.

In steelworks the question of obsolescence and the need for replacement of plant depend, partly, on the present condition of the plant and partly on the conception which is to govern the future organisation of the industry as a whole. In competing countries the advance has been steadily towards the concentration of a large proportion of the total production in units organised for continuous operation at full capacity, with an unchecked, synchron-

ised flow of materials from the coal entering the coke ovens to the loading of the products of the rolling mills. In this process the consumption of solid fuel ceases at the blast furnace. The raw iron passes in huge containers to the mixers and the steel furnaces, and the cost of producing pig iron is eliminated. Coke-oven and blast-furnace gas, separate or in combination, according to the purpose for which it is required, suffices for the steel furnaces, heating pits, and power plants of the whole works. Steel furnaces ranging up to 200 tons capacity— and even larger ones are now discussed—mechanism of the most varied character for automatic or semi-automatic operation at every stage, and highly specialised rolling mills differentiate this type of plant from the older methods of British production. Coal consumption is reduced in the works using high-grade ores to 35 cwts. or less per ton of rolling-mill products, and, in addition, enormous economies in operating costs are achieved.

Rapid wholesale reorganisation on these lines would be impossible at present in Great Britain, but the development of several complete units by the new groups of combined firms is regarded as practicable at points where existing plants are favourably situated for this purpose. The production of special steels at Sheffield, and the modernisation of works at this centre where necessary, would be treated as a separate problem of reorganisation, and in other districts some of the smaller plants would be preserved and improved to serve particular purposes. If evolution on these lines is decided upon by those now organising the large combines in the industry a capital expenditure of many millions can be envisaged.

The Balfour Committee, in its survey of metal industries, published in 1928, was not able to give a detailed estimate of the amount of reconstruction necessary in the coking, iron and steel plants, but its extremely guarded comments on the relative efficiency of British and foreign plants left no room for doubt that a great modernisation effort was regarded as necessary. The aggregate capacity of blast furnaces in this country in 1927 was given as 12,000,000 tons, and that of steelworks at over 12,000,000 tons (as compared with production in 1929 of pig iron 7,580,000 tons and steel 9,654,000 tons). Attention was called to the large proportion of small, old, and hand-charged blast furnaces, as compared with the larger modern furnaces abroad, and to the lack of balance between iron and steel production capacity in the different districts—the North-East Coast area having a large excess of iron, while Scotland, Sheffield and South Wales have an excess of steel capacity. An extensive modernisation of steel plants during the war was noted, but a statistical table relating to 1926 showed that the capacity of 400 out of 632 furnaces was below 55 tons. The point was stressed that, while many individual steel plants were modern and highly efficient, few British works were modern throughout. The continuance of these defects was attributed mainly to the difficulty of obtaining adequate capital for reorganisation, while, as to coking plants, the Committee declared that the British industry remained where the Continental industry was before the war; and attention was directed to the importance of zone or long-distance gas supplies as an essential factor in modern coke-oven organisation if the fullest possible advantages are to be gained from the high capital expenditure involved in installing the newest plants.

Reference to the Balfour Committee's report, however, is a reminder of the rapidity with which official documents dealing with industrial and technical matters tend to become out-of-date for reliable comparative purposes, however valuable they may be historically. This survey of the metal industries, for instance, was based mainly on evidence relating to the conditions of 1925-26, when the comprehensive technical rationalisation of the German coal, coking, and iron and steel plants, and also a far-reaching modernisation of American plants, was only just beginning. The disparity between these and British plants has been greatly increased during the past three years, and the intensity of research abroad suggests that in iron and steel we are still far from the limits of technical progress.

Similarly, in the coal industry, it is clear that much depends on the progress of amalgamation, without which adequate plans for concentration of production and modernisation of plant cannot possibly be prepared and carried through. It will probably always be found both necessary and economic to retain many of the coking plants at the mines. If, where the circumstances are favourable, as in Durham, some parts of South Wales and Scotland, and South Yorkshire, plans are developed for the better utilisation of all the coke-oven products, including regional gas supplies, a large expenditure for entirely new plant in association with coke ovens will have to be provided for. In the sphere of coal-getting merely to bring the majority of the pits which should be retained in production up to the level of the best new and modernised mines will be a task of great magnitude, involving very heavy expenditure on cutting machines, hand implements, haulage mechanism, winding gear, and new buildings and labour-saving layouts at the pit-top. Wider reorganisation of the underground workings which would be made possible by certain amalgamations demands the sinking of new shafts, while progress in the cleaning and grading of coal on the scale required to place the British industry on the average level of its competitors calls for a rapid increase in the number of washing or other forms of cleaning plant, and of modern screening equipment.

Finally, so far as the shipbuilding, textiles, and heavy engineering works are concerned, the variation in conditions is so great that it is impossible to make even the broadest survey of re-equipment needs. From such inadequate indications as are available, however, it is permissible to express the belief that close investigation would reveal in these industries also a very wide scope for technical improvement and cost reduction, calling for capital expenditure on a scale that can only be met by the co-operative mobilisation of all available financial resources.

UNCLE JONATHAN'S OTHER ISLANDS.

A DEPUTATION of Filipino politicians, under the leadership of Señor Roxas, Speaker of the Philippine House of Representatives, is renewing before the American Senate its annual demand for independence. The principle of self-government, though not of independence, has indeed been conceded by American statesmen of all parties, Presidents Taft, Wilson and Coolidge having committed themselves with greater or less caution to such a policy. The Democratic platform in 1928 stated that " it is now our duty to keep our promise to these people by granting them immediately the independence which they so honourably covet," and the Anti-Imperialist League loses no opportunity of reminding the American Government and Legislature of their obligations. Account must also be taken of the desire of American citizens for " independence for the United States "; and a dislike of Philippine embarrassments strengthened the support of the Jones Bill of 1912, which would have granted independence in nine years, and of the unsuccessful Clarke amendment to the Jones Act passed in 1916. The King Bill now before Congress offers all that the Filipinos demand. It is, however, unlikely to be passed, since the difficult questions of security and of economic relations, so intimately connected with one another, remain unsolved.

The existing system of free trade with the Islands, reluctantly established by the United States in 1913, is unpopular with American producers. Manila hemp, it is true, does not compete with American products, but the American grower of tobacco and beet is adversely affected by $100 million of untaxed cane sugar and $10 million of Philippine tobacco. An entire separation, on the other hand, would cause appreciable losses. The United States enjoys two-thirds of the total Philippine trade, and finds a secure market for her cotton goods, foodstuffs, iron and steel. An independent Filipino Government would no doubt embark on some such campaign of tariff building as commends itself to Indian Nationalists, and much of this trade would be sacrificed. The Filipino attitude, however, is not wholly certain. The Assembly in 1909 voted unanimously against free trade with America, and jealousy of foreign capital and fear of " economic servitude " impede every scheme for agricultural development by the grant of plantation land to American companies or individuals. Yet Señor Roxas and his deputation protest vigorously against the suggestion, put forward at Washington, that each party should resume tariff autonomy. The Filipinos appear, in fact, to desire free entry to the American market together with the right to exclude American goods.

There is, moreover, little doubt that under a Filipino *régime* foreign capital, if admitted, would feel itself less safe. The sudden relaxation of control by Governor Harrison in 1913, when he first assumed office, resulted in a sharp fall in commercial business and foreign trade, and though the peculiar conditions of the war period restored prosperity, the erratic finance of the Philippine National Bank and the wild ventures of Government-owned corporations showed prudent men what was to be expected under the guidance of inexperienced and ambitious politicians.

Though steady progress is being made under American authority, there is insufficient ground for supposing that the lesson of caution and moderation has yet been learned. Illiteracy among the Christian Filipinos, who form 90 per cent. of the population, still exceeds 50 per cent. of those above the age of ten years, and no account is taken in this calculation of 1,000,000 Moros and pagan tribes, for whom exact figures are not available. The revenue devoted to education is four times the amount per head which British India can spare for the purpose, but literacy alone is no guarantee of moral or political balance, and apart from the scandals of Government undertakings during the Democratic period (1913-21) it should be remembered that the salaries of all the more responsible offices were then indiscrimnaitely reduced, that the cost of the Philippine Legislature was more than trebled in eight years, and that a distressing increase took place in the mortality of men and cattle, which has now been corrected by more careful administration.

It is, indeed, highly uncertain whether the Filipinos themselves would rejoice in their liberty. The Muhammadans of Mindanao and Sulu have protested vigorously against it, except on the condition of separation from the other islands, as intended by the Bacon Bill of 1926. The Wood-Forbes Mission in 1921 evoked strong expressions of opinion in this sense, and it is not unlikely that a Filipino Government in Manila would be confronted with an outbreak of violence, and possibly successful rebellion, by the non-Christian tribes. These are at present protected by a special provision that a transfer of their lands is only valid if made with the consent of the Bureau of Non-Christian Tribes, but the removal of this restriction, or the placing of the Bureau in Nationalist hands, would lead to a rapid displacement of illiterate cultivators by educated and commercial-minded citizens of the towns, which could only lead to disorder.

In the event of the American withdrawal, the Filipino Government would presumably be called on not only to maintain internal order, but also to arrange the external defence of an archipelago of 7,000 islands. Liberty is bought at a price, and the payment is continued indefinitely. A taxation of 3 dollars a head, as at present, would not suffice to hold the seas against other interested Powers. Here, too, the Filipinos would prefer to gain the advantages of both worlds, but America has made it abundantly clear that she is not prepared to pay the bill. President Coolidge spoke of " the misapprehension that America, even though she granted full independence to the Islands, would still assume the heavy responsibility of guaranteeing the . . . independence of the Islands." On the other hand, the intrusion of another Power would be unacceptable. The Filipinos, who are Christians, would be uncomfortable under Japanese rule, and America would not be alone in disliking the presence of naval forces at Manila under another flag. The proposal of the Philippine Independence deputation, that the status of the Islands be guaranteed by an agreement between America, Great Britain, France and Japan, provides a possible solution of the problem. The Manila fortifications would presumably be dismantled, and Philippine neutrality in case of war assured, but no such autonomy can, with justice to the non-political mass of peasants, be granted until a stable and honest Government is in a position to maintain internal peace.

Notes of the Week.

The Economic Advisory Council.—The Prime Minister made the interesting announcement in the Commons on Wednesday that the Government has decided to set up an Economic Advisory Council under his own chairmanship. Mr MacDonald gave no information about his scheme except that it would absorb the existing Council of Civil Research and that he hoped to secure for the Council the whole-time services of at least two experienced economists. The constitution and functions of this new organisation cannot, therefore, be discussed in detail until the promised White Paper is issued. In recent years numerous suggestions have been made in this connection, borrowed in many cases from the experience of various foreign countries. There is, for example, the case of Germany, which introduced an Economic Council as part of the Weimar constitution, but has found it expedient in practice to reduce what proved to be an unwieldy body, with powers in some respect challenging those of Parliament, to a smaller and more technical organisation. There is the proposal of the Melchett-Turner Conference for the formation of a National Industrial Council, but for the time being this scheme has reduced itself to a bilateral council of organised employers and employed only, whose personnel has to be adjusted by a complicated mechanism to the existing organisation on the employers' side according to the subject under discussion. Then, at the other extreme, there is the proposal for an Economic General Staff outlined in the Liberal Yellow Book, which would definitely be an organ of Government. Finally, there is already in existence the Committee of Civil Research, which has, in fact, functioned as a method of setting up investigations into a great variety of economic questions, the personnel of its inquiries being drawn either from Government or other sources, as might be appropriate according to the subject of investigation. The fact that the new body is to be called a Council indicates that it will not be a piece of machinery entirely internal to the Government, but will draw upon outside advice. On the other hand, the use of the word " advisory " and the fact that it is to absorb the Committee of Civil Research and to augment its staff suggests that it is intended in some degree to fulfil the function which was laid down for the Economic General Staff in the Liberal Yellow Book of engaging in continuous study of economic problems, completing and co-ordinating statistical and other information, and watching important tendencies at home and abroad. In other words, it is not to serve the specific requirements of any one department, or engage in sporadic inquiries now into this now into that, but is to endeavour to formulate or provide the means of formulating a considered policy having regard to the situation of the country as a whole. We have suffered far too much in recent years from hastily devised expedients alternating with periods of drift. The employment of a permanent staff in constant touch with non-political advisers will, if the politicians are willing to listen, go far to ensure that, whatever Government be in power, there will be greater continuity and stability in our economic policy.

The Week in Parliament.—Legislators' return to work has been signalised this week by activity in the Upper House rather than in the Commons. On Tuesday, the Lords, refreshed by their holiday and roused by tocsins sounded uncompromisingly by Lord Salisbury and Lord Banbury, fell with vigour on the Unemployment Insurance Bill, which emerged from the *mêlée* limited in opera-

tion to a period ending March 31, 1931, and with its famous fourth Clause, defining conditions of eligibility, shorn clean away. Wednesday, on which the Report stage of the Road Traffic Bill was begun, found noble lords again in spirited debating form, the chief modifications made in the measure being the acceptance of amendments providing that the penalty for driving after disqualification should be imprisonment without the option of a fine, and that for "dangerous driving" there should be imposed four, instead of three, months' imprisonment, thus giving defendants the right of trial by jury. By contrast, the proceedings in the House of Commons were uneventful. A Supplementary Estimate of £4,150,000 for the Ministry of Labour, on account of new charges on the Exchequer for transitional benefit, led on Tuesday to a desultory debate on unemployment, in advance of which the Lord Privy Seal had succeeded in answering—without allaying the curiosity of questioners or adding to general enlightenment—a volley of interrogations regarding the progress of employment schemes. With the promise of yet another White Paper the House had to be content. On Wednesday, when the business consisted mainly of the discussion of a private Labour member's resolution (carried by 169 votes to 139) demanding a Select Committee to consider the possibility of earlier meetings (and bed-times) for the Commons, interest centred on the Prime Minister's announcement of the establishment of an Economic Advisory Council, on which we comment above, and on Mr Henderson's statement that he had informed the Soviet Ambassador that a message from the Third International in the *Daily Worker* "was calculated to impede that improvement in the relations between the two countries which the impending negotiations had as their object." The Conservative Opposition was at once surprised and gratified by this indication of a "firm line" on the Foreign Secretary's part, but sensible opinion in the country, which desires very definitely the conclusion of a Commercial Treaty calculated to facilitate much-needed expansion of trade with Russia, may be less inclined to approve of too much fuss being made over peurilities. Manifestly the Government cannot afford to be charged with overlooking breaches of the "no propaganda" agreement, but the furtherance of our commercial interests in the Russian market was, frankly, the *raison d'être* for the interchange of ambassadors, and Mr Henderson, we trust, will not allow that purpose to be obscured by what is relatively trivial and unimportant.

Coal Bill Amendments.—Until the full list of amendments to be lodged by each of the three Parties is known, it is difficult to say what chances the Coal Mines Bill has of being re-cast in a form acceptable to the majority of the House of Commons. So far as can be judged from the amendments tabled by Mr Graham, the Government appear to have endeavoured to meet some at least of the more weighty criticisms levelled at the Bill on Second Reading, though they have clearly been severely restricted within the limits imposed by the fact that the essence of the measure is that it relies predominantly on the coal-owners to operate its provisions. They have not so far made any effort to amplify more specifically the Board of Trade's general power to approve regulation schemes "with or without modifications," or to prescribe in the Bill any rules for the fixing of "standard tonnages" and allocation of quotas. On the other hand, they have decided that the whole part of the Bill relating to the so-called "marketing" schemes shall expire, unless expressly renewed by Parliament, at the end of 1933; while, as regards selling prices at the pithead, an amendment has been tabled providing that reference may be made by any "investigating committee" or other party to an independent arbitrator, whose decision shall be final. One may with reason be somewhat sceptical of the practicability of this amendment, and doubts also arise whether the Government's proposals with regard to amalgamations are likely to operate effectively. In this matter it is proposed that three Commissioners shall be appointed and charged with the dual task of (a) assisting amalgamations proposed voluntarily by coalowners, and (b) promoting amalgamation schemes where none are voluntarily initiated, and imposing them compulsorily on the parties concerned, subject to the right of appeal to the Railway and Canal Commission. The Commissioners' powers, however, have not yet been defined with clarity, and in the absence, so far, of a time limit for the completion of amalgamations, it seems uncertain whether the proposed element of compulsion would in practice not be illusory. Fortunately, a reasonable interval still remains before the Committee stage of the Bill is due to begin, so that there will be full opportunity for detailed consideration of these and all other proposed amendments before Parliament embarks on what is likely to be a difficult and protracted task.

Experts and Statesmen.—Some plain speaking seems to have taken place at a recent private session of the League of Nations Economic Committee regarding the last League Conference on the Treatment of Foreigners. The fact, incidentally, that the conference was held in Paris instead of at Geneva (writes a correspondent), was responsible in part for the virtual failure which had to be registered, for a conference, unless it is of the first order, is lost in the complex life of a great capital, whereas at Geneva it occupies the centre of the stage and developments possible where surreptitious manœuvres pass unnoticed are impracticable under the steady Geneva limelight. But the real cause of the breakdown of the Treatment of Foreigners Conference lay much deeper than that, and it is worth examining, since it springs from a vicious principle which if left unchecked in its application might bring even a Disarmament Conference to destruction. What happened in this particular case was that Governments, as represented at Geneva by their responsible Ministers, agreed on certain principles governing the treatment of foreigners, approved the draft convention which the League's Economic Committee had framed after years of preparation, and then nominated, as delegates to the Conference which was to adopt the convention as an international instrument, officials who made it their business so far to eradicate every element in the convention as to reduce the whole thing to worthlessness. In many cases such an attitude was perfectly natural, for the delegates in question were the men whose obduracy and narrow departmentalism were the very factors which had made an international convention on the fair treatment of foreigners necessary. In just the same way in the past, Governments, through their Ministers, have agreed on certain principles of disarmament and then appointed, as delegates to a conference designed to translate those principles into action, generals or admirals whose first aim and purpose has been to keep the principles from ever being applied at all. The Conference on the Treatment of Foreigners will not have failed in vain if its failure has the effect of driving home the essential truth that when Ministers on behalf of their Governments commit themselves to a policy they must be taken as pledging that Government *ipso facto* to give binding and compelling instructions to any experts to whom the working out of the policy may be entrusted. That principle may be involved in the coming Conference on the proposed tariff truce. It may even be involved in regard to some of the committee work at the London Naval Conference. Its scrupulous observance is an essential condition of success in international co-operation.

Reparation Transfers.—The Agent-General for Reparations, who, of course, continues in office until the ratification of the Young Plan has been completed and the Bank for International Settlements has commenced operations, has issued his third monthly report for the year 1929-30. This interim period, between the close of the Dawes Plan year on August 31st, and the opening of the Young Plan year on April 1st, is actually covered by the Young Plan, but it has been agreed among the Powers concerned that pending ratification Germany shall pay on the Dawes scale, but that the Creditors shall only receive their dues under the Young Plan, the remainder to be contingently credited back to Germany. The period began with a balance in hand, which, with the sums paid in September in completion of the fifth Dawes annuity, totalled Rm. 316,225,639; to this must be added Rm. 3,132,723 gained in interest and exchange differences, including Rm. 514,345 during December. Transfers totalling Rm. 245,330,273 have been made out of this balance, leaving Rm. 74,028,089 as the residue of the Dawes annuities proper. During the first three months of the transition period, Germany paid to the Agent-General Rm. 648,609,315, including Rm. 181,929,238 during December. Only Rm. 493,827,898 of this have been allocated, however, namely Rm. 33,370,755 for the service of the Dawes Loan, Rm. 36,000,000 to the Reserve Fund for Costs of Occupation and the fund for expenses of Commissions and Organisations, as provided in the Hague Protocol, and Rm. 424,457,143 for distribution among the Creditor Powers. Thus at the end of the year there remained contingently at the credit of Germany the sum of Rm. 154,781,418, which had been invested in Treasury Certificates of the Reich (*Reichsschatzanweisungen*) maturing January 31, 1930. As far as the short-term operations of the German Treasury were concerned, the transfer of this sum was only temporary. Interest and exchange differences totalling Rm. 2,258,596 remain unallocated. The allocations must be distinguished from the transfers actually made. The latter totalled only Rm. 323,402,692, leaving Rm. 19,013,230 in the reserve fund for occupation costs, Rm. 5,277,572 in the fund for costs of Commissions, and Rm. 146,134,404 at the credit of the Powers. Great Britain took Rm. 29,601,548 of the total transfers, including Rm. 7,650,677 in December. This is in addition to Rm. 37,069,299 transferred to us during the three months' period out of the fifth Dawes annuity.

British Banking Results.—The publication on Friday of Lloyds Bank balance sheet enables us to summarise below the position of the chief British banks at the end of the year, their position at the end of 1928 being given for comparative purposes. More extended reference to these figures will be made next week. The first table shows deposits, acceptances and cash:—

	Deposits.		Acceptances.		Cash.	
	1928.	1929.	1928.	1929.	1928.	1929.
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Barclays	335·1	337·4	24·9	22·0	60·9	62·7
Lloyds	353·6	353·2	60·4	52·2	55·4	57·0
Midland	396·4	381·4	74·4	37·5	65·6	65·3
Nat. Provinc'l	291·2	272·6	19·6	15·2	44·2	41·9
Westminster...	295·3	286·3	26·5	27·6	47·3	46·0
Total	1,671·6	1,630·9	205·8	154·5	273·4	272·9
Coutts	17·7	19·8	0·5	0·4	3·0	3·1
Glyn, Mills ...	35·9	39·5	2·1	2·7	7·4	8·6
Martins	83·4	83·2	10·9	7·2	12·1	13·3
District	52·7	52·6	2·5	2·4	8·0	8·1
Williams Deacon's	32·3	31·8	1·5	1·0	5·2	5·2
Total	1,893·6	1,857·8	223·3	168·2	309·1	311·2

Deposits have fallen in the aggregate from £1,894 million to £1,858 million, while the higher level of money rates ruling in London last year is probably responsible for a sharp decline in acceptances from £223 to £168 million. To some extent, however, this last decline is due to alterations in accounting methods adopted by one bank. Cash remains practically unchanged, a testimony to the neutralisation policy of the Bank of England. The next table deals with the principal earning assets of the banks. Despite the reduction effected during the past few months, advances have risen from £976 to £990 million. This expansion, together with the decrease in deposits, has forced the banks to make appreciable reductions in the remainder of their earning assets. Thus call money has been reduced by nearly £15 million, discounts by nearly £33 million, and investments by just over £18 million.

	Call Money.		Discounts.		Investments.		Advances.	
	1928.	1929.	1928.	1929.	1928.	1929.	1928.	1929.
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Barclays	24·0	23·6	38·3	37·0	58·5	52·7	168·6	174·5
Lloyds	26·8	26·5	49·3	39·6	38·1	37·1	187·2	191·8
Midland	27·7	21·7	63·3	58·8	36·9	32·9	214·1	210·4

The United Dominions Trust.—The City learned with surprise on Tuesday that the United Dominions Trust, Ltd., had been in negotiation with the Bank of England as the result of which the subscription for a new issue of shares has been arranged. The existing capital of the company is £250,000, which will be increased to £750,000 by the creation of 250,000 shares of £2 each, of which £1 will be paid up. The statement does not specifically say that these shares are to be purchased by the Bank of England, but it is understood that this will be the case. The United Dominions Trust is an enterprise whose primary purpose is the financing of purchases on the instalment principle. We gather, however, that its business, which has grown from £1,240,722 in 1925 to £3,826,504 in 1929, excludes the financing of purely "luxury" goods and is concerned rather in engineering products and goods of a capital nature than with articles for domestic use, though these are not entirely excluded. Its method is the discounting of bills for the whole series of payments drawn by the vendor. It is claimed that the business is of direct assistance to the engineering trade, and has a large field available in connection with the growth of electrical light and power in this country. We can well believe that the Bank of England holds the view that a stimulus to trade through the use of credit for such purposes would be of value at the present juncture. We sympathise, however, with those who are asking with surprise how it comes about that the Bank of England is investing its money in a particular private enterprise of this kind on a scale which, though not giving it control or even, except in exceptional circumstances, voting rights, makes it nevertheless a 50 per cent. partner in the business. Moreover, the new "B" shares are not an ordinary marketable investment, for the original holders have undertaken not to sell them without first offering them to the directors to be disposed of to the "A" shareholders. This new partnership is so novel an arrangement and, if it is to be a precedent, opens up such remarkable possibilities that a fuller statment as to the lations of the Bank towards this enterprise is very desirable.

The International Coal Conference.—The results achieved by the Preparatory Technical Conference on conditions of work in coalmines must be regarded as a serious disappointment. Having decided that wage rates are not yet "ripe" for international regulation, the Conference narrowly escaped from an *impasse* which would have left the Governing Body of the I.L.O. with no answer to the question whether the discussion of an hours of work Convention should even be placed on the agenda of the next International Labour Conference. In the end it was resolved to recommend the inclusion of this item in the agenda of the June, 1930, Conference, but no agreement could be reached on any definite figure of working hours which could be put forward as a basis for a Convention. Notwithstanding vigorous opposition on the part of the British Coalowners' representative, the Conference decided that "time spent in the mine" must be calculated on a "bank to bank" basis, this principle being

accepted, however, by the British Government delegate only on condition that the winding time should be reckoned from first man down to first man up. The essence of the difficulty here is that British collieries represent on the whole older workings (involving longer travelling time) than is the case with Continental coalfields, so that an unqualified " bank to bank " calculation would mean that in many pits British miners would be a shorter time at the face than their Continental competitors. This consideration naturally did not appeal to the delegations from other countries, who objected that even the qualified acceptance of the British Government representative implied that in some British mines men would actually work longer than in others, and that differences would prevail even in the same pit, since the first man down might be the last to come up. With this underlying obstacle to agreement confusing the issue, every proposal to affix a figure to working hours was rejected in turn, the nearest approach to a majority (the voting was, in fact, equal) being secured by the motion of the Dutch Government delegate that the hours should be 7¾ per day—for a period to be agreed—and thereafter 7½ per day. Between now and June four clear months remain in which negotiations between Governments, at least, can, and should, continue. The fact that the Preparatory Conference apparently favoured the principle of allowing daily hours to be extended—up to one hour per day—proportionately to the curtailment of work on Saturdays, should render negotiations easier from the British point of view; but the importance of an international Convention is so great, and the opposition on the Continent to the British method of including one winding time only in statutory hours is now seen to be so formidable an obstacle to agreement, that the question arises whether Clause 9 of the Coal Mines Bill before Parliament should not be re-cast on a " bank to bank " basis.

Cotton Trade Problems.—The paper on Japanese competition in cotton textiles, written by Mr Barnard Ellinger and Mr Hugh Ellinger, and read before the Royal Statistical Society on Tuesday by Mr Barnard Ellinger, constitutes an interesting contribution to discussion of the problems of the cotton industry. Mr Ellinger pointed out that such discussion has recently turned for the most part on four advantages which the Japanese industry is alleged to enjoy over that of Lancashire, namely: lower labour costs; closer proximity to the Far Eastern markets; cheaper cotton supplies; and a higher degree of organisation. On the first point, the authors of the paper did not advocate a direct reduction of British wages, but they considered that certain out-of-date wage lists could be revised, with ultimate advantage both to the industry and to the operatives. The differential benefit apparently enjoyed by Japan through her closer contact with the Oriental consumer, especially in China, they attributed partly to a difference in methods of trading, and pointed out that it is open to the British manufacturer to establish closer relations by the choice of appropriate agents. They called attention, however, to the fact that in markets virtually equidistant from Great Britain and Japan, the Japanese have an advantage by reason of their lower freights, and suggested that shipowners should give attention to the possibility of so classifying Lancashire goods as to make possible an adjustment of rates in favour of those grades most subject to Japanese competition. On the question of the price of the raw material, Mr Ellinger stated that the cloths in which Japan directly competes with the United Kingdom contain cotton which costs her from 1d. to 1½d. per pound less than the cotton composing the corresponding British product. This is due to the fact that in spinning the coarsest counts Japan uses 80 per cent. or more Indian cotton, for which she pays, on the average, 1d. a pound less than Great Britain and 2d. or 2½d. less than is paid for American cotton. In order to compete successfully in this class of goods Lancashire must find means for the more efficient buying of Indian cotton, and must equip herself to spin it and to mix it scientifically with other grades. On all these three points Mr Ellinger takes a conservative view of Japan's superiority, and his conclusions as to what Great Britain may learn from her will command a wide measure of agreement. When he turns to the question of organisation he contrasts the Japanese industry, which is closely organised at the core, with that of Great Britain, with a core of over 3,000 unco-ordinated small units, surrounded by a " crust " of close amalgamations, and outside that again rings of individual units bound together by price-fixing agreements and the like. The most urgent task, in his view, is that of organising the " core," and his own very interesting figures show that it is no mean problem. He proposes a prodigious nucleus, for purposes of co-ordination, in the shape of an association of which the existing and proposed amalgamations, chemical and artificial silk interests, shipping, textile machinery, insurance and distributive interests should all be members. This proposal appears to lose sight of the fact that, whereas the vertical organisation of the Japanese industry is the natural consequence of its historical development, the scheme suggested for the British industry would involve the superimposition from without of an artificial vertical organisation on an industry whose natural development has been on lines of horizontal amalgamation. It is at least possible that if Lancashire proceeds wholeheartedly with urgently needed reorganisation on the horizontal lines to which she is committed, the necessary degree of vertical co-ordination will be forthcoming in a more natural manner.

Indian Cotton Duties.—Lancashire traders with India, writes our Manchester correspondent, have been hampered for many months by the uncertain political situation in that country. Dealers in the bazaars have hesitated to replenish supplies of cotton goods and merchant houses in Manchester have not been in the mood to anticipate the future requirements of customers. Another uncertainty, however, has now arisen. There is a distinct fear of an increase in the import duties from the beginning of March. The Bombay millowners are unceasing in their agitation for more Protection. They recognise that competition from Japan is more severe than from Lancashire, and there have been rumours of differential duties by a higher figure on coarse goods than on fine cloths. According to letters recently received from India in Manchester, traders anticipate an increase in the duties of 4 per cent., making 15 per cent. Before 1917 the import duty of 3½ per cent. was met by a similar Excise duty, and India manufacturers received no advantage. In 1917, however, the import duty was raised to 7½ per cent. without any alteration in the Excise duty. There was a further increase in 1921 to 11 per cent. and in 1925 the Excise duty was abolished, so that for the last few years the charge against foreign goods has been 11 per cent. It remains to be seen what will be done, but any trade expansion between Lancashire and India is improbable until a definite decision has been reached.

The Hatry Case.—The first three days of the Hatry trial at the Old Bailey, which were occupied with the Attorney-General's opening speech and with part of the evidence for the prosecution, produced little that was startling or new to the public. As the cross-examination of witnesses by counsel for the defence has not been protracted, and the charges are being concentrated upon three issues of municipal stocks only—omitting the allegations which had been made previously regarding shares in public companies—it is likely that the trial will end some days earlier than was expected. Hatry, Daniels, Tabor and Dixon are severally charged with conspiring with John Gialdini and other persons unknown to forge and utter valuable securities purporting to be bearer scrip certificates relating to part of the authorised issue of Swindon, Gloucester and Wakefield stocks; further, with forging and uttering scrip certificates, with conspiring with intent to defraud, and with causing, by false pretences with intent to defraud, large sums of money and valuable securities to be paid or delivered by various companies, firms, and persons to Austin Friars Trust, Ltd., and to other companies in the Hatry group. All four defendants pleaded " Not Guilty." The Attorney-General said that Gialdini is living in Italy, of which country he is a citizen, and for that reason his return cannot be secured under the terms of the Anglo-Italian extradition treaty. " I should like Gialdini to come back," added Sir William Jowitt. " If he did I should most certainly see that he also was accused of these offences." After describing certain of the companies in the Hatry group, " circling like satellites " round Austin Friars Trust, and the method in which the fraudulent paper is alleged to have been uttered, the Attorney-General summed up the position of the transactions between Corporation and General Securities, Ltd., and the three municipalities. The company paid to the Wakefield Corporation £100,000 of the £422,000 which was owing in respect of the stock issue; in addition, he said, the defendants raised £350,000 on bogus certificates for Wakefield stock. Swindon and Gloucester were owed £250,000 each, in addition to £222,000 and £217,000 respectively alleged to have been raised on bogus certificates. Thus £822,000, owing to the three municipalities, had not been accounted for, and £789,000 had been raised on fraudulent paper purporting to represent their stocks. The evidence of the city treasurer of Gloucester, the borough treasurer of Swindon, and the town clerk of Wakefield, was taken later. The two latter testified to receiving, on September 20th, scrip certificates for registration in excess of the authorised issues. The chief clerk in the issue department of Secretarial Services, Ltd. (secretaries to the Hatry group), stated that he knew of the existence of Gloucester and Swindon scrip in excess of the authorised issue, and several times approached Dixon, Daniels and Tabor upon the matter without receiving any satisfaction. Representatives of the Equitable Trust Company, Messrs Kleinwort, Sons and Company, the Westminster Bank, J. C. im Thurn and Sons, Ltd., Barclays Bank, Lloyds Bank, the Peterborough Trust, the Porchester Trust, the National Provincial Bank, Messrs. J. Horstman and Company, Messrs J. and J. Reid, Messrs E. P. Parsons and Company, Messrs Crews and Company, and Messrs Cohen, Laming and Hoare, described advances that their firms had made to Hatry companies in the course of the summer upon security of scrip certificates for stocks mentioned in the indictment. A former solicitor to Hatry, under cross-examination, said that Hatry had used a personal fortune of £750,000 to meet the liabilities of the Commercial Corporation of London. Sir Gilbert Garnsey, at the close of Wednesday's session, began his evidence by relating the now familiar story of how the defendants approached him on September 19th with admissions of " irregularities " in the affairs of the companies which he was about to investigate.

The Incidence of Unemployment.—The information furnished by some ten thousand claimants to unemployment benefit, on March 18 and September 16, 1929, has been very fully analysed, and the tabulated results are published in the January *Ministry of Labour Gazette*. It appears that the average duration of each spell of unemployment during the twelve months ending September 16th was eight weeks for men and six weeks for women. For men in coal mining the average duration was sixteen weeks and in other industries seven weeks. Throughout industry, the average number of unemployed periods experienced was 2.4 for men and two for women, and the commonest length of such periods was from one to three weeks. Of the men, about 30 per cent. had been unemployed for less than three months in the year; about thirty for between three and six months, and about forty for over six months. The corresponding approximate percentages for women were 50, 30 and 20. The average number of days of unemployment during the preceding year, for men and women respectively, were, at the March enquiry 140 and 93, and at the September enquiry 141 and 95. In coal mining the figure improved from 214 to 185. Analysis of the information relating to the last spell of unemployment showed that about 60 per cent. of the men and nearly 70 per cent. of the women had been continuously unemployed for not more than four complete weeks. The effect of advancing age on the liability of the individual to unemployment comes out with depressing clearness. The amount of unemployment experienced by men in the 55-64 age groups is over 50 per cent. greater than that in the age group 18-24. The group 35-44 corresponds very nearly to the average. Even more marked is the increase in the length of the last unemployed period towards the higher age groups. Among men of 18 to 24, in the September inquiry, the last spell of continuous employment averaged 7 weeks, as compared with 15 weeks in the age group 60 to 64.

Employment and Cost of Living in December.—During the first half of December employment continued to decline, but there was a slight net improvement in the third week of the month. The influence of the Christmas trade, however, had a smaller effect than in previous years on the total numbers unemployed, this being due partly to the bad weather conditions which prevailed during November and the early part of December, and which affected all outdoor occupations, and partly to a decline in other important industries, notably the textile trades. During the last week of the month there was the usual heavy increase in unemployment due to the discharge of temporary Christmas workers and to the extension of holidays in certain industries. According to the *Ministry of Labour Gazette*, among the 12.1 million workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed (wholly and partially) at December 16th was 11.1. This compares with 11.0 per cent. at November 25th, and 11.1 per cent. at December 17, 1928. The total number of registered unemployed was approximately 1,341,000 at December 16th, as compared with 1,323,000 at November 25th, and 1,312,000 a year ago. As regards the cost of living, there was a slight decrease during December. At January 1, 1930, the index number of the Ministry of Labour stood at 66 per cent. above the level of July, 1914, as compared with 67 per cent. at December 1, 1929, and a year ago. For food alone the percentage was 57 at January 1, 1930, showing a drop of 2 per cent., as compared with a month ago and a year ago. The fall in the indices during December was mainly due to reductions in the prices of eggs.

Co-operative Societies and Municipal Loans.—The steadily growing share capital of co-operative societies (writes a correspondent) is causing their committees to look for substantial investments outside their business. Naturally they look first to the Co-operative Wholesale Society and place with its bank a large proportion of the capital that is not wanted in the development of the local business. The rate for fixed deposits is only 4¼ per cent., so that where societies are paying 5 per cent. on their share capital the re-investment is unprofitable. Hence the interest with which the societies are now regarding municipal loans, in which the Northampton, Hull, Bury, Sheffield, Dewsbury, Heckmondwike, and other

BANKERS to world-renowned Swedish industrial and financial concerns.

Skandinaviska Kreditaktiebolaget

KREDITBOLAGET

societies have placed large amounts during the past year. The growth of share capital has proved larger than is required for the business, hence the necessity of investments outside the movement. This is a development that has been most marked since the war, and one that has every prospect of continuance and extension throughout Yorkshire and Lancashire. In many of the towns in these counties the co-operative societies have been in existence more than half a century, and have spread their branches into all sections of the distributive trade until they cannot find a local outlet for the members' savings. So the committees are looking to municipal loans as being along similar lines of collective ownership.

Soviet Oil in Europe.—Information drawn from Soviet Government sources here (writes our Paris correspondent) indicates that Russian exports of petroleum products into France now are equivalent to 13.8 per cent. of this country's entire consumption, and take third place after the United States and Persia. The Soviet Government Naphtha Syndicate and its French representative, the Société des Produits du Napthe Russe, failed to obtain the import licence now necessary, under recent French legislation, concerning all forms of petroleum, because it does not import its products under its own name. Sales in France are made by contract, either to the Petrofina Française, Desmarais Frères, Lille Bonnières, Colombes, and other French companies, or direct to State departments. More than half the requirements of the French navy in crude petroleum are now met from Russian mazout. The French Russian Naphtha Products Co. also constitutes the channel through which Russian oil enters Belgium, Holland, Spain and their Colonies. Soviet oil imports into France and her Colonies totalled 386,368 tons in 1926-27, 353,849 tons in 1927-28, and 388,859 tons in 1928-29. In other countries the rate of increase has been much higher. Spain, which absorbed 68,649 tons in 1926-27, took 220,317 tons the following year and 304,169 in 1928-29. The total purchased by Holland and Belgium has risen from 79,859 tons in 1926-27 to 113,219 in 1928-29. Soviet exports of oil to Great Britain, which amounted to 381,270 tons in 1926-27, are stated to have risen in 1928-29 to 714,014 tons, and those to Germany from 361,822 tons to 477,000 tons. These totals include motor spirit, lubricating oil and combustible oil.

Sun Life Assurance Society.—It is a very creditable feat for so large a society as the Sun Life to prepare and issue its annual report and accounts so promptly after the close of the year. How large the society is may be judged from the fact that the total balance sheet assets now amount to £42,714,752, compared with £23,111,995 so recently as December 31, 1926. We have on more than one occasion drawn attention to the circumstance that this rapid expansion has been due in large measure to the specialisation by the society in the issue of super-tax saving policies by single premium, 90 per cent. and upwards of which are borrowed at the outset. The 1929 report shows clearly that this feature continues, for the amount received in single premiums last year was £5,340,740, compared with £5,016,980 in 1928. Assuming that the single premiums amounted on the average to 80 per cent. of the corresponding sums assured, these figures mean that more than 40 per cent. of the total new business transacted was in respect of policies in this form. It is at least arguable that although these single premium policies are a legitimate means of saving super-tax, their transaction in such large volume does a positive disservice to the cause of life assurance in general, to the extent that they distract the organisation of the office and the resources of the policyholders from policies carrying insurance protection. The net rate of interest earned on the funds during the year works out at £4 13s. 9d. per cent., compared with £4 15s. 10d. per cent. in 1928, and some part of the explanation for the falling off in interest earnings must again be sought in the fact of the large increase in policy loans. In this connection the balance sheet shows that policy loans have risen during the year from £13¼ million to just over £18 million. Another change in the balance sheet of interest is the large increase in an item which has hitherto remained comparatively stationary, viz., loans on bonds, stock and shares, which has risen during the year from £83,000 to £357,000. A possible explanation of this is that these loans have been made on collateral security as part of the transaction of single premium policies. A complete picture of the changes in the society's investments is presented in the following table:—

Nature of Assets.	Dec. 31, 1928. Amount. £	% of Total Assets.	Dec. 31, 1929. Amount. £	% of Total Assets.
Mortgages and loans	1,218,909	5·27	1,461,128	3·42
Loans on society's own policies	3,716,519	16·08	18,099,324	42·37
British Government securities	8,252,710	35·71	3,320,565	7·78
British municipal securities	1,512,903	6·54	1,034,054	2·42
Colonial Government and municipal securities.....	2,368,027	10·25	4,783,634	11·20
Foreign Government and municipal securities.....	1,850,448	8·01	3,927,015	9·19
Debentures, debenture stocks and preference stocks.....	3,029,269	13·11	8,422,213	19·72
Ordinary stocks and shares	13,654	·06	36,450	·08
Properties, reversions, &c. ...	1,149,556	4·97	1,630,369	3·82
Total assets	23,111,995	100·00	42,714,752	100·00

The feature of this table is the tremendous increase in policy loans, accompanied by the realisation of British Government securities and the reinvestment of the proceeds in debentures, etc., bearing a higher return. Although the total net interest earnings have in recent years been maintained and even slightly increased, it would seem that this process, in face of the fact that over 40 per cent. of the total assets now earn but 5 per cent., has been made possible only by the running off of British Government securities and their reinvestment in higher yielding debentures.

National Mutual Life Assurance Society.—The first Life Office report to be published is again that of the National Mutual, and on this occasion the report coincides with the centenary of the society. Though still above the level of previous years, the new life business shows a decline compared with 1928, the amount being £895,635 as against £906,089. The reduction corresponds approximately to the falling off in the amount received by way of single premiums. In consequence of this reduction the premium income is slightly lower for the year, and this, in turn, has resulted in an expense ratio of 13.1 per cent., compared with 12.9 per cent. The net interest earnings have jumped from £4 14s. 10d. per cent. to £4 19s. per cent., but it is rather a shock to find that this is largely due to the heavy depreciation suffered, amounting to £317,420. This depreciation amounts to 6.02 per cent. of the average total balance sheet assets, and, though substantial, compares favourably with the experience of trust companies over the same period. Part of the explanation for it is to be found in the changes in the balance sheet, which shows that, while British Government securities have declined from £1,414,559 to £593,938, holdings in preference shares have risen by £223,000, and holdings in ordinary shares by £361,000. A more exact comparison is set out below:—

	1928. Per cent.	1929. Per cent.
Mortgages and loans, including loans on society's policies	11.02	12.46
British Government securities	26.48	11.42
Ordinary stocks and shares	13.66	20.98
Other Stock Exchange securities	36.96	42.38
Reversions, properties, etc.	11.88	12.76
	100.00	100.00

Last year was a period of heavy decline in stock market ordinary share values, and although the results of the society's particular investment policy have been unfavourable in 1929, the National Mutual has emerged from the period of the last six or seven years with investment profits probably greatly in excess of the average. An attempt has been made to compare the actual depreciation suffered in 1929 with that which would have been experienced by a hypothetical company that invested its funds in the same proportions, but in the securities included in the *Investor's Chronicle* index. This calculation brings out an aggregate depreciation of 7.48 per cent., a figure substantially in excess of the 6.02 per cent. actually lost by the National Mutual in the same period. After writing off the whole of the depreciation, the surplus on valuation still amounts to the striking figure of £709,507. Accompanying the annual report is the usual report on the valuation by the actuary. From this document the following comparison with the previous year has been extracted:—

	1928. £	1929. £
Trading profits earned during the year	131,890	149,403
Profits on securities	117,555	317,420
Brought forward from previous year	751,246	877,524
	1,000,691	709,507
Allocations—		
To ordinary bonuses to policyholders ...	121,667	129,270
,, Centenary bonus to policyholders ...	—	162,421
,, Pension fund	—	18,417
,, Valuation and centenary expenses, etc.	1,500	13,380
,, Carry forward to next year	877,524	386,019
	1,000,691	709,507

The society has decided to celebrate its centenary and at the same time mark its confidence in the strength of its own position by a special bonus distribution to policyholders costing rather more than one year's ordinary bonus; but whereas the ordinary bonus is maintained at the usual compound rate applicable to policies of all durations and ages at entry, the special distribution has evidently been carefully devised to yield the largest results for the older members. The scale of centenary bonus commences at the low rate of 4s. 6d. per cent. for entrants in 1928, but increases very rapidly to 48s. per cent. for 1922 entrants, to 102s. per cent. for 1916 entrants, and finally to £10 per cent. for all entrants in 1900 and previously. Not only does this represent a very handsome distribution for all policies which have been some little time in force, but its nature is further proof of the society's determination to preserve equity between the various classes of members, and so to maintain the principle of mutuality in the conduct of its business.

Treaty Reinsurances, Limited.—This is one of the strongest of the reinsurance companies, having been founded just after the war by a group of large composite offices, of which the three remaining are the Century, the Phœnix and the London and Scottish. Each of these companies has a representative on the board, and all the policy contracts are guaranteed by the shareholding companies. It is the more disappointing, therefore, to find that Treaty Reinsurances experienced an extremely bad year ended June 30, 1929, and to the extent that this may represent the general experience, the outlook for the accounts of the large composite companies is certainly not encouraging. During the financial year ended June 30, 1927, the company earned an underwriting profit at the very satisfactory rate of 7.4 per cent. In the year following, the ratio had dropped to 1.7 per cent., but in the year now under review there was a substantial loss, equivalent to 4.8 per cent. and amounting to £32,140 on a premium income of £676,000. These figures relate to the fire and general business combined, there being no separate revenue account published. Although the transaction of Marine business was discontinued at the end of 1925, it is curious to find that a sum of £181 was actually collected in premiums on that account during the year to June 30, 1929, and that at that date there still existed a small remaining fund of £291. Allowing for items debited to profit and loss (including the directors' fees of £2,000, now disclosed for the first time in conformity with the new Companies' Act), the underwriting loss is increased to a total of £36,691. The company is justified in maintaining the dividend at the same rate as before, viz.:—25 per cent. free of tax, since the net interest earned on invested funds is sufficient to cover the cost of the dividend nearly two and a half times. The balance sheet is strong, and includes a general reserve fund of £150,000 and a profit and loss credit balance of £26,782, against a capital of only £30,000.

Fire Losses.—With the publication of the statistics of Fire Losses incurred during December, it is now possible to obtain a complete picture of the whole experience of the year 1929. Fire losses in December in the United States showed an improvement as compared with December, 1928, though the corresponding figure for the United Kingdom was still above the level of December, 1928. The result for the year 1929 is a total of $332,426,600 for the United States, an increase of just over 10 per cent. on the corresponding total for 1928, an increase which, large though it is, is probably not incommensurate with the natural growth in property values exposed to fire hazard. Fire losses in the United Kingdom showed a very unfavourable tendency throughout the whole part of 1929, and the final figure for the year is £11,784,000, compared with £8,629,200 in 1928, an increase of nearly 40 per cent. The detailed figures of fire losses during each of the last three years are set out below:—

Year.	United Kingdom (from the *Times*). £	United States of America (from the *Journal of Commerce*, New York). $
1927.....	6,910,200	320,595,600
1928.....	8,629,200	301,267,560
1929.....	11,784,000	332,426,600

The heavy rise in fire wastage in this country is bound to have an unfavourable effect on the forthcoming accounts of the composite offices. Until 1929 the offices had experienced, on the whole, a series of comparatively favourable years, and the underwriting profit for 1928, for instance, worked out at 9½ per cent. It will not be surprising if the profit ratio for 1929 is some two or three points lower than this.

Transvaal Gold Output in 1929.—The total output of gold of the mines of the Transvaal during December amounted to 851,134 ozs. of fine gold, making the total gold production for 1929, 10,414,066 ozs., as compared with 10,358,596 ozs. for the year 1928. The following table shows the monthly output since the beginning of 1923:—

Months of	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	764,469	796,768	823,692	796,270	839,782	843,857	876,462
February	704,970	760,617	753,925	753,924	779,339	816,133	815,284
March	761,586	795,671	825,479	834,340	860,511	877,380	866,529
April	743,651	768,923	787,519	803,303	824,014	825,907	872,123

June	755,309	773,053	780,251	852,145	855,154	862,363	856,029
July.....	754,306	829,437	814,202	860,134	851,861	867,211	889,480
August ...	769,371	809,571	808,218	843,854	863,345	891,883	889,601
September	739,504	799,422	797,247	839,939	842,118	857,731	849,553
October ...	795,842	827,583	812,832	853,296	855,743	897,720	888,690
November	780,639	802,313	787,633	840,276	848,059	872,484	861,593
December	778,849	825,273	791,455	836,157	851,225	859,761	851,134
Total ...	9,133,060	9,597,634	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	April, 1929.	May, 1929.	June, 1929.	July, 1929.	Aug., 1929.	Sept., 1929.	Oct., 1929.	Nov., 1929.	Dec., 1929.
Gold mines	197,412	195,733	192,595	190,031	190,062	190,567	189,739	186,941	184,280
Coal mines	15,900	15,852	15,928	16,914	15,867	15,733	15,533	15,320	15,326
Diamond mines	5,554	5,473	5,029	4,845	5,071	4,814	4,555	4,561	4,811
	218,866	217,058	213,552	210,790	211,000	211,114	209,827	206,822	204,417

There was a further decline in the number of natives employed at the gold mines.

The Jevons Memorial Lectures, to be held during the present term, will consist of four public lectures on "The Relations Between Ethics, Economics and Politics," to be delivered by the Master of Balliol, Mr A. D. Lindsay, on Thursdays, January 30th, February 6th, 13th and 20th, at 5.30 p.m. in the Applied Statistics Theatre, University College, Gower Street, W.C.2. The lectures are open to the public without fee or ticket.

Overseas Correspondence.

UNITED STATES.—MONEY—BOND MARKET—INDUSTRY—PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 10.

WHILE the share market has been somewhat disappointing to the bulls, the course of financial and business events seems to have started the new year in a normal and not discouraging manner. The anticipated ease in short-term money has arrived, and while part of this ease may be temporary, based as it is on the fact that during the early part of January funds flow back to New York faster than the influx can be offset by Federal Reserve bank sales of securities, no strong stiffening is anticipated. The week's Federal Reserve statements show that the usual January contraction of credit is proceeding. The reserves of the system increased by $95,000,000, most of the gain being in gold holdings, and circulation fell by $73,000,000. The total volume of credit extended by the system declined by $163,000,000. This decrease was accounted for by a drop of $65,000,000 in discounts, which now are $309,000,000 smaller than a year ago, together with a decline of $73,000,000 in bills purchased in the open market and a drop of $26,000,000 in "Governments" similarly purchased. Total reserve credit outstanding was $1,384,000,000 as against $1,602,000,000 a year ago. The week's changes brought an increase of 3.3 in the reserve ratio which, at 72.9 per cent., was 6.6 above last year's level. Changes at the local Reserve bank were of a similar character; but the total credit extended by this bank is $29,000,000 higher than a year ago, and the ratio, at 67.4, is only 0.4 above the level of last year. As for the discount rate, one notices a striking contrast between the comparatively small interest in the subject that is being displayed here and the lively interest that exists in your market. The attitude here may perhaps be explained on the basis of a general feeling that the readjustment in business is proceeding in a normal fashion, that a certain amount of time will be required, and that particularly cheap money is not needed.

Perhaps the best development of the past week is a distinct improvement in the bond market. One of the first signs that liquidation has produced useful results should be, of course, a revival of the bond market. There has been some doubt as to whether further liquidation of bank loans on securities might not be required before the money position would be comfortable and the bond market really good. Present indications suggest that much further waiting may not be necessary. The demand for bonds has been strong and prices have been firm. As might be expected, the demand has been for good bonds rather than the more speculative or higher yielding descriptions. In any event, the bond market is likely to be tested in the next few days by a $150,000,000 issue of thirty-five year American Telephone and Telegraph 5 per cent. debentures at a price fractionally under par. The intention obviously is to price the bonds attractively and to insure an impressive success. It will be recalled that six years ago this company's bankers succeeded in restoring confidence in the bond market by a similar issue, attractively priced. If the present test is successful, the way will be open for a number of other issues that have been in the course of preparation. One factor that should tend to help the bond market is the ending of the period of heavy subscriptions to new share offerings by corporations through issuance of "rights." The break in the stock market, of course, put an end to this sort of thing, at least for the time being; but there was a considerable lag between the creation of the rights and the call for payments on subscriptions.

Business and industrial news is fair. December retail sales in this district were about equal to those of the previous year. There was a considerable transfer of purchasing to cheaper shops, but the aggregate volume was well maintained. Early January reports from chain stores indicate that the same tendency is continuing, with the volume at these stores actually exceeding that of last year. The steel industry is making the expected recovery from year-end "shutdowns." Production for the industry as a whole approximates to 60 per cent. of capacity, and the trade is attempting to judge how much this (and some further anticipated improvement) is due to an abnormal reduction in stocks before year-end inventories. Steel scrap is firmer, but the prices for finished products show no rallying power as yet. The annual automobile show at New York is now under way, and the public seems to be showing considerable interest; but the motor manufacturers are increasing their production cautiously. Altogether, observers realise that the advent of mid-winter can hardly be expected to bring signs of industrial or business revival. Dun's index of commodity prices fell 1.3 per cent. during December, following a decline of 1.2 per cent. during November. The December decline was general, but was most pronounced in farm products.

FRANCE.—HAGUE AGREEMENT—INTERNATIONAL LOAN—CAPITAL ISSUES.

(FROM OUR CORRESPONDENT.)

PARIS, January 22.

THE outstanding event of the week has been the signature of the Hague agreement, which is regarded here as an event of vastly greater importance than it appears to be considered in other countries. For France, the solution of the reparations problem, as arrived at in the Dutch capital, removes the last difficulty in the way of her financial programme, which she is now eager to translate in accomplishment. "France," as the *Temps* puts it, "has obtained (by the Hague decisions) satisfaction on all the points that were of a kind to render her particularly anxious as to the future." Reflection has only deepened the satisfaction felt when the bald terms were first announced. Even the substitution of the right of appeal to the International Court for the famous Clause 430 of the Versailles Treaty is accepted as likely to prove a sufficient guarantee (in view of the other factors of the Young Plan) against any danger of further default by Germany. So far as France is concerned, the plans for the financial liquidation of the war now appear to have been completed and to have no obstacle in the way of their successful application. M. Tardieu and his colleagues are credited with having secured an indisputable success, and the degree of French satisfaction may be gauged from the fact that the support which was given to them by Mr Snowden during the past fortnight at the Hague, "in spite of all that occurred at the beginning of the Conference," is generously acknowledged, both verbally and by the cartoonists.

The arrangements made for the mobilisation of the "unconditional"—or, as the French prefer to describe them, the "undelayable"—portions of the German debt exactly fit in with this country's financial plans, which, it is now becoming more and more clear, have latterly been based largely on the scheme for debt commercialisation which has been arrived at. Information drawn from reliable sources here earlier in the week indicates that the decision to associate the mobilisation of the "unconditional" debt with the supply of the foreign credits which Germany needs for the benefit of her railways, postal department and other internal factors, also meets with general approval. The quotation of the new international bonds on the Paris Bourse, which is already assured, will mark the beginning of the admission to this market of other scrip of German origin (which, it may be recalled, was promised in principle some months ago, subject to a satisfactory settlement of the evacuation, commercialisation and other kindred problems by the Hague Conference). The admission of German securities to the French market will constitute yet another factor in the development of Franco-German *rapprochement*, which both French and German political and financial leaders appear determined to foster by all possible means. It will also assist in bringing to a successful issue the plans for the elevation of Paris into a great international financing centre, the building up of which is expected to receive unusually close attention during 1930 and 1931.

The announcement that the reparation portion of the first of the series of international loans will amount to $200,000,000 (£40,000,000) confirms the forecast published here last week. Enquiries to-day confirmed, also, that the combined $300,000,000 issue will, in all probability, take place in May. The issue price is expected to be around 93 (which is also, it is understood, the figure fixed for the Kreuger loan of 500,000,000 marks to Germany in April through the International Settlements Bank). The nominal interest yield, it is now stated, will be found rather higher than the 5-6 per cent. rate originally forecast here. The American financiers interested are stated to have insisted that this first trial issue shall be at 6 per cent., plus 1 per cent. for amortisation, in order to ensure success in advance. Unconfirmed statements are in circulation that a firm offer has been put forward by an international group to take up the whole $300,000,000. The Morgan group is said to have stipulated that the larger part of the loan shall be offered in Europe, and to have agreed, in such case, to take up $140,000,000 for New York. European banking interests, and especially the Bank of France, are understood to agree fully with this.

Extracts from London newspapers reproduced here, which give the impression that the French may be inclined to throw on British and other foreign investors an unduly large proportion of a loan that will chiefly benefit this country, have been read here with astonishment and regret. The attitude of France to the pending loan is the exact opposite of that with which she is credited. Out of the $200,000,000 of the issue which represents mobilisation of the German reparation debt, about 71 per cent., or $142,000,000 (say £28,400,000), would be allocated to France in respect of her share of the German debt. Should it be decided that, apart from America, the issue should be distributed among the various Allied countries in strict proportion to the direct benefit that would be derived from it by each of them, no doubt whatever need be felt that France would be perfectly capable of absorbing at least $142,000,000, and that, if French investors were left to themselves, such an amount (on anything like the attractive terms set forth above) would be largely over-subscribed. The French view, both official and otherwise, is that the new bonds, if wisely launched, will, in all probability, rank on level terms with the best of the world's gilt-edged scrip. Other things being equal, this country will most probably be found ready to absorb, on its merits, an even larger proportion of the loan than that which might be expected of her. The only objection to this course is that, if French holders secured too large a proportion, the advantages of commercialisation would be largely nullified, as they would find themselves, *vis-à-vis* Germany, almost as ill-protected as the French Government has been under the *régime hitherto* existing, which made Germany's reparation debt to France merely an obligation of one Government towards the other. France's whole policy has been to devise a means whereby she would no longer be far the most prominent creditor of Germany. If a substantial proportion of the new bonds are held in the United States, Great Britain and other countries, the French holders would be proportionately better protected.

Another strong reason why it is desired here that as large a proportion of the loan as possible (subject to the conditions just mentioned) should be held by this country is that the new scrip is being relied upon as an important factor in the development of the French debt extinction policy. Plans are already being developed for the utilisation of the pending issues in connection with the series of important national debt conversion operations foreshadowed for 1930 and 1931, which will mark the real beginning of the debt extinction policy laid down since M. Poincaré resumed power in 1926. According to present plans, subscribers here will be offered the new international bonds in exchange for scrip of one or two of the higher-interest-bearing Rente issues, probably the 1920 6 per cent. (which closed to-night at 103.95) and 1927 6 per cent. (104.45). The double advantage of thus extinguishing public debt and the recurrent interest burden on the Budget, and also transforming a portion of the national debt into a merely commercial obligation is too obvious to need comment.

Banking circles are confident the new reparation bonds will speedily be carried to par, owing to the high yield which is expected to be offered, and that, as far as the portion to be issued in this country is concerned, the success of the operation is a foregone conclusion. Experts who are in a position to speak with authority estimate that it should be possible to mobilise the whole of the German "unconditional" payments within a period of about six years. These, according to the modified figures of the Young Plan, comprise 37 annual payments of 612,000,000 marks, or an undiscounted total of about £1,130,000,000 (in addition to the sums required for the service of the German External Loan, 1924). The value discounted at 6 per cent. is less than half this figure. Whether international financial resources will be capable of absorbing an average of £100,000,000 of the new bonds during each of the next six years remains, of course, to be seen. Much will, in any case, depend on the American situation and on the exact rank which the bonds will permanently assume among "international" securities. According to a recent estimate, the French revenue from investments abroad now exceeds 6,000,000,000 francs a year, and the same authority calculates that the country can now "certainly lend annually several milliards of francs abroad."

The total new issues during December are returned as 1,490,000,000 francs (of which 113,000,000 francs consisted of shares by new companies, 394,000,000 francs of increased share capital by old companies, and 983,000,000 francs of bond issues by the latter). The average rate of interest offered by new bond issues in December was 5 per cent., as against 5.25 per cent. in November, 4.80 in October, and a monthly mean of 6.03 per cent. in 1928. The Crédit Foncier announces its decision to lower its rate of interest on long-term loans to departments and communes from 7.15 per cent. to 6.05 per cent.

HOLLAND.—MONEY—STOCK EXCHANGE—FOREIGN TRADE—CAPITAL ISSUES.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, January 16.

THE Amsterdam money market remained amply supplied with credit even after the turn of the year. Owing to the payment of interim dividends by some of the larger concerns, including the Royal Dutch and some of the agricultural undertakings, much money has been released. Call money even dropped to 2 per cent., the rate for "prolongations" touched the low level of 2½ per cent. on the 13th inst., and the private discount rate touched 2⅞ per cent., with the official rate at 4½ per cent. To-day the Bank has reduced its rate to 4 per cent. The trend of the Bank rate during the past year will be clearly seen from the following table of prolongation rates:—

Average.	1926	1927	1928	1929
First quarter	2.74	3.39	3.94	4.78
Second quarter	2.93	3.75	4.05	5.67
Third quarter	2.67	3.48	4.03	4.95
Fourth quarter	3.29	4.61	4.62	4.20
Total for the year ...	2.91	3.85	4.16	4.90

That the position of the Netherlands Bank was strong enough to justify to-day's reduction will be clearly seen from the following figures, which also show that the last reduction of the discount rate in 1929 to 4½ per cent. has had no weakening effect:—

NETHERLANDS BANK.

(In millions of guilders.)

1929.	Foreign Bills.	Sundry Accounts.	Gold Supply.	Total.
January 7th	219.8	37.9	434.5	692.2
April 2nd	33.9	44.3	422.5	500.7
July 1st	175.6	33.9	436.6	646.1
October 7th	195.9	38.3	442.9	677.1
1930.				
January 6th	219.3	37.6	447.5	704.4

Neither on the stock exchange nor on the issues market did the ample supply of money produce any perceptible effect. On the whole business was very quiet.

There was, however, a general increase in foreign trade in 1929. As imports increased to a greater extent than

exports, the import balance was greater than in the preceding year. The figures of the Dutch trade balance for the past six years are given below. As the returns for December, 1929, are not yet available the total for the year 1929 is arrived at by adding the figures for December, 1928.

NETHERLANDS TRADE BALANCE.

1924-1929.

(In millions of guilders.)

	Imports.	Exports.	Import Balance.
1924	2,363	1,661	702
1925	2,455	1,808	647
1926	2,441	1,749	692
1927	2,549	1,900	649
1928	2,684	1,987	697
1929 (estd.) ...	2,747	2,010	737

These figures are not altogether encouraging. In the first place the year 1929 has closed with a record debit balance. It is true the increase compared with 1924 is not very great in itself, but the position becomes more critical when one considers that there has been an increase in the import balance of some 12 per cent. in the space of two years. Compared with 1924 this year's imports have increased by about 16 per cent. Exports, compared with those of 1924, are up by some 21 per cent., thus showing a greater percentage increase than the import or debit balance, but the annual rate of increment has shown during the last two years an alarming tendency to decrease.

The following figures show the part played by manufactured articles: —

	Imports.		Exports.	
	(In millions of guilders.)			
	1928.	1929.	1928.	1929.
Total for 11 months ...	2,475	2,537	1,822	1,845
Manufactures :—				
(*a*) Food and drink ...	158	141	372	345
(*b*) Other manufactures ...	972	1,074	731	803
Total manufactures ...	1,130	1,215	1,103	1,148

In the course of the year a large number of foreign stocks were offered to the Dutch public through introductions on the stock exchange, so that it is not possible to ascertain the amount of capital taken up here. A feature last year was the excess of share issues over bonds. Of the total amount offered, viz., 468.1 million guilders (last year 669 millions), 284.8 (last year 348) were in the form of shares, and 183.3 million (last year 320) in the form of bonds and mortgage bonds. Of this amount 79.8 million was accounted for by municipal and state loans, so that private issues amounted to 103.5 millions. Of the total of the shares issued, 234 millions are for home account and only 50 millions for foreign account. Of the bond issues, 97 million were for home account and 85 million for foreign account. Conversion loans reached more than double the total for last year; namely, 86.1 million compared with 36 million. The lion's share of this amount was that part of the 4½ per cent. Netherlands-East Indies Loan, 1929, which served to redeem the outstanding 65,625,000 guilders 6 per cent. bonds of the 6 per cent. Netherlands-East Indies Loan, 1923.

The Amsterdam issues market was in 1929 far behind what it was in 1928; there was a decline from 669 million in 1928 to 468 million in 1929. In the course of the year wide fluctuations took place in the issues market. The average monthly total was about 39 million, and there was in February a maximum total of 100.8 million, and in August a minimum amount of 6.2 million. Of the aggregate of 468 million 332 million were accounted for by home issues and 136 million by foreign.

As will be seen from the table given below the tendency which was noticeable in 1928 also continued throughout 1929 :—

DUTCH AND FOREIGN ISSUES

(in millions of guilders).

	1924	1925	1926	1927	1928	1929
Dutch ...	354	154	176	162	360	332
Foreign ...	49	143	283	340	309	136
Total ...	403	297	459	502	669	468
	Per cent.					
Dutch ...	87.8	51.8	38.3	32.3	53.8	70.9
Foreign ...	12.2	48.2	61.7	67.7	46.2	29.1

Whereas in the years 1924-1927 foreign issues were gaining ground—the home ratio dropped from 87.8 per cent. in 1924 to 32.3 per cent. in 1927—after 1927 this trend was reversed.

ROUMANIA.—POLITICAL SITUATION—AGRICULTURAL CREDIT BANK—PETROLEUM INDUSTRY—ECONOMIC SITUATION.

(FROM OUR CORRESPONDENT.)

BUCHAREST, January 16.

THE Government is losing popularity. The fairly serious unemployment in the industrial districts and in the towns in general, due to the economic crisis, the unsatisfactory state of agriculture caused by low world prices, the administrative reform combined with the wholesale pensioning of civil servants, the appalling state of credit, aggravated in no small measure by the unfortunate law of the Concordat Preventif—all these circumstances are very effective weapons in the hands of Monsieur Maniu's political opponents. That these conditions are not due to bad administration during the past year, but are rather the consequence of the devalorisation of the currency, with all its attendant evils, and of the mistakes of former Governments, is often not taken into account, and the opposition parties find it easy to sow dissatisfaction. The coming municipal and provincial elections will therefore show a marked diminution in the supporters of the present administration. However, sane judgment will probably prevail, and the Government will not be shaken seriously in its position. After all, the Government must be admired for adhering courageously to its programme of reorganising the country and its resources, in spite of all difficulties. Roumania has need of political peace, and this consideration should for the moment take precedence of all others.

Although the last harvest was very satisfactory as to quantity and quality, the situation of the farmer is unsatisfactory on account of the low level of prices. This reflects naturally on the economic position of the country. In view of the competition of Canada, the Argentine and Russia in the world markets, there is no improvement to be expected in the sale of Roumanian cereals. The only remedy lies in cheaper and better production. Capital is therefore needed to obtain machinery required for more intensive cultivation; cheap credit facilities are wanted to assist the farmer until he has realised his crop. At present agriculture is ruined by usurious charges. The Agricultural Credit Bank, the formation of which has been contemplated for a long time, is most urgently needed, but the scheme is encountering serious difficulties. For the great task which it will have to perform the new bank will require ample funds, and the assistance of foreign capital will have to be called in. As the agricultural land is the ultimate security of the foreign lender, while the Constitution does not permit foreigners to own such land, it is not easy to find a formula for making the investment attractive for the foreign capitalist, and at the same time to obtain the money on terms sufficiently cheap. It is generally asserted here that the farmer should obtain credit facilities on about a 7 to 8 per cent. basis. When it is considered that for the stabilisation loan, with the security of the Monopoly Institute, Roumania had to pay approximately 9 per cent., the difficulties standing in the way of the formation of the Agricultural Credit Bank, with foreign help on the signature of the State only, are obvious.

Petroleum interests have received encouragement from the agreement of the principal refineries regulating the sales in the interior, which was signed towards the end of last year. A similar agreement was concluded in 1927, but came to an end in the following year owing to a divergence of opinion among the companies concerned. During the time of its existence it had a very beneficial effect on earnings. Owing to its termination the companies' activity during 1929 will have been hardly profitable, and dividend prospects are unfavourable. As a matter of fact, it was only dire necessity in view of a disastrous year which made the renewal of the agreement possible. The effects are already noticeable in higher prices of crude oil and petroleum products for internal consumption. The outlook for 1930 is consequently brighter; nevertheless, the dependence of the industry for about 50 per cent. of its production on the precarious conditions of the world markets, and the crushing taxation, of which there seems no immediate prospect of relief, remain discouraging factors. Yet the industry has made good progress during last year. The daily production amounts to 1,500 wagons even now at the slack season.

It is intended to change the law of the Concordat Preventif because of the disastrous effects which this measure has had since the time of its passing in July last. This news comes as a relief to the commercial and financial community. A more equitable treatment of the relations of debtor and creditor, affording better protection for the latter than that given by the present law, can only have a good influence on credit conditions in general. There is no doubt that the law has accentuated the economic crisis which daily claims new victims.

There are difficult months ahead, and no marked amelioration of conditions can be expected until the export of cereals is resumed in spring. A factor of stability will be introduced by the conclusion of commercial treaties on the basis of the new Customs tariff; such treaties with several countries are under discussion now. On the whole, it is believed that the economic depression has reached bottom, and the outlook for 1930 is that, with political stability and a good harvest in the summer, a time of gradual recovery will be inaugurated.

GREECE.—BANKING TROUBLES—BANK OF GREECE—ECONOMIC CRISIS—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

ATHENS, January 18.

IN consequence of the failure of the Bank of Messinia nervousness prevailed in the Athens Stock Exchange. Bears, profiting by this, caused unfavourable rumours to circulate regarding various companies. Among these companies was the Bank of Industry, of which it was said that as it was an important creditor of the Bank of Messinia, its position, following the latter bank's failure, was difficult. Hence the shares of the Bank of Industry fell heavily, and it was found necessary for the Bank of Greece and the National Bank of Greece to intervene once again in its favour. A joint communiqué issued by these two institutions stated that, after a thorough investigation into the conditions of that bank, they were convinced that its financial situation remained satisfactory, and that the small part of its credit which was frozen was otherwise secured. Consequently, they informed the bank in question that it could rely upon their assistance if required. This statement disposed of the adverse rumours concerning the bank, but it is understood that large withdrawals of deposits were again made from it. Owing to the shock thus suffered for the second time in the course of a few months by the Bank of Industry its projected amalagamation with two other banks, and the formation thereby of a large industrial banks, has been abandoned. The bank will continue its operations as before, and should its further working not prove possible, it might eventually wind up or be absorbed by the National Bank of Greece. A representative of the latter bank and one of the Bank of Greece have been appointed to sit on the board of the distressed bank.

Another bank established in Athens during the war, the Bank of National Economy, found itself obliged, after a period of vegetation, to proceed to a voluntary winding-up. The liquidation of its affairs is being effected by the National Bank of Greece, to which the principal stockholder of the bank and wealthy shipowner, L. Embiricos, has given a guarantee covering any eventual deficit between the assets and the liabilities of the liquidated bank. The annual balance sheet of the Bank of Greece has just been published. As compared with December 31, 1928, the principal changes are as follows:—Bank notes in circulation show a decrease of 496 million drachmas; other sight liabilities in drachmas are lower by 599 millions; liabilities in gold exchange are higher by 753 millions. Gold coins and bullion have increased by 87 millions, but foreign gold exchange, disposable abroad, has declined by 458 millions, while the State Debt is less by 193 millions. The proportion of cover to circulation and sight liabilities in drachmas stands at 46.35 per cent. A year ago it was 54.24 per cent.

After the Industrial Association, both the Chamber of Commerce and Industry of Athens and the Commercial Association have in their turn submitted memoranda to the Government with suggestions as to the measures to be adopted in order to face the present economic crisis. The first thing for which everybody asks is cheap credits, —as extensive and as long-dated as possible. It is officially announced that the Government will lend to the Bank of Greece and the National Bank a sum of £400,000, which these two banks will utilise in making loans to various industrial concerns needing assistance. This amount will be taken from the sum of £1,500,000 deposited with foreign banks from the proceeds of the Stabilisation Loan and destined for the payment of Budget arrears. The Greek Treasury has already paid arrears of an equal amount from its ordinary revenue. An application has been lodged with the League of Nations for permission to withdraw the whole sum of £1,500,000, on the ground that the ordinary revenue of the Budget will suffice in future also to pay the remaining arrears. Should this permission be granted, the balance of £1,100,000, together with the accumulated surpluses of the Budget, would be utilised for financing the execution of public works pending the conclusion of a foreign loan. Gross receipts from revenues assigned for the services of the public debt for the first 11 months of 1929 amounted to Drs. 3,873 million, showing an increase of Drs. 135 million over the corresponding period of 1928. The special revenues securing the service of the Refugee Loan of 1924 amounted during the same period to 828 millions, or Drs. 1 million less than in the previous year. Revenues subject to the distribution of the surplus show, at Drs. 203 million, a decline of 9 millions in comparison with the receipts of 1928.

IRISH FREE STATE.—BANK RESULTS—REVENUE—DAIRY INDUSTRY—CORK HARBOUR.

(FROM OUR CORRESPONDENT.)

DUBLIN, January 21.

THE accounts of the principal Irish banks at the end of 1929 have been published, and it is possible to review the operations of the banking year. Deposits amount to £176,298,935, a decrease of £553,000 on last year, while advances and bills discounted amount to £95,890,002, an increase of £599,476. Notes in circulation amount to £10,326,712. The proportion of total assets held in

cash, investments and advances shows no material change. These figures refer to all the Irish banks, many of which possess numerous branches in Northern Ireland and in Great Britain. No separate figures are published for advances and deposits in the Free State, and one important economic barometer is thus wanting for the statistician. Possibly the most reliable index of this kind available is the Dublin bank clearings. These amounted in 1929 to £247,752,850, a decrease of £3,877,700 on the previous year.

The revenue and expenditure figures for the first nine months of the current financial year are eminently satisfactory, and have given rise to rumours of remission of taxation. The revenue amounted to £16,657,962, an increase of £232,759 on the corresponding period in 1928. The estimated revenue for the year, £23,939,000, will certainly be realised, as the present quarter is the best in the year. The main sources of the increases were Customs duties, motor taxes, and estate duty; while Excise duties, income tax and corporation profits tax declined. Expenditure amounted to £18,044,599, a decrease of £308,464. The apparent deficit is not a matter for alarm, as it is all accounted for by capital expenditure, mainly on the Shannon scheme. At the same time, it is becoming obvious that further borrowing must soon be undertaken, as the floating debt is becoming unduly large. The easier interest rates now prevailing, together with the excellent reputation of the Free State in financial matters, should enable any money that is needed to be raised on very favourable terms.

A largely attended congress of cow-testing associations was held in Dublin this month. There is no part of its agricultural policy to which the Government attaches more importance than the increase of the milk yield of dairy cattle. Dairying is the key industry of the Free State, on which the prosperity of the whole countryside largely depends. Considerable advances have been made in cow testing in recent years, but even to-day the cows under test are only a small percentage of the total dairy cattle, and the Government is attempting by means of subsidies to encourage this progressive and constructive movement in every way. Of the cows actually under test, the average yield increased from 430 gallons in 1912 to 580 gallons in 1928. There are 11,227,000 dairy cows in the country, and a corresponding all-round increase in yield. with milk at 8d. a gallon, would increase the agricultural income by more than £6,000,000, a sum greater than the total amount paid by way of land purchase annuities and local rates. While the policy of the Opposition party is to encourage the farmer to agitate for the removal of these payments, the Government, much more wisely, attempts to help him to increase his real income so that he may discharge his legitimate obligations without feeling them an excessive burden.

An American syndicate, which is said to have command of 60 million dollars for investment in Ireland, is exploring the possibilities of developing Cork harbour. It is suggested that, if facilities were provided for liners to come alongside a jetty instead of discharging their passengers and cargo, as at present, by tender, a large number of American tourists would include Ireland in their European itinerary. An engineer, acting on behalf of the syndicate, is engaged on inspecting possible sites for such a landing stage, and it is thought that some place in the neighbourhood of Queenstown will be found most suitable. Proposals are also being put forward that Cork should be made into a free port. The tractors from the Ford works are exported in ships that have frequently no return cargo, and it is argued that this defect in the transport arrangements of the port could be remedied if shippers were encouraged by the establishment of a free port to make use of the magnificent natural advantages which Cork possesses as a centre of the distributive trade in the British Isles.

Books and Publications.

NAVAL DISARMAMENT.*

THE public enthusiasm with which the London Naval Conference is welcomed undoubtedly exceeds public knowledge of the matters which the Conference is to discuss. It does not need technical knowledge to desire a genuine restriction of naval armaments for the sake of economy and security; it will need some technical knowledge to follow intelligently the progress of the Conference and to appraise its results. For that reason these two books ought to enjoy a wide circulation. They supplement rather than compete with each other, for while Mr Wilson Harris clearly and tersely discusses the issues before the Conference, the Chatham House monograph is a bare history, with only very occasional comments, of attempts at naval disarmament since the war. The reader will find, for instance, the complete text of the Washington Limitation Treaty with its annexed schedules. Mr Wilson Harris also devotes one half of his book to history, but he goes into much less detail than Mr. Latimer and is not afraid to enlighten the tale with his personal views.

When Mr Latimer does allow himself an expression of opinion his theme is much the same as Mr Harris's. "The Washington Conference," he writes, "owed its success largely to the fact that political and technical discussions had been carried on side by side, and the experience of that and later conferences have shown that if one is to come before the other it must be the political questions which are settled first." Insistence upon the new political background created by the Pact of Paris is one of the strongest cards in the hand of those who wish success to the London Conference. But the maxim, "He who wills the end wills also the means," may not hold good where the choice of the means is so difficult, and it is because intelligent public opinion ought to be brought to bear upon the problem of means as well as that of the end in naval disarmament that these books ought to be extensively read.

* "Naval Disarmament." A brief record from the Washington Conference to date. By Hugh Latimer. Preface by Philip H. Kerr, C.H. (London) Royal Institute of International Affairs. 3s. 6d. "Naval Disarmament." By H. Wilson Harris. (London) George Allen and Unwin. 3s. 6d.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Greece To-Day. By Eliot Grinnell Mears. (London) Oxford University Press, Warwick Square. 23s. net.

A study of the present economic problems of Greece, by an author whose interest in ancient Greece and intimate personal knowledge of modern Greece qualify him to write vividly and with authority.

Africa and Some World Problems. By General J. C. Smuts. (London) Oxford University Press, Warwick Square. 7s. 6d. net.

Consists of the Rhodes Memorial lectures delivered last term and of lectures delivered before the Royal Scottish Geographical Society, the League of Nations Union, and Newnham College respectively. The three last-named were entitled: "Livingstone and After"; "Future Tasks of the League," and "Democracy."

The Stock Exchange.

ARTIFICIAL SILK DIFFICULTIES.

SHAREHOLDERS in artificial silk concerns are awaiting the forthcoming reports of their companies with a certain misgiving, in view of the difficult conditions of the industry last year. Prices, which had been reduced in 1928, on the average, by 15 per cent., were again so largely cut as to leave but a small profit-margin on cheap-grade yarns, even to well-established producers. For the first few months of 1929 the output of rayon yarn and waste exceeded demand, if we may regard the excise returns as a fair measure of consumption. Subsequently, for a few months, sales overtook output, but in the last two months of the year production again exceeded demand. On the whole, therefore, no appreciable inroad was made upon the surplus stocks handed over from 1928. The British output of rayon yarn and waste in the last four years has been as follows:—

	Lbs.
1926	26,314,000
1927	40,147,000
1928	54,240,000
1929 (estimated.)	57,700,000

The consumption of artificial silk is still expanding, but production is running ahead of demand. If this condition is unaltered in the future, shareholders in rayon companies cannot remain oblivious to its implications.

It is clear that even the oldest and strongest producers are unfavourably affected by the present state of the industry. How much more difficult must be the position of the smaller concerns, formed during the recent boom and overtaken by depression before production had got well into its stride! The record of some of these flotations is scarcely an encouraging commentary on British company promotion methods. The promoters had two factors in their favour: the speculative enthusiasm of the public in 1928, and the protected nature of the artificial silk industry, which enjoyed a Customs duty of 2s. per lb., against an Excise duty of 1s. per lb. In point of fact, the companies already established were fully able to take care of any reasonable increase in demand. On the one hand, Courtaulds had vast resources and infinite capacity to expand, while on the other British Celanese proposed to produce a large proportion of the acetate silk that the home and export trade in this country could be expected to handle. Among the smaller companies was British Enka, formed at the end of 1925, with strong financial and technical backing, which was working up to a production of 18,000 lbs. per day; Harbens, which was already well established and producing a good quality of yarn, and Branston, which was promoted in 1927 with a prospectus estimate of 4,960 lbs. per day. In spite of this formidable competition—it must have been realised that at any time Courtaulds could cut prices if they wished—nine new companies were promoted between December, 1927, to November, 1928, and budgeted in their prospectuses for an output of 33 tons, or 73,920 lbs. per day, or, say, 22,176,000 lbs. a year! Few people expected that these estimates would be even approximately realised, but the coming into production of these new companies, towards the end of 1928, when the output of the older companies had already been increased, and demand was falling off, tended powerfully to depress the market. In their reports for 1928 the directors of Courtaulds, British Enka and Harbens all tell the same story: that sales were good for the first nine months of the year but in the last quarter the market was disturbed by low offers from the new producers; that stocks increased; and that prices fell by fifteen per cent.

The nine new companies included in the following table have a par capitalisation of £8,593,209. At present market prices their securities are worth to-day no more than £1,956,504—a depreciation of 77 per cent.:—

Company.	Date of Issue.	Prospectus Issue.	Present Issued Capital.	Prices. Highest, 1929.	Prices. Present.
			£		
International Artificial Silk.	Dec., 1927	£200,000 deb.....	57,290	12½	5⅝
		1,180,000 ord. 5/–	614,168	8/-	10½d.
Cellulose Acetate Art. Silk.	Feb., 1928	950,000 ord. £1 ...	950,007	11/3	3/6
		950, 000 def. 1/-...	75,585	3/1½	1/-

		240,000 def. 1/- ...	30,000	2/6	3d.
North British Artificial Silk.	March 1928	345,000 10% pf. ord. £1.	345,000	9/9	5/-
		345,000 def.ord. 1/-	40,000	1/2½	6d.
British Acetate Silk...	April, 1928	1,400,000 ord. £1	1,939,026	8/4½	2/3
		700,000 def. 1/-	109,470	2/10½	6d.
Yorkshire Artificial Silk.	May, 1928	225,000 10% pf. ord. £1.	225,000	No market; in liquidation.	
		450,000 def. 2/-...	77,500		
Allliance Artificial Silk	July, 1928	4,680,000 5/-	1,325,000	3/9½	1/4½
Scottish Amalgamated Silks.	July, 1928	3,700,000 pf. ord. 5/-	1,295,192	2/4½	4½d.
		7,400,000 def. 1/-	534,971	1/1½	4½d.
British Netherlands Artificial Silk.	Nov., 1928	1,400,000 ord. 10/	700,000	No market.	
		1,400,000 def. 1/-	155,000		

Even at the highest prices recorded in 1929 the shares of these ten companies were valued at only £5,677,283, a depreciation of 34 per cent. of their par value. In the next table we show the estimated output of each company, the estimated profits, the results of the first year's operations, and the directors' explanations:—

Company.	Estimated Output.	Estimated Profit.	Profit Realised.	Directors' Explanation.
		£	£	
International Art. Silk	4 tons per day	230,172	1,684 (loss)	Position of artificial silk industry has undergone complete change since the inception of the company.
Cellulose Acetate Art. Silk.	4 tons per day	439,000	11,802 (loss)	Impossible to arrange for the installation of the plant and machinery within the time estimated.
Rennes Art. Silk	1,320 lbs. per day.	93,600	•	...
North British Art. Silk	28,800 lbs. per week.	100,000	...	Factory and production started only on June 28, 1929.
British Acetate Silk ...	50 tons per week by April, 1929.	850,000†	196,300 (loss)†	Company involved in internal disputes mainly in connection with management. Original estimates of expenditure found inadequate. Considerable amount due in respect of calls payable on shares. In addition, certain further processes ...necessitated provision of still further money.
Yorkshire Art. Silk ...	15 tons per week.	120,000	In liquidation.	...
Alliance Art. Silk ...	5 tons per day	650,000	•	Lowestoft factory not yet completed.
Scottish Amal. Silks...	2,688,000 lbs. per annum.	388,000	41,011 (loss)	Operations limited owing to failure of underwriters to meet their obligations.
British Netherlands Art. Silk.	30 tons per week.	247,500	•	...

• First accounts not yet published. † Estimated profit before, and realised profit after, deductions for Income Tax and Depreciation.

Not one of the companies which have so far published their reports has made a profit on its first year's operations. The history of all the new companies, indeed, has been a troubled one. The difficulties of training labour and bringing into operation highly intricate pieces of mass-production machinery have been far greater than was contemplated by the directors. The disappointments of British Enka, which, despite its ample resources and skilled management, has made no profit for its ordinary shareholders from 1925 to 1928, afford a striking example of the risks of the industry.

What is the future outlook for the companies formed during the 1928 boom? A policy of severe price-cutting must necessarily tend, if prolonged, to put many of the

weaker companies out of business altogether. Even the largest producer may be called on to sacrifice a share of its profits under such conditions, but its resources are sufficient to withstand difficulties which to the weaker brethren might be ruinous. It is reported that certain concerns in the trade, including Branston, Kirklees, Rayon Manufacturing and North British, are seeking a basis for amalgamation in order to improve their market position. Out of the nine companies we have considered one has already gone into liquidation. As regards the rest it is not clear how far fresh capital may be required in the near future, the raising of which, in the present state of the industry, and of the new issue market, would be anything but easy. In the circumstances, the absence of conspicuous optimism among shareholders is a phenomenon which may elicit some little sympathy, but needs no elaborate explanation.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
February 4.	February 6.

The Stock Exchange exhibited most of the characteristic features of a period of uncertainty. No large volume of selling was in process, but public interest was lacking, and the volume of business tended to tail off. Much the most noteworthy event of the week was the unanimous acceptance, by Tuesday afternoon, of the scheme for the Hatry settlement, followed, the next day, by the Committee's official announcement of the date fixed for that settlement. At one time odds were laid on a reduction in Bank rate, but neither this expectation nor its non-fulfilment had much effect on prices. Resources awaiting investment were recognised as being of substantial proportions, but the ideas of their controllers as to what constituted "sound" employment remained exacting, and in the meantime the will to speculate was imperceptible either inside or outside the "House."

Dealings in the gilt-edged market were of narrower dimensions than last week, and prices, after sagging slightly, showed little change on balance, though War Loan was dealt in at 101 on Wednesday afternoon in anticipation of a drop in Bank rate. India loans were again realised, especially on Thursday morning, following a press report of an interview with Mr Gandhi. Australian stocks were again a weak feature in a dull Dominion and Colonial market, but Ceylon Five per Cent. scrip was in demand.

Foreign bonds showed appreciable firmness, though business remained on a moderate scale. Brazilians experienced a measurable recovery, and Chinese obtained further support. The successful outcome of the Hague Conference encouraged modest buying of French and Central European stocks.

In the Home Railway market the week's traffic figures on the group lines left little to go for. Attention was chiefly centred on the London lines, partly on prophecies of a forthcoming Underground dividend ranging from 7 per cent. upwards, and partly on reports that negotiations at present in progress, in the matter of London traffic organisation, would have an outcome favourable to stockholders. As regards Foreign Rails, the week was uneventful. The Argentine traffic statements were poor, but the various stocks showed few price changes. Brazilian prices were irregular. The chief features of the market were the quiet strength of Canadian Pacifics, and the emergence of a moderate demand for French railway sterling bonds.

The carry-over in the Industrial markets revealed a very small open position, rates being at approximately the level of a fortnight earlier. America showed a disposition to nibble at a few stocks, such as International Nickel and Brazilian Traction, while the Continent was occasionally a buyer of Swedish Match and Kreuger and Toll, on reported negotiations for the Japanese match monopoly. Dealings in British domestic stocks, however, were lethargic. Gramophones showed unexpected weakness, associated with nebulous rumours of disagreement on "talking picture" policy, or the loss of a lawsuit by the Radio Corporation. British Celanese recovered slightly on the denial of reported new price "cuts," but again became dull. Cables and Wireless "B" had a heavy appearance. The position of outstanding Marconi £1 shareholders, in the light of a statement made by the Communications Company, is discussed in an "Investment Note" on page 181. The week's most satisfactory feature was the Imperial Tobacco dividend announcement, which was well above even the most optimistic of market expectations. Carreras attracted some little attention after going ex bonus. Textile shares remained dull and heavy, Listers report coming as a disappointment. A slight accession of selective interest in brewery shares was lost by mid-week. Among motors, Leyland were bought in expectation that the forthcoming report would announce a resumption of ordinary dividends. Iron and steel shares attracted little attention. Dunlops were flat on Thursday, on the fear that the company would be compelled to write off significant amounts from the year's profits on account of the drop in crude rubber prices. Bank and insurance shares were irregular, and mainly unchanged.

The mildly firmer tone of the rubber share market, following the constitution of a British-Dutch growers' committee to study the situation, was interrupted by the weakness of the commodity on Monday. Our readers will find an analysis of present conditions in the rubber-growing industry on page 180.

The market for tea shares showed some signs of broadening, on the firmer tendency of common teas at the week's auctions. Oils opened quietly, but had a better appearance after the publication of figures revealing a falling-off in the American output. Investment buying of Shells continued, and a steady demand obtained for a time for Anglo-Persians.

Business in the mining markets was on a limited scale throughout the week, inquiry coming almost entirely from professionals. Kaffirs closed slightly better after a dull week, East and West Rand both advancing slightly. Crown Mines were a fraction higher on some London buying, but in the main, Rhodesians were weak, Selection and Bwana M'Kubwa both finishing easier. Tin fell to the lowest level since November, 1922, and share quotations were marked down all round. Ashanti Goldfields were firmer on a good report (discussed on page 184), but Anaconda showed signs of debility on fears that the price of copper could not indefinitely be maintained at the prevailing level.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market has continued quiet with rallies curbed by realisations and quiet liquidation, while selling has dried up on declines and shorts have received occasional reminders that it would be easy to oversell their positions. Bears have been operating in coppers on rumours of an imminent reduction in the price of the metal, but actually producers are confident of their ability to maintain the price and are now curtailing production sharply. The strength of nickel shares is based on the smallness of the recession in the business of these companies and reports of much buying from your side. The bond market has been dull after the recent lively activity in new issues. There has apparently been considerable

switching from old into new issues. Rumours of the flotation of German reparations bonds have been received with reserve as it is not believed that any great volume can be floated here. It is considered that this market might take a quarter of any international issue, or, say, 50 millions, but no early offering is anticipated. Foreign bonds are somewhat better, but the demand is still for the best domestic investment issues.

By courtesy of the Standard Statistics Company, Inc., of New York and 13, Copthall Avenue, London, we print the following index figures of American security values and yields, calculated on closing prices (1926=100):—

	1928.		1929.		1930.		
	Lowest.	Highest.	Lowest.	Highest.	Beginning of Year.	Jan. 9.	Jan. 16.
337 Industrials	132·5	186·4	134·5	218·5	146·0	148·4	146·8
33 Rails	120·5	139·7	127·8	169·4	134·3	134·7	136·7
34 Utilities	128·3	180·6	178·6	327·9	202·2	208·4	210·3
Total, 404 Stocks	130·3	178·9	140·3	228·1	153·0	155·7	155·2
Average yield of 50 Industrial Common Stocks	3·32%	4·42%	3·10%	5·23%	4·83%	4·77%	4·85%

DAILY AVERAGE OF 50 INDUSTRIAL COMMON STOCKS (1926 = 100).

Highest of 1930. (Jan. 9).	Lowest of 1930. (Jan. 17).	Jan. 15.	Jan. 16.	Jan. 17.	Jan. 18.	Jan. 20.	Jan. 21.	Jan. 22.
170·2	166·5	169·5	167·5	166·5	167·6	167·7	169·4	169·9

AMSTERDAM.

During the past month the aspect of the Stock Exchange has altered considerably. Though December was extremely calm in comparison with previous months, there was a continuation of the gradual decline in many issues, and even a drop in the call money rate to 1 per cent. failed to bring about an appreciable revival. The following official indices show the heavy fall in prices during the past months:—

(1921-5 = 100.)

	1929.		
	Oct.	Nov.	Dec.
Industrials	113	98	99
Banks	119	113	113
Shipping	73	63	61
Others	89	81	82
Colonial	139	126	120
Oil	141	125	126
Total	113	100	100

Not until January, when large amounts of capital were released through the payment of dividends and coupons and the redemption of loans, did the tone on Change become more animated. Industrials showed the greatest liveliness, Margarine Union and Philips leading, while A.K.U. also became prominent after the reduction in the

Berlin discount rate. Accoustiks were firm on rumours of an agreement with Western Electric. Rubber shares received considerable attention, on news of further developments in restriction plans, and the proposal of interested parties to visit the Dutch East Indies to obtain Government co-operation. Tobaccos remained firm with small fluctuation. In the mining market, Boetons and Algemeene Exploraites were active on favourable rumours. The money market was very easy, with the contango rate at 2 per cent. and the private discount rate at 2⅜ per cent. The lowering of the official discount rate to 4 per cent. had little effect on the Stock Exchange, but the bond market was firm. Rotterdam headed the list of new issues with 25 million florins 4½ per cent. bonds at 97½ per cent.

INVESTMENT NOTES.

Hatry Settlement Date.—The Stock Exchange Committee's announcement that the deferred settlement in the Hatry group of securities will take place on February 13th has given unqualified satisfaction, the more so as the date anticipates by about a fortnight that which was regarded in well-informed quarters as probable a short time ago. The Committee has studied the convenience of members by choosing a date midway between the two ordinary February Settling Days. The event is the logical sequel to the acceptance of the plan described in our columns last week, under which the interests of all concerned will be safeguarded. Its acceptance was unanimous, though it is understood that a slight degree of peaceful persuasion hastened this *dénouement*. The removal of the bugbear of a large open position may not be in itself a sufficiently powerful factor to initiate an upward movement in Stock Exchange values, in the absence of sustained public interest. It will, however, remove a harmful psychological influence which, so long as it persisted, would effectually have prevented the development of any such movement.

Vendors' Shares on the Stock Exchange.—The Stock Exchange Committee will be asked to take into consideration on Monday a petition signed by many members. It is suggested that the following Rule should be enacted:—

> The Committee will not allow dealings in shares or securities issued to the vendors, or person or persons, or corporation deriving title under them, credited as fully or partly paid, until after the issue of the company's first annual report; neither will the Committee sanction any dealings in a company's shares or securities should the prospectus allow of any evasion of this rule, but this rule does not apply to reorganisations or amalgamations of existing companies, or to cases where no public shares are issued, or to cases where the vendors take the whole of the shares issued for cash.

A former Rule, rescinded in July, 1926, prohibited dealings in vendors' shares until six months after permission had been given to deal in shares of the same class subscribed by the public. It was found, however, in practice, to penalise mainly those who lacked either the ingenuity or the will to evade its provisions, and was finally abandoned after representations from the provinces. The industrial boom of 1928 offered an irresistable temptation to people of a certain class. Vendors in new companies, in some cases, took large lines of low-denomination shares in part payment of the purchase price, and were frequently able to unload these on the public at a substantial premium, as a result of the amazing appetite that sprang up for gambling in shilling, florin and other shares of small nominal value. The services were sometimes requisitioned of outside firms, who flooded the country with circulars offering the shares in question. It is claimed by those responsible for the present petition that, had the Stock Exchange Rule relating to vendors' shares been in force, some of the scandals connected with these operations would not have occurred, though this is a matter upon which doubt is permissible. An objection to the present proposals is made by some members on the ground that a vendor can, if he wishes, apply for, say, 100,000 shares in his own company, pay a cheque for that amount without having it presented, have the shares allotted to himself, and then deal in them as being "good delivery." In any case, it would seem difficult to prevent a vendor for cash from employing the proceeds through third parties in subscribing for shares. Were he compelled to run market and other hazards for twelve months before disposing of his interest he might conceivably demand a higher purchase price for the assets he transferred to the company, to compensate him for his extra risk. Again, under the proposed rule, circularisers might offer the shares outside the Stock Exchanges, and sell to the public securities which, not being "good delivery," would command a smaller value than those in which permission to deal had been granted. Closer surveillance of market operations, on the other hand, would be beneficial in many respects. There is a good deal to be said on both sides of the question, inside and outside the "House."

Rubber Plantation Industry's Troubles.—The rubber plantation industry, which relinquished a scheme of Government restriction as recently as October, 1928, is now numbered—along with tea, nitrate, tin, copper, coffee, diamonds and oil—among trades either operating or considering plans for "controlling" the market. The industry, as we explained a fortnight ago (see the *Economist*, January 11, 1930, page 83), was gravely affected by last year's unprecedentedly high level of Eastern shipments. Some Malayan estates have recently been yielding as much as 550 to 600 lbs. of rubber per acre. In the earlier months of 1929 a considerable share of the increase was taken up by heavy world consumptoin, but the Stock Exchange collapse in America was followed by a severe contraction of demand from that country, which normally absorbs about two-thirds of the world's rubber. Prices have recently been at their lowest level for seven years. The statistical position is set out in the following table, based on figures compiled from Messrs S. Figgis and Company's *Annual Review*:—

(Quantities in Thousand Tons.)

	1927.	1928.	1929.	*1930* (Estimated.)
Year's shipments, plantation rubber:				
Malaya (including re-exports)	371	409	577	...

Lowest monthly average	1s. 4⅜d.	8⅜d.	8d.	...

† January, 1928.

The Rubber Growers' Association recently issued a circular which, while declaring that the much-advertised idea of a central selling agency for rubber was impracticable in view of the fact that native growers accounted for as much as 47.6 per cent. of the world's rubber supplies, advocated a closer selling policy among the various groups of British producers. We understand that negotiations to this end are still being carried on, further suggestions having been embodied in a confidential circular during the last few days. The Dutch growers have simultaneously been considering the possibility of adopting some scheme to meet the circumstances. The news that delegates from the Rubber Growers' Association had gone to Holland for joint discussion was sufficient to send up the price of spot rubber from 7d. to 7 9/16d. last week. On Friday, January 17th, it was announced that a joint British-Dutch committee had been established "to study means to ameliorate the position of the rubber producing industry." The anxiety of the Dutch to co-operate with British growers, despite Holland's adamantine refusal to join in the earlier Stevenson Scheme, may be partially explained by the fact that present productivity is demonstrably greater on Malayan estates than on those of the Dutch East Indies. In many quarters in London, however, there is considerable scepticism as to the efficacy of any restriction measures whatever in the present situation. Among the ideas under discussion are a six-day working week (on the model of the scheme which is being adopted in the tin industry), more prolonged cessation of tapping, and the reservation of large quantities of rubber for the purpose of demonstrating its adaptability to new uses. Whether the industry, with its recent experience of the pitfalls of restriction, even on compulsory lines and under State auspices, will be willing again to expose itself to inevitable difficulty and disappointment is doubtful. In the long run, the fact that half the industry cannot possibly be included under any European-inspired scheme must be fatal to any such proposal. Salvation would seem rather to lie in the further reduction of overhead costs which a large output should make possible, and the encouragement of consumption (which in any case should be stimulated by the present level of prices), by the organisation of much more effective propaganda and research. As regards the immediate future, however, much obviously depends on the possibility of a revival of activity in the American automobile industry during the coming spring.

The Nizam's State Railways.—At an extra-ordinary meeting held last Monday the stockholders of H.E.H. Nizam's State Railways authorised the directors to continue and conclude negotiations with the Nizam's Government, in respect of an offer to acquire the undertaking, as on April 1, 1930, for the sum of £8,300,000. The Nizam's Government in any event has the option to purchase the undertaking on January 1, 1934, and Lieut.-Colonel George Huddleston informed the stockholders at the meeting that, under the terms of the contracts, he estimated the amount which would then be payable at under £7,000,000. Of the purchase consideration offered, £4,300,000 is in cash and the balance of £4,000,000 in 5½ per cent. debentures, which are to be repaid at par by three equal annual instalments ending April 1, 1933, and secured on Government of India 5 per cent. rupee loans of a present market value of over £5,000,000. It was explained that the realisation of these securities so as to provide the whole of the purchase consideration in cash "might embarrass the Government of India." If there be added to the purchase consideration the amount estimated to be realised by the sale of the company's reserve investments, £1,800,000, and its share of the 1929-30 net revenue, £300,000, the total amount to be disposed of is approximately £10,400,000. Out of this sum must be provided £4,000,000 for the redemption of the 3½ per cent. and 4 per cent. debentures, £96,000 for a 6 per cent. interim dividend (to be paid on account of the 1929-30 earnings), and about £100,000 compensation to directors and staff. The holders of the £2,000,000 stock of the company should thus receive not less than £310 per £100 stock, valuing the new debenture stock at par, plus the interim dividend of 6 per cent. Though some criticisms have been levelled as to the amount of the compensation to directors, the stockholders were, in general, too well satisfied with the terms of the offer to put forward any serious or widespread objection.

Communications Company Capital: Marconi's Position.—The Imperial and International Communications Company, the operating subsidiary of Cables and Wireless, Ltd., states that, for the purpose of acquiring the communication assets of the Cable and Marconi Companies, and for providing for the purchase price of the Pacific Cable Board's Pacific cable undertaking and West Indian telegraph system and of the Imperial Atlantic Cables, the share capital of the company has been increased from £100 to £30,000,000, divided into ordinary

	28,733,514	1,266,486	30,000,000

It appears from this table that the Marconi Company has been allotted only 14.7 per cent. of the Communication Company's shares. This seems extraordinary in view of the fact that, in the division of the shares of the holding company, Cables and Wireless, Ltd., it was allotted 14.9 per cent. of the 5½ per cent. preference stock, 37.7 per cent. of the 7½ per cent. "A" ordinary stock, and 65 per cent. of the equity or "B" ordinary stock. It was always assumed that the Marconi Company received a high proportion of the equity stock of Cables and Wireless because the future of this merger lay with the beam wireless services rather than with the cables. The £1 Marconi shareholders, who remained out of the cables-wireless merger, will naturally raise the question whether the earning power of the Marconi wireless services has been correctly valued in the allotment of shares in the Communications Company. It is possible that the management of Cables and Wireless has decided to concentrate chiefly on the development of the cable services for the time being rather than of the beam wireless services, and that the allocation of 14.7 per cent. of the Communication Company's shares represents the present ratio of revenue as between wireless and cable services. But the £1 Marconi shareholders have further cause for anxiety. It will be remembered that the standard revenue of the Communications Company is put at £1,865,000, of which £274,267 will, apparently, accrue to the Marconi Company from its holding of 14.7 per cent. of the share capital. If this figure represents the present earning capacity of the Marconi wireless services, then approximately £231,444 represents the Marconi revenue from manufacturing and patent rights on the basis of the 1928 earnings of £505,711. At the general meeting of the Marconi Company last May, Lord Inverforth anticipated a substantial reduction in the future revenue from patents, as the number of broadcasting patents from which the company has derived such large profits expired last year, or will expire in 1930. In the last two years these royalties, he said, had amounted to about £250,000. If this revenue is to decline, and if the Marconi Company is to receive only £274,267 from its holding in the Communications Company, it will scarcely be able to pay, in future, a 20 per cent. dividend on its ordinary shares, which was only just earned in 1928. It would seem that the £1 Marconi shareholders may be placed in an unenviable position.

Metropolitan Trust.—Apart from a decline of some £175,000 in the value of its investments, this successful company appears to have surmounted the difficult investment conditions of 1929 in satisfactory fashion. Net profits for the year ended January 1, 1930, total £150,794, an increase of £5,278 on last year. Preference dividends take £28,125, while the ordinary shares receive 20 per cent less tax out of 24.5 per cent. earned, against a previous 19.5 per cent. out of 23.5 per cent. earned. The following table sets out the results for the past three years:—

YEAR ENDED JANUARY 1ST.

	1928. £	1929. £	1930. £
Gross revenue.....	232,058	235,140	240,994
Debenture interest, etc.	88,445	89,624	90,200
Net profit	143,613	145,516	150,794
Brought forward	32,291	52,779	72,670
Pref. dividend			
Amount	28,125	28,125	28,125
Rate %	4½	4½	4½
Ordinary			
Amount earned	*115,488*	*117,391*	*122,668*
Amount paid	95,000	97,500	100,000
Rate % earned	*23·1*	*23·5*	*24·5*
Rate % paid.....	19·0	19·5	20·0

Carried forward	52,779	72,670	20,339
Investments.....	3,164,543	3,215,945	3,205,479

Though dividends have increased steadily since 1923, there has been no undue depletion of resources, and the directors are now able to advise the allocation of £75,000 to reserve, bringing that item to £625,000, equal to the ordinary share capital, the balance carried forward being less, as a result, by approximately £50,000 than the amount brought in. The investments of the company show a slight reduction at £3,205,479, more than accounted for by a cash increase of £35,000. Of 473 investments, 0.7 per cent. are in British Government securities, 26.7 per cent. in railways, 13.4 per cent. in public utilities, 31.8 per cent. in industrial companies, 17.0 per cent. in trust companies, and 10.4 per cent. in foreign and municipal loans. More than 96 per cent. of the investments have a published quotation. A valuation of the investments, based as far as possible upon the prices current at the date of the balance sheet, shows an appreciation of approximately £725,000 over the book cost of £3,205,479.

African and Eastern.—For the seven months ended May 1, 1929, the African and Eastern Trade Corporation—whose business, with that of the Niger Company and the West African interests of Unilevers, Ltd., is now merged in United Africa, Ltd.—has declared a profit of £74,600, out of which it has paid dividends on its "A" preference shares, and now proposes to pay six months' arrears to December 31, 1928, on the 6 per cent. "B" preference shares. This indicates a satisfactory recovery in earning power, especially as the merger with the Niger Company only took effect from May 1, 1929. For the year ended September 30, 1928, the African and Eastern made a loss of £96,953, or, if the losses of subsidiary companies are included, of £136,720. These losses were due mainly to the operation of the cocoa pool, and, as Sir Robert Waley Cohen explained at the general meeting, were not likely to recur. African and Eastern and the Niger Company are now holding concerns, each having received 6,500,000 shares in United Africa. Margarine Union, on the transfer of its West African interests, received in exchange 1,534,000 ordinary shares in United Africa, with an option on 1,500,000 more at 22s. 6d. The merger of the West African interests of Margarine Union, which took effect from January 1, 1930, undoubtedly improved the earning position of United Africa, especially as the profits earned by the margarine companies have been used to develop their business in West Africa and not to pay dividends. The chairman of Margarine Union, at the recent general meeting, stated that the support of Unilevers would greatly benefit United Africa, since that company would naturally receive preferential treatment for the supply of raw materials, although it would not be given any exclusive rights. The shareholders of African and Eastern should now be able to look forward to the steady restoration of their company's fortunes. The 6 per cent. "B" preference shares, allowing for 18 months' arrears of dividends (of which six months will be paid on February 8th), return a potential yield of 7½ per cent. at the present price of 17s. 6d. The ordinary shares, which have received no dividend since the 1927 distribution of 8 per cent., are at present quoted at 15s. 9d., as against a high level in 1929 of 20s. 10½d.

United Serdang.—The period of uncertainty and difficulty which all rubber growers have been called upon to face has left its mark on the affairs of this prominent plantation company. The directors report that during the year 1929 1,392,160 lbs. of rubber were collected in excess of the exportable allowance, and valued at cost. The average net sale price for the year has been 10.25d. per lb., compared with 1s. 2.28d. in 1928 and 1s. 9.74d. in 1927. This persistent decline is naturally reflected in the accounts. Net profits for the year ended August 30, 1929, stand at only £138,752, as against £163,547 for the preceding twelve months, and £183,185 in 1927. Dividend on shares has declined with earnings, the distribution on ordinary capital having dropped from 22½ per cent. in 1927 to 7½ per cent. for the current period, and earnings from 23.2 per cent. to 9.7 per cent.

YEAR ENDED AUGUST 30TH.

	1927. £	1928. £	1929. £
Net profit	183,185	163,547	138,752
Brought forward	61,483	66,594	83,776
Ordinary—			
Amount earned	*183,185*	*163,547*	*138,752*
Amount paid	176,574	126,365	106,745
Rate % earned	*23·2*	*12·9*	*9·7*

Carried forward	66,594	83,776	95,782

A further sum of £20,000 has been set aside for reserve, following last year's precedent, while the carry-forward item exceeds the amount brought in by some £12,000. Largely as a result of the difficult market, the increase of capital effected in February, 1927, in connection with amalgamation schemes, though it resulted in a noticeable extension of acreage, has still not reached its maximum earning power. At a time when marketing is more important than increased production it must inevitably prove to be something of an encumbrance unless it can be applied to measures of rationalisation and the cheapening of output.

A New Security Index.—Our contemporary, the *Financial News*, has broken new ground in the statistical measurement of security values, by the publication of a daily index number of share prices on the London Stock Exchange. As our readers are aware, the Standard Statistics Company of New York publishes a daily index of American common stock prices, but hitherto no index has been available in this country at less than weekly intervals. The new compilation makes no claim to excessive technical refinement. It is based on the quotations of 30 "equity" shares, each of which enjoys a free and active market, and includes four textile shares, six iron and coal shares, three electrical stocks, five foodstuffs, three "distribution," four transport and communication, and five miscellaneous stocks. The average price of each stock over the year 1928 is represented by 100, and the aggregate index number calculated by dividing by 30 the sum of the indices of the individual stocks. The results differ from those of most other indices since they show the peak point of 1929 as occurring, not at about the end of January, but at the turn of April and beginning of May. The index reached its lowest point at the end of December last, when it stood at 86.6, but a partial recovery raised it to 90.5 on January 13th, with a subsequent decline to 89.1 on January 23rd. The compilers of the index will probably find it advisable to broaden its base so as to include, not merely the prices of 1929, but the average of several earlier years, the choice of a "boom" year being open to objection on many grounds, as will become increasingly evident in the future. The index, however, should be of tangible value to all whose interests require them to keep a daily finger on the pulse of the Stock Exchange.

Insurance Share Index.—Particular interest attaches to our insurance share index in view of the general decline in Stock Exchange values during the past year, and the added circumstance that the statistics of fire losses, both at home and in the United States, have indicated a heavy increase in claims. The table below exhibits the history of an investment in 1913 of £1,000 in the ordinary shares of each of 25 leading companies, with an index of the total. Columns have been added to show the values as at December 31, 1928 and 1929. The figures are based on the mean of the highest and lowest prices each year except in the case of the two last columns, which relate to the middle market price on the dates specified:—

SHARE INDEX (1913 = 100).

* Caledonian, 1923—£25 shares split into £5 shares; 1 new £5 share at 6 premium for each £25 share. † Guardian, 1917—£10 shares split into 2 £3 shares and 1 £4 preference share each. ‡ Commercial Union, 1927—New shares of £2 10s. offered proportion of 1 share for each 5 held at £16 per share. § Royal Exchange, 1927—New shares £1 offered in proportion of 1 share for each £5 stock held at £6 10s. per share. ‖ Caledonian, 1929—New shares £5—1 new share for every 5 held at £14 per share. ¶ Yorkshire, 1929—New shares £1 offered 1 new share for every 14 £5 shares held at £12 per share. ** Prudential—New shares £1 offered 1 new share for every 4 shares held at £5 per share.

The index as a whole has fallen from £3,542 in 1928 to £3,139 at the end of 1929, or by rather more than 11 per cent. This may be compared with the decline shown in the index published by the *Investor's Chronicle* relating to general business (*i.e.*, to the ordinary shares of miscellaneous industrial companies) which has fallen in the same period by no less than 24 per cent. The comparison supports the view of those who consistently regard insurance shares as the aristocracy of the ordinary share market. As regards individual company's shares four, in fact, show an appreciation during the past year, all being those of life assurance companies, viz.:—Gresham Life, Legal and General, Life Association of Scotland, and Scottish Life. The greatest falls, on the other hand, have occurred in the shares of the Caledonian, which show a depreciation of 27 per cent., the Commercial Union, which have declined by 18 per cent., and the Gresham Fire, by 29 per cent.

Ashanti Goldfields.—Our mining correspondent writes: A fresh and extended stride forward is marked by this, the doyen of West African gold mining enterprises. For the year ended September 30th last the net profit amounted to £203,600, an increase of £40,150 upon the 1927-28 total and of £62,150 upon that for the preceding period. The dividend aggregates have been 65 per cent., 55 per cent. and 50 per cent. respectively. From last year's earnings, £30,000 is allocated to an exploration account, and some smaller sums are set aside for staff pensions, etc. The following table sets out the results for the past three years: —

Year ended September 30.	1927.	1928.	1929.
	£	£	£

Carried forward	83,236	59,176	63,260

* Including £7,000 to Pensions and Benevolent Fund.

Twelve months ago £50,000 was placed to reserve, increasing that entry to £250,000—for the most part embarked in the undertaking. The usual 10 per cent. is written off the fixed assets. Investments at cost figure now at £47,860 in British Government securities, and £31,840 shares in associated companies. The latter item doubtless consists in the main of the company's interest in the Bibiani—a revived enterprise whose development is being attended with moderately encouraging results. Cash, gold and debtors account for £234,000, as against creditors of £60,400 and the £100,000 required to cover the balance dividend of 40 per cent. Although the developments have not borne out the almost sensational promise of eighteen months ago, they have resulted in an expansion in both the quantity and value of the ore reserves, the tonnage being 40,800 up at 590,200, and the value 1 dwt. to the good with 25.2 dwts. Results since September 30th, says the manager, have been good, and "promise important additions to the above figures." Last year's expansion in output was due partly to increase in the tonnage milled, but mainly to an advance in the average value, the latter, at 95s. 1d. per ton comparing with 89s. 2d. for 1927-28. Monthly outputs rose from £36,270 in October, 1928, to £46,050 in September last, the average being £42,000. In view of the favourable mining position it is proposed to increase the monthly production to £47,000-£48,000; possibly more if conditions permit the handling of a larger tonnage. On last year's dividend the yield shown is approximately 10 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Barclays Bank, Midland Bank, Bank of New South Wales, Barclays Bank (Dominion, Colonial and Overseas), Provincial Bank of Ireland, Alexander's Discount, National Discount, Union Discount of London, Midland Railway of Western Australia, Treaty Reinsurances. The bank chairmen's speeches are dealt with in an earlier article. At the annual meeting of Barclays Bank, Ltd., the chairman told shareholders that the maximum amount which the bank might possibly lose, either directly or indirectly, through the Hatry troubles, was the sum of £330,000. At the Bank of New South Wales meeting, Mr Thomas Buckland, in an interesting review of economic and financial problems in Australia, said that although the wool clip would be considerably lower than last year, the season was opening with promise of good rains, and if industrial troubles could be satisfactorily settled the country might look forward to the speedy end of the present industrial depression.

CAPITAL ISSUES.

The only public issue of the week was made by the Central Argentine Railway, which offered £3,000,000 redeemable debentures offering a running yield of £5 11s. 8d. per cent. The issue price offered a "turn" of 1½ per cent. on the current market price of outstanding stock of identical status, and a handsome prospective profit on redemption. It ranks as a high-grade long-dated security, but could probably have been made on better terms some months ago.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to January 18, 1930, £3,052,460.

Central Argentine Railway, Ltd.—Issue of £3,000,000 5 per cent. redeemable debenture stock, 1967-87, at 89½ per cent., ranking *pari passu* with existing similar stock. The stock is repayable at par on May 1, 1987, but the company reserves the right to redeem all or any part of the stock at 102½ per cent. on any interest date after May, 1967, on three months' notice. The stock is secured as a floating charge on the company's undertaking, subject only to the charges in favour of the 4 per cent. and 3½ per cent. debenture and 4½ per cent. annuity. Any holder of the 5 per cent. redeemable debenture stock is given the right at any time to exchange his holding into 4 per cent. debenture stock of the company, rendering the security of the two stocks of equal value. Net profits for 1929 amounted to £3,345,197, covering interest on debentures, including present issue, 3.2 times.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction: **Endell Street Estates, Ltd.**: Issued capital, £23,943 7 per cent. debentures, £210,000 7½ per cent. debentures, 75,000 shares of £1 each, fully paid, and 75,000 shares of £1 each, one shilling paid. The company was incorporated in September, 1926, to carry on the business of estate owners.

[*Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, shorter notices, and dividend announcements will be found on page 205, under the heading "Company News."*]

COMPANY MEETINGS, &c.

BARCLAYS BANK LIMITED.

SUCCESSFUL RESULTS—INCREASED PROFIT.
HATRY GROUP TROUBLES—BANK'S MAXIMUM LOSSES.
BOARD'S CONSERVATIVE DIVIDEND POLICY.
ASSISTANCE TO INDUSTRY—NECESSITY OF BUSINESS EFFICIENCY.
MR GOODENOUGH ON FINANCIAL AND TRADE CONDITIONS.

The thirty-fifth ordinary general meeting of the shareholders of Barclays Bank, Ltd., was held, on the 21st instant, at the Cannon Street Hotel, London, E.C.

Mr Frederick Craufurd Goodenough (the chairman), who was received with cheers, said:—My lords, ladies and gentlemen, I will call upon the secretary to read the notice of meeting and the certificate of the auditors, which appears at the foot of the balance sheet that has been submitted to you.

The Secretary (Mr W. N. Seeley) then read the formal notice convening the meeting and the report of Messrs Kemp, Chatteris, Nichols, Sendell and Company and Messrs Price, Waterhouse and Company.

The Chairman, proceeding, said:—My lords, ladies and gentlemen,—Is it your pleasure that the report and accounts of the bank for the year ended December 31st last should be taken as read? (Agreed.)

You will observe that reference is made in the report to the deaths which have occurred during the year among the members of our board. We have had the misfortune to lose the following directors—namely, Mr Edward Gurney Buxton, Mr Geoffrey Fowell Buxton, Mr Herbert Gosling, Mr John Edward Mounsey, and Mr James Tuke. All these gentlemen were experienced bankers, and the loss of their services will be very greatly felt.

The following gentlemen have been elected to seats on the board—namely, Mr Francis Lawrence Bland, a local director in our Ipswich district; Mr Lionel Gurney Buxton, who was formerly a local director at Hull, is now our senior director in Paris, and has been until lately an advisory director of the bank; Mr William Macnamara Goodenough, a local director in our Oxford and Birmingham districts; and Mr Quintin Edward Gurney, a local director in our Norwich district. We have also re-elected the Rt. Hon. Earl Peel, P.C., G.B.E., to the seat on the board which he occupied prior to his becoming a member of the late Government.

PROFIT AND LOSS ACCOUNT.

The profit for the year ended December 31st last, as shown in the profit and loss account, amounted to the sum of £2,331,579 12s. 2d., full provision having been made for all debts which are considered to be bad or doubtful, and which may result in a loss to the bank.

The profit is slightly higher than that of a year ago, and would have been substantially higher had it not been necessary to make special provision out of the profits to meet the loss which we shall incur through the difficulties connected with what is known as the Hatry Group. I propose to tell you quite frankly the extent to which we may be affected. The maximum amount which the bank may possibly lose, either directly or indirectly, through the Hatry troubles, is the sum of £330,000. Our loss cannot exceed that amount, and it may be substantially less. In making this statement I am referring not only to what is known as the Hatry Group and the losses which we shall incur directly through them, but also to indirect losses which may fall upon us through customers to whom we have lent money being themselves involved. We have made full provision for all possible loss. I wish to add that, so far as concerns the securities which were deposited with us, and which were mostly of a high-class character, it would have been quite impossible for us to discover that they were not genuine. The directors feel that in view of the magnitude of the trouble it is fortunate that the total loss which we may incur is, comparatively speaking, moderate in amount. None of our subsidiary banks is in any way affected by the Hatry troubles.

CAUSES OF THE LARGER PROFIT.

The higher profit was due to the increase in the turnover, and to the substantially larger amount of loans to customers, as well as to the somewhat abnormal rates of interest which prevailed throughout almost the whole of the year, the average of the Bank of England rate of discount having been £5 9s. 11d. per cent. as compared with £4 10s. per cent. in the preceding year. After making the appropriations shown in the profit and loss account, the directors recommend the payment of dividends at the same rates as a year ago, and we carry forward the sum of £552,432 2s. 4d., which is slightly in excess of the amount brought forward.

At some previous meeting the hope has been expressed by shareholders that a higher dividend might be paid, and it might possibly be suggested that the larger profit this year would justify an increase. The directors, however, consider that this profit should be regarded as exceptional, owing to the high rates of interest which have been current, and they are of opinion that the conservative policy as regards dividends which has been always adhered to should be continued. There is also the possibility that taxation may have to be increased, in view of the heavy programme of non-productive expenditure to which the country is committed. Having regard, therefore, to these considerations, the directors do not feel justified in recommending an increased dividend.

CURRENT, DEPOSIT AND OTHER ACCOUNTS.

Turning to the balance sheet, the current, deposit and other accounts with the Bank on December 31st last amounted to the total sum of £337,439,213 14s. 9d. This figure includes the deposits kept with us by subsidiary banks, which are shown as a separate item, and to which I will refer later. The total of our deposits shows an increase over the figure at which it stood in the balance sheet of a year ago, being higher than at the corresponding date in any previous year in the history of the bank. There were wide fluctuations, however, in the total amount of our balances during the year, and the average has been considerably lower than the final figure as on December 31st last. These wide fluctuations were due to special causes, but, speaking generally, the normal contraction of credit which would follow the loss of gold was largely compensated for by special operations on the part of the Bank of England, which helped the money market to sustain the pressure that would have taken place otherwise, owing to the loss of gold.

It might be noted that the gold exports between the middle of June and the end of November last effected a reduction of about £28,500,000 in our stock of gold. On the other hand, Government securities in the banking department of the Bank of England rose during that time by £21,500,000. There was a further increase of £24,000,000 by January 1 this year, which was probably due in part to an increase in the Government ways and means advances. The Bank of England also had to provide for the usual market requirements at the end of the half-year. These factors would tend to create an increase of balances with the banks.

GOLD MOVEMENTS.

The activity in the American stock markets, which had already continued for a long time and had been reflected, to some extent, on the London Stock Exchange, led to a rise in the Bank rate from 4½ per cent. to 5½ per cent. in February last. Previously, gold had left this country for New York, and provided credit in America for banks and others, which they lent at abnormally high rates of interest, or applied in payment for securities purchased. The large conversions of sterling into dollars throughout the first nine months of the year had an adverse effect upon the sterling-dollar exchange. Towards the close of June, further heavy gold shipments occurred, and the outflow continued throughout the succeeding three months, finally necessitating the raising of the Bank rate to 6½ per cent. on September 26th last. There followed an appreciation in the sterling exchange and the retransfer of credit balances and gold to this country and to Europe, restoring the gold holdings of the Bank of England to £150,500,000, the present figure, which is approximately the amount considered by the Cunliffe Committee and the Committee on the Currency and Bank of England Note Issues to give an adequate reserve. I should add that neither our bank nor, as I believe, the other banks allowed their own balances to be dealt with in the manner above referred to, as we felt that our doing so would have prejudiced our own people, but there is no doubt that during the boom many private

persons and others lent money to America for the purposes I have mentioned, and this led to the export of gold. It is easy, therefore, to understand why rates of interest in this country were above the normal level during the year, and why it was necessary to increase the Bank rate to protect our gold position and to adjust credit here in the interests both of industry and of the community as a whole.

INCREASED STOCKS IN AMERICA AND FRANCE.

In the months of January and February the New York Exchange, and again from June to September the New York and Paris Exchanges, fell below the gold export point. It must be remembered that, under the conditions of an abnormally low exchange, such as was at that time experienced, the cost of imports would be greatly increased. Exports also would suffer should such conditions continue for any length of time. The higher cost of imports would affect prices of raw materials, the cost of living, and other costs of manufacture. During the year the net gold exports from this country amounted to about £15,000,000. The receipts and withdrawals of gold by and from the Bank of England were exceptionally heavy, the gold holdings of the Bank, which at the beginning of the year amounted to £153,000,000, having at one time been reduced to £129,000,000. The stock of gold held in the United States of America has been increased during the first eleven months of the year by the equivalent of £45,000,000, the total gold holding in that country at the end of November amounting therefore to $4,366,000,000, or £873,200,000, which is very largely in excess of the minimum statutory requirements in regard to gold in relation to currency.

The Bank of France also has increased its stock of gold by the equivalent of approximately £78,000,000, and its total holding has reached a very large figure, equivalent to about £342,000,000, which, except for the United States of America, is the largest stock of gold held by any country in the world. The ability of France to increase her stock of gold so materially has been due, apparently, in the main to the fact that prior to the legal stabilisation of the franc it had been under-valued in relation to world prices of commodities. It would seem that a policy has been adopted of reducing the cost of financial facilities in Paris, with the object of making Paris more of a European centre for exchange and other financial operations, which will bring her into greater competition with the London money market.

The movements in gold which have taken place last year give rise to the question of whether the gold stocks of the world are being redistributed to the best advantage.

ELASTICITY OF OUR MONETARY SYSTEM.

It seems to me that recent events illustrate clearly the elasticity of our monetary system. The immediate object of the raising of our Bank rate in September was to stop the further outflow of credit, which was operating to our disadvantage, and there followed a rapid rise in the sterling-dollar exchange and the retransfer of credit balances and gold to this country and to Europe.

The fact that customers may desire to transfer large credit balances to other countries in order to secure a high rate of interest for a time establishes the need for the banks to preserve a liquid position. Our holdings of cash, bills, and gilt-edged investments show a satisactory position in this respect. The holding of Government securities, whether in the shape of Treasury bills or of investments, is a great help to the Government in arranging their finance.

The holding of bills, and the lending of money at call and at short notice against bills, are also important in the interests of the country, because these operations, besides affording temporary employment for money, also represent, to a considerable extent, the financing of imports into this country, and, conversely, the balances kept in our hands by our subsidiary banks, to which I have already referred, are used by them largely for the purchase of export bills, payable in the territories in which they operate. The import and export trade of this country is therefore financed in this way.

EFFECTIVENESS OF THE BANK OF ENGLAND RATE.

I think that the effectiveness of the Bank of England rate should be regarded as among the most favourable features during the year. There have been many disturbing influences, which have adversely affected business generally, though I am glad to say that many of them may now be regarded as past history. There is cause for genuine satisfaction that our monetary system, which has proved so reliable in the past, when conditions may have been somewhat different, has shown itself again to be entirely effective, and there is no doubt that the prestige of London has been greatly increased by the satisfactory readjustment of the credit position through the operation of the Bank of England rate. The fact that we are able to transact a great volume of trade throughout the world with a relatively small reserve of gold, as compared with that of other countries, proves the cheapness of our monetary system and the efficiency of the Bank of England rate, which can effect expansion and contraction as may be required, while at the same time ensuring a due relation betwen currency, credit, and prices.

THE OUTLOOK.

As regards the immediate future, monetary conditions in the London market should be easier, at all events, for a time. It is difficult, however, to say whether a state of normal equilibrium has been reached or whether we are still liable to suffer from the after effects of the exceptional international monetary disturbances of the past few months.

During the year there has been some improvement in industry and trade, notwithstanding the difficulties arising out of monetary conditions. Exports of British goods show some increase. There have been also many other favourable features. A further stage has been reached towards the settlement of the Reparation problem. Although the wave of speculation in New York was in itself unhealthy and unsound and created a shortage of credit throughout the world so long as it lasted the crash which has resulted should prove to be a benefit, both to America and to the rest of the world, as more money will be released for economic development and for expansion of industry and world trade.

A basis has been arrived at for discussion of industrial problems between the General Council of the Trades Union Congress, the National Confederation of Employers' Organisations, and the Federation of British Industries, and it may be hoped that the possibility of greater co-operation between Capital and Labour has been advanced. In spite of the heavy figures of unemployment, there are, on an average, 250,000 more insured people employed than a year ago. The Board of Trade Index of Production for the third quarter of the year shows an increase of 10 per cent., as compared with the same period for 1928. Coal exports have improved and the output of iron and steel has shown substantially better figures. Much has been done in the industrial world towards reorganisation, and the financial system of the country, which has passed successfully through a very severe test, is capable of co-operating with industry and trade upon sound and progressive lines.

FACTORS CREATING UNCERTAINTY.

There should be a better outlook for industry in the present year, although there are factors which create a great deal of uncertainty.

There has been a further fall in wholesale prices, and there is still a large amount of unconsumed foodstuffs and raw materials which remains to be disposed of. The fall in prices, and the further fall which the realisation of a great accumulation of stocks may produce, may affect the world's purchasing power, as it has done during the past year. Agriculture may also suffer in this country from the fall in prices and the large unconsumed supplies of wheat and other foodstuffs. On the other hand, in the case of raw materials, lower prices should help the costs of manufactures and improve the outlook for industry, provided we can secure markets.

There is also the possible effect upon the world generally of the great losses sustained by America during the year, which may result in a reduction of purchasing power in her home markets, so that America may find it necessary, in the interests of her own industries, to force out her manufactures abroad, possibly at much reduced prices.

BANKING INQUIRY COMMITTEE.

The Government have appointed a Committee "to inquire into banking, finance and credit, paying regard to the factors, both internal and international, which govern their operation, and to make recommendations calculated to enable these agencies to promote the development of trade and commerce and the employment of labour." This inquiry will lead to an investigation of a difficult subject which will be of public advantage.

PROBLEM OF MARKETS AND PRICES.

There has been a considerable amount of progress in the matter of industrial amalgamations upon sound lines and in working agreements, with the object of reducing costs of manufacture, and these factors, always provided they are justified and well devised, should be the means of securing wider markets and an improvement in industry without running an undue risk of greater unemployment or of over-production and an accumulation of unmarketable stocks.

The real problem at the present time is that of markets and prices. Everybody will realise that we must be able to sell as well as to produce. Everybody knows that we cannot import unless we can export. The price at which we can produce and the markets for our production are the two essential factors in our problem. Home markets are, of course, of great importance, but more especially so are foreign markets. The home market will not pay for our imports, and our home market does not offer the same opportunities as the wider home market of America. We need the wider field. We must be able, as far as possible, to pay for our imports by our exports, thus leaving the greater part of our invisible receipts to be applied by the investing public in making those foreign investments which have helped us to develop foreign markets in the past, and to build up, to a great extent, the industry and trade of the country.

It should be understood that the banks themselves do not as a rule make loans abroad for the direct development of markets, but they use their resources for the purpose of financing trade. There is no doubt that industry and trade can be greatly encouraged if the banks help to finance our manufacturers in the execution of their orders from abroad. We can also, by granting acceptance credits, help the purchasers so that they may more readily buy from us.

BANKS' ASSISTANCE TO INDUSTRY SINCE THE WAR.

It is well to realise the part that has been played by the banks in assisting industry during the very difficult period since the war. The banks in this country have shown an increasing sense of their responsibility. They have recognised more and more that they have a duty not only to their shareholders but also to the community as a whole, and they have appreciated the fact that, in the long run, the interests of the community and the interests of the shareholders are identical. The banks recognise that it is necessary they should be in a strong position, and with the knowledge that good times are frequently followed by bad they have adopted a conservative policy in regard to dividends. Additional profits which they may make in good times are largely applied in creating reserves against contingencies, which may arise when times are bad, so that there is a real continuity and steadiness in the policy of the banks, which are vital to the industrial and financial position of this country and, to some extent, to that of the world.

Since the post-war slump it has been evident to those in touch with the facts that the banks have been anxious to help those businesses which have been in difficulties, and having created reserves in the past they were able to give assistance beyond anything which in normal times which have been regarded as justifiable.

EFFICIENCY OF CONTROL.

In very many instances, help given has been justified by results; in other cases, it has proved that it was not financial assistance which was required, but reorganisation to meet the ever-increasing competition. It lies with industry to reorganise itself, that not being within the province of the banks, and provision of capital is of little value unless a business is efficiently organised and controlled. If the banks should advance further money at a time when the control of the business itself is inefficient, or if the industry as a whole is labouring under more or less permanent difficulties, either natural or artificial, which cannot be overcome, the money advanced by banks under those circumstances would become a loss, and no benefit would accrue either to the industry or to the banks. In many instances, where a business fails to make progress, it may be found that the primary reason for this position is not a shortage of capital, but the handicap of inefficiency as compared with other similar businesses either at home or abroad. In the alternative, it may be due to the ignoring of economic laws or to some alteration of basic conditions. If the difficulty is due to some relative inefficiency, it may be possible to overcome it through reorganisation. It is then that the banks can assist by helping to find the liquid capital that is necessary to such reorganisation when a scheme has been carefully worked out by experts. When, however, there has been a change in basic conditions, or some artificial interference with economic laws, which precludes the possibility of successful operation, if the banks try to help, they are then merely throwing good money after bad.

OVERSEA DEVELOPMENTS.

It is certain that the banks will help industry, but ihdustry must also help itself by placing itself upon a sound basis, both as regards efficiency and costs of manufacture. Through the interests which we have taken in subsidiary banks, and especially through our Dominion bank, we have been able to handle both imports and exports and to extend our own business as well as theirs, besides providing cheap and efficient service for our customers, and promoting commercial intercourse and trade between those countries in which we and our subsidiaries are interested. There is no doubt that, in the past, great benefits have been obtained for our home trade through the policy of the larger banks in opening branches over wider areas. It is equally certain that our foreign trade can also be helped through banking extension, especially in the Dominions.

With regard to our Dominion Bank, the linking up of business between this country and the Dominions, and the co-operation which has taken place between us, have been of great value.

In conjunction with our Dominion Bank, we have established during the year a bank in Canada, in the city of Montreal. We have every reason to be satisfied that this direct link which we have made will be of advantage to many of our customers carrying on business between this country and the great and growing markets of Canada.

The world is moving in the direction of big aggregations of industries, which has been the reason for the amalgamation of banks in this country upon a large scale also, enabling the banking system to bear the financial burden of the war and the period following after the war, without many of the consequences of deflation having fallen directly upon the shoulders of the people. There is no doubt that banking extension should be regarded as a genuine co-operator with industry in this country for the purpose of facilitating the interchange of goods both at home and with foreign markets, although it would be undesirable that we should adopt the foreign system of becoming partners with industry. Great amalgamations of banks have taken place recently in America and in Germany, no doubt with the same objects.

BANK FOR INTERNATIONAL SETTLEMENTS.

In the meantime, under the "Young" Plan for Reparation payments, it is intended to establish a new Bank for International Settlements, to be domiciled in Basle, which may have for its object not only the adjustment of payments actually arising out of the war, but also of playing an increasingly important part as a super central bank for the regulation of gold movements and international exchange, which hitherto have been adjusted through the money markets of London and of the other international monetary centres, but of which London had the principal share. If the London market is to maintain its position as the chief exchange centre of the world, it will be all the more essential that it should be the cheapest monetary centre, and that we should be able to transact the world's financial business on even more favourable terms than before, when the position of London was due to the readiness with which we could sell our manufactures in foreign markets and to our carrying trade and the cheapness of our financial services.

CLOSER UNION WITHIN THE EMPIRE.

There is a growing desire at the present time, both in this country and amongst the Dominions and Colonies overseas, to draw more closely together, through the recognition that each can give material help, either industrially, financially, or in the supply of foodstuffs and raw materials, to each other by such a movement. So far as this country is concerned, we cannot be regarded at the present time as an independent economic unit, because we are and must always be in the position of having to purchase largely from overseas so many of the essentials for the maintenance of a great and growing population. We require raw materials for industry, besides the actual necessities of life, and also the markets for our output, all of which the Dominions and Colonies are able to furnish in an increasing degree. On the other hand, they require our purchasing power for their raw materials and foodstuffs, and finance for their development, which, in turn, will attract a greater population and larger markets, and it is therefore becoming increasingly realised that closer economic ties would be of very great advantage to the Dominions and Colonies and ourselves.

Apart from these advantages, there are the ties of kinship and mutual understanding which exist.

QUESTION OF ECONOMIC TIES.

I think, myself, that at the present time more can be perhaps accomplished towards closer union through the extension of existing businesses or the establishment of fresh undertakings having branches both at home and in those other countries, which would provide a growing community of interests and more frequent interchange of the personal element. I believe also that, as a centre for education, especially post-graduate education, London will offer great attractions to the younger generations from the Dominions for the encouragement of study in the sciences, arts, and the great professions.

I think that these steps would be a certain preliminary to closer ties in many ways, including economic ties, although it is probable that, having regard to the general high level of protective tariffs throughout the world, there would be room now for an extension of economic arrangements as between this country and other parts of the Empire. It must be recognised, however, that,

whatever form such arrangements take, England must be the best market for their goods, the best in which they can buy and the best in which to borrow. This position can be reached only through building up a large export trade by means of low costs of manufacture and cheap credit.

BANK'S RESOURCES.

Finally, I may mention that the resources of Barclays Bank and the group of banks which it controls, inclusive of the capital and reserve funds of those banks, but without bringing into account the capital which we hold ourselves, amount to a total figure in excess of £500,000,000.

The staff of Barclays Bank and its subsidiaries now have great opportunities of gaining experience in various parts of the Empire, either through coming from the Dominions to Great Britain or *vice versa*. I cannot speak too highly of the way in which they place the interests of the bank in the forefront, regarding themselves, as they do, as being responsible for the welfare of the business.

I now beg to move :—" That the report of the directors produced, together with the annexed statement of the company's accounts at December 31, 1929, duly audited, be received, approved and adopted, and that a final dividend at the rate of 10 per cent. per annum on the 'A' shares and 14 per cent. per annum on the 'B' and 'C' shares, less income tax, be declared, payable on the 1st proximo to the shareholders registered in the books of the company on December 31st last, making with the interim dividend paid on August 1st last, 10 per cent. for the year on the 'A' shares and 14 per cent. for the year on the 'B' and 'C' shares."

I much regret to say that Sir Herbert Hambling is unfortunately laid up with a bad cold. He intended to have been here to-day as usual, and we all regret his absence and would have been glad if he had been able to be present. As he could not come, he asked me to express his regret, and I now call upon Mr Tuke to second the resolution. (Cheers.)

Mr William Favill Tuke (vice-chairman) seconded the resolution.

SHAREHOLDERS' CONGRATULATIONS.

Sir Alfred Herbert, K.B.E., said he had great pleasure in supporting the motion and in congratulating the directors on a very successful year. As an old and very satisfied customer of the bank he had the greatest pleasure in testifying to the extremely kind, courteous, and businesslike way in which the customers of this great bank were treated. Both from the Head Office and from their Branch in his own city of Coventry he had invariably received the most helpful consideration and the most courteous dealing. For 40 years or more he had been engaged in an industry the function of which was to supply to other engineers the plant and machinery which was essential to the expansion and development of their business. It was impossible nowadays to speak about industry without saying something about Government.

His own conception, for what it was worth, of what industry asked from Government was, first, a condition of confidence and stability that it might not be disturbed by "alarums and excursions," and that it might be allowed to carry on its operations in peace and in security. Secondly, industry asked for the freest possible access to the markets of the world and for at least a fair chance in its own market. They had heard recently some important pronouncements from Government as to the greater availability of capital for the development of industry, and he was sure this would be all to the good, but none the less, in his rather large number of years of industrial work he had never found that there had been any difficulty in getting the necessary capital for the development and expansion of enterprises which in themselves were sound. (Hear, hear.) He himself felt that the most valuable kind of capital that could be held in any business was the capital which that business had been able to save for itself by care, economy, and a conservative policy in dealing with its accounts. He believed that £1 of capital which they themselves had saved was worth as much to them as £2 of capital which they might borrow from outside. (Hear, hear.)

While the air was full of the talk of peace and of the abolition of war it had to be realised that we were in fact engaged in a war of industry. At no time in his recollection had competition from outside been fiercer; at no time had it been less easy to obtain access into foreign markets. He hoped to see in the future a stronger policy adopted. It was extraordinary what good was done by the courage to stand up. He could not help feeling that, as conditions changed, policies must be changed to meet them. There were already signs that we were sitting up and thinking, and he hoped that in the near future there would be shown a greater courage to stand up and maintain our own markets as a means of obtaining freer access to the markets of our surrounding neighbours. (Cheers.)

AN EXCELLENT REPORT.

Mr E. T. Hargreaves said he wished to thank the Chairman for the very able and interesting address with which he had favoured the shareholders, and to say how sorry they all were that Sir Herbert Hambling was not able to be present also to address them. The directors were to be congratulated upon presenting such an excellent report after a year of difficulty. With regard to the dividend, so far as the Chairman was concerned he had always been conservative in his finance, and he (the speaker) entirely approved of the recommendation of the board, hoping at the same time that they might look forward to a larger dividend a little later on. (Laughter and "hear, hear.") He was extremely interested to hear what the Chairman had said with regard to co-operation in industry between employer and employed, which was making some progress and for which the thanks of the nation were due to Lord Melchett and others. With regard to assisting industry there was not the least doubt that the directors of that bank would help wherever it was necessary, and he was perfectly satisfied that, although advances in the balance sheet amounted to such a large sum, they were all amply secured, and that, so far as the bank was concerned, the directors would see that they stuck to good banking business and would continue to give the shareholders the results of which they were all so proud. (Cheers.)

Mr F. Tomkinson expressed his thanks to the directors and the management generally for the very able way in which they had managed the business of the bank during the last very trying year.

APPROVAL OF BOARD'S DIVIDEND POLICY.

Sir Alfred Stephens also congratulated the Chairman on his able speech, which, he remarked, disclosed an unbroken record of prosperity for the bank. He quite agreed with the conservative policy which had been pursued with regard to the payment of dividends. The banks had done a good deal during the past few years for trade. It was often said that they should do a great deal more, but he thought that the people who said that did not realise that the deposit money held by the banks was the money of their customers and that they had to take the very greatest care of it. (Hear, hear.) They were asked to dispense credit with a generous hand, but if they did that without being perfectly sure what would become of the money it would impose a very heavy strain on the banks. He was convinced that Barclays Bank had done its duty most nobly; that it had carried out not only its responsibilities to its shareholders, but, what was far more important, its responsibilities to those who had deposited their money with it. (Hear, hear.)

What was wanted in this country was a greater feeling of security for the future. If they had the feeling that all was going well and they could go on with their industries and set to work at full speed the country would have a chance to regain the position which it had held in the past. One point which should be stressed was that industries should be left to carry out their own work, and that there should be no Government interference with them in any shape or form. (Hear, hear.) That was the only way by which industry could possibly thrive. Taxation had taken far too much out of industry in the past, and he ventured to say that if those engaged in industry in this country were given fair play and fair conditions of competition there was no country in the world which could beat us.

The Chairman thanked the shareholders who had spoken for their expressions of appreciation, and the resolution was then put to the meeting and carried unanimously.

RE-ELECTION OF RETIRING DIRECTORS.

The Chairman next proposed :—" That Messrs Bertrand Yorke Bevan, Francis Lawrence Bland, Lieutenant-Colonel Edward Hoblyn Warren Bolitho, D.S.O., Messrs Lionel Gurney Buxton, Edwin Henry Galsworthy, Arthur Bevington Gillett, William Macnamara Goodenough, Quintin Edward Gurney, Walter Somerville Gurney, the Right Hon. Earl Peel, P.C., G.B.E., Mr Hugh Exton Seebohm, the Right Hon. Viscount Wimborne, P.C., and Mr Cecil Mercer Woodbridge, the retiring directors, be re-elected directors of the company."

Mr W. Favill Tuke seconded the resolution, which was unanimously adopted.

The Right Hon. Lord Ebbisham, G.B.E., then moved :—" That Messrs Kemp, Chatteris, Nichols, Sendell and Company, and Messrs Price, Waterhouse and Company, chartered accountants, be reappointed auditors to the company, at the usual remuneration, to hold office until the next annual general general meeting." In doing so he said that these firms for many years had rendered distinguished service to the bank, and he thought the shareholders would agree that they were fortunate in possessing them as auditors. He would like to add his tribute of appreciation of the Chairman's interesting and comprehensive speech, and congratulations on the successful year which the bank had had. The shareholders would have been especially interested in the Chairman's reference to the linking up of business between this country and the Dominions through their Dominion Bank. This further assisted in carrying out the wish, so widely expressed, for still closer union within the Empire. They also warmly sympathised with the Chairman in his belief that London as a centre for education would offer great attractions to the younger generations from the Dominions.

Mr Allen Hepworth seconded the motion, which was carried unanimously.

VOTE OF THANKS TO GENERAL MANAGERS AND STAFF.

Mr H. E. Seebohm proposed :—" That the cordial appreciation and thanks of the shareholders be given to the general managers and the whole of the staff for the manner in which they have carried out their duties during the past year." He would not try to emulate the speeches of the directors who had proposed a similar resolution in former years, but he would yield to none of them in the sincerity of the thanks that it was the intention of his resolution to convey. One feature of the past year had been the further introduction by banks of what was called the mechanisation of banking—not the mechanisation of bankers, for that would be a disaster; on the contrary, it was to be hoped that the relegation of certain work to machines might actually lessen the chance of any man himself becoming a machine. Of course, he must not disparage the boon of mechanical accuracy, but it was not on accuracy, but rather on other qualities, that he based the resolution which he had the pleasure of moving.

The growth of the great banks had resulted in increased competition throughout the whole field, and he thought that the amassing of men and women in these very large staffs did call more and more for the exercise of qualities such as co-operation and adaptability. Shareholders would, he was sure, realise what unremitting care and discretion and organising ability throughout all the branches were required before a great concern such as Barclays Bank had grown to be could earn for them the profit to which they so confidently looked forward. The directors would vote for this resolution as wholeheartedly as would any of the shareholders. They knew the value of the staff. He would like to say one word more. Seeing that all the business of the bank, before it came to the board, had to pass through the gateway of their two general managers, they must all consider the resolution, comprehensive though it was intended to be, as having very special application to those gentlemen. (Cheers.)

Mr R. L. Barclay, C.B.E., seconded the motion, remarking that the longer he worked with the staff the more he was convinced that they were second to no banking staff in the world. (Hear, hear.)

The resolution was carried with acclamation.

MR MITCHELL'S REPLY.

Mr H. T. Mitchell (one of the general managers), who was enthusiastically received, said that it was his pleasing duty, on behalf of the staff of the bank, to express their gratitude for the passing of the vote which had been submitted in such kindly and complimentary terms. That resolution never failed to give them a considerable amount of pleasure, and he thought it was because they recognised that it introduced into the somewhat prosaic and businesslike proceedings a personal note—just that personal touch which stimulated the efforts, fostered the loyalty, and brought out the very best endeavours of those who worked with the directors in the service of the bank. (Hear, hear.) The staff of Barclays Bank were particularly fortunate inasmuch as they knew that they could always look with the utmost confidence to their Chairman and his co-directors, not only for inspiring leadership but also for generous recognition of any efforts they might make in the interests of their institution. They considered themselves doubly fortunate in that they had a still further reward—a reward which they valued most highly—namely, the warm and hearty appreciation of the shareholders. (Cheers.)

VOTE OF THANKS TO CHAIRMAN.

Sir Alfred Herbert, K.B.E., proposed a hearty vote of thanks to the Chairman for his illuminating speech and for the courteous manner in which he had presided over the meeting.

This was cordially approved, and the Chairman, in acknowledging the compliment, said he took the resolution to apply to all the members of the board. Shareholders would understand from the remarks he had already made that the past year had not been an easy one for bankers—indeed, it had been a very difficult one—but they might feel satisfied that the bank was in a sound position. (Cheers.)

The proceedings then terminated.

BARCLAYS BANK.

(DOMINION, COLONIAL AND OVERSEAS.)

SUCCESSFUL RESULTS—CONTINUED PROGRESS.

INCREASE IN THE DIVIDEND.

The ordinary general meeting of Barclays Bank (Dominion, Colonial and Overseas) was held, on the 21st instant, at the Cannon Street Hotel, London, E.C.

Mr Frederick Craufurd Goodenough, chairman of the company, presided.

Mr H. R. Bradfield (assistant general manager) having read the notice convening the meeting and the report of the auditors,

The Chairman said :—My lords, ladies and gentlemen,—In accordance with our usual procedure I will refer first to changes which have taken place in the personnel of the bank during the past year. The directors desire to record their deep regret at the death of Mr John Edward Mounsey and Mr James Tuke, who were members of the board, and of Mr Edmond Wodehouse Lucie Smith, who was a local director of the bank in Jamaica.

The directors have much pleasure in informing you that Sir Ernest Oppenheimer, M.L.A. (Union of South Africa), has been elected to a seat on the board, and this meeting will be asked in due course to confirm his election in accordance with the articles of association. The election of Sir Ernest Oppenheimer will serve to strengthen our representation from South Africa, where a considerable proportion of our business is transacted.

We regret to announce that Mr Ernest Hyslop Bell has resigned his membership of the Colonial Bank local board on account of ill-health.

Mr Gerald Robert Macintyre has been appointed a local director in New York, where he was formerly agent.

BALANCE SHEET ITEMS.

If you will refer to the balance sheet and profit and loss account for the year ended September 30, 1929, you will find that the total figures at that date exceeded £73,000,000. Current, deposit, and other accounts amounted to £61,043,262, being an increase on the previous year of £1,367,606.

Cash in hand and at bankers and gold bullion amounted to £11,649,106, showing an increase of nearly £900,000. Bills discounted were £12,564,919, which is nearly £5,000,000 less than the corresponding figure of a year ago. On the other hand, advances to customers amounted to £28,690,099, or an increase of more than £5,000,000

BANK PREMISES.

The "bank premises account" has increased by about £150,000, and now stands at £2,113,437. This increase is largely accounted for by the cost of rebuilding the office in Gracechurch Street, London, which was reopened in September last. The contract for rebuilding the premises in Adderley Street, Cape Town, in accordance with the designs of Sir Herbert Baker, A.R.A., F.R.I.B.A., has been placed, and the old building is now being demolished.

Valuations of the bank's premises which have been made give a figure which is in excess of the amount shown in our books, and we have a redemption fund for the small amount of leasehold properties owned by us. You will appreciate that owing to the extension of our business the provision of banking premises is a matter which will require a great deal of money in the future, and we shall find it desirable to write down that account from time to time out of profits.

PROFIT AND DIVIDENDS.

The net profit for the year ended September 30, 1929, after making full provision for bad and doubtful debts, amounted to the sum of £516,593, which compares with £494,822 last year. An interim dividend on the "A" and "B" shares at the rate of 4 per cent. per annum was paid in July last, and it is proposed to pay a final dividend on these shares at the rate of 5 per cent. per annum, making 4½ per cent. per annum for the year, against 4 per cent. for the previous year. The reserve fund has been further increased by £150,000, and has therefore reached the figure of £1,550,000, while the carry-forward has been increased from £130,709 to £137,981.

The bank has not suffered any loss arising out of the troubles in connection with what is known as the Hatry Group.

As the shareholders are aware, the dividend has been gradually increased from 3 per cent. to 4½ per cent. per annum, but they should not assume that increases will be continuous because, as has been stated on previous occasions, the policy of the directors is that of adding in each year a substantial amount to reserves, which, as already mentioned, will include the writing down of the premises account.

BARCLAYS BANK (CANADA).

The application for a charter for the conduct of banking business in Canada was granted, and Barclays Bank (Canada) was

deposits had fallen to £87,000; its cash amounted to £15,000, and balances with other banks to less than £600, while it had borrowed £15,000 from the Union Bank of London. Contrast this position with that of another small local institution which about the same time had deposit and note liabilities of £80,000, and held against them only £1,600 in cash, but had balances of no less than £25,000 with its London agents. It is obvious from these and other similar figures that there was no regularity in the relations between cash and liabilities to the public. Nor were the amounts of these liabilities themselves at all stable.

Finally, of all the banks operating in 1844 which subsequently came into the Midland, not one employed the Bank of England as its London agent. Indeed, in the contemporary list of banks already mentioned the Bank of England is quoted as the London agent of only two provincial institutions. We see, then, in the first place, that the country banks had no immediate reserve connections with the Bank of England, and, secondly, that both their cash holdings and deposit liabilities were subject to wide, rapid, and unassociated fluctuations. It follows from these facts that the Bank of England exercised no more than a very indirect control, if any at all, over the volume of credit, whereas to-day it is the supreme authority in determining the quantity of money available for the use of the public.

BANK NOTE ISSUES.

In the orthodox modern view a necessary attribute of a central bank is the possession of a sole right of note issue. In this respect, again, the arrangements in force to-day differ widely from those of 1844, though the seeds were sown by the Bank Charter Act for the complete monopoly in England and Wales now enjoyed by the Bank of England. The position then was that, while the Bank of England possessed a majority right of note issue effective all over the country, nearly 300 other banks had smaller issues confined mainly to the immediate locality of their operations. The provincial banks derived considerable direct benefit from their circulation powers, quite apart from the utility of the notes as a medium of advertisement. Our own bank did not exercise the right of issue, but among the 40 banks operating in 1844 which eventually joined us no fewer than 30 did so.

Two further points of contrast may be mentioned. In those days gold coin was widely used as currency. To-day no gold is in active circulation, nor, as far as can be foreseen, is it likely to be so used in future. Secondly, a much larger proportion of the country's business was then financed by currency. The total of bank deposits was comparatively small, and the cheque system was still in an early stage of development. The bill of exchange, it is true, was used commonly in domestic business, but, even after making full allowance for this practice, the fact remains that trade was transacted to a far smaller extent on a credit basis than it is to-day.

CURRENCY AND CREDIT, 1844 AND 1929.

The difference between the relative volumes of currency and credit in 1844 and at the present time is important, not only in monetary theory but also in practical banking. To measure exactly the extent of the change is impossible; to make an estimate extremely difficult. Nevertheless, I propose to give a few figures, which, though not as reliable as might be desired, are sufficiently definite and authoritative. Towards the end of 1844 the active circulation of Bank of England notes was about £20,000,000, while other banks had nearly £8,000,000 of notes in issue. The gold coin in circulation has been estimated at approximately £40,000,000. Adding these figures together and ignoring token coin, we arrive at a total of roughly £70,000,000 of currency in the hands of the public and in bank reserves, excluding the Bank of England. The comparable figure at the present time is given by a single item in the Bank of England return, which shows that in the ordinary way there are about £360,000,000 of notes outstanding. When we come to consider deposits we are on much less solid ground. We may place the present total for England and Wales at approximately £2,000,000,000, while the corresponding figure for 1844 has been roughly estimated at about £200,000,000.

It appears, then, that between 1844 and 1929, while the volume of currency has multiplied five-fold, there has been a ten-fold increase in the volume of credit. Moreover, that is not the whole story. Deposits circulate with much greater rapidity than currency, so that not only has the relative numerical importance of credit vastly increased, but the proportionate volume of business financed by credit must have grown in far more striking degree.

From all these facts it follows that the problems of monetary affairs to-day are widely different from those which had to be faced in 1844. The Bank Charter Act, you will remember, was intended to incorporate the general principle that a close, if not quite mechanical, relationship should be maintained between the flow of gold into and out of the country and variations in the volume of notes in circulation. Gold movements were to govern currency fluctuations. Clearly, in view of the changed conditions ruling to-day, this principle is no longer applicable, and, as we all know, has been definitely abandoned in practice. Nevertheless, our modern monetary system still preserves a connection between long period gold movements and changes in the total volume of money as distinct from currency alone.

MONEY AND GOLD RESERVES.

This leads me to one other point of comparison: the quantitative relationship between gold and non-metallic money to-day, as compared with that existing in 1844. We saw a few moments ago that the paper currency in circulation at that time amounted to nearly £30,000,000, while bank deposits were estimated at £200,000,000, making a total of £230,000,000 of money, excluding the gold and token coin in circulation. Nowadays we have about £360,000,000 of paper currency and £2,000,000,000 of deposits, so that roughly speaking the volume of non-metallic money has expanded ten-fold since 1844. Compare this expansion with the contemporaneous growth in the gold stock. It has been estimated that the amount of bullion in the country in 1844, including gold coin in circulation as well as in bank reserves, was between £50,000,000 and £60,000,000. In recent months it has varied between about £130,000,000 and £150,000,000, approximately 2½ times as much as at the earlier date. Upon this doubled or trebled stock of gold has been reared a ten-fold expansion of non-metallic money. We have here a conspicuous instance of economy in the use of gold and the beneficial effect of the concentration of banking resources. Authorities tell us to-day that there is a shortage in the world supply of gold. We should be suffering a veritable famine were it not for the economy practised in this and some other gold standard countries.

GOLD STANDARD DEVELOPMENTS.

The developments during the past century in the use of gold as a monetary basis are indeed striking. Contrary to the general assumption, the gold standard is quite a modern invention, for as late as 1844 Great Britain was the only leading country properly to be described as working upon that system. Almost the whole of the rest of the world was then on a standard of gold and silver combined or of silver alone. Nowadays nearly every important trading country uses gold, nominally if not in practice at the moment, as its sole metallic basis. Since the adoption of the gold standard by Great Britain not only has its sphere of operation been widened, but, as already mentioned, substantial economies have been secured in the use of the metal. Germany made a notable step towards this goal when, in 1875, the Reichsbank was set up and given a degree of elasticity in its note issue hitherto unknown among the leading central banks. The system of holding only a percentage of gold against notes, of which the German scheme was the direct forerunner, has since been adopted nearly all over the world, to the practical exclusion of the fixed fiduciary issue. Coming to recent history, Britain, followed by other countries, has further economised in metallic reserves by adopting a bullion standard, which in effect excludes gold coin from circulation. Finally, the system known as the gold exchange standard received official blessings in the early stages of post-war monetary reconstruction and, although not so widely or permanently adhered to as might be desired, has secured appreciable economy in the use of the world's gold supplies.

GOLD STANDARD PAST AND PRESENT.

These facts remind us that progress is not confined to the physical and mechanical sciences. I have already shown that the operative gold standard of 1930 is a vastly different mechanism from its namesake of 1844, just as the locomotive running from London to Birmingham to-day is a very different machine from the engine which first steamed into Birmingham in 1837. For one thing, our gold stock is now concentrated entirely in the hands of the central institution. The public no longer possesses the right either to have gold coined into sovereigns or to obtain sovereigns in exchange for notes. This mobilisation of gold renders the available supplies of far greater effectiveness for international purposes. Much more important, however, from the standpoint of our economic welfare is the fact that monetary policy exercises for short periods an assured ascendancy over gold movements. Nowadays, in contrast with the old system, imports and exports of the metal are frequently deprived of their natural effect upon the volume of credit. We can well imagine what enormous fluctuations in the supply of credit would have taken place during the past five years if the successive inflows and outflows of gold had been allowed to exercise unregulated influence upon the quantity of bank cash. We should have suffered repeatedly the evils of feverish inflation and drastic deflation, and trade would have been the plaything of these tremendous changes in monetary conditions.

It will be seen, then, that the development of our monetary machinery, despite its less popular appeal, is just as remarkable as that achieved in the physical sciences. I must hasten to add, however, that we are by no means at the end of the road, for progress cannot cease unless it gives place to recession. Let us hope that we shall never be entirely satisfied with the monetary machine as it is. (Hear, hear.) Dissatisfaction becomes a virtue when it provides the motive power to further improvement in our scientific equipment. (Cheers.)

THE MIDLAND BANK, 1847-1929.

I will now resume the story of the development of our own institution by referring to the balance-sheet of the Birmingham and Midland Bank for June 30, 1847, the earliest date for which we have such a statement. The figures provide a most interesting contrast with our position to-day, not only in respect of size but of the relations between the various items. The paid-up capital at that time was £90,000, while the guarantee fund, corresponding to our reserve fund, together with the balance of profit and loss account, came to nearly £39,000. Deposits, in the narrower sense, stood at £139,000, and the net balance on customers' accounts at £22,000. A sum of £9,000 for composition bills—a type of instrument not used to-day—completed the one side of the balance-sheet. Among the assets, cash was shown at rather more than £8,000, and balances with other banks at £26,000. Premises and miscellaneous smaller assets aggregated £10,000. No investments were held, and no entry appeared for advances, since a net figure of current accounts was included in the liabilities. But bills—by far the largest item—amounted to £255,000. Thus the total on each side of the balance-sheet was £299,000. Incidentally, the bank had no branches at that time.

To-day I have to report to you a balance-sheet total far more than a thousand times as large. Our paid-up capital has risen, through new issues and exchanges of shares, from £90,000 to nearly £13,500,000, which is also the amount of the reserve fund. We have over 70,000 shareholders, as compared with 100 in 1847. We conduct our business through more than 2,050 offices covering practically the whole of England and Wales, and in addition are the sole shareholders of three other banks with about 450 offices in Scotland and Northern Ireland. A small, provincial bank has become a vast, nation-wide organisation, whose history is typical of the whole process of evolution in the sphere of finance, as well as in industry and trade. (Cheers.)

THE YEAR 1929.

Now let me turn specifically to the progress recorded in the past year. Parenthetically I may observe that our balance sheet has undergone a number of changes in form, due mainly to the provisions of the new Companies Act. In addition, we have published for the first time a consolidated statement of the liabilities and assets of the Midland Bank and its affiliated companies.

Considering the various items in our own balance sheet, we find that deposits amount in the aggregate to £379,500,000, a fall of £15,000,000 on the year. In explanation of this movement, I would remind you that ours is pre-eminently a traders' bank, and that accordingly our position tends to reflect with particular faithfulness a falling off in business activity. In the earlier months of 1929, when trade was relatively good, our deposits were maintained at a higher level than in the previous corresponding period. The decline was concentrated in the second half of the year, when business as a whole took a decided turn for the worse. A further indication of the course of events is to be seen in the continued downward trend in the proportion of current account balances to total deposits.

Passing on to the next item, acceptances and confirmed credits amount to £19,750,000, as compared with £25,000,000 a year ago. The decline is attributable to the fact that recently money rates in London have been above those in New York. Engagements stand at £17,750,000. At the end of 1928 the figure was £49,500,000, but, as I mentioned a year ago, the exceptionally high total was due largely to special influences. We have, however, made a change in our system of accounts which also materially affects the comparison. Hitherto forward exchange transactions outstanding have appeared in the total of our engagements. We have removed this part of the item and show the figure separately in a note on the balance sheet. Both acceptances and engagements are balanced by a contra entry representing the corresponding liability of the customers on whose behalf we carry out the transactions.

ASSETS.

We come now to the assets. Coin, notes, and balances with the Bank of England stand at £47,000,000. This figure shows an increase of £1,500,000, which, in conjunction with the fall in deposits, raises the cash ratio from 11·5 to 12·4 per cent. The increase in cash is roughly offset by a decline in balances with and cheques on other banks, which stand at £18,500,000. We have reduced money at call and short notice to £21,750,000, and investments and bills discounted to £33,000,000 and £58,750,000 respectively. Included in the last item are about £15,500,000 of Treasury Bills.

These various reductions have enabled us to maintain advances at the 1928 level, despite the decline in deposits. The aggregate of the amounts shown under three separate headings on the balance-sheet is £212,250,000. It is a common notion, to judge from speeches and letters in the Press, that the banks have an inexhaustible power of lending money to industrial enterprises, and that any industry suffering from general depression could be restored to prosperity if only what is termed a more generous policy were adopted by the banks. (Laughter.) A moment's reflection, however, will show that the banks have no inexhaustible fund to draw upon. The sums they lend are balanced by amounts due to depositors, who would certainly not rest content unless confident that their money was being wisely used and could be repaid to them at any time. (Hear, hear.) The important fact to be emphasised is that we continue to keep at as low a level as possible our loans for what may be called financial purposes, so that all the accommodation in our power may be granted to British industry and trade. (Hear, hear.)

THE REVISED BALANCE SHEET.

You will notice that the balance sheet in its revised form shows two separate items covering investments in premises, which include land, buildings and their equipment. The first, described specifically as bank premises and entered at nearly £9,000,000, is almost the same as last year; the second, other properties and work in progress, represents an entry formerly included among other accounts, and amounts to £1,250,000. As offices are completed and occupied for business their book values are transferred from the second item to the first, which, on the other hand, is under a constant process of writing down out of profits. Perhaps I should add that the whole expenditure to date upon the occupied portion of our new head office is already included in the first item. The main part of this building is rapidly approaching completion, and the central management expect to move there in the course of a few months.

The concluding items among our assets relate to investments in affiliated companies, and the figures show little change from a year ago. The Clydesdale Bank has increased its paid-up capital, and in the case of the Belfast Banking Company it is proposed to raise its paid-up capital to £800,000 by the allocation of 10s. a share out of undivided profits. All four of our affiliations, the Belfast, Clydesdale, and North of Scotland Banks and the Executor and Trustee Company, have made sustained progress during the year, and I cannot omit an expression of complete satisfaction with the results of our now long-standing Irish and Scottish connections. (Hear, hear.)

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, the net profits for the year, after making full provision for all bad and doubtful debts, amount to £2,665,042, about the same as for 1928. Adding to this sum the balance brought forward, a total of £3,513,605 is available for distribution. The interim and final dividends, both at the rate of 18 per cent. per annum, which has been maintained for no less than 26 years, together absorb £1,934,347. It has been decided to place £500,000 to bank premises redemption fund and £220,000 to officers' pension fund, these allocations being the same as in each of the previous two years. We are thus left with a balance of £859,258 to be carried forward.

REASON FOR THE NEW SHARE ISSUE.

Before concluding my commentary on the position and progress of the bank, you will undoubtedly wish me to refer to the forthcoming issue of capital, of which full particulars are given in the report. The reason which has prompted the decision to issue new shares, in the same proportion and on the same terms as on the last occasion, is a very simple one. We feel the scale of our operations has become so vast that the present paid-up capital is too low in comparison with liabilities to customers. The new issue will increase both the paid-up capital and the reserve fund to over £14,000,000 each, which, together with the balance of profit, will raise the shareholders' fund, as shown in the balance sheet, to more than £29,000,000.

I deeply regret that the year just closed, like its predecessor, has taken a heavy toll of our colleagues on the board. Sir James Bell, Sir Edmund Turton, Mr Walter S. M. Burns, Mr Charles Gow, and Mr John Henderson have all been removed from among us. We mourn their loss, as we value their memory, with a deep sense of

gratitude for their great services through some of the most difficult years we have been called upon to traverse.

In the early part of my address I mentioned the retirement of Mr Woolley from active management, and I am sure you would like me to express to him your appreciation of his able and unsparing devotion to the interests of the bank. (Cheers.) We all hope he may enjoy a long retirement and continue for many years to assist us with his counsel and encouragement. Mr Hyde is now sole managing director. Those of us who have the privilege of close association with him know and appreciate his brilliant capacities and outstanding personal qualities. Happily, we can still regard him as a young man; the passage of the years in no way impairs his energy and ability. (Hear, hear.)

I need not remind you, however, that the best possible leadership would be entirely wasted if support were not forthcoming from an adequately trained, capable, and conscientious staff. I have said a good deal on this subject in previous years, so that no further words of mine are needed to convince you how much we owe to our general managers and other head office officials, branch managers, and all members of the staff. You will have an opportunity at a later stage of showing in a separate resolution your warm appreciation of their indefatigable services.

THE FUTURE.

Looking back over the year just ended, I am unable to say that developments in trade and industry have justified the expectations with which it began. The welfare of the people of this country is of the greatest concern to every one of us, and in consequence we cannot view existing conditions with satisfaction. The situation, however, is relieved by a particularly hopeful feature, the stimulus which adversity is giving to our efforts to reorganise and improve our industrial structure. We have passed through a decade of troublous times, but if we emerge from this testing period with improved efficiency and more highly productive and economical machinery our tribulations will not have been in vain. For myself, I entertain no doubt that such will be the eventual outcome, and with this in mind I believe we can face the future with a reasoned measure of confidence. (Cheers.)

The report was adopted, other ordinary business was transacted, and the proceedings terminated with a vote of thanks to the chairman.

NATIONAL DISCOUNT COMPANY, LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.

The ordinary general meeting of the National Discount Company, Limited, was held, on the 22nd instant, at the Cannon Street Hotel, London, Col. the Hon. Sidney Peel, C.B., D.S.O., the chairman, presiding.

The secretary (Mr Charles H. Gough) having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen,—I do not think that even the most unobservant person could describe the year 1929, which we are reviewing to-day, as an uneventful year.

I should describe it myself as one of the most tumultuous in recent financial history. I do not propose to depress you by recalling the numerous events which have combined to disturb the investor in almost every country. Most of these crises, unfortunate as may be their effect on the general tone, do not directly affect the securities in which a company like ours deals, but in so far as they influence the supply of bills or credit in the London money-market, they may have a very important repercussion; they may have, too, a very tangible influence on the price of certain gilt-edged securities which do directly interest us. Last year we have certainly had our full share of storms which do agitate even the Pool of London. The worst has been the disturbance produced by the course of speculation in America. The tempting, almost fantastic, rates for the employment of money caused thereby, attracted so much to that centre as seriously to disturb the money-markets of the world, especially our own This was the worst storm, but by no means the only one; we have had domestic troubles in our own country, which I need not go into.

If we look at the fluctuations in the Bank of England rate during the year we shall get a clear reflection of the commotions of the year. Whereas in 1928 the Bank rate remained without change at 4½ per cent. (indeed it had stood at this figure since April, 1927), in 1929 we had no less than five changes, and I think we can be grateful to the authorities that we did not have even more. On February 7th it rose to 5½ per cent., on September 26th to 6½ per cent., on October 31st it fell to 6 per cent., on November 21st to 5½ per cent., and on December 12th to 5 per cent.

There can be no doubt as to the stormy nature of the year. The question immediately before us is how far we have been able to steer a successful course through these tumultuous seas. I venture to think that the examination of the figures will show that we can congratulate Mr Goldsmith and his assistants on the skill with which they have encountered the troubles and difficulties of the year.

BALANCE SHEET ITEMS.

When I addressed you last year, I mentioned that there were indications of troubles ahead. In view of these indications we had taken in some sail, as shown by the reduced figures of our balance sheet, but I did not think that our profits for the coming year would be increased thereby. Our forecast has proved to be correct. This year our balance sheet shows an increase in totals; I hope we shall be justified in this greater confidence in the immediate future. Our total of bills discounted, after deduction of bills rediscounted, still shows an increase of about £1,500,000 over last year, and we have, in fact, had a larger turnover in bills than for some years past. Our deposits, on the other hand, are correspondingly larger. Our investments are about £300,000 down from last year. Once more we can say that our company, according to the figures of the balance sheet, is in a very sound and liquid position.

PROFIT AND LOSS ACCOUNT.

Turning to our profit and loss account we find the gross profits are down by £70,000, but, owing to the smaller amount required for rebate, our actual net profits are somewhat greater than last year. We are able to put £25,000 to reserve fund as against £15,000; £14,076 to pensions fund as against £10,000. This contribution brings the total of that fund up to the round figure of £100,000. We have then left over for appropriation the sum of £356,000 as against a rather smaller amount last year. We are proposing to you to-day to pay the usual dividends, plus a bonus of 2s. instead of 1s. 6d. on each B share.

If any shareholder feels a reluctance to accept our recommendation of an increased bonus, I shall be prepared to justify our action. For the moment I will merely say that, if you accept our proposals, and agree with me that these are good results to have attained in a difficult year, I hope you will give the credit where it is due—to Mr Goldsmith, our manager, and his assistants. We have had some reorganisation of our staff this year, as you will see by a comparison of the front page of this year's report with last year.' This means a certain increase of expenses, which I am certain is proving and will prove money well laid out.

TRIBUTE TO STAFF.

I should like to pay my tribute to the staff for their excellent and unremitting work. By no means all the names of those who have done the company good service appear in the list of the higher officials on that page.

I have only to add that I am sure you will regret, as we do, the retirement from the board of Mr Walter Heriot. He had been a director of the company for over twenty years. I should like to be able to thank him on your behalf for his valuable services, and to wish him a complete restoration to health. I also regret very much that Mr Petley is unable to be with us to-day owing to illness.

The chairman concluded by moving the adoption of the report and accounts.

Mr Charles D. Seligman seconded the resolution.

Mr J. H. Butterworth said that shareholders ought to be very well satisfied with the results which had been obtained and with the fact that the directors had had the courage to add 6d. to the bonus. (Hear, hear.)

Mr G. A. Christian said that when they saw the great difficulties which financial institutions had had to encounter during the past year they could hardly have expected any increase in the distribution; therefore, that there should be an increase was very much to the credit of the company and a proof of its very able and conservative management. Considering the year through which they had passed, he thought the results were very gratifying to all concerned. (Hear, hear.)

The resolution was carried unanimously.

On the motion of the chairman, seconded by Mr Frederick W. Green, the dividends as proposed, together with the increased bonus, were approved.

The retiring directors, Mr Frederick W. Green and Mr Charles D. Seligman, were re-elected and the auditors, Mr Francis W. Pixley (Jackson, Pixley and Co.) and Sir Albert W. Wyon, K.B.E. (Price, Waterhouse and Co.), were reappointed.

Mr Vere Herbert Snith, proposing a cordial vote of thanks to the chairman, directors, manager and staff for the excellent results of their work during the past year, expressed regret at the retirement of Mr Heriot and suggested that a message should be sent to Mr Petley expressing regret at his illness and a hope for his speedy recovery.

This was seconded by Mr Butterworth and carried unanimously and a brief acknowledgment by Mr Francis Goldsmith (the manager) concluded the proceedings.

BANK OF NEW SOUTH WALES.

RESULTS OF DIFFICULT YEAR.

MR. THOMAS BUCKLAND'S INTERESTING REVIEW OF ECONOMIC AND FINANCIAL PROBLEMS IN AUSTRALIA.

At the ordinary general meeting of the Bank of New South Wales, held at the head office, Sydney, on Friday, November 29, 1929, the chairman, Mr. Thomas Buckland, President of the Bank, in moving the adoption of the report, said :—

Gentlemen,—In rising to move the adoption of the report and balance sheet, I shall review the main items and compare them with last year.

The movements taken as a whole are indicative of the conditions affecting us to-day. There is evidence of the marked drop during recent years in the prices of our staples, of the continuation of drought conditions in many districts and of increasing costs and the lack of continuity affecting industry and commerce to the disadvantage of all.

Taking the less important items first, the note circulation in New Zealand shows a small decrease.

Bills payable at £7,284,000 represents a small increase of £84,000.

Bank premises are £225,000 higher and stand at £1,450,000. The increase is largely due to the new head office building, and the new building for our Brisbane branch. Unfortunately the progress of the work on these two buildings has been delayed. We hope to be able to occupy the new premises in Brisbane in about three or four months, and to transfer our Sydney business into the rear portion of the new head office building towards the end of January next. The old building at the corner of George and Wynyard Streets will then be handed over to the contractors to be pulled down in preparation for the front portion of the new structure. The building of this is expected to take three years. We may therefore have to hold three more annual meetings in this room, as the administrative offices will remain in Endeavour House to avoid making a double transfer.

Having dealt with these items, I can best explain the movements under the other headings by showing their relationship to each other and to the conditions at present obtaining.

Deposits, £66,056,000, show the small increase of £1,541,000. This taken with the like experience of other banks is evidence of the slowing-up of our national progress, and a lower capacity to provide for the development of the many and varied industries of the community. It seems necessary to repeat what I said two years ago in this connection. The drain on local funds, as the result of borrowings by Governments and local authorities, appreciably affects the accumulation of deposits. This in turn reduces the funds available for advances, and for that private enterprise upon which our progress and wealth mainly depend. Without a steady and appreciable increase in deposits year by year the banks cannot extend their support to the development of the community. The banks cannot create credit except by resorting to inflation, with its painful aftermath. This leads me to the point I wish particularly to stress. The people as a whole will bring about their own undoing if they pursue the policy of past years with its extravagant and often unproductive expenditures. Such policies with their reduction of output—not necessarily the value of output—must bring hard times and force upon us a lower standard of living. When these are combined with a serious fall in the prices obtainable for our chief staple, wool, and a considerable reduction in the quantity of another, wheat, due to adverse weather conditions, the outlook is hard indeed. The figures of the balance sheet give full support to the position thus outlined.

Advances have increased by £8,074,000, making a total of £59,427,000. When taken with the comparatively small increase in deposits this is a striking testimony to the way in which our customers have found it necessary to lean upon us during the past year, and when it is realised that the experience of the other banks is similar to ours in this department also, it behoves all of us to take stock of our position, both as a community and as individuals. The money for these increased advances has been provided mainly from our liquid assets, Government and other securities, Treasury bills and cash, which show reductions of £2,074,000, £2,000,000 and £4,090,000 respectively. On the other hand, money at short call has increased by £1,220,000, and other items show small increases. Last year our holding of cash was on the high side for this time of the year, so that the reduction is not as important as it may appear at first sight.

These figures will begin to readjust themselves as the proceeds of our produce come to hand and the community accommodates itself to our altered conditions. This readjustment will, however, tend to be slower than in past years. The prices and quantities of our primary products are so much less and the national income so much smaller.

The capital is the same as last year, £7,500,000, and it is proposed to add £250,000 to the reserve fund, making it £6,150,000.

In view of the serious fall in the prices of our staples over recent years, there must follow an appreciable fall in the values of our lands and other assets of the community. Your directors therefore feel that the prudent course is to conserve the resources of the bank. It is proposed to pay the usual dividend at the rate of 10 per cent. per annum, but not to pay a bonus on this occasion. The shareholders have had the benefit of four bonuses in succession, or in other words have received in four years dividends which would in the ordinary course have been paid over a period of five years.

This decision will not come altogether as a surprise to you, as I have warned you on each occasion that the bonus is a matter of each year only, and not to be taken as a precedent or an earnest of continuance. In 1927 I asked the newspapers not to include the bonus when stating the rate of return on the quoted prices of our shares. This advice, I regret to say, was utterly disregarded.

Before leaving our own immediate affairs it is desirable that I should draw your attention to the burden taxation is becoming in our own particular case. The bank has paid £350,086 during the year. This is an increase of £55,741 on the amount paid last year and of £79,019 on the year before. Taxation now represents a charge of £4 13s. 4d. per cent. on our capital, a charge which in two years has risen somewhat over 1 per cent.

Turning now to conditions generally, we expect to find some districts having good seasons and some bad in a business covering the large areas we do. The winter in Tasmania has been rather severe. The western parts of Queensland and New South Wales are still drought-stricken, as are the north-western parts of Victoria and the Northern portions of South Australia. Western Australia, generally speaking, is having the best season all round of the Australian States, although the wheat crop will not be as large as was hoped for some couple of months back. While recent rains and cool weather have improved the outlook for the wheat harvest in New South Wales, Victoria and South Australia, the yield will be much below average. The wool clip will be considerably lower than last year, and with the continued fall in prices returns will in most cases do little more than pay expenses. It is cheering to be able to report an improvement in the beef cattle industry, which has suffered so severely for some eight or nine years. As to the future, the season is opening with more promise of good rains, and we look forward in the hope that the long drought will pass from our western areas at no distant date. Could we but settle our industrial troubles and reduce our costs of production to enable both primary and secondary industries to work on a profitable competitive basis with the rest of the world, and secure in their freedom from strife, the present trade depression would soon pass.

The seasons in New Zealand have been good and the country is prosperous. The external trade shows a substantial balance in favour of exports, while Australia's balance is the other way.

Conditions in Fiji are good, despite lower prices for sugar and copra, as are also those in Papua and the Mandated Territory of New Guinea.

Before concluding, I wish to refer briefly to several matters of current interest.

The reduction in the quantity of our chief exports, due to the drought conditions which have prevailed over many parts of Australia, coupled with the continued fall in values, is having the effect of decreasing Australian funds abroad. These funds are required for the discharge of Government and other obligations, and for the handling of Australia's external trade. Excluding such outside influences as borrowings abroad by Governments and others and the investment of capital from outside in Australian ventures, imports will always adjust themselves to exports, but with a lag—if exports increase imports should increase at a somewhat later date; while the converse is true that imports will decrease following upon a decrease in exports. It would be very unwise to attempt to correct the present position by placing an embargo on imports generally or on specified imports. To do so would in the first instance damage our good trade name, then create injustices among the trading community according to the way in which different sections are placed with regard to their external commitments and further expose individual traders to the risk of damages for breach of contract, etc. On the other hand, should prohibition of imports become effective, we should lose our Customs revenue and ultimately be unable to sell abroad our surplus products—wool, wheat, etc. These products would then become valueless or of little value, as production is far in excess of Australia's capacity to consume, and disaster would be the result.

As against this question of restriction of imports, we have certain sections of the community who have resorted to, or wish to resort to, artificial means of controlling the realisation of their produce. I do not think that any such artificial tampering with the course of marketing will in the end achieve the objects aimed at, but the serious aspect of the case, from our point of view, is that those who have sponsored such schemes have apparently overlooked the question of finance. How is it possible for us to carry over a consider-

ably extended period the product already harvested or shorn, while at the same time we are called upon to finance the growing harvest or clip? In times when money is plentiful it might be possible to go a long way towards achieving this object, but in a period when our loads are already heavy, it is very doubtful whether our financial resources will enable such schemes to be carried through without denying the necessary finance to those in need of it for the current season's requirements. There is another aspect of this question. It is unsound for the producer to become a speculator in his produce.

It has been suggested that proposals are being considered to extend the note issue. It is a feature of any elastic currency system that it should be capable of extension to meet the seasonal requirements of the community from time to time, but it is a very different matter when, either by design or otherwise, reduction in the percentage of gold backing occurs apart from seasonal requirements. If by design, such a movement, when divorced from the genuine trading requirements of the community, becomes inflation, bringing about higher prices with an increased cost of living, which bears most hardly on the workers and those on fixed incomes.

Any such inflation would increase the burden, which is already a heavy one, upon our exports, and consequently our primary industries; while, on the other hand, it would encourage imports. Another effect would be the continued drain of gold until no doubt resort would be had to an embargo on the export of gold. The Australian note would then become inconvertible and the doors would be flung wide open for inflation in its worst form. The proper means to check any such drain would be to raise the interest rates and so preserve the common measure of value we have to-day with all other commercial countries.

Another proposal is that all borrowing by Governments and local authorities should be restricted to the Commonwealth, and that no loans should be raised abroad, a policy with which I agree. To adopt this policy now, however, would restrict all development work in Australia to such proportion of the amount of the annual savings of the Australian community as could be attracted to investment in such loans. To borrow beyond this would create inflation, which has been referred to above, in connection with the note issue. In a partially developed country, such as Australia, it is necessary for a time that capital in addition to the savings of the community should be attracted from outside to enable important schemes of developmental works to be carried on. To refuse absolutely to accept capital from abroad would be to slow up our development suddenly and to limit it to our own capacity to undertake it. The latter is the more desirable course, but, having pursued a policy of external borrowing for many decades, to turn round now and limit borrowing to the funds available in the Commonwealth would be to increase unemployment far beyond the conditions now obtaining. Largely owing to the tremendous wastage of accumulated capital during the war the policies pursued more or less throughout the world during and since then, the supplies of available funds fall short of requirements and rates of interest are tending to harden throughout the financial world. Owing to this there is no doubt that we shall have to pay more for our requirements in the immediate future. Should a policy of borrowing internally be persisted in, the funds so obtained must be withdrawn from the funds in use by the community in its trading and industrial activities, both primary and secondary. It is easy to see, therefore, that the employment given on the one hand would increase the unemployment on the other, while the withdrawal of necessary finance would tend to weaken or destroy a proportion of industries already existing, and the income available for taxation for Government purposes would be reduced over the whole community.

The Loan Council ought to advance warily and not be led away into great additions to public indebtedness, whether internal or external. The economic burden of an internal debt is just as heavy as that of an external debt.

Much is made, and rightly so, of the distinction between borrowing for productive and for unproductive expenditure. I am afraid that much of our so-called productive expenditure is in reality more or less unproductive. "The simple practical rule for productive expenditure is that, after a term of years, the undertaking should repay the original expenditure" in addition to providing interest, depreciation, etc., during the currency of the loan. To the extent that our loans are not fully productive they are a burden to us, and unproductive expenditure tends to leave nothing behind but debt and unemployment.

Our borrowing policies in the past have contributed materially to our unemployment problem. The scale of borrowing has meant inflation, with rising prices and disordered trade. With our arbitrary systems of wage fixing this policy meant higher and yet higher wages. We cannot have continual and general rises in wages and keep the costs of production within economic limits.

Taxation on capital will indirectly affect the wages of labour, and so far tend to lessen the productive power. Taxation is also a feature of the costs of production.

The serious reduction in our national income during recent years must impress everyone with the urgent necessity of reducing the costs of production as well as public and private expenditure. We must realise now that the wastes of war and of unproductive expenditure in the sense I mentioned above can only be made good by greater effort. There is no other way out. Expedients, such as borrowing to provide employment, inflation of the note issue, or the maintenance of high prices by fixing money wages or restricting output, will lead us to harder times and greater difficulties. Expenditures must be reduced. There is abundant evidence in the financial columns of the Press that capital is already having to face the readjustment.

Labour as a rule benefits by falling prices and loses by rising prices.

Are we as a people incapable of facing the position we find ourselves in? Are we able to keep up artificial rates of wages and working restrictions the while repeated applications to the Courts show that real wages—that is, purchasing power—do not follow them? Is it sound to follow the doctrine of high wages for some, while others cannot find employment at that figure? Is it not better for all to work on a lower nominal wage? Could not the readjustment be made by small amounts monthly spread over an extended period, and so reach a sound and profitable basis with as little injury to trade and industry as possible It is imperative that we should be able to produce both in the primary and secondary spheres at a cost enabling us to sell at a profit in competition with the outside world, and, I emphasise, to do so without artificial aids, such as bounties, etc.

The serious increase in taxation is another feature of the high cost of production. This burden is accentuated by the uncertainty, from year to year, in the incidence of taxation and by the administration of the various Acts, which is too often unsympathetic and failing in appreciation of the needs and difficulties of the taxpayers concerned.

The last suggestion I propose to deal with is that the Commonwealth Bank should be made a People's Bank. Those who set this before themselves as their policy do not define the term "People's Bank," but it has a specific meaning in domestic banking. Suffice it to say here that a People's Bank is not a trading bank in the ordinary sense of the term. It is a co-operative institution to assist wage-earners and small husbandry. I take it that what is meant is a trading or commercial bank. We have a population of about six and one-third millions. The trading and savings banks of Australia, and in this connection we include also the Commonwealth Bank, have 2,945 branches with 5,468 agencies, a total of 8,413 points at which banking facilities are offered to the community. This works out approximately at one for every 756 of the population. It can thus be seen that there is no reason to be adduced from the dearth of banking facilities to demand the conversion of the Commonwealth Bank into a People's Bank. On the other hand, it is necessary to point out that, over a period of years, the Commonwealth Bank, in co-operation with the trading banks, has been gradually making progress towards becoming the Central Reserve Bank of Australia, and thus the keystone of the financial arch. Consultations have been had with recognised authorities on this subject, and the principles as laid down by them have ever been kept in the forefront of the board's policy. To alter this policy would be destroy the work of years. The Commonwealth Bank would then become involved in the ordinary vicissitudes of trade, commerce and industry in the same way as the trading banks are. As it could not then fulfil the functions of a central reserve bank, being involved in the same way as the trading banks, and having its assets in the same largely unliquid form as a trading bank must necessarily have, the support of the latter would of necessity have to be withdrawn. The financial position of Australia would then revert to what it was in the first few years of this century, where every bank had to stand on its own feet. Naturally the promoters of the Commonwealth Bank take pride in it, but would it not be an achievement far beyond what its sponsors intended were the present policy accepted and the Commonwealth Bank, with the assistance of the trading banks, allowed to proceed on its way to achieve the great and outstanding distinction of becoming, when the time is ripe therefor, the Central Reserve Bank of Australia.

In conclusion, I wish to express the directors' appreciation of the work of the staff throughout the past year. During that period Mr Oscar Lines, our general manager, retired, and Mr A. C. Davidson was appointed in his place. It is with profound regret that I refer to the untimely death of one of our directors, the late Mr F. B. S. Falkiner, and of one of our auditors, the late Mr W. Harrington Palmer. We wish to place on record the valuable services they rendered to the bank, the former during the eleven (11) years he was a director, and the latter as an auditor for periods extending over the last 27 years, and to express our sympathy with those whom they have left behind in their bereavement. To fill the vacancy on the board Sir Kelso King was asked to join the directorate.

ALEXANDERS DISCOUNT COMPANY, LIMITED.

DIVIDENDS AND BONUS MAINTAINED.
STRONGEST BALANCE SHEET YET SUBMITTED.
MR. COLIN CAMPBELL'S REVIEW.

The sixty-second ordinary general meeting of shareholders of Alexanders Discount Company, Limited, was held, on the 22nd instant, at the office of the company, 24 Lombard Street, London, E.C.

Mr Colin Frederick Campbell, the chairman of the company, presided.

The secretary (Mr A. K. Bruce) having read the notice convening the meeting and the auditors' report,

The chairman said: Ladies and gentlemen,—I assume you will take the report as read as usual. (Agreed.)

The year 1929 stands out in marked contrast to that of 1928. In that year we experienced a uniform Bank rate of 4½ per cent. throughout the year. We also witnessed a considerable influx of gold into the Bank of England, and America was a free lender to other countries, and particularly to Europe. In 1929 all this was changed.

CHANGES IN THE BANK RATE.

The Bank rate was raised on February 7th to 5½ per cent., and again on September 26th to 6½ per cent. Fortunately it did not remain at this high level very long, and the rate was reduced on October 31st to 6 per cent., on November 21st to 5½ per cent., and again on December 13th to 5 per cent., at which rate it stands to-day, the average for the year being £5 9s. 11d.

The Bank of England also lost on balance eight millions of gold during the year; at one time the loss was very much greater than this, but substantial sums were received towards the end of the year. America also, instead of being a free lender, became a very persistent borrower.

The question naturally arises as to what was the cause of these great changes, and it is at once apparent that they are inter-related and bound up one with another. The tremendous wave of speculation in the stock markets of America may be said to have created the movement, so that the free balances held in that country were required to meet the demand being made upon her money market by speculators, and not only was this the case, but the high rates obtainable in New York attracted money from this side, which caused a steady flow of money to that centre during the first half of last year.

GOLD ACCUMULATION BY FRANCE.

This was the main reason for the rise in our rate, and was, indeed a quite sufficient one for the action taken, but a further development arose in the steady accumulation of gold by France, who now holds a stock of £341,000,000 against £257,000,000 a year ago. The precise object of this great accumulation is not very clear. but it was made possible by the large balances held abroad by France, which had been increasing for some time. The French Minister of Finance has stated quite recently that France wishes to establish an international money market in Paris, and her desire to accumulate a large stock of gold is doubtless closely related to this project.

Had the conditions in New York continued into the autumn, it is difficult to say what the Bank rate here might have been forced up to, but, as you all know, the stock markets in America completely collapsed in the autumn, and with the collapse went all the great demand for money. The Bank rate here immediately became effective, and we soon heard of gold beginning to come back to London, with a corresponding fall in our discount rates.

What I am saying is all very elementary, but, looking back, it is interesting to see very clearly the cause and effect of conditions that gave us a good deal of thought at the time.

INDUSTRIAL CONDITIONS AT HOME.

With regard to our own business, we have again been obliged to rely on Treasury bills to a great extent, owing to the scarcity of bank and trade paper. Our basic industries continue in a depressed condition, and it is difficult to take a definitely optimistic view. It may be said that coal is looking up in certain districts, and iron, steel, and shipping are probably in a rather better position than they were a year ago, but, on the other hand, the textile trade is worse now than it has ever been. This does not mean that great efforts are not being made to improve matters, but it does show that the process of regaining markets and of establishing new ones is a slow and tedious one.

The troubles that have occurred in London during the past few months in financial and Stock Exchange circles did not, fortunately, affect the discount market, so that there is no necessity to refer to these matters in dealing with our affairs.

The figures issued by the Clearing House are again interesting, the grand total being the enormous one of £44,896,677,000, being an increase of £692,000,000, or 1·5 per cent., over 1928 Unfortunately, the provincial clearings, as distinguished from the town and metropolitan clearings, give some indication of the depression in trade. The total for Bradford shows a heavy decline of 13·3 per cent., Liverpool 5·6 per cent., Manchester 4·8 per cent., and Birmingham 3·6 per cent. The combined total clearing of the eleven provincial centres amounted to £1,599,213,000, a decline of 4·4 per cent.

FEATURES OF THE ACCOUNTS.

If you will turn now for a moment to the balance sheet and profit and loss account in your hands you will notice that the total at £26,067,119 is some £3,700,000 lower than last year, which is largely accounted for by the decrease in our holding of Government securities. Early in the year, owing to the uncertainty of the outlook and the rapid fall in the Bank of England's gold stock, we thought it wise to reduce our holdings considerably and after-events have proved that this policy was fully justified.

The figure of bills rediscounted is also a good deal lower than that of last year. This is due to the higher rates of discount ruling in London during 1929; the average rate having been £5 4s. 4d., against £4 2s. 10d. in 1928. This higher rate undoubtedly discouraged borrowers from making use of London acceptance credits; in fact, those interested in business with France experienced credit arrangements for franc bills to be discounted in France instead of sterling bills in London, owing to the cheaper rates ruling in the former country.

The consequence was that fewer commercial bills came forward for discount, which, together with the cessation of Continental demand during the last few weeks of the year, accounts for the drop in the figure in the accounts before you.

STRONG FINANCIAL POSITION.

Our gross profits are practically the same as last year, and, after providing for the dividends and bonus at the same rate as in recent years, we are able to increase the carry forward by about £5,000 at £53,089. Taking the balance sheet as a whole, it discloses a very liquid position, and I venture to think that it is the strongest one that your directors have been privileged to submit to you.

Once again we are greatly indebted to Mr. Newcomb and his staff for the skilful way in which they have handled the affairs of the company in a year which was by no means an easy one to deal with.

THE RESOLUTION.

If anybody has any questions to ask before I propose the adoption of the report and accounts, I shall be pleased to answer them. I now beg to propose "That the report and accounts be received, adopted and entered on the minutes, and that dividends for the half-year ended December 31st last be declared at the rate of 6 per cent. per annum on the £200,000 preference capital, and at the rate of 15 per cent. per annum on the £575,000 ordinary capital, both less income tax, and a bonus of 1s. per share on the ordinary shares, free of tax, payable on and after the 23rd instant, and that the balance of £53,089 10s. 10d. be carried forward to next account."

Sir Austin E. Harris, K.B.E.: I have great pleasure in seconding that.

The Chairman: If there are no questions, I shall put that resolution to the meeting. Those in favour will please hold up their hands; on the contrary; that is carried unanimously. The next resolution concerns myself.

RE-ELECTION OF DIRECTORS.

Sir Austin Harris: I beg to move "That Mr Colin Frederick Campbell and Mr George Cleverly Alexander be re-elected directors of the company."

Mr Eric Gore Browne, D.S.O.: I have much pleasure in seconding that resolution.

The Chairman: Those in favour; on the contrary; carried unanimously. Then we have to confirm the appointment of

CAPITAL and INTEREST

are both lost if your investments fail.

This loss may be avoided by investing in "Globe" Life Assurance, a gilt-edged security not liable to depreciation.

A copy of our new comprehensive prospectus, featuring many attractive schemes, will be sent post free on your request.

THE

LIVERPOOL & LONDON & GLOBE

INSURANCE COMPANY, LTD.

Head Office: 1, Dale Street, Liverpool. | **London:** *Chief Office:* 1, Cornhill, E.C.3.

Mr Frank Newcomb as a director. I have much pleasure in proposing that.

Mr G. C. Alexander: I have great pleasure in seconding that.

The Chairman: Those in favour; on the contrary; carried unanimously. I will now ask someone on the other side of the table to move the reappointment of the auditors.

Mr E. D. Spring-Rice: I have pleasure in moving the reappointment of Messrs Price, Waterhouse and Company as auditors.

Mr E. B. Baggallay: I should like to second that. I presume it is at the same remuneration as before.

The Chairman: Yes. That has been proposed and seconded. Those in favour; on the contrary; carried unanimously. That, ladies and gentlemen, concludes our business.

The proceedings then terminated.

UNION DISCOUNT COMPANY OF LONDON, LIMITED.

REVIEW OF MONETARY CONDITIONS.

FAVOURABLE RESULTS.

The seventy-second ordinary general meeting of the shareholders of the Union Discount Company of London, Ltd., was held, on the 23rd instant, at the Cannon Street Hotel, London, E.C.

Mr Archibald A. Jamieson presided.

The secretary (Mr C. W. Holliday) read the notice convening the meeting and also the auditors' report.

The chairman, after referring to the death of Sir Robert Balfour, Bart., said: I shall now run over the various items in the accounts. Our capital and reserve remain at three millions, the same as in 1928. Our loans, deposits and other liabilities and provision for contingencies at December 31, 1929, were £45,591,127, compared with £45,875,810 in 1928.

Our bills re-discounted were £12,310,529, as against £15,634,655 in 1928. This is a decline of about 3¼ millions, although the stock of bills on hand was a record—£40,263,578. This compares with £39,207,884 in 1928. The rebate on bills discounted showed an increase—£634,033, compared with £585,004 in 1928. Cash on hand, you will see, on December 31, 1929, was £1,328,876.

Our holding of British Government short-term securities, Exchequer bonds, Treasury bonds and other short-dated gilt-edged securities was lower in 1929 than it was in 1928—£7,629,621, as against £8,963,231. Loans on securities, £208,767, compares with £123,230 in 1928. The bills discounted figures were £52,574,107, compared with £54,842,539 in 1928.

DIVIDEND, BONUS AND ALLOCATIONS.

Out of the year's profits, £10,000, you will observe, it is proposed should be used in reduction of freehold and leasehold premises account, now standing in the balance-sheet at £90,000. We ask you to sanction this, and to authorise the allocation of £10,000 again this year to the trustees of the staff provident fund. An interim dividend was paid last July of 15 per cent. per annum, less income tax, and we now ask you to confirm this, also to give us your authority to pay a final dividend to December 31st last at the same rate of 15 per cent. per annum, less income tax, and, in addition, a bonus of 2s. 6d. per share, free of tax, for 1929.

If these suggested appropriations are authorised, there will remain a balance of £269,291 19s. 8d. to be carried forward to the 1930 accounts. The gross profits for 1929, after making provision for contingencies, were £977,122 6s. 1d., compared with £909,203 9s. 11d. in 1928. These were our company's results for 1929, and I think you will agree, keeping in mind the state of credit all over the world—and your company's interests are of necessity of an international character—that these results were favourable.

The chief factor of the financial year 1929 which affected the London discount market was speculation in Wall Street and its effect on European bank rates.

STOCK EXCHANGE SPECULATION IN U.S.A.

The prosperity of the United States of America is essential to world prosperity. A prosperous world is not possible without good trade conditions across the Atlantic, but unsound speculation based upon this prosperity has ramifications which affect the rest of the world.

While the collapse of the Stock Exchange speculative orgy, with its fantastic price-levels, has removed a nightmare and menace to the trade of the world, we all hope that the inevitable progress of the United States of America will continue on lines that will not again injuriously affect the credit systems and price-levels of all other countries.

When the richest country in the world, in search of funds for Stock Exchange speculation, competes abroad and bids higher rates for money than those current there, it must be only a question of time when such action will prove disadvantageous not only to the lenders, but to the borrowers as well. Fortunately this danger has disappeared for the present, but it is by no means certain that it may not return again.

Speculative excesses are common and periodic. In the past, their consequences have been confined almost entirely to the countries in which they occurred. Nowadays, through the interdependence and closer relationship of nations, these outbreaks of excessive speculation tend to become wider in range and more injurious in their results, and the demand for funds to finance such an excess in a country of great world importance must have its reactions throughout the world.

By means of the gold standard money is an easily transferable thing; it can be functioning to-day in London, to-morrow in New York, and the next day in Berlin. Movements of this kind affect rates of exchange and gold stocks.

One nation can injure another by damaging its economic structure Such damage may be equally devastating as war in its results on other nations who, because of its insidious form, are only vaguely conscious of the cause of their adversity, and this condition may come about without any desire or intention to harm, but through lack of understanding and neglect of the responsibility which all the great nations upon the gold standard must bear to one another. The right and wise control by nations of gold itself is a matter of concern to every man, woman and child in every country though few are aware of it.

CONSEQUENCES OF SPECULATION.

The consequences of the recent speculation have not been confined to the citizens of the United States. In Europe, bank rates have had to be put up, and money has had to be borrowed by Governments at abnormal rates. Trade has suffered for the same reason, more especially in those countries where unemployment is so large and tending upwards.

All thoughtful persons welcome every international effort to reduce expenditure on armaments and to promote peace and economy among the nations. Nowadays, the futility of war and its injury to all are generally recognised by mankind. Is it not probable that, under modern conditions of international intimacy, there is a danger of an injury to mankind which arises in a more subtle manner, but which in its ultimate effect may be as injurious as war itself?

If the facts have been fairly stated, it is obvious that the reduction of world expenditure on armaments is not only matter of grave international importance that calls for consideration and settlement by the representatives of the great nations.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C. 4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

PROVINCIAL BANK OF IRELAND LIMITED.

PERIOD OF ABNORMAL CONDITIONS.

CONDITIONS IN FREE STATE AND NORTHERN IRELAND.

MR. RICHARD D. TROTTER'S REVIEW.

The 105th annual general meeting of the shareholders of the Provincial Bank of Ireland, Ltd., was held, on January 22nd, at the head office of the bank, No. 8, Throgmorton Avenue, London, E.C., Mr Richard D. Trotter (the chairman) presided, and the other directors present were: Mr John C. D. Carlisle; the Hon. Sir William H. Goschen, K.B.E.; Mr Robert A. Gradwell, Mr. Henry S. H. Guinness, Mr Edward R. D. Hoare, and Mr Alexander B. Leslie-Melville.

The secretary (Mr Hume Robertson) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—The report has been in your hands for some days, and you will, I hope, as usual, kindly take it as read.

During the half-year we have lost the services of a very valued colleague in the person of Mr Walter S. M. Burns, who died last month. His wide experience and judgment had been brought to the deliberations of our board for the past fifteen years. We are happy in having secured as his successor Mr Edward R. D. Hoare, whose association with us revives an old connection. His election will come before you later for confirmation.

ABNORMAL CONDITIONS.

Our report covers a period of abnormal conditions which have disturbed trade and finance in Great Britain and throughout the world. The past half-year has been one of considerable difficulty and strain for bankers all over the world, and the closing months have been shadowed by Stock Exchange troubles, which have not yet been entirely surmounted. We do not here concern ourselves with any review of international affairs, but a year that has witnessed five changes in the Bank rate in this country, and a similar number of movements in the Irish Bank rate, must be noted as one of the most eventful since the war.

Although the gross figures of our assets and liabilities do not show appreciable change, the individual items mark fluctuations which invite comment. The net profit for the half-year, while maintaining the level recorded at June last, is lower by £11,200 when compared with the corresponding period of 1928, and is given in the balance sheet at £50,794. I may explain that this is not due to any special reverse in the normal course of our business, and has no connection with the unpleasant developments which have brought the names of various concerns into prominence during recent months. It is our experience that a period of high rates, such as we have had for the greater part of the last half-year, is not advantageous for profits in our business.

NEW CURRRENCY ARRANGEMENTS.

I referred last year to the adverse effect that we anticipated the new currency arrangements in the Irish Free State would have upon our profits. The new conditions have been in operation since May last, and our fears of diminished profits from our circulation have been confirmed. You will see that our notes in issue at 31st ultimo stood at £921,677 against £1,046,863 a year ago, but I have explained on previous occasions that the figures in this connection are not now strictly comparable owing to the changes that have occurred in the working of the circulation of the banks of issue in the Irish Free State under the Currency Act of 1927. In terms of the Act redemption is still proceeding of notes issued by this and other banks under the Act of 1845, and in the Free State these notes and British currency and Bank of England notes are being replaced by our new local issues. This loss of circulation has been accompanied by a large increase in the duty we are called upon to pay in the Irish Free State.

LARGE CASH RESOURCES.

Continuing our analysis of the balance sheet, it is gratifying to note that our deposits show steady expansion as compared with the two previous half-years; and advances at £6,760,000 mark an increase of about £26,000 on the figures for the corresponding period of 1928. Having regard to prevailing conditions, it has been considered prudent to keep our cash resources at a high level, and our total of cash and Treasury bills, at £3,849,000, compares with £2,479,900 a year ago. On the other hand, you will note that investments at £6,189,000 are lower by £1,394,000. As regards the values of the majority of securities, the year has no doubt been one rather of adjustment and reaction, but I can renew the assurance you have had from time to time that the market value of the bank's investments is in excess of the figures at which they appear in our balance sheet. The proportion of liquid assets to liabilities remains at 63 per cent.

After provision for the dividend at the rate of 14½ per cent. per annum, you will note the application of £10,000 to reserve raises the fund to £640,000, which brings us to £100,000 in excess of our paid-up capital of £540,000, and the credit of £10,000 to premises account leaves the total for a time below £200,000, but our expenditure on premises has to be carried further, as certain outlays on buildings are still pending.

AGRICULTURAL CONDITIONS.

Reports concerning harvest results have been generally favourable from all parts of Ireland, harvesting operations having been conducted under highly satisfactory conditions. While the yield in the case of most crops has been exceptionally abundant, the net results to growers who realised have meant but a narrow margin of profit. Improved conditions of pasturage are producing better yields of milk, and better finish of live stock, the trade in which has shown improvement, especially in the cross-Channel demand for store cattle of suitable quality and condition. The herds throughout Ireland have been happily free from disease, and the export trade has been conducted without interruption. The shipments of cattle from Irish ports show an important increase for last year, with improved prices in recent months, and official returns continue to show increasing numbers for the holdings of live stock both in Free State and Northern Ireland. The importance of the trade is indicated by the total of 883,400 animals shipped during the year.

LINEN TRADE IN NORTHERN IRELAND.

In Northern Ireland we find that a hopeful spirit still pervades the linen trade, and is encouraged by the lower costs of production following reduced prices for raw material, but the benefits which may be expected from the activities of the Linen Guild and of the delegation to the United States and to Canada have probably not yet fully developed, owing to the disturbed financial conditions on the American Continent. There are indications that good results may yet be reached by closer co-operation in certain branches of the trade, and the efforts to accomplish this are, I believe, still progressing.

The Government de-rating schemes in the North of Ireland have brought substantial benefit to the linen trade through relief of rates and a lessening of certain overhead charges, and the remission of rates for textile factories must also prove advantageous. The assistance afforded to the agricultural community through the de-rating of farms will doubtless soon be reflected in improved conditions.

This brief reference to Northern Ireland would, however, be incomplete if I omitted to express gratification at the largely increased output last year in the shipbuilding yards of the City of Belfast. We hope the record for the current year will be equally satisfactory.

SUPPLY OF ELECTRICITY.

During recent months the Government of the Irish Free State has had the good fortune to see the commencement of the supply of electricity from the great electrical works on the banks of the River Shannon. The prospects of the ultimate success of this most enterprising if costly undertaking are, I believe, very encouraging. We must look upon it as evidence of the progressive spirit animating the Government of the Free State. It will be of interest to you to know that at practically all points where the Electricity Supply Board have the current available for us, we are gradually completing the lighting installation of our premises.

Speaking generally, I may say that the financial credit of the Free State is well maintained, and the prices of the loan issues stand high in the Dublin market. It is worthy of note, as an indication I would hope of expanding trade and of commercial development, that the registered tonnage of vessels entering the Port of Dublin last year reached a total of 2,340,000, an increase of 48,500 on the figures for 1928, being, with the exception of one year, a record in the long history of the port.

FACILITIES OFFERED TO CUSTOMERS.

I am glad to be in a position to report that our customers and friends are making a steadily increasing use of the facilities we are now able to afford them through our income tax recovery offices, our trustee and executor department and our foreign exchange organisations. It is pleasant to find that these auxiliary features in our business activities are valued by our supporters, and their introduction into our official routine being justified by results

and by the developing interest of those whom we are in a position to assist.

The position of chief officer in Ireland recently became vacant through the retirement of Mr Samuel D. Budd, who had filled the office through the past 10½ years, which, as you know, have covered a memorable and strenuous time in our history. We part regretfully with the services of one whose conspicuous ability and devotion to duty had marked his career for fifty-seven years, and rendered him a valued officer, whose counsels have been of great service to the board.

Owing to advancing years Mr Budd relinquished the arduous duties which for so many years devolved upon him, and has taken with him our most cordial good wishes for the years to come, which we trust may be many and happy.

NEW CHIEF OFFICER IN IRELAND.

In his successor, Mr Bradshaw, we have an officer who has qualified for advancement by the successful discharge of duty in various capacities, and who brings to his responsible office an extensive knowledge of the bank and its affairs.

I will close my remarks by expressing the appreciation of the board of the work of the inspectors, the managers and the staff at London and throughout the branches.

I now beg to move: "That the report of the directors and relative balance-sheet of the affairs of the bank as at December 31, 1929, already in the hands of the proprietors, be adopted." I will ask Sir William Goschen to second this.

The Hon. Sir William H. Goschen, K.B.E., seconded the resolution, which was carried unanimously.

The Chairman then proposed the re-election of the directors retiring by rotation, Mr John C. D. Carlisle and Mr J. Harold Pim, F.C.A., which was seconded by Mr A. B. Leslie-Melville and unanimously approved.

The confirmation of the election of Mr Edward Ralphe Douro Hoare as a director of the bank was also unanimously approved.

On the motion of Mr Charles Sebag Montefiore, seconded by Mr Edward C. Steward, the auditors, Mr Stuart R. Cooper, F.C.A., and Mr G. Brock, F.C.A., were reappointed.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr Charles Sebag Montefiore: Mr Chairman and gentlemen, Before we part I should like from this side of the table to take the opportunity—an opportunity which I have been looking forward to and hoping for—of expressing on behalf of the shareholders an appreciation of our thanks both to you, sir, as chairman, and to your colleagues on the board. The interest with which we have listened to your explanation of the figures in the balance sheet, and also the note of optimism in your speech as regards the outlook of affairs in Ireland tend perhaps to make us forget that this is the result of a year of very hard work and careful supervision in our interests. As you have rightly said, sir, it has been a very difficult year in the City of London for all bankers, and we must count ourselves very fortunate that we have you, sir, as chairman and your colleagues on the board to look after our interests and the interests of the bank, and to give us as satisfactory a statement as you have done to-day. Without delaying you further, I would like o propose a very hearty vote of thanks to the Chairman and directors for the careful regard they have had to our interests and for the way in which they have managed the bank during the past year.

Mr W. H. Corker seconded the vote, which was cordially approved.

The Chairman briefly acknowledged the compliment, and the proceedings terminated.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 18, 1930:—

(000's omitted.)

Expenditure.	£	Receipts	£
Supply Services	7,950	From Revenue	18,682
Interest, &c., on Debt	753	Decrease in Balances	19
Sinking Fund	615		
Sundries	93		
Decrease in Debt	9,290		
	18,701		18,701

The ordinary revenue for the week amounted to £18,681,500, as compared with £18,098,000. Income tax was higher at £9,903,000, against £8,921,000, but super tax was lower at £1,860,000, against £2,240,000. Customs and Excise brought in £1,547,000 and £6,565,000, as compared with £1,310,000, and £7,186,000 respectively. Ordinary receipts amounted to £29,000, against £91,000, and special receipts to £10,000, against nil last year. The National Debt was reduced by £19,289,700, as shown below:—

(000's omitted.)

	£		£
Public Dept. Advances	+ 3,950	Treasury Bills	— 26,739
5% Conversion Loan	+ 11,850		
National Savings Certificates	+ 150		
Sundries	+ 1,500		
	+ 17,450		— 26,739

The Floating Debt was reduced by £22,795,000 to £795,640,000.

FINANCIAL YEAR, 1929-30, APRIL 1 TO JANUARY 18.

	£		£
Expenditure	620,441,037	Revenue	472,089,224

	Total	1,002,613		Total	506,016

Net arrivals, £496,597.

Messrs Samuel Montagu and Co. write on January 22, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £150,466,378 on the 15th instant (as compared with £149,061,137 on the previous Wednesday), and represents a decrease of £3,439,937 since April 29, 1925—when an effective gold standard was resumed. Bar gold from South Africa to the value of £553,000 was available in the open market yesterday and realised 84s. 11d. per fine ounce. The main proportion, viz., £375,000 was taken for France, whilst Germany secured £130,000. Of the balance the Home and Continental trade took £33,000 and India £15,000. There was a net influx of gold of £590,186 during the week.

The anticipated stabilisation upon a gold basis of the currency of Indo-China has now become effective. An official announcement gives the rate of stabilisation as Frcs. 10 to the Piastre: the gold contents of the latter will thus be approximately equal to 9·09737 grains of fine gold.

An order issued on the 15th instant to the Chinese Customs authorities by the Finance Minister of the Nanking Government stated that from February 1st next Customs duties on imports from abroad will be collected on a gold basis. The Haikwan tael is to be no longer used as the unit of calculation and is to be replaced by a new gold unit. This new gold unit will be equal to 60·1866 centigrammes of fine gold equivalent to 19·7265 pence sterling. This important change has resulted from the decline in the value of silver, in consequence of which the value of the Chinese Customs receipts had greatly depreciated in terms of gold.

SILVER.

A somewhat quieter tone has prevailed in the market and although prices have fluctuated the trend has been downward. The demand from China eased, and during the latter part of the week there has been some re-selling from the same quarter. The Indian Bazaars have sold for forward dates but have continued to acquire silver for near delivery, this demand being sufficient to maintain a premium varying from ⅜d. to ½d. on silver for cash delivery. America offered freely at the higher rates, but also gave support as the market declined.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 13th instant to mid-day on the 20th instant :—

IMPORTS.	£
Germany	24,407
France	33,500
U.S.A.	46,300
Mexico	11,348
Canada	38,135
Other countries	15,875
	£169,565

EXPORTS.	£
Soviet Union (Russia)	77,736
Hong Kong	121,875
British India	166,243
Other countries	9,093
	£374,947

AFRICAN AND EASTERN TRADE CORPORATION, LTD.—The African and Eastern Trade Corporation, Ltd., officially announce that payment will be made, on February 10, 1930, of six months' dividend, less tax, to December 31, 1928, on the 6 per cent. "B" cumulative preference shares. A general meeting will be held at Liverpool on January 24th, and notices to the shareholders will be posted shortly.

AUSTIN MOTOR COMPANY, LTD.—With regard to 6 per cent. "B" preference shares, the warrants, covering the payment of a further year's dividend on account of the arrears still outstanding on these shares, have been despatched to shareholders. This represents a payment of £75,000 gross, less tax, £60,000 net. It is of interest to note that since April, 1928, the undermentioned payments on account of these arrears have been made to the shareholders: 13/4/28, one year to June 30, 1921, £75,000 gross; 31/12/28, two years to June 30, 1923, £150,000 gross; 1/7/29, one year to June 30, 1924, £75,000 gross; 30/9/29, one year to June 30, 1925, £75,000 gross; 15/1/30, one year to June 30, 1926, £75,000 gross; total, £450,000 gross.

STEEL INDUSTRIES OF GREAT BRITAIN, LTD.—The directors announce a dividend at the rate of 6½ per cent. per annum on the cumulative convertible preference shares of the company in respect of the half-year to December 31, 1929. Dividend warrants will be posted to the preference shareholders on January 30, 1930.

BANK OF NEW SOUTH WALES.—The net profit for the year ending September 30, 1928, should read £1,184,943, not £1,355,559 as published in the *Economist* of January 18, 1930

REPORTS AND NOTICES.

Captain George J. R. Cooper has joined the board of the Equitable Life Assurance Society.

William Chamberlain has been elected a director of International Paper and Power Company.

We understand that Mr J. H. Tresfon has resigned his seat on the board of N.V. Margarine Unie and Margarine Union, Ltd., as from January 1, 1930.

Mr A. Blackmore relinquished his position as secretary and routine director of the United Steel Companies, Ltd., United Strip and Bar Mills, Ltd., and United Coke and Chemicals, Ltd., on December 31st last.

At a general meeting of the Life Offices' Association, held on January 20, 1930, Mr W. A. Workman, general manager of the Legal and General Assurance Society, was re-elected chairman, and Mr W. Penman, actuary and life manager of the Atlas Assurance Company, Ltd., was re-elected deputy chairman.

The Board of the Peruvian Corporation have elected Mr. William Stephen Eyre to be Deputy Chairman.

BANKS.

BANK OF ITALY NATIONAL TRUST AND SAVINGS ASSOCIATION.—The statement at December 31, 1929, show total resources of $1,055,113,373. The bank's deposits show an increase of $195,800,000 as compared with December 31, 1928.

BANKERS TRUST COMPANY.—The Statement of Bankers Trust Company as of December 31, 1929, show total assets of $817,976,883, an increase of $44,708,016 over the corresponding figure a year ago. With capital $25,000,000, surplus $50,000,000, and undivided profits $32,631,387, the capital structure totals $107,631,387, an increase of $5,244,205 over the corresponding figure of $102,387,182 on December 31, 1928. Deposits on December 31, 1929, are shown at $552,521,900, as against $509,621,859 a year ago. During the same period time and demand loans expanded from $432,804,456 to $461,626,041, an increase of $28,821,584.

THE DOMINION BANK.—The London Office have been advised by the head office at Toronto that the total profits of the bank for the year ended December 31, 1929, amount to $1,522,000, with total assets standing at $154,181,000. These figures both represent new high records in the bank's history, profits for the year 1928 being $1,408,000, with assets at $152,605,000. The immediately available assets exceed 51 per cent. of the public liabilities.

MISCELLANEOUS.

APEX TRINIDAD OILFIELDS.—Oil profits of the year ended September 30, 1929, amounted to £447,650, against £348,523, from which fall to be deducted :—Amortisation of wells, £132,349, and head office expenditure, £2,092, leaving a profit of £313,208, against £246,474. Add balance from previous year £119,374, making £432,582, against which there is chargeable :—Interim dividend of 22½ per cent., £112,500; directors' additional remuneration, £5,625; reserve for income tax in United Kingdom and Trinidad, £36,935, leaving balance to credit of profit and loss account of £277,522. The directors recommend the payment of a final dividend of 30 per cent., less tax, making 52½ per cent. for the year, against 30 per cent., £120,022 against £119,374 to be carried forward.

EDISON BELL, LIMITED.—The twentieth annual report and Accounts show a profit for the year ended September 30, 1929, of £28,145 (last accounts for 15 months showed a profit of £20,158). Adding the amount brought forward and deducting the preference dividend and interim dividend of 5 per cent. paid on the ordinary shares, there is a balance of £19,176, from which the directors recommend the payment of a final dividend of 5 per cent., making 10 per cent. for the year, and the writing off of £3,000 from expenses of preference share issue, leaving £8,676 to be carried forward. For the last financial period the dividend was 12½ per cent., but that covered a period of 15 months and, in addition, the accounts included £33,139 in respect of the sale of foreign trading interests, of which £20,000 was placed to reserve.

EVER READY TRUST AND FINANCE.—After meeting expenses the revenue account of the Ever Ready Trust and Finance Company for the initial period from November 14, 1928, to December 31, 1929, shows a balance of £43,837, from which is deducted for income tax £8,675, leaving £35,162. The directors have written off preliminary expenses (one-third) £11,040, and transferred to capital reserve account £9,536, leaving £14,586 to go forward. The investments are taken into the balance sheet at cost (£677,100). The market value of the quoted securities as at December 31, 1929, shows a depreciation of £39,090.

FREMLINS LIMITED.—The report for the period ending September 30, 1929, shows a profit, after charging all expenses other than income tax, of £87,655; dividend on preference shares absorbed £18,851; interest paid to vendors pending completion of purchase, £9,744; and transfer to reserves profits prior to incorporation, £10,000; leaving a balance of £49,059. Income tax absorbs £8,688. The directors propose a final dividend of 5 per cent., which, with the interim already paid at the rate of 2½ per cent., represents approximately 10 per cent. per annum on the ordinary shares for the period concerned. Carried forward, £17,622.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions have enabled farmers in the United Kingdom to resume field work, and fair progress was made with preparations for spring sowings. The course of the grain markets, however, affords little encouragement to lay down a larger acreage this year; growers are dissatisfied with the unremunerative prices ruling, and are also faced by Continental competition. Native wheat was in larger supply at the principal Statute markets, but trade showed no improvement and a weaker tendency resulted. The import market, however, was less depressed, and values showed a moderate recovery from the low levels recently ruling. In the floating and forward cargo section, a good business is reported in Australian sorts to India and Japan, while, on this side, Portugal is filling seasonal requirements, and Germany taking fair quantities from Argentina. North America also experienced a better export movement, principally on U.K. account, which induced Canadian and United States sellers to raise their limits, and it would appear that the policy of the American Farm Board to maintain prices in that country still holds good. Although European demand is slowly increasing, the movement is insufficient to have appreciable effect on large stocks in the northern hemisphere, which still dominate the international situation, and unless trade materially improves in the near future, any upward movement must be difficult to sustain in view of fair competition by southern hemisphere exporters. The recent improvement in demand for Plate maize was maintained, and prices responded to higher first-hand offers, with sellers showing more reserve. Buyers however, are reluctant to follow the advance, while competition from barley and oats is still an adverse factor in the maize position. Little or no interest was evinced in Danubian descriptions, of which practically the whole exportable surplus remains to be shipped, while South African varieties are generally held above the market.

Wheat.—Irregular, but tone steadier. No. 1 Northern Manitoba, ex-ship, 53s.; No. 2 ditto, 52s. 3d.; No. 3, 51s. 3d.; No. 4 Manitoba, 50s. 3d.; No. 5, 47s.; No. 6, 40s.; No. 1 Vancouver, 52s. 6d.; No. 2, 51s. 9d.; No. 3, 50s. 6d.; No. 2 hard Winter, 46s. 9d.; Rosafe, 63½ lbs., 45s. 9d.; Barusso, 63½ lbs., 46s. 3d.; Australian, 48s. 3d. per 496 lbs. English, 9s. 4d.-9s. 6d. per 112 lbs.

Flour.—Steady. London straight run, 41s. per sack for country deliveries, and 40s. London area. Of imported, Manitoba patents, 39s.-41s. 6d.; Buffalo, 39s.-41s.; Australian, 36s. 6d., ex-store. On c.i.f. terms, Manitoba top patents, January-February, 39s. 6d.; export ditto, 37s.-37s. 6d.; Australian, 34s. 3d.-34s. 6d. per 280 lbs. Argentine low grade, February-March, £7 per ton.

Maize.—Firmer. Plate, landed, 28s. 3d.; ex-ship, to arrive, 27s.; February-March, 28s. 3d.; new, April-May, 29s. 3d.; May-June, 28s. 9d. per 480 lbs. Yellow maize meal, £8 5s. per ton f.o.r. London. Yellow African, £7; white, £6 10s. per ton ex-ship.

Barley.—Dull. Californian old, landed, 36s.-42s.; new, ex-ship, 37s.-45s. as to sample; Chilian brewing, ex-store, 36s.-42s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs.; No. 2 Federal American, landed, 24s. 6d.; Danubian, landed, 25s. 3d.; Black Sea, January, ex-ship, 22s. 6d.; Persian ditto, 22s. 6d. per 400 lbs. English malting, 8s. 6d.-13s.; feed, 7s. 3d.-8s. per 112 lbs.

Oats.—Quiet. Plate, landed, 17s.; ex-ship, to arrive, 15s. 6d.; black Plate, landed, 17s.; Chilian, white, landed, 24s.; ditto, tawny, 19s. 6d.; German, landed, 20s.; ex-ship, to arrive, 19s.; mixed Canadian feed, 15s. 9d.; South Russian, 18s. per 320 lbs. English, 7s.-7s. 6d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE MIDLAND BANK LIMITED

In accordance with the provisions of Sub-section 1 of Section 134 of the Companies Act, 1929, we report as follows :—

We have examined the above Balance Sheet in detail with the Books at Head Office and with the certified Returns from the Branches. We have satisfied ourselves as to the correctness of the Coin, Bank Notes and Balances with the Bank of England, Balances with, and Cheques in course of Collection on other Banks in Great Britain and Ireland and Bills Discounted, and have verified the correctness of the Money at Call and Short Notice. We have also verified the Securities representing the Investments of the Bank, and having obtained all the information and explanations we have required, we are of opinion that such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

MIDLAND BANK EXECUTOR & TRUSTEE CO. LTD.

THE COAL TRADE.

Our Sheffield correspondent writes: The export demand for South Yorkshire hard coal continues moderately good, with prices slightly easier, current quotations being 18s. 6d. f.o.b. The mild weather is responsible for abnormal quietude in house coal. The same influence is affecting adversely sales of blast furnace coke. This is quoted at 17s. 6d. at ovens.

Our Glasgow correspondent writes: Demand is still running on small lines, and the market has an easier tendency, with nuts of all sizes a weak feature. Treble nuts are at best 17s., while fully 1s. under that is more usual quotation. Current prices for shipping business are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 16s.; splint best, 17s. 6d.; splint second, 16s. 9d.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; steam, 14s. 6d.-15s.; Hartley, 18s.; trebles, 16s.; doubles, 14s. 6d.-15s.; singles, 14s.; pearls, 13s. 6d.; dross, 10s. FIFE.—Screened navigation, 18s.-19s. 6d.; first-class steam, 15s.-16s.; third-class steam, 14s.; trebles, 17s.; doubles, 14s. 6d.-14s. 9d.; singles, 14s. 3d.; pearls, 13s. 6d. LOTHIANS.—Prime steam, 14s. 6d.; secondary steam, 14s.; trebles, 17s.-17s. 6d.; doubles, 14s. 6d.; singles, 14s.; pearls, 13s. 6d.-14s. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s. 6d.; trebles, 16s.; doubles, 14s. 9d.; singles, 14s.; pearls, 13s. 6d.; dross, 10s. 6d.; all per ton f.o.b. Ayr or Troon.

Our Cardiff correspondent writes: Comparatively quiet conditions have existed this week on the Cardiff coal market. Colliery contract commitments are heavy, and there has been a good supply of prompt tonnage, but there has been little current inquiry, and the market is finding it impossible to absorb the quotas for the first quarter under the output regulation scheme, with the result that stocks are accumulating and work in some of the pits becoming less regular. For practically all descriptions of large coals market quotations are on the basis of the minimum schedule, but for small coals they are still quite firm up to 2s. per ton above the scheduled figures. The quantity of coal shipped at the South Wales docks last week was 631,700 tons, compared with 658,100 tons in the previous week, and 584,604 tons in the corresponding week last year. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 20s.; best drys, 20s. to 20s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. 3d. to 18s. 6d.; Eastern Valleys, 18s. to 18s. 3d.; best small steams, 14s. 9d. to 15s.; cargo smalls, 14s. to 14s. 3d.; coking smalls, 14s. 6d. to 15s.; anthracite best large, 36s. to 38s.; Red Vein large, 26s. to 28s.; machine made cobbles, 42s. 6d. to 45s. 6d.; French nuts, 45s. to 47s. 6d.; stove nuts, 44s. to 46s.; rubbly culm, 12s. 6d. to 13s.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 27s. to 27s. 3d.

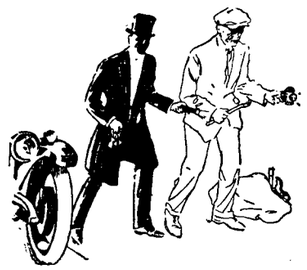
IRON AND STEEL.

We extract the following from the weekly report of The London Iron and Steel Exchange:—The iron and steel markets over the past week have been disturbed by the cartel negotiations which have been going on among Continental steel makers. The uncertainty as to the outcome of these negotiations has reacted upon most of the export markets, and buying appears to have been held up in consequence. On the whole, however, British steel makers, though not particularly well off for orders, have booked a certain amount of business which has enabled them to face the future with rather more confidence. Nevertheless, complaints are general regarding the smallness of the export demand. The pig iron department continues to receive a steady flow of orders; but imports of Continental iron are reported at cheap prices. Inquiries for semi-finished material have been circulated in fair volume; but much of this appears to have been only for the purpose of testing the market. A number of Continental works have ceased quoting for the time being, and this has led to more business going to the British steelworks. Similar conditions have prevailed in the finished steel department.

Our Middlesbrough correspondent writes: The demand for Cleveland iron shows little improvement, and during the past week the market has been extremely dull. Consumers are drawing their supplies from contracts made some time ago, and so far show little inclination to enter into fresh purchases of importance, the tendency being to carry on from hand to mouth, and wait further market developments. Makers are not pressing sales, and although there has been some accumulation in stocks recently, the aggregate is not of any great volume, and they look for further buying before long. At Tuesday's market business was again confined to small parcels for early delivery. Makers realised 72s. 6d. for No. 3, but for destinations where merchants can compete they cut this price to some extent. No. 1 was unaltered at 75s., No. 4 foundry 71s. 6d., and No. 4 forge 71s. f.o.b. or f.o.t. Shipments of all kinds of pig iron to 21st inst. amount to 13,726 tons, against 8,436 tons for the same period of last month. Hematite is only in moderate demand, and although inquiries continue to circulate for important quantities, business matures very slowly. Increased Continental competition is being encountered in different export markets, and home consumers are only buying sparingly at present. Although makers have good contracts on their books, they are anxious for more business, and for early shipment would accept 78s. 6d. for mixed numbers, but for delivery a few months ahead 80s. is asked. This figure would, however, be shaded for good lines. In the steel trade works continue busy, but the demand for sheets is still poor. Prices are unchanged from last week. Dorman, Long & Co., Limited, and The Cargo Fleet Iron Co., Limited, share an order for 10,000 tram rails for the London County Council and the L. M. & S. Railways have placed orders for railway chairs of about £50,000 value among local makers. Cochrane & Co., Limited, have also secured an important order for cast iron pipes for a new water scheme in Aberdeenshire, and an order for 20 large tank engines has been placed with R. Stephenson & Co., Limited, Darlington, by the Central Argentine Railways. In ore consumers are well stocked, and continue to hold off the market. One or two spot cargoes of best rubio were offered last week at below market rates, but for delivery a few months ahead, 23s. c.i.f. Middlesbrough is the nominal quotation. The rate of freight Bilbao/Middlesbrough for prompt tonnage is about 6s. 9d. Coke continues in full supply, and good furnace qualities are now obtainable at 22s. to 22s. 6d. delivered works. The number of furnaces in blast in the district is 40.

Our Sheffield correspondent writes: Steel makers are still awaiting the development of a buying movement, as, outside certain special lines, business this month has been confined to hand-to-mouth quantities. There is little disposition to order forward and the apparent absence of confidence is somewhat disconcerting. The output of the Sheffield industries this month has been exceptionally poor, alike in the heavy and light branches. Makers of tool steels and alloy steels are experiencing formidable competition in their home market from Germany and Sweden, as the low prices of this material prove tempting to many users. The present output of open hearth steel in the Sheffield area is about half the available capacity. The North Lincolnshire steel furnaces, however, are working nearly up to capacity. Prices are unchanged as a whole, but easier as regards the cheaper qualities of steel. There is little doing in pig iron, and the local ironfoundries have no considerable amount of work on hand or in prospect. Overseas business is on the quiet side.

Our Glasgow correspondent writes: Business is not picking up to the extent that was looked for at the beginning of the year. Steelmakers are, however, fairly busy and have a considerable amount of work on hand. During the present week several additional shipbuilding contracts have been placed with yards on the Clyde, including three oil-tanker vessels for the Anglo-Persian Oil Co.—two to be built by Messrs Lithgows, Ltd., at Port Glasgow, and one by the Greenock Dockyard Co., Limited, Greenock. These vessels will be engined by Messrs J. G. Kincaid & Co., Limited, of



Thieves, Ancient and Modern.

THE CHATWOOD SAFE

Has a strong deep hold upon Bankers and those with treasure to protect.

It gives a feeling of confidence that only work of quality can give.

The protection lies in the strength of the defence, while the design embodies the experience of the past and the knowledge of the present.

What The Chatwood Safe has it holds, for delivery only to the keeper of the key.

It is the cheapest safe that can be bought having regard to the contented security offered. J.E.S.

AUDITORS' REPORT TO THE MEMBERS OF BARCLAYS BANK LIMITED.

We have compared the above Balance Sheet with the balances on the Books at the Head Office, and with the detailed Returns from the Branches. We have verified the Cash with the Bank of England, the Cash and Bills at the Head Office, the Investments of the Bank and the Securities held against Money at Call and Short Notice. We have obtained all the information and explanations we have required, and we are of the opinion that the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shewn by the Books and Returns of the Bank.

KEMP, CHATTERIS, NICHOLS, SENDELL & CO., PRICE, WATERHOUSE & CO., *Auditors.*

LONDON, *9th January*, 1930.

Greenock. The outlook in the tube trade is somewhat brighter, and there are a number of good enquiries on the market. The position in the sheet trade is unsatisfactory. Both in the black and galvanised trades business is poor, and prices are so keenly cut that there is no margin of profit. It has been found necessary to curtail the working week at some establishments.

Our Cardiff correspondent writes: In the tinplate and galvanised sheet trades conditions continued rather quiet, and prices for both products, although nominally unchanged, are easier, while the heavier branches of the industry are adversely affected by exceptionally heavy imports of steel bars from Belgium and France. Last week the local Customs returns showed iron and steel imports totalling 30,203 tons, of which bars alone accounted for 14,669 tons, and further heavy consignments are anticipated. Effect has already been given to the decision to close the steel furnace at the Cardiff Guest, Keen works, and it is feared that it may become necessary to blow out one of the blast furnaces in the district. The minimum price for the Welsh steel bar is £6 10s., but the Belgian bar is selling at 21s. below this price.

OTHER METALS.

TIN.—The standard market was moderately active, but prices eased on selling pressure combined with lower Eastern advices. Continental demand has slackened off, and little support was forthcoming from America, while consumers here merely operate to fill immediate requirements owing to the uncertainty of the general situation. Standard cash changed hands at £174 5s.-£170 and £172; three months, £177 5s.-£172 15s. and £175 5s. In the East, sales were reported at £179 to £174 17s. 6d. and £177 7s. 6d. ton c.i.f.

COPPER proved a generally quiet market and dealings still attended by a good deal of irregularity, while the backwardation has been maintained. American production for December amounted to 138,000 tons, against 145,000 in the previous month; exports, 35,000 tons, against 38,000; domestic deliveries, 58,000, against 69,000; refined stock, 171,000, against 127,000; and Blister stock, 265,000, against 258,000 tons. Standard cash, sold, £71 15s.-£72 5s. and £71 12s. 6d.; three months, £68 7s. 6d. to £68 15s. and £68 12s. 6d.

LEAD quiet but fully steady as sellers refrained from pressing. Good soft foreign pig, February, sold, £21 11s. 3d.-£21 10s., £21 12s. 6d.; March, £21 10s.; April, £21 11s. 3d. to £21 10s., £21 12s. 6d. May, £21 11s. 3d. to £21 13s. 9d. per ton.

SPELTER in better support and tendency firmer. February, sold, £19 12s. 6d.-£19 16s. 3d. and £20; March, £19 17s. 6d. to £20 2s. 6d.; April, £20 1s. 3d.-£20 7s. 6d. ton.

ANTIMONY firm. English regulus, £45 10s.-£52 10s.; Chinese ditto spot, £32 5s.; January-February, £29. Chinese crude, January-February, £19 ton c.i.f.

ANTIMONY ore, 50 per cent., January-February, 4s.; 60 per cent. ditto, 5s. per unit c.i.f.

ANTIMONY OXIDE.—January-February, £27 10s. ton c.i.f.

ALUMINIUM steady. Home trade, £95; export, £100 ton.

QUICKSILVER maintained. Spot, £22 17s. 6d. per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 18s. 7½d. to 18s. 10½d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, January 22.

The market has continued to move within a very narrow compass, the extreme fluctuation being 10 points, with trade calling offsetting any hedging. Speculation is non-existent pending some ideas of the new crop prospects and the acreage likely to be planted. Spot sales for the week 16th to 22nd (inclusive), 38,000 bales, of which 16,870 bales are American; 5,000, Brazil; 250, Argentine; 2,450, Peru; 8,850, Egyptian; 1,750, African; 1,650, East Indian and 1,180 sundries. Imports for the same period are 96,116 bales, of which 36,523 American, 47,152 Brazil, 2,157 Peru, 1,878 Egyptian, 3,246 African, 3,699 East Indian, and 1,461 sundries. Quotations to-day are: American Middling, 9·47; Egyptian F. G. F. Sakel, 14·55; Uppers, 10·49; Brazil Fair, 9·17; Peru G. F. Mod-Rough, 10·50; G. F. Smooth, 10·17; West African Middling, 9·52; and East African G. F., 10·42.

MANCHESTER, January 22nd.

Conditions in the market during the past week have not improved and in certain sections producers have lost ground. Buyers have provided a fair amount of inquiry, but there has been much hesitation in placing orders. A moderate turnover has taken place in light bleaching cloths for India, most of the transactions being for Calcutta and Karachi. Heavy makes, however, have been slow of sale. There has not been any freer movement for China, and developments are not expected until after the New Year celebrations. Operations for Egypt, the Near East and South America have been confined to small lots and very little practicable demand has been met with for the Continent. Only necessary buying has occurred in home trade fabrics. The prices secured for all kinds of piece-goods have given no satisfaction whatever. A slack state of affairs has prevailed in the yarn market. American and Egyptian counts have been offered freely at cut prices, and the financial position tends to become worse.

THE WOOL TRADE.

Our Bradford correspondent writes:—The Antwerp "Futures" market for tops may be taken as a barometer reflecting trade sentiment, and whereas the quotation last July was 38½d. for the dry-combed type, which is taken as the basis, to-day it is 24d. for all months up to and including August. On the Bradford market oil-combed warp 64's tops were quoted at 40d. at the beginning of July; to-day the quotation, as far as there can be said to be one, is about 30d. Some topmakers may be standing out for a penny more, but there is little or no demand and nothing definite upon which to base quotations. The wool auctions have opened in London with values very much in line with what was expected; wool appears to be "dirt cheap," but always there is the feeling that it may yet be cheaper, and until prices find rock-bottom users everywhere will continue to operate on hand-to-mouth lines and there will be no sustained volume of business to reveal the real position. When the reaction does come it is almost certain to be seen in a more or less sharp upward movement, for it is generally admitted that users are not carrying any big stocks and the majority will endeavour to hit the market at the bottom; this in itself will be sufficient to cause an upward movement in values. Meanwhile traders are seriously alarmed at the continued drop—10d. per lb. in 64's tops in the last six months, 18d. compared with a year ago, and 25d. compared with two years ago. In recent weeks crossbreds have also suffered, though 46's carded tops are only about 7d. down compared with a year ago, or 9d. compared with the quotation ruling in January, 1928.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The chief event in the wool trade this week has been the opening of another series of London sales, and it is no exaggeration to say that what has happened there has had a profound effect upon the industry as a whole. Prices for all qualities of tops have fallen pence per lb. since the last series held in 1929, and values for wool in Australia and elsewhere have undergone further reductions. The problem now is to stabilise prices. The most serious aspect of the present fall is that it is only too likely to involve buyers in further serious losses, and unfortunately spinners and manufacturers are not yet showing the confidence which is indicative of increasing consumption requirements. Spinners are bidding low prices for fine tops, and express determination to leave crossbreds entirely alone. This is due to a desire not to start buying heavily until the bottom point has been touched, and the London sales have presented a very apathetic appearance, neither home trade nor Continental buyers having the pluck to go in heavily. Withdrawals have been numerous, and one can only infer that owners will have to make some further readjustment of limits before the bulk of the wool now being offered can be disposed of. Meanwhile, merino wool offered this series is only commanding bids of 3d. to 4d. per lb. less than was paid for lots from the same mark at the final series of 1929. An equally deplorable state of affairs is revealed in crossbreds, for prices in New Zealand as well as Buenos Aires and Monte Video have undergone further reductions, and slipe halfbred lambs have frequently failed to realise even 16d. in Coleman Street this series; 20 per cent. decline is also having to be faced by those who have sold their greasy clips. Altogether the situation is deplorable in the extreme from the growers' and sellers' point of view, and yet there is little, if any, better prospect for users. The position is entirely due to the failure of ultimate consumers' requirements to develop, and there will be a further keen struggle before trade is placed in a really satisfactory position.

HIDE, LEATHER AND ALLIED TRADES.

English cattle hides were unchanged in value at the auctions held so far this week, and a steady demand exists for most descriptions. Calfskins on the other hand are not required so freely, and the tendency is towards lower values. Although conditions in the foreign hide market have been a little better this week there is still a good deal of uncertainty regarding future values, and this is to some extent restricting business. In the South American market further advances have been paid for Argentine ox on account of United States tanners, and these are now selling on the basis of 9 3/16d. Saladeros have come in for more attention and sales have been made of Salto ox at 8⅝d., and Casablanca ox at 8 5/16d. Prices for dry River Plates are more or less unchanged; B.A. Americanos have been sold at 9 3/16d., M.V. Americanos at 10⅛d., while good business has been done in inservibles. African hides are a little irregular as, while some descriptions have been able to maintain later rates, others, such as Capes and Nigerians, are quoted a fraction easier. A fair amount of business is being transacted in

The Manhattan Company group, in addition to the International Acceptance Bank, Inc., consists of the following institutions:

Bank of Manhattan Trust Company, New York;
International Manhattan Company, Incorporated, New York; New York Title and Mortgage Company, New York; American Trust Company, New York;
The County Trust Company, White Plains, N. Y.

PAUL M. WARBURG, *Chairman of the Board* — P. A. ROWLEY, *President* — J. STEWART BAKER, *Chairman of the Executive Committee*

connection with sole leather, and generally speaking prices are on the firm side, with an effort to obtain slight advances here and there. Repairing bends are still the mainstay and this section of the trade is taking up regular supplies. Manufacturers have also been in the market for the lighter averages in bends, in both English and wet salted, and although the amount of business passing under this head is not as large as was hoped for, a regular trade is being done. Medium qualities in some of the dry hide bends have also been sought after, and where the price quoted has conformed to the views of buyers, business has taken place. Both bellies and shoulders continue to be in request, and anything of the right description is easily placed. Upper leathers for the most part are in steady request, the bulk of the business done still being in connection with black and brown glacé kid and willow calf. On the other hand an improvement has been noted in the inquiry for patent leather and box calf, and although price to some extent retards business in connection with certain grades of the former, inquiry is better than for some time past. Heavy upper leathers are not a good line, and what inquiry exists is mainly in connection with waxed splits, kip butts and box sides. Shoe manufacturers are able to report the position as steadily improving, and although the orders coming to hand so far are for small quantities, these are being received in increasing numbers.

THE JUTE TRADE.

DUNDEE, January 22, 1930.

Business in the jute trade is slow, owing to over-production of jute cloth. Values of raw jute have fallen a little during the past few days, but they will require to come down several pounds per ton to enable producers of yarns and cloth to make ends meet. The Calcutta mills continue their policy of working the six hours extra per week, and this is having a demoralising effect on the jute trade in general. Their original intention was to depress prices of cloth to such an extent as to defy competition from other producing centres, which, they allege, are capturing some of their markets, and at the same time discourage native enterprise in the erection of new jute mills in India. Unfortunately, however, they have chosen a season to increase their production when the state of trade throughout the world is poor, with the result that much money is being lost in the making of jute goods, and the Calcutta mills themselves may yet be compelled to supply the incentive for a return to economic conditions of working by again curtailing their output to 54 hours per week instead of the 60 hours now in operation. Rumours have been current that the mills will shortly signify their intention to review their working hours, some reference to which may be made at a meeting of the mills to be held in the course of the next few days. The value of Daisee assortment has come back to £25 10s., threes to £25 and fours to £23 10s.; while Tossa assortment is offered at £27 5s., threes at £26 15s., and fours at £25 10s., January-February shipment. Good First Marks are quoted at £32, and best Lightnings have been sold at £29, same shipment. Prices of jute yarns are mostly nominal in the absence of business to test them. Spinners continue to name 2s. 10d. for common 8-lb. cops and 2s. 11d. for 8-lb. spools. Twist has been sold at 5d. for 3-ply 8 lb., and sacking yarns are quiet at 3¼d. to 3⅝d. for 24-lb. weft and 4 11/16d. to 4¾d. for 8-lb. chains. Rove is nominally unchanged at £27 for 48 lb. and £17 for 200 lb., and fine yarns keep steady. Carpet qualities meet with little interest at 4⅛d. for 14-lb. warp. Cloth orders are very limited and only for the smallest of quantities. Manufacturers are still adhering to their prices, but show willingness to shade them in the case of orders worth taking. The value of 10½ oz. 40 in. is from 3 13/16d. and 8 oz. from 2 13/16d. Linoleum hessians continue very quiet, and business in heavy goods is only possible where considerable concessions are given on the quoted rates. Calcutta goods were firm and dearer all last week, but an easier tendency has again set in, which has destroyed all confidence in the market.

THE KIDDER PEABODY ACCEPTANCE CORPORATION

We hereby certify that we have audited the books and accounts of The Kidder Peabody Acceptance Corporation for the period beginning January 1, 1929, and ending December 31, 1929, that we have examined all current assets and have found them and all liabilities and proprietorship accounts as stated.

The accompanying Balance sheet, we believe, to be a true statement of the financial condition of said corporation as of the date named.

(Signed) WALDRON H. RAND & COMPANY,
Certified Public Accountants.

Letters of Credit in Dollars issued jointly with Kidder, Peabody & Co., to Finance Imports, Exports and Domestic Shipments.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—An unhealthy state of affairs continues, as the market is depressed by over-production and lack of confidence on the part of buyers. Prices were again marked down, in some directions substantially, but this so far has led to only a moderate increase in absorption. It would appear rates now ruling are too low to inspire confidence, which has been so badly shaken. Prices in all directions were marked down to-day. Messrs. Tate and Lyle's goods reduced 6d., and in the case of T.L. granulated 9d. Home-grown granulated, 3d. lower. Foreign descriptions for shipment are difficult of sale and prices have a downward tendency. Terminal sections weaker as sellers predominated, but market reacted sharply on rumours of Cuba restricting present crop, and a fair amount of business resulted. Raw, including March delivery, 5s. 6¼d. to 5s. 5½d. and 6s.; May, 6s. 9¾d. to 6s. 9d., 7s. 4½d. 7s. 3d.; August, 7s. 5½d. to 7s. 4½d., 8s. 0¾d., 8s.; December, 7s. 9d. to 7s. 8½d., 8s. 3½d., 8s. 2½d. Two cargoes, Cuban, 96 per cent. afloat, offered at 7s. 3d. c.i.f. U.K. White Java, February-March, to India, 10s. 7½d. c. and f. Cuban receipts last week, old crop, 13,639 tons, against 3,926 last year; new, 2,862, against 109,997; exports, old, 33,200, against 41,530; new, 145, against 22,205; stocks, old, 128,072, against 62,586; new, 2,499, against 96,730. Centrals at work, 125, against 154 same time last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending January 18th totalled 236,029 tons, compared with 147,413 last year.

COFFEE.—There was a brisk demand, mostly for all the more attractive liquoring qualities and market ruled very firm. There was rather more attention given to the lower grades.

COCOA.—Only a slow movement on spot. Forward positions firm. Accra F/F, February-April, sold, 40s. 6d. f.o.b. Terminal: January, sold, 44s. 6d.; February, 44s. 3d.; March, 44s. 3d. to 44s. 4½d. and 44s. 3d.; May, 44s. 7½d. to 44s. 10½d.; July, 45s. 7½d. to 45s. 9d.

TEA.—Indian auctions during the week totalled 54,724 packages. All fine autumnal character teas, also tippy grades, met a brisk demand at full rates. Medium about steady, but irregular for plain and thin liquoring qualities with leafy sorts a shade easier. Ceylon sales of 29,010 packages ruled firm to rather dearer for the few finest qualities offered. Otherwise, much irregularity ensued with medium brokens a weak feature. These mostly ½d. to 1d. down from previous auctions. There was rather more export inquiry. Java auctions generally easier.

RICE.—Burma kinds steady at recent slight improvement, but general trade quiet, particularly on United Kingdom account. Spanish quiet, but reservedly offered and firm. Two Stars, January-February and February-March, quoted 12s. c.i.f. Spanish oiled, February, 16s. c.i.f. Fancy Blue Rose, American, 20s.; extra ditto, 21s. to 21s. 6d. c.i.f. No. 3 Burma to the Levant, double bags, January, 12s. 1½d.; February, 12s. 1½d. S.Q. to Cuba, 12s. 3d. Saigon No. 1 round grain, February-March, to Europe, 12s. 1½d. Siam Super, January-February, 15s. 6d. Californian nominal.

BROKEN RICE quiet. Burma 1A, February-March, 10s. 10½d.; B1, 10s. 4½d.; A2, 10s. 3d.; B2, 10s. Saigon 1 and 2, mixed, 10s .3d. c.i.f.

RICE BRAN dull, and afloat, sellers, at £4 5s.; for shipment, £4 10s. per ton ex ship terms United Kingdom, regarding Burma.

BEANS.—A firmer market for butters, with covering orders still circulating. Spot, new crop, 40s. to 42s. Parcels per "Eugene Grossos," quoted, 29s. 6d.; per "Clan Macindoe," 29s. 6d.; "Clan Chatton," 29s. "Belgrano," 27s. 10½d.; November-December, 29s. 6d.; December-January, 28s.; January-March, 27s. 6d. c.i.f. Other descriptions idle. Ohtenashi, March-April, quoted, 22s. 6d. Rangoon haricots, ex store, 13s. 6d.; January-February, 12s. 6d. c.i.f. London. Danubian, hand-picked, spot, 25s. to 25s. 6d.; January-February, 23s. 6d. c.i.f. London. To Glasgow: North African, January-February, 9s. c.i.f. Chinese horse, afloat, 8s. 9d. c.i.f.

PEAS.—A dull market continues. Japanese, spot, old, 14s. 9d.; new, sold, 15s. 9d.; afloat, sellers, 15s. 6d.; January-February, 16s. 6d.; February-March, 16s. 4½d.; March-April, 16s. 6d. c.i.f. London. Dutch steady, but quiet. Marrowfats, prompt, quoted, 17s.; small blues, H.P., 11s. f.o.b. terms. Calcutta, January-February, 57s. 6d. Karachi, nominal c.i.f. Maples quiet. No. 1 New Zealand, January, old, 57s. 6d.; new crop, March-April, 60s. Tasmanian "A" grade, new, February-March, 67s. c.i.f. China white, hand-picked, December-January, quoted, 13s. 6d.; f.a.q., 10s. 9d. Manchurian white, December-January, 12s. c.i.f.

LENTILS dull. Bold Bombay, January-February, nominally 68s. Calcutta Patna, to arrive, 75s. Bombay Patna, nominal c.i.f. (504 lb.).

SPICE.—Pepper in fair support and market firmer with regard to forward positions. Lampong, January-March, sold 11½d.; March-May, 11¾d. Muntok, white, January-March, sold 1s. 4d.; and March-May, 1s. 4⅛d. lb. London stocks on the week, 95 tons regarding black and 56 white, decreases. Stock of black now 1,191, against 1,181 last year, and white, 1,473, against 269. Aleppo, January-March, quoted 107s.; Tellicherry, 110s. cwt. c.i.f. Cloves steady. Zanzibar, spot, 9¾d. to 10d.; April, steamer, sold 8¾d. Tapioca quiet, unaltered. Sago flour, February-March, to the United Kingdom, quoted, 11s. 7½d. c.i.f. Dutch farina, 9s. 9d. f.o.b.

FRUIT (Dried).—Currants: Market generally quiet, supplies being adequate for requirements. Pyrgos, quoted, 37s. 6d.-38s.; Amalias, 38s. 6d.-40s.; Patras, 40s.-45s.; Gulf, 44s.-51s.; Vostizza, 52s.-63s.; small ditto, 51s.-58s.; Australian, 37s.-42s. Sultanas in limited demand. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-80s.; Greek, 42s.-75s.; Australian, 35s.-52s.; Cape, bleached, 35s.-40s. Dates in fair request at steady rates. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s. 9d.-14s. Raisins: Valencia, quiet of sale. Quarter-boxes, 45s. Figs quiet. Layers, 32s.-40s.; genuine, 30s.-38s.; good average, 27s.-29s.

EVAPORATED FRUITS.—Californian plums steady and new South African apricots are available. Other descriptions quiet at about late rates. Plums: Californian new crop, 30's-40's, 72s. 6d.; 40's-50's, 67s. 6d.; 50's-60's, 63s. Apricots, South African new crop Royal, 57s. 6d.-117s. 6d.; Australian, 67s. 6d.-77s. 6d. Pears, Californian Lake County, fancy, 90s.; extra, 100s.; Australian, 65s.-85s. Peaches, Californian, choice, 57s. 6d.; extra choice, 62s. 6d.; fancy, 67s. 6d.; extra, 72s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-69s.; Canadian, 64s. Almonds steady. Mazagan, 110s.; Mogador, 107s. 6d.; P.G. Sicily, 125s.; Majorcas, 112s. 6d.-135s.; Bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 75s.; China, bitter, for shipment, 39s., new crop, c.i.f.; sweet, spot, 77s. 6d. Hazel kernels: Kerasunde, spot, 140s.; Barcelona, 132s. 6d. New crop French (shelled) walnuts firm at 150s. ex wharf London.

CANNED GOODS, &c.

CANNED FRUITS.—A firm tone governed the market for most descriptions of Californian fruits as remaining stocks unsold are in small compass, but demand fails to expand while confined to immediate needs. Australian varieties move off steadily. Singapore pines steady, but business restricted both for spot and shipment parcels. South African and Hawaiian firmly held. Italian tomatoes experienced a quiet sale on about former terms.

CANNED FISH.—Salmon: Market firm, but demand slow to improve. Alaska red talls, quoted, 48s.-50s.; pink talls, 25s. 6d.-26s. 6d.; and halves, 34s. 6d.-36s. Japanese crab firm, and fancy qualities, quoted, 97s. 6d.-100s., with lower grades still scarce. Lobsters steady, halves ranging from 135s.-140s. Sardines in limited demand, but tone steady. Portuguese clubs, quarters, 4s.; 1-lb. tins, 12s. per dozen tins.

CANNED MEATS.—Market firm and ox tongues tend dearer. Firm prices are also obtainable for tinned hams.

CONDENSED MILK AND MILK POWDERS.—Market easier. Condensed, Dutch, full cream, sweetened, 5-cwt. casks, 37s. 6d.; machine-skimmed, ditto, 23s.; full cream, sweetened, 56-lb drums, two in a crate, 52s. 6d. English full cream, sweetened, 5-cwt. casks, 41s.; machine-skimmed, ditto, 24s. Powders: Full cream, English, roller process, 28 per cent. butterfat, 2 by 56-lb. tins, crated, 85s.; Dutch, roller process, 26 per cent. butterfat, 1-cwt, cases, 72s.; ditto, spray, 26 per cent. butterfat, 2 by 56-lb. tins, crated, 96s.; Dutch, machine-skimmed, roller process, 1-cwt. cases, 26s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 39s. 6d.; ditto, 1-cwt. cases, 37s. 6d., all per cwt. All English prices basis carriage paid nearest station. All Dutch prices are nett, ex-store London-Hull or Goole, and cover prompt or gradual delivery to end of April, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. On the grocery side: Full cream,

THE MONEY MARKET.

THE repayment, early this week, of £15,400,000 of maturing Exchequer bonds helped to make money extremely easy, and as there is still present in the market much money that is normally employed in the Stock Exchange, and as the clearing banks refrained from

ing, rates for old money ran as low as 3½ per cent. Discount rates also remained low, February bills being quoted at 3⅞ per cent. and March at 3 11/16 per cent., while the three months' market rate on Wednesday was 3¾ per cent., or even "$\frac{1}{32}$ under." The weekly Treasury bill maturities are still £15,000,000 in excess of new issues, and so a further contraction in the supply of bills must be expected.

* * * *

In these circumstances discount rates are likely to remain weak until such time as revenue influx or a revival of Stock Exchange activity draws money off the market. It is not impossible that some Stock Exchange money will disappear next settling day (February 6th) in order to take up stock now being sold in preparation for the special Hatry settlement. Meanwhile the market has ceased to look for any reduction in Bank rate, simply because the principal foreign exchanges would not justify it. The mark is now down to the lower gold point, and on Tuesday Germany took all the market gold available after satisfying the needs of India and the trade. There have also been heavy earmarkings of gold at the Bank, largely on Argentine account. Gold so earmarked is regarded by Argentine law as being lodged at the London Legation, and so is eligible under the recent decree as cover for the Argentine note issue.

* * * *

The fall in the German exchange is thought to result from transfers of French funds from London to Berlin, presumably because of the low level of London rates. The improvement in the dollar is explained partly by European preparations for debt payments and partly by maturities of cotton and grain bills. A third cause is the fact that American stocks are proving attractive at present prices, and it is known that some buying on London account is already taking place. Here again a revival in interest in the London Stock Exchange is needed to counteract this development. These factors are serious arguments against a reduction in Bank rate, and so the present gap between Bank rate and market rate seems likely to persist, at any rate for a little while.

	Jan. 9, 1930.	Jan. 16, 1930.	Jan. 23, 1930.	Jan. 30, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%

Market rate (3 months' bills)	4 1/16	4 1/16–⅛	3 15/16–15/16	3⅞	...

The December statements of the nine English clearing banks show that deposits have increased to their highest level since July, but that there has been a sharp fall in acceptances.

	Aug., 1929.	Sept., 1929.	Oct., 1929.	Nov., 1929.	Dec, 1929.
Capital and reserves	130·8	130·8	130·8	130·8	130·7
Acceptances	186·1	188·7	203·2	215·2	169·6
Deposits (including undivided profits, &c.)	1,758·8	1,754·0	1,764·7	1,751·4	1,773·3
Total liabilities	2,075·7	2,073·5	2,098·8	2,097·4	2,073·6
Coin, notes, balance at bank, and cheques in course of collection	237·2	242·3	247·1	242·0	266·3
Money at call	140·8	145·5	144·9	139·7	139·0
Investments	266·6	266·4	265·5	259·5	260·4
Discounts	225·0	221·7	226·9	230·7	226·7
Loans and advances	981·3	971·9	974·0	973·0	972·7
Cover for accept., premises, &c.	224·8	225·8	240·4	252·5	208·5
Total assets	2,075·7	2,073·5	2,098·8	2,097·4	2,073·6

The assets side of the accounts show that the increase of £21.9 million in deposits is more than balanced by an expansion of £24.3 million in cash. Discounts are lower by £4,000,000, but the remaining earning assets are practically unchanged.

NEW YORK.

The Federal Reserve statements reveal a continued gain in reserves and a contraction of discounts and bill holdings, with Government securities stationary. The circulation is still falling and the System's ratio is up 2 per cent. to 78.3 per cent., a rise of 8.9 per cent. on the year. The total volume of credit outstanding is $313 million lower than a year ago. In general the changes at the New York Bank are similar and some newspapers have been agitating for a lower discount rate. $5 million of gold has been imported from Brazil in the week and $2½ million released from earmark. In addition, about $20 million is coming from Japan. The liquidation of Member Bank loans on securities continues, and altogether it appears that a further easing of money rates is likely.

THE STOCK MARKETS.

The Stock markets remained in a dull condition, business being greatly restricted and public interest conspicuously absent, though a slightly firmer tone obtained towards the end of the week. Some selling to meet "Hatry" settlement commitments was reported. Gilt-edged stocks reflected the less favourable monetary outlook, and the falling-due of a heavy payment of Five per Cent. Conversion Loan. India Loans recovered sharply on the reassuring letter of the Secretary of State, and Australian issues were better. Interest in the Industrial markets was largely confined to international stocks. Rubber shares were a trifle harder, but tea shares again declined. The announcement that the Patino interests would co-operate in the tin restriction scheme produced a reasonable recovery in share values.

THE COMMODITY MARKETS.

There is little change since last week. The coal trade is mainly occupied with old contracts, and new business is not abundant. Reports on the iron and steel markets are somewhat conflicting, but there appears to be some slight improvement in certain branches at least. A fall in raw cotton prices has intensified a very unsatisfactory position in Manchester. The situation in the wool textile industries is unchanged, but colonial wools are meeting a slightly better demand. Some anxiety is being felt in the timber trade, but the causes of this do not appear to be very serious. The hide and leather markets remain satisfactory. Vegetable oils and oilseeds are not in very great demand. Wheat prices have fallen.

THE FOREIGN EXCHANGES.

Quiet conditions prevailed in the Foreign Exchange market last week, the only noteworthy feature being another sudden drop in the peseta. Sterling declined, against the dollar, from 4.86 21/32 to 4.86 9/16. Montreal improved from 4.92⅛ to 4.91⅝. Paris fluctuated a good deal, and lost two points on balance at 123.92, after being at one time 123.88. Brussels lost ½ at 34.93½. Milan gained a point at 92.98. The peseta reacted to the political atmosphere, for after going from last week's level of 37.55 to 37.35, the rate rose suddenly to 38.30 on Tuesday, finally settling down considerably stronger at 36.25. Amsterdam lost ⅜ at 12.11⅝. Berlin fluctuated a good deal, but gained ¾ at 20.36½. Switzerland went from 25.18 to 25.20¾. Stockholm was firmer at 18.12⅜, Oslo gained ½ at 18.21 and Copenhagen improved from 18.19⅜ to 18.18¾. Among the South American exchanges Rio improved after some hesitation from 5 7/16d. to 5⅜d., but Buenos Aires lost 7/16d. at 44½d. after having been over 45d. The rupee was a little weaker at 1s. 5 23/32d., the yen was unchanged at 20s. 4d., but Batavia improved from 12.14¼ to 12.13½. In the futures market one month's dollars were more sought at 3/64 cent premium, but three months were less wanted at the same quotations, against 3/32 cent. premium last week. Francs were again in short supply at rather higher premium of 4½ and 8 centimes. Amsterdam was unchanged, as was one month's Berlin at 2½ pfennigs discount, but three months were ¼ better at a discount of 6½ pfennigs, as against 6¾ last week. Silver prices fluctuated a good deal, and spot lost ⅛d. at 20 9/16, but the forward quotation was unchanged at 20 7/16. The Chinese silver exchanges reacted differently, Hong Kong gaining ⅛d. at 1s. 8d., whilst Shanghai lost ¼d. at 2s. 0⅜d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Enquiries should be addressed to Moody's-Economist Services, 6 Bouverie Street, London, E.C. 4.

AMENDING THE COAL BILL.

THE weight of the criticism directed against the Coal Mines Bill during its Second Reading in the House of Commons, and re-inforced by resolutions of protest from important associations of manufacturers and traders, suggested unmistakably that, if the Government were to succeed in carrying their measure through Parliament, it could only be in a form radically altered and modified. From the nature of the Government's own amendments, noted briefly in last week's issue of the *Economist*, it seemed clear that the Cabinet had recognised the necessity of going as far as possible to meet the views of the Opposition parties, and this impression was confirmed both by Mr Graham's conciliatory attitude during Tuesday's Debate on the Money Resolution (agreement to report progress being reached on the basis of an understanding that the resolution would be re-drafted to give wider scope for amendments in the Committee stage) and by the fact that a number of conferences were held this week at Mr Lloyd George's headquarters between the President of the Board of Trade and the Committee of the Liberal Parliamentary Party appointed to draw up the Liberal amendments to the Bill.

At the time of writing we are not aware of the result of these *pourparlers*, nor do we know what amendments the Liberal Party will eventually table. The Government amendments were designed, firstly, to afford ampler protection to the consumer by providing that if a committee of investigation, as established by the Bill, finds that "any act or omission of any persons in respect of their functions under the scheme is having or is likely to have an effect contrary to the public interests," the committee may, failing rectification, refer the matter to a single independent arbitrator, whose decision shall be final; secondly, to secure reconsideration by Parliament of the effect of the scheme at the end of 1933; and, thirdly, to stimulate the process of amalgamation by constituting a Coal Mines Reorganisation Commission. This Commission, whose membership, it was suggested by Mr. Graham in the House on Tuesday, should consist of a chartered accountant, a lawyer and a mining engineer, is "to promote and assist by the preparation of schemes and otherwise" such amalgamations as "appear to the Commission to be in the national interest." It is to be empowered to hold inquiries, and, if owners of collieries which, in its opinion, should be amalgamated fail to initiate an amalgamation scheme, it is to submit the necessary scheme *via* the Board of Trade to the Railway and Canal Commission, which shall treat it as if it had been submitted (by colliery owners) under Part I of the Mining Industry Act, 1926. If a scheme so submitted is confirmed, *i.e.*, made obligatory, by the Railway and Canal Commission, the expenses incurred by the Reorganisation Commission in preparing the scheme are to be recovered from the merger company, and in such amalgamations "the value of any undertaking shall be taken to be of such amount as it is estimated would have been the value thereof if Part I of this Act had not been passed,"—*i.e.*, "quota-rights" are not to count.

So far as they go, these amendments harmonise to a large extent with the views expressed by Mr Lloyd George and Sir Herbert Samuel during the Second Reading Debate, but they manifestly do not succeed in eliminating all the Bill's worst defects. Apart from the fact that the Reorganisation Commission is not charged with the submission of amalgamation schemes *within any specified period of time*, and that reference to the Railway and Canal Commission is a circumlocutory process, it will be observed that Parliament is still asked to delegate to the owners of the collieries statutory power to administer a system of organised restriction of output and minimum selling prices which might be operated to the grave detriment of individual coal producers and of all users of coal. The objectionable permissive powers to make a levy for subsidisation of exports remain, and though the machinery of "investigating committees" is strengthened by the appointment of an independent arbitrator, the establishment of a single individual with the powers of a dictator over every action of an industry is itself open to considerable criticism, and does not solve the difficulty that complaints—*e.g.*, of excessive prices—might take so long to investigate, attempt to rectify, and refer to arbitration, that the remedy would come too late in many cases to help the injured party. Without knowledge of the amendments which the Liberal Party's committee have drafted and have been discussing with Mr Graham, we should expect them to go considerably beyond those tabled by the Government, especially with regard to compulsory amalgamations, consumer's participation in price control, and the establishment of organised marketing syndicates. In fact, Liberal amendments have already been lodged proposing that the House in Committee should have power to consider provisions for the acquisition of mining royalties, and that consideration of Part I of the Bill, as read, be postponed until all new clauses have been discussed.

But whereas the Liberal Party appears inclined to support the reduction of hours in Part II of the Bill, and to endeavour, in Part I, to get such effective "amalgamative" machinery incorporated that the output restriction and price-fixing clauses can either be dropped at once or allowed to lapse after a short period (thus becoming of secondary importance), Conservative amendments have been tabled which seem calculated to place the Government in a position of some difficulty. Considering their source, the amendments are of a remarkable character. Naturally no reference is made to the desirability of compulsory amalgamations or the purchase of royalties by the State, but, through their objections to the frankly syndicalist principles of the Bill, the Conservatives have been led to proposals which involve a striking degree of Parliamentary interference with the conduct of an industry.

The most important of the Conservative amendments are to the following effect:—

(1) That the limitation of daily hours of work should not apply to mines in which the aggregate time below ground of any shift does not exceed 45 hours per week or, alternatively, 90 hours per fortnight.

(2) That both the central scheme and the district schemes shall be laid before Parliament; that the central scheme shall not become operative without an affirmative resolution of both Houses; and that district schemes shall take effect only in the absence of a negative resolution after the lapse of 20 Parliamentary working days.

(3) That coal supplied by mines, controlled by another industrial undertaking, for use as fuel in that undertaking's works shall not be subject to quota-restriction.

(4) That the power to make levies for "facilitating the sale of any class of coal" be abrogated.

(5) That investigating committees, if they find that a consumer has been charged an excessive price, may order the district's executive board (subject to appeal, as below) to pay him compensation.

(6) That a Judicial Commission shall be appointed by the Lord Chancellor, consisting of a judge of the Supreme Court, a chartered accountant, and "a person having industrial and commercial experience," whose legal powers shall be equivalent to those of the High Court, and whose functions, *inter alia*, shall be to give binding awards on (*a*) appeals by any persons against any order made by a committee of investigation under amendment (4) above, or (*b*) appeals by any colliery for a lowering of the fixed minimum price.

Inasmuch as they indicate a distinct departure from the traditional attitude of Conservatism towards the relations between industry and the State, these amendments are significant and interesting. Further, they

appear to us to be in the main well-conceived. There is a good deal to be said for some elasticity in the arrangement of working hours. The levy proposals for subsidising exports have nothing in their favour; "mixed" undertakings should certainly not be penalised by quota restriction of purely "transfer" coal; we prefer a Judicial Commission (though its proposed functions appear to be somewhat circumscribed) to the single arbitrator suggested by Mr Graham; and unless the portions of Part I of the Bill delegating powers of regulating output and fixing prices can be subjected by the House of Commons to much closer statutory definition, it might be necessary for Parliament to retain the right to revise all central and district schemes.

This very consideration, however, exposes one of the grave weaknesses of the Bill. A fortnight ago we expressed a decided view that the Bank of England was not the right body to frame, in detail, schemes of industrial "rationalisation." If this is true of the Bank it is far more true of Parliament. Even in the comparatively simple case of the Railways Act of 1921, Parliament did not attempt to define the terms of amalgamation, but contented itself with laying down what groups were to be formed and the general principles of the scheme, and left detail to be approved by a special amalgamation tribunal. Surely it is desirable that in this Bill Parliament should endeavour, on the one hand, to come to closer grips with the conditions which the schemes must fulfil, and on the other hand to delegate to a body commanding general confidence the task of seeing that these conditions are adhered to in detail, rather than have fresh debates in relation to each scheme.

A further question, however, clearly arises, before the full list of Liberal amendments is known. What will the coal-owners' reactions be if even the Conservative amendments are carried, as many of them deserve to be, and in all probability will be? It could be foreseen that the colliery proprietors would object to the compulsory amalgamation proposals pressed by the Liberal Party and assured, we imagine, of Labour support; but it must be borne in mind that the essence of the Bill, as originally drafted, was that it represented the Government's attempt to "buy off" miners and mineowners alike. The miner was to have a 7½-hour day; the mineowner (to quote the Bill's explanatory memorandum) was to have "schemes . . . operated by the colliery owners themselves." But now the Conservative Party—*quantum mutatus* since the sympathetic days of 1926—proposes not only to make every scheme subject to parliamentary scrutiny, but to place a Judicial Commission over the heads of the mineowners, and expressly to forbid them to recoup themselves for the cost of shorter hours by levying a toll on coal which they think can "stand it" for the benefit of coal exposed to competition.

What understanding, if any, was reached between the Government and mineowners with regard to the maintenance of miners' earnings in the districts now working an 8-hour shift we do not know. Unless the Government were taking a blind leap in the dark, presumably some sort of *entente* on the basis of the original Bill did exist. So far, the mineowners have followed, with regard to the amendments tabled, the reticence of the Tar Baby, but we read with interest in a contemporary, which usually reflects accurately the colliery owners' opinions, that the Conservative amendments would "remove any excuse for increased coal prices to public-utility undertakings or householders," and would "place upon the promoters of the Bill the onus of financing the pledge to reduce hours." That consideration is not one which should weigh with Parliament, but Mr MacDonald may yet find that his pledge has an uncounted cost.

EVENTS IN SPAIN.

General Primo de Rivera has solved the problem of his exit from office by scrambling out of it. For some months past it has been obvious that the end of the present Dictatorship in Spain—though not necessarily the end of Dictatorship—was in sight, and the existing Dictator has been casting about in visible perplexity for the best means, or, indeed, any means, of effecting the transition from unconstitutional to constitutional government.

He need not be blamed for his failure to solve that baffling problem. His successor may not find the difficulties easier of solution. But it could hardly have been foreseen that General Primo's term of office would end quite so abruptly, or as the result of so singular a piece of ineptitude. For the past twelve months—ever since the abortive outbreak at Ciudad Real and the arrest of the former Prime Minister, Señor Sanchez Guerra—signs of discontent with the dictatorship had been growing, and the Dictator himself did not fail to read the omens. What he failed to do was to evolve any settled policy in face of them. He first of all announced a relaxation of restrictions and an acceleration of the return to what President Harding used to call "normalcy." He then recanted, declared that the newly granted liberty, such as it was, had been used as licence, and that the return to constitutionalism must be slowed down again. Later, acceleration was announced once more, with the prospect of partial municipal elections at the beginning of this year. Finally, with startling suddenness, General Primo, stung apparently by continued criticisms of his régime, decided that he would put his popularity to the singular test of seeking a certificate of approval from the heads of the Army and Navy.

This had the incidental, but by no means unimportant, effect of accentuating the military character of the régime and its dependence on generals and admirals. How far the desired vote of confidence was accorded is not known, for before the result of the consultation could be announced King Alfonso, influenced, apparently, by news of threatened military revolts against the Dictatorship, took action that he must long have been contemplating and summoned the Dictator to the palace. General Primo's resignation was handed in the same day, and by Tuesday evening he was Dictator no longer. The climax of the whole strange affair is his issue of a valedictory message in which he explains that, when he decided to consult the seventeen Army and Navy officers, he was not in full possession of his faculties, owing to a nerve crisis.

What emerges from all this is that General Primo, genuinely perplexed as to the method of his exit from office, hit finally on a quite indefensible expedient, for, added to the unwisdom of reliance on the verdict of the Army, was failure to inform either his Cabinet colleagues or the King of the step he was taking. His resignation could in any case not have been long postponed. His attempt to secure support for his new draft Constitution had failed ignominiously. His relations with the Palace were notoriously strained and, what was perhaps in the last resort most important of all, the peseta has been falling steadily and has resisted all attempts to re-establish it.

Interest now centres primarily on the position of King Alfonso and the nature of the régime to be established. It has long been clear that the King was restive under an incubus which he himself created in a moment of stress, but it does not follow that he desires constitutional government pure and simple. He has been credited, indeed, with liking a Dictatorship but disliking the present Dictator. However that may be, the King would appear to have strengthened his position, momentarily at any rate, by taking advantage of General Primo's false move in the matter of the consultation of the Army and acting with swiftness and decision. But the Republican movement in Spain is by no means negligible, and a moment of transition from one Dictatorship to another, or from a Dictatorship to something different, would give it its natural opportunity. So far, however, the country seems quiet, and though there have been Republican manifestations in one or two provincial cities, they have clearly not amounted to much. Another factor in the situation is the Catalan separatist movement, but danger in that quarter may be considerably diminished if, as is rumoured, Señor Cambo, the Catalan leader, is given a place in the new Cabinet.

Much, if not everything, hinges on the personnel and the quality of the Ministers who are to succeed General Primo and his colleagues. What Spain has to fear next to anarchy is government, or attempted government, by the old military committees. Some fear of this appears to be aroused by the fact that the head of the new Cabinet, like the head of the old, is a General. That, however, need not be laboured unduly. General Berenguer, though gravely involved in the Morocco disasters of eight years ago, is a man of considerable force, and his first announcement has been that he has accepted office as a civilian and not as a soldier. He appears, nevertheless, to be seeking his colleagues to some extent from his own Service, for another general is to go to the Home Office in place of that masterful personality, General Martinez Anido, who was to a large extent the brains of the old administration. What Spain probably needs most at this moment is a Cabinet which shall command national confidence by including as many as possible of the leaders of the old political parties. If Señor Cambo, Count Romanones and Señor Sanchez Guerra are prepared to lend their co-operation from a sense of public spirit, an administration can be constructed which will command public respect, even though it continues to act, as it still must for some time, on unconstitutional lines.

The fact remains that the Dictatorship of Primo de Rivera can be succeeded only by an avowedly transitional, not a permanent, Dictatorship. Even the strongest Spanish Liberals have recognised the impossibility of passing from an unrestricted Dictatorship on a Monday to a normal constitution on a Tuesday. So long as a course is now definitely set towards the goal of constitutional government, there will be no complaint if the goal is not attained in a week or a month. It must always be remembered that while one element in the *coup d'état* which raised Primo de Rivera to power in 1923 was the Morocco imbroglio and the King's implication in it, another factor was the universal disgust with the squalid bickerings of party politicians. Public opinion in Spain to-day, no doubt, favours a return to a parliamentary system, and there is no special reason why the constitution of 1876 should not be its basis. If General Berenguer and his colleagues make that their policy, and if at the same time they gradually relax the restrictions which the late Dictator imposed on all expressions of public opinion in Spain, the life of the country should go on sufficiently quietly to give them leisure to elaborate the difficult process of transition.

There are, it is true, several uncertain elements. One is the attitude of the outgoing Ministers, who are not likely, however, to command sufficient following to make them formidable, even if they wanted to make trouble. A second is the attitude of the Army; but this should not cause the new Cabinet grave concern, since, so far as can be seen, the soldiers are more anxious to see the country governed effectively than to govern it themselves. Finally, there is the King. Don Alfonso understands his country's politics through and through. He enjoys being a king and he knows that under certain circumstances he might cease to be a king. General Primo was, at first at any rate, an asset to the monarchy. More recently, as he alienated sympathies himself, he became something of a liability.

The King's wise course to-day, and he is likely to realise it, is to co-operate closely with his new Ministers in their return towards a constitutional government. If that path is followed by King Alfonso and General Berenguer alike, the new administration has a reasonable prospect of weathering the storms that are bound to beset it.

THE BANK BALANCE SHEETS.

The events of 1929 caused the present series of banking accounts to be invested with an unusual amount of interest. Considering first gold movements, the Bank of England's holdings fell between January and September from £153 to £130 million, and subsequently rose to £146 million. It is common knowledge that the Bank of England neutralised these fluctuations by counter purchases and sales of securities, so as to keep the volume of its own deposits constant, but it remained to be seen if this policy had succeeded in maintaining the joint-stock banks' cash holdings at a constant level and whether the banks had responded by keeping their deposits unchanged. Again it was known that the banks had made efforts to reduce their loans against stocks and shares, and it was hoped that the progress of rationalisation in industries had been accompanied by a writing off of irrecoverable loans by the banks. This imparted some interest to the magnitude of bankers' advances. To mention another point, Mr Beckett, the deputy-chairman of Westminster Bank, recently called attention to the low ratio of British banks' capital and reserves to their deposits, and gave this as one reason why the banks would not make long-term advances to industry or involve themselves in industrial "participations." Finally came the question as to how far the bank balance sheets would reflect the fall in Stock Exchange values during the year, and in particularly the losses arising from the Hatry defalcations.

The following tables have been prepared in such a form as to illustrate some of these points. The first shows the banks' liabilities and assets grouped under their main headings. "Cash" includes coin, notes, balances at the Bank of England, and also those with other banks at home and abroad, and cheques in course of collection. Two banks, unfortunately, still include call money under this heading, and, in general, it is regrettable that only

one bank, Martins, has seen fit to follow the example of Lloyds Bank in amplifying its balance-sheet on the lines of the Cunliffe Committee's recommendations. Lloyds Bank, however, are following the example of the Midland Bank in revealing the percentage of current accounts to total deposits. Their 1928 average is 46.4 per cent. Mr Pease also announced that effect was to be given to the recommendations of the Balfour Committee that the joint stock banks should publish their annual turnover, *i.e.*, the total value of the cheques drawn on customers' accounts. This will render available a most valuable piece of banking information, and it is to be hoped that the other banks will rapidly follow suit.

This table reveals several important facts. The first is that, as summarised above, the joint-stock banks' cash holdings have, in the aggregate, remained unchanged, though those of the "big five" alone are slightly reduced. So far the results are reassuring, but the next fact is more disquieting. Although bank cash is unchanged, deposits have been allowed to fall by some two per cent., and so the banks have failed to follow the Bank of England in maintaining the country's supply of credit. It is true that during the year wholesale prices fell by 7 per cent., and that, therefore, the amount of credit available has relatively increased, but this begs the whole question of whether or not the contraction in bank deposits was a partial cause of the fall in commodity prices.

* Includes "reduction of bank premises" account. † Includes call money.

Acceptances reveal a substantial decline. This is in part due to the decision of the Midland Bank to exclude forward exchange contracts from this item, and it may also be to some extent fortuitous, for the monthly statements of the clearing banks reveal a sudden and inexplicable decline between November and December. Still the higher level of money rates ruling during most of 1929 may have diverted a certain quantity of acceptance business from London. If so the banks, with the Westminster as the chief exception, have had to bear their share of this loss.

Coming now to the banks' earning assets, interest centres on advances, and it must be realised at once that despite the considerations alluded to above, the banks, with one or two exceptions, have not seen fit to reduce their total loans. In so far as the increase in advances represents a growing demand for credit on the part of industry, it is all to the good, but the recent course of commodity prices and trade does not wholly substantiate this optimistic explanation, and it is difficult to resist the belief that there is still much dead wood to be cut away. Several of the Scottish banks show separately their loans against securities, and, as both the Commercial Bank and the National Bank of Scotland record appreciable declines during the past year, it is reasonable to hope that this item has been reduced generally by English as well as by Scottish banks. The main fear is that it has still proved impossible to reduce outstanding and largely "frozen" industrial loans.

As advances have actually increased, the shrinkage in deposits has been balanced by substantial reductions in discounts and investments. The fall of £33 million in the banks' bill holdings is to some extent accounted for by the corresponding reduction during the year of £7.7 million in the volume of Treasury bills outstanding. Clearly, this is not the whole explanation, and it is possible that the shrinkage in the banks' bill portfolio is evidence of a decline in the volume of commercial bills available in London. Such a decline could be explained by such factors as the fall in commodity prices, and the possible loss of acceptance business alluded to above.

The fall off in the banks' holdings of investments is equivalent to one of 6.6 per cent., which is very little greater than the decline in the price of gilt-edged securities during the intervening year. It is thus reasonable to suppose that the fall represents mainly writings-down by the banks in pursuance of their traditional policy.

The final table shows the relation between deposits on the one hand and capital and reserves, cash, and advances on the other hand.

	Ratio to Deposits of

* Includes balances with other banks and cheques in course of collection and call money in the case of the two Manchester banks.

Considering cash first, it appears that all the "big five" except the National Provincial improved their cash ratios, but that this movement was not quite so general among the smaller banks. In any case, the 1928 cash ratios were fully adequate, and it is difficult to understand why, in these circumstances, bank deposits are allowed to decline.

For reasons discussed above, the advance ratio for all banks has risen from 51.6 to 53.4 per cent. Judged by past standards, both these figures are high, but the important point in the table is not so much their actual size as the fact that 1929 recorded an increase. It is to be noted that there is a tendency for the smaller banks to operate on a higher cash ratio and lower advance ratio than the "big five." This suggests that one of the advantages of bank amalgamations is that the large institutions can employ safely a greater proportion of their resources.

The capital percentages should be compared with those quoted by Mr Beckett for some of the German banks, namely, the Dresden Bank 8 per cent., the Deutsche Bank 12 per cent., and the Disconto Gesellschaft 16 per cent. The British ratios are clearly on the low side, and there is a strong case to be made out for increasing the paid-up capital of the British banks. Last year the District Bank added £300,000 to its capital, and this year the Midland Bank is offering to its shareholders new shares of £1 at a premium of £1 in the proportion of one new share for every £20 of paid-up capital, the premium to be added to reserve. This, again, is a move in the right direction, but a 5 per cent. increase in the Midland Bank's capital and reserves will only raise their ratio to deposits from 7.1 to 7.5 per cent., whereas Mr Beckett is envisaging something far more comprehensive.

For the effects of the Hatry crisis and the fall in Stock Exchange values reference must be made to other sources than the balance sheets. Mr Goodenough, in his address to Barclays' shareholders, admitted that his bank's losses at the most amounted to £330,000, while Mr. Pease, in his address to the shareholders of Lloyds Bank, said that until outstanding legal questions between innocent parties have been settled, it was impossible to gauge the extent of their loss. He added that they had taken the prudent course of providing in the usual way out of the profits of the past year a sum of £500,000, which, in all probability, would be in substantial excess of the amount actually required. The fact that the Westminster Bank have raised their annual allocation to contingencies from £200,000 to £400,000 may have some connection with these unfortunate events, and, indeed, Mr Tennant made the highly reassuring statement that the bank's contingent fund had increased during the year, notwithstanding these and other losses, some of which may eventually be redeemed. It may, however, be explained in the same way as Williams Deacon's reduction in their final dividend and transfer of £300,000 from reserve to contingencies, namely, by the need of providing for future losses arising out of industrial rationalisation and the consequent sacrifices it will inflict upon all parties concerned. This frank recognition of the implications of rationalisation provides convincing evidence that the bankers are realising that they will have to play their part.

THE HATRY CASE.

With dramatic swiftness the trial of Clarence Hatry came to an end last Friday. Hatry and his three associates pleaded guilty, and no evidence was offered for the defence. Incisively, yet without venom, Mr Justice Avory sentenced the prisoners—on the charges of forging and uttering, fourteen years' penal servitude for Hatry, seven years for Daniels, five years for Dixon and three for Tabor. Each is to serve concurrent terms of imprisonment on the charges of fraud, and of two years' hard labour for conspiracy. Hatry has appealed against his sentence as too severe, and in these circumstances comment upon it would be improper, but in any case the occasion is one neither for sentimentalism nor for vindictive satisfaction at the fate of the transgressors. The general feeling, especially in the City, is relief at the termination of a discreditable episode.

Unfortunately, it is only the criminal side of the Hatry exposure that is over. Hatry himself has still to endure the publicity of bankruptcy proceedings; the Stock Exchange special settlement has to be carried through; the legal position of the three corporations, scrip for whose stock was forged, has to be argued and their financial misfortunes liquidated; Sir Gilbert Garnsey has yet to present his report on the affairs of the Hatry group of companies. It may be that the Italian Gialdini, who chose a convenient date to take a holiday in his own country, will be brought to justice by the Italian authorities. The echoes of the shock which the City of London, and indeed the whole of the western world, received at the end of last September will take long to die away.

Looking back upon the case, one is impressed by the inevitability of the whole tale. Austin Friars Trust, the central sun of the Hatry group, was, according to Sir Gilbert Garnsey, insolvent from the start. Whether this was due to its having shouldered certain of Hatry's obligations arising from the failure of the Commercial Corporation of London—an affair out of which he came with such little credit that his re-instatement in the world of finance is a matter for wonder—or for whatever reason, some big effort had to be made to improve the fortunes of the Trust. Hatry conceived the vast ambition of reorganising the steel industry. He and his associates were not experts in the steel industry; their aim was to make money for their companies and themselves.

The finances of the plan were hopelessly prodigal, and existing shareholders, who were offered either cash or shares in the new merger, eagerly applied for their money. In order to meet these liabilities £4,800,000 was raised by pledging steel shares and in other ways. But £1,500,000 of it, declared Sir Gilbert Garnsey, was used outside the steel scheme. When plans for disposing of the entire interests broke down, at a fateful meeting in June the frauds now exposed were decided upon. There is no need to go into the details of the transactions. It remains clear that the root cause of the Hatry group's difficulties was the improper conversion of that million and a half. Where did it go? Apparently not straight into the pockets of the defendants, though counsel's citation of that fact was rightly described by the Judge as the threadbare plea of every clerk who robs his master to back a horse. The money was used to pay off old liabilities and for purchasing the shares of the group in an effort to support their market value.

Here one touches upon a clue to the origin of the whole trouble as far as the public and the City are concerned. Only under a system of interlocking finance as exemplified in the Hatry group can such large deficiencies be incurred or the wholesale fabrication of share transfers be carried on. Only under such a system is it possible to buttress up the credit of one company by the operations of another in the securities of a third. A great deal of the lost money fell into the pockets of those who sold Hatry shares on a market which had to be artificially supported because companies in the group were borrowing on the security of large blocks of the same shares. Such methods of finance cannot be wholly detected or eliminated, but the banks and the Stock Exchange are plainly faced with the problem of limiting them. Two plans which have been suggested—the closer scrutiny of the prospectuses and finance of new companies before their securities are allowed to be dealt in, and the restriction of permission to deal in vendors' shares until a balance sheet and accounts have been issued—are in the main wisely conceived, and will repay full consideration by the Stock Exchange Committee. The suggestion of a writer to the *Times*, that every company whose securities are dealt in should have an independent and licensed registrar, though very valuable as a line of progress, cannot be contemplated as an immediate reform and, in any case, is designed rather to prevent frauds of a kind which we are unlikely to see again for a long time than to limit a persistent though unfortunate type of company finance. The proposal that

banks should endorse new issues is premature and even dangerous—premature because British banks are without the necessary machinery, dangerous because until excessive competition among the banks can be annihilated the plan might well bring discredit to banks rather than security to investors.

The reflection leads on to the next problem which the case exposes. The long list of lenders who advanced large sums of money on fraudulent security, all within the space of a few days, includes four of the five big banks, while some hints at the share of the banks in the incidental losses are noted in a survey of the bank balance sheets in another column. Admittedly, good faith expected and observed is the key to the greatness of the City of London. Nevertheless, a multiplicity of lenders in acute competition with one another does plainly entail not only the acceptance of business which would be turned down by those less eager to retain a big customer, but also the possibility of raising colossal sums by an aggregation of many loans no one of which is exceptional. The answer that banks only grant loans upon a wide margin of marketable security does not dispel their responsibility for an inflation of credit in undesirable directions, since advances may be used, as apparently in this case, to purchase other securities on which further loans are raised. If competition is to be a stimulus and not a weakness, the banks must look beyond the security to the purpose of loans.

Finally, there is the isolated problem to which the losses of the municipalities demand a solution. It has been declared in one legal opinion that the councillors were personally responsible for a breach of trust in leaving public money on deposit with Corporation and General Securities, Ltd., a company which was not a bank, and which offered no security beyond its previous history and the reputation of its directors. Whether that opinion is upheld or not, town and city councils have had a shocking warning which they will not forget in our generation. But it is doubtful whether the issue of stocks which pledge public credit should in any case be entrusted to a privately-owned corporation. The Bank of England has the machinery, but it cannot be expected to buy up whole issues of stocks and unload them as opportunity presents itself. Even the joint-stock banks could not offer such attractive terms as municipalities have been accustomed to obtain. These reflections, though they point tentatively to the issue of joint municipal loans, and to the proper underwriting of all local corporation issues, do little more than limit the problem. Indeed, no cut-and-dried solution can be expected for any of the difficulties with which the Hatry case has brought the financial world face to face. It is enough that they should not be shirked.

THE LANCASHIRE COTTON TRADE IN 1929.

(BY A CORRESPONDENT.)

At the beginning of 1929 there were hopes that cotton spinners and manufacturers in Lancashire would experience relief from the severe depression which had existed for several years, but another twelve months have gone without any definite signs of better conditions, and in many respects the past year has been the worst period since the boom of 1919-20. Throughout the year it was impossible for spinners and manufacturers to run their machinery at full stretch. There was a considerable amount of short time and irregular working, with serious unemployment for the operatives. The financial position tended to become worse; cases of "difficulties" increased in number, and there was evidence that trade is still being lost to competitors. The one consolation, indeed, is that the industry is becoming more alive to the gravity of its situation, and that definite attempts are now being made to rationalise the industry. It is recognised that the unit of production in the past has been too small, and two amalgamations, the Lancashire Cotton Corporation, Ltd., and Combined Egyptian Mills, Ltd., have been formed, which are likely to have a vital effect upon the trade in the near future.

With regard to the raw material, the year opened with the price of American cotton (middling on the spot in Liverpool) at 10.59d. per lb. Rates at first tended to advance, and 11.14d., the highest price of the year, was reached on March 15th, followed by a decline which, with fluctuations, brought the price down to 9.22d. on November 13th. The average price of American cotton during the twelve months was 10.28d. per lb., against 10.90d. in 1928, and 9.52d. in 1927. At the beginning of 1929 the price of Egyptian cotton (fully good fair sakellaridis on the spot in Liverpool) was 19.35d. per lb. The highest price during the year, 19.60d., was registered on March 22nd. The lowest price, 13.95d., was on December 20th and 21st, the quotation on December 31st being 14.15d.

For the season 1928-29 the growth of American cotton was 14,450,000 bales, against 12,956,000 bales in the previous year. The consumption during 1928-29 was 15,076,000 bales. The new crop in the United States is expected to be about 15,000,000 bales. It is extremely likely that the requirements of users throughout the world will be reduced and consumption during this season is estimated at 14,000,000 bales. The Egyptian crop for 1928-29 was 8,035,000 cantars, against 6,091,000 cantars in the previous season. The consumption during the twelve months was 8,024,000 cantars, against 6,714,000 cantars in the previous year. The prospects for supplies for this season are generally encouraging. The latest Government estimate is 7,916,007 cantars, but there is a possibility of the yield being about 8,200,000 cantars.

The export trade in piece-goods was again very disappointing. It will be seen from the table given below that the shipments were smaller than in 1928:—

	Yards.	£
1913	7,075,252,000	97,775,855
1927	4,189,109,600	109,995,715
1928	3,968,198,300	107,298,462
1929	3,764,851,400	99,263,987

Throughout the twelve months demand ran generally on small lots to meet urgent wants, and there were very few occasions when buyers took a hopeful long view of the market and anticipated their requirements. The retail character of the orders available caused much comment, and there never was a time when our customers were more disposed to purchase from hand to mouth. The turnover from India was disappointing, the exports being 1,374,179,000 yards, against 1,541,784,000 yards in the previous year; the bulk of the demand was for bleaching descriptions, chiefly in the lighter styles, while there was further evidence of lost ground in the grey shirting trade. The policy of the Marwari Chamber of Commerce in restricting the import of certain cloths into Calcutta during particular months had the effect of disorganising business. There are distinct signs that this embargo of dealers is resulting in the diversion of trade to other centres, and more mention was made of business for the up-country markets of Delhi and Cawnpore. Uncertainty with regard to political developments in India had a serious effect upon trade activities during the closing months of the year, and the figures of Japanese imports into India continued to cause anxiety in Lancashire.

At the end of 1928 a rather more hopeful feeling prevailed with regard to China trade, but the expected improvement was not realised, and the past year was very discouraging so far as the Far East is concerned. A development which had a very adverse effect upon trade was the decline in the price of silver and the fall in exchange rates. The auction sales in Shanghai were very poor and merchants had to sell at prices which meant a loss. During the last few months there has been freer buying for Egypt, in view of the new tariff, but that market also was quiet, taking the year as a whole, and

demand from the Near East generally was restricted. On certain occasions a fair amount of trade was done for Singapore, but South American buying was irregular, and unfortunate developments took place in Brazil, where, as a result of the market being over-supplied, some serious losses were entailed by merchants. There was no general activity in the Continental market, but a number of manufacturers met with useful support from the British Dominions, especially Australia. The home trade had a fair year.

There was thus considerable irregularity of production in the weaving towns of Lancashire. Some sheds were closed down for an indefinite period, and numerous manufacturers were not able to run all their looms at full stretch. On the whole, output was between 75 and 80 per cent. of full capacity. In connection, however, with the reorganisation of the industry, an interesting experiment was started in Burnley. An arrangement was reached between manufacturers and the trade union for the weavers to take charge of eight looms instead of four, the employers providing additional help for weft and cloth carrying. This experiment met with considerable success. The operatives are enabled to earn higher wages and the manufacturers are satisfied with the increased production.

In the spinning section of the industry, so far as American yarns are concerned, production was from 75 to 80 per cent. of full capacity. Although during the twelve months there was no organised short time, a large amount of machinery was stopped. Competition for orders was severe, and in few instances did the prices ruling cover the costs of production. In March the Master Spinners' Federation recommended that the mills should stop on Saturdays and Mondays during April, thus reducing the working hours from 48 to 35 per week, but the proposal was not supported, and had to be dropped. In December the Masters' Federation decided to recommend all members engaged on American cotton to close their mills for a full week at Christmas. This recommendation was carried out rather irregularly.

With regard to Egyptian yarns, the year opened with loud complaints from spinners that the prices ruling were unremunerative. In February the members of the Bolton Master Spinners' Association decided to curtail production by 33 per cent. for two months. At the end of that period the short time was extended by another month. This curtailment, although not beneficial to the trade as a whole, at least prevented a further collapse of prices. Since then the demand for all kinds of Egyptian yarns has been very unsatisfactory. During the last two or three months more firms have been compelled to restrict output, and at the end of the year it was estimated that total production was not more than 80 per cent. of full capacity.

As will be seen from the following table, shipments of yarn were smaller than in 1928:—

	Lb.	£
1913	210,099,000	15,006,291
1927	200,464,700	23,608,368
1928	169,206,900	22,566,494
1929..	166,636,700	20,753,279

An outstanding event of the year was the formation of the Lancashire Cotton Corporation, Ltd. The company was registered in January, and according to the latest figures available, 71 companies have joined the Corporation, the machinery amounting to 6,750,000 spindles and 20,000 looms. It is expected that within the next few months the Corporation will control 100 companies, representing 8,000,000 spindles. Another important development was the formation of Combined Egyptian Mills, Ltd. This company absorbed 14 concerns, owning 31 mills in the Egyptian section, controlling 3,000,000 spindles.

In June the employers, both spinning and weaving, made an effort to secure a reduction in the wages of the operatives of 25 per cent. on piece price lists. The claim was strongly resisted by the trade unions, and, despite the intervention of the Ministry of Labour, a lock-out began on July 27th, which lasted for three weeks. Eventually all parties agreed to settle the dispute by arbitration. The Arbitration Board, consisting of Sir Rigby Swift, K.C. (chairman), Sir Arthur Balfour, Sir Archibald Ross, Mr C. T. Cramp and Mr A. G. Walkden, on August 22nd announced that the employers had made out a case for a reduction of wages, the reduction being 12½ per cent. on piece price lists, equal to 6.41 per cent. on current wages. The operatives, especially those in the weaving section, expressed their dissatisfaction with the award of the Arbitration Board. Since then several meetings have been held of the Operative Weavers' Amalgamation, and in October it was decided to make an application for an advance in wages of 25 per cent. in piece price rates, or a rise of 2s. 6d. in the £ on current wages. The employers definitely rejected the demand, and a ballot of the operatives as to whether the claim should be pressed is now taking place.

It cannot be said that the year 1930 has started with any feeling of optimism in Lancashire with regard to the immediate future. The facts of the situation must be recognised, and so far very little has been done to reduce production costs so as to enable Lancashire goods to compete successfully against the products of other countries. This is the problem which faces Lancashire to-day. Unless means can be found whereby goods can be placed in distributing centres abroad at the same prices as competitors', no improvement can be expected. Since standing charges and overhead costs are fairly well fixed, the cost of producing each pound of yarn and each yard of cloth can only be reduced by increasing the output and spreading the charges over a wider basis. A development of this kind can only be achieved by the establishment of a two-shift system, and later by the use of a larger number of automatic looms. With regard to markets abroad, the trade outlook in India and China is far from bright, and in other parts of the world higher tariffs are adversely affecting Lancashire trade. Great things are expected from the amalgamations which are now taking place in the industry. These will certainly result in many economies and more efficient marketing, but it may be some time before these organisations can make any definite impression upon the competition from other countries, and especially from Japan.

THE WALL.

(BY A TRAVELLING CORRESPONDENT.)

Why, that must be it: that white ribbon festooned along the flanks of the blue-grey mountain on our right. What luck that I had awoken at dawn and had idly poked my head out of the corridor window. For, had I slept ten minutes longer, I might have missed the sensation of crossing the line between the two worlds of darkness and light, of barbarism and civilisation. As I gazed at that narrow ribbon up aloft, a few more festoons unfolded themselves, and then suddenly the white line turned at right angles and came rushing down a spur of the mountain straight towards the train, transfiguring itself, as it approached, into a towered and battlemented wall. In an instant, we had shot through a gap cut by the sacrilegious hands of the railway engineer, and our locomotive was whistling as it drew up at the station of Shan Hai Kwan—The Mountain-and-Sea-Gate of "All that is under Heaven" (the outer darkness does not count). Our train was to wait an hour. We hurried out of the station and hired rickshaws.

Should we have time to visit that North Gate which towered above the walled city? As the crow flies, the gate is not so far from the station, but the alleys of Shan Hai Kwan are narrow and circuitous, and on that morning they were infested with parties of Fengtien troops, moving out to the plain beyond the Wall for a military review. They were not unamiable in themselves—those sturdy fellows mounted on equally sturdy Mongolian ponies or leading mules laden with sections of mountain guns; but they were up to no good; and we felt that our quest, though possibly idler, was certainly less mischievous than theirs. One could not conceivably cast these modern Chinese soldiers for the *rôle* of those classic troops, armed with javelin and bow, who once had manned the Wall when the Wall was a military reality. No, these amiable fellows patently belonged to the camp of the barbarians and destroyers.

In the end, we reached the North Gate just in time to climb it, take one glance round, and scramble down again. For the first moment my eye was drawn towards the great Manchurian plain—the region of outer darkness, across which our train had been travelling towards the Wall all night. Then my eye was caught again; and this time held fascinated, by those white festoons high up along the mountain side. Was it just a ribbon, or was it something alive: one of those fabulous titanic "worms" of Teutonic mythology that were supposed to guard buried treasure? What but a live thing could manage to cling to those almost perpendicular slopes? My fantasy was abruptly cut short by the necessity of re-boarding the train.

So here we were, barbarians all, on the point of crossing the threshold of civilisation. "What would your family say? Have you left your conscience behind?" It was just a benevolent Quaker fellow-passenger looking down at me from the door of the wagon-lits coach and reproaching me for buying raw fruit from a Chinese vendor on the platform. But for one instant of bewilderment, as her mild adjuration struck my ears, I fancied that I must be some missing link in that endless chain of barbarian invaders—Khitan and Kiu and Manchu—who had crossed this formidable threshold at their peril and had been inexorably demoralised by a civilisation too subtle and sophisticated for them to master. The next minute, our train moved on, and soon the narrow passage, guarded by the Wall, between the mountains and the sea opened out again into the plain of Chihli, as broad and level as the plain of Manchuria. Yet, all the same, this was another world; for here, inside the Wall, the plain was sown thick with grave mounds. The mounds ranged in scale from tiny grass-grown hummocks of earth to great barrows with hewn stone copings; but all alike trespassed boldly upon the otherwise jealously treasured arable land; and all bore witness to a civilisation in which the dead majority of the race had maintained a dominion over the souls of the living. Yet, even inside the Wall, a new world was jostling the old. The works of the Kailan Mining Administration—a joint Anglo-Chinese concern—were as imposing to the eye as any of the plant which Japanese enterprise has set up in barbarian Manchuria. After that, darkness fell, and when I saw light next morning I was in Peking.

A few weeks later I once more found myself standing on a gate in the Wall—this time high up among the mountains, at the summit of the Nankow Pass. Those ribbon-like festoons, or dragon-like coils, which I had seen from far away, and far below, at Shan Hai Kwan, were now writhing close around me. My eye followed them over ridge and ravine; my feet followed my eye; and I veritably believe that the Wall would have drawn me on—up one gigantic flight of steps and down another and up the next again, and round this corner and then round that—until I might have dropped from exhaustion in the wilderness, if the muleteer had not soberly reminded me that I had a four hours' walk down the pass to accomplish before dark.

No photograph or picture that I have ever seen gives any adequate impression of the way in which the Wall strides across these mountains. For these are not mountains of the form with which we are familiar in our world. So unfamiliar to our eyes are those sugar-loaf peaks and serrated hog's-backs and ridges running in all directions at once, like a choppy sea, that when we find them faithfully portrayed in Chinese landscape painting, we assume that they are creations of the same fantastic imagination that conceived the dragon and the kylyn. And if any western eye did become convinced of their reality, the one thing certain is that the owner of that eye would never dream of attempting to set his impress upon so outlandish a piece of Nature. Even a Roman military engineer, I believe, would have left those mountains alone and have trusted here to Nature to do his work for him. But not so the men who were responsible, two thousand years ago, for the guardianship of "All that is under Heaven." Just as they did not hesitate to delineate that tangled labyrinth of mountains with the brush, so they had the hardihood to trail their great wall across its pinnacles for hundreds and thousands of miles—deftly compelling Nature to serve their human purpose. Two features in the wall strike the barbarian sightseer with awe and admiration: the marvellous skill with which those ancient surveyors took advantage of the contours, and the fineness of workmanship of the masons who carried their plans into effect. Here Ancient China and Nature stand face to face—face to face, yet now no longer alone, for Modern China has established a footing here too. The Chinese-built railway from Peking to Inner Mongolia threads its way up the Nankow Pass, and at the head of the Pass it burrows through a tunnel under the Wall in order to emerge on the upland plain that stretches away northward towards the outer line of defence at Kalgan.

Which will prevail: the old or the new? The railway has not yet driven out of business those trains of pack animals that have plodded up and down the pass from time immemorial. But the survival of the ancient method of transport is apparently due less to the inefficiency of the railway than to the greater facility with which exorbitant dues can be levied on goods carried in bulk by rail than on goods carried, in small parcels, on mule or camel back. (At this moment, coal is actually carried on camel back, in successful competition with the railway, from the mines at the foot of the mountains to Peking. When they opened the city-gate for us before dawn, as we were driving out to the station to take the Kalgan train, we caught one glimpse of a convoy of coal-laden camels, patiently waiting for the signal to file in.) Meanwhile, whatever the reason may be, the pass is still full of life. As we walked down it that afternoon, through the successive fortifications with which each narrow place is bolted and barred, we passed a steady stream of traffic all the time; and at convenient halting places there were tiny booths where, for a few coppers, the weary muleteer could buy a handful of persimmons or as many cups of green tea as his soul desired. So still, through the pass, the mule-track and the railway run side by side—an apt allegory of China herself, as she is to-day.

Notes of the Week.

The Naval Discussions.—The Naval Conference is making a leisurely beginning of its labours. The anxiety of the British and American delegations in particular to avoid any suggestion that they have planned out the Conference in advance and are imposing their will on it has led to hesitations which have left the whole situation fluid rather longer than need have been the case. Mr MacDonald has been a little criticised for not having given the Conference more definite direction, and it does not, in fact, appear that the individual conversations, which began several days before the opening of the Conference, and have continued ever since, have cleared much ground, except in the matter of a compromise between the principle of measurement by total tonnage desired by France and Italy and that of measurement by categories, which the Anglo-Saxon Powers and Japan prefer. The crux of the Conference at the moment is the conflict still prevailing between France and Italy over the relationship of their two fleets. Italy insists on the parity which she secured in the matter of capital ships at Washington in 1922, and which M. Briand was then prepared to accord to her in auxiliary types also, while France is still determined to have parity in the Mediterranean and maintain a certain number of vessels in other seas as well. Private conversations in this field have not made for progress, and the time has pretty clearly come to get difficulties of this kind into the open. That, indeed, is what is likely to happen now that public sessions of the Conference are being resumed. When these initial questions of principle, notably the adoption of some compromise between the total tonnage and categories methods have been settled, the Conference can get down to its real work of actual limitation. The outcome of discussions on this head cannot yet be predicted. In regard to capital ships, the Americans so far seem less prepared for drastic action than the British, though Mr Stimson's broadcast address of last Tuesday suggested a certain approximation to the British attitude. The one virtual certainty is that the beginning of any new battleship construction will be postponed from 1931 to 1936, and for 1936 one may perhaps read the Greek Kalends. In addition, some immediate scrapping, or, failing that, the withdrawal of a number of ships from commission is a distinct possibility. As to cruisers, the Japanese show little sign of abating their claim to a 70 per cent. allowance of whatever cruisers the United States is allotted. The proposed disparity in 10,000-ton cruisers between Great Britain and the United States is proving so embarrassing, since other nations desire to apply their percentages to the higher of the two figures, that the MacDonald-Dawes arrangement may have to be revised in that respect. Meanwhile, the British Government has definitely cancelled orders for two 10,000-ton cruisers, the *Surrey* and *Northumberland*, a decision which, laudable though it is, means actually less than appears, since the British Empire has already built, or building, the whole of the fifteen "Treaty" cruisers allotted to it under the MacDonald-Dawes agreement. It is true that two of these, the *York* and *Exeter*, are of 8,400 tons, instead of 10,000 tons, but they mount 8-inch guns, which puts them in the Treaty cruiser category. There were, therefore, obvious reasons why the *Surrey* and *Northumberland*, projected before the Anglo-American conversations of last summer, should be abandoned, apart from the consideration that the utility of this type of vessel may have to be reviewed in the light of the technical progress represented by Germany's "pocket battleship" of identical tonnage but heavier armament.

Indian Developments.—The much-advertised "Independence Day" demonstrations passed off last Sunday without serious incident, and, though the processions to the seashore at Bombay led to some jostling between the Congressmen and the Communist Trade Unionists, who endeavoured to hoist the Red Flag on the platform, it cannot be said that any new light has been thrown on the situation likely to help Mr Gandhi out of his difficulty in planning a campaign of civil disobedience. Indeed, the only tangible success, if it may be so called, was the fact that a day or two earlier the students of Bombay prevented the Moderates, who wished to co-operate at the round-table conference, from holding a meeting. More importance attaches to the lengthy address delivered by the Viceroy before the Legislative Assembly last Saturday. In this statement he made it clear that no definition, in terms however unequivocal, of the goal to which British policy was tending could of itself provide a solution of the problems that have to be solved before that purpose is fully realised. "The assertion of a goal, however precise its terms, is of necessity a different thing from the attainment of the goal. No sensible traveller would feel that a clear definition of his destination was the same thing as the completion of his journey." He emphasised, however, that it was something gained to know that on both sides the aim was the same. He proceeded to say that the conference which His Majesty's Government will convene could not be one that would proceed by way of a majority vote to the fashioning of an Indian constitution which would be accepted unchallenged by Parliament, with whom ultimate responsibility must rest; and the exact numerical representation of interests, therefore, was of less importance than that sound proposals should be made and the arguments for them clearly presented. It was desirable that an effective voice should be given to the provincial as well as to the all-India point of view, but he had not yet advised His Majesty's Government as to how the Indian side of the conference should be constituted. As to its date, the Government were anxious that it should be held as early as possible, and his reference to the holding of the Imperial Conference in the autumn of this year may be read to mean that the Indian conference may be held at about the same time. He indicated that the elections, which should have been held at the end of last year but were put off, will not be indefinitely postponed, but will be held in time for a new Assembly to meet for the Delhi Session, to be held a year hence. The most significant part of his address, however, was his reference to agitators who desire to attain an immediate goal by resorting to "unconstitutional and unlawful methods of civil disobedience," and who have made public profession of the intention to refuse recognition of India's financial obligations. To all such, as well as to those who regard violence as the speediest and most effective solvent of political problems, he addressed the following solemn warning:—

> It remains my firm desire, as it is that of His Majesty's Government, following the recently professed wish of the British House of Commons, to do everything that is possible for conciliation in order that Great Britain and India may collaborate together in finding the solution of our present difficulties; but it is no less incumbent upon me to make it plain that I shall discharge to the full the responsibility resting upon myself and upon my Government for the effective maintenance of the law's authority and for the preservation of peace and order, and in the fulfilment of this duty I do not doubt that I should have the full support of all sober citizens.

He concluded by an appeal that all who can speak with authority should endeavour to express India's case at the conference with something like unanimity. While some of the Moderates have regretted that the Viceroy should find it necessary to point out the difference between a common objective and the immediate attaining of that objective, the Moslem leaders have appreciated the point that there is no possibility of Moslem rights being voted away by a counting of heads at the conference, while so wise a counsellor as Sir Tej Bahadur Sapru has underlined the significance of the last part of Lord Irwin's speech—recognising that, while there is nothing to prevent those attending the conference from urging full Dominion Status, with such safeguards as may be necessary, the measure in which such a demand can be fulfilled must depend upon the unity with which the case is put before the conference.

Law Among Nations.—The approval by the House of Commons on Monday of the Government's proposal to ratify its signature of the Optional Clause of the Statutes of the Permanent Court is an event of some moment, particularly since the process of ratification is in progress in France and Italy also. It is noteworthy that after an amendment by Sir Austen Chamberlain, designed to add to existing British reservations another in regard to maritime law, had been decisively defeated, the motion for actual ratification was adopted without a division. The case against the Chamberlain amendment was that it postulated either the old form of war which, since the signature of the League Covenant and the Kellogg Pact, is a definite breach of international law, or else trouble between Great Britain and the United States while the former was engaged in naval operations as an agent of the League against some violater of the peace. In regard to the second contingency, the difficulty really arises from the fact that we might be asked under Article 16 of the Covenant to undertake obligations to which the United States is not a party. So far as the Optional Clause is concerned, since only fellow-signatories of the Clause can require Great Britain to accept the jurisdiction of the Court, and since there is no indication that the United States has the smallest intention of signing it, there is no ground for arguing that our "belligerent rights" at sea could be questioned before the Court at the instance of the United States. If the United States should sign the Clause, the moment, as Sir Herbert Samuel pointed out, would be opportune for discussing and settling once for all various contested questions in the realm of maritime law. Meanwhile, there was substance in Mr Norman Angell's argument that, since the position of the United States is that we take too national a view of sea law, any move towards its internationalisation should be welcomed in that country.

Empire "Free Trade."—If Wednesday's Debate in the House of Commons served no other purpose, it succeeded at least in demonstrating that Lord Beaverbrook's "Empire Crusaders" have been forced, even more rapidly than Joseph Chamberlain's followers in 1903, to admit that Empire "Free Trade" is, for this country, a flagrant misnomer, and that, so far from its being an alternative to Protection, it means Protection unadulterated and unqualified. Originally, it will be recalled, Lord Beaverbrook proposed that, in return for the much-advertised removal of tariff walls within the Empire, Great Britain should join in quietly "ring-fencing" the Empire itself with a tariff on all foreign imports. Discovering, as he might have known, that the Dominions, even if we agreed to tax for their benefit our large foreign imports of food and essential raw materials, would stoutly decline to open their doors to free imports of British manufactures, the chief Crusader has changed his ground. The "new model" is to admit the possibility of interior walls within the "ring-fence" being erected by the self-governing Dominions, and to concentrate on securing freedom from tariffs for British products exported to the non-self-governing Colonies—a crude reversion to mercantilism discredited two centuries ago. In any event, whether the supposed gain, to counterbalance loss of trade with foreign countries, is to be sought in the whole Empire or only in such sections of it as can have "free trade" forced upon them, the fact that the Liberal amendment to Mr Remer's motion in the House on Wednesday—"provided that any such proposals [for developing the Empire as a single economic unit] shall not include additional taxation upon foodstuffs or raw materials"—was rejected by Lord Beaverbrook's protagonist showed up the Crusade in its true colours. It is well that the plain fact should have once more been restated that we cannot give the Empire tariff preference without taxing our food and the primary materials required for our industries. As Mr Lloyd George pointed out, we get seven-eighths of our raw cotton from foreign countries, and a tax imposed for the benefit of cotton-growers in Uganda, Nigeria and the Sudan would cripple Lancashire at one stroke. We are glad, though scarcely surprised, to note Mr Snowden's uncompromising refusal of Government support for proposals which Mr Lloyd George was fully justified in describing as "fantasies." In the course of a debate which, to the manifest relief of Conservatives, was "talked out" with no division, one further point, not strictly germane to the "Empire Free Trade" issue, calls for comment. Referring to Lord Beaverbrook's propaganda with regard to foreign "dumping," Mr Lloyd George admitted that if State-subsidised goods were "dumped" here below cost of production—*i.e.*, for wrecking purposes—in competition with commodities produced here, this was a proposition which ought to be dealt with, not by tariffs, but, if necessary, after careful examination of each case by a competent tribunal appointed by Parliament, by the imposition of an embargo. This remedy is clearly one which should be applied only in the last resort, though the problem of "dumping" is one whose existence must be recognised. It is a problem which was very present to the mind of the World Economic Conference, and which gave rise to the suggestion at a recent meeting of the Consultative Committee that the principles of the Brussels Convention—an international agreement concluded before the war to take the strongest measures against "dumping" of bounty-fed sugar—should be revived. The best hope of dealing with the problem lies in the possibility of international agreement, and, this being so, it is of vital importance that Parliament should not prejudice the position of this country and render the possibility of agreement remote by leaving in the Coal Mines Bill the dangerous and ill-conceived clause giving State sanction to levies, if desired, on home-consumers' coal for subsidisation of exports.

The Economic Advisory Council.—The White Paper setting out the functions and constitution of the Economic Advisory Council, which was promised by the Prime Minister last week, has now been issued in the form of a Treasury Minute, dated January 27th. The paper records the decision of the Government to set up the new council, which will be a standing body reporting to the Cabinet. Its purposes are defined as follows:—

> To advise His Majesty's Government in economic matters.
> To make continuous study of developments in trade and industry and in the use of national and imperial resources, of the effect of legislation and fiscal policy at home and abroad, and of all aspects of national, imperial and international economy with a bearing on the prosperity of the country.

This is, indeed, a wide enough mandate to ensure that neither the Council nor its staff will suffer from want of work. The study of the effects of fiscal policy at home and abroad, for example, is one which alone would keep a considerable staff fully occupied. In order to economise its efforts one of the first tasks of the Council should be to establish close relations with the Economic Section of the League of Nations, which is covering, in a general way, an even wider field. The Minute proceeds to state that the Council, which will be subject to the general direction of the Prime Minister, will keep in touch with the Departments, but "will interfere in no way with the functions or responsibilities of Ministers or of the Departments over which they preside, and it will have no administrative or executive powers." The Prime Minister will be chairman, and its members will include: (*a*) the Chancellor of the Exchequer, the Lord Privy Seal (while the present duties are attached to that office), the President of the Board of Trade and the Minister of Agriculture; (*b*) such other Ministers as the Prime Minister may from time to time summon; (*c*) other persons chosen by the Prime Minister in virtue of their special knowledge and experience in industry and economics. The Council may initiate enquiries into and advise upon any subject falling within its scope, including proposals for legislation. It is evidently contemplated that these inquiries may be made by the Council direct or by committees or groups of experts set to work by it, for it is provided that the Chairman "may appoint standing committees and also such committees for special purposes as may be required." Further, the Council is to have prepared a list of persons with industrial, commercial, financial and working-class experience, and persons who have made a special study of social, economic and other scientific problems to assist the Council by serving on committees or in other ways. The reports and work of the Council will be confidential, unless it advises the Prime Minister otherwise. The Council is to have a secretary and at least two assistant secretaries, two of whom will be economists. We understand that one of the economists referred to in the White Paper will be Mr Hubert Henderson, formerly university lecturer in economics at Cambridge and more recently editor of *The Nation*. No formal announcement has, however, yet been made in regard to staff.

Economists at the Bank.—Two interesting appointments have been made this week in continuance of Mr Norman's policy of strengthening the personnel of the Bank of England. Professor Henry Clay, of Manchester University, is to carry out for the Securities Management Trust, recently formed under the auspices of the Bank of England, the organisation and direction of economic research into industry. The second appointment is that of Dr. O. M. W. Sprague, in succession to Dr. Walter Stewart, who is going back to America. It will be recalled that Dr. Stewart, who had formerly been head of the Intelligence Department of the Federal Reserve Board in Washington, and subsequently had been in business in New York, joined the Bank for a period of two years with a twofold object. One was to help it to maintain contact with and understand American opinion, and the other to help in the organisation of the intelligence and statistical services of the Bank. Dr Stewart's appointment has been very successful in both respects. His successor, who comes straight from Harvard, is one of the best known professors of banking in the United States. He recently accepted membership of the League of Nations Committee on the Purchasing Power of Gold, which was appointed last year, and he has acted in an advisory capacity on important occasions and given evidence before many banking inquiries. These two appointments unquestionably strengthen very greatly the resources of the Bank on the economic side, which, in this respect, challenges comparison with the staff of any other central bank in the world. A central bank requires both an international outlook and a thorough understanding of economic questions if it is properly to fulfil its primary functions. There is, however, an aspect of the appointment of Mr Henderson to the staff of the Economic Advisory Council, and of Professor Clay to the Bank which gives us some concern, for these two appointments, as far as the public are concerned, have muzzled two of the leading exponents and teachers of economics in Great Britain. It has for years been evident that the number of first-class people in the economic field is very small. Teaching posts have actually been kept unfilled for lack of suitable and experienced professors, while the scheme two years ago of the London School of Economics to meet the difficulty by bringing over Professor Young from America ended in tragic failure by his untimely death. Our university authorities should take serious note of the important responsibilities which qualified economists are invited to take in increasing measure and at the same time the very small number of persons qualified for the work. Nevertheless, though their places will be difficult to fill, we welcome the association of economists of high standing with the Government and the Bank, for in both cases their presence may be of immense practical importance in guiding economic policy. Whether, however, the Bank's existing staff or its new recruits are competent to advise it on the way in which industry is to be reorganised, is another story. The announcement of the Bank's interest in the United Dominions Trust, Ltd., has given rise to considerable uneasiness as to the way in which the immense resources, power and prestige of the Bank of England are to be used in connection with industrial developments. A clear statement on what is conceived to be the *rôle* of the Bank in this connection is very desirable.

Reparations: An American View.—A Washington correspondent writes:—The American Economic Association devoted one of the three morning sessions of its recent annual meeting at Washington to a discussion of the problem of German reparation payments. Both the budgetary and transfer aspects of the subject were discussed, the latter especially by Professor J. W. Angell, of Columbia University. Pointing out that foreign loans had acted and would necessarily continue to act as an essential element in Germany's capacity to pay, Professor Angell followed Mr Keynes in viewing pessimistically Germany's ability to effect the realignment of its economic forces necessary in order to provide the requisite future export surplus of commodities to take the place of payments from loans (economic services being considered relatively unimportant). Although handsome tribute was paid to the remarkable economic recovery of Germany, whose present equipment was declared as efficient as that of any European country, it was held that the necessary export surplus could not be secured with the rapidity demanded by the Young Plan. The competition of other European countries and the existence of hostile tariff barriers were seen as the principal difficulties in securing this surplus which probably could never be permanently attained save by a lowered standard of living in Germany. The most hopeful solution, it was suggested, would be a change of opinion in the U.S.A. making possible a drastic revision of the whole question of reparation payments, or at least a lowering of the tariff. In the subsequent discussion the feasibility of compelling Germany to accept a standard of living lower than that which she might otherwise attain, and the possibility of a future fall in prices of manufactured goods relatively to agricultural produce were urged as factors which would render advisable a reduction or abolition of reparation payments at no very distant date.

The Left Wing in France.—French political activity is somewhat in abeyance with four members of the Cabinet absent in London, but one extra-parliamentary event of importance is the decision taken by the Socialist Party last Sunday to refuse any active collaboration with the Socialist-Radicals except in a Government in which the Socialists definitely have a controlling voice. The resolution adopted did not indeed confine itself specifically to collaboration with the Socialist-Radicals in particular, but that is obviously the one practical combination of the Left, if any combination is practical at all. There was a considerable minority of another way of thinking, for 2,000 votes were cast in favour of the resolution and 1,500 against it; and a section of the minority declared it would refuse to abide by the decision taken. That suggests at least the possibility of a sufficient access of strength to the Radical-Socialists to warrant M. Daladier, in exceptionally favourable circumstances, in attempting the formation of a Government should opportunity arise. The series of fiascos which marked the attempts of successive Cabinet-makers before M. Tardieu finally got the present administration together emphasises the necessity of counteracting the chaotic results of the group system in France by collaboration between relatively like-minded Parties. The possibility of a reconstitution of the Cartel des Gauches is not entirely disposed of by last Sunday's rather inconclusive vote.

Bankers on Rationalisation.—The chairmen of the Westminster Bank, Lloyds Bank and the National Provincial Bank included in their customary reviews of the events of the past year interesting references to the progress of industrial rationalisation. "Our great basic industries," said Sir Harry Goschen, speaking to the shareholders of the National Provincial Bank on Thursday, "are all clamouring for further supplies of capital to instal new machinery, to bring processes up to date, and to effect such improvements and reorganisation as they confidently hope will enable them to compete successfully in the markets of the world, and where is this capital to come from? No one, I take it, would suggest that the banks should permanently find the money required for capital expenditure and lock up their resources in machinery and bricks and mortar." On the other hand, Sir Harry Goschen gave a welcome to the attempts of the Lord Privy Seal to solve the unemployment problem, and in reference to the steel industry declared his confidence that no efforts will be wanting on the part of British banks to afford the necessary assistance to sound proposals, and that it is only by the provision of the most economic and efficient plant that this industry can successfully exploit to the fullest advantage the natural means at its disposal and compete effectively in the markets of the world. Mr Beaumont Pease, the chairman of Lloyds Bank, took up the same theme in his speech on Friday. He did not think that bankers had the necessary detailed knowledge of the condition of an industry as a whole, or were sufficiently acquainted with its technicalities, to be in a position to say what particular reforms are advisable; what flaws there may be in its technical procedure; or what units are redundant. No doubt banks had an important and useful *rôle* to play in providing the necessary temporary finance for the reconstituted industry if they were satisfied that the position had been sufficiently investigated and that the reforms instituted had reasonable hopes of success. He had no doubt at all that banks would be willing in such an event to do their part. A company such as that recently formed under the auspices of the Bank of England should, he thought, be a useful intermediary in this way between industry and the banks. The chairman of the Westminster Bank, commenting in his speech last Wednesday on the proposal that British banks should co-operate more closely with industry by providing fixed as well as working capital, likewise suggested that the formation of new institutions for this specific purpose was the best way out of the difficulty. His commendation of the work of the

Lancashire Cotton Corporation and the Combined Egyptian Mills Company in reorganising the two great sections of the spinning industry was especially notable in view of the criticism so often levelled against the banks, that especially in Lancashire their own vested interest has been one of the greatest impediments to their efforts towards financial reconstruction. Mr Hugh Tennant further discussed the burden which the monetary difficulties of the past year placed upon trade. The complaint of the trader against the banking system could be answered, first by the negative and counteracting part which London played in the monetary fluctuations of 1929, second by the vast importance in our international trade balance of the "financial industry," which must rank as one of our greatest exporting industries, third by the stimulus which international investments gave to trade, and finally by the unique facilities which London's machinery of international finance provides for the British trader. If London ceased to be a repository for the world's spare resources, the rates paid by British industrialists for accommodation would be appreciably higher.

The Problem of Falling Prices.—Mr Keynes had so much to say in his annual speech to the National Mutual Society on the investment problems of the past year, as well as on the history of the Society—now celebrating its centenary—that he said little about the general situation or future prospects. He devoted, however, a few words to a subject which he has previously discussed, namely, the disparity between falling prices and stationary wages and the extent to which the gap has been or can be filled by improved efficiency. He pointed out that in 1929 the problem had been aggravated, rather than the reverse, since prices had fallen by a further 4 or 5 per cent., while wages were unchanged. In so far as the problem arose as a result of the return to gold, it was local to this country, but in Mr Keynes' view the fall in wholesale prices of materials has now taken on the character of a world-wide disaster. "The storm centres are to be found to-day, in my judgment, neither in Great Britain nor in the United States, but in the great producers of raw materials overseas. For significant signs of recovery or of further deterioration it may not be so important to-day to consider London or New York, as to watch Australia, South America, and Asia, and also Central Europe. For these areas are being reduced to very grievous distress by the combined circumstances of the fall in the prices of their chief products and the difficulty of obtaining funds on the International Loan Market." Mr Keynes added that these events in his opinion are avoidable and remediable, but are to be attributed "to the want of collective wisdom on the part of the Central Banking authorities of the world taken together, and are not now wholly remediable by the isolated action of any single country." In his view the struggle for gold stocks must cease and market rates in financial centres must be reduced "for some time" to a low figure—attainable, in his view, if they all move together—before there can be a general recovery of enterprise and confidence. Mr Keynes is clearly right in thinking that this has now become an international question, and it remains to be seen what contribution can be made towards its solution on the theoretical side by the Gold Committee of the League of Nations and on the practical side by the Bank for International Settlements.

Miners' Hours.—There is on the Order Paper for the Coal Mines Bill a Conservative amendment providing that the maximum working day should not apply to pits where less than 45 hours weekly are worked underground; another amendment desires that the maximum should not apply where the hours do not exceed 90 in a fortnight. In this connection, and also in relation to the international comparisons made at the Preparatory Technical Conference on Miners' Hours at Geneva recently, the following figures given by the Secretary for Mines in a written answer to Sir Herbert Samuel are of special interest.

	Average daily hours underground.		Average time spent underground weekly.	
	hrs.	mins.	hrs.	mins.
Scotland	8	26	48	53
Northumberland:				
Hewers	7	52	43	14
Others	8	22	45	59
Durham:				
Hewers	7	57	44	19
Others	8	27	47	17
Yorkshire	7	59	45	33
Lancs and Cheshire	8	34	49	14
Notts and Derby	8	8	45	53
South Derby	8	32	49	2
Leicester	8	30	47	58
Cannock Chase	8	30	48	28
Warwick	8	29	48	13
South Wales	8	30	49	29
Forest of Dean	8	36	49	1
Somerset	8	31	50	0
North Wales	8	38	49	51
Bristol	8	25	49	30
North Staffs	8	31	48	11
South Staffs	8	19	47	54
Salop	8	28	48	48
Cumberland	8	23	46	11
Kent	7	53	44	13

These figures are based on the International Labour Office reckoning, which counts hours from bank to bank. The British official practice embodied in legislation is to deduct one winding time (roughly half an hour per shift). The practice with regard to Saturday working varies from coalfield to coalfield and even from pit to pit. In Northumberland, as in some Scottish pits, 11 days are worked per fortnight. The Leicester coalfield works 2¾ hours less on Saturdays, but this is exceptional, the majority of coalfields working one or two hours less on Saturdays. Yorkshire, which has a comparatively short working day, reduces it on Saturday by only half an hour.

Production in 1929.—The London and Cambridge Economic Service has published its index of the physical volume of production for the last quarter of 1929. A seasonal increase in that quarter is usual, as the following table shows, but the rise this year is unusually sharp:—

1924=100.

	1927.	1928.	1929.
First quarter	110·8	105·7	108·3
Second quarter	108·1	103·7	111·0
Third quarter	105·9	95·4	108·2
Fourth quarter	107·4	105·2	115·0
Average	108·1	102·5	110·6

The rise is ascribed mainly to an increase in the output of coal and textiles. The indices of both metal groups, contrary to the experience of previous years, have fallen slightly, and that of the food group has declined, owing to a customary decrease in the wheat and flour figure. The average for the year, 110.6, is the highest yet recorded, and this is also true of the group averages of coal, ferrous metal products, chemicals, food and paper. Non-ferrous metals and textiles, though better than in 1928, have not recovered their earlier levels. The corresponding index of the Board of Trade has not yet appeared. It has recently tended to be higher than that of the London and Cambridge Service, owing partly to the inclusion of gas and electricity, and of a separate group for engineering and shipbuilding (both of which indices show more than the average increase over 1924), and partly to a difference in the composition of the chemical group. As the London and Cambridge Service only includes cotton, silk and rayon in its textiles, the textile index is consistently very much higher than that of the Board of Trade, which covers also wool and linen. For this reason it is possible that the Board of Trade index may not show such a large rise in the fourth quarter of 1929 as that registered by the London and Cambridge Service, in which a rise in the textile group played a large part. The great difficulties of selection and weighting, which can only be solved by prolonged experiment, require that any index of this character be interpreted with extreme caution, but other economic barometers, including the *Economist's* indices of business activity, confirm the conclusion that on the whole 1929 compared favourably with its immediate predecessors.

Wheat in 1928-29.—A year ago we characterised the world wheat situation in 1927-28 as "another year of wheat surplus." It was followed by a year in which wheat production even more strikingly exceeded consumption. In 1928-29 the world wheat acreage harvested stood at 7 per cent. above the 1922-27 average; production, thanks to exceptionally high yields per acre, stood at 16 per cent. above average. Prices, though they fell very nearly to the low level of 1923-24, and though they provided meagre reward even for farmers with large crops, were on the whole surprisingly well maintained, and consumption did not advance by any means in proportion to supply. The following table, taken from the December issue of Wheat Studies of the Food Research Institute of Stanford University, shows approximate carry-overs at August 1st.

(Million bushels.)

	1924.	1925.	1926.	1927.	1928.	1929.
United States	165	135	111	138	142	262
Canada	41	26	35	48	78	104
Canadian in U.S.	3	3	4	5	14	23
Argentina	66	56	61	65	90	120
Australia	38	36	30	34	43	45
Afloat for Europe	42	33	39	46	45	38
U.K. Ports	10	9	4	8	10	6
Totals	365	298	284	344	422	598

Thus for three consecutive years the world has been accumulating wheat reserves which must sooner or later be disposed of. The immense increase in North America, where facilities for wheat storage have been very highly developed, is most notable. Indeed, one of the most striking features of the last crop year was the far greater strength of Canada and the United States, compared with the Argentine, in maintaining the level of prices. On the average, Liverpool prices of Rosafé were conspicuously lower than those of No. 3 Northern Manitoba and No. 2 Winter, wheats with which it competes. In consequence British importers curtailed their purchases of other wheats and expanded their purchases of Argentine in so far as flour standards permitted, 27.5 per cent. of British wheat imports coming from the Argentine, compared with 20.9 per cent. in 1927-28 and only 15.1 per cent. in 1926-27. This factor in the international wheat situation is likely to remain a very strong one, and indeed the history of the first months of the present crop year, especially the opening weeks, during which imports from the Argentine practically displaced those from Canada, indicates that, if anything, it is likely to be reinforced. Argentina had a much increased share in total world trade in wheat, which at 940 million bushels was over 90 million bushels larger than ever before. European countries, many of which themselves had bumper crops, did not import much more than usual, but, with a poor crop turning India into a net importer, extra-European countries took 76 million bushels more in 1928-29 than in any previous year, thanks, no doubt, to the attraction of low prices.

Continental Steel Cartel's New Developments.—The conclusion apparently to be drawn from the result of last Saturday's committee meeting of the Continental Steel Cartel at Luxemburg, writes our Paris correspondent, is that the organisation is about to assume a more aggressive policy. It was decided to create, as from February 1, a provisional organisation to handle steel exports in common in the various foreign markets, to be followed six months later by the establishment of permanent selling agencies. Evidence of the closer working of the various national sections of the cartel is afforded by the recent handing over to the Belgian plants (which were not well furnished with work) of surplus orders in the hands of the German and Luxemburg steelmasters. The bald communiqué issued after the meeting makes no reference to the present position of the overtures made to the British steel industry to give its adhesion to the cartel. Production figures for December show that the French plants are still working to capacity. The month's output of pig iron was 874,000 tons, against monthly averages of 832,000 tons in 1928, 772,000 tons in 1927 and 742,000 tons in 1913 (Alsace-Lorraine plants included). The output of crude steel was 813,000 tons, against monthly averages of 791,000 tons in 1928, 692,000 tons in 1927 and 559,000 tons in 1913.

THE BRITISH LINEN BANK.
Incorporated by Royal Charter, 1746.
Capital and Reserve Funds, £3,400,000.
EXECUTOR and TRUSTEE DEPARTMENT.
Head Office: 38, St. Andrew Square, Edinburgh
The Bank is prepared to undertake the duties of Executor or Trustee, and to act as Trustee for Debenture Stockholders, Public Institutions, etc.
LONDON OFFICE: 38, Threadneedle St., E.C.2
Every description of Banking Business transacted.

Woolcombing Difficulties.—Our Bradford correspondent writes:—In the textile boom after the war, combs, spindles and looms were largely increased in number in the wool trade of Yorkshire. For the last few years it has been impossible to run all of them. There is not enough trade for the machinery, thanks partly to reduced spinning power at home, partly to increased tariffs abroad, and the fact that more countries are making their own goods. Probably two-thirds of the wool combed in this country is treated by two public commission concerns, who during the last few years have found their customers gradually taken from them by private combers, working for lower rates in order to keep machinery going which their own private trade could not employ. A rate war has developed, and the last of several reductions was made at the beginning of January. The public commission firms knew that this reduction would mean a loss unless they could run to 85 per cent. of capacity. They also knew that such an increase in running was impossible, because the trade does not exist for everyone. It was a reduction made with the intention of squeezing the weak financial firms out of existence, both inside and outside the federation, and already in the scramble for work the new tariff has been cut by non-federated firms, notably by one that is being run by a bank and is alleged to have lost £20,000 in the last 12 months. Woolcombers, Ltd., and Messrs Holdens, the big public concerns, both have large reserves invested and, like other combers, having run only 50 or 60 per cent. capacity over the last few years, they have paid dividends out of the interest on investments, profits on combing being non-existent. The rate war has now been carried to such a point that English woolcombing charges are as low as French and German and lower than Italian. They spell nothing but loss, except on full-time running, and it now pays spinners and topmakers who have their own combs, but who cannot run them full time, to give out their wool on commission. Even if this practice were general, it is doubtful if combers could earn dividends without the help of their reserves. It is admitted that by no means all the weak firms are outside the Federation. Rationalisation is impossible because of individual jealousies, but as Sir Josiah Stamp recently pointed out in Bradford, a method now resorted to for the reduction of plant and personnel means that the weakest firm financially, and not necessarily the worst firm technically, goes out of business.

Dangerous Drug Traffic.—There is a fortune awaiting the writer of crook melodrama whose pen can do justice to the material provided in the report, published at the beginning of the present session, of the League Advisory Committee on traffic in narcotic drugs, by the director of the Egyptian Central Narcotics Intelligence Bureau.

Major-General Russell Pasha was offered, in 1929, by the Prime Minister of Egypt, a free hand and unlimited funds to stamp out the traffic which had already turned some 560,000 out of a population of 14 millions into drug addicts. With £10,000 he set up a secret service which, aided by the whole-hearted collaboration of the French authorities in Syria, has already checked the import of hasheesh and exposed two or three of the main sources and distributive channels of narcotics. Speaking before the Advisory Committee, Russell Pasha called attention to the fact that a certain Swiss manufacturer had three times escaped prosecution by producing drugs, the manufacture of which was not covered by the Swiss prohibitive code. In the subsequent discussion M. Carrière was able to assure the committee that this individual, though he retained his licence owing to a constitutional difficulty, had been deprived alike of access to raw materials and of the right to export. All synthetic derivatives of morphine are covered, as Russell Pasha himself realised, by the new Swiss code which comes into force on February 1st. To Russell Pasha's request that the French delegates would inform the committee of the results of the enquiry set up in consequence of the revelations in Alsace, M. Bourgeois replied that legal action was now being taken. He further announced that the French authorities in Syria had destroyed the whole hasheesh crop last year, and announced his readiness to explain in secret session the measures by which the French export of narcotics had been reduced in 1929 to a few kilogrammes. At an earlier meeting of the committee the French delegates had announced that France now refuses to export to countries which have not adopted an import certificate system, and the German and Swiss delegates stated that their respective authorities only authorised export to China on production of import certificates. The French delegates further indicated that France is instituting an enquiry into the question of export to China. Sir Malcolm Delevingre requested that Turkey might be included, and later asked that the attention of the Turkish Government be called to the recent establishment of two drug factories in Turkey, having behind them the resources of a person who had recently been concerned in the illicit drug manufacture on a grand scale in France. The question of limitation of manufacture revealed some differences of opinion, and a subcommittee of ten was appointed to study it between the meetings of the full committee. One of the most encouraging facts which has so far emerged is the willingness and efficiency with which the police of certain countries, especially Switzerland, have helped the efforts of the Egyptian Bureau.

Sun Life Assurance Society: A Correction.—The first column of the table on page 170 of the *Economist* of January 25th should have been headed 31 December, 1926, not 1928.

UNITED STATES.—TRADE RECOVERY PROSPECTS—SHARE MARKET—MONEY—YEAR'S RESULTS—PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 17.

PROGRESS, though slight, has been made during the past week toward better prices for securities and higher rates of operation for basic industries. The money market has felt the easing influence of the cessation of the gold efflux, the liquidation of outstanding credit at interior centres, and the return of currency from circulation, consequent partly upon early year factors and partly upon the diminished activity of trade.

Perhaps the most encouraging development has been a considerable increase in steel mill orders and a corresponding rise in production. It is estimated that the larger units of the industry are now running at from 65 to 70 per cent. of capacity. As the old year closed they were down to 40 per cent., and last week's rate was only 60 per cent. In an effort to stimulate orders the mills have made price concessions, but scrap steel is meeting with firmer demand, and that is regarded as an indication of a better market for finished steel. Motor manufacturers are planning increased operations, and they profess to be well pleased with the first of the national exhibitions held here last week.

That is about the extent of tangible evidence of trade recovery. After postponing price reductions, perhaps unwisely, until the New Year, the oil purchasing companies have now posted lower prices for crude throughout the south-west territory, and price-cutting may become even more pronounced before much real progress can be made in cutting down excessive production. So far, curtailment agreements have been a failure. A lively contest is being waged with the copper-producing companies on one side and the large consumers, including the telephone and telegraph companies and other public utility concerns, on the other. First blood seems to have gone to the producers. By withholding copper from the market at under 18 cents a pound they have finally forced a good deal of buying at that figure. However, the lack of consumption last month and the only moderate extent of the decline in output sent stocks on hand to the largest figure for several years. Producers are determined to fight to maintain the price, and under the lead of the Anaconda company further reduction in output is taking place. But it is still an open question whether price cutting can be avoided later on.

Distribution of goods, as indicated by railroad freight loadings, continues lower than in the corresponding period of a year ago, but surveys taken by shippers' associations estimate that the volume which will move in the first quarter will be less than one per cent. lower than that of last year. Cotton consumption figures for December made a rather poor showing, compared with the previous December, and the price of the staple shows little strength in spite of the market operations for the co-operative institutions organised under the auspices of the Federal Farm Board. Foreign trade figures for last month also were smaller than those for November or for December, 1928. Exports fell substantially, while imports, though lower than in the preceding month, were above those of a year ago. Twelve months' results were total exports, $5,248,483,000; and imports $4,400,634,000, leaving an export balance of $847,849,000, compared with $1,036,912,000 in 1928. Taking trade news at its worst, it does not seem that the business recession is particularly severe. Certainly it is less so than had been predicted when the stock market collapsed last autumn. Wall Street is satisfied that spring will bring a fair revival, and confidence throughout the country is reported to be high.

Meanwhile, share market dealings have crept forward, but the volume of trading has been smaller than for a year and a half and the gains have been chiefly among public utility shares, which were thoroughly deflated last year. These shares are now being helped by recent court decisions, which strengthen their claims to rates enabling them to earn a good percentage on capital invested. Pool operations have revived here and there, but their attempts to obtain a public following have generally failed. Prices go up easily enough on a small turnover, but they go down just as easily and the net gain by leading stocks on the year to date has amounted to only two to four points.

Fixed interest-bearing securities, however, look much stronger. At the beginning of the week the market was well tested with a $150 million issue of 5 per cent. American Telephone and Telegraph Company bonds. The offering was over-subscribed and the price quickly went to a premium. The signal was thereby given for other flotations, with the result that the week's offering of approximately $340 million was the greatest since the wartime Liberty Bond flotations. Signs are not wanting that the rush to sell new bonds has hurt the market and prices have turned irregular. But a good underlying demand for investment securities has been disclosed, and, with the prospect for continued ease in money, prices should rise higher.

Call money has been plentiful at 4 per cent., while little demand has developed for time funds at 4½ per cent. Brokers' loans rose $13 million this week, but the gain was chiefly due to payment made on January 15th for approximately $80 million of new shares offered some time ago by the Pennsylvania Railroad and a public utility company. The year-end bulge in loans made direct to customers on stock and bond collateral by member banks of the Federal Reserve system was more than wiped out last week, and liquidation of such collateral and loans is expected to continue. Member bank discounts at the Reserve Banks have receded further and at $442 million are but little more than half the total of last year at this time. Total Reserve Bank credit outstanding declined about $125 million on the week, and is a quarter of a million below that of a year ago, while the reserve ratio stands at 75.4 per cent., compared with 67 per cent. on the same date in 1928.

Annual earning statements of banks, investment trusts and industrial corporations are now being published. The banks, of course, had a highly profitable year, although a few which operate security trading and investment affiliations have had to take some losses. The investment trusts, as anticipated, reveal considerable losses, but shares of most of them are now selling below or close to their "break-up" asset value. Industrial corporation earnings are running ahead of 1928, in spite of an unfavourable fourth quarter, except in those industries which were depressed all the year. Commodity prices, according to the index of the Bureau of Labour Statistics, at 94.2, were down only one-fifth of one per cent. in December and stood 2½ per cent. below a year ago. The average was 96.5 for the year.

FRANCE.—CHAMBER—PARIS AND INTERNATIONAL FINANCE—MONEY MARKET DEVELOPMENTS.

(FROM OUR CORRESPONDENT.)

PARIS, January 29.

THE Budget continues to occupy the Chamber, but in the absence of M. Tardieu and his principal colleagues in London, progress is slow. Interest for the moment is focused on the problem of whether the national insurance law shall be put into application on February 5, or its practical operation postponed until its many glaring defects can be remedied. M. Loucheur, who is in charge of the measure, as Minister for Labour, insists that the law fixing the date of application must be respected, and in this he has the entire support of the Labour organisations and the Socialist Party, and the tacit approval of many of the Radical Socialists. Opponents of the scheme in its present form (who correspond closely to the Parties forming the present Government's majority) allege that M. Loucheur is coquetting with the Parties of the Left, with the object of overthrowing M. Tardieu and replacing the present Cabinet with a Loucheur-Briand Radical-Socialist combination. As the insurance law has already been the subject of an important amending Act, and is even now undergoing still further modifications, the scheme that will actually be applied will probably be much more modest and less costly than the one crystallised in the original Act.

Strenuous efforts are now being made to carry out the programme laid down by the Bank of France, with the wholehearted support of the Government, for the development of Paris into one of the world's leading financial centres. The psychological atmosphere in French financial circles may be summed up in a phrase contained in an article from a foreign review which is reproduced at length here to-day: "Amsterdam took the place of Venice, London that of Amsterdam; why should Paris not conquer London?" Official circles are mute and refuse to be drawn in regard to this aspect of the situation. It is confidently asserted, however, that large financial operations are being carefully prepared, and are on the eve of being launched. The main reason for hesitation lies in the fact that their success depends on a favourable welcome by the country at large, and for this a buoyant and constantly-improving list of Bourse quotations is indispensable. This accounts for the unusual attention which is being given to the inexplicable apathy that has marked the Paris stock market during the past ten days.

So far as the Bourse itself is concerned, the crying need for radical improvements in the mechanism of the market is keenly recognised. At the annual meeting of the *coulissiers'* syndicate yesterday, proposals were discussed for the extension of trading hours by 50 per cent. Official hours are now from 12.30 to 2.30, or less than half those of London and New York. Both the *agents de change* and the *coulissiers'* associations are in favour of longer hours, but the banks are stated to object to the proposed extension. Preparations are being actively pushed forward for the introduction here of a large number of foreign issues that have never yet been listed in Paris. A start is to be made with several Belgian industrials, and these are to be followed by a number of leading American, German and other active issues. For the American descriptions it will be necessary to organise local trustee companies, who will hold the original scrip permanently and be responsible for all French taxation due on it, individual holders of the securities being given "representative certificates" as proof of ownership.

One of the most important steps taken so far has been the reported decision of the Bank of France to mobilise part of the Caisse d'Amortissement bonds (totalling 5,611,000,000 francs) handed to it, under the Stabilisation Law, in exchange for the mass of derelict "Russian Bonds" which were discounted by the Bank, in respect of French Government advances to the Czar's Government during the war. The mobilisation of these bonds—for which no date has yet been fixed—offers the only means which the Bank possesses of practising, like the Bank of England, the "open market policy," by putting out short-term bonds, when money is superabundant, and buying them in when the contrary is the case. The bonds are to be issued on monthly maturities in denominations of 1,000,000 francs to 10,000,000 francs, and only to important corporations, such as railways and banks. The Caisse d'Amortissement bonds held by the Bank bear no interest. Under the law, the Bank is given power to negotiate the scrip on the market, however, as it may deem fit, "in order to act on the volume of credit and maintain control over its circulation." The Bank, therefore, would itself assume the burden of the interest payable to concerns who take up such bonds, on the ground that it is its duty to accept this sacrifice in view of its obligation to control the market by the most efficacious means at its disposal. The yield is expected to be fixed at slightly under Bank rate (probably at 3 per cent.).

The possibilities attaching to the manipulation of these bonds as the balance wheel of the market scarcely need recapitulation. Behind this lies the fact that, when the Bank decides to utilise its new instrument, it will become possible for gold imports on a large scale to continue indefinitely (other things being equal) without unduly inflating the note issue, and thus artificially increasing commodity prices. The note issue at its present level of 68,688,000,000 francs, cannot be considered excessive, as compared with its pre-war total, in view of the greatly-increased requirements (in which largely increased territory is only one factor). Some nervousness has been felt during the past few months, however, owing to constantly rising commodity price levels—due, it is held, to the abnormal amount of available money—and it is urged that this should be speedily checked. A few months ago, owing to the scarcity of short-term capital, the banks were compelled to call in portions of their foreign balances. That situation has since been entirely reversed, owing to the recent extinction of over 3,000,000,000 francs of Defence Bonds and buying in of Rentes by the Caisse d'Amortissement. At the same time, a further plethora of short-term capital is pending. The Caisse, in order to equalise gradually the monthly maturities of Defence Bonds—which will be exceptionally heavy between now and the end of April—intends during this period to pay off more bonds than it will issue, while also continuing to buy in Rentes. This will reduce its balance at the Bank

by a further 3,000,000,000 francs or more. Simultaneously the Treasury, owing to the extension of the financial year by three months, will receive practically nothing in the form of direct taxation until the new Budget comes into effect in April, and will consequently have to draw largely on its balance at the Bank, which, on January 17th, stood at 7,424,000,000 francs. Private current accounts at the Bank, which now stand at over 7,000,000,000 francs, are also expected to be substantially reduced during the same period. The bond issue now decided upon, therefore, comes very opportunely.

Later in the year, the situation will have changed entirely—according to present indications. The coming mobilisation of the first part of the German "unconditional" payments (although probably most of the French portion of this will be, for all practical purposes, a Rente-conversion issue) will absorb a certain amount of surplus capital. During the second part of the year the Caisse d'Amortissement will resume the policy of issuing more Defence Bonds than it pays off, in order to reconstitute its reserves, while the Treasury, from the resumption of the inflow of direct taxation, will also probably accumulate fresh reserves. By that time, also, it is anticipated, the new French Acceptance Bank (which has now opened definitely for business) will have considerably developed the scope of its operations (although it is generally considered that two years at least will be required before it can come fully into operation). The Caisse Autonome d'Amortissement announces that it has fixed the maximum amount of National Defence Bonds to be issued during 1930 at 28,211,000,000 francs, as against 35,487,000,000 francs during 1929.

SWITZERLAND.—CENSUS OF MANUFACTURES —EMBROIDERY INDUSTRY.

(FROM OUR CORRESPONDENT.)

GENEVA, January 14.

THE results of the census of manufactures and factory workers taken last August have now been published. In August there were 8,514 factories under the control of the Federal authorities; they employed 409,083 workers and had 688,610 h.p. at their disposal. The following figures show the increase during the past forty-seven years:—

	Number of Factories.	Workers.	H.P.
1882 ...	2,662 ...	134,862 ...	59,512
1895 ...	4,994 ...	200,199 ...	145,325
1911 ...	7,907 ...	328,841 ...	414,144
1923 ...	7,871 ...	337,403 ...	517,258
1929 ...	8,514 ...	409,083 ...	688,610

The most striking feature is the great increase in the number of factory workers, which was particularly marked during the past six years, when it averaged about 12,000 a year, while it was only 700 during the period 1911-23 in consequence of the serious economic crisis of 1921, when in a single year the number of workers was reduced by about 25,000, and that of factories by nearly 800. The big rise in the number of workers is mainly ascribed to the increased quantity of power at the disposal of Swiss industries. Out of a total of 688,610 h.p. no less than 580,000 h.p. consists of electric power.

Out of a total of 409,083 workers, 147,061 are women, and 34,490 men and women are working at home. The number of workers rose during the past six years, particularly in the clothing, metallurgical, machines and watchmaking industries, while it decreased in the embroidery industry. A curious fact is the big increase in the number of workers in the watchmaking industry —especially in the Chaux de Fonds and Le Locle centres —who are working at home, as was the custom fifty years ago; they prefer family life and the freedom to work at any time during the day and night to factory life and strictly regulated working hours; a consequence of that transformation is the decrease in communism and extreme socialism in these districts.

The classification of Swiss industries according to the number of hands employed is as follows:—

Industries.	Workers.
Watchmaking	48,378
Machines	41,192
Clothing	40,324
Cotton	35,275
Silk and artificial silk	32,118
Wood	26,967

According to the number of factories, the classification is as follows:—

Industries.	Factories.
Wood	1,237
Watchmaking	1,134
Clothing	993
Embroidery	531
Cotton	377
Machines	236
Chemicals	220
Silk and artificial silk	196

Factory workers represent nearly 10 per cent. of the total population, while industry as a whole employs 821,340 persons, nearly 44 per cent. of the population. Directly and indirectly 1,633,000 inhabitants of Switzerland depend on industry for their living, while 1,043,000 depend on agriculture. Switzerland can thus be regarded as an industrial country, and it is likely that her industry will further expand during the coming year as a result of the increasing development of water resources for the production of cheap electric power.

The centenary, at the beginning of the present year, of the introduction into the Swiss Canton Saint Gallen of the first embroidering machine coincides with a serious crisis in the embroidery industry, the development of which had been very important until 1920. A very imperfect embroidering machine was already working in Saint Gallen towards the end of 1828; it had been constructed in Alsace, at Mulhausen, by a certain Heillmann, who later sold two similar machines to the great St. Gallen manufacturer, François Mange. It was then agreed that Heillmann would sell no other machine of that type in Switzerland nor in the neighbouring countries within a strip of territory 50 miles wide. These machines were improved by Mange, but they only reached perfection in 1840 after they had been transformed by Mr Rittmeyer. This was the beginning of the great expansion of the Swiss embroidery industry, which mainly concentrated in Eastern Switzerland. It soon became one of the most prosperous industries in the country, and its products—ranging from handkerchiefs to dress goods and novelty and fancy embroideries—were exported to all countries, especially to America.

Some years ago, there existed 1859 embroidery establishments, operating 23,000 machines and employing some 60,000 hands. Exports reached £17,000,000 in 1919, and £16,500,000 in 1920, but since then they have gradually fallen to £4,300,000 in 1927, £4,200,000 in 1928, and £3,600,000 in 1929. The crisis which began in 1921 and became worse after 1927, may be ascribed mainly to changes in fashion. At the end of 1929 the embroidery industry had only 531 factories working and it employed 8,000 workers. Some of the factories were closed down, others were transformed with a view to turning out other goods, and the fate of that once flourishing industry now seems to be doomed unless some new change in fashion comes and gives it a new impetus, which does not seem very probable.

JUGOSLAVIA.—ECONOMIC REFORMS—FINANCE —BUSINESS PROSPECTS—TRADE.

(FROM OUR CORRESPONDENT.)

BELGRADE, January 15.

AT the end of its first year the Dictatorship has issued a detailed statement of its work to date and of its future plans. The standard of administration, it is claimed, has improved, while the process itself has been simplified by the division of the Kingdom into nine provinces (banovinas) with considerable autonomous power. Many laws and regulations have been promulgated, of which the most important in the economic sphere are a modern cheque law, and agricultural, stockraising, forestry, foreign trade, and road laws, providing for the complete reorganisation of those branches of economy. Of those ready to be published, the chief are a mining and an electrification law. Provision has been made for agricultural credit by the foundation of the Privileged Agrarian Mortgage Bank, while the erection of many selecting stations for seed and stock, more vigorous education and other measures are to help the productive side of agriculture. Rolling stock has been increased by 1,600 engines, coaches and trucks, and further 3,500 are on order; 1,500 hectares of land have been reafforested; import duties on agricultural necessities have been lowered, and a general tariff reform is contemplated.

Government finance looks decidedly healthier. Receipts for the period April-September were 4,549 million dinars, or including September receipts from State undertakings, about 4,920 millions, against 4,278 millions in 1928. The war debt to France has been settled favourably. The total has been fixed at 1,800 million French francs, for which Jugoslavia is to hand over to France 37 annual sums of an average of 3.5 million gold marks from her share of the reparations. In other words, Jugoslavia is to pay less than half with the additional advantage of having made the payments an integral part of the reparations. A plan for the legal stabilisation of the dinar has been prepared, and, judging from the Premier's declaration that no foreign loan is intended, it is to be carried out with national means. Government securities continue firm, and the quotation at home bourses of the Blair and Seligman loans concluded in U.S.A. has imparted a firmness to these also. Thus, the Blair 8 per cent., the Blair 7 per cent., and the Seligman 7 per cent., which were quoted at New York on November 18th respectively at 80, 71 and 68, were quoted on January 8th at 88, 76.75 and 76; their price at the Belgrade and Zagreb Bourses was one or two points higher.

Finance, in general, is passing through a most interesting phase. In consequence of an active trade balance and the heavy foreign investments in mining and industry the stocks of the National Bank have swollen from 339 million dinars, on December 22, 1928, to 1,767 millions (£6.5 million) at the end of 1929. Savings deposits in the country and current accounts have also greatly increased, while further sums from foreign investments are in process of arrival. Yet comparatively little of this money is flowing into business for the moment as investors apparently prefer to watch their opportunity. Thus, paradoxically enough, a country poor in financial means is suffering momentarily from a plethora of capital. Naturally, this cannot last long. The interest rate, which was 10-16 per cent. in business at the end of 1928, has slackened to 9-14 per cent. at the end of 1929. All industries, and especially mining, textiles, timber, electricity, chemicals, cement, paper, are making plans for extending business and absorbing part of this capital. Private people are thinking of housebuilding to ensure a better return on their money. Banks are making plans for issuing credit to agriculture. In general, both psychological and financial conditions seem favourable to a substantial economic advance in 1930. Several other factors should also contribute to this. The excellent harvest has cheapened food to such an extent as to raise real wages, so that at present no movement for increased wages is likely. The new unified legislation, which has replaced the many different procedures in various parts of the country, allows for better planning and safer calculation in business. With a renewed peasant demand the industrial market has every prospect of expanding.

The trade returns are also good. Exports to the value of 7,143 million dinars have been achieved for the first eleven months in 1929, against a value of imports of 6,995 millions. There is, therefore, a prospect of an active balance for the year of 300 to 350 million dinars, as December is a good month for exports, but an ordinary month for imports. Last year's figures were 5,875 million and 7,286 million dinars respectively for exports and imports, leaving thus a deficit in the trade balance of 1,411 million dinars.

BULGARIA.—HAGUE SETTLEMENT—BANK ACCOUNTS—INDUSTRY—RAILWAYS.

(FROM OUR CORRESPONDENT.)

SOFIA, January 22.

AFTER protracted negotiations, the question of Bulgarian Reparations has been definitely settled at The Hague. Part B of the debt is cancelled as well as the balance of occupation accounts due to Great Britain, France and Italy. In settlement of the remaining obligation (Part A) the creditor countries accepted a series of yearly payments comprising one instalment of 5 million gold francs, ten yearly instalments of 10 millions, ten annuities of 11½ millions, and 16 annuities of 12,515,238 gold francs each. Payments are to begin on April 1, 1930, and to end in 1966. The revision clause of Article 122 of the Treaty of Neuilly is abolished, only a kind of transfer provision being maintained. The rights of the Reparations Commission in connection with these payments are to be exercised in future by the Bank of International Settlements. A separate understanding with Roumania puts an end to the much-debated point of Bulgarian property in that country linked up with the question of compensation for war damages to Roumanian property. A lump sum of Lei 110 million to be paid by Bulgaria disposes of the case.

This settlement does not come as a surprise to the public. There is, however, little doubt that the mere fact of the agreement being reached is a great psychological relief to almost everybody, with the possible exception of some politicians and of the nationalists. The ratification by Parliament of the arrangements arrived at will probably be an occasion for part of the opposition, and perhaps also for certain of M. Liaptcheff's followers, to bring about at least a partial reconstruction in the present Cabinet. In any case, the difficult economic situation of the country undoubtedly requires a rapid and decisive end to political discussion and party quarrels for some time. The urgent need for the direction of the whole attention of the active elements in the Government to the reorganisation of public finance, administration and agriculture has become very evident during the acute financial, trade and credit crisis of the last six months. The accounts of the National Bank reflect to a certain degree the changes in the general economic situation caused by the heavy adverse balance of foreign trade and by the widespread commercial crisis resulting from it. On December 31, 1928, the aggregate amount of gold, silver and gold-exchange currencies was Leva 3,746 million, as against notes in circulation and other sight liabilities combined, Leva 7,563 million, *i.e.*, a ratio of 49.53 per cent. The corresponding figures at the close of 1929 are: gold, silver and gold exchange, Leva 2,470 million; notes and sight liabilities, Leva 5,840 million, or a ratio of 42.30 per cent. In order to keep the legal cover at an adequate level, the Bank had to contract the note circulation as much as possible and to curtail rediscount and other credit facilities. From Leva 4,173 million, notes in circulation have been brought down to Leva 3,609 million, as between December 31, 1928, and December 30, 1929. Advances to trade and industry have dropped from 701 to 495 million, the Treasury's debt from 3,735 to 3,505 million, investments from 335 to 273 million. On the other hand, bills discounted and rediscounted show an increase from Leva 588 to 907 million, due initially to an expansion policy in the first six months of 1929, and, later on, to the practical impossibility of withdrawing the facilities granted without completely disorganising trade and industry. The firm attitude of the Bank in this respect has been much criticised in business and political quarters, but it is only fair to state that a further expansion of credit would only have amounted to maintaining artificially a state of overlending, the quick liquidation of which appears to be the only right way out of the present difficulties of the market. Other banks followed suit and credits are being gradually reduced to normal proportions.

This policy had unpleasant effects on the position of a great number of firms. The volume of failures and suspensions of payments considerably increased, as well as the amount of protested bills; between January 1st

and November 30th last year 217,000 bills for Leva 1,780 million have been protested for non-payment, as against 183,000 bills for Leva 1,450 million during the same period in 1928. Trade, industry and banks will suffer losses, as well as foreign creditors for goods sold on credit, but it must be admitted that, in spite of repeated warnings by competent advisers, almost everybody has been lending money or selling on credit without paying due attention to the actual potentialities of the market.

The effects on local industries of the uneasy financial situation have been equally serious. Owing to a relatively large proportion of their working capital being generally tied up for a longer term than is the case elsewhere, the restriction of credits is bringing about an increased recourse to the help of foreign capital, or, in many cases, the closing down of works and liquidation of business. This circumstance deserves earnest consideration, for, although the fact has widely escaped attention both here and abroad, the capital invested in industry represents a very important part of the country's resources. According to the estimates of the National Bank's Statistical Department, there are invested in industry, as share capital, Leva 1,760 million in joint-stock companies only, while the total capital investments are computed at Leva 7,500 million. The position on December 31, 1927, with regard to larger undertakings only, in the chief industries, may be summarised thus:—

Industries.	Number of Undertakings.	Capital in Thousand Gold Leva.
Vegetable oils	15	2,973
Leather	26	4,993
Metals	33	6,531
Tobacco	35	7,868
Ceramics	49	36,040
Wood	19	3,090
Textiles	67	33,860
Flour Mills	41	13,903
Chemicals	27	5,028
	312	114,286

In 1929 there were 82,000 workmen employed in industrial undertakings. The concerns shown in the above table used, in 1927, local raw materials to the value of Gold Leva 60,787,000, foreign raw materials for Gold Leva 31,676,000, accessory materials for Gold Leva 9,950,000, and fuel for Gold Leva 4,326,000. Their total output is estimated at Gold Leva 114,226,000.

There is a substantial increase in number of undertakings and in capital since 1927, and, in certain cases, the output is in excess of local needs. As a consequence of high protective duties, of deficient organisation and dear money, production costs in the great majority of industries are too high to permit of export. Competition in the local market between similar undertakings is growing very keen, both in price-cutting and in selling on easier terms to retail merchants and to the public. A change in the policy of the Government in the direction of limiting protection and the granting of new licences to industrial undertakings is strongly advocated in financial circles. The present crisis will no doubt contribute to readjustment, but official measures appear to be urgently needed.

The legislation recommended by the Financial Committee of the League of Nations in connection with the reorganisation of the railway system has been recently completed by an amendment to the Railways Administration Act. According to the new measure, the annual profits on working are no longer to be allocated exclusively to the construction of new lines, but are to be employed according to a plan to be approved by the Council of Ministers. The amendment will permit of the maintenance of the existing railroads in a better state of repair and of the improvement of the rolling stock, equipment and upkeep of the whole system, which still leaves much to be desired. The present shortcomings in this connection were acutely felt last autumn, when the transport of agricultural produce and coal suffered considerable delay and caused heavy losses. According to the Government's undertaking in connection with the Reconstruction Loan, the reorganisation of the railways will be pursued still further under the supervision of the League of Nations Commissioner in Bulgaria.

INDIA.—BUDGET ANTICIPATIONS—TARIFF PROSPECTS—POLITICAL UNREST.

(FROM OUR CORRESPONDENT.)

CALCUTTA, January 20.

IT is unfortunate, for many reasons, that a financial position necessitating new taxation should coincide with a period of acute political unrest. It is also clear that, in leaving the Assembly before the new taxes are imposed, Congress legislators, taking a long view, have proved themselves to be shrewd electioneers. As on a previous occasion, the parties outside the Congress will be left to share with the Government the entire responsibility for the new imposts, while Congress politicians reserve to themselves the easier and more congenial task of posing, however impotently, as the champions of wholesale reduction in expenditure, and consequently in taxation. At present, unfortunately, retrenchment is taking the undesirable, but unavoidable, form of drastic curtailments in capital expenditure on productive projects, chiefly, although not exclusively, railways. In effect, the Hindley programme, which contemplated the construction of a thousand miles of new lines per annum, has been scrapped. The case for extension and improvement remains as strong as when the programme was formulated, and endorsed by the Legislature; but the funds required to carry it through are not available and, according to present indications, owing to the deterioration in the political, as well as the financial situation, will not be available during the finance membership of Sir George Schuster. This is, of course, lamentable, not only from the railway standpoint, but because the stream of contracts emanating from the Railway Board represented to many industries the oxygen necessary to health and even life. But what are the financial facts? To assert that the debt-repudiation resolution adopted by the "National" Congress at Lahore represents an idle threat would be correct but would not remove or modify its immediate effects, including the enforced suspension, for an indefinite period, of sterling borrowing, except on terms exceedingly deleterious to India's credit, and to the interests of present holders. It has also to be recollected that, above certain rates, the raising of loans for railway purposes ceases to be profitable.

Inability to borrow in London would occasion less regret and embarrassment if accompanied by ability to borrow on a larger scale in India, but, unfortunately, the deterioration is equal and simultaneous. Bombay, which financially is the right arm of the Government of India, is paralysed as the result of the prolonged depression in the cotton mill industry, and throughout the country holders of Government securities are disgruntled and disinclined to take further risks. Many wealthy Indians, holding large blocks of Government Paper, are selling out to enable them to re-invest the proceeds in countries where political complications, including threats of "repudiation," are not superimposed on the ordinary economic risks. The flight of Indian capital from Swaraj-*cum*-Independence has begun, and will be accelerated by any definite effort to carry the Lahore programme of civil disobedience and non-payment of taxes into effect. Industrial strikes, organised primarily to promote political aims, have cost Indian investors many crores of rupees, and the debt-repudiation resolution is extending the losses to holders of Government securities, already hard hit by economic and financial difficulties, domestic and international.

Failure to balance the budget—if necessary, by imposing new taxation—would depreciate Indian credit still further. New direct taxation, at a juncture when industrial profits are small and trading conditions so generally unsatisfactory, would be inexpedient, inopportune, and probably ineffectual. Economic as well as political considerations point to higher import duties, however lamentable such a step may be, from the point of view both of the British exporter, and of international interests and considerations generally. Not least among these international considerations is the desire and demand, expressed at the Geneva Economic Conference, for a concerted movement in the direction of lower tariffs. In this instance, new indirect taxation is considered necessary, somewhat paradoxically, in order to render existing direct taxation more productive. That is to say, whereas the Bombay cotton mills, under normal conditions, yield approximately three crores of rupees to the Central Government in terms of income tax and super-tax, the present revenue from this source has fallen to little above zero, and the condition of the industry is causing much financial embarrassment to the Provincial Government, and the local authorities, not excluding the Bombay Port Trust. Apart from revenue considerations, the economic rehabilitation of Bombay is also essential and urgent, in order to re-establish financial, and market conditions favourable to the flotation of official rupee securities.

In these circumstances it is all but certain that Sir George Schuster's second budget will include, as one of its most important features, higher import duties on cotton piece-goods, possibly, as in the case of steel manufactures, differentiating in favour of goods of British origin, comprising goods of a class not at present manufactured, or likely in the near future to be manufactured, in Indian mills.

One of the most unfortunate consequences of the financial difficulties now confronting even the most prominent and powerful of the Indian business houses, whose headquarters are located in Bombay, was the recent sale by the Tata interests of a substantial share in the Tata Hydro-Electric Power Companies to American financiers, a transaction which certainly would not have been carried through, except as a last resource.

In relation to the threatened campaign of civil disobedience, including non-payment of taxes, Mr Gandhi, who recognises that "for such an indefinable thing as Swaraj people must have previous training in doing things of all-India interest," is in complete control. He is now engaged in evolving "a workable formula" designed to accelerate the materialisation of Swaraj, while avoiding recourse to violence in any form. The outstanding results of his dominance to date have been the division of the Congress party into numerous warring factions and the complete alienation of the Liberal, Nationalist and Responsivist parties who, in conjunction with the Princes, the Mohammedan leaders, the non-Brahmas, the zemindars, and other influential interests, are anxious to participate in the round table conference, in the hope that it will be possible at that gathering to evolve a scheme carrying India, without recourse to further Parliamentary inquiries, by progressive stages, to Dominion status, or a position approximate thereto.

SOUTH AFRICA.—MINING RESULTS—PHTHISIS COMMISSION—RAILWAYS—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, January 8.

THE gold-mining companies making returns to the Transvaal Chamber of Mines have announced their dividends to a grand total of £8,413,616, which is a slight drop on the 1928 figure. The Far East Rand still contributes an amount—£7,251,147—much out of proportion to its tonnage, capital invested, and employing capacity, but there is a very slight increase in the proportion from other parts of the Rand. From a profit-making point of view, the Reef divides itself into three roughly equal parts, following closely the geographical division of Far East, East and Central, and West Rand. About two-thirds of the issued capital of the Reef companies yields dividends, but the good dividends are all from the Far East except that of the Crown Mines. The Government's revenue from leases now amounts to about £2,200,000 per annum (or £1,650,000 excluding amounts credited to income tax account). This sum is beginning to assume considerable weight in comparison with the private shareholders' £8,000,000 odd.

Yet another Miners' Phthisis Commission is sitting. Since 1911, there have been four previous Commissions, ten Select Committees, and nine Acts of Parliament. The history of the question has been complicated by the fact that in the past the South African and Nationalist Parties each in turn tried to curry favour with the European labour vote on the Rand. Signs are not wanting that the Government practice of awarding excessive amounts of other people's money to its supporters is now coming to an end. For one thing, the Labour Party no longer counts, and the Afrikander workman votes Nationalist and seems likely to continue to do so. The Government is, to an increasing extent, a partner in the industry, and it has taken to heart the fact that capital can secure and must have a reliable measure of payment. The present Commission evinced a good deal of interest in the suggestion (from the industry's witness, Mr P. M. Anderson) that at least part of the compensation should come from the Consolidated Revenue Fund and not from a separate fund entirely financed by levies on the mines. Of course, the mines would have to provide the money indirectly in any case, but if the Government had to legislate for compensation payable out of money in its own coffers, it is probable that the trend of that legislation would be considerably altered.

In his report on the working of the South African Railways and Harbours for the year ended March 31st last, the General Manager states that during that year revenue had advanced appreciably by £785,891, or 3.11 per cent.; while expenditure had advanced only by 0.53 per cent., or £98,656. The result of the year's working was a net profit of £343,041. The number of passenger trains (542,357), the passenger-train mileage (13,826,162), the number of passengers carried (81,994,517), the goods-train mileage (30,646,429), and some other items all constituted records. The employees numbered 52,526 Europeans and 31,879 non-Europeans. Passenger-train mileage constituted 27.7 per cent. of total train mileage, while passenger revenue was 21.1 per cent. of total revenue. It is pointed out that from 1920 to 1929 the total passenger revenue increased by 3.66 per cent., while passenger train mileage increased by 91.60 per cent. This is attributed in great measure to the liberality of our excursion facilities in this country.

The practice, inaugurated in 1925, of issuing general specifications when calling for tenders for locomotives, leaving manufacturers to tender for their own details, has been found unsatisfactory in practice and, in future, the complete designs will be prepared by the Chief Mechanical Engineer and his staff, who will be required by the Administration to keep themselves informed of current practice. In other parts of his report the General Manager enlarges on the unsatisfactory experience of the Administration with electric traction. As regards the suburban traffic, there has been severe competition from private motor-buses here as elsewhere. As regards electric lines generally, the railway officials complain of the cost of current supplied by the Electricity Commission, whose Salt River station charges 1¼d. per unit for power for the Capetown-Simonstown line. Electrification has involved very heavy capital expense and a substantial increase in running costs. The capital cost of the Salt River power station was £30 per kilowatt, while the Colenso (Natal) station cost £23 10s.

The Government accounts for the year ended March 31, 1929, have just been published, together with the report of the Controller and Auditor-General. The surplus for the year was £1,832,455, and the accumulated surplus on revenue account at that date was £3,122,851. The Union Debt at March 31st last stood at £244,044,512, bearing interest at an average rate of 4.218 per cent. Somewhat under 60 per cent. is repayable in London and the balance locally. The Union's contribution to the League of Nations during the year was £14,707, an assessment at the rate of 15 units. The Auditor-General recommends that there should be a general inventory of all Government land and land rights.

Letters to the Editor.

BANKS AND BUSINESS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am extremely interested in your excellent article on "Banks and Business" in this week's issue of the *Economist*. I most heartily agree that it is not the function of the Central Bank to participate in the financing of the rationalisation of an industry. Such a procedure may be setting up a dangerous precedent. In my view, the financing of rationalisation is a *rôle* of the joint-stock banks. It is true that in the past the joint-stock banks have made loans to industry, but they have not shouldered the responsibility of watching over that loan as do the German banks. Furthermore, they have not trained the personnel to undertake this industrial side of banking, even to the extent of "fathering" the issue, made for the express purpose of reorganisation of the industry.

British banks perform some services better than any other banks in the world, such as cashing of cheques and short-term advances, but they have yet to learn the business of long-term advances. The difficulties now in the way of making long-term advances must be overcome. It is argued that deposits repayable on demand or at short date are the very basis of British banking, but surely the leading joint-stock banks of Britain are capable of setting up machinery to deal with our changing economic system.

I was talking to a leading German banker this week, and I inquired whether Germany had instituted any similar organisation to the Securities Management Trust in order to deal with financial problems of the rationalisation of industry which had been carried out with a measure of success in that country. His reply was that such an institution was unnecessary, as the joint-stock banks undertook the work. The banks' nominees on the reorganised boards of directors made it their business to see that their banks' money was properly utilised.

I hazarded a further question as to what machinery the German Government instituted to cope with her unemployment, which naturally follows any scheme of rationalisation in an industry. His reply was that labour was mobile, and that quite a number of miners who were rendered unemployed, for example, by the closing down of uneconomic pits, found work in the potash industry, where unemployment was not rife. As the coal industry improved these men were reabsorbed.

Mr J. H. Thomas is certainly to be congratulated on trying to arrive at the root causes of our economic ills, and he has put his finger on the real cause by stressing the relationship of bankers and banking to industry, and, as stated elsewhere in your journal, how far the British banking system can be developed to meet the changing needs of industry without sacrificing its present safety and elasticity, is a question that is rapidly becoming one of the most important before the country to-day.—Yours faithfully,

W. TUDOR DAVIES.

6, Pump Court, Temple, E.C. 4.
January 21, 1930.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Open Door and the Mandates System. By Benjamin Gerig. With a Foreword by William E. Rappard. (London) George Allen and Unwin, Ltd., 40, Museum Street. 10s. net.

A critical account of the evolution of the principle of the Open Door. The texts of three typical mandates are given in appendices, and there is a good bibliography.

Naval Disarmament. By H. Wilson Harris. (London) George Allen and Unwin, Ltd., 40, Museum Street, 3s. 6d. net.

A very timely publication designed to place the reader in a position to follow intelligently the work of the Conference.

The World Crisis of 1914-1918: *An Interpretation.* By Elie Halévy. (London) Oxford University Press, Warwick Square. 5s. net.

A reprint of three Rhodes Memorial lectures, entitled: "Towards Revolution," "Towards War," "War and Revolution."

The Naval Blockade, 1914-1918. By Lieut. Louis Guichard. Translated and edited by Christopher R. Turner. (London) Philip Allen and Company, Ltd., Quality House, Great Russell Street. 15s. net.

A clear, dispassionate and well-arranged account of the blockade.

Economia e Corporativismo. By N. Massimo Fovel. (Ferrara) S.A.T.E.

An examination, in terms of pure economic theory, of the effect on welfare of an improved distribution of wealth. Signor Fovel believes that the corporative system will lead to such improvement.

A Proposito di un Tentativo di Teoria Pura del Corporativismo. By Carlo Pagni. (Turin) Ditta Fratelli Pozzo.

Signor Pagni refutes, one by one, the contentions of Signor Fovel as expounded in *Economia e Corporativismo.*

The Political Quarterly. January, 1930. (London) Macmillan and Company, Ltd., St. Martin's Street. 14s.

We welcome this new monthly which, if one may judge by the distinguished names on the list of the editorial board, may be counted on to present a progressive and enlightened point of view. The articles in this first issue include: "The Problem of the Mines," by G. D. H. Cole; "How Far can a Labour Budget go?" by J. Wedgwood; "The Question of High Wages," by J. M. Keynes.

Annuaire de la Société des Nations, 1929. Compiled under the direction of Georges Ottlik. (Geneva) Editions de l'Annuaire de la Société des Nations, S.A. 1, rue de la Monnaie.

A most valuable work of reference, comprising a general article, a bibliography, the text of the Covenant; an account of the constitution of the League and its auxiliary organisations, a history of the League's activities, relevant information concerning each member State, and an account of the relations with the League of each non-member State.

Statistical Abstract of the United States, 1929. (Washington) Superintendent of Documents. $1.00.

The fullest source of official statistics relating to the United States.

Die Wirtschaft des Auslandes, 1928. (Berlin) Verlag von Reimar Hobbing. 25 Rm.

A very useful source of statistics of over sixty countries. It covers the usual economic categories and is most convenient for comparative work.

The Annals of the American Academy of Political and Social Science. The Anti-Trust Laws of the United States. Edited by John G. Hervey. (London) P. S. King and Son, Ltd., Orchard House, Great Smith Street. $2.00.

The papers are grouped under four heads: "Some Aspects of the Laws"; "Application to Specific Industries"; "Some Observations"; "What of the Future?"

Monthly Labour Review, November, 1929. (Washington) Superintendent of Documents. 15 cents.

Includes, *inter alia,* articles on the average cost of construction of dwellings in principal American cities, and on wage-fixing legislation in the United States.

Economic History, January, 1930. (London) Macmillan and Company, Ltd., St. Martin's Street. 6s. net.

Among a number of historical articles are two which have particular interest at the moment: "The Localisation of the Cotton Industry," by J. Jewkes, and "Combination in the West of Scotland Coal Trade, 1790-1817," by H. Hamilton.

The Economic History Review, January, 1930. (London) A. and C. Black, Ltd., 4, 5 and 6, Soho Square. 10s. 6d. net.

Includes, *inter alia,* articles on "The Decay of the Ancient World and its Economic Explanations," by Professor Rostovtseff, and "The Industrial Revolution and Discontent," by J. L. Hammond.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:—

Department of Overseas Trade: Economic Conditions in Austria, November, 1929. 2s. net.

Reparation Commission: Official Documents XXIIA—Report of the Commissioner for the German Railways (December 14, 1929); *Report of the Commissioner of the Reichsbank* (December 23, 1929), etc. 3s. net.

The Stock Exchange.

THE PRICE OF NEW CAPITAL.

FOR many years past we have set out in our columns, at annual intervals, details of the average price of various types of new capital—a matter of prime importance to every government, municipality and company desirous of raising money in London, as well as to the investor in gilt-edged and a wide range of fixed-interest stocks. Our review on this occasion may most usefully be regarded as a study of the London capital market under abnormal—and for the most part depressed—conditions.

The story of 1929 falls into three periods: (1) January and the first week of February, when the boom of 1928 reached its climax and exceptionally large amounts of new capital were offered and subscribed; (2) spring and early summer, when considerable offerings were made but seldom subscribed; and (3) the last six months of the year, when the market relapsed into a state of suspended animation, and new issues to the public (as distinct from offers to shareholders) were few and far between. The February rise in Bank rate, which inaugurated some months of dear money, undoubtedly was a factor in bringing the market's "fine, careless rapture" to an end, and inducing the more responsible borrowers to postpone their operations to a more convenient season. It is doubtful, however, whether this would in itself have been powerful enough to bring about the stagnation of the later months, without the additional factor of severe Stock Exchange depression in London, on the Continent, and, more particularly, in America, which effectually stifled the public appetite for speculation both in "new" and "old" securities. We may examine the year's figures in the light of these facts.
