Company News.

REPORTS AND NOTICES.

His Grace the Duke of Beaufort has accepted a seat on the main board of the Eagle Star and British Dominions Insurance Company, Ltd.

Major R. L. Benson, D.S.O., M.C., of Messrs Robert Benson and Company, Ltd., has been appointed a director of the Attock Oil Company, Ltd., in the room of Mr B. T. Petley, who has vacated his office as director owing to ill-health.

G. Street and Company, Ltd., 6, Gracechurch Street, E.C. 3, announce that they have formed an affiliation with the well-known American financial advertising agency, Rudolph Guenther-Russell Law, 131, Cedar Street, New York.

The Argentine Land and Investment Company announce the receipt of the third instalment on the sale of their "Las Varas" property due on April 1st, amounting, with interest, to £86,006.

GOVERNMENT, &c.

CZECHOSLOVAK 8 PER CENT. STATE LOAN OF 1922.—The figures subject to audit, received from the Ministry of Finance, Prague, show that, for the quarter ending December 31, 1929, the receipts from the Customs duties amounted to Kc. 357,642,863, and the net revenue from the tobacco monopoly to Kc. 366,000,000, making the total received from both sources Kc. 2,660,265,325 for the year ending December 31, 1929.

† Free of income tax.
‡ Period from November 12, 1928, to March 31, 1930.

(*Continued from page 970.*)

SAN FRANCISCO.—March:—*Ore treated*, 29,010 tons; lead concentrates produced, 3,750 tons; zinc concentrates produced, 3,252 tons; estimated net smelter returns, $184,157; operating expenses, $124,784; estimated operating profit, $59,373.

ROOIBERG MINERALS.—Production for March, 35 long tons of concentrates.

BURMA CORPORATION.—During March, 47,496 tons of ore were mined, including 5,768 tons of high-grade ore; 34,950 *tons of ore* were milled in the treatment plant, producing 11,560 tons of leady concentrates; 14,060 tons of lead-bearing material, including 3,865 tons of high-grade ore, were smelted in the blast furnaces, producing 7,345 tons of hard lead for treatment in the refinery. *Refinery products* were 6,750 tons lead and 607,000 ozs. silver. Of silver production, 40,918 ozs. were recovered from the treatment of copper matte. Zinc plant produced 5,060 tons zinc concentrates, assaying 8¼ ozs. silver, 4¾ per cent. lead and 51·3 per cent. zinc. In addition to the above, *1,250 tons* copper matte were produced from the treatment of accumulated smelter by-products and 7,248 tons copper ore; 100 tons of refined antimonial lead and 200 tons of nickel speiss were also produced. Included in the tonnage of refined lead is 165 tons recovered from the *smelting of copper ore*.

ANGLO-ORIENTAL.—March production of the affiliated tin companies: Anglo-Oriental Mining Corporation—Burma Group, 63 tons; Cornwall, 72 tons. London Tin Corporation (Nigeria), 220 tons; Associated, 200 tons; Juga Valley, 16 tons; Tin Properties, 19 tons; Junction, 6 tons. Total, 596 tons; February, 639 tons; January, 688½ tons. Total for all affiliated companies, 997½ tons. This compares with December, 1929, 1,512 tons; January, 1930, 1,246½ tons; February, 1930, 1,060 tons. The above companies have curtailed output in accordance with the recommendations of the Council of the Tin Producers' Association.

EAST POOL AND AGAR.—March: Tons of ore milled, 7,313; tons of black tin recovered, 82·32; pounds black tin recovered per ton of ore milled, 25·21. Tons of arsenic recovered, 30. Estimated revenue, £9,200.

BROKEN HILL SOUTH.—Four weeks ended April 5th: 27,970 tons of crude ore were treated and produced 5,904 *tons of leady* concentrates, assaying 70 per cent. lead and 24 ozs. silver per ton; also 5,424 tons of zinc concentrates, assaying 50 per cent. zinc.

MOUNT LYELL.—During the quarterly period ended March 31st there were smelted: North Lyell ore (direct to smelters), 2,325 tons; concentrates, 12,999 tons. The converters produced 2,736 tons of blister copper, containing: copper, 2,710 tons; silver, 52,044 ozs.; gold, 1,151 ozs. The mill treated 58,762 tons of ore and produced 11,790 tons of concentrates. Furnace ran 61 days. Cathode copper produced 2,191 tons.

SANTA GERTRUDIS.—March: Dry short tons milled, 52,359. *Total revenue, after allowing* for development and participation of owners, but before deducting reserve for depletion, depreciation, &c., $109,134. (February, $93,067.)

EUROPEAN AND NORTH AFRICAN.—Production for March: Iron ore, 2,732 tons; lead concentrates, 110 tons. Shipment: Iron ore, 11,349 tons.

ANGLO-ORIENTAL MINING CORPORATION.—March outputs: Malaya—Larut Tin Fields, 34½ tons; Jelapang Tin Dredging, 23 tons; Kuala Kampar Tin Fields, 62 tons; Changkat Tin Dredging, 17 tons; Rawang Tin Fields, 90 tons; Kundang Tin Dredging, 12 tons; Rawang Concessions, 30 tons; Kampong Lanjut Tin Dredging, 43 tons; Malim Nawar Tin, 25 tons; Kramat Tin Dredging, 25 tons; Kampar Malaya Tin Dredging, 40 tons; Malayan *total*, 401½ tons. Burma—Tavoy Tin Dredging Corporation, 20 tons; Thingandon Tin Dredging Company, 7 tons; Theindaw Tin Dredging Company, 6 tons; Northern Tavoy Tin Dredging, 30 tons; Burma total, 63 tons. Cornwall—Wheal Kitty Tin, 40 tons; Polhigey Tin, 32 tons; Cornish total, 72 tons. Nigeria—London Tin Corporation, 220 tons.

Commercial Reports.

Mark Lane, Thursday evening.

THE CORN TRADE.

Further rains and a low temperature prevailed over the United Kingdom during the past week, but spring sowings were completed under ideal conditions, and a spell of warm weather *is now needed* to ensure regular germination. Winter cereals continue to progress satisfactorily. Markets remained quiet under holiday influences, the few days of actual trading disclosing slight price fluctuations, and demand restricted to pressing needs. Supplies of native wheat remain in small compass and values occasionally turn in buyers' favour. On the import market a weaker tone was also in evidence, and consumers' small wants easily met, though towards the close rather more interest was shown in both *Northern* and Southern Hemisphere supplies. Since the Easter holidays cable advices from Chicago and Winnipeg were easier on beneficial rains and favourable progress of both *winter crops* and spring sowings, but the chief event was the reopening of navigation on the St. Lawrence heralding the resumption of direct shipments from Canadian ports. Prospects of a liberal movement during the season are foreshadowed by a good demand for shipping space, particularly to Mediterranean countries, but in view of restricted European requirements it is doubtful whether really large North American shipments can be absorbed. Fair quantities are still available from Argentine and *Australia, and, despite market fluctuations* occasioned by weather and crop reports, considerable difficulty may be encountered in disposing of North American holdings, and which remain the outstanding feature in the international situation. The seeding of spring crops has progressed favourably both here and abroad, so that quantities on hand reassert their influence, and with every prospect of a large carry-over, millers are assured of ample and cheap supplies of grist for some months ahead. Flour prices tend easier, and North American shipment offers are coming more into line with market parity on this side. Consumers, meanwhile, confine purchases to immediate needs pending further developments in the situation. Feeding stuffs are quiet and prices generally easier.

Wheat.—Easier No. 1. Northern Manitoba (Vancouver shipment), ex-ship, 43s. 9d.; No. 2, ditto, 43s.; No. 3, 42s.; No. 4, Manitoba, 41s.; No. 5, ditto (Atlantic shipment), 38s. 9d.; No. 6, 31s. 6d.; No. 2 hard winter (Atlantic shipment), 39s. 6d.; No. 2 mixed Durum, 36s.; Rosafe, 62½ lbs., 40s. 6d.; Barusso, 62½ lbs., ex-ship to arrive, 39s. 3d.; Australian, 41s. 9d. per 496 lbs. English, 8s. 9d.-9s. per 112 lbs.

Flour.—Dull. London straight run, 37s. per sack for country deliveries, and 36s. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 33s.-36s.; Australian, 31s.-32s., ex-store. On c.i.f. terms, Manitoba top patents, April-May, 34s.-34s. 9d.; export ditto, 32s.-32s. 6d.; Australian, 28s. 6d.-29s.; French, April-May, 25s. 6d.-27s. 6d. per 280 lbs. Argentine low grade, March-June, £6 2s. 6d. per ton.

Maize.—Steady. Plate landed, 32s.; ex-ship, 31s.; March-April, 27s. 3d.; new, April-May, 25s. 9d.; May-June, 25s. 3d.; June-July, 25s. 3d. per 480 lbs. Yellow maize meal, £8 15s. per ton f.o.r. London. Yellow African, £6 10s. per ton ex-ship.

Barley.—Quiet. Californian old, landed, 36s.-42s., new ex-ship, 36s.-42s. as to sample; Chilian brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs. Black Sea, ex-ship f.a.q., 19s. 6d.; landed on sample, 22s.; Persian landed, 19s. 6d. per 400 lbs. English malting, 7s.-11s. 6d.; feed, 6s. 6d.-6s. 9d. per 112 lbs.

Oats.—Weak. Plate landed, 16s. 6d.; ex-ship to arrive, 15s. 6d.; Chilian white, 21s. 3d.; ditto tawny, 17s. 3d.; German landed, 20s. 6d.; ex-ship to arrive, 19s. 6d.; *mixed* Canadian feed, 14s. 6d.; South Russian, ex-ship, 16s. 3d.; North ditto, 15s. 9d. per 320 lbs. English, 6s.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27:—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to April 19	Qrs. 118,822	Qrs. 148,778	Qrs. 272,937	Qrs. 160,033
33 weeks to April 19	7,797,829	8,385,455	8,418,874	10,008,242
Average price of English wheat per cwt.	s. d. 8 10	s. d. 9 10	s. d. 10 3	s. d. 11 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Qwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Qrs.	Qrs.	Qrs.	s. d.	s. d.	s. d.
April 12	155,042	113,678	29,994	8 7	7 10	6 3

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent week with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	Apr. 24, 1929.	Jan. 2, 1930.	Apr. 9, 1930.	Apr. 15, 1930.	Apr. 23, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	121⅛	148⅜	115¼	107⅛	109
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	114½	130⅞	113⅜	106½	104⅜

The visible supply of wheat in Canada at 74,742,000 bushels shows an increase on the week of 61,000 bushels. Supplies a year ago stood at 83,475,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Most of the South Yorkshire pits closed four days for the holidays, and there were ample stocks to meet a moderate pressure for deliveries before the stoppage. Values remain as before, namely, 15s. 3d. to 15s. 6d. f.o.b. for best steams. Secondary qualities continue weak, with an easy tendency of prices. Inquiries for forward bunker coal show some improvement. Supplies of industrial fuel continue sufficient to cover the demand. The market for coke continues weak.

Our Glasgow correspondent writes:—No improvement can be noted in conditions in the Scottish coal trades. Short-time work appears to be the rule everywhere, and in spite of this supplies continue to be in excess of demand, with the result that prices have still a drooping tendency. The only comparatively firm spots in the whole market are Fifeshire steam coal and treble nuts in both Fife and the Lothians. There is a fair forward inquiry circulating, but so far not a great deal of it has been translated into orders. Current prices for shipping business are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s.; splint best, 17s.; splint second, 16s.; navigation, 16s.; navigation second, 14s. 6d.; Hartley, 18s.; steam, 12s. 6d.; trebles, 12s.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 6d.; dross, 10s. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 12s. to 12s. 6d.; doubles, 11s.; singles, 10s. 9d.; pearls, 10s. 6d. LOTHIANS.—Prime steam, 12s. 3d.; secondary steam, 12s.; trebles, 12s. 6d.; doubles, 11s.; singles, 10s. 9d.; pearls, 10s. 6d. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 3d.; trebles, 12s. 6d.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The South Wales collieries and docks were idle on Monday and Tuesday, and consequently there has been practically no business transacted. The undertone, however, remains weak, for there has been little reduction in stocks over the holiday period and the proportion of miners who returned to work on Wednesday morning was exceptionally high. Advices have been received that *the Maris Company* have tendered 100,000 tons at 26s. 5½d. c.i.f. Alexandria and 40,000 tons at 26s. c.i..f tons at 26s. 5½d. c.i.f. Alexandria and 40,000 tons at 26s. c.i..f on account of the Egyptian State Railway contract for the supply of 250,000 tons between May and September, and that among the other tenders are 90,000 tons at 26s. 7½d. by Messrs. Tabb, Burleston and Company, and 250,000 tons at 27s. 2½d. by Messrs. Evans and Reid. These offers are almost exclusively for Monmouthshire coals, but no official announcement has yet been made as to which tender has been accepted. Current coal quotations were purely nominal.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—Prices of Cleveland iron are the same as last week, viz.: No 1, 70s.; No. 3, 67s. 6d.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s. f.o.b. or f.o.t. Most consuming works have been closed down for two days, but work is now fully resumed and the cessation of deliveries will have caused very little accumulation of stocks of pig iron at the furnaces. An improvement in business is looked for now that the holidays are over. In the hematite department business continues disappointing. Orders are mainly confined to small lots for early delivery, which makers have booked at 75s. per ton, but for parcels of a few hundred *tons they have* accepted down to 74s. 6d. and are still prepared to do business at this figure. There are, however, very few such orders going about and unless business improves soon the present production will have to be reduced. *Shipments of* pig iron have eased off recently, the total to 22nd inst. being 11,685 tons, against 15,377 tons to March 22nd. In the steel trade most of the large plants were idle on Monday and Tuesday, but work is now resumed. Some new contracts of importance are reported and several more are under negotiation. Dorman Long and Company, Ltd., have booked an order for constructional work for a brewery at Bristol which will involve 700 tons of steel material, and Tee Sides Bridge and Engineering Company, Ltd., Middlesbrough, are expecting to receive confirmation of an order for seven large steel tanks for the Anglo-Persian Oil Company's depot at Avonmouth, for which they have submitted the lowest tender. Important extension and development schemes have been decided upon by L.M.S. and L.N.E.R. railways which are expected to benefit this district. Prices for home are unchanged, viz.: Steel plates, ⅜-in. up, £8 15s.; joists, £8 10s.; sections, £8 10s.; iron crown bars, £10 15s.; 24-gauge galvanised corrugated sheets, £12; black sheets, 21/24-gauge, £9 12s. 6d., all for home use. In the ore trade consumers are entirely off the market, their requirements being more than covered under their running *contracts. Best rubio* can be secured for prompt delivery at 21s. c.i.f., and the freight Bilbao/Middlesbrough for immediate tonnage is about 5s. 6d. Coke is freely offered at 18s. 6d. delivered at furnaces with little demand.

Our Sheffield correspondent writes:—An expectation of a reduction of 3s. 6d. on local foundry iron at the end of the month has proved a further inducement to buyers to continue their waiting policy. Scarcely any forward business has been transacted in the *iron market during* the holiday stoppage and stocks are accumulating at some of the furnaces. In the heavy steel trade the stoppage has been rather longer than usual and work is decidedly scarce in the open-hearth department, although the home demand for railway steel has improved a little. Overseas demand for special and ordinary commercial steels is poor, and a spell of quietude has descended upon the tool and cutlery branches. The rolling mills are on short time. There is, however, a fair inquiry for engineers' *small tools and hacksaws*. No Russian business is reported at the moment, nor are any substantial orders from that source expected this year.

Our Workington correspondent writes:—There is not now at command in the North-East Coast *hematite* pig-iron trade the business that was available in December, the Continental and Dominions demand having dried up, while that in the Midlands, Scotland and South Wales is smaller, and though makers are booked to mid-July and hold no stocks, they find the pressure of lower prices *too hard to withstand*. Bessemer mixed numbers have fallen in the course of a few weeks from 79s. 6d. to 76s. at works, and the tendency is still downward, haggling for a further reduction accompanying all negotiations for new contracts. It is the financial stringency in Germany rather than the severity of the East Coast competition that is at the bottom of the increasing depression in trade, and the outlook accordingly is not viewed with much hope, the consensus of opinion being that it will be winter before there is any revival in demand such as was witnessed in the last quarter of 1929. At present the make of the twelve furnaces in blast between Workington and Ulverston is being absorbed, but unless operations become larger in the local steel industry it is more than likely that stocks will accumulate after the half-year end. Malleable iron is in diminishing request at 95s. to 97s. at works, and ferro-manganese is quiet at £13 10s. home. In the steel trade the position is that there are sufficient orders on the books to keep the mills at Workington employed on railway material, mostly for South America, until the second week in July, but new business is scarce. The United Steel Company has concentrated the manufacture of rails, fishplates and sleepers at Workington. Native ore at 18s. 6d. to 20s. 6d. is poor in East Coast and Scottish, but in steady local demand. The coal trade is becoming sluggish, and short-time working is inevitable as soon as the weather becomes warmer. Business in the Irish market is entirely of a hand-to-mouth character. Small coal is in short supply for the coking plants, the entire make of which is going to the East Cumberland iron smelters at 18s. to 18s. 3d. per ton.

Our Glasgow correspondent writes:—Business in the iron and steel trades in the West of Scotland remains quiet, and this year some of the works have had a slightly longer holiday. In the pig-iron market there has been a rather better demand within the past few days. At the steel plants the position is much the same as during the last month or two; the demand for structural sections being fairly satisfactory, but that for shipbuilding material showing a considerable *falling off*. Tube makers are still only moderately busy. Black and galvanised sheet makers are both obtaining a steady flow of orders, but these are not sufficient to keep all plants fully employed and this week some of the mills are not operating.

Our Cardiff correspondent writes:—Owing to the intervention of the holidays little business has been reported this week in the tinplate trade, but the general position is stated to be satisfactory, with most of the works well contracted forward up to the end of September.

OTHER METALS.

TIN.—The standard market displayed dull features and prices declined under selling pressure and lower Eastern cables, while also influenced by the weakness of copper. Only moderate interest is displayed, both here and *on the Continent*, and despite restrictive measures confidence is not yet restored. Standard cash changed hands at £162 10s. to £160 10s.; three months, £166 to £162 15s. In the East, sales were reported on the basis of £166 15s. to £164 7s. 6d. and £164 15s. per ton c.i.f.

COPPER.—Values fell sharply on realisations, and a further cut expected in the price of Electrolytic, but a fair business done at the decline, chiefly in three months at £56 to £53 12s. 6d., with cash £54 per ton.

LEAD active, but easier in sympathy with other metals and liberal offerings. Good soft foreign pig, April, sold £18 1s. 3d. to £17 12s. 6d. and £18; May, £17 15s.; June, £18 to £17 15s.; July, £18 5s. to £17 13s. 9d. and £17 17s. 6d.

SPELTER quiet and values moved in buyers' favour. May, sold £17 13s. 9d. to £17 6s. 3d.; June, £18 to £17 10s. and £17 11s. 3d.; July, £18 3s. 9d. to £17 15s.; August, £18 2s. 6d. to £18.

ANTIMONY quiet. English regulus, £40 to £46 10s.; Chinese ditto, spot, £29 10s. to £30; April-May, £26 10s. to £27; Chinese, crude, April-May, £17 per ton c.i.f.

ANTIMONY OXIDE.—April-May, £26 15s. to £27 5s. ton c.i.f.

ANTIMONY ORE.—50 per cent., April-May, 3s. 6d.; 60 per cent., 4s. per unit c.i.f.

WOLFRAM maintained. Chinese, April-May, 24s. 9d.; Burmese ditto, 24s. 6d. per unit c.i.f.

ALUMINIUM quiet. Home trade, £95; export, £100 ton.

QUICKSILVER quiet. Spot, £21 15s. net, per bottle.

ZINC OXIDE steady at £29 to £36 per ton as to quality, delivered U.K.

TIN PLATES in moderate demand and market steady. I.C. coke, prompt and forward, 18s. 4½d. to 18s. 6d. per box, f.o.b. Swansea.

(Incorporated in Canada as a Limited Liability Company.)

No. 28, Canada Life Building, 2 ST. JAMES'S SQUARE, LONDON, S.W.1. *Estd.* 1847.

THE COTTON TRADE.

LIVERPOOL, April 23rd.

Spot sales for the days 15th, 16th, 17th, 22nd and 23rd (inclusive) are 51,000 bales, of which 16,580 are American, 3,600 Brazil, 50 Argentine, 3,800 Peru, 24,500 Egyptian, 1,490 African, 750 East Indian, and 230 sundries. Imports for the period 15th to 23rd (inclusive) are 27,589 bales, of which 9,193 bales are American, 204 Brazil, 486 Peru, 7,760 Egyptian, 4,390 African, 4,333 East Indian, and 1,223 sundries. Quotations to-day are: American Middling, 8·48; Egyptian Sakel, 14·30; Uppers, 10·47; Brazil Fair, 7·78; Peru G.F. Smooth, 8·88; West African Middling, 8·30; and East African G.F., 9·03.

MANCHESTER, April 23rd.

Since the resumption of business after the holidays there has been no important change in the situation. Buyers are not in the mood to give out orders and owing to the weakness in the raw cotton markets, the state of unrest in China, and the cloth boycott in India the turnover has been of limited extent. Here and there cloth inquiry has been met with for India in light bleaching styles, fancies and occasionally in prints, and isolated sales have been arranged. The smaller outlets such as Egypt, South America and the Colonies have given moderate support. Owing to the trade depression many spinning and manufacturing concerns extended the usual Easter holiday period. American and Egyptian yarns have been purchased sparingly, although one or two individual orders have been of fair weight. Even though a large amount of short-time working is in operation in both American and Egyptian sections, current supplies are sufficient to meet the requirements of users. No further developments have taken place in connection with the Burnley eight-loom experiment.

THE WOOL TRADE.

Our Bradford correspondent writes:—The wool trade has been quiet during the past week and the chief feature now is the interest which is being taken in the wages dispute. Before the holidays there was a substantial addition to the ranks of those who thought it policy not to stand out against a reduction, and but for the overlookers the strike would now be almost over. Those who have machinery to run think the dispute will die down without any further serious trouble. There are no signs whatever of any weakness in wool and the outlook is regarded as being brighter. Many spinners outside Bradford are running, which means that there is quite a large consumption of tops, and as production is suspended, except by spinner-combers, stocks are becoming very low. When work is resumed, all the tops that can be produced should be readily absorbed. The temporary scarcity of tops is resulting in a slight advance in the prices of any spot lots which are available. There has also been inquiry from Germany for 56's tops in oil. Generally speaking, prices are firm, without any indication of a definite upward movement in such business as is forthcoming on forward account. By-products are firm, and stocks are being steadily reduced. Some rush orders for noils for America came out last week, shipment being wanted immediately, to get the consignments into New York and Boston before May 1, when it is expected the new import duties will come into force.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The question of the control of wool prices is again being brought into prominence. Cable information from Sydney received last week stated that the current season's prices were below cost of production, and that it was imperative that these costs should be reduced. How this can be accomplished must be left for growers to decide, but it is gratifying to find that the importance of this side of the case is being realised. The economic adjustments which have been in progress for at least twelve months were certain to react upon pastoral enterprise, and it is now evident that for a very long time extremely high values for wool will be impossible. Pastoralists themselves will therefore have to make an effort to see that wool is a profitable commodity for themselves, without expecting this to come entirely from an advance in the market value of the commodity. Meanwhile, it is desirable that wool should be sold to the very best advantage possible. That there is no serious obstacle in the way of this is shown in the degree of confidence now existing in wool and tops among importers and topmakers. Even a strike of textile operatives is having no injurious effect in this respect. The dispute is admittedly a very one-sided affair, but any excuse is better than none when one is wanted, and it is a striking tribute to the soundness of wool that nobody expresses any misgiving about it. It is understood that growers in Australia have been asking for control, and it seems as if some misconceptions are still entertained about what might be accomplished by an appraisement scheme. The wool would have to be financed, and if the Australian Government undertook to do this, they would require capital for the purpose, and would be undertaking all the risks and responsibilities now carried by private enterprise. Not the least important consideration involved is that the mere fact of wool being held by any organisation would not guarantee for it any more than a market price. In that case a big surplus would be just as heavy a burden upon the industry as under the present system. Wool is readily saleable at current values and increased demand may be expected to induce a hardening tendency.

HIDE, LEATHER AND ALLIED TRADES.

Hides from home slaughtered cattle were slightly dearer at the auctions held during the week-end, when supplies were sold for two weeks. Hides coming on to the market free from warbles are now getting scarce, and it is generally expected that advances will be recorded for these over the next few weeks. Business in the market for foreign hides has been interrupted on account of the Easter holidays, and although the turnover has been less, prices have ruled steady, except for goods from South America, which are inclined to be easier. The weakness has been most marked in connection with frigorifics, Argentine ox having changed hands on the basis of 7 7/16d., second ox at 6d., and bulls at 3⅝d. At these figures there has been a little more interest shown by the home trade, and it is hoped that further business will be possible in the near future. Dry River Plates also show a slightly weaker tendency, and a fair amount of business has been done in the various descriptions, including B.A. Americanos at 7¾d., Sierra Cordobas at 8¼d., B.A. Inservibles at 4 7/16d., and Rejections at 4⅛d. Capes are firm, with business done in dry salted at 7⅝d., and 6⅝d. for first and seconds, and drys at 8¼d. and 7¼d. Mombasas have sold at 6⅜d. for 30/40/30. Australians are steady at late rates. Business in connection with sole leather has not opened out to any extent since the holidays. Here and there a few orders for bends have filtered through since the resumption of business, while the wet weather has given a slight fillip to the repairing section of the trade. Shoulders and bellies have also been enquired after, but the business done has been small. Although actual orders have not been sufficient to test the market, the position is considered satisfactory. Prices are firm for most descriptions, and with no large stocks available reductions, at any rate for the time being, appear out of the question. Upper leathers have also ruled quiet, with the limited inquiry coming to hand covering most kinds, including black and brown glacé kid, willow calf, low grade patent, reptiles, etc. The Easter trade in footwear has not come up to general expectations, and the opinion is held that sales have fallen considerably short of previous years. Some manufacturers are fairly well placed for orders, but on the other hand, many experienced a difficulty in keeping all hands working full time.

THE TIMBER TRADE.

The movement of European timber into consumption has been satisfactory over the past month. In that respect, this year so far is a much better one than last, and there are no indications of any falling-off in the demand, which is more likely to expand than otherwise. The building trade is full of promise this year. Costs of buildings for which plans have been passed within the past quarter are much higher than those of the corresponding period last year, especially in housing, while other trades that use, or influence the use of, wood, should not be worse than in 1929, and are more likely to be better. The increased taxes on higher incomes must have some influence on the timber as well as other trades, but these are not likely to hurt industry so much as the preceding uncertainty. The worst is known for the next twelve months, and industry should operate with much more confidence than during the past year. The good demand for European timber has been accompanied by a large import, keeping stocks on the London market (the prime factor of the U.K. timber trade) at about normal for the time of year. The first of the new season's shipments are being loaded at the now ice-free Finnish and Swedish ports, but the inactivity of the forward market precludes the possibility of an excessive import just yet. Besides less purchasing of Finnish and Swedish timber this year, the Russian sales are much lower than they would have been if the Soviet timber authorities and the British consortium of buyers had arrived at an agreement as to bulk buying. This seems as if it must come, sooner or later, as the British consortium includes many of the larger operators, all of whom with their fellow members, collectively and individually, are holding off. The fears of the autumn of 1929 and the early weeks of this year as to a glut of European timber on the U.K. market this season are being dispelled. It is now the impression in the trade, after careful consideration, that Russia will not be able to ship 650,000 standards to the U.K. this year, while it is also likely that Finland and Sweden may not send their 1929 quantities. On the other hand, a larger consumption this year is expected. Thus the prospects of sellers are very much better than they appeared three months ago. The hardwood

market continues dull, and the prospects of a larger consumption are not bright. But whereas European building wood prices on the spot and forward are weak, those for hardwoods are firm because shippers' prices are strong. This has been demonstrated for mahogany logs by the auction sales held in London last week, at which a large percentage of the logs failed to reach the minimum reserve. The firmness is also marked in the market for Indian teak, of which available supplies in shippers' hands are limited. In sawn hardwoods, on the other hand, the market, forward and spot, is handicapped by the large supplies in the United Kingdom of States lumber, the only moderate demand for that class of wood, and the divergence of price range for fresh shipments to the United Kingdom.

VEGETABLE OILS AND OILSEEDS.

There is an all-round tendency towards easiness. Linseed oil is in only slow demand by consumers, and is barely steady, the current value on spot being £40 10s., and for April delivery £40, later positions being at a small discount. Cotton oil is quiet and slightly lower. Crude Egyptian on spot offering at £29, and common edible at £32 per ton naked, ex Hull mill. Other seed oils are quiet, and values about unchanged. In the oilseed section Plate linseed is dull, and demand small, prices being easier on lower Argentine cables for seed on spot and afloat, £18 5s. 6d., quoted £17 17s. 6d. for April shipment, and £18 May and June. Calcutta linseed to Hull, April-May, have been done at £19 1s. 3d., and bold Bombay to the Continent, April-May, £20 2s. 6d.; and May-June, £20. The quantity of linseed on passage to Europe, about 116,300 tons, is 19,400 tons more than a week ago. Only a small business is reported in Egyptian cotton seed, and values are being around £7 15s. for black on passage, and April-May loadings. The demand for oilcakes and meals is fair, but declining.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Subdued conditions continue in all directions. Trade buyers are only in the market to fill certain gaps and are seemingly occupied in taking delivery of contract quantities. Raw refining sugars held with some reserve and quite firm. Cables from Java show that new business is difficult to arrange, though sellers adhere to steady asking prices. Terminal sections without new feature, a moderate amount of business being effected at prices marking no material change. Of raw, May delivery, quoted, 6s. 10½d.; August, 7s. 1½d.; December, sold, 7s. 4½d.; March, 8s. 4½d.; May, 8s. 6¾d. Cuban receipts last week of old crop, 3,712 tons, against nil last year; exports, 10,202, against nil; stocks, 6,222, against 12,712; receipts of new sugar, 146,931, against 191,524; exports, 43,956, against 138,223; stocks, 1,769,441, against 1,479,877. Centrals at work total 118, against 95. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending April 19th amounted to 185,338 tons, against 139,956 last year.

COFFEE.—There is only a small movement in spot goods at previous rates.

COCOA.—Spot market quiet. Forward positions the turn steadier. Accra, F.F., May-July, sellers, 35s. 6d. f.o.b. Terminal, May, sold, 38s. 7½d.; July, 39s. 3d.

TEA.—Only retail quantities selling on the spot at steady prices, resumption of auctions next week being awaited.

RICE.—Firm. Spanish oiled, April-May shipment, quoted, 14s. 9d. c.i.f. London. Two stars, spot, London, 13s.; April-May, steamer, 12s. 4½d. c.i.f. London/Continent. No. 3 Burma to Levant, quoted, 12s. 7½d. c.i.f. double bags. American blue rose from 23s. to 24s. 6d. c.i.f. S.Q. to Cuba, 12s. 9d. Saigon No. 1 round grain, April-May to Europe 12s. 10½d. Siam Super April-May, 17s. 6d.

BEANS.—Market quiet but steady. Madagascar, spot, London, 33s. 6d. to 35s.; March-April and April-May, 33s. c.i.f. London. Rangoon haricots, spot, London, 11s.; April, 11s. 6d. c.i.f. Ohtenashi, spot, London, 19s. 6d.; April, 18s. Danubian H.P., spot, London, 20s. To Glasgow, North African, new, July-August, £8 7s. 6d. c.i.f.

PEAS.—Dull. Japanese old crop, spot, London, 15s.; new, 15s. 6d. to 16s.; afloat, 14s. 9d.; March-April, 14s.; April-May, 14s. c.i.f. Dutch marrowfats, prompt, 16s. to 16s. 6d.; small hand-picked blues, 12s. to 13s. 6d. f.o.b. terms. Calcutta (per 504 lbs.), April-May, 44s. Karachi, June-July, 41s. 9d. c.i.f. Maples firm. No. 1 New Zealand, new crop, April-May, 55s. 6d. Tasmanian "A" grade, new, afloat, 66s. c.i.f.

LENTILS.—Bold Bombay, April-May, 60s. 6d.; Calcutta Patna, to arrive, 59s. 6d.; Bombay Patna, April-May, 59s. 6d.

SPICE.—Pepper met with moderate support and market proved steady. London stocks of black reduced 30 tons on the week to 967, against 1,184 last year; white, 35 tons down, at 764, against 634. Lampong, March-May, quoted, 10⅞d.; May-July, sold, 10¼d.; and buyers, August-October, sold, 9¾d. Muntok, white, March-May, quoted, 1s. 1⅞d.; May-July, 1s. 1⅞d.; and August-October, sold, 1s. 0¾d. Zanzibar cloves, March-May, steamer, 1s. 0¼d. Sago flour, April-May, to the United Kingdom, quoted, 11s. 3d. c.i.f. Farina slow and barely steady. Tapioca idle at the moment. African ginger, to arrive, sellers, 38s. c.i.f. Pimento slow.

FRUIT (Dried).—Currants firm with a fair trade in force. Pyrgos, quoted, 35s.-35s. 6d.; Amalias, 37s.-38s.; Patras, 39s.-43s.; Gulf, 42s.-46s.; Vostizza, 47s.-58s. Sultanas in better request Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-75s.; Greek, 42s.-65.; Australian, 31s.-45s. Dates dull. Hallowie, spot, 19s.-21s.; Khadrowie, 15s.; Siar, 12s.-13s. 6d. Raisins steady with improved inquiries. Valencia, quarter boxes, 40s.-42s. Figs quiet. Genuine, 21s.-25s.; good average, 20s.

EVAPORATED FRUITS.—Market quiet and holiday influences, though apricots continue in fair request, and peaches also meet with attention. Plums move off quietly and prices tend easier for parcels to arrive. Plums: Californian, new crop, 30's-40's, 67s.; 40's-50's, 65s.; Oregon, 30's-40's, 53s.; 50's-60's, 50s. 6d. Apricots: South African Royal, 50s.-112s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 95s.; Australian, 65s.-85s. Peaches: Californian, choice, 55s.-60s.; fancy, 62s. 6d.-67s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 55s.-65s.; Canadian, 52s. Almonds firmer. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 110s.; Majorcas, 107s. 6d.-125s. Bitter Jordan, new crop, 182s. 6d.-195s. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 39s. c.i.f.; sweet, spot, 72s. 6d. Hazel kernels: Kerasunde, spot, 140s.; Barcelona, 136s.; French (shelled) walnuts, 135s.-140s. ex wharf London.

CANNED GOODS.

CANNED FRUITS.—The general position remains unaltered, but trade is gradually improving in view of seasonal requirements. Moderate support was accorded Australian varieties. Singapore pines move off with greater freedom and prices show a hardening tendency. Italian tomatoes quiet and values still on the easy side.

CANNED FISH.—Salmon: Market steady but trade slow to improve. Alaska red talls, quoted, 47s. 6d.-49s.; pink talls, 24s. 6d.-26s. 6d.; and halves, 34s. 6d.-36s. Japanese crab dull and slightly irregular with best quality 90s.-96s. Lobsters scarce and prices largely nominal; halves range from 135s.-140s. Sardines in better request and market steady. Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Market firm with a steady trade passing, but cooked hams quieter, trade requirements being fairly well covered at the recent lower levels.

CONDENSED MILK AND MILK POWDERS.—Market steady and a rather better trade is reported, recent price reductions stimulating demand. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 33s.; machine-skimmed, ditto, 20s. 6d.; full cream, sweetened, 56-lb. drums (two in a crate), 52s. 6d. English condensed milk, full cream, sweetened, 5-cwt. casks, 38s.; machine-skimmed, ditto, 22s. 6d. Dutch full cream milk-powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 61s. 6d.; spray, ditto, 2 by 56 lb. tins, crated, 80s. Dutch machine-skimmed milk-powders, roller process, 1-cwt. cases, 27s.; spray, ditto, 2 by 56 lb. tins, crated, 38s. 6d.; spray, ditto, 1-cwt. cases, 36s. 9d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are net, ex store London/Hull or Toole, and cover prompt or gradual delivery to the end of June, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. Minimum, 1-ton lots; smaller lots, 6d. per cwt. extra. On the grocery side: Full cream, sweetened, 18s. 6d.; machine-skimmed, sweetened, 8s. 6d. per case, basis usual packing.

HONEY.—Market dull and rather featureless. Jamaican, white, 48s.-50s.; good amber to fine pale, 40s.-47s. 6d.; dark to fine amber, 37s.-40s. White Cuban, 40s.-42s. 6d. San Domingo, good to fine, 37s.-40s.; manufacturing, 35s. Mexican, 35s. Californian, 50s.; light amber, 45s. New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d. per cwt.

RUBBER.

Nothing occurred to relieve the monotony of this market. Trade continues very quiet, with but fractional price changes. Sheet, spot and May sold, 7 1/16d. to 7¼d.; June, 7 1/16d. to 7 1/16d.; July-September, 7⅛d. to 7¼d.; October-December, 7⅛d. to 7⅛d., and January-March, 8⅛d. to 8d. London stocks increased 919 tons on the week, landings being 2,159 tons; deliveries, 1,240; stocks, 73,252, against 30,503 same time last year. Liverpool stocks, 13 tons lower, landings, 306; deliveries, 319; and stocks, 22,663, against 4,521.

GENERAL.

JUTE.—A quieter tone was apparent and prices tended weaker, though sellers were not pressing. Firsts, April-May, also May-June, Continent, quoted £25 10s.; new, August-September and September-October, £26 15s. Lightnings, May-June, £24 10s. Hearts, £23 c.i.f.

HEMP.—Manila qualities steady, but quiet, on the basis of £28 10s., grade K for May-July shipment. J No. 2, April-June sellers, £29; K ditto, quoted, £28 10s.; August-October, £29; L No. 1, April-June, £27 10s.; L No. 2, April-May, £25 5s.; M No. 1, May-July, £25 10s., and M No. 2 ditto, quoted £24 c.i.f. African sisal: No. 1, f.a.q., March-May, sellers, £33; Marks, £33 15s. c.i.f.

The Economist,

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. CX. SATURDAY, MAY 3, 1930. No. 4,523.

ALLIANCE

ASSURANCE COMPANY, LIMITED.

(*Established in* 1824.)

HEAD OFFICE: BARTHOLOMEW LANE, LONDON, E.C.2.

Marine Department: 2-6, Billiter Square, London, E.C.3.

ASSETS EXCEED £30,000,000.

INSURANCES OF EVERY KIND.

LIFE DEPARTMENT.

INCREASED COMPOUND BONUSES on Participating Policies.

Assurances with DISABILITY BENEFITS (including Income Benefit).

Comprehensive Deferred Assurances for Children.

For full information apply to the Head Office or to any of the Offices or Agents of the Company.

A. LEVINE, General Manager.

CHRISTIANIA BANK OG KREDITKASSE

OSLO

Established 1848.

Paid-up Capital and Reserve Funds,

Kr. 40.000.000.—.

Oldest Norwegian Joint Stock Bank. Direct correspondents throughout the country. Offering complete services to banks and firms doing business on Norway.

Correspondence invited

CREDITO ITALIANO

Limited Company Incorporated in Italy.

Capital Subscribed	Lire 400,000,000

THE MONEY MARKET.

THREE PER CENT.

MONEY proved easy and plentiful early in the week, and 2 per cent. was freely quoted on Wednesday. The banks continued to buy short bills in large quantities, and the rate for June bills again ruled low at $2\frac{3}{16}$-$\frac{1}{4}$ per cent. on

Wednesday. The three months' bill rate was also lower at $2\frac{3}{8}$-$\frac{7}{16}$ per cent., and so, as far as the technical position of the money market was concerned, the stage was set for the reduction in Bank rate from $3\frac{1}{2}$ to 3 per cent., which was announced the following day. The exchanges, however, told a different story, Paris being quoted Wednesday afternoon at 123.92½ francs, Berlin at 20.36$\frac{1}{2}$-$\frac{3}{8}$ marks, and New York at $4.86\frac{1}{4}$.

* * * *

For reasons discussed elsewhere, the Bank authorities decided to ignore the immediate situation of the foreign exchanges and to reduce their rate. Their decision will undoubtedly be welcome to the discount market. Hitherto with Bank rate at $3\frac{1}{2}$ per cent. the clearing banks have been charging the market $2\frac{1}{2}$ per cent. for their weekly loans, and, with the three months' discount rate at $2\frac{1}{2}$ per cent. or even less, brokers have been working at a loss. This has been their experience during the whole of the present year, a fact which has increased their difficulties.

* * *

The institution of the 3 per cent. rate, with the automatic reduction of the rate on weekly loans from $2\frac{1}{2}$ to 2 per cent., has enabled bill-brokers once more to operate at a profit, for on Thursday afternoon discount rates were very little lower than they had been prior to the Bank rate reduction. Short bills were quoted at $2\frac{3}{16}$ per cent., and three months' bills at $2\frac{5}{16}$ per cent., a rate which left brokers with an adequate margin.

* * * *

So far, no increase in the volume of Treasury bills has taken place since the close of the financial year, but it is known that next month the Treasury has to pay off £20,000,000 of Treasury bonds, and also to prepare for the 5 per cent. War Loan dividend. Against these demands it is thought that calls still outstanding on the recent Conversion Loan issue only amount to £18,000,000, so that the Treasury will have a substantial amount of money to raise. As the low level to which discount rates have fallen may attract fresh bills to London, it may well be that the market will be plentifully supplied with bills before long.

	Apr. 10, 1930.	Apr. 16, 1930.	Apr. 24, 1930.	May 1, 1930.	Previous Rate and Date Changed.

This week's Cape gold went partly to Germany and partly to an unknown buyer, believed to be Belgium. The price paid was 84s. 11¼d., which is very near to the Bank's selling price. For reasons discussed elsewhere, it does not follow that the Bank is going to lose gold, and in any case this week's Bank return reveals gold stocks of £164.3 million, a reserve of £65.5 million, and a proportion of 52⅞ per cent. Thus the Bank occupies a very strong position, and could lose a few millions of gold without any harm. It is true that the week's gold acquisitions, at £441,000, were less than those of recent weeks, but £3,362,000 of the notes withdrawn for the Easter holidays returned from circulation, so that the reserve was increased during the week by £3,803,000. The banking department's holding of Government securities increased by £1,183,000, and public deposits rose by £3,689,000. Bankers' deposits only expanded by £151,000.

NEW YORK

Our New York correspondent cables:—Money is easing, due to continued gold shipments of about $38 million, which arrived this week from South America and Japan, and also due to the anticipation of a cut in the discount rate. It was expected that the New York reduction would follow another reduction in London, which, however, came unexpectedly. Bill rates were twice reduced to-day, and $2\frac{1}{8}$ per cent. is now asked for 90-day bills. A sharp cut in the buying rate of bills by the Federal Reserve is expected to-morrow. Time funds are one-quarter lower and call money failed to rise above 4 per cent. The record for the end of the month was broken, dividend and interest payments totalling $650 million. The old discount rate proved ineffective, with the open-market rates ¾ per cent. lower, and Member Bank borrowings were only $40 million. The Federal Reserve System shows a gain of $20 million in discounts, a drop of $50 million in bills, due to non-replacement on maturity, and a reduction of $22 million in the total credit outstanding, resulting in a rise in the Reserve ratio to 82.5 per cent. A good bond market is expected to follow this discount cut, but, as regards stocks, views are mixed owing to the idea that the rate stresses poor condition of business and reflects the concern felt by the authorities, while actual credit demands are so slack that rates makes little difference; however, building operations should benefit in the long run.

THE STOCK MARKETS.

Business in the stock markets was limited by the setback to prices in New York, the absence of public interest at home, the May Day holiday, and the Preliminary Contango day which succeeded it. The reduction in Bank rate took most members of the "House" by surprise, though gilt-edged stocks had previously shown a firmer tendency after a shaky start to the week. Home rails continued to decline on unfavourable traffic figures. The outstanding feature in a dull industrial market was the activity of Gramophone and Columbia Graphophone shares on circumstantial "merger" rumours. The fresh fall in rubber prices, on the eve of the "tapping holiday," brought out only a few lines of stock, but mining shares were heavy on the further weakness of base metal prices, and oil shares were less active in the absence of support from New York or Paris.

THE COMMODITY MARKETS.

Though not without some encouraging elements, this week's reports are on the whole disappointing. The coal market remains depressed, though there are a few firm spots. It is difficult to detect any convincing sign of improvement in the iron and steel trades. Reports from Manchester are very gloomy, though business in home trade fabrics has been fairly steady. In spite of the wage dispute, the condition of the wool textile industries is considered sounder than it has been for some time. The silk trade is quiet, pending the conclusion of an agreement for limitation of output in India. Hides and leather are firmer and there has been an improvement in the boot and shoe trades. The vegetable oil and oilseeds markets are quiet. Wheat has fallen a few points.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was very quiet this week, and only small transactions were marked. The tendency, on the whole, was against sterling, but the principal feature was a renewed collapse of the Argentine peso. The New York rate fell from $4.86\frac{5}{16}$ to $4.86\frac{5}{32}$, but Montreal was unchanged at $4.86\frac{3}{4}$. Paris gained seven points at 123.91, but Brussels was ¼ weaker at 34.83 with the reduction of the Belgian Bank rate. Milan was steady at 92.80, but Madrid was uncertain and weak, the rate rising from 39.06 to 39.30. Amsterdam improved from $12.08\frac{3}{8}$ to $12.07\frac{11}{16}$, and Berlin gained ⅜ at $20.36\frac{1}{4}$. Switzerland was stronger at $25.07\frac{3}{8}$. Of the Scandinavian exchanges, Stockholm gained ⅛ at 18.09, but Oslo fell ⅛ to $18.16\frac{1}{4}$, and Copenhagen ⅜ to $18.16\frac{1}{2}$. Helsingfors was a trifle better at 193.10, against 193.30 last week. Of the South American exchanges, Rio was firmer and gained $\frac{1}{16}$d. at $5\frac{7}{8}$d., but Buenos Aires fell away from $43\frac{15}{32}$d. to $42\frac{11}{16}$d., whilst Montevideo lost ½d. at $45\frac{1}{4}$d. In the Far East the rupee was again steady at 1s. $5\frac{27}{32}$d., as was the yen at 2s. $0\frac{3}{8}$d. Batavia gained ⅛ at 12.08. In the forward market, dollars were more on offer at wider discounts of $\frac{3}{32}$ cent and ¼ cent for the two periods. Paris went from 2 and 3 centimes premium to a discount of 1 centime for both quotations. Brussels was unchanged at 1½ and 3½ centimes discount. Milan was a little weaker for one month at 12 centesimi discount, but was unchanged for three months at 32 centesimi discount. Madrid was firmer at 2½ and 7 centimos premium. Amsterdam fell away for both periods at wider discounts of ⅞ cent and 1½ cents respectively. The silver market was quiet with only a small turnover. Spot was unchanged at $19\frac{3}{8}$d., whilst forward was $\frac{1}{16}$d. higher at $19\frac{9}{16}$d. The China silver exchanges were unmoved, Hongkong at 1s. $6\frac{3}{8}$d. and Shanghai at 1s. $11\frac{1}{4}$d.

THE SITUATION IN INDIA.

THREE events have occurred during the week which show that the Indian situation is passing through a difficult, and what we must all hope to be the most acute phase. The first of these is the announcement by the Government that during the recent disturbances in Peshawar City, when troops were employed and ordered to fire, the conduct of two platoons of the 2nd/18th Royal Garhwal Rifles "was found to be unsatisfactory," with the result that the battalion has been removed and an inquiry is to be held. The next is the promulgation by the Viceroy of an Ordinance reviving the Press Act of 1910. Thirdly, Mr Patel, who was elected by the Legislative Assembly to succeed Sir George White as Speaker, has resigned—to throw in his lot with the promoters of civil disobedience—after correspondence with the Viceroy in which he explains that his hope of "a change of heart on the part of the British Government and a change of spirit in the day-to-day administration of India" has been disappointed.

The third of these events is not of great importance in itself. The patronising tone of the correspondence in which Mr Patel explains that a clique of underlings by vilification, abuse and misrepresentation have been allowed to prejudice the Viceroy against him, and still more, the declaration that he had never believed "that reason, persuasion or argument had any place in Great Britain's dealings with subject races," and that, therefore, "every activity which was likely seriously to embarrass British administration in India . . . had my fullest support," reveals the outlook of the man with whom the Government has had to deal as the President of the National Assembly. His resignation, coming after his refusal to adopt that course in December, when Congress called for the resignation of members of the Assembly, will *not add any considerable weight to the civil disobedience movement.* It is, nevertheless, a symptom of the hardening of opinion among those whom Mr Patel represents, and has drawn from the Viceroy an expression of the hope "that you and those with whom you are once again to be openly associated may come to realise how grave a wrong you do to India by rejecting the way of peace that lies open through free conferences with His Majesty's Government, in order to encourage your countrymen to deliberate and dangerous defiance of the law."

The other two events are of more practical significance. The Peshawar episode suggests that there is some disaffection among the Hindu units of the Indian Army. Though Hindus constitute a comparatively small proportion of the Indian troops, this incident emphasises the importance of not allowing the prestige of Government to be undermined. The Press Ordinance, together with the conferring of special powers on the Bengal Government, to which we referred last week, is a decisive step in this direction. The revival of the 1910 Act, which empowers Provincial Governments to require deposits, liable to forfeiture in the case of serious offences, and to confiscate printing presses, is a course only to be justified by very exceptional circumstances. It savours of arbitrariness, and is utterly repugnant to the British tradition that truth will emerge from the free expression of opinion, but never from suppression. On the other hand, it must be remembered that the Government of India, small in numbers, has no means of direct appeal to the vast population of that continent, whereas the vernacular Press not only circulates throughout the towns, but is beginning to spread to the villages. If this Press can with impunity create the impression that disregard of the law is a commendable policy, it will make government impossible; and a feature of the present Ordinance is that it covers incitement to civil disobedience, which is thus recognised as being as destructive of ordered government, and thus of social life, as actual rebellion.

These events, together with sporadic disturbances arising out of demonstrations—mainly in the Presidency Provinces—police raids, and arrests, are signs of a rising temperature. The situation is one that may well get beyond Mr Gandhi's control, and, in any case, the Government has rightly reached the decision that civil disobedience and the breakdown of authority which it implies cannot be tolerated. Whether, in the circumstances, the proper course for the Government was to go to the source and gratify Mr Gandhi's wish by arresting him, or to refrain, must have been a very difficult question to decide. Mr Gandhi has been arrested before, and his arrest was the signal of the breakdown of the non-co-operation campaign, but his sympathy with his people—illustrated by his mode of life and his doctrine of non-resistance, difficult to understand in the West—gives Mr Gandhi's personality an appeal which far surpasses the bounds of his own community. This has been illustrated during the week by the correspondence between the Viceroy and Mahomed Ali, a leader of the Khalifat Party, who, though siding with his co-religionists in opposition to the Hindu majority, is a Nationalist. The latter telegraphed a fortnight ago as follows:—"I earnestly appeal to your Excellency not to permit the situation to become graver by the arrest of Mahatma Gandhi. Both he and the Government have made a sufficient demonstration of their strength. I pray that consideration of prestige will prevent neither from seeking a *rapprochement* by retracing their steps and bringing about peace and freedom. With an assurance from you we shall try our utmost to bring about a peace honourable to both."

It would be easy to criticise and judge Mr Gandhi by the ordinary canons of political tactics, and it is difficult to justify the discrimination in treatment between the inspirer of this great movement of non-violent resistance to the laws and that afforded to his subordinates. On the other hand, Mr Gandhi's arrest would not only be regarded in India as an affront to Indian sentiment, but might well have the result of driving the movement into much more active channels. The situation is one in which the only possible course is to trust to the judgment of those who are in personal touch with the daily course of events. But if the Government of India's duty is clear, it is equally important that opinion in this country should not be deflected from its course. A situation such as the present may tempt people, according to their inclination, to say, on the one hand, that all further talk of concession must stop until we have shown by firm government that this country is not prepared to be cajoled or moved by threats, or, on the other, that, as we desire in any case ultimately to grant responsible government to India, we should learn from the lesson of Ireland and other countries, to act while there is time and concede the demands of India forthwith. To give way to panic and pursue either course could only lead to disaster.

There is no precedent in the world, and never can be anywhere else in the world, for the task which we have set before ourselves in India, namely, to hand over gradually the reins of an orderly Government to the representatives of a vast population, of whom 92 per cent. are illiterate, containing many races, religions and languages, and among whom there are very slender bonds of unity and little or no experience of government. We are, however, committed to the task. Not only has the desire for political freedom, which the Western world has taught to the Eastern peoples, been strengthened in India by the object lesson of developments elsewhere throughout Asia, but, with the concurrence of every party in the State, we have as recently as six months ago reiterated that it is the intention of this country to honour the pledge given twelve years ago, namely, that the policy of Great Britain is "the gradual development of self-governing institutions, with a view to the progressive realisation of responsible government in India as an integral part of the British Empire." This is a commitment in which our honour is engaged. It is also to us a matter of self-interest, for we have great economic interests in India, and it is clearly to our advantage that

there should be contentment and growing economic prosperity in a country which is our chief market; and it is a policy of necessity, for it is unthinkable that the British democracy should attempt to impose its will and maintain domination by force.

On the other hand, the great difficulties of the problem require the utmost care and patience. Concurrently with the events to which we have referred, the President of the All-India Depressed Classes Conference, which has been meeting at Amraoti, declared:—

"We will not join the Gandhi movement. We will not only denounce his revolutionary designs, but will side with the Government for the maintenance of law and order." Mr. Gandhi was not going to suffer, and had nothing to lose, but it would be the Depressed Classes who would have to bear all the miseries resulting from law-breaking. "The movement will end by making us sink still deeper in the quagmire of untouchability."

The British Government has responsibilities towards these unfortunate people, whose numbers are variously estimated at from 30 to 60 millions. There is also the vast problem of the great and widely distributed Moslem minority (numbering 69 millions), and though most of these share the universal desire in India to attain complete nationhood, there is as yet no sign that India has solved or can solve for herself the problem of the relation between Moslem and Hindu. The reports by the Mohammedan members of the Indian Central Committee, published last autumn, reveal yet once more the difficulty of this problem. Finally, there is the position of the Indian States, to whose rulers Great Britain has very definite commitments. Those in this country, as well as those in India, who are apt to base their views of this problem on analogy with the experience of Ireland, and who think that we can make a short cut to the solution there adopted, will do well to bear in mind the complication that Ulster always made in the Irish problem, and to remember that there is not in India one Ulster but many Ulsters scattered throughout the continent.

The conclusion, then, is clear. A new phase will develop with the publication of the report of the Statutory Commission, which must be the guide to opinion in this country on this complex situation. Its findings will furnish the basis of conference with the representatives of India, and that phase will inevitably be long and difficult and will tax the utmost resources of statesmanship in both countries. In the meantime, this country must lend its support to the Government of India in its task of maintaining ordered government and stability, but without divrging from its principle of concerting with the Indian people steps for proceeding as rapidly as may be possible towards the goal which is the common objective of both peoples.

PEACE AND POPULATION.

If we ask ourselves what has been men's chief single desire since the war, our answer will be "Peace." We shall arrive at that answer, whether we measure current human wishes by their diffusion, by their intensity, or by their persistence. On each of these bases, and *a fortiori* on a combination of them, peace will certainly head the list of desires in a psychological survey of the last dozen years. How, then, do we stand as a result of twelve years' endeavours? Our most conspicuous success has been on the political plane—in international organisation for the prevention of war by providing opportunities for friendly and rational discussion of international difficulties at an early stage and by imposing deterrents and restraints upon "direct action" in the last resort. In this field, though much remains to be done, we may fairly claim to have accomplished more already than has ever previously been achieved in the relations between sovereign independent States. Again, in a distinct but closely related political field—that of disarmament—we have accomplished more than would have been thought possible in the pre-war period, though here we have less cause to be complacent when we measure our achievement up to date by the amount that has to be achieved if peace is to be assured. Nevertheless, if our survey is really comprehensive and objective, we may find ourselves reporting that even the problem of armaments is not the chief stumbling-block in the way of fulfilment of the world's desire. We may report that the chief danger to the preservation of peace is not to be found on the political plane at all, but on the economic—or rather, perhaps, along a line where these two planes of social activity intersect.

In the current economic development of the world, the master tendency is for all important economic operations to be carried out on a scale transcending the scale of even the biggest units on the political map—a scale which, in almost all branches of economic activity, is obviously tending to expand until it becomes world-wide. Yet while the natural unit of economic activity is thus coming to be a field which embraces the whole planet, we are witnessing everywhere a struggle to oppose and overcome this economic tendency from motives not of economic but of political expediency. The Governments of States—and behind them the peoples of the world, in so far as they act as political and not as economic animals—are still struggling politically to keep the economic life of the world divided into fragments and confined within territorial compartments corresponding to the political divisions and compartments that have emerged from the war. And in this struggle they are mainly relying upon two weapons: tariff walls and restrictions upon immigration.

Tariff walls are an old and familiar expedient for political interference in economic affairs, though their unfavourable economic effect is more potent for evil now than it was before the war, partly because there are more of them on the post-war than there were on the pre-war map, and partly because many of them have either been raised or supplemented by more severe restrictions such as prohibitions and embargoes. On the other hand, the weapon of restriction upon immigration is comparatively new. During the century preceding the outbreak of the war, the outstanding feature of migration—at least, as far as the White Race was concerned—was its freedom from restriction and the advantage which was taken of that freedom. About the beginning of that century, immigration into the United States received an impetus which lasted until 1914; and, on a smaller scale, similar impetuses entered, as the century went on, into the streams of immigration into the "ABC" States of Latin America and into the British Self-Governing Dominions. The checking of these impetuses and the damming of these streams have been one of the principal changes in international relations since the war. The landmarks in this change are the United States Immigration Restriction Acts of 1921 and 1924, to which some British Dominions have followed suit already, while the "ABC" States are evidently preparing to take the same course. The fact is that, since the war, the hindrances to the natural economic flow of population from areas where the population-pressure is relatively high to areas where it is relatively low—hindrances which already, before the war, were being opposed to the migration of the Coloured Races—have been applied likewise to the migration of the White Race by the political action of the principal White countries of immigration. Thus now throughout the world, and without respect to differences of race, the inherent economic tendency of population to reach a uniform world-wide level is being resisted by political forces which, regarded from the economic standpoint, are "uneconomic," or in other words, perversely artificial. We may well decide to report, as the result of our general survey, that this is the point at which the chief present danger to peace is to be found.

Such a report is rendered in an interesting form, and is supported by powerful arguments, in a recent book by an American author, Dr. Warren S. Thompson, entitled "Danger Spots in World Population."* Dr. Thompson's main thesis is that the recent discovery of artificial methods of contraception will prove to have been one of the epoch-making discoveries of history; and he implies that it has been made in the nick of time. Hitherto, the principal agencies in the restriction of population have been disease and war. Recently, by discovering the existence of microbes, and the means of putting an end to it, man has begun to eliminate the factor of disease. The speed with which he is eliminating it is shown in the rapidly falling death-rate (from causes other than war) in the most civilised communities during the last few generations. *Ergo*, the argument proceeds, if a new method of restricting population by birth control had not been discovered soon after the discovery of how to eliminate the historic restriction of population by microbes, the pressure of the demand upon the other historic method of restriction—the method of war—might have become irresistible. As Dr. Thompson puts it, we cannot have *both* uncontrolled births *and* controlled deaths for long; and since a deliberate retrocession of the ground that is being conquered from disease is really inconceivable, the argument leaves us confronted with two alternatives for the future: restriction of population by war or restriction by birth control. To perform its function under the new conditions, war would have to kill us off on an unprecedented scale; but Nature has thoughtfully provided for that, since man's new mastery of her secrets, which has enabled him to be fruitful and multiply beyond precedent, has also given him means of destroying human life which are unprecedented too. So (the argument concludes) war can and will do the work of restricting population if birth control (*i.e.*, the prevention in lieu of the destruction of surplus life) does not reopen a breach as great as that which Hygiene has closed.

Dr. Thompson believes that, in the industrial urban populations of the contemporary world, birth control is now within measurable distance of performing this function effectively. May we, then, conclude that birth control has already banished the spectre of war? No (he contends), we may not; for an important part of mankind is still in a mainly agricultural "swarming" stage and, even if we believe that the practice of birth control is destined eventually to become as universal as, let us say, the use of fire, that process will take time, since social habits that touch the intimate things in life do not change in a day. Now, by a political fatality, the principal communities that are still in this "swarming" stage find themselves, on the present political map, with a shortage of land and of the other material resources for sustaining life, whereas the main existing reserves of unoccupied land and undeveloped resources are in the hands of industrial communities in which population is on the verge of becoming stationary. The picture is completed by that great accentuation, since the war, of restrictions upon migration which has been mentioned above. The juxtaposition of areas of high and low population-pressure which are artificially isolated from one another by these political restrictions constitutes the danger to peace to which Dr. Thompson calls attention. Unless this pressure is relieved by voluntary political concessions, he prophesies that it will be eased instead by the forcible political method of war—on new, unprecedentedly destructive lines.

Dr. Thompson believes that the temporary outlet of emigration, pending the permanent restoration of equilibrium through birth control, is the only way out, since for various reasons he does not think that relief can be found through an industrialisation of the "over-populated" countries or through a production of surplus foodstuffs in tropical countries in which the pressure of population is now low. But those who wish to follow the argument in detail must read the book itself. If they are interested in the problem of peace they should read it without fail.

LACE SAFEGUARDING: POST-MORTEM.

The sequel to Mr Snowden's announcement in his Budget speech that the lace duty, imposed on July 1, 1925, for a period of five years, would be allowed to expire at the end of that period, has been, as was to be expected, an intensive campaign of propaganda in favour of the retention of the duty. The recklessness with which the President of the Board of Trade in the last Government committed himself to the statement that "without the duty our lace trade would undoubtedly have gone" has been paralleled by the exaggerations with which the defenders of the duty have lately depicted the consequences of its withdrawal.

Before attempting to review, on the basis of such evidence as is available, the effects of safeguarding on the lace industry during the past five years, we may recall the fact that the Committee appointed in 1925 to consider the industry's application for tariff protection found "that imported laces are not being retained for consumption in the United Kingdom in quantities which can be described as abnormal," but expressed the view "that, given greater security of the home market, Nottingham firms will be able to . . . compete more successfully in the export trade." On these curious premises, and in consideration of the fact that production costs were found to be lower on the Continent than in Nottingham, a duty of 33⅓ per cent. *ad valorem* was recommended in as singularly blatant a *non-sequitur* as ever characterised a tariff-making committee's report. The results of the duty merit careful and unprejudiced examination.

In the following table we have endeavoured to present in comparable form the figures of retained imports and British exports of lace and net of all kinds, including embroidery made on net or dissoluble fabric, for the years 1924 and 1927-29. The data relating to 1927 and 1928 are taken from the annual Statement of Trade, and those for 1929 from the monthly Trade and Navigation Accounts, supplemented by the information given by Mr Graham in the House of Commons on April 17, 1930. With regard to 1924, certain minor difficulties present themselves. The figures for cotton lace and net and for silk and mixed silk lace are given, as shown below, in the Annual Statement of Trade; but up to July 1, 1925, rayon lace was not separately classified, and, after that date, changes were made in the classification of the figures (relatively trivial in amount) of imports and exports of "other" lace and embroidery or net. In the second half of 1925 the retained imports of rayon lace were valued at £23,000, and a distinguished proponent of safeguarding, Mr Herbert Williams, has contended, in a letter to *The Times* on April 25th, that "the presumption is that the imports in 1924 would have been substantially more than double." This "presumption" is apparently not endorsed by Mr Burrows, the assistant secretary of the Federation of Lace and Embroidery Employers' Associations, a letter from whom, published in *The Times* of April 28th, seems to imply that retained imports of rayon and "other" lace in 1924 amounted only to £3,000; but, in order to give the "safeguarders" the utmost benefit of the doubt, we have placed the total of retained imports of lace and net, other than cotton and silk or mixed silk, in 1924 at £60,000, which is probably an over-statement. Similarly, in the case of exports, we have estimated the 1924 rayon and "other" total at the very conservative figure of £40,000, which brings the total lace exports in that year to a level

actually lower than that which Mr Williams, in his letter quoted above, concedes.

FOREIGN TRADE.

Lace and Net of All Kinds.

(000's omitted.)

	1924.	1927.	1928.	1929.
Retained Imports :—	£	£	£	£
Cotton	206	258	233	318
Silk and mixed silk	304	118	171	176
Rayon and other...	60 (*a*)	93	88	85 (*b*)
Total	570 (*a*)	469	492	579 (*b*)
Exports:—				
Cotton	2,498	1,673	1,539	1,426
Silk and mixed silk	77	91	221	225
Rayon and other...	40 (*a*)	316	426	524 (*b*)
Total	2,615 (*a*)	2,080	2,186	2,175 (*b*)

(*a*) Partly estimated.
(*b*) Based on statement by President, Board of Trade, in House of Commons (*Hansard*, April 17, 1930).

The conclusions to be drawn from the foregoing figures are sufficiently plain. So far as cotton lace and net is concerned, the duty has not resulted in any diminution of retained imports. On the contrary, retained imports have risen by 50 per cent., and, even when allowance is made for the possibility (no concrete evidence is available) that a proportion of the former *entrepôt* trade in lace may now take the form of goods transhipped in bond and so be excluded from the import and export statistics, it is significant of the damage indirectly caused by the duty that cotton lace and net re-exports in 1929 amounted only to £71,000, against £1,710,000 in 1924. On the other side of the account exports of cotton lace and net, which amounted to £4,108,000 in 1913 and £4,872,000 in 1907, have continued, notwithstanding the supposedly beneficent effects of the duty, steadily to decline.

It is, in fact, only in respect to silk and rayon laces that Nottingham's position has improved since 1924. Retained imports of natural silk (pure or mixed) laces would seem to have been slightly diminished by the duty—though, when allowance is made for changes in price, the decline is more apparent than real—and exports of these goods have increased, comparatively small in value though the aggregate shipments are. Here, however, and still more in the case of the rapidly-expanding trade in exports of rayon and " other " lace—almost wholly rayon—the changing demands of fashion and the development of a new material have been the determining factors. There is no evidence that the duty has had any significant effect. All that has happened is that Nottingham, like other lace-manufacturing areas abroad, has been able to gain in greater sales of silk and rayon lace for dresses and underwear some compensation for the decline, by no means confined to this country, in the market for cotton lace and net.

If we are to accept the thesis that safeguarding has benefited Nottingham—a possibility which would not affect the objections on general grounds to protective tariffs—the progress of the industry as a whole must be considered. In his letter, already mentioned, to the *Times*, Mr Burrows stated that between 1924 and 1929 " the increase of sales of British-made lace in the home market " has amounted to 162 per cent. If this remarkable statement were to be taken literally as applying to the lace industry's entire output, it would mean that whereas total exports have fallen by 20 per cent., from £2,615,000 to £2,175,000, and retained imports have slightly risen, home sales of British lace, etc., must have expanded from £2.7 million (Census of Production figure) in 1924 to £7.1 million last year. On this basis the total output of lace in this country must have risen from £5.3 million in 1924 (compared with £6.1 million in 1907) to £9.3 million in 1929. That a duty which has not diminished imports should achieve this happy result would be very remarkable. Even if we accept as possible in some degree the " safeguarders' " contention that the imposition of the duty caused some lace, which had previously been classified as " embroidery," to be properly classified as lace, and—noting that retained " embroidery " imports fell from £2,037,000 in 1924 to £1,118,000 in 1927—allow £500,000, say, of this decline to be " excluded " imports, our astonishment at the miraculously stimulating effects of a tariff on aggregate home consumption is undiminished.

Nor is it lessened by the fact that, *pari passu* with this apparently claimed increase in sales, the industry's labour force has not, as might be expected, proportionately expanded. In July, 1924, the estimated number of insured workers in the industry was 20,330, and in December of that year there were 4,181 persons unemployed, leaving 16,149 actually at work. Last July the insured total had fallen to 16,920, and the number unemployed in December was 1,651, so that those actually at work numbered 15,269. Even when allowance is made for the fact that the exclusion from the later figures of persons under 16 and over 64 may account for a few hundreds of the decline in numbers insured, the fact remains that the volume of employment in the lace industry was smaller last December than five years ago, a situation irreconcilable with Mr Burrows' statement of a 162 per cent. increase in the industry's home sales.

If Mr Burrows was referring, as seems probable from a passage in Mr Herbert Williams' letter in the *Times*, not to the lace industry's *total* home sales, but to " the home sales of finished lace of the kinds used for personal decoration," the claim is much less impressive and accords much more closely with a reasonable estimate of probabilities. Since the export figures, however, suggest that the bulk of this expansion is accounted for by sales of rayon lace, in whose case the pre-duty retained imports were trivial, it is difficult to connect even this expansion of sales with protection. In short, the five years' experience of lace-safeguarding has shown that the duty—damaging, as it has been, to the *entrepôt* trade—has failed to arrest the decline in the manufacture of the cotton fabrics which used to be the industry's staple product; has not led to a recovery in the volume of employment; and has had little relevance to the industry's satisfactory, if moderate progress in developing new trade in silk and rayon lace trimmings. There is no proof that the duty has positively bettered the industry's position, and the statement that without the duty matters would have been worse is an equally unproven hypothesis.

AMERICAN UNEMPLOYMENT.

(BY A CORRESPONDENT.)

WHEN the first news of the New York Stock Exchange collapse last autumn burst on the amazed American public, with its rumours of sensational losses and suicides, it was freely prophesied that a hard winter was in store and that unemployment would be serious. The gravity of the situation was soon emphasised rather than concealed by the steps taken to reassure the world that everything was sound or, at least, that it soon would be. Towards the end of November, President Hoover summoned to the White House representatives from the railroads, the manufacturing interests, organised labour, agriculture, public utilities, builders, and financiers, to confer on the economic state of the country. While in one respect this was a continuation of the policy he had instituted with such success while Secretary of Commerce, it was plainly an emergency measure with the object of maintaining industrial activity, employment and buying power at their high former levels. As a climax to these " prosperity conferences," on November 23rd the President sent a personal telegram to the Governors of the forty-eight States appealing for " energetic yet prudent pursuit of public works " by State, municipal and county authorities. As a result it was soon possible to announce that well over two billion dollars would be spent in 1930 on new utility works and on the further equipment of industry. It was not indicated how much of this expenditure would be for new works, nor how much of it would have been spent in any case.

The effect the figures were designed to produce was purely psychological, the avoidance of panic and the reaffirmation of faith in American prosperity. The Press of the country, with rare exceptions, caught and reflected

this attitude. A prominent editor repeated his faith in advertising as the nation's salvation, and openly urged that an optimistic tone be adopted by publications. For a time this policy was fairly generally adopted, but unfortunately, in spite of these efforts, unemployment has occurred, and in many places it has been serious. It is by no means conquered yet, and it has forced its way to the front pages of the newspapers in spite of the general reluctance to pay much attention to it.

It is, in fact, too big a problem to be ignored any longer. Exactly how big is not known with any accuracy, and estimates of its extent vary so much as to be almost worthless—ranging from three-quarters of a million up to seven or eight millions. The official figures are among the lowest, but they have received little credence. The general estimate varies between about three and four millions. In certain cities more reliable data are available. Philadelphia in March estimated its unemployed as over 50,000. Boston, which annually lists its residents, counted its unemployed (for the first time) in April as 41,466 out of a population of 402,394 adults. Cincinnati, which has the distinction of being one of the few cities to have made any preparation for unemployment before the crash came, reported only 16,000 to 18,000 " employable individuals " without work in a population of half a million. But for the work of the Citizens Committee, which began the study of ways and means of stabilising employment in January, 1929, it is probable that Cincinnati's unemployed would be much more numerous. That the total runs to well over three millions at least seems to be the general conclusion from the imperfect materials available.

It is not only in statistics, however, that the problem is most apparent. From qualified observers in many parts of the country the same account is forthcoming of hardship and distress due to industrial depression. The head of the Illinois State Employment Agency has recently declared that the distress caused by unemployment in Chicago during the last few months has been the most acute in ten years, and that the same holds true of other industrial centres. Senator Wagner, of New York, who has presented Bills to the Senate to provide for unemployment relief by creating a federal research department and a special division to anticipate and relieve periods of depression, told a Senate Committee on March 18th that the unemployment situation had never been more serious. Miss Frances Perkins, the Industrial Commissioner of the State of New York, who has also urged the adoption of some concerted plans to regularise employment, describes the recent conditions as " striking and shocking " and comparable only to the panic times of 1914.

The trouble is, indeed, apparent to all. The employment agencies along Sixth Avenue in New York are thronged daily with anxious inquiriers, public bodies are receiving many more applications for employment, State hospitals are receiving many more inmates, and arrests and convictions for petty offences have reached an abnormal number. Industrial workers are turning to agriculture, and on April 1, 1930, the Bureau of Agricultural Economics reported, as a result, that the supply of farm hands was from 13 per cent. in excess of demand in the North Atlantic States to 21 per cent. in the Far Western States. Farm wages, already very low judged by urban standards, have sunk to the lowest point recorded since the Bureau began to collect figures in 1923, and stand as low as $33.88 a month in the South and $77.27 in the Far West.

Private charity, on which the workless must principally rely, is being severely strained, and the leading charity organisations have had a hard time in their efforts to cope with the need at their doors. On March 18th 2,500 unemployed stood for hours in Pittsburgh in a " bread line " waiting for a piece of bread and a bowl of soup, and this number was not unusually large. In New York City the situation is very much worse, and as many as 12,000 meal tickets (worth about 15 cents each) were distributed by the Bowery branch of the Y.M.C.A. on March 17th. The bread lines on the Bowery (on the lower east side of New York City) have increased pathetically this winter, and

standing in these queues, with the usual and inevitable number of unemployables, have been a much greater number of steady workers and a sprinkling of professional men. The increase in these latter classes is deplorable evidence of the acute reality of the industrial depression.

Such social phenomena are the extreme expressions of economic depression. They do not include less spectacular facts such as short time, lowered earnings and diminished savings, which are the normal accompaniments of the crisis in a trade cycle. How long they will continue is still a matter for conjecture, although it is natural to expect a considerable relief as the summer advances. It is significant as an index of the true situation that the President of the American Federation of Labour stated recently that unemployment among the membership of the leading trade unions had constantly increased since August, and that it was not until the middle of March that the rise had been halted. Available statistics of trade conditions do not make very encouraging reading, and there are signs of growing opinion in favour of some method of preventing or alleviating future unemployment crises.

The better planning of State expenditures on public works; the five-hour day; the spending of last year's profits to stimulate this year's trade; the diversification of product in factories engaged in seasonal work; unemployment reserve funds; stabilisation of industrial wages on a yearly salary basis; and various other schemes of rationalisation in production methods have all been advocated. There is a great reluctance to face unemployment insurance as a way out, in spite of its advocacy by the People's Lobby at Washington (of which Professor Dewey of Columbia University is President), and in spite of the threat of the President of the American Federation of Labour, who has plainly told the Senate Commerce Committee that unless unemployment is stopped the country must face revolution or give the dole. The State of New York has indeed appointed a board to collect figures on unemployment, to encourage relief work and to study means of stabilising industry. Proposals for somewhat similar schemes by the Federal Government at Washington have been favourably received; but that is all. Despite its immense resources and its present wealth, it is clear that American industrial civilisation must sooner or later face the same social problems that are being met after a fashion in England and Germany. It may possibly still have a generation or two in which to make up its mind on the methods it will adopt to deal with those problems, but so far there is little indication that it will succeed in avoiding them entirely.

HEALTH INSURANCE FINANCE.

" THE burden of the social services " is one of the items which occur most frequently in popular enumerations of Britain's economic difficulties. Health insurance has met with less recrimination than most of the other principal components of this " burden," because it has been generally recognised as genuine insurance, with nothing of the " dole " about it, and believed to be solvent, with a good margin to spare. The report issued a few days ago by the Government Actuary, which shows that actuarially the scheme is no longer solvent, in the

sense that the benefit claims exceed the provision made for them, has therefore proved something of a bombshell, as far as the general public is concerned.

Let it be said at once that there is no cause for alarm. The funds of the approved societies show ample surpluses, and there is no danger of the National Health Insurance scheme becoming in any practical sense insolvent, but the very wealth of the societies might have proved, but for this timely report, a temptation to ignore the fact that if the conditions of 1924 and the years immediately following were to continue indefinitely, the present actuarial basis of the scheme would require revision.

The gist of the report, which is based on a representative sample, is that the number of claims for sickness and disablement benefit, though not to any great extent their average duration, increased rapidly between 1921 and 1927; that this increase has been most marked among married women; and that there has been a significant tendency for claimants, especially younger claimants and married women, to return to work when their benefit was reduced from the sickness to the disablement rate. The general analysis of claims is as follows:—

ANALYSIS OF CLAIMS WITH RESPECT TO NUMBER AND DURATION.

	Men.		Unmarried Women.		Married Women.	
	Number of members claiming in each 100.	Average duration of claims within the year (weeks).	Number of members claiming in each 100.	Average duration of claims within the year (weeks).	Number of members claiming in each 100.	Average duration of claims within the year (weeks).
SICKNESS BENEFIT.						
1921.....	14	4·8	12	6·1	19	7·1
1922.....	18	4·4	15	5·8	25	7·0
1923.....	17	4·5	15	6·0	27	7·2
1924.....	20	4·3	19	5·7	34	6·9
1925.....	21	4·1	20	5·5	37	7·0
1926.....	20	4·8	19	5·9	36	7·5
1927.....	23	4·2	21	5·6	38	7·3
DISABLEMENT BENEFIT.						
1921.....	1·5	25·4	1·9	28·7	3·3	23·4
1922.....	1·8	25·2	2 2	28·0	3·6	23·9
1923.....	2·0	26·3	2·6	28·2	4·5	23·4
1924.....	2·2	26·5	2·9	28·1	5·4	22·7
1925.....	2·2	27·1	3·3	28·3	6·9	21·4
1926.....	2·5	27·3	3·7	28·9	8·1	21·6
1927.....	2·6	27·7	3·9	29·1	9·2	22·2

The proportion of men claimants of sickness benefit has increased by over 50 per cent. since 1921, and that of married women has doubled. This increase has been most marked among the short-period claims, and the average duration of claims by men and unmarried women has diminished, while those by married women have not increased materially in duration, a fact which is of some significance in connection with the suspicion of malingering, since it would be much easier to prolong unduly the period of inability to work than to fake an illness from the beginning.

The effect of these developments on the actuarial position is illustrated by the following table, which shows the percentage of weeks of sickness and disablement to the provision made for these benefits on the present valuation basis:—

PERCENTAGE OF WEEKS OF SICKNESS AND DISABLEMENT TO "EXPECTATION."

	Men.		Women.			
			Unmarried.		Married.	
	Sickness.	Disablement.	Sickness.	Disablement.	Sickness.	Disablement.
1921.....	76	54	73	60	63	66
1922.....	89	65	88	67	82	73
1923.....	86	72	91	77	92	90
1924.....	97	81	105	86	110	104
1925.....	98	83	112	99	121	125
1926.....	108	93	112	111	124	146
1927.....	107	100	117	119	130	171

This explains the existence of large surpluses, which at the last valuation, five years ago, amounted to £65 million, for the claims did not begin to reach the level provided for until 1924. In 1927 they were well above that level. There was some reduction in 1928, but the figures for 1929 suggest that there is no definite change in the upward trend. If this be so, action of some sort is called for, for the "enormous surpluses" referred to by an optimistic contributor to last Tuesday's debate in Supply Committee of the House of Commons will not last for ever if the outgoings of the fund regularly exceeds its incomings.

The nature of the required action depends on the causes of the increase in the number of claims. If they are illegitimate increases, attributable to malingering, the remedy lies in a stricter administration. With that is bound up the difficult question of the right of the panel patient to change his doctor at any time on short notice, since the difficulty of proving that a man who alleges himself to be ill is actually capable of work is at present reinforced by the detriment to the doctor's practice which may result from success in doing so. Tuesday's debate revealed a majority of opinion in favour of stricter limitations on the patient's power of changing doctors; evidently a happy medium has not yet been found in this matter, but it is of very great importance that everything should be done to make it easier for doctors to fulfil their difficult task of distinguishing between genuine and feigned disability.

It is, however, extremely unlikely that increased malingering has very much to do with the rapid growth in claims. A contributory cause of the growth may be the increasing recognition of the advisability of seeking medical advice in the early stages of illness. But undoubtedly one of the principal causes is to be found in the severe unemployment of the last few years, for unemployment is bound to react on the proportion of health insurance claims in a number of different ways. In the first place, it undermines the physique of its victims, so that, in spite of the favourable reports of the Registrar-General, whose statistics do not take account of sickness that is neither fatal nor notifiable, there may well have been a growing amount of minor illness in the last few years; in the second place, if an insured person has nothing to do, he is likely to give in to an indisposition which he would try to ignore if he had a job to keep, and lastly the poverty resulting from unemployment drives insured people to avail themselves of every opportunity to claim any benefits to which they are entitled. Furthermore, the longer the scheme has been in force, the more people realise and avail themselves of the full extent of their rights under it. It has been suggested, moreover, that the fact that among men and married women the percentage who "declare off" soon after they are transferred from sickness to disablement benefit is highest among the age-group 16-34 implies that the youngest generation of workers, which has grown up under a system of social insurance, has developed in consequence a more grasping and less independent outlook. However this may be, it seems probable that, at all events in the absence of some very marked change in industrial conditions, we must reckon on a higher outlay from the fund than was originally expected and adjust its income accordingly. It is significant that other countries are having a similar experience. In Germany, for example, claims for sickness benefit increased by 70 per cent. between 1924 and 1929.

The scope and cost of national health insurance during the years 1928-1929 is shown in the following table:—

GREAT BRITAIN.
(000,000's omitted.)

	Estimated number entitled to benefit.	Receipts.				Accumulated funds at end of year.	Total Benefits.	Total Cost of Administration.
		Contributions of employers and workpeople.	Interest &c., on funds.	Parliamentary Votes and Grants.	Total.			
		£	£	£	£	£	£	£
1921	15·1	25·2	3·7	11·7	40·6	92·2	24·5	5·4
1922	15·1	25·0	4·1	8·4	37·5	100·4	24·8	4·9
1923	15·2	26·2	4·8	6·9	37·9	109·5	24·6	4·9
1924	15·6	27·4	5·3	7·0	39·7	116·6	26·1	4·8
1925	15·8	27·7	5·6	8·1	41·4	126·6	27·5	4·9
1926	16·3	24·4	6·0	7·0	37·4	126·6	32·0	5·1
1927	16·5	26·4	5·5	7·6	39·5	125·1	35·7	5·2
1928	16·4	25·8	5·9	7·1	38·8	126·4	32 3	5 3

This suggests that while there is no cause for anxiety for a long time to come, there are taking place developments as to whose causes the nation must be fully informed. Mr Greenwood announced last Tuesday that two investigations are to be undertaken: one, which is already under way, is to make available information as to the steps which are taken by approved societies to check the genuineness of the cases in receipt of benefit, and the other has as its object the obtaining of more precise knowledge as to the standard applied in interpreting the phrase "incapacity for work." The results of these inquiries, and of the further investigation which is being undertaken by the National Health Insurance Joint Committee should be a great aid in interpreting the position.

BROADCASTING: BRITISH AND FOREIGN SYSTEMS.—II.

(BY A CORRESPONDENT.)

AT first sight, the competitive system of wireless organisation appears to offer a much greater choice than the B.B.C. system. A New Yorker has a choice of a dozen stations; a Londoner, unless he has a set that reaches abroad, can receive only the National, London and Midland programmes. But even this apparently simple comparison is misleading. The smaller number of the British stations is, in the view of many experts, an evidence of superiority rather than inferiority, For technical reasons, it is at present impossible to combine purity of tone with great selectivity, and the quality of the reception may almost be said to vary inversely with the number of stations received. A London listener, if he can only hear three or perhaps two programmes, can at least hear those perfectly, at a small expense. What he loses in quantity he has gained in quality.

A plethora of stations has a further disadvantage. The average American station has to live by the amount of custom it can secure. It is a commercial enterprise, and, when this form of commercial enterprise was new, it was a very popular one. But in May, 1929, before the Wall Street crash, it was publicly stated in the New York Press that several of the New York stations were in severe financial difficulties owing to their redundant numbers and the diminishing interest of advertisers. What effect the crash has had upon them can only be imagined as yet. There is, at least, no doubt that it must have weakened their resistance to the baser forms of advertising.

The theory of the commercialisation of broadcasting (which has certain advocates over here) pushed to its logical outcome might well exclude any restrictions whatever upon the advertisers' selection. It is argued that an advertiser who broadcasts tedious, over-vulgar, or over-highbrow material in his "hour" will eventually discover that he is losing money and will then change his programme. But such is not necessarily the case. The broadcast advertiser is never sure what "pull" a particular concert may have had, and he may for a long period of time give entirely unremunerative programmes without the fact being clearly disclosed. Furthermore, in the slow process of discovering this the advertiser may have put on programmes of a character that damage the reputation of the station. Listeners pay but little attention to the name of the corporation which purchases the "hour" to which they listen, but they pay great attention to the name of the station. It is an important financial asset to enjoy the reputation of always having a good programme, whereas it is a disaster to suffer the reputation of letting advertisers produce any rubbish they please.

It is this reason, rather than any æsthetic reaction to vulgar advertising, which has induced certain of the more powerful stations in the United States to hold their advertisers in check. The Atwater-Kent chain, for example, claims to be very strict with its advertisers, and allows them little more than the right to announce their name and the goods they are endeavouring to push. Such announcements as "This concert is arranged by Palmolive Soap, the artistes being the Palmolive Soap Band. Palmolive soap is the soap that . . .," etc., are frequent enough and do not offend American ears. But it is only powerful and wealthy stations that are able to confine their clients to these limits, and whatever ethical canons are announced as universally adopted are evaded in weaker stations by the adoption of uncontemplated forms of advertising. Listeners in America may have heard a "concert" given by a large distributing firm in New York in which each member of the board (or an actor impersonating him) one after the other lauded his department and the advantages it offered customers and then sang a third-rate song or told a story; or a "song party in Alaska" in which everybody announced their devoted endeavours to provide the best skins for Messrs X.'s fur sale on the corner of —— Street and —— Avenue; or even a time signal "which will be given on Messrs Z.'s gold repeating watch, the best and cheapest on the market. Ping! That was the time-signal, gentlemen, given on Messrs Z.'s gold repeating . . .," etc., etc.

That these outrages are impossible upon the British-controlled ether is an imposing item to the credit of the B.B.C. But, upon closer examination, the balance is seen to be even heavier upon the British side. The commercialisation of broadcasting acts not merely positively in introducing rubbish, but negatively in discouraging the unusual and good. It may be too much to say that such items as the best of the "National Lectures" could not possibly be ever heard on the ether in New York, but it can be said with certainty that they would be drowned in a flood of trash. What "forward-looking corporation," having paid dollars for an hour of a big station's time, is going to spend that money on matter which may have no sales value? It turns invariably to those items which large publics are sure to listen to; and "A Concert Party in Old Dixie" and the latest dance numbers are repeated again and again. It is no doubt possible, by a careful selection based upon a study of the *New York Times*, for a listener each night to select, by rapid switching from station to station, a programme as good as, or maybe even better than, that of the B.B.C. But how many listeners, in fact, do this? Very, very few. They try one or two of the loudest stations and then settle down with whatever they get—which is usually a ceaseless iteration of "sure-fire favourites."

That the principle on which the B.B.C. is conducted is superior to the American or French system, however, does not mean that the Corporation is extracting full value from its privileged position, or giving the public the service that it has the right to expect. There have been undoubted improvements. The Regional scheme is one of the most impressive, and the research carried on by the B.B.C. (though few but experts can appreciate it) must not be forgotten. The "talks" and educational matter have improved. The "no controversy" rule—which often meant a rule of enforced dullness—has been slightly relaxed; music is excellent; and drama and vaudeville at least are well attempted.

But this praise is only valid for five days in the week. At the week-end, on Saturday and even more on Sunday, the programmes are distressingly bad. Yet these are our national holidays, and more people probably listen in then than at any other time. On Saturday the mid-day music actually starts an hour later and ends an hour or half an hour sooner. Frequently there has been thereafter complete silence for those who do not care to listen to a broadcast commentary on a "sporting event." For this no reason seems discoverable.

Sunday arrangements are even more open to criticism. For the greater part of this holiday the wireless is actually completely silent. When it speaks, the majority of its time is given to religious services, church music, Bible readings, and addresses acceptable only to a certain type of Protestant listener. These Sunday programmes are defended usually on two grounds. The first is an evasion. Objectors are told that they will not be permitted to "drive religion from the ether." But it is safe to say that it has never been seriously proposed that the religious broadcast should be closed down (unless perhaps in certain Jewish or other circles which are positively offended by their content). It is merely contended that the present long compulsory silences should be filled by matter suited to that great body of opinion which does

not care to be restricted to a diet of religious services. The second is the statement reported to have been made officially to a secularist deputation that the present programme is "what the public desires." How so dogmatic a statement can be justified is far from clear. Indeed, very strong evidence can be produced upon the other side. If one listens in on Sundays to French stations, one is almost certain to hear English spoken. Radio-Paris, for example, broadcasts at lunchtime the Decca Company's concert, at half-past six the Carreras Black Cats concert, and later at night the Grosvenor House Hotel's programme; Toulouse broadcasts Kolster Brandes concerts; and so forth. The programmes are announced in English, and though for decency's sake a French announcer is also employed, the programmes (which are of the American type) are constructed exclusively for English listeners, and songs are sung in English. In other words, so passionate is the flight of British listeners away from the B.C.C.'s Sunday programme that they have actually elbowed the French out of a great portion of the time of their own stations on that day. It may be taken as certain that such enlightened firms as Carreras would not pay large sums for the hire of Radio-Paris to push goods that have practically no sale in France if they had not discovered there was a big British public on Sundays driven to listen to foreign stations through discontent with the B.B.C. service.

Notes of the Week.

The Bank Rate Reduction.—Once again the monetary situation has undergone a rapid change, and whereas a fortnight ago the City had become reconciled to the belief that the prospects of a 3 per cent. Bank rate had receded, for the time being at least, this lower rate was established on Thursday. In some ways the reduction was unexpected, for recent exchange movements have been against sterling, and during the past month Germany, France, Belgium and Switzerland have each in turn taken the incoming Cape gold at figures well above the Bank of England's buying price. Under these circumstances it might be argued that there was a risk lest a further reduction of Bank rate, by attracting to London a greater volume of foreign bills for acceptance and discount, should place a serious strain on sterling. On the other hand, there can be little doubt that a major factor influencing the authorities in their decision to risk a reduction to 3 per cent. was the growing indications that the recrudescence in the early future of bull speculation in Wall Street need no longer be regarded as a serious threat to the equilibrium of the sterling-dollar exchange. In addition, there are other considerations which were probably present in the authorities' minds. After a brief period following the last Bank rate reduction, during which new capital issues of the gilt-edged type went well and the yield which first-class borrowers found it necessary to offer showed a falling tendency, the new issue market showed signs of becoming less propitious. Public response to the West Ham and Sao Paulo loans was disappointing, and, with several large issues on the stocks, including prospective loans to New Zealand, Japan and Austria, it was highly desirable that something should be done to create a favourable atmosphere in the London market for the reception of the forthcoming reparations loan. As our Berlin correspondent points out on a later page, the terms of issue ultimately settled for that loan will tend for some time to set the standard for first-class German issues, and it is understood that the French authorities have also been insistent that the yield on this loan should not be higher than 5½ per cent.—a basis below what is apparently considered appropriate in New York. It is perhaps permissible, therefore, to infer from Thursday's decision that, in the common interest of facilitating the reparations loan issue on a favourable yield basis, the recent meetings of central bankers at Basle and Brussels may have resulted in an understanding that an attempt should be made to maintain low money rates in Europe and to minimise the disturbing effects of international gold movements, which might have resulted from lack of co-ordination in Bank rate policy. It is significant in this connection that the Bank of Belgium reduced its rate to 3 per cent. on Wednesday, while similar reductions took place on Thursday both in Paris and New York. The psychological effects of the latest reduction should be of value, although it is true that industrial and other borrowers indebted to the joint stock banks, whose loans carry a minimum rate of 5 per cent., will not be directly benefited. Thursday's decision is also likely to occasion speculation in the City as to whether Mr Snowden will now take advantage, for the purpose of carrying through a conversion operation, of an opportunity which a fortnight ago seemed to be in danger of being lost.

The Fulham By-Election.—The result of next Tuesday's polling at Fulham is, for many reasons, awaited with unusual interest. For one thing it is the first London by-election since the present Government took office. But the special reason for its prominence is the fact that Lord Beaverbrook has dominated the proceedings on the Conservative side, and has used the Fulham platform for the propagation of his gospel of "Empire Free Trade." It would, of course, be absurd to attach too much importance to the result, whatever it may be. A Conservative victory would not necessarily mean that the new fiscal creed was making headway, nor would a Labour victory cause Lord Beaverbrook to desist from his propaganda. One swallow does not make a summer for any party, nor have we ever heard it claimed that what Fulham thinks to-day, England thinks to-morrow. Nevertheless, the position at Fulham is intriguing. A Conservative victory would give Lord Beaverbrook a goad with which to urge on Mr Baldwin; while a Labour victory would cause Lord Beaverbrook's stock to fall many points in the political market. What result would the Conservative central office, in its heart of hearts, like to see? It is surely on the horns of a dilemma. One result would add prestige to the Labour Government, the other to its own *enfant terrible*. Nor in this particular election are the Liberals happily placed. In the absence of a Liberal candidate their forces are clearly divided. The late Liberal candidate is supporting the Conservatives, while the Chairman of the Liberal Party has spoken, if not for the Labour candidate, at least against the main plank in the Conservative candidate's programme. Fulham electors may be pardoned if they feel just a little bewildered. We suspect that many non-Labour voters will prefer not to go to the poll at all, rather than vote in favour of the fallacies and superficial allurements of Lord Beaverbrook's wooing.

Eastern Reparations.—The question of non-German Reparations has been, relatively speaking, unimportant from the financial point of view. And yet the signature of a comprehensive agreement relating to them, which took place this last Monday, April 28, will certainly rank as an event of real importance in the post-war history of Europe. The reason is not far to seek; and it is, of course, not financial but political. Financially, non-German Reparations could not bring much benefit to any of the receiving countries. Politically, they could and did do the whole of Europe great harm by keeping alive the ill-feeling between defeated countries that had been mutilated or dismembered and their "successor States." The *cause célèbre* of this kind was the "Optants Dispute" betwen Hungary and Roumania—a case in which Czechoslovakia and Jugoslavia were interested indirectly as co-successor-states of Hungary, side by side with Roumania who was the actual party to the dispute. The political havoc caused by this controversy and by others of the sort, which have been less in the public eye, reacted in turn upon European economics and finance. Broadly, it is correct to say that the non-settlement of the non-German Reparations problem has retarded the reconstruction of Central and Eastern Europe appreciably. And this gives the measure of the importance of the agreement that has been signed this week. We shall appreciate the magnitude of the achievement if we take into account both the number and intensity of the political rancours which had to be overcome, and the variety and complexity of the financial and economic problems which had to be disposed of; for the general title of a Reparations Settlement hardly conveys an adequate picture of the field that has been cleared up. The new agreement does not merely deal with Reparations in the strict sense of the term. It also covers the payments exacted, under the euphemistic label of "costs of liberation," from successor States whose territories had been carved wholly or partly out of "ex-enemy States," although they themselves appeared in the *rôle* of Allied Powers in the peace treaties. Again, it covers the valuation and accounting of public property which has been transferred, with the territory on which it stands, from the possession of one Government to that of another. Finally, it covers a whole complex of problems, of which the Hungarian Optants case is only one signal example, where the legal status of private property and the rights of private possessors are concerned. It can easily be appreciated how great a drag upon the recovery of Europe all these controversies have constituted during the past ten years. The settlement of the tangled problems of Central Europe makes the arrival in London of the Austrian Chancellor, who will be warmly welcomed for the great services he has rendered to his country, particularly timely.

The Belgrade Treason Trial.—On Thursday, April 24th, there opened, at Belgrade, a treason trial in which the accused were twenty-four Croat citizens of Jugoslavia—one of these being Dr. Machek, the successor of Stephen Radich in the leadership of the now dissolved Croat Peasant Party, and the others, mostly young men, and all of them obscure. They are being tried by a special court which has been set up, under the present dictatorship in Jugoslavia, by a decree law. It is a court of original and final jurisdiction, from which there is no appeal, and its rules of procedure—particularly those circumscribing the activities of the counsel for the defence—would appear to weight the scales against the accused rather heavily. It is significant and satisfactory that no fewer than 163 barristers have placed their services at the disposal of the accused, and that these include eminent Serbs, like Monsieur Jovanovich, as well as Croats. Dr. Machek is accused of having distributed money knowingly to be used for terrorist purposes, of having been privy to a distribution of revolvers for such purposes, and of having prophesied the secession of Croatia from Jugoslavia, in veiled language, in an article published in an organ of the Croatian press. One of the young men, a student named Bernardich, is accused of having organised a band of terrorists for the assassination of the principal representatives of the Government at Zagreb. Actually, one cavalry officer appears to have been shot—though by whom, and at whose instigation, is not yet established. Meanwhile, Bernardich, who was examined publicly on the second day of the trial, has pleaded "Not guilty," and has declared that the confessions and denunciations which he made between his arrest and his appearance in court were extracted from him by the police—partly through "third degree" processes amounting to torture, and partly through promises of a mitigation of his prospective sentence. He further declared that several months before his arrest the chief of police at Zagreb had invited him to become an *agent provocateur*, and that, though he had declined the proposal, he knew of another who had accepted. All this local colour carries conviction to anybody who has followed the history of Croatian treason trials during the time when the Croats were under the domination of the Magyars and not of the Serbs. The evidence for the prosecution at the celebrated Zagreb treason trial was shown by President Masaryk, at that time a member of the Austrian Reichsrat, to have been forged in the Austro-Hungarian Legation at Belgrade. The main difference in the present case seems to be that the manœuvres leading up to the trial have been conducted by the Serbs. The Serbian dictators of Jugoslavia ought to study the history of the last years of the Hapsburg Monarchy. They would learn that the methods which they have copied from their predecessors are most efficacious in producing the very results which they are intended to avert.

The Warsaw Bomb.—On Saturday, April 26th, a discovery was made of apparatus in the Soviet Legation at Warsaw and in an adjoining house, which would seem, on the face of it—pending the results of further investigations—to be material evidence of an attempt to blow the Legation up. Happily the plot, if such there was, has been frustrated in time; and since no outrage has actually been perpetrated, we may hope that the discovery will have no untoward effect on the diplomatic relations of the countries concerned. It is unfortunate that Russia-Polish "incidents"—and these accompanied by loss of life—have occurred in Warsaw twice before since that city has once more been the capital of an independent Poland. It is to the credit of both countries that these earlier and more serious incidents were surmounted without any breach of the peace. The most startling of them was the shooting, on the platform of the Central Railway Station, of the Soviet Minister in Warsaw himself on June 7, 1927, when he was meeting some Russian diplomats who were *en route* through Warsaw from London to Moscow. The assassin of Monsieur Voykov was a young Russian *émigré*, and so was the victim of the second of these serious incidents, which occurred in the hall of the Soviet Legation at Warsaw on September 2nd of the same year. On that occasion the victim called at the Legation and asked to see the *chargé d'affaires* and, upon being refused admittance, he was alleged to have wounded the porter with a knife and to have drawn a revolver—whereupon a member of the Legation staff shot him dead. It is noteworthy that no Polish citizens were concerned in either of these "incidents" in 1927. They were exclusively affairs between "White" and "Red" Russians; and since the hatred between Russians of the two colours has not abated during the last three years, it is a natural conjecture that the present plot—if there really has been a plot—is of "White" Russian origin. The number of Russian *émigrés* in Poland is considerable. It is to be hoped, however, that this community of Russian exiles in Poland will not be made the scapegoats of this latest affair, and that punishment will only be meted out to individuals definitely convicted of guilt. The avoidance of trouble between Poland and the U.S.S.R. is highly desirable, but it would be unjust to an unfortunate body of helpless and mostly harmless people if good relations between the Governments were in any way preserved at their expense. With reasonable goodwill on both sides, diplomatic relations should not be affected; for neither Poland nor Russia is at present in a condition in which she can contemplate taking even one step in the direction of the precipice that divides peace from war.

Our Index Number.—The average level of wholesale prices, as measured by our index number, fell during April by 1.8 per cent., following a decline of 1.3 per cent. in March. Since the beginning of the year prices have fallen by over 7½ per cent., and are now 13 per cent. lower than at the end of April, 1929. Recent movements of the group figures are summarised below:—

AVERAGE, 1927 = 100.

	Apr., 1929.	Jan., 1930.	Feb., 1930.	Mar., 1930.	Apr., 1930.
Cereals and meat	99·1	89·2	85·4	84·7	84·9
Other foods	86·5	83·1	83·0	82·7	80·8
Textiles	96·7	76·7	74·7	73·0	72·9
Minerals	96·7	92·6	90·5	89 8	85·6
Miscellaneous	90·0	88·0	87·0	85·5	83·2
Complete Index	94·0	86·1	84·2	83·1	81·6

The heaviest decline in April was recorded by the figure for the minerals group, reflecting the sharp break in the price of copper and other non-ferrous metals. Among

foodstuffs, cereals were mostly firmer, but there were substantial falls in the price of both imported beef and mutton; tea and coffee and butter were also lower. Textile prices showed comparatively little change on balance, but the miscellaneous group continued to decline. Changes in the prices of individual commodities, as compared with a month ago and a year ago, are shown in the next table:—

	Inc. (+) or Dec. (−) per cent. compared with			Inc. (+) or Dec. (−) per cent. compared with	
	Month Ago.	Year Ago.		Month Ago.	Year Ago.

If 1924 be taken as 100, the current figure of our index number works out at 70.5, as compared with 71.8 at the end of March and 81.2 a year ago. Converted to a percentage of 1913, the recent figures of our index number are shown below in comparison with the averages for 1924 and 1928-29:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168·5	215·8	214·7	149·3	122·6	166·2
„ 1928	152·9	189·7	165·0	115·2	111·2	140·9
„ 1929	143·0	173·5	144·7	119·6	105·0	132·8
End Apr., 1929	146·2	174·9	151·8	120·9	104·5	135·0
„ Mar., 1930	125·0	167·2	114·6	112·3	99·2	119·4
„ Apr., 1930	125·3	163·4	114·4	107·1	96·6	117·2

It will be seen that, excluding foodstuffs, the level of raw material prices now stands at a point not greatly higher than in the pre-war year.

The Dearer Loaf.—Baiting the Food Council seems to be becoming a popular sport among London purveyors. The details of that curious incident last autumn when the Food Council and the President of the Board of Trade received a flat negative from the dairymen have never, so far as we are aware, been published, and, finding that the lion's chains really do hold, the London bakers have now felt emboldened to still greater liberties. After adhering for four years to the scale recommended in the Food Council's report of November, 1925, the Incorporated Society of Principal Wholesale and Retail Bakers, Ltd., and the London Master Bakers' and Confectioners' Protection Society suddenly informed the Food Council that they had set up a committee "to investigate the manufacturing costs of a commercial loaf." A fortnight later they announced to the Council that they had decided to reduce the scale of flour prices which correspond to given prices per quartern loaf by 2s. per sack as from April 7th. The Food Council, in a letter of protest reporting this incident to the President of the Board of Trade, states that it was not consulted, and that, in the absence of an inquiry, which would take some time and probably fail to elicit the necessary information, it can see no possible justification for a rise. The price increase is only estimated to amount to ¼d. per 4-lb. loaf, and, as much bread in London is sold below the scale of the two leading bakers' associations (though, on the other hand, some bread prices in the provinces are regulated by reference to it), it is unlikely to arouse much public attention. But the effect on the consumer is not the point. Far more important is the fact that a body appointed by the Government for the protection of consumers is in the undignified position of having its advice disregarded and of being unable to compel the production of information which would justify its position. If the Consumers' Council Bill, the second reading of which is to be taken next Thursday, becomes law, the Food Council's successor will have powers of compelling the production of information, and thus of turning the light of publicity upon recusant associations of traders, which should put an end to a situation as precarious for the consumer as it is humiliating for his protector.

Lord Melchett on Mergers.—If anyone has a claim to attention when he speaks of rationalisation and mergers it is Lord Melchett, and such attention should be carefully given to the address (reported in later columns) which he delivered on Tuesday to the annual meeting of the great merger over which he presides, Imperial Chemical Industries. From a long speech touching upon many important subjects we are inclined to select as the *chef d'œuvre* a passage, obviously phrased with care, in which Lord Melchett defined the main problems of successful conduct of big combines:—

> The real problem of rationalisation and merging of big enterprises consists in effective central control with sufficient elasticity lower down to allow action to be neither arrested nor delayed, and to prevent the chiefs at the head from being encumbered by too much detail, at the same time keeping a grip on all essential features of policy, such as finance, expenditure, sales and relations with other great groups of industrialists throughout the world. I think I can claim, with confidence, that we have succeeded in achieving these twin objects, both of which are essential to the successful working of great organisations.

This claim is substantiated by results achieved in a period of bad trade. Of profound interest, also, was the speaker's description of the building up of a great organisation for research in various branches of the companies' vast business. In pre-war days Britain lagged far behind certain other countries in the harnessing of research to the chariot of industry, but to-day the I.C.I. leads the way in what we trust will become an increasingly widespread effort to make up for lost time. It was research that gave Germany her great aniline dye industry. It is research, first and foremost, that made and stabilises ours. Of other matters of broader importance touched upon by Lord Melchett, the chief was the effect of taxation on industry. The salient passage in his reference to the Budget was the following:—

> I cannot subscribe to the doctrine of the Chancellor of the Exchequer that high rates of income tax, sur-tax, etc., do not detrimentally affect industry. When out of every pound you put by in your reserve fund from your profits year by years for the building up of your business 4s. 6d. is taken by the State—often for by no means so useful a purpose—how can anyone say that taxation does not impair the strength of industry?

Difficult times like the present certainly compel attention to the whole intricate problem of the taxation of company reserves. In the later part of his speech Lord Melchett advocated the formation of Imperial mergers; and on the next day, at the annual meeting of another great British merger, Associated Electrical Industries, the chairman, Sir Felix Pole, laid stress on the advantage obtained from arrangements for co-operation and exchange of patents with the G.E.C. of America. Such international co-operation can only be effectively achieved by large-scale business organisations—and that, of course, is one of the reasons why British industry should press forward on the path of rationalisation.

Non-provided Schools.—In the process of implementing the recommendations of the Hadow Report, the fact has been revealed that one of the most important of them cannot be carried out without some alteration in the existing law. Under the compromise effected in 1902 the public education authority is responsible for the heating, lighting and cleaning of non-provided schools, for the payment of their teachers' salaries, and for the provision of books and stationery; but it may not contribute towards their building expenses. One of the principal Hadow recommendations, which has won widespread approval, was that all children above the age of eleven should be educated in senior schools, characterised by smaller classes, better workshop and laboratory provision, more libraries, halls, and playing fields. This, together with the proposed raising of the leaving age to fifteen, involves a great deal of extension and the building of some entirely new schools. Most of the schools belonging to religious foundations, which, according to the latest figures, are responsible for 2,012,545 out of a total of 6,071,017 children in England and Wales, have no funds to finance extensions on the scale which would be necessary, so that if they were to remain ineligible for public grants a great deal of new building at the public expense would have to be undertaken in place of the more economical method of extending existing buildings. In consequence the Government, after consultation with teachers, local authorities, and representatives of the various religious denominations, have proposed a new compromise, the essence of which is that local education authorities should be permitted to give financial assistance to managers of non-provided schools for purposes of reorganisation in return for an extension of public control in the appointment and removal of teachers. The managers would retain their existing responsibility for repairs, after the execution of the specific alteration. The teachers would become the servants of the local education authority, by whom they would be appointed or removed, subject to an agreement with the managers specifying the number of teachers necessary for the provision of religious instruction. The managers would have the right to be consulted and satisfied that this number of teachers were willing and competent to give the necessary religious instruction, and they might ask for the removal of any of them who failed to do so. Further, provision is made in the proposals for the withdrawal, at the wish of parents, for special religious instruction outside the school, of children transferred under this scheme from non-provided to provided schools. This arrangement is admittedly only a stopgap, and as it appears to call for no sacrifice of principle, while offering the only means of making immediate provision for urgently needed educational reforms, it is very much to be hoped that it will be generally accepted. Public opinion, with the enlightened example before it of those religious authorities who were consulted in the matter, has so far expressed itself favourably.

British Production.—The London and Cambridge Economic Service has published its index of the physical volume of production for the first quarter of 1930. It shows a drop of 4.7 per cent. on the previous quarter, but has been surprisingly well maintained if compared with the corresponding quarters of the last three years:—

	1924=100.			
	1927.	1928.	1929.	1930.
First quarter	110·8	105·7	108·3	110·1
Second quarter	108·1	103·7	111·0	...
Third quarter	105·9	95·4	108·2	...
Fourth quarter	107·4	105·2	114·8	...
Average	108·1	102·5	110·6	...

The group averages of non-ferrous metals, textiles, food, chemicals and paper all show a decrease on the previous quarter. The fall is most marked in the textile and paper groups, which declined 11 per cent. and 30 per cent. respectively. If wool were included in the textile group this decrease would probably be even more pronounced. The latest available information indicates that production in the heavy industries is not maintained at its high level, and as the other industries show no signs of an early improvement, the average may be expected to decrease still further during the current quarter.

Lancashire and India.—From a trade point of view, writes our Manchester correspondent, Lancashire has been badly hit by the latest developments in India, and business in cotton piece-goods has been practically brought to a standstill. There were rumours on the Manchester Royal Exchange on Tuesday that dealers in the bazaars were considering the question of cancelling contracts, and, later in the day, the Manchester Chamber of Commerce published copies of cables received from the Delhi Piece-Goods Association and the Bombay Native Piece-Goods Merchants' Association. According to the message from Delhi the Association thought it advisable to warn shippers and manufacturers that goods shipped will, in all probability, not only be refused, but also be unsaleable, and the greatest caution is therefore necessary in making shipments. The cable from Bombay contained a resolution just passed at a general meeting of the Association pointing out that a very serious and alarming crisis had arisen for the mercantile community in India. The Association drew the attention of the Secretary of State for India, the Viceroy, and the Manchester Chamber of Commerce to the grave political situation, and urged them to use their power and influence to bring about the acceptance of the national demands and effect an amicable settlement. It is stated that if the situation is not eased the members of the Association will be most reluctantly compelled to consider the advisability of cancelling all outstanding contracts. These cables were considered at a special meeting in Manchester of the Executive Committee of the India Section of the Chamber of Commerce and it was decided to send the following reply to both the Indian Associations:—"Manchester Chamber of Commerce cannot interfere in political matters, but the Chamber and its members will insist on the observance of the sanctity of contract." The Chamber also decided to address communications to the Prime Minister, the Secretary of State for India and the President of the Board of Trade with reference to this interchange of cables.

Anglo-German Coke Export Discussions.—A correspondent writes:—It has now become known that for some time important discussions have been proceeding between representatives of the Westphalian Coal Syndicate and British coke producers on the possibility of an international marketing and price arrangement. The primary aim is to regulate sales to the countries, particularly Scandinavia, where excessive competition for several years has persistently depressed prices. The advantages to be gained from an agreement have been realised by individual producers and exporters in this country, and the syndicate has been active for a long time in an effort to create a favourable atmosphere for discussion, but the difficulties in the way of a general understanding are formidable, owing to the number of non-associated producers here, and a clash of producers' and exporters' interests. All the important British producers who are concerned in the export trade, including gas companies, have been represented in the discussions. The outcome of the first formal meeting, held some months ago, was not encouraging to those who had taken the initiative, the principal obstacle arising from diverse views on the relative aggregate quotas of the two countries. In view of the fact that negotiations were resumed after an interval, and that several meetings have been held, it is assumed that this obstacle is no longer regarded as insurmountable. Although the problem of a marketing arrangement for coke is much less complicated than that of a general agreement covering coal exports, the discussions will probably help to smooth the way for consideration of the wider question when the British owners' national committee is set up. It is not without significance that representatives of the Durham owners, who have hitherto been reluctant even to establish a coal-marketing scheme for their own district, have been active in the coke discussions. It is understood that some of the exporters of Durham coke object strongly

to an international agreement, which would involve not only sales at prices fixed by the producers, but probably a commission basis. Some of the producers are disposed to meet this opposition, if it persists, by an effort to establish a British coke-export syndicate.

Emigration in 1929.—The information received by the Board of Trade on passenger movements to and from the United Kingdom throws much light on emigration to and from this country. Comparative figures of net emigration during the past five years, distinguishing between the principal destinations, are given below:—

NET EMIGRATION OF BRITISH SUBJECTS.
(000's omitted.)

To—	1925.	1926.	1927.	1928.	1929.
British North America	25	39	40	39	53
Australia	28	37	33	20	9
New Zealand	10	14	5	2	2
Total British Empire	63	93	81	63	63
U.S.A.	21	22	19	16	25
Total world	84	116	98	79	88

While emigration to the Empire in the last two years has been constant at the 1925 level after a sharp rise in 1927 and 1928, there has been a striking redistribution as between the three Dominions shown in the above table. Australia and New Zealand has taken a steadily diminishing number of British emigrants, while Canada took more than twice as many in 1929 as in 1925. British emigration to the United States, after a fall in 1927-28, was in 1929 higher than in any of the preceding five years. The *Board of Trade Journal* recently contained an analysis of the occupations of British immigrants and emigrants over eighteen years of age, which are summarised as follows:—

OCCUPATIONS OF MIGRANTS* OVER 18 YEARS.
(000's omitted.)

Occupation.	Emigrants. 1928.	Emigrants. 1929.	Immigrants. 1928.	Immigrants. 1929.
MALES:				
Agricultural	12·5	12·3	2·8	3·0
Commercial, finance and insurance	9·2	9·8	4·4	4·2
Professional	2·7	2·4	2·3	2·5
Skilled trades:

Professional	2·7	3·0	1·9	2·0
Clothing trades	0·9	1·1	0·3	0·2
Wife or housewife (not otherwise described)	21·4	22·0	11·9	11·8
Other and ill-defined occupations	6·5	7·4	3·8	3·5
Total	45·7	50·7	21·6	22·0

* Including a small number aged 12–18 whose ages were not specified.

The increased movement of women in both directions is practically confined to those having other occupations than that of housewife, and is in sharp contrast to the movement of men. The most marked change among men emigrants is the diminished number of miners, no doubt owing largely to the special harvest emigration to Canada in 1928. Agricultural labourers are still the largest class of male emigrant, but 80 per cent. of them go to British North America, and among emigrants to all other parts of the Empire, except New Zealand and to the United States and other foreign countries, they are outnumbered by commercial, finance and insurance workers. Of women other than housewives, those in domestic and hotel service are by far the most numerous, but they are outnumbered by professional women in emigration to South Africa, India, "other parts of the Empire" and "other foreign countries."

Union Bank of Scotland.—Having earned 33.9 per cent. on the paid-up capital, the directors, for the eighth consecutive year, have recommended a dividend of 18 per cent. Bank premises and heritable property yielding rent were respectively written down by £25,000, while £50,000 was added to the rest account, now £1,550,000, as compared with the paid-up capital of £1,000,000. £135,053 is carried forward, this figure being £34,301 greater than the amount brought forward at the beginning of the year:—

	Years ending April 2, 1928.	1929.	1930.
	£	£	£
Profit	329,505	336,239	339,310
Bank offices	35,000	35,000	25,000
Heritable property yielding rent	35,000	35,000	25,000
Rest account	50,000	50,000	50,000
Earned per share	32/11	33/7	33/11
Paid per share, less tax	18/–	18/–	18/–
Amount of dividend	180,000	180,000	180,000
Pensions and allowances fund	25,000	25,000	25,000
Increase or decrease in carry-forward	+ 4,505	+ 11,239	+ 34,301

While cash and money at call are £618,732 lower at £5,967,097, loans and advances are £1,064,532 more at £14,602,249. Deposits are £972,318 greater at £28,262,507, thereby making the ratio of advances to deposits 51.6 per cent., as compared with 49.6 per cent. a year before. Acceptances have fallen by £149,779 to £1,071,313.

Wholesale Co-operation.—A correspondent writes:—That the productive developments of the co-operative movement are keeping pace with the distributive activities is evident from the latest report of the directors of the Co-operative Wholesale Society. This report covers the six months ended January 11th, and records sales of £45,802,994, an increase of £1,718,757. The supplies for the society's productive works were £14,134,312, an increase of £540,294. The increase in the latter supplies was 3⅞ per cent., or exactly the same rate of increase as in the sales. This is an interesting coincidence, suggesting that the productive works are keeping pace with the growth of the general business. After meeting all the expenses of production and distribution, providing for interest on capital and depreciation of property according to rule, there was a surplus of £742,148, for which £522,650 is to be returned to the societies by way of a dividend of 3d. in the £ on purchases; £207,547 is set apart for writing off land, buildings and fixtures, and the remainder is placed to the reserve fund, which now stands at £1,112,640. There has been an increase of 1¾ per cent. in the turnover of the Lancashire and Yorkshire area; of 2½ per cent. in the North-Eastern area, and of 6⅞ per cent. in the Southern districts. The advance is most marked in the drapery, woollens, clothing and coal departments. In the export department (which is now assigned a separate account) the sales for the half-year rose to £588,193, as compared with only £292,826 in the corresponding period of the previous year. The directors are advising the admission of the "Hangya" (the C.W.S. of the Hungarian farmers) to membership, and the closer association between the co-operative trading bodies of various countries is reflected in the growth of the export business of the C.W.S. The banking department continues to interest trade unions as well as co-operative societies, and 8,709 branches of the former have current accounts with the C.W.S. Bank. The deposits and withdrawals of the bank totalled £359,344,895, an increase of 4¾ per cent. In addition to its 15,817 current accounts for societies, unions, clubs and other mutual organisations, the C.W.S. Bank is operating similar accounts for 10,389 individuals. While the trading departments have shown a progressive advance, the farming operations have not done so well. The eleven farms, with an acreage of 20,625 acres, have resulted in a net loss of £34,011, mainly contributed by the estates at Wisbech and Goole and the two farms in Wiltshire. Those in Shropshire, Lancashire, Cheshire, Northumberland and Leicestershire have each provided a surplus. Reference is made in the report to the partnership with the Scottish C.W.S., which supplied 30,206,592 lbs. of tea to the English societies in the last half-year, and to the association with the Scottish C.W.S. in connection with the Co-operative Insurance Society. The latter, which is the joint insurance department of the two wholesale societies, had a premium income of £4,396,871 in 1929, as compared with £4,184,162 in 1928, and its total assets now amount to £10,235,941.

Rockefeller Foundation.—The existing Committee for Social Science Research Training, under the chairmanship of Sir Josiah Stamp, for encouraging, by scholarships and otherwise, statistical and objective methods in economics, has been reformed and extended for the purpose of acting as an Advisory Committee to the Rockefeller Foundation for the award of Fellowships from Great Britain and Ireland over the whole field of the social sciences (including anthropology and law). These Fellowships replace those awarded in recent years under the auspices of the Laura Spelman Memorial, for which the Fellowship Advisor was Mr J. R. M. Butler, of Trinity College, Cambridge. The new personnal of the Committee is Sir Josiah Stamp, chairman, Mr J. R. M. Butler, Sir Arthur Keith, Dr. C. Myers, Professor Carr Saunders, Professor Graham Wallas, together with the original members for the Economics section, Mrs Sidney Webb, Mr W. T. Layton, the Right. Hon. R. McKenna, Mr. C. E. R. Sherrington and Mr J. C. Cobb. The secretary is Mr N. F. Hall, of University College, London.

INSURANCE NOTES.

London and Lancashire Insurance Company.—The London and Lancashire group comprises no less than 26 different companies transacting business in all parts of the world, the most important in point of size being the Law, Union and Rock, whose accounts are analysed elsewhere in this issue. For many years now the company's report, which is in a consolidated form embracing the operations of all the subsidiaries, has been a steady repetition of prosperity, and in spite of the difficulties of 1929 the report just issued for that year continues the tradition unbroken. The total premium income in fire, accident and marine accounts amounted last year to £7,354,871, representing a slight decline on that for 1928, though this has fallen entirely on the fire department, since accident and marine premiums are slightly up. The details of the operations of the last two years are as follows:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	507,079	14·7	397,548	11·7
Accident and General	146,429	6·0	120,788	4·9
Marine	86,979	5·9	238,917	16·0
Life	...		32,184	
Capital redemption	1,454		1,153	
	741,941		790,590	
Less items debited to profit and loss account	199,848		217,234	
Total net trading surplus	542,093		573,356	

The most important feature of the year is the extraordinarily high profit in the marine department. The result is unexpected, because, in his speech at the annual meeting last year, the chairman stated that it was very doubtful if the favourable results of 1928 could be repeated in 1929. The net interest earnings available for dividend have increased from £497,000 to £527,000, the increase being assisted by the redemption during the year of £673,000 London and Lancashire 5 per cent. debentures. As a consequence, the gap between the net interest earnings and cost of dividend, which is maintained at the same rate as in 1928, namely, 95 per cent., is reduced from £64,000 to £34,000, and this has, no doubt, influenced the directors in announcing their intention to increase the dividend for the current year 1930 to 100 per cent. After meeting the dividend, which requires £561,818, there remained the sum of £539,000 available to augment surplus assets, so that the actual dividend declared was earned almost twice over. It has been decided to double the paid-up capital by capitalising a portion of the profit and loss account balance and thus increasing the amount paid up per £5 share from £1 to £2. In accordance with the requirements of the Companies' Act, 1929, a balance sheet of the London and Lancashire Company is published in addition to the usual consolidated balance sheet. From this it appears that in respect of the total balance-sheet assets of £13,285,000 no less than £8,730,000 is represented by the item "Shares in subsidiary companies." A footnote to the balance sheet states that shares in subsidiary companies have been valued at the amount by which the assets exceed the liabilities, including outstanding losses and reserves for unexpired risks.

Eagle Star and British Dominions.—The total assets of this well-known company amount to £22,341,000, but of this total £17,288,000 is accounted for by the life funds, including the capital redemption fund. Only one life revenue account is published, a fact which obscures the real position, which is that the fund supporting the current series of policies was started but ten years ago and amounts only to about £4½ million. The balance consists of the funds of four acquired businesses, the Star, the Sceptre, the English and Scottish, and the Eagle, all of them now conducted as closed funds. The shareholders' proportion of quinquennial profits earned in these various funds is substantial, and the position is so arranged that a contribution from one or other of them falls into profit and loss account each year and is usually by far the most important item on the credit side of the account. In 1928, £148,393 was produced in this way. In 1929, £21,487 has accrued, while the unusual course has been adopted of taking credit for a further £50,000 on account in respect of the quinquennial valuation of the current series, an event not due to take place until next year. As will be seen from the table shown later, the absence of these contributions would have resulted in a net trading loss in each of the last two years instead of a profit. As regards the progress of the current series, no information is vouchsafed in the report or in the accounts beyond a statement as to the new business. From this it appears that new life business registered a big advance from £1,801,946 in 1928 to £2,613,125. In the capital redemption fund there has been a correspondingly large jump in new business, mainly in the form of single premiums, probably of the surtax-saving variety. Turning now to the fire and general business of the company, it is satisfactory to find a curtailment in marine premium income and a further moderate expansion in all other departments. The marine account has required a further strengthening to the moderate extent of £25,000, and the fund has been increased from 79 per cent. to 87 per cent. of the premiums. The other depart-

ments have all yielded a lower rate of profit, as will be seen from the table set out below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	83,028	8·5	36,170	3·7
Accident	41,640	28·3	36,470	23·4
Employers' liability	2,993	1·6	742	0·4
General	44,981	4·0	40,341	3·3
Marine	−100,000	−12·6	−25,000	−3·9
Life, annuity and sinking fund	148,393		71,487	
Profits from investments	59,001		...	
	280,036		160,210	
Less written off cost of acquired businesses	120,000		...	
Less items debited to profit and loss account	68,221		98,392	
Total net trading surplus	91,815		61,818	

The usual dividend of 20 per cent. has again been declared, and the payment is now practically covered entirely by interest earnings.

General Accident, Fire and Life Assurance Corporation.—Established in Perth forty-five years ago, this corporation has built up in this comparatively short period a fire and accident premium income of £7½ million, and has come to occupy an important position among the large composite offices, most of which date back to a much earlier period. This is a proud achievement; and it is due very largely to the energy and skill of one man, Mr Norie-Miller, who is the present deputy-chairman and general manager, and has been in control since the commencement. The 1929 report shows that the expansion of premium income, which has been a feature of the accounts of recent years, continues at a rapid rate. In 1929, fire premiums amounted to £657,000 and accident premiums to £6,964,000, compared with £642,000 and £6,695,000 respectively in the preceding year. In addition, there is a marine account, with premiums of £95,000, and in thus being content with a modest marine account the corporation has saved itself much anxiety and financial loss. In this rapid accretion of new premiums the corporation has a vulnerable point, for the reserve position for a company of its size is comparatively weak. Five years ago, in 1925, the total premiums amounted to £6,239,000, in respect of which departmental reserves, together with general reserve and profit and loss account balance, amounted to £2,420,000, equivalent to about 40 per cent. At the end of 1929 the corresponding reserves had grown to £3,845,000, equal to 50 per cent. of the 1929 premiums of £7,715,000. The situation is improving, though a great deal remains to be done before the ideal position (and it is one which some of the largest offices have now exceeded) of a 100 per cent. reserve is reached. Turning now to the underwriting results, the details of the past two years are as follows:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	108,960	17·0	79,886	12·2
Accident	231,728	3·4	246,207	3·5
Marine	−1,356	−1·7	−37,445	−39·6
	339,332		288,648	
Less items debited to profit and loss account	169,733		207,417	
Total net trading surplus	169,599		81,231	

The fire account, which consists largely of home business, has consistently produced a handsome surplus, and the 1929 profit, though on a lower level, is very satisfactory. In the accident account the surplus has been based on the usual 40 per cent. unexpired risk reserve, though the corporation itself maintains only a 35 per cent. reserve on long-term contracts. The premiums in this account are shown separately for long-term and for short-term contracts, and in respect of the latter no unexpired risk reserve is maintained. The accounts show for the first time two balance sheets, one for the General Accident, and the other a consolidated balance sheet including subsidiaries, and from these it is clear that the life business of the General Life, purchased in 1925, accounts for the greater part of the difference between the totals. New life business in 1929 totalled £1,986,000, compared with £1,758,000 in 1928, and the fund slightly exceeds £3¼ million. But interest earnings are comparatively low at £4 7s. per cent. net, while expenses are high and absorb 19 per cent. of the premiums.

Legal and General Assurance Society.—The Legal and General, under the present energetic management, pursues a very distinctive policy of its own. Since the year 1919 the whole of its new life business has been issued on a "non-profits" basis, and at about the same time a fire and accident department was set up. In spite of this handicap the life business has expanded very rapidly, and the volume of new sums assured now transacted is larger in relation to the funds than is the case in many other life offices. Details of the constitution of the new business during the last three years are now available and are as follows:—

	1927. Sums Assured.	1927. Amounts per annum.	1928. Sums Assured.	1928. Amounts per annum.	1929. Sums Assured.	1929. Amounts per annum.
Life Assurances.	£	£	£	£	£	£
Ordinary business	3,190,803		3,387,118		3,366,004	
Decreasing term and group insurances	3,458,361		4,259,783		4,587,860	
	6,649,164		7,646,901		7,953,864	
Deferred annuities		43,865		90,581		109,746
Sinking fund assurances	565,262		997,622		740,375	

The ordinary business by itself is on a large scale, but more than as much again is due to the development of decreasing term assurances and to group insurances. The former is the fruit of an arrangement with building societies whereby purchasers of small house property protect their families from the consequence of their premature death before the final redemption of the loan taken up to assist the purchase. Group insurance, in which the company has specialised, has more recently been associated with group pensions on a plan extensively adopted in America, and a large proportion of the deferred annuities referred to in the table is due to group pension schemes. Under such a scheme, in return for a fixed, joint contribution from employer and employee—subject to periodical review by the insurance company—a firm may arrange for pensions at, say, 65, of £1 per annum for each year of service after commencement of the scheme, together with a further pension of, say, 10s. per annum for each year of back service prior to the scheme. If, as is often the case, a separate group insurance contract is set up at the same time the benefits are all-embracing and include both life insurance, generally for one year's wages, and provision for old age pension. The company's total assets now amount to almost £22 million. Of this amount nearly £13 million is invested in loans and mortgages, a class of investment to which its traditionally legal associations have naturally inclined it, and a further £3 million has been laid out in the purchase of reversionary interests. The rate of interest earned on the funds worked out last year at £4 13s. 5d. per cent. net, compared with £4 11s. 6d. per cent. net in 1928. Progress in the fire and general department, though less rapid than in the life department, has been sound, and the underwriting profits have been almost exclusively applied in building up strong underwriting funds. Last year's premium income totalled £330,000, in respect of which a net surplus of £7,270 was earned, compared with £20,426 on premiums of £269,000 in 1928. Interest earnings in this department alone contributed £48,000 towards the dividend of 37½ per cent., free of tax, costing £75,000. At the present price of £15½ for the £5 shares with £1 paid up the yield is only 3⅛ per cent. gross, but the prospects are such that the shares constitute an attractive investment.

Law Union and Rock Insurance Company, Ltd.—This company is an important subsidiary of the London and Lancashire, and the figures relating to the fire and accident business are incorporated in the accounts of the parent company. Although the fire and accident premium income is slowly expanding and now amounts to close upon £800,000, the Law Union and Rock is principally a life company, and is the medium for the transaction of life business in the group, since the London and Lancashire does not itself number life business among its activities. The life fund amounts to nearly £11 million, including the funds of two closed series, the "Rock" and the "Crown," which together account for about £2½ million of the total. The quinquennial valuation of all three funds was due to be made at the end of last year, and the results of that appertaining to the current series are as follows:—

	1920–1924. £	1925–1929. £
Trading surplus earned during quinquennium	596,206	999,748
Brought forward from previous quinquennium	355,696	70,351
	951,902	1,070,099
Allocations:		
To Bonuses to policyholders	785,861	857,862
„ Shareholders	95,690	103,138
„ Carried forward to next quinquennium	70,351	109,099
	951,902	1,070,099

The very large increase in the surplus earned during the quinquennium just ended is a measure of the rapid expansion in the business. The shareholders' proportion of the surplus is based not, as is commonly the case, on the amount of surplus, but on a percentage of the premiums, and in this lies an obvious incentive towards quantitative expansion. The distribution to policyholders has been allocated in the form of a compound reversionary bonus, and the rate of bonus has been maintained at 45s. per cent. The increased surplus has enabled this distribution to be made with a margin, whereas the previous distribution was only possible after a substantial draft on the carry-forward. During 1929 the new business transacted was again on a high level, the amount being £2,161,004, compared with £1,977,388 in 1928. The net rate of interest earned in 1928 was £4 15s. 6d. per cent., and the expenses worked out at 14.8 per cent. of the premiums. The underwriting profits in both the fire and accident departments continue to be extremely satisfactory, and the combined results in all departments are as set out below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	89,337	16·3	72,045	13·0
Accident	15,643	6·3	20,359	8·6
Capital redemption	1,454		1,153	
Life (one-fifth of quinquennium) current series	...		21,820	
"Rock" and "Crown" funds	...		10,364	
	106,434		125,741	
Less items debited to profit and loss account	36,449		30,720	
Total net trading surplus	69,985		95,021	

The dividend has been raised from 12s. to 14s. per share, and the payment requires a sum of £109,547, to meet which interest earnings of £73,678 are available.

Scottish Union and National Insurance Company.—The "S.U. and N." is the largest Scottish composite company transacting all classes of insurance business, and has the great advantage of a very small nominal capital of only £300,000. On this foundation a very large business has been built. Total premiums, excluding life, amount to £1,924,000, while the life department has a fund of £10,587,000. The business has been skilfully conducted with a consistent record of success, and the reserve position is very strong. Departmental reserves, general reserve and profit and loss account amount in the aggregate to almost 150 per cent. of the premiums. The 1929 results, though less favourable than those of 1928, are none the less very creditable to the company. The details are as follows:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	168,040	12·8	117,792	8·9
Accident	1,166	4·8	952	3·7
Employers' liability	8,432	15·8	4,172	7·7
Miscellaneous	10,567	7·1	10,616	6·4
Marine	15,000	4·1	15,000	4·3
	203,205		148,532	
Less items debited to profit and loss account	80,488		97,812	
Total net trading surplus	122,177		50,720	

Interest earnings have risen from £152,594 to £155,667, but the cost of the dividend at the same rate as before, namely, 65 per cent., has fallen from £156,000 to £151,125 by reason of tax having been deducted at 4s. 6d. instead of at 4s. There is thus a small margin between interest earnings and cost of dividend, and, if account be taken of the total net trading surplus, the total earnings available work out at 89 per cent. The present price of the shares is £16½. At this price the yield is 4 per cent. on dividend and 5⅛ per cent. on earnings. In the life department new policies were issued last year for sums assured of £2,085,022, compared with £2,025,887 in 1928.

Scottish Equitable Life Assurance Society.—The financial year of this society ends on March 1st, and for the year just concluded the society reports a record new life business, amounting to £1,530,047. This sum compares with £1,477,292 in the preceding financial year. The interest earnings show practically no change on those of the preceding year, and the net rate of interest works out at £4 13s. 5d. per cent. The expense ratio, which in this society has for many years been on a moderate level, has been further reduced, and worked out last year at the rate of 11.5 per cent. A capital redemption fund makes its appearance in the accounts for the first time, and has opened with a premium income of £578. The society celebrates its centenary during the current year, but the next quinquennial valuation is not due to be made until 1933, and the chairman gave no hint in his speech at the annual meeting of any special distribution to mark the event. In the course of his speech the chairman referred with regret to a little noticed provision in the Budget, whereby the relief of income tax on life assurance premiums will be continued at the same rate as before, namely, 2s. in the £, whereas if the principle hitherto adopted had been allowed to remain the relief would have automatically risen with the increase in the standard rate, and would have been calculated at 2s. 3d. in the £. He claimed that this provision will do something to discourage the cause of thrift by means of life assurance and that no class is more deserving of consideration than the clientele of life assurance companies, who, after all, provide the bulk of direct taxation.

Ocean Accident and Guarantee Corporation.—For the third year in succession the dividend of this, the largest accident company in the world, has been increased, and last year's payment works out at 290 per cent. of the nominal capital. In addition to the accident business there is a fire account which for some years has yielded a premium income of about £350,000. Last year's total was somewhat increased and amounted to £362,000. Contrary to the general experience, however, the underwriting profit was higher and worked out at the excellent figure of 10 per cent. of the premiums. Accident premiums last year amounted to £5,823,000. For the last three years the premiums have been declining, the decrease compared with the 1926 income amounting to as much as £919,000. The sacrifice, though difficult, has been deliberate and has been brought about largely by the elimination of unprofitable business in the United States, where competition has been exceedingly keen and

is increasing rapidly from the native companies. It has been estimated that as much as £10 million was invested in the formation of new casualty companies in U.S.A. during 1928. Unfortunately, the accident revenue account is extremely uninformative—much more so than is customary or needful for the premier company in this field of insurance. The 1929 account states that a sum of £135,000 was transferred to profit and loss account, but in a separate typewritten document a profit of £145,458 is claimed to have been made on a basis unstated. But, after allowing for reserves on the usual basis of 40 per cent. of the premiums, the profit works out at £63,646, a figure which compares with £335,170 in 1928 on the same basis.

State Assurance Company, Ltd.—The results of the State should be studied in conjunction with those of the Royal Exchange, for although the State pursues a separate existence, it has been controlled since 1924 by the latter company. The State in turn controls the British Equitable, which, in addition to fire and general business, conducts on its own account a small life department. Thus we have the spectacle of two subsidiary companies, with separate entities and all the apparatus of boards of directors and established organisations, each transacting business of a similar character in apparent competition with the parent company. This is the curious result of what is presumably intended to be an amalgamation of interests, and it is hard to see what benefit can be extracted from this anomalous situation. The operations of the British Equitable are incorporated in the accounts of the State, and the details of the last two years' results are as follows:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	28,978	4·1	−11,026	− 1·6
Accident	13,347	7·7	13,500	7·3
Marine	5,827	13·0	5,499	11·6
Life and sinking fund	6,324		...	
	54,476		7,973	
Less items debited to profit and loss account	27,673		27,990	
Total net trading surplus	26,803		−20,017	

Thus in the fire account the State has shared the general experience of 1929, though the results of the accident account are favourable. The item in the 1928 figures for the life department represents the shareholders' proportion of the surplus disclosed in the quinquennial valuation. The accounts of the British Equitable are issued separately, and from these it appears that a profit was realised both in the fire and in the accident departments. New life policies for £516,325 were issued, as compared with £466,164 in 1928, and the life fund amounts to £1,658,000.

Caledonian Insurance Company.—In every department excepting marine the Caledonian has experienced the unfavourable effects of conditions in 1929. The detailed results of 1929 and of 1928 are compared below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£	Per cent.	£	Per cent.
Fire	44,505	5·1	−21,337	−2·4
Accident	1,227	21·6	839	13·3
Employers' liability	8,591	20·7	178	·4
General	37,143	11·7	9,122	2·6
Marine	7,392	6·6	12,616	10·8
	98,858		1,418	
Less items debited to profit and loss account	24,273		−28,465	
Total net surplus	74,585		−27,047	

The dividend has been maintained at 87½ per cent., but, owing to last year's bonus issue of shares, which participated for a portion of the year, the cost has risen from £90,300 to £99,400, though interest earnings are sufficient to meet all but £10,000 of this payment. This year's dividend at the same rate, to which the new shares will be fully entitled, will cost £105,000. A sum of £338,000 has been added to reserves from the proceeds of the premiums arising from the above-mentioned new issue. Of this, £138,000 has been applied to strengthen still further the already strong departmental underwriting funds and the remainder, £200,000, has been added to the general reserve fund. The reserve position is now exceedingly strong in relation to the premiums. The total premium income last year was £1,406,972. Including the general reserve of £500,000, and the profit and loss balance of £117,796, the reserves total altogether £2,009,000, which is equivalent to as much as 143 per cent. of the premiums. The life department continues to make steady progress. The 1929 new business of £1,381,265 represented a small advance on that for 1928, and the fund now amounts to £6,684,000. Valuations and distributions of surplus are now made triennially, and the next valuation is due to be made at the end of 1930.

London and Scottish Assurance Corporation.—The London and Scottish controls the Scottish Metropolitan and is in turn controlled by the Northern. The life business of the Scottish Metropolitan is run as a closed fund, which now amounts to £700,000, but the London and Scottish itself has a life fund of just over £4 million and transacts a substantial new business. Last year's total amounted to £778,634, compared with £888,910 in 1928, the decline being wholly attributable to a falling off in the Colonial business, which is responsible for 40 per cent. of the total. The Colonial business is identified largely with Canada, in which country over a quarter of the total life fund is deposited for the security of Canadian policyholders under local laws. As regards the other departments the detailed results of the past two years are set out below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£	Per cent.	£	Per cent.
Fire	27,052	8·1	4,161	1·2
Accident, employers' liability and general	4,280	1·3	22,806	6·7
Marine	−4,938	−3·0	−5,365	−4·0
	26,394		21,602	
Less items debited to profit and loss account	19,528		23,434	
Total net surplus	6,866		−1,832	

The fire result is rather poor, but the results of the accident account are very satisfactory and are much the best since 1926. The marine account, which some years ago was in an extremely unsatisfactory state, has been drastically curtailed and considerably strengthened. At the end of 1926 the fund was equal to only 52 per cent. of the then premium income of £436,000. In 1928 the premium income was reduced to £134,000, but the fund now stands at 125 per cent. of the current premium income.

Sea Insurance Company, Ltd.—The Sea is one of the few remaining independent concerns among the old-established marine companies. In its own sphere the company has been consistently successful even in these difficult times. But, as in the case of other companies in a similar position, a fire and accident department was set up after the war, and, although the premium income from this source now exceeds £200,000, the underwriting results so far have been very poor. Allowance must, of course, be made for the inevitable initial expense attending the new enterprise, but nevertheless the fact remains that in respect of premiums of £888,000 during the last five years there was an aggregate underwriting loss of £55,000. The 1929 results in this department show a loss both on fire and on accident account, though in each case on a lower scale than in 1928. In the marine department the 1928 underwriting account has been closed with a substantial profit of £32,481, and the premium income in the new 1929 account has been increased to £614,560 from £541,721. The first year's experience has again been favourable and the fund remaining is equal to 59.5 per cent. of the premiums, compared with 59.8 per cent. a year ago. The details of the last two years' results are as follows:—

	1928. Amount of Profit.	1928. Percentage of Premiums.	1929. Amount of Profit.	1929. Percentage of Premiums.
	£	Per cent.	£	Per cent.
Fire	5,259	2·9	−3,181	−1·8
Accident and General	−12,377	−19·8	−2,090	−3·3
Marine	32,146	6·6	32,481	6·0
	25,028		27,210	
Less items debited to profit and loss account	1,332		1,439	
Total net surplus	23,696		25,771	

The dividend has been maintained at 16¼ per cent. and is covered by interest earnings with a small margin.

Fire Losses.—Fire wastage in the United Kingdom during the month of January was on a very high level, but subsequent improvement took place in the months of February and March to such an extent that the aggregate figures for the first quarter of this year are comfortably lower than those for the corresponding quarter of 1929, though still above the 1928 figues. The details, as compiled and published by *The Times*, are shown below:—

	1928. £	1929. £	1930. £
January	710,000	1,086,000	1,387,000
February	557,000	733,000	632,000
March	448,000	1,677,000	796,000
Totals for three months	1,715,000	3,496,000	2,815,000

In the United States, on the other hand, the statistics compiled by the *Journal of Commerce*, New York, indicate that the losses during the first quarter of this year exceeded those of the same period of 1929. Details of the figures for the three months in each year are shown below:—

	1929. $	1930. $
January	44,713,825	42,344,000
February	41,520,290	43,206,940
March	41,277,814	42,964,392
Totals for three months	127,511,929	128,515,332

The improvement in January was more than offset by heavier losses in February and March.

UNITED STATES.

Company Reports — Industrial Outlook — Prices — Money — Stock Exchange.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 22.

WITH the second quarter nearly a third gone, and with current reports exposing the weakness of the first three months from the standpoint of corporation earnings, there is little expectation of pronounced trade improvement before autumn. At the same time, the downward trend seems to have run its course in most industries, and fewer observers hold the view that business "will grow worse before it improves." Business men generally agree with Mr Myron C. Taylor, chairman of the finance committee of the United States Steel Corporation, who, at the corporation's annual meeting this week, summed up the situation as follows:—

"The present business foundation is sound and we can look into the future with a feeling of assurance, confidence and safety. There is no great inventory at the present time which warrants downward revisions. Certain commodity values have been readjusted since last fall, particularly those designated as crop commodities. We could hardly continue the great activities of last year. There must be a readjustment in keeping with the economic rules which man cannot defy. That readjustment in a general way has been accomplished."

More than fifty large industrial and public utility corporations have now published earning statements for the first three months. Here and there better results were secured than in the same period of last year, but, in the aggregate, there was a decline of nearly 18 per cent. in profits. This ratio is probably typical of all such corporations in the three months. March and three-months' reports for the railroads are now being published, and the losses are fairly large, amounting to approximately 25 per cent. The General Motors Corporation earned only 98 cents a share in the first quarter, as against $1.37 a share last year, and production was but little more than a third of that of the same period last year.

The motor industry as a whole is doing better, but the gain is seasonal. Official production figures for March place output of cars and trucks at 401,378, compared with 585,455 last year. However, production was the largest for any month since last September. Some further improvement was made in April, but it is being gained mostly by low-priced cars, and no marked recovery is now expected before the autumn. The steel industry holds at just under 80 per cent. of capacity, and is likely to continue at that rate for a time. Copper buying from abroad has been quite substantial since the reduction in the price of the metal to 14 cents a pound, but domestic manufacturers are slow in placing orders. While a further price decline is not expected at this time, copper output and earnings are poor, and some dividend reductions are likely at the next meetings. Railroad car loadings have gone up moderately, but are still lower than for this season in 1924. A more cheerful outlook is at hand for the building industry. March permits being up 50 per cent.

Commodity prices are still receding. The Bureau of Labour index for March registers a loss of 1¾ per cent., bringing the figure 7 per cent. below last July, when prices were at the highest for last year. Prices are now the lowest since 1916. Group changes follow (1926 = 100):—

	March, 1929.	Feb. 1930.	March, 1930.
ALL COMMODITIES	97·5	92·1	90·8
Farm products	107·1	98·0	94·7
Foods	98·1	95·5	93·9
Hides and leather products	108·3	103·9	103·2
Textile products	96·1	88·3	86·5
Fuel and lighting materials	80·6	78·8	77·4
Metals and metal products	106·4	100·9	100·6
Building materials	98·8	95·7	95·4
Chemicals and drugs	95·6	92·3	91·2
Housefurnishing goods	96·5	97·0	96·5
Miscellaneous	80·0	78·5	78·2
Raw materials	98·9	91·8	89·3
Semi-manufactured articles	99·1	92·1	90·6
Finished products	96·5	92·6	2·0
Non-agricultural commodities	94·9	90·6	89·8

Money markets are turning easier, and the bond market, which has been going through a period of digestion, is finding a fresh appetite, which investment bankers are quite ready to satisfy. New financing, interrupted last week by the holidays, is fairly heavy this week, and some large issues are in the offing. It is expected that the week's volume will be around $250 million, including the Brazilian coffee devalorisation loan. Negotiations are now under way for a Japanese loan, which, it is reported, will amount to about $100 million, the proceeds to provide for the maturity of the sterling loan on January 1, 1931. The feature of the past week's financing was the $235 million common stock offer of the American Telephone and Telegraph Company. Offered to shareholders at par in the ratio of one new share for each six shares held, the issue involves "rights" worth more than $20 each at current prices.

Call money has been plentiful at 3 per cent. in the open market, but the Stock Exchange rate has not gone below 3½ per cent. Bill rates to-day fell one-eighth of 1 per cent., but the Federal Reserve Bank has not changed its buying rate. Last week's statement showed a heavy addition to Reserve Bank holdings of bills, but this week it is believed that the banks are not doing more than replacing maturities, which amount to about $40 million. Any doubts that the Reserve authorities were purposely making money easier is removed by a reading of the March bulletin of the Washington Board, which says:—"Easter conditions in the money markets of the United States in recent months have been caused in part by Federal Reserve policy, as expressed in rate reductions and in open

market purchases of securities, and in part by a decrease in the demand for funds since the October-November break in the stock market." Gold continues to flow in. The Japanese movement is drying up, but gold received this week and on the way from South America totals approximately $40 million.

Credit demands of the share market are rising, and, with last week's gain of $131 million in brokers' loans, that item is now up over $700 million on the year, or about 20 per cent. That this has represented little if any shifting of borrowings directly from the banks is indicated by the fact that reporting member banks' loans on securities are down only $76 million, or less than 1 per cent. In the same period industrial share prices have risen about 18 per cent. Thus the "technical" position of the market has not weakened appreciably since the beginning of the year, but it is now beginning to do so. In the past three weeks brokers' loans have risen $300 million, against a gain of only about three points in the stock market "averages." This halt to the long advance has reflected the current doubts that the market has outdistanced trade conditions too far.

FRANCE.

Tax Reduction — Bourse — National Insurance Act — Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, April 30.

THE Chambers succeeded, under pressure of working until close on midnight on Easter Eve, in pushing through both the National Insurance Bill and the measure for further reducing taxation, after which both Houses immediately adjourned until June 3rd, when they will resume their sittings until the national Fourteenth of July festival.

The Bill for taxation reduction, which was promulgated on Monday, affords relief estimated at about £15,000,000, of which the larger part, amounting to 1,100,000,000 francs, directly affects imposts on securities and on Bourse operations. The taxes on the latter have been brought down from 1 franc per mille to 50c. (both buyer and seller) for account transactions, and the *ad valorem* impost on "carrying over" operations from 50c. per mille to 10c., while the stamp duty on scrip has been reduced by 50 per cent. The income tax levied on coupons attaching to French issues is reduced from 18 per cent. of the dividend to 16 per cent., and that in respect of foreign issue coupons from 25 per cent. to 18 per cent. There was a hope that the irritating and onerous annual *taxe de transmission* would have been reduced to vanishing point, or near it, but the Government found itself unable to concede more than a lowering from 0.40 per cent. to 0.25 per cent.—this being the second reduction within a short time. There was a strong belief during the week-end that the passing of the Government's taxation relief proposals into law would at once give a substantial stimulus to the Bourse, but this proved to be entirely unfounded.

The past three sessions of the Bourse have been characterised by an even greater disinclination than before on the part of the ordinary investor to come into the market, and even the professional speculator has displayed marked signs of discouragement. Evidence of the unsatisfactory tendency of the market of late is afforded by the fact that, during March, the revenue from Bourse operations amounted to only 25,074,000 francs, or less than half the yield in March, 1929, when 56,689,000 francs were recovered from this source. It seems more than possible that the systematic inflation of capital values, which has been a marked characteristic of this market since the passing of the stabilisation law, is, to a large extent, responsible for this decline in business. Holders of long standing, who lost four-fifths of their capital by stabilisation, have now to a great extent recovered that loss, and in some cases more than recovered it. Bank of France 1,000-franc shares, for instance, which stood around 5,000 francs before the war, are now usually around 25,000 francs. The would-be investor, however, now finds the yield from most of the leading counters uninteresting at present prices, and it is not surprising that he is preferring to wait for the various pending new issues that promise a better return. Also, the huge mass of new bond issues through the banks has diverted a vast amount of unemployed capital that would otherwise have gone through the Bourse.

The National Insurance Law, although adopted by the Chambers before Easter, has not yet been promulgated, by publication of the text in the *Journal Officiel*, but this is reported to be imminent. The scheme adopted is remarkable in many ways, and well worthy of detailed examination. The original Bill, it will be recalled, was hastily pushed through Parliament with a view to the 1928 general elections, and was admittedly as faulty and unworkable as any Bill could be. M. Poincaré himself, who was then in command, stated flatly, before the measure was adopted, that revision of many parts of the scheme was inevitable; and this revision M. Loucheur, Minister of Labour in M. Tardieu's previous Cabinet, undertook. M. Loucheur's plans were on such a scale, however, and would have involved such unexpectedly large expenditure in administration that public opinion rose in arms against his proposals. The downfall of M. Tardieu and the elimination of his Minister of Labour opened the road for a second radical revision of the whole scheme; and this has now been carried out in a praiseworthy manner.

In the first place the application and administration of the law has been very largely placed in the hands of the friendly societies. These number some 29,000 throughout the country, with a total membership of over 6,000,000, and vast accumulated funds. The friendly society method of saving has always strongly appealed to the French mentality, and the organisations have invariably been soundly and very economically managed. Under the new law, the national scheme is to be administered through a series of territorial organisations (probably more or less coterminous with the various departments), each district embracing from 100,000 to 200,000 insured persons, and basing itself on the existing local friendly societies as a foundation. The *rôle* of the State has been kept down to a minimum of control, operated through a national council composed of Government officials, representatives of labour and employers' associations, and various other interested bodies. The cost of the scheme to the national Budget this year has been definitely limited to 223,000,000 francs, which may prove sufficient, as the law does not come into operation until July 1, and will involve only small expenditure for some years to come, except perhaps possibly in regard to provision for sickness.

The question of the extent to which the scheme will affect costs of production and, consequently, the cost of living, has been and is the cause of a very keen controversy. The plan is, as yet, necessarily in embryo, and even an approximate estimate of its future cost is at present impossible. The only factor on which to base any kind of calculation appears to be the fact that the combined contribution of employers and employed (who pay half each) is alleged to be equivalent theoretically to 8 per cent. of the wages total, but in reality only to 6½ per cent. The scheme is compulsory on all wage-earners receiving less than £2 5s. a week (except in large towns, where the limit is £2 15s.). It will apply to all persons of this category between the ages of 16 and 60, and men and women are to benefit and contribute on equal terms. The risks covered are those of sickness, premature permanent disablement, maternity and death, and there is provision for old age pensions at 60.

One single contribution (ranging from 6d. a week to 2s., according to the wage scale) covers the whole of these risks for each insured person (these amounts being, of course, doubled by the addition of the employer's half of the total contribution. Maternity benefits are covered by the husband's contribution, as are also pensions provided (till the age of 16) for dependent children, on the father's death. Medical benefits (which are also extended to the insured man's wife and children) are subject to the payment by the insured person of from 15 to 20 per cent. of the doctor's fee, and of the cost of medicines, etc.

In the case of agricultural wage-earners the obligatory principle is limited to old age pensions and sickness benefits. In regard to this category of workers the insured person's contribution for old age pension benefit has been fixed at 2 per cent. of the wages received, and for sickness insurance to 5 francs per month, the employer paying similar amounts. Agricultural workers are free to insure against the other three risks on equally moderate contribution terms. Full old age pension benefits come into operation only after the payment of 30 years' regular contributions, the insured man being entitled at sixty to a pension equivalent to at least 40 per cent. of his average wages. Insured people now approaching the age limit are qualified for proportional old age pensions after having paid the normal contributions (6d. to 2s. a week, according to wage scale) for five or more years.

The March revenue returns show a total yield from all "normal and permanent sources" of 2,974,241,000 francs, against 2,982,000,000 francs in March last year and 2,687,000,000 francs in March, 1928. Indirect taxation and monopolies produced 9,601,000 francs less than in March, 1929. This is eminently satisfactory, since direct relief of taxation totalling 2,765,000,000 francs was accorded between March 30th and December 31st last year. Customs showed an increase of over 53 millions in March and yield from motor spirit and petroleum was 15¼ millions higher. On the other hand, sugar yielded 49,638,000 francs less than a year ago, largely owing to the effect at this season of the lowering of the sugar tax. The total recoveries in the form of turnover tax, too, were 11,000,000 francs (1½ per cent.) down, which would indicate a slight slowing down in general buying activity.

GERMANY.

Reparations Loan — Grain Import Duties — Artificial Silk Agreement — Bourse.

(FROM OUR CORRESPONDENT.)

BERLIN, April 29.

AT the session at which the Bank for International Settlements was organised Germany protested against the election of a Frenchman as director-general. This protest was not directed against M. Pierre Quesnay personally, but was only an expression of the German standpoint that the parity between France, as main creditor, and Germany, as sole debtor, under the obligations to be discharged with the aid of this bank, should be maintained in all circumstances. Apart from this, it is at the moment not at all unsatisfactory from the German standpoint that France, by securing for herself the most influential position in the bank, has assumed responsibility for the success of its transactions. As a matter of fact, that success depends largely on French policy. France is one of the few countries that have to-day a surplus of capital. But the French capital market has heretofore been available only in small degree for meeting the capital requirements of other countries. Only if this French policy of locking up capital be brought to an end will reparation loans have a chance of complete and speedy success.

Unfortunately, the reports concerning the apportionment of the subscriptions for the 300 million dollar loan to be offered within the next few months scarcely indicate that France will assume a proportion corresponding to her abundance of capital. In this connection it is reported that Germany is to be asked to take over 25 millions. This figure is too high, for even though the German capital market has recently begun to show the first signs of a recovery, it is not able to carry through a loan transaction of this extent on the terms contemplated. The provincial loans that were placed on the market in recent weeks in sums of from five to ten million marks brought the subscriber 8½ per cent. interest. The reparation loan, according to the latest reports, is to yield somewhat over 6 per cent. This, it is true, is decidedly too high when future developments are taken into consideration, for conditions in Germany are ripe for a sharp reduction of interest rates, which is still deferred only through lack of confidence; and it is undesirable that such a relieving of the situation, important for the German economy as well as for the smooth fulfilment of the reparation obligations, should be limited in advance by fixing such a rate of interest for the reparation loan, which is likely to set the standard for some time to come. But for the moment a yield of 6 per cent. is too low to guarantee any success of subscriptions in Germany.

The mobilising of the reparation payments by means of international loans was a French, not a German, demand. Now, however, Germany desires that the 300 million dollar loan be placed on the market and subscribed as soon as possible. Unless all the indications are deceptive, Germany will soon have reached the trough of her economic depression. This means that she will enter upon an economic period in which her hunger for capital will become even greater than it is now. But at present all sources of capital are blocked because the banks of issue are everywhere waiting for the great international loan. And in addition it is naturally very important for Germany that she shall receive as soon as possible the 100 million dollars that are to come to the German Railway Company and the Post Office Department from the proceeds of the loan.

The Government has already made use of the authorisation to fix the import duties on grain without reference to the Reichstag. The duties on wheat and brewers' barley have both been raised from 120 to 150 marks per ton. This shows plainly how hard the Government is trying to meet the wishes of the farmers in spite of all scruples, for what has been done here is utterly irreconcilable with the intention of the law. Together with the authorisation to fix duties the Reichstag directed the Government to attain an average yearly price of 260 marks a ton for wheat. But the price of wheat in Berlin was about 270 marks before the duties were increased. It is not known, it is true, how the Government calculate the yearly average, but that they did not wait at least a few months to observe the development of prices was not exactly fair treatment of the consumers, who were in any event expected to make such heavy sacrifices for the benefit of the agriculturists. That the Government is more dependent than ever on satisfying the farmers is indicated by the developments in the German National Party. There Herr Hugenberg is just now fighting a decisive battle against Count Westarp, who, with the majority of the German National deputies in the Reichstag, desires to support Herr Schiele, the Minister of Agriculture, and thus also the Bruening Cabinet. Count Westarp's chances of success depend entirely on showing the farmers how much they have to gain by keeping the present Government in office.

The labour market, which is ordinarily greatly relieved in the spring by the renewal of building operations and by the need for farm labourers, is this spring recovering only very slowly. In many places building activities cannot properly get under way. It is prescribed by law that half of the sums received from taxes on house rentals must be employed for credits at low interest rates for building dwelling-houses. But these sums are inadequate unless increased by credits from the municipal savings banks and by contributions from the municipalities themselves, a course that has been regularly followed in the last few

THE BRITISH LINEN BANK.
Incorporated by Royal Charter, 1746.
Capital and Reserve Funds, £3,500,000.

LONDON OFFICE: 38, Threadneedle St., E.C.2
Every description of Banking Business transacted.

years. Now, however, the municipalities have been compelled by their financial difficulties to stop making such loans and to get as much money as possible from the savings banks for their own purposes. In addition to this, the industrial situation has grown markedly worse in the last few weeks. The statistics of the trade unions show that from February to March the employment figure for their members dropped from 79.5 to 79, whereas in the same period last year it rose from 84.3 to 85.2.

A few weeks ago the German artificial silk industry made a novel agreement with the most important associations of silk manufacturers in Germany—manufacturers of woven, knitted and crocheted wares—which has now been made public. With a consumption of, roundly, 23 million kilograms in 1929, 9½ million kilograms of artificial silk were imported into Germany, and a slightly higher quantity was exported. The factories now pledge themselves to purchase 90 per cent. of their requirements of artificial silk yarn from German makers. They agree not to oppose the efforts of the artificial silk industry to secure an increase of the at present very low import duty, which is 60 pfennigs per kilogram, or about 10 per cent. *ad valorem*, but any change of duty will be very difficult to attain, since the duty is included in the German-Italian commercial treaty. In return for these concessions, the German industry guarantees to furnish its products for further manufacture at a price not exceeding that paid by the most important foreign competitors. As a result of agreements between Courtaulds and Glanzstoff, no artificial silk has been imported into Germany from England in recent years; the countries of origin were Italy, Holland and Belgium. The Dutch production is to be protected by financial measures in the Aku concern, which controls the Glanzstoff factories in Germany and the Enka in Holland; the new agreement is mainly directed against imports from Italy. That the export agreements between the Great Italian factories, Snia and Chation, have thus far not gone into effect is doubtless a result of the new German artificial silk pact.

Interest is again concentrating on the German stock markets on interest-bearing securities. The public is keeping away from the stock markets, but is steadily reinvesting long-term bank deposits in loans. As a result of the international decline of interest rates the banks are paying far lower rates than last year, but municipal and industrial loans and mortgage bonds can still be had that pay somewhat more than 8 per cent. Only this week did the best 8 per cent. mortgage bonds reach par, but some 8 per cent. municipal loans are still quoted at around 90, and first-class 7 per cent. securities at 86 to 92. However, the liquidity in the short-term money market continues to increase. German economy is at the moment very well provided with short-term money and also with to attain, since the duty is included in the German-short-term foreign credits, but supplies of long-term money still fall far short of requirements.

ROUMANIA.

Politics — Agriculture — Commercial Treaty with Germany — Finance — Petroleum Industry.

(FROM OUR CORRESPONDENT.)

BUCHAREST, April 22.

IT is extremely difficult to arrive at an exact appreciation of the present internal situation of Roumania. The fact that, at a public meeting, three prominent generals made a protest regarding the conditions in Bessarabia and thereby caused the resignation of the Minister of the Army, renders future developments obscure, as it throws a hitherto unknown quantity, the opinion of the army, into the political balance. Political strife has become exceedingly venomous lately on account of the tactics of the Liberal Party, which is not too scrupulous in the employment of means to embarrass the Government. Exaggerated reports as to Communist activities in Bessarabia, dismissals from the public services and the railways, claims of disabled ex-service men, unemployment caused by the economic crisis, etc., are indiscriminately used to forward this campaign to such an extent that public opinion is becoming uneasy, and even the credit of the country abroad is affected. Matters are not improved by the openly avowed intention of the Opposition to annul many of the measures taken by the present Government for the economic organisation of the country. It is evident that these activities cannot encourage foreign capital to enter Roumania. As, however, it is universally agreed that foreign capital is necessary for further economic development, it is time for the principal parties to come to an agreement as to the economic necessities of the moment and the means to meet them. The present state only breeds distrust where confidence is sorely needed. So far, Monsieur Maniu appears to be still firmly established, but a repetition of the attack on the part of the Opposition is foreshadowed for the near future.

Business circles are watching with great interest the prices of cereals. The spring export campaign has begun, and, happily, prices have risen considerably during the last month. This timely improvement has entirely changed the outlook of agriculture for the moment. Although the highest prices have not been maintained, the present level is said to insure the farmer against loss. In addition, beneficial rains have fallen lately in the whole country, and the state of the fields is considered very promising.

The period for the conclusion of commercial treaties has once more been extended, this time for two months as from the 1st of May. The chief cause for this delay lies in the difficulty of coming to a satisfactory agreement with Germany in consequence of the latter's high protective tariff on cereals. This policy on the part of Germany is decidedly prejudicial to the Roumanian grower, and unless some kind of arrangement is reached it is not unlikely that Roumania will decide to take measures of reprisal for her own protection.

An important statement of the Minister of Finance describes the situation of the Treasury at the end of the first three months of the year. While in the period January to March, 1929, receipts amounted to 5,610 million lei, the figure for the same months of this year is given as 6,738 million lei. In this amount are shown only the receipts from sources existing in the Budget of 1929. There must be added the sum of 73 millions, receipts from the Institute of Roads, which did not exist last year. A further sum of 361 millions is not included in the figure for 1930, as this amount came from exceptional sources and was used for the payment of old debts. The receipts during the first three months of 1929 amount to 15.1 per cent. of the Budget estimates. The proportion for the same period of 1930 amounts to 16.7 per cent. of the estimates of this year's Budget. Both direct and indirect taxation show satisfactory increases. All taxes on articles of consumption, except those on spirits, show good results. The receipts from the taxes on business turnover and from stamp duties are also higher, which fact the Minister of Finance interprets as being due to an improvement in the economic situation. Compared with 1929, the receipts of the Autonomous Institute of Monopolies are 33.46 per cent. higher for January, 19.69 per cent. higher for February, and 21.95 per cent. higher for March. The Commercial Public Régies are showing also satisfactory results. The receipts of the various Ministries amount to 730 millions, against 517 millions last year. In view of these figures the Minister thinks that he can expect with confidence the realisation of the Budget estimates for the current year, and that, following on the export of last year's harvest, he can look forward to a revival of the economic activities of the country.

It is reported that the Régie of Royalties has concluded a contract for the sale of 2,500 wagons of crude oil to Yugoslavia. This is of great importance for the internal crude oil market, which has shown signs of congestion for a long time past. In fact, the price of crude oil has fallen to 14,300-14,500 lei per wagon of Bustenari and to 9,200-9,500 lei per wagon of Moreni non-paraffinous. The problem of crude oil has become very acute in view of the constantly increasing output. The State possesses considerable quantities of this article received as royalties, and competes with the petroleum companies in the internal market. The relief caused by the Régie's new policy of selling abroad is therefore evident. But on the whole the situation of the petroleum industry is far from satisfactory, as is shown by the new representations made by the Petroleum Associations to the Minister of Industry and Commerce. Heavy taxation is preventing the industry from competing satisfactorily in foreign markets, and a revision of taxation is urgently pressed.

JAPAN.

Indian Cotton Tariff — Foreign Trade — Railway Results — Prices — Bank Failures.

(FROM OUR CORRESPONDENT.)

TOKYO, April 7.

THE Japanese cotton manufacturers have accepted the new Indian tariff philosophically, and are now making efforts to surmount the fresh difficulties of the cotton trade. Under the new duties Japanese cotton goods will have to pay 11.4 million yen more in the case of grey cloths and 3 millions more in the case of bleached, dyed and printed cloths, according to the calculations of the Master Cotton Spinners' and Manufacturers' Association on the basis of last year's Indian takings. The prohibitive duties on grey goods will compel the manufacturers to change from grey to white cloths and from heavy to light goods. The big combines are already planning to enlarge and re-equip their finishing sections, while independent mills are attempting to enter into closer contact and co-ordination with the bleaching, dyeing and printing firms scattered over the principal producing centres, or to create vertical units in some way covering various sections. Certain mills are trying to make finer dhooties for the Indian market, hoping that the difference of an additional 5 per cent. preference duty on non-British goods in this line will be offset by reduction of costs of production and distribution. The Kanegafuchi cotton mills, one of the most influential combines, are the first to attempt to lower labour costs. On Saturday last they announced a cut of 20 per cent. in wages and salaries by way of abolishing the war-time bonus. That this lead will be followed by other firms is certain, though it is doubtful whether it will be done peacefully and without trade union interference, particularly in the smaller mills where pay is not so good.

Even when allowance is made for the fall in prices the contraction of trade is very remarkable. The trade returns for March show that, as compared with the corresponding month of last year, imports declined in value by 28.7 million yen, or 13.6 per cent., and exports fell by 32 millions, or 19 per cent., the total turnover being thus 60.7 millions, or 16 per cent., lower. Imports and exports for the first three months of the year were lower respectively by 163.9 millions (23.7 per cent.) and 95.9 millions (19.4 per cent.). The visible adverse balance of trade, excluding the movements of bullion and coin, was, for the month, 46.8 millions, as compared with 43.6 millions in March, 1929, and, for the three months ended March, 1930, 124.9 millions, against 192.9 millions in 1929. A comparison of the value figures for March and the first three months of this year and last is set out below:—

MONTH OF MARCH.
(000's omitted).

	1929. Yen.	1930. Yen.	Increase (+) or Decrease (−) in 1930 Yen.	Per cent.
Imports	211,107	182,417	− 28,690	− 13·6
Exports	167,484	135,577	− 31,907	− 19·0
Total turnover	378,581	317,994	− 60,597	− 16·0
Excess of imports over exports	43,623	46,840	3,217	+ 7·3

THREE MONTHS ENDED MARCH 31st.
(000's omitted.)

	1929. Yen.	1930. Yen.	Increase (+) or Decrease (−) in 1930. Yen.	Per cent.
Imports	689,411	525,472	− 163,939	− 23·7
Exports	496,506	400,514	− 95,992	− 19·3
Total turnover	1,185,917	925,986	− 259,931	− 22·0
Excess of imports over exports	192,905	124,958	− 67,947	− 35·3

Net gold exports during last month amounted to 59.7 million yen, bringing up total withdrawal during the first three months of the year to 176.4 millions, the greatest outflow in any quarter in the annals of this country.

The results of operations of the Imperial Government Railway in the fiscal year ended on March 31st show that the passenger train receipts were 283,511,000 yen and the goods train receipts 208,885,000 yen, making a total of 492,396,000 yen, which fell short by 26,970,000 yen of the original estimates, and was 9,312,000 yen lower than the actual receipts of the preceding year. The results of the private railways tell the same story. The heavy decline in railway earnings is principally accounted for by the decrease in freight traffic due to the general trade depression, but growing competition from road transport is also partly responsible.

The decline in wholesale prices, which had slowed down more or less in February, was again accelerated last month. The Bank of Japan's wholesale index number for March recorded a substantial drop of 1.9 per cent. on the month, and of 13.4 per cent. in comparison with March, 1929.

At the end of March three local banks closed their doors, owing to the intensified depression in trade and the consequent lock-up of funds. This has caused a sensation in financial quarters. Fortunately, however, they are all very small banks in out-of-way towns, with aggregate deposits of not more than seven million yen, and there is no sign of the effects spreading to other institutions.

ARGENTINA.

Commercial Difficulties — Customs Revenue — Exchanges — Freights.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, April 4.

IT is not easy to give in concise form a faithful impression of Argentina's present commercial and financial state without falling into the error of extremes. Conditions during the first quarter of 1930 have notoriously been difficult and commercial failures heavy. The exact figures are, however, beside the point. They are apt to mislead and, when compared with previous periods, may be made to prove almost anything. More serious than the commercial failures is the decline in prices that has marked all produce, meat alone excepted. Cereal quotations at the present moment naturally reflect the general oversupply that is a matter of common knowledge. With wheat at $9.95 paper per hundred kilos, and a depreciation of something like 9 per cent. in Argentine money as compared with sterling, it is easy to understand why agricultural interests feel that they are being rather hardly treated. Maize and oats are also quoted low, the former being $6.35 paper and the latter $4.90, both for May delivery. Linseed, on the other hand, is firm at $1.20 per hundred kilos, but little remains to be shipped. The partial failure of the last wheat harvest has, therefore, not been compensated for by the higher prices at one time so confidently expected, and the total volume of produce shipped shows a marked decline, which is reflected in the traffic receipts of the railway companies. Another interesting index to Argentina's present position is afforded by the revenue returns of the Buenos Aires Customs House. At the end of March collections amounted to $77,425.117 paper, which is, roughly, fourteen million dollars paper below the figures of the corresponding period last year.

The exchange situation, handicapped though it is by the closure of the Conversion Office, is gradually showing signs of improvement, the diminished imports which the falling Customs returns indicate undoubtedly affecting the position. Talk is rife concerning a large foreign loan to be issued either in London or in New York, and, were such an operation to be carried through, its effect on exchange would be immediate. If it were accompanied by a reopening of the Conversion Office, Argentina's currency would immediately recover parity. In the local money market an air of expectancy prevails. For, although the rates for discounts and advances are at present anything between 7 and 8 per cent., the underlying tone of the market is weak and the strong competition for deposits so noticeable at the beginning of the year has, for the time being, disappeared, at any rate, as far as first-class banking institutions are concerned. Such restriction as there may be with regard to facilities is traceable rather to caution than to any pronounced shortage of funds, and it is probable that, if the low European bank rates continue, Argentina's next harvest will in large measure be handled, as far as shippers are concerned, by borrowings in Europe or the States, such credits being drawn against from this side to the further benefit of the exchange position. At the moment of writing banks' cable drawing rates are 43⅞ and 112.50 on London and New York respectively, with Paris 22.35 and the lire 16.65.

In the freight market the tone is distinctly weaker, with recent fixtures for prompt steamers ranging between 10s. 3d. Bahia Blanca to London or Hull, and 12s. 6d. Rosario to Genoa and Mediterranean ports. The weather has not favoured maize shipments, and a touch of sharp cold would probably see an upward movement in freights, since there is not too much free tonnage in Plate ports.

It seems that, all things considered, the worst of the depression is over. There are many factors of a potential nature which make for improvement. Conditions in the agricultural and pastural areas are reasonably satisfactory, and the wonderful and speedy recuperative power of this country will in all likelihood come into play once more to confound the pessimists.

AUSTRALIA.

Commonwealth Bank — Overseas Trade — Conversion — Loan Council.

(FROM OUR CORRESPONDENT.)

MELBOURNE, March 22.

THE balance sheet of the Commonwealth Bank of Australia as at December 31, 1929, shows deposits £33,822,878, or a decrease of £5,586,709 as compared with twelve months previously; money at short call in London, £6,244,745, or a decrease of £10,193,255; public securities, £12,328,787, or an increase of £2,072,580; and discounts and advances, £12,876,781, or an increase of £791,345. The directors' report, in referring to the exchange situation, states that in the immediate future it may be anticipated that considerable additional quantities of gold will require to be exported overseas, which can be done "without impairing the necessary gold reserves required to support the note issue." The report also points out that the feeling generally exists that no immediate improvement in the depressed condition of the internal trade of Australia can be anticipated, and urges that every effort be put forth in the direction of increased production and reduced expenditure upon unproductive work.

The trade returns of the Commonwealth for the seven months ended January 31 show a decrease of £24,617,090 in exports of merchandise as compared with the corresponding seven months of the 1928-29 financial year, but an increase of £8,179,185 in gold exports. Merchandise imports for the seven months show a slight increase, though the December figures showed a decrease of 1½ millions and the January figures a decrease of a million. A comparison for the seven months ended January 31 is as follows:—

Seven Months.	1928–29.	1929–30.	Movement.
Imports—	£	£	£
Merchandise.....	86,236,577	87,072,647	+ 836,070
Gold	208,585	152,268	− 56,317
Total imports	86,445,162	87,224,915	+ 779,753
Exports—			
Merchandise.....	80,925,433	56,308,343	−24,617,090
Gold	1,481,491	9,660,676	+ 8,179,185
Total exports	82,406,924	65,969,019	−16,437,905

The Commonwealth Government is making satisfactory progress with its loan conversion operations into the new 6 per cent. loan, 1937. To meet the £10,400,000 loan which matured on March 15, conversions amounted to £5,748,000, and cash subscriptions to £7,653,000, leaving a margin of three millions, which is to be applied towards immediate redemption of the December maturity, where desired by holders. For the 6 per cent. loan of about 60 millions maturing in December the conversion applications are already about 25 millions. The 6 per cent. Commonwealth loan, 1937, is also being issued for cash over the State Treasury counter at par, money being required for State purposes.

The Loan Council is taking steps to supervise the borrowings of large public bodies outside the State Governments, and has intimated to the Melbourne and Metropolitan Board of Works that it considers that the latter should not pay more than 6¼ per cent. on a conversion loan to provide for a 6½ per cent. loan of £250,000 maturing on April 1. The Board of Works is accordingly offering a 6¼ per cent. conversion loan, 1940, for cash and conversion at par. The Board had been negotiating for a 6½ per cent. loan, and the change is somewhat embarrassing.

Letters to the Editor.

A PROTECTIONIST FALLACY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr H. G. Williams, with the characteristic intolerance of the bigoted protectionist, dismisses Mr Beard's moderately stated Free Trade argument with the graceful words: "Of course, Mr Beard is writing nonsense." I do not doubt that Mr Beard is fully capable of defending his position, but may I make a few comments of my own? The point at issue is, whether exports from a protected country are paid for either in raw materials and foodstuffs or in manufactured goods. Mr Beard takes the latter view, under existing circumstances, and Mr Williams the former. I believe Mr Beard is correct, but does it really matter? In any case, the exporting worker or manufacturer expects payment in one form or the other, and whether the worker takes his wages in, say, boots which he wears, or bananas which he eats, seems to me immaterial. If he has enough food he buys boots, and if enough boots he buys bananas.

Whilst on the subject of "writing nonsense," to use Mr Williams' expression, may I give one glaring example from his own letter? Mr Williams sums up the Free Trade position in these words: "Mr Beard's only conclusion on the subject is that the ships of the world should be engaged in conveying vast quantities of identically similar goods at enormous speeds in opposite directions," and then adds that one ship going backwards and forwards, but which never discharged its cargo, would be equally effective. Such a parody of the basic principles of international trade, or internal trade for that matter, is scarcely worth refuting. For the same reason that the bootmaker of Leicester does not exchange his boots for the rival and similar products of another manufacture in the same town, so neither does the exporter do anything so foolish. Foreign trade in essence is complementary, and it is no less futile to restrict exchanges between Newcastle and Leicester than, say, London and Paris.—Your obedient servant,

FRANK MORRIS.

Constitutional Club, Northumberland Avenue.

FARM RELIEF IN THE UNITED STATES.*

To the student of current American politics "Farm Relief" and "Agricultural Reform" have a definite significance, and the importance of the issues raised by the claims of the agricultural interests in the United States to the assistance of the Legislature in redressing the disequilibrium between the status of the American farmer and of those who might be regarded as his economic equals in the industrial and commercial spheres, finds a parallel in certain phases of current discussions on the fiscal policy of this country.

From the increasing attention given to the subject by Congress and Senate, by politicians, economists, and partisan propagandists since the introduction of the Fordney Emergency Tariff Bill in 1920, it may be assumed that the justice of the farmers' claims has been broadly admitted. The problem of the moment, therefore, is the formulation of a policy which will restore to agriculture its proper place in the national economy.

While the proposals put forward with this end in view have taken a considerable variety in form, those which contemplate the intervention of Government assistance in raising the prices of agricultural products in the domestic market and in controlling the exportable surpluses have excited the greatest amount of public interest and given rise to the more intensive discussion. Whether the emphasis thus given is a satisfactory measure of the relative importance of price-fixing and surplus-controlling proposals as compared with other phases of the agricultural relief problem, is questionable, but, be that as it may, the objectives sought are sufficiently fundamental to the national well-being to justify a thorough and unbiassed examination of the proposals themselves. From this point of view, therefore, the Farm Export Debenture Plan commands the serious notice of all who may be connected in any way with the problems at issue. Published by the Food Research Institute, of which the author is a co-director, the work, extending to 265 pages, is a most thorough description, analysis and criticism of the plan on which the major part of the controversy has been focussed.

In common with its main rival in the schemes of agricultural reform, namely, the equalisation fee, the export debenture plan is based on the assumption that the main cause of the agricultural depression is the low purchasing power of farm products, and it aims at such a manipulation of the tariff as will raise the farm prices of those products of which the United States produces export surpluses, and, further, raise domestic prices of those products above their export prices. The mechanism of the plan, in essence, provides for the issue of bearer certificates—the debentures—by the Treasury to exporters of farm produce, the certificates being receivable within one year of issue in payment of Customs duties on imports.

In examining the many claims put forward in support of the plan, the author has sought to "treat the matter with unmistakable fairness, but also with the thoroughness and insight that standards of research dictate." The case for the plan, both from its defensive aspects in relation to alternative plans, and from the positive elements of justice, appropriateness, simplicity and effectiveness embodied in it, is fully stated and dispassionately examined point by point from many angles. No serious argument for or against the proposals would seem to have escaped the author's notice, and, to quote his own words, "If the conclusions tend more nearly to coincide with President Hoover's views than with those of the adherents of the proposal, this is merely the end to which our efforts at unbiassed economic analysis have led."

That the conclusions have been arrived at in the spirit of the author's expressed purpose is evident from the care taken to assess the probable results of the operations of the debenture plan from such standpoints as the cost to the Treasury, the reactions upon prices and production of the main agricultural products, and the possible reactions of foreign Governments. The lessons which may be drawn from the experience of other Governments in the applications of export bounties have also been freely drawn upon.

The Stock Exchange.

AMERICAN TOBACCO COMPANIES.

On both sides of the Atlantic the tobacco industry has long offered a favourite field for the conservative investor. The prosperity of the British tobacco companies is proverbial, but few shareholders of Imperial Tobacco, British American Tobacco, or Carreras are cognisant of the rapid progress achieved by the industry on the American side during recent years.

The investor who is impelled to make further inquiries will find, at least, that he is not confronted, at the outset, with the traditional secrecy under which the British companies are wont to cloak the prosperity of their trade. While it is impossible to ascertain the cigarette consumption of the British citizen, we are told month by month exactly what our American brothers and sisters are smoking by way of cigarettes, cigars and leaf tobacco. Last year, for example, the cigarette consumption of the United States of America was 12.3 per cent. greater than in 1928, smoke having ascended to heaven from no less than 119,000 million cigarettes. According to the Standard Statistics Company (whose figures we are quoting), the production of cigarettes this year may approximate to 133,000 million. American production of cigars last year amounted to over 6,500 million, an increase of 15 per cent. as compared with 1928, though 1927 and 1928 had shown a tendency to decline. Of the total number of cigars produced last year 54 per cent. were of the 5 cent class which, the connoisseur will regret to learn, is becoming increasingly popular. The increase in the consumption of tobacco in America suggests that the habit is sufficiently well rooted in modern American life to justify the attention of the British investor.

We propose to deal, not with the results of the cigar companies, which have the most difficult section of the tobacco trade to exploit, but with those of the leading manufacturers of cigarettes and smoking tobaccos, which show a high level of prosperity. About 97 per cent. of the total American production of cigarettes is accounted for by four companies. American Tobacco produces 33⅓ per cent. of the whole; R. J. Reynolds, 33 per cent.; Liggett and Myers, 22 per cent.; and Lorillard, 8½ per cent. The first three may be regarded as seasoned industrial investments, but the fourth has an entirely speculative character. The bugbear of the cigarette trade in America is intensive competition, which involves the leading companies in enormous advertising expenditure and periodical price-cutting wars. It is estimated that American Tobacco and R. J. Reynolds spend about $14 million a year each and Liggett and Myers and Lorillard about $7 million each on advertising. The sales programme of the American Tobacco calls this year for considerably more advertising space, and some estimates of its advertising budget run as high as $18 million. In the matter of price-cutting wars, the belligerents, after a long struggle, signed a truce last October, and advanced wholesale prices to $6.40 per 1,000 cigarettes, an agreement which is expected to increase their earnings this year in spite of heavier advertising expenditures. In the retail trade a price-war is still being waged. Raw material prices, on the whole, are lower than they were twelve months ago. Whether the agreement of last October will, however, usher in a new period of prosperity has still to be demonstrated.

The growth in the common share earnings of American Tobacco, Liggett and Myers, and R. J. Reynolds and the decline in the earnings of Lorillard over the past five years is shown in the following table:—

Common Share Earnings—Million $.

	1925.	1926.	1927.	1928.	1929.
American Tobacco Co.	19·1	19·3	20·1	21·8	27·0
Liggett and Myers ...	13·7	16·1	17·2	17·8	20·4
R. J. Reynolds.....	25·2	26·2	29·1	30·2	32·2
Lorillard	4·8	3·3	1·7	1·0	0·5

R. J. Reynolds has the reputation of being the best profit-earner in the American tobacco industry. It is the second largest cigarette manufacturer, the annual production of its "Camel" brand being estimated at 39,000 million. It is also a large manufacturer of plug, twist, and smoking tobaccos, the best known of its smoking tobaccos being "Prince Albert." The company has no funded debt, and retired its preferred stock in 1926. It carries its goodwill in its balance sheet at $1. Its capital now consists of 1,000,000 shares of voting $10 common stock and 9,000,000 shares of non-voting $10 "B" stock. For nine years in succession its earnings have shown an unbroken increase. Dividends have been steadily increased, and are now on a $3 annual basis. The last stock dividend was 2½ for one at the end of 1928, when the par value of its stock was reduced from $25 to $10.

The American Tobacco Company is the largest cigarette manufacturer in the industry. Among its best-known cigarette brands are "Lucky Strike," "Sweet Caporal," "Pall Mall," and "Lord Salisbury," and among smoking tobaccos "Tuxedo" and "Bull Durham." Cigarette production is the leading branch of its business—its current output is estimated at 40,000 million a year—but the company is said to have a greater diversity of output than its competitors. It holds a large majority of the common and preferred stock of American Cigar, which produces the highly advertised "Cremo" cigars, and it has also a holding in Schulte Retail Stores. Including $19,529,180 of Class "B" common stock offered to shareholders in September last year at $25 a share, the capital now consists of $52,699,700 6 per cent. preferred stock and $117,175,500 in common and "B" stock of $50 par. The common and "B" shares rank equally in all respects, except that the "B" shares have no voting power. Both classes of common stock received $10 per share in dividends in 1929.

Liggett and Myers is now the third largest manufacturer of cigarettes, its "Chesterfield" brand being produced at the rate of about 26,000 million a year. Its other well-known brands are "Piedmont" and "Fatima." It is also one of the largest manufacturers of smoking tobacco, and the world's largest plug manufacturer. Its earnings have shown a remarkable expansion in the last five years. As at December 31, 1929, it wrote $40,709,711 of goodwill down to $1 in its balance sheet. It has $28,306,000 of funded debt and its share capitalisation consists of $22,514,100 in 7 per cent. preferred stock, $21,496,400 in $25 voting stock and $56,930,725 in $25 non-voting stock after giving effect to the subscription of one new share of common "B" at $25 for each five shares in February this year. Both classes of common are on a $4 annual dividend basis, with an extra dividend of $1 per share annually.

Lorillard is now the fourth largest manufacturer of cigarettes, its "Old Gold" brand being produced at the rate of 10,000 million a year. As a result of the price-war and heavy advertising expenditures its earnings have been declining in recent years. The next twelve months may afford a decisive test of its position in the trade. Its capitalisation now consists of $11,307,600 in $100 7 per cent. preferred shares and 1,908,505 shares of no par value common stock. Its funded debt aggregates $35,012,200.

The following table shows the recent course of prices of the shares of these four companies, with information as to yields on dividends and on earnings:—

	Highest Price, 1929.	Lowest Price, 1929.	Present Price.	Div. Rate. $	Div. Yield. %	Earnings per share, 1929. $	Earnings. Yield. %
American Tobacco "B"	235	160	240¾	10·0	4·2	11·53	4·8
Liggett and Myers.....	106¼	80	109¼	5·0	4·6	7·82	7·2
Reynolds "B"	66	29	52⅞	3·0	5·7	3·22	6·1
Lorillard	31½	14¼	25	Nil	...	0·28	1·1

Prospects for the current year are naturally pitched in a high key, and may need discounting later, in the light of fuller information. The estimates of one authority (generally conservative in its prognostications) suggest that American Tobacco may show earnings of nearly $21 per share, R. J. Reynolds of $3.52 per share, and Liggett and Myers of $12 per share. Lorillard is, of course, a distinct speculation, but it is expected to make a better showing this year, some estimates of 1930 earnings running as high as $3 per share. The investor who contemplates an interest in these shares, however, would do well to remember that tobacco stocks were among the leaders in the 1930 recovery in the New York stock markets. At the bottom of the last autumn "slump" the shares of these four companies were 20 per cent. below the maximum reached in 1929. Two of them are now actually above the latter level, so that some caution is called for on the part of prospective buyers.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
May 6.	May 8.

A dull week was broken by the May Day holiday, on which the Bank of England reduced its official minimum discount rate—without any reflection, it may be understood, on the conduct of those members of the Stock Exchange who had dispersed to enjoy somewhat brighter sunshine than had previously found its way into the "House." The monetary situation at the beginning of the week had not, in fact, been regarded as over-encouraging, and gilt-edged prices had generally been marked down as a precautionary measure. The recession in New York, though hailed as a wholly healthy sign, was not conducive to activity in industrials or internationals, while the continued weakness of base metal prices unfavourably affected many of the speculative share markets. The reception afforded some of the week's new capital issues, and the threat of even more solid issues to come, also made for a restriction of business, and, in the circumstances, the relatively small extent of the falling-off in share values was regarded as a matter for congratulation.

Gilt-edged stocks were heavy at the outset, but improved steadily as the week progressed, with an inevitable accession of activity on Friday after the Bank rate reduction. The new Four-and-a-Half per Cent. Conversion Loan recovered after being marked down to 1¼ premium, and War Loan was strong on going ex-dividend. Favourable Press comments on the measures taken by the Viceroy were reflected in the steadier tone of India stocks, though the market remained depressed. Among Dominion and Colonial stocks, Australians suffered a fractional decline, and New Zealand loans were heavy on the eve of the new issue. Home corporation stocks were irregular, but inclined to harden. West Ham scrip opened at 1⅝ discount.

Foreign bonds were dull. Scattered realisations of Brazilian stocks continued, the position scarcely being helped by the conservative response of investors to the new San Paulo issue, which is discussed on page 1006. European stocks were neglected, though Turkish Unified had a better appearance. Few measurable changes were recorded in Far Eastern stocks.

Home railway prior charges showed appreciable weakness before the change in Bank rate. The ordinary stocks were influenced by another batch of unfavourable traffic returns. The gross receipts of all the four groups for the year to date now show a decline as compared with the corresponding period of 1929. Argentine rails had a sharp reaction, liquidation, due to unfavourable traffic figures and the weakness of the peso, finding dealers unwilling to take stock. Great Western of Brazil held their ground. Canadian Pacific came within the orbit of the recession in America.

Business in the Industrial markets was on a limited scale, though the undercurrent of sentiment became slightly firmer as the week progressed. The reaction in

New York depressed quotations for internationals, dealings in which were left mainly in professional hands. One striking exception was provided by Columbia Graphophone, which rose sharply on Monday on the impression that a definite statement on the merger with H.M.V. was at hand. The movement spread to the latter company's shares. Unilevers were sold after the meeting, the terms of the proposed large share issue being held to allow only a moderate " turn " on the market price, less " rights " and accrued dividend. Breweries had an easier tendency and little disposition was evinced to open fresh commitments in tobacco shares. Electrical manufacturing concerns showed fractional declines, and " heavy " iron and steel shares remained neglected. The spurt in selected motor-car issues having come to an end, price movements in this group were easier for choice. The Dunlop dividend was in accordance with expectation, but sellers predominated in the market. Rayon shares were quieter than for some time past. The Spillers' report, discussed on page 1008, induced no great selling. Imperial Chemicals receded slightly, the annual meeting revealing no concrete factor on which a bullish " story " could be based. Business in bank and insurance shares was still further contracted, prices trending slowly downwards.

Exceptionally quiet conditions obtained in the rubber share market, the weakness of the commodity, on the eve of the " tapping holiday " bringing out only a small amount of stock. The rubber position is discussed in an " Investment Note " on page 1006. Dullness in tea shares was accentuated by the easier tone at the week's commodity auctions. The moderate activity of the previous week in the oil share market was arrested by the setback in New York, a slight rise in the daily rate of American crude production, and the absence of support from Paris.

The unsatisfactory tendency in the metal markets cast a gloom over mining shares, and practically all movements were downwards. Tin receded further to £153 1s. 3d. on Wednesday, and many quotations were no longer able to bear up under the persistent depression. Substantial losses were recorded by several Eastern descriptions, and London Tin dropped to 24s. 6d. Copper shares were weak in sympathy with the metal. Rio Tintos were freely offered and lost a point to 41½. In the Rhodesian market early firmness was not held. Rhodesia Katanga remained steady at 1¾, but Congo Border declined ⅛, and Bwanas, Anglo-American and Roan Antelope were all easier. Kaffirs were quiet, with Sub Nigel a strong exception at 2½, but Consolidated Main Reef and Village Deep moved up on a limited enquiry. Panama Corporation showed some weakness, following the new issue.

NEW YORK.

Selling still persists in the share market, with rallies few and far between, the general feeling of pessimism being the most pronounced since the early winter, in spite of reassuring statements by the Washington Government. This is plainly due to the cumulative force of poor industrial and railroad corporation reports for the first quarter. Brokers' loans have risen $450 million during the past five weeks. The decline in prices, numerous dividend cuts, continued low freight-car loading figures and fresh drops in the price of copper and other commodity prices have destroyed any false hopes of a trade revival which may have been built upon a good market during February and March, and pessimism is now probably being overdone. Stock prices have lost the greater portion of their gains made since the beginning of the year, coppers and rails being particularly hard hit. Oil stocks are doing fairly well, and public utilities were steady until to-day. Brokers' loans are up $57 million this week, although prices made a sharp downward movement, largely due to the continuance of American Telephone bond conversions, borrowing on recent new bond issues, and payments for the week of $40 million on rights to subscribe to the offerings of new stock. Bond prices are strengthening.

CANADA.

The Canadian stock markets had a stronger tone during April, with a recession at the end of the month. The rise in wheat prices helped to restore confidence in the immediate business outlook. Although the grain market subsequently suffered a setback, the feeling of optimism which the arrival of spring always generates in Canada prevented serious repercussions. There has been nothing which could be described as a real " bull " movement, and the course of the market has been marked by irregularities, but, under the leadership of public utility stocks like Montreal Power and Shawinigan, the general tendency was upward. The public still refuses to indulge in speculative activities except upon a very guarded scale. The most important event was the announcement of the plan for the reorganisation of the capital structure and general consolidation of the British Empire Steel Corporation and its subsidiary companies. On the whole, the Stock Exchanges took a favourable view of the plan. Some of the newsprint stocks were also better, but the average operating ratio of Canadian newsprint mills in March was only 68.4 per cent. of capacity. The Canadian money market has shown a gratifying capacity for the absorption of bonds. The stocks of the larger Canadian oil companies have been beneficially affected by the success of plans for the curtailment of production in the United States, and issues like Imperial Oil and International Petroleum have moved forward several points. The mining market remains deplorably dull and the recent sharp cut in the price of copper has not helped the prospects of the copper mines. Markets, as a whole, are expected to be quiet until the appearance of the Federal Budget, which is expected to contain tariff changes affecting a wide variety of industries.

INVESTMENT NOTES.

Chilean Nitrate Developments.—The inspired announcement that proposals have been drawn up for the formation of a £75,000,000 company to take over all the nitrate fields of Chile may be regarded as a *ballon d'essai*, which is the more significant in view of Lord Melchett's revelation that the synthetic nitrogen industry is working below capacity. It reported that the Chilean Government will take one-half the new company's capital, ceding in return all the undeveloped nitrate fields and remitting the export tax of £2 10s. per ton. The remaining capital will be divided between the nitrate-producing companies on the basis either of Stock Exchange quotation or average earnings. The new company will aim at achieving all the economies of " rationalisation," by concentrating on the large producing units, closing down small oficinas and constructing new oficinas in the most productive undeveloped ground. The Chilean Government will be compensated for the loss of the export duty by the proceeds of an issue of £3,000,000-£4,000,000 of debentures by the company. This is an ambitious scheme, which follows rapidly upon the attainment by the (American) Guggenheim interests of the dominant position in the industry. It has long been evident that the export tax must go, in view of the rise of " synthetic " competition. The Chilean Government, however, has acted astutely, having given the industry, in effect, a series of preliminary and partial remissions of the duty by means of " subventions," while steadily reducing the part played by nitrate revenue in the national Budget. The proposed arrangement would represent by no means a bad bargain for the Government. The company's first problem would be to secure the liquidation of the present excessive stocks of 1,300,000 tons of nitrate in Chile without upsetting the market. The subsequent course of events will be watched with interest. The company might endeavour, by rationalisation, further to bring down costs, and thus to compete *à outrance* with the synthetic producers. On the other hand, it might utilise the elements of strength in its position so as to secure a favourable *modus vivendi* with the synthetic producers. The " natural " product is claimed to possess certain agricultural qualities which are not present in its synthetic competitor, and although it supplies at present only about one-fifth of the world's nitrogen requirements, this is a sufficient proportion, given the present state of the industry, to make it worth while for the synthetic producers to come to a friendly agreement if satisfactory terms are forthcoming.

Imperial Chemical Meeting.—Lord Melchett's pronouncements at the annual meetings of Imperial Chemical Industries are read with exceptional interest by investors. Not only does his Lordship speak for one of the largest of all British concerns, with a paid-up capital of £76,481,759 and an acknowledged position in the front rank of the world's chemical producers, but Lord Melchett himself has come to be regarded as the most outstanding exponent of " rationalisation " in the British industrial sphere. His references, at Wednesday's meeting, to this subject, and to the effect of heavy taxation on industry, are discussed in a " Note of the Week " on page 988 of this issue. As regards the position and prospects of the company itself, the chairman was at pains to show that the merger was not " top heavy," in any sense of the term, that the balance sheet revealed a position of strength and solidity, particularly as regards reserves (some 20 per cent. of the profits of 1928 and 1929 had, his Lordship declared, been left in the business), and that the vast operations of the combine had been so organised that the men at the top were not over-burdened with a mass of detailed administrative duties. Lord Melchett made no secret of the fact that, although the world's nitrogen consumption had doubled in the last six years, the synthetic industry was passing through a difficult period, and that the company's Billingham factory possessed a larger plant than could immediately be utilised. This part of the speech should be read in conjunction with the report of a comprehensive merger among Chilean producers, to which reference is made on this page. Lord Melchett was equally frank regarding what some observers have always regarded as one of the " lame dogs " among the company's interests—the dyestuffs' industry. He declared that " an altogether surprising amount of progress " had been made. Sales' methods had been reorganised both at home and abroad, so that the British dye industry now produced 93 per cent. by weight and 72 per cent. by value of British dyestuffs' requirements. He made, however, a plea for " sympathetic consideration " from the Government—in other words, for the retention of the protection afforded by the Dyestuffs' Act. One of the most interesting parts of the speech, from the point of view of shareholders, related to the investment of Nobel Industries in General Motors, which the I.C.I. took over on the liquidation of the former company. Though the investment was originally made from motives of policy, it had proved so profitable that its appreciation in market value provided, on the liquidation of Nobels, a reservoir from which £2,300,000 was carried to capital reserve and £1,000,000 to free reserve, while a further large amount was utilised for writing-off the expenses of the I.C.I. and forming the nucleus of an obsolescence reserve. Last year's New York slump temporarily wiped out part of the appreciation in market value on which these transactions were based, but the subsequent recovery in New York has largely restored the situation, so that the present market price is practically equal to that at which the holding was taken on to the I.C.I.'s books. Though Lord Melchett did not mention the fact, this connection is presumably beneficial to the company in another respect, since the Du Pont interests (one of the " Big Three " of

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

the American chemical industry), are also large holders in General Motors, which thus forms a link between the I.C.I. and a most important Transatlantic chemical interest.

The Rubber "Holiday."—On Thursday last the entire rubber plantation industry under European control "downed tools" for a month, as a means of relieving the market of heavy stocks and improving the price of rubber. The step is without parallel in the annals of the industry, partly because the measure of restriction which it involves is to be achieved at a single stroke instead of being spread over twelve months, and partly because it marks the first occasion on which Dutch and British interests have found it possible to agree on joint action. For the first time, again, an endeavour has been made to secure a substantial measure of support from native growers. The importance of the latters' co-operation is a matter of prime moment in view of the Rubber Growers' Association's recent estimate that nearly half the 6,000,000 acres under rubber are in non-European hands. It is understood that some success has attended efforts in this direction, but, in view of the well-known exigencies of native finance, the concrete results should not be over-estimated. In the long run, a month's stoppage cannot be a cure for the ills of the industry if production and consumption are violently out of adjustment, though it may temporarily reduce a stock which tends to press heavily on the market. Indeed, the general absence of enthusiasm either among British or Dutch growers, suggests that many have supported the present scheme on grounds of expediency rather than of economics, on the belief that some sacrifice is justified in order to cement the possibility of constructive action between the Dutch and British branches of the industry in the future. In the meantime, prices this week have fallen to 6¾d. a pound, the lowest figure for eight years. The reports of representative companies now appearing are somewhat deceptive as to the real conditions of the industry, since they show in many cases a rise in earnings last year as compared with 1928:—

Company.	Net Profits. 1928.	1929.	Ord. Div. 1928.	1929.
	£	£	%	%
Cheviot	31,024	32,667	10	10
Grand Central (Ceylon) Rubber	68,136	57,417	5	5
Jugra Land and Carey	73,101	83,442	5	5
London Asiatic	52,951	59,885	15	15
Pataling	22,973	33,603	10	12½
Rembau Jelei	55,372	44,526	10	7½
Rosehaugh (Ceylon) Rubber	16,219	30,153	5	5
Strathmore	22,402	17,857	5	5
Sungei Salak	8*	19,338	nil	nil
Sungei Way	19,123	19,482	7	7

* Loss.

The rise in earnings is due in large measure to forward contracts made at relatively favourable prices—sometimes, at over 1s. a pound. For the present year, few producers have sold forward to any considerable extent, and, clearly, unless consumers are intimated by the "tapping holiday" and a "squeeze" occurs, it is unlikely that contracts can be made at any figure much above the present market price.

The San Paulo Loan.—We understand that underwriters will be called upon to take up a large proportion of this week's £8,000,000 issue of the State of San Paulo 7 per cent. Coffee Realisation Loan. There has been for some time an unofficial embargo on foreign loans, the proceeds of which are not to be spent in buying British goods. The issue of the San Paulo Loan suggests that this attitude has been modified. No doubt the three houses which sponsored the British issue—Baring Brothers, Rothschild and Sons and J. Henry Schröder—were able to argue that the loan moneys would be ultilised in part to repay British banking credits already issued. There are, however, several features of the San Paulo Loan which may appeal in due course to comparatively large investors. The stock is of short-term character, with a maximum ten years' life, and is self-liquidating. The San Paulo Government has undertaken to dispose of an amount of coffee each month which will be more than sufficient to redeem one-twentieth of the loan each half-year. Moreover, redemption is to take place by means of half-yearly drawings at par. Besides being a direct obligation of the San Paulo Government, the loan is specifically secured on 16,500,000 bags of coffee valued at £41,000,000, the documents of title to which will be transferred to the loan trustees and cancelled as the coffee is disposed of. Payment of interest is specially secured by the hypothecation of a special tax levied on all coffee arriving at Santos or being despatched outside the State of San Paulo. In so far as this loan enables Brazil to liquidate its unsold stocks of coffee in an orderly manner over a period, and so to rid itself of an unsound scheme of coffee defence which has had the effect of slowing down the whole trade of the country, it will have a beneficial effect on international trade. The Committee of the London Stock Exchange has refused permission to deal in the stock until Congress has passed the necessary laws creating the special tax of 3s. a bag and formally ratifying the loan contracts. This is expected to take place early next week. It may be asked why the issue was made with such appearance of haste as to render necessary this decision, which, while sound (and, indeed, inevitable), must clearly put the unfortunate underwriters to considerable inconvenience, unless the issuing houses agree to postpone the first date of payment.

Nizam's Railways—a "Compensation" Question.—The arrangement under which H.E.H. the Nizam's guaranteed State Railways are being taken over by the Nizam's Government this year, instead of in 1934 as under the terms of the agreement, is of special interest, in view of the fact that other Indian railways, such as the Assam-Bengal, Bengal and North-Western, Rohilkund and Kumaon, and Madras and Southern Mahratta, may be passing from private to public ownership in the course of the next few years, if the Government exercises its options. Viewed broadly, the settlement is unquestionably favourable to stockholders in the Nizam's railways, since, in return for giving up a thoroughly efficient and prosperous property for a possible £260 or £270 per £100 of stock on January 1, 1934, they are obtaining something between £300 and £310 (partly in cash and partly in debentures repayable in three years or less) for a sale as from April 1, 1930. Some discussion, however, has centred upon the payment of £110,000 as "compensation" to those affected by the transfer. The allocation of this amount has been left in the hands of the directors (three of whom have been appointed liquidators of the company at a remuneration of £1,500). Certain speakers at a meeting on January 21st last advocated liberal treatment of all concerned, but some shareholders have asked whether an amount equal to a levy of £5 10s. on each holder of £100 stock is not somewhat excessive in the circumstances. Some £25,000 has been allocated by the directors to themselves. The former agent of the railway in India, Mr Lloyd Jones, who is one of the advisory committee set up in London by H.E.H. the Nizam's Government under the new *régime*, is recognised as having performed most valuable services both before and during the negotiations, and no criticism would follow a generous recognition of his efforts. Even so, it is pointed out by critics of the scheme, something of the order of £65,000 remains, the destination of which has not been made clear. Certain of the higher European officials may, possibly not unfairly, receive an *ex gratia* payment, but this question, with that of "compensation" to the Indian staff, should be viewed in the light of the fact that the Nizam's Government has offered to take over all concerned, from platelayers to senior officials, on the same terms of remuneration as under the company. The directors, who will receive, under the suggested arrangements, much more than four years' fees, may conceivably see their way to meet the views of this section of

opinion by announcing, at the earliest possible moment, the basis of allocation of the £110,000 in question—the distribution of which is, of course, by virtue of the stockholders' resolutions, entirely within their discretion.

Gramophone Shares.—Dullness in the industrial share markets has been relieved by great activity in gramophone shares—in Columbia Graphophone and H.M.V. on rumours of a merger, and in Vocalion in fearful anticipation of the dividend and report. The directors of Vocalion have now issued a circular to prepare their shareholders for the worst of the report, which will be submitted towards the end of June. It is common knowledge, they declare, that the field of the low-priced gramophone record has been invaded by innumerable competitors. Competition reached its height in the first half of the company's financial year (ending March, 1930), and as a result the sales for that period showed a decline. Various steps taken by the directors to meet this competition have proved "so successful" that this decline has been practically recovered in the latter part of the year, the sales during the last three months showing an increase of nearly 20 per cent. over the corresponding period of the previous year. In deciding not to pay an interim dividend, the directors were influenced by the company's financial requirements not only in the expansion of the gramophone trade but in preparation for the recording of talking films. Whilst the profit for the year may be less, substantial earnings will be shown. This guarded statement will be received with mixed feelings by shareholders. For the previous year the company showed earnings of 47.7 per cent. on its issued ordinary capital of £250,000 (in 10s. shares) and paid 40 per cent. in dividends. Columbia Graphophone and Gramophone (H.M.V.) have recently announced interim dividends—the first 15 per cent., as in the previous year, and the second 5 per cent., as against 10 per cent., both being paid on increased capital. Columbia has now a capital of £1,583,310, of which £1,283,310 is in ordinary shares of 10s., and Gramophone a capital of £3,300,000, of which £3,200,000 is in ordinary shares of £1. Columbia is expected to pay 45 per cent. or more for the year, and H.M.V. 30 per cent. (on its doubled capital). It is beyond doubt that negotiations are in progress for a merger between the Radio Corporation (which controls Victor Talking, which in turn controls H.M.V.) and Columbia Graphophone, and it is believed that Radio Corporation has already acquired a holding in Columbia, but at this stage it is idle to speculate as to the form and terms of the merger.

Sofina.—The British investor will find much of significance in the first annual report of the directors of Sofina (Société Financière de Transports et d'Entreprises Industrielles), which was formed in December, 1928, as a merger between the old Sofina and Trufina (Trust Financier de Transports et d'Entreprises Industrielles). This Belgian company is one of the world's largest investment trusts specialising in public utility holdings and the finance and management of electrical undertakings. It owes its present prosperity largely to the genius of M. Heineman, the managing director. British interests are represented on its board of directors by Sir Philip Cunliffe Lister, Mr. Dudley Docker and Mr Reginald McKenna. The company's chief holdings are in the Banque de Bruxelles, Société Centrale pour l'Industrie Electrique of Paris (which has holdings in electricity, gas, tramway and industrial concerns in France, Spain, Portugal, Turkey, South America and Indo-China), Electric and Railway Finance Corporation of London, and the American and Continental Corporation of New York. The best-known of its public utility companies are "Chade" (Cie. Hispano Americana de Electricidad operating in South America), "Sidro" (S. Internationale d'Energie Hydro-Electrique which has large interests in Barcelona Traction, Mexican Light and Power and Mexican Tramways), Compagnie Générale de Tramways de Buenos Ayres (which has holdings in Anglo-Argentine Tramways), and Société d'Electricité de Rosario. The directors' report discourses at length upon the electrical developments of the world, and refers in particular to the reorganisation of the companies engaged in the production of electricity in Belgium. As the result of an agreement between the Banque de Bruxelles, Société Générale de Belgique, Le Banque de Paris et de Pays Bas and Sofina, one of the most important of the Belgian electricity companies (Electrobel) has been reorganised. The directors conclude a somewhat discursive report with remarks upon the wastefulness of sterilised gold, which they regard as one of the principal causes of the fall in commodity prices. The company has a capital of £7,147,776, half in preference shares and half in ordinary shares of 500 francs. Its holdings have a book value of £2,812,052, of which the market value last September was approximately £20,000,000. The income (by way of dividends) for the year to December, 1929, amounted to £803,653, and the net profit, after depreciation, to £666,956. This enabled dividends to be paid on the preference shares and total dividends on 97,756¼ old shares of 700 francs per share and on 102,243¾ new shares of 350 francs per share. A strong financial position is disclosed by the balance sheet, cash in hand and at bankers amounting to £7,868,829.

Dunlop Rubber.—The accounts for the year ended December 31st last reveal a satisfactory recovery from the low level of earnings of the previous twelve months, when the abrupt removal of rubber restriction and the consequent serious drop in the price of crude rubber brought about a sharp slump in profits. Net revenue for 1929 totals £1,886,335, which, while nearly twice that of last year, is still some £650,000 below the level of 1927. The final dividend of 9 per cent. on the ordinary shares makes 15 per cent. for the year, against 20 per cent. for 1929, absorbing £924,461. The payment, unlike that of last year, is well covered by net earnings of £1,591,022, representing 25.8 per cent. on the ordinary capital:—

	Year ends December 31, 1927.	1928.	1929.
	£	£	£

Carried forward	578,580	801,278	782,328

* Dividends on preference shares of Dunlop Cotton Mills, Ltd., Dunlop Plantations, Ltd., and Dunlop Rubber Co. (India), Ltd.

The sum of £150,000 has been added to general reserve account, which (with premiums on shares issued during the year, totalling £193,393) now stands at £3,373,105, despite the previous year's drain of £1,500,000. A further amount of £225,761 has been transferred to income-tax reserve, raising that item to £477,000, while the company has once more had to find preference dividends, requiring £309,750, for three of its subsidiaries, though the results of the American company, while not fully realising expectations, nevertheless show an improvement over 1928. On the whole, the tone of the report is quietly optimistic, and there seems little reason to fear that the setback of 1928 has prejudiced the general position of the company. At the present price of 14s. 6d., which compares with a high level last year of 26s. 9d., the ordinary 6s. 8d. shares give a yield of £7 4s. 6d. per cent. allowing for a final dividend of 9 per cent.

Johnson and Phillips.—The net earnings reported by this company for 1929 are nearly 90 per cent. in excess of those for the previous year. Great economies effected in the cost of production are stated in the directors' report to be principally responsible, although the improvement is also due partially to an increase in turnover. The recovery is even more substantial than would appear at first sight because the 1928 trading account included a transfer of

an unstated amount from reserves previously made and no longer required:—

Year ended December 31st.	1927. £	1928. £	1929. £
Net profit	62,597	55,831	102,514
Earned on ordinary	*10·43%*	*9·3%*	*17·08%*
Paid on ordinary	10%	10%	10%
Amount	60,000	60,000	60,000
Carry-forward	85,072	80,903	123,417

The balance sheet presents a satisfactory appearance, surplus liquid assets amounting to almost £680,000 after providing for the final dividend of 5 per cent. The reserve account of £250,000 and the carry-forward amount together to approximately 62 per cent. of the issued capital. At the last annual meeting reference was made to the exceptionally large contracts being placed by the Central Electricity Board, which were expected to have a beneficial effect, both directly and indirectly, on the company's business. The report now issued states that important contracts have been secured during the last few months. At the present quotation of 38s. 6d. the shares return around 5½ per cent.

Spillers.—The unsatisfactory results recorded by this firm of flour millers and distributors for the financial year ended January 31, 1930, emphasise the desirability of more stable conditions in this very uncertain industry. A gratifying profit of £309,958 in 1925 was followed in 1926 by a loss of £429,392. Since then there have been three moderate years, while for 1929 the company announces a loss of £221,510. No dividend has been paid on the ordinary shares since the 7½ per cent. in 1928, which was satisfactorily covered by earnings. The debit on the year's operations (including £54,865 for preference dividend) is met by adding a sum of £150,000 taken from contingency reserve to the £182,973 brought forward from last year's account.

Year ends January 31.	1928. £	1929. £	1930. £

The properties of the company, which figured in the last balance sheet at £3,778,128, have been drastically written down, and the present item, reduced to £2,843,373 by the application of over £1 million taken from reserves, provides a commentary on the roughness of the road which pioneers of "rationalisation" must frequently tread. The directors report that they have acquired new mills at Grimsby, and have closed down those at York, while Spillers Overseas Industries, Ltd., is "no longer necessary" as a separate organisation, and its assets have been transferred to the company. Meanwhile, with a view to further rationalisation, the company has formed, in conjunction with other millers, a Millers' Mutual Association for the purpose of shutting down redundant mills and concentrating sales within economic distances of the various plants. Holders of 832,795 deferred shares, who during the last seven years have received only one dividend of 5 per cent., will anxiously search the skies for signs of progress in these important directions in the near future. Dealings in the ordinary £1 shares have ranged round about 18s. during the past few days, against a high level last year of 32s. 6d.

Marks and Spencer.—A preliminary statement issued by this progressive company of bazaar proprietors reports excellent results for the year ended March 31, 1930. Net profit totals £298,589, after deduction of income tax, compared with £203,549 in 1929 and £139,621 in 1928. After payment of preference dividend, there remains £263,589, representing 39.9 per cent. earned by the ordinary capital, against 32.1 per cent. last year. The ordinary dividend, raised from 15 per cent. to 20 per cent., is thus almost twice covered. In addition, it is proposed to give a capital bonus of one "A" ordinary share for every ten ordinary or "A" ordinary shares previously held:—

	Year ended March 31, 1928. £	1929. £	1930. £
Net profit	139,621	203,549	298,589
Brought forward	19,548	24,776	37,023
Preference dividend	31,500	35,000	35,000
Rate %	9	10	10
No. of times covered	*4·4*	*5·8*	*8·5*
Ordinary capital:—			
Earned £	*108,121*	*168,549*	*263,589*
Paid £	43,066	78,802	132,000
Earned %	*32·6*	*32·1*	*39·9*
Paid %	13	15	20
To reserve	59,827*	77,500	117,500
Carried forward	24,776	37,023	51,111

* Contingencies fund and writing off preliminary expenses.

The sum of £100,000 is to be placed to general reserve account, against a previous £60,000, while, as before, £10,000 is allocated to properties contingency fund and £7,500 to preference share reserve. The present dividend distribution is payable on a larger capital than the 15 per cent. distributed last year, the bonus issue of £60,000 paid in May last having increased the issued ordinary capital from £599,977 to £659,977.

Holland-America Line.—The report of the Holland-America Line for 1929 reveals a further decline in earnings. A decrease in trading profits of over one million guilders is entirely attributed to the unsatisfactory course of the freight markets.

(Thousand guilders.)

	1927.	1928.	1929.
Gross earnings	6,760	4,411	3,477
Interest	1,294	1,475	1,131
Net earnings	5,466	2,935	2,346
Depreciation and reserve	4,970	4,920	4,806
Total loss	*496**	*1,984*	*2,460*
Capital	25,000	25,000	25,000
Reserves	18,535	16,551	6,012
6% Bonds	30,000	28,500	27,000

* Profits.

The loss has again been written off from the reserve fund, and the board, in addition, has deemed it desirable to write off entirely various other items which might otherwise have been distributed over a period of years. The book value of the fleet stands now at 113.40 guilders per ton—a decidedly low figure, the cost of building new steamers being about 250 guilders per ton for freight vessels and 700 to 900 guilders for passenger steamers.

New Capital Issues in April.—In the table below we show the new capital raised in London by issue to the public or shareholders in April and recent periods:—

(000's omitted.)

Monthly Average.	United Kingdom. £	British Possessions. £	Foreign Countries. £	Total. £
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597
1928	21,965	5,263	3,526	30,754
1929	16,502	5,081	2,186	23,769

Monthly Average.	Govt. £	Other. £			
Jan.–Mar., 1929	*617*	*18,757*	*8,797*	*4,147*	*32,318*
Jan.–Mar., 1930	12,803	11,973	5,360	1,120	31,256
April, 1929	*150*	*25,558*	*3,686*	*1,865*	*30,959*
April, 1930	450	10,223	1,228	10,869	22,770

The figures for April fell short of those for the previous month, especially as regards home flotations, though there was a large growth in loans to foreign countries. During the month sales of National Savings Certificates exceeded encashments by £450,000. The most important home corporation borrowers were Barnsley and Sunderland. The largest borrower was San Paulo, which offered £8,000,000 of 7 per cent. stock at 96, and the largest home borrower the Southern Railway, which offered £3,000,000 of 5 per cent. debentures at 98½. Large issues to shareholders only were made by the Venezuelan Oil Concessions and the Midland Bank, while Wiggins, Teape offered to the public £1,000,000 in 5 per cent. debentures (of which £237,888 represented conversions).

General Mining.—Despite the unfavourable conditions which prevailed last year for the operations of a concern of this kind, the General Mining and Finance Corporation realised a gross profit of £162,900, or nearly £10,000 more than in 1928. Some useful economies being effected in administration expenses, the net surplus comes out at £112,200, as against £90,300. Unfortunately, on the present occasion depreciation calls for £169,100, with the result that no dividend can be paid and the carry-forward becomes reduced from £120,300 to £61,150. In the balance sheet, stocks and shares figure at the slightly enhanced total of £1,058,000—which is substantially exceeded by their market value as a whole. The cash assets, including advances to other companies, show a surplus of £596,300 over current liabilities, or of £144,100 if the advances in question be ignored altogether. Of the company's interests the chief are in the East and West Rand Mining enterprises and Phœnix Oil. The latter has begun the payment of dividends.

Daggafontein.—Last year's operations were noteworthy for an arrangement of the finances of this concern to pave the way for a comprehensive development programme. Some 259,400 shares were offered to the members at 22s. 6d. The Anglo-American Corporation guaranteed this issue, and subscribed for 49,550 shares at the same price. At the date of the accounts the company had in hand net cash to the amount of £320,000, expenditure during the year having been small. Options at par until November 24th next are outstanding on 622,000 shares, and will doubtless be exercised in the event of developments continuing favourable. After the reorganisation of 1927, development was resumed by the extension of certain drives from the adjoining Springs property. Last year the payable footage opened up was 830, as against 545 in 1928, the inch-dwt. values figuring at 526 in place of 438. This, of course, is very small beer; but during the current year the footage will be considerably augmented. At December 31, 1929, the new shaft, known as No. 3, had reached a depth of about 300 ft. The reef is expected to be struck at a depth of 3,800 ft. by the end of 1930. Thereafter, progress will be much more rapid.

City Deep.—During each of the past two years it has been necessary to describe the position and prospects of this company with some reserve, and a similar remark applies in the present instance. The operating loss shows a further expansion at £139,200. The performance of an increased development footage again failed to be reflected in the ore reserve tonnage. This factor is attributed to the unproductive character of a considerable proportion of the work, but better results are foreshadowed for the current year. The available tonnage of 1,323,400 represents little more than a year's supply. Loan account has now increased to £385,400—not far short of the stipulated total of £400,000—the net deficiency of liquid assets at the date of the balance sheet amounting to £309,000. The consulting engineers describe the outlook at the mine as better than during the past two years. Improved operating methods have been introduced; reduction in costs and some recovery in grade is looked for. Last month there was a loss of only £750, as compared with £15,750 in November. Nevertheless, the company is facing an uphill task; and a drastic scaling down of capital appears inevitable. There are in issue 1,295,000 shares, quoted around 7s.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Czechoslovak Legions, Wiener Bank-Verein, Royal Exchange Assurance, Law Union and Rock Insurance, State Assurance, General Accident Fire and Life Assurance, Ocean Accident and Guarantee Corporation, Legal and General Assurance, Royal London Mutual Insurance, Cable Telephone and General Trust, Associated Electrical Industries, Rio de Janeiro City Improvements, Imperial Chemical Industries, Lunuva (Ceylon) Tea and Rubber Estates, London Trust, Henry Glave, James W. Cook, Hope Brothers, Champion Reef Gold Mines of India, and Mysore Gold Mining. At the annual meeting of the General Accident Fire and Life Assurance Corporation the chairman said that if the Road Traffic Bill passed into law it would possibly increase the motor premium income, but not, he thought, by any substantial amount, for there was no doubt that fully 95 per cent. of the owners of motor-propelled vehicles were already insured. Discussing the future of the Mysore mine, the chairman of the Mysore Gold Mining Company said that though the deepest development point of the mine was some 6,180 feet vertical, the neighbouring Champion Reef mine was finding rich ore at more than 600 feet greater depth. Presiding at the annual meeting of Associated Electrical Industries, Sir Felix Pole said that, whereas it had been widely supposed that the company was under American control, in point of fact the International General Electric Company held only a minority interest, and the voting rights of the International Company's shares had been placed in his (Sir Felix's) hands by virtue of a power of attorney. Lord Melchett's speech at the meeting of Imperial Chemical Industries is discussed on pages 988 and 1005 of this issue.

CAPITAL ISSUES.

A number of interesting issues were made this week. The £8,000,000 7 *per cent. State of San Paulo Coffee Realisation* loan, due 1940, is dealt with in an Investment Note on page 1006. This loan was left heavily with the underwriters. *Queensland* made an offer to holders of £3,781,700 Queensland 3½ per cent. stock, maturing on July 1st, to convert into an equal nominal amount of Queensland 5½ per cent. stock repayable 1934-6. At the same time an offer was made for subscription in cash to Queensland 5½ per cent. debentures, convertible into the new 5½ per cent. stock up to the amount required for repayment of any unconverted portion of the maturing loan. *Wiggins, Teape* issued £1,000,000 5½ per cent. mortgage debenture stock at 98—a fairly well-secured industrial investment—and

the *Panama Corporation* offered at par 250,000 of its £1 shares to provide funds for the development of its gold areas, regarding which it has issued somewhat glowing promises. This issue is frankly speculative, and came out at a not altogether favourable moment, despite the appearance on the prospectus (in the dual *rôle* of director and technical expert) of the name of a past-president of the Institution of Mining and Metallurgy. The capital market may be in danger of serious congestion and indigestion during the next few weeks. Loans are impending, or in contemplation, for various home corporations (including Grimsby), of Reparations Bonds, and for New Zealand, Japan, Austria and Hungary. The coming Unilever offer will call for a further £6,000,000. Last week's West Ham issue was left as to 84 per cent. with underwriters.

ISSUES OF THE WEEK.

Queensland Government 5½ per cent. Conversion Loan, 1934-36.—Offer of conversion to holders of £3,781,700 of Queensland Government 3½ per cent. inscribed stock, maturing July 1, 1930, at £97 per cent. Principal will be repaid at par on July 1, 1936, the Government having the option of redemption at par on or after July 1, 1934, on three months' notice. Trustees may invest in this stock. Further offer for cash of Queensland Government 5½ per cent. debentures, 1934-36, to an amount sufficient to make up, with the stock converted, the above total of £3,781,700.

Panama Corporation.—Issue of 250,000 shares of £1 each at par. The corporation was formed in April, 1926, to acquire two important concessions known as the Veraguas and Darien Concessions. The proceeds of this issue are required for the development of a new concession of approximately 2,000 square miles, in the provinces of Chiriqui, Veraguas and Bocas del Toro.

State of San Paulo 7 per cent. Coffee Realisation Loan, 1930.—Offer of £8,000,000 7 per cent. Sterling Bonds due October 1, 1940, at £96 per cent. On every April 1 and October 1, beginning April 1, 1931, a minimum of one-twentieth of the total amount of the loan is to be repaid by drawings at par. Payment of principal and interest is a direct obligation of the Government of the State of San Paulo, and is to be secured by the general bond of the Government, under which payment of interest is to be specifically secured by the hypothecation of the proceeds of a special tax.

Bognor Gas and Electricity Company.—Issue by tender of £14,000 new consolidated stock, ranking for a maximum dividend of 7 per cent. equally with existing similar stock. Minimum price of issue £102 per £100 stock. Also £11,000 5½ per cent. redeemable debenture stock, to be redeemed at par on January 1, 1940, minimum price, par. Net revenue of the company for the year ended December 31 last was £13,560, covering interest on debentures, including present issue, 4.5 times. Dividends on "A" stocks £8, "B" stocks £9 4s., and new consolidated stock £7.

Wiggins, Teape and Company (1919).—Issue of £1,000,000 5½ per cent. mortgage debenture stock at 98 per cent., of which part is to be utilised to pay off £224,000 8 per cent. first mortgage redeemable debentures at the rate of £106 4s. per cent. The company was formed in March, 1919, to acquire the paper-making business of Wiggins, Teape and Company. Net profits for the year 1929 totalled £328,694, covering interest on the above issue nearly six times.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices and dividend announcements, will be found on page 1029 under the heading "Company News."]

COMPANY MEETINGS, &c.

BANK OF CZECHOSLOVAK LEGIONS, PRAGUE

DIVIDEND 8 PER CENT., AS IN THE LAST YEAR.

The ninth general meeting of the shareholders of the Bank of Czechoslovak Legions was held in the Lucerna Hall, on April 27th last, Dr. Rudolf Rase presiding.

From the president's speech we quote the following: We are holding this general meeting of shareholders on the anniversary of the eightieth birthday of our president,

T. G. MASARYK,

which was honoured by our bank by a grant of

KC. 1,000,000

to the scholarship fund of the bank. We wish our president may live still many years to the benefit of the nation and of the Republic.

Last year, in spite of the less favourable economic situation, which was greatly felt, especially in the second half of the year, our bank worked successfully.

The great success of our work is mainly due to the valuable services of the general manager, Mr Sip, the assistant general manager, Mr Khyn, and the entire staff of the bank. The spirit throughout the bank was always excellent.

PROFIT, DIVIDEND AND RESERVES.

The general manager, Mr Sip, turned to the balance sheet and explained all its items.

The net profit amounts to Kc. 7,912,300.70 and a dividend of 8 per cent., *i.e.*, Kc. 16, per share will be paid, the same as last year. From latent reserves, Kc. 22,036,108.20 were added to the reserve fund during the year and further Kc. 813,891.80 from current profits. The reserves amount now to Kc. 64,550,000, *i.e.*, 92.21 per cent. of the capital.

ELECTION OF DIRECTORS.

The retiring directors, Mr Josef Khyn, Mr Karel Horák, and Mr Josef Kukla were re-elected. The member of the auditing committee, Mr Augustin Turka, was re-elected and Mr Václav Sál newly elected.

The board of directors held a meeting at the close and re-elected Dr. R. Rase as president, Dr. A. Straka as first vice-president, and Mr Stanislav Zavadilek as second vice-president.

WIENER BANK-VEREIN.

REVIEW OF THE PAST YEAR BY MR HUGO MARCUS.

The sixtieth ordinary general meeting of the Wiener Bank-Verein was held in Vienna on April 24th, Mr Hugo Marcus, the chairman of the company, presiding. The abridged report submitted to the shareholders proceeds as follows :—

THE PAST YEAR.

The cause of the economic depression generally registered throughout Europe reacted unfavourably also on Austria in 1929. In the neighbouring countries a receding of the conjuncture had already previously set in which affected adversely the productive activity in Austria. As a consequence of the boom on the New York Stock Exchange, American money was kept at home, while European capital was attracted to the United States by the high rates of interest obtainable in that country. In addition to the heavy fall of the prices of cereals, the unsatisfactory 1929 crop brought about a critical situation for the agricultural community, which the prompt action of the Government could only partly relieve. Finally, the political tension at home, and the wild rumours spread in that connection by irresponsible parties, led to withdrawals of deposits and to transfers of money abroad. It was under these circumstances that the collapse of the Allgemeine Oesterreichische Boden-Credit-Anstalt occurred, and, though the creditors of that bank suffered no losses and Austria's credit abroad was in no way impaired, yet the repatriation of the amounts that were withdrawn is naturally a slow process. The unemployment figures, which, for reasons known, are permanently high in Austria, rose to an exceptional level in the course of 1929.

Though their effects can only be expected to be fully felt in the future, several factors liable to promote the economy deserve to be mentioned : thus, the amendment of the Rent Restriction Act, and the Promotion of House Building by the Government; the satisfactory settlement of the Austrian Reparation problem, and of sundry outstanding political obligations of the Austrian Government. The convention governing the redemption of the Austrian Relief Debt having been ratified by all parties concerned, Austria will now be free to conclude the long delayed Federal Investment Loan which should react favourably on the domestic economy.

PUBLIC FINANCES.

Notwithstanding the receding conjuncture, the yield of taxes and fees reached record figures in 1929. The Government has already on several previous occasions stated that it is anxious to reduce the taxation burden, but in order to carry on its investment policy, which also benefits the home industries, the Federal Government had to postpone the proposed de-rating pending the conclusion of the Investment Loan. Considering the substantial receding of loan rates, and also the fact that the political atmosphere at home has considerably improved, the trading community is hopeful that the Government and the public corporations will see their way to decrease the rates of sundry direct and indirect taxes. Notwithstanding the events referred to above, the gold and foreign bills held by the National Bank of Austria have, from the close of 1928 to that of 1929, only receded by 57 million schillings, and the cover of the notes in circulation was maintained at the remarkably high ratio of 64 per cent.

THE BANK'S ACTIVITIES.

Owing to the slow growth of national wealth and the slackness of the Stock Exchange, the Austrian banks had to refrain from proceeding with issues of securities and other profitable operations. On the other hand, they had to exercise great caution in extending credit facilities. They decided, however, to grant further concessions to their customers in order to make up for the latter's narrow profit margin. Under said circumstances, the volume of the Wiener Bank-Verein's current business remained approximately the same as in 1928, while its sundry participations and the securities owned show a moderate increase. A decrease of the profit was, therefore, unavoidable, and a reduction of the dividend has to be proposed to the shareholders. Since the earning possibilities decreased, the bank strove to further curtail the expenditure by adequately reducing its staff. The indemnifications granted to the employees who resigned were drawn from hidden reserves, and do, therefore, not burden the profit account. The bank's staff now numbers 1,610, as against 1,788 one year ago. The number of the branches and sub-branches has remained unchanged, and the results obtained by them have again been satisfactory, in particular those of the Vienna sub-branches.

With regard to our permanent participations in affiliated banks, we would mention that, as a consequence of the merger of the General Banking Corporation of Bohemia with the Boehmische Union-Bank we are now holding a block of the latter's shares. Our holdings of shares of the Banque Franco-Belge et Balkanique, and of the General Banking Corporation of Poland have grown owing to a participation in capital increases of these institutions; on the other hand, the Boehmische Union-Bank joined the group of sponsors of the General Yugoslavian Banking Corporation and of the General Banking Corporation of Poland, ad took over from us shares of these two banks.

We participated in 1929 in the following transactions :—As shareholders of the Union Financière Polonaise we created, jointly with the Union Chimique Belge, the Société Générale d'Industries en Pologne; jointly with German banks, we merged two existing shipping companies into the Neue Norddeutsche and Vereinigte Elbeschiffahrtsgesellschaft; we participated in the capital increase of the Auxiliara, Bucarest; we purchased shares of the Raymond Buurmans and Cie., S.A., Paris and Brussels, of the Société Industrielle d'Exploitation de Moyens de Transport, Paris, of the "Sonopa" Société Nouvelle de Papeterie, Paris, of the Société d'Electricité de la Région de Malmédy a.s.f. We also participated in underwriter-syndicates for the capital increases of the General Banking Corporation of Poland, the Société Générale de Belgique, the Swiss Banking Corporation, the Banque de l'Union Parisienne, the Società Finanziaria Assicurativa a.s.f. After enumerating participations in other syndicates, the Chairman proceded to survey the numerous companies in which the Wiener Bank-Verein holds a controlling interest; despite the general economic depression, quite a number of these are able to increase their dividends without departing from their conservative policy of consolidating their reserves. While the balance sheet as of December 31, 1929, shows no additions to the reserves, there are also no withdrawals, and the aggregate reserve funds amount, as one year ago, to 27,528,370 schillings.

RESULTS OF THE YEAR.

The results of the year are as follows :—

Assets.

	Schillings.
Cash	18,275,159.45
Bills	84,692,946.76

Taxes and fees	3,278,067.18
Depreciation on real estate	121,000.—
Net profit	2,960,510.59
Total	25,881,360.69

DISTRIBUTION OF PROFITS.

The chairman proposed, on behalf of the board of directors, to apply 2,750,000 schillings of the net profit to the payment of a 5 per cent. dividend (i.e., 1 schilling for one share of 20 schillings par value), and to carry over to 1930 210,510.59 schillings.

The report and accounts were adopted.

The chairman announced that Herr Oscar Pollak, who had been a member of the board of managing directors since 1919, had tendered his resignation in order to join another bank. He left the Wiener Bank-Verein on the best of terms with his former associates, who highly valued his past services.

The board of directors underwent several changes. Herr Karl Stoegermayer having, in consideration of his age, expressed the desire to be relieved of his duties as chairman, the board of directors reluctantly accepted his resignation and appointed him honorary chairman of the board, of which he will continue to be a member. Mr Hugo Marcus, the present vice-chairman, was unanimously elected chairman. M. Henry Dewez, having relinquished his managing directorship of the Banque Belge pour l'Etranger, resigned from our board and was replaced by M. Auguste Callens, manager of the Société Générale de Belgique. Signor Antonio N. Cosulich likewise resigned for personal reasons. A warm tribute was paid to the retiring directors. In order to give expression to the close ties now existing between the Wiener Bank-Verein and the Boehmische Union-Bank, Dr. Friedrich Elbogen, a prominent industrial, of Prague, and Dr. Gottlieb Morawetz, senior manager of the Boehmische Union-Bank, were elected on the board of directors. Finally, Herr Alexander Weiner, a partner of Messrs. Ephrussi and Company, Vienna, and formerly a distinguished member of the board of managing directors of this institution, was elected vice-chairman of the board of directors. The directors retiring by rotation, to wit : Baron Edmond Carton de Wiart, Dr. Heinrich Haerdtl, Dr. Hans Larisch-Mönnich, M. Auguste Morel-Vischer, Herr Bernhard Popper-Artberg, and Dr. Alfred Wieland-Zahn, were re-elected.

A vote of thanks to the chairman concluded the meeting.

THE ROYAL LONDON MUTUAL INSURANCE SOCIETY, LIMITED.

CONTINUED EXPANSION—TOTAL ASSETS : £21,932,085.

The sixty-ninth annual general meeting of the Royal London Mutual Insurance Society, Ltd., was held, on the 29th ultimo, at Winchester House, London, E.C.

After the Secretary (Mr J. H. Skinner) had read the directors' report and auditors' certificate,

The Chairman (Mr Alfred Skeggs, F.C.I.I., the managing director), in the course of his speech, said :—I am privileged to be in a position to congratulate the policyholders upon the continued success of the society. 1929 again shows a great forward movement in all branches of the society's business.

In the accounts, I would first direct your attention to the industrial life branch. The premium income for the year amounted to £3,841,206, an increase of £128,121 over 1928. The mortality experience was heavier than in 1928. The funds of this department at the end of the year amounted to £15,355,322, being an increase of £1,244,952 over the previous year. The new policies issued during the year, as you will see from the accounts, exceeded 1,038,000, a substantial increase over 1928.

With regard to the ordinary life branch, the new assurances effected during the year amounted to £4,164,154, with an annual renewal premium of £211,776. The new business was in excess of that written in the previous year by £66,079. The total premium income of the branch amounted to £1,104,758, and the funds at the end of the year stood at £5,614,146, being an increase of £451,670 over 1928.

In the accident and general account, it will be observed that the income for the first time exceeded £20,000, the exact amount being £20,879 19s. 3d.

Reviewing the results of the society's activities for the year 1929, it will be noted that the income from all sources during the year amounted to £6,072,913, thus for the first time passing the £6,000,000 mark.

Reference to the balance sheet will show that the society's assets now amount to £21,932,085, an increase for the year of £1,815,487. The groups of investments are clearly set out in the balance sheet, which has been duly vouched by the auditors, Messrs Brown, Peet and Tilly.

It is now my pleasure to move that the directors' report and statement of accounts and balance sheet for the year ended December 31, 1929, now before the meeting, be adopted, and I will ask Mr H. G. Parr to be good enough to second the proposal. The resolution was seconded by Mr Parr and carried unanimously.

GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORPORATION, LIMITED.

SATISFACTORY RESULTS—PROGRESS IN ALL DEPARTMENTS.

The forty-fourth annual general meeting of the General Accident, Fire and Life Assurance Corporation, Ltd., was held, on the 30th ultimo, at the head office, General Buildings, Perth.

The Chairman (Dr. William Low, of Blebo), in moving the adoption of the report, said that it was specially pleasing to be able to place before the shareholders a statement of accounts showing such satisfactory results, as they had been attained in a year which, admittedly, had been bad for insurance, as well as in the economic conditions of the country generally. Their income in all departments showed a satisfactory increase, and what was equally gratifying was the fact that the corporation's profits had also been well maintained and were practically the same as in the very satisfactory year of 1928. They were paying an increased dividend of 1s. per share and even so the amount it cost was still £70,000 under the total interest earnings.

SATISFACTORY INVESTMENT POSITION.

The corporation had suffered no ill-effects from the financial slump in the United States last autumn, notwithstanding the large stake it had in that country, the market values of the investments in the United States as at that date being only about £12,000 below the high-water mark of December, 1928. The directors, in view of the decrease in the market value of investments generally at the end of last year, and as a precautionary measure, had made a small transfer to the reserve for depreciation of investments. He was pleased to say, however, that since that date their securities had appreciated by an amount considerably in excess of the amount transferred to the reserve. He was sure that the shareholders would heartily appreciate the decision of the directors to offer the unissued 18,800 ordinary shares pro rata to the shareholders on terms that would prove equivalent to a not unimportant bonus.

GENERAL MANAGER'S STATEMENT.

Mr F. Norie-Miller (director and general manager), in seconding the motion, said that there was no doubt that the economic conditions of the year 1929 were such as to make it a very difficult one for most branches of insurance. With bad trade new business was more difficult to obtain, but in addition experience had always shown that in bad times losses, especially by fire, were always greater. It, therefore, spoke volumes for the corporation's organisation that in bad times they had been able to increase the premium income by the substantial sum of over £300,000, and make satisfactory profits in both the fire and casualty accounts.

In the fire account net premiums amounted to £656,868, an increase of over £15,000 on the previous year. The losses amounted to 49.78 per cent., as compared with 42.47 per cent. in 1928. Their income would have been larger but for the lack of mercantile business, which had been sadly reduced, and would, he feared, not increase until this country returned to its customary position as the market of the world. They had been fortunate in making up that loss with other first-class business.

The accident account showed nearly £270,000 of an increase, almost entirely in home business. The losses paid and outstanding amounted to 62.46 per cent., and were slightly higher than the previous year.

MOTOR INSURANCE.

If the Road Traffic Bill passed into law, it would possibly increase the motor premium income, but not, he thought, by any substantial amount, for there was no doubt that fully 95 per cent. of the owners of motor-propelled vehicles were already insured. Present rates were only just sufficient to leave a minimum of profit. Those would have to be materially increased if juries continued to give the very excessive verdicts against motor owners, doubtless influenced by the fact that they were insured, and forgetting that an insurance company was not a philanthropic institution, but had to charge owners of cars sufficient premium to pay claims and give a fair margin of profit to the company.

OVER £2,000,000 OF NEW LIFE BUSINESS.

Their life business had been most successful. They had had well over two millions of new business last year, and this year, under its present able management, he expected they would approach the three millions mark. He must record his indebtedness to the directors of the life company and also its officials for all they had done in the interests of the company; as they were aware, it was carried on as a separate company and would shortly become one of the most successful of British life companies.

The resolution was carried unanimously, and the meeting terminated with a vote of thanks to the chairman.

LAW UNION AND ROCK INSURANCE COMPANY, LIMITED.

RECORD NEW LIFE BUSINESS.

SATISFACTORY QUINQUENNIAL VALUATION.

The annual general meeting of the Law Union and Rock Insurance Company, Ltd., was held on the 1st instant, at the head office, 7 Chancery Lane, London, W.C.

Mr Charles G. Hamilton (the chairman) presided.

The secretary and actuary (Mr James Stirling) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I presume you will take the report as read. (Agreed.)

Before dealing with the accounts for the year, I have to express the regret of the directors at the loss sustained by the death of two of their colleagues, Mr F. J. Coverdale and Mr Frederic Wadsworth, both aged over 90 years.

Both of these gentlemen were members of the country board for very many years and, although age and infirmity prevented frequent attendance at our meetings in recent years, they will be much missed.

The year 1929 was the last of the Quinquennium, at the end of which the life valuation fell to be made. But before going into this important section of our report, I will deal shortly with the trading accounts.

FIRE ACCOUNT.

The fire account, although not quite so good as we have in recent years been accustomed to, is nevertheless not an unsatisfactory one, bearing in mind the heavy losses experienced by all fire offices in the early months of last year. The premium income at £553,968 shows a small increase. The loss ratio was 45·69 per cent., compared with 42·96 per cent. in the previous year. The expense ratio was 40·91 per cent., as against 40·4 per cent. in 1928. The fire reserves were increased to £571,587, and the sum of £94,769 was carried to the profit and loss account.

ACCIDENT AND GENERAL ACCOUNT.

In the accident and general account the premium income amounted to £235,712, and the outgoings of all descriptions to £218,158. The reserves now stand at £265,785 and £31,068 was carried to the profit and loss account.

PROFIT AND LOSS ACCOUNT.

The profit and loss account maintains its strength. After bringing in £126,991 from the trading accounts and £32,184, one-fifth of the shareholders' proportion of life profits for the quinquennium, 1925-1929, transferring £10,000 to the staff pension fund and £50,000 to the general reserve, the balance at the end of the year was £534,085.

The directors recommend the payment of a dividend for the year now current of 14s. per share, less income tax, payable by half-yearly instalments on May 31st and November 30th.

LIFE ACCOUNT.

Coming now to the life account, the amount of the net new life business completed last year was £2,161,000. This constitutes a record for the company.

The expense ratio was 14·82. The average net rate of interest earned on the life funds was £4 15s. 6d. per cent. The new premium income was £226,689, and the total premium income, £844,689. The claims by death amounted to £527,212, a sum well within the expectation.

The actuarial valuation of the liability of the company under its life policies was made as at December 31st last. Preparatory thereto, all the assets of the company were carefully reviewed. Every loan made and property owned was critically examined, and whenever it appeared to be necessary or desirable, the values of such assets were written down or full reserves set up to meet possible depreciation.

No stock exchange security stands in the company's books at more than the market price, and the market value of the total holdings of the company is much in excess of the amount at which they are taken in our books. The valuation results are eminently satisfactory, and the hopes held out to life policyholders have been amply justified.

The net new life business completed last year constitutes a record, as I have already said, and the total for the quinquennium, £8,787,688, is the largest in the history of the company for any similar period. The figures for the previous two quinquenniums were as follows: 1915–1919, £5,194,105; and 1920–1924, £7,264,485.

THE SURPLUS.

The surplus disclosed by the valuation of the three funds amounts to £1,461,320, exclusive of the amount paid by way of interim bonus. After transferring to the credit of the shareholders their proportion of the profits, £160,920, we are able to declare on policies in the "Law Union and Rock" fund a compound reversionary bonus of £2 5s. per cent. per annum, the same high rate declared five years ago, the highest ever declared by the company. I wish to lay emphasis on the fact that the bonus is compound, *i.e.*, that it is not calculated upon the sum assured only, but upon the sum assured and existing bonuses. Calculated upon the sum assured only, the rates of bonus vary from £2 5s. per cent. to over £5 per cent.

The holders of "Rock" policies, entitled to participate, will receive a compound reversionary bonus at the rate of £2 10s. per cent. per annum for the five years. Policyholders will receive bonuses ranging from £2 10s. per cent. per annum to well over £5 per cent. if calculated upon the sum assured only.

Policyholders in the "Crown" fund, whose bonuses are not declared in the same form, will receive just as satisfactory additions. I believe that in every case these will be larger than on any previous occasion and, of course, of greater cash value owing to the increased ages of the lives assured.

INTERIM BONUS.

On policies which mature by death or survivance during the quinquennium just entered upon, the directors have decided to increase the rate of interim bonus, and on policies entitled thereto to pay a bonus at the rate of £2 5s. per cent. per annum, unless otherwise determined.

The increased rate of interim bonus will be paid in respect of policies on all three funds, the "Law Union and Rock," the "Rock," and the "Crown." After so satisfactory a stocktaking, I think we may look to the future with reasonable confidence.

The investments of the life fund are carefully selected and well spread.

About 28 per cent. is invested in British Government securities,
21 per cent. on Mortgages in and out of the United Kingdom,
7–8 per cent. in Railway and other debentures,
6 per cent. in Indian and Colonial Government provincial and municipal securities,
4 per cent. in Foreign Government provincial and municipal securities,
3·5 per cent. in Preference and guaranteed stocks, and only
1·5 per cent. in Ordinary shares and stocks.

Owing to the collapse last year of the boom on the New York Stock Exchange and the crisis on our own Stock Exchange, there was some reduction in the appreciation of our investments of the life funds on December 31, 1929, but since that date there has been a recovery of about 60 per cent.

The rate of interest on which the valuation of the liabilities of the going fund, the "Law Union," is based is 3 per cent. The actual rate earned during the quinquennium was £4 13s. 10d. per cent. per annum net.

Our expense ratio is moderate, and the rate of mortality experienced is consistently well below that expected according to the mortality tables.

Five years ago in this fund, we carried forward an undivided surplus of £70,000. That surplus is now increased to £109,000, and there is the further large reserve in the difference between the market value and the book value of our securities.

CONFIDENCE JUSTIFIED.

Year by year I have expressed my confidence in the future of the life department, and the results of the valuation just concluded are my justification for continuing to stress the value of a "Law Union" profit policy as an investment.

The recent Budget has thrown additional burdens on incomes and on the estates of deceased persons, and this makes it still more important to effect substantial life policies, for the annual premiums on such policies can, up to a maximum of one-sixth of the total income, be deducted from the annual income in computing the amount on which income tax and sur-tax has to be paid, and the sums assured will assist to pay the heavy death duties.

The "Law Union and Rock" will quote for any class of insurance that can be devised, but I believe the best insurance there is for the assured is a Whole Life with profits policy.

I now beg to move the adoption of the report and accounts.

Mr F. W. Pascoe Rutter seconded the resolution, and it was carried unanimously.

THE DIVIDEND.

The chairman next moved: "That in accordance with the recommendation of the directors in their report, now adopted, a dividend of 14s. per share, less income tax, be paid to the shareholders for the financial year ending December 31, 1930, the dividend to be payable as usual by half-yearly instalments on the 31st day of May and on the 30th day of November next."

This resolution was seconded by The Rt. Hon. The Earl of Midleton, K.P., and unanimously approved.

Colonel Alfred G. Lucas, C.B., M.V.O., proposed the re-election of the retiring directors, Mr Charles G. Hamilton and Mr F. W. Pascoe Rutter.

The Rt. Hon. Viscount FitzAlan of Derwent, K.G., seconded the motion and it was unanimously passed.

On the proposition of Mr Charles Hendry, seconded by Mr Philip E. B. Fooks, the auditors, Messrs Peat, Marwick, Mitchell and Co., were re-appointed.

MR PASCOE RUTTER'S REMARKS.

Mr F. W. Pascoe Rutter: Mr Chairman and gentlemen, I have pleasure in proposing a vote of thanks to the agents and staffs of this company. The agents, as you know, are the business producers; the staffs in this head office and throughout the country are those who deal with the grist which comes to the mill. During the past year the staffs have not only had to perform their normal duties but, after much labour, they had delivered to us a very satisfactory account of the quinquennium, as you have heard from the chairman. It is therefore a pleasure to me to propose this vote of thanks to the staffs and the agents from Mr Stirling downwards for their excellent work during what undoubtedly has been a difficult year.

Mr Fooks seconded the vote, adding that he personally came into touch with the staff to a considerable extent, and he was extremely struck not only by their unfailing courtesy, but also by their very great keenness in the service of the company. (Applause.)

The vote was unanimously accorded.

Mr Busick E. Pemberton proposed a vote of thanks to the chairman. They all recognised, he said, and had done for many years past, the great ability which Mr Hamilton brought to bear upon the handling of the affairs of the company so far as they fell within his province, and they also recognised the assiduous attention which he always gave to them. (Hear, hear.)

This was seconded by The Hon. E. C. G. Cadogan, C.B., M.P., and unanimously passed, a brief acknowledgment by the chairman concluding the proceedings.

LONDON TRUST COMPANY, LIMITED.

SUCCESSFUL RESULTS—INCREASED DIVIDEND.

FUTURE PROSPECTS.

The forty-first ordinary general meeting of the London Trust Company, Ltd., was held, on the 28th ultimo, at Winchester House, London, the Hon. Evelyn Hubbard (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that, in spite of the many disturbing events of the past year, the trust had maintained its even course, being unaffected either by the collapse of the boom in the United States, where they had not any material holdings, or by the sensational débâcle of the Hatry companies, from which they had kept austerely aloof.

The accounts submitted showed that, after allowing for debenture stock and bank interest and expenses, the revenue had increased by £6,678. The directors had transferred £20,000 to general reserve account (raising it to £120,000) and recommended a final dividend on the deferred stock of 13 per cent., making 21 per cent., as compared with 20 per cent. for the previous year. The balance carried forward was £47,816, as against £46,253 a year ago.

The investments stood in the balance sheet at £2,400,720, and, after providing for all liabilities, their value on March 31st fairly justified the current market quotations for the deferred stock. The holdings of the trust were well spread both at home and abroad. Their foreign securities were, for the most, in companies under English management and were quoted on the London Stock Exchange.

While the reduction in the Bank rate had resulted in a rise in the gilt-edged market, the quotations for industrial shares did not indicate active trade; at the moment, indeed, it was very much the reverse. Many industrial concerns were finding great difficulty in earning any profits, and great care was required in selecting investments. Although the new financial year had opened under conditions unpropitious for British trade, he saw no reason for discouragement as far as this company was concerned, and he was of opinion that the position which this trust had attained would enable it to stand any storms that might be likely to arise in the ordinary course of business. The stockholders might be satisfied that the directors would not now be paying an extra 1 per cent. if they were not convinced that the revenue position gave assurance of their ability to continue it.

The report was unanimously adopted.

THE STATE ASSURANCE COMPANY, LIMITED.

DIVIDEND AGAIN 40 PER CENT.

ADVERSE FIRE EXPERIENCE.

SIR C. H. MORTON REVIEWS A DIFFICULT YEAR.

The thirty-ninth annual meeting of the State Assurance Company, Ltd., was held, on the 28th ultimo, at the head offices of the company, State Insurance Buildings, Liverpool.

Sir Charles H. Morton, J.P., the chairman, who presided, said: The net amount available for transfer to profit and loss account, after making the necessary adjustment in premium reserve and providing for an underwriting loss on the fire account of £11,026, amounts to £48,122. This sum falls considerably short of that to which you have become accustomed. Last year the transfer was £94,633. The reduction is due to rather an unusual experience for us—poor fire results. These cannot be accounted for by any particular catastrophe involving the company in a serious loss, for, taking our fire losses individually, they have not been abnormal in amount, but in the aggregate they have exceeded those of last year by no less than £35,597.

INCIDENCE OF FIRE LOSS.

You will have observed the persistent occurrence of serious fires throughout the year, and what has happened in this country has taken place at many points where we are operating in the foreign and colonial fields. Many causes are advanced for the high burning ratio of 1929. It has been suggested that it is due to prolonged drought and to poor conditions of trade, and there is no doubt these have been contributory factors. But our business is one of averages, and we must expect the lean as well as the profitable years. There has been no material change in the constitution of our commitments. It is the same business which has shown satisfactory profits in the past that has run so poorly during 1929.

GROWING ACCIDENT BUSINESS.

Fortunately the underwriting loss on the fire account is more than covered by the profits made in the other departments. In our accident department there is a transfer to profit and loss account of £13,500, which is in excess of that of last year. The loss ratio of 49.5 per cent. is satisfactory. The premiums show an increase of £10,874, which follows upon increases of somewhat similar amounts in 1927 and 1928. The company is now transacting practically all classes of accident insurance, and the department is growing steadily in importance on account of its revenue and profit-earning capacity.

The marine department once again makes its contribution to profit and loss account. This year it is £5,499. The increase in premiums is negligible, and I do not anticipate much expansion in our revenue from this source until the present depression in the shipping industry is relieved.

RESOURCES UNIMPAIRED.

Interest.—You will notice that our interest revenue continues to expand, and now amounts to £39,126, against the dividend cost of £32,229.

To sum up the figures: it has been a difficult year, but it is some satisfaction to say that whilst the carry-forward of profit and loss account, after providing in that account for the usual charges, is less than 1928 we complete the year with our resources and profit-earning capacity unimpaired.

The report and accounts were adopted, and the payment of a dividend at the rate of 27½ per cent., making, with the interim dividend of 12½ per cent. paid last October, 40 per cent. for the year, was confirmed.

ROYAL EXCHANGE ASSURANCE.
PROGRESS IN THE VARIOUS DEPARTMENTS.
GROWTH OF TRUSTEE BUSINESS.

The 210th annual general court of the Royal Exchange Assurance was held, on the 30th ultimo, at the head office of the corporation in the Royal Exchange, London, Mr Vivian Hugh Smith (the Governor) presiding.

The Governor, in the course of his speech, said: I should like to allude to a very important change which we have made in our organisation during the past year. I refer to the appointment of Mr Robert Connew as general manager. The Royal Exchange Assurance has never had a general manager up to now, but we felt that the business of the corporation had become of such magnitude that it was essential to appoint one. We are fortunate in securing Mr Connew for this position, and I am sure you will join with me in wishing him every possible success in his new work. (Hear, hear.) One of the reasons why it became imperative to appoint a general manager was because we are losing in a few days the services of our secretary and friend, Mr Percy Hodge. Mr Hodge joined the corporation in the year 1885, and has greatly assisted in building it up to the high position it occupies to-day in the insurance world. (Applause.)

Dealing now with the accounts of the "Royal Exchange" only, you will see that the balance of last year's account has been augmented not only by the interest and profits made during the year, but also by an item of £100,000 which represents a sum set aside years ago as a reserve against any possible unestimated liability for taxation. We now find that this reserve is no longer required, and it is therefore carried into the profit and loss account, which is, as you know, the general reserve fund of your corporation.

ADDITIONS TO THE FUNDS.

Your directors are of the opinion that a general reserve fund of £1,000,000 is adequate for our present requirements, and that it is desirable for the departmental reserve funds to be increased until they—with the reserve for unexpired risks—approximate to the amounts of the annual premium incomes. This explains the transfers on the credit side of the profit and loss account of £50,000 to the accident fund and £100,000 to the fire fund. The transfer of £200,000 to the marine fund should strengthen that fund to such an extent that it should be independent of the general reserve fund in future, and, unless something very unforeseen happens, your directors do not propose to augment it further. It is hoped, however, to continue to build up the accident and fire funds as and when circumstances permit.

If you will refer to the results of the life department, you will see that during the year nearly 4,000 new proposals were completed, assuring £2,670,832, the net new business amounting to £2,273,906. Attention has recently been called to the issue of single-premium policies. The corporation has never encouraged this business, and the total number of policies issued under this scheme is only nine, of which two were completed in 1929. The net premiums from this class of business amounted to £56,289. The gross rate of interest on the life fund has again risen and is £5 15s. 1d. per cent., as compared with £5 13s. 11d. per cent. in the previous year. The life fund at December 31st last amounted to £8,137,984, an increase of £623,995 on the 1928 figure. I am glad to be able to draw your attention to the fact that the interim bonus of 40s. per cent. has been improved by calculating it on the sum assured and declared bonuses, instead of only on the sum assured, as formerly.

CONTINUED GROWTH OF TRUSTEE DEPARTMENT.

The business of the trustee department continues to expand, and the services rendered by your corporation through this department for the public generally as executors and trustees of wills and settlements, as managers of private investments and estates, and as debenture trustees, registrars, &c., appear to be more appreciated as time passes. This is borne out by the continual growth of the trust funds under the administration of the department, the funds amounting at December 31, 1929, to approximately £108,000,000, showing an increase over the funds in the custody of the corporation at the end of the previous year of nearly £15,000,000.

The profits derived from the department also show an increase, the amount carried to profit and loss account being £16,848, an increase of £1,727 over the figures carried in for the previous year. Considering the magnitude of the business undertaken by the department and the complexity of the services rendered, this profit must be considered most reasonable and satisfactory.

As a matter of interest I should like to refer for one moment to the help that your corporation was able to render as trustees for the Stock Exchange (Hatry) settlement. It gave us great pleasure to be able to assist in this most arduous and difficult task, and to offer the services of the trustee department voluntarily and free of cost in the clearing up of one of the most unfortunate financial happenings which the City has ever had to overcome. It was very gratifying to receive from the Stock Exchange (Hatry) Settlement Committee a graceful letter of appreciation of our services and to learn therefrom that the work had been carried out to their complete satisfaction.

FIRE BUSINESS.

The net premium income of the fire department of over £1,756,000 shows an increase of some £12,000 compared with 1928. The expense ratio is unchanged, but our loss experience has been less satisfactory throughout the world. The amount carried to profit and loss account from this department is £113,308. This is less by some £37,000 than was carried in 1928, but I think that, in a year in which the general experience of fire business has been so much less favourable, an underwriting profit of over 4 per cent. cannot be regarded as other than satisfactory.

The year 1929 was one of acknowledged difficulty for fire business. Fire waste in the United Kingdom has been exceptionally heavy, and I think I am correct in saying that it is many years since insurance companies have suffered so severely in this respect. In the United States, although results were not unfavourable, the profit obtained was less than for 1928, due, to some extent, to the exceedingly keen competition and the resultant increase in the cost of obtaining business. In the remainder of the foreign field our premiums have been more than maintained, but here, again, the loss ratio is appreciably higher than we have experienced for some years. The fire fund now amounts to £1,302,476, including £100,000 transferred from the profit and loss account.

The premium income of the marine department for 1929 shows an increase as compared with 1928. This is partly due to the increase in hull rates, and also to the writing of specially selected additional business of a class which has in the past proved satisfactory. This sphere of your corporation's business is being given the most careful and constant supervision. I must repeat my remarks of last year that, whereas the hull rates show an improvement, the position as regards cargo is still unsatisfactory. Nevertheless, I feel I am justified in saying that, although progress in this business is disappointingly slow, on the whole there has been a distinct improvement in the attitude of the market, and more disinclination to engage in the disastrous competition which was so prevalent a few years ago. Including the amount transferred from profit and loss account, the marine fund amounts to £1,001,835.

GENERAL ACCIDENT DEPARTMENT.

In the general accident department the premium income continues to expand, the net premiums for the year amounting to £1,275,830, which is £144,626 more than the corresponding figure for 1928. This is mainly due to an increase in the foreign business. The percentage of losses shows a welcome reduction, it being 53·28 per cent., as against 56 per cent. for the previous year; while the result of the year's working is a transfer of £71,585 to profit and loss. Including the £50,000 transferred from profit and loss account to strengthen the accident reserve, the general accident fund now stands at £1,070,687. Accident business generally is not free from difficulties, and at the present time the margin of profit is small. It will be noticed that the general accident fund now exceeds £1,000,000, which, I think you will agree, places the department in a very satisfactory position.

Returning to the profit and loss account, you will notice that the "Dividend to proprietors" cost £205,763. This is larger than the amount appearing in the 1928 accounts, owing to the issue of new stock in 1928 for the payment for the shares of the Motor Union Insurance Company. After deducting the transfers already referred to, there remains a balance of £1,002,094 to be carried forward.

PROGRESS OF ASSOCIATED COMPANIES.

All your associated companies have, unfortunately, suffered from the generally unfavourable fire experience, and the results of the "State" and "Motor Union" are in consequence disappointing. The "Car and General" and "National Provincial" have, on the other hand, had a satisfactory year, the profits obtained from the other departments of their operations more than counter-balancing the fire results. I am confident, however, that they are making progress, and I have every reason to believe that their acquisition will continue to prove beneficial to the corporation.

I wish to draw your attention to the statement on the balance sheet to the effect that the aggregate profits of the associated companies during this year were in excess of the dividends paid by those companies.

The report and accounts were unanimously adopted.

OCEAN ACCIDENT AND GUARANTEE CORPORATION, LIMITED.
STRONG FINANCIAL POSITION.

The fifty-ninth annual general meeting of the Ocean Accident and Guarantee Corporation, Ltd., was held on the 29th ultimo, at the offices, 36-44 Moorgate, London.

Sir Clarence Smith, J.P., presided in the absence, through indisposition, of Mr E. Roger Owen (chairman of the corporation), and in the course of his speech said: Viewing the year's operations as a whole, the corporation's premium income at £6,185,040 was some £63,000 less than the premium income of the previous year. After making necessary and ample provision for unearned premiums and outstanding claims, there remained an underwriting profit of £181,838, being 2·9 per cent. of the premium income for the year. Interest, dividends, and rents totalled £303,274.

Fire department: The net fire premiums for the year amounted to £362,203, an increase of some £14,000 as compared with the previous year. After providing 40 per cent. for unearned premiums, there remained an underwriting profit of £36,380, which was transferred to profit and loss. The departmental fund stands at £479,765, equalling 132·5 per cent. of the year's premium income.

I believe it may be fairly said that the fire losses of the offices generally for 1929, and particularly at home, were above the normal. Fortunately, our own experience was quite a satisfactory one. The income of the fire department is steadily increasing, and the directors regard with satisfaction the manner in which our policyholders in other departments to an increasing degree are placing their fire insurances with the corporation. It is anticipated that the operations of the department will increase still further in volume as time goes on.

Accident department: The net premium income of the accident department was £5,822,837, a decrease of some £77,000 as compared with the previous year. The figures include those of our American company, the Columbia Casualty Company. After making ample provision for unearned premiums and outstanding losses, there remained an underwriting profit of £145,458, of which £135,000 was transferred to the profit and loss account. The balance was added to the departmental fund, which now stands at £4,185,635, equal to 71·8 per cent. of the premium income of the year. As in the case of the fire department, the reserve is a very substantial one.

The year 1929 was by no means an easy or a prosperous one for casualty insurance companies in at least one or two of the countries in which the Corporation transacts its business.

The reduction in premium income was consequent upon the further pursuit of our policy of curtailing commitments in certain directions where for one reason or another we do not regard the rates obtainable at the present time as sufficient to yield some profit in return for our services and the risks incurred. In those fields of our operations where we did not deem it advisable to adopt this policy of curtailment our premium income increased to a satisfactory degree.

Motor business: The ever-increasing number of mechanically propelled vehicles in use in this and the many other countries in which we are doing business has further increased our premium income in respect of motor insurance, and this section now represents a highly important part of our entire business. Claims continue to increase, not only in ratio to the number of vehicles in use, but also in the average cost of disposing of the claims, and the result is that in some countries the percentage of profit is very small, while in others it is becoming more and more difficult to carry on the business with any margin of profit, however small, at the current rates.

In our endeavours to meet the requirements of the insuring public at home and overseas, the corporation transacts a wide and ever-widening variety of business. In this connection I take the opportunity of mentioning one of our highly specialised departments.

Engineering: By reason of its steady expansion, the engineering department at home occupies an increasingly prominent position in the field of our activities. No trouble or expense has been spared in building up a thoroughly skilled inspecting organisation, and it will probably interest you to know that at the present time we have on our permanent staff well over 100 inspecting and supervising engineers solely occupied in rendering that efficient service upon which success in engineering insurance business essentially depends.

The risks to be underwritten are of a very varied character, including those incidental to the use of boilers and pressure vessels, engines, electrical plant, lifts, cranes, etc. Every policy, in addition to providing indemnity, includes an undertaking periodically to inspect all the insured items with a view to reducing preventable accidents to a minimum and to securing safety and continuity of operation.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, *6 Bouverie Street, Fleet Street, London, E.C. 4.*

LEGAL AND GENERAL ASSURANCE SOCIETY, LIMITED.
MR. ROMER WILLIAMS, D.L., J.P., THE CHAIRMAN, DESCRIBES A POLICY WHICH PROVIDES £3 PER WEEK INCOME, FROM £1,000 CAPITAL.

At the annual meeting, held on the 29th ultimo, Mr Romer Williams, in the course of his remarks, referred to the "Safeguard" policy, and said:—

". . . We have just introduced a new form of contract, known as the 'Safeguard' policy, which should be specially attractive to the married man with family responsibilities. It overcomes to a great extent the difficulties of the investment of the sum assured which a widow so often experiences after the death of her husband. It provides her, during the most difficult period, with a steady and substantial income largely in excess of the return possible from ordinary investments."

Life assurance has been criticised because the capital sum available on the death of the policyholder produced at best but a bare 5 per cent. for the dependants when safely invested. It has also been suggested that the widow at the time of her bereavement would find difficulty in safely investing the capital sum which came to her, at a good rate of interest. So many inexperienced people were attracted by and beguiled into speculative investments boasting a high rate of interest with disastrous results, and this would be especially likely to happen at a moment when judgment was clouded by grief and an acute sense of loss.

The new policy provides, in the event of the death of the life assured, an income of £3 per week for each £1,000 of assurance. This is rather more than 15 per cent. interest, and, because it is guaranteed and does not necessitate the dependants attending to various details of investment, it is particularly suited to all men with dependants who are inexperienced in matters financial. When the £1,000 capital is paid at the end of the specified period the dependants would be more experienced, and so would be better able to make a safe and profitable investment.

Obviously, no insurance company would pay 15 per cent. for more than a specified period, and under the new policy this is limited to 20 years from the date the contract is effected; that is to say, in the event of death within the first year of the new policy a man's dependants would receive an income of £3 per week for the balance of the 20 years from the date of the policy, and, at the end, £1,000 in cash would be payable. It will be seen that the contract would be most effective when a man's responsibilities were at their maximum and the handsome income would carry his dependants over the most trying years after his death.

There has already been a steady demand for this type of contract since its introduction, and it is proving a useful contribution towards the solution of one of life's most difficult problems.

A life assurance of £2,000 under the contract provides an income of £6 per week for 20 years from the date of the policy, or an assurance of £500 would provide 30s. per week. As an illustration of the cost, a man aged 35 years next birthday would set aside only slightly over £5 10s. per quarter to provide his widow and dependants with an income of £3 per week and £1,000.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

IMPERIAL CHEMICAL INDUSTRIES, LIMITED.
GOOD RESULTS—INCREASED PROFITS.
POWERFUL FINANCIAL POSITION.
LORD MELCHETT ON POSITION AND PROSPECTS.

The third ordinary general meeting of Imperial Chemical Industries, Ltd., was held, on the 29th ultimo, at the Central Hall, Westminster, London.

Th Rt. Hon. Lord Melchett, P.C., D.L., D.Sc., F.R.S. (the chairman), in moving the adoption of the report, in the course of his speech said: The gross profit for 1929 amounts to £6,502,341, which is an increase of £504,960 over 1928 and of £1,168,417 over 1927.

We have followed our usual practice of maintaining out of profits the whole of our subsidiary companies' plant and buildings in a state of the highest efficiency, and the amount transferred to the central obsolescence fund represents a further provision to guard against the possibility of any of our plants being rendered obsolete by the discovery of new and more efficient processes.

We have appropriated to general reserve the sum of £529,020, and there remains available, with the balance brought forward from last year, the sum of £5,359,995. The preference dividend and an interim dividend of 3 per cent. on the ordinary shares have already been paid, and your directors now recommend that a final dividend of 5 per cent. actual, making 8 per cent. for the year on the ordinary shares, and a dividend of 2 per cent. on the deferred shares be declared. As compared with last year, the rate of dividend on the ordinary shares is unaltered, but the dividend on the deferred shares is raised by ¼ per cent. The amount carried forward to 1930 will amount to £350,923, as compared with £109,634 a year ago.

MERGER NOT TOP-HEAVY.

A word on the criticism I sometimes hear to the effect that the business is top-heavy and suffers from difficulty of control owing to its size.

The real problem of rationalisation and merging of big enterprises consists in effective central control with sufficient elasticity lower down to allow action to be neither arrested nor delayed, and to prevent the chiefs at the head from being encumbered by too much detail, at the same time keeping a grip on all the essential features of policy, such as finance, expenditure, sales and relations with other great groups of industrialists throughout the world.

I think I can claim with confidence that we have succeeded in achieving these twin objects, both of which are essential to the successful working of great organisations. Naturally, the overlooking of such wide, important and scattered interests is a task requiring daily thought and consultation on behalf of those engaged in the higher management, including myself and the president.

To-day presents a less formidable problem than the earlier stages of the existence of the company.

GENERAL POSITION OF THE COMPANY.

The balance-sheet reveals a position of strength and solidity of which any company in any country might well be proud. Only in existence for three years during a time of exceptional industrial and trade difficulty, we have shown continuous growth of profits—profits which, I may say, are the result of the manufacture and sale of our products, the legitimate business on which we are embarked, profits which have been obtained in a time of gradually diminishing world prices and relatively non-elastic and slow-moving markets, both at home and abroad.

If some of the industries in this country on which we are dependent for the outlet of our products are depressed, it is inevitable that we suffer with them, but fortunately our interests are so diversified, both commercially and territorially, that in practice any loss in one direction is generally recouped in some other direction.

PROFITS AND SALE OF SECURITIES.

Among the many rumours which naturally reach one regarding the position of the company—rumours which sometimes even find their way into printed statements and which display an extraordinary ignorance both of the methods on which the company is conducted and results—there is one to which I wish to give a most categorical and emphatic denial, and that is that the profits of the company from its inception have either been inflated or affected by capital profits made on the sale of investments or Stock Exchange speculation in securities.

If at any time the realisation of securities has resulted in any profits from the merger value, such profits have always been dealt with as capital appreciation and have never been included in the profit and loss account of I.C.I. (Hear, hear.)

As regards the second statement, it ought not to be necessary, but I must once more repeat that the Board of I.C.I. is carrying on a manufacturing business and not employing the funds of the company in speculative Stock Exchange ventures.

There is one further point which I think I ought also to mention, and that is the statement that the profit and loss account includes sums transferred from reserve funds existing in the subsidiaries at the time when the merger was made. No such transfers have taken place. Where transfers have been made, as shown in this year's account, from a subsidiary to the central obsolescence fund created since the merger, the transaction is shown in the reserve account, but this is merely part of our policy of creating a central obsolescence fund.

DIVIDENDS AND RESERVE FUNDS.

To have achieved in three years a reserve and obsolescence fund of £16,725,000 is a feat of which we can be proud.

We all realise the right of those participating in industrial ventures to obtain during their lifetime as good a return on their capital as the industry can afford.

But I hope you will agree with me that you do not wish us to be precipitate in our action to adopt a dividend rate, the maintenance of which we cannot really foresee not merely for one year but for some time ahead.

INDUSTRY AND TAXATION.

It is quite impossible in industry to-day to divorce entirely the effect of economic actions undertaken by governments from the conduct of business affairs.

Neither technology and efficiency nor commercial ability and sagacity can counteract the disastrous economic results which may, and do, arise from unwise actions of governments.

I have no hesitation in saying that if you wish to restore the agricultural and industrial condition of this country to a real state of prosperity, one of the first necessities must be reduction of the burden of direct taxation. When out of every pound you put by in your reserve fund from your profits year by year for the building up of your business, 4s. 6d. is taken by the State—often for by no means so useful a purpose—how can anyone say that taxation does not impair the strength of industry?

There never was a period in the world's business history in which it was more necessary to enable large decisions to be taken rapidly. Time most frequently is of the utmost importance. "Yes" or "No" must be given at once.

And on these occasions the groups of far-sighted and powerful men who are prepared to risk a very considerable part of their fortunes and who will be inclined to ask shareholders to do likewise, are an essential necessity to our modern economic life.

That you can destroy with impunity the existence of such people or substitute any other form of machinery to fulfil their rôle, is one of the most dangerous heresies and fallacies of a certain class of economic thought.

THE DYES POSITION.

Our dye industry becomes of special interest, as the Dyestuffs Act, which was passed in December, 1920, and under which the British Dyestuffs Corporation was originally founded, expires in January, 1931, unless by the intervention of Parliament new legislation is passed.

It is not surprising that the first years of this company were years of difficulty and disappointment. In fact it can be more accurately described as a national work rather than a remunerative commercial industrial enterprise.

As you know, we have only had three years in which to tackle all the various problems connected with this enterprise. I am glad to think that during that period we have made an altogether surprising amount of progress, more especially in the last two years. The range of dyes required for the various purposes of modern industry is enormous. There are over 10,000 separate dyestuffs known, and while a great many are redundant, this figure serves to show the complexity of the industry.

We are to-day manufacturing and even exporting dyes of a quality equal to those made by any other firm in the world, and no customer of ours has any longer any reason to complain, as undoubtedly was the case in the earlier days, regarding quality.

We have reduced prices to figures which enable the English consumer to obtain his products at world prices.

In our view, the results obtained so far entirely justify the passing of the Act. The British dye industry to-day produces by weight 93 per cent. and by money value 72 per cent. of the dyestuffs consumed in this country.

Before the war the industry was practically negligible, but there are now several millions of pounds of capital invested in the industry, which employs many thousands of people directly and indirectly.

We think the period has been too short to enable us to catch up the long start our competitors have had, but we feel certain that within a given time we shall arrive at any rate at an equality, if we do not surpass them.

NITROGEN POSITION. BILLINGHAM PROGRAMME.

We have almost reached the completion of our expenditure on our fertiliser and ancillary plant at Billingham. It is, of course, public knowledge that the whole of this plant is not in full operation.

We have never expected that all the fertiliser plant we were erecting would be required immediately on completion of the plant. Owing to the rapidity of construction the date of our original programme has been considerably anticipated, and in view of extensive technical improvements the capacities of the various fertiliser plants are all considerably higher than the original estimates, and the amount of surplus of each plant at the moment is larger than it would otherwise have been.

In order to maintain our relative position and importance as manufacturers we shall always in the future, as we have throughout our history in the past, have to be prepared to have a certain amount of reserve plant in existence. We can never afford not to be able to deliver when the market calls for our products. Neither is it possible with the most careful economic and statistical study to foretell with accuracy more than the trend over periods of the world consumption.

During the past seven years world nitrogen consumption has more than doubled. We can, however, from past experience state with certainty that there is still a great world need for the increased use of fertilisers. There have been sudden and large increases in the demand for nitrogen in recent years, and I fully expect that history will repeat itself in this respect.

One of the main objects of my recent visit to South Africa was to obtain a personal acquaintance with the working of African Explosives and Industries Limited, a very important associated company of ours in which we have a 50 per cent. interest in conjunction with the De Beers Company, and was very pleased with the present position and future prospects of the company.

As you will know, I personally am absolutely convinced of the importance of the development of Imperial economic unity not merely to relieve the industrial depression of this country, but also to assist the agricultural and general development of the Empire as a whole.

IMPORTANCE OF EMPIRE TRADE.

My visit to South Africa has only tended to confirm my previous view. There, and throughout the Empire, you see the enormously wide field that lies open to trade agreements between the British producer and the British manufacturer. We have given a great example of the advantages of industrial mergers. I can assure you that I am absolutely convinced that even much greater and more far-reaching advantages to the British people could be derived by co-operation on the lines of an Imperial merger.

One of the schemes which were discussed in South Africa was the introduction into that country of our processes for the manufacture of synthetic ammonia and its oxidation into nitric acid for the cheapening of the manufacture of explosives. Owing to our interests and connections with this great industry in South Africa we are able at the same time to exploit on remunerative terms to your company the result of the years of research and experiment we have carried out at your Billingham factory, and at the same time assist in the development of an important secondary industry in the Dominions which will render South Africa, which up to now has had to import Chilean nitrate of soda for the manufacture of nitric acid, a self-contained unit as far as this operation is concerned.

In general, I would say that I feel confident that this company, which is in an extraordinarily strong position, will continue to extend very largely its operations in many directions and become a still larger contributor to the profits of I.C.I. as compared with what it has been during the last few years.

OIL FROM COAL.

We have made great progress in the important field of the conversion of coal into petrol and fuel oil, by hydrogenation. A semi-technical plant is in operation and is to-day producing first-class petrol from British coal. We are doing intensive work on the subject, studying it particularly in this country and in other parts of the Empire, and we have every reason to hope that, under favourable conditions, we shall be able to produce high-class petroleum products on a commercial basis.

We have recently had discussions with representatives of an important group of oil companies and the Standard I.G. Company of America, with a view to arranging for mutual co-operation and the pooling of knowledge and for exploitation of the process on lines which will encourage mutual progress. I am happy to say that within the last day or two we have practically reached agreement on the points involved, and we have no doubt that this agreement will be of material benefit to us and facilitate early practical progress not only in this country but in the Empire as a whole. I need hardly point out the importance of these developments, both to national and imperial defence and the future development of the coal industry in this country. They would carry with them directly and indirectly a large amount of new employment of workers in this country.

CONCLUSION.

On looking at the situation as a whole, I can only repeat that we have every reason to be satisfied with the position the company has reached in such a short space of time and has maintained during the years of exceptional industrial and financial difficulties.

The balance-sheet discloses a powerful financial position. As far as we can judge our capital requirements for the present year, and probably for longer, are covered by the last issue which we have made.

While it is early in the year to endeavour to anticipate the final results, and whereas it is always an unthankful task to assume the rôle of a prophet, especially in times such as these, still, giving you the best views on the position which I can make at the present time, I see no reason to anticipate that the present year should not give us results as favourable as, if not somewhat better than, those of the year whose accounts we are presenting to-day.

Those who are partners with us in this great Imperial enterprise, and on whose loyalty and support we have to rely, can rest assured that there is nothing which will not be done which foresight, energy and application can humanly do to develop still further this great concern.

There is, fortunately, throughout the entire ranks of our body a unity of purpose, a common loyalty and harmonious co-operation which become intensified as time goes on.

Surrounded as I am by colleagues of exceptional and established ability, by a staff of the highest grade of efficiency, by a band of workers unequalled in the world, I look forward with no uncertainty or hesitation to the growing expansion, the increasing prosperity of, at any rate, one great British industry, of which I have the honour to be the chief.

SIR HARRY MCGOWEN'S SPEECH.

Sir Harry McGowen said: On former occasions it has been my custom to supplement our chairman's speech, but his remarks to-day, coupled with the report issued a few days ago, have been so comprehensive and informative that it is unnecessary for me to add to them.

In a word, I would like to say that I subscribe to all he has said, but I would stress one point: that is, that your great concern is equipped in every way, technically and commercially, to take care of whatever business is offering in our many commodities throughout the world's markets, but, naturally, when those industries on which we depend for a demand for our products are depressed we must necessarily suffer. Constant care is being continually exercised in the direction of reducing costs of manufacture and distribution, and I hope you will agree with me that it is rather an excellent achievement that we should have been able to show such a very satisfactory result for the past year notwithstanding the general unsatisfactory conditions of business in this country and in many parts of the world.

I commend the enterprise of our staff in continuously looking for new outlets for our products. The day is past when we can sit at home and wait for orders to come to us. Members of our staff are all the time travelling the world, getting in contact with existing and potential buyers, and I can assure you that no stone is left unturned in our efforts to hold and increase our business.

As an encouragement, let me add that our sales for the first three months of this year are quite as satisfactory as those for the corresponding, and less difficult, period of 1929.

In the nature of things I possibly come in contact with more individual members of the staff than our chairman, and I would just like to say that any words of mine are inadequate to express my feelings of gratitude that we have around us a staff so loyal, keen and enterprising.

Publicity has been given in many newspapers to the contract we have made with the Russian Government, but I would like to remove what is, possibly, a misconception in the minds of our shareholders. It has been stated in one or two papers that we have given a loan to the Russian Government. That is not so. What we have done is to sell our products on extended terms of credit, which, however, in our opinion are quite satisfactory, but any possible risk is adequately covered by insurance. The contract provides for considerable quantities of many of our manufactures at satisfactory prices, and we are pleased at this opportunity of giving increased employment to workers in certain of our factories.

Ladies and gentlemen,—I have great pleasure in seconding the resolution proposed by our Chairman.

The resolution was carried unanimously.

ASSOCIATED ELECTRICAL INDUSTRIES, LIMITED.

SATISFACTORY PROFIT EXPANSION.

The thirtieth annual general meeting of Associated Electrical Industries, Ltd., was held, on the 30th ultimo, at Bush House, Aldwych, London, W.C., Sir Felix J. C. Pole (the chairman) presiding.

The secretary (Mr R. H. Haviland, A.C.A.) having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, pointed out that the general reserve account had been increased from £575,000 to £800,000. The profit for the year, including dividends from subsidiary companies and after deduction of all expenses and charges other than interest on debenture stock and depreciation, amounted to £365,961 as against £258,772 last year—an increase of £107,189. To this figure, £365,961, there had to be added the amount brought forward from last year, £101,851, so that they had a total of £467,812. After providing for interest on the debenture stock, depreciation written off works, machinery, plant, &c., at Trafford Park and Sheffield and the amount transferred to general reserve, the total profits available for distribution amounted to £348,389. They recommended that there should be paid a dividend of 8 per cent. on the preference shares and 6 per cent. on the ordinary shares, both less tax, absorbing £239,147, which would leave a balance to be carried forward of £109,241. He had been reminded, he said, that it was usual to pay dividends on preference shares half-yearly, and he was pleased to announce that the directors proposed to adopt that practice in future, commencing with the payment of a half-year's dividend on July 1st next.

Having regard to the severe competition prevailing throughout last year, the results might, he thought, be regarded as satisfactory, but the directors felt that the profits were not commensurate with the high quality of their products, and the service rendered to their customers. The works of the group were comparatively well employed during 1929, and the output was satisfactorily maintained.

An important development during the year was the decision to utilise the Edison Swan Electric Company as the merchandising section of the group, and the business in wiring supplies, fittings, and radio apparatus, formerly handled by the merchandising sales department of the British Thomson-Houston Company had been taken over by the Edison Swan Company. This would be followed by the transfer to the Edison Swan Company of the Metropolitan-Vickers merchandising business. The results already secured had been encouraging, and the directors believed that substantial economies would accrue.

The works of the group were comparatively well employed during 1929, and the output was satisfactorily maintained. Orders in hand showed an increase over those for the previous year. He was sorry, however, he could not be very optimistic with regard to prices, which in his view were far too low, having regard to the very high standard of their products.

EFFICIENCY OF THE INDUSTRY.

It had been said of some of the industries in this country that they were badly equipped with respect to plant and technical ability, and it had been suggested that the poor financial results obtained had been due to these causes. There was no foundation for any such statement if made with regard to the electrical manufacturing industry. The works of their own companies were as well equipped and as up to date as any to be found in other countries.

It was only in the case of price that they were at a disadvantage, due to their having no protected home market in which they could build up quantity production and so get lower costs, to the heavy burden of taxation which they had to bear, and to the lower rates of wages paid by their Continental competitors.

It was most unfortunate that the really vital question of how to protect our home markets should be a matter of political controversy, and he could not help feeling that the solution of the problem was work for an impartial tribunal, which should weigh up facts, figures and arguments and make a recommendation without regard to party cries or vote catching. (Hear, hear.) Some day British working men would realise that safeguarding of Industry was synonymous with safeguarding of their employment.

How effectively the export business had been re-established since the war was demonstrated by the fact that in the last nine years the Metropolitan-Vickers Electrical Company alone obtained business from overseas aggregating £27,000,000. He had made a calculation to what this meant to the workers of this country, and he thought might be estimated that quite £18,000,000 was paid in wages as the result of this business being obtained for Great Britain—a notable contribution to the solution of our post-war difficulties.

The report was unanimously adopted.

HENRY GLAVE, LIMITED.

TWENTY PER CENT. IN A DIFFICULT YEAR.

The eighth annual general meeting of Henry Glave, Ltd., was held, on the 29th ultimo, at 80/110 New Oxford Street, London, W.C. (the company's new store).

Sir Arthur Wheeler, Bt., D.L., J.P. (the chairman) said:—The basis of allocation of profits which we recommended provides for the maximum dividend on the preferred ordinary shares, and for a 20 per cent. dividend on the deferred ordinary shares—for the third year in succession—and that after allocating £3,000 to reducing the amount at which fixtures and fittings stand in the balance sheet, we carry forward a little more than we bring in.

I draw attention to this because the period under review has not been by any means favourable. As you know, building operations have been in progress, and they have been a severe handicap to the revenue-earning capacity of this store. Apart from this, the road on our frontage—New Oxford Street—has been closed to traffic for eight weeks. Eight weeks you may think is only a very short period, but the standing charges are very heavy, and if our sales for two months are heavily reduced it means that during that time we are actually making a loss.

Whilst I am on this point of the relation between turnover or sales and overhead expenses, I must tell you that our rigid policy is to sell the maximum quantity of goods and to achieve that maximum figure two factors are essential: We must display our wares to the best advantage, and the price at which we offer them must be attractive.

The first condition is undoubtedly provided under our rebuilding scheme. We can pride ourselves on having the best lay-out of its kind from the shop windows to the most remote corner of the building. The second factor, the competitive price, we attain by making a small profit per unit of goods sold. We can buy well because we buy "big." We prefer to make a shilling profit on each of forty articles rather than ten shillings on each of four.

QUESTION OF RESERVE.

To return to the allocation, we propose placing nothing to reserve, and for this very good reason. Perhaps I might first generalise and say that in any business a general reserve is created against contingencies. It represents profit set aside in one year because it is felt that in a subsequent year it may be required to enrich a poorer profit, or it is perhaps set aside and an equal sum invested in a gilt-edged security so that if some asset of the company decreases in value this amount set aside will keep the balance true. Neither of these aspects or situations concerns your company to-day. In the trading of Glaves Stores we are at the foot of a rising curve, and so far as our assets are concerned we actually have a considerable internal reserve.

Our investments in subsidiary companies, which stand in the balance sheet at £492,260, would show an appreciation of some £160,740 if we valued them on a 10 per cent. yield basis. To put it another way, if we wished to provide a similar income we should have to invest £653,000 at 10 per cent. per annum. This takes no account of the reserves vested in the subsidiary companies. Again, our leaseholds and buildings stand more than 20 per cent. below the valuation recently placed on them by Messrs Goddard and Smith. I am conservative in the extreme, I acknowledge the necessity for adequate reserves, but I do not make a fetish of reserve building. My board and I recognise that we are here to look after not only the interests of shareholders but the interest on their money.

FUTURE PROSPECTS.

Now in regard to our future prospects. Glaves Stores are particularly well situated. Its frontage is on the most direct thoroughfare from the West End to Holborn and the City, and within a few yards runs Charing Cross Road, carrying endless traffic north and south. Ultimately, no doubt, the new Charing Cross Bridge will be built, and that will still further improve our position as a shopping centre. There are stores in London far less conveniently situated which bring shoppers from every part of England. How much more so shall we be able to attract the stream of shoppers assisted by this natural flow in our direction! All these factors are there to help us, but we do not rely on them alone. When Glaves Store is completed, I make so bold as to prophesy that people will visit Glaves because it is Glaves, and not because they happen to be passing.

Mr W. J. Hopton, J.P. (managing director), said that many people disliked hire purchase and the credit system. They did not want three or four years to pay; they wanted value. This "Glaves" had proved by the fact that they had served nearly 50,000 more customers during last year, and about 150,000 more during the last two years, in spite of their difficulties.

The report and accounts were unanimously adopted.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES, LIMITED.

INCREASED PROFITS AND DIVIDEND.

The twenty-third ordinary general meeting of the Lunuva (Ceylon) Tea and Rubber Estates, Ltd., was held on the 28th ultimo, in the Council Room of the Rubber Growers' Association, 2-4 Idol Lane, London. Mr H. J. Welch (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—The issued capital of £632,758 remains at the same figure as last year. The reserve has been increased by £15,637 to £235,000. The estates account (including buildings, machinery and plant) stands at £814,866, or £60,754 higher—the addition being represented by the purchase for £9,400 of 326 acres of fine virgin land suitable for tea, and the balance by development expenditure and expenditure upon buildings, machinery, &c., less £23,358 written off for depreciation.

After making allowance for the surplus assets, less the liabilities (including the £10,000 which it is proposed should be written off buildings, etc., account), the planted areas stand in the books at the net figure of £44 11s. per acre, as against £41 last year.

ANOTHER NEW TEA FACTORY.

The erection of a new tea factory has just been completed on the Hingurugama estate This is the sixth new tea factory erected by the company since 1926. With its completion we hope that we have virtually come to the end of the re-equipment of our tea estates.

As you know, during the last four years the company has expended a large sum of money upon putting its estates in first-class condition, particularly as regards factories and equipment. I think the results for the year are sufficient evidence that the policy has been fully justified.

The profit per acre on tea rose from £17 3s. 9d. in 1928 to £19 12s. 11d. in 1929, an improvement of £2 9s. 2d. per acre.

The net profit upon rubber amounted to £2 1s. 8d. per acre, or £1 17s. 9d. per acre better than in 1928. This was in spite of a fall in the net price secured for the rubber crop of almost 3½d. per pound, and is the result of a very considerable reduction in the cost.

The profit per acre on the coconut area was disappointing. It fell by 18s. 4d. to £2 6s. 4d. This was mainly owing to the low price ruling for copra, which realised about £3 per ton less than in 1928.

The policy of gradually planting up the reserve lands of our existing estates was continued during 1929, and the company's total planted area now amounts to 11,801 acres, of which 1,475 acres have not yet reached the revenue-producing stage. A further 252 acres (184 of tea and 68 of rubber) will be planted this year.

All the estates, as I have said, are in first-class order, and, given reasonably remunerative selling prices for its two main products, I think this company can look forward with every confidence to continued and, indeed, increased prosperity. (Hear, hear.)

The satisfactory results, however, could not have been secured without the loyal co-operation of a skilled and energetic staff in Ceylon, and our very cordial thanks are again due to the estates staff, our visiting agents and our Colombo agents, and our acting secretary in London (Mr. J. E. Ritchie). Especially are our thanks due to all concerned for the improvement in the manufacture and value of our teas.

The total net profit for the year amounted to £135,188, as against £120,721 in 1928. It equalled 21 per cent. upon the issued capital.

The directors recommend the payment of a final dividend of 11½ per cent., making 17½ per cent. for the year, as against 15 per cent. distributed in 1928.

CURRENT YEAR'S PROSPECTS.

As far as the year 1930 is concerned, up to the present our teas have realised higher and our rubber lower prices than the averages obtained for last year. The company has agreed to restrict its tea crop for the year and not to tap its rubber during May. You are doubtless fully aware of the schemes under which these restrictions are taking place, the object of which is to prevent the continued accumulation of surplus stocks. It is hoped that we shall thereby gain in increased prices what we shall lose in reduced outputs and increased costs.

The report and accounts were unanimously adopted, and a final dividend of 11½ per cent., less income tax, declared. The retiring director, Mr George Nicol Thomson, was re-elected to the board, and the auditors, Messrs. McAuliffe Davis and Hope, reappointed for the current year. A hearty vote of thanks to the Eastern agents, the staff in the East, the chairman and the directors terminated the proceedings.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED.

DIVIDEND OF 10 PER CENT. MAINTAINED.

The ordinary general meeting of the Rio de Janeiro City Improvements Company, Ltd., was held, on the 28th ultimo, at Winchester House, Old Broad Street, London.

Mr Edward Greene, who presided, in the absence of the chairman, Lord Hunsdon, said that the board recommended the same final dividend of 1s. 3d. per share as last year, bringing the total distribution up to the usual figure of 10 per cent., free of tax. The most salient fact in the report was that additional rents received for new houses drained reached the record figure of 2,919 during the year, which confirmed the enormous development, progress and growth of the city of Rio de Janeiro, which, indeed, were visible to the visitor on every hand. With regard to the capital accretion to the shares, that had arisen from the sale of the company's property at Fazendinha da Gavea, which, mules having been superseded by motor transport, was no longer required for the purposes of the company. The property was in one of the most lovely spots in the neighbourhood of Rio, and had been purchased by the Rio Golf Club; the shareholders of the company would appreciate the proposed distribution of 6d. per share, which would necessitate an extra-ordinary meeting, and the members of the club would be proud in the possession of what would become in time one of the show country clubs of the world.

UNDRAINED AREAS—THE 1926 CONTRACT.

As regarded the large undrained areas which existed in the city, the Chairman last year referred to the still unratified contract of 1926. There had been further conversations on the matter, and the Government had promoted a Bill in Congress to obtain the necessary legislative authority to negotiate a contract with the company. That Bill, while passing the Senate, had failed to reach the stage of being voted on by the Chamber of Deputies before Congress dissolved in the ordinary course. When Congress met again next month it was possible that the project might be pushed forward more energetically. As to prevailing conditions in Brazil, the President, Dr. Washington Luis, had weathered a most serious political crisis without disturbance or disorder, and it was considered that Brazil would now enter upon a new era of prosperity and progress if continuity in the financial policy of the President was maintained.

The report and accounts were unanimously adopted.

HOPE BROTHERS, LIMITED.

A SATISFACTORY RECORD.

The thirtieth annual meeting of Hope Brothers, Ltd., was held, on the 25th ultimo, at the Cannon Street Hotel, London, E.C.

Mr T. E. Goodyear (the chairman) said that that was the twentieth occasion on which he had presided over their annual meeting, and he thought he might claim that those twenty years were years of progress. The number of their branches had been substantially increased. For the past twelve years the dividend had averaged 10 per cent. per annum, and they had accumulated a reserve and carry-forward which now amounted to upwards of £137,000. They had applied £125,000 in reducing the valuation of goodwill and had been able, with the shareholders' sanction, to appropriate more than £20,000 to the staff provident fund. That, he thought, was a satisfactory record, and they could regard the present balance sheet with absolute confidence as showing a thoroughly healthy position.

Having regard to the conditions that had prevailed during the past year he thought that the results might be considered satisfactory. In the first half of the year conditions were favourable; the weather was seasonable, and there was a widespread feeling that more prosperous times for the country were in sight. As a result they obtained a substantial increase both in sales and profits. Unfortunately, the second half of the year did not maintain the earlier promise. The weather of the autumn and winter was mild and wet, and the advent of the present Government produced a feeling of uncertainty. National prosperity could be attained only by industry and economy. The burden of taxation had been increased and the extension of the system of doles must tend to the further demoralisation of industry. The result was shown in the great increase of unemployment.

In the circumstances, he thought they were fortunate in being able not only to maintain their dividend at 10 per cent., but also to recommend a further allocation in reduction of the item of goodwill. They had made their usual liberal provision for depreciation of their fixtures and fittings. After the payment of the dividends and provision for the various allocations he had mentioned they would still have £37,000 to carry forward—a sum equal to two years' dividend on the preference capital.

In conclusion, he moved the adoption of the report and accounts, which was seconded by Mr W. W. Greenslade (deputy-chairman and managing director) and unanimously carried.

CABLE TELEPHONE AND GENERAL TRUST, LIMITED.

INCREASE OF CAPITAL APPROVED.

SIR ALEXANDER ROGER'S STATEMENT.

An extra-ordinary general meeting of the Cable Telephone and General Trust, Limited, was held on the 30th ultimo, at Donington House, Norfolk Street, London, W.C., for the purpose of considering and, if thought fit, passing special resolutions increasing the capital of the company to £1,100,000 by the creation of 390,000 shares of £1 each, of which 250,000 are to be preference shares, 5,000 "A" preference shares and 135,000 ordinary shares, raising the rate of annual dividend on the preference shares from 6 per cent. cumulative to 7 per cent. cumulative, changing the title of the " " preference shares to "preferred ordinary shares," and adopting new articles of association.

Sir Alexander Roger (chairman of the company) presided.

The secretary (Mr L. D. Bennett) having read the notice convening the meeting,

The Chairman said: Ladies and gentlemen,—As foreshadowed in my remarks to you at the fourth annual general meeting of the Trust, held on March 4th last, you have now been called together to consider proposals for the increase and alteration of the capital of the Trust.

In the first place it is proposed to increase the authorised capital from £710,000 to £1,100,000 by the creation of 390,000 new shares of £1 each, of which 250,000 will be preference shares, 5,000 will be "A" preference shares and 135,000 will be ordinary shares.

A certain amount of the Trust's business has up to now been carried on by temporary financing on the lines of short-term borrowing, and this fact was brought to your notice when we last met.

The proposed alterations in the capital structure will place the Trust in a position, therefore, more readily to expand and meet the needs of a large and ever-increasing business.

GROWTH OF TRUST'S CAPITAL.

The Trust was formed in June, 1926, to carry on the business of an investment and trust company and is particularly, but not exclusively, interested in the telephone and cable industries and allied undertakings throughout the world. The original authorised capital was £202,000, which was increased to £500,000 in March, 1927, and again to £550,000 in August of the same year. The next increase took place in July, 1929, up to £710,000, and at date there is a total issued capital of £698,737. The whole of the issued capital has been paid up in full on allotment, and in addition 100,000 of the issued ordinary shares have been subscribed for at a premium of 5s. per share, thereby already providing a reserve of £25,000.

The Trust's investments and interests in subsidiary and associated companies as at December 31, 1929, showed a total of £1,172,784 8s. 6d., and a valuation made at that date showed that, despite the well-known adverse market conditions then existent, the value of the Trust's investments was considerably in excess of book figures.

AN IMPORTANT LINK.

The Trust is an important link in a chain of companies in U.S.A., Great Britain and elsewhere who together transact and operate every kind of telephone business, and is in association with International Automatic Telephone Company, Ltd., Automatic Telephone Manufacturing Company, Ltd., British Insulated Cables, Ltd., and other important British interests, and the Associated Telephone and Telegraph Company of U.S.A.

You will see that it is proposed to increase the dividend on the preference shares from six per cent. cumulative to seven per cent. cumulative as from June 30th next. It is estimated that when the changes now proposed have taken place the capital value of the seven per cent. cumulative preference shares will be covered more than twice, while the dividend will be covered about three times.

Another proposal before you to-day is to rename the existing "A" preference shares "preferred ordinary shares." As you will have gathered, these "A" preference shares, being non-cumulative, and ranking just before the ordinary shares, which bear the equity of the business, are more in the nature of a preferred ordinary share than a preference share, and it is proposed to rename them accordingly. They have hitherto been entitled to a seven per cent. non-cumulative dividend out of the profits each year after satisfaction of the cumulative preference shares, and the same rights attach to their fresh designation.

NEW ARTICLES.

To give effect to these changes in the articles of association, and to bring them into line with the recent changes in law made by the Companies Act, 1929, your directors consider that the numerous alterations thus necessitated render it imperative that a new set of articles of association should be adopted. A copy of these new articles of association has been available at the registered offices of the Trust since April 15, 1930, for inspection by shareholders.

The resolutions were put to the meeting and carried unanimously

The proceedings closed with a hearty vote of thanks to the chairman and directors.

At subsequent class meetings of preference, "A" preference and ordinary shareholders the resolutions were unanimously confirmed.

CHAMPION REEF GOLD MINES OF INDIA, LIMITED.

ENCOURAGING PROGRESS AND RESULTS.

The ordinary general meeting of the Champion Reef Gold Mines of India, Ltd., was held, on the 30th ultimo, at the Cannon Street Hotel, London, the Hon. A. T. J. Fraser (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The mill treated 101,280 tons of ore for a production of 53,695 ounces of fine gold. There were also treated 265,684 tons of old tailings from which were recovered 12,459 oz. The total, with the inclusion of some 400-odd ounces from old copper plates, amounted to 66,562 oz. After deducting royalty and refining charges, the sales of gold produced £268,272. Interest and other items bring the total receipts up to £273,813, and the balance over expenditure amounts to £52,370, an increase of £13,250 over the previous year.

The average grade of current ore treated was just under 11 dwts., and the recovery shows the very satisfactory figure of 97½ per cent. The balance from last year, together with some £800 from dividends, gives a total disposable of £57,900. Your directors have decided to write off a total of £20,500—namely, £10,000 against Heathcote's shaft, £7,500 depreciation on machinery and plant, and £3,000 to insurance and contingencies. A dividend of 1s. 3d. a share, taking £33,150, has been declared and paid, thus leaving £4,252 to be carried forward.

The estimates of ore reserves at the end of the year amounted to 278,086 tons, an increase of 8,730 tons over the previous year.

During the period under review general progress and results may, I think, be described as decidedly encouraging.

As regards development results underground, these were undoubtedly most satisfactory. In the central ore shoot, in the neighbourhood of Carmichael's shaft, the 72nd level, opened up during the year, has proved of about the same value as in the two levels above. Farther south, in the neighbourhood of Glen's shaft, there has been a notable improvement. I think I have for several years told you at the annual general meeting that our most trustworthy prophets, both in India and in Messrs John Taylor and Sons' office, have been anticipating the opening up of some good ore in this neighbourhood in depth. After some years of hope deferred, I was able last year to inform you that a comparatively small block of medium-grade ore had been developed between the 69th and the 70th level at this point, and that the latter level showed much promise. At the end of 1929 this ore shoot had been opened up for its whole length at the 71st level and shows a marked improvement in length and gold contents over the 69th, the figures for the 71st level being as follows: For a total length of 622 ft. an average value of 1 oz. 6 dwt. over 40 in. At December 31st two winzes were half-way down to the 72nd level, and two others had just been started.

At the date of our latest news the two former were down to the horizon of the 72nd level, and some 25 ft. or so had been driven either way from both points. The results of the 100 ft. or so driven—which I must point out are in the heart of the richest section of the ore shoot—are most encouraging, the average being rather over 2 oz. per ton over a width of 4½ ft.

It is always rather rash to make the statement that a given phenomenon has never previously occurred in history, but I make bold to say that there are at any rate very few instances in the history of mining of a new ore shoot of such strength and value commencing at a depth of 6,500 ft. from surface, after 2,000 ft. of practically barren, certainly unpayable, ore channel above it.

Now, having spoken about ore running up to 2 oz. or so, I do not want you to go away with the impression that we are eventually going to mill an average grade of ore in any way approaching that figure—or, in fact, anything very much higher than our present grade. In the first place, owing to the nature of the lode and great pressures at a depth of nearly 7,000 ft., it is impossible to mine these reefs clean. In the second place, these rich shoots can only be regarded as "sweeteners," and, in order to keep up a reasonable monthly tonnage, a large proportion of much lower grade ore has to be mined and treated.

It will, however, I am sure, be most heartening to shareholders of this mine, and also to a certain extent to those of other properties on the Kolar Field, that new ore shoots of such value can make their appearance at so great a depth.

The report and accounts were unanimously adopted.

JAMES W. COOK AND COMPANY, LIMITED.

IMPROVED RESULTS.

The thirty-third annual general meeting of James W. Cook and Company, Ltd., was held, on the 29th ultimo, at 130–135, Minories, London, Mr. W. J. Clarke, chairman and managing director, presiding.

The Chairman said he was quite glad that they had been able to show better results of their trading than they had done for some years. He was not, however, content, because it was still a fact that high costs of labour and high costs of overtime, brought about by shorter hours, continued to make London much dearer than the provincial ports and worse than their Continental rivals, which meant that the trans-shipment and warehousing trade in so many articles was deviated away from this country.

They applauded the magnificent programme of extension which the Port Authority had now completed and which would enable the Port in all directions to accommodate greatly increased tonnage and offer greatly increased facilities, and it was to be hoped that the costs of operation in London would be diminished so that vessels might be attracted here and full advantage taken of the public spirit which the Port Authority had shown in their development scheme.

The Chairman then referred to the item of goodwill. That item, he said, was of days gone by, and one of the objects in creating a reserve fund was to counteract it. They were proposing to steadily increase that fund so that one day they could extinguish the item of goodwill altogether and still have a satisfactory amount at the credit of reserve. They therefore proposed transferring to reserve the sum of £20,000 from accumulated profits, making it £120,000.

After paying his annual tribute to the loyalty of the permanent staff, which, he said, was again beyond reproach, he concluded by moving the adoption of the report and statement of accounts and the payment of a dividend at the rate of 15 per cent. per annum for the half-year on the Ordinary shares, payable forthwith, making with the interim dividend already paid 10 per cent. for the year, less income tax.

The resolution was carried unanimously.

The retiring director, Mr E. G. Devitt, was unanimously re-elected and the appointment of Capt. Douglas Cable as a director was confirmed, and the proceedings closed with a cordial vote of thanks to the chairman and his colleagues.

MYSORE GOLD MINING COMPANY, LIMITED.

JUBILEE HOPES FOR THE FUTURE.

The fiftieth ordinary general meeting of the Mysore Gold Mining Company, Ltd., was held, on the 29th ultimo, at Cannon Street Hotel, London, E.C., the Hon. Lionel Holland, chairman of the company, presiding.

The secretary (Mr F. H. Williams, F.C.I.S.) having read the report convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that, although not without encouraging features, the results of the year's working were disappointing.

The drop in the dividend from 22½ per cent. to 17½ per cent. was more sudden than appeared probable a year ago. The production of over 14,200 oz. of fine gold less than in 1928 was due almost entirely to the exhaustion, in November, 1928, of the dumps of old tailings, from the re-treatment of which over 12,000 oz. were derived in 1928.

There had been a saving of nearly £14,000 in revenue expenditure, but wages had increased, and a severe rockburst had involved considerable outlay and interrupted for a time the facilities for economical work in one area of the mine. Receipts from gold sales, less royalty, were less by £58,000, and the profit was reduced by £47,000.

For forty-three years the company had not failed to pay an annual dividend. The first distribution was in 1887, and with the dividend payment made this month, it had since paid close upon £10,250,000 in cash dividends. Few mines could boast of a history so successful, so long and eventful, and yet they were able to claim that their resources were far from being exhausted.

They could not expect the mine to repeat again the amazing triumphs of its youth, and for the next year or two they were not likely to see much variation in the returns from those of the past year. But evidence of renewed vitality was accumulating. The profitable future of the mine must be sought in depth, and, while the deepest development point of the Mysore mine was some 6,180 ft. vertical, the neighbouring Champion Reef mine was finding rich ore at more than 600 ft. greater depth. There were signs of recovery which encouraged development at depth, with good hope that many more years of profitable vigour would be added to the fifty years of splendid achievement already recorded.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 26, 1930:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	5,724	From Revenue	9,095
Interest, &c., on Debt	467		
Sinking Fund	1,434		
Decrease in Debt	1,139		
Increase in Balances	142		
Sundries	189		
	9,095		9,095

The ordinary revenue for the week amounted to £9,094,600, as compared with £9,872,400 in the corresponding week last year. Income tax was lower at £1,031,000, against £1,188,000, and super-tax at £590,000, against £670,000. Estate duties brought in £1,740,000, against £1,320,000, while Customs and Excise amounted to £2,567,000 and £1,070,000, against £3,150,000 and £1,211,000 respectively. Miscellaneous receipts brought in £516,600, as compared with £1,400. The National Debt was reduced by £1,139,000, as shown below:—

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council, from April 1 to 26, 1930, were £2,601,000 by means of purchases of sterling in India.

BULLION.

The following statistics of imports and exports of gold for week ended May 1, 1930, are issued by the Statistical Department of H.M. Customs and Excise :—

Imported into *Great Britain and Northern Ireland.*		Exported from Great Britain and Northern Ireland.	
From—	£	*To*—	£
France	2,723	*Poland*	1,700
Irish Free State	8,600	Germany	426,320
British West Africa	47,646	Netherlands	383
British South Africa	711,935	France	130,971
New Zealand	2,275	Switzerland	507,200
Other countries	747	Spain	10,137
		Austria	6,820
		Kenya	1,700
		British India	38,091
		Other countries	137
Total declared value of imports	773,928	Total declared value of exports	1,123,459

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, *have been as follows*:—

1930.	Arrivals.	£	1930.	Withdrawals.	£
April 25	Bars *bought*	8	April 25	Bars sold	1,724
,, 26	Sovs. from abroad	8,600		Sovs. for export	7,000
,, 28	Sovs. *released*	250,000	,, 26		Nil
,, 29		Nil	,, 28	Bars sold	1,720
,, 30	Bars bought	1,695	,, 29		Nil
	For. coin bought	196	,, 30		Nil
May 1		Nil	May 1	Bars sold	1,693
	Total	260,499		Total	12,137

Net arrivals, £248,362.

Messrs Samuel Montagu and Co., write on April 30, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £162,887,487 on the 23rd instant (as compared with £159,822,774 on the previous Wednesday), and *represents an increase of* £16,927,403 since January 1st last. Gold from South Africa to the value of £712,000 *was available* in the open market yesterday. There was keen competition, and the price realised was 84s. 11½d. per fine ounce. Germany secured £350,000, and £272,000 was taken for a destination not officially disclosed, but rumoured to be for Belgium. Indian requirements absorbed £50,000, and the Home and Continental trade £40,000. Receipts of gold by the *Bank of* England totalled £460,539, which included £450,000 sovereigns "released," and withdrawals £10,444, a net influx of £450,095 during the week under review.

SILVER.

Prices have undergone very little change since our last letter and for four working days remained unchanged at 19 11/16d. and 19 5/16d. for cash and two months' delivery *respectively*. Demand for India has been maintained, and purchases have been made for shipment by this week's steamer, although many bazaar orders were limited to rates *slightly below those quoted*. *China has* been more disposd to sell, as have American operators who have shown more willingness to offer than has lately been the case. Supplies have *again* been augmented by moderate offerings from the Continent. The premium on silver for cash delivery increased to ⅛d. on the 24th instant, but narrowed again to 1/16d. to-day.

The following were the United Kingdom imports and exports of silver registered from mid-day *on the 19th instant to* mid-day on the 28th instant :—

Imports.	£	Exports.	£
Germany	38,955	*China (including Hong Kong)*	180,713
France	85,102	British India	98,345
Other countries	6,940	Other countries	5,772
	£130,997		£284,830

Indian Currency Returns (in lacs of rupees).

	Apr. 22.	Apr. 15.	Apr. 7.

REPORTS AND NOTICES.

At the court of the council of the Corporation of Foreign Bondholders, the vice-president, Mr Cecil Lubbock, was elected president for the ensuing year in the place of Mr Charles E. Barnett, who expressed his wish to retire from that office. The office of vice-president was filled by the election of Mr H. A. Trotter.

BANKS.

BANQUE COMMERCIALE DE BALE.—The balance-sheet total for 1929 is 765,914,479 Sw. frs., and the general business turnover reaches 28,954 million Sw. frs. The rebuilding of the bank's premises, at Basle, has now been completed, and out of the profits of 1929 a sum of 527,529 Sw. frs. has been applied in reduction of the premises account, which represents an amount of 5,000,000 Sw. frs. After making full provision for bad and doubtful debts and various reserves, the year's net earnings amount to 8,230,043 Sw. frs., out of which a dividend is being paid at the rate of 8 per cent., similarly to the two previous years of 1927 and 1928.

RAILWAYS.

GREAT WESTERN OF BRAZIL RAILWAY.—This Company is resuming dividends on its ordinary shares after a lapse of 16 years. The report has just been issued showing net receipts of £45,891 more than for 1928.

The operating results in sterling were as follows :—

	1928. £	1929. £
Gross receipts	818,103	976,424
Working expenses	603,554	715,984
Net receipts	214,549	260,440

Of the profit, £1,480 goes to the Brazilian Government for audit and inspection, rental payable under contract is £2,239, interest on permanent 6 per cent. debenture stock takes £18,375, interest on 4 per cent. debentures £54,520, final interest on interest arrears debentures now redeemed £3,988, and sinking and amortisation funds receive £72,149, leaving £107,687. Exchange differences account for £3,040, leaving £104,647, transfer fees and interest, discount, etc., bring the total to £111,962, and with £16,797 brought forward, the net surplus is £128,759. After placing £20,000 to a reserve for contingencies, the board recommend a final dividend of 3 per cent. on the preferred shares, making 6 per cent., less tax, absorbing £47,250, and a dividend on the ordinary shares of 3 per cent., less tax, amounting to £29,062 for the year, and carry-forward £32,446. Meeting, River Plate House, May 7th, at 2 p.m.

MISCELLANEOUS.

CAMMELL, LAIRD AND CO.—The 5 per cent. debenture stock holders of Cammell, Laird and Company, Ltd., at a meeting held on April 25th passed resolutions extending the date for the repayment of the debentures from July 1, 1930, for five years and the increase of interest to 5½ per cent., and the increase in the borrowing powers of the English Steel Corporation. There was not a quorum present of the 4½ per cent. debenture stockholders, so the meeting was adjourned until May 16th. The junior debenture stockholders approved any modifications of their security involved by the passing of the resolutions of the other debenture holders.

FORESTAL LAND, TIMBER AND RAILWAYS.—A Preliminary notice states that, after setting aside £168,714, against £203,456, for depreciation, and £51,717, against nothing, in respect of the discount on issue and expenses of the 6 per cent. 10-year notes issued during the year, the profit for 1929 amounts to £301,101, against £492,548, to which has to be added the balance brought in £253,451, making an available total of £554,552, against £693,565. The dividend of 6 per cent. on the preference shares absorbs £111,951, and the board have decided to recommend the payment of a final dividend on the ordinary shares of 9.6d. per share (or 4 per cent.), making, with the interim dividend of 6d. per share (or 2½ per cent.) paid in January, 1930, a total distribution of 6½ per cent., less tax, against 7½ per cent., leaving £201,526 to be carried forward, against £253,451 brought in. No allocation is made to reserve, against £50,000 for 1928. General meeting, River Plate House, May 26, 1930.

THE WALL PAPER MANUFACTURERS, LIMITED.—The Directors have decided to pay an interim dividend of five per cent. on the ordinary shares of the company, and a like rate of interim dividend, viz., five per cent., on the deferred shares in respect of the current financial year. The warrants for the dividend on the ordinary shares will be posted to the shareholders on May 31, 1930, and for the dividend on the deferred shares on June 16, 1930.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions over the United Kingdom were more favourable to agricultural pursuits, a spell of warmth and sunshine enhancing the prospects of spring sowings, while winter wheat and oats are also responding well. Native wheat continues in small supply at the Statute markets and prices are about steady for good milling grades. On the import market, trading has been of a restricted character since the Easter recess, and prices generally moved in a downward direction. North American cables report a fair export business, but values were adversely influenced by further beneficial rains in the United States and Canada, which relieved all fears of drought regarding spring sowings, and improved the winter wheat crop. In these circumstances, increased pressure was noticeable to market Canadian holdings, but offers found little response on this side. A fair business was reported, however, in American hard winters, as prices appear reasonable compared with good Plate wheat, which is somewhat sparingly offered, and with lighter shipments now taking place from the Southern Hemisphere, more attention will probably be centred on North American supplies. Quite a large business has recently been effected in French wheat and flour on United Kingdom account at competitive prices, which tends to keep pressure off the Canadian market for the time being. The Indian crop is officially estimated at about 6,000,000 quarters over last year, and may allow of certain quantities for export this season. Offers, so far, are above market parity here, and future movements will depend on the extent of local consumption and on international prices. Flour prices have followed the course of wheat, and with cheaper offers from North American mills, consumers adopt a reserved attitude pending further developments in the situation. A fair business was reported in French makes, owing to attractive prices. Of feeding stuffs, maize in near positions still commands a premium on distant loadings, which tend to ease on large prospective supplies, consequently buyers of new crop La Plata adopt a cautious attitude. Offers of Danubian were much in evidence this week, and tended to depress the market. Barley and oats were neglected, though obtainable on easier terms.

WHEAT.—Easier. No. 1, Northern Manitoba, ex ship, 43s. 6d.; No. 2 ditto, 42s. 6d.; No. 3, 41s. 6d.; No. 4, Manitoba, 40s. 6d.; No. 5, ditto, 38s. 6d.; No. 6, 30s. 9d.; No. 2, hard Winter, 39s.; No. 2, mixed Durum, 37s. 6d.; Rosafe, 62½ lbs., 40s.; Barusso, new crop, 62½ lbs., ex ship, to arrive, 38s. 9d.; Australian, 41s. 3d. per 496 lbs. English, 8s. 10d.-9s. per 112 lbs.

FLOUR.—Dull. London straight run, 35s. 6d. per sack for country deliveries and 34s. 6d. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 33s.-36s.; Australian, 31s.-32s., ex store. On c.i.f. terms, Manitoba top patents, April-May, 32s. 9d.-33s.; export ditto, 30s. 3d.-30s. 6d.; Australian, 28s. 3d.-29s.; French, April-May, 24s. 6d.-26s. 6d. per 280 lbs. Argentine, low grade, March-June, £6 2s. 6d. per ton.

MAIZE.—Easier forward. Plate, landed, 31s. 6d.; ex ship, 30s. 3d.; March-April, 26s.; new, April-May, 25s.; May-June; 24s. 6d.; June-July, 24s. 6d. per 480 lbs. Yellow maize meal, £8 15s. per ton f.o.r. London. Yellow African, £6 5s. per ton ex ship.

BARLEY.—Quiet. Californian, old, landed, 36s.-42s.; new, ex ship, 36s.-42s., as to sample; Chilian, brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs. Black Sea, ex-ship, f.a.q., 18s. 9d.; landed, on sample, 21s. 3d.; Persian, landed, 19s. per 400 lbs. English malting, 7s. 3d.-10s. 6d.; feed, 7s.-7s. 2d. per 112 lbs.

OATS.—Weak. Plate, landed, 15s.; ex ship, to arrive, 14s.; Chilian, white, 21s.; ditto, tawny, 16s.; German, landed, 20s.; ex ship, to arrive, 19s.; mixed Canadian feed, 14s. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	May 1, 1929.	Jan. 2, 1930.	Apr. 15, 1930.	Apr. 23, 1930.	Apr. 30, 1930.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	122	121	148⅜	107⅞	109	105½
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	113	130⅞	106½	104⅜	101⅜

The visible supply of wheat in Canada at 74,631,000 bushels shows a decrease on the week of 111,000 bushels. Supplies a year ago stood at 77,112,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Depression continues in the coal market. Home demand is steady, but not many spot contracts are being picked up, and the price of best small Yorkshire steams is easy, at from 15s. 3d. to 15s. 6d. f.o.b. Coke is plentiful and rather in excess of consumption.

Our Glasgow correspondent writes:—The Scottish coal trade is dull. Demand is running on small lines, both in the shipping market and in the home trade, and the majority of the collieries in all districts are badly in need of orders. The market is still weak, the only steady spots being steam coal in Fife and treble nuts in all districts. Current shipping prices are approximately as follows (all f.o.b. district ports): Lanarkshire:—Ell best, 14s.; splint best, 16s. 9d.; splint second, 16s.; navigation, 16s.; navigation second, 14s. 6d.; Hartley, 18s., all per ton f.o.b. Glasgow; steam, 12s. 6d.; *trebles, 12s.; doubles,* 11s. 3d.; *singles,* 10s. 6d.; pearls, 10s.; dross, 10s., all per ton f.o.b. Grangemouth. Fife:—Screened navigation, 16s. 6d. to 17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 12s. to 12s. 6d.; doubles, 11s.; singles, 10s. 9d.; pearls, 10s. 6d., all per ton f.o.b. Burntisland or Methill. Lothians:—Prime steam, 12s. 3d.; secondary steam, 12s.; trebles, 12s. 6d.; doubles, 11s.; singles, 10s. 9d.; pearls, 10s. 6d., all per ton f.o.b. Leith. Ayrshire:—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 3d.; trebles, 12s.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 9d.; dross, 10s. 6d., all per ton f.o.b. Ayr or Troon.

Our Cardiff correspondent writes:—Depressed conditions continue on the Cardiff coal market. It is reported that the Egyptian State Railways have placed a contract for the supply of 250,000 tons between May and September, but otherwise inquiries have been very scarce and collieries are complaining of irregular employment. In these circumstances production is declining, but supplies generally remain heavy, owing to the accumulation of stocks, and there is no indication of prices advancing above the minimum schedule. Individual collieries are busy, particularly in the Monmouthshire district, but mainly in the shipment of large coals, and some of the smaller grades are a drug in the market. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. *to* 19s. 9d.; best drys, 18s. 6d. *to* 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best, large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 45s.; rubbly culm, 10s. 9d. to 12s.; foundry coke, 32s. 6d. to 35s.; patent fuel, 20s. to 22s.; pitwood, ex ship, 26s. 6d. to 27s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—There is a slightly better tone in the iron and steel markets. The volume of business is still much below the normal for the time of year, but there is rather more overseas inquiry about and the home market seems to have become more active. The British works as a general rule are still badly in need of orders, but considering the prevailing quietness in business they seem to be obtaining a fair share of the orders coming on the market and to be as well off for work as their principal foreign competitors. In the pig iron department the expectations of a reduction in the price of Midland iron have been disappointed, and the producers have given their customers a strong hint that the effect of the Coal Mines Bill may be *to force* an advance. In several of the producing districts in this country stocks are reported to be increasing. In the semi-finished steel department business has been irregular; but the British works continue to secure a good proportion of the orders passing in competition with the Continent. Conditions in the finished steel department are brighter than of late, although they still leave a great deal to be desired. Stock replenishment orders have been rather more in evidence, and one or two of the overseas markets have been buying with a little more freedom.

Our Middlesbrough correspondent writes:—The market for Cleveland iron is quiet, very little new business coming forward. Makers are well placed as regards contracts a few weeks ahead, and before they expire it is expected that further buying will take place. In the meantime the production is fully absorbed and there is a reduction in stocks at some of the works. A few small sales were made by makers at Tuesday's market at 67s. 6d. for No. 3 for early delivery to home consumers, but there was nothing doing on export account. Other qualities were unchanged, viz., No. 1, 70s.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s. f.o.b. or f.o.t. The hematite market is depressed and prices are again lower. With increasing stocks makers are keen to secure orders and have accepted 74s. for mixed numbers in moderate sized parcels, and would even shade this price for more substantial lines. Rumours have been current during the past few weeks of a probable reduction in the production and it is now almost definite that at least two furnaces on the Tees will go out of operation within the next two or three weeks. Shipments of pig iron have recently been very poor, the total cleared to 29th inst. being 13,671 tons, against 20,208 tons to same date last month. In the steel trade no new orders of importance are reported this week, but several tenders are out and awaiting decision. In the meantime most mills are fairly well employed on old contracts. Prices are generally unchanged from last week The ore trade is idle as regards new business, best Bilbao rubio is nominally 21s. c.i.f. for prompt delivery and the current freight Bilbao/Middlesbrough for early loading *is about 5s. 6d.* Coke *is very weak,* consumers are all well covered and only in odd instances is it possible to make sales; good furnace qualities are now obtainable at 18s. delivered works. The number of furnaces in blast in the district is so far unchanged at 40, but one now producing basic iron is going out within the next day or two at the Newport works of Dorman, Long and Company, Ltd.

Our Sheffield correspondent writes:—Trade in both the iron and steel sections slumped badly in April and the depression has extended to most of the finished industries of Sheffield, including motor car parts and material. The outlook of the present month is not good, as there are comparatively few inquiries. Not many consumers of materials have resumed their deliveries, which were suspended a month ago. Australia is now one of the worst of the overseas markets. The import there of certain local products is prohibited, and the duties on others have been increased. Apart from these handicaps, Australian orders are being held up until the finances of the Commonwealth improve. Prices of foundry iron are stabilised for a further month. Few contracts are being made, and users are still buying *on hand to mouth lines.* Steel prices also are unlikely to be altered this month. Rolling mills report that work continues to contract. The Lincolnshire iron and steel works have been fully employed for a year, but are now experiencing a little depression which overtook other centres some months ago.

Our Glasgow correspondent writes:—The depression in the iron and steel trades in the West of Scotland is becoming more pronounced, and the present position is somewhat disquieting. At many of the Lanarkshire steel plants there has been a serious cutting down of the working week, a large number of workers being affected. At the shipbuilding yards on the Clyde the outlook as regards future employment *is also causing some anxiety.* New work placed during the current year has been far below the average, and during the month of April the tonnage placed has been negligible. Things are rather better at the sheet making plants, a considerable tonnage for export both of black and galvanized has been booked, and the home demand is well maintained. Prices are unaltered.

Our Cardiff correspondent writes:—On the Swansea Metal Exchange on Tuesday business was relatively quiet, but there were inquiries from the *Continent and South America,* and it was stated that an order for half a million boxes of oil sizes had been secured. Prices are stationary at from 18s. 4½d. to 18s. 6d. per basis box. Shipments of tinplates last week were exceptionally heavy, and there was consequently a reduction of about 30,000 boxes in the warehouse stocks. Galvanised sheets are a shade easier, at £11 17s. 6d. to £12 per ton, compared with £11 17s. 6d. to £12 5s. the previous week. The margin between native and foreign bars has been reduced by a fall in the price of Welsh bars from £6 10s. to £6 3s. 9d. per ton.

OTHER METALS.

Tin.—Market depressed and prices marked a further decline on heavy liquidations, and lower Eastern cable advices, though dealings were attended by a good deal of irregularity. With slow support from the Continent and a lack of confidence on the part of consumers here, offerings proved in excess of requirements, and market stability does not yet appear in sight. Standard cash changed hands at £157 10s. to £152 12s. 6d., and three months £159 15s. to £154 2s. 6d. In the East, sales were reported at £160 17s. 6d. to £156 10s. per ton c.i.f.

Copper.—In moderate support, and values also moved in buyers' favour on selling pressure. Standard cash sold at £52 15s. to £50 12s. 6d., three months £51 10s., £52 5s. and £49 17s. 6d. and £50 7s. 6d.

Lead met a fair demand, but offerings proved excessive, and values exhibited irregularity, while weaker on balance. Good soft foreign pig, April, sold £18 to £17 18s. 9d.; May, £17 13s. 9d. to £17 8s. 9d.; June, £17 13s. 9d. to £17 7s. 6d.; July, £17 13s. 9d., £17 17s. 6d. and £17 8s. 9d.; August, £17 13s. 9d. to £17 12s. 6d. and £17 13s. 9d.

Spelter was freely offered, and a moderate turnover resulted at declining rates. May sold at £17 6s. 3d. to £16 12s. 6d.; June, £17 10s. to £16 17s. 6d.; July, £17 13s. 9d. to £17 5s.; August, £17 17s. 6d. to £17 5s. ton.

Antimony quiet. English regulus, £40 to £46 10s.; Chinese ditto, spot, £29 10s. ditto, May-June shipment, £26 10s.; Chinese, crude, May-June, £16 15s. ton c.i.f.

Antimony Oxide—May-June, £26 10s. ton c.i.f.

Antimony Ore.—*50 per cent., May-June,* 3s. 6d.; 60 per cent., 4s. 3d. per unit c.i.f.

Wolfram steady. Chinese, May-June, 24s.; Burmese ditto, 23s. 6d. *unit* c.i.f.

Aluminium maintained. Home trade, £95; export, £100.

Tin Plates steady, with moderate sales. I.C. coke, prompt and forward, 18s. 4½d. to 18s. 6d. per box f.o.b. Swansea.

Zinc Oxide steady, at £29 to £36 per ton, as to quality, delivered United Kingdom.

THE COTTON TRADE.

Liverpool: April 30th.

The chief feature of the week has been the widening of values between the old and new crop positions. Values of the near positions vary but little from those of a week ago, but the more distant are about 12 to 15 points lower. This has been caused by more favourable new crop reports, particularly from the Eastern belt. *In the central belt rains would help germination,* whilst in the west preparations are well advanced, but lack of moisture is delaying planting. Some showers have been reported in Texas and Oklahoma during the last day or two. Private reports seem to show but very little reduction in acreage. Trade reports continue poor, and in U.S.A. further mill curtailment is expected. Spot sales for the week are 32,000 bales, of which 13,890 are American, 5,600 Brazil, 2,700 Peru, 5,640 Egyptian, 3,300 *African,* 450 *East Indian* and 420 sundries. Imports for the same period are 64,667 bales, of which 15,215 are American, 2,273 Brazil, 549 Peru, 19,096 Egyptian, 2,640 African, 24,362 East Indian, and 532 sundries. Quotations to-day are: American Middling, 8·52; Egyptian Sakel, 14·20; Uppers, 10·32; Brazil Fair, 7·87; Peru G.F. smooth, 8·97; West African Middling, 8·47; and East African G.F., 9·12.

Manchester: April 30th.

Business in the market has been of smaller dimensions than for a long time back, and traders have been depressed by the unfavourable news from foreign outlets. The situation in India is considered to be very serious, and apart from the absence of fresh buying there *is a danger of contracts* being cancelled, and goods being thrown on the hands of merchants. In the circumstances offers for piece goods have been decidedly scarce, and buying has been confined to odd lots in light fabrics and fancies, chiefly for Calcutta and Madras. The latest news from China has also been discouraging as, at the auction in Shanghai this week, the market was described as depressed with an entire lack of confidence, and prices for goods had to be *marked down.* Isolated sales have occurred in narrow shirtings for Egypt and some producers of bleaching cloths have done fairly well for South America, chiefly Chile. A steady business has again been done in home trade fabrics. The outlook in weaving centres is very uncertain as a result of the disturbed conditions in the East and Far East. Trading in the yarn market has been of limited dimensions. Despite the big curtailment of production the output has *not* been sold, and prices in American and Egyptian counts have been more irregular when tested.

THE WOOL TRADE.

Our Bradford correspondent writes: The wage dispute still drags on and, judging from the threats made, will become more serious. The situation is not, however, alarming, as the upward tendency in raw material values which has developed in Australia during the past few days shows. This can be taken as indicative of sounder manufacturing conditions generally, for Bradford has participated in the buying and, but for the dispute, spinning and manufacturing conditions would have been definitely improved. Stocks of tops held by spinners were not large when it began, and these are now being depleted. With practically all commission combing machinery standing, it is not an easy matter to keep spinning machinery running. The majority of mills outside Bradford appear to be running satisfactorily, but most of them in the city are idle. A good deal of trouble has been caused by attempts to bring out operatives who are willing to work. Meanwhile, besides the hardening tendency in wool, there is a slight advance in tops and yarns. One pleasing feature is the increased demand on export account for all the commodities named. Some of the English wool withdrawn at the last series of London sales has been sold privately at better prices than were originally big. Botany noils are realising a good 1d. more, and stocks of laps and wastes are being reduced. Every section of the market presents a very encouraging appearance, and the outlook is fairly good.

COLONIAL WOOLS.

(from a correspondent.)

Both private and public cables state that at Melbourne and Sydney prices were 5 to 7½ per cent. dearer last week, which is equivalent to practically 1d. to 1½d. per lb. scoured. This advance is all the more significant in view of the fact that a large number of textile operatives have come out on strike. Combing machinery cannot stand for any length of time without things being made more difficult for worsted spinners and manufacturers, but there has been increased buying for Yorkshire in both Melbourne and Sydney, and instead of confidence in wool values being weakened, it has actually become stronger. The third series of London sales will open on May 13th, and it is expected that values will be firm, with possibly a slight advance in certain classes. There is no doubt whatever that but for the labour troubles, a substantial improvement in trade would have been seen during the interval compared with previous months. Even now there are indications of a very encouraging character, and as soon as the dispute is finished, an effort will be made to regain lost ground. Unfortunately the best time of the year for the execution of summer repeats is passing without any opportunity being provided for home and export orders to be dealt with.

Figures published by Dalgety and Company, Ltd., show that exports of wool from Australia and New Zealand from July 1, 1929, to March 31, 1930, totalled 1,768,000 bales, a decrease of 381,000 bales compared with the corresponding period of last year, while *the exports from New Zealand* were 426,000 bales, a decrease of 122,000 bales. This total decrease in exports of 503,000 bales show that there has been a distinctly slower movement of the raw material than in the previous corresponding period. There is still an adequate supply of wool for all requirements. At the commencement of the sales in Australia this week there were still over 600,000 bales to sell. This is a fairly substantial quantity, but there seems to be no reason for uneasiness about the future of values.

HIDE, LEATHER AND ALLIED TRADES.

Hides from home-slaughtered cattle are steady and show a slightly firmer tendency, and with the demand generally speaking satisfactory a better tone should be experienced at the auctions over the end of the week. The supply of good-class hides free from

warbles continues to be limited. In the imported hide market business is still on the quiet side, and although a regular day-to-day trade is done in small lots, certain kinds are only just steady, while others have dropped to lower figures. For instance, although a fair amount of business has been done in connection with Argentine ox, sales have been made at 7¼d., with Montevideo ox realising a similar figure and light ox 6 15/16d. Fair business has been done in dry River Plates, with B.A. Americanos realising 7¾d., Sierra Cordobas 8¼d., and Inservibles 4½d. Cape hides are unchanged in price, drys selling at 8½d. and 7½d. for firsts and seconds, and 7⅝d. and 6⅝d. for dry salted. Nigerians have sold at 7d., drysalted Madagascars at 4½d., and drys at 7¼d. Business in connection with sole leather has been better this week, and although most of the orders are for small quantities the total has made for a fair turnover. Shoe manufacturing requirements have been for light to medium weights in some of the cheaper grade bends, while the repairing section has been in the market for English and wet salted 10 to 12 lb. bends suitable for this class of trade. Shoulders and bellies are also inquired after, and a regular steady business is being done all the time. Prices are generally unchanged. The upper leather market is still quiet, and although day-to-day inquiries for stock are received the amount of business resulting is by no means large. Glacé kid in black and brown, together with willow calf, are the leathers in most request, in addition to which there has been a slight improvement in the call for patent. Suède leather is still a feature of the trade. Curried leathers are still neglected, and only very limited quantities of waxed kip butts and splits are sought after. Reptile and novelty leathers move steadily in small parcels. Shoe manufacturers report an improvement in the number of orders coming to hand for footwear, and although business is not what it should be for the time of the year there is a feeling that things have taken a turn for the better.

THE JUTE TRADE.

DUNDEE: April 30, 1930.

Something like a deadlock has been reached in the negotiations which the Indian Jute Mills' Association have been carrying on in their endeavours to bring about a unanimous agreement on the part of all the jute mills in India to curtail production of jute goods. One native mill has joined the Association, but other four native-owned mills are still holding out. A meeting is being held in Calcutta to-day, to discuss the position further, and it is hoped that a step nearer to the end in view will result. All members of the trade are fervently hoping that the mills in India will come to some arrangement whereby output will be brought more into line with the present consumption. Meantime, buyers are holding off in view of the uncertainty, and stocks of goods at all consuming centres are mounting up. Sellers, as well as buyers, are in doubt as to the ultimate issue, and prices are remaining remarkably steady, despite the fact that there is little business passing. The raw material is not weak, but there has been an easy tendency in regard to new crop prices, owing to brighter reports of weather conditions. Nevertheless, there is great reserve on the part of sellers offering to do business, and few offers are being made here. Best Lightnings have been sold at £28 for short group, September shipment, and Green Circle Ram Lightnings at £28 5s. for August. Daisee assortment is not meantime quoted for new crop, but old crop has been sold at £25 to £25 10s., and Tossa assortment offered at £26 17s. 6d. for May-June shipment. Spinners have transacted rather more business in jute yarns in the interval, and it has been strongly demonstrated that the price of 2s. 8d. cannot be broken for common 8 lb. cops, and 2s. 9d. for 8 lb. spools. Many spinners are refusing to sell at these prices, and it is only if quick delivery is taken that a few will accept the rates. Inquiry is made for forward delivery, but sellers will not quote for June onwards. All other yarns are steady, Rove especially being firm at £27 10s. for 48 lb., and £17 10s. for 200 lb. Twist is at 5d. for 3-ply 8 lb. and sacking yarns 3½d. for 24 lb. weft and 4¼d. for 8 lb. chains. Fine yarns are firmly held, and quite busy on present restricted output. Carpet qualities are more or less nominal at 4½d. for 14 lb. warp. Cloth orders are very few, and only for small quantities. A large order for sugar bags has been refused because buyers would not pay the prices wanted by sellers, and it is understood that the business has gone out of the country. For 10½ oz. 40 in. hessians 3 3/16d. is lowest quoted, and for 8 oz. 2 7/16d. Linoleum hessians are quiet and nominal, while heavy goods are slow. Calcutta goods are well maintained in value quotably, but there always seems to be the possibility that less might be done. Spot 10 oz. has been bought this week, but the quantity has not exceeded 150 bales.

"THE INVESTORS' CHRONICLE"
20 BISHOPSGATE, LONDON, E.C.2.

VEGETABLE OILS AND OILSEEDS.

Markets generally are comparatively quiet, and only a moderate business is reported. Linseed oil is in fair request, and values are steady around £40 10s. per ton, naked, ex Hull mill, prompt, and £39 15s. May delivery, with later positions at a small discount. Cotton oils, after steadier conditions, are easier again. Values are for crude Egyptian, ex Hull, £28 15s., and common edible £31 15s. Other seed oils are quiet. In the oilseed section very little business is passing. Plate linseed is fairly steady on spot and near, which are at a premium over shipment, the relative prices at Hull being £18 10s. and £17 12s. 6d. respectively. Some trade in Indian has been done, £19 being paid for Calcutta linseed to London, April-May. The quantity on passage to Europe is increasing, and at 128,300 tons is 12,000 tons more than a week ago. Cotton seed is slow, and prices are about unchanged on the week, black Egyptian now being quoted £7 12s. 6d. afloat and April loading, and £7 15s. May and June. A few transactions have taken place in Bombay cotton seed to the U.K., current value for shipment, April to July, being £16 12s. 6d. The demand for oilcakes is falling off concurrently with the advent of the open weather.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market is extremely quiet. Political complications are threatening trade, and as far as Europe is concerned, high inland prices to the consumer, in many countries, including those producing the commodity, are preventing any increase in consumption. Supplies in consequence are outstripping consumption, and prices are unremunerative to the producer. No further change occurred in spot prices, but new business is difficult to arrange. Raw refining sugars mark a downward tendency. A moderate business effected in the raw Terminal section, prices being irregular, with sellers predominating at times. May delivery, sold, 6s. 6¾d. to 6s. 8½d.; August, 6s. 10½d. to 6s. 9¾d., combined with 6s. 10½d.; December, 7s. 2½d.; March, 8s. 2½d. to 8s. 3d.; May, 8s. 3¾d. Czecho granulated ready free sugar, sellers, 8s. 10½d. f.o.b. Hamburg. A cargo Cuban 96 per cent., May-June, sold, 7s. 4½d. c.i.f. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending April 26th amounted to 172,657 tons, compared with 137,378 at corresponding period last year. Cuban receipts of new sugar last week were 136,378 tons, against 166,503 last year; exports, 153,482, against 135,640; stocks, 1,751,553, against 1,509,795. Receipts of old, 117, against nil; exports, 3,728, against nil; stocks, 2,611, against 1,615. Centrals, 109, against 64.

COFFEE.—Quite a steady market prevailed during the week. A fair off-take resulted on the spot, fine liquoring qualities being favoured, and these ruled occasionally dearer.

COCOA.—Small spot sales include fine Grenada at 52s. 6d. Forward positions quietly steady. Accra, F/F, May-July, quoted, 35s. 6d. f.o.b. Terminal, December delivery, sold 40s. 10½d.; May, 39s.

TEA.—Indian auctions during the week amounted to 28,000 packages. Fair competition was experienced, and low teas, also clean common, ruled ½d. to ¾d. dearer. Medium sorts met a comparatively quiet market. All really fine liquoring grades firm to dearer and wanted. Ceylon sales totalled 27,663 packages. A fairly good demand ensued, but market proved somewhat irregular. After proceeding without material change, towards the close prices drooped and often marked a decline of ½d. to 1d. This in a measure was accounted for by falling off in quality. Export demand counts for little just now. Java sales rather quiet and prices frequently easier.

RICE.—Trade on European account still difficult to arrange, and prices for Burma declined 1½d. Siam rather dearer and Saigon unaltered. Spanish, for shipment, 14s. 6d. c.i.f. London. Two stars, spot, London, 13s.; May-June, 12s. 6d. c.i.f. London-Continent. No. 3 Burma to Levant, quoted, 12s. 6d. c.i.f., double bags. American blue rose from 23s. to 24s. c.i.f. S.Q. to Cuba. 12s. 9d. Saigon, No. 1, round grain, April-May, to Europe, 13s. Siam Super, April-May, 17s. 4½d.

BEANS.—Business moved quietly in all descriptions. Madagascar butters, spot, 33s. 6d. to 35s.; March-April and April-May, 33s. 6d. c.i.f. London. Rangoon haricots, spot, London, 10s. 9d. to 11s.; April, 11s. 6d. to 12s. c.i.f. Ohtenashi, spot, London, 19s. 6d.; April-May, 18s. 6d. Danubian H.P., spot, London, 20s.; April-May, 20s. 6d. To Glasgow, North African, new, July-August, £8 7s. 6d. c.i.f.

PEAS.—Steadily held, but buyers are not much in evidence for any variety. Japanese, old crop, spot, London, 14s. 6d.; new, 15s. 6d. to 15s. 9d.; afloat, 15s.; April-May, 14s. 9d. Dutch marrowfats, prompt, 17s. 6d.; small hand-picked blues, 12s. to 13s. 6d. f.o.b. terms. Calcutta (per 504 lb.), April-May, 45s. Karachi, April-May, 42s. 6d. c.i.f. Maples: No. 1, New Zealand, new crop, April-May, 56s.; old, 55s. Tasmanian, "A" grade, new, afloat, 66s.; April-May, 65s. c.i.f. China, white, February-March, quoted, f.a.q., 9s. 6d.; Manchurian, white, February-March, 11s. c.i.f.

LENTILS.—Firm. Bold Bombay, April-May, 62s. Calcutta Patna, to arrive, new crop, April-May, 60s. Bombay Patna, 61s. c.i.f. (504 lb.).

SPICE.—Pepper received fairly good patronage and forward positions ruled firmer as sellers exercised increased reserve. Lampong, March-May, quoted, 10⅞d.; May-July, sold, 10⅝d.; August-October, 9⅝d. Muntok, March-May, quoted, 1s. 1⅝d.; May-July, sold, 1s. 1⅜d.; August-October, 1s. 0½d. Cloves quiet. Spot Zanzibar, 11½d. to 11⅝d. as to quality. Tapioca idle at the moment. Sago flour weak. Business in Sarawak, April bill of lading, at 11s. 3d.; May, sellers, 11s. 1½d.; June, 11s c.i.f. United Kingdom. Pimento, spot, 7d. and forward; sellers, 5¼d. c.i.f. London. Ginger slow of sale. London stocks of black increased 49 tons on the week 1,016 tons, against 1,176 at same time last year; white, 20 tons her, at 784, against 587.

FRUIT (Dried).—Currants firm with improved inquiries. Pyrgos oted 35s. 6d.; Amalias, 37s.-38s.; Patras, 39s.-43s.; Gulf, .-46s.; Voztizza, 47s.-58s.; Australian, new crop, 43s.-58s. tanas meet with increased support. Smyrna, medium to fine, .-55s.; Cretan, 42s.-75s.; Greek, 42s.-65s.; Australian, 31s.-. Dates in fair request. Hallowie, spot, 19s.-21s.; Khadrowie, .; Siar, 12s.-13s. 6d. Raisins quiet of sale. Valencia, quarter-tes, 36s.-38s. Figs quiet. Genuine, 21s.-25s.; good average, 20s.

EVAPORATED FRUITS.—The general position remains unchanged, though plums tend easier with moderate inquiries, chiefly for large sizes. South African and Australian apricots meet with attention, but other fruits move off slowly. Plums: Californian, new crop, 30's-40's, 67s.; 40's-50's, 65s.; Oregon, 30's-40's, 53s.; 50's-60's, 50s. 6d. Apricots: South African Royal, 50s.-112s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 95s.; Australian, 65s.-85s. Peaches: Californian, choice, 55s.-60s.; fancy, 62s. 6d.-67s. 6d.; Australian, 50s.-60s. Apples: Californian, spot, sliced, extra choice, 55s.-65s.; Canadian, 52s. Almonds firm: *Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 110; Majorcas,* 107s. 6d.-125s.; Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels, Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 39s. c.i.f.; sweet, spot, 72s. 6d. Hazel kernels: Kerasunde, spot, 140s.; Barcelona, 136s.; French (shelled) walnuts, 135s. to 140., ex wharf London; for shipment, 130s. cwt., f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—Trade is gradually improving, but a spell of warm weather is needed to stimulate consumption. Prospects for the Californian new pack appear more favourable than last year, and buyers are reluctant to operate forward in anticipation of lower prices. A fair business is reported in new pack Australian. Singapore pines experienced a quiet sale on spot, while shipment prices are maintained with difficulty. Hawaiian and South African steady.

CANNED FISH.—Market generally quiet. Salmon: Alaska red talls, quoted 47s. 6d.-49s.; pink talls, 24s. 6d.-26s. 6d., and halves, 34s. 6d.-36s. Japanese crab easier, best quality 87s. 6d.-90s. Lobsters sparingly offered, halves ranging from 135s.-140s. Sardines in moderate request but prices steady. Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Market firm, with a steady demand for lunch tongues, but cooked hams rather quiet. Corned beef and ox tongues unaltered.

CONDENSED MILK AND MILK POWDERS.—A steady demand continues, but prices occasionally the turn easier for condensed milk. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 32s.; machine skimmed ditto, 20s.; full cream, sweetened, 56-lb. drums (two in a crate), 50s. English condensed milk, full cream, sweetened, 5-cwt. casks, 37s. 6d.; machine-skimmed, ditto, 22s. 3d. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 61s.; spray ditto, 2 by 56-lb. tins, crated, 80s. Dutch machine-skimmed milk powders, roller process, 1-cwt. cases, 27s.; spray ditto, 2 by 56 lbs. tins, crated, 38s. 6d.; ditto, 1-cwt. kegs, 37s. 3d.; ditto, 1-cwt. cases, 36s. 9d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are net, ex store, London-Hull or Goole, and cover prompt or gradual delivery to the end of June, 1930. Stocks available in Newcastle, 3d. per

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

(Incorporated in the Union of South Africa.)

ABRIDGED REPORT OF THE DIRECTORS FOR THE YEAR 1929. To be submitted at the Annual General Meeting to be held in Johannesburg, on June 3rd, 1930.

The working profit for the twelve months ended 31st December, 1929, after deducting administration expenses, &c., amounted to			£112,224 9 6
The unappropriated balance brought forward was			120,257 8 4
Making the total available profit			232,481 17 10
which was dealt with as follows:—			
Amount appropriated to cover depreciation in market value of certain Stocks, Shares, &c.	£169,119 6 1		
	916 19 7		
Additional Reserve for bad and doubtful debts	1,295 8 0		
Amount paid for Taxes			171,331 13 8
Leaving a balance of unappropriated profit to be carried forward of			£61,150 4 2

The Reserve Fund stands at £400,000.

In view of the above results no dividend is recommended, more especially as, in order to maintain a strong financial position, it has been deemed inadvisable to distribute any of the unappropriated profit.

Investments are shown in the Balance Sheet, in accordance with the usual practice, at or under the market price ruling at the end of the financial year. Owing to continued market depression during the year, the prices of Stocks and Shares generally were detrimentally affected, and as a result of this it was necessary to appropriate from profits £169,119 to bring down the Corporation's holding of certain investments to the prices ruling at the end of the year. The aggregate value, however, of the share investments of the Corporation at market prices at 31st December last was still considerably greater than the figure at which they appear in the Balance Sheet.

The principal interests of the Corporation are in the following Companies:—

Meyer and Charlton Gold Mining Co., Ltd., Van Ryn Gold Mines Estate, Ltd., West Rand Consolidated Mines, Ltd., Witpoort Gold Areas, Ltd., New Steyn Estate Gold Mines, Ltd., East Rand Proprietary Mines, Ltd., and the Phoenix Oil and Transport Co., Ltd.

The Corporation holds various mining properties, real estate and leasehold property, &c., while its holding in financial and industrial concerns in Europe and also in mining companies in South Africa other than those above have been maintained and continue to produce a satisfactory revenue.

BALANCE SHEET at 31st DECEMBER, 1929.

THE MONEY MARKET.

LAST week's reduction in Bank rate has so far done little to narrow the margin between Bank rate and market discount rates, for three months' bills have this week been quoted at 2⅛ per cent., as against 2 1/16–⅛ per cent. a fort-

night before. Short bills have been down to 2 per cent., and even six months' bills have been little higher than 2⅜ per cent. Money on Wednesday was rather wanted, but, even so, the rate for new money was no higher than 1½ per cent., and apart from transient demands such as were in evidence on Wednesday, money is still considered to be easy and plentiful. This view is confirmed by this week's Bank return, which shows an increase in bankers' deposits of £2,372,000. The wider implications of the Bank rate reduction are discussed on a subsequent page, but it should be added that some brokers regard 3 per cent. as an artificial and temporary rate, and are beginning to watch for the right moment to change over from long to short bills, so as to minimise the loss arising from a possible increase in Bank rate. But this is looking rather far ahead, for there are no obvious grounds for anticipating an increase in Bank rate for some time to come.

* * * *

At the same time, the weakness of sterling and the gold losses to France are disconcerting. Since the end of last week France has withdrawn from the Bank of England over four millions at the rate of about a million a day, which is still all the Paris assayers can deal with. It seems likely that these withdrawals may continue, for the same causes are operating as were at work last year, and the Paris money market will take a long time to reach such a stage of development as will prevent French banks from drawing upon their foreign balances to meet internal needs. It is noticeable, however, that so far the Bank of England has not taken any definite steps to tighten up credit in London as an offset to the French gold withdrawals. It is true that the Bank's holding of securities of all kinds shows a contraction on the week of just over £3,000,000, but this is more than balanced by a reduction of £4,791,000 in public deposits, and on Tuesday the Bank was reported to have bought some three months' bills.

* * * *

Taking a broad view, it seems likely that the Bank is going to maintain easy conditions for a time, and it is an obvious inference that it is doing so as part of an internationally concerted plan to prepare the ground for the reparations bond issue. If so, it may be prepared to ignore gold losses, and as a matter of fact, the French withdrawals have so far been more than balanced by further gold arrivals from Australia, together with sovereigns from South Africa, so that this week the Bank has gained £219,000 of gold.

	Apr. 16, 1930.	Apr. 24, 1930.	May 1, 1930.	May 8, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	3½	3½	3	3	3½ (May 1, '30)
Banks' Deposit Rate	1½	1½	1	1	1½ (May 1, '30)
Discount { Call	1½	1½	1	1	1½ (May 1, '30)
Houses { Notice	1¾	1¾	1¼	1¼	1¾ (May 1, '30)
Market rate (3 months' bills)	2½	2½ – 9/16	2 5/16	2⅛	...

On the other hand, it is quite likely that discount rates will rise. In addition to the psychological effects of the gold losses, Friday's Treasury bill issue will be £9,000,000 in excess of maturities, and preparations for the War Loan dividend and impending debt maturities may increase the Treasury bill issue still further. Discount rates are, therefore, likely to be driven up nearer to Bank rate, which will not be a bad thing.

NEW YORK.

Our New York correspondent cables:—Money is a drug on the market and, following the cut in the Boston discount rate to 3½ per cent., New York reduced its buying rate on bills to the dealers' asking rate of 2¼ and 2⅜ per cent., thus virtually inviting sales of bills to the Reserve, especially as call money was lending outside the Stock Exchange at 2½ per cent. A reduction in discount rate is being discussed, but it is unlikely to be seriously considered at this time. This week's statement of the Reserve System shows a moderate drop in bills, and the total of credit outstanding, at $951 million, is the lowest since September, 1924. The Reserve ratio is 83, against 74.3 a year ago. The extent of stock liquidation is measured by a drop of $200 million in brokers' loans, the first drop since March 26th, and more than the total of combined weekly declines since the middle of last December. The total had risen $882 million since it touched bottom on December 4th. The drop was about what the Street had expected. Gold movements this week have been negligible. Motor output in April is estimated at 460,348, against 401,678 in March, but 40 per cent. below that of a year ago. Since the cut in copper prices, copper shares have been steadier, and it is believed that buyers of the metal will come in. Tobaccos spurted on good business, and chemicals and utilities turned against shorts. Steel issues were soft on the further drop in the operating rate of the industry and rails rather heavy on the continued low level of traffic, but the worst is believed to be past.

THE STOCK MARKETS.

The Stock Markets were dull and spiritless on the New York reaction and the absence of domestic public interest. The effect of last week's Bank rate reduction was negligible. Gilt-edged were fairly steady after a shaky start, but little business was done in Dominion stocks, and Home Rails were neglected. Internationals were marked down to New York levels, and changes in home industrial share quotations were adverse to holders. Rubber and tea shares were slightly firmer, but oil shares suffered heavily during the American burst of liquidation, and mining shares were overshadowed by new and discouraging evidence of the instability of base metal prices.

THE COMMODITY MARKETS.

Signs of improvement are to be found in some directions, but the general situation leaves much to be desired. The coal markets are still weak, and stocks are accumulating. Trade in pig iron does not improve, but there is a definite, though gradual, expansion in some classes of finished steel, especially in the West of Scotland. There is no sign of revival in the cotton export trade. The world wool position is greatly improved, and prospects for Bradford, once the wages dispute is settled, are definitely brighter. The hides and leather markets are steady. Conditions in the vegetable oils and oilseeds markets are very quiet. Wheat prices still show a downward tendency.

THE FOREIGN EXCHANGES.

Quiet conditions again prevailed in the Foreign Exchange market this week, with many currencies showing an irregular tendency, while sterling was generally dull. The New York rate fell from 4.86 5/32 to 4.85 23/32, after being lower on Wednesday and Thursday. Montreal fell away from 4.86¾ to 4.87¼. Paris gained four points at 123.87 after 123.80 during the week. Brussels was half a point better at 34.82½. Milan gained 13 points at 92.65. Madrid again fluctuated rather wildly, losing 25 points on balance at 39.55 after 40.05. After several fluctuations Amsterdam was rather better on balance at 12.07½. Berlin, after hesitation, remained unchanged at 20.36½. Switzerland also showed irregularity, and lost ⅝ at 25.08. The Scandinavian currencies were uncertain. Stockholm fell sharply from 18.09 to 18.10⅜; and Copenhagen lost ¼ at 18.16½, but Oslo gained ¼ at 18.16. In the South American exchanges Rio was unchanged at 5 7/8d. Buenos Aires rose spectacularly from 42¾d. to 43½d. on May 3rd, fell again to 43½d. next day, and closed very firm at 43¾d. Montevideo also gained ¾d. at 46s. In the Far East the rupee was less firm at 1s. 5 7/8d., the yen unchanged at 2s. 0⅜d., and Batavia ⅜ better at 12.07½. In the forward market, dollars were more on offer at 3/16 cent and 7/16 cent discount. Paris was also weaker at discounts of 7 and 10 centimes, against 1 centime discount for both periods last week. Brussels gained ½ for each quotation at 1 and 3 centimes discount. Madrid was considerably weaker at 1 and 3 centimos premium, against 2½ and 7 last week. Amsterdam was unchanged, and Berlin was weaker at 2 and 5 pfennigs discount. The silver market was quiet, and prices remained unmoved at 19½d. for spot and 19 7/16d. for forward. The Chinese silver exchanges were weaker, Hong Kong losing ½d. at 1s. 6½d., and Shanghai ½d. at 1s. 11d.

TARIFFS DAY BY DAY.

The active revival of fiscal controversy is no more confined to this country than is the industrial *malaise* which has Britain as well as so many other lands in its grip. In the United States, in Canada and in Australia, to mention no other countries, recent events have thrust the tariff question into a prominence as great as that which Lord Beaverbrook's "Empire Crusade" has won for it here. The merits and demerits of Protection are being more talked of to-day around the world than at any time since the World Economic Conference. In this eternal trench warfare between trade restrictionists and champions of freer exchange the past week's *communiqués* have contained interesting news both from the home and from the more distant fronts. At home the West Fulham by-election has been fought and narrowly won by Lord Beaverbrook's candidate on a policy of that form of Protection that makes the propagation of Imperial trade its stalking horse; and at Nottingham another by-election is approaching, in which Protection cannot fail to be a principal issue. In Canada a new Budget has been introduced, a feature of which is the extension of preferential treatment for British goods. In the United States a memorandum against the new and higher tariff has been signed by over 1,000 American economists and forwarded to the President.

Of these items the result at West Fulham is primarily of interest from the point of view of political tactics. What has happened there is that a traditionally Conservative seat, surprisingly captured by Labour a year ago, now returns to the fold after a year of rather disappointing experience of Labour rule. Whether this return was accelerated or jeopardised by the terrific close-range concentration of Lord Beaverbrook's protectionist artillery no one can say; for the fact that only 63 per cent. of the electors were moved to visit the poll shows that the bombardment did not arouse West Fulham as a whole to much interest in the contest. In the Beaverbrook camp there was enthusiasm enough, and the result will undoubtedly strengthen the hands of the "whole-hoggers" in their efforts to dislodge Mr Baldwin from his uncomfortable position on the fence. But the smallness of the poll, and the traditional Toryism of the seat, mean that West Fulham is an uncertain guide to the state of popular opinion. Nor is any clearer light on the attitude of the country to the fiscal question to be expected from Nottingham. In this case the Conservatives hold the seat, and the battle area is the home of the lace trade, whose "Safeguarding" duty is to be allowed to lapse by the Labour Government. We may expect, therefore, that the brand of Protection to be preached there will be Mr Baldwin's "retention and extension of Safeguarding," rather than the "Empire Crusade" of Lord Beaverbrook. A Conservative defeat there certainly would be a portent, for if ever the selective special pleading of the Protectionist had a favourable atmosphere and opportunity these are surely provided at Nottingham to-day. Nottingham workers have been subjected to ceaseless propaganda to the effect that their very livelihood depends upon the retention of Protection for the lace trade, and the result must be an atmosphere somewhat unsympathetic to the teaching and apprehending either of the broader aspects of the lace trade question, which we examined in the *Economist* last week, or of the national, as distinct from the local, advantage, real or supposed.

The week's tariff news from abroad gives more nourishing food for thought. The full text of the American economists' protest to President Hoover is not yet to hand, but the purport is given by the *Times'* Washington correspondent in a despatch printed on Tuesday. These experts argue that, if the projected increases in the American tariff are enforced, "our export trades will suffer," and among those trades they enumerate such great American industries as copper, automobiles, agricultural machinery and the like, whose difficulties, they say, will be increased if the new Tariff Bill becomes law. "There are few more ironical spectacles," continues the protest, "than that of the American Government as it seeks on the one hand to promote export through the activity of the Bureau of Foreign and Domestic Commerce, while on the other hand by increasing tariffs it makes exportation ever more difficult." As for American manufacturers in general, "further barriers to trade will serve them not well, but ill." To Britain, vastly more reliant on export trade than America, these words have a peculiar significance. Significant, too, is the comment of the *Times'* Washington correspondent:—"His (*i.e.*, President Hoover's) friends believe that, in spite of every political reason to the contrary, he should veto the Bill, but the chorus of short-sighted business men and vote-hungry politicians drowns their voices."

There are a hundred and one fiscal lessons here. "The chorus of short-sighted business men," seeing no more of the national interest than what they can snatch by way of spoon-feeding for their own particular businesses; "the vote-hungry" politicians at the mercy of the persistent log-rolling by vested interests grown up behind the tariff wall—what a picture is here of the "pull devil, pull baker" sectionalism, of the corruption of public life, of the obscuration of the goal of the common weal, which a system of tariffs always in the long run breeds. For the moment the expert and unbiassed voices that warn the United States of the danger may be drowned, but they and the ineluctable force of economic fact must in the end prevail. It is possible to understand the remark of a contemporary cynic, who has said that England would be saved in the nick of time from "going Protectionist" by the spectacle of America "going Free Trade."

When we turn to the remaining item of news, the extension of Canadian preferences, we find several more lessons to be learned. The loudest protests against the new American tariff proposals came from Canada, and here we see one of the results. When a tariff country repeatedly raises its tariff (and unless the consumers and the exporting industries of a country rouse themselves the walls always tend to grow higher) what do her best customers do about it? Either they proceed to raise their own tariff walls or else they begin to look elsewhere for other customers, with whom they may establish better relations. That, in fact, is what Canada is doing now, and the object lesson is one that should impress not only American but British Protectionists, for, if we place barriers between ourselves and our foreign customers, we shall drive them, as America is doing, to look elsewhere.

But there is another aspect of the affair that may be commended to the attention of our "Empire Free Traders," including for the moment in that category Mr Baldwin. The Canadian Government makes these extensions of the British preference because it thinks them good policy for the Canadian people. Canada makes them to Free Trade Britain, and is no more likely to "demand" a *quid pro quo* than she is to tolerate any attempted interference by Britain in her own fiscal policy. Canada turns one way along the fiscal path: we are grateful. Australia turns the other way: we are disappointed. We may express our gratitude or our disappointment; but, whichever it be, we must first of all acknowledge that these things are done and decided by the Dominion Governments by their right and volition under the rules and constitution of a free and equal democratic partnership. That is what obtains at present. What change is it that Mr Joseph Chamberlain 25 years ago and Lord Beaverbrook to-day would have us make? They would have us transform this cherished autonomy and confine it within the boundary of commercial contract; they would have us nonchalantly discard the fiscal system under which the might of Britain grew; they would have us jeopardise

our essential trade with the non-British world, and especially with Europe—a market at our doors, which buys about a third of our exports. Why? In order to revoke the cherished autonomy of the members of the British Commonwealth and substitute for it the restrictions of a commercial bargain. "If you follow this Protectionist path," say the American economists to their President and their country, "you will inject bitterness into international relations." One of the many formidable retorts that true British Imperialists could make to Lord Beaverbrook is this: "If your policy came to fruition, you would inject bitterness into Imperial relations."

WHAT MIGHT HAVE BEEN.

In each of the national series of documents on the origins of the European War which have been published, or are in course of publication, the tragic interest becomes heightened as the moment of the catastrophe is approached. The present volume* in the British series carries the record down to a date less than two years short of "the twelve days" in 1914 with which the eleventh and concluding volume (arranged by the late Sir James Headlam-Morley) deals. The culminating point in this sixth volume is Lord Haldane's mission to Berlin in February, 1912. The volume ends with the failure to bring about an Anglo-German *détente* on the lines which had been explored non-committally in Berlin by Lord Haldane and by the then German Chancellor, Herr von Bethmann-Hollweg.

In this volume, four personalities make their mark: Bethmann-Hollweg, Lord Haldane, Lord Grey and Sir Eyre Crowe. The two last-mentioned figures, though in this act they neither of them stand in the foreground of the stage, continue to impress the spectator by their straightforwardness and by their force of character—points of likeness between them which are rendered all the more piquant by the profound differences of temperament and outlook that divided them. Their force is such that even when they appear in the *rôle* of commentators—making their voices heard through minutes and memoranda—they often make a stronger impression than the persons by whom the action is actually being carried on.

Lord Grey is distinguished, as always, by his absolute frankness and by his vision of some comprehensive European understanding into which the *entente* and the alliance would both be taken up; and there is a moment, just after Lord Haldane's return to London, when he believes that he has caught a glimpse of the same vision in the German Chancellor's mind. Perhaps he was right; for Bethmann-Hollweg, as he appears on the scene in this volume, gives the impression of ardently desiring an Anglo-German understanding for the preservation of the general peace. Indeed, the first suggestions for such an understanding were made by Bethmann-Hollweg, on his own initiative, immediately after he took office in the summer of 1909; and all the British diplomats and statesmen who came into contact with him during the next three years testify to his sincerity and to his goodwill. In him it is not the will but the will-power that fails. *Volo non valeo* might be his motto. And yet, in Bethmann-Hollweg's position, could even a Bismarck—or, for that matter, an Eyre Crowe—have forced a conciliatory policy through against the triple obstacle of the Kaiser with his volatile temperament, the Prussian ruling caste with their adamantine tradition, and the unhappy German people who, like Jeshurun, had waxed fat since the triumph of 1870-1 and, like the hero of some great tragedy, were apparently doomed by the envy of the gods to travel from "surfeit" through "insolence" to "disaster"?

Sir Eyre Crowe continues, with his old courage and ability, to play the invidious part of a Cassandra—never believing that the will to peace and friendship, even if genuinely present in the hearts of individuals like Bethmann-Hollweg, will prevail in the counsels of the German Government, and therefore never expecting the negotiations for a better understanding between Great Britain and Germany to succeed. His main concern—and the main concern of other British public servants whose views are heard—is to prevent this attempt at a *détente* with Germany, which they look upon as foredoomed to failure, from upsetting the existing ententes with France and Russia. As for Lord Haldane, we see him bringing into the field his immense and varied abilities, his knowledge of Germany and the German language, and, above all, a fresh mind—so unlike the hard-set mind of Crowe, who had pored over the situation as it is until he had lost the ability to conceive of its being changed for the better by anything further that the wit of man could devise.

The issue was, briefly, as follows:—Bethmann-Hollweg was anxious to improve Anglo-German relations by doing something to ease the competition in naval armaments, and he was prepared to challenge von Tirpitz and the Chauvinists at least so far as to retard—though not ultimately to reduce—the German building programme; but he could not face this conflict in the field of domestic politics unless he could show his countrymen some signal set-off to the concession that he proposed on the German side; and he therefore insisted from the outset that a technical agreement on naval armament must be accompanied by a political agreement of the kind that nowadays is called a "pact of amity and good relations." On the British side, professional opinion was, on the whole, hostile to this second suggestion—particularly from the point of view that it involved a closer and more definite tie with Germany than any by which we had bound ourselves to Russia or France. In these circles, the technical naval limitation agreement was regarded as the essence of an Anglo-German *détente*, and the proposal for a pact of amity as, on the whole, an obstacle to its realisation. On the other hand, Lord Haldane regarded a political agreement, if drawn on mutually satisfactory lines, as something of value for both parties; and, owing to his fresh initiative, German and British drafts of such an agreement were actually exchanged unofficially during and after his visit to Berlin in February, 1912. It was the impossibility of reconciling the two draft formulæ, and not an inability to agree over the technical terms of naval limitation (which did not come up for discussion between him and the representatives of Germany with whom he talked), that really caused his mission to fail.

The crux was the question of what the position of either Power would be if the other Power were to be involved in war with a third party. Bethmann-Hollweg's formula was that they would not either of them make any combination, or join in any combination, that was directed against the other, and that if either became entangled in a war with a third party or parties, the other would observe towards it at least a benevolent neutrality. The British formula—as finally worked out after Lord Haldane's return to London and communicated by Lord Grey to the German Ambassador—was:—

> "England will make no unprovoked attack upon Germany and pursue no aggressive policy towards her.
>
> "Aggression upon Germany is not the subject, and forms no part of any treaty, understanding or combination to which England is now a party; nor will she become a party to anything that has such an object."

To this Count Metternich replied:—

> "I am afraid the political formula you left with me to-day will not be found sufficient at home, as no mention is made of neutrality. . . ."

And so it proved when the German Ambassador brought to Lord Grey the German Chancellor's observations and desiderata. After hearing these, Lord Grey put it to Count Metternich that "What the Chancellor now asked amounted to an agreement of absolute neutrality, which was more than conditional neutrality." Count Metternich said that the Chancellor had not used the word "absolute," but in effect his wish amounted to that.

This was an insuperable obstacle to agreement, since it would have prevented Great Britain from assisting France and Russia in the event of Germany making a war of aggression upon either or both of them. Thereafter, on the British side, the business was wound up by a private letter to Lord Grey from Mr Asquith, in which the latter statesman's lucid commonsense comes out in a characteristic way:—

> "My dear Grey,—I agree that the French are somewhat unduly nervous. But I confess I am becoming more and more doubtful as to the wisdom of prolonging these discussions with Germany about a formula. Nothing, I believe, will meet her purpose which falls short of a promise on our part of neutrality: a promise we cannot give. And she makes no firm or solid offer, even in exchange for that."

This letter would have been equally agreeable to Sir Eyre Crowe and to Admiral von Tirpitz, for it was an intimation that *saeva necessitas*, and not statesmanship, was in control of the destinies of Europe in 1912. The tragedy was at hand.

This is the main action of the volume, but the reader will find many incidental points of interest. In particular, he will notice some points in which the general setting of international politics seems infinitely remote from what it is now, and others in which current issues already appear almost in their present form. We feel happily far away from our own times when we listen to the Kaiser saying to Sir F. Lascelles in the castle of Friedrichshof:—

> "It was not public opinion, it was not Parliament, it was not the Federal Council, but the Emperor himself who had to decide whether Germany should draw the sword, and it was inconceivable to him that anyone in their senses could for an instant suppose that he, the grandson of Queen Victoria, whose memory he revered, the nephew of the King for whom he had a sincere affection, should ever dream of attacking England, a country to which he was personally devotedly attached."

On the other hand, we feel ourselves on familiar ground when the problem of "defining the aggressor" crops up in the discussion of the British and German formulæ for that pact of amity which it unhappily proved impossible to conclude.

BANKING CO-OPERATION STARTS.

The simultaneous reduction last week of the Bank rates in four such important centres as London, New York, Paris and Brussels can hardly be regarded as a fortuitous coincidence; and it seems legitimate to infer that it was a measure agreed upon in principle at the inaugural meeting of the nominated directors of the Bank for International Settlements held at Basle the previous week. It also seems fairly clear that the object of the movement is to facilitate the forthcoming issue of the Reparations Loan on terms that will not prove too onerous to Germany.

If these inferences are correct—and the City is disposed to assume that this is so—the first meeting of the B.I.S. has quickly borne fruit, for it is unlikely that these four reductions would have taken place at once under the old system of unorganised and unofficial central banking co-operation. A concerted reduction in bank rates is, however, only the first stage. It has yet to be proved that each of the central banks concerned can maintain its rate at the lower level without finding that too great a strain is imposed upon it. But if action is taken by common agreement, it follows almost as a matter of course that the parties must make it as easy as possible for one another in carrying out the common objective. A crucial test of the new system will be the extent to which the meetings of the board of the B.I.S. will result in relieving the strain upon those money markets which are most affected by the common policy.

This matter is a very pertinent one for London, which finds, as the world's banker, that every financial cross-current is liable to cause drafts upon its resources and upon its gold stocks. A month ago, the currents were definitely adverse. There was then at least a threat of an outbreak of speculation on Wall Street with its usual concomitant of a renewed drain upon the world's supply of short money. Nearer home, the French, as last year, were beginning to draw upon their foreign balances to meet their current needs, and in the London exchange market the franc had appreciated from par to the export gold point. In these circumstances, it required confidence and courage for the Bank of England to participate in a general reduction of bank rates.

Events have removed for the present the Wall Street menace, for, as a chart on page 1059 shows, the upward movement of share prices, which by mid-April had retrieved about a third of the ground lost during the great slump, has suffered a marked setback in the last week. This latter movement had for some time been foreseen by competent American observers, as witness an article by a New York correspondent in the Banking Supplement published with the current issue of the *Economist*. Both the Bank of England authorities and those of the New York Reserve Bank must have been aware of the weaknesses of Wall Street, and it seems likely that when they decided upon last week's rate reductions, they were of opinion that the danger from Wall Street could be ignored.

The Continental, and especially the French, situation, is a different matter, and the French gold withdrawals from the Bank of England, amounting during the week ended Wednesday last to about £3,000,000, and the keen competition between France and Germany for Tuesday's market gold come as a sharp reminder of the vulnerability of the Bank's gold stocks. The German demand need not cause great concern, for past experience has shown that Germany loses gold as readily as she takes it, and in any case Germany as a payer of reparations is not likely to prove a permanent absorber of gold.

The French demand, however, is more serious. Our Banking Supplement contains an article on the Paris money market which explains the reasons for the absorption of gold by France. In brief, the undeveloped state of the Paris money market means that the French banks and financial institutions use their foreign balances as one of their main forms of liquid assets, and that they

draw upon them whenever they are faced with any special demand for francs. Current withdrawals are in part due to the same causes as operated last year, namely, the demands for francs in order to make tax payments and to finance the tourist season which is now beginning. An additional factor is probably French accumulations of funds in preparation for subscriptions to the French portion of the Reparations Loan, and also perhaps for the French share of the capital of the B.I.S., while transfers of French balances between different centres are cross-currents in the exchange market which at the moment are probably adverse to sterling.

The week's gold losses to France are a warning that even the united powers of central banks have their limits, though this warning, so far from supporting an attitude of negation, emphasises the need for further progress in central banking methods. In so far as France is concerned, the article already referred to admits frankly the need for further development. The writer adds that this will take time, that France must first reduce her accumulated foreign balances to a more normal level, and that, in practice, her best chance of doing this is to make Paris an important market for long-term foreign loans. Meanwhile, the writer says, foreign centres will be subject to the risk of sudden sales of French balances held abroad. In other words, sporadic gold movements to France are likely to continue, though it is to be hoped not on the scale of last year.

While the development of their own market is a task primarily to be undertaken by the French themselves, there will from time to time be obvious opportunities for co-operation on the part of other financial centres, of other central banks, and last, but not least, of the Bank for International Settlements itself. Positive action of this kind, not only in the case of France, but elsewhere, as opportunity arises, may seem to imply an attempt to set up rival money markets to London. But clearly it is in the interest of this country, no less than of the world generally, that means should be established for enabling the international movement of funds to take place as freely as possible without involving large movements of gold. We do not mean to imply that the B.I.S. can elaborate a system that will do away with gold movements altogether, or that there are alternative means of creating conditions of which these gold movements are at once the sign and the cure. But the simple fact is that these movements have quite a different economic effect in various countries, according to the form in which their money markets are organised. In one which is sensitive the movement in or out of £5 million may have a greater effect than a movement of £25 million in one in which the credit system is less highly organised. If banking co-operation on the basis of the gold standard is to become really effective, it seems inevitable that we must move towards a state of affairs in which movements in actual gold or in the ownership of gold will have as nearly as possible the same effect upon credit and upon prices in one country as in another. Until this happens, the economic situation will continue to be largely influenced by the amount of gold held in free markets and hardly influenced at all by the amount of gold held in others.

The extreme case of an " insensitive " market is India, to which it is notorious that gold, sometimes in enormous quantities, disappears and ceases to have an influence upon prices and credit in the world generally. But a similar problem arises, though smaller in degree, in any country in which gold may disappear in considerable quantities without producing any appreciable reaction. It will be difficult to move very far in the direction of controlling gold unless its movements produce similar effects in different countries.

In the meantime, it is a great step gained that banking co-operation should have got so far as to lead to common agreement on the objective of the moment. The mere fact that the different countries are attempting to obtain the same result will make it easier for each of them to use its own resources for the purpose in hand, and the course of events in the near future will be watched with the very closest attention.

LANCASHIRE AND RATIONALISATION.

PUBLIC attention has been directed widely this week to the situation in the cotton industry. A " National Cotton Week " organised by Lancashire has been the occasion of a spectacular co-operative effort to extend the home market by appeals, especially to women, to eschew more popular fabrics and extend the use of Lancashire goods. Simultaneously a series of authoritative articles by well-known men in the Lancashire industry, surveying the industry's position in detail, has appeared in the *Financial News;* questions relating to the reconstruction of the industry have been discussed by the annual conference of the United Textile Factory Workers' Association; and consideration of the diverse views of Lancashire's own experts in the light of the observations of an experienced foreign investigator has also been made possible by the translation of a critical study* undertaken last year by Dr. J. Wisselink for the benefit of the Dutch cotton industry.

The hopes expressed by the promoters of the national cotton week prompt the reflection that, while a campaign of this kind is wholly commendable, the greatest possible accession of trade in the home market likely to be achieved is insignificant in relation to the immense loss of export trade—one might say, in relation even to the continued loss from a point which many people in the industry believed to be near the lowest limit of the depression. During 1929 there was a decline in the export of piece-goods of all kinds of 195,000,000 square yards compared with 1928, and no less than 445,000,000 compared with 1927; and the figures for the three months ending March last give no indication that this distressing record has reached its downward limit.

In this situation it is not surprising that discussion is increasingly concentrated on the problems of the industry. Unfortnuately the effect is not to invoke a united effort—comparable in energy and purpose even with the organisation of the national cotton week, over the whole field of production and distribution—but rather to reveal and accentuate the differences of opinion among men whose knowledge and experience of all sections of the trade apparently give them an equal title to speak with authority. The one organisation which is resolutely grappling with the task of reorganisation and concentration on a comprehensive scale, the Lancashire Cotton Corporation, goes forward steadily with its difficult work. Yet, important as this is both in scope and significance, the Corporation's full programme, involving the control of ten million spindles and about thirty thousand looms, covers little more than one-fifth of the spinning section and touches only the fringe of weaving. For months past there has been talk of the formation of other large combines in spinning, weaving and merchanting, with aims similar to those of the Corporation, but their accomplishment on the scale demanded by the continued decline of the industry, and the growth of unemployment in many centres to over 15 per cent. of the insured population, still seems remote.

In the first of the articles in the *Financial News*, Mr Herbert W. Lee, chairman of the Joint Committee of the Cotton Trade Organisations, speaks of the persistence of the handicap of a disinclination to change methods, and of a " temperamental obstinacy in declining to admit the obvious consequences of new conditions." He notes in the weaving section a lack of inclination towards amalgamations, while stressing the urgency of the question whether the example of the spinners will be followed by the manufacturers. Yet he insists that it is fatal to assume that difficulties arise mainly from defects in the internal organisation, or from lack of efficiency in the separate units. He also holds that only reform, not revolution, is required, and admits nevertheless that even minor reforms are not easy to bring about by reason of the large number of interests which have to be " cajoled or overcome." In the second article, on the other hand, Sir Kenneth Stewart, chairman of the Lancashire Cotton Corporation, suggests the possibility of important improvements in efficiency and large economies, but the means indicated for the achievement of these by large-scale operation and centralised control of buying material, spinning, weaving and selling are certainly nearer to revolution than to reform.

Dr. Wisselink, whose study loses little in value because of the delay in translation, is in full accord with the small group of bold constructive critis to which Sir Kenneth Stewart belongs, especially in his insistence on the importance of far-reaching changes in the weaving and merchanting sections. Basing his conclusions largely on comparisons with American and Japanese methods, he finds that, apart from the need of concentration, there is less fundamentally wrong with spinning and finishing than with the organisation of the weaving and distribution sections. He notes particularly the unsatisfactory position of the weaving section, so far as size of mills and specialisation are concerned, with a reservation that less drastic changes in these respects are needed in the manufacture of finer fabrics in the Colne district than in the centres where coarser cloths are woven. In Burnley, for instance, he finds an average of 860 looms per mill as compared with 2,000 to 3,000 in America, with the consequence that, whereas in America it is possible to have 500 looms and more in a single mill producing one type of cloth, the number in Burnley is sixty or less.

In the concentrated and highly organised finishing sections he suggests that costs are increased by the multiplicity of small orders from the numerous small merchanting houses, especially in the printing departments, where much preparatory work is necessary for each order. All this, he contends, is " fatal to plant efficiency." He is led by these and other technical considerations to the conclusion that successful mass production of cheaper cloths is impossible without a drastic reorganisation of the selling organisation. As things are, the small size of many commercial houses hampers the expansion of the factories, while it is the existence of these houses which makes it possible for the many small mills to have their own special export agencies and thus maintain their existence. Dr. Wisselink plumps for complete vertical organisation as the one effective solution of the organisation problem, but agrees that much might be gained by a series of interlocking horizontal combinations of spinners, weavers, finishers and merchants. This certainly appears to be the line of speediest advance for Lancashire.

Dr. Wisselink regards the work of the Cotton Corporation as the only promising development, but insists on the great difficulty in the way of the fullest progress owing to the fact, as he estimates it, that only 200,000 out of 800,000 looms are in mills suitable for rationalised production. This point is also emphasised by Sir Kenneth Stewart, who states, for instance, that, apart from other problems relating to the installation of automatic looms and automatic attachments to existing looms, there are only between 20 and 30 per cent. of the Lancashire weaving sheds adapted for such installations, which would constitute " much more of a fundamental change than anything which is at present available in spinning." Sir Kenneth also concludes that it " remains to be seen how the present structure of the trade will allow the full development of that elimination of waste upon which reductions in production cost depend."

Dr. Wisselink visualises the possibility that the Cotton Corporation will lead the way by organising ultimately synchronised production on the basis of 8,000,000 spindles to 200,000 selected looms and large-scale marketing. Assuming the general adoption of this method, he sees, however, little prospect of any recovery of the lost Eastern markets—after allowing for all possible savings on production costs by concentration, estimated by him at 1¾ per cent. for grey goods and 4 to 5 per cent. on printed goods—in face of an advantage of 9½ per cent. lower costs possessed by Japan. The utmost possibility he concedes, apart from the adoption of the two-shift system and a wide extension of the allocation of eight looms per weaver, is a share in expansion in these markets. In other markets, however, he considers that a reorganised Lancashire industry would make substantial progress and become a formidable danger to the competing cotton industries of the Continent.

The irresistible inference from these expert discussions is that a contraction of the Lancashire industry on the basis of full-time working in selected productive units, which is possible only in large-scale organisation, is essential for the creation of conditions in which expansion may again be possible. Both mass production of the cheaper standard cloths and intensive efforts to extend the sales of the finer fabrics could thus be combined. But a powerful urge to united action is still necessary. In some quarters there is an almost pathetic belief that the report of the Government Committee of Inquiry, the completion of which is promised for the end of this month, may break down obstacles which preceding reports have failed to move. It is doubtful if this report can do more than focus attention once again on the necessity for all-round reorganisation. The best that can be hoped from it is that it will help to stir into activity on the right lines those whose lethargy or obstinacy has become a positive danger to the industry.

* " The Concentration in the English Cotton Industry," by Dr. J. Wisselink. Translation of articles which appeared in the *Nieuwe Rotterdamsche Courant*, July 2 and 3, 1929. Rotterdam, 1s.

ROAD, RAIL AND THE PUBLIC.

(BY A CORRESPONDENT.)

THE practical completion of the negotiations between the railways and those omnibus companies which are associated with the Tilling and B.A.T. group brings to a close the first stage of the reorganisation of passenger traffic which is proceeding as a result of the Railways (Road Transport) Act of August, 1928. This stage has been the acquisition by the railways of a financial interest in the existing omnibus undertakings. Four main types of control have been evolved. Firstly, in a few cases, such as the Crosville Motor Services of Chester, the East Midlands Motor Services, and the Vectis (I.O.W.) Bus Services, the railway companies have either bought the bus company outright or purchased more than 50 per cent. of the shares. Secondly, in agreements with concerns outside the Tilling group, such as the National Omnibus Company, and the South Wales Commercial Motors (Western Welsh Omnibus Company), and also with the United Automobile Services, the railways have acquired a 50 per cent. holding and the right to appoint half the directorate, or in some cases, such as the Devon General

Omnibus Company, Oxford and District Motor Services, and Bristol Carriage and Wagon Company, merely 50 per cent. of the shares carrying voting rights. The third group includes the great majority of bus undertakings in the Tilling group; in these cases the railway policy is to acquire a holding of shares equal to that of the present largest shareholder. This means in practice that both the railways and the Tilling and B.A.T. holding company have each a 33⅓ per cent. interest in the larger group of Tilling Bus Companies. The railways thus have a 33⅓ per cent. interest in most of the Tilling companies, such as the East Kent Road Car Company, Southdown Motor Services, and Aldershot and District Traction Company.

At the present time the only non-Tilling bus undertakings of any importance with which the railways have failed to come to terms are the United Counties Bus Company in L.N.E.R. and L.M.S. territory, the Red and White Services in Great Western territory, and the Wilts and Dorset Motor Services in Southern Railway territory. The Lancashire United Transport and Power Company is connected with the Tilling group by an interlocking directorate, but is still outside the railways' sphere of influence. The financial transactions between the Tilling companies and the railways have now been completed for all Tilling companies in the Southern Railway's territory, the Southern having paid £855,000 for a 33⅓ per cent. interest in them. The railway companies already have interests in concerns controlling nearly 15,000 buses. There are, however, altogether about 35,000 public passenger vehicles registered with a seating capacity of over eight seats; the balance includes some 2,000 express motor coaches, 3,000 municipal buses, an unknown number of charabancs, and the various small local omnibus services which are rapidly being bought up by the larger railway-controlled companies over whose routes they operate. Up to the end of last year the railways had invested £2,658,000 in omnibus undertakings, including £1,038,000 by the Southern, £662,000 by the L.M.S., £490,000 by the L.N.E.R., and £468,000 by the Great Western. This year the figures will be much higher, the L.M.S. alone having invested £2,250,000. There is very little competition with each other over the same routes by the larger bus companies. In the few cases where a route has been served by two or more companies, agreements have been in force covering fares and time-tables, but each of the larger omnibus undertakings has in the main established a kind of local monopoly so far as the other large companies are concerned.

Following on the taking by the railways of a financial interest in the omnibus industry, the second step towards the reorganisation of passenger transport has already been begun. The railways have established local committees representative of road and rail interests in all parts of the country for working out in detail the co-ordination of road and rail transport, and Sir Ralph Wedgwood has even gone so far as to look forward to a transfer of branch-line traffic and stopping-train traffic on the main lines from rail to railway-controlled road vehicles. The railways, whose annual passenger revenue shows a reduction of £10,000,000 compared with five years ago, due to loss of traffic to the buses and cheap fares to meet road competition, have every incentive to push forward with schemes which will enable them to place their passenger transport on a more profitable basis. The considerable interest retained in most of the companies by the former owners of the bus undertakings should, however, together with the self-interest of the railways in encouraging the travel habit all round, prevent the appearance of any tendency on the part of reactionary elements on the railways to attempt to stifle omnibus transport in the supposed interests of their late competitors the railways proper.

The Road Traffic Bill will inaugurate the third stage in the reorganisation of passenger transport. This will indeed be revolutionary, and will completely change the position of the omnibus industry. The Royal Commission on Transport, in its Report on the Licensing and Regulation of Public Service Vehicles, declared itself in favour of a limited number of traffic areas, each to be controlled, so far as omnibuses are concerned, by three traffic commissioners to be appointed by the Minister of Transport. The object of these commissioners was defined as being to work towards a "controlled monopoly" of transport in each area. Events, nevertheless, are moving towards such a state of affairs in any case.

The Road Traffic Bill merely copies the suggestions of the Royal Commission. It is proposed that commissioners in twelve traffic areas should have the power of granting licences, the giving of which should be conditional on the fulfilment of certain requirements. The licensee must have his time-tables and fares approved by the commissioners. He will be liable to inspection and the enforcement of proper conditions of service with regard to his employees; he may be required to fix his fares in such a way as "to prevent wasteful competition with alternative forms of transport along the route or any part thereof, or in proximity thereto," *i.e.*, to put up his fares to such an extent as to drive people back to the trams or the railways; a licence may be made conditional on an undertaking for "the elimination of unnecessary services, and the provision of unremunerative services"; finally, the licensee must "keep such records and make such returns as the Minister may prescribe." This part, dealing with the regulation of public passenger vehicles, constitutes by far the most important change envisaged by the Road Traffic Bill, a fact which has been generally overlooked, as attention has been focussed on speed-limits and dangerous driving.

The Minister of Transport will thus be in a position largely to dictate to the omnibus industry what its gross receipts may amount to through his power to regulate services. He will be able similarly to dictate its expenses through his control of the conditions of service of workers and the clerical records to be kept. He will, therefore, be in a position almost to dictate whether omnibus undertakings may make a profit, and, if so, how much. This will hardly be a satisfactory state of affairs, as the omnibus industry, unlike the railways, will have no guaranteed revenue, and it may reasonably be doubted whether, in the long run, the regulation of the industry without some guarantee of its earnings will prove practicable. If the third stage in the reorganisation of road passenger transport is to be detailed public control, it will be necessary to guarantee that due respect shall be paid to the legitimate interests and expectations of the parties now providing the service.

Notes of the Week.

The Disturbances in India.—The week has been one of critical events in India. Early on Monday morning police officers aroused Mr Gandhi from his bed and conveyed him to Teroda, where he will be placed under restraint during the Government's pleasure. This step, taken by the Bombay Government with the concurrence of the Government of India, and presumably of the Government at home, has been made under Regulation 25 of 1827, which means that Mr Gandhi will not be brought to trial. The authorities have treated Mr Gandhi with consideration, for which he has expressed his gratitude, and it may well be that Mr Gandhi is happy to be relieved of the embarrassing decision of what to do next. Those on whom the mantle of the Mahatma falls have no light task, for a *hartal*, proclaimed throughout India when the news was known, in many cases led to rioting and disorder. Of these incidents Delhi has been one of the scenes. On Wednesday last a mob came into conflict with three police lorries, two of which made their way back to the police barracks, but the third was surrounded, and a charge from police headquarters was only able to rescue the car after a discharge of buckshot. This incident involved four deaths and casualties variously estimated at from 20 to 30. Disturbances have also occurred at Chittagong, Howrah, Bombay and some other towns. At Sholapur, in the Bombay Presidency, one of the most serious clashes has occurred, in which it is reported that there have been 25 deaths. Both here and in the cotton stores at Bombay incendiarism seems to have been at work. The week's events also include an earthquake at Rangoon involving serious, though at first greatly exaggerated, loss of life, which is said to have been interpreted by the Indians in Burmah as a punishment from God for the arrest of the holy man. Belated reports have also been received of what has been happening recently in Peshawar. News from various indirect sources had reached London which indicated that events in that vital spot on the North-West Frontier had been more serious than was at first reported, and that something like a censorship was in operation. On Monday, therefore, the Government of India issued a statement which threw considerable light on the situation. In the course of the disturbances on April 23rd, when troops had been used and the behaviour of one Garhwali regiment had been unsatisfactory, Mr Metcalfe, the Deputy-Commissioner, was injured, some 20 rioters killed and possibly 60 injured. It appears that the military forces were thereupon withdrawn from the native city in the hope of avoiding conflict. Other troops normally in the neighbourhood had apparently been moved elsewhere in the tribal territory, and, when the troops had withdrawn, a so-called "War Council" of the Congress Party was set up in the town, and is stated to have invited the Haji of Turangzai to enter Peshawar. This adventurer apparently moved down to the frontier, but advanced no further; the tribal chieftains generally have made no move; and some of them have offered and provided forces to assist in keeping order. For several days the Congressmen of Peshawar were left undisturbed until the early morning of Monday, when a considerable body of troops quietly moved into the city, took possession of it, and arrested the leaders. This was apparently accomplished without disturbance of any kind, and the situation is now under control. Unfortunately, the Chief Commissioner of the North-West Frontier, Sir H. Norman Bolton, who broke down under the strain of his intensely responsible and anxious task, is returning to England, his place being taken by Mr S. E. Pears, formerly Resident of Mysore. It is highly probable that these events were the deciding factor in determining the Government to arrest Mr Gandhi and to demonstrate to the whole of India that the authority of Government must be maintained. While it would be premature as yet to assume that the trouble is over, it looks, at the time of writing, as if the Government of India had once again seized the psychological moment for removing Mr Gandhi temporarily from the stage. It was only to be expected that the arrest of the Mahatma would provoke a sharp expression of popular feeling, but the handling of such disorders as have occurred since Monday last shows that the Government intends to act firmly, and gives ground for the hope that, the demonstration having been made, we may experience comparative quiet until discussions of the Statutory Commission's Report can commence.

Budget Criticisms.—Mr Snowden is, at least, entitled to boast that, though he possesses no independent majority in the House of Commons, and, indeed, is liable to find twenty or thirty of his own nominal supporters in the Lobby against him, yet he is getting his Budget and will apparently get it *in toto*. To tell the truth, the discussions of the Budget, both in and out of the Parliament, have been unusually featureless. The burthen of the Conservative song has been complaint against the selective and discriminating taxation of the rich; while outside the House of Commons the most important discussions have ranged round the effect of high death duties on the supply of capital for industry, on which Lord Lothian and others have addressed pertinent letters to *The Times*, and around the burden which high income taxes place upon productive enterprise, on which subject Lord Melchett led the way. For the rest, the general attention is given more to the nature of the bill which Mr Snowden has to meet than to the way in which he meets it. The *Monthly Review* of the Midland Bank calls it "the inevitable Budget"; the Westminster Bank Review describes it as "an orthodox document"; Barclays Bank Review aims its darts, not at Mr Snowden, but at the size of the national expenditure, for which it distributes blame to all the political parties. Growing and spreading realisation of the urgent need for retrenchment is the best result of the Budget and the best feature of the Budget discussions, and the paragraph in the Budget speech which has claimed most favourable attention is that in which the Chancellor held out the hope that he would need no new taxes next year. When it is recalled with what trepidation a Socialist Budget was awaited in certain quarters, the really striking point is the smallness of the ripples which Mr Snowden has caused in the waters either of politics or business.

The Consumers' Council Bill.—Mr Graham has taken steps to implement his promise of last summer, and a bill for the establishment of a Consumers' Council received its second reading last Thursday. The proposed Council is to consist of seven members, of whom two at least shall be women, and its duty will be to investigate and report to the Board of Trade upon all questions relating to the production, distribution, supply and price of articles of food of common consumption, clothing materials, wearing apparel, fuels and such other articles as it may be charged by the Board of Trade to investigate. Such an order by the Board of Trade will not take effect until it has been approved by a resolution of each House. For the purpose of investigations, which may be undertaken either as a result of complaints made to the Council, or on its own initiative, or by request of the Board of Trade, the Council is to have power to examine witnesses upon oath, to compel the production of information in writing, and to obtain access to any books, accounts or documents it thinks material. Everybody taking part in any investigation will be required to make a declaration of secrecy, and no information about any individual business may be disclosed, except to the Board of Trade or in connection with legal proceedings under the Act. Where the Council is convinced that an excessive price or commission is being charged it may include in its report to the Board of Trade a recommendation as to the price which ought to be charged, and may recommend that an order be made by the Board of Trade for the purpose of securing compliance. If the Board of Trade is of the opinion that compliance cannot be secured in any other way, it may fix a maximum price. This last provision is embarrassing to many of those who would welcome the powers the Bill confers of securing information and the production of accounts. Price-fixing is an almost universal method of regulating public utility concerns which are in private hands, this restraint being the *quid pro quo* for the grant of monopolistic powers. The Liberal Industrial Report suggests that it may be necessary to extend this idea to concerns which, though not enjoying a formal legal monopoly, are, because of their size or by agreement with other concerns or for any other reason, exercising monopolistic powers. Even in this case, it is preferable that the public should be safeguarded by competition, but there is a case here for price-fixing in the last resort. Attempts to fix prices, however, in competitive industries have a long record of failure. Evasion, the disappearance of supplies, deterioration of quality, the tendency of maximum prices to become minima at times when, in a free market, prices would be lower, are but a few of the difficulties that have been met with. If in spite of its previous failures price-fixing is to be made a success, it will inevitably involve intervening in the methods of production and marketing. To use price-fixing as a method of approach to reorganisation in these respects, whether it be under the State or in private hands, is to start at the wrong end of the stick. With minimum prices for coal on the one hand and maximum prices for other commodities on the other, our economic system is in danger of being subjected to most curious and crippling distortions. Of the most valuable weapons which could have been placed in the hands of the proposed Council, that of publicity, little is said in the Bill, but this very serious omission may, it is to be hoped, be remedied in committee.

Church and State in Malta.—Last Saturday the Governor of Malta issued an ordinance postponing the impending General Election in the interests of public safety—a step which gives the measure of the gravity of the conflict between church and state which has been in progress there for some time. It is not merely a conflict between the local civil and ecclesiastical authorities in Malta. Greater Powers are involved: the Imperial Government on the one side and the Vatican on the other. Pending the publication of a White Paper, the diplomatic dealings on the matter between these Powers are still obscure. The origin of the trouble was the action of the local authorities of the Catholic Church in ordering an ecclesiastic to leave Malta for a place in foreign territory as a measure of ecclesiastical discipline. The ecclesiastic was unwilling to go; and when the matter came before the notice of the Government in Malta (which now possesses "semi-Dominion status"), the Prime Minister, **Lord Strickland**, held that the ecclesiastical authorities were seeking to impose a civil penalty and were thereby infringing upon the prerogatives of the civil Government. The church then threatened to retaliate by using its influence against Lord Strickland and his party in the General Elections; and the purpose of the negotiations between London and Rome was to induce the Vatican to instruct the local ecclesiastical authorities to refrain from doing this, on the understanding that, after the elections, other negotiations for a Concordat should be started. These preliminary negotiations broke down because the Vatican refused to tie the local bishops' hands, which, in effect, was an encouragement to them to take the offensive. This they did on May 1st by issuing a joint pastoral, in which they declared that good Catholics could not vote for Lord Strickland or his supporters without committing grave sin; and they proceeded to forbid priests to administer the sacraments to anyone who disobeyed these instructions. The immediate effect was to produce a dangerous excitement of public opinion, and the Governor's ordinance is the result. Thus the issue is fairly joined. It is an old, but by no means a dead, issue. When the Catholic Church takes up this position it cannot expect any Government to compromise.

Italy's Naval Programme.—On April 30th the Italian Cabinet decided to lay down within the coming year one 10,000-ton cruiser, two flotilla leaders of 5,100 tons each, four destroyers of 1,240 tons each, and 22 submarines—the total amounting to 42,900 new tons of Italian warships. This precipitate action seems a little provocative. After all, the Naval Conference is still in being as far as Italy, France and Great Britain are concerned. The understanding on which the treaties were signed and on which the Americans and the Japanese went home was that discussions *à trois* for an understanding between Italy and France should be continued in concert with Great Britain, in the hope that the French and Italians might eventually find themselves able to come into the comprehensive agreement for naval limitations which has already been arrived at between the three principal naval Powers. For the failure to achieve a five-Power agreement up to date we do not acquit the French of blame. They elected to meet the Italian demand for parity by putting forward a building programme on a scale calculated to make it financially difficult for Italy to compete, but challenging to Italian *amour propre*. In our opinion, this policy was very short-sighted, but two pieces of bad statesmanship do not make an international understanding; and all that Italy will have achieved by her last move is to put herself in the wrong and to diminish the chances of an agreement. If France and Italy drift into a race of naval armaments in the Mediterranean, the British Empire cannot remain unconcerned; and if we were to be forced into the race ourselves to the extent of being compelled to act on the contingency clause in the three-Power treaty of London, then the United States and Japan would become concerned as well. No Power or Powers in the world as it is nowadays can afford to make themselves a nuisance to their neighbours beyond a certain degree. Security is conditional on the recognition of obligations to others.

Dr. Murray Butler's Lecture.—It was a happy thought which prompted the invitation to a distinguished American to deliver the 1930 Richard Cobden Lecture, and Dr. Nicholas Murray Butler, who chose as the subject of his address, at the Royal Society of Arts on Wednesday, "Nation Building and Beyond," made excellent use of the opportunity. The chief importance of a lecture which excelled both in construction and material was a lucid disquisition upon the differences between a national and an international outlook, and, as one would expect from Dr. Butler, his treatment of the theme was worthy of and appropriate to the occasion. Of substantial historical interest, too, was his survey of the development of American fiscal policy—a survey illustrated by pertinent quotations from the "Fathers of Protection." Here is one of the most striking, from a speech of President Garfield in 1866:—"I hold, therefore, that a properly adjusted competition between home and foreign products is the best gauge by which to regulate international trade. Duties should be so high that our manufacturers can fairly compete with the foreign product, but not so high as to enable them to drive out the foreign article, enjoy a monopoly of the trade, and regulate the price as they please. To this extent I am a protectionist. If our Government pursues this line of policy steadily we shall year by year approach more nearly to the basis of free trade, because we shall be more nearly able to compete with the other nations on equal terms. I am for a protection which leads to ultimate free trade. I am for that free trade which can only be achieved through protection." Here in brief, compact form is the argument for the protection of the infant industry. A country desires not to depend upon agriculture alone, but by diversification of effort to create a broader basis of economic activity. Temporary tariff aid is therefore given, theoretically for a few years only, to industries which, it is supposed, will be strong enough thereafter to stand upon their own feet. If President Garfield were alive to-day he would be a disappointed man; for he would see that experience has proved the difficulty of reaching Free Trade through Protection, the obstacle lying in the fact that a duty creates vested interests which are usually strong enough to prevent that duty's projected removal.

The Reparations Loan.—Following the conference of the world's leading bankers at Brussels last week, in regard to the launching of the first portion of the German Reparation bonds, the representatives of the Treasuries of the Allied creditor Powers have been engaged this week in conference at Paris, for the purpose of settling the technical details of the pending issue. The proceedings have been kept strictly private, but it is understood, writes our Paris correspondent, that the loan will in all probability be issued between May 20th and 25th. The yield, it is thought, will be nominally 5½ per cent. for each of the various national portions of the issue, but the actual return will vary, in all probability, in accordance with the issue price fixed for each country. The issue price for Germany, for instance, may be expected to be around 93, so that for the German portion the yield may work out in the neighbourhood of a full 6 per cent. For some of the other countries the issue price may quite likely be as high as 98. The scrip will consequently vary slightly in certain details according to the country of issue, but will in general principle be of a uniform character. It will probably be found that coupons will be payable only in the currency value (in gold) of the country in which any given bond has been issued. Interest payments, it is understood, are to be free, or nearly free, of all taxation in all countries. With regard to the manner in which the issue should be distributed among the various markets, it is understood that agreement has been more or less generally arrived at on a distribution basis of one-third to New York, one-third to neutral countries, and one-third between Great Britain, France, Belgium, Italy and Germany. The crux of the difficulty in this part of the negotiations has been the question of the amounts to be allocated respectively to London, Paris and Berlin. The British argument is that as France is to receive 78 per cent. of the proceeds of the $200,000,000 to be offered in respect of the first portion of the German Reparation bonds to be mobilised, London should not be asked to take more than about $25,000,000 of the same part of the issue (which would represent approximately the British share of the proceeds), as otherwise there would be a risk of a further drain of gold from the Bank of England. Germany, which is anxious to borrow and not to lend, wishes to be allocated merely a nominal amount of the issue. It is generally believed here that the French portion of the issue will be largely in the hands of the Crédit Lyonnais, in its capacity as the head of a syndicate comprising most of the leading Paris banks.

Paris Issue of B.I.S. Capital.—It is reported, writes our Paris correspondent, that a large number of dealings are already taking place in France in connection with the pending issue of the French share in the capital of the Bank for International Settlements. The shares, which are to have a nominal capital value of 12,300 francs, 25 per cent. paid up, and were being dealt in last week at 1,000 francs premium, are now changing hands at around 7,000 francs, which represents a premium of about 4,000 francs. The issue is expected to be made towards the end of next week, or soon after. It was seriously, though unofficially, announced in Paris this week that there is reason to believe the issue will be "at least 100 times oversubscribed," so great is the effort being made by the banks to secure substantial portions of the scrip. In that case the application money temporarily immobilised would amount to the enormous sum of £40,000,000. But though this forecast may be exaggerated the applications for the issue will be very large and the need of francs for this purpose in Paris is said to be one of the causes of this week's heavy gold purchases in the London market on French account.

The Charing Cross Scheme.—The Private Bill Committee of the House of Commons, which, it will be remembered, adjourned on April 10th to allow the L.C.C. time to find an alternative site to the Lion Brewery for the new Charing Cross station, has now rejected the Charing Cross Bridge Bill. The L.C.C., in co-operation with the Southern and Underground railways, had meanwhile examined several alternative schemes and decided that they could not accept the responsibility of submitting any of them to Parliament. They offered certain modifications to the scheme in the Bill, which would have removed to same extent the æsthetic objections to it, but these did not meet the crucial criticism of the committee, which was that the building of a station on the Lion Brewery site would be fatal to the future development of Lambeth. This is not a mere matter of local South London interest. The twisted deformities of that district, which are mainly the work of the early years of railway development, block what would naturally be far the shortest route between London Bridge and points west of Vauxhall, with the result that the Middlesex side of the river is hampered by a suffocating degree of congestion, both of traffic and of buildings. The construction of a station at the new bridge head would destroy for ever all possibility of remedying this, and with that in mind, the committee expressed its conviction that something better could be done. Meanwhile, the Southern Railway appears to be somewhat unaccommodating on the matter of a site, and the L.C.C. declares that "if the scheme is rejected they see no prospect of securing the national improvement represented by a new road bridge at Charing Cross." Fortunately, neither the public nor the Private Bill Committee takes that somewhat sulky view. The committee has announced that it is "still of the opinion that the construction of this bridge across the river will be an immense improvement to the City of London, and they believe that such a bridge will be made and will be made soon." With visions before them of a large area on the Surrey side which shall be an integral part of Central London, having buildings and thoroughfares worthy of it, and an Embankment of which they can be proud, Londoners will maintain pressure on the L.C.C.—in the last resort, perhaps, even bring pressure to bear upon the Government—until a satisfactory scheme is carried through.

Northern Ireland Finance.—Our Belfast correspondent writes:—The estimates for services under the Government of Northern Ireland for 1930-31 amount to £8,881,450, as compared with a total of £7,659,014 in respect of estimates and supplementary estimates for 1929-30. This increase of £1,222,436 is largely due to increases under three main headings—social services, grants to local authorities, and public works and buildings. The vote for unemployment insurance shows an increase of £412,990 from £1,060,010 in 1929-30 to £1,473,000 in the present year, mainly due to the transfer from the Unemployment Fund to the Exchequer of liability for benefit paid under transitional conditions. Expenditure on widows, orphans and old-age contributory pensions has more than doubled, the vote having increased from £140,000 in 1929-30 to £315,000 in the present year. The increase in grants to local authorities amounts to £584,650, due to the derating scheme—full provision for which is now made for the first time. In 1929-30 the sum of £256,000 was transferred to the Exchequer from the Rating Relief Suspense Account, and the net vote for grants to local authorities was reduced by this amount. It is stated that a substantial sum still remains in this account, but no credit from this source is provided for in the 1930-31 estimates pending the submission to Parliament of legislative proposals for the disposal of the balance remaining. Expenditure on public works and buildings shows an increase of £132,666 from £293,507 to £426,173. This is largely due to the acceleration of building work on the new Parliament buildings and Government offices at Shoremont. The departmental portion of the building is expected to be ready for occupation early in the summer of 1931. The figure of £1,222,436 represents the increase in expenditure on all transferred services, but there has also been an increase in the payments by the Imperial Treasury to the Northern Ireland Exchequer in respect of works services under Section 34 of the Government of Ireland Act and in respect of the Unemployment Equalisation Fund. Payments under the former heading have increased from £244,167 to £332,697 and under the latter from £337,000 to £533,000. The increase in the estimates after eliminating this Imperial expenditure thus amounts to £937,906. As already indicated, this sum may subsequently be reduced by a transfer from the Rating Relief Suspense Account, but the rise in expenditure which has been necessitated by recent legislation must exert a profound influence upon Mr Pollock's next Budget, which will be looked forward to with special interest. It may be pointed out, however, that for 1929-30 the Northern Ireland payment to Imperial services was provisionally fixed at £600,000, while the increase in taxation made in Mr Snowden's Budget is estimated to produce an extra £300,000 in the six-county area. These two items above, therefore, are approximately equivalent to the net increase in the estimates for the current year, irrespective of any increase in income from other sources.

Non-ferrous Metal Prices.—As the following table shows, the sharp fall in the non-ferrous metal market that has occurred during the course of the current year has already carried prices back to below pre-war levels. As the general price-level is still 17.2 per cent. above its 1918

average, non-ferrous metal prices appear to-day to be unduly low.

Date.	Standard Tin. £ per ton.	Standard Copper. £ per ton.	English Lead. £ per ton.
1901–05 average	128·00	60·00	12·50
End 1913	167·75	64·00	18·75
„ 1919	347·12	116·12	49·00
„ 1924	267·00	67·44	45·00
„ 1928	225·75	74·00	22·25
„ 1929	178·12	68·00	23·25
„ March, 1930	170·50	71·00	20·50
„ April, 1930	153·00	55·50	19·25
May 7, 1930	145·25	48·50	18·75

Copper has for some years been comparatively little above its 1913 price, but lead and tin have only fallen to that level within the last few months, though it should be remembered that at the beginning of 1913 tin stood at approximately the same level as at the end of 1928. A more general point to bear in mind is that sources of supply and conditions of production and demand have changed greatly during the generation that has elapsed since the beginning of the century. While the effects upon producers of the recent break must not be minimised, it does not follow that the comparison between pre-war and present-day prices can be interpreted literally or without a considerable degree of qualification.

Egyptian Cotton Yarn Prices.—Our Manchester correspondent writes:—During the last two months producers of yarns from Egyptian cotton have been discussing a scheme for the control of production and prices. It is understood that an attempt has been made to obtain the support of 90 per cent. of the employers affected. Certain difficulties have arisen, and, so far, it has not been possible to put all the proposals into operation; but, in the meantime, the directors of three of the leading combines—the Fine Spinners' Association, Combined Egyptian Mills, Ltd., and Crosses and Winkworth Consolidated Mills, Ltd.—have reached an arrangement whereby prices shall be fixed at a level which will prevent losses. This decision has meant an advance of ½d. to 2d. per lb., according to the range of counts. In Lancashire there are about 18,000,000 spindles engaged on Egyptian cotton, and these three organisations control about 9,000,000 spindles. There has been considerable interest in the Manchester market in this development, and so far buyers have resisted rather strongly the higher prices. The future will depend upon the attitude of outside firms, and, as things stand at present, the orders available are going to spinners outside the three combines. The market at the moment is very depressed, and undoubtedly a bad time has been chosen to establish minimum prices, but it is quite possible that the concerns that have already made a move in this matter will obtain the support of other firms. It is recognised that, if price fixing is to be a success, the promoters will have to obtain the consent of fully 90 per cent. of the spindles affected.

International Motor Production.—The world's output of motor vehicles in 1929 surpassed all previous records. The production of the principal countries for the last four years is set out below:—

NUMBER PRODUCED (000's omitted).

	1926.	1927.	1928.	1929.
U.S.A.	4,301	3,401	4,359	5,358
Canada	205	179	242	263
U.K.	180	212	212	239
France	193	191	210	263
Italy	55	65	55	68
World*	4,999	4,163	5,202	6,300

* Estimated.

The outstanding feature of last year's activity is the remarkable increase in the production of the United States, whose share in the total increase represents about 90 per cent. The United Kingdom, Canada, France and Italy all show an advance on the previous year—particularly marked in the case of France. It is noteworthy, as the following table shows, that although all countries with the exception of Italy increased their exports, the ratio of exports to total production declined in the case of the United States and France, whereas that of the United Kingdom and Canada was higher.

EXPORT TRADE.

	1926.		1927.		1928.		1929.	
	No.	Percentage of Production.	No.	Percentage of Production.	No.	Percentage of Production.	No.	Percentage of Production.
U.S.A.	305	7·1	384	11·3	507	11·6	537	10·2
Canada	74	36·3	57	32·2	79	32·8	102	38·6
U.K.	32	18·0	36	16·9	33	15·5	43	17·8
France	60	30·9	52	27·2	44	21·0	49	18·6
Italy	34	62·4	33	51·6	28	51·4	24	34·9

Since November last the production in North America has declined heavily, and although that of Europe has so far been well maintained a considerable decrease in the world's output for the current year is to be expected.

Shipping Freight Index Number.—"Tramp" shipping freights in April, though the tendency of the market was irregular, showed on balance a slight recovery. Our index number of whole-cargo rates works out at 89.7, as compared with 87.9 a month ago, a rise of 2.1 per cent. A year ago the index stood at 115.3, while the corresponding figure for April, 1928, was 110.1. The following table summarises recent movements of the various group indices:—

AVERAGE 1898–1913=100.

	Average, 1913.	April, 1929.	Feb., 1930.	Mar., 1930.	April, 1930.
European Waters	110·0	117·7	98·1	96·3	94·4
North America	113·1	120·5	92·6	87·7	91·2
South America	123·4	118·4	95·5	91·9	95·9
India	106·3	106·3	93·4	94·2	94·8
Far East and Pacific	117·4	114·7	78·9	77·8	76·3
Australia	127·9	113·9	75·7	79·2	85·5
Total	116·3	115·3	89·0	87·9	89·7

The only features of noteworthy improvement during the past month were an appreciable rise in the homeward quotation from South America. The volume of chartering did not expand very greatly, but, as a consequence of recent heavy withdrawals of tonnage from active commission, the pressure of unfixed vessels at the Plate was somewhat lightened. Grain freights from North America and Australia were also slightly firmer. Outward coal freights, on the other hand, registered a further decline for most destinations. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade	76·7	− 0·9	South America—outwards	109·8	− 7·8
Bay—outwards	102·7	− 1·9	South America—homewards	82·1	+15·8
Bay—homewards	121·0	− 4·8	India—outwards	109·5	...
Mediterranean—outwards	94·3	− 1·0	India—homewards	80·2	+ 1·3
Mediterranean—homewards	94·9	− 2·1	Far East, &c.	76·3	− 1·6
North America	91·2	+ 3·5	Australia	85·5	+ 6·3

Expressed as a percentage of the average for 1913, the total figure of our index number for April works out at 77.1, as compared with 75.5 in March and 99.1 a year ago.

The East England Electricity Scheme.—The publication of the East England Electricity Scheme by the Central Electricity Board on Wednesday last virtually completes the national "grid" for the supply of electricity throughout the country. In many respects, writes a correspondent, the East England Scheme presents an interesting problem in the economics of electricity supply. With an area of 3,438 square miles of agricultural country of Norfolk and Suffolk and a population at the last census of approximately 788,880, representing an average density of about 230 persons per square mile, and with only one town of any size within its boundaries, it constitutes a "test" area in the problem of rural electrification. It is

interesting, in passing, to compare the relevant statistics of this area with the hypothetical figures mentioned in the Report, issued in July, 1928, of the Conference on the Electricity Supply in Rural Areas. In this Report, districts with an average population density of under 200 persons per square mile were considered, from the point of view of electricity supply, to be "rural." Further, districts in which the consumption per head of electricity fell below 40 units per annum were not regarded as economic for development purposes. Excluding Norwich from the area now in question, the figures of the remaining districts amount to a population density of 192 persons per square mile, while the average annual consumption per head of population is no more than 32 units. This comparison serves as a sufficient indication of the difficulty in the task of development before the Central Electricity Board. At the present time there are 18 authorised undertakers in the area, owning between them 11 public generating stations. In 1928-29 the total sales of electricity amounted to 48.2 million units, equivalent to 61 units per head of the population for the whole area. Of this total, Norwich alone is responsible for about 63 per cent., and that station, together with those at King's Lynn and Yarmouth, accounts for about 83 per cent. Thus, the task of selection was simple. Out of the 11 generating stations, two will be operated for the board. These are the South Denes Stations of the Great Yarmouth Corporation and the Thorpe Station of the Norwich Corporation. Provision is also made for the operation, if necessary, of the station of the King's Lynn Corporation under temporary arrangements. The amount of plant installed or sanctioned at the moment in the Yarmouth station is 15,250 kw., while that at Norwich is 27,500 kw. The contemplated extensions up to 1943-44 amount to a net increase of 51,000 kw. The increase in the sales of electricity is estimated to reach a total of 221 million units by the same year, giving a consumption figure per head of population, based upon the 1921 census, of 280 units. The cost of the scheme to the board for the erection of the transmission system is estimated at £594,328, while the expenditure by undertakers on account of extensions of existing stations will amount to about £306,074. Thus, the main expenditure will be on distribution, and in estimating the final cost of the current to the consumer, little reliance can be placed upon the price charged by the Central Electricity Board to the authorised undertakers. An estimate given suggests that this price will fall from 0.41d. per unit in 1932-33 to 0.38d. in 1937-38. In view of the fact that this territory was being already developed by the existing undertakings, the enterprise of the board in taking over this control seems to be to a certain extent diminished. One cannot help feeling that a sounder method would have been to include this area in either the South-East or Central England Schemes.

The Deep Sea Fisheries.—A correspondent writes:—Supplies of fish in the first quarter of the year, both in weight and value, showed a substantial increase over the corresponding period of 1929, and, including imported wet fish, had a first-hand value exceeding £5½ million. The following summary relating to wet fish only is compiled from the returns issued by the Ministry of Agriculture and Fisheries:—

	Weight.		Value.	
Jan.-March—	1929.	1930.	1929.	1930.
British caught—	Cwts.	Cwts.	£	£
England and Wales	2,486,355	2,715,842	3,025,753	3,244,892
Scotland	1,137,698	1,103,070	950,218	923,450
Shell fish	...	...	62,666	74,468
	3,624,053	3,818,912	4,038,637	4,242,810
Foreign caught	300,706	369,340	212,694	249,430
Imported	827,595	805,998	1,062,140	1,026,143

There was a good increase in the quantity of British-caught fish landed at the ports of England and Wales, and some advance in the aggregate value, though the latter did not keep pace with the heavier landings, as may be gathered from the fact that the average value was 23s. 10¾d. per cwt., against 24s. 4d. per cwt. in January-March last year. In Scotland there was a small decline both in weight and value. More fish was landed from the deep sea fisheries by foreign-owned vessels but less was imported from abroad. Supplies are now being sought off the Murmansk coast, Bear Island and Greenland, in addition to those obtained from Iceland, the Faroe and the North Sea. For this purpose larger and more modern steam trawlers are being built and fitted out. The exports of wet fish from Great Britain in the quarter had a value of £355,802, as compared with £341,186 a year ago.

INSURANCE NOTES.

Friends' Provident and Century Life Office.—The report issued for the year 1929 includes the results of the quinquennial valuation for the period 1925-1929. During that period the business has registered a considerable quantitative advance, the fund having expanded from £4,600,000 to £6,200,000. The total sums assured and bonuses in force under existing contracts have risen from £11,850,000 to £15,272,000, and the relative yearly premium income has advanced from £447,000 to £513,000. This movement has been accompanied by an improvement in the profit-earning capacity of the office, the average net rate of interest during the last five years being £5 2s. per cent., compared with £4 11s. 5d. per cent. in the preceding quinquennium. Moreover, the rate of expense, including commission, has worked out to an average of 16.9 per cent. on premiums received, compared with 19.2 per cent. in the corresponding period five years earlier. The details of the valuation just concluded, which has been made on the same basis as formerly, are as follows:—

	1920-24. £	1925-29. £
Trading surplus earned during quinquennium	377,441	682,552
Brought forward from previous quinquennium	86,885	24,402
	464,326	706,954
Allocations:—		
To bonuses to policyholders	439,924	676,626
„ carried forward to next quinquennium	24,402	30,328
	464,326	706,954

The bonuses to policyholders are allocated in the form of compound reversionary additions calculated on the sums assured and existing bonuses. For the quinquennium 1920-1924 the rate of bonus declared was 36s., and for the quinquennium just ended the directors have decided to declare an increased bonus at the rate of 42s. per cent. Satisfaction at the increase in the rate of bonus must, however, be tempered with the reflection that, although on this occasion it has been fully earned, with a very small margin, taking the ten-year period as a whole, the trading surplus earned falls short of the cost of bonus declared by some £56,000. During the year 1929 a further moderate expansion occurred, and the new life business transacted amounted to £1,645,844, compared with £1,567,483; and, from a statement appended to the report, it is clear that the increase occurred wholly in the with-profits class, there being a slight decrease in the without-profits new business. The full details of the underwriting results of the past two years are set out below:—

	1928. Amount of Profit.	1928. Percentage of Premiums.	1929. Amount of Profit.	1929. Percentage of Premiums.
Fire	12,027	3·8	1,362	·4
Accident	− 14,096	− 5·8	2,136	·9
Marine	− 3,079	− 2·6	− 18,951	−12·5
Sickness	20,000		...	
Life	...		23,164	
Total	14,852		7,711	
Less items debited direct to profit and loss account	3,921		6,302	
Total net trading results	10,931		1,409	
Add net interest earnings	49,548		45,995	
Total amount available	60,479		47,404	
Less cost of dividend (6%)	33,600		33,600	
Net increase in surplus assets	26,879		13,804	

The situation has fortunately been retrieved by the fact that the quinquennial valuation of the life department of the Century was due to take place at the end of last year, and, as a result thereof, the sum of £23,164 has been credited to the profit and loss account.

Northern Assurance Company, Ltd.—The Northern accounts for 1929 make, on the whole, a satisfactory showing, for the poor results in the fire department have been to some extent counterbalanced by unexpectedly favourable results from the accident department. Excluding the life department, the total premium income amounted in 1929 to £4,961,850, compared with £5,097,551 in 1928. Of this total, £2,547,000 is attributable to the fire department, £1,606,000 to the accident and £809,000 to the marine. The underwriting results of the company and of its subsidiaries, whose figures are incorporated in the accounts, are shown below:—

	1928. Amount of Profit.	1928. Percentage of Premiums.	1929. Amount of Profit.	1929. Percentage of Premiums.
	£		£	
Fire	136,325	5·2	23,188	·9
Accident	120,287	7·8	152,566	9·5
Marine	— 4,938	— ·1	— 5,365	— ·7
	251,674		170,389	
Less items debited to profit and loss account	61,543		93,389	
Total net trading surplus	190,131		77,000	

A great change has come over the marine account during the last five years, in which period the premium income has been reduced from £1,805,000 to £809,000. In 1925 a loss of £235,000 and in 1927 a loss of £304,000 was incurred. The reduction in premium income reflects the drastic reorganisation which has been effected, and the position of the fund, which amounts to 114 per cent. of the premiums, is now such as to relieve the company from further anxiety. The dividend has been maintained for the tenth year in succession at 85 per cent. The gap between interest earnings and cost of dividends, which has been growing larger during the past few years owing to a diminution in the total premiums, has, during 1929, been reduced to £52,505. The life department registered a considerable advance in new business during 1929, the amount having been increased from £825,139 to £950,386.

London and Provincial.—The London and Provincial Marine and General Insurance Company, Ltd., is a subsidiary of the Yorkshire, and is the medium for the transaction of marine insurance by the group. In this field it has been eminently successful. The marine premium income during the last five years has remained practically stationary at about £170,000 per annum, but the transfer to profit and loss has in none of these years been less than £30,000. The fire and accident account is conducted with a premium income almost exactly equal last year to that of the marine department, but in 1929 an underwriting loss of 3.8 per cent. of the premiums was experienced. The details of the underwriting results for the last two years are set out below:—

	1928. Amount of Profit.	1928. Percentage of Premiums.	1929. Amount of Profit.	1929. Percentage of Premiums.
	£		£	
Fire and accident	4,881	3·3	6,273	—3·8
Marine	40,000	24·0	35,000	21·3
	44,881		28,727	
Less items debited to profit and loss account	6,424		10,526	
Net trading surplus	38,457		18,201	

The dividend payment has been increased from £20,000 to £30,000, and at the higher figure is still considerably less than the interest earnings, amounting to £50,784. From the balance remaining at the credit of profit and loss a sum of £75,000 has been transferred to general reserve, bringing this fund up to £400,000, and £160,000 has been transferred to special reserve. The whole of the special reserve fund in hand at the end of 1928 was utilised for the purpose of reducing the uncalled liability on the £10 shares by £2, thus making them £3 paid up, and the new allocation will presumably be utilised for a similar purpose in due course.

Alliance Assurance Company.—The Alliance report for 1929 is the most favourable that has yet appeared, the characteristic feature being the very high rate of underwriting profit earned in the fire department. For many years now the Alliance has not transacted fire business in the United States, and this and the fact of an unusually high-class home connection, especially in the London area, have together been responsible for the excellent results achieved. In 1929 the fire premium income was slightly higher at £2,060,000, but in other departments there was little movement in premium income except in the case of "Miscellaneous," where there was a notable increase from £786,000 to £959,000. Details of the underwriting results for the past two years are set out below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	447,361	21·9	331,548	16·1
Personal Accident	2,048	5·5	12	...
Employers' Liability	33,668	14·6	27,579	12·2
Miscellaneous	78,134	9·9	65,255	6·8
Marine	7,378	1·3	9,286	1·6
Life	177,573		...	
Sinking Fund	100,000		...	
Transfer Fees, etc.	11,618		9,469	
	857,780		443,125	
Less Items debited direct to Profit and Loss Account	454,783		262,188	
	402,997		180,937	

The large credit appearing in 1928 in respect of life and sinking fund was consequent upon the quinquennial valuation of the current series made at the end of 1928. In addition to the current series, which now has a fund of nearly £15,000,000, there exist funds amounting in the aggregate to just under £6,000,000 belonging to three closed accounts—the Imperial Life, the Provident and the Economic. A considerable new life business is transacted under the current series, the amount in 1929 being £3,027,438, compared with £2,922,678 in 1928, in addition to which £73,000, compared with £65,000, was received as consideration money from new annuities granted. For the third year in succession the dividend remains unchanged at 18s. per share and the payment of this rate requires the sum of £495,250. The large discrepancy which has existed for many years between the cost of the dividend and net interest earnings has been somewhat reduced on this occasion owing to an increase in interest earnings from £338,000 to £360,000.

North British and Mercantile.—The North British and Mercantile Insurance Company is the parent of several important offsprings, namely, the Railway Passengers, the Fine Art and General, and the Ocean Marine. The fire business is transacted direct by the parent company, the accident business is divided among the Railway Passengers and the Fine Art and General, while the Marine business comes within the province of the Ocean Marine. The accounts of all four companies are included separately in the annual report of the North British and Mercantile. Apart from life business the total premiums in 1929 in all departments amounted to £6,381,709, compared with £6,513,966 in 1928. Although the underwriting results do not come up to the level of those in 1928, they are none the less satisfactory and creditable to the company, as will be seen from the details below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	486,030	10·7	443,544	9·9
Railway Passengers	111,381	9·6	96,613	8·0
Fine Art and General	37,183	9·3	30,660	8·1
Ocean Marine	25,000	6·1	35,000	10·5
Life, Annuity, Sinking Fund	35,000		35,000	
	694,594		640,817	
Less Items debited to Profit and Loss	174,530		156,274	
Total Net Trading Surplus	520,064		484,543	

For 1929 the rate of dividend has been increased from 84 per cent. to 88 per cent., but the increased payment was fully covered by interest earnings. A sum of £503,036 remains unappropriated from the year's earnings and goes to augment the surplus assets, this sum being equal to over 18s. per share. In the life department the total new business transacted declined somewhat, the figure being £4,020,000, compared with £4,257,000 in 1928, but the reduction is explained by a corresponding decline in the amount of single premiums received. In addition to the life business, over £200,000 was received by way of consideration money for annuity transactions, compared with £188,000 in 1928, and the total life and annuity funds now amount to £28,553,000.

Overseas Correspondence.

UNITED STATES.

Wall Street — Money — Capital Issues — Industry — Tariff.

NEW YORK, April 29.

A MILD wave of pessimism has been sweeping over Wall Street, and the share market has lost some of its recovery since the first of the year. The January-March "bull" movement clearly was based on hope of early business recovery, a hope dashed by the earning statements of industrial and railroad corporations now being published, by commodity price-cutting, and by other statistical evidence of slack trade. There has been no justification from a business standpoint for a "bull" movement in common stocks, and the cheap money factor was in itself insufficient to explain the rise.

April appears to have been a trifle more favourable for trade than was March, but such recovery as has come has been less than seasonal. The present state of affairs, while not really bad if comparison be made with any but the boom years of 1928 and 1929, seems to be giving more concern to Washington than to Wall Street or to the country generally. The money market is turning easier, and if a substantial drop in brokers' loans should follow the share market setback the outlook for a 3 per cent. discount rate* at the Federal Reserve Bank would brighten. Most well-informed observers expect a reduction to come some time within the next month or so, and it may be significant that the asking rate on 90-day bankers' bills has been cut to 2⅞ per cent., with a further reduction to 2¾ per cent. an early probability. The rise of $400,000,000 in brokers' loans in April helped to keep money rates steady in the face of slack commercial demand, but continued gold imports were a counteracting factor.

It is understood that the Federal Reserve Bank is now buying bills actively, mostly for foreign bank account, the daily rate of accumulation running from $10,000,000 to $15,000,000, although the Reserve Bank's own buying rate has not been cut to meet the weaker open-market quotation. Call money at the moment is firm at 4 per cent. on preparations by the banks to meet month-end dividend and interest payments, which will break all records for this season, totalling around $650,000,000, which, with new stock subscriptions, will bring financial payments to approximately $1,000,000,000. Within the next fortnight the Treasury is expected to announce a new bill offer to take care of a $56,000,000 maturity on May 19. Corporation bonds and notes maturing in May amount to $75,000,000.

With the receipt to-morrow of $10,000,000 in gold from Brazil, the net inflow of metal for April will have been approximately $58,000,000. Since the beginning of the year the net gain has been $194,000,000, of which Japanese exports account for $94,600,000 and Brazilian shipments for $57,700,000. Movements from both these heavy exporting countries are believed to be near an end. A refunding loan of $100,000,000 for Japan is under discussion, and the market is now absorbing its $35,000,000 portion of the Brazilian coffee loan, which has been well taken.

New issues offered in April were largely bonds, in contrast to the preponderance of share issues last year, and the volume, approximately $900,000,000, was larger than that of March. Foreign dollar loans contributed about $175,000,000. The principal foreign issues were for New South Wales, South American Railways, Argentina, Buenos Aires, Berlin City Electric, Chile, Piedmont Hydro-Electric and the State of Sao Paulo. With the exception of the latter, virtually all these loans proved to be a bit sticky, but they are moving out steadily. European demand for the Sao Paulo loan caused the withdrawal of a portion of the dollar bonds for sale abroad in addition to the sterling issue. Recently, the trend toward bonds with the attraction of various forms of conversion rights became pronounced, but the fresh setback in the stock market may offset this by lessening the competition of shares for investment money.

Price weakness is still the most disturbing element in the business situation. Another cut in copper prices is an early probability, the reduction to 14 cents not having induced much domestic buying and stocks having gone up further in April. Some people argue that an early cut to 12 cents would bring about speedy curtailment of production and right the situation sooner than would a lengthy trial period for the current price. Rumours also have been afloat of a general reduction in steel prices, but if it should come it would be formal recognition of cuts made from time to time in recent months rather than a fresh lowering of prices.

The steel industry is operating somewhat under 80 per cent. and is expected to hold near that rate for another two months at least. The position of the motor trade is a little better. Stocks of new cars are lower than a year ago. Used car supplies are much larger than last year, but they have been sharply reduced in the past six weeks. Production probably will "follow a line" through the summer. The building industry is improving in some lines, but residential construction is still quite slack. Railroad traffic, while higher in April than in the preceding month, is still considerably lower than that of the past few years.

First quarter earning reports for the railroads show a drop of approximately 40 per cent. in net operating income as compared with a year ago. This decline is not, however, a true reflection of traffic losses. Gross revenues are materially lower and carloadings have been running the lowest since 1924, or even 1922, but nearly all the railroads have taken advantage of the poor season to charge to earnings extraordinary expenses for maintenance and improvements on the ground that favourable reports are not expected from them at this time. It is quite probable that the last half of the year will bring a decided improvement in railroad traffic and earnings.

Large industrial corporations to the number of about 150 have reported earnings for the first quarter. A few, particularly oil companies, public utilities and electrical manufacturers, did better than a year ago, but, as a

* The Federal Reserve rate was reduced to 3 per cent. on May 1st.

whole, reductions in profit average about 17 per cent. Obviously such declines, when the high level of earnings a year ago are considered, are not particularly alarming. This quarter's earnings would have been considered very large a few years ago, but some companies are finding it necessary to cut dividends, especially the copper producers.

Although President Hoover has sent a second warning to Congress that tax increases next year will be necessary unless proposed appropriations are cut, income tax collections for the first nine months of the fiscal year indicate that the year will end with a small surplus. Tax collections to date run $140,000,000 in excess of the 1929 fiscal year.

The Tariff Bill finally has come out of the House-Senate Conference, and voting will begin this week in the House. Then the Senate will vote and further conferences may be necessary before sending it to the President. It is unlikely that the matter will be finished before late May. The treatment the bill received in conference suggests that the debenture plan for farm products exports will fail, and, with that objectionable part out, the bill will most likely be signed by President Hoover, no matter how far individual schedules may differ from his views. It is generally conceded that when the tariff is passed one important cause of business hesitation will have been removed.

FRANCE.

Effect of Tax Reductions — Iron and Steel Output — Coal and Coke Production.

(FROM OUR CORRESPONDENT.)

PARIS, May 7.

SENATORS and deputies have forsaken the Chambers for a full month, and left public opinion to digest the Budget for 1930-31, the completely recast national insurance law, and the additional £15,000,000 of taxation reductions which Parliament presented to the country as a belated Easter egg. The smaller portion of the taxation relief accorded has been received with universal satisfaction, for the reason that much of it, which concerns imposts on foodstuffs, motor cars and other matters of general necessity, has actually come into effect, and has indicated its practical value in the form of lower commodity prices. It is now being discovered, however, that a substantial proportion of the reduction of 1,100,000,000 francs which, it was believed, had been accorded in regard to taxation on securities and on Bourse transactions has been, in the first transports of gratitude, largely over-estimated.

M. Jacob, the Syndic of the Compagnie des Agents de Change (the body of sworn stockbrokers who govern the Paris Bourse), under the influence of the feeling of surprise that the taxation relief accorded did not immediately result in a marked improvement in the state of the market, expressed the regretful opinion, a few days ago, in a newspaper interview, that the Bourse, since the reduction of taxation came into operation, has acted ungratefully. "The market," he said, "is behaving like a spoilt child, who has loudly cried to his parents for a present, and immediately forgotten all about the gift he has received." In his journal, *La Situation Economique et Financière*, M. Dromel this week retorts to the President of the Bourse by setting forth in plain language that one reason why the tendency of the Bourse, since the new taxation concessions were made to it, has been admittedly rather worse than before, lies in the fact that certain of the most important of these reductions really amount to very little. M. Dromel goes even further by stating that the application of the new scale of taxes, so far as shares are concerned, will not prevent the yield for the 1930 business year from being in most cases even less than it was for 1929, presuming that the dividends to be paid are of the same nominal value as for last year. In support of this he prints a list of eighteen leading French issues, showing their actual net yield for the past year, and what it would be under the new taxation *régime*, with the same dividend. Only three out of the eighteen issues, worked out on this basis, result in any improvement in yield. In a further list of eight bond issues, on the other hand, the new *régime* is shown to forecast in all cases a higher yield.

The explanation lies in the fact that the reduction in the burden of the *taxe de transmission* (from .04 per cent. *ad valorem* to .25 per cent.) will be nullified, in the case of nearly all shares, by the increase in the capital value of the scrip during the last few months. The transmission tax is assessed every year on the basis of the mean Bourse quotation of the share during the previous twelve months. As most leading shares have appreciated largely in capital value recently, and appear likely to continue to do so, rather than otherwise, M. Dromel's argument appears to be sound. With mortgage bond issues the case is quite different, and holders who absorbed the enormous mass of these instruments that has been issued during the past twelve months and is still being issued, should benefit appreciably from the cut in the tax.

A similar disappointment has occurred, particularly among the travelling public, over the abrogation of the irritating "landing and embarking" taxes levied on all passengers entering or leaving French ports. These taxes were completely suppressed under the new Budget Bill, ostensibly in order to encourage tourist traffic. It has now become known that the shipping and railway companies are continuing to collect these taxes, the yield from which has merely been diverted from the Government directly to the various port authorities, under the guise of quay tolls, sanitary taxes, dues for the benefit of local chambers of commerce, etc.

Iron and steel production figures for March, which have been announced this week, are again on the up grade. Crude steel output totalled 949,000 tons (or 2,000 tons above the previous high record set up last October), as against 773,000 tons in February and 800,000 tons in January last, and a monthly average of 659,000 tons in 1913 (*Lorraine plants included*). Pig iron production was 899,000 tons (or within 4,000 tons of the high record established in January, 1929), against 810,000 tons in February and 875,000 tons in January last, 880,000 tons in March, 1929, and a monthly average of 749,000 tons in 1913. Both export and domestic demands have fallen off, and prices have dropped sufficiently to justify the report that the European Steel Cartel is contemplating a further cut of 10 per cent. in production, following a similar cut in November last.

Coal production figures for March are slightly below previous returns. The total output in March was 4,799,000 tons for the 26 working days, against 4,578,000 tons in February (for 24 days). The daily average in March was 190,769 tons, against 179,566 tons in March, 1929. The average daily extraction was just over 48,000 tons more than in 1913, including 19,000 tons from the Lorraine pits restored to France after the war. The lowering of British export prices during the past few weeks is having a direct effect on French prices as well as German. Imports are steadily increasing with growing French industrial requirements, most of the increased imports being from Great Britain. Total imports of coal during the first quarter of the year were 8,084,000 tons, as against 6,794,000 tons in the corresponding period of 1929 and 5,565,000 tons in 1913. Under pressure of falling prices the Liévin Company has laid off its underground workers one day a week, and some of the companies in the Loire fields are contemplating a similar course. Metallurgical coke production by the colliery plants in March was 443,909 tons, against 392,950 tons in February and 411,328 tons in March, 1929.

GERMANY.

Money and Capital Markets — Industry — Measures for Relief of Agriculture — Budget.

(FROM OUR CORRESPONDENT.)

BERLIN, May 6.

THE Reichsbank has, up to the time of writing, not followed London, New York and Paris in reducing its discount rate, but it is to be assumed that it will do so within the next few days. The Reichsbank's delay is explained less by its internal situation than by the growing disproportion between the abundance of money on the money market and the continuing shortage on the capital market. For, although the official discount rate has stood at 5 per cent. since March 25th and bankers' acceptances have dropped to 4⅛ per cent., first mortgages still cost 9 per cent., and the easing of the situation on the capital market proceeds but slowly. It is true that 8 per cent. mortgage bonds have in the last few days risen above par for the first time, but it is still impossible to issue a large loan in Germany on tolerable terms. The Reichsbank, however, has practically no choice in the matter. If it leaves the discount rate unchanged at 5 per cent. in order not to stimulate any inflation of credit, the result would be, in view of the big margin between Berlin on the one side, and Paris, London and New York on the other, that more foreign currency and gold would flow into the country. The note circulation would remain unchanged, and the Reichsbank's holdings of foreign exchange would expand instead of its bill portfolio. The development of the Reichsbank's status has already shown this tendency plainly enough. The note circulation amounted at the end of April this year to 5,026 millions, against 5,121 millions at the end of April, 1929, whereas discounts and advances had dropped from 3,189 to 2,151 millions, while holdings of gold and foreign exchange had increased from 1,991 to 2,893 millions.

A large number of circumstances have intensified this development. The industrial depression continues and, despite the continuing liquidity of money, there are so far no indications of any improvement. The heavy industries —especially coal and iron—are now beginning to feel the depression in its full force. The production of coal is 10 per cent. lower than at the same time last year, and the ironworks are complaining of a steady falling off in orders. In consequence, the number of unemployed in receipt of benefit is half a million greater than last spring. Capital expenditure is being sharply curtailed on all sides, and building activity is limited. The result is that demands for credit from industry and trade are confined within very narrow limits. On the other hand, much foreign money is coming in. The large banks have for a considerable time been refusing offers of short-term money, and recently dollars were offered for a year at 4¾ per cent., but were not taken up by the large banks.

Recent months have brought a number of big foreign loans. Most important, besides the Reich Government's Kreuger loan, were the loans of Siemens and the Berliner Elektrizitätswerke through Dillon-Read. A few days ago the Phœnix-Bergbau Company offered 10 million guldens of 6 per cent. bonds through a consortium headed by Hope and Company, in Amsterdam. The bonds entitle the holder to purchase stock at 115 per cent. until May 1, 1931, at 120 per cent. until 1932, and at 130 per cent. until 1933. The purpose of this issue is not altogether clear, but it would appear that the loan is to provide for the general money requirements of the Stahlverein concern. Gelsenkirchen and Stahlverein have in the last few months bought a considerable number of coal and ironworks, and as both companies already have foreign loans in existence, it has apparently been felt preferable to bring in the Phœnix, heretofore unburdened, in order to secure money abroad.

When the new German agrarian import duties were decided on it was already clear that these constituted only half the proposed protective measures for agriculture: the tariffs are to be supplemented by subventions, limited, it is true, to the particularly necessitous districts of the eastern provinces. This was also the plan of the former Cabinet, but whereas the Müller Government planned to spend 350 million marks in ten years, the Brüning Government proposes to place at the disposal of the farmers, 500 millions in the form of credits, probably within five years. In addition to this there are to be, for special cases, direct contributions for operating expenses, taxation concessions and freight-rate reductions, and increased appropriations for railways and highways. This improving of means of communication is, as a matter of fact, absolutely requisite, and should have been begun long ago. The rail and highway connections with the eastern Prussian provinces were in very many places destroyed by the cession of the Polish Corridor, and the importance of providing improved communications is not disputed by any party.

An important issue that is disputed, however, is the manner in which the credits are to be distributed. Of the 500 millions, 200 are to be used for liquidating existing short-term indebtedness, for which the farmers have up to now had to pay high interest rates. The new credits to be furnished with the Government's help are to be for long terms and at low interest rates, and the old creditors are to be paid out of them and possibly persuaded to make some cancellations in order to reduce the burden on the agriculturists. The other 200 millions are intended for the so-called "settlers," that is, farmers with small or medium-sized farms who in former years received from the Reich and Prussia land that had been secured by buying up and dividing large estates. The settlers have received, in the past, short-term credits from the Reich which they cannot pay back. Now these sums are to be liquidated by long-term credits, and the short-term funds thus set free are to be used for creating new farms for settlers. Since the land needed must be gained by buying up more large estates, this part of the programme will help to some extent the utterly stagnant estate market in the eastern provinces. But much depends naturally on who receive the credits and what estates are bought for settlement purposes. The farmers' organisations have demanded that the decision as to the employment of the funds shall be left to local officials or to the organs of the provinces which are in close touch with the farmers personally. But, as similar experience in the past shows, this entails a danger of wasting the funds by using them to help farmers who are already indebted beyond any hope of recovery, and whom further credits would only enable to stave off collapse for a time. Since the means provided in the new programme, hard though it is to secure them, still bring only limited aid in view of the extent of the need in the east, it is absolutely necessary to be firm in rejecting the demands of agriculturists who can not be saved in any case.

The severest misgivings as to the new agrarian programme are, however, concerning its inadequate financial foundation. The proposed Budget for 1930, which the Minister of Finance has just submitted to the Reichstag, includes only a round 60 million marks for agricultural relief. In addition to this, the Government proposes to get a further 50 millions this year from its ownership of barracks and lands in the occupied districts, which have hitherto been used by the occupying troops and will now become free, and from other sources. In the following years it is hoped to secure more money from the charge on industry for reparations, the industrialists themselves having offered to carry the burden further for agricultural relief after it is no longer needed for reparation payments. But all this is not sufficient to put the Government in a position to furnish 500 millions from its own funds. Hence this sum is to be secured by a loan guaranteed by the Government and handed over to the agriculturists. A new banking institution—"Deutsche Ablösungsbank—is to carry through this transaction.

The Government memorandum accompanying the 1930 Budget shows that the balance for 1929 has become still more unfavourable than had already been feared. The entire savings under the Young Plan, which amounted to 614 millions for 1929, have been used up, and there remains, in addition, a deficit of probably 360 millions. This is due to smaller receipts as a result of the unfavourable economic situation, and to a number of

items of extraordinary expenditure, especially for unemployment insurance. The estimates of receipts have been correspondingly reduced in the new Budget, and increased cover is provided for different items of expenditure. As a result, 534 millions of new taxes are required, despite the further relief of the Budget by the savings on the Young Plan for the whole year. But since the increase of the tobacco and match taxes, which was made at the end of 1929, applies to the whole year, a total increase of 858 millions above the receipts of 1929 is looked for, and, in addition, 166 millions of increased receipts from administrative sources. The ordinary Budget for 1930 balances at 8,442,900,000 marks, against 7,550,000,000 marks last year. To this must be added the portion of receipts from taxes that must be handed over to the States and municipalities, amounting to 3,389,800,000 marks, against 3,286,900,000 marks last year. A further 400 millions must also be handed over to the States for special purposes and under particular demands. The extraordinary Budget has for years been kept low; it balances at 230 millions.

SWITZERLAND.

Finance — Foreign Trade — Industry — United States Tariff.

(FROM OUR CORRESPONDENT.)

GENEVA, April 28.

THE Federal Council has given its approval to the accounts of the Swiss Confederation for 1929, which are highly satisfactory. Receipts in the 1929 Budget were estimated at £14,112,000 and expenditure at £14,038,200, thus leaving an estimated surplus of £73,800. Receipts for the year 1929 aggregated £15,838,273 and expenditure £14,878,642, thus leaving a surplus of £959,631. This excellent result is due to the increased yield of Customs duties, which produced £8,560,000, and of the stamp duty, which yielded £3,140,000, as well as to the profit recorded by the post, telegraph and telephone service. The surplus will be used in paying the Federal Railways an instalment of £600,000 on the subsidy of £1,400,000 granted to them by the Government for repaying their heavy war debt; a sum of £260,000 will be paid to the special reserve for the redemption of the public debt, while the remaining £99,631 will help to increase the reserve funds of the various federal services.

This is the second time since 1910 that a surplus in the Swiss State finances has been recorded. From 1910 to 1927 substantial deficits, ranging from £64,000 in 1927 to £5,104,000 in 1921, were regularly registered. From 1921 to 1924, drastic curtailments were made in all State expenditure, with the result that the yearly deficits were progressively reduced. There was a surplus of £952,000 in 1928, and, thanks to the increase of all State receipts, it is hoped, as stated by the chief of the Finance Department, Federal Councillor M. Muzy, that the era of deficits is now closed. It may, nevertheless, be remarked that expenditure has been growing again since 1925 in consequence of the grant of higher Government subsidies to industry and to the Cantons for public works of all sorts. It is very much hoped that some measures will be taken by the Government to stop the rise in expenditure, and to alleviate the heavy burden under which trade and industry are labouring. This might be done by reducing the post, telegraph and telephone rates, as well as indirect taxation, especially as receipts during the first quarter of the year were substantially higher than in the same period of 1929.

The economic depression which is now prevailing in Switzerland is clearly reflected by the foreign trade returns, which are, on the whole, very unsatisfactory. During the first quarter of the year imports totalled £25,620,637, as against £25,044,342 during the corresponding period of 1929, while the value of exports was £18,500,348, compared with £19,868,239 last year. There was a rise in the imports of cereals, foodstuffs, vehicles, chemicals, and a few classes of metals, while imports of raw materials and coal generally decreased. Exports were nearly all lower than in the previous year, both in value and quantity, but there was a small rise in machines and chemicals. Trade with the five principal countries was as follows (in million £):—

	Imports.		Exports.	
	1929.	1930.	1929.	1930.
Germany	6·0	6·7	3·3	3·0
France	4·6	4·8	1·5	1·8
Italy	1·7	1·6	1·3	1·2
Great Britain	1·6	1·2	2·6	2·4
U.S.A.	2·1	2·0	1·7	1·5

Trade with Great Britain has been steadily decreasing since 1928; British exports to Switzerland have suffered from German and American competition, and from the fact that the Swiss demand for coal has been considerably reduced in consequence of the increasing use of electric power; Swiss exports to Britain declined as a result of the McKenna duties. The present slump is furthermore reflected by the drop in the receipts of the Federal Railways, which reached £3,542,000 for the first quarter, as against £3,662,000 last year. The surplus, which was £1,056,000 in 1929, was this year reduced to £877,000 for the first three months. The decrease is due to a drop both in passenger and goods traffic.

The home market is similarly depressed, and retail traders complain of the fact that business is uncommonly slack. The position, though not encouraging, is not definitely bad, as unemployment is not increasing. Employment was generally normal in most industries, except in the watchmaking industry and in the manufactures producing machines for the textile and watchmaking industry. The number of unemployed was as follows:—

	1929.	1930.
January	16,284	14,846
February	15,979	12,462
March	7,098	10,138

The crisis in the watchmaking industry is continuing, and, recently, the few factories which had found it possible to maintain the six days' working week, decided to close one day every week. The Federal Government has also decided to prolong the payment of unemployment benefit for another three months. The slump is felt in all industries except the building industry, which continues to be very active in the towns despite some minor strikes at Basel and Canton Ticino.

The situation is now made more gloomy by the coming decision of the U.S.A. to raise by 100 to 500 per cent. import duties on several classes of Swiss goods, particularly on watches and cotton goods. Some manufacturers are trying to start a campaign to induce the Swiss population to boycott United States products. It is doubtful whether such measures would induce the United States to abandon their scheme for the raising of duties on Swiss products, and it would by no means benefit Swiss exports.

CANADA.

Agriculture — Depression in Flourmilling Business — Canadian Currency in U.S. — Bank Returns Revenues — St. Lawrence Navigation.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 21.

FARMERS are busy everywhere upon the land, and good progress is being made with cultivation. There have been some rains on the prairies, but the new crop is being sown with subnormal moisture reserves and a very substantial rainfall is required in the next few weeks to give it a fair chance. Meanwhile, the western farmers have been greatly encouraged by the upward swing of wheat prices, which is largely due to the reports of serious damage by drought in the south-western States of the American Republic, and it is calculated that any danger of the provincial Governments being called upon to make good their guarantees to the banks of advances made to the wheat pools has now passed, and that the latter should be able henceforth to stand upon their own legs.

During the week ending April 11 stocks of wheat decreased less than 4 million bushels, remaining at

191,153,238 bushels. At the end of the fiscal year the Bureau of Statistics placed the aggregate volume of unsold wheat at 228,836,826 bushels, including what remained in farmers' hands and gave the following figures for other grains: oats 105,415,885, barley 44,853,819, flax 1,221,706 and rye 11,036,341 bushels, making a total of over 400 million bushels. The Bureau also offers a revised final estimate of the wheat crop of 1930 which raises its earlier figure of 299 million bushels to 310, and on the assumption that there will be 3½ million bushels of wheat exported every week from March 31 till August 1, it forecasts a carry-over of 115 million bushels into the next crop, which would be 9½ million bushels greater than the abnormally large carry-over of 1929. One satisfactory feature of the latest crop bulletin is that the Bureau estimates the merchantable quality of the wheat crop of 1929 at 98 per cent., as compared with 95 per cent. in the previous year. But, all things considered, the immediate outlook for the prairie grain grower is not auspicious, and there has been no hint of any further payments on the part of the pools.

The flour-milling industry of Canada has been sharing the troubles of the farmer, and the exports of flour during the half-year ending February 28th, at 3,172,000 barrels (of 126 lbs. each), were little more than half the 6,074,000 barrels exported in the parallel period a year ago. During February Canadian flour mills only operated at 37.7 per cent. of their capacity, and their prospects of better business are not improved by the announcement that the Grain Stabilisation Board of the United States will sell wheat on very favourable terms to American millers in order that surplus stocks of wheat may be moved out of the country as flour. There have been complaints by Canadian millers that the pools' policy of eliminating all middlemen and selling direct to the foreign buyer has hurt them, and that there has been practically no co-operation between the pools and the millers. So the *Financial Post* of Toronto, in its issue of April 15, suggests editorially that the pools should follow the American example and sell a large quantity of their wheat at reasonable prices to the Canadian millers to be ground into flour. It declares that both parties would benefit by such an arrangement, and that the policy adopted to ease an emergency might prove so satisfactory that it would be transformed into a permanent scheme of co-operation.

There has been very little change in business conditions during the past two weeks, but the delay in the production of the Budget has been a disturbing factor in some degree, as commercial and industrial interests are all prepared for comprehensive tariff changes which may necessitate considerable trade readjustments. Meanwhile commodity prices are at the lowest point they have been since 1916. Wholesale and retail houses report a good demand for groceries, clothing and footwear, but the sales of luxury goods have fallen off greatly and consumers seem to be in an economical mood. There is still a good deal of unemployment in all the urban centres, but the Bank of Nova Scotia, in its latest monthly economic survey, takes an optimistic view of the outlook, and asserts that industrial employment has, after allowance is made for seasonal variations, only undergone a contraction of 6½ per cent., that business failures have not been in excess of the average during recent years, and the business recession is not nearly as serious as many people suppose. On the other hand, one adverse symptom is the evidence of a marked curtailment of new construction; building permits issued in 61 leading cities during March were valued at $13,352,640, a decline of 44.5 per cent. as compared with $24 million in March, 1929. The promise of good crops would help to promote a business revival, but failing them a period of comparative stagnation has probably to be faced, and the general election, which everybody now expects some time before September, will have an unsettling effect, especially if it is fought on the tariff issue.

The latest banking returns do not reveal a very satisfactory credit situation. The ratio of loans to deposits in Canada, which is considered the best ready index of credit conditions, rose to the abnormal figure of 81 per cent. at the end of January, as compared with 77 per cent. at the end of December, 1929, and about 70 at the end of January, 1929. The main cause of this condition is the heavy slump in deposits, which fell over 79 million dollars in January without any corresponding decline in loans. However, it is understood that the situation has since undergone some rectification through the return of Canadian funds to par in New York, which has resulted in the return of substantial sums of Canadian money from the United States. But there is no disposition to regard the depression as anything but temporary, and plans for new enterprises and the expansion of old ones are being briskly pushed ahead. It is estimated that this year there will be spent in the four western provinces more than $225,000,000 on railroad construction, highway building, oil drilling, hydro-electric plants, telephone services, and building construction, and obviously this programme will absorb a great deal of both labour and material. There has also been forthcoming in the past month better news about western oil developments. The brokerage scandals and the inadequate results from drilling operations had had a disheartening effect, but recently a well of the Mill City Company, in the northern-central part of the Turner Valley, blew in with a heavy flow of wet gas, and there has been an even more important development in the Red Coulee field, lying near the Montana boundary, 65 miles south of the city of Lethbridge, where more than one well has blown in with a good flow of crude oil.

Before Parliament adjourned for the Easter recess the Finance Minister intimated to the House of Commons that the Budget would be brought down within the first week after it reassembled on April 25. The February revenue statement, covering the first eleven months of the fiscal year, placed the revenues for that period at $405,545,881, which is a decline of roughly $6 million compared with the parallel figure for the previous year; expenditures were given as $336,317,278, which is an increase of $15 million. The Department of National Revenue has since published the returns from income tax and from Customs and Excise for the whole fiscal year, and they show that while income returns, given as $69,020,751, increased by about $9½ million there was a fall of some $23 million in the revenues from Customs and Excise duties. Mr Dunning will be able to show a very comfortable surplus, but he cannot, in view of the farming and business situations, count upon revenues being maintained during the coming fiscal year at the same level as during the present one, and it is doubtful if he will be able to offer any but very modest reductions of taxation.

The foreign trade returns for March were again unsatisfactory; domestic exports were valued at $89,597,138, which is a decline of $25 million from the figure for March, 1929, and imports shrank from $135 million, the figure for March, 1929, to $114 million. The provisional trade figures for the whole fiscal year give striking evidence of the effects of the grain market crisis, for the value of wheat exported was only $215,753,475, as compared with $428½ million during the fiscal year 1928-29 and in the same period flour exports dropped from $65 to $45½ million.

Navigation on the St. Lawrence has reopened this week, and the first ocean vessel has arrived at Montreal. The present summer will see some interesting developments in connection with the navigation facilities of the Upper St. Lawrence. Last Monday part of the enlarged Welland Canal, which connects Lakes Erie and Ontario, was opened for shipping traffic, and the remaining sections will be opened with a formal ceremony on July 1.

SOUTH AFRICA.

Budgets — Transvaal Provincial Council — Riotous Assemblies Bill — Women's Enfranchisement Bill.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, April 2.

LAST week the Ministers of Finance and Railways introduced their Budgets for expenditure from consolidated revenue and from railway and harbour funds during the year ending March 31, 1931. Dealing first with the former, Mr Havenga opened by pointing out that South Africa could not expect to escape the world-wide fall in commodity prices, and expressed the opinion—which a study of his figures supports—that matters in this country might have been far worse. He estimated that the final surplus at March 31, 1930, would be found to be about £400,000. The final expenditure and revenue are expected to be £30,100,000 and £30,485,000. Customs duties (realising £8,450,000) had exceeded the estimate by £250,000, Excise by £30,000, income tax by £249,000, native taxes by £43,000, but mining revenue from diamond export duty (realising £785,000) fell £375,000 short of his estimate of a year ago. Exports in 1929 totalled £97,842,000; the value of farm products exported had fallen from £32,199,000 in 1928 to £26,763,000 in 1929.

The deficit for the coming year, on the present basis of taxation, would, it is estimated, amount to £1,388,000, the estimated revenue being £29,425,000. It is proposed to reduce the deficit by withdrawing a rebate of 20 per cent. on individuals' income tax, thus providing £563,000. There are to be extra taxes on ready-made clothing, wheat and sugar, but these are not expected to yield heavy revenue. With the appropriation of the surplus of £400,000 from the current year, there remains a sum of £425,000 unprovided for.

On Thursday, March 27th, Mr C. W. Malan followed his colleague's tale of "modified rapture" with one in a similar strain. The final figures are expected to show a deficit of £289,000 on the year's working, with revenue and expenditure at £31,205,000 and £30,916,000 respectively. For the coming year the estimated deficit is £146,000. The latter figure assumes an increase in maize traffic and in revenue from the line to the manganese deposits at Postmasburg. The Minister referred in his speech to a "review of the whole question of rates and fares." It is to be hoped that the Minister is contemplating the briefing of independent advice in this connection. The recently published report of the Departmental Railway Tariffs Inquiry Committee is, as one might expect of a departmental committee, merely a statement and defence of the position of the administration. That position, again, is affected by considerations which have nothing to do with the accepted principles on which railways are supposed to be run.

The newly elected Transvaal Provincial Council will consist of 28 Nationalists, 25 South African Party members, and two Labour members of the National Council faction. Colonel Creswell's followers were completely eliminated, including the candidates for the seats which he and Mr Sampson represent in Parliament. It is not surprising that a section of the Nationalists consider that these two Labour Ministers should resign, as it is certainly difficult to say whom they represent. It is true that all the other members of the Cabinet are of Afrikander race, but, after his attitude on the Flag question, Colonel Creswell at any rate cannot be considered, even by his Nationalist friends, to represent the British section of the population. The South African Party have been successful in capturing several country seats, and lost by nominal majorities in others. The party regards the election results as not unsatisfactory, while the Nationalists are disappointed, as well as perturbed as to the outcome of the old difficulty of devising acceptable schemes of Provincial finance.

The proposals before the House for the amendment of the law relating to riotous assemblies and "agitation" generally are causing serious alarm for the liberty of the subject—not merely the native subject, but also anyone who has the temerity to advise or defend the native when in difficulty. The Minister may prohibit gatherings, or the publication of information; he may cause the removal of offenders from place to place, or beyond the borders of the Union if born beyond its borders. The offence is "the engendering of hostility" between Europeans and natives, and in practice such a law is likely to operate more harshly on the native and his friends than on the supporter of local convention. In its placing of power in the hands of the Minister, the Bill is a fine example of encroachment on the prerogative of the courts. The provisions for enabling interested parties to defend themselves in court against the Minister's decisions are regarded as utterly inadequate. South African Party members in Natal are supporting the Government.

The Women's Enfranchisement Bill has passed its second reading. The country members include a number who are unalterably opposed to the principle and care nothing for details. They say, quite truly, that there is no very strong and unanimous demand for the Bill. There is also some difficulty in regard to coloured and native women in the Cape Province. Several Cape members consider that they should share the same privileges as European women, subject to the same tests. On the other hand, there is nothing to prevent a supporter of the Women's Enfranchisement Bill being a supporter of the Prime Minister in regard to the Cape native vote. It is generally considered that the Bill, which is a non-party measure, will pass, in spite of opposition.

Letters to the Editor.

A PROTECTIONIST FALLACY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Protectionists fail to realise that all overseas trade is an exchange in which, by export of goods and services of the past and of the present, we create credits which give us a claim for goods from all parts of the world. That normally each year the British export and credit items exceed the import and debit item by from £50 to £150 million means that the world is not sending us enough goods in return, but is running into debt to us year after year. To increase our exports and get paid for them (for that is surely not unimportant) we must either save and invest more abroad, which under present circumstances we cannot do, or we must import more, and, of course, we will only take goods that we need.

Let us each assume that we can obtain 75 per cent. increase in our remuneration, while we only need to pay 25 per cent. more for our food and other necessities of life; surely this will mean that the main increase in our expenditure will be more in the direction of manufactured goods rather than in additional food and crude products of which we have probably been able to procure all we required before.

As exchangers of manufactured goods for raw materials, we are in this position, and the protectionists wish to add to the difficulty of our driving a hard bargain by fining us in import duties when it happens to suit us to receive or exchange goods which might possibly be made here.

To-day's unexported margin of cotton, woollen and engineering products cannot be paid for by additional imports of oranges or by additions in any uncompetitive imports, and all attempts to check imports add to the difficulty in disposing of our old volume of exports.

No wonder that Mr Williams wishes to restrict our freedom to import if he really thinks that we might use it to import "identically similar" goods to those we are exporting. A visit to any of our ports will convince him that this is not likely to happen.—Yours truly,

GILBERT BEARD.

Wayside,
Ashley Heath,
Hale, Cheshire.
April 30, 1930.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My fellow clubman, Mr Frank Morris, writes with somewhat less appreciation of humour than we would expect from a regular newspaper controversialist.

Our purpose in exporting manufactured goods is to enable us to obtain in this country supplies of commodities which would otherwise not be available and, accordingly, if parts of our exports are paid for by goods of kinds which we can produce, the process is essentially a wasteful one. Neither I nor Mr Morris, nor Mr Beard can allege that a particular cargo of steel from Belgium can be regarded as the payment of an export of an equal quantity of steel from this country to some other part of the world, because, of course, it is only in the aggregate that these things balance each other. But quite obviously the cargo of steel is part of our payment for a variety of exports which will also include the other cargo of steel that I have visualised for the purpose of this argument.

So far as my analogy of the ship travelling backwards and forwards without unloading is concerned, I was merely using this example for indicating the complete absurdity and economic waste which occurs when, at the same moment, there are ships leaving these shores with goods of a certain kind and ships arriving at these shores with goods which are interchangeable with those which are being exported.

Why this argument should be described as the "characteristic intolerance of the bigoted protectionist," I cannot understand, but perhaps on the next occasion when we have a discussion at the Constitutional Club on Safeguarding Mr Morris will join in and explain exactly the merits of this wasteful process.—Yours faithfully,

HERBERT G. WILLIAMS.

351, Abbey House,
Victoria Street, S.W.1.
May 3, 1930.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We are glad that Mr Williams has at least seen that we require to export 25 per cent. less to pay for the imports we need when looked at statistically. We must now show him that it is equally true looked at practically. It is quite right that the British manufacturer should endeavour to increase his exports. And it is perfectly true that, in order to pay for these exports, it is necessary for us to import more manufactured goods. But that all manufactured goods should be identically similar, as Mr Williams suggests, is merely futile.

We import goods which foreign countries can make better and at a smaller cost than ourselves. And when we increase the export of our manufactured goods, it is only sane to increase the export of those goods easily manufactured in England. In this way, for example, we can increase our export of Sheffield cutlery, and at the same time we can import more window frames from Sweden.

Mr Williams says that Mr Beard is talking nonsense when he states that we cannot increase our importation of foodstuffs indefinitely. The small boys, which Mr Williams offers to produce, who could eat many more bananas and oranges if their parents could afford to buy them, would most certainly make themselves very ill indeed if they ate a quarter of the amount of bananas and oranges needed to make up for the imports due to us.

Free Trade must result in an increase of specialised production and employment, and every article the freely trading consumer buys will not only be the best, but also the least expensive. Therefore, buy British where British is best, and buy foreign where foreign is best, since all foreign goods have come into the country in exchange for British goods.—Yours truly,

HARRY RAWLINS.

Memorial Hall Club,
Manchester.

Books and Publications.

INTERNATIONAL LAW.

IN this volume* the *Year Book* completes the tenth year of its existence. Looking at the past ten volumes as a whole—which we are now the better able to do as a valuable general index of the contents of the ten volumes is now included—most readers will agree that the joint editors, Sir Cecil Hurst and Professor Pearce Higgins, and their committee, have shown that there is a place waiting for the *Year Book* among British periodicals, that it fills that place well, and that its future is assured. There are very few important topics of international law which have not received its attention in the past ten years, and it has been the means of enabling British practitioners and students of this branch of law to make their contribution to its development by international discussion. In these ways, and also by reason of its annual record of important decisions given by international and national tribunes and of its bibliographies and reviews, it has become a normal piece of apparatus in the hands of the growing body of persons in this country and in some others who follow international relations with attention.

The 1929 volume, in which volumes Professor J. L. Brierly replaces Sir Cecil Hurst as joint editor, contains articles and notes having both technical and general interest. Sir Cecil Hurst examines some of the recent examples of diplomatic immunities conferred upon persons not truly diplomatic, such as the members of the Permanent Court of International Justice and other international tribunals or League officials, and discusses in particular the recent decision of the House of Lords in *Engelke* v. *Mussman*. In that case the question at issue was whether a person bearing the title of "consular secretary" and being a member of the staff of the German Embassy in London could lawfully be subjected to cross-examination in order to ascertain whether he was engaged upon diplomatic or upon consular duties, consuls not being entitled, apart from exceptional cases, to diplomatic immunity. The House of Lords held that the Attorney-General's statement, addressed to the Court of Appeal, that the gentleman in question was recognised by the Foreign Office as possessing diplomatic status, was conclusive, so that the "consular secretary" could not be cross-examined upon the nature of his duties. Incidentally, this decision is yet another illustration of the matters in which the courts of law are bound to defer to the decision of the Executive.

Sir Thomas Fischer Wilhains subjects to comparative analysis the Pan-American Draft Treaties of Conciliation and Arbitration approved at the Pan-American Conference of January, 1929, with the not very dissimilar "Geneva Act and Model Conventions" elaborated at Geneva in 1928 and now being considered by the British and many other Governments; while Professor Charles Cheney Hyde, a foremost American authority and formerly Solicitor to the State Department in Washington, discusses the part played by Commissions of Inquiry and treaties of Conciliation in the pacific settlement of disputes. Chinese affairs come under consideration in two articles, one by Sir Skinner Turner on "Extraterritoriality in China," the other by Mr G. W. Keeton on the "Revision Clause in Chinese Treaties," an acutely topical question in view of the recent Chinese demand for the abolition of the "unequal" treaties. The international use of water and waterways is discussed by Professor H. A. Smith in an article upon the problem arising from the diversion of the waters of Lake Michigan at Chicago, and by Miss Ruth Bacon, an American scholar, in an article upon British policy with regard to certain European Rivers of International Concern. The mandate for Palestine is discussed by the Attorney-General of that country, Mr Norman Bentwich.

Among other articles and notes of varying interest and importance we would draw particular attention to a note by Professor J. L. Brierly upon "Some Implications of the Paris Pact," which expresses the view that, given a war in which the British fleet is co-operating against a Kellogg-Pact-breaker, non-belligerent States should consider themselves estopped by their ratification of the Pact from asserting neutral rights.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The National Income and its Purchasing Power. By Willford Isbell King, assisted by Lillian Epstein. (New York) National Bureau of Economic Research. $5.

A gold mine of information on the origins and distribution of the national income of the United States. Some idea of its range may be afforded by the following representative selection of chapter headings: The Share of Property and Enterprise; The Share of the Employees; Changes in Concentration of Income; The Values of Corporations to Their Owners; Gains and Losses of Investors in Securities; Facts Bearing on Agricultural Income; Government as a Factor in National Income.

The Stock Market Crash—and After. By Irving Fisher. (London) Macmillan and Company, Ltd., St. Martin's Street. 10s. 6d. net.

Professor Fisher's prolonged study of the stock market, places him in the unusual position of being able to produce a detailed and expert examination of an important event whilst it is still topical. His book should be widely read.

A Picture of World Economic Conditions at the Beginning of 1930. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. $2.50.

A new departure is the inclusion of the Annual Report of the President of the International Chamber of Commerce on World Economic Conditions in 1929. This is followed by the usual review of economic conditions in the United States at the beginning of 1930, and by a series of articles by foreign correspondents on economic developments in their respective countries.

L'Esprit International dans l'Enseignement Française. By M. A. Desclos. (Paris) Publications de la Conciliation Internationale, 173, Boulevard Saint-Germain. 3.50 francs.

L'Idée de Civilisation dans le Conscience Française. By Ernest Robert Curtius. (Paris) Publications de la Conciliation Internationale, 173, Boulevard Saint-Germain. 3.50 francs.

La Politique Etrangère des Etats Unis et l'Amérique Latine. By M. Graham Stuart. (Paris) Publications de la Conciliation Internationale, 173, Boulevard Saint-Germain. 4 francs.

Part of a series of bulletins to be issued by the *Conciliation Internationale*, under the auspices of the Carnegie Endowment for International Peace. All three are short studies by writers of standing in their subjects, and all are well calculated to fulfil their object of promoting international understanding.

Die Deutschen Eisenbahnen im Kriege. By Dr. Adolf Sarter. (London) Oxford University Press, Warwick Square. 15s. net.

This volume of the Carnegie Endowment series contains a history, on the usual thorough lines, of German railways during the war.

Public Utility Control in Massachusetts. By Irston R. Barnes. (London) Oxford University Press, Warwick Square. 13s. 6d. net.

A study of the application of the prudent investment theory to the problems of rate regulation.

Movimento Economico dell' Italia. (Milan) Banca Commerciale Italiana.

A most valuable yearbook, containing statistical tables and up-to-date information on the money market, Stock Exchange, industries, agriculture, foreign trade and public finance of Italy.

The Official Year Book of New South Wales. Compiled by T. Waites. (London) New South Wales Offices, Australia House.

An extremely valuable compilation of official statistics by the Government statistician. It covers a wide range of subjects, including, in addition to the usual economic categories, such matters as local government, climate, police, education, prisons, etc.

Immigration and Prosperity. Evidence prepared for the Palestine Commission of Inquiry by S. Hoofien. (Tel-Aviv) "Mischar W' Taasia" Publishing Company, Ltd.

A pamphlet of useful economic information and statistics relating to Palestine.

Bulletin de l'Institut des Sciences Economiques, March, 1930. (Louvain) Institut des Sciences Economiques, Place du Peuple.

A collection of articles constituting between them a survey of Belgian economic conditions in 1929.

The Frontier Tradition in South Africa. By Eric A. Walker. (London) Oxford University Press, Warwick Square. 2s. net.

A reprint of an interesting lecture recently delivered in Oxford.

The Imperialist War, 1914-15. By V. I. Lenin. (London) Martin Lawrence, 26, Bedford Row. 12s. 6d. net.

This eighteenth volume of Lenin's collected works contains an essay on Karl Marx, the pamphlet "Socialism and War," and a collection of articles, speeches and resolutions from September, 1914, to December, 1915. There is also a bibliography and a calendar of Lenin's life.

Forced Labour. (London) International Labour Office, 12, Victoria Street.

The report of the discussion on forced labour at the International Labour Conference.

Workmen's Compensation Legislation of the United States and Canada as of January 1, 1929. (Washington) Superintendent of Documents. 55 cents.

Includes the t ext of legislation enacted in 1927 and 1928.

Etude Mathématique et Graphique des Opérations Financières. By René Damien. (Paris) Les Presses Universitaires de France, 49, Boulevard Saint-Michel.

A short treatise, in pamphlet form, on the mathematics of real interest calculations.

The Case for Tasmania, 1930. (Tasmania) John Vail, Government Printer.

An official statement of Tasmania's claim for an increased special grant from the Commonwealth.

The Railway Gazette, April 28, 1930. *Special Spanish Railway Number.* (London) The Railway Gazette, 33, Tothill Street. 2s. 6d.

Published in connection with the International Railway Congress, which opens at Madrid on May 5th. This special number forms a valuable source of information on the subject of Spanish railways.

Provincial Brokers' Stock Exchange Year Book, 1930. (Hull) Provincial Brokers' Stock Exchange, Parliament Chambers. 2s. 6d.

Contains the rates, a list of members, a list of firms, information about trustee investments, commissions, etc., and a number of calculating tables.

Investments Abroad, 1930. (New York) Mackay and Company, 14, Wall Street.

A tabulation, on a geographical basis, of all foreign dollar securities issued in the United States.

Handelsrekenen. By H. L. C. Kok. (The Hague.) By J. B. Wolters Uitgevers—Maatschappij, N.V.. Gronigen. F. 12.50.

A substantial Dutch text book on Stock Exchanges.

Gedenkboek Van de Javasche Bank, 1828-1928. (Amsterdam) De Javasche Bank.

This very handsome volume is Part II of the history of the Java Bank, published in celebration of its centenary.

Modellen en Formulieren. By H. L. C. Kok. (The Hague.) By J. B. Wolters, Uitgeversmaatschappij, N.J., Gronigen. F. 15.00.

A volume of facsimiles of deeds, transfer forms, trace sheets, income tax claim forms, etc., in use in various countries.

The Bankers' Magazine, May, 1930. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Contains the text of Sir Charles Addis's address to the Institute of Bankers on the Bank for International Settlements.

The Slavonic Review, March, 1930. (London) Jonathan Cape, Ltd., 30, Bedford Square. 6s. net.

This issue contains a wide range of interesting articles, including, *inter alia,* two on Masaryk; one on the war on religion in Russia; the second, on Czechoslovakia, of Mr Ifor Evans's series on agrarian reform in Danubian Countries, and "The Diary of a Soviet Student."

The Stock Exchange.

THE WALL STREET OUTLOOK.

THE effect of last week's reduction of Bank rate on Stock Exchange business has been largely obscured, this week, by dramatic events in Wall Street, which have monopolised attention more completely than at any time since the slump of last autumn. After a period of "wobbling" during the latter part of April, with a perceptible downward trend, American security prices took a decided plunge last Saturday, when total sales of 4,862,000 shares made a "record" for a two-hour session. Selling was renewed on Monday, when the volume of dealings was the highest on any day this year, but in the later trading a marked recovery was initiated, which made substantial progress on Tuesday. The extent of the "slumplet" may be inferred from the behaviour of the index of fifty industrial stock quotations, compiled by the Standard Statistics Company. This index (which is based on the figure 100 for 1926), reached its maximum point of 202.4 for the present year on April 10th, slowly declined to 192.7 by April 30th, dropped to 177.2 last Saturday, and recovered to 178.8 and 184.9 on Monday and Tuesday of this week, respectively.

Though it is much too early as yet to assume that this week's recovery is the last word on the matter, it may at once be stated that in no well-informed quarter is a major downward movement, comparable with last year's break, regarded as at all a probable contingency. So far, indeed, the net loss of ground has been comparatively small in proportion to the steady rise of values since bottom was touched towards the end of last year. The chart on this page will enable readers to view recent price movements in due perspective. Broadly, while last year's slump reduced industrial share values approximately to the level of mid-1928, the recovery of the first three and a half months of this year carried them back to the level of the late autumn of 1928. During the course of the revival more than two-fifths of the ground lost was recovered, and the latest reaction still leaves prices a long way above last year's low point.

The most significant feature of the 1930 recovery which preceded last week's decline, however, was the decidedly unequal headway made by different groups of industries. This point is well exemplified by the table given below, which is based on data supplied by the Standard Statistics Company.

(1926 average = 100.)

	Highest, 1929.	Lowest, 1929.	Highest, 1930.	April 24, 1930.	May 1, 1930.
Group indices:

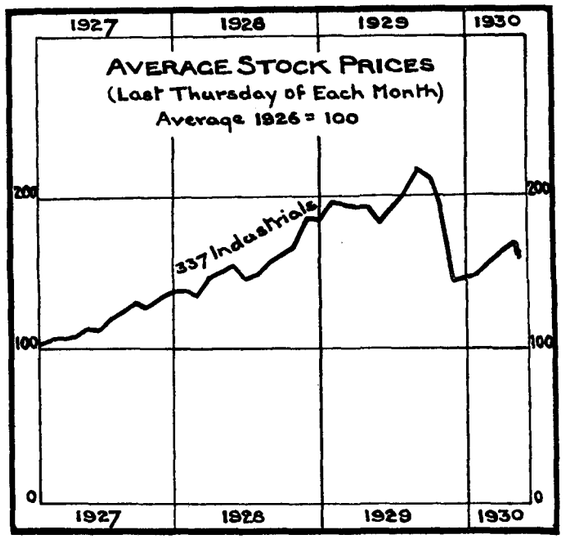
Electricity, gas and water (holding companies)	468·1	204·3	363·5	358·5	

* Including General Motors. † Including gramophone industry.
‡ Including U.S. Steel Corporation.

Prior to the downward movement of the last three weeks, industrial shares as a whole had recovered about 47 per cent. of the ground lost in last year's slump, while railroad stocks had recovered 39 per cent., and utility stocks 59 per cent. The figures for separate industrial groups, however, show that while share values in, *e.g.*, the tobacco industry, were actually *higher* last month than at the peak of 1929, and in such groups as electrical equipment, industrial chemical, telephone and telegraph, and oil were not very much below last year's highest, in other groups, such as automobiles, building equipment, textiles and retail trade, only a modest recovery was recorded. In the steel group the recovery was about "average," and in the public utility holding company group rather more than average.

This decidedly unequal distribution of gains, in a rising market, was held by many observers to reveal an absence of confidence, on the part of investors and speculators alike, in the recuperative powers of American industry as a whole, as distinct from those of certain specially favoured trades. The sharp "shake-out" last week-end, again, suggests an underlying fear in the markets that the rise in prices was running too far ahead of the recovery in industry. It was, in fact, no mere coincidence that the burst of selling followed the publication of earnings figures for the first quarter of the year, by many of the larger corporations, which made a demonstrably unfavourable comparison with those of twelve months earlier.

This view is borne out by an impressive body of evidence. In round terms, the data so far available indicate that the volume of industrial production in America



was something like 10 per cent. smaller in the first quarter of 1930 than of 1929, with aggregate profits showing a decline between 15 and 20 per cent. The first quarter's earnings of General Motors have fallen by about 25 per cent., and the aggregate figures of ninety-six other large industrial corporations show a fall of 16.9 per cent. Six railroad concerns show a shrinkage in income of 20.7 per cent. In the utilities group, nine companies show a recession of 3.5 per cent., but if the stabilising influence of American Telephone and Telegraph be excluded, the decline is as much as 11.3 per cent. Among the select number of instances of higher earnings so far recorded, the most noteworthy increases occur in the electric light and power, advertising, paper, railroad equipment and theatre groups.

More detailed accounts from individual industries confirm the view that while a few relatively minor trades are highly prosperous, activity in the more basic industries is running well below last year's level. The "mechanisation of the farm" movement is still making conspicuous headway, the motion picture firms are enjoying a "banner" year, and the American population smoked

5.47 per cent. more cigarettes last March than in March, 1929. On the other hand, the output of the automobile industry in the first three months of this year was only 68 per cent. of the 1929 figure, while sales of motor tyres in February were 30 per cent. below last year's level. Building construction contracts, again, were 12 per cent. less in the first quarter of 1930 than of 1929. Bituminous coal output is about 10 per cent. below last year's level. Steel production has gradually expanded in recent weeks, but a downward trend is expected before the summer. The American cotton mills took 20 per cent. less raw material in March this year than last, and for some time the woollen mills have been working at little more than 50 per cent. of capacity. Though the last recorded sales of electrical power in America show an advance of nearly 6 per cent. as compared with 1929, this figure, in fact, indicates a slowing down of the rate of increase, which a year earlier had been equivalent to 13 per cent. To complete the picture, it must be pointed out that agricultural purchasing power is still sub-normal (and will remain so unless short world crops bring higher prices some months hence), while declines have recently been recorded of 30 per cent. in lead and zinc prices, 40 per cent. in silver, and 30 per cent. in copper. Altogether, the economic basis for any sustained upward movement in share prices is difficult to discover, even by the most confirmed optimists.

The weight of evidence, in short, suggests that, for some groups at least, the recovery in share prices has been based on a premature assumption of industrial revival, and that the reaction of last week-end was a healthy movement. It is common ground that a substantial recovery in business, and in earnings, will come in time; but cautious observers are sceptical of its materialising before the autumn, or even later. The market appears to have put up prices prematurely this year in anticipation of a recovery *in the spring*, and subsequently to have sold on the growing realisation that this view could not be maintained in the face of unfavourable industrial news. If this interpretation of the situation is correct, a further period, not necessarily of wide-spread selling, but of irregularity and hesitation, may be expected in the next few weeks. Much will subsequently depend on the further trend of commodity prices, and on the progress of this year's American crops.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
May 20.	May 22.

Markets were dull and dispirited, partly as a result of events in New York and partly for reasons described by a " House " correspondent on page 1062. The week's new issues undoubtedly strained the market's powers of absorption. With gilt-edged stocks suffering from indigestion and the Budget, internationals afflicted by the Wall Street *malaise*, and the more speculative section overwhelmed by a fresh drop in base metal prices, no part of the Stock Exchange showed any disposition to shake off the prevailing lethargy. Selling was scattered rather than heavy, and, with careful nursing, it was possible to find buyers even for comparatively large lines. The " House," in short, suffered less from depression than lack of enterprise and inability to see far ahead.

Gilt-edged stocks were affected by the French gold withdrawals and the congestion of the new issue market. Fairly heavy declines occurred throughout the list on Monday, War Loan and the new Conversion issues, in particular, being offered in an unwilling market. The effect of last week's Bank rate reduction was of no more than twenty-four hours' duration, its influence this week being negligible. By mid-week, however, the general tone was steadier. India stocks were heavy on fears as to the political reactions of Mr Gandhi's arrest. Only a moderate business was done in Dominion and Colonial stocks at fractionally lower prices. Heavy stagging of the New Zealand Loan kept the price down to par, despite large over-subscription. Home corporation issues were firmer after a shaky start.

The foreign market was idle for the most part. Some amount of buying of European stocks was in progress in view of the coming Reparations Loan, but Turkish were easy on conflicting reports of the Debt Service discussions. After an initial reaction, San Paulo bonds improved on the ratification of the new loan by the San Paulo Congress.

Home rail prices sagged in the absence of investment interest. The week's traffic figures were better than was expected in the case of the Southern, but confirmed the downward movement in Midland and Scottish receipts. Among foreign railways, Argentines were sold on a poor traffic showing and a set-back to the peso. Brazilians lacked support, Leopoldinas showing a sharp drop on fears that next week's final dividend would not be maintained, though this opinion was not shared by the market generally. The Chilean nitrate proposals, discussed on page 1063, were regarded as a bull point for the railways.

The industrial market was dominated by the New York reaction and the absence of domestic public interest. All internationals were marked down at the outset, and, after a sharp response to Tuesday's rally in Wall Street, fell back on scattered selling. A fair business was done in the gramophone group, though prices were not maintained. Rayon shares were steadier, with the exception of Courtaulds, which lost fresh ground on sales from the North. " Cotton Week " had no effect on textile shares, a more powerful factor being the reduction of the J. and P. Coats' dividend from 20 per cent. to 17½ per cent. Unilever were heavy, despite a fair turnover, the new share offer being regarded as offering only moderate attractions at its issue price. Kreuger and Toll were harder after an initial marking down. Motor shares were dull, but iron and steel shares harder in places. Tobaccos were uninteresting but held their ground. Cables and Wireless " B " continued to recede, but Imperial Chemical were slightly harder on numerous small orders, after going ex-dividend. Bank shares were a shade better, but further declines occurred in the insurance share market.

The declining tendency in the rubber share market was partially arrested by the firmer tone of the commodity, which rose from 6 15/16d. on Tuesday to 6 31/32d. on Thursday. Rubber trusts, however, were lower on balance. Business in tea shares showed a slight expansion, but the tone remained dull. Oil shares suffered heavily in the New York reaction, and a firmer trend, subsequently, was checked by a further slight rise in the crude production figures.

Sharp declines in base metal prices greatly handicapped business in the mining share market. Tin fell as low as £142 7s. 6d. on Tuesday, and the subsequent improvement did not prevent a further retrogression in share prices, though one or two Eastern descriptions, including Malayan, Ipoh, Kamunting and Southern Tronoh were harder. Kaffirs were firmer after a poor start, with Langlaagte Estate a strong spot, and Robinson Deep B in demand in anticipation of a dividend this year. A feature was the strength of one or two Northern Rhodesian issues, Congo Borders jumping to 17½, while further appreciation was recorded in Anglo-American, Bwanas, Rhodesian Selection and Loangwas. With copper only just over £48, Tintos further declined, but strengthened at the close on limited support from Paris.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market is turning dull, with greater stability of prices, after recovering about 40 per cent. of the decline suffered in the past fortnight. Sentiment is mixed, and there is little outspoken optimism, but it is believed in most quarters that, if a further decline ensues, it will at least be more gradual. It is now felt that the speculative excesses of the first three or four months in the share are well cleared up and the only heavy ones in immediate market, and the unwarranted hopes of a rapid trade recovery, have been fully liquidated, and that the immediate future depends on business. It is thought that the increasing plethora of money will tend to moderate any further decline in share prices and stimulate investment buying. The bond market is fairly strong and moderately active. New issues are held back owing to the unsettled conditions, and the week's offerings were only 130 millions, against 253 millions a week ago, but old offerings are well cleaned up and the only heavy ones in immediate prospect are the Japanese loan and the Reparations issue.

PARIS.

During the month of April, particularly the first half, the Paris stock markets were better supported than of late, and the tone became livelier with the gradual return of public confidence. The chemical products, mining, and electrical groups led the revival. When, however, the Stock Exchange reopened, after a four-days' Easter holiday, the movement, which it had been hoped would continue, was appreciably duller. The sharp reduction in the price of copper, which had such an unfortunate effect on the London metal market, was also a cause of uneasiness in Paris. Nevertheless, the tax reductions which have recently taken place give grounds for hoping that the Paris market will soon regain its animation and stability.

As from May 1st, until the end of October, the Paris Bourse will remain closed on Saturdays, in accordance with the usual practice during the non-winter six months.

BERLIN.

During April the German stock markets continued to feel the effects of the international lowering of interest rates. While the discount rate of the Reichsbank was not reduced, private rates were lowered from 4⅞ to 4⅛ per cent., and 30-day money from 6 to 5 per cent. Small bank depositors, as well as speculators, turned to domestic interest-bearing securities. The small capitalist endeavoured to place his money at long terms at 7½ and 8 per cent., while the speculator calculated on a speedy improvement in quotations as a result of the dropping of the discount rates in the money market. The general loan index of *Der Deutsche Volkswirt* increased in April from 90 to somewhat over 92.

In contrast to the gilt-edged market, the industrial stock market was quiet, so that, despite small increases in quotations at the beginning of the month and considerable gains on the part of certain favourites, the general level dropped some points during the month. It was doubtless due mainly to the unfavourable estimate of the German economic situation that cheaper rates for money were unable to exert any influence whatever on average quotations. The " laying-off " of workmen in the mining, electrical and chemical industry, in connection with the decline of prices for numerous raw materials and finished wares, caused the Bourse to fear that the profits of the most important industrial undertakings in 1930 would be below those of the preceding year. Mining and paper shares and Siemens and Halske shares were especially depressed. There was, however, a continuing demand for Kali, which was already a favourite in March, and Salzdetfurth gained strongly as a result of a very favourable result for 1929. Reichsbank shares also improved as a result of purchases abroad. In the last days of the month I. G. Farbenindustrie finally rose some ten points, the Bourse being pleasantly surprised by the distribution of a 2 per cent. bonus by the company in addition to its 12 per cent. dividend. The turnover, however, was very small even for the favourite counters. The proceeds of the tax on turnover, which in March reached the lowest point for two years, were probably not exceeded in April.

Official " Cash " Quotations in all cases.

INVESTMENT NOTES.

The Dullness of Markets—a " House " View.—A note from a member of the " House " expresses, tersely and with vigour, the view of the Stock Exchange as regards the present dullness of markets. No little disappointment, he declares, is felt at the tepid character of the markets in sound stocks and shares. According to reasonable anticipation, the market in investment stocks should be enjoying a considerable volume of business. Unfortunately, the Consol market—which covers British Government securities, Home and Colonial Corporation stocks, the issues of India and the Dominions, and various other securities of the best class—is no whit busier than before Bank rate came down. What is the reason for this inertia? In the first place, the gilt-edged market is suffering from threats of indigestion. Numerous five per cent. stocks were rushed out about par last month, and others are on the way. This week we have had heavy loans from New Zealand, and the Agricultural Mortgage Bank, not to mention the Unilever issue, and a big reparations loan looms on the horizon. The Budget, again remains a source of uneasiness in the minds of many investors, who are choosing to keep their spare resources on deposit with their bankers for the time being, even at a negligible rate of interest. The gilt-edged market thus finds that the Budget has merely brought in heavy sales by speculators who had bought a good deal more gilt-edged stock than they were able to digest with comfort. The average investor feels, vaguely, that it will be necessary for him to economise, owing to the additional taxation, which is being kept in the forefront of his attention, at the moment, by the circulation of demands for income tax returns for the current year. The net result is that Stock Exchange business, with very few exceptions, has fallen to something like midsummer proportions. Its reduction in volume has been accompanied, inevitably, by a sagging of prices. The market, however, has been

through many such periods in the past, and has invariably re-emerged into activity. Human nature is always bullish, in the long run, and in times like the present broker and jobber alike fall back upon this comforting assurance.

Preference Shares as Investments.—A good deal of discussion has lately ranged round the position of the preference share. It is held in some quarters that it tends to be a costly instrument both to borrowers and investors. Apart from last year, when conditions were somewhat abnormal, the rate offered on new issues of preference shares has tended to rise of recent years:—

Average Rates Paid on New Issues of Preference Capital in London.

	%		%
1913.....	5·74	1927	6·67
1925.....	6·10*	1928	7·37
1926.....	6·70	1929	6·58

* Lowest post-war figure.

The ratio of new preference share capital to ordinary capital has also been declining in the last few years, as will be seen from the following figures of new ordinary and preference share issues in London:—

PUBLIC ISSUES OF NEW CAPITAL IN LONDON.

	1913.	1926.	1927.	1928.	1929.
	£	£	£	£	£
Preference stocks and shares	22,955,600	39,393,200	36,836,600	45,062,600	31,543,400
Ordinary stocks and shares	33,661,300	46,209,400	89,371,400	111,177,600	116,017,600
Amount of Preference to every £100 Ord.	£68	£85	£41	£40	£27

The critics of the preference share maintain that holders are required to surrender, not merely their equity in a company's future growth, but also, in the majority of cases, their voting power. Their status thus tends to be that of " outsiders," without the security as regards income and principal possessed by debenture holders. In schemes of reconstruction they are frequently required to consent to heavy sacrifices, particularly as regards arrears of dividend, simply because they have no stick (in the shape of a charge on fixed or floating assets) with which to beat the directors. Preference shares with participating rights offer some attractions in theory, but in practice have never been popular. To-day, they are less popular than ever, as a result of their serious abuse during the " shilling share " boom. Altogether, according to this view, the Preference share is tending to fall between two stools, and the future must be left to show whether the power to issue redeemable preference shares, conferred on British companies by the new Companies' Act, will revive its former popularity. At present, it is tending to be regarded rather as a means of slightly raising the average income yield of a diversified holding of fixed-interest securities, rather than as an instrument of investment with a definite *raison d'être*.

Company Defaults—Further Prosecutions.—A fortnight ago (see the *Economist*, April 26, 1930, page 954), we discussed the important issues involved, from the investor's point of view, in the prosecution initiated by the Board of Trade against a company for making default in forwarding to Somerset House the annual return required under the Companies' Act. A further development has occurred this week. On Tuesday last, summonses were heard at Guildhall against six companies " for neglecting to hold general meetings in 1929 as required under the Companies' Act." The companies concerned were the Anglo-Scottish Securities, Ltd., Asbestos and General Trust, Ltd., Belgian Finance Company, Ltd., St. Paul's River Tin Company, Bolivia Trading Corporation, and Kamounghla Tavoy Tin Company, Ltd. Some of the cases were adjourned, but as regards the remainder, fines totalling £460 were imposed on the companies and certain directors. All these cases were brought upon information lodged by the Stock Exchange Committee. The prosecuting counsel for the Board of Trade enunciated the dictum that " it is very right and proper " that the Committee should exercise " a good deal of vigilance " as to the manner in which companies carry out their legal obligations. The action taken by the Board of Trade is thus the first fruits, by no means negligible, of the Committee's exploration of the whole question of " Permission to Deal." From an answer to a parliamentary question, given by the President of the Board of Trade on Tuesday, however, it is clear that the Board is not yet prepared to go as far as some critics would desire. The Board still regards it as impracticable to compile a complete list of companies in default, in any year, until after the end of the following January, and thereafter will not take definite steps until the attention of the companies has been called to the default and an opportunity has been given them of complying with the law. For the rest, the Board is still clearly inclined to leave to individual shareholders the initiative of taking police court proceedings or bringing irregularities to its attention. The question of improving the machinery for enforcing the law, however, is under consideration, and Parliament will, if necessary, be asked to increase the Board's available staff for the purpose.

Associated Automatic Machine Corporation.—The first annual report of this " Hatry " flotation shows a total loss of £1,564,051, and reveals a disgraceful series of irregularities before the Hatry crash occurred. The resources of the company were squandered to finance the extravagances of the Hatry coterie. Gilt-edged securities to the value of £450,000 were realised, the proceeds being used to purchase shares of little or no value, in the Hatry group. Excessive prices paid for shares in subsidiaries, together with loans raised in the name of the company, but used to finance the Dundee Trust, Ltd., and Austin Friars Trust, Ltd., were other factors in the company's huge loss. The present directors, on taking over, found themselves with " very onerous trade commitments and irregular financial debts " of £484,000 which were settled for £183,000, approximately 7s. 6½d. in the pound. The position regarding the former board is *sub-judice*, but the melancholy story suggests at least one lesson—that a year is an unduly long time for the first run of a new company without the publication of a balance sheet. It also reveals the extent to which, in the best as in the worst flotations, the investor is compelled to rely on the honesty and reputation of the promoter, which, in the last resort, is a new concern's greatest asset—or liability.

Chilean Nitrate Developments. — We referred in last week's *Economist* to the proposal for the formation of a £75,000,000 company to take over all the Chilean nitrate fields, the Chilean Government being allotted one-half of the capital and ceding in return all the undeveloped nitrate fields and remitting the export tax of £2 10s. per ton. The latest report of Messrs Aikman (London), Ltd., the leading nitrate brokers, states that the Chilean

Government has decided to present to Congress a Bill authorising the creation of such a company, with a capital of 3,000 million pesos, to be known as the Compania Salitrera Nacional (" Cosana "). The company will guarantee that the Government's revenue, including dividends and income tax, for the first three years, shall not be less than £4,500,000 in 1931, £4,000,000 in 1932 and £3,500,000 in 1933, which sums the company will have power to raise by the issue of debentures, the service of which will be a first charge on the profits. After 1933 the Government will renounce its right to priority treatment and will depend for its revenue on its 50 per cent. shareholding. The company is to have a life of 60 years and is to be managed by a board of 12 directors, of whom four will be nominated by the Government and eight by the producers. It is the intention of " Cosana " to take over the debentures, loans and preference shares of the existing nitrate companies as a first charge on profits. If there is any dispute among the companies as to the terms on which they are to be merged (which seems more than likely), the dispute is to be submitted to arbitration, the deciding vote on the arbitration committee lying with the Government's nominee. Messrs Aikman are of opinion that the merger will prove beneficial to the shareholders of the existing nitrate companies, most of the latter having a prospective life of only ten years, whereas " Cosana " will have reserves of caliche for at least 60 years. Moreover, the consolidation of all producers into one company will enable costs to be reduced by centralising production in the cheapest oficinas, while the removal of the export duties should once more place the industry on a profitable basis. Messrs Aikman intend, therefore, to recommend the companies in which they are interested to negotiate for an exchange of holdings. The important fact behind this announcement is that the Chilean Government has apparently secured the entire support of the influential Guggenheim interests, which now dominate the Chilean nitrate industry. Messrs Aikman confirm the report that conversations have taken place between the representatives of the European synthetic nitrogen producers and those of the Chilean industry to explore the possibilities of reaching an agreement on production and prices for an extended period. No decision has yet been reached and the discussions will be renewed in a fortnight's time. On these discussions depend the immediate fate of the Chilean nitrate industry. If no agreement is reached with the synthetic nitrogen manufacturers the Chilean producers will probably embark on a policy of increased output and more intensive competition at lower prices.

Dunlop Rubber Balance Sheet.—At the general meeting of the Dunlop Rubber Company this week the chairman referred to the changes made in the company's balance sheet. Some of the alterations conform with the requirements of the new Companies Act; others represent a departure from established practice. The resulting document gives a much clearer view of the company's position. The sub-divisions of investments and advances as between subsidiary companies associated companies and sundry investments are required under the Companies Act—advances to subsidiaries are rightly not treated as current assets—but a departure from custom is the inclusion in the profit and loss account of the appropriations to reserve and the proposed final dividends, less income tax. This enables the balance sheet to show clearly the final liquid position of the company, the final dividends and taxation reserve being shown separately under the heading of current liabilities. Another improvement in the balance sheet is the disclosure of a separate reserve " for inter-company profits in stock valuations of subsidiary companies." This arises as a result of inter-company transactions, in the course of which goods may be sold from subsidiary A to subsidiary B, and appear in subsidiary B's balance sheet at " cost," which includes a profit on the sale from A to B, although the goods have not in fact been sold to the public. One result of these changes in the profit and loss account and balance sheet is the disclosure at a glance that the Dunlop Rubber Company has a working capital of £2,874,573 (*i.e.*, current assets less current liabilities), while a simple calculation will show that its ordinary shares have a book value of 9s. 10d. per share. Unfortunately it is still impossible to find out precisely what its net assets, valued at £23,151,376, are earning, since the net profits (before depreciation, directors' fees and interest) of £2,226,612, contain not the real earnings of the subsidiaries but only the earnings to the extent of the dividends declared by these subsidiaries in respect of 1929. A holding company will never disclose its real earnings until it publishes a *consolidated* profit and loss account and balance sheet. This is not yet required by the Companies Act, but we suggest that it is the next reform which the Dunlop Rubber Company should make.

British Match Corporation.—The accounts of this holding company for the financial year ended April 30 last are the best results since the company's incorporation (under its present auspices) in 1927. On a slightly augmented capital, net profit amounts to £493,931, an increase of £73,258 over the total for the previous twelve months. Preference dividend at 5½ per cent. requires £23,121 after tax, while a distribution of 6 per cent., tax free, on the ordinary shares (as last year) requires £371,501:—

	Year ending April 30, 1928.† £	1929. £	1930. £
Ordinary capital	6,000,000	6,187,269	6,187,500
Net profit	407,425	420,673	493,931
Brought forward	...	35,855	51,209
Preference dividend.....	...	14,426‡	23,121
Rate per cent.	...	5½	5½
Ordinary capital:			
Earned £	*407,425*	*406,247*	*470,810*
Paid £	290,500*	371,236*	371,250*
Earned per cent.	*6·7*	*6·6*	*7·6*
Paid per cent.	6	6*	6*
Other allocations	81,070	19,657	83,302
Carried forward	35,855	51,209	67,467

† 8½ months. ‡ Half-year. * Tax free.

The directors recommend that the sum of £3,302 be set aside for the purpose of writing off the item, " Office fittings and furniture," while the heavy item of £800,000 for goodwill is to be reduced by £80,000. Some £67,467 is carried forward, against £51,209 brought in from the last account. The balance sheet reveals few important changes, the company's shareholdings in subsidiaries being virtually unaltered, though cash is down from £330,218 to £240,443. During the year 231 ordinary shares and 413 5½ per cent. preference shares were issued in connection with the acquisition of 307 ordinary shares and 275 7 per cent. preference shares in Bryant and May (Brazil), Ltd., the whole of whose issued capital the corporation now holds. At their present price of 26s. 9d. the ordinary £1 shares give a yield of about £4 12s. per cent., tax free, allowing for a final dividend of 4 per cent.

Guest, Keen and Nettlefold Debentures.—The dispute over the proposal of the directors of Guest, Keen and Nettlefold to vary the terms of the 4 per cent. irredeemable debenture stock may strike some observers as being a storm in a tea-cup. This debenture stock is secured specifically on certain properties and carries a floating charge on the whole of the assets. No other charge can be created equal or prior to these debentures. As several of the mortgaged properties are to be transferred in connection with the Guest, Keen-Baldwins " rationalisation " scheme, the directors propose that the debenture holders should give up their specific charge and be content with a floating charge. They offer, in return for this concession, to convert the stock into a redeemable stock and establish a cumulative sinking fund, beginning at £30,000 a year, which is to be applied either by purchase or annual drawings at 90. Objection is taken to the drawings at 90

on the ground, presumably, that the stock in a period of cheap money in the next 30 years might rise to par. Without necessarily subscribing to this or any other prophetic view, the directors may choose tactfully to withdraw a concession which does not appear to please the debenture-holders or benefit the company. There is only £1,850,000 of 4 per cent. debenture stock outstanding, and the interest of £74,000 a year is covered by earnings, last reported at £956,000. Given this handsome security with which to bargain, the task of coming to terms with the debenture-holders should not present insuperable difficulties. As we go to press we note that the directors proposals have been approved (see page 1082).

Swedish Ball Be aring Co.—The report and accounts for 1929 of A/B Svenska Kullagerfabriken (S.K.F.), the largest group of manufacturers of ball and roller bearings in the world, supplying over one-third of the world's requirements, are voluminous and informative. The report declares that the favourable trade conditions which began in 1928 culminated in July, 1929, and in the last quarter of the year a somewhat reduced demand was noticeable. The output from the Swedish factories reached a new high level, and the factories in France and Germany considerably increased their production. In the United States and in Great Britain factory extensions have been made. In Germany the various ball-bearing factories acquired have been merged into a single unit, and this control has given the company the same predominating influence on the German ball-bearing market as it secured in France in 1928. Thus it has been able to continue its policy of standardising and rationalising the European ball-bearing industry. The earnings and distribution of profits for the past three years are shown:—

	1927.	1928. (Thousand Kr.)	1929.
Net profit	17,319	26,035	30,809
Depreciation and tax, &c.	6,471	8,863	9,573
Available for ordinary shares	10,848	17,172	21,236
Per cent. earned	*11·7*	*16·2*	*16·3*
Per cent. paid	10·0	12·0	12·0
To reserve	1,161	Nil	Nil
Carry forward	1,057	5,509	11,145
Issued capital	92,000	106,000	130,000

The directors point out that the profits are derived from manufacturing in Sweden and from the dividends declared by subsidiary and other companies, and that only a portion of the subsidiary companies' profits has been distributed. Moreover, the new investments in the German factories, coming into effect as from July 1st last, have not contributed to the company's dividend income. A consolidated balance sheet for the S.K.F. group as a whole is given with the report, together with comparative figures for the preceding three years. As at December 31, 1929, the working capital (earned assets less current liabilities) of the group was over 121 million kroner. During the year the company's shareholdings showed a net increase of 26.4 million kroner, chiefly on account of the new German investments and the taking over of minority holdings in the company's French factories, and for this reason the capital of the company was increased by the issue of 24 million kroner in " B " shares, to the present total of 130 million kroner in 92 million kroner " A " shares and 38 million kroner " B " shares. The " B " shares are internationally quoted. On the London Stock Exchange they are currently valued at £12¾ cum dividend.

I.-G. Farbenindustrie.—The net profits of the German chemical trust in 1929 were somewhat lower than in the preceding year. The annual report is not yet available, but the falling off is generally ascribed to less favourable conditions in the nitrogen trade. After writing off 70.1 million marks, against 71.8 million marks in the preceding year, the company shows net profits of 104.6 million marks, against 118.5 millions for 1928. Five million marks are deducted from profits for welfare purposes, but reserves are not increased. The dividend is unchanged at 12 per cent. on a capital of 800 million marks, of which 250 million marks of convertible debentures carry 6 per cent. interest. The stockholders (who at the beginning of 1928 and of 1929 received a stock dividend) this year receive a cash payment of 2 per cent. on the common shares and of 1 per cent. on the debentures, from funds received by the company from the release of property sequestrated in America. The company's factories and selling undertakings in the United States were confiscated during the war, and the amount received by the American Alien Property Custodian has now been released, the company obtaining some 21 million marks in cash.

American Tobacco Consumption.—With reference to our leading article last week, on " American Tobacco Companies," it may be of interest to record a gain in cigarette production in the United States for the first three months of 1930. Output reached the record total of 27,788 million cigarettes, as against 26,912 million in the first quarter of 1929, a gain of 3.25 per cent. The production of cigars continued its downward trend, the total for the three months ending March being 1,300 million, as against 1,356 million in the corresponding quarter of 1929, a decline of 4.13 per cent. Nevertheless, the 5 cent cigar increased in popularity and accounted for 62.4 per cent. of the total cigar production up to March. Neither Liggett and Myers nor Reynolds Tobacco manufacture cigars. American Tobacco has its interest in this trade through the American Cigar Company, which has started an intensive sales campaign on the 5 cent cigar. Lorillard is the only one of the four large cigarette companies directly competing in the cheap cigar business. At this stage of development, however, profits on the 5 cent cigar are of modest dimensions.

Indian Gold Mining. — Our mining correspondent writes:—Considerable irregularity is shown by the results of the Kolar group for the year, the balance being on the wrong side. Balaghat paid the same dividends as before—1s. 6d. on the preference, 6d. on the ordinary—but the ore reserves indicate a substantial reduction. With the Champion Reef a marked advance in grade was, to some extent, offset by decline in tonnage milled and consequent increase in cost ratio; still, a fresh expansion in dividend was practicable, 1s. 3d. per share being disbursed as against 1s. for 1928 and 9d. in respect of each of the three preceding years. In the main the reduction in the profits of the Mysore is attributable to the exhaustion of the old tailings dump, which caused both a shrinkage in revenue and an advance in the cost per ton milled, which now has to include the whole of the fixed charges. At £279,350 the net liquid assets at the date of the balance sheet are lower by £31,950; the year's capital expenditure amounted to £52,200. The company's incursion into Canadian mining has proved unfortunate. The interests held are now written down to £34,600 by the appropriation of £55,000 from the reserve fund. For last year the Mysore dividend total was cut from 2s. 3d. to 1s. 9d. per share. An appreciable relapse has occurred in the ore reserves.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, " Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

The following tabulation contrasts the salient features of the results of the past three financial periods of the five companies:—

	Tons of ore milled.	Mill yield per ton.	Working profit.	Carried forward.*	Ore reserve tonnage.
		Dwts.	£	£	
Balaghat—					
1927	45,250	13⅜	30,140	5,650	70,390
1928	47,950	12½	24,150	7,580	74,130
1929	50,100	13	26,040	7,080	56,000
Champion Reef—					
1927	95,150	†11¼	40,930	4,390	260,220
1928	111,160	†9½	39,120	4,690	269,360
1929	101,280	†11	52,370	4,250	278,100
Mysore—					
1927	221,900	†9½	179,900	18,510	557,200
1928	217,200	†9½	177,890	20,040	569,620
1929	213,040	†9½	130,710	8,670	517,020
Nundydroog—					
1927	126,250	8¾	80,750	7,220	221,160
1928	126,640	9¾	93,170	12,770	246,460
1929	129,860	10¼	108,080	11,190	265,600
Ooregum—					
1927	150,000	†12¼	145,640	10,150	353,330
1928	150,000	†11	99,930	9,990	295,130
1929	165,450	† 8¾	76,560	13,760	270,800

* Subject to directors' percentage. † Average assay value.

Thanks to a further all-round improvement, especially in the value of the ore opened up, the Nundydroog has been able to disburse 2s. 6d. per share—continuing the progressive increase of recent years. With the Ooregum, a fall in grade has proved the outstanding adverse influence. Last year's dividends on the ordinary shares totalled only 1s. as against 1s. 9d. for 1928 and 2s. 3d. for 1927, and the outlook is uncertain. Here, also, Canadian interests have been written down by an appropriation from reserve. Little change is shown in the financial position, the net liquid assets on December 31st amounting to £126,600. The shares of all the companies have lately fallen in price owing to the disturbances on the field. Conditions having become more settled, Champion Reef and Nundydroog may be worth the attention of the speculative investor.

Anglo - American Corporation. — The outstanding feature of last year was the expansion which took place in the scale of operations, the balance-sheet total of £15,200,900 being nearly £4,000,000 up. In part this arose from the issue of 281,550 shares at £2; but in a larger degree from increase in the deposits by affiliated companies and others, these figuring at £6,052,600 as against £4,516,600. Shares and interests now stand for £7,313,850, in place of £5,311,300; debtors at £3,232,150, against £1,229,000. Cash has risen by £436,400 to £1,144,300; nevertheless, the position is anything but liquid. The additional capital, being embarked in Northern Rhodesia, did not immediately earn its keep, while conditions during a large portion of 1929 did not favour the business of finance companies. Thus the net profit declined £50,000 to £721,000. The capital now ranking for dividend is £2,000,000 in 6 per cent. cumulative preference stock and a like amount in 10s. ordinary shares. Upon the former a half-year's distribution was required; upon the latter 2s. 3d. per share, or 22½ per cent., has been paid, as against 12½ per cent. upon £3,718,450 in £1 shares for 1928. The sums absorbed were respectively £510,000 and £464,800. Once again the appropriation account receives an adventitious contribution in the shape of taxation reserve written back. In the present statement the net premiums on the new share issue, also the dividend equalisation reserve of £250,000, are taken to credit. By the appropriation of £450,000 the reserve for stabilisation of diamond interests is raised to three-quarters of a million, while £240,000—representing two year's requirements—is set aside as a preference stock dividend reserve. Both are employed in the business. As usual, short particulars are given of the company's principal holdings, which comprise South African gold, diamond and land interests and a participation in the Northern Rhodesian copper industry through the Rhodesian Anglo-American. The ordinary shares of the Anglo-American Corporation are quoted at 1 5/16 and the preference stock at 93, showing a return of about 8½ and 6½ per cent. respectively.

Waihi.—The report for last year makes much more agreeable reading than could have been expected. In the 1928 document the directors emphasised the deterioration which had taken place in the developments, and at the meeting the chairman intimated that continuation of the dividend rate could not be expected after 1929. Meantime, the prosecution of underground work has been attended with satisfactory results, and the superintendent reports that "there are many points in the mine at which further investigation is warranted." In these circumstances the ore reserves show only a small decrease, though they do not represent more than eighteen months' supply. At £117,500 the profit is up to the extent of a few thousands; but reference to the accounts indicates the revenue to have been swollen by a special amount of £12,540, "reduction of bullion in process of treatment." Special appropriations require much the same as before, and the directors declare a final dividend of 1s. per share tax free, making a total of 2s., the same as for eight preceding years. The outstanding feature in the position is the strength of the finances. The company holds gilt-edged securities to a total of £371,000, and in September next year is due to receive from the New Zealand Government £212,500 in respect of its hydro-electric works. These amounts together represent about 12s. per Waihi 5s. share, now quoted at 14s. cum 1s. dividend.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Great Western of Brazil Railway, Union Bank of Scotland, London and Lancashire Insurance, London Assurance, Equitable Life Assurance Society, Friends' Provident and Century Life Office, Scottish Union and National Insurance, Eagle Star and British Dominions Insurance, Rubber Plantations Investment Trust, London Asiatic Rubber and Produce, Rembau Jelei Rubber, Kepong (Malay) Rubber Estates, Anglo-American Debenture Corporation, Spillers, and Howard and Bullough. At the London Asiatic Rubber and Produce Company meeting the chairman said that the crop produced during the past year totalled over 4,900,000 lbs., and exceeded that of 1928 by 1,250,000 lbs., while, as a result of the increase in the crop harvested, the cost of production was the lowest in the history of the company. Presiding at the forty-third annual meeting of Spillers, Ltd., Mr. E. A. V. Baker said that German oats, comparable with the best oats grown in this country, had been sold at prices to which there was no parallel since 1894, while Russia had exported barley to this country at prices as much as 10s. below the ruling values. At the annual meeting of the Great Western of Brazil Railway Company the chairman reminded shareholders that the improvement of general trade depended largely on the price of sugar, and said that arrangements were being made to export half a million bags now with the object of stabilising local prices during the next season.

CAPITAL ISSUES.

New issues this week were heavy, and, in some cases at least, appeared to be based less on the absorptive capacity of the market than on the financial exigencies of the borrowers. The trustee issues of the week included a *New Zealand Government* loan, giving a shade over 5 per cent. for 19 years—an excellent issue by a popular borrower, which was largely over-subscribed—and the debenture stock of the *Agricultural Mortgage Corporation*, which, at par, was somewhat dearly priced. The *Unilever* issue of 2,000,000 £1 ordinary shares at £3, with preferential consideration to existing shareholders, was affected by market movements which, unfortunately, wiped out the " turn " on the new shares. The company would have been well advised, in view of the very large amount of the issue, to fix the issue price at a somewhat lower premium than 200 per cent. The cover for the *Rhodesia and Mashonaland Consolidated* debentures was not unusually wide, but a rapid expansion of traffic has characterised the results of recent years' working, and potentialities in connection with the development of the Rhodesian copper areas are, of course, very considerable. *The Home and Foreign Investment Trust*, which offered £353,420 of 5 per cent. debenture stock at 95, is a small but successful trust established in 1926, with the managing director of G. and J. Weir on its board. This issue, also, was highly priced.

New Zealand Government.—Issue of £5,500,000, 5 per cent. inscribed stock, 1949, at £99 per cent. Trustees are authorised to invest in this stock. The proceeds of the issue will be allocated entirely to production purposes, and the stock will be repaid at par on December 15, 1949. The gross public debt of the Dominion on March 31, 1930, was approximately £267,380,000, as against £264,190,000 on March 31, 1929.

Grace National Bank
Hanover Square, New York, U.S.A.
A thoroughly organized international bank, giving special attention to the requirements of European banking correspondents.
Special Representative
148 Leadenhall St. London, E.C. 3.

Agricultural Mortgage Corporation.—Issue of £3,500,000 5 per cent. debenture stock, 1959-1989, at £100 per cent. The stock is a trustee investment, and will be redeemed over the years 1939-89 by the operation of a cumulative sinking fund of ½ per cent. per annum, to be applied in the purchase of stock for cancellation, at or under par. Repayable on July 1, 1989, but the company reserve the right to repay at par on any interest date on or after July 1, 1959, on three months' notice.

Unilever, Limited.—Issue of 2,000,000 £1 Ordinary shares of £1 each at £3 per share. The company was incorporated in November, 1927, under the name of Margarine Union, Ltd., changed in March, 1930, to Unilever, Ltd. The present issue is being made in order to provide the company with additional working capital. Net profits for the period from November, 1927, to December, 1928, were £1,666,849, and for the year to December 31, 1929, were £3,524,784. In each case a dividend of 10 per cent. was paid on ordinary capital.

Rhodesia Railway, Limited, and Mashonaland Railway Company.—Issue of £2,500,000 6 per cent. consolidated debentures at £100½ per cent. The debentures will be to bearer in denominations of £500 and £100, and will be repayable at par on February 1, 1962, the companies having the right to redeem at 101 per cent. on February 1, 1937, or any subsequent August 1st or February 1st, on six months' notice. Net revenue before deduction of debenture interest totalled £1,757,759, covering interest on debentures, including this issue, approximately 1.6 times.

Home and Foreign Investment Trust.—Issue of £353,420 5 per cent. debenture stock, 1953-63, at £95 per cent. The stock will be repayable at par on November 1, 1963, but the company reserve the right to repay in whole or part on or after November 1, 1953, on three months' notice. Net profit for the year ended March 31st, before deduction of interest on debentures, totalled £61,050, covering interest on debentures, including this issue, 2.4 times.

Gosport District Gas Company.—Issue by tender of £10,000 consolidated ordinary stock ranking for a standard dividend of 6 per cent. equally with existing similar stock, now receiving £7 7s. 9d. per cent. Minimum price of issue, £105 per £100 stock. Also £3,800 6 per cent. redeemable debenture stock. Minimum price par, redeemable at par on January 1, 1940.

Sutton Gas Company.—Issue of £26,672 5 per cent. perpetual debenture stock at £98 per cent., payable 30 per cent. on allotment. Payment in full may be made on any of the instalment dates under discount at 4 per cent. per annum.

Southampton Gas Company.—Sale by tender of £100,000 5½ per cent. preference stock, minimum price of issue £97½ per £100 stock. Dividends payable on March 1st and September 1st in each year.

Sutton District Water Company.—Sale by tender of £60,000 7 per cent. maximum ordinary stock, at a minimum price of £121 per cent., in lots of £100 each.

The following particulars are issued " for information only " with a view to Stock Exchange introduction. **Philips' Incandescent Lamp Works Holding Company, Eindhoven.** Issued capital Fl. 72,667,000, in 6 priority shares of Fl. 5,000 each, 18,846 cumulative preference shares of Fl. 1,000 each, and 53,791 ordinary shares of Fl. 1,000 each. Incorporated in 1912, and is now second largest manufacturer of incandescent lamps outside U.S.A.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices and dividend announcements, will be found on page 1082 under the heading " Company News."]

COMPANY MEETINGS, &c.

LONDON AND LANCASHIRE INSURANCE COMPANY, LIMITED.

GOOD RESULTS DESPITE DIFFICULT CIRCUMSTANCES.
INSURANCE POSITION AND PROSPECTS.
MR PASCOE RUTTER'S REVIEW OF WORLD CONDITIONS.

The sixty-eighth ordinary general meeting of the London and Lancashire Insurance Company, Ltd., was held, on the 7th instant, at the chief administration offices, 7, Chancery Lane, London, Mr F. W. Pascoe Rutter (governor of the company) presiding.

The Governor, in moving the adoption of the report and balance sheet, said :—From an examination of the report and accounts you will have found some new features. The novelties I will refer to later. The bare facts of the underwriting results I will now point out to you.

Our fire premiums at £3,410,039 show a small reduction as compared with the previous year. Similarly, the profit at £398,010, while yielding a surplus of 11.67 per cent., is 3 per cent. less than that of 1928.

In the accident department there is a slight increase in the premiums, which amount to £2,455,736, and the profit of £120,845 or 4.9 per cent., is approximately 1 per cent. less than in the previous year.

The marine results are exceptionally good, constituting a notable testimony to the ability of our underwriters. The total premium income of "The Marine" and "Standard" combined is £1,489,096, and the profit is distinctly the largest since the war, amounting to £239,158, or 16.06 per cent., which is nearly 3½ per cent. better than the good year of 1928.

These results have been achieved notwithstanding an increase in the cost of obtaining and working the business, our expenses having gone up by nearly half of 1 per cent., which means £30,000 per annum.

The total premiums, summarised, amount to £7,354,871, a reduction of £5,652 on the previous year, and the total profit, of course before deducting British income tax, is £758,013, or 10.31 per cent., against £840,317, or 11.42 per cent., last year.

Now that account is, in my judgment, having regard to all the difficult circumstances, not only a good account, but surprisingly good. If you knew all the inner workings as I do, you would, I think, be astonished that, in such times, and under such conditions, we have been able to do so well.

To say that 1929 has been a year of hard work would be a mere platitude. That goes without saying. But I do think that it has had its own special anxieties—not so much in actual events as in the causes for apprehension as regards the future.

THE WORLD SITUATION.

Permit me for a moment to invite your attention to the world situation. For you must always bear in mind that our results are not merely an epitome or reflex of the state of affairs in Great Britain, but of those throughout the wide world—our Dominions and Dependencies, and nearly every foreign country as well.

It happens that I have recently returned from another visit abroad—South Africa this time—where I found our affairs being well and conscientiously administered, but where it is necessary, at present, to proceed warily. South Africa, with all its natural productivity, is not immune from the universal economic and financial anxieties to which I am about to refer.

But such an absence has a dual advantage. It enables one to study not only the conditions of the country visited, but the conditions of our own country and the rest of the world. It is often only by going abroad that one can form a really detached and unprejudiced opinion of things at home.

To the City "crash" and the United States slump he attached no real significance in considering the world situation, the former demonstrating a period of undue optimism and speculation and the latter a natural sequence of over-production and of speculation in industrial stocks.

The simple fact was that the shadow of the war was still with us, and likely to be. Britain's paramount position as the greatest creditor nation had dramatically changed. As trade followed credit, so America displaced us from the position we held. Our total exports and imports, which in 1913 amounted to 15·24 per cent. of the world's trade, had fallen in 1928 to 13·13 per cent., whereas the corresponding figures for the United States showed an advance from 11·15 per cent. to 13·65 per cent. Even before the war our imports exceeded our actual exports, but this economic drawback had been emphasised much further since, the margin of imports over exports having risen from 20 per cent. in 1913 to 45 per cent. in 1929.

BRITAIN'S TRADE POSITION.

The difference was accounted for by invisible exports, of which part was due to shipping, banking and insurance—the three, and still great, pillars of what used to constitute our international supremacy. But if the business activities of this country continued to be hampered by the myopia of legislation, and if something was not done soon in the way of a reciprocal economic understanding with the Colonies and Dominions to enable the Empire as an entity to vie with outside competition, this valuable portion of our invisible exports must be a diminishing factor. The remainder of the invisible exports—income from overseas investments—represented the extent to which we were living on the fruits of past savings, and to have to live on one's fat was not a position anybody could regard without anxiety. As a nation of traders, therefore, we should not improve our position until we produced more of our internal requirements, thus importing less; and by greater productive capacity increased the volume of our real and visible exports.

Europe was impoverished and over-populated, with twenty million souls dependent upon the charity of either their Governments or of individuals. Even the United States was now in the same plight, having to tackle a grave unemployment problem. Coupled with this, a disastrous period of over-production and low prices had had its baleful effect throughout the whole of the world.

The troubles, therefore, were not only our own, but world-wide. They were affecting Australia and India—two great countries—upon which they as an insurance company relied for much revenue and profit. Australia had suffered by the fall in the price of wool, the adverse exchange, and by disturbances in the coal and timber trades. India had suffered not only through its internal unrest, but by depression and strikes in its great industries, jute and cotton. Their letters this week from India indicated a deplorable state of business stagnation.

HOME TRADE.

As regarded our home trade, 1929 seemed to indicate some definite, if unimportant, advance, placed by the Board of Trade at as much as 5 per cent., but 1930 did not support that improvement. If only our statesmen could realise that the country had reached a critical condition, when only drastic measures could save us from disintegration! We had got beyond the stage of expedients, and what it all narrowed down to was work—real, intense work, such as was evoked by the war, and which was just as necessary now in the testing period we are passing through.

The Budget simply cast a limelight upon the country's serious financial position and the pressing urgency of retrenchment and reform, but it was what brought the Budget about, and not the Budget itself, which occasioned the anxiety. On top of the heavy war debt was the prodigal expenditure on social services, which would surely react on those perpetrating this economic tragedy. Moreover, the country was manacled by an ironbound system restricting the hours of labour for skilled workers, while increasing benefits were conceded to those who did not work. How could we possibly expect to regain lost ground until there was a premium put on good work and a discount on malingering and mediocrity? (Hear, hear.)

INTENSIVE COMPETITION FOR INSURANCE BUSINESS.

This brief survey was obviously not inspiring, but would help to a realisation of the difficulties the company had been and was encountering. At home two factors had affected the fire results for the year, one, which was a passing incidence, being the heavier loss ratio. British fire losses in 1929 were estimated to have been £11,700,000, against £8,600,000 in 1928. The other factor was more important, the company having met special and intensified competition, due to depressed business, low prices, decreased values, and with a reduced demand for insurance, every company striving to avoid losing ground.

In the markets of the world it was difficult at present to see a field for expansion. Even the United States had called a halt in its development, and there also the growth of insurance organisations made business more difficult to secure. The result of their fire business in the States, a profit of over 7 per cent., was therefore good. It was hoped that the reductions in rates had been justified by the improvement in building construction and the lessening of what used to be regarded as the ever-present conflagration hazard.

On the accident side of the company's business the margin beyond losses and expenses was steadily diminishing, the rebates on workmen's compensation and other concessions, coupled with a heavier loss ratio, having had their combined effect. The quality of motor-car business also was deteriorating, great discrimination being required to produce a profit. He was apprehensive that some of the provisions of the Road Traffic Bill, and enforced contributions by injured motorists to hospitals where they were treated, would place additional burdens on insurance companies.

LIFE INSURANCE—SATISFACTORY YEAR FOR LAW UNION AND ROCK

Life insurance business, which the company transacted entirely through its ally, the Law Union and Rock, again had been very satisfactory. That company since 1919 had considerably developed its fire and accident business, but its high-class life business had also improved in volume, and the handsome 45s. compound bonus which again had been declared was a testimony to its quality. The Law Union and Rock had just closed a quinquennium, and the resulting profit to the London and Lancashire, which held all the shares, was £160,920, one-fifth of which would be credited in this and each of the succeeding four years.

Life insurance since the war had been more sought for, and perhaps more exploited by various schemes and suggestions than formerly, and the Law Union, having been alive to this, had correspondingly benefited. Whether the development was likely to continue was a moot question. It was obviously influenced by increased income-tax, which must reduce the interest earned, and was also affected by the Chancellor of the Exchequer's repression of single premium cases, which it might be difficult to replace by a corresponding volume of whole life business.

INTEREST AND DIVIDEND.

The net interest income for the year amounted to £527,412, which, with the £32,184 from the life department, almost provided for the dividend being paid of £561,818. Having nearly balanced interest and dividend, the directors decided to intimate a prospective increase of dividend for 1930 by 1s. per share, and the final dividend of 10s. now being paid would be supplemented by an interim dividend of like amount next November.

In addition to the usual transfer of £30,000 to the pension fund, £10,000 had been contributed to the new staff widows' fund, a mutually contributory scheme which he was glad to see. The concession naturally had been greatly welcomed by the staff, and he was convinced the company would also benefit by this important step in the consideration of the welfare of their employees.

COMPANY'S RESERVES.

Reference to the form of balance sheet required by the new Companies Act led to the Governor pointing out that the great bulk of the company's reserves were wrapped up in the holding of shares in allied or subsidiary companies, the whole of whose assets and liabilities were held by the London and Lancashire. The subsidiary companies numbered 26. Six, including the most significant, were in Great Britain, and every share of those was held by the London and Lancashire. Of the remaining twenty, every share was held except 63. As aptly described by one of his colleagues, they owned a great strong box containing 26 compartments, and held the key to them all.

The value of these subsidiary companies was £8,729,961, which was the break-up value, or the amount by which the assets exceeded the liabilities. The financial outcome of their acquisition had been consistently profitable, substantial dividends having been derived, while their remaining profits had been sufficient to wipe out all the provisions made for the cost of their respective goodwills. Their present value of £8,729,961 was actually £350,074 more than was originally paid for them.

RATIONALISATION.

In fusing so many companies in years gone by, the London and Lancashire, with other insurance companies, were really pioneers in the field of what was called rationalisation. Rather late in the day rationalisation has been resorted to as a remedy for British industrial ills, but it should not be regarded as the perfect panacea. Its value depended upon how it was employed. If by combination and amalgamation of scientific methods it sensibly increased the business of the country, especially in its export trade in competition with the ingenious activities of other countries paying less wages and working longer hours, then it would be a successful help in time of need. But if it only resulted in some diminution of expenses without increasing the trade of the country, and therefore of the output, then t might in some cases quite easily result in an actual increase in unemployment.

Rationalisation, as the London and Lancashire had undertaken it, had been both successful and profitable. By the utilisation of the best brain power and the elimination of waste they had, almost without exception, so improved the quality and so developed the volume of the businesses acquired that there had been no necessity to diminish the number of the staffs. Indeed, generally speaking, the staffs of allied companies were now considerably larger than when they came under the aegis of London and Lancashire control.

VALUES OF INVESTMENTS.

You may be further interested to know, the Governor continued, that the handsome margin of market values of our investments in excess of the book values continues—with some small modification, it is true—but the seven-figure inner reserve still exists. 1929, as you know, lost a good deal of the appreciation which 1928 had shown, but it only affected us to the extent of 3·36 per cent., and more than one-half of this, or, to be exact, 2 per cent., has been recovered during the four months of this year.

INCREASED PAID-UP CAPITAL.

I now come to the transaction which has in some quarters been euphemistically dubbed as our bonus to shareholders. I have no doubt you would have welcomed a real bonus, either of cash or shares, but for us it would not be good finance, and I do not wish you to be under any illusion.

The step taken simply means this : that whereas at present out of an issued capital of £3,639,310—that is to say, 727,862 shares of £5 each—there is £1 per share, or £727,862 paid up, we now propose, and a resolution will be moved at this meeting, to transfer from the balance carried forward a similar amount—namely, £727,862—which will then make the capital £1,455,724, or £2 per share paid up. (Hear, hear.)

This transaction is in sequence to what we did ten years ago, and perhaps in another ten years, if we are sufficiently prosperous, we may be justified in repeating the process. What amounts to little more than a book entry does not put any actual money into the pockets of any shareholder, but, by reducing the liability to the extent of a further £1 paid up, it should relieve the minds of any anxious shareholders, if there are any, as to the amount which they would be required to pay in the event of our going into liquidation.

After giving effect to this transfer, our various funds, exclusive of capital, will amount to £9,919,617, or 134·87 per cent. of our premium income.

THE OUTLOOK.

Reverting then to what I said at the commencement, I may briefly summarise the insurance outlook as follows :—

In the fire department we must look for restricted values and intensified competition.

In the accident department we cannot count upon any appreciable improvement in the two largest sections—motor-cars and workmen's compensation—and, therefore, we must contemplate a comparatively modest result.

In the marine department, the result last year having been so exceptional, and the losses to date in 1930 being already heavier, it would be the extremity of optimism to expect such a year as we have been able to record for 1929.

You may, therefore, anticipate for companies generally a period of diminished prosperity. But I still believe what I have always felt : that British insurance business continues to maintain its high standard and its prestige. There is an admirable cohesion and spirit of good will permeating the companies as a whole. There is the willingness and the desire to consider the requirements and even the idiosyncrasies of insured in regard to their particular risks, especially when they themselves happen to be struggling against the tide. And there is the encouragement accorded to employees, for I am satisfied that whatever concessions have been made have been justified and have proved a stimulus to continued good work.

So far as we are concerned, I have no apprehension. We are as sound as a bell. The "London and Lancashire" has weathered many a storm, and gone through many trials when we were less able to bear them. And, relying as we do upon the marked capacity and energy of our general manager, Mr. Hendry, of Mr. Rogers, his associates and the staff I am confident that, whatever the general experience may be, and whatever new difficulties have to be met, we shall retain the relatively high position which we have for so many years had the privilege to occupy in the insurance world.

Mr. Charles G. Hamilton (the deputy-chairman) seconded the motion, which, on being put to the meeting, was carried unanimously.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE.
FAVOURABLE RESULTS FOR 1929.
BONUS YEAR—RECORD NEW BUSINESS.

The annual meeting of the Friends' Provident and Century Life Office was held, on the 7th instant, at the Holborn Restaurant, London, Mr Harold J. Morland, M.A., F.C.A. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said :—Although the year 1929 saw important changes in the political world and ended with a serious fall in the prices of Stock Exchange securities, our office was able to surmount the adverse conditions without real difficulty, and experienced on the whole a favourable year.

You have in your hands not only the directors' report on the transactions of the year, but also very full particulars of the quinquennial valuation, which has enabled the actuary to recommend a bonus which is a cause of gratification, I am sure, to all the members of the office. It appears, therefore, to be a suitable opportunity for briefly reviewing our position and considering the progress which we have made during the past five years, 1925-1929, as well as during the particular year to which the accounts refer—namely, 1929.

NEW LIFE ASSURANCES.

The sums assured on policies issued during the quinquennium, after deducting reassurances, totalled £7,151,000, nearly £1,000,000 more than the total for the previous five years. The "bonus year," 1929, produced a record new business of £1,645,844, about £262,000 more than in 1924, which was the last "bonus year." It is gratifying to note that the proportion effected under whole life was appreciably larger than under endowment assurance tables. Although without-profit rates of premium have never before been so low, nevertheless another important trend is in favour of the assurance entitled to participate in profits.

MORTALITY.

The profit from favourable morality in the quinquennium was about £337,000. During 1929 the amount of claims was 74 per cent. of the expectation, as compared with an average of 61 per cent. for 1925-29 and 61 per cent. also for 1920-24.

REVENUE ACCOUNTS.

The premium income of the valuation period has been affected by fluctuations in the amounts of single premiums received from year to year. If this disturbing factor be excluded, the remaining recurrent premium income for 1929 was £513,000, an increase of £93,000 as compared with 1924. The life and annuity fund advanced equally satisfactorily. If the sum of £380,000 refunded to the Century at the end of 1926 as consideration for cancelment of reassurances be taken into account, the total advance in the life and annuity fund was £1,946,000, of which the record increase of £436,000 took place during 1929.

The average rate for the five years was £5 2s. per cent., clear of income tax, while the rate for 1929 was £5 4s. per cent., as compared with £4 19s. per cent. for 1925, the first year of the quinquennium, and with £4 14s. 5d. per cent. for 1924.

CENTURY ACCOUNTS.

The premium income for the year 1929 in the general departments of the Century advanced by £52,430 and amounted to £736,640. The fire and accident accounts each secured a modest profit, notwithstanding the special adverse circumstances of the year, but it was necessary to strengthen the marine fund by the transfer thereto of the sum of £15,000. On balance the operations of these three departments resulted in a loss of £2,480.

CENTURY INSURANCE TRUST, LTD.

During the year the Century board decided to transfer the investments in subsidiary insurance companies at cost to a trust company formed for the purpose. The Century Insurance Trust, Ltd., was accordingly established with a paid-up capital of £300,000, divided into 150,000 six per cent. cumulative preference shares of £1 each (possessing also certain participating rights after the ordinary shares have received 8 per cent.), and 150,000 ordinary shares of £1 each. For its first financial period of about seven months the trust has paid dividends at the rate of 6 per cent. per annum on the preference and 8 per cent. on the ordinary capital.

As regards the Century itself, after crediting interest received not attributable to other accounts, and paying the usual 12 per cent. dividend on the paid-up capital, £13,805 was added to the balance carried forward in the profit and loss account, making it up to £103,546.

The Century funds, including paid-up capital, amounted at the close of 1929 to £3,301,090, an increase of £55,417 in the year.

FRIENDS' PROVIDENT BALANCE SHEET.

As stated in the annual report, the assets of the Friends' Provident have been reviewed by a committee of the directors specially appointed for the purpose.

The depreciation on the year was the moderate proportion of about 2 per cent. of the fund, and was covered by internal reserves.

QUINQUENNIAL VALUATION RESULTS.

The bases employed for the valuation of the life assurance and annuity contracts have been similar to those employed on the occasion of the 1924 valuation. It has been gratifying to ascertain, as a result of the valuation, that there was a record surplus of £650,935, after having provided intermediate bonuses of £56,019 to policyholders during the five years. It has been decided to carry forward £30,328 to the current valuation period and to utilise the sum of £620,607 in providing bonuses for the members on a scale unequalled since the new series of with-profit assurances was instituted in 1902.

The bonus applicable to particular policies varied from £2 2s. to £6 per cent. per annum, calculated on the original sum assured.

FUTURE VALUATION—INTERIM BONUS.

The one hundredth anniversary of the establishment of the Friends' Provident Institution (which was the title by which this office was known until 1920) will be celebrated during 1932. By arranging for the next valuation to take place at the close of the centenary year the office naturally passes on to a system of triennial profit distributions, which appears to accord with a popular desire of the present day. In practice the members already have the benefit of annual distributions, because in the event of policies maturing or being surrendered they will be given the benefit of an interim bonus at the full ordinary rate just declared, viz., £2 2s. per cent. per annum compound. The directors reserve the right to vary the rate of interim bonus during the three-year period should they find it desirable to do so. The similar reservation made five years ago was made use of by the directors to increase the interim rate even beyond the full rate allotted at the 1924 division.

BUDGET PROVISIONS.

Three weeks ago the Chancellor of the Exchequer increased the standard rate of income tax from 4s. to 4s. 6d. in the pound, a change which will have an appreciable adverse effect upon the income of all life offices, and, therefore, upon bonus prospects.

Another feature of the new Budget is the proposal to disallow for the purpose of surtax returns interest payable on certain loans against life or sinking-fund policies. This office had issued a few assurances on these lines, mainly for the whole of life or for a term of years, thus providing valuable cover for dependents or for death duties. We invariably declined to issue contracts having little or no life assurance cover.

WHOLE-LIFE ASSURANCE AND RESPONSIBILITY TO DEPENDENTS.

I am afraid that in this country we are not quite so advanced in our conception of the primary reasons for life assurance as is the case in the United States of America and some of our Dominions. In the countries where life assurance is most utilised I believe the assurer obtains little benefit by way of saving of taxation, but effects life assurance because he is trained to realise his responsibilities to his dependents. Whole-life assurance is the type of cover principally in demand because it is realised that it is only by its means that sufficient protection can be secured for the family with the amount normally available (even with some measure of self-sacrifice) for the purpose. I do not wish to suggest that the longer-term endowment assurances fill otherwise than a useful place, as they are a safe and lucrative means of providing for the later years of life, and afford substantial cover in the meantime, while shorter-term endowment assurances are quite suitable for persons of middle age who wish to make good in part the decrease in their incomes which will follow retirement from business activities. For young people with new responsibilities of wife and family, it is clear that whole-life assurance is the appropriate form, while even in later life a large proportion of one's assurances should be whole-life rather than endowment assurance. It is pleasing to me to find that in our own office whole-life assurance is in the ascendant—and 1929 was no exception in this respect.

TRIBUTE TO STAFF.

I should be doing less than my duty if I did not, before closing, direct your attention to the services rendered by the whole of our staff at our two head offices and our various branches. I believe that throughout all grades there is the determination to do their very best for the office, and you will, I know, cordially approve the action of the directors in distributing a general bonus for the five years proportioned to that which you have yourselves received.

The resolution was seconded by Mr Robert H. Marsh, the deputy-chairman, and carried.

THE LONDON ASSURANCE.
IMPROVED VALUE OF INVESTMENTS.
FAVOURABLE OUTLOOK.

The annual general court of the London Assurance was held, on the 7th instant, at 1 King William Street, London, Mr Colin F. Campbell (the Governor) presiding.

The Governor, in moving the adoption of the report and accounts, said: The life department has again made substantial progress and has done very well. The fund has increased by £394,000, and the total increase during th last three years has amounted to no less than £1,175,000. The premium income was about the same as in 1928, and the rate of interest earned was £5 9s. 3d. per cent., against £5 9s. 8d. per cent. in the previous year. There was no great change in the expenses of management or commission paid, but with a steadily expanding business a slight increase is inevitable. The mortality experience was again well below that anticipated from the tables, the number of deaths being 72 per cent. of that expected. In 1928 it was only 63 per cent., but it was not probable that so low a figure would be repeated in 1929. During the year we reduced the rates for deferred assurance for children, and this has led to a considerable increase in new sums assured in this section. We have also started a house purchase scheme, which seems to meet a public need.

The investments held by the life department continue to be of high class, as in past years, and I am glad to say that, notwithstanding the fall in prices that occurred towards the end of 1929, the usual valuation taken at December 31st last revealed a substantial surplus on the book values.

We are now in the last year of the quinquennium, and I can only repeat what I said a year ago, that the prospects for a favourable result are very encouraging.

FIRE DEPARTMENT.

The fire account is not up to the average and is in fact rather a disappointing one. The figures in the statement in your hands are not comparable with those of previous years, because they represent the business transacted by the "London" only, and do not include the operations of our allied companies. The profit realised including interest amounting to £67,407, was £85,292, and the fire fund of £1,300,000 represents 94·1 per cent. of the premium income. We have transferred £135,831 to profit and loss account.

The general experience of the fire offices was less favourable than in 1928. The aggregate losses for the United Kingdom are estimated to be at least three and a quarter millions sterling in excess of the total for 1928. We had no severe individual loss, but our home loss ratio is higher than for several years past.

The general foreign field was also rather disappointing, the losses on both direct and treaty business being considerably in excess of normal percentages.

Last year I referred to the unsatisfactory conditions of fire business in the United States. We had the expectation of a fair profit there up to the end of October, but, as a sequel to severe weather in the closing weeks of the year, our figures were adversely affected to the extent of £25,000. There has been some lessening in the volume of fire wastage, but commission and other expenses continue to rise. Competition has been intense, and so continues; during the past two years no less than 70 new companies have undertaken fire business. The insurance Press of America has had numerous references to the usefulness of gains on investments as an offset to poor trading results, but recent events may have somewhat curtailed that form of recoupment, and may lead to greater attention being given to actual underwriting in future.

MARINE BUSINESS.

Turning to the marine account, I am happy to be able to report that the improvement I ventured to foreshadow when addressing you a year ago has taken place. The marine fund, which stands at £838,802, represents 91·8 per cent. of the premium, whereas in the preceding account the reserve shown was 87·6 per cent. This result has been arrived at after making a transfer of £80,000 to the marine account of our affiliated company, the British Law. The latter company undertakes certain business for which we are responsible, and it is in this connection that we have thought it prudent to strengthen their account by this transfer, although I would add that the business thus underwritten has been reduced considerably during the last two years, and will probably continue to diminish in volume.

Our 1928 account, which has now been closed, came out almost square, and would have shown a profit but for some losses attributable to previous years. This, I need hardly say, is in sharp contrast with the results for 1926 and 1927.

With regard to the 1929 account, it is always dangerous to prophesy, but, so far as it has gone, it shows a slight improvement over 1928.

When making a general survey of the conditions of the marine insurance market, it is impossible not to be disappointed at the slow progress made in the direction of raising rates of premium; increases have been secured here and there, but competition remains as keen as ever. The closer co-operation that now exists between those interested in marine insurance business has already begun to make its influence felt, and this will no doubt increase as time goes on, but I am fully convinced that a profit is to be looked for from the more careful selection of risks and the elimination of certain classes of business on the part of our own underwriter, which is a policy that he has been following for the last three years.

ACCIDENT ACCOUNT.

The accident account, though set out under three separate headings, can really be considered as one. Our desire is to develop and increase this side of our business, and, with this object in view, we have established in recent years connections in the Dominions, Colonies and in several foreign countries. Unfortunately, last year some of these accounts were unprofitable, mainly due to losses sustained on reinsurance contracts and to heavy claims under motor-car policies. We have therefore transferred £25,803 from profit and loss to strengthen the general accident account.

Our home account, on the other hand, showed an increased premium income and a satisfactory loss ratio.

It would be foolish to be discouraged in our policy of development because of one small setback in the foreign field, and we shall therefore continue in the confident expectation of a favourable balance as a result of this year's operations.

The motor insurance business continues to expand, but the claims experience for light cars is still too high.

YEAR'S RESULTS.

The interest received, apart from that credited to the different departments, amounts to £131,284, which is a satisfactory increase of £10,000 over that of last year, and the total interest receipts show a margin of £27,000 beyond the sum required for the payment of the dividends, as against £23,000 a year ago.

The balance sheet calls for no special comment beyond noting that the total of £11,775,000 shows a decrease of £330,000 as compared with a year ago. This is due to the elimination of the figures of two of our subsidiary companies, so that, had the accounts been prepared in precisely the same manner as in previous years, it would have been seen that our total assets had increased by over £300,000 to nearly 12¼ million pounds.

The report was unanimously adopted, and a final dividend of 5s. 10d. per share, less income tax, was declared.

SCOTTISH UNION AND NATIONAL INSURANCE COMPANY.
RECORD NEW LIFE BUSINESS.
TOTAL ASSETS OVER 15¼ MILLIONS.

Mr T. M. Murray, W.S., chairman, presided at the 105th annual general meeting of the shareholders of the Scottish Union and National Insurance Company, held at Edinburgh, on May 7, 1930. In moving the adoption of the report and accounts for the year 1929, he referred to the continued expansion of the company.

Notwithstanding the adverse industrial conditions, a fresh record falls to be registered in the amount of new life business transacted, which reached a total of £2,085,000, as against the previous record of £2,025,800 in 1928. The claims by death, amounting to £545,630, are up by £165,000. The endowment assurance maturing, and amounting to £265,000, are practically the same as in 1928.

FIRE INSURANCE ACCOUNT.

In the fire insurance account, the premium income reveals an increase of over £11,500, and, having regard to the tremendous competition in these days, this result is satisfactory. Losses, including fire brigade charges, show an increase of some £62,000. Commission and expenses combined are just about the same figure as in the previous year's account. Notwithstanding the heavier losses referred to, the amount—£181,000—now transferred to profit and loss account is the fourth largest sum transferred from the fire account in any one year.

ACCIDENT, EMPLOYERS' LIABILITY AND MISCELLANEOUS ACCOUNTS.

Taking the accident, employers' liability and miscellaneous accounts together, the premiums total £245,000, and show an increase over the previous year of £18,000. The profits realised and transferred to the profit and loss account amount to £19,600, which shows a decrease of some £5,000 on the profits realised in 1928.

In the marine account a sum of £15,000 is transferred to profit and loss account, being a similar transfer to that made the previous year.

The profits realised from the various accounts, excluding life, and transferred to profit and loss account, exceed the substantial sum of £215,000.

FIRE INSURANCE FUND.

Last year the chairman referred to the advisability of building up the fire insurance fund, and it is proposed to continue this policy by transferring a further £50,000 to the special reserve in the fire insurance account, bringing that special reserve up to £750,000, the fund now being fully 106 per cent. of the year's income in the fire account.

The carry forward of £541,400 is practically the same as the previous year.

THE DIVIDEND.

During 1929 £156,000 was paid in dividend, but this year, with the alteration in the income tax to 4s. 6d. in the £, the dividend, payable at the same rate, will only require £151,125, and to meet this there are net interests in 1929 of £155,664. It is interesting to note that had the 1929 interests been subject to income tax at 4s. 6d. in the £ the total net interests would still have been in excess of the dividend payment by fully £700.

TOTAL ASSETS—LARGE INCREASE.

The total assets of the company now amount to more than fifteen and a half million pounds, the increase during 1929 amounting to no less than £447,000. The assets during the last five years have increased by over two and a quarter million pounds.

Notwithstanding the general fall in prices towards the end of 1929, accentuated as it was by the Hatry sensation and by the American debacle, the assets suffered depreciation as at December 31, 1929, of only about 3 per cent. as compared with the values at December 31, 1928, and a valuation of the Stock Exchange securities as at December 31st last shows a substantial excess over the figures at which they stand in the balance sheet.

EAGLE STAR AND BRITISH DOMINIONS INSURANCE COMPANY, LIMITED.

SOLID PROGRESS.

Presiding at the general meeting of the Eagle Star and British Dominions Insurance Company, Ltd., held on the 2nd instant, Sir Edward Mountain, Bart., J.P. (chairman), in moving the adoption of the report and accounts, said that the life department had again shown a remarkable expansion and development. New policies, numbering 3,348, were issued for sums assured of £2,661,225 gross, of which £2,613,125 were retained. Their premium income continued to expand, the new premiums being more than sufficient to make good the wastage which was necessarily experienced in their closed funds. The rate of interest earned on the whole of their life funds, after deduction of income tax, was £4 15s. 3d. per cent.

FIRE DEPARTMENT.

The premiums in the fire department were £986,324, against £979,382 in the preceding year. A falling off of business occurred in the United States, which was more than offset by developments elsewhere, and it was particularly satisfactory that their home fire business showed an increase notwithstanding the unsatisfactory trade position. The underwriting profit for the year amounted to £36,169, or 3.66 per cent., which, under the circumstances, was quite satisfactory. They had transferred another £25,000 to the additional reserve fund created in this department, bringing it up to £75,000.

ACCIDENT DEPARTMENT.

The ordinary premiums in the accident department amounted to £72,127, and the special premiums to £83,769. A sum of £36,469 had been transferred to profit and loss account.

In the general insurance department the premiums amounted to £1,228,520, and the claims to £619,320. From this department they were able to transfer to profit and loss account the sum of £42,196.

MARINE DEPARTMENT.

The premiums for the year in the marine department, less reinsurances and commissions, amounted to £638,814, while claims were £643,130. The marine fund carry-forward was £532,447, which represented 83.3 per cent. of the premium income, as against 79.3 per cent. last year. In addition they had set up a further reserve fund of £25,000. Business generally in the marine market continued to be in an unsatisfactory state.

PROFIT AND LOSS ACCOUNT.

They would see from the profit and loss account that interest from investments last year amounted to £146,682, and, adding to this an item of interest of £707 in the employers' liability account, they got a total net interest income of £147,389, which was only £380 less than the net cost of the dividend on all classes of their shares. They had written £11,000 off the office equipment account and £15,000 off the house property account. Moreover they had transferred £35,000 to investment fluctuation account, £25,000 to the additional fire reserve account, and £25,000 to the additional marine reserve account, while the balance carried forward was slightly larger than last year.

Their premium income for the year in the fire and general department had increased by £108,501, while the total assets of the company and subsidiaries now amounted to £22,341,064.

In conclusion, the chairman added that the present year had opened favourably and he thought that they could look forward with great confidence to the future expansion and profits of the company.

The report and accounts were unanimously adopted and the proceedings closed with a vote of thanks to the chairman, directors and staff.

SPILLERS, LIMITED.

GRAIN MARKET DIFFICULTIES.

ACTION OF THE CANADIAN WHEAT POOL.

"IDEA OF BRITISH MILLERS' BOYCOTT UNTRUE."

MR. EDGAR BAKER'S REVIEW OF THE POSITION.

Mr E. A. V. Baker, presiding at the forty-third annual general meeting of Spillers, Ltd., at Cardiff, on the 3rd instant, said that the result of the trading year had necessitated the transfer of £150,000 from the contingent reserves and suspense account. The contingencies against which parts of this reserve had been held had disappeared, and the balance remaining in that account was sufficient to meet the company's requirements.

The general and specific reserves had been utilised to the extent of £1,077,568 for the purpose of providing for depreciation for the year under review, obsolescence, loss on sale of surplus properties, expenditure in connection with the milling trade rationalisation scheme and to reduce the value of the present properties to well below replacement value. The account drawn upon was a figure of £2,277,567, the excess value of assets of associated companies, which were liquidated in 1927.

Owing to the liquidation of Spillers Overseas Industries, Ltd., which circumstances had rendered it unnecesary to continue in being, there was a large reduction in the amount due to subsidiary companies and a correspondingly large reduction in investments in and amounts due from those companies.

INVESTMENT DEPRECIATION RECOUPED.

The shrinkage in stocks and values during the year largely accounted for the increase in the investments and loans, which had gone up by £180,000. Of the total trading loss of £221,510 upwards of £40,000 represented depreciation on British Government and other securities held by the company, which had by now been practically made good by the upward course of the stock markets in the last few months.

The fluctuations in the wheat market during the past year had been violent, and the position had been rendered more difficult by the action of the Canadian Wheat Pool in withholding supplies notwithstanding the demand from importing countries. The idea in Canada that British millers were boycotting Canadian wheat was untrue, but, owing to competition in the milling industry, British millers had to buy in the cheapest market available.

The grain side of the business was the principal cause of the unsatisfactory results of the year. Similar losses had been suffered by the grain traders throughout the country, and the year 1929 would stand out as one of the most phenomenal and disastrous years ever experienced in that trade.

EFFECT OF BOUNTY-FED COMPETITION.

The price of raw grain had fallen by as much as 40 per cent., largely owing to the bountiful European crops of 1929 and the export to the United Kingdom of large quantities of wheat, oats and other grain under bounties paid by the countries of origin.

German oats, comparable with the best oats grown in this country, had been sold at prices to which there was no parallel since 1894, and, although the farmers were the principal sufferers, all those who had to carry stocks of grain had lost heavily.

Other factors contributing to the difficult position in this trade were the arbitrary and unforeseen export by Russia to this country of barley at prices as much as 10s. below the ruling values; the heavy drop in freights between the beginning and end of the company's last financial year amounting some cases to nearly 50 per cent.; and the financial crash on Wall Street in the autumn, which had serious effect on the purchasing power of many European countries.

THE SUGGESTED COMPULSORY QUOTA OF BRITISH WHEAT.

The intention expressed by the British Government of compelling millers to use a fixed quota of British wheat could not be implemented unless some serious practical difficulties were overcome, particularly the ensuring to British millers of an adequate and regular supply of suitable British wheat, and the provision of safeguards to ensure that overseas millers should not be enabled to compete with British millers on even more favourable terms than they could at present.

In regard to the flour milling, the establishment of the Millers' Mutual Association had had the effect of making the outlook more favourable than it had been for many years past. The rationalisation scheme did not indicate an attack on consumers, but was concerned with the shutting down of redundant mills and aimed at reducing costs in that way and by its corollary—viz., delivery within economic distances of the mills. There was no reason why the consumer should pay any more for millers' products as a result of the scheme. The effect on the company's business of the formation of the association, which only took place in the autumn, had, of course, not been felt materially during the past year.

FUTURE POLICY AND PROPOSED DIRECTORATE CHANGES.

The board were giving grave consideration to the policy to be adopted in view of the bad results of the last year's trading, but would not be stampeded into panic legislation. They had curtailed operations in grain in the autumn, and were continuing to do so. Their ultimate object was gradually to concentrate on the manufacturing side of the grain business rather than dealing in raw grain.

It was, further, the intention of the board to take into consultation some of the largest shareholders and others, with a view to placing before the shareholders at an adjourned meeting proposals for an alteration in the personnel of the board. At another meeting certain revisions in the company's articles of association, rendered necessary by the new Companies' Act, would be dealt with.

The Chairman concluded by expressing the thanks of the directors and shareholders to the staff for their work during the year.

The report and accounts were adopted and the retiring directors and auditors re-elected.

EQUITABLE LIFE ASSURANCE SOCIETY.

ANOTHER YEAR OF PROGRESS.

The 168th annual general meeting of the Equitable Life Assurance Society was held, on the 7th instant, at 19 Coleman Street, London, Sir Evan Spicer (the president) presiding.

The President, in moving the adoption of the report and accounts, said that the new business for 1929 was remarkable in some ways. The new sums assured were less by a trifling amount than in 1928, but the new premium revenue of £55,000 showed a substantial increase over the corresponding figure of £42,000. The explanation was that during 1929 new pension schemes were arranged with the society by various employers, and the development of this kind of business provided the society with new connections and with a permanent premium income. Their net rate of interest last year was £4 15s. 6d., which was 2s. higher than in the previous year. This was explained because they had included the profit on reversions which had fallen in during the year. The mortality for 1929 was light, and the amount appearing in the accounts for claims by death showed a decrease of £130,000.

Owing to the wonderful results shown for whole-life policies, where on the average they paid more than twice the sum assured, there was a temptation to ignore the results of the endowment assurances. The table at the end of the report showed that they ought to be as proud of their endowment assurances as of their whole-life policies.

The funds of the society had increased during the year by over £350,000, and there was a substantial margin between the book value of the assets and the market-value as at December 31st last.

Their subsidiary companies continued to make excellent progress. The reversionary societies had proved to be a most profitable investment, and the University Life Office had recently declared, for a broken period of four years and eight months, the same bonus as was declared in the previous five years, the bonus being far in excess of that guaranteed to the policyholders by the shareholders.

In regard to new business, about 62 per cent. of the new sums assured had been obtained without an immediate right to share in profits, and the pension or deferred annuity and the sinking fund business also took no share in profits. Their rates of premium for non-participating policies were the lowest rates published, and they were able to offer these terms because they spent so little in obtaining new business.

Mr H. L. M. Tritton seconded the resolution, which was carried unanimously.

GREAT WESTERN OF BRAZIL RAILWAY COMPANY, LIMITED.

IMPROVED POSITION—RESUMPTION OF ORDINARY DIVIDEND.

The ordinary general meeting of the Great Western of Brazil Railway Company, Ltd., was held, on the 7th instant, at River Plate House, Finsbury Circus, London, Mr Follett Holt, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said: The total ton-miles handled by the railway was the greatest in our long history, and the financial and operating results obtained serve to reflect the sustained and successful efforts of our colleague, Mr Gudin, and of our general manager, Dr Assis Ribeiro, to place our affairs in Brazil once again into good order. We were favoured during the past year with a substantial sugar crop, upon which so much of the prosperity of our zone depends, and this helped largely to make amends for the depressing commercial situation which obtained not only in Brazil, but in all parts of the world.

The actual sterling balance obtained as the result of operating the railway is slightly in excess of our record year, 1913. In that year exchange was at 16d., and last year, with exchange at under 6d., we were called upon to handle approximately 40 per cent. more traffic for the same result. The situations we have had to face during the intervening years have been most difficult, and we can only hope that the improved conditions under which we are now working will afford a safeguard to your capital and provide a fair remuneration upon it during the remainder of the lease.

ALLOCATIONS.

As our lease expires in 30 years, when the railway reverts to the Brazilian Government, it is necessary to provide for the redemption, during this period, of the capital involved in the undertaking. You will see from the accounts before you that the sum of £72,149 has been allocated from the revenue of the year as the corresponding quota for this purpose. After meeting this charge and debenture interest we are able to recommend to you the payment of the full interest on the preferred shares, and a 3 per cent. dividend on the ordinary shares—the first that has been paid, as you too well know, for 16 years. It was necessary to place £20,000 to a reserve for contingencies and to increase the carry-forward in order to be covered against the settlement of claims and counterclaims in Brazil. When we have been working for some time longer under the new regime we shall, I hope, at the end of each year know more definitely our position, but in the meantime we must go warily and be prepared for difficulties should they arise.

In common with railways in practically every part of the world we have met with competition, from road transport, and although we are still faced with this competition, we have by the adjustment of rates regained a considerable proportion of traffic which left the railway when the full effect of the increased tariffs was first felt during the earlier months of the year. Experience is being gained in many directions as to the use and abuse of roads in relation to railroads; the subject is being watched carefully, and it is possible that we may in the north of Brazil find it advisable to establish road services as an auxiliary to the railway.

CORDIAL RELATIONS WITH BRAZILIAN AUTHORITIES.

Our relations with both Federal and State authorities in Brazil, I am happy to say, have been most cordial throughout the year. It is a matter for satisfaction to all concerned in the welfare of Brazil that the recent Presidential elections were carried through with no more disturbance to public business than we are accustomed to in our own country. We who have been so closely allied with Brazilian affairs for now over half a century are watching with the greatest sympathy the great efforts that are being made to handle the national resources to the best advantage. The country has immense potentialities and latent wealth, and offers to the statesman and economist a field as wide and as fruitful for good work as is to be found in any part of the world.

During the last two or three months we have had some decline in our receipts, mainly due to the last cane crop having been an early one, leaving less sugar to come down to the ports in these months. The last cable advice from the general manager tells us that the next crop may be slightly inferior to the last. He also reminds us that the improvement of general trade in our zone depends largely on the price of sugar, and gives us the satisfactory news that arrangements are being made to export half a million bags now with the object of stabilising local prices during the next season. At this period, however, the extent of the crop can only be gauged by the area planted and the present condition of the young cane. It is therefore too early to predict with any safety the volume of sugar that will be realised when cane cutting commences in August next. We can only believe and hope that when we meet you next year we shall have no sorry tale to unfold to you.

Mr H. C. Allen seconded the resolution, which was carried.

THE UNION BANK OF SCOTLAND, LIMITED.

CENTENARY YEAR.

The Duke of Atholl, presiding at the centenary meeting of shareholders, held in Glasgow, on the 7th instant, referred to the progress and prosperity that had marked the hundred years. He said that all along it had been the endeavour of the management to conduct the institution on sound banking principles and that shareholders had every reason to be proud of the position now attained. To mark the centenary it was proposed to issue a new class of shares with no uncalled liability, partly as bonus shares and partly on bonus terms. It was also fitting that a handsome bonus to the present staff and retired officers had been paid.

A year ago it was possible to report a slight improvement in trade generally with considerable hopes that this might continue. Unfortunately, a falling off had been witnessed and there were, meantime, few redeeming features. Contributory factors included the General Election, the orgy of speculation, particularly in the United States, with the inevitable smash in October, and a world-wide fall in commodity prices.

Reports from all over Scotland mentioned the plight of the arable farmer notwithstanding, and, perhaps, partly due to, fine weather and excellent crops of potatoes and cereals. In the case of oats, steps should be taken to deal with the dumping here of subsidised foreign grain. Further conversion of arable land to grass appeared inevitable, with resultant unemployment and falling off of food production, both to be deplored from a national point of view.

The output of the iron and steel trades had been well maintained, but it was to be deplored that, when the industry looked to be turning the corner, coal mining should once more have become the plaything of politicians, thus rendering the attraction of fresh capital necessary for development more difficult than ever. Shipbuilding had a satisfactory output, but prices continued on a basis showing little profit. Freights were low and there was an excess of tramp tonnage for existing world trade. The outlook was not good.

Financially, the year had not been easy with its eight changes in Bank rate, which, at 3 per cent., is under average, but it was a tribute to the management of the Bank that its figures were well maintained and that the year had been so satisfactory.

The Duke concluded on a note of warning, pointing out that the country was spending more on social services than it could afford. Direct taxation on a small section when carried to excess must eventually harm the whole community. If death duty rates continue at present level there would, twenty years hence, be few large fortunes remaining, which, in turn, meant reduction of potential payers of income and surtax and of the suppliers of capital for industry. It seemed clear this country was living beyond its means, and this could have only one ending.

BALANCE-SHEET FIGURES.

Sir Ludovic J. Grant, Bart., in moving the adoption of the report and accounts, referred to the increase in deposits which, at 28¼ million pounds, shows an improvement of almost one million on the 1929 figures; deposits, of course, included the Bank's considerable inner reserves. There was every reason to be satisfied with the progress of the small deposit accounts movement; customers, large and small, receive the same courteous treatment. Reserves and carry-forward were £1,685,000, much in excess of paid-up capital of £1,000,000. Investments totalled 9¾ millions; not only was market value very appreciably greater than this figure, but the surplus valuation was actually greater than at April 2, 1929. Advances again showed a record, being 1½ millions higher than a year ago, evidence of the Bank's policy of lending freely to assist industry.

Declared profits at £339,000 showed a small increase of £3,000 after full provision for contingencies and bad and doubtful debts, which, for the year under review, were of modest dimensions and actually under average. The Bank was not affected directly or indirectly by, or interested in, the recent notorious financial scandals. The rate of dividend, again 18 per cent., was a modest return on the real capital employed.

Sir Ludovic, in paying an eloquent tribute to the services of the staff and management, pointed out that the bank's prosperity during its long history had never been a matter of luck or chance, but that it was directly due to the industry, loyalty and zeal of the staff and the wisdom and enterprise of the management. He referred to the high qualifications of the seven general managers who had held office, and made particular mention of the eminent services rendered to the bank by James Anderson, the first, and Norman Hird, the present general manager.

At a subsequent extraordinary general meeting the proposals for increasing the bank's capital by £200,000 were approved.

LONDON ASIATIC RUBBER AND PRODUCE COMPANY, LIMITED.

INCREASED PROFIT—LOW RECORD PRODUCTION COST.

The twenty-second ordinary general meeting of the London Asiatic Rubber and Produce Company, Ltd., was held, on the 5th instant, in the Council Room of the Rubber Growers' Association (Incorporated), 2, 3 and 4, Idol Lane, London, Mr H. J. Welch (the chairman) presiding.

Mr J. O'May, representing the secretaries (Messrs Harrisons and Crosfield, Ltd.), having read the auditors' report,

The Chairman said:—Gentlemen,—The annual accounts show practically no changes during the year in our issued capital or reserves. The amount of £17,598 has been spent on the upkeep of immature rubber and on new planting; £1,422 upon the purchase of good new land adjoining two of our existing estates, and £6,571 on new buildings and machinery. Under the latter heading, however, depreciation calculated on a generous basis and amounting to £7,400 has been written off from profits, so that the net increase in our capital expenditure is £18,191.

NET COST PER PLANTED ACRE.

The net balance-sheet cost per acre of our planted area, ascertained by deducting the excess of liquid assets over liabilities from the issued capital, and allowing for the dividend and all other appropriations now recommended, is still under £27 per acre.

Throughout the year which has just closed the estates were on full production (on the moderate system of tapping which we employ), the restriction of output having gradually come to an end during 1928. The crop produced, of over 4,900,000 lbs., exceeded that of the previous year by over 1,250,000 lbs. It equalled 500 lbs. per acre tapped, and 464 lbs. per acre of the total mature areas, part of which were being rested in accordance with our conservative agricultural programme. Owing to the larger crop harvested the cost of production per lb. was further reduced, and like the previous year, achieved another low record of cost in the history of this company. This was achieved by the lightening of fixed charges consequent upon the increased yields, and by the further success of our managers in aiming at the utmost economy in working, subject to the full provision of all requirements for the welfare of the properties.

The latter qualifying cause is, in the minds of the directors, of the first importance; this company owns large areas of rubber giving very fine yields, which we believe are largely due to adequate cultivation in past years, and it is still our policy to assist the trees by cultivation and periodical resting, to attain the maximum development and producing capacity of which they are capable.

CONDITION OF THE ESTATES.

During the year under review further improvement works have again been approved by the board on a considerable scale, and we have no doubt that the results of this work will be as satisfactory as those we see in our statistics of yield and in the reports we receive of the splendid growth of our immature areas. The visiting agent's reports show that the company's estates are all in thoroughly good order and well and efficiently managed. Labour has been adequate throughout the year, and health conditions satisfactory on all the properties.

The immature areas amount to 2,645 acres, out of the total of 13,217 acres planted at December 31st last. They include 277 acres which were planted during the past year, all with the finest selected seed obtainable, and most of which will have alternate trees budgrafted this year, when the appropriate stage of growth is reached. For the current year we have planned extensions on a somewhat larger scale, totalling about 600 acres.

The crop which we expect to produce during the year is about 4,500,000 lbs., after allowing for the agreed cessation of tapping throughout the present month. The extent of the support accorded to the scheme for cessation of tapping in May, by both British and Dutch producers and companies domiciled in the East and also by Asiatic owners of rubber estates, is a most hopeful feature. Had we, however, been harvesting an unrestricted crop we had estimated to produce it at even a lower cost than last year, which, as I have said, was already the lowest recorded by this company. I do not propose now to discuss the general position of the rubber industry, as I shall do so fully on the occasion of the annual meeting of the Rubber Plantations Investment Trust on Thursday of this week.

The net profit on the year's working, £69,884, was decidedly better than that shown for the previous year, which was £53,951. From these profits we recommend the payment of a final dividend of 10 per cent., making a total of 15 per cent. for the year. We shall then carry forward £97,000, as against £95,600 last year.

After paying a tribute to agents and staffs the chairman concluded by moving the adoption of the report and accounts.

Mr Mence Wilkinson seconded the resolution, which was carried unanimously.

THE RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED.

THE TEA AND RUBBER INDUSTRIES.

MR WELCH ON THE OUTLOOK.

The twenty-first ordinary general meeting of the Rubber Plantations Investment Trust, Ltd., was held, on the 8th instant, at the Cannon Street Hotel, London, E.C., Mr H. J. Welch (the Chairman) presiding.

Mr E. J. Johnson, F.C.I.S., representing the Secretaries (Messrs Harrisons and Crosfield, Ltd.), read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: The outstanding feature of 1929 was the depression of the markets in both the commodities in which this Trust is interested.

Production in India, Ceylon and the Dutch East Indies during 1929 amounted to 840,000,000 lbs., the figures for each of the countries concerned establishing fresh high records. For the years 1928 and 1927 the comparative figures were 787,000,000 and 761,000,000 lbs. World consumption (net imports or market absorption) for 1929 is estimated at 953,000,000 lbs., in comparison with 927,000,000 in 1928, and 888,000,000 in 1927. This steady progress in consumption is most encouraging as being proof of the increasing popularity of tea as a beverage.

TEA STOCKS.

At the end of February of this year the London stocks (which are estimated to represent about 90 per cent. of the total for the United Kingdom) had reached the highest figure then recorded, namely, 267,000,000 lbs. The latest figures available, viz., those for April 30th, showed the stocks at 234,000,000 lbs., in comparison with 222,000,000 in 1929. The average price obtained for all tea sold in public sale and garden account during 1929 was 1s. 4¼d., compared with 1s. 4⅞d. in 1928 and 1s. 7d. during 1927.

It being generally realised that there has been over-production of the lower unattractive classes of tea, concerted efforts were made to arrange a reduction in these classes. Agreement having been reached between India, Ceylon and the Dutch East Indies producers, steps are being taken to correct the over-supply, and to improve the quality of the teas manufactured. It is estimated that the effect of the combined agreement to restrict outputs during 1930 will be to reduce the normal unrestricted production by not less than 57,000,000 lbs. of manufactured tea. This, in a time of increasing consumption, should result in stocks being reduced to a normal amount towards the end of the year, and it may not be until that time that its full effect on prices will be felt.

THE RUBBER INDUSTRY.

The production of plantation rubber during 1929 amounted to about 840,000 tons, and greatly exceeded all estimates made a year ago, the divergence being mainly due to the output of native rubber from Malaya. The large increase in production was fortunately accompanied by a large increase in the absorption by manufacturers. The United States used over 470,000 tons in 1929, against 440,000 in 1928, and 375,000 in 1927. The deliveries to manufacturers "in other countries" in 1929 far surpassed expectations, and amounted to 330,000 tons, against 240,000 in 1928, and 215,000 in 1927. Whatever may happen to the absorption of the United States during the next few years, there can be little doubt that the trend of absorption of the rest of the world will be steadily upward, notwithstanding the fact that the use generally of reclaimed rubber is also increasing.

The future extension of motor traffic is closely related with the mileage of fully metalled roads. It is therefore worth while to observe that the estimates show that the whole Continent of America contains about only one-third of the mileage in fully metalled roads that exist in Europe. Europe contains more than one-half of the estimated total mileage of metalled roads in the whole of the world, America less than one-fourth, and the rest of the world about one-fifth.

CURRENT YEAR'S PROSPECTS.

Turning now to the prospects for the current year, we are again face to face with several uncertain factors. It is generally anticipated that the Malayan native output in 1930 is not likely to be greater than it was last year. The output of Ceylon will probably not exceed that of 1929, and the production of estate rubber in the Nederlands East Indies is expected to show only a small increase. Without the cessation of tapping in May it seems probable therefore that the total world production of crude rubber during 1930 would not have been very much greater than it was in 1929, unless, of course, the price rose to a level which would attract labour to the native gardens in the Nederlands East Indies.

The absorption by manufacturers in the United States is generally estimated by them at its 1929 amount of 470,000 tons, and this appears to be a safe figure to work upon, in view of the existing trade conditions there. With regard to other countries, although world trade as a whole, and especially that concerned in the production of raw commodities, is passing through a period of depression, the expansion of motor transport in those countries is not likely to be unduly retarded. It seems probable, therefore, that the rest of the world will use not less than 360,000 tons during 1930. At the present moment, however, all estimates are unusually difficult.

THE TAPPING HOLIDAY.

The steady increase in the world's stocks, and the resulting depressed price of the commodity which has obtained since September last, has had one highly important result which may have a far-reaching effect on the accumulation in the future of unwanted stocks. I refer to the agreement to cease tapping during this month of May. The response which this scheme has elicited from the British, Dutch and other Continental and the Asiatic estate owners is highly gratifying. The scheme has the support of producers of nearly one-half of the estimated output of plantation crude rubber for 1930, and it is said will keep from 30,000 to 35,000 tons of rubber off the market during the summer months at a time when the demand is likely to be at its maximum.

With the increasing stocks and the selling price at or below the average all-in cost of production of European estates it was natural that the question of restricting outputs should again be raised. Doubt is felt by some people as to whether any practicable scheme for restriction of output will prove to be of permanent benefit to the plantation industry. As far as I can judge at present, however, the adverse effects of the Government restriction scheme are not likely to follow restriction when the price is at or below the average cost of production of well-managed European estates, notwithstanding that such restriction is effected only by a section of the producers, provided they cease to restrict when prices rise above such average cost. If and when, as at present, surplus stocks obviously exist, and the net price is only about or is below such average cost of production, it seems to me quite reasonable to stop adding to such excess stocks. Excess stocks have to be paid for by the producers in depressed prices twice over—once whilst such stocks are accumulating, and afterwards whilst they are being absorbed.

IMPORTANCE OF COST OF PRODUCTION.

It would be very unwise, however, for producers to ignore the important fact that native areas, apart from what are known as "Asiatic-owned estates," probably now represent at least two-fifths of the total area planted, and no one knows their full productive capacity.

However advisable, therefore, may be temporary restrictions of output, such as that in force this month, our real and permanent interests will doubtless be found, not in restriction of output, which increases the cost, but in lowering the cost of production by every method consistent with the preservation of the agricultural value of our estates.

It follows from what I have said that, in my opinion, if any future agreement for restriction affecting a section of the producers only becomes necessary, it should depend upon the net market price at the time of restriction not exceeding the average cost of production of well-managed European estates.

Taking a view covering, say, five to ten years ahead, I am optimistic as to the future of the rubber producing industry, with or without any further restriction schemes, and in its ability over such a period of giving fair average returns in dividends. I believe that, fortunately, owing to the increasing consumption, our present troubles are only temporary, and that before long the growing demand for rubber will again overtake the supply.

A net profit of £252,552 was earned during the year, or over 11 per cent. upon our issued capital. This compared with £310,564 earned during 1928. It is proposed to transfer £50,000 from the dividend equalisation reserve and to pay a final dividend of 7½ per cent.

The estates include 8,119 acres of mature and 1,547 acres of immature tea, and 26,038 acres of reserve land. The planted areas are reported to be in excellent condition agriculturally, the tea vigorous and healthy, and all buildings, machinery, etc., have been maintained in a satisfactory manner.

Mr Eric Macfadyen (vice-chairman), in seconding the resolution, referred to his visit to the tea estates, which, he said, whether for extent or for level of cultivation and equipment, were unsurpassed, so far as his experience went, in any tea-producing country. He had never seen the estates looking better or the bushes more healthy, and, quite apart from manuring, there had been steady progress in methods of cultivation

The resolution was carried unanimously.

HOWARD AND BULLOUGH, LIMITED.

PROLONGED DEPRESSION IN THE COTTON INDUSTRY.

The thirty-sixth annual ordinary general meeting of the shareholders of Howard and Bullough, Ltd., was held, on the 7th instant, at Globe Works, Accrington. The chairman of the company, Sir George Bullough, Bart., presiding.

In moving the adoption of the reports and accounts, the Chairman said: Since we last met the prolonged depression in the cotton industry has become more acute. Throughout the world the demand for cotton-spinning machinery has been of such a restricted character that it has seriously affected our trade. This is reflected in the reduced turnover, you will notice, in the accounts for the year under review.

Having fully in mind the scarcity of work in our own business as textile machinery makers, we are constantly keeping in view any avenues of work in any other line for which our equipment is suitable. Further serious consideration has been given to the question of amalgamation or regulation of selling prices by the various machine makers, and meetings and consultations have taken place, but so far without tangible results. It must, however, be borne in mind that no schemes of rationalisation or combinations on the part of machine makers can furnish a remedy for the lack of demand in the trade which, after all, remains the dominating factor in the situation.

With your kind permission we will take the report and balance-sheet as read. Turning to some of the items in the balance-sheet, I have to explain that, owing to the fluctuations in the Bank Rate, it was found advantageous to wipe out our bank overdraft by realising some of our investments. That accounts for the reduced amount shown under the heading of investments. On the other hand, instead of a bank overdraft of £385,000, we now have a balance to credit of £88,000.

I take this opportunity of informing our shareholders that of the £250,000 debentures in our company we hold at present £56,520 as part of our investments, which reduces the liability to outside debenture holders to £193,480, thereby strengthening the position of our concern. At the half-year business was sufficiently active to justify your directors in declaring an interim dividend of 2½ per cent. on the ordinary shares. We had at that period a fair amount of important inquiries on hand which are expected to fructify in time to come within the operations of the financial year now under review. Protracted negotiations, however, caused delays, and much of the business which we have secured will thus come within the scope of our next financial year.

The second half-year's output was, therefore, lower than anticipated, and the total for the year is much less than the previous year's output. When low turnover is coupled with a low price level for the manufactured article as now ruling, it is difficult to make ends meet. But fortunately during our more affluent years we were able to build up a reserve fund to provide for difficult times such as we are passing through. Our balance sheet shows but a slender margin on the right side, and for the 2½ per cent. dividend on ordinary shares already declared and paid we are able to draw upon our dividend reserve fund to cover. For this and the preference dividend and debenture interest we propose to withdraw £55,000. The directors do not consider it advisable to deplete further dividend reserve fund at the present time.

The resolution was carried after being seconded by Mr James Stephenson, of Blackpool.

Established 1889.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED.

DIVIDEND AGAIN INCREASED.

The fortieth ordinary general meeting of the Anglo-American Debenture Corporation, Ltd., was held, on the 8th instant, at Winchester House, London.

Mr Richard S. Guinness (the Chairman) said that it was again his privilege to submit accounts disclosing an increase in revenue, a further strengthening of the already strong financial position, and, what in these times was of more than usual interest to shareholders, recommending an increased dividend for the fifth year in succession. After deducting expenses and debenture interest, and making provision for income tax, there was a balance of £123,694. They had again transferred £25,000 to the general reserve account, bringing the disclosed reserve up to £275,000, or 61 per cent. of the ordinary capital. After paying the preference dividend they had £70,007 available for dividend on the ordinary stock, and in view of this very satisfactory surplus the directors had decided to recommend an increase in the distribution from 14 per cent. to 15 per cent.

They had prepared the usual estimate of the revenue likely to be received during the current year, and, although they had had to allow for a reduction in revenue from certain of their holdings, owing to generally unsettled conditions, the estimate indicated that the present revenue ought not only to be maintained, but in probability a reasonable increase would be shown, always provided, of course, that conditions did not become worse. It was always difficult to forecast revenue in respect of a large number of holdings such as this company possessed, and it was especially so on this occasion, when trade was so depressed throughout the whole world, either through the heavy fall in the prices of commodities or in consequence of political troubles or fears of political troubles.

The valuation of the investments was not quite so satisfactory as last year, when he was able to state that it had improved by £100,000. During the year this improvement had disappeared, but there was still a very substantial appreciation upon the balance-sheet figure. Without giving the exact figures of the valuation he would go so far as to say that the present market price of the ordinary stock was, in his view, justified by it.

It was difficult in these times to point to any industry or to any country where the outlook was hopeful, but, despite the fact that the coming year was likely to be as difficult as that through which they had just passed, he felt that the position of this company was such that they might look forward to the future without undue apprehension.

The report was unanimously adopted.

KEPONG (MALAY) RUBBER ESTATES, LIMITED.

DIVIDEND 27½ PER CENT.

The twenty-fifth annual general meeting of the Kepong (Malay) Rubber Estates, Ltd., was held, on the 8th instant, at the Great Eastern Hotel, London.

Sir Francis Voules, C.B.E. (the chairman) said that last year the company produced 2,144,397 lbs., compared with 1,686,276 lbs. in 1928, and the gross average price realised was 11·1d. London landed terms, compared with 1s. per lb. in the previous year. The net profit for the year was £45,917, an increase of £7,000, the greater crop collected and a satisfactory reduction in costs accounting for the better result. It was proposed to pay a final dividend of 17½ per cent., making 27½ per cent. for the year, to write off £6,063 from administration and development account, and to carry forward the slightly increased amount of £20,357. The crop for 1930 was originally estimated at 1,988,000 lbs., but the cessation of tapping during the whole of the present month would probably modify this figure. They were in the fortunate position of having still 181,440 lbs. to deliver under forward contracts at the handsome price of 2s. 3d. per lb. This would all come out of the 1930 crop.

Although the average yield over the areas tapped during the past year had been over 500 lbs. per acre, the year's crop had been produced without in any way taxing the productive capacity of the estate. The total capitalisation of their properties worked out at £28 per acre, and they therefore had a considerable hidden reserve in that the cost of planting the area to-day would probably be about £70 per acre. Rubber, like all other commodities, was suffering from an excess of production, but it was one of the few articles which had continued to be in ever-increasing demand. The world consumption for 1929 must be taken as 785,000 tons, an increase of 110,000 tons over 1928. The statistical position, showing stocks of approximately 100,000 tons in London and Liverpool, in addition to heavy stocks in America, could not be considered satisfactory. But for a true comparison these figures had to be taken in conjunction with the consumption figures, and the present stocks, at their worst, represented only seven months supplies, as compared with over 14 months supplies at the end of 1921.

The report and accounts were unanimously adopted.

REMBAU JELEI RUBBER, LIMITED.

PLANTING POLICY—INCREASE OF CAPITAL APPROVED.

The sixth annual general meeting of Rembau Jelei Rubber, Ltd., was held, on the 2nd instant, at Winchester House, Old Broad Street, London.

Mr T. W. Hodge, chairman of the company, presided, and in moving the adoption of the report and accounts, said that they had harvested 2,798,890 lbs. of rubber, against 2,140,986 lbs. in 1928, which, over the mature area of 5,863 acres, worked out at 478 lb. per acre. The all-in cost showed a reduction of slightly over 1d. per pound, offset by a fall in the average price realised from 11.73d. per pound to 10.22d. per pound.

He had had the pleasure of visiting the company's properties early this year. The various estates were in good order, and he found the immature rubber looking particularly well; he was much impressed by the appearance of the budgrafted areas.

The estimated output for next year was originally 2,767,000 lbs., but since then the company had consented to stop tapping during the month of May. It was estimated that stoppage of tapping in May would keep between 20,000 and 30,000 tons of rubber off the market. That might afford temporary alleviation, but he doubted whether a permanent solution of the difficulties in which the industry stood could be found in any such artificial expedients.

A sounder solution of the problem would appear to be offered by trying still further to reduce costs of production, and by relying on a period of low prices to cause a reduction of output and an increase in consumption. As to the planting of a further 268 acres at Jeram Padang during the current year, it was the board's policy to consider adding similarly small areas year by year. The reason was that it was necessary to keep abreast of new planting methods. The clearings would be put out in accordance with the latest practice, and budgrafted with proved high-yielding clones.

There was £46,046 for disposal, and the board recommended a final dividend of 5 per cent., making 7½ per cent. for the year, leaving to be carried forward £26,046.

As to the suggested increase of £50,000 in the authorised capital, the sole reason was to provide for the possibility of their acquiring a small estate adjoining Jeram Padang. The property concerned had a grant area of 1,308.83 acres, of which 699.29 acres were planted. The acquisition would not involve an issue for cash, and the board did not contemplate issuing more than the mere number of shares involved in the purchase.

The report and accounts were adopted, and the increase of capital approved.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 3, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	13,304	From Revenue	10,340
Interest, &c., on Debt	12,538	Increase in Debt	15,464
Sinking Fund	525	Decrease in Balances	616
Sundries	53		
	26,420		26,420

The ordinary revenue for the week amounted to £10,340,400, as compared with £12,181,000 in the corresponding week last year. Income tax was higher at £2,262,000, against £2,135,000, but surtax, at £610,000, was £70,000 lower. Estate duties brought in £890,000, as compared with £1,570,000, while Customs amounted to £2,219,000, against £2,158,000, and Excise to £814,000, against £979,000. Miscellaneous receipts brought in £1,356,700, against £2,232,000. The National Debt was increased by £15,463,600, as shown below :—

Net withdrawals, £988,727.

Messrs Samuel Montagu and Co., write on May 7, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £163,341,964 on the 30th ultimo (as compared with £162,887,487 on the previous Wednesday), and represents an increase of £17,381,880 since January 1st last. The week has seen a substantial efflux of gold to France, and besides withdrawals from the Bank of England a large proportion of the gold offered in the open market was also acquired for that country. There was in consequence a good demand for the £837,000 of South African gold available yesterday, and the price was fixed at 84s. 11½d. per fine ounce. France secured £515,000 and Germany £208,000, bids from the latter quarter being mostly limited to lower prices. The balance was divided between India (£60,000), the Home trade (£24,000), and the Continental trade (£30,000). Movements of gold at the Bank of England have resulted in a net influx of £223,057 during the week under review. Receipts totalled £3,350,000, composed of £3,050,000 in sovereigns from Australia and £300,000 in sovereigns from South Africa. Of the withdrawals, amounting to £3,126,943, about £3,100,000 was in bar gold for France.

SILVER.

The market has developed an easier tendency. China has continued a seller at current rates and offerings from this quarter and from America have more than offset the demand from the Indian Bazaars. The latter have continued to buy, but the demand has been less insistent and orders have again been limited to prices rather below those fixed. Quotations have, in consequence, shown a tendency to sag, and have ruled at a slightly lower level than that of last week. The following were the United Kingdom imports and exports of silver registered from mid-day on the 28th ult. to mid-day on the 5th inst. :—

Imports.	£	Exports.	£
France	138,024	British India	119,193
U.S.A.....	34,299	Other countries	12,986
Belgium	43,644

NOTICES.

Barclays Bank, Ltd., announce the opening of a new branch at 261-3, Stanley Road, Bootle.

Lloyds Bank, Ltd., announce that the sub-office of the bank at Tutbury is now converted into a full branch.

Lloyds Bank, Ltd., announce that a sub-branch of the bank is now open at 384, Neasden Lane, Willesden, N.W.10.

Company News.

REPORTS AND NOTICES.

The Royal Exchange Assurance announces that its court of directors has accepted, with much regret, the resignation of Mr Percy F. H. Hodge, who, after 45 years' service, retired on pension on May 2nd. Mr Hodge has occupied the important positions at the head office of account (from 1902-1917) and secretary (from 1917-1929).

The Legal and General Assurance Society, Ltd., announce the formation of a local board of directors for the West End of London. This is the first local board set up by the Society. The following directors have been appointed :—Mr Harold Bellman, M.B.E., F.S.S., F.R.Econ. S., general manager of the Abbey Road Building Society, chairman; Mr T. R. Chandler, F.I.A., secretary of the Woolwich Equitable Building Society, vice-chairman; Mr G. R. Ellis-Danvers, a partner of Messrs Ellis and Ellis, the well-known Parliamentary solicitors of The Sanctuary, Westminster.

The Universal Automobile Insurance Company, Ltd., whose head office is situated at 162, Buckingham Palace Road, S.W. 1, have opened a City office at 3, Newman's Court, Cornhill, E.C.3. Telephone : Avenue 8740.

MISCELLANEOUS.

THE BRYNYMOR STEAMSHIP COMPANY, LIMITED.—The tenth annual report and accounts shows a profit for the year ended March 31, 1930 (after providing for depreciation), of £16,044 (last year, £11,374). Deducting interest, audit fees and directors' fees, there is a balance of £8,605 (last year, £6,774), which, with the amount brought forward, gives a total of £11,432. Dividends have been paid at the same rate as last year, *i.e.*, 7 per cent. on the 6 per cent. participating preference shares and 10 per cent. on the ordinary shares, which call for £8,840 (against £7,176 last year), leaving £2,592 to be carried forward (last year, £2,827). The report states that freights in the early part of the company's year were satisfactory, but are now on a very low basis. Meeting : Swansea, May 13, 1930, at 3 p.m.

GENERAL REFRACTORIES, LIMITED.—The thirtieth annual report and accounts show a profit for the 15 months ended December, 31, 1929, of £12,839. This is without taking into account profits of the associated companies, in which the company owns interests and the report states that the proportion of the latter applicable to the company's interests is £9,465, which, with the above £12,839, makes a total trading profit for the period of £22,305. To the profit of £12,839 is added £4,316 brought forward and £2,815 deducted for interest charges, etc., leaving £14,340, from which the directors propose the payment of a 12½ per cent. dividend, and reserving £2,500 against depreciation, leaving £4,614 to be carried forward.

GUEST, KEEN & NETTLEFOLDS, LTD.—At the meeting of debenture stockholders of the company, held on Thursday, at Queen's Hotel, Birmingham, the voting was as follows :—In favour of the resolution, 1,028 (representing debenture stock to the value of £964,271); against the resolution, 52 (representing debenture stock to the value of **£67,457**).

J. COMPTON, SONS AND WEBB, LIMITED.—The Seventeenth annual report and accounts shows a net profit for the year 1929 of £60,099 (last year, £59,842). Adding the amount brought forward there is a total of £65,929, from which is deducted preference dividend, £8,400; interim ordinary share dividend of 10 per cent., £14,000; a final dividend recommended by the directors of 17½ per cent. on the ordinary shares, making 27½ for the year (last year, 25 per cent.), and £13,500 proposed to be transferred to reserves, leaving £5,529 to be carried forward. Meeting : May 16, 1930, at 12 o'clock at Great Eastern Hotel, E.C.

† Free of income tax. ‡ Period from November 13, 1928, to March 31, 1930.
§ Includes £4,749 profit on sale of lease of 484 Oxford Street.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of April are as follows :—Production of oil, 35,770 tons; deliveries, 35,330 tons.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended April 16 :—Venezuela, 37,833 barrels; Trinidad, 15,246 barrels; total, 53,079 barrels. Production for the week ended April 23rd : Venezuela, 37,144 barrels; Trinidad, 12,967 barrels; total, 50,111 barrels. Production for the week ended April 30th :—Venezuela, 40,019 barrels; Trinidad, 14,424 barrels; total, 54,443 barrels.

HECTOR WHALING, LTD.—Catch report to April 13, 1930 :—

	Season 1928-29.	Season 1929-30.
Number of expeditions reporting ...	Three	Three
Catch for week ending April 13th in barrels of oil	3,200	4,400
Total catch to date in barrels of oil	123,600	*194,500

* Including expedition returned.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of March amounted to 136,427 barrels, or approximately 19,489 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended April 12, 1930, was 272,000 barrels. The production for the week ended April 19, 1930, was 258,000 barrels.

SERVICE PETROLEUM.—Production from the company's wells as Gura-Ocnizei and Ceptura for the week ended February 23rd was 1,329 tons (9,303 barrels). Production from the company's wells at Gura-Ocnitzei and Ceptura for the week ended March 2, 1930, was 1,207 tons (8,449 barrels). Production from the company's wells at Gura Ocnitzei and Ceptura for the week ending March 9, 1930, was 1,182 tons (8,274 barrels). Production from the company's oil wells at Gura-Ocnitzei, Ceptura and Moreni for week ending March 23rd was 2,371 tons (16,597 barrels).

STEAUA ROMANA (BRITISH), LTD.—Production of the Steaua Romana Company, Bucharest, for the month of April was 73,310 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during March, 44,450 tons; oil purchased during March from other companies, 44,550 tons. Oil produced during April, 32,550 tons; oil purchased during April from other companies, 44,550 tons.

VENEZUELAN CONSOLIDATED OILFIELDS, LTD.—Production for the week ended March 21st, 2,567 barrels (367 tons). Production for the week ended March 29th, 2,555 barrels (365 tons). Production for the week ended April 5th, 2,463 barrels, 352 tons. Production for the week ended 12th instant, Fyzabad property, 3,585 barrels, 370 tons. Production for the week ended April 19th, 2,337 barrels (334 tons). Production for the week ended 26th instant (Fyzabad property only), 2,334 barrels (334 tons). Production for the week ended 3rd instant, 2,397 barrels (343 tons). This production is from the company's Fyzabad property only.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended March 22nd was :—Bolivar district, 122,690 metric tons; Maracaibo district, 6,398 metric tons; total, 129,088 metric tons. Production for the week ended March 29th was :—Bolivar district, 114,677 metric tons; Maracaibo district, 6,650 metric tons; total 121,327 metric tons. Production for the week ended April 5th was :—Bolivar district, 100,471 metric tons; Maracaibo district, 6,422 metric tons; total, 106,893 metric tons. Week ended April 12 : Bolivar district, 95,572 metric tons; Maracaibo district, 6,700 metric tons; total, 102,272 metric tons. Production for the week ended April 19th was : Bolivar district, 93,998 metric tons; Maracaibo district, 7,449 metric tons; total, 101,447 metric tons. Production for the week ended April 26th was :—Bolivar district, 91,598 metric tons; Maracaibo district, 7,335 metric tons; total, 98,933 metric tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Favourable climatic conditions have continued over the United Kingdom, and both cereal crops and pastures present a healthy appearance. A full acreage has been laid down to oats and barley, and, so far, germination is satisfactory, while winter wheat gives every promise of a good yield. Supplies of native wheat on the principal Statute markets was in excess of requirements, and prices showed an easier tendency, while influenced by competition from French wheat and flour, which has been selling freely to United Kingdom outports of late. On the import market, no important change occurred in the general position, slight price fluctuations being registered in sympathy with North American cables, also weather and crop prospects. Australian varieties have been purchased by Italy, and fair quantities of Canadian and American hard winter grades were taken by United Kingdom and Continental millers, but in the aggregate, business remains much below normal for the time of year. Neither Canadian nor American sellers are disposed to force sales pending further progress of new crop sowings, though offers are fairly plentiful and prices compare favourably with good quality Plate wheat. Southern hemisphere shipments continue on a light scale, but the North American quota is steadily increasing, and again assumes chief importance in the International situation. Meanwhile, definite offers of Indian wheat are on the market, and sales resulted in choice white Karachi, May-June, at 39s. 6d. to the United Kingdom. France continues to offer freely, and further chartering is reported of Russian grain for May shipment. The outlook is somewhat uncertain, but greater pressure to market North American holdings is likely to arise when new crops become more assertive, and, in any event, consumers are assured of ample supplies of grist at reasonable prices. The demand for home-milled flour is fairly satisfactory, though largely confined to pressing needs. North American offers were again slightly reduced, but still above market parity here, though adversely affected by attractive prices of French makes. Feeding-stuffs quiet, and Plate maize easier on lack of demand in forward positions; also competition from Danubian varieties, which are selling more freely. Advices from South Africa indicate that the crop will be available much earlier than anticipated.

WHEAT.—Steady. No. 1, Northern Manitoba (Atlantic shipment), ex ship, 43s. 9d.; No. 2, ditto, 43s.; No. 3, 42s.; No. 4, Manitoba, 40s. 6d.; No. 5, ditto, 38s. 9d.; No. 6, 31s. 3d.; No. 2 hard winter, 39s. 9d.; No. 2 mixed Durum, 37s. 3d.; Rosafe, 62½ lbs., 40s. 6d.; Barusso, new crop, 62½ lbs., ex ship to arrive, 39s.; Australian, 41s. 6d. per 496 lbs.; English, 8s. 8d.-8s. 10d. per 112 lbs.

FLOUR.—Quiet. London, straight run, 35s. 6d. per sack for country deliveries, and 34s. 6d. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 33s.-36s.; Australian, 31s.-32s., ex store. On c.i.f. terms, Manitoba top patents, May, 32s.-32s. 3d.; export, ditto, 29s. 6d.-30s.; Australian, 28s.-28s. 6d.; French, prompt, 24s. 6d.-25s. 6d. per 280 lbs.; Argentine, low grade, May, £5 17s. 6d. per ton.

MAIZE.—Quietly steady. Plate, landed, 30s. 6d.; ex ship, 29s. 6d.; March-April, 26s.; new, April-May, 25s.; May-June, 24s. 6d.; June-July, 24s. 6d.; No. 2 white flat African, 31s. landed, per 480 lbs. Yellow maize meal, £8 15s. per ton, f.o.r. London. Yellow African, £6 5s. per ton, ex ship.

BARLEY.—Dull. Californian, old, landed, 36s.-42s.; new, ex ship, 36s.-42s., as to sample; Chilian brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs.; Black Sea, ex ship f.a.q., 18s. 6d.; landed, on sample, 19s. 6d.-20s. 6d. Persian, landed, 18s. 9d. per 400 lbs. English malting, 7s. 3d.-10s. 6d.; feed, 7s.-7s. 2d. per 112 lbs.

OATS.—Weak. Plate, landed, 14s.; ex ship, to arrive, 12s. 9d. Chilian, white, 20s. 6d.; ditto, tawny, 15s. German, landed, 19s. 6d.; ex ship to arrive, 17s. 3d. Mixed Canadian feed, 13s. 6d. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—	Qrs.	Qrs.	Qrs.	Qrs.
1 week to May 3	161,749	167,009	289,262	142,128
35 weeks to May 3.....	8,133,718	8,721,146	8,986,274	10,282,175
Average price of English wheat per cwt.	s. d. 9 0	s. d. 9 11	s. d. 10 10	s. d. 11 8

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929 :—

Weeks ended.	Quantities Sold.			Average Price per Qr.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Qrs.	Qrs.	Qrs.	s. d.	s. d.	s. d.
April 26	174,140	69,063	22,545	9 0	7 9	6 8
May 3	161,749	48,855	21,810	9 0	7 10	6 8
May 1, 1926	235,649	64,456	42,210	12 10	9 6	9 8
April 30, 1927 ...	131,805	25,054	36,363	11 6	10 11	8 7
May 5, 1928	289,262	36,820	32,802	10 10	11 6	12 10
May 4, 1929	167,009	35,021	28,040	9 11	10 1	9 10

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929 :—

Nearest Future.	Jan. 2, 1929.	May 8, 1929.	Jan. 2, 1930.	Apr. 23, 1930.	Apr. 30, 1930.	May 7, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	113⅛	148⅛	109	105½	105
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅛	106⅛	130⅛	104⅛	101⅛	100⅛

The visible supply of wheat in Canada at 73,499,000 bushels shows a decrease on the week of 1,132,000 bushels. Supplies a year ago stood at 75,496,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes :—The South Yorkshire market continues weak in all sections and decidedly in favour of buyers, although rather more export inquiries are about. On prompt account best steams are quoted at 15s. 3d. to 15s. 6d. f.o.b.

There is still a considerable surplus on offer. A leading colliery has seceded from the Central Collieries Commercial Association. House coal has been reduced 1s. and 2s. per ton. Blast-furnace coal has declined to 15s. per ton at ovens.

Our Glasgow correspondent writes:—In spite of a moderate improvement in the shipping trade, the market generally remains weak. Coal is in excessive supply in all districts, and is accumulating, so that there is extensive short-time working at the pits. Among round coals flint coals in Lanarkshire have been a weak feature lately, and among smalls, trebles and doubles are offering at cheap prices. Current quotations for shipment are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s.; splint best, 16s.; splint second, 15s.; navigation, 16s.; navigation second, 14s. 6d.; Hartley, 18s.; steam, 12s. 6d.; trebles, 12s.; doubles, 11s. 3d.; singles, 10s. 6d.; pearls, 10s.; dross, 10s. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 12s.-12s. 6d.; doubles, 11s.; singles, 10s. 9d.; pearls, 10s. 6d. LOTHIANS.—Prime steam, 12s. 3d.; secondary steam, 12s.; trebles, 12s.-12s. 6d.; doubles, 11s.; singles, 10s. 9d.; pearls, 10s. 6d. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 12s.; doubles, 11s. 3d.; singles, 10s. 9d.; pearls, 10s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—There has been no improvement this week in the state of business on the Cardiff coal market. There has been no expansion of current inquiries and the market is still without any official information concerning the placing of the Egyptian contract. The period for which the tenders were open expired on Wednesday and up to the afternoon of that day none of the Cardiff firms who had sent in tenders had been informed either of the acceptance or the rejection of their offers. Production is declining owing to the closing of some pits and the irregular working of most of those situated in the steam-coal area. Prices, however, are being maintained solely on the strength of the loyalty of the members of the Marketing Association, and in view of the increase in the cost of production due to lost shifts some colliery companies are suggesting an advance in prices. German statistics show a very considerable increase during the March quarter in the export of German coal to France, Belgium and the Netherlands, and notwithstanding The Hague coal agreement, German shipments to Italy show only a very small decrease compared with those in the corresponding period last year. At the request of the colliery owners, the representatives of the South Wales Coal Trade Conciliation Board have this week discussed the probable effects of a reduction of hours on the economic position of the industry, but the miners' representative turned a deaf ear to the owners' suggestion that Part III. of the Coal Mines Bill should be replaced by a clause providing for a 45-hour week or a 90-hour fortnight. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Western Valleys, 18s. to 18s. 6d.; Black Veins, 18s. 6d. to 18s. 9d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 45s.; rubbly culm, 11s. 3d. to 12s.; foundry coke, 27s. 6d. to 30s.; patent fuel, 20s. to 22s.; pitwood, ex ship, 26s. 9d. to 27s.

IRON AND STEEL.

We extract the following from the weekly report of The London Iron and Steel Exchange:—Trade in iron and steel continues to run on a disappointing scale. For the time being the home market is rather more active, but even so, the volume of trade is still below the normal for the time of year. The British works are experiencing a limited and irregular demand, but in some departments at least are benefiting from the confusion into which the efforts of the European Steel Cartel to establish its price policy has thrown the market for Continental steel. The home demand for pig iron is steady, but insufficient to prevent the accumulation of stocks. Prices, however, are maintained, as the producers are of opinion that no reduction in prices would stimulate buying in the present state of business. The demand for finished steel materials has improved somewhat, and there have been fair purchases of Continental material. The British works, however, continue to take a good share of this business in districts where they are prepared to compete for orders. The overseas demand has brightened somewhat and an active inquiry recently developed from India, which was followed by a certain amount of buying, the demand being principally for steel sheets. Buyers in other markets, particularly in the Far Eastern, have shown little inclination to depart from the cautious policy they have shown for some time past. Generally speaking, it may be said that business in the finished steel department has improved slightly, but the increase in the demand is only of slow growth.

Our Middlesbrough correspondent writes:—The market for Cleveland iron continues very quiet. Consumers are not making forward purchases, being content with the contracts already entered into which will carry them on for several weeks, and in the meantime they prefer to watch the course of events. Deliveries under current contracts are taking up the small amount of iron produced that is available for the open market, and stocks are being reduced to some extent. Makers, therefore, are not perturbed about the absence of new business at the moment, and look for increased buying later on. At the weekly market on Tuesday only a few small lots of No. 3 were sold for early delivery on home account at 67s. 6d. per ton, and other qualities remained unchanged, viz., No. 1, 70s.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s. f.o.b. or f.o.t. The demand for hematite is still confined to small quantities for early delivery, both home account and for export. Two furnaces have been put out at Linthorpe works, but the stoppage has come rather earlier than was expected. This leaves only thirteen producing hematite in the district, and makers are hoping that the reduced production will prevent any further fall in prices, but stocks at the furnaces are heavy. Works are still accepting 74s. for mixed numbers. Merchants have rather considerable unsold stocks and are willing to shade this price. The total shipments of iron and steel from Middlesbrough last month showed a loss of just over 20,000 tons on March, the figures being as follows:—

	March.	April.
Pig iron	20,208	14,345
Manufactured iron	2,204	1,589
Manufactured steel	58,579	44,379
	80,991	60,313

Up to 6th of this month the pig iron clearances amount to 4,123 tons against 2,900 tons to April 6th. In the steel trade no new business of importance is reported. Home prices under the rebate scheme are unchanged, viz., plates, £8 15s.; joists, £8 10s.; sections, £8 7s. 6d. Other home prices are heavy steel rails, £8 10s.; iron crown bars, £10 15s.; 21-24 gauge black sheets, £9 12s. 6d.; and 24 gauge galvanised corrugated sheets, £12. New transactions in ore are practically unheard of, curtailment of deliveries under current contracts being the rule. Best Bilbao rubio is nominally 21s. c.i.f., and the rate of freight Bilbao/Middlesbrough for early tonnage remains about 5s. 6d. Coke is offering very freely, and although the general quotation for good average furnace qualities is 18s. delivered works, a good order could be placed at 3d. to 6d. less. The number of furnaces in blast in the district is now reduced to 37.

Our Sheffield correspondent writes:—The iron and steel trade in North Lincolnshire is at last feeling the general depression acutely, and production has been curtailed at two of the largest works there. At these establishments considerable stocks of ingots and billets have accumulated. The Sheffield works report no improvement in demand and inquiries and short time is almost general. There is practically no forward buying. A few sections of the industry are doing fairly well, notably bright steel strip, heat-resisting steels, and forged boiler drums. Several firms are well employed on forgings for commercial motor vehicles. The railway steel department has lately booked increased work from home sources, but trade overseas has been extremely meagre for

several years and does not improve. Export business generally is abnormally quiet for the time of year. The pig iron market continues stagnant as regards long contracts. Building trade demand for light castings is below the level of a year ago. Makers of hand tools, cutlery and plate, report unfavourably of the state of their order books.

Our Glasgow correspondent writes:—In West of Scotland trade circles things seem rather brighter this week, improvement being noticeable in several directions. In the pig iron market business is poor. Steelmakers report somewhat heavier bookings, although work coming in is not nearly sufficient to keep plants running at full capacity. There is a distinct improvement in the tonnage of galvanised sheets for export placed with Glasgow sheetmakers, and business in black sheets is also rather better. Among recent orders placed in Glasgow, one which has given much satisfaction and prospects of employment for considerable numbers, is that placed with the North British Locomotive Company, of Springburn, for 25 locomotives. It is also reported that Messrs William Denny and Brothers, Ltd., of Dumbarton, have received an order for a turbine steamer for the Stranraer–Larne service of the London Midland and Scottish Railway Company, Ltd. It is announced this week that the Dundee Harbour Trustees have agreed to accept the offer of Messrs Fleming and Ferguson, Ltd., of Paisley, for the construction of a steam hopper barge amounting to almost £22,000, subject to the approval of the Unemployment Grants Committee.

Our Cardiff correspondent writes:—On the Swansea Metal Exchange on Tuesday it was reported that inquiries were fairly general, and that most works were well booked up to June and some up to September. Competition in the bar trade has been accentuated by the offer of cheap foreign bars, which are now quoted at £5 9s. per ton or less, compared with the £6 3s. to £6 10s. quoted for the South Wales bar. The prices of tinplates are unaltered at from 18s. 4½d. to 18s. 6d. per basis box, and of galvanised sheets from £11 17s. 6d. to £12 10s. per ton. Shipments were normal last week and stocks were slightly lower than in the previous week.

OTHER METALS.

TIN.—In the standard market, values suffered a further sharp set-back on heavy liquidations, also depressing Eastern cables. A good deal of irregularity occurred at times, but a fair business transpired at the lower levels and market recovering. So far, restrictive measures have not been effective in keeping down world's supplies, particularly in view of decreased consumption, and some time must elapse before any benefit is felt in this respect. Standard cash sold £149 7s. 6d.-£142 5s. and £145 10s.; three months, £151 10s.-£143 10s. and £147 7s. 6d. In the East, sales were reported at £154 10s.-£146 15s. and £148 17s. 6d. ton c.i.f.

COPPER.—Irregular, but prices lower on balance following the reduction in America, and the possibility of a further decline there. Business, however, was on a fairly liberal scale at some recovery. Standard, cash, changed hands at £49 12s. 6d.-£48 5s. and £50 2s. 6d.; three months, £49 15s.-£48 2s. 6d. and £50.

LEAD in fair support, but values fluctuated slightly in view of liberal offerings. Good soft foreign pig, May, sold £16 18s. 9d.-£17 10s.; June, £16 17s. 6d.-£17 11s. 3d.; August, £17 2s. 6d.-£16 15s. and £17 11s. 3d. ton.

SPELTER.—Market weaker, supplies being in excess of requirements, while heavy American stocks tend to discourage buyers. May sold £16 6s. 3d.-£16 2s. 6d.; June, £16 12s. 6d.-£16 6s. 3d. and £16 13s. 9d.; July, £16 15s.-£16 10s.; August, £17 2s. 6d.-£16 12s. 6d. and £17 2s. 6d. ton.

ANTIMONY quietly steady. English regulus, £40-£46 10s. Chinese ditto, spot, £29-£29 10s.; May-June, £26 5s.-£26 10s. Chinese crude, May-June, £16 15s. ton c.i.f.

ANTIMONY OXIDE.—May-June, £26 10s. per ton c.i.f.

ANTIMONY ORE.—50 per cent., May-June, 3s. 6d.; ditto, 60 per cent., 4s. 3d. per unit c.i.f.

WOLFRAM quiet. Chinese, May-June, 24s. 3d.; Burmese ditto, 24s. per unit c.i.f.

QUICKSILVER quiet. Spot, £21 15s. net per bottle.

TIN PLATES steady, with moderate dealings. I.C. coke, prompt, and forward, 18s. 4½d. to 18s. 6d. per box f.o.b. Swansea.

ZINC OXIDE dull. Values range from £27 to £33 per ton, as to quality, delivered U.K.

THE COTTON TRADE.

LIVERPOOL: May 7th.

Prices on the week show a reduction of 12 to 20 points, the new crop positions showing the greater weakness. Crop news for the past week has been favourable, some rains in Texas and Oklahoma have fallen and given partial relief from the drought. Some warm rains in the Eastern and Central belts would help germination, but on the whole conditions are very good. The American Cotton Crop Service reports that preparations for the whole of the belt are well forward, with planting about completed in the southern half and only a decrease in acreage of probably under 5 per cent. The New York Cotton Exchange estimates the consumption of American cotton during March at 1,074,000 bales against 1,063,000 bales in February and 1,291,000 bales in March last year. The difference in New York between the old and new crop, say, July and October,

OVER ONE HUNDRED YEARS OF SERVICE.
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY.
ASSETS EXCEED - £15,500,000
FIRE. LIFE. ACCIDENT. MARINE.
Edinburgh: 35, St. Andrew Square.
London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1

has again widened, and now shows a difference of 200 points, and this has had the effect of mills, both in U.S.A. and the Continent, further curtailing production until more is known of the intentions of the Farm Board and new crop prospects. The Farm Board received over 250,000 bales on the May tenders in New York and New Orleans. Spot sales for the week 1st to 7th (inclusive) are 24,000 bales, of which 12,370 are American, 4,800 Brazil, 3,000 Peru, 1,950 Egyptian, 1,250 African, and 630 sundries. Imports for the same period are 59,756 bales, of which 17,065 are American, 217 Brazil, 342 Argentine, 944 Peru, 23,500 Egyptian, 5,095 African, 11,209 East Indian, and 1,384 sundries. Quotations to-day are: American Middling, 8·51; Egyptian Sakel, 14·00, Uppers, 10·25; Brazil Fair, 7·76; Peru G.F. Smooth, 8·86; West African Middling, 8·36, and East African G.F., 9·01.

MANCHESTER, May 7th.

Conditions throughout the market have been decidedly unfavourable to activity. Although there continues extensive curtailment of production in spinning and weaving, the sales this week in yarn and cloth have been much less than the output. The easier tendency of raw material rates has had some effect upon the attitude of buyers. In piece goods for India, demand for the time being has dried up, and according to advices received by merchants the boycott of foreign goods in the bazaars is now complete. Deliveries against old contracts are being taken, and it is reported that clearances of India-made cloths are improving. News from China does not improve, and the sales at the auctions in Shanghai remain decidedly small. Fresh business has been almost non-existent. Scattered transactions have been put through for Singapore, South America and the West Coast of Africa, but manufacturers as a body are having very little to do at the moment. The special propaganda has stimulated demand for goods in the retail establishments, and the prospects for the home trade are rather brighter. American yarns have been irregular in price and slow of sale. In Egyptian yarns the most interesting development has been the arrangement of three leading combines to put up prices. The success of this movement will depend upon the attitude of outside firms.

THE WOOL TRADE.

Our Bradford correspondent writes:—Locally, the partial strike of operatives is causing more or less dislocation, especially as employment on the reduced rates of wages is fairly general in the spinning section of the industry, whereas combing and weaving mills are practically at a standstill on account of the refusal of the overlookers to accept the Macmillan recommendations. All the indications point to the majority of the employees being prepared to accept the employers' offer, but little real progress can be made so long as the so-called "key men" resist. Taking a broader view of the wool textile industry and ignoring the dispute in the West Riding, it must be admitted that conditions are more favourable than they have been at any time during the last few years. The fall in wool values seems to have been arrested, and all reports from the primary markets indicate that buyers are operating freely and with confidence. There has been a marked appreciation in the price of wool since the resumption of the auctions in Australia, and the South African and South American markets are also more active on the new level of values. This return of confidence in the raw material position is reflected in renewed activity in the chief Continental centres, a feature being a further pronounced reduction in the stocks of tops. In Bradford business is being carried on with difficulty, but there is a good deal of inquiry for tops for prompt delivery, and also some interest on forward account. In view of the rise in wool values topmakers are adopting a firmer attitude, and a firm market in London next week will tend to strengthen their position. Yarns are well held, but there is no big volume of business. In the piece-goods section there is a good seasonal demand, and the question of delivery is of more importance than that of price in many cases.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The quantity available for the third series of London sales which will commence next Tuesday is 143,200 bales, which is 19,200 bales more than was sold last series, when the quantity carried forward was 61,000 bales. The quantity available will be quite sufficient for all the requirements of the industry in this country, particularly crossbreds. The quantity of New Zealand wool is 54,000 bales, and there are 30,000 bales of South American, chiefly new clip Puntas. It is to be hoped that the home trade will be able to buy freely, but it is a little difficult to make any forecast about the movement of prices. A good deal will depend upon the Continent, especially in regard to merinos. These may show an appreciation of about 5 per cent., but the state of trade in Yorkshire does not justify any advance. At the same time, there is every probability that the series will be a good one, and if there is an active demand at firm prices, with good support from the home trade, it will be very convincing testimony of the soundness of the situation. All overseas cables received this week have indicated a good general demand, with prices fully maintained. Most descriptions of wool are now making 7½ to 10 per cent. more than a month ago, and one very important factor in establishing prices has been the operations on Japanese account. The "futures" market at Roubaix has been reopened, and daily quotations can now be expected. It may take some little time to get this going, but eventually important transactions will take place daily. The establishment of a terme market in New York has also been mentioned.

HIDE, LEATHER AND ALLIED TRADES.

A very steady tone continues to prevail in the market for hides and skins from home-slaughtered cattle, and any change in values is in favour of sellers. At the auctions held in the north so far this week fractional advances have been again recorded on certain weights of ox and heifers, and it is expected that the sales held during the week-end will show a similar tendency. Business in the imported hide market is dull, and with little inclination on the part of buyers to take more than is absolutely necessary for immediate needs the tendency of values appears to be weaker, although at the moment prices are more or less unchanged. This perhaps is more due to the fact that shippers at certain origins are not prepared to operate on the present basis of prices than to the amount of actual business transacted of late. Although there has not been the same inquiry for frigorifics as of late, Argentine ox are still selling at the equivalent of 7 15/16d., light ox at 6 11/16d., and Montevideos at 7⅛d. The home trade have not been buyers of these, but a few parcels of second bulls have changed hands for this country at from 2¾d. to 3d. The trade here has also been interested in dry River Plates, which have commanded 8⅝d. for M.V. Americanos, 8½d. for Sierra Cordobas, 7½d. to 7⅝d. for B.A. Americanos, and 4⅝d. for Inservibles. African hides are steady with dry Capes selling at 8½d. and 7½d. for firsts and seconds, and 7⅝d. and 6⅝d. for dry salted 20/30 lbs. Mombassas are in fair demand at 6½d. Prices for Australians are erratic, while latest cable advices from the United States report the market as steady, with Chicago native steers selling at 14 cents. There seems to be a slight improving tendency so far as the market for sole leather is concerned, and although the amount of business actually transacted still falls short of what it should be for the time of the year, the number of inquiries coming to hand are more numerous than has been the case for several weeks past. Shoe manufacturers have been in the market for bends suitable for their purposes, and several sales of light weights in the medium-priced grades have been brought off. Repairing bends have also received more attention and some fairly satisfactory business has been put through. Shoulders and bellies continue to go out regularly with quite a decent inquiry all the time. Prices for the home-produced article are generally unchanged, but with a fair amount of Continental sole leather on offer at rather low figures a certain amount of anxiety is felt in some buying quarters regarding the future in this direction. On the other hand tanners seem fairly confident of the position; stocks are not large and there seems every indication that as the season advances the call for footwear will be greater with a corresponding increase in the demand for leather. No new feature can be reported in connection with the sale of upper leather, trade for the most part running on steady if somewhat quiet lines. Demand to a greater or lesser degree covers most descriptions, the bulk of the inquiry being in connection with brown glacé kid, and black and iron suede. Willow calf is moved off regularly in small quantities, but there does not appear to be much inquiry for either box calf or patent leather, sales of both kinds being very restricted. Curriers, also, continue to find business very slow, and even when an inquiry is received it is usually for a small quantity quite easily negotiated from stock. Novelty leathers and reptile skins are slow, and generally speaking the greater part of the demand for the latter is in connection with imitation grains. Shoe manufacturers are better placed for business in most centres, but buying is still on the small side. The number of orders coming to hand, however, is larger than before the holidays.

NATIONAL PROVIDENT INSTITUTION
DISTRIBUTION OF PROFITS
DECEMBER 31st, 1930.
INTERIM BONUSES INCREASED.
48 Gracechurch Street, London, E.C. 3.

VEGETABLE OILS AND OILSEEDS.

Much quieter conditions rule, and generally markets have an easy tone. Linseed oil is in poor demand, despite lower prices, current values for raw oil on spot being £40 per ton, naked, ex Hull mill, and £39 10s. for May delivery, later positions being at a substantial discount. Cotton oils are steadier, and crude in better demand. Present quotation for crude Egyptian is £28 10s. ex Hull prompt, and for common edible £31 10s. Other seed oils are quiet, and soya palm kernel and ground nut quoted lower. In the oilseed section linseed is neglected, crushers here and on the Continent hardly operating at all. Plate has receded to £18 on spot at Hull, and at hand and April-May shipment, to £17 5s. (paid). A small business has been done in Indian linseed to the Continent, £18 10s. being paid for Calcutta; and £18 12s. 6d. for small Bombay. The quantity of linseed on passage to Europe is now 123,900 tons, or 4,400 tons less than last week. Cotton seed is in slow request, and black Egyptian to Hull has declined to £7 10s. on spot, and for April and May loadings. Oilcakes are in very poor demand, and prices are easier.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The slow tone prevalent for some time past was fully in evidence to-day, and apart from attending to immediate requirements, trade buyers are not interested. Very moderate sales in British refined and home-grown granulated took place at previous rates. General undertone is weak and less reserve is marked with regard to offers from several producing countries. Estimated Java shipments for last month of 114,000 tons are on a liberal scale for the time of year. Terminal sections weaker, as sellers were in evidence, but a fair amount of business was effected. Of raw, May delivery sold 6s. 5¼d., to 6s. 3¾d.; August, 6s. 6¾d. to 6s. 6½d.; December, 7s. to 6s. 9¾d.; March, 7s. 1½d. to 7s. 9d.; May, 8s. 0¾d. to 8s. White, August delivery, sold, 8s. 10½d. Czecho, granulated, free, May-June, sellers, 8s. 9d.; November-December, 8s. 10½d. f.o.b. Hamburg. Dutch too dear for the U.K. market. White Java, July-December, to Calcutta, sellers-9s. 6d. c. and f. terms. Cuban, 96 per cent., May, quoted, 7s. 1½d.; June, 7s. 2¼d.; July, 7s. 3d.; and 88 per cent. Continental beet, 6s. 10½d. c.i.f. U.K. Cuban receipts of new crop last week total 151,941 tons, against 164,461 same time last year; exports, 148,145, against 135,927; stocks, 1,754,746, against 1,537,163. Receipts, old crop, 277 tons, against 966; exports, 2,269, against 1,049; stocks, 619, against 1,532. Centrals still at work, 91, as compared with 40 last year. Stocks of raw sugar in the three principal ports of the United Kingdom for week ending May 3rd totalled 157,077 tons, compared with 135,009 at corresponding period last year. Home refined closed 3d. to 1s. 6d. cwt. lower.

COFFEE.—Market continues fully steady for all qualities showing attractive liquor in the cup and move off with fair freedom. Medium, also common, come to a slow market.

COCOA.—Small sales resulted on the spot at barely steady prices. Forward positions easier. Accra, F/F, May-July, sold, 34s. 6d. to 34s. f.o.b. Terminal, June delivery, sold, 38s. to 37s. 6d.; July, 38s. to 37s. 6d.; September, 38s. 6d.; December, 39s.

TEA.—Indian auctions during the week embraced some 54,364 packages. All finest also clean common kinds met quite a brisk demand at full rates, the latter being mostly ½d. dearer, but plain and medium grades while in full supply ruled occasionally easier. Ceylon auctions amounted to 29,722 packages. An irregular and easier market resulted, general tone being quieter than of late, even after making due allowance for a falling off in quality. Export demand at the moment is generally found wanting. Finest descriptions of leaf and broken teas brought steady rates, but otherwise a decline of ½d. to 1½d. was observable. Java and Sumatra auctions proceeded on quiet lines, and buyers were favoured regarding price alterations.

RICE.—Business on European account continues small, but shippers require steady rates. Spanish oiled, May, 14s. c.i.f. London; Two Stars Rangoon, spot, London, 14s.; May-June steamer, 12s. 9d. c.i.f. London/Continent; No. 3 Burma, to Levant, quoted, 12s. 6d. c.i.f. double bags. American blue rose from 23s. to 24s. 6d. c.i.f. S.Q., to Cuba, 12s. 9d.; Saigon No. 1 round grain, May-June, to Europe, 12s. 10½d.; Siam Super, May-June, 17s. 4½d.

BEANS.—Quiet. Madagascar butters, spot, 33s. 6d. to 35s. as to quality; March-April and April-May, quoted. 33s. 6d. c.i.f. London. Rangoon haricots, spot, London, 11s. as to sample; May, 11s. 6d. to 12s. c.i.f. Ohtenashi, spot, London, 20s.; May-June, 18s. 6d.; Danubian H.P., spot, London, 20s.; May-June, 20s. 6d. c.i.f. To Glasgow, North African new, July-August, £8 7s. 6d. c.i.f.

PEAS dull. Japanese, old crop, spot, London, 14s. 6d. to 15s.; new, 15s. 9d. to 16s.; afloat, 15s. 3d.; April-May, 14s. 3d. c.i.f. Dutch marrowfats, prompt, 17s.; small hand-picked blues, April-May, 12s. 6d. to 13s. 6d. f.o.b. terms. Calcutta (per 504 lbs.), April-May, 43s. 9d. Karachi, June-July, 42s. c.i.f. Maples: No. 1 New Zealand, new crop, May-June, 57s. Tasmanian A grade, new, afloat, 66s. c.i.f.; April-May, 65s. 6d.

LENTILS firm. Bold Bombay, April-May, 61s. 3d.; Calcutta Patna, to arrive, new crop, April-May, 59s. 6d.; Bombay Patna, 60s. 3d. c.i.f. (504 lbs.).

SPICE.—Pepper firmer in forward positions as buyers were more in evidence. Lampong, April-June, quoted, 9¾d.; May-July, sold, 9¼d. to 9⅜d.; August-October, 8¾d. Muntok, white, April-June, sold, 11¾d.; May-July, 11¼d. to 11⅜d.; August-October, 11¼d. to 11½d. Pimento flat and May-June steamer to London quoted 43s. 6d.; July-August, 42s. 6d. c.i.f.; spot lots, 6d. Cloves and tapioca quiet unaltered. Sago flour, April-May, to the U.K., quoted 11s. 1¾d.; and May-June, 11s. c.i.f. Ginger idle. London stocks of black increased 22 tons on the week to 994, against 1,227 same time last year. White reduced 23 at 761, against 591 last year.

FRUIT (Dried).—Currants firm, with a fair trade passing. Pyrgos quoted 36s. 6d.; Amalias, 38s.; Patras, 39s.-43s.; Gulf, 42s.-46s.; Vostizza, 47s.-58s.; Australian, new crop, 43s.-58s. Sultanas quiet of sale. Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-60s.; Greek, 42s.-65s.; Australian, 31s.-45s. Dates move off slowly. Hallowie, spot, 19s.-21s.; Khadrowie, 15s.; Siar, 12s.-13s. 6d. Raisins: Small sales occurred in Valencias, quarter-boxes at 36s.-38s. Figs tend easier. Genuine, 21s.-25s.; good average, 18s.

EVAPORATED FRUITS.—Spot market easier, with a moderate business passing. Apricots meet with fair attention, and there was rather more inquiry for medium-size plums, but peaches move off quietly. Forward positions remain weak under the influence of larger prospective new crop supplies. Plums: Californian, new crop, 30's-40's, 60s.; 40's-50's, 55s.; Oregon, 30's-40's, 50s.; 40's-50's, 48s. Apricots: South African Royal, 50s.-112s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 95s. Peaches: Californian, choice, 50s.; fancy, 87s. 6d.-62s.; Australian, 50s.-60s.; South African crop, 1929, 42s. 6d.-52s. 6d.; 1930 crop, 45s.-57s. 6d. Apples: Californian, spot, sliced, extra choice, 35s.-65s.; Canadian, 52s. Almonds steady. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 110s.; Majorcas, 107s. 6d.-125s.; Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 39s. c.i.f.; sweet, spot, 72s. 6d. Hazel kernels: Kerasunde, spot, 142s. 6d.; Barcelona, 142s. 6d. French (shelled) walnuts, 135s. to 137s. 6d., ex wharf London; for shipment, 130s. cwt. f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—There is rather more inquiry for Australian varieties, but Californian moves slowly and sellers inclined to grant concessions in order to reduce stocks. The demand for Singapore pines is gradually improving and late rates were maintained. Italian tomatoes tend easier on spot, but shippers refrain from pressing forward offers.

CANNED FISH.—Market steady and general trade improving. Salmon: Alaska red talls, quoted, 47s. 6d.-49s.; pink talls, 24s. 6d.-26s. 6d., and halves, 34s. 6d.-36s. Japanese crab, best quality, 87s. 6d.-90s. Lobsters sparingly offered, halves ranging from 135s.-140s. Sardines: Portuguese clubs, three-quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Market quiet, but generally firm for ox tongues and beef. Lunch tongues in better demand, with improved inquiries also for cooked hams on spot.

CONDENSED MILK AND MILK POWDERS.—Market quiet and slightly easier. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 31s.; machine skimmed, ditto, 20s.; full cream, sweetened, 56-lb. drums (two in a crate), 50s. English condensed milk, full cream, sweetened, 5-cwt. casks, 37s. 6d.; machine skimmed, ditto, 22s. 3d. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 61s.; spray ditto, 2 by 56-lb. tins, crated, 80s. Dutch machine-skimmed milk powders, roller process, 1-cwt. cases, 27s.; spray ditto, 2 by 56-lb. tins, crated, 38s.; ditto, 1-cwt. kegs, 36s. 9d.; ditto, 1-cwt. cases, 36s. 3d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are net, ex store, London-Hull or Goole, and cover prompt or gradual delivery to the end of June, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. Minimum, 1 ton lots; smaller quantity, 6d. per cwt. extra. On the grocery side: Full cream, sweetened, 19s.; machine skimmed, sweetened, 8s. 6d. per case basis, usual packing.

HONEY.—Market generally quiet, supplies being adequate for requirements. Jamaica, white, 48s.-50s.; good amber to fine pale, 40s.-47s. 6d.; dark to fine amber, 37s.-40s. Cuban, pale, 40s.; light amber, 37s. 6d. San Domingo, good to fine, 37s.-40s.; manufacturing, 35s.-36s. Mexican, 35s. Californian, 50s.; light amber, 45s. New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d. cwt.

RUBBER.

Business was on an extended scale while assisted by firmer cables from the East, and larger buying orders mainly on covering account. Standard sheet spot and May sold 6¾d. to 7d. and 6 15/16d.; June, 7d. to 7 1/16d. and 7d.; July-September, 7⅛d. to 7 3/16d.; October-December, 7⅛d. to 7 1/16d.; January-March, 7⅛d., 7 1/16d., 7⅛d. London stocks increased 1,456 tons on the week, landings being 2,653; deliveries, 1,197; stocks 75,540, against 31,580 last year. Liverpool stocks 331 higher; landings, 548; deliveries, 217; stocks 23,877, against 4,614 same time last year.

GENERAL.

JUTE.—A quiet market continued, but prices steady, as sellers are in no way pressing. Firsts, April-May also May-June, Continent, quoted £24 12s. 6d.; new crop, August-September and September-

THIS YEAR—See
CANADA
Easy to Reach
Easily Travelled

OTTAWA—capital of Canada, with the House of Commons, Senate, and famous Carillon Tower—is visited by all Tours.

FRESHNESS . . . colour . . . charm . . . variety . . . This is what a holiday means in wonderful Canada . . . The great Dominion, easiest part of the Empire to reach, not only will amaze you by its tremendous vitality, but will also entrance you as a new holiday ground . . . a summer climate warmer than our own, the magnificent snow-crowned Rocky Mountains, quaint old Quebec, deep primeval forests, Niagara Falls, progressive modern cities like Montreal, Toronto, Winnipeg . . . prairies, mines, cowboys, Indians, big game hunting, salmon fishing, the fragrant Pacific Coast . . .

OUR TOURS TO CANADA
MAKE YOUR TRIP EASY

And Canada is more comfortably travelled, in more luxurious trains, than any country in Europe . . . and has hotels (such as the Chateau Frontenac at Quebec, Banff Springs, Lake Louise, the Empress at Victoria) which are not only world-famous but also the best in the world . . . It's always easy to travel in Canada, and we are glad to prepare itineraries . . . but this year we make it especially easy in an attractive "*Across Canada*" Tour de Luxe, at an inclusive price which covers everything . . . fares, hotels, meals, drives, guides, tips . . . Sail by the DUCHESS OF YORK on July 25, travel in Canada by a special train that waits in the station while you're sightseeing . . . seven weeks' trip altogether, crossing to Pacific Coast and back, and visiting 35 places . . . Also we have a series of 11 *Short Tours* to Eastern Canada, sailing in June, July, August, occupying from 19 to 26 days.

THE MONEY MARKET.

MONEY has been distinctly more usable this week. New capital issues and prepayments on Conversion Loan had taken a certain amount off the market, and in the middle of the week up to 2½ per cent. was paid. Thursday, to

was viewed with some anxiety owing to the heavy turnover of funds on that day caused by the repayment of the Treasury Bond maturities on the one hand and by its being the last day for the payment of the final Conversion Loan call on the other hand. Prepayments of this call during preceding weeks had reduced the latter item, so much so that it was calculated that the market would gain two millions on balance. Even so, with only a small balance resulting from a big turnover, it was clear that temporary conditions of acute stringency could easily arise.

* * * *

As it turned out, the double operation was managed so well that comfortable conditions prevailed, and though money was rather scanty in the middle of the day, it re-appeared again in the afternoon. Discount rates have been a shade firmer this week, partly owing to gold losses and partly owing to the higher level of money rates. Brokers have been charging $2\frac{5}{32}$ per cent. for three months' bills, and the clearing banks called the rate $2\frac{5}{16}$ per cent. Competition, however, at times drove the rate down to $2\frac{1}{8}$ per cent., so that the net rise in discount rates has been almost insignificant. The Clearing Bank averages quoted in a subsequent paragraph show an accretion between March and April of £26 million in the bank's bill portfolio. This reflects part of the recent purchases of short bills by the banks, and further purchases have been made in May since the averages were compiled. The total magnitude of this increase is sufficient to explain to some extent the recent low level of discount rates.

	Apr. 24, 1930.	May 1, 1930.	May 8, 1930.	May 15, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	3½	3	3	3	3½ (May 1, '30)
Banks' Deposit Rate	1½	1	1	1	1½ (May 1, '30)
Discount { Call	1½	1	1	1	1½ (May 1, '30)
Houses { Notice	1¾	1½	1½	1½	1¾ (May 1, '30)
Market rate (3 months' bills)	2½ – 9/16	2 5/16	2⅛	2⅛	...

After being higher on Tuesday, so that the market gold went to Germany at 84s. 11⅛d. per ounce, the franc exchange has again fallen, and further gold has been withdrawn on French account from the Bank. As a result of this and previous French withdrawals, the week's Bank return to Wednesday last reveals a net loss of £1,155,000. As, however, £2,036,000 of notes returned from circulation during the week, the reserve has increased by £881,000. With gold stocks in excess of £163,000,000 the French withdrawals need cause little anxiety—indeed, the Bank of England is believed to be assisting in maintaining easy monetary conditions. It is true that the Bank return shows a turnover of some £10 million from bankers' to public deposits, but this probably represents Conversion Loan prepayments. The reduction of £3,570,000 in Government securities is less easy to explain.

* * * *

The April statement of the nine English clearing banks reveals increases of £30.2 million in deposits and £9.4 million in cash.

	Apr., 1929.	Jan., 1930.	Feb., 1930.	Mar., 1930.	Apr., 1930.
Capital and reserves.....	130·8	130·5	130·5	130·5	130·5
Acceptances	206·3	164·4	159·8	159·5	159·0
Deposits (including undivided profits, &c.).....	1,743·8	1,767·5	1,714·2	1,682·0	1,712·2
Total liabilities	2,080·5	2,062·4	2,004·5	1,972·0	2,001·7
Coin, notes, balance at bank, and cheques in course of collection	251·0	248·0	234·6	235·3	244·7
Money at call.....	140·8	139·9	125·7	130·6	131·7
Investments	244·1	259·6	255·3	251·8	251·7
Discounts	191·5	242·9	218·3	181·5	207·5
Loans and advances	985·8	969·1	972·2	974·7	968·0
Cover for accept., premises, &c.	267·3	202·9	198·4	198·1	198·1
Total assets	2,080·5	2,062·4	2,004·5	1,971·9	2,001·7

Call money and investments are unchanged, while advances have been reduced by £6.7 million. The increase of £26.0 million in discounts, alluded to in a previous paragraph, show that the banks have put most of their additional resources into bills.

NEW YORK.

Our New York correspondent cables: Money is easy, no change having followed the mid-month dividend payments of about $250,000,000, nor is any expected next week, when Treasury bill tenders of $100,000,000 are called for. Half of the latter amount is required to meet maturing bills, while the balance is made necessary by Farm Board borrowing to take up deliveries of wheat bought to support prices. The banks are buying bonds unwillingly, owing to their inability to place all their surplus funds elsewhere. The Reserve statement shows a further decline in credit outstanding, which is, at $920,000,000, at the lowest level for five years, as a result of a further cut in discounts, which stand $700,000,000 below the figure of a year ago. Holdings of bills and Government securities show little change. The Reserve ratio stands at 83.6 per cent.

THE STOCK MARKETS.

The week opened inauspiciously in the Stock Markets, the weight of "undigested" new issues, the unfavourable April trade returns, and the lower earnings reported by industrial companies, all being depressing factors. A stronger tone became in evidence, however, as the week progressed. Gilt-edged recovered their earlier losses, but unsatisfactory traffic figures brought out further selling of Home Rails. Industrials were slightly harder, taking their tone frequently from New York. Rubber and tea shares lost ground, but the satisfactory "Shell" dividend induced firmness in oil shares, and the better tendency of base metal prices was reflected in the price of mining shares.

THE COMMODITY MARKETS.

The general situation remains depressed and uncertain. A slight steadying in the coal market is the result of control of supply rather than of improved demand. Competition in the iron and steel industries is intensified by the depressed state of the trade abroad, and the only consoling element in the situation is that the condition of the industries in this country appears to be no worse than that abroad. Plates and sheets are apparently the strongest section of the trade. Overseas markets for the cotton industry remain thoroughly discouraging.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was fairly active this week, with considerable irregularity in many currencies. The tendency at the opening was rather markedly against this country, but sterling recovered satisfactorily at the close. The New York rate opened at 4.85⅞ and, after being lower, rose to $4.86\frac{1}{32}$ on Thursday, having been at one time $4.86\frac{3}{32}$. Montreal improved from 4.87¾ to $4.86\frac{1}{2}$. Paris gained a point on balance at 123.86, but on Tuesday was 123.93. Brussels was quiet, but a point better, at $34.81\frac{1}{2}$. Milan lost 4 points at 92.69. Madrid was hesitant and weaker at 39.80, against 39.55 last week. Amsterdam moved sharply in our favour from $12.07\frac{1}{2}$ to $12.08\frac{5}{8}$. Berlin was ⅜ worse on balance at $20.36\frac{5}{8}$ after 20.36. Switzerland was irregular and lost nearly five points at $25.12\frac{3}{4}$ after 25.13. In the Far East the rupee was weaker with the political situation at 1s. $5\frac{5}{8}\frac{3}{4}$d. The yen was firmer on the new loan at 2s. $0\frac{13}{32}$d., but Batavia was weaker by ¼ at $1,207\frac{1}{2}$. In the forward market interest centred chiefly in the franc, as a result of funds being wanted in Paris for the Bank of International Settlements issue on May 20th, but quotations were not much affected, in spite of this, and gold shipments to France at 7 and 12 centimes discount. New York was at $\frac{3}{32}$ cent discount for one month after being higher, and at $\frac{7}{32}$ cent discount for three months. Brussels was unchanged. Milan was a point weaker for cash quotations at 13 and 32 centesimi discount. Amsterdam was uncertain and stood at ¼ and ⅝ cent discount on Thursday. Berlin was firmer at reduced discounts of 1½ and 4¼ pfennigs. The silver market was quiet, but prices fell by ⅜d. for spot at $19\frac{1}{16}$d. and by $\frac{5}{16}$d. for forward at the same quotation, chiefly as the result of China selling in the absence of support from the bazaars. The China silver exchanges were weaker, Hong Kong losing ⅜d. at 1s. 5¾d. and Shanghai ¾d. at 1s. 10¼d.

THE CHANGES OF TWENTY YEARS.

LAST week King George V. completed the twentieth year of his reign, and the congratulations offered to him by the nation are the more deeply sincere because with them is mingled a national sense of keen relief at the current evidence of recovery from his recent severe illness.

Twenty years! Has any full reign, even Queen Victoria's, sustained so great a shock of happenings or seen so great a degree of revolution and evolution, both political and economic, as have been crowded into the first two decades of this Georgian era? The Victorian age, it is true, saw the coming of steam and the great miracle of industrialisation. The Georgian period—not yet one-third of the span of the Victorian—has seen already such phenomena as the greatest war in history, the evolution of democracy, the passing of the world idea of nationality into one of internationalism, the giant strides of science and its application to industry, the maturing of the British Commonwealth of Nations, the world-wide enthronement of the Peace ideal and the establishment of the basic machinery for its attainment.

By whatever acid test we assay the past two decades they emerge as the most notable in British history. It is, or was until recently, the habit to speak of "those happy pre-war days." He who accounts them happy is indeed a *laudator temporis acti se puero*. What were the outstanding public features of the scene from which King Edward VII. passed in 1910? The constitutional crisis over the House of Lords question was at its height and was threatening deadlock to the workings of the Parliamentary system; the Irish crisis was apparently at its bitterest, and yet grew more bitter day by day till the Great War alone averted civil strife; Europe was an armed camp and armament competition grew month by month, drawing the world nearer to the edge of the precipice; the suffragettes were using force to back their demand for a limited female suffrage. We need go no further before we look across the gulf of war ordeal at the things of to-day. Who imagines to-day that the reformation of the Second Chamber, though as yet unaccomplished, will create internal strife? Ireland is a peaceful and loyal member of the British Commonwealth. Europe, and more than Europe, concentrating slowly and painfully, not on armament rivalry, but on the means of securing peace; the British democracy fully developed into a system of almost complete manhood and womanhood suffrage.

If we cannot yet claim the banishment of war, we may at least hail the steady discrediting of belligerency in favour of co-operative effort. This process is as visible in the domestic as in the international sphere. In 1910 Europe and the world were practically without the machinery of arbitration, conciliation or the peaceful settlement of international disputes. In 1910 in Britain the trades unions were busy "rationalising" themselves into big units in preparation for the great struggle with unorganised capital, which came inevitably to its climax in 1926. In 1930 we have at Geneva the common consulting ground for the rulers of the nations and the means, at least, of the widest co-operation; on paper the Kellogg Pact has outlawed war; the treaties of Washington and London have substituted restriction for unfettered competition in naval preparations; the economic activities of the League and such events as the establishment of the International Bank have not merely countered the dire effects of the world war, but have set the feet of the nations into the way of peaceful and co-operative self-help. At home the belief in brute force and "direct action" as effective industrial weapons has given way to the realisation that, however difficult the road of give and take, and common pursuit of efficient and economic production, it is the only road by which Capital and Labour can reach the goal of prosperity.

It may be that the historian will divide the first twenty years of King George's reign into four periods, each, though short, with very distinctive features. The first four years, 1910-14, of turbulent domestic politics, and in Europe of a riot of militarism irresistibly bringing nearer the threat of imminent war. The next four and a half years of nightmare—of strife, ordeal, effort, death, suffering. Then from 1919 to 1924 spasmodic, often ill-directed efforts at "clearing up the wreckage." Finally, the last six years of concentration (sometimes feeble, sometimes interrupted, but always gaining ground) on applying the lessons of the decade for the common good of the nations and their peoples.

This last period is not yet ended. Scenes are still changing fast. In our own country, for instance, we are learning the new art of Minority Government; and we are witnessing a great shift of the centre of gravity of British industry from North to South. We still face a surfeit of baffling problems. Events in India and the long struggle in China remind us of the clash of East and West, which demands a new evolution of political wisdom; the great world-wide slump in trade shows up luridly the gaps in economic organisation which wait to be filled. Yet as we look backward over the chequered years and forward into the uncharted future we may claim some grounds for satisfaction and some for confidence. The net result of these dire years of victory and defeat, of progress and setback, of achievement and disappointment, has on balance been progress all round. If we have not achieved the unachievable "Parliament of Man and Federation of the World" we have yet gone some way towards substituting the co-operative for the competitive spirit in international and in industrial and social policies; if we have not found the key to prosperity—and who, indeed, would expect to find that key quickly amid the ruins of war-impoverishment—we have at least done something towards a better distribution of wealth, towards the establishment of higher standards of living, towards reaching a greater degree of material well-being for the greater number. The task of the coming years is so to organise the system of production, credit and exchange that the means for the sustentation of higher standards are forthcoming. That and the gradual perfection of the newly and roughly forged instruments of international confidence and co-operation—these are the two supreme problems of the next decade. If responsible leaders in the political and economic spheres succumb to the spirit of "defeatism" or surrender to frenzies engendered by the pressing troubles of the present, these problems will not be solved. But we are confident of their progressive solution—and this for three (if no more) reasons:—science and invention have placed and are placing in our hands new weapons of incalculable power; the cataclysm of the recent past have taught lessons which history sometimes takes centuries to teach; the peoples of civilised countries have had their eyes sufficiently opened to see the difference between the strait path of united effort that leads ultimately into the fertile valleys and the broad road of belligerency that leads directly into the inhospitable mountains of distress. We believe, therefore, that when the full tale of the reign of George V. comes to be told—and far off may that time be—the final balance of progress and achievement over trial and failure will be greater than, amid our many troubles, we can realise to-day.

THE ECONOMIC BACKGROUND IN INDIA.

THERE has been little change during the week in the Indian situation. The disturbance at Solapur, which broke out towards the end of last week, continued over the week-end and resulted in the city being occupied and placed under martial law. On the frontier a air demonstration has been made against the Haji of Tangzai and his forces, and a march of volunteers to raid the salt works at Dharsana led by Mr Gandhi's successor, Mr Abbas Tyabji, was stopped by the police. The new leader and fifty-nine of his companions were arrested and have been sentenced to imprisonment. Considering that the week included the anniversary of the outbreak of the mutiny and the Moslem festival of Bakr' Id, which is commonly an occasion for disorder, it is a matter for qualified satisfaction that there have been no more serious developments. The Viceroy has chosen this moment to issue a statement to the people of India giving in very restrained terms an account both of the Government's policy and its offer to India, and of the development of the civil disobedience campaign. He concludes with a warning against the dangers of the present course and the grave wrong that would be done to India if, as a result of misguided counsel, the extremists caused their countrymen to lose the opportunity of a great step forward towards the goal of responsible government.

This statement, together with answers given in the House of Commons, have also served to outline the precise time table of future developments. The Secretary of State's announcement was to the effect that Volume I of the Statutory Commission's report will be simultaneously published in England and India on June 10th, and that the second volume will be published on June 24th. The Round Table Conference is to meet in London on or about October 20th, and it now emerges from correspondence between Mr MacDonald and the Viceroy, that, in order that representation should be fairly distributed amongst the sections of those who desire and have a title to be heard, the delegates will not be elected but will be invited in consultation, where possible, with the interests concerned. The Viceroy reached this conclusion after discussing the matter freely with men of widely differing opinions.

Meanwhile, an all-parties conference had been summoned by the moderate parties to meet on Wednesday in Bombay to see if a way could be found for settling communal differences before the London Conference comes into being. But the situation has not been favourable to compromise. Half the members of the committee who should have been present have found one reason or another for not attending. Certain Hindu leaders, whose attitude has at critical moments been hesitating, are unwilling to commit themselves; some of the moderate leaders profess dissatisfaction that the Viceroy's declaration did not contain some more definite assertion with regard to Dominion Status—though there was clearly never any hope that anything specific could be said on the eve of the publication of the Simon Report—while the Moslem leaders are unable to see their way clearly in view of the uncompromising attitude of the high caste Hindus and the general preoccupation with the civil disobedience campaign. It is, therefore, anticipated that instead of discussing the central problem of communal relations, this Bombay conference will debate whether the leaders of any party should attend the London conference at all. Under all the circumstances there seems little likelihood that there will be any clear or definite change in the situation generally until the proposals of the Statutory Commission are made public.

In the meantime the annual statement* on the moral and material progress of India in 1928-29, which has just been issued, will enable the British public to fill in some of the background of the Indian scene. This document is, as usual, mainly a record of the events of the year, and devotes considerable space to political events which centre round the visit of the Statutory Commission and the attitude of the various parties towards it. Prominent in the category of events are the controversy over the Public Safety Bill, the riots in Bombay in February, 1929, with their death roll of 139 persons killed, and the failure of Moslem and Hindu to reach any understanding. These are among the depressing features of a story which is, however, relieved by the record of many achievements in the social and economic field. Mr Coatman's report also covers the preliminary stages of the latest efforts that have been made to deal with the question of child marriage. These have since been brought to a successful conclusion.

But perhaps the greatest value of this report lies in the chapters which deal with the economic situation in India. Mr Coatman does well to remind us at the outset of the statistical importance of the Indian village population. Out of 319 million inhabitants in 1921, less than 8¼ millions lived in towns of a population of 100,000 and upwards, while another 3½ millions lived in towns whose population was between 50,000 and 100,000. Apart from these, less than 21 millions lived in places that can be called towns, even if we include in this category villages of a population of less than 5,000. But the remaining 286 millions are living remote from the modern world of industry and highly organised communications, and still gain their livelihood with primitive implements and methods of cultivation. Nevertheless, even the Indian village is not entirely unaffected by the changes that have taken place in the past few decades. "The spread of railways and roads in India has done much to break down the ancient isolation of her villages, and a majority of her people must at any rate have seen motor-cars, whilst millions of them have actually ridden in them at some time or other." The post-Reform developments in local self-government have also given the villages a new status, and their residents new interests and functions. Boards have been set up to deal with water supply, the cleansing of public roads, tanks and wells, and have been brought into contact with the administrations of the provinces. Small industries, too, are beginning to spring up in the countryside. "As the traveller drives about the country now he will hear frequently from many of the villages which he passes the sound of a little engine working a sugar-cane crusher, an oil presser, a little rice hulling mill, and so on." Yet again, the cultivator is producing to an increasing extent for more distant markets. Surplus harvests can now be disposed of, and the Indian "money crops"—tobacco, oilseeds, jute, cotton, tea—are assuming an ever-increasing importance.

Since 1913 India has risen from sixth to fifth place among the trading countries of the world. Fifty years ago India's exports were valued at approximately 60 million rupees, but in 1925 they almost reached 4,000 million rupees, and the greater part of the increase has taken place in the last two decades. The picture is thus one of a country with a primitive agricultural life which, however, is beginning to participate in modern material progress. The rate of increase of India's foreign trade has been, and still is, great, but its achievements to date are small as compared with its immense potentialities. There is, however, another side to the picture. "Although an appreciable improvement has taken place in the standard of living of the Indian agricultural masses during the past quarter of a century, this only represents the genesis of what has yet to be accomplished. There is a vast amount of what can only be termed dangerous poverty in the Indian villages—poverty, that is, of such a kind that those subject to it live on the very margin of subsistence." From this poverty arise all the difficulties associated with dependence upon the money lenders. Mr Coatman relates something of the history of the efforts that have been made by co-operative credit societies, Agricultural Loan Acts, etc., to solve this problem.

Hand in hand with poverty goes disease which, in the phrase of the report, is the cause "of immense economic wastage." In this connection the report recalls the resolution of the Conference of Medical Research Workers which in 1926 declared that "the average number of deaths resulting every year from preventable disease is about five to six millions, that the average number of days lost to labour by each person in India, from preventable disease, is not less than a fortnight to three weeks in each year." Mr Coatman adds that the fragmentation of holdings and certain social and religious customs, such as excessive expenditure on weddings and funerals, and the custom of child marriage, are also hampering influences.

Wherever one turns in India there is clearly a vast field for scientific research, and the report describes some of the work that has been done in producing and distributing new types of seed, in improving the breed of cattle and in the study of the prevention of disease, to say nothing of irrigation. In these directions, and in the development of road and railway communications, there is a record of progress of which the Administration may well be proud, and although, as is well known, the Indian cotton industry, like the cotton industry elsewhere, has for years been in a state of depression, the internal carriage of goods as well as the external trade of India advanced during the year under review to record dimensions. This glance at the record of work done, and to be done, is a useful complement to the wearisome story of political unrest, and its lesson is plain. The raising of India from her poverty is a task in which the Government has done much, but it cannot possibly hope to achieve adequate results without Indian co-operation.

THE YOUNG PLAN AT WORK.

THE Young Plan has been ratified, the Bank for International Settlements is formally in existence, and its first official board meeting has been held. After confirming the appointments of the personnel of the Bank, which had already been announced, the first task of the board was to deal with the issue of its own capital. The date for the subscription of the capital has been fixed for May 20th. The central banks of six of the seven signatory countries, and the New York Banking group are to be allotted 16,000 of the 200,000 shares of 2,500 Swiss francs each, of which the capital of the bank consists. No public issue of the British quota will be made in London, and presumably the shares will be placed privately.

These allocations account for 112,000 of the shares. Of the balance, the Swiss National Bank, the Netherlands Bank and the Swedish Riksbank are each to take 4,500, and the remainder are at the moment in abeyance. Other preliminary questions to be disposed of by the bank include that of the suggested appointment of Mr Siepmann as head of the Liaison Department. No definite statement as regards this has yet been made, but it is to be hoped that even if Mr Siepmann is unable to accept the appointment, provision will be made for the inclusion of one or more English representatives among the senior officials of the bank. That the City shares this hope is evidence of London's desire to co-operate.

Apart from these internal questions, the first task that is engaging the attention of the directors of the bank is that of the Reparations Loan. As was inevitable in a task of this complexity, the preliminary negotiations have been protracted, and are not yet complete. One of the chief reasons for this delay appears to be the difficulty of determining the form of the bonds and coupons. The issue, it will be recalled, is to be made simultaneously in a number of centres, including not only those of the signatories to the Young Plan, but also other centres, such as Amsterdam and Stockholm. The question on which there appear to have been differences of opinion is whether the bonds and coupons should be expressed and be payable in a single national currency or in several. The Young Plan contemplates national bonds—though suggesting that they may express on their face an equivalent in other currencies. In any case the principal is to be payable on the basis of the gold equivalent of the currency in question. As to the coupon, the Young Plan suggests two possibilities. The first is that the coupon, in whatever currency expressed, shall be payable at the exchange rate of the day in all markets on which the bonds are quoted; the second, that, after 10 years, the Bank may issue bonds "the service of which is payable in different currencies at par at the holder's option." In other words it may issue really international bonds with an international coupon. It has been suggested that bonds of this international character should be issued forthwith; but to this objection has been raised. From one point of view the suggestion seems attractive, for it would make the bonds more marketable, and so render it possible to place them on better terms from the issuer's point of view. On the other hand, bonds of an international character are less likely to remain permanently domiciled in their original country of issue, and if such transfer from one centre to another takes place on a large scale, it means that the capital actually subscribed will come from the various countries in quite different proportions to the quota originally allotted, and the careful attempts to adjust these quotas to the capacity of various markets will be so much time wasted.

This question of the form of the bonds is of special interest to London owing to its exceptional position as an international capital market, and in view of the vulnerability of the Bank of England to calls upon its gold stock, there may be some advantage to London in not making it too easy to transfer other portions of the loan to this country. It is, perhaps, for these reasons that the British Treasury appears to have attached importance to the point and taken a hand in the discussion in accordance with the terms of the Trust Agreement signed in January at the Hague, which entrusts the B.I.S. with the task of mobilising these bonds. The relevant clause runs as follows:—

"No issue of an international character may, however, be made in the market of any of the countries the Government of which has signed this Trust Agreement without the approval of that Government both as regards the amount of the issue and as regards the conditions on which it shall be authorised."

As a result of the discussions to date, it has been agreed that the bonds themselves are to be national bonds, but the form of the coupon has apparently not yet been agreed upon. We hope this matter will be quickly settled and the uncertainty as to this large loan which is now hanging over markets removed. After all, it is easy to exaggerate the importance of the point at issue, for bonds of almost any country in the world will find a market in London if the price is sufficiently attractive, and if the issues in other countries are too large for their national markets, there is a considerable probability that they will be transferred here. If, as is said to be the case in France, it will prove possible to sell her quota of the bonds at a higher price than in London or New York, the issue at different prices will itself tend to prevent the transfer, provided the experts are successful in adjusting the quota to the absorbing power of the markets. If they are not successful, the bonds will find a home wherever capital is available, no matter what the currency in which they are issued.

It is, of course, true that with a national issue of small dimensions there is likely to be a very poor market in London. Moreover, by giving the bonds a "national" as opposed to an "international" character, the transfer to London of amounts in excess of those which may be allocated to us will be delayed, so that instead of a sudden and severe strain being thrown upon the London market by the issue of the loan, such transfer of bonds to London

as does occur will spread the strain over a longer and more indefinite period.

The exact terms of issue will obviously vary slightly in each market, in accordance with current possibilities as measured by the market price of existing bonds of a similar character. Probably all the bonds will carry the same nominal rate of interest, and the differentiation between the various markets will be obtained by means of the price of issue in each market. It seems likely that the nominal rate will be 5½ per cent., and while this means that in certain centres—notably London and New York—the bonds will have to be offered at a discount, there are other considerations which outweigh this objection.

The French quota is to be offered on terms including exemption from French taxation. The reason for this is that the French issue will largely take the form of a conversion operation in exchange for existing French bonds which are already exempt from taxation. This consideration does not apply to other centres, and in London in particular it is legally impossible—even if it were desirable—to free the bonds from the incidence of British taxation.

The sinking fund provisions have also to be determined. A meeting with the issuing bankers was held on Thursday, and this point was possibly considered, though no details are forthcoming at the time we go to press. There is, however, a final point that it is necessary to make. The fate of recent new issues has shown that this is hardly a propitious moment to launch an important new loan in London, and conditions in New York are little better. The Bank for International Settlements is, strictly speaking, authorised to determine the moment when reparation bonds can suitably be issued; but whatever discretion it may have in the future, on this occasion it has no option but to do its best to carry out the intentions expressed by the Powers at the Hague, and to bring the loan out at an early date. The fact that the reasons for this course are political and not financial does not, unfortunately, diminish their urgency. These considerations must be given some weight in times like these; but they are essentially matters of detail. They are not of such importance as to justify our withholding co-operation in an issue which, for political reasons, the world has accepted as a necessary accompaniment of the Young Plan. The difficulties of the bankers do, however, illustrate the disadvantages of making these great financial operations dependent on political exigencies, and stress the case of the Paris experts who endeavoured to remove the whole problem into the purely financial sphere. We should like to think that this is the last time that political influences will thus intervene.

ECONOMICS OF FASCISM.

THE creation of a new body of economic theory is a long-cherished ambition of the leaders of Fascism, and Fascists have frequently reproached Italian economists with their slowness in evolving such a theory, accusing them of wilful aloofness from Fascism owing to their liberal intellectual background and congenital inability to adapt their minds to new experiences. Lately, however, the progress of corporative legislation, which is spreading its net more and more widely in Italy over the field of prices and wages, has been accompanied by the appearance of a growing body of literature whose purpose is to discuss the theoretical principles underlying Fascist economics.

A very pronounced step towards the final embodiment of these principles in legislation has been recently taken in the passing of the Bill on the National Council of Corporations, whose main provisions were summarised in the *Economist* of December 7 last. The new Act is designed to bring into existence the "Corporation," an impartial higher body—not directly representative of the employers' and employees' syndicates—which was provided for in the Labour Charter of 1927, but which had not yet come into being. Under the provisions of the Act a council is to be created, to function as a sort of industrial parliament, principally for the purpose of giving advice on industrial matters, but endowed also with legislative powers. Hitherto the collective bargains reached by the employers' and employees' syndicates were legally binding, even upon non-members, but they were strictly confined to wages, hours and other purely labour matters, and the syndicates were expressly forbidden to meddle in the conduct of industry. Under the new Act, legal recognition is accorded to the impossibility of thus segregating economic matters in watertight compartments, and the council is empowered to "formulate compulsory rules regulating collective relations between different categories of production," and to "rectify agreements on the same matters reached by the interested recognised associations." If, for example, wheat or sugar beet producers think that the price paid by millers or sugar manufacturers is too low to enable them to pay the standard agricultural wage, they may, with the consent of the Prime Minister and of the producers' syndicate concerned, bring the matter before the Council, whose decision shall be legally binding. In the debate on the Bill several members hailed the Council as superseding old parliamentary institutions, and as the forerunner of a new social or corporative order.

On the face of it there appear to be strict limits to the exercise of the regulating power of the Council. The associations concerned must agree upon the reference to the Council, and if one party objects the matter does not reach it. Thus the power of the Council is not so much that of a legislator acting on his own initiative as that of an arbitrator having legal power to enforce his award, provided the dissentients agree to have recourse to him. If associations were self-governing bodies in which it were possible for dissenting members to make their voices heard, and for majorities to refuse their consent to a request by other associations for reference to the Council, the reform, though important, would remain in the realm of permissive arbitration.

The misgivings of Italian employers about the working of the new statute might at first sight seem incomprehensible, since, according to the letter of the law, if they fear an award, they need only refuse to invoke the Council. Actually, however, the position is not so simple. In the first place, the syndicates are public bodies to which nobody dare, in practice, refuse to belong, and in any case decisions are binding on non-members. In the second place, they are in fact governed from above; the presidents and secretaries are not elected but nominated. Thus the last word is with the Prime Minister, who may at times prefer to legislate under the outward form of an award of the National Council of Corporations, following a request from the associations affected, instead of by royal decrees or through the medium of a nominated Parliament. As one member pertinently asked in debate, illustrating his point from a recital of the numerous stages in the progress from broken iron to finished ship at which disagreements on the question of price might arise, what of the private initiative which the Labour Charter considered the basis of corporative economy?

Another illustration of the subordination of the individual to the presumed good of the community is afforded by a recent ruling of the Fascist Grand Council. Instances were already numerous of the seizure by the State of lands whose owners were not utilising them to the best advantage. The current *Countryman* reproduces a recent decree of this nature, based, it is true, on pre-Fascist legislation, but on legislation which no previous Government attempted to enforce. Now it has been decreed that owners of reclaimed land in the Po valley must adopt a system of *métayage*, and wherever possible must employ a specified minimum number of men per acre. The underlying principle of these decrees, a principle which was laid down in the Labour Charter, is that private property implies duties, and is not an absolute right but a revocable trust to be exercised for the benefit of the community.

It is therefore not surprising that Signor Arias, one of the economic theorists of Fascism,* should seek the kernel of the new doctrine in an endeavour to appropriate rents (by which he understands not the "rent" of economic theory, but rather, "unearned income") for public ends, among which ends is a redistribution of wealth. He points out that in the Corporative State, *rentiers* as such have no place. Holders of bank deposits and public securities have no standing in a syndicate of their own, and only the producer, whether employer or employee, is a full citizen. Signor Fovel, in another book† on Fascist economics, quotes the compulsion to employ a minimum number of men per acre referred to above, the legal prohibition of lockouts and the virtual prohibition of closing down during slack times, as instances of the tendency to encroach on capitalist incomes for the benefit of labour.

Signor Arias, on the other hand, takes the view that the interesting point in Fascism is not the redistribution of income but the motive to which the change is due. Whereas the driving force of "liberal" economics is the interest of the individual, that of Fascist economics is pursuit of the ends of the State. Thus prices or wages or profits or rent may be fixed in the usual competitive or monopolistic ways, but it will be on a different level and therefore with different results.

For our part, we are inclined to agree with Signor Pagni,‡ who scouts both these views and prefers to regard economics as a science whose principles, if properly formulated, can be equally well applied to liberalism, socialism or corporativism. He believes that self interest, in the present state of human nature, is likely to remain the fundamental motive of economic actions. If this be accepted, it is impossible not to sympathise with Italian employers in their uneasiness as to the future. The margin for new saving is being reduced, and capitalists are afraid to invest in view of the risk of sudden State intervention. Imperfect as may formerly have been the bulwark provided by Parliament against this peril, at least it meant discussion and delay. Now there is no safeguard against unforeseen decisions by the Fascist headquarters staff, and Italian employers are learning, at great cost, that their most urgent need is for certainty as to the future.

THE DIRECTION OF OVERSEAS TRADE.

THE Board of Trade analysis, in the April Trade Returns, of the origins and destinations of our imports and exports in the first quarter of 1930, reveals certain noticeable changes. While total imports fell from £305,963,000 in the first quarter of 1929 to £283,484,000 in January-March, 1930, imports from foreign countries in Europe rose from £99,920,000 to £107,107,000 in the same period, and whereas British exports fell from £181,168,000 to £164,132,000, exports to Europe only fell from £56,590,000 to £55,144,000. A corollary of this is a marked decline in the proportion both of our imports and of British exports which is accounted for by British countries, as is shown below. The table is based on figures from the current *Board of Trade Journal*, and for the sake of comparability with 1913, trade with the Irish Free State is not included.

1930.....	72·64	4·41	3·66	14·62	1·71	2·96

This shows marked changes in the origin of our imports, the share of Europe having risen from 30.98 to 36.74 per cent. at the expense principally of Africa and North America. The proportional distribution of our exports has changed less, but here also there has been a definite rise in the European share and a fall in the proportions going to North America and Asia. The African percentage has slightly increased. The principal changes in re-exports are a rise in the European share and a sharp drop in the proportion taken by North America.

Imports from almost all European countries except the Netherlands, France and Switzerland have risen, and the increase is particularly marked in the case of the Scandinavian and Baltic countries. Exports to Europe, which declined by only £1½ million, show small changes as far as individual countries are concerned, except for Germany. The decline of nearly £1¾ million in our exports to her is greater than the fall in our exports to Europe as a whole. Exports to Russia show an increase of some £400,000.

Outside Europe there have been a few increases in imports, but these are far outweighed by certain heavy declines:—

Argentine	10,845	20,983	21,098	16,393	5,232	8,549	7,417	6,913
Other foreign countries (non-European)	1,570	5,341	4,123	4,228	1,505	2,243	2,824	2,592
Total	71,877	104,327	107,899	92,872	32,368	41,845	42,915	35,728

Imports from the United States have fallen by practically £10 million, and those from the Argentine by nearly £5 million. From Chile, Brazil, Mexico and Uruguay they increased slightly, but imports from the remaining Latin-American countries in the table fell, and there was a decline of £2½ million in imports from Egypt. Foreign, non-European exports showed an almost uniform decline, slight rises being recorded only in exports to Persia, Mexico, and Uruguay. Exports to the United States, China, Japan and Brazil fell substantially.

Trade with British countries, shown below, has undergone the most marked decline of all, as far as imports are concerned, and a decline in exports not very much less than in those to foreign non-European countries and very much greater than in exports to Europe:—

JANUARY TO MARCH.

Total	49,639	99,075	99,156	83,505	48,317	81,843	81,662	73,260

The only part of the Empire separately shown in the table from which our imports have increased is the Irish Free State, and there have been very serious declines in imports from India and Ceylon, Australia and New Zealand, partly attributable to the heavy decline in the prices of raw materials which form a large part of our imports from those countries. The Free State is also the only part of the Empire which has taken substantially more of our exports, though there have been small rises also in our exports to New Zealand and the West Indies. Exports to Canada have fallen by over one-third, and India has taken over £3 million less than in the first quarter of last year. In view of the increasing tendency, to which we have more than once called attention, for European countries to trade with each other rather than with other parts of the world, it is interesting that the only part of the Empire with which our trade shows a steady expansion should be the Irish Free State, and the only other part which records even a small increase so far this year, the British possessions in Europe.

The remaining table shows re-exports in the first quarter over a period of several years:—

RE-EXPORTS.—JANUARY TO MARCH.
(000's omitted.)

Other British countries	551	886	1,038	1,056	960	1,074	1,049	1,006
Total	31,083	39,243	39,918	37,048	31,438	33,239	30,098	24,482

There has been a practically unbroken decline since 1924, and this is particularly marked in re-exports to the United States, Australia and Canada, while those to Denmark, India and Ceylon and New Zealand are approximately holding their own. As compared with last year, the most marked declines were in re-exports to Germany, Belgium and the United States, while those to Russia, the Netherlands, the Irish Free State, New Zealand, India and Ceylon increased.

If a list be made from the above tables of countries with which our trade in both directions, excluding re-exports, expanded in the period under consideration as compared with the first quarter of last year, it will be found to contain nine European countries together with Persia, Mexico and Uruguay, and no British country except Ireland. A corresponding list of countries with which trade in both directions declined contains fourteen foreign countries, of which eight are in Europe, and six Empire countries, including India, South and West Africa, Australia and Canada. So many disturbing elements,

especially recent changes or projected changes in tariffs, have entered into the determination of trade during the quarter under review that it is dangerous to generalise from these results, but when all allowance is made for merely temporary influences the impression still remains that they afford strong support of the statement recently put forward in a League of Nations publication, that the older industrialised countries of Europe are to an increasing extent finding their best markets in each other.

SAFEGUARDING: MORE RESULTS.

IN a recent issue (*Economist*, May 13, 1930) we examined the effects produced during the past five years by the lace duty, whose date of expiry is June 30th. The other Safeguarding duties which expire during the present year, at the end of their appointed five-year term, are those on gas mantles, certain kinds of cutlery, and gloves of leather and cotton fabric—all imposed on December 22, 1925. The results of these duties are also worth brief examination in the light of the available trade returns.

So far as gas mantles are concerned, there is little positive evidence as to the duty's effects. The industry in this country is small, employing less than 2,000 workpeople. In 1924, according to the submissions of the applicants at the 1925 Safeguarding Inquiry, British production of mantles amounted to 290,000 gross, as compared with retained imports of 165,000 gross. Since the imposition of the duty retained imports have fallen to the negligible figure of 10,000 gross in 1929, but exports, which amounted in 1924 to about 8 per cent. of British production, have shown no expansion whatever. Moreover, the fact that after the duty was imposed an agreement was concluded between the British Associated Manufacturers and their German competitors, providing for the reservation of the British market for home producers in return for (1) a toll levied on British production, and (2) allocation of other markets to Germany, makes it impossible to prove whether the duty by itself would have ever shut out foreign imports. All that can fairly be said is that the duty has enabled the British manufacturers, who maintain—so the Safeguarding Committee was informed—"a price association which practically eliminates price competition," to free themselves, in an inelastic home market, from the spur of competition. The consumer has borne the burden.

Turning next to the cutlery duty, we show in the following table (the figures in which are taken from the Annual Statement of Trade and the answers to questions given by the President of the Board of Trade in Hansard of February 27, 1929, and April 17, 1930) the course of retained imports and British exports of cutlery of dutiable kinds in 1924 and in post-duty years:—

British Exports	913	971	1,061	974

* Including safety blades, &c. † Not available.

It will be observed, firstly, that in the case of knives and scissors the duty has had no visible effect either in restricting imports or stimulating exports, whose decline was found by the Census of Production in 1924 to have been the main cause of the failure of British output to expand since 1907. As we have pointed out before in these columns (*vide Economist* of November 10, 1928), the import trade in cutlery takes predominantly the form of cheap Solingen-made lines of pocket knives and scissors, which Sheffield, whose staple cutlery production (unaffected by competitive imports) is table knives, is not organised to replace. For the cheap goods which he requires the consumer, once again, has paid the duty, without any benefit being conferred on the British industry. Only in the case of razors has the position of the British manufacturer improved since the duty; and it is difficult to say that the improvement has been due to it. Blades for safety razors are here the important factor, and it is satisfactory to note that, under conditions of rapidly increasing world demand, the British manufacturer has succeeded in largely expanding his exports. But retained imports have also increased, and the production of Gillette-type blades in this country was going ahead fast before the duty was imposed. Moreover, when the aggregate values of all kinds of cutlery on which the Safeguarding duty was imposed are considered, it will be seen that between 1924 and 1929 retained imports have risen by £286,000 (nearly 100 per cent.), and British exports by only £61,000, or less than 7 per cent.

There remains the case of the glove-making industry. It may be recalled that the Census of Production in 1924 showed that in the leather section of the trade production amounted to 532,900 dozen pairs, as compared with 608,700 dozen in 1912, the average increase in selling price being 153 per cent. Retained imports amounted to 63 per cent. (as compared with 75 per cent. in 1912) of the total home consumption—the average price declared at the Customs being £1 17s. 6d. per dozen, against £3 10s. 3d. per dozen for all British-produced gloves, and exports amounted to 7½ per cent. of British output, against 40 per cent. in 1912. The explanation of this great discrepancy between the values per unit of the foreign imports and the British output was that our purchases from abroad were mainly of the cheaper "light" leather gloves not produced in this country.

As regards cotton fabric gloves, British production, which had never represented more than a trifling proportion of our total consumption, amounted in 1924 to about 137,000 dozen pairs, of which 59,000 dozen were exported, against retained imports of 817,000 dozen. The following table gives the foreign trade figures for 1924 and 1927-29:—

FOREIGN TRADE IN GLOVES.
Thousand dozen pairs.

	1924.	1927.	1928.	1929.
Leather and Fur—				
Retained Imports	851*	759	775	621
British Exports	41*	48	49	53
Cotton Fabric—				
Retained Imports	817	1,131	1,335	1,035
British Exports	59	19	20	21

The conclusions suggested by the foregoing figures are (1) that the import duty has shut out a proportion of the lighter type of inexpensive leather gloves which we formerly purchased from abroad, and (2) that the exclusion of these imports has stimulated, in spite of the duty, our purchases of foreign-made cotton fabric substitutes. When the totals for both leather and cotton gloves are combined, it will be noted that net imports in 1929 amounted to 1,656,000 pairs, against 1,668,000 pairs in 1924, while exports had fallen from 100,000 to 74,000 pairs. In short, there is little evidence that the duty has done more than add to the price of gloves without materially benefiting the industry. The British output of fabric gloves has continued to represent a tiny fraction of the total consumption; there has been little improvement in the industry's employment position; and there has been a serious increase in the price of "popular" light leather gloves, while the Lancashire spinners who supply the yarns for the manufacture of fabric gloves in Saxony have been seriously affected by the duty's repercussions.

In this examination of the effects of the four Safeguarding duties which come to an end in 1930 we have not been concerned to try to prove that a particular industry cannot be stimulated by tariff protection. A tariff may very well produce that effect, and the case for Free Trade does not rest on the assumption that individual beneficiaries of Protection cannot gain a selfish advantage. The trouble with protective tariffs is that the benefit is gained at the expense of others and ultimately turns to the impoverishment of all. What we are entitled to conclude at the end of this brief survey of the history of the lace, gas mantle, cutlery and glove-making industries since

1924 is that the consumer has paid heavily in 33⅓ per cent. duties for negligible benefits to the trades concerned. If these industries are now protesting against the expiry of the duties it is because they have failed, since 1924, to organise their production in such a way as to give them confidence that they can stand on their own feet, not because the duties have been to them of much advantage.

Notes of the Week.

The Government and the Press.—The prominence given to the recent action of the Government towards certain London newspapers, in connection with "intelligent anticipation" of the decision to arrest Mr Gandhi, reveals how cherished a British possession is the freedom and independence of the Press. On the eve of the arrest three London newspapers announced that the Cabinet had decided to approve this step. The Prime Minister, fearing serious consequences and assuming that improper leakage of information must have occurred, consulted the Attorney General and set in motion the machinery of the Official Secrets Act (Section 6), which, when improper disclosure is suspected, lays on the discloser the obligation to give to the police the fullest information as to the source from which the statement was obtained. Police interviews with two editors, one acting editor and one Lobby correspondent followed and the matter was fully ventilated in the House of Commons at question time on Monday. The upshot was the establishment of two facts. First, that there had been no leakage of Cabinet secrets; secondly, that neither the editors nor their Parliamentary correspondents had been guilty of any departure from ordinary and justifiable conduct of their difficult business. The correspondents had merely done what they must in the nature of things always be doing—talking with prominent politicians, and endeavouring to glean enough material for forming their own views as to the probable course of events. It came as a shock to the Press to discover that the mere performance of this legitimate and delicate task laid journalists open to police interrogation and to the demand, on pain of severe penalties, to disclose sources of information. So seriously was the incident regarded that a representative meeting of the Newspaper Proprietors' Association was held on Tuesday, at which strongly-worded resolutions were passed declaring the action of the Government to be unjustifiable and asking for an amendment of the Official Secrets Act. Undoubtedly the Government blundered. The section of the Act under which action was taken is clearly intended for dealing with serious cases of espionage and not for hampering journalists in their proper function of intelligent forecast. It is clear from the Prime Minister's remarks in the House that his action was prompted by the fact that there has recently been too much leakage of Cabinet secrets. As it turned out, the Government found no more than a mare's nest. Whether any amendment of the Official Secrets Act is desirable there is room to doubt. No one wishes to weaken the powers of the authorities to deal with espionage or improper disclosure of State secrets. But if the Act is to stand as it is, two things are necessary. One is, an assurance that the powers conferred by the Act will only be used in big and serious cases; the other is a clear public statement by the Prime Minister exonerating the newspapers and journalists concerned in this incident. An incidental reflection suggested by the affair is that, all circumstances being considered, improper leakages are surprisingly few.

Mr Baldwin Stands Firm.—At Sheffield, last week, Mr Baldwin addressed the first meeting of the Conservative "Home and Empire" campaign, and the chief feature of his speech was that he made no concession whatever to the demands made on him by Lord Beaverbrook and his "Empire Crusaders." The latter, of course, recognise as clearly as the late Joseph Chamberlain that taxes on foreign imported food are an essential basis of the policy which they describe as "Empire Free Trade," and wish to drive the official Conservative Party into promising to impose them. Mr Baldwin adheres to the position which he took up some months ago. "I will not ask the people of this country," he reiterated at Sheffield, on May 8th, "at the forthcoming general election to put any tax on foreign goods." What he will do is this: If returned to power he will hold an Imperial Conference to discuss "every possibility for increasing Imperial trade," and "if, as a result of those discussions there should be any form of treaty or agreement which would involve on our part the taxation of foreign foodstuffs, or any foreign foodstuffs, then that agreement, or treaty, or whatever it may be, shall be put before the judgment of our people by means of a poll." By "poll" Mr Baldwin presumably means a referendum, and he used that word in the same context at Reading this week. This is precisely the same policy as that which, two or three weeks ago, Lord Beaverbrook found to be "not in consonance" either with his Empire Free Trade policy or "with the arrangement under which we accepted the referendum." So the struggle between Mr Baldwin and Lord Beaverbrook for the body of the Conservative Party goes on. The latter's strenuous efforts at the West Fulham by-election did not yield a result sufficiently striking to alarm Mr Baldwin into further concessions. Now, at the Central Nottingham by-election, the Conservative candidate is fighting on a policy of no food taxes and the retention and extension of safeguarding. At Sheffield Mr Baldwin somewhat enlarged upon his previous statements on safeguarding. He wants safeguarding for three reasons: "For the protection of our standard of life; for bargaining with foreign countries; for retaliating." In safeguarding he sees the only road to freer trade in the world: "Of one thing I am convinced, that, so long as we keep this country as the world's dumping ground, you will never see 6d. taken off any duty in any country." The idea that the way to lower world tariffs is for the great Free Trade nation to join the already overcrowded ranks of tariff warmakers is unconvincing as a theory, and becomes completely fantastic to anyone who takes the trouble to study the tariff experience and tariff history of recent years.

The Breakdown of the Egyptian Negotiations.—The breakdown of the negotiations between Mr Henderson and Nahhas Pasha occurred at 12.45 p.m. on Thursday, May 8; and while the door has been expressly left open for resumption of negotiations as from the point reached in this abortive attempt at a settlement, no date for resumption has been fixed. The breakdown is the more regrettable when we consider how very near the point reached actually was to the goal. Indeed, complete agreement appears to have been reached on all matters that were discussed in the Chamberlain-Sarwat conversations of 1927; that is, on three out of the four points reserved in the British unilateral declaration of February, 1922. These points are the security of British Imperial communications in Egyptian territory and territorial waters; the defence of Egypt against attack by a third Power; and the protection of native minorities and foreign residents in Egypt. It will be remembered that in 1927 the crux was British Imperial communications, or, in concrete terms, the question of where in Egyptian territory, and for how long, British troops should continue to be stationed. To have achieved agreement on this point is a substantial success from the point of view of both parties; and although this agreement has not been implemented, owing to the breakdown of the negotiations over another matter, it is to be hoped that it will be accepted in both countries as definitive, even if other Governments happen to be in power in London and Cairo when negotiations are started again—whenever that may be. Meanwhile, this latest attempt to arrive at a comprehensive Anglo-Egyptian settlement has miscarried over the fourth of the four reserved points, namely, the Sudan—a point which, in the Chamberlain-Sarwat conversations, was deliberately set aside for consideration at some later date. This breakdown over the Sudan is disappointing, in view of the fact that agreement has been attained over all questions concerning the direct relations of Egypt and the British Empire with one another, and the further fact that, last year, the Sudanese question, which is most clearly a matter of direct and vital concern to Egypt, was settled in detail, and to the satisfaction of all parties, by the conclusion of the Nile Waters Agreement. Thus it is a failure to agree over the political status of the Sudan, and this alone, that has thrown us back upon the situation established by the declaration of February, 1922. What were the stumbling-blocks here? It is hardly profitable to examine them until after the publication of the White Paper which is promised for next week; but we may note provisionally that they appear to have been created by two Egyptian demands: first, that the Sudan should be thrown open to immigration from Egypt without leaving the Sudanese Government those powers of control and restriction which it now exercises; second, that the Anglo-Egyptian Agreement of 1899, by which the Anglo-Egyptian condominium in the Sudan was established, should be placed on the table, for review by negotiation, within a year. We propose to deal with these and other matters in greater detail when the White Paper appears.

Relapse in China.—The long-threatened military collision between the forces of the Kuomintang Central Government at Nanking, on the one side, and the confederate armies of Fêng Yu-hsiang ("the Christian General") and Yen Hsi-shan ("the Model Tüchün") on the other, seems at last to have begun—though, in the light of all the precedents in China, it is still not impossible that the quarrel may be patched up by some financial bargain at the eleventh hour. This would, of course, mean a further diversion of public funds from constructive work to the pockets of generals and politicians, and a further postponement of political stabilisation; yet it would not be so bad as a recrudescence of civil war on the new alignment. For this war, if it really takes place, will have the two most calamitous characteristics that a Chinese civil war can have: it will be on the grand scale and it will leave everything as utterly undecided as ever. The omens point to the probability that the pair of Northern War Lords will win the first round. They will probably overrun the provinces of Shantung and Honan and may even reach the northern bank of the Yangtse. Yet it is not really conceivable that they should hold the Yangtse Valley permanently, or occupy the southern littoral at all; and the principal effect of successes on their part will be to unite all elements in the south against them—unless, of course, Yen and Fêng first fall out with one another, as is extremely probable. In any case, no new Central Government can spring from their precarious alliance. On the other hand, even if the second round in the struggle were to end in the Nanking Government's favour, it is equally unlikely that Chiang Kei-shek would prove strong enough to drive Fêng out of his home province of Shensi or Yen out of his home province of Shansi. The division of China between rival military Powers would continue. At the same time, this outcome would offer greater hope for the future than the break-up of the Nanking Government; for this Government is the single potentially constructive political force which China has thrown up since the outbreak of the Revolution nineteen years ago; and if Chiang Kai-shek's enemies complain that he is just another war lord, it may be replied that in their Finance Minister, Mr T. V. Soong, the Nanking Government have produced a statesman who, under enormous difficulties, is doing solid work of the kind that the country needs. We may prophesy this much: a union of the Yangtse Valley with the southern littoral, such as the Nanking Government has achieved, will be the nucleus out of which the new Chinese State will grow; and the political capital of this State will remain within the radius of a day's journey from its financial and economic capital Shanghai. There are forces in operation here which neither warfare nor diplomacy can overthrow.

Four Months' Foreign Trade.—The April trade returns are, in some respects the worst since the abnormal days of 1926, and, even after allowance has been made for Easter, such results are far from satisfactory. Nor are the figures for the first four months of the year much better. Declines since 1929 of 10.4 per cent. in imports and 12.6 per cent. in exports are not indicative of progress.

MONTH OF APRIL.
(000's omitted.)

	1930.	Inc. or Dec. on April, 1929.		Inc. or Dec. on April 1928.	
	£	£	%	£	%
Imports	83,922	−20,206	−19·4	−12,887	−13·3
British exports	46,861	−13,383	−21·4	− 8,407	−15·3
Re-exports	7,844	− 2,532	−24·4	− 3,111	−28·3
Total exports	54,706	−15,915	−22·5	−11,518	−17·0
Excess of imports over total exports	29,216	− 4,292	−12·8	− 1,370	− 4·5

FIRST FOUR MONTHS.
(000's omitted.)

	1930.	Increase or Decrease as compared with			
		1929.		1928.	
	£	£	%	£	%
Imports	367,342	−42,674	−10·4	−39,222	− 9·6
British exports	210,994	−30,419	−12·6	−26,211	−11·1
Re-exports	32,325	− 8,149	−20·1	−11,869	−26·8
Total exports	243,319	−38,568	−13·7	−38,080	−13·5
Excess of imports over total exports	124,023	− 4,105	− 3·2	− 1,142	− 0·9

The real question is how much of this shrinkage is due to the world-wide fall in prices, and how much to an actual contraction in volume? The *Economist* wholesale price index number averaged 12 per cent. less for the past four months than for the corresponding period of 1929, which suggests that the fall in prices accounts for the whole of the contraction. Unfortunately, in so far as British export trade is concerned, there is a flaw in this argument, for British exports consist mainly of finished goods, and their prices have certainly fallen by much less than the 12 per cent. of the wholesale price index numbers which are based mainly upon foodstuffs and raw materials. In fact, the usual Board of Trade calculations, the latest of which cover the first quarter of the current year, show that between 1929 and 1930 the average price of exports of finished goods has only fallen by 3.2 per cent., while there has been a volume shrinkage of 8.8 per cent. This result is confirmed by the following table, which includes April as well as the first quarter of each year:—

SOME LEADING EXPORTS.
(Quantity.)

		First Four Months.		
		1928.	1929.	1930.
Coal	tons	15,745,017	17,882,080	19,435,310
Railway material	,,	257,920	169,533	161,232
Total of iron and steel	,,	1,402,846	1,491,208	1,251,842
Textile machinery	,,	41,208	42,493	33,696
Total machinery	,,	188,940	184,707	170,930
Cotton yarns	lbs.	58,642,100	57,296,600	49,585,700
Cotton piece-goods	sq. yds.	1,365,742,600	1,388,797,400	1,111,096,700
Wool tops	centals	126,782	111,145	95,441
Woollen tissues	sq. yds.	44,752,700	37,559,800	30,571,700
Worsted tissues	,,	11,712,400	17,165,700	13,395,400
Linen piece-goods	,,	27,161,500	24,221,500	24,323,500
Jute piece-goods	,,	60,536,800	58,010,300	41,535,700
Boots and shoes	doz. prs.	358,577	292,960	324,080
Leather	cwts.	154,072	103,456	92,913
Locomotives	tons	14,570	11,599	16,826
Motor-cars and chassis	number	9,798	14,165	11,357

The only increases are in coal, linen piece-goods, boots and shoes and locomotives, and some of the decreases exceed 20 per cent. Thus the British overseas trade position is far from encouraging, and it is cold comfort to see that the United States are passing through a similar experience.

Mr Snowden's Speech to the Bankers.—Though Mr Snowden, in his speech at the annual dinner of the British Bankers' Association, had little new to say, he touched on several topics of current political and financial interest. In reply to Mr Goodenough, who, in proposing his health,

upheld the view that high taxation was a definite burden upon industry, Mr Snowden said that he had two guiding principles in his financial policy. One was that the country must pay its way, and the other was that it was no use paying a debt with borrowed money. It was this latter principle which explained his decision to increase the Sinking Fund this year. In an allusion to the recent increase in unemployment, Mr Snowden called attention to the existing disparity between wholesale and retail prices, and proceeded to denounce Protection as a quack remedy for the disease. Possibly the most interesting passage in Mr Snowden's speech was his allusion to this year's reduction in the Floating Debt. Mr Snowden did not claim that the Government's policy in redeeming Treasury bills was the sole cause of the recent reduction in money rates, but he did claim that it was a contributory factor. He proceeded to argue that the net result would be a substantial saving in the cost of the Floating Debt. As regards the tax increases in his Budget, the Chancellor, while agreeing as to the burden of high taxation, defended himself on the ground that he inherited a deficit and had to meet expenditure to which the country was already committed. A disappointing point about the speech was his insistence on the difficulties of achieving economy.

The Lords and the Coal Bill.—The Coal Bill has been having a rough passage in the House of Lords, and a number of highly important amendments have been made during the first two days of the Committee stage. After Lord Gainford, supported by the Government, had unsuccessfully attempted to reinstate the central export levy which was deleted by the House of Commons, the Peers, bowing to Lord Melchett's argument that they should have both levies or none, logically decided to remove the district levy also. This is a change for the better; for an inland subsidy on certain classes of coal would have caused almost as serious difficulty as the export levy originally contemplated. Amendments were also made excluding the so-called " mixed mine " from the operation of the quota and providing that the minimum quota to be fixed for each district should not be less than the district's own home consumption of coal. Though the subject is highly controversial, a good case can be made out for giving preferential treatment to mixed mines, which are part of iron and steel or other industrial undertakings. Certainly the original arrangements would have caused dislocation in these cases, and would have interfered with important vertical combinations. The new minimum district quota has much less in its favour, for besides preventing inter-district competition and granting semi-monopolistic powers where it may be operative, it will help to keep inefficient units alive instead of hastening the concentration of production in the most efficient undertakings. Much more important is the deletion of the Coal Mines Reorganisation Commission and the transfer of their functions to the Board of Trade. These changes, which were proposed by Lord Gainford and the Duke of Northumberland respectively, cut the heart out of the amalgamation proposals of the Bill; and the debate on them showed that the coal owners are as much opposed as ever to compulsory or thoroughgoing amalgamation. It is obvious that the Commons will not accept these amendments, which rob an essential part of the Bill of its effective force and leave the marketing and quota arrangements with all their original disadvantages unqualified by any hope of speedy and drastic reorganisation of the industry. In a number of other directions the Lords made further changes which, while avowedly designed to provide safeguards for one set of interests or another, in fact make the machinery of the Bill more cumbersome and less workable than before. Still other highly controversial changes are also on the order paper, notably the hours spread-over, which is practically certain to be made in the face of the miners' opposition; while in the background is a Conservative threat to reject the whole Bill, or various parts of it, if, after the Committee stage, it does not commend itself to the House of Lords as a whole. Plainly, the Bill is not yet out of the woods; and, plainly also, a situation is developing in which the relations between the Lords and Commons will be at the least highly interesting.

The Safeguarding Debate.—The Conservative Opposition took advantage of the vote for the salaries and expenses of the Board of Trade to raise in the House of Commons, on Wednesday, the question of Safeguarding and the Government's decision to allow existing duties to lapse at the end of their current term. In view of the by-election now in progress at Nottingham, the debate was appropriately opened by Sir H. Betterton, one of the members for the lace-making town. He claimed that " just as the duty had saved the trade, so taking off the duty would ruin it." In a recent issue of the *Economist* we examined at some length the experience of the lace trade under Safeguarding and found no evidence to support such a claim; nor was any such evidence produced by Sir H. Betterton. Indeed, Mr Graham, who replied for the Government, was given nothing more formidable to answer than the inadequately based assertions with which we are already familiar. After reminding the House of the narrow field of industry covered by the Safeguarding experiment, and warning members not to try to build a tariff case on so slender a foundation, the President of the Board of Trade briefly examined the particular case of the lace industry and found that the facts were " against the industry." From this he passed to broader aspects of the fiscal problem and claimed that the last general election yielded " a great majority for Free Trade principles," and averred his own faith:—" Free Trade, in my judgment, is not a negative principle; it is a great positive force. The more we restrict in these matters, the more we add to the volume of unemployment." Another telling point in Mr Graham's speech was his reminder that Mr Baldwin, when Prime Minister, had stated that these safeguarded industries, in his view, were entitled to a five-years' experiment, but that if they could not put their house in order, or make some kind of progress in that time, they were not entitled to further safeguarding.

Bankers' Industrial Development.—The full list of shareholders of the Bankers' Industrial Development Company is as follows:—The " A " shares: Barclays Bank; Baring Brothers and Company; A. P. Brandt and H. B. Brandt; E. Clifton Bower, of Brown Shipley and Company; District Bank; Erlangers; G. Farrer, of H. S. Lefevre and Company; Robb, Fleming and Company; Glyn, Mills and Company; Grace Brothers and Company; Guinness, Mahon and Company; Hambros Bank; Higginson and Company; Kleinwort, Sons and Company; Lazard Brothers and Company; Lloyds Bank; Martins Bank; Midland Bank; Samuel Montagu and Company; Morgan Grenfell and Company; M. Samuel and Company; National Provincial Bank; North of Scotland Bank; Robt. Benson and Company; L. N. de Rothschild and A. G. de Rothschild; Royal Bank of Scotland; J. Henry Schroeder and Company; Seligman Brothers; S. Japhet and Company; Stern Brothers; British Linen Bank; British Overseas Bank; British Shareholders' Trust; Central Mining and Investment Corporation; Clydesdale Bank; Commercial Bank of Scotland; the Governor and Company of the Bank of Scotland; Manchester and County Bank; National Bank; National Bank of Scotland; Union Bank of Manchester, Union Bank of Scotland; Westminster Bank; Williams Deacon's Bank. This accounts for 44 of the 45 " A " shares, the remaining share has been allotted to Mr N. L. Campbell, of Helbert, Wagg and Company. As previously announced, the 15 " B " shares are under the direct control of the Bank of England. Fourteen have been allotted to the Securities National Trust, Ltd., and the fifteenth to Mr Norman himself. A perusal of the list of " A " shareholders makes it clear that with the exception of the insurance companies every important financial interest in the City is represented. This means that the new scheme has received full recognition, and that it is assured of a successful start.

Cotton Trade and Arbitration in Labour Disputes.—For many years, writes our Lancashire correspondent, the cotton industry has had a reputation for conciliation in settling disputes between the employers and the operatives, but latterly there have been frequent instances of trouble arising at individual mills over minor matters, and some difficulty has been experienced in bringing such disputes to a close. A recent particular case is that at the Broadstone Mill at Reddish. This dispute began about a month ago, and on April 22nd the operatives came out on strike as a protest against the management dismissing one of the workpeople. It was stated on behalf of the employers that the dismissed employee (a spinner) was found eating a meal and reading a newspaper behind the machinery shortly before 9 o'clock in the morning. The employers stated that this action amounted to a serious breach of discipline which jeopardised the firm's property and the regular employment of his fellow workers. On behalf of the operatives it was contended that it had been the custom for the workpeople to have their meals behind the mules. The stoppage of the mill continued, and in the middle of last week the Ministry of Labour intervened and a joint conference took place on Friday last between representatives of the Master Spinners' Federation and the Operative Spinners' Amalgamation. This conference was adjourned until Tuesday last, when a settlement was reached. It was decided to refer the dispute to arbitration. Work at the mill was resumed on Thursday morning, with the exception of the pair of mules in dispute. It is understood that the dismissed operative will not be reinstated pending the arbitration. In connection with this matter an important development is the official statement that the Joint Committee of employers and trade union officials is of opinion that the principal of arbitration in disputes at individual mills might be more frequently adopted. With that object in view it was agreed that both sides should at once endeavour to organise such machinery as will be effective in avoiding stoppages at individual mills where disputes have passed through the usual procedure at present recognised and negotiations have failed. It will certainly be a big advantage to the trade as a whole if some means can be found to stop these irritating disputes at individual mills.

Lancashire and Fiscal Policy.—In accordance with the recent decision of the directors of the Manchester Chamber of Commerce to take a referendum of the members on fiscal policy, details have been published this week of the proposed vote. The directors have had some difficulty in deciding upon the questions to be asked and numerous suggestions from the sections of the Chamber have been made. The questions to be put to the members are:—

(1) Are you in favour of the policy generally known as Free Trade?
(2) Are you in favour of a settled policy of imposing protective duties in the manner generally known as " Safeguarding? "
(3) Are you in favour of a general protective tariff on imports, including raw materials and foodstuffs?
(4) Are you in favour of a general protective tariff on imports, excepting raw materials?
(5) Are you in favour of a general protective tariff on imports, excepting foodstuffs?
(6) Are you in favour of a general protective tariff on imports, excepting raw materials and foodstuffs?

Only one question out of the six is to be answered by the member voting and the papers have to be returned not later than May 31st. The Secretary of the Chamber, in an explanatory letter, which is being sent with the voting papers, says:—" You are particularly requested only to answer one of the questions. Thus, if you answer ' Yes ' to No. 1 the others fall to the ground and need no reply. If you answer ' Yes ' to No. 2 you are not committed to any of the other alternatives, although it will be equally clear that you are opposed to the first. By having only one answer from each member we shall obtain a clear result as to how many members actually give first preference to each alternative, whilst if more than one question were answered it would not be clear how opinions were divided." In Manchester commercial circles this week some difference of opinion has been expressed as to whether this referendum will show very clearly the consensus of opinion of the members of the Chamber of Commerce on this important matter, but there is considerable interest in the decision to take a ballot and it is expected that the result will be announced early in June.

FACILITIES FOR THE IMPORT OF PRODUCE ARRANGED.

HEAD OFFICE:
54, LOMBARD STREET, LONDON, E.C.3.

Iron and Steel Production in April.—The production figures of iron and steel for April, which have just been issued, reflect, for the first time, the quieter market conditions which set in some months ago. The number of blast furnaces in operation declined by six during the month to 151, compared with 170 at the end of August last; production of pig iron declined from 665,800 tons in March to 619,600 tons in April, a reduction in the daily rate of about 4 per cent., while steel production declined from 826,100 tons in March to 696,100 tons in April. Part of the decline in the case of steel is due to the Easter holidays, but there is no doubt that the figures indicate a definite downward tendency. Imports of iron and steel amounted to 234,800 tons, compared with 280,900 tons in March, while exports, at 268,000 tons, were not only 69,700 tons lower than in March, but were the lowest of any month since February, 1927. The Board of Trade's price index number for iron and steel (1913=100) fell from 114.9 in March to 114.3 in April. The contraction in iron and steel activity was clearly foreshadowed at the end of last year, when the International Steel Cartel decided to reduce output by 10 per cent., for it indicated that Continental countries no longer had full order books, and that competition from that quarter might be expected to increase. Another cause of the decline is the unsatisfactory shipbuilding position: this was revealed in a recent report of the Shipbuilding Employers' Federation, in which it was stated that 69 per cent. of the shipbuilding firms did not receive a single order during January, 84 per cent. did not get an order in February, 80 per cent. did not get an order in March, and 50 per cent. of the firms did not receive a single order throughout the whole of the quarter. The contraction in iron and steel production on this occasion is not confined to this country. Although, apparently, Continental manufacturers underestimated the extent of the slump, and were loth to curtail production, there is no doubt that April production in each Continental country was lower than in any month in the first quarter of the year. In the United States, production of pig iron at 3,182,000 tons was 480,600 tons lower than in April last year.

Unemployment Insurance in Germany.—Our Berlin correspondent writes:—Unemployment insurance has been the most important domestic political issue in Germany for a year and a half. It was on this issue that the Müller Cabinet was overthrown. The Socialists were afraid at that time that the acceptance of a finance law demanded by the bourgeois parties would lead to a reduction of benefit. It is now clear how baseless that fear was. Following the acceptance of that finance law, the new Cabinet of the Right can do nothing that was not done before by the Cabinet of the "Great Coalition," that is, it must grant to the "Reichsanstalt für Arbeitslosenversicherung" (the institution from which benefit is paid) sufficient money or credits to make it possible to maintain relief at the present level. That the Government fully understand this is shown by a speech recently made by the Minister of Labour, Herr Stegerwald, in which he said:—"So far as Germany is concerned, I am of the opinion that at the present time, a time of mass unemployment, drastic reforms for the purpose of reducing costs can hardly be carried through, since the chief abuses were already done away with in October, 1929. Otherwise we shall see the same state of affairs as in England. There social insurance is not so comprehensively organised as with us. The result is smaller payments for social insurance, but very much higher expenses for charitable work. An increase of municipal budgets for charitable relief would be much more disastrous economically in Germany than an increase of the premiums on insurance or a special tax." The Minister's reference to the reform of October, 1929, referred to a law passed at that time by which benefit for workers in the building and other outdoor trades was reduced, for the reason that unemployment in the winter months was not due in their case to depression alone, but was a regular condition in the trade in which they worked. The German People's Party regards this law as insufficient. Herr Stegerwald, who is undoubtedly supported in this matter by his party, the Centre, is obviously unwilling to consent to any further reductions, since he regards himself as the leader of the Christian Trade Unions, which compete strongly with the Socialist Trade Unions for the favour of the labouring classes. As Christian labour leader he cannot grant what his Socialist predecessor, Herr Wissell, decisively rejected. The Minister has called on the managing committee of the unemployment insurance institution to report on the possibility of a reform. But it is hardly likely that this report will lead to any positive result that could bring about important economies. Meanwhile conditions on the labour market are growing steadily worse. The national Budget includes 230 million marks as the Reich's contribution to unemployment insurance, and the insurance department will be able to pay the required benefit provided the average yearly number of unemployed does not rise above 1,200,000. This figure was until recently regarded as very conservative. Now it is evidently too low, and the money granted by the Reich will not be sufficient. Especially disquieting is the smallness of the improvement brought by this spring. On March 31st last the number of unemployed was only some 150,000 above the number on the same date last year (2,053,380 against 1,899,121), but on April 30th it exceeded the 1929 figures by more than 600,000 1,760,863 against 1,126,078), in spite of the fact that the spring of 1929 was handicapped by extraordinarily unfavourable weather.

The Hong Kong Currency Problem.—Our Hong Kong correspondent writes:—The Hong Kong Government has appointed a Committee of Inquiry to examine and report on the currency question. It is now six months since the Hong Kong dollar started to descend from what was regarded as its normal level of 2s. The first drop of about 2½d. brought it nearly to a par with silver, thereby eliminating the substantial premium at which the notes, issued by the three authorised banks, were standing. When, as silver began to decline, the dollar followed, and at to-day's rate of exchange the pound sterling costs about 25 per cent. more in local currency than it did last October. The break in exchange has seriously disturbed trade. Adjustment of local prices has enhanced the value of stocks imported before last autumn, but it has upset the normal course of import business, and it will probably be many months before merchants and dealers can adapt their order books to the new conditions. Chinese dealers in particular are reluctant to abandon hope of a return to a higher level of exchange, and in the meantime they are adopting a hand-to-mouth policy, although every banker predicts still lower rates of exchange in the absence of any support for silver. While the unfortunate result of being tied to a silver standard is accepted by most people here with philosophic calm, there are many who feel that the time has come for the Colony to abandon a silver basis and stabilise its dollar on a gold standard. This school of thought takes as parallel cases the adoption of a gold standard by the Straits Settlements in the late nineties and by French Indo-China early in the present year, but it has not put forward any practical suggestion for providing a gold reserve, nor has it indicated what the cost would be. However, the Government Committee has been set a series of six questions, the last of which is as follows: "Is it desirable in the interests of the Colony that the value of the dollar be stabilised? If so, can any effective steps be taken to that end?" The answer to that question is eagerly awaited, but there is every reason to fear that even if the first part is in the affirmative, there will be insuperable difficulties in giving a satisfactory reply to the other part. At the annual meeting of the Chamber of Commerce, held last week, the currency problem occupied a good portion of the chairman's review of the past year. While declining to pronounce an opinion as to whether high or low exchange was beneficial to the Colony, the chairman asserted that the commercial prosperity of the Colony could not have been achieved, and was not likely to be maintained, without full consideration being given to the economic policy of the neighbouring provinces. His main contention was in favour of a *laisser faire* policy, but he went on to deal with the embarrassing situation brought about by the heavy importation of silver dollars. So far the banks have been unable to depress the rate of exchange for the Hong Kong dollar to a point where it is no longer profitable to import silver. The consequence is that minted dollars have been steadily arriving here and threaten to become a most serious burden. With the leaders of commerce bewildered by the situation, and with the man in the street crying out for some relief from the pressure brought about by the sudden rise in the cost of living, the Government Committee of Inquiry are undertaking no light task.

Liquor Legislation in Switzerland.—Our Geneva correspondent writes:—An important referendum took place in Switzerland in April, when the electorate, by 487,340 votes against 314,316, accepted the new regulations for the sale of liquor proposed by the Government. The new legislation brings under State control a series of alcoholic drinks made of fruit and fruit residues and known under the local name of "schnaps." Before 1885 "schnaps" was made of potatoes by agriculturists and drunk in many regions, especially in German-speaking Switzerland and the alpine valleys. "Schnaps" was even given to children, and, in order to check that evil, the Federal Government was at that time empowered to buy out the national production of potato alcohol and to use it for industrial and medicinal purposes. Since 1910, in consequence of the development of fruit cultivation, new sorts of "schnaps" were made of fruit and fruit residues, the yearly production being about one million gallons, nearly one-sixth of the total fruit production being used in producing alcohol. The consequence was that consumption of liquor in Switzerland was the highest per head of population of any country in the world. The new law provides, on the one hand, for an increase in the price of all liquors, for the purchase by the Federal Excise of the whole "schnaps" production and the sale by it of the quantity strictly needed by the country, the remainder being used in industry and for medicinal purposes. On the other hand, the new law provides for a better and cheaper organisation of fruit transport so as to facilitate the distribution and sale of fruit throughout the country. The profit thus made—about one million a year—will be employed for purposes of social insurance and old age pensions. The enforcing of that legislation will not only benefit the country's health, but also afford the Government the necessary means for developing social insurances, which could only have been done by the setting up of new taxation.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during April amounted to 868,606 ozs. of fine gold, as compared with 889,370 ozs. produced during March. In April, 1929, the output amounted to 872,123 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	796,768	823,692	796,270	839,782	843,857	876,452	882,801
February ...	760,617	753,925	753,924	779,339	816,133	815,284	818,188
March	795,671	825,479	834,340	860,511	877,380	866,529	889,370

November	802,313	787,633	840,276	848,059	872,484	861,593	...
December	825,273	791,455	836,157	851,225	859,761	851,134	...
Total ...	9,597,634	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	...

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Aug., 1929.	Sept., 1929.	Oct., 1929.	Nov., 1929.	Dec., 1929.	Jan., 1930.	Feb., 1930.	March, 1930.	April, 1930.
Gold mines	190,062	190,567	189,739	186,941	184,280	190,663	196,752	200,134	202,434
Coal mines	15,867	15,733	15,533	15,320	15,326	15,288	15,495	15,250	15,109
Diamond mines	5,071	4,814	4,555	4,561	4,811	5,889	6,584	7,002	5,565
	211,000	211,114	209,827	206,822	204,417	211,840	218,831	222,386	223,108

There was an increase in the number of natives employed in the gold mines during April.

Commercial Union Assurance.—As is the case with other large composite companies, the 1929 report of the Commercial Union, in addition to the usual consolidated balance sheet, includes for the first time a balance sheet of the parent company to comply with the provisions of the Companies Act, 1929. A study of these reveals the fact that out of total fire, accident and marine funds of £14,938,000 some £5,290,000 belongs to subsidiary companies, by far the largest of which is the Ocean Accident, with an accident fund alone of £4,186,000. The life fund of the parent company is nearly £17½ million, in addition to which there are five closed life funds of acquired companies. Shares in subsidiary companies account for £5,079,000 out of total assets, excluding the life fund, of £18,024,000. The book value of these subsidiaries represents original cost, approximately £9 million, less amount written off, and includes £700,000, being goodwill of recently acquired businesses now in process of being eliminated. When this has been effected the book value will be equivalent to the break-up value at dates of purchase without any allowance for the subsequent considerable increase in surplus assets. Here, evidently, is a position of very great strength. The underwriting results of 1929 not unnaturally reflect the prevailing conditions, except in the marine department, which on this occasion has surpassed itself by yielding a profit of £200,000 on a premium income of £685,000. Details of the last two years' results are shown below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£		£	
Fire	552,365	7·3	306,823	4·0
Accident	399,327	4·5	155,336	1·8
Marine	100,000	15·7	200,000	29·2
Life:				
Commercial Union	28,088		28,088	
Union Life Fund ...	5,000		5,000	
Hand in Hand Fund	20,000		80,000	
Sinking Fund	5,000		...	
	1,109,780		775,247	
Less items debited to Profit & Loss Acc'nt	286,902		256,783	
Total net trading surplus	822,878		518,464	

The dividend has been maintained at the same rate as in 1928, namely, 41 per cent., and requires £1,149,784, compared with which net interest earnings amount to £1,000,089.

Liverpool and London and Globe Insurance.—Last year was the beginning of a new era for this famous company, which for some few years has been controlled by the Royal, although preserving its individuality and its organisation. Upon the retirement of the respective general managers of each company in 1928, the new general manager, Mr Robert McConnell, was appointed as chief officer of both companies, and the new London manager was similarly established in charge of both London offices. With a view to the achievement of a greater measure of unified control it was also announced that the board of directors of each company was to be similarly constituted. The first report to be issued under the new *régime* is a satisfying document. Excluding the life department, which administers a premium income of £810,000, the aggregate premium income for 1929 amounted to £11,119,035, this figure being some £148,000 greater than the 1928 total. This tremendous total comes as to £5,428,000 from miscellaneous business (accident, and particularly motor insurance), as to £4,846,000 from fire, and the balance from marine, personal accident and employers' liability, in that order. The table below of the details of the past two years' underwriting shows that net trading surplus, largely owing to a reduced profit from the miscellaneous department, is less favourable than for 1928. The comparison, however, is a severe one, since 1928 was, except for the boom years immediately after the war, the best in the company's history:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£	%	£	%
Fire	294,848	6·3	260,242	5·4
Personal Accident	−297	...	900	·4
Employers' Liability	11,550	6·6	20,142	11·6
Miscellaneous	247,769	4·6	146,652	2·7
Marine	25,117	6·1	33,435	8·3
Life	23,000		23,000	
	601,987		484,371	
Less Items debited to Profit and Loss Account	150,237		154,636	
	451,750		329,735	

The dividend for 1929 has been raised to 65 per cent. from 62½ per cent., and, after deducting the cost of this from interest earnings, there remains a sum of £291,000 wherewith to augment free reserves as a result of the operations of the year, thus increasing the break-up value by 11s. per share.

Yorkshire Insurance.—The underwriting results for 1929 of this company exhibit the general characteristics of those of many other composite offices whose accounts have already appeared, namely, reduced profits both in the fire and accident departments. The causes are also the same

—in the fire department an increased claims ratio particularly in this country and in the United States, and in the accident department heavy claims on account of motor accidents. The premium income, on the other hand, has been well maintained and, in fact, somewhat increased, that in the fire department now amounting to £1,068,000 and in the accident department to £1,383,000. In addition there is a marine premium income of £517,000 the increase in which during the year has been brought about largely as a result of higher rates of premium. Details of the last two years are set out below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
	£	%	£	%
Fire	148,354	13·9	74,044	6·9
Accident and General	51,772	4·2	28,919	2·1
Marine	−10,328	− 2·1	− 471	− ·1
Life	4,740		9,610	
Profits from reversions	5,000		5,000	
Excess Profits Duty recovery	121,300		...	
	320,838		117,102	
Less Items debited to Profit and Loss	85,968		108,366	
Total net trading surplus..	234,870		8,736	

The 1928 figures were swollen by a "windfall" described in the report as "the amount recovered on the final determination of excess profits duty liability, together with the balance of the special reserve in marine underwriters' profit account, not now required." For the first time the general reserve fund has passed the £1,000,000 mark, having been increased during the year from £854,000 to £1,068,000. The increased reserve has been due largely to the rearrangement of capital and to the premium arising from the recent new issue of shares. The dividend for 1929 is at the rate of 47½ per cent., and corresponds to that paid last year.

UNITED STATES.

Share Market — Trend of Business — Copper Position — Mr Hoover and the Tariff Bill.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 6.

ATTENTION of the financial community and of the country generally this week has been focussed on the share market. While it had been plain enough for the past month that the speculative bubble built up on illusions of trade improvement and the desire to recoup the heavy losses suffered last autumn must break before long, the sharpness of the decline and the immense volume of trading seemed to take the financial community by surprise. It raised fresh apprehensions lest the panicky conditions of October and November would be repeated and discouraged those who felt that at last trade improvement was really in sight. The decline has been a natural enough deflationary movement, following the upbuilding of the price structure in anticipation of business improvement which did not take place in the first quarter. In the first three trading days of this month share market values dropped nearly 10 per cent., but they have recovered virtually half the loss in the subsequent rally. Opinion here is that the bulk of the inevitable liquidation is over and that, regardless of what happens in the next week or so, a period of staleness is in prospect for the remainder of the spring and early summer at least. It is felt that prices are now in much better harmony with the state of trade, and that the market will be in a favourable position to advance with the first signs of real improvement, as it will have very easy money in its favour for some time to come.

Reduction of the Federal Reserve Bank's buying rate on bankers' bills to 2¾ per cent., which was done after the discount rate cut last week, has had the effect of maintaining fairly well the system's portfolio, new purchases offsetting maturities. Just now the open market rates are showing signs of weakening. At the same time, the rate on time funds has declined ¼ of 1 per cent. to 3½ to 3¾ per cent. Commercial paper also is easier at 3¾ per cent. The unsettlement of the share market has had a sympathetic unfavourable reaction on the bond market, and new capital issues have been scarce for the past several days. However, the effect of easier money is expected to take shape shortly, and several sizeable offerings are on the ways. It is believed that a Japanese loan of perhaps $100,000,000 will be taken care of before the reparations issue is ready. There is talk of an Austrian loan, but nothing will develop for several months.

The record of business for the first quarter as shown by corporation earnings is now fairly complete. The decline amounted to 19 per cent. as compared with the same period of last year, for industrial corporations, and to 40 per cent. for the railroads. The railroads earned at the annual rate of 3.56 per cent. on their property investment, as against 5.35 per cent. last year. Industrial profits, according to a calculation made by the National City Bank, turn out to have been 2.8 per cent. on "net worth" (that is, the stockholders' equity, made up of preferred and common stock outstanding, surplus account and undivided profits, taken at the beginning of the fiscal year) in the first quarter, against 3.9 per cent. last year and 3.2 per cent. in 1928. That calculation is based on the increase of about $1,000,000,000 in capital stock and surplus for 1930. Actual net profits were 4 per cent. larger than in the first three months of 1928, so that actual business has not been so very poor, measured on standards of any but a boom year.

Trade statistics continue to be unfavourable, but nevertheless a better feeling is apparent in some lines of business. Employment has not increased much through other than purely seasonal operations, but outdoor work is becoming more plentiful. The steel industry is maintaining its operating rate at close to 80 per cent., although prices have declined to the lowest in over a year. The motor trade is a trifle better, and, while no marked increase in sales is expected in the next few months, the slackening may be less noticeable than it usually is in the summer, since the spring advance was small. Contract awards and building permits made a better seasonal showing in April than for the first quarter, but actual construction is still far below that of the past two years. Meanwhile, the railroads, after spending liberally for maintenance and improvement in the first quarter, are now reducing their purchases, partly because their needs for the year have been largely met and partly because their revenues have been falling rapidly. Car loadings for the last week of April were sharply reduced, following a few weeks of improvement.

Buying having failed to follow the cut in copper to 14 cents, a further reduction to 12½ cents has been made. Wages at most of the mines have come down, since they are based on the price of the metal, and production also has been curtailed further. Another good-sized addition to stocks, it is believed, was made in April. Consumers' needs for copper in this country are fairly large, but the buyers have felt too sure of their advantage to place orders at the higher prices. Copper company shares have steadily declined, but now seem to be attracting good investment buying.

No great change has taken place in the banking position. Security loans, which rose steadily in the New York district throughout the past month, are expected to show a substantial deflation this week. Member banks, which increased their borrowings at the Federal Reserve over the month end, have this week paid off most of the debt. It is quite possible, therefore, that Federal Reserve credit in use has decreased, but demand is so slack that the withdrawal is unnoticeable. Gold imports have been negligible for the past week.

Next week the Treasury likely will announce mid-month financing to take care of a $56,000,000 bill maturity on the 19th. In addition to that sum, recent calls for Treasury cash from the Farm Board and others have made it necessary to borrow, and the forthcoming bill tender probably will reach from $75,000,000 to $100,000,000. Very favourable terms are a certainty.

In spite of the petition presented to President Hoover by more than a thousand of the country's leading economists, urging a veto of the tariff bill, there is little likelihood that he will not sign, unless something particularly objectionable slips into the measure before final passage. As the measure of his party, the bill, however objectionable it may be to Mr Hoover, runs no great risk of defeat from presidential veto.

FRANCE.

National Insurance — Reparations Loan — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, May 14.

THE outstanding topic of the week here—apart from the pending issues of the French portion of the capital in the International Settlements Bank and the Paris portion of the issue of German reparations bonds which is to follow—is the coming into operation in July of the national insurance scheme. It is already evident that even now, after the double re-casting that the scheme has undergone, it is by no means complete. Evidence of this was given a few days ago when it was announced that a special decree, extending the benefits of the law to domestic servants, had been signed by the President of the Republic, during his official visit to Algeria in connection with the centenary celebrations there. This decree deals primarily with the valuation, as part of the money wage, of the board and lodging accommodation generally received by indoor servants as part of their pay. In towns of 200,000 inhabitants or over, this form of payment is fixed as having a wage value of 7 francs per day, or 210 francs per month; in smaller towns at 5 francs a day, and in rural houses at 3 francs a day. Industry in general is loud in its protests against the new law. The general assembly of the presidents of the French Chambers of Commerce, at their meeting a few days ago, passed resolutions strongly condemning the insurance plan as being based "only on conjectures, hypothesis, eventualities and approximations," and "rejecting all responsibility as to the consequences of a measure which will weigh heavily on the economic destinies of the country."

Information received here from private and other sources in Basle during the week fully confirm the indications given in the last number of the *Economist* as to the difficulties that still exist in regard to the pending issue of the first part of the international German reparations loan. These difficulties, which concern practically all the essential features of the issue (except, apparently, the yield from the scrip, which has been fixed at 5½ per cent.), proved so impossible of solution by the Treasury experts at their Paris Conference, that the whole matter was referred to the full board of the Bank for International Settlements, who discussed it at their meeting at Basle on Monday. Down to this evening, as far as can be gathered, none of the problems have been resolved, but there is a confident hope at Basle that they will be before the end of the week, and that the issue will be made "before the end of the month." The refusal by the German representatives to give the special guarantees asked of them, in connection with the redemption of their own $100,000,000 of the loan, appears to be definite.

The outstanding difficulty, so far as the British portion is concerned, lies in its amount and in the form of the scrip to be adopted. The French portion is to be issued free of all taxation, which removes what was at first feared would be a serious blot on the "internationalising" of the bonds. According to reports from reliable quarters tonight, the British demand for a special form of bond is likely to be granted, but the whole of the remaining national issues will conform to a uniform type, although the yield in some countries may vary slightly, owing to the special incidence of local fiscal laws. The question of the issue price appears likely to vary also, which will constitute another factor of difference as regards yield. In the case of the bonds which are to be issued here, representing the French capital in the International Settlements Bank, the Government has made it clear that, as this will technically constitute a foreign issue in France, only scrip belonging to the French portion will be allowed to circulate in this country. One effect of this proviso will be to facilitate the accomplishment of the French desire for the international commercialisation of the German reparation debt, which is looked forward to here as likely to prove effective against any intention Germany may manifest in the future to make default in payment of her annuities. The desire not to concentrate too large a proportion of the reparation bonds in France, with this factor in view, is one of the reasons why the French are not anxious to take up a larger share than necessary in the pending issue. For the rest, the success of the French portion of the issue may be regarded as undoubtedly already assured. It is said that applications have already been received by the banks for more than three times the total of the $80,000,000 which it is stated are to be allotted to Paris.

The index figure of the Statistique Générale for wholesale prices at the end of April is 561 (1914=100). This shows a drop of four points since March, 14 since February, 27 since January, and 83 since January, 1929. The detailed figures are as follows:—

	Commodities.	End of months of Feb.	March.	April.
General index figure	45	575	565	561
French products	29	611	600	596
Imported products	16	510	501	497
Foodstuffs (general figure)	20	529	523	529
Vegetable foods	8	430	422	432
Meats	8	624	617	614
Sugar, coffee, cacao	4	536	536	532
Raw materials	25	615	601	592
Minerals and metals	7	584	577	544
Textiles	6	544	528	537
Various	12	676	659	654

The index figure representing wholesale prices of French products, which at the end of 1927 was 67 points below that for imported products, is now 99 points above the latter. While the figure for imported goods has dropped 163 points since 1927, that for French products has actually increased three points in the same period, though it is now 35 points below the figure for the end of 1928. Reduced to gold value, the French general figure for April works out at 114, as against 125 in March for Great Britain (Board of Trade), 141 for the United States, 126 for Germany, 119 for Italy (Milan Chamber of Commerce) and 112 for Belgium. Retail prices in Paris, as far as can be gauged by the quotations for the 13 articles of common necessity covered, continue their trend downward. The index figure returned for these at the end of April is 586, as against 626 in May, 1929 (highest last year), and 522 in February, 1928 (lowest in that year). The cost of living for a Paris working-class family of four persons during the first quarter of 1930 is represented by an index figure of 565 (the same as for the previous quarter), equivalent to 115 in gold, as compared with a figure of 157 in Great Britain for March, 111 for Austria, 117 for Poland, and 149 for Germany.

GERMANY.

Discount Rates — Ruhr Gas Company — A. E. G. — Railway Rates.

(FROM OUR CORRESPONDENT.)

BERLIN, May 13.

CONTRARY to all expectations, the Reichsbank has not yet reduced its discount rate, but it is generally believed that it will do so within the next few days, for its situation is growing steadily and rapidly easier and money rates in the open market are falling day by day. The rate for bankers' acceptances, which, last week, at 4½ per cent., was already far below the Reichsbank rate, has now fallen to 3¼ per cent. The Reichsbank, however, hesitates to lower its rate to 4½ per cent., although in the first week of May its holdings of commercial paper fell off by 86 millions (against 7 millions in the first week of May, 1929), its holdings of treasury certificates by 70

millions, its advances by 82 millions (53 last year), and its note circulation by 260 million marks (189 millions last year). I pointed out last week the reasons for the Reichsbank's hesitation. It appears, however, that, in addition to consideration for the capital market, it is also being guided by special consideration of the banks' ability to earn profits. The rapid decline in interest rates is creating a difficult situation for the German banks. They were able to maintain their dividends for 1929 only with the aid of their reserves. And now that their earnings from interest are declining rapidly, there is no way of offsetting this. The overhead expenses of the German banks to-day take 80 per cent. of their gross income; before the war they did not reach 40 per cent. Hence only a relatively small margin exists beyond which a further decline in receipts will make it impossible to meet the expenses of operation. Formerly the reduction of the banks' profits as a result of falling interest rates could be compensated for by the fact that the easing of the money market made it possible to bring about increases of capital of existing concerns, to organise new ones, issue loans, and, above all, to take advantage of the greater activity of the bourses. But the capital market is still unable to absorb new funds and the turnover on the bourses remains small, though there has been some strengthening in the last few days. Notwithstanding all these considerations, the Reichsbank will not be able to maintain its isolated position unless, contrary to expectations, the next few days bring a stiffening of money rates in London and Paris.

The Ruhrgas-Aktiengesellschaft reports great progress. This, it will be recalled, is the subsidiary company of the Rhenish-Westphalian Cokeries, which was created in 1928 for the purpose of organising the supply of gas from the Ruhr district to remote towns and industrial districts. All the members of the coal syndicate are interested in it as stockholders and sellers of gas. In 1929, 300 kilometres of new pipes were laid. The supply of gas began on April 1, 1928. In December, 1929, 47 million cubic metres of gas were being furnished monthly, and the figure rose above 60 million in April of this year. The monthly income from the gas business is now twice as high as a year ago, and 744 kilometres of gas-pipe lines have been laid. The company has concluded contracts with a great number of industrial undertakings and with a number of cities. Recently it also made an offer to the City of Frankfort to cover its additional requirements of gas, and also declared its readiness to buy some undeveloped coalfields, which the city, together with Cologne, bought at a high price two years ago in order to head off the Ruhrgas A.G. This transaction would free the two cities from a financial embarrassment.

The A.E.G., which has been showing marked activity since it came under the influence of the General Electric Company, has now secured a footing in Saxony through a surprising step. There existed there formerly two independent electro-technical factories, one of which, the Poege A.G., was in difficulties a few months ago, so that its stock capital had to be reduced at a ratio of 6 to 1. By the issue of new shares, however, the company's capital was increased by three million marks, and nobody knew who was the owner of these new shares. Now it is admitted that the A.E.G. was behind the transaction, but it transpires that the A.E.G. was not so much trying to gain an influence over the Poege concern as over the much greater Sachsenwerk, in which the banking house of the Arnhold Brothers is closely interested. In this it was successful. The Sachsenwerk is now fusing with the Poege, and in addition to the Sachsenwerk shares that were exchanged for Poege shares, it is to hand over to the A.E.G., a further two millions of Sachsenwerk shares. The condition precedent to this transaction is an agreement with Schroeder, of London, which must first announce its surrender of an option on Sachsenwerk shares given it in connection with a loan. A working agreement will be concluded between the A.E.G. and the Sachsenwerk, under which the former guarantees a dividend of 7 per cent. on the latter's common stock. The aim of the A.E.G. is obvious: it desires not only to get rid of an uncomfortable competitor in electrical industrial machines, but also and, above all, to effect an entrance into the business in Saxony, where the Sachsenwerk heretofore enjoyed a certain preferment.

The Reichseisenbahnrat, an advisory commission for railway questions, made up of representatives of all branches of Germany's economic life, has approved an increase of freight rates for sundry freights and baggage, but rejected any increase of rates for carload lots. The commission also proposed an increase of passenger rates to secure the 150 million marks demanded yearly by the railway company. The Cabinet has already approved the increase in rates for sundry freight and baggage, which assures an additional 70 million marks for the railway. An increase of passenger rates remains to be considered. In addition to the competition from motor-buses, the financial situation of the railway company has been especially affected by the fact that a part of the system, particularly bridges and tunnels, requires immediate improvement. The neglect during the war and inflation years is now making itself more strongly felt than was anticipated when the German railway company was organised. And on top of all this comes the enormous decline in business as a result of the unfavourable economic situation.

BELGIUM.

Coal Industry — Employment — Public Works — Agriculture — Capital Issues.

(FROM OUR CORRESPONDENT.)

LOUVAIN, May 9.

THE present general plight of the Belgian coal industry is beginning to cause uneasiness. In 1929 this industry enjoyed very favourable conditions—the balance sheets at December 31st showed substantial profits. Since the beginning of 1930 the coal market has become weaker every month, though until to-day selling prices have not given way very much. The National Railways Company, Ltd., obtained, on the basis of previous terms, a discount of 10 francs per ton on ordinary coal and of 14 francs on compressed fuel, the schedule of prices for industrial coal has diminished 15 to 20 francs, and household coal quotations have dropped about 25 francs. The fall is expected to continue.

Stocks are at present about 1,500,000 tons, and have been increasing 300,000 to 400,000 (metric) tons a month, that is about one-seventh of the output. Stocks at the pithead have never exceeded 1,850,000 tons, even in the most critical moments. They were only 280,000 tons last October, but on March 31st they had risen to 1,100,000 tons. It should, however, be noted that so high a level of stocks at the pithead may be (and in this case probably is to some extent) evidence of the financial power of the coal companies, which allow stocks to accumulate rather than sell at very unfavourable prices.

The present difficulties in the coal industry are consequent on the curtailment of demand for fuel by the industrial depression, but they have been emphasised by the very mild winter, which caused slackening in orders for household coal. Yet the output of coal, reduced in 1929 on grounds of labour shortage, has increased ever since the beginning of 1930. At one time, in order to recruit the necessary labour, pitowners had granted voluntary additional wage increments to pitmen, so that the miners' wage index has been above that of the cost of living. In view of the present situation the companies would like to cut part of these voluntary increments; the proposed reduction would be 5 per cent. of the present wages. This is resisted by the trade unions, and a strike in the coal industry is not impossible. The situation appears to be becoming really difficult. Though practically all the pitowners adhered to the " Comptoir des Charbons " instituted a year ago for the uniform regulation of prices and standing terms, its action has not been keenly felt, nor has it been tested by a crisis. There is at present some scepticism as to its efficiency.

Nevertheless the technical conditions of working in the Belgian coal mines have manifestly improved; daily output per man has reached 590 kilos. This figure is far below the corresponding rate of extraction for England and Germany, but one ought always to take into account that the working of the Belgian coal seams is less easy and that a great number of men are employed here at the pithead in sorting and washing the coals. The average daily production per man was only 561 kilos for 1928 and 525 for 1913. The use of machinery has been very much extended, and it is estimated at 71 per cent. of the total output for 1926 and 86 per cent. for 1928.

In general, though Belgium has suffered from the worldwide recession, she has not been very seriously affected. The latest available statement on unemployment records that on April 5th, out of 1½ million workmen, there were 13,700 totally and 21,900 partially unemployed. The resumption of outdoor work in agriculture and in the building industry will absorb this slight excess. Last year there was so acute a labour shortage that the execution of public work under construction was hampered.

This year big extension works have been pushed forward with the help of abundant funds and energetic action from the Ministry for Public Works. The extension works of the Antwerp port are proceeding rapidly. One section of the projected direct canal Liége-Antwerp (across the Campine), which will be navigable by river craft of 2,000 tons, has been started, and the Government will presently contract for the digging of other sections. The enlargement works in sections between Brussels and Clabecq on the Charleroi-Brussels canal are drawing to an end. After the programme of public works was passed in 1928 a special Bill organised an autonomous Fund for Extension Works of the waterways network, endowed with 1,800 million francs to be granted in allotments from 1928 to 1931; the increase in prices has raised the estimates to 3,000 million. The carrying out of these extension plans will, of course, mitigate to a certain extent the effects of the economic depression.

The situation in agriculture has been put seriously to the test in the last five months by the fall in the prices of sugar, flax and oats. Nevertheless, it can resist more successfully than it does in other countries, since the main revenue of the Belgian farming class proceeds from slaughter cattle and butter, for which profitable prices are still available. On the financial market, the leading trend seems in general firmer. Net issues of shares, which often exceed 1½ milliards monthly, shrank to 60 million francs in March. Funds are so abundant that banks grant only 1 per cent. interest, less income tax, on sight deposits.

NORWAY.

Money Market — Conversion Loan — Trade — Industry — Trondhjem Fair.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, May 10.

THE recent reduction of the Bank of England rate has, as usual, brought into the foreground the question of a similar step on the part of the Norges Bank. The bank return of May 8th shows ample evidence of the easier conditions governing the domestic market at the present, and furnishes some ground for the belief that was prevalent in banking circles on Thursday last that a reduction of the Bank rate was likely. There was, for instance, a net increase of the balance of foreign exchange of 2.6 million kroners, and the amount representing interest-bearing securities in portfolio had been increased by nearly 5 million kroner, although, on the other hand, balances with foreign banks decreased by 2 million kroner. Sight deposits rose from 83.5 to 87.1 million kroner, loans and discounts were reduced by 6.5 million kroner, and notes in circulation showed a similar contraction. However, as yet no reduction has been announced, and it is at any rate likely that the Norges Bank will postpone this step pending developments on the international markets.

In connection with the plans of the Government for the conversion of the 6 per cent. loan of 1920 (the so-called Landslaan) announcements are now forthcoming of the floating of a new Government loan for 100,000,000 kroner at 5 per cent. Of this amount 50 million kroner will be taken over by banks, insurance companies and other large holders of the old loan, while the remaining 50 million kroner will be offered to the public at a rate which has not yet been definitely fixed. Authorisation has also been given by the Storting for the Government to arrange for the conversion of the 6 per cent. loan that was raised in England in 1921. Of this loan £3¾ million is still outstanding, but is redeemable as from July 1, 1931, only, so that this question is not of immediate moment.

The general fall in world prices continues to influence conditions in Norway, especially as regards shipping and export industry. Otherwise, general trade is still good and the turnover in the various branches of retail trade is on the increase. The result of this year's fisheries has been very satisfactory, and the output of Antarctic whaling amounts to 1.2 million barrels, representing a value of well over 100 million kroner. In comparison it may be noted that last year's total world production, including that of the Antarctic as well as the summer season, amounted to 1¾ million barrels.

Foreign trade statistics for March reveal an excess of imports over exports of about 27 million kroner, against 23.6 million kroner in the same month last year. Imports during the first quarter of the year exceed exports by 64.4 million kroner, as compared with 58.6 million kroner during the same period last year. The increase of the adverse balance is chiefly due to the value of the imports having risen from 86.3 million kroner in March last year to 91 million kroner this year, the value of exports at the same time showing an increase of about 1 million kroner.

Industrial developments continue favourable, and the reports of a number of concerns for 1929, recently published, reveal satisfactory results and give promising forecasts for the current year. The recent capital issue of the Norsk Hydro (Azote) was very successful. An amount of 27,447,300 kroner was offered to the old shareholders in the proportion of one new share for three old shares, at par. Unemployment figures at April 15th show a decline of 2,704 unemployed persons from the preceding month, while, compared with the position at the same time last year, there is a decline of about 2,400. The cost of living index of the Statistical Bureau for April 15 is 175, a reduction of one point from the preceding month.

A big fair will be opened in Trondhjem on June 1st next in conjunction with the great Cathedral festivities that have just been instituted to-day in celebration of the ninth centenary of St. Olav—the founder of the Cathedral. The fair will be a splendid review of Norway's fisheries, industries, agriculture, etc. with a large number of exhibitors of all branches of trade and industry.

FINLAND.

Money Market — Foreign Bond Loan — Labour Market — Foreign Trade.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, April 22.

AN appreciably easier tendency was felt during March and at the beginning of April on the Finnish money market. It is principally the position of the Bank of Finland and of the joint-stock banks that has improved, as the easier state of things has not yet had time to affect trade and industry to the same extent. The reduced stringency is a consequence of the combination of several circumstances. By the taking up of loans abroad fresh capital has been brought into the country, while at the same time the redemption of foreign short-term indebtedness has strengthened the position. Lumber work is on a more restricted scale, work at the sawmills has been reduced considerably, and restrictions have been put into force in other branches of industry. Building, which was active a year ago, is at a standstill. As, in addition, the balance of

trade with other countries is far more favourable than during the last few years, it will readily be understood that the demand for credit has been less than usual.

The credits of joint-stock banks also showed a falling off of 14 million marks, whereas in March, 1929, they grew by 144 millions, and the year before by 294 millions. On the other hand, the banks' deposits increased by 226 million marks, compared with 163 millions a year before. This increase was due partly to the fact that some of the proceeds of the loan taken up by the Central Bank for the Co-operative Credit Societies were deposited for the time being in the joint-stock banks. The increase in money actually saved was still very small. By this means the difference between credits and deposits was reduced to 1,805 millions, compared with 2,157 millions a year ago.

With regard to the Bank of Finland, it should be noted that the supply of foreign currency was augmented in March by 194 million marks and in the first week in April by a further 36 millions, while the total credits fell off by 111 and 68 million marks respectively. In this way the cover for the note issue was raised from 60.8 per cent. at the end of February, to 66.5 per cent. at the end of March and 70.1 per cent. on April 8th. The proportion a year ago was 53.5 per cent.

A continued improvement in the state of the money market may be expected, for the falling rates of interest abroad have made it possible to take up two long-term loans in addition to that already referred to. In the middle of April the new sterling loan of the Industrial Mortgage Bank was issued in London, Stockholm and Helsingfors, this having been taken up from a syndicate with Messrs J. Henry Schröder and Company and Hambros Bank, Ltd., at its head. The loan is for two million pounds at a nominal rate of 6 per cent. and for a period of twenty-five years. Although part of these funds will be employed for redeeming short-term foreign indebtedness, some new capital will be introduced into the country. The psychological effects of this, on the Stock Exchange, for example, are already making themselves felt in advance.

The labour market, which had been very bad in January, has improved to some extent since then as a result of ordinary seasonal circumstances. The number of unemployed registered at the labour exchanges dropped from 12,751 at the end of January to 10,784 and 10,062 at the end of the following months and to 9,120 by the middle of April. The number of unemployed is, however, still about three times as large as it was a year ago.

Foreign trade was again exceptionally satisfactory in March. For the whole of the first quarter the value of imports was 953 million marks, compared with 1,188 and 1,690 millions in the two preceding years. The value of exports amounted to 844 million marks, compared with 687 and 744 millions in the preceding years, the easy ice conditions having exercised some influence this year. While Finland had a surplus of imports in the first quarter of 1928 of 947 million marks and one of 501 millions last year, the figure has dropped this year to only 109 millions. Although some fortuitous circumstances have contributed to this record result, it is nevertheless possible to expect that the adverse balance of trade of last year, and particularly of 1928, will not be repeated this year.

CANADA.

Budget — Tariff Revision — British Preference — National Finances — Trade — Politics.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 2.

ON May 1st Mr Dunning, the Minister of Finance, submitted his first Budget to a crowded House. Its appearance formed the climax of the session, and had been awaited everywhere with great interest, as there was a general realisation that in its contents and their reception by the country the fortunes of all parties in the approaching election campaign were deeply involved. Forecasts in the Press had prepared the public for extensive tariff changes, but few people anticipated the most comprehensive measure of tariff revision offered to Canada since the late Mr Fielding, in the Budget of 1897, introduced the principle of British preference. The Budget, which is a notable departure from the traditional fiscal policies of the Liberal Party, has many protectionist features obviously devised by way of retaliation for the penalties imposed by the Smoot-Hawley tariff on Canadian produce, and the general effect of the changes, which affect more than 500 out of a total of 1,188 schedules in the tariff, is to encourage a substantial diversion of trade from American to Canadian and British hands. There has been every disposition to show ample consideration for Canadian industry, but Imperial trade co-operation is also aimed at through the widespread and generous extension of the British preference, which will give British goods free entry to the Canadian market under 589 schedules. Mr Dunning said that the Government had no desire to indulge in a tariff war with anybody, and he declared that the changes were the expression of the spirit in which Canada would approach the forthcoming Imperial Economic Conference, and were planned not merely to increase British exports to Canada, but to enable the Canadian people to buy more freely from such countries as gave a kindly welcome to Canada's most important products. He estimated that the changes would affect a range of business valued annually at least 200 million dollars.

The most important alterations are in the iron and steel schedules, which are completely readjusted. In some cases the general rates under which American imports enter are raised, and in others there is either an extension or a free listing under the British preference. A similar policy is adopted in regard to a long list of machinery items of all kinds, engines, electrical equipment, typewriters, lighting fixtures, and also to a variety of household ware, like china, refrigerators and aluminium ware. The net result will be to place in jeopardy a considerable proportion of the exports in these lines which the United States has been shipping to Canada to the annual value of some 330 million dollars.

But these are not the only blows aimed at the United States. To meet the complaints of the fruit and vegetable growers, who have suffered from the dumping of surplus American produce at bargain-counter prices, the rates of the general tariff on these products are stiffened in many cases by a minimum specific duty, and they are all made free under the British preferential rate. The object of this latter change is to help British Colonies like Bermuda and the British West Indies to capture the Canadian market for vegetables and fruits during the winter season. Furthermore, a direct reprisal for the Smoot-Hawley tariff is planned in the shape of a countervailing duty upon a list of commodities, chiefly farm products like livestock, eggs, flour and meats, on which Canada will impose rates equivalent to those imposed by the country of origin upon the corresponding Canadian products, when these rates are higher than those existing in the Canadian tariff. In announcing this provision Mr Dunning explained that countries who interchange in trade these particular commodities with Canada will have it at any time in their power to secure by reciprocal action the reduction of Canadian duties to their normal level.

The coal industry is helped by a bounty of 49½c. per ton on Canadian bituminous coal when it is converted into coke for smelting purposes, to be continued as long as the present rebate on imported bituminous coal exists. Then the clamour of the dairymen of Canada against the heavy inflow of New Zealand butter is being met by a double move. The rates on butter, which are at present 3c. per lb. British preference, 4c. intermediate and 5c general, are raised to 4c., 6c. and 7c respectively, and Mr Dunning also announced that the existing trade arrangements with New Zealand would terminate by mutual consent on October 12th of this year; this means that New Zealand butter, which is now admitted at a rate of 1c. per lb. under the terms of the Australian trade treaty subsequently made applicable to the sister Dominion, will now have to face a duty of 4c. per lb. Mr Dunning, however, intimated that on October 12th Canada would extend her full British preference to New Zealand, and that negotiations were afoot for a direct trade agreement between the two Dominions. He also reported that a new trade agreement with Newfoundland was on the verge of completion.

A detailed arithmetical survey of the tariff changes is impossible here, but they can scarcely fail to effect a temporary dislocation of the currents of Canadian business and also to give the authors of the Smoot-Hawley Tariff Bill much food for thought. At the close of his speech Mr Dunning said that his investigations had convinced him that more British goods could be sold in Canada, but he added that British sellers, even with the advantage of the British preference, must seek the Canadian buyers through sales and service organisations comparable with those of their most effective competitor.

Revenue for the last fiscal year is estimated at $447,372,000, as compared with $461,847,000 in the previous year, and as Mr Dunning placed expenditure at $402,805,000, as compared with $380,311,496, he claimed a surplus of 44½ million dollars. He declared that the Government was entitled to credit for retiring out of surplus revenue last year two loans totalling 80 million dollars, and reducing the debt interest charges since 1922 by 20 million dollars to a present figure of 113½ million dollars. He gave the total of the country's funded and unfunded national debt at the close of the fiscal year as $2,250,837,336, of which, roughly, $1,637,000,000 was repayable in Canada, 311½ millions in London, 166 millions in New York, and 136 millions alternatively in Canada or New York. Mr Dunning announced a cut in the sales tax from 2 to 1 per cent. and some minor concessions in regard to the income tax.

His account of the financial position of the Canadian National Railways was less encouraging, for their revenues last year had declined to $36,389,058, and they had fallen short of meeting the interest charges due to the public by nearly nine million dollars without taking any account of the large annual sum of interest owned by the railway on advances made by the Government. When the deficit of the Canadian Government Merchant Marine and other items were added, the total drain during the past year made by the State-owned railway upon the Federal Treasury was just a little short of 10 million dollars. Furthermore, Mr Dunning had to admit that, during the past year, the Canadian National Railways had found it necessary to float, with the help of Government guarantees, loans aggregating 120 million dollars, of which only a small proportion was used for refunding purposes.

Exports in 1929, at 1,145 million dollars, were 244 millions lower, and since imports amounted to 1,248 million dollars there has been an adverse trade balance of 103 million dollars. Mr Dunning pointed out, however, that for this situation the grain market impasse was largely responsible, as exports of grain to the United Kingdom alone had fallen off by 138 million dollars. In his review of the general economic condition of the Dominion he asserted that, although agriculture had had a troubled and disappointing year, industrial production had reached a new peak figure, and that an expanding development of substantial dimensions had been visible in the general business economic structure of the Dominion. He contended that Canada had effectively marshalled her resources to meet the grain market crisis and the stock market *débâcle* of last autumn, and that underlying business conditions were essentially sound and full of hopeful augury for the future.

The supporters of the Government are enthusiastic about the Budget, and are confident that it will materially assist to revive the fortunes of the King Ministry, which in recent months have been decidedly on the wane as the result of the grain market crisis, the unemployment situation and other factors. The general impression in Ottawa is that, if the Conservatives obstruct or even offer fairly resolute opposition to the Budget, Mr King will lose little time in dissolving Parliament and appealing to the country. It is, however, going to be very difficult for the Conservative Party to oppose a Budget which has such a strong flavour of Empire co-operation, and they may content themselves with criticisms of details. In that event the Government would find it impossible to make the Budget a national issue, and would probably carry on for some time longer in the hope that a promise of good crops and a business revival might create greater appreciation of their merits among the voters for an election in the late autumn. Meanwhile, all preparations for the contest are going ahead.

Letters to the Editor.

A PROTECTIONIST FALLACY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr. Herbert G. Williams complains that I do not appreciate his own special brand of humour, or, alternatively, that I myself am lacking in that "saving grace." When Mr Williams wrote that Mr Beard (including, I presume, all other Free Traders) "was of course writing nonsense," I endeavoured to exercise a becoming restraint in merely describing his views as "bigoted." I now gather that Mr Williams was only humorous, and therefore I apologise for and withdraw the offending expression.

When it comes to Mr Williams' "serious" arguments in his last two letters to the *Economist* I frankly confess that I do find them extremely humorous. Mr Williams first of all defined the Free Trade position as equivalent to "sending a ship backwards and forwards without discharging its cargo." Then, when caught in the net of his own false analogy, he attempts to extricate himself by repeating the same argument with a few verbal alterations. He bases his new position "on the complete absurdity and economic waste" of sending, *e.g.*, steel rails to the Argentine, and buying back interchangeable and identical goods, say, from Belgium. Let us see. In the first place, the steel rails we send to the Argentine are not, in fact, identical with the goods we import from Belgium, and even if they were, at the worst, we should be selling "dear" and buying "cheap," which I believe is a good business proposition. Secondly, suppose we put an embargo on the *assumed* identical steel we import from Belgium, as the protectionists advocate, all that would happen would be that, although we should make more steel, we should lose the reciprocal trade which, either directly or indirectly, the purchase of Belgian steel involves.

Fundamentally, the answer to Mr Williams is that Free Trade does not consist in the exchange of goods, identical both in price and quality, but in the exchange of goods for goods which we cannot advantageously produce ourselves, and Mr Beard makes a good suggestion in asking Mr Williams to visit any of our ports and see for himself. Finally, let me

THE UNIQUE CHARM OF SOUTHWOLD.

THIS PICTURESQUE SMALL TOWN on the Suffolk Coast is an ideal place for those who desire a few days' complete change and rest. The Town itself, with its wonderful Church and quaint "greens" and great, high Common commanding extensive views over sea and land, is different from the usual seaside resorts.

Across the river is WALBERSWICK, the haunt of nearly all artists and of many famous authors for some fifty years past, and from here are many beautiful walks or rides, either along the beach or across the silent marshes, to the lost city of DUNWICH, or over hilly gorse and heather commons flanked by woods to BLYTHBURGH, with its noble church, or WENHASTON, with the large mediæval picture of "The Doom."

From Southwold delightful short motor excursions may be made to FRAMLINGHAM (20 miles), with its vast castle and church, with splendid monuments of the tragic Howards, or to WINGFIELD CASTLE (21 miles), the great Manor House of the ill-fated Dukes of Suffolk, with the beautiful effigy of Elizabeth Plantagenet in the church adjoining, or to ALDEBURGH THORPENESS (18 miles) and ORFORD, remote from modern life, with the great Norman keep still dominating town and coast.

Southwold provides excellent sea angling, and there is an attractive 18-hole golf course. By train from London it is about two hours to SAXMUNDHAM (14 miles) and a little more to DARSHAM (7 miles), HALESWORTH (9 miles), where motors from hotels meet visitors by appointment.

There is THE SWAN HOTEL (h. & c. water in every bedroom) in the Market Place, a well-known and most comfortable hotel with a century's reputation (Tel. 5), and also a smaller, THE CROWN HOTEL, an old Georgian Inn recently reconstructed (Tel. 53), both well known for the excellence of their catering.

add that if protectionists would only envisage foreign trade from this true point of view, and omit the confusing element of *money payments*, which have no theoretical bearing on the issue, I believe this would do much to clarify their mental processes.—Your obedient servant,

FRANK MORRIS.

Constitutional Club, Northumberland Avenue.

BROADCASTING: BRITISH AND FOREIGN SYSTEMS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with considerable interest the article in the May 3rd issue of your excellent paper entitled "Broadcasting: British and Foreign Systems—II."

Your correspondent makes several statements in respect to American broadcasting which I feel I cannot let pass without criticism.

First, ". . . the average American station has to live by the amount of custom it can secure. . . ." Actually, the *average* American station is owned by a commercial organisation (a manufacturing company, a "store," a newspaper, etc.), and its primary purpose is to advertise this organisation; incidentally, it very often pays for its way by selling hours to other concerns.

Next, ". . . an advertiser who broadcasts tedious, over-vulgar or over-highbrow material in his 'hour' will eventually discover that he is losing money, and will then change his programme. . . " Actually, the more important broadcasting stations and/or systems have concise statistics showing the type of programme most in keeping with the product to be advertised and the hour at which it will do most good; in practice, these statistics have proved to be more than accurate.

Again, ". . . listeners pay little attention to the name of the corporation which purchase the hour to which they listen. . ." This statement is very far removed from the truth. The names of the different programmes are literally household words, and any radio "fan" in the United States and Canada will tell you over what station and at what times he can listen to the General Motors, Ipana, Lucky Strike, etc., "hours."

Lastly, ". . . the commercialisation of broadcasting acts not merely positively in introducing rubbish, but negatively in discouraging the unusual and good. . . " To refute this argument I need merely quote two of the highbrow series of programmes which are broadcast in America—those recently sponsored by the General Electric Company in the United States and Imperial Oil, Ltd., in Canada, featuring Mr Walter Damrosch and Mr Reginald Stewart respectively in a series of illustrated microphone lectures on Symphony Orchestra construction, very similar to those recently given in this country by Sir Walford Davies.—I am, sir, yours faithfully,

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Memorandum on International Trade and Balance of Payments, 1926-1928. Vol. II. *Balance of Payments*. (Geneva) League of Nations.

This volume contains details of the international balance of payments of twenty-nine countries, so far as they are available, in the years 1924-28, preceded by a very valuable introduction.

The Theory of Interest. By Irving Fisher. (London) Macmillan and Company, Ltd., St. Martin's Street. 25s. net.

Begun as a revision of Professor Fisher's earlier book, "The Rate of Interest," this dissertation has developed into an almost entirely new work, though the author's theory is modified less in substance than in presentation.

The Influence of Communications Internal and External upon the Economic Future of China. By Ming-Ju Cheng. With an Introduction by W. Tetley Stephenson. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 7s. 6d. net.

An important study of transport and other communications in China, and their relation to the economic future of the country.

The Future of Empire Trade. By J. E. Ray, with a foreword by the Rt. Hon. L. S. Amery. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 2s. net.

A short statement of the case for increased economic co-operation within the Empire.

Legal Aspects of Commercial Letters of Credit. By Herman N. Finkelstein. With an Introduction by Karl N. Llewellyn. (London) Oxford University Press, Warwick Square. 37s. 6d. net.

A remarkably full and well-documented volume with an excellent index.

Public Companies and the Investor. By A. E. Cutforth. (London) G. Bell and Sons, Ltd., York House, Portugal Street. 10s. 6d. net.

The author, who is an accountant, has devoted great care to the initiation of the investor into the science of interpreting balance sheets and prospectuses. His book is clear and readable without being unduly elementary.

Income Tax up to Date. (London) The Financial News, 20, Bishopsgate. 9d.

One of the more useful representatives of a numerous species, this booklet makes it possible, with the aid of its clear examples and tables, for any income-tax payer to calculate the amount of his own liability under the new rates.

The Directory of Directors, 1930. (London) Thomas Skinner and Company, 330, Gresham House, Old Broad Street. 25s. net.

This indispensable work of reference now contains over 32,000 names and there have been over 6,000 changes in the current edition.

Oil Facts and Figures, May, 1930. (London) Frederic C. Mathieson and Sons, 16, Copthall Avenue. 1s. 6d.

Contains financial particulars of oil companies, with a table of output statistics.

The Journal of the Royal Agricultural Society of England. (London) John Murray, Albemarle Street. 15s.

Of the special articles, which cover a wide range of subjects of agricultural interest, that which perhaps has the greatest interest for the general reader is the paper by Sir William Haldane on "The World Shortage of Cattle—its Future Effects on British Agriculture."

IRISH FREE STATE

Third National Loan

(4½% Registered and Inscribed Stock, 1950-1970.)

ISSUE OF £6,000,000

Price of Issue £93½ PER CENT.

Interest payable 1st April and 1st October.

First Dividend payable on 1st October, 1930, as follows:—

	Per cent.
(a) On instalment allotments	£0 18 6
(b) On fully-paid allotments	£1 12 6

Principal repayable at par on 1st October, 1970, the Government of the Irish Free State having the option to redeem the stock in whole or in part, at par, on or after the 1st April, 1950, on giving three calendar months' notice in *Iris Oifigiuil*.

Both the Principal and Interest of this Issue will be a charge on the Central Fund of the Irish Free State.

The following banks are authorised by the Government of the Irish Free State to offer for subscription £6,000,000 of the above Stock authorised to be issued under Act of the Oireachtas, entitled the Central Fund Act, 1930 (No. 7 of 1930):—

BANK OF IRELAND.
HIBERNIAN BANK.
MUNSTER AND LEINSTER BANK.
NATIONAL BANK.
NATIONAL CITY BANK, DUBLIN.
NORTHERN BANK.
PROVINCIAL BANK OF IRELAND.
ROYAL BANK OF IRELAND.
ULSTER BANK.
GUINNESS, MAHON & CO.

Payment will be required as follows, viz.:—

£10	per cent. on application.	
£20	" "	allotment, 10th June, 1930.
£20	" "	10th July, 1930.
£20	" "	8th August, 1930.
£20	" "	5th September, 1930.
£23 10s.	" "	

Payment in full of instalment applications may be made after allotment, and discount at the rate of two per cent. per annum will be allowed. Where payment is made in full between two instalment dates, discount will be calculated as from the instalment date next succeeding the date of such full payment.

In case of default in the payment of any instalment at its due date, the amount previously paid will be liable to forfeiture.

In case of partial allotment, the balance of the amount lodged with the application will be appropriated towards payment of the instalment due on allotment.

Applications must be for sums of £10 or multiples thereof.

The Registered and Inscribed Stock of this issue is a Trustee Investment in the Irish Free State authorised by the Trustee Act, 1893, and trustees may invest therein, even though the price at the time of investment exceeds the redemption value of £100 per cent.

The Government of the Irish Free State undertake to set aside on 1st April and 1st October of each year a sum equal to 2½ per cent. of the total nominal amount of the loan. After deducting therefrom the amount required for payment of interest, the balance of the sum so set aside will be carried to a Sinking Fund which will be applied to the purchase of the Loan for cancellation or otherwise invested for the benefit of the Sinking Fund.

Arrangements will be made to enable stock of this Issue to be accepted at its face value, with due allowance for any unpaid interest accrued thereon, as the equivalent of cash in satisfaction of amounts due on account of Death Duties payable in respect of any property passing on a death, provided that such stock has formed part of that property continuously up to the date of death from the date of the original subscription or for a period of not less than six months immediately preceding the date of death.

The Books of this issue will be kept at separate Registers at the Head Office of the Bank of Ireland, Dublin, and at the principal Office of the same Bank in Cork, and transfer between the Registers in Dublin and the Registers in Cork will be free of charge.

Stock may be inscribed as transferable in the Stock Transfer Books, or may be registered as transferable by Deed.

Inscribed Stock will be exchangeable for Registered Stock, or *vice versa*, without payment of any fee.

Stock will be transferable in any sums which are multiples of a penny.

Powers of Attorney for the transfer of Inscribed Stock and Deeds for the transfer of Registered Stock will be free of Stamp Duty.

Dividends on Stock will be paid by warrant, which will be sent by post.

Dividends on Stock of this issue will be paid without deduction of Income tax, but the income derived from such dividends will be assessable to Income tax in the hands of the recipients at the rates of tax appropriate to their respective incomes.

Stock of the present issue and the dividends payable from time to time in respect thereof will be exempt from all taxation of the Irish Free State, present or future, if it is shown in the manner directed by the Minister for Finance that the Stock is in the beneficial ownership of a person who is neither domiciled nor ordinarily resident in the Irish Free State.

Fully-paid Allotment Letters may be "Inscribed," transferable in the Stock Transfer Books, or "Registered," transferable by Deed.

A Commission of 5s. per cent. will be allowed to Bankers, Stockbrokers, and Financial Houses on allotments made in respect of applications bearing their stamp.

The Stock now offered will be officially quoted on the Dublin and Cork Stock Exchanges.

Application Forms may be obtained from any Bank or Post Office, from Messrs. Butler and Briscoe, 18–19 College Green, Dublin, from any other Stockbroker, from the Department of Finance, Dublin, and from the High Commissioner for the Irish Free State, York House, Regent Street, London.

Instalments may be paid without additional charge through any of the Offices of the aforementioned Banks.

DUBLIN, 10th May, 1930.

The List of Applications will close on or before Saturday, 24th May, 1930. **Form A**

APPLICATION FOR "INSTALMENT" ALLOTMENT. *No.*.....

IRISH FREE STATE

(4½% Third National Loan, 1950-1970)

ISSUE OF STOCK

Price of Issue £93½ per cent.

To the Bank of Ireland, Hibernian Bank, Munster and Leinster Bank, National Bank, National City Bank, Dublin, Northern Bank, Provincial Bank of Ireland, Royal Bank of Ireland, Ulster Bank, Guinness, Mahon and Co.

In terms of the Prospectus dated the 10th May, 1930, I/we hereby apply for an Instalment Allotment of £....., say.....pounds of the above-mentioned issue.

And I/we hereby engage to pay the instalments as they shall become due on any allotment that may be made in respect of this application as provided in the said Prospectus.

The sum of £....., being the amount of the required deposit (at the rate of £10 for every £100 applied for), is enclosed herewith.

I/We request that any allotment made in respect of this application may be—

1. Inscribed as Stock—"transferable in the Stock Transfer Books,"
   at* Bank of Ireland, Dublin / Bank of Ireland, Cork
2. Registered as Stock—"transferable by Deed"
   at* Bank of Ireland, Dublin / Bank of Ireland, Cork

One or other of these two categories must be selected, and the one not selected must be struck out.

Signature.....

Name of Applicant in full.....

Communications to be addressed to:—

Name.....

Address.....

Date.....1930.

PLEASE WRITE DISTINCTLY.

The Stock Exchange.

THE TIN OUTLOOK.

THE tin-producing industry had sufficient experience of falling prices last year to be convinced of the wisdom of the classic advice of agreeing quickly with one's adversary. The industry agreed that its adversary was over-production and, without attempting closely to define that elusive term, the British section of the tin-producing industry took speedy steps to deal with it. The Tin Producers' Association was formed, and at the beginning of this year proposed a scheme for the restriction of output in British Malaya and Nigeria, for which it obtained the support of the Patino and Aramayo groups of Bolivian mines. Following upon the formation of the Tin Producers' Association, a merger of four of the five principal smelting plants in the British Empire was arranged under the title of Consolidated Tin Smelters, Ltd. (the Straits Trading Company being left outside), which was intended to facilitate the buying of tin ore from scattered producers and prevent haphazard marketing of the metal. This concerted move towards "rationalisation" encouraged the tin-producing industry at the beginning of this year to believe that with the spot price of tin down to £176 a ton—as compared with £223 at the beginning of 1929—the worst had been seen.

Nevertheless, last week was the blackest experienced since 1922. The spot price in the London metal market fell to £142 8s. 9d. a ton—a decline of 38 per cent. from the 1929 high level of £229 15s. and of 55½ per cent. from the 1926 peak of £321 2s. 6d. a ton. The occasion of the fall was the heavy and unexpected increase in the "visible supply" returns and in the stocks held in the East. The following figures, published by the Metal Exchange, show at a glance how the statistical position of the tin industry has deteriorated since 1927 and how sharp was the increase in stocks in April this year:—

	Visible Supply.* Tons.	Carry-over in the Straits Settlements.† Tons.	Total. Tons.
December, 1927	15,733	1,450	17,183
December, 1928	24,563	1,235	25,798
December, 1929	28,140	4,725	32,865
January, 1930	29,032	4,730	33,762
February, 1930	33,581	4,330	37,911
March, 1930	32,972	3,085	36,057
April, 1930	36,595	5,664	42,259

* Stocks landing or warehoused in Great Britain, U.S.A. and Holland, and tin afloat to Great Britain, U.S.A. and Europe from the East.

† Figures of Messrs Ricard and Freiwald.

It is difficult to explain the abnormal increase in the "visible supply" and "carry-over" returns for April except on the assumption that the smelting companies in the East have been working off some of their accumulated stocks. It can scarcely be due to any increase in production, for the restriction scheme which the Tin Producers' Association has now brought into effect has already resulted in a considerable curtailment of output. An announcement of the Tin Producers' Association, reported in the *Economist* of April 19th, declared that producers with a normal output of 137,799 tons of metallic tin a year had agreed to curtail output to the extent of 24,096 tons and that an aggregate curtailment of 30,000 tons a year should not be unattainable. The actual reduction in mining output for the first three months of 1930, as reported by the Metallgesellschaft of Frankfurt, was as follows:—

Mine Production in terms of Metallic Tin (Metric tons).

	Monthly Average for 1929.	January, 1930.	February, 1930.	March, 1930.
British Malaya	5,873	6,443	4,989	6,055
D.E. Indies	2,959	3,379	2,312	2,056
China, &c.	1,776	2,080	1,657	1,819
Nigeria	890	961	905	794
Bolivia	3,922	4,200	3,200	2,500
Other Countries	845	860	838	855
	16,265	17,923	13,901	14,079

These figures clearly show the effect of curtailment of output. On the basis of the January production figure the world total mine output for 1930, if uncontrolled, might have been estimated in the neighbourhood of 216,000 metric tons, against 195,185 metric tons in 1929. If the 30,000 tons curtailment proposed by the Tin Producers' Association be applied to the former figure, the 1930 production may be put at 186,000 tons. If, however, the monthly output for the rest of the year be calculated on the March level of 14,000 metric tons the total "probable" output for the year comes out at about 172,000 tons.

The question arises as to whether—in view of the world setback in trade and industry this year—a curtailment of output of 30,000 tons or even 44,000 tons this year will be sufficient to bring supplies into line with a reduced demand. Deliveries in America for the first four months this year amounted to 26,210 tons, as compared with 30,958 tons in the corresponding period of 1929—a decline of over 15 per cent. Last year world consumption, according to the estimates of the Anglo-Oriental Mining Corporation, which are stated to cover about 90 per cent. of world trade, would appear to be in the neighbourhood of 184,320 tons. This is probably a conservative figure, since the Metallgesellschaft estimate for 1928 consumption was as much as 174,200 tons. If it is reasonable to assume, having regard to American deliveries in the first four months of this year, that world demand will fall 10 per cent. below that of 1929, the total consumption for 1930 may be about 166,000 tons, as against an estimated mining output, at the lower of the two figures mentioned above, of 172,000 metric tons. In other words, if the rate of world consumption this year is no better than that of the first four months, the curtailment of output which the Tin Producers' Association has brought into effect will not be sufficient to bring supply into complete equilibrium with demand.

The situation, however, may not be quite so unpromising as these figures indicate. In the first place, there is a possibility that the consumption of tin in America may improve before the end of this year. In the first three months of 1930 the output of the American automobile industry was only 68 per cent. of the corresponding 1929 figure. Nevertheless, the Ford Motor Company in this period was steadily increasing its output and is now producing nearly 9,000 cars and trucks a day, its passenger cars accounting for nearly 45 per cent. of the total American output of that class of vehicle. If the recovery of the Ford Motor Company points to a general changeover to the lower-priced car it is not impossible that the American motor industry will justify the prognostications of sanguine American observers and reach a higher level of output before the autumn.

In the second place, the slump in the price of tin may ultimately do more to effect curtailment of output than all the schemes of the Tin Producers' Association. How far Chinese mines have been forced by the present level of prices to suspend operations, or how far the leading producers in Bolivia have restricted their output in deference to the restriction programme of the Tin Producers' Association and the expressed wishes of the Bolivian Government, must remain uncertain until further shipment returns are published. It is not unreasonable, however, to suppose that, if there is no sharp recovery in the price of the metal, the tin production of the world this year may well be less than the estimated total of 172,000 tons. Mr E. J. Cornish, Vice-President of the Patino Mines, who may be presumed to be an authority on mining costs, has recently declared, in so many words, that the price of tin is more powerful than any cartel, since it is impossible at the moment for many tin mines to operate at a profit.

While the uncertainty as to the statistical position remains, however, both the metal and the share markets are likely to be highly sensitive to the publication of monthly returns of stocks. Have the stocks held in the East been completely disclosed? Are tin stocks held in warehouses in this country—estimated at over 18,000 tons—in strong hands or are they likely to find their way on to the market at inconvenient times? These are questions that cannot as yet be answered. At the moment of writing sentiment has improved and the price of the metal has recovered to £147 12s. 6d. a ton. The following table shows that the market prices of tin shares are slightly above the bottom:—

	1929. High.	1930. High.	1930. Low.	Present Price.	Last year's Divs.
Malayan Tin, 5s.	30/3	28/9	23/9	24/6	60%
Southern Malayan, 5s.	17/6	17/9	15/–	14/9	30% (est.)
Kamunting, 5s.	17/10½	10/6	7/7½	8/3	10%
Tronoh, 5s.	22/10½	23/–	18/4½	19/–	32½%
Patino Mines, $20	9 11/16	5 3/16	4¼	4¼	12/–

Altogether, the available evidence suggests that the present price of tin is abnormally unfavourable from the producer's point of view. When world consumption resumes its normal rate of increase and the world's visible tin stocks are reduced, it is more than possible that there will be another of those sharp recoveries in prices on the Metal Exchange which are as much against the interests of producers as the extreme slump which we are now witnessing. It has been pointed out that since 1900 (apart from the abnormal period of 1919-1921) tin prices have always reached a "peak" every six years. The last peak was in 1926. If a similar time-table operates for the next cycle, a fresh peak will be reached in 1932, when the experts may be expected duly to bring forward figures to show that the world's consumption has "outpaced" its productive capacity.

SOME AMERICAN RAILROAD FIGURES.

THOUGH the American rail market in London is but the ghost of its pre-war self, there are still many British investors, public and private, who hold these stocks, and have been interested to discover that market opinion is even more divided as to railroad prospects in America than in Great Britain. Without venturing, however, on the thorny question whether road competition will, or will not, steal traffic and profits from the railways in America, as it has done in England, we may point out that railroad stocks have, in fact, recovered this year, only about 17½ per cent. of the ground lost during last year's slump in Wall Street, while industrials generally have regained 38½ per cent., and public utility stocks 55½ per cent. of their losses, according to the index figures prepared by the Standard Statistics Company. The railroads are, naturally, feeling the effect of the recession in American industrial activity. The total freight-car-loadings in the first quarter of 1930 showed a decline of 7 per cent. as compared with 1929, while the net earnings of 28 companies for the first three months of this year showed a drop of no less than 32 per cent. The following figures are instructive:—

	1927.	1928.	1929.	Jan., 1930.	Feb., 1930.	Mar., 1930.
Average weekly freight-car loadings (Thous. cars)	979	993	1,014	837	876	883
Average monthly gross earnings, thirty railroads (Million $)	353	351	363	298	296	...

These introductory remarks may enable our readers to put into a rough perspective the detailed results achieved by three well-known American systems last year which have been summarised by our New York correspondent.

Southern Pacific.—The income from this company's lines and its solely controlled affiliated companies was equivalent in 1929 to $12.99 per share on the average capital outstanding, an increase of $2.28 over the preceding year. The property investment of the system increased by $69,891,889 to $322,914,542, and the total assets, at $426,625,319, were $74,070,394 higher than at the end of 1928. The total railway operating revenues for 1929 reached $310,969,138, and were the largest in the company's history, showing an increase of $10,865,110 over the revenues of 1928. The gain was largely the result of an increase of 5.03 per cent. in the volume of revenue freight carried, but partly reflected a windfall of $2,096,312 from a retro-active mail pay increase for the period from May, 1925, to July, 1928.

A few significant figures from the income accounts for the past two years may be set out as follows:—

	1928. $	1929. $
Operating revenues	300,104,027	310,969,138
Operating expenses	216,734,202	219,698,403
Net from railway operations	83,369,825	91,270,735
Railway tax accruals	21,525,425	22,263,607
Net railway operating income	54,908,101	59,741,859
Non-operating income	13,300,658	17,852,215
Interest and other deductions	29,180,126	30,178,744
Net income	39,028,633	47,434,930
Dividends	22,342,884	22,342,900

The total assets of the system at the end of the year were $2,277,779,543, an increase of $34,392,089, while funded debt increased by $7,514,592.

For the first three months of 1930 the Southern Pacific Company has reported gross receipts of $63,689,423 and net railway operating income of $7,130,739. These figures compare with $72,135,190 and $11,474,544 respectively during the same period last year.

Union Pacific.—The 1929 gross operating revenues of the Union Pacific system showed an increase of $2,187,347, and net income from transportation was $1,506,573 higher. Inclusive of other income the net earnings available for the common stock, after paying preferred dividends, were $45,264,328, equivalent to $20.36 per share, compared with $42,125,148 ($18.95 per share) in the previous year. The company's freight revenue was $2,177,477 higher than in 1928, but passenger revenues dropped by $563,254. Significantly enough, the system's revenue from highway motor-coach services dropped $280,599, although it is now operating motor lines from Chicago and St. Louis to Los Angeles and Portland, with feeder routes, over 7,000 miles of highway. Its investment in properties for this service, made in order to maintain its position in passenger transportation, amounted to about three million dollars at the end of 1929.

The company retired funded debt to a total of $47,242,000, leaving $362,116,420 in the hands of the public on December 31, 1929.

The principal items of the income account are shown:—

	1928. $	1929. $
Operating revenues	215,169,245	217,356,592
Operating expenses	146,256,488	147,026,561
Net from transportation	43,818,995	45,325,568
Income from other sources	20,346,558	21,598,472
Fixed and other charges	18,058,681	17,667,998
Net income	46,106,872	49,256,042
Dividends	26,210,884	26,210,884
Carried forward	19,895,988	23,045,158

Investments in other than affiliated companies are valued at $170,146,114, plus United States Government bonds and notes of $32,013,361, while a surplus of $330,590,046 was shown.

Atchison, Topeka and Santa Fé.—The gross operating revenues of the Atchison, Topeka and Santa Fé Railway for 1929 set a new high record, aggregating $264,695,984, against $248,074,187 in 1928. The net income available for dividends and surplus increased from $49,930,430 to $61,036,803, or from the equivalent of $18.09 to $23.76 a share on the common stock.

The President of the company, in his annual report, criticised the proposed allocations of other lines to the Atchison, Topeka and Santa Fé system under the tentative grouping plan drawn up by the Interstate Commerce Commission last December. He declared that "properties which are joined in consolidation should integrate well," and that this condition did not apply to "a considerable part of what is tentatively allocated" to the company.

The operating statistics of the company showed an increase last year of 10,057,349 passenger miles, or 0.82 per cent., but passenger revenues were $445,372 lower than in 1928. The total freight ton-miles increased by 1,404,176,066 (8.19 per cent.). The principal items of the income account follow:—

	1928.	1929.
	$	$
Operating revenues	247,632,836	267,189,178*
Operating expenses	171,992,255	175,243,236
Railway tax accruals	17,772,346	20,340,961
Net railway oper. income	55,332,525	68,652,330
Other income	6,224,256	5,827,913
Interest on bonds	11,094,119	12,766,878
Net corporate income	49,930,430	61,036,803
Carried forward	...	30,447,244

* Includes $2,493,193 back "mail pay."

The report for the first quarter of 1930 showed a decline in gross operating revenues from $58,432,498 to $53,166,586. The net railway operating income fell from $12,250,175 to $4,884,856, a large part of the decline being chargeable to the heavy maintenance programme, including rail renewals. According to the President, Mr W. B. Storey, however, a "normal" profit for the year is expected.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
May 20.	May 22.

The week opened in quiet fashion, with the investment markets burdened with large amounts of undigested stock from recent new issues and industrial shares quiet in view of the continued rise in the unemployment figures, the unfavourable April trade returns and the bad showing made by published company reports, especially in the textile industries. As the week progressed, however, the undertone became slightly firmer. Gilt-edged prices strengthened, new stocks being absorbed, on the whole, more quickly than had been anticipated, and elsewhere such fractional changes as were recorded were usually on the right side, while mining shares benefited from the harder tone of the base metal markets. Stock Exchange sentiment, in short, remains undecided, and is revealing the week-to-week fluctuations, with no definite trend, characteristic of a period in which cheap money on the one hand and of the visible signs of trade depression on the other, are pulling against each other.

Gilt-edged stocks showed a "psychological" improvement after a depressing start. Funding Loan fell appreciably on Monday, and the 4½ per cent. Conversion issues on Tuesday. From Wednesday onwards, however, better investment demand was in evidence, particularly as regards War Loan. News from India again proved a bear point for India loans, the 4½ per cent issues being the chief sufferers. Australian loans came on offer, with, however, a stronger tone in mid-week.

The outstanding development in the Foreign market was the opening of dealings in the new San Paulo 7 Per Cents., which, after touching 1⅞ discount, improved to 1 11/16 discount. Other Brazilians were dull, the appearance of the new stock inducing sales by tired bulls of the older issues. Japanese bonds were steady on the success of the new Conversion issue. German 7 Per Cents. improved, but scattered realisation of other Europeans was in progress.

Though a moderately favourable traffic showing would probably have brought out appreciable buying of Home Railway stocks, the week's batch of figures was, in fact, unsatisfactory. All the groups except the Southern showed an appreciable drop in gross earnings, to which the market attached the greater significance in view of the restoration, as from May 1st, of the 2½ per cent. previously deducted from wages. Great Western and London, Midland and Scottish came back to the lowest levels of the year, and some selling occurred of prior charge stocks. Among foreign rails, Argentine stocks were heavy on further traffic losses. The maintenance of the Leopoldina dividend at 5 per cent. had been generally anticipated, though the stock showed a modest rise.

Industrial shares had an undistinguished week, the market being more susceptible than usual to the tone of Wall Street, which, on the whole, was firmer. A fair business was done in motor shares, Leylands obtaining most attention. Courtaulds were better supported than of late. The bad showing made by the week's company reports was a deterrent to business in the textile market. The Fine Spinners' figures, however, had been fully discounted, and the shares enjoyed a modest recovery. Breweries were steady, but demand for tobacco shares was again on quiet lines. International Tea rose on rumours of the company's possible absorption by the Unilever interests. Symptoms of increasing interest were discernible in the gramophone market, H.M.V. being prominent. Electrical shares were undecided, and in the "heavy" group, interest was centred chiefly on Wm. Cory, in anticipation of a higher dividend. The White Star report (discussed on page 1121) was not conductive to activity in Royal Mail issues, though Argentine Navigation were in demand on a satisfactory dividend announcement. Internationals, as a whole, were marked up on New York developments. Insurance shares again had a downward trend, and bank shares were irregular.

Despite the stronger tone of rubber, following the new "restriction" plan, outlined in the speech of the chairman of the Rubber Plantations Investment Trust (described on page 1121), the share market remained inactive, a slow but steady stream of selling being in evidence. Tea shares were depressed, partly on Indian "political" fears, and partly on dividend uncertainty, emphasised by the disappointing Consolidated Tea and Lands declaration. The oil share market was influenced less by the more reassuring news regarding the Californian "conservation" position than by the maintenance of the "Shell" dividend on an increased capital. The latter caught out numerous bears, all the leading stocks, in fact, being strong on the news.

The mining share markets were more active, with a cheerful undertone. Northern Rhodesians were again in the van, though the influences at work were severely professional. Congo Borders touched 19½. N'Changa also moved up and Bwanas, Chartered, Loangwas and Roan Antelope all strengthened. Kaffirs were mainly firm, Anglo-American being well supported, while Brakpan, Modderfontein and East Rand improved fractionally. Metal prices were harder. Rio Tinto recovered sharply on better price prospects for copper, but later lost part of the rise. Tin shares were steady, but the metal failed to show the expected signs of greater stability. Kampar Malaya and Penang were firm, but Southern Malayan and Ipoh were weaker. Of the Canadians, Vipond rose on good development rumours. Lena Goldfields declined on the decision of the Soviet Government to take over the concession.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Business sentiment is a trifle more cheerful, with a stoppage of large-scale liquidation in the share market, although statistical evidence of improvement is lacking. The steel industry is operating at a slightly lower rate, around 76 per cent., and railroad traffic remains at about 1924 levels. Building contracts and permits for April are somewhat higher than for March, but are still far below those of last year. Heavy buying of copper is in progress, and the price is stiffening at 13 cents a pound, but it is hoped that no further rise will take place sufficient to cause a repetition of over-production. There will probably be a small decrease in surplus stocks for May, but their total is still large. The present tariff deadlock is disliked even more than the actual passage of high duties would be. It is likely, however, that the Bill will go through and obtain Presidential signature. Copper shares have rallied on better metal prices, and public utilities are in improved demand. The motor group, however, is weaker on continued unsatisfactory sales for all but low-priced cars, although the used-car situation is improving. Rails have rallied moderately on the appearance of investment buying and the belief that the worst traffic losses have now been witnessed. United States Steel and other pivotal issues are merely marking time, and the volume of transactions has fallen to about half the total of March and April. Continued dullness is expected for some time, and will be welcomed, on the whole, in good quarters. Bonds are also quiet and a shade easier. New capital issues are of moderate proportions, and no great amount is expected until after the Reparations issue, which, it is believed, should go well.

INVESTMENT NOTES.

A Glut of New Issues.—"Cheap" money and competition among issuing houses at a time when the reopening of the market has admitted a long queue of borrowers, are being reflected in a flood of new issues at prices which do not invariably square with market ideas. The large amounts of these issues which have been left with underwriters, in many cases, may be seen from the following enumeration:—

Borrower.	Total Issue (Nominal).	Running Yield.	Left with Underwriters. Per cent.	Amount.
	£	£ s. d.		£
San Paulo	8,000,000	7 5 9	87	6,960,000
West Ham	800,000	5 1 6	84	670,000
New Zealand	5,500,000	5 1 0	...	...
Agricultural Mortgage Corp.	3,500,000	5 0 0	85	2,970,000
Rhodesia and Mashonaland Railways	2,500,000	5 19 6	68½	1,710,000
Unilever Co.	2,000,000*	...	59	3,540,000(*a*)
Japan	12,500,000†	6 2 3	...	...
Grimsby ...	670,000	5 0 3	42	280.000
L.C.C.	4,055,000‡	4 14 9	(*b*)	(*b*)

* At premium of 200 per cent.
† Conversion Loan; actual cash issue not yet known.
‡ Includes £1,055,000 for Conversion purposes.
(*a*) Cash. (*b*) Result not announced at time of going to press.

By all outward indications, the above figures should argue severe congestion in the market. While, however, some observers agree that this is the case, others maintain that underwriters are actually "getting out" of the majority of issues within a few days at figures which leave them some profit. On the whole, the "subscription" figures may give a pessimistic idea of the capacity of the market, and many recent issues would conceivably have obtained quite a fair response had the yield offered been, say, ¼ per cent. higher. Actually, the effective rate for "long-term" capital accommodation appears still to be somewhat higher to-day than in recent years, despite the fall in "short-term" rates during the last few months:—

Year.	Average Bank Rate. %	Average Yield on Corporation Loans Issued During Year. %	Average Yield on New Foreign Govt. Bonds. %	Average Yield on Dominion and Colonial Govt. Loans. %
1924 ...	4·00	4·81	7·66	4·99
1925 ...	4·55	4·84	*	4·97
1926 ...	5·00	5·02	7·42	5·10
1927 ...	4·65	4·96	7·29	5·08
1928 ...	4·50	4·75	6·76	5·02
1929 ...	5·50	4·96	7·21	4·97

* No issues.

In this connection reference may be made to certain significant features of the international flow of capital in recent years, which have been revealed in a recent memorandum of the League of Nations. The figures show that the three main reservoirs of long-term international capital—the United States, Great Britain and France—all released somewhat large resources for employment in other countries during 1927-28, and severely restrained their facilities in 1929. The flow even yet would appear not to have entirely resumed its customary volume, and the position, as far as this country is concerned, has, at the moment, an air of abnormality, in view of the desire of those concerned to keep the stage as clear as possible for the coming Reparations loan. In the circumstances, borrowers would be well advised to study all the available indications as regards the trend of *long-term*, and not merely short-term, accommodation, and, particularly, to avoid any danger of the market's becoming congested with large issues offered on an unduly low-yielding basis.

Tea Regulation.—After a period of fair strength tea shares have given way to some extent recently, partly owing to inevitable, though unsubstantial, "political" fears (induced more particularly by disturbances in Calcutta), and partly on disappointing dividends, such as those of the Finley group of companies. Apart from incidental fluctuations in values, however, the outlook for the industry, as a whole, has improved during the last three months, during which average London prices have risen by about fifteen per cent., and stocks are estimated to have fallen from 296 million lbs. to 261 million lbs. The industry is, in fact, reverting to an expedient followed with success more than once in the past—finer plucking. On this occasion, however, the producers of India and Ceylon have secured the co-operation of the Dutch growers of Java and Sumatra. A tentative agreement of February last was implemented last month by a definite scheme, under which the four areas chiefly concerned will reduce their 1930 crops on the following lines, according to *The Rubber and Tea Quarterly*.*

Area.	1929 Crop. (Million lbs.)	Amount of of Reduction Envisaged. (Million lbs.)	*Percentage of Reduction.*
Northern India	370¾	32	*8·63*
Southern India	52¼	4	*7·65*
Ceylon	251½	11	*4·37*
ava and Sumatra	158¾	10	*6·30*

Restriction, as we have frequently urged, cannot provide a permanent solution for the economic difficulties of any industry, and the tea growers are keenly alive to the necessity of broadening the world basis of tea consumption. Great Britain alone consumes over 50 per cent. of the tea exported from the East, and the British Empire and the United States, together, no less than 80 per cent. Tea drinking, in fact, is largely a habit of work to be done among both "Eastern" and "Western" races, all of which have given tangible evidence of a susceptibility to the charms of the plant once they have made its acquaintance. In the meantime, it is urged that restriction in the tea trade stands on a somewhat different footing from restriction in other trades, since *less* tea means *better* tea. This factor should be particularly in evidence under the present scheme as regards teas from Java. These have, in the past, contained a proportion of ultra-coarse leaf, which will now be left on the bushes or destroyed. Many well-wishers of the industry attach great importance to the possibilities of future co-operation between Empire and non-Empire growers, towards which this year's agreement is a first step. Such a policy, they argue, should be facilitated by the fact that the Dutch growers find it necessary to market the lion's share of their crops, not in Holland, where any import duty equal, at present prices, to about 50 per cent., obtains, but in London, where a free market has been in existence for the last thirteen months. The potentialities in this direction will be put to a practical test during the next few months.

Rubber—A New Restriction Scheme?—The speech of Mr Welch, at last week's general meeting of the Rubber Plantations Investment Trust, has caused something of a stir in the rubber market. The latter has put up prices from 6⅞d. to 7 1/16d. a pound on the strength of Mr Welch's proposals for a new restriction scheme. Broadly, Mr Welch declared that a voluntary agreement might be negotiated between British and Dutch rubber growers, at the conclusion of the present month's "tapping holiday." Under this scheme tapping would be suspended for seven consecutive specified days in every month, following any month in which the average London spot price of standard quality smoked sheet rubber did not exceed 9d. a pound. Such a scheme, Mr Welch declared, would not seriously disorganise labour, would cease to operate as soon as a "profit-making price" was obtained, should not bring out more native rubber or antagonise manufacturers, and would decelerate the accumulation of unwanted stocks. Mr Welch, however, made it clear that the price aimed at must do no more than cover the all-in costs of production on well-managed European estates, and that the industry must build its hopes of permanent recovery, not on this or any restriction scheme, but on the growth of consumers' demand (which he predicted might increase by 100 per cent. within the next ten years), and on the lowering of the cost of production by every practicable means. It has long been evident that, while the May "holiday" may reduce the weight of visible rubber stocks to some extent, it does not touch the fringe of the industry's main problem of restoring equilibrium between supply and demand. To those growers who supported the Stevenson scheme the new proposals may appear superficially attractive. They are, in effect, a new species of Stevenson scheme, less rigid than the old (being based on a lower pivotal price with one month instead of three as the datum period), and, if Dutch support is secured, more extensive than the earlier scheme. More will doubtless be heard of these proposals, which presumably have the support of Harrisons and Crosfield and other powerful names in the industry. We trust, nevertheless, that producers will think twice before committing themselves once again to the difficulties and dangers of any restriction scheme. Rubber is not alone in suffering from a temporary setback to consumption. The effect of the world industrial recession of the last few months is eloquently shown by the American trade figures, which show that the tyre and other rubber-consuming industries absorbed only 105,309 tons of rubber in the first three months of this year against 129,326 tons in the corresponding period of 1929. On a long view, the present depression is only an incidental phase in the history of an industry which, by every appearance, is destined to show rapid progress for many years to come. The best answer to the increasing use of reclaimed rubber (of which 213,000 tons were used in the United States last year, against 41,000 in 1922) is not the artificial restriction of supplies of crude rubber, but the cheapening of the latter's production by every possible means, including the exploitation of "budding" and other scientific methods.

White Star Line.—The publication of the accounts of the White Star Line, Ltd., for the year ended December 31, 1929, increases the difficulty of understanding the ambiguous statement which was issued by the British, Foreign and Colonial Corporation, as trustees of the 6½ per cent. preference shares, in February last. This statement, which was made on Lord Kylsant's authority, was to the effect that the White Star earnings for 1929 would be practically identical with those of 1927 and 1928. Actually there was a considerable difference between the earnings of 1927 and 1928—the latter being higher by nearly £100,000—and it now emerges that the 1929 earnings are even lower than those of 1927, as the following table will show:—

	1927. £	1928. £	1929. £
Profits after depreciation	456,200	508,645	437,627
Interest	195,182	148,811	162,401

Earned on ordinary (%)	*12·1*	*11·9*	*1·05*
Paid on ordinary (%)	6	6	Nil
Expenses written off	Nil	31,262	Nil
Carried forward	48,843	64,610	75,155

* From January 12th to December 31st.

The preference dividends (which are guaranteed by the Royal Mail Steam Packet Company) were only just earned last year. The directors' report gives no explanation of the reduction in profits. The shareholder is left to discover for himself that the company's chief subsidiary, the Oceanic Steam Navigation Company, which owns the Atlantic White Star fleet, distributed dividends of £400,000, as in the previous year, and that the decline in the profits of the parent company must therefore be attributable to lower earnings of the seven steamers of the Commonwealth Line—on which considerable alterations and improvements were carried out last year—and to lower dividends from other subsidiaries. The balance sheet of the Oceanic Steam Navigation Company reveals a bank overdraft of £896,840, and loans repayable from 1930 to 1946, secured on ships and properties, of £2,413,750, together with a surplus of creditors over debtors and cash of £377,000. That of the White Star Line discloses the following amounts still due on various purchases: On the shares of the Oceanic Steam Navigation £2,350,000, payable by 1936; on the purchase of other shares, payable during the next five years, £500,000; and on the purchase of the Australian Commonwealth Line, £1,485,000, payable by nine annual instalments—a total of £4,335,000. Preliminary expenses and commission, remaining to be written off out of profits, amount to £261,100. The 6½ per cent. preference shares are quoted at 10s. 9d., as compared with a high level of 23s. in 1929 and 14s. 6d. this year.

J. and P. Coats.—At the last annual meeting of this famous cotton thread company, the chairman announced that the returns for the first few months of the current year were behind those for the corresponding period in 1928. The accounts for the year ended December 31st last now reveal a decline of £750,484 from the record net profit of £3,929,058 attained during the previous twelve months. Percentage earnings on an ordinary capital of £14,750,000 are down from 24.4 to 19.4, while a reduction in the bonus from 1s. to 6d. per share brings the total distribution down to the traditional level of 17½ per cent.

	Year ends December 31. 1927.	1928.	1929.
	£	£	£
Net profit	3,729,642	3,929,058	3,179,574

Other allocations	250,000	500,000	...
Carried forward	676,896	825,954	1,094,278

In 1927 the sum of £250,000 was placed to dividend reserve, while last year £500,000 was written off buildings and machinery as "extra depreciation." This year, however, the whole of the surplus is being carried forward, making, with the amount of £825,954 brought in, a total of £1,094,278. In the main, though the present result is the least satisfactory for the past three years, it cannot be taken as indicating any permanent falling away in the company's profit-earning power. An examination of the company's returns over a long period reveals constant fluctuations, while the present earnings on the ordinary capital of 19.4 per cent. compare favourably with the average rate of 18 per cent. earned during the past ten years. The market apparently expected better things, however, and the shares were marked down 1s. 3d. on the report. Every branch of the cotton trade, in fact, is feeling the effect of the prevailing depression, as is evidenced, not merely by the drop in Coats' profits, but by the unfavourable figures published this week by the Fine Cotton Spinners and Crosses and Winkworth (both of which will be found summarised on page 1140), and the "Slubbers" (summarised below). At £3 2s. 6d. the ordinary shares of J. and P. Coats give a yield of about £5 14s. 3d., allowing for a final dividend and bonus of 1s. 3d. per share.

British Cotton and Wool Dyers.—The report of the British Cotton and Wool Dyers' Association for the year ended March 31st last, reveals a further considerable drop in revenue. Net profit at £64,685, before deducting an amount for directors' fees not yet determined, is less by £26,362 than the total for 1928-29, and is less than half the amount earned in 1927-28. Following a reduction in percentage earnings from 17.3 in 1927-28 to 11.8 in 1928-29 (when the dividend of 10 per cent. on the ordinary shares was maintained), the company's capital has this year earned only 8.4 per cent. The dividend is reduced to 7½ per cent.

	Year ends March 31. 1928.	1929.	1930.
	£	£	£

* Before deduction of directors' fees.

No further allocation has been made to reserve account, which was increased to £230,000 by the allocation of £50,000 in 1928. Liquid assets, ignoring the shares in subsidiary companies, amount to the sum of £432,009, against which there are creditors' claims for £95,509. The depreciation fund now stands at £82,336, following this year's allocation of £25,000, against a figure of £54,106 in the balance sheet to March, 1929. Stock in trade is valued at £101,170, against £130,210, and investments are down from £197,463 to £81,817. The ordinary 5s. shares are quoted at par and yield about £8 2s. per cent.

Forestal Land.—Owing to continued depression in the tanning industry, the gross profit for 1929 was £153,292 lower at £684,409. During the year £1,000,000 was issued in 6 per cent. 10-year notes, interest on which absorbed £86,717, but as this was partly offset by a decline of £34,743 in the depreciation charge, and a release of "reserves no longer required," amounting to £17,061, the net profit was £189,304 lower at £303,244. Although only 5.16 per cent. was earned on the ordinary shares the directors recommend a dividend of 6½ per cent.

Years ended December 31.	1927.	1928.	1929.

† Including £65,078 from exchange adjustment account.

The most striking alteration on the assets side of the balance sheet is the decrease of £395,987, to £2,755,271, in subsidiary company investments and advances, while on the liabilities side creditors are down by £402,654 to £528,453. Debtors show a slight fall, and as cash is £138,535 greater, at £555,616, the surplus of liquid assets has increased considerably—from £62,995 to £591,494. In their report the directors state that, despite optimistic signs, the industry has not regained normal conditions. The ordinary shares, at 16s. 10½d., yield £7 14s. 1d.

Shell Union Oil.—The report of the Shell Union Oil Corporation for the year 1929 shows an increase in gross income by no means proportionate to the increase in its capital. Actually, there was a reduction in net income on account of the larger amount allowed for depreciation and drilling expenses, and an increase in the interest charges. Moreover, the amount available for the ordinary shares was further reduced by the dividends payable on the preference shares which were issued in June, 1929. The net result was that the ordinary dividends of $1.40 per share payable on over 13,000,000 shares (instead of 10,000,000) were not fully earned, $1,757,736 being taken from reserve for the payment of this distribution. The results for the past two years compare as follows:—

	1928.	1929.
	$	$
Gross income	68,538,816	72,955,012
Depreciation, drilling, &c.	44,012,282	50,478,786

* On 10,000,000 shares of no par value.
† On 13,068,497 shares of no par value.

The directors refer in their report to the fact that a great deal of expenditure was incurred which normally would have produced results during the year, but which, owing to "conservation restrictions," was not fully productive. They recite the various restriction agreements in the producing fields to which the corporation was a party. The extent of this restriction is brought out by the fact that the actual daily production of the combined companies at December 31, 1929, was at 114,690 barrels a day, net, while the amount of production shut in was no less than 186,000 barrels a day. The refining capacity of the group was increased from 240,000 barrels a day to 290,000 barrels a day, and further extensions were made to the pipe-lines and distribution facilities. The marketing of "Shell" products was extended to the Atlantic seaboard last year by the purchase of existing marketing facilities, a policy which the directors claim to be sounder than the construction of new marketing stations. The rapid expansion of the Shell Union companies in the American markets over the past few years has entailed a heavy capital expenditure programme. The following issues of capital have been made by Shell Union since 1927:—

May, 1927	$50,000,000 5% gold debentures.
Nov., 1927	$30,000,000 5% gold debentures (Shell Pipe Line).
Dec., 1928	$30,000,000 3,000,000 ordinary shares at $10.
June, 1929	$40,000,000 5½% convertible preferred shares of $100.
Sept., 1929	$50,000,000 5% debs. with purchase warrants.
	$200,000,000

This is a large sum of money to raise in three years, and the Shell Union may be compelled to wait for higher refined oil prices before it realises the full benefit of its expansion. The balance sheet at December 31, 1929, with a total of $661,996,416, shows the usual strong financial position, the surplus of current assets over current liabilities being $105,005,135. No less than $47,559,138 is held in "short-term and demand loans," $8,297,668 in cash, and $2,873,279 in marketable securities. The common shares are quoted in New York at $23¾ to yield 6.15 per cent. on the basis of $1.40 dividends.

Ever Ready Company.—The accounts for 1929-30 continue the story of unbroken progress. Net earnings of £243,284 compare with only £64,000 in 1923-24, when, however, the issued capital was much smaller. The programme of expansion of manufacturing facilities inaugurated a few years ago is apparently not completed, additional expenditure amounting to £30,000 having been sanctioned and put in hand since March 31st last. Some £92,000 has been similarly expended over the period covered by the following table:—

(Year ended March 31).	1928.	1929.	1930.
	£	£	£

* On capital outstanding at year end
† Interim, 10%; cap. bonus, 20%; final, 25%.

There have been several developments of importance in the last two years. Two items which appeared amongst assets for the first time a year ago are "Trade Investments," now valued at £209,716, and an investment of £96,000 in the deferred shares of Ever Ready Trust and Finance Company. No details of the former have been given to shareholders, but they are understood to include a substantial holding in Lissen, Ltd., ordinary shares. The Ever Ready Trust was floated in November, 1928, under the auspices of the Anglo-Eastern Finance Corporation, a company at that time controlled by the Horne group. The trust's main operations so far have been the acquisition of a £500,000 interest in Lissen, Ltd., preference shares and a holding of 128,845 ordinary shares in the parent company at a cost of £151,000. A minor interest is an investment of £5,000 in Steel Industries of Great Britain. What the value of the parent's holding in the trust deferred shares may be is problematical. No quotation is available, but the price of the ordinary is at about 50 per cent. discount. Allowing for the final dividend, Ever Ready shares at 18s. 9d. yield 10 per cent. It is uncertain how far this high yield reflects the attitude of investors to the policy of association with the Associated Anglo-Atlantic Company in 1928, and the subsequent new financial departures. Shareholders would welcome further information regarding the position of Lissen, Ltd. In December, 1929, this company had only a small issued capital; but by the capitalisation of reserves (it is not known just how these were created) the capital was increased to £700,000 in £500,000 preference and £200,000 ordinary. The latter are 10s. shares, and Ever Ready is understood to hold 199,996, or just under half. The whole of the preference are held by the Ever Ready Trust.

Anglo-Oriental Mining Corporation.—The report of the Anglo-Oriental Mining Corporation for the year ending February 28, 1930, is a voluminous document which discusses, at length, recent developments in the tin-producing industry. It refers in particular to the absorption by London Tin Corporation of the Tin Selection Trust and the Malayan Tin Trust early this year. As the Anglo-Oriental Mining Corporation had large holdings in these two trusts it became the largest individual shareholder in the London Tin Corporation. Further, it increased its shareholding by selling to the London Tin Corporation, in exchange for shares, all its investments other than its holdings in Anglo-Oriental and General Investment Trust, Anglo-Oriental (Malaya), Ltd., Ashanti Goldfields, Ltd., and British-American Tin Corporation. The Anglo-Oriental Mining Corporation are now acting as technical managers (and the Anglo-Oriental Trust as secretaries and registrars) for the London Tin Corporation and its associated mining companies. The earnings of the Anglo-Oriental Mining Corporation for the year to February 28, 1930, show a decline of over 50 per cent., which is not surprising in view of the

BE UP-TO-DATE—
SHELLUBRICATE

fall in the price of tin from £220 to £173 per ton over this period. The comparative figures are:—

	Period to Feb., 1929	Year to Feb., 1930
	£	£
Net profits	220,228	96,466
Taxation Reserve	10,000	10,000
Investment Reserve	30,269	15,000
Earned for Divs.	179,959	71,466
7½% Pref. Divs. paid	56,466	60,000
Earned for further Pref. Div.	30,873	2,866
Extra Pref. Div. paid	10,000	3,229
Earned for Ord.	92,620	8,600
Earned %	46·3	4·4
Paid %	15	5
Carried forward	83,493	82,043

The preference shares confer the right to a fixed cumulative 7½ per cent. dividend and participate to the extent of one-fourth in the surplus profits distributed by way of dividend. The balance sheet shows investments at cost £1,312,499, the depreciation on which, at present market prices, is slightly over 10 per cent. Creditors and debtors almost balance, and there remains cash at £54,465. The reserve accounts stand at £70,000, and are being increased by appropriations out of profits this year to £95,000. The 7½ per cent. participating preference shares, which were issued to the public in February, 1928, at 21s., are now quoted at 14s. 3d., and the ordinary shares of 5s., which were issued at 10s. per share, at 6s. 4½d.

Central Mining.—Our mining correspondent writes:—In view of the conditions prevailing during the greater part of last year, an appreciable setback in the earnings of this financial undertaking was to be expected. As the receipts and profits are lumped together, no exact idea can be gained of the headings under which the diminution took place; but seeing that the dividends on the Witwatersrand Gold Mines, in which interests are held, were fairly well maintained, the inference is that the difference is to be sought in other directions. Of late years, of course, the Corporation has gone into fields far removed from mining, and no very striking change has been recorded in the earnings. Even now the shrinkage of £162,400 does not entail any cut in the dividend, being practically counterbalanced by the absence of any fresh transfer to reserve. A total of 20s. per share, or 12½ per cent., has now been disbursed for six successive years. Our usual table is appended:—

	1927.	1928.	1929.
	£	£	£
Shares, investments, etc.	8,129,340	8,250,370	7,810,730

Securities for which quotations are available—representing 76 per cent. of the total—have been entered at or below market values as at December 31st. The usual review is given of the company's varied holdings. A new departure is the acquisition of interests in Bolivia. A participation has been taken in a company formed to amalgamate the well-known tin properties of Cerro de Potosi, also in another company formed to acquire and treat "large adjacent accumulations of low-grade tin and silver ores." At 18 cum final dividend of 12s. the yield shown on Centrals is just under 6 per cent. tax free.

Tin Dredging Results.—Widely different experiences were enjoyed last year by the two Malayan tin companies whose annual reports have been issued this week. Both concerns, of course, were adversely affected by the decline in the metal. In the case of the Tekka-Taiping there was also some falling off in average yield and an appreciable advance in costs, so that the profit came out at £29,650 in place of £38,850. The dividend total was reduced by 3d. to 1s. 9d. per share, the balance available being swollen by the addition of £7,000 income tax reserve no longer required. The forecast of the manager that during the first few months of the coming year the returns were likely to be low has been fully justified by events. When No. 3 dredge comes into full operation, however, "a large increase in output is anticipated, with a considerable reduction in the working costs per cubic yard." Meantime the shares appear fully valued at 21s. In the case of the Peng Kalen the output was more than doubled owing to the installation of an additional dredge. Consequently, although the revenue from sale of power fell off slightly and that from tributes in a relatively sharp degree, the net profit amounted to £72,800, as against £46,260. Dividends on the ordinary shares totalled 40 per cent. in place of 25 per cent., leaving the slightly increased balance of £21,800 to go forward. As in view of the concession granted to the Perak River Hydro-Electric Power Company the Government was unable to renew the Peng Kalen Company's licence to sell power, there will be no further revenue from this source, which last year provided £35,350. The 5s. shares are quoted at 14s. It is of interest to note that costs last year at the Tekka-Taiping were £66 per ton of ore and at the Peng Kalen £41 with the new dredge. Hence there is a fair margin of profit even with metallic tin at £150—equal to about £105 per ton of ore or concentrates.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Bank of South America, Alliance Assurance, Commercial Union Assurance, Yorkshire Insurance, British Shareholders' Trust, Mining Trust, British Match Corporation, Dunlop Rubber, Province of Buenos Ayres Waterworks, Calcutta Electric Supply, Cawnpore Electric Supply, Cluny Rubber Estates, Lanadron Rubber Estates, Ledbury Rubber Estates, Wiggins Teape and Company, and Whiteaway, Laidlaw and Company. Presiding at the Mining Trust meeting, Mr Leslie Urquhart discussed the Mount Isa Development position. He said that in the short space of 2½ years they had developed 28 million tons of ore, made experiments of the highest importance, built a dam and impounded 1,400 million gallons of water, and laid out and nearly completed the building of a town. To bring Mount Isa to the production stage it was estimated that a further £500,000 would be required, and the Mount Isa Company was issuing £1,500,000 debenture stock. At the Dunlop Rubber Company meeting the chairman said that the company had pursued the policy of broadening the basis of their manufacture, so that they were now interested in many products such as general rubber goods, shoes, garments and the like. The turnover in commodities unconnected with the automobile industry now represented 25 per cent. of the whole.

CAPITAL ISSUES.

Underwriters had no respite this week—the subject of congestion in the new issue market is dealt with in an Investment Note on page 1120—but fared better on the whole than for some time past. The £12½ million cash and conversion loan for *Japan* (5½ per cent. Conversion, redeemable 1965) met with a good reception. For cash subscribers the yield was £6 2s. 3d. flat or £6 4s. on redemption—an attractive return seeing that the credit of Japan is generally rated under 6 per cent. To holders of the 4 per cent. 1905 Loan, due January next, the conversion terms were generous. Domestic issues were honourably

represented by *Grimsby*, with £670,000 5 per cent. stock at 99¾, repayable in 1960, and *London County Council* with £3,000,000 4½ per cent. stock, issued for cash at 95, and £1,055,000 of the same stock offered for conversion of 5¾ per cent. bonds, due on October 31st this year. Both these loans will add their mite to the development of domestic trade, but that of London was, in the opinion of the market, dearly priced in the light of contemporary conditions. The only trade issue was that of *R.M.C. Textiles* (1928), a company formed in 1928 to acquire a cloth manufacturing business founded in 1914 and specialising in what are described as "high-quality suitings and mantle fabrics." The high yield of the 8 per cent. preference shares offered at par denotes the risks of the trade and the apathy of the investor in this class of issue. A good reception was extended to the issue, at par, of the ordinary shares of a new trust—*C.L.R.P. Investment Trust*—formed under the auspices of the City of London Real Property Company to carry on the business of an investment trust on orthodox lines. The issue was not underwritten. The *Irish Free State Loan* was designed, primarily, as an Irish internal issue—the Third National Loan—giving a flat yield of 4.82 per cent. The stock is a trustee issue in the Irish Free State, and will be quoted on the Dublin and Cork Stock Exchanges. Both the principal and interest of the issue will be a charge on the Central Fund of the Irish Free State. Special arrangements have been made (presumably on the model of British Victory Bonds) for the acceptance of the stock at its face value in payment of Irish Death Duties. The stock is free of Irish taxation in the hands of outside holders. At its issue price, its immediate appeal to British investors is limited, but the flotation of the Loan on the terms offered is itself a tribute to the high level of Irish Free State Government credit.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to May 10, 1930, £134,507,472.
Total, including conversion recorded, January 1 to May 10, 1930, £195,107,496.

National Savings Certificates.
Net sales week ended May 10, 1930, £50,000.
Total receipts, April 1, 1930, to May 10, 1930, £600,000.

Imperial Japanese Government 5½ per cent. Conversion Loan of 1930 for £12,500,000 at £90 per cent.—Subscriptions to this loan will be applied towards the conversion and redemption of the outstanding balance of the Imperial Japanese Government 4 per cent. bonds, issued in November, 1905. Subscriptions may be made in cash or in Imperial Japanese Government 4 per cent. bonds of 1905, the latter receiving preferential allotment. The Government undertake to establish a fixed cumulative sinking fund as from July 1, 1935, calculated to redeem the entire loan at latest by May 1, 1965, and reserve the right to redeem the whole of the loan outstanding at par at any time after ten years from the date of issue, on ninety days' notice.

Irish Free State Third National Loan.—Issue of £6,000,000 4½ per cent. registered and inscribed stock, 1950-70, at £93½ per cent. The principal is repayable at par on October 1, 1970, the Government of the Irish Free State having the option to redeem the stock, in whole or part, at par on or after April 1, 1950, on three months' notice. Trustees may invest in this stock. The issue allows a flat yield of £4 16s. 3d. per cent., and a redemption yield of £4 17s. 6d. per cent.

London County Council.—Issue of £3,000,000 4½ per cent. consolidated stock, 1945-85, for payment in cash at £95 per cent. and £1,055,000 in exchange for holding of London County 5¾ per cent. bonds, due October 31, 1930. Trustees are authorised to invest in this stock. If not previously redeemed, 4½ per cent. London County consolidated stock, 1945-85, will be repaid at par on April 5, 1985, but the Council reserve the right to redeem the stock at par at any time on or after April 5, 1945, on three months' notice. Outstanding debt of the Council on March 31, 1930, was £103,003,000, while the assessable value of the County of London is approximately £54,659,000, a rate of one penny yielding about £227,700.

Grimsby Corporation.—Issue of £670,000 5 per cent. redeemable stock, 1950-1960, at £99 15s. per cent. The stock will be repaid at par on October 1, 1960, unless previously cancelled by purchase or agreement, but the Corporation will have the option of redeeming the same at par at any time on or after October 1, 1950, on six months' notice. Trustees are authorised to invest in this stock. The rateable value of the borough is £434,926, and a rate of one penny will produce £1,649.

C. L. R. P. Investment Trust.—Issue of 120,000 shares of £5 each at par, to be later sub-divided and converted into £3 of preference stock and £2 of ordinary stock, the preference stock to bear a fixed cumulative preferential dividend at the rate of 5 per cent. per annum from November 30, 1930. The company has been incorporated for the purpose of carrying on the business of an investment trust in all its branches.

R. M. C. Textiles (1928), Ltd.—Issue at par of 100,000 8 per cent. cumulative preference shares of £1 each. The company was incorporated in February, 1928, to acquire as a going concern the clothing business of R.M.C. Textiles, Ltd. Net profit for the year ended December 31, 1929, totalled £40,005, covering dividend on the present issue five times over.

Hampton Court Gas Company.—Issue by tender of £40,000 5 per cent. redeemable debenture stock, redeemable at par on July 1, 1950. Minimum price of issue, £95 per £100, at which price the redemption yield is £5 9s. 2d. per cent. The net revenue of the company for the year ended December 31st last was £12,480, covering interest on loan capital, including the present issue, more than four times.

Harrogate Gas Company.—Sale by tender of £53,000 6 per cent. preference stock, minimum price par. On completion of the issue the dividends on the whole of the company's preference stock will be covered by net profits, carry-over balance and reserve fund more than four times.

The following particulars have been issued "for information only" with a view to Stock Exchange introduction:—**Clapton Stadium, Ltd.** Issued capital, £91,013 15s. in 364,415 shares. Incorporated as a private company in November, 1927, and converted into a public company in November, 1928. **Bahia Blanca Water Works Company, Ltd.** Particulars of an issue of 3,500 6 per cent. registered debentures of £100 each, redeemable at £105 per cent. on or before August 1, 1970. Net receipts of the company for year ended June 30, 1929, were £50,576, covering interest on above issue approximately 2½ times. **City of Wellington, New Zealand.** Particulars of an issue of £60,000 5 per cent. debentures to bearer, of £100 each. The proceeds of the issue will be used to provide drainage and sewerage extensions.

[*Other Stock Exchange information, including the latest profit and loss figures, shorter notices, dividend announcements and summary of balance sheets will be found on page* 1140 *under the heading "Company News."*]

COMPANY MEETINGS, &c.

DUNLOP RUBBER COMPANY, LIMITED.

INCREASED PROFITS IN A DIFFICULT YEAR.
BURDEN OF TAXATION.
SIR ERIC GEDDES ON THE POSITION AND OUTLOOK.

The thirty-first ordinary general meeting of the Dunlop Rubber Company, Ltd., was held, on the 9th instant, at the Whitehall Rooms, Whitehall Place, London.

The Right Hon. Sir Eric Geddes, G.C.B., G.B.E. (the chairman), in moving the adoption of the report and accounts, said :—The total profits from all sources for 1929, after providing full depreciation in the accounts of the whole group of companies, amounted to £2,307,354, as compared with £1,359,894 for 1928. The year, therefore, shows an increase in profit of £947,460 over 1928. The board has decided to transfer to taxation reserve £225,761, and £150,000 has been transferred to general reserve. We recommend the payment of a final dividend, less income tax, on the ordinary shares at the rate of 9 per cent., making a total dividend for the year of 15 per cent., and a balance of £782,329 is carried forward.

The general reserve has been increased by the premiums on shares issued during the year, £193,393, and the transfer of £150,000 from profit and loss account brings it up to £3,373,105.

World trading conditions in 1929 were exceptionally difficult. This was due almost entirely to the abnormal condition of the international money market, which was brought about by the credit demands of speculators in connection with the international Stock Exchange boom centred in New York. This caused a serious outflow of European funds to America. With a view to checking this, money rates were raised to a high level, thirteen Central European banks, led by the Bank of England, adopting this course during the first six months of the year. Having shown the effect, he proceeded to say :—These conditions affected different countries in different degrees. Of European countries, France suffered least, and maintained a good level of trade and employment till almost the end of the year. Germany, where credit had for a long time been abnormally dear, and international political conditions still exercised a depressing effect, suffered perhaps most, and our own country came midway between these two, suffering a gradually increasing reaction in both home and foreign business during the last half of the year. Amongst adverse influences which particularly affected business in this country were the political uncertainties attending on the change of Government.

MCKENNA DUTIES.

The automobile industry felt these conditions in common with others, and was specially affected by the threat to the McKenna Duties, which undoubtedly resulted in the holding up of a considerable volume of business. We ourselves had to contend also with the severe reaction in rubber prices.

In the McKenna Duties we, as a company, are interested in two ways—first, in their effect upon the automobile manufacturers in this country. Our tyres are their principal accessory, and their prosperity means more business for us. There are four or five principal automobile manufacturing countries in the world. America, with her great size and enormous wealth, has a fully protected market within her own frontiers, and her registration of automobiles is 77 per cent. of the total automobiles of the world. Her manufacturers, assured of their enormous home market, and benefiting by the consequent spread of their overhead expenses, have obtained in the export market an almost corresponding percentage of business.

Since the war our automobile manufacturers, under the provisions of the McKenna Duties, have attained a measure of volume, but their protection has only been half-hearted, and has never been continuously assured to them. As recently happened, they have been kept in a state of doubt almost from month to month, whether their protection was to be maintained or taken from them. It is only partial even to-day, and was never certain, and they are competing in an industry where every producing country is highly protectionist.

If ever there was an industry which justified protection because of its industrial structure and methods of production, the automobile industry justifies it, but the industry does not know whether its position will be fundamentally altered by the withdrawal of the McKenna Duties a year hence. That uncertainty must retard enterprise, development and growth, and is, therefore, bad for this company and for you as shareholders. The second interest we have in the McKenna Duties is in so far as they are applied to tyres, and the disadvantage of uncertainty here is, to a great extent, superimposed upon and cumulative to the disadvantages which we suffer under because of the uncertainty of the automobile manufacturers. Tyres were not safeguarded in the original imposition of the McKenna Duties, and this company laid its plans and made its great recovery after the catastrophes following the year 1920 without protection. We were included under the McKenna Duties at a subsequent date, namely, in 1927, without our request and for revenue purposes.

EFFECTS OF THE DUTIES.

The protection of the McKenna duties as applied to tyres had two immediate effects. In 1926 well over 1,000,000 motor tyres were imported, and in 1929 only 120,000 were imported, but the capacity of this country for the manufacture of tyres had been enormously increased. Foreign manufacturers built works in this country. We increased our capacity—we had no option. The buyers of the 1,000,000 imported tyres had to be supplied with tyres of home manufacture. We cannot stand still and so great additional capacity has been provided in the country and the export trade has been well maintained, even allowing for the fact that tyres wear so much longer than they did a few years ago. Prices have fallen to an even greater extent than the cost of the raw materials used in manufacture, and in spite of the fact that quality has steadily improved. In the tyre industry, therefore, the imposition of the duties has substantially benefited the trade and employment in this country, and there has been no detriment to the consumer, but in fact the consumer's position has also improved for other reasons. To my mind, it is inconceivable in fairness and justice that Parliament in these circumstances should remove the import duties placed upon tyres. I am convinced that, given adequate protection and security in its continuance, the British automobile industry would make enormous strides in export, to the benefit not only of the industry, but to us as the tyre makers. Protection was imposed upon us, and it appears to me to be monstrous to think that that protection could now be withdrawn when by its imposition Parliament has forced us into expenditure which we would not otherwise have incurred. (Applause.)

SUCCESS OF "FORT DUNLOP" TYRE.

Last year proved to be an exceedingly difficult year for business, not only in this country, but throughout the world. At home we have had to face intense competition, but I am glad to assure you that, in spite of this competition, we have more than maintained our volume of business. One of the features of our trading last year has been the immediate and outstanding success of the "Fort Dunlop" tyre. This tyre was originally designed to give that reserve of strength which is necessary to withstand abuse either in road surface, high temperature, or high speed, but its success shows us very clearly that a large number of motorists will have the best, and in the end they achieve the lowest cost per mile.

Last year the plantations made a trading profit of £341,000, more than two and a half times the amount necessary to pay the preference dividend, and therefore leaving a substantial ordinary dividend to this company. In 1929 we cropped almost 19,500,000 lb. at the rate of 416 lb. per acre, at a f.o.b. cost Singapore of 5½d. All these figures are records. For 1930 we forecast a 10 per cent. increase in crop at a f.o.b. cost of less than 5d. per lb., but we do not think we have reached the lowest limit of costs. We feel that there is a big future for the plantation industry provided scientific production and economic management are attained. We are extending our plantations with the finest bud-grafted material possible, and we believe that we will be able to make money as planters even if prices for raw rubber remain at a low level.

We have pursued a policy of broadening the basis of our manufacture, so that we are now interested in many products, such as general rubber goods, shoes, garments, etc., the object being to help and stabilise the profit-earning position of the company. Our turnover in commodities unconnected with the automobile industry now represents 25 per cent. of the total.

Eighteen months ago we completely reorganised our export organisation, and our sales in overseas markets during last year, in spite of the most intense competition and general trade depression, showed marked improvement.

POSITION SUMMARISED.

To summarise the 1929 position : The quality of our products, as proved by very complete records, was never so high. Our plant throughout the organisation was never so up-to-date or in better condition. The efficiency and economy of our tyre and rubber factories was never greater, and the wages of our employees have improved with the increased efficiency, and have steadily risen since the reconstruction. Our relations with our employees have never been better, and are excellent. The demand for our products generally throughout the world has never been so high. We have sold more tyres in this country in 1929 than ever before, and the volume of our export business is rising.

So far as primary products are concerned, our plantations are producing at the lowest figure that they have ever attained, and with a record weight of rubber per acre and in total. Our cotton mills have produced a record quantity and at the lowest factory cost. These are facts which you ought to know, and which I give with a full sense of responsibility. Incidentally, they will enable you to judge the value of the rumours which were so assiduously circulated last year.

OUTLOOK FOR 1930.

With regard to the outlook for 1930, to date we are doing very well—I might say extremely well. While tyre prices show a downward tendency world conditions in the industry are steadier than they were in 1929, and our activities outside the automobile industry are increasing and becoming more profitable. We have made very substantial economies indeed in our productive cost, to some extent resulting from prudent capital expenditure in the past; to some extent due to increased efficiency and economies of a managerial and scientific character; to some extent due to increased output from our workers, the benefit of which we have shared with them in regularity of employment and increased earnings.

Our sales force was never keener than it is to-day—our quality was never higher.

Our relations with our competitors were never sounder or more friendly, and an influence making for stability is increasing throughout the industry. I feel that with this greater stability and our enormous goodwill (which, I may remind you, stands at nothing in our balance sheet) we stand to share in that prosperity which I ardently hope for, and frankly expect, in the motor tyre industry. I look also with hope to our business other than motor tyres.

At home, however, no thoughtful man can deny that in business circles, and in public circles of a sufficient financial status to be possible customers in the automobile market, there is a feeling of uncertainty.

On the one hand, increased taxation, and further increases are feared.

On the other hand, there is still grave uncertainty about the McKenna duties and other safeguards.

That this Government means well in its own estimation of what is good for the country I do not doubt, but some of the utterances of its less responsible members promise us still further increased taxation, which creates a reluctance to buy on the part of the very class of people who can afford to run a motor car.

"The old automobile will do," "a repaired type or a patched tyre will see it out," "the second automobile must be done without," "we cannot afford a motor car this year." Those are the thoughts of our possible customers.

THE BURDEN OF TAXATION.

There are those in high and responsible quarters who say that heavy income taxation does not withdraw funds from business and industry. You will realise that such a statement is fundamentally wrong, but the speech of the chairman of the Dunlop Rubber Company reaches far beyond the walls of this room. Many people will read it who do not realise how public companies are taxed.

As you all know, you receive your dividends less tax. That is what is called income "taxed at the source," but what actually takes place is this :—

We prepare our accounts, and after careful consideration make prudent provision for all contingencies, and the final net profit is appropriated as follows— :

A. To general reserve.
B. To pay dividends.
C. The balance carried forward.

The State is as directly interested in the continued prosperity of a business as are the shareholders and employees. One would think, therefore, that the State would encourage conservative finance and would only levy tax upon the profits arrived at after provision for all contingencies, and after setting aside sums necessary for the development of the concern.

The Inland Revenue Department does not accept the basis of ordinary prudent business consideration, but arrives at a profit figure of its own. It says, in effect, for example : "You may think such a rate of depreciation on plant and buildings right, but we fix a much lower rate. You may consider it prudent to create a fund to provide for future obsolescence, reserves for contingencies and for the general development of the business, but we shall not allow these."

SUBSIDIARIES—AN ARBITRARY VIEW.

In a company such as ours, owning holdings in a very large number of subsidiaries, we adopt the principle of taking into our accounts the dividends of our subsidiaries and making full provision for the losses of our subsidiaries. The law evidently recognises the soundness and importance of this principle because of the note which you will see on the lower right-hand corner of the profit and loss account. Yet the Inland Revenue, in arriving at the figure of profit upon which we are taxed, assesses us upon our profits from subsidiary companies, but makes no allowance for the losses on other subsidiary companies.

In these and other ways that Department arrives at a figure of hypothetical profits upon which we are taxed. To illustrate what this means in the aggregate, taking the years from 1924 to 1929, you as shareholders have paid income tax personally on the dividends that you have or will receive in respect of those years. But the Inland Revenue has, or will have, levied income tax on a total of approximately £3,700,000 over and above the dividends paid in respect of those years.

The whole of this £3,700,000 has been retained in the business to provide for contingencies and development, but the State has levied income tax upon the whole of this sum.

DRAIN ON INDUSTRY.

In these circumstances I do not see how any sane man can deny that money is being taken directly out of industry which, in the interest of the industrial prosperity of the country, ought to be left in the industry, or that you as income tax payers are in effect paying in taxation far more than 4s. 6d. in the pound, as you pay upon the dividend you receive as individuals, but you also pay upon sums which you have not received, and which ought to be left, and are left, in the business in order to strengthen and develop it.

No business can succeed in the long run unless it has funds with which to keep its productive capacity up to date, and with which to develop itself to its maximum capacity. If one examines the history of any of the old and successful businesses of to-day, it will be found that in the past the development of the concern has been largely financed out of profits. There are many who say with truth that we have far too many out-of-date plants in this country. In my opinion this is largely due to the fact that the State has taken from industry funds which would otherwise have been available for the replacement of plant and the general development of the business. (Hear, hear.) In consequence of these heavy inroads in the available profits of industry, further capital has to be raised to finance development, obsolescence, etc., and that further capital falls as an additional burden upon production. As taxation has risen this burden has become more and more serious, and if this continues the poor goose that lays the golden egg will be killed.

Now this taxation situation and political uncertainty are undoubtedly factors which, in looking to the future, we cannot disregard, but it is not only at home that we trade; a large proportion of our business is export business, and when one looks at the unrest and disturbance, financial, political and economic, in every quarter of the globe—Australia, India, China, Egypt, South America, Russia, Poland—I doubt whether in the history of organised business there has ever been a time when greater uncertainty existed.

Notwithstanding, therefore, the increased strength disclosed by our balance sheet, the ever-growing efficiency and economy in our business, and our hopes for an improved competitive situation, your board, in common with other prudently-managed industrial concerns to-day is adhering to a very conservative policy.

Your accounts have never been compiled on a more conservative basis than the ones now presented to you. We have never more carefully scrutinised the value of your assets than in presenting these accounts to you. We have never more rigorously conserved your resources. We have been prudent, as we felt that the vast majority of our shareholders would wish us to be.

CONFIDENCE IN THE FUTURE.

We view the future with confidence, and in the knowledge of our conserved strength.

What we require is the renewal of trade, so long overdue. We are fully equipped to cope with it. Pessimism is an unfortunate epidemic and highly infectious. It leads people to gloomy exaggerations and to despairing and disparaging statements which have no foundation in fact, and by which only the "bears" on the Stock Exchange benefit.

The people of this country must not allow this spirit to dominate them.

So far as we are concerned, we shall go on in faith and courage, developing the great organisation which you have entrusted to our hands.

The report and accounts were unanimously adopted.

THE BRITISH BANK OF SOUTH AMERICA, LIMITED.

OUTLOOK BRIGHTENING.

The sixty-seventh ordinary general meeting of The British Bank of South America, Ltd., was held on the 15th instant, at the head office, 117 Old Broad Street, London, E.C.

Mr R. J. Hose (the chairman) said that 1929 had witnessed a state of commercial depression and uncertainty almost world-wide, and with regard to the economic position of Great Britain, the trend of affairs during the past few years had not afforded many grounds for optimism, for not only was the country's proportion of world trade apparently declining, but an unduly heavy surplus of visible imports continued to be recorded. Whatever degree of satisfaction might arise from official recognition of the necessity to study the country's export markets, it was disappointing that the financial policy pursued at home was often inconsistent with such steps.

The necessity for rationalisation brought about by the drastic post-war changes in world economic conditions was surely not confined to industry alone, but extended equally to Government policy. Just as it was vital for business interests to adjust their ideas and methods to meet rapidly and constantly changing world conditions, so it was clearly of at least equal importance for any Government to keep unceasing watch upon the effect—especially on export trade—of their fiscal policy, and to adjust that whenever and wherever it might be of benefit to industry. Flexibility, and not uncompromising rigidity, should be the keynote of the taxation system.

Brazil was subject to alternating periods of prosperity and depression, and unfortunately the past year had witnessed one of the most severe crises in her history, principally owing to the difficulties of the coffee-producing industry.

The stability of Brazilian exchange was naturally intimately connected with the coffee market. They might hope for the ful adoption of the terms of the Monetary Reform Decree, which was designed to modernise the currency system on a gold basis in accordance with accepted principles of stabilisation, including the establishment of a central banking organisation. In that connection, it was a matter for congratulation that President Washington Luiz, in his message read at the opening of the National Congress on the 3rd inst., had expressed the hope that a Central Bank of Issue and Re-discount might be created shortly. In the report submitted to the President of Brazil by the Montagu Mission in 1924, the view had been expressed that, with wise and prudent handling, the Bank of Brazil might be made a powerful and efficient central bank, to which the control of the currency might be safely entrusted. The report emphasised, however, the absolute necessity of the central bank being of an independent character. If the success which had attended the establishment of a similar institution in Chile could be any criterion, Brazil would derive many benefits from the step. As to Brazil, there appeared to be a brighter outlook by reason of recent outstanding developments.

A BUDGET SURPLUS.

The improvement in the position of the national finances of Brazil, reported in 1927, continued in 1928, and a surplus had also been announced for 1929, as shown in the cable just received from the bank's Rio de Janeiro branch: "The President of the Republic stated in his message to Congress on 3rd inst. that national revenue in 1929 totalled 2,399,600 contos, this being 188,829 contos in excess of the estimate, while expenditure was 2,017,693 contos, or 99,678 contos below the estimate. The net surplus, after providing 206,923 contos for extra budgetary expenditure, is 174,983 contos. The President also dealt with the question of the revision of the present taxation system under which import duties are collected by the Federal Government and export duties by the individual States, thus creating conflicting interests, as well as revision of the Customs House tariffs which at present hamper internal trade and hinder commercial treaties with friendly countries. The message dealt with the further question of modifications to the existing laws which permit States and municipalities to contract loans without permission of the Federal Government. The President expressed the hope that, provided the necessary capital arrangements can be made, a central bank of issue and rediscount will be created before the end of the year, the law regulating the fiscalisation of banks being perhaps revised in the interval."

In all the circumstances, a reduction in gross profits was inevitable, but, in view of the very difficult times through which they had passed, the result might be considered very satisfactory, especially as there had been a correspondingly greater reduction in general charges. The net profit for the year was virtually unaltered at £99,977, and enabled the board to recommend the payment of a final dividend for the 12 months of 10s. per share, thus maintaining the total distribution at 10 per cent.

The report and accounts were unanimously adopted.

ALLIANCE ASSURANCE COMPANY, LIMITED.

CONTINUED PROGRESS.

NET NEW LIFE BUSINESS EXCEEDS £3,000,000.

The annual general court of the Alliance Assurance Company, Ltd., was held, on the 14th instant, at the head office, Bartholomew Lane, London, E.C.

Mr C. E. Barnett (the chairman) said that the new life business completed during the year, after deduction of the sums reassured, amounted to £3,027,438, this being the first occasion on which the net new life business transacted in any one year had exceeded 3 million sterling. The figures included substantial amounts under policies issued under two special schemes. One of these related to policies issued to borrowers from building societies in order to cover outstanding balances of mortgages upon houses in the event of death. The other related to deferred assurances for children. It was hoped that the children thus assured might, later on, become valuable connections of the company. The claims by death during the year were somewhat larger than usual, but in this the directors believed that the company's experience was not exceptional.

The net premium income on the active alliance account was £1,379,387, and the alliance life fund during the year increased by nearly £700,000, and amounted at the close of the year to £14,910,735. The total life and annuity funds, including the closed funds, amounted to £21,793,031.

FIRE ACCOUNT.

In the fire account the premium income was £2,059,809, being £17,030 in excess of that of the previous year. This was a very satisfactory feature because, owing to the continually increasing competition, there was a tendency for the rates to be reduced, and it was therefore very difficult to maintain the premium income. The claims were substantially higher, and the profits therefore considerably less than in 1928. There could be no doubt that the protracted drought during the first nine months of the year contributed to a great extent to the exceptionally heavy fire losses during that period. It should be remembered, however, that the loss ratio in 1928, as in 1927, was exceptionally low, and the year now under review might really be regarded as an average year for the company. In the circumstances, the fact that the account showed a profit of over 16 per cent. on the premium income must be regarded as distinctly satisfactory.

MARINE ACCOUNT.

As to the marine account, he was afraid that they could not regard the position of the marine insurance market in this country as at all satisfactory. It was believed that the rates of premium on hull business had been brought to a basis on which there was a reasonable prospect of a small profit being earned, but as against this there was the fact that, owing to the great shortage of freights, an unusually large number of vessels had been laid up, and this must have an unfavourable effect on the result.

ACCIDENT DEPARTMENT.

In the accident department the company's business continued to grow, notwithstanding that there had been a slight setback in the workmen's compensation premiums owing to the depression in trade. The account showed a satisfactory profit, viz., 7.3 per cent. of the premium income, after allowing for an increase in the amount reserved for unexpired risk. In this department the miscellaneous account included all sorts of accident and contingency risks, and motor insurance provided a large proportion of the premium income. In connection with this, the increasing number of motorists and frequency of collisions and other accidents in which motor vehicles, and, incidentally, their occupants, were involved, were causing the directors some concern. The enormous vans, lorries and motor 'buses that travelled at great pace—often on unsuitable roads—did not tend to allay that feeling any more than they added to the security of other users of the roads. A disturbing feature to the companies was the tendency of juries to award what sometimes appeared to be unduly generous damages to injured persons.

The Road Traffic Bill now before Parliament was being very carefully watched by the insurance interests concerned. The directors were glad to see that stringent penalties were proposed for the reckless driving of motor-cars. He hoped this proposal might have the effect of improving the standard of driving and thus reducing the number of accidents.

In the profit and loss account they had carried £50,000 to general reserve and £50,000 to pension reserve, in addition to £16,500 to the widows' and orphans' fund, and the balance carried forward to the current year was £1,231,963.

The report was unanimously adopted, and a dividend of 18s. per share, less income tax (of which 8s. per share was paid as an interim dividend in January last), was declared.

COMMERCIAL UNION ASSURANCE COMPANY, LIMITED.

CONTINUED PROGRESS OF THE BUSINESS.

The sixty-eighth annual general meeting of the Commercial Union Assurance Company, Ltd., was held, on the 13th instant., at 24, Cornhill, London, Sir Percy W. Newson, Bart. (the chairman), presiding.

The Chairman, in the course of his speech, said :—The premium income of the fire department amounted to £7,640,967, an increase of £142,430 upon that of the previous year. It will be remembered that in 1927 and 1928 there were considerable reductions in the income occasioned by the revision of our business in the United States of America. This revision is now completed, and the revenue from that country showed an increase last year. Notwithstanding the adverse economic and political conditions in various countries our general overseas business has also increased.

Last year your chairman referred to the difficulty of maintaining the home income owing to the fall in rates of premium. It is gratifying, therefore, to be able to state that, in spite of this fall and the depressed condition of trade in many districts where the company has large interests, the volume of business derived from this country has been maintained. The loss experienced has been generally good, but the home losses were unusually heavy.

After providing the additional reserve for unexpired liability due to the increased income, there is an underwriting profit of £306,822, of which £275,000 has been transferred to profit and loss account, leaving the fire insurance fund at £7,831,577.

MARINE BUSINESS.

The net premiums amounted to £684,887, an increase of £47,961 compared with 1928; £200,000 was transferred to profit and loss account, leaving the marine insurance fund at £1,155,412 at the end of the year, being 168.7 per cent. of the premium income.

ACCIDENT ACCOUNT.

The premiums of this department amounted to £8,785,582, an increase of £26,236 on the previous year. The continuance of the policy of revising our accident business in the United States has resulted in a diminished income from that country, but elsewhere there has been satisfactory development. The use of motor traction at home and abroad increases rapidly, and our operations being world-wide in extent, it is natural that our income from motor-car insurance should have grown to very considerable dimensions. The increase in the number and amount of the claims has, however, also been considerable.

After adjusting the reserves, the accident business for the year resulted in an underwriting profit of £242,922, of which £200,000 was transferred to profit and loss account, leaving the accident insurance fund at £5,951,028.

Summarising the three underwriting departments with which I have just dealt in detail—fire, marine, accident—the total premiums amounted to £17,111,436, the losses £9,348,292, and commission and expenses £7,094,015. After adjusting the reserves set aside for unexpired risks, the underwriting profit amounted to £752,496, as against £951,415 in 1928, while the trading surplus was £669,129, against £701,654.

LIFE DEPARTMENT.

In the life department we issued 7,440 policies assuring over £4,290,000 gross or, after deducting reassurances, over £3,975,000 net. These figures are slightly below those of 1928, but they exceed those for 1927 which, being a bonus year, showed a substantial increase. The declaration of exceptional bonuses in May, 1928, gave a special impetus to new business in that year which could not in the nature of things recur. The premium income increased by over £35,000 and the life fund by over £1,100,000, while the expenses and commission, both absolutely and relatively to the premium income, showed a reduction.

Interest, dividends and rents, less income tax, amount to £1,117,225, being an increase of £11,000 on the corresponding figure last year. The directors recommend a final dividend of 10s. 3d. per share, less income tax, which will make a total distribution for the year of £1 0s. 6d. per share, less income tax. The statutory balance sheet discloses a very sound financial position. The assets, including the closed life funds, amount to £44,707,343, as compared with £61,447,749 shown in the consolidated balance sheet.

The report and accounts were unanimously adopted.

YORKSHIRE INSURANCE COMPANY, LIMITED.

SUCCESSFUL RESULTS IN A DIFFICULT YEAR.

The annual general meeting of the Yorkshire Insurance Company, Ltd., was held, on the 13th instant, in York, Sir James Hamilton (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The year just closed has been a somewhat hard one for most business organisations throughout the world, and insurance has not been exempt, yet we have increased our premium income in the fire, accident and marine departments by £175,000; we have raised the funds of these departments by £83,000, and have added £10,000 to the general reserve out of trading, thus augmenting our future interest earnings. The life fund is also increased by £283,000. It is true the margin of profit on our general account, following the common trend, is lower than for the previous year; nevertheless, it contributed £61,900 to the profit and loss account. I think, therefore, there is no occasion for us to be other than thankful that our results are so good.

LIFE AND FIRE ACCOUNTS.

The new life sums assured, after deduction of reassurances, amounted to £1,570,160, being less by £160,000 than the net sums assured in 1928, the figures for which constituted a record. The decrease is largely due to diminution in the amount of single premium assurances effected, a class of business never sought by us. The number of policies issued was actually greater than in 1928. The claims by death, £182,000, are higher by £32,000, but are well within the mortality expectation.

The fire account shows a small increase of premium at £1,068,000, and in prevailing conditions we have good reason to be satisfied that we have not only maintained our income, but are able to report a slight improvement. The loss ratio is 52.9 per cent., as compared with 47.5 per cent. in the previous year, and reflects the experience of many of the companies, the year having been noticeable for an abnormal number of fires at home and in certain sections of the foreign field. Taking everything into consideration, it is satisfactory that we have been enabled to transfer £107,700 to the profit and loss, and also strengthen the reserve.

ACCIDENT AND GENERAL ACCOUNT.

In the accident and general account, the premiums again show a substantial advance—£138,000—and now stand at £1,382,000. This is mainly attributable to motor insurance, which entails increasingly anxious attention in view of the ever-growing number of vehicles on the road, and, unfortunately, an increased number of accidents. It remains to be seen whether the removal of the speed limit and the introduction of more stringent regulations as to dangerous driving will improve matters.

The loss ratio in this general account corresponds very closely with that of the previous year, and after increasing the reserves for unexpired liability and balance carried forward from £754,000 to £810,000, £61,900 is carried to the profit and loss account.

In the marine account the premiums have increased from £484,000 to £517,000—due, in great measure, to increased rates on certain sections of the business—while the losses are less. There is still much to be done in the direction of improving other sections of the marine business, but it can at least be said that something has been achieved. However, the position does not justify any departure from our conservative policy, and the transfer to profit and loss of £20,000 represents the interest credited to the account, the profit on the trading being allowed to remain in the fund, the balance carried forward being increased to £581,000. The 1927 account, now more or less closed, is satisfactory.

PROFIT AND LOSS AND DIVIDEND.

The departmental sums brought into the profit and loss account total £204,000, while interest is £44,500, £9,000 in excess of last year. After payment of the dividend and other charges, including £41,000 Colonial and Foreign State taxes, and providing £57,500 for home income tax, £10,000 has been added to the superannuation fund, £10,000 to general reserve and £140,000 is carried forward.

The general reserve fund has been increased by £214,000, and now stands at £1,068,000. To bring this fund above the million mark has long been one of our aims, and it is satisfactory that this has now been achieved. The gross rate of interest earned on the funds is £5 4s. 8d. per cent., and the net rate is £4 9s. 5d. per cent.

The directors recommend the dividend be 9s. 6d. on the fully-paid shares and 4s. 9d. on the partly-paid shares, which, on the rearranged capital, is the same as for the previous year. The dividend is paid free of tax, and therefore the increase in the rate of income tax from 4s. to 4s. 6d. in the £ raises the corresponding gross dividend.

The report and accounts were unanimously adopted.

THE BRITISH SHAREHOLDERS TRUST, LIMITED.

CAPITAL AND RESERVES INTACT.
PROTECTION OF LABOUR.

The eighth ordinary general meeting of The British Shareholders Trust, Ltd., was held, on the 12th instant, at the Cannon Street Hotel, London, E.C.

Mr Follett Holt (the chairman of the company) presided.

The Secretary (Mr F. Charlton Fry, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman moved "That the report and accounts to March 31, 1930, submitted to the meeting be and they are hereby approved and adopted."

Mr Edgar W. Crammond (the managing director) seconded the resolution.

The Chairman, continuing, said:—You will observe from the accounts before you that, after defraying the expenses of our issuing house and the management of our investments, the net profit realised for the year amounted to £100,476, a figure which appears to us to be satisfactory, particularly in view of the difficulties in New York and London, which seriously affected all financial business.

You will see from the balance sheet that our investments at March 31st stood at a book value of £876,284, and these showed a depreciation of 3 per cent. only, from which you will have gathered, as was the case, that we were in no way involved in any of the disastrous proceedings or investments which caused so much trouble last year. From the profits of the year to cover this comparatively small depreciation we have transferred the sum of £30,000 to a depreciation reserve, and also £30,000 to strengthen our general reserve account, and £2,500 to our staff pension fund. From the balance remaining we propose to you to approve a final dividend of 4 per cent., making 7 per cent., less tax, for the year on the company's capital; the balance carried forward, at £30,441, being practically the same as last year.

After providing for the dividend the sum of our capital, capital and general reserve, and carry forward to-day amounts to £900,000, which is intact and represented by cash, British Government securities, and other well-selected and spread investments, conservatively valued. We are, therefore, well on the road to reach the first goal we have aimed at—that is, to have in the treasury of the trust £1,000,000 sterling in cash and securities with which to support and develop the shareholders' position, and as ancillary evidence of our ability to afford financial assistance to our national industries and undertakings.

POLICY OF THE BOARD.

There may be a few shareholders who would prefer a more showy policy in the shape of larger dividends, but these I would ask to bear in mind that the trust has only been in existence for some six years, and that during this period our object has been to lay soundly the foundations of a reliable British issuing house, which will have and hold the confidence of the market. This, I venture to think, has already happened, and with a little more patience the reward will certainly appear in revenue to the shareholders as it has already appeared in capital increment.

I wonder sometimes whether the great financial institutions of the country have always consulted amongst themselves on the extent of the assistance that should be given to industrial firms concerned in cut-throat competition in the same home or foreign field. To-day everyone is thinking on the lines of pooling resources in brains, in research, and in buying and selling. If these essentials are insisted upon as part of the price of further assistance, I do not think that as much of the nation's capital would be lost in the future as has happened in the past. Loss of capital must mean the loss of employment of labour, and the protection of labour, whether on the farm or in the factory, is surely the outstanding necessity of our time and the essential to our very existence as a great nation. I mention this subject to preface the information that we have subscribed to a share in the Bankers Industrial Development Company, which has been formed to afford help where it may be most needed to develop and preserve our great industries.

I will not close my remarks without again expressing on behalf of my colleagues our acknowledgment of the good services rendered to the trust by the managing director, Mr Edgar Crammond, and the officers and staff at 3 Lombard Street. (Hear, hear.)

The resolution was carried unanimously, and the formal business having been transacted, a cordial vote of thanks to the chairman, directors and staff concluded the proceedings.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, *6 Bouverie Street, Fleet Street, London, E.C. 4.*

BRITISH MATCH CORPORATION, LIMITED.

FURTHER PROGRESS

The third ordinary general meeting of the shareholders of the British Match Corporation, Ltd., was held on the 14th instant, at Winchester House, Old Broad Street, London, E.C., Sir George Paton (chairman and managing director) presiding.

The secretary (Mr H. E. Hobson, A.C.A.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said:—The net revenue this year is £493,930 12s., as against £420,673 9s. 0d., which, with the carry forward, £51,208 10s. 2d., against £35,854 13s. 2d., makes £545,139 2s. 2d., against £456,528 3s. From this have to be deducted interim dividends £135,297 0s. 8d., leaving available for distribution by this meeting £409,842 1s. 6d., against £332,782 15s. 4d. Your directors recommend that £3,301 12s. 1d. be written off office fittings and furniture, leaving this item at £1; that £80,000 be written off goodwill, rights, etc.; the payment of the preference dividend for the half-year to April 30, 1930, at 5½ per cent., less income tax, £11,574 1s. 3d., and dividend of 4 per cent., free of income tax, on the ordinary shares, absorbing £247,500, a total of £342,375 13s. 4d., leaving to be carried forward to next account £67,466 8s. 2d., against £51,208 10s. 2d. brought in from last year.

BRYANT AND MAY'S RESULTS.

I will try to give you some idea of the magnitude of your business by summarising the interests you hold in subsidiary companies.

The principal one, as you know, is Bryant and May, and that company's accounts for the year ended March 21st were submitted to the annual meeting on April 29th. The year's working again proved very satisfactory, the net profit being £528,038, against £531,642 in 1929, which, as you may remember, was a record year. The directors of that company paid dividends the same as in the previous year, put £50,000 to the reserve fund, bringing it up to £400,000, and made a grant of £10,000 to the employees' benefit fund. They wrote off plant, properties, machinery account £100,000, bringing this account down to £974,092, which, at one time, was over £1,870,000. I need hardly tell you that the plants could not be replaced at anything like the figure at which they now stand in the books.

Trade during the year has been, although difficult, very satisfactory, and we have not only held our own against all competitors, but increased the turnover considerably, largely due to the maintenance of high quality, good salesmanship and good service. The investments held by Bryant and May, of which over £50,000 is represented by Government securities, continue to be very remunerative and provide a large proportion of the profit shown in the accounts.

J. John Masters and Company's business continues to give a satisfactory return on the money invested there.

TARIFF WALLS.

It has been rightly said, "Export or we starve." How true, but how can we increase or even maintain our export trade when every nation in the world, and even our own Dominions, have erected tariff barriers in order that their workpeople may be kept in full employment. Capital may climb these tariff walls, but Labour cannot follow, so the numbers of the unemployed at home continue to increase alarmingly. It must appear to every right-thinking man, who is not first a politician, that if this unemployment problem is to be solved, this question of tariffs must be considered apart from politics ere it is too late and we sink into a second-rate, if not a third-rate, business nation.

Bryant and May (Brazil) comes next in importance of your subsidiary companies. I said last year that this would prove a good investment for your company, and, although conditions in Brazil have been, to say the least of it, deplorably bad, we have had a satisfactory year, with every prospect of good, steady business in the future. Even when trade or employment is bad people must have matches; thus we are not greatly affected by every turn of the tide of trade.

In Australia we are very busy. The Government have just increased the tariff on many articles, matches included, so that the imported goods are practically shut out, and our factories there will be taxed to their fullest capacity to meet the demand.

In New Zealand the trade is a steady and regular one, but with considerable competition from imported goods, particularly from Belgium.

In Canada the factories belonging to the Eddy Match Company, in which we hold a controlling interest, do over 90 per cent. of the trade, and this company has given a very good account of itself. Here again we have the protection of a tariff. I propose to visit the factories in Canada in a few weeks' time.

The report and accounts were unanimously adopted.

THE MINING TRUST, LIMITED.

THE MOUNT ISA DEBENTURE ISSUE.

An extraordinary general meeting of shareholders in the Mining Trust, Ltd., was held, on the 15th instant, at the Cannon Street Hotel, London, E.C., for the purpose of receiving a report on the position of the company's interests to date.

Mr Leslie Urquhart (chairman of the company) presided.

After dealing with the position of the New Guinea Goldfields, North Charterland, the French Interests and the Lawn Hill Concession, the chairman went on to refer to Mount Isa, in regard to which he said:—The large ore reserves already proven and the enormous possibilities of future development put Mount Isa into the class of a manufacturing proposition rather than that of a short-lived mining problem, and the variation in the grades of the different ore bodies will enable us to suit our production to the world's demand for metals.

It is because of the huge size of its metal deposits that Mount Isa is destined to be not only the world's greatest individual producer of lead and later of zinc also, but the cheapest producer of lead ever known.

THE PROJECTED ISSUE.

To bring Mount Isa to the production stage, it is estimated that a further £500,000 will be required, and the Mount Isa Company is now making an issue of debenture stock for that purpose and in order to repay all indebtedness and clear the balance sheet for dividend purposes. Let me say that this issue is strictly in accordance with programme, for it was decided on more than 18 months ago, but the issue itself was deferred to the latest possible date, until we were on the eve of production, in order that the figures of cost, profits, &c., put forward in support of the issue should have been checked and re-checked, leaving no vestige of doubt as to their accuracy. That is the position to-day.

The issue which the Mount Isa Mines is now making, and details of which will be sent you over the week-end, consists of £1,500,000 8 per cent. convertible and redeemable debenture stock at par, carrying the right for three years to convert into Mount Isa shares at the rate of one £1 fully-paid share for every £1 10s. of debenture stock—perhaps more popularly expressed as convertible at 30s. per share.

QUEENSLAND GOVERNMENT SUPPORT.

It gives me great pleasure to state that to the extent to which this issue may not be subscribed, the Queensland Government has agreed to guarantee finance to the company up to a total of £500,000. I am confident that we shall not have cause to call for such assistance, but by this action the Queensland Government has once again evidenced its confidence in Mount Isa, and I am sure shareholders will wish me to express our united thanks to the Queensland Government and to the Agent-General in London, Mr Macartney.

The issue will constitute a first charge on the whole business, and will enable the Mount Isa Company to repay all loans and liabilities of every kind, complete the plant and put the mine on a dividend-earning basis. Even at present low metal prices, the estimated profit from the first mill unit alone will cover debenture interest nearly six times, and if all the debenture stock is converted into shares and the outstanding options exercised, the net profit from the first mill unit alone, based even on present abnormally low metal prices, will show a return of over 27 per cent. on the total issued share capital.

That is, of course, looking three years ahead, by which time metal prices must recover and, together with plant additions at Mount Isa, permit of a much higher earning on the share capital; but it is sufficient to illustrate that the option to convert debentures into shares on a basis of 30s. per share may be regarded as of great value.

CONSIDERATION FOR SHAREHOLDERS.

Criticism has been levelled that the terms of the issue are too generous to subscribers and impose an unnecessary obligation on the Mount Isa Company. To the latter I reply that Mount Isa is of such magnitude and its profit-earning capabilities so great that such an obligation is negligible. That the terms of the issue are generous we admit, but any criticism under this head has been met by the arrangement now made, namely that, preferential consideration will be given to applications, firstly from Mount Isa shareholders, and secondly from shareholders in the Mining Trust.

Based on our shareholding in Mount Isa, the Mining Trust is entitled to an allotment of £1,000,000 of stock. We are therefore applying firm for that amount, leaving £500,000 for allotment to other applicants in the preferential order mentioned.

I think I have said enough to indicate how attractive the debenture stock is, and I have no doubt that shareholders will take full advantage of the preference in allotment which we have obtained for you.

PROVINCE OF BUENOS AYRES WATERWORKS COMPANY, LIMITED.

CONTINUED IMPROVEMENT IN SERVICE.
MR P. ASHLEY COOPER ON THE PROSPECTS.

The twenty-first ordinary general meeting of the Province of Buenos Ayres Waterworks Company, Ltd., was held, on the 9th instant, at Winchester House, Old Broad Street, London, E.C.

Mr. P. Ashley Cooper (the chairman and managing director) said: This is the twenty-first annual general meeting, and shareholders will, I think, agree that on attaining its majority the company shows every sign of having grown up strong and healthy, in spite of some years of illness in its youth. And there is no reason to believe that it will not continue its course in health and strength. Shortly after our meeting last year I paid another visit to Buenos Aires to study our future development. During my visit I had the honour of being received by the President, who showed the greatest interest in our affairs. Naturally, a service such as ours appeals to Dr. Irigoyen, who has the welfare of his people so close at heart. So much so that he invited me to submit to him some suggestions for the improvement and development of sanitary services throughout the country.

NEW STATION AT MONTE CHINGOLO.

During my visit we inaugurated, in the presence of the public authorities, the large station at Monte Chingolo about which I told you last year. This station is now in use and is proving most valuable in helping us to deal with the large extensions—the biggest number of new consumers in any year in the company's life—in our districts. I am glad to say our service continues to improve and is being appreciated more and more by the people and by the public authorities.

In the province a new Cabinet took office on May 1st. In Senor Crovetto and his Ministers we have men of great business experience, and we can, I believe, look forward with confidence to constructive co-operation from them. Before I sit down I should like to record our great appreciation of the services of our local committee and our management. You know them all well by now, and their splendid work speaks for itself.

The report and accounts were unanimously adopted and a final dividend of 4 per cent., making 6½ per cent. for the year, was declared.

WHITEAWAY, LAIDLAW AND COMPANY, LIMITED.

A DIFFICULT YEAR.

The twenty-second annual general meeting of Whiteaway, Laidlaw and Company, Ltd., was held, on the 9th instant, at 5, Cripplegate Buildings, London. Mr Mence Wilkinson (chairman and managing director) presided.

The Chairman, in moving the adoption of the report and accounts, said:—The trading profit, £133,927, compares with £145,933. This is after debiting managing director's remuneration, which a year ago was charged under the heading of directors' fees, so the actual shrinkage in profit is £9,000 only. The board propose that the balance be appropriated as follows:—To pay a final dividend of 3 per cent., making 8 per cent. per annum, free of tax, and carry forward the balance of £26,401. Your directors cannot but feel disappointed with the results of the year's trading. You will recognise that we have had to contend with exceptional difficulties and circumstances quite beyond our control. The political conditions in India are mainly responsible for the fall in profits.

In Burma the unsatisfactory condition of the rice trade has continued throughout the year, and the purchasing power of our customers, who are mostly natives of the country, has been restricted. Our branches in Ceylon have done well, in spite of the low price now prevailing for rubber, one of the principal exports of that country. Trading conditions have been difficult in the Federated Malay States and Straits Settlements, also due to the slump in rubber and tin, but, with one exception, all our branches have made a fair amount of profit. Siam has proved a disappointment, but a change in management at our branch in Bangkok will, we hope, result in an improvement during the current year. Our branches in Java and Sumatra have improved on last year's results.

As our branch in Uganda was proving an unprofitable unit it has been closed, and the stock and premises have been disposed of. The branches in Kenya Colony have contributed slightly more to the general result than they did a year ago. As regards China, sales have been well maintained in spite of the unsettled condition of the country, but owing to a very severe fall in the price of silver and a consequent depreciation in the exchange value of the dollar profits have not been up to the previous year's level. Your directors, however, feel that the managers at Shanghai, Hong Kong, and Tientsin have come through a difficult period very creditably.

Mr J. H. Lewis seconded the motion, which was agreed to.

CLUNY RUBBER ESTATES, LIMITED.

RESULTS CONSIDERED SATISFACTORY.

MR CHARLES McARTHUR ON THE OUTLOOK.

The twentieth ordinary general meeting of the Cluny Rubber Estates, Ltd., was held, on the 14th instant, in the Council Room of the Rubber Growers' Association (Incorporated), 2, 3 and 4, Idol Lane, London, E.C., Mr Charles McArthur (chairman of the company) presiding.

Mr John McInnes, representing the agents and secretaries (Messrs Harrisons and Crosfield, Ltd.), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, with your permission I propose to take as read the directors' report and accounts as published.

BALANCE SHEET ITEMS.

Supplementing the printed report, I comment as follows: On the liabilities side of the balance sheet, general reserve has been increased by the amount of £1,500 which you authorised to be transferred from profits a year ago. Taxation reserve, with the addition of the tax to be deducted from the dividend we recommend for 1929, will more than cover our liability payable in 1931. A new item of £2,513 6s. 4d. for staff provident fund reserve appears for the first time in compliance with the provisions of the Companies Act, and you will note that it is squared by a similar entry on the assets side of the balance sheet. Although I have referred to this every year since its inception, I will repeat that it is a genuine asset belonging to the company, and forms part of the Lanadron, Ledbury and Cluny provident fund reserve, which has been set aside and separately invested to ensure, as far as is reasonably possible, that Cluny's annual contribution to the provident fund shall be forthcoming whether the annual trading results of the company be good or bad. It is, therefore, in the nature of a trust guarantee fund, the principal of which belongs to the company, but is not available for its ordinary business.

On the assets side of the balance sheet, rubber in stock and in transit appears at the moderate figure of £3,908 4s. 5d. The bulk of this has since been realised by sale, and the small unsold balance of 22,229 lb. has been valued at a safe figure. It will be noted that the unspent balance of capital and reserves, plus the balance in profit and loss account at December 31, 1929, are all held in cash or easily realisable assets.

PROFIT FOR THE YEAR.

Turning to the profit and loss account, as the combined incidence of a reduced market price on greater output, we have realised a profit of £5,924 0s. 9d., or about £271 short of our profit for 1928, a result which I hope you will regard as satisfactory considering market conditions throughout the year.

I am sure you will wish, as usual, to express your appreciation of the continuous loyal and efficient services of the estate manager and staff, our Eastern agents and the visiting agents, without which services such a result would have been impossible.

In the published report your directors have made their recommendation for disposal of profits. With regard to the proposed transfer of £1,500 to general reserve, it will be noted that during 1929 we added only 20 acres to the planted area, which you will see from the acreage statement now stands at 1,210 acres. For a long time, owing to inadequate funds, our planted area stood at 977 acres. From 1926 to 1929 we have, as funds and labour conditions permitted, added to this figure a total of 233 acres in pursuance of the policy of insurance against the possibility of failing crops in the old areas, and of making the estate a more economic unit of production. We have authorised a further extension of 118 acres to be opened up during the current year, and, if you sanction the transfer to reserve now proposed of £1,500, we shall have adequate unspent capital to develop and bring to the bearing stage all immature areas. The total planted area will then be 1,328 acres.

The proposed carry-forward in the profit and loss account of £7,193 3s. constitutes a fund entirely available to finance the ordinary requirements of the company's business, and may be considered sufficient for the purpose.

CURRENT YEAR'S PROSPECTS.

On the subject of prospects for the current year, it is impossible to be optimistic. Like the great majority of rubber producers, we have ceased tapping throughout the whole of this month, and this will naturally increase the cost per pound of our production. What the effect of cessation of tapping is likely to be on world stocks can be estimated, but in regard to market price I fear that the advantage of a reduction in stocks will be offset by the world-wide depression of market conditions for all commodities, and that no real prosperity can be expected until world trade shows signs of revival.

In the case of any company it is difficult to foresee anything but a lean year in 1930. It is at least satisfactory to be able to state that we have delivered, or have still to deliver, about 60,000 lb. out of current year's crops at a net sale price of 1s. 0½d. per pound.

I now move: "That the report and accounts for the year to December 31, 1929, be received and adopted," and shall ask Mr Macfadyen to second that, and, after he has done so, I shall endeavour to answer any questions that shareholders may desire to ask.

Mr Eric Macfadyen seconded the resolution, and it was carried unanimously in the absence of question or comment, and the dividend recommendation was also unanimously approved.

The retiring director, Mr C. McArthur, and the auditors, Messrs Wyatt Williams and Company, having been re-elected, a vote of thanks to the agents, manager and staff on the estates terminated the proceedings.

WIGGINS, TEAPE AND COMPANY (1919), LIMITED.

PROGRESS IN 1929.

OUTPUT AND SALES INCREASED.

The eleventh annual general meeting of Wiggins, Teape and Company (1919), Ltd., was held, on the 13th instant, at Winchester House, Old Broad Street, London, E.C., Mr Leslie W. Farrow (deputy-chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and Gentlemen, I am glad to be able to report progress both as regards output and sales.

You will be interested to know that the mills of this company had an output for 1929 of 4 per cent. more than that of 1928, the output for which year, you will remember, showed a considerable increase on the output for 1927. The Stoneywood Mills of Alex. Pirie and Sons, Ltd., had an increased output of 23 per cent. compared with that for 1928. It is a source of satisfaction to your board to be in a position again to inform you that with the exception of the necessary shuts for alterations to the plant and machinery, we have been able to keep all our mills running full time.

You will remember the late chairman referring last year to increased sales, both at home and abroad, during 1928 compared with 1927. I am glad to be able to report that in 1929 both the home and export sales showed a further increase of 8 per cent. compared with the sales for 1928.

ACQUISITIONS IN 1930.

The increase of capital early this year was mainly for the purpose of providing the necessary additional shares to enable your company to acquire the whole of the ordinary share capitals of Portals (John Allen and Sons), Ltd., W. Howard and Sons, Ltd., and the Roughway Paper Mills, Ltd., all of these companies being engaged in the manufacture of similar papers to those made by your company. We were subsequently able to acquire, either by exchange of shares or for cash, the whole of the share capital of the Basted Paper Mills Company, Ltd., whose mills are also engaged in the production of high-grade papers. Your board consider that in these acquisitions a most important step has been taken in the rationalisation of the high-grade paper industry in this country. A position has now been reached in which your company controls a very large proportion of the number of paper-making machines in this country engaged on the production of high-grade tub-sized papers.

CURRENT YEAR'S PROSPECTS.

With regard to the current year, the results for the first four months compare favourably with those for the corresponding months in 1929. In addition, the company's order books are, on the whole, in a satisfactory condition. Unless, therefore, some adverse circumstances operate, I think your board may look forward with confidence to meeting you this time next year with another satisfactory balance sheet. At the meeting held on March 3rd last, the late chairman, when referring to the position created by our recent acquisitions, stated that, as a result of these fusions, he was able to view the future of your company with far greater confidence than he had experienced for many years past. Your board heartily subscribe to that view. It is the intention of your board to consider the payment of an interim dividend on December 1st next.

The report was unanimously adopted.

The dividend of 10 per cent. as proposed was approved, the retiring directors were re-elected, and the auditors were re-appointed.

CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED.

CONTINUED EXPANSION OF BUSINESS.

The thirty-third annual general meeting of the Calcutta Electric Supply Corporation, Ltd., was held, on the 12th instant, at 3 and 4, Clement's Inn, Strand, London.

The Right Hon. Lord Meston of Agra and Dunottar, K.C.S.I. (the chairman), in moving the adoption of the report and accounts, said that 1929 had been a period of progress and prosperity. The former was reflected in some measure in the capital account; the latter was apparent from the revenue returns. In spite of the general political unsettlement, and in spite also of a good deal of labour trouble in other industries, which to some extent reacted on the corporation, their work of providing material comfort and industrial power had continued almost unchecked. They had sold 170 million units during the year, in contrast with 148 millions in 1928.

The net result was that their gross receipts were £1,058,629, or nearly 11 per cent. higher than in 1928, and their working and maintenance charges were £597,508, or an increase of just under 8 per cent. The resultant gross profits, that was, before meeting their heavy capital charges, British taxation, etc., were £461,121, or about 15 per cent. better than last year's figure of £401,803.

It would have been obvious that the numerous developments and improvements now in course of execution or in contemplation would require a considerable addition to their capital resources. So far they had been careful to avoid the raising of new capital before it could be profitably employed, but, as the increase of their share capital could not be indefinitely postponed, they thought it desirable, and, indeed, their duty, in the present circumstances of the money market to take advantage of the cheap accommodation available. They had, therefore, within the last few weeks issued privately, through Messrs Robert Fleming and Company, on favourable terms, a comparatively small block of 220,000 preference shares. It was their hope to issue, certainly before this time next year, and probably a good deal earlier, a substantial amount of ordinary shares, which it was their intention to offer to the holders of their existing ordinary share capital on terms which it was trusted would be regarded by them as satisfactory.

To conclude, he might summarise the situation by describing the company as in a strong financial position, and its prospects as satisfactory.

The report and accounts were unanimously adopted.

CAWNPORE ELECTRIC SUPPLY CORPORATION, LIMITED.

INCREASED OUTPUT—EXTENSIONS TO PLANT.

The meeting of the Cawnpore Electric Supply Corporation, Ltd., was held, on the 13th instant, at Winchester House, London, Mr John G. B. Stone (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that there was no change in the share capital, but the 6 per cent. first mortgage debentures had been reduced by £60, and the 5 per cent. debentures had been reduced by £5,060 through the operation of the sinking fund. The reserves at £52,293 have increased by £10,369 during the year.

As to the profit and loss account, from 1928 £18,524 had been brought in, and after paying the final dividend for that year and the directors' commission thereon, there remained a balance of £3,824 to be added to the balance from the revenue account, making a total of £83,768. Out of that the board had paid the interim dividend, two half-yearly preference dividends, the directors' commission thereon, and had transferred to depreciation and renewals £27,500, to the general reserve £2,500, to the income-tax account £4,000, and to the debenture sinking fund £7,827, leaving £20,941 5s. 11d., and they recommended the payment of a final dividend of 7 per cent., leaving £6,241.

A considerable part of the company's business lay in the supply of power to the mills and other industries in Cawnpore. The year under review had not been good from an industrial point of view, but in spite of that, they had increased output, and it had brought with it an increase in the maximum demand upon the company's plant. There were signs of an improvement in trade, and the board had received and were discussing further contracts for the supply of power. The board had thought it desirable, therefore, to make arrangements for extending the Riverside Power Station. Two of the existing turbines were to be replaced with others of greater output, and a new turbine and alternator were to be added. That addition necessitated the extension of their buildings, but not any addition to the boiler plant at present. A further alteration and improvement was that, owing to the increased generating capacity of the power station, they had found it advisable to put in larger and more modern switchgear.

The construction of that plant was well in hand; the first shipment was now being made, and the board hoped that by about the end of this year they would have the use of the new machinery, with which they would be able to handle a greater demand, and obtain still further economy in the cost of production.

The report and accounts were unanimously adopted.

LEDBURY RUBBER ESTATES, LIMITED.

STRENGTH OF COMPANY'S POSITION.

MR ERIC MACFADYEN ON PROSPECTS.

The twenty-first ordinary general meeting of the Ledbury Rubber Estates, Ltd., was held, on the 14th instant, at 2, 3 and 4, Idol Lane, London, E.C., Mr Eric Macfadyen (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—Our share capital remains unaltered at £108,600, against which our estates have cost £134,788. Allowing, therefore, for the general reserve, including to-day's allocation thereto, we have an unspent balance on capital account of £13,812, which is more than sufficient to meet our present capital commitments. Our balance-sheet assets, taking investments at cost, exceed liabilities by £28,854, after deducting the amount required for the dividend of 10 per cent. Our finances are therefore in good shape, and we feel justified in distributing the greater part of the year's earnings.

We are not wholly dependent upon rubber for our income, but are interested also in tin mining through the Sione Tin Company, formed to dredge the low-lying portion of our Sione Estate. Our net revenue from tin was £2,420 last year. The tin market, like the rubber market, is depressed for the time being, but a certain revenue will continue to accrue to us by way of royalties, even if for some time we receive no dividend on our shares.

Our other investments, together with sundry minor receipts, produced £1,155 last year. Rubber contributed £8,250, bringing the total profit up to £11,825. This compares with a profit of £11,398 for 1928 and £18,324 for 1927.

Although we are better off than many rubber companies, owing to our having had good years in the past and having laid by against a rainy day, it is plain that we must not count upon an equally good year in 1930. In 1927 our average net price realised was 18.7d. per pound. In 1928 it was 10.12d. In 1929 it was 9.11d., and, as we all know, the market has so far continued to decline throughout 1930.

LOW CAPITALISATION.

I want our shareholders, however, to realise the strength of their position. Last year we harvested an increased crop, and this year's output would have been still higher but for the May tapping holiday, in which we have agreed to participate. Last year was also our cheapest year, and our costs in 1930 will, I anticipate, be as low or even a shade lower. Even this year we are so far covering expenses on revenue account. Allowing for our share in Sungei Sabaling, I calculate that a purchaser of our shares at par is buying rubber, fully equipped and over 80 per cent. mature, at a net capitalisation per acre of £30, taking our tin interest and our other investments at cost. Anyone who set out to plant a new rubber estate to-day would have to wait seven or eight years for a return on his outlay, and would be remarkably lucky if his capitalisation came out no higher than double that figure. When the inevitable change in the psychology of markets comes about, sooner or later, anyone who may have picked up Ledbury shares at to-day's price will have reason to congratulate himself.

GOOD CONDITION OF ESTATES.

I visited the estates once more myself a few months ago, and was well satisfied with the progress made on the agricultural side. Kinrara, to which old Ledbury is now attached for administrative purposes, has never, in my knowledge of it, been better looked after. The health problem there, which for many years prevented the establishment of an altogether satisfactory labour force, now presents no serious difficulty, thanks to the thoroughgoing co-operation of our manager with our medical officer in planning and carrying out malaria-prevention measures. As a result we now have an ample and settled Tamil labour force, and the advantage of this is apparent in our cost of production. The improved conservation of soil and rainfall and the conservative tapping system adopted some years ago have resulted in a great improvement in the condition of the trees, and our bark position is definitely in a sounder state than when I saw the estate four years ago, and still more so than it was nine or ten years ago. We may expect an output from these old areas on pretty much the same scale as last year, and at a slight reduction in cost for a good many years to come.

The report and accounts were unanimously adopted and the dividend of 10 per cent. was declared.

LANADRON RUBBER ESTATES, LIMITED.

STRONG FINANCIAL POSITION.

MR ERIC MACFADYEN'S SURVEY.

The twenty-second ordinary general meeting of Lanadron Rubber Estates, Ltd., was held, on the 14th instant, at 2, 3 and 4 Idol Lane, London, E.C., Mr Eric Macfadyen (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Our capital expenditure during last year included over £4,400, representing our share of the expenditure on Sungei Sabaling Estate and about £2,000 spent on further development and buildings on Lanadron and Jementah. After allowing for depreciation reserve—to which we have transferred £2,000 not required in our reserve for taxation—the net addition to the book cost of our estates is £4,391, which brings it up to £360,774. This corresponds very closely with our issued capital, leaving our reserve of £60,000 virtually intact.

CONDITION OF THE ESTATES.

As I visited the estates again a few months ago you may care to know the impression I derived from them. Lanadron, which was one of the pioneer rubber estates, continues to hold its own very well. The losses due to disease and accident in the course of time have gradually reduced the average stand, until to-day the ground could certainly support more trees per acre with advantage from the point of view of production. Many difficulties are met with in rehabilitating areas thinned out by storms and disease, but we are making some progress in this work on Lanadron, and where areas which have become uneconomic are, as one may say, rejuvenated, planting material is used which far exceeds in potential productive capacity that of the original trees.

Against a relatively low average yield, an old estate has certain substantial compensations. The problem of making it healthy has been studied, and as the result of experience it has been made attractive both to staff and to labour, so that drawbacks are absent which, in other cases, explain a high cost of working. The net profit per pound earned by Lanadron this year, on an average net sale price of under 8¾d. net, affords an instance of what I mean.

On Jementah I found conditions distinctly better and more hopeful from the agricultural point of view. We are still under the necessity of conserving bark on Jementah, and have to be content with a very low crop, so that this estate was worked at an actual loss last year.

NEW ESTATE'S DEVELOPMENT.

The new estate over which we have entered into partnership with the Ledbury Company is opening out remarkably well. It is situated in a district of Negri Sembilan, which is noted for high yields. The soil is good and the general configuration and lay-out of our block will lend themselves to economical working once it is planted up. In the development of this new property we are employing methods which we believe will give us in the end an estate which in point of yield will far surpass the results of the best of the old estates.

Our finances are so strong as to justify us, in our opinion, in proposing a 4 per cent. dividend, although that will mean a small reduction in the carry forward. I am afraid that, in view of market conditions, I do not foresee any prospect of an immediate improvement in our earning capacity, and our dividend policy must not be taken as implying that we count upon that, although there is, in my view, ground for hoping that 1930 may prove to be the zero year for rubber growers. But our shareholders have shown great self-restraint in the past in laying by for a rainy day. Our accounts show liquid resources (including rubber in stock and in transit) little short of £100,000, and we think it not unreasonable, at the present stage, to distribute a little more than the actual earnings of an exceptionally unremunerative year.

The report and accounts were unanimously adopted, and the dividend of 4 per cent. was declared.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 10, 1930:—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	4,750	From Revenue	10,047
Interest, &c. on Debt	1,214		
Sinking Fund	630		
Sundries	203		
Decrease in Debt	2,787		
Increase in Balances	463		
	10,047		10,047

The ordinary revenue for the week amounted to £10,047,200, as compared with £9,212,100 in the corresponding week last year. Income tax and super-tax were higher at £1,582,000 and £950,000, against £799,000 and £540,000 respectively. Customs brought in £2,354,000, as compared with £2,295,000, while Excise amounted to £936,000 against £1,061,000. Miscellaneous receipts were lower at £204,300, against £438,200. The National Debt was reduced by £2,787,000, as shown below:—

(000's omitted.)

	£		£
Treasury Bills	+1,713	Public Department Advances	−7,800
National Savings Certificates	+ 50	Bank of England Advances	−1,500
4½% Conversion Loan	+4,750		
	+6,513		−9,300

The Floating Debt was reduced by £7,600,000 to £620,530,000.

	Total ...	1,504,349		Total ...	1,933,179

Net withdrawals, £528,830.

Messrs Samuel Montagu and Co. write on May 14, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £163,572,470 on the 7th instant (as compared with £163,341,964 on the previous Wednesday), and represents an increase of £17,612,386 since the 1st January last. In the open market yesterday £434,000 of bar gold from South Africa was disposed of at 84s. 11⅜d. per fine ounce. With the French exchange momentarily more favourable to this country, there was no competition from that quarter, but Germany was again in the market and secured £400,000. Of the balance, India took £16,000 and the Home and Continental trade £18,000.

Movements of gold at the Bank of England have resulted in a net efflux of £1,193,501 during the week under review. Receipts totalled £1,504,349, which included £1,000,000 in sovereigns from Australia and £500,000 in sovereigns from South Africa. Of the withdrawals, amounting to £2,697,850, about £2,669,000 was in bar gold for France and £25,000 in sovereigns taken for export.

SILVER.

The tone of the market has continued easy and price movements have been gradually downward. The demand from India has been more limited and as this quarter was the chief cause of the recent steadiness the market has rather reflected the lack of support. China exchanges have shown weakness and there has, in consequence, been a certain amount of selling by Chinese operators, besides which America was disposed to sell more freely during the latter part of the week. Buying has been mostly confined to bear covering operations by China and the Indian Bazaars. To-day the premium on cash delivery disappeared, prices being quoted even at 19 1/16d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 5th instant to mid-day on the 12th instant:—

IMPORTS.	£	EXPORTS.	£
France ...	148,026	China (including Hong Kong) ...	95,340

NOTICES.

The Midland Bank announces the opening of a new branch at 10 Mill Street, Macclesfield. Additional offices have also recently been opened at 6 Princes Crescent, Bare, Morecambe; Auction Mart, Boroughbridge, Yorkshire; Llanwrda, Carmarthenshire; The Strand, Sheldon, near Teignmouth, Devon; and at 67 London Road, Stockton Heath, near Warrington, Lancs.

Company News.

REPORTS AND NOTICES.

The registered office of the London Iron and Steel Exchange, Ltd., is now 28, Essex Street, Strand, London, W.C.2. The telephone number will be Central 6565.

The Westminster Bank announce the opening, on May 12th, of a new branch at Watford Cross Roads (151 The Parade, High Street, Watford).

Barclays Bank, Ltd., announce the opening of a new sub-branch at Sawston, Cambridgeshire.

MISCELLANEOUS.

THE BRITISH ELECTRIC TRACTION COMPANY, LIMITED.—The profits (subject to audit) for the year ended March 31, 1930, amount to £253,081, against £196,995 for the previous year. The directors recommend a cash dividend of 5 per cent., less income tax, on the deferred ordinary stock, and a bonus of 10 per cent. fully-paid £1 deferred ordinary shares, being at the same rate as last year. These distributions entitle the holders of the 6 per cent. cumulative participating preference stock to a further 1.89 per cent. by way of participating dividend, making 7.89 per cent. for the year ended March 31, 1930. A balance of £65,547 is added to undivided profits account.

CROSSES AND WINKWORTH CONSOLIDATED MILLS.—A decrease in profit of £114,267 is reported for the year ended March 31, 1930. After allowing for interest charges and management expenses, the profit is £31,323, as against £145,590 for 1929. There is available, including a transfer of £20,000 from reserve for income tax no longer required, £80,012, and after depreciation, £50,000, and interim dividend on the preference shares, paid December 1, 1929, £23,539, there remains to be carried forward £6,473, as against £28,689 brought in. The last dividend paid on the ordinary capital was 10 per cent. for the period to March 31, 1921.

Meeting, Bolton, May 21st, at 12 noon.

FINE COTTON SPINNERS.—For the year ended March 31, 1930, the profits of the Fine Cotton Spinners' and Doublers' Association, including a transfer from reserve in respect of reparations, and after charging £180,000 to depreciation, against £200,000 last year, and providing for bonuses to management, amount to £517,518, in contrast with £632,618 for the previous year. Adding the balance brought in of £214,167 and £50,000 transferred from reserve for equalisation of dividends, there is a total of £781,685, against an available total last year of £933,067, when £200,449 was brought in and £100,000 taken from dividend equalisation reserve. The ordinary dividend is reduced from 9 per cent. to 6 per cent. for the year. The carry forward is £183,135.

GREAT BRITAIN AND CANADA INVESTMENT CORPORATION.—The preliminary figures have arrived by cable, and they show a total revenue from dividends, interest on call loans, and revenue from stock dividends sold, of $654,802. After deducting $267,072, interest at 4½ per cent. on $6,000,000 of bonds outstanding, and $71,926 for management and general expenses, there is a balance of $315,804 available for the dividend on the 5 per cent. preferred stock. This dividend for the year calls for $200,000, leaving a net surplus after the payment of the dividend, of $115,804, which is carried forward. It is stated that the net depreciation of the securities held by the corporation at the end of the fiscal year amounted to 2.12 per cent. The report gives a complete list of the bond and stock holdings of the trust.

LAKE VIEW INVESTMENT TRUST, LIMITED.—The following are some of the principal features of the report, as compared with last year :—

	Year to Mar. 31, 1929.	Year to Mar. 31, 1930.
Dividends and interest received, less income tax ...	131,389	150,082
Net profit ...	93,409	102,133
To reserve from revenue ...	20,000	25,000
To reserve from surplus on changes in investments ...	30,000	25,000
Ordinary dividend ...	12½ p.c.	13 p.c.
Carried forward ...	10,448	12,972

In the report the directors state that the values of the investments largely exceed in the aggregate the amount at which they stand in the balance sheet. A list of investments, numbering 450, will be found on pages 7 to 26 of the report. On page 6 of the report will be found a classification of the investments, showing the character of the undertakings, their geograhpical positions and the denominations of the securities.

SIEMENS BROTHERS AND COMPANY.—A profit of £314,465 for 1929 was made by Siemens Brothers and Co., against £335,758 for 1928. Deducting interest on and redemption of 4½ per cent. debenture stock, £67,439, the year's dividend of 10 per cent. on cumulative preference shares, £55,000, and an interim dividend of 2½ per cent. on ordinary shares, £55,625, there remains £136,401. It is proposed a final dividend of 5 per cent., making total dividend for year of 7½ per cent., less tax, as last year, requiring £111,250, leaving £25,150, which, with the brought forward of £313,360, gives £338,511 to carry forward.

Meeting, Central Hall, Princes Street, S.W., May 22nd, at 12 noon.

WEEKLY TRAFFIC RETURNS.

RAILWAYS OF GREAT BRITAIN AND IRELAND.

OIL OUTPUTS.

ATTOCK OIL COMPANY.—April output, 15,972 barrels.

BRITISH BURMAH PETROLEUM COMPANY.—Production of crude oil by this company for the month of April amounted to 36,386 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended May 7:—Venezuela, 50,132 barrels; Trinidad, 17,201 barrels; total, 67,333 barrels. Production for April:—Venezuela, 164,738 barrels; Trinidad, 59,841 barrels; total, 224,579 barrels. Deliveries for April:—Venezuela, 145,511 barrels; Trinidad, 89,045 barrels; total, 234,556 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA.—Total production during the month of April amounted to 137,504 barrels, or approximately 19,643 tons.

THE MEXICAN EAGLE OIL COMPANY.—Production for the week ended May 3, 1930, was 236,000 barrels.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Further rains and cold winds experienced over the United Kingdom during the past week tended to retard vegetation and germination of spring crops, but agricultural prospects generally are excellent both here and on the Continent, and all cereals will respond quickly to a spell of sunshine and warmth. Native wheat proved slow of sale and prices further moved in buyers' favour. Recent large sales of French wheat and flour to United Kingdom outports at competitive rates were a feature of the market, and it is stated that one prominent London firm have booked nearly sixty vessels ranging from 200 to 3,000 tons for early shipment. Fair quantities of Canadian wheat were also taken by United Kingdom millers, with Continental purchases of Manitoba, American hard Winter, and Australian descriptions, the latter also selling to Italy. Despite the favourable outlook for new crop sowings in most of the great exporting countries, sellers as a rule refrained from pressing, which resulted in a fairly steady tone. The export movement from North America, although increasing slowly, is by no means sufficient to appreciably reduce surplus holdings, nor do prospects appear hopeful of any great expansion in European purchases during the remainder of the cereal year. In these circumstances, the position of Canadian and American sellers appears difficult in finding an outlet for present supplies before new crops become available, which indicates selling pressure to make elevator room. Meanwhile, the market remains very sensitive to weather and crop reports, and although sowings have made a good start, final results must depend on climatic conditions up to harvest. The market for flour remained steady, sellers being less disposed to grant concessions, and a fair business resulted in home milled to cover current needs. Of imported, North American makes moved off quietly, but Australian and French were taken up with fair freedom. The restricted movement of Plate maize, due to adverse climatic conditions, resulted in a better demand for European varieties, recent arrivals from the Danube showing better condition. Prices ruled easier, especially for near positions, owing to a slow consumptive demand. Barley dull and weak, with further large bookings of Russian. Oats quiet and trend of values in buyer's favour.

WHEAT.—Steadier. No. 1, Northern Manitoba (Atlantic shipment), ex ship, 44s.; No. 2, ditto, 43s. 6d.; No. 3, 42s. 6d.; No. 4 Manitoba, 41s. 3d.; No. 5, ditto, 39s.; No. 6, 32s.; No. 2, hard winter, 39s. 9d.; No. 2, mixed Durum, 37s. 6d.; Rosafe, 62½ lbs., 39s. 9d.; Barusso, new crop, 62½ lbs., ex ship to arrive, 39s.; Australian, 42s. 3d. per 496 lbs.; English, 8s. 4d.-8s. 6d. per 112 lbs.

FLOUR.—Maintained. London straight run, 35s. 6d. per sack for country deliveries, and 34s. 6d. London area. Of imported: Manitoba patents, 32s. 6d.-35s. 6d.; Buffalo, 32s. 6d.-35s. 6d.; Australian, 30s. 3d.-31s. ex store. On c.i.f. terms: Manitoba top patents, May-June, 31s. 6d.-32s.; export ditto, 29s.-29s. 6d.; Australian, 28s.-28s. 6d.; French prompt, 24s.-24s. 6d. per 280 lbs. Argentine low grade, May, £5 17s. 6d. per ton.

MAIZE.—Easier for near positions. Plate, landed, 29s. 6d.; ex ship, 28s.; March-April, 26s.; new, April-May, 25s. 3d.; May-June, 25s.; June-July, 24s. 9d.; No. 2 white flat African, 30s. 6d. landed, per 480 lbs. Yellow maize meal, £8 15s. per ton f.o.r. London. Yellow African, £6 5s. per ton, ex ship.

BARLEY.—Dull and weak. Californian old, landed, 34s.-40s.; new, ex ship, 34s.-40s. as to sample; Chilian brewing, 33s.-37s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 34s.-36s. per 448 lbs. Black Sea, ex ship, f.a.q., 17s.; landed on sample, 18s. 6d.-19s. 6d.; Persian landed, 17s. 3d. per 400 lbs.; English malting, 7s. 3d.-8s. 9d.; feed, 7s.-7s. 2d. per 112 lbs.

OATS.—Dull. Plate, landed, 14s.; ex ship to arrive, 12s. 9d.; Chilian white, 20s.; ditto tawny, 15s.; German, landed, 19s.; ex ship to arrive, 17s.; mixed Canadian feed, 12s. 6d. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27:—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to May 10	Qrs. 183,867	Qrs. 152,984	Qrs. 278,460	Qrs. 162,543
36 weeks to May 10	8,317,585	8,874,130	9,264,734	10,444,718
Average price of English wheat per cwt.	s. d. 8 11	s. d. 9 11	s. d. 11 2	s. d. 12 0

FIGURES OF ASSURANCE

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £74,000,000. Annual Income £10,500,000. Full particulars on application.

A.M.P.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY

73-76 King William St., London, E.C.4 Established 1849.

D. E. WALKER, Manager for the United Kingdom.

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	May 15, 1929.	Jan. 2, 1930.	Apr. 30, 1930.	May 7 1930.	May 14, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	114	148⅛	105¼	105	105⅛
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅛	105⅛	130⅛	101⅛	100⅛	102⅜

The visible supply of wheat in Canada at 69,542,000 bushels shows a decrease on the week of 3,957,000 bushels. Supplies a year ago stood at 76,688,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports no real improvement in the South Yorkshire coal trade, although export inquiry has improved a little and the cutting of prices appears to have run its course. Best steams are quoted at 15s. 3d. f.o.b. Contracts for blastfurnace coke are being offered at 16s. at ovens, but such fuel can be bought on the open market at rather less. Demand is poor. Deliveries are suspended in numerous cases. The marketing board has reduced its subsidy on export orders from 3s. to 2s. per ton. It was increased in April from 1s. 6d. to 3s.

Our Glasgow correspondent writes:—Though the market has steadied a little lately, it is to be feared the reason is not improved business, but smaller supplies as the result of curtailed output, although an additional influence appears to have been a better supply of shipping tonnage. Best steam qualities in Fife and splint coal in Lanarkshire are the steadiest spots about round coal, while in nuts trebles and doubles have improved their position. Current quotations for shipment (f.o.b. district ports): Lanarkshire.—Ell best, 14s.; splint best, 16s.; splint second, 15s.; navigation, 16s.; navigation second, 14s. 6d.; steam, 12s. 6d.; Hartley, 18s.; trebles, 12s.; doubles, 11s. 3d.; singles, 10s. 9d.; pearls, 10s.; dross, 9s. 6d. Fife.—Screened navigation, 16s. 6d. to 17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 13s.-13s. 6d.; doubles, 11s. 6d.-11s. 9d.; singles, 10s. 9d.; pearls, 10s. 6d. Lothians.—Prime steam, 12s. 3d.; secondary steam, 12s.; trebles, 13s.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 12s. 6d.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—There has been no improvement this week in the position on the Cardiff coal market, and the volume of the export trade has further declined. The traffic returns of the Great Western Railway Company show that last week the total quantity shipped, foreign and coastwise, at the South Wales ports was only 492,400 tons compared with 594,600 tons in the previous week, and with 531,772 tons in the corresponding week last year. The stocks on the colliery and railway sidings are estimated at about 1¼ million tons, equivalent to nearly 1½ weeks' output, and collieries in most of the districts are losing time. The marketing scheme, however, is preventing the slump in prices which would otherwise have been inevitable, and the customs returns for April actually show a slight increase in the declared average f.o.b. value compared with the previous month. The Egyptian State Railway contract has been placed with a South Wales firm, but it is not expected that Monmouthshire collieries will profit from this particular contract to anything like the extent they have done under previous Egyptian locomotive contracts. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 45s.; rubbly culm, 11s. 3d. to 12s.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s.; pitwood, ex ship, 25s. 3d. to 25s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The British iron and steel industry is suffering from the depression which is affecting practically every country in the world. The home market, although business is worse than for the past year or two, is more active than most of the foreign markets. The British steelmakers, however, complain that the poorness of the demand from overseas markets has intensified the competition for orders in the domestic market. This, combined with the policy of consumers in buying from hand-to-mouth and for near delivery, has created a difficult position in practically all branches of the industry. Reports from the pig-iron producing districts of the country indicate that stocks are increasing notwithstanding the steady if comparatively small volume of business that is moving in this department. Conditions in the semi-finished steel market are not good, but British steelmakers continue to secure a fair share of the business passing. On the other hand the Continental makers complain that their trade with British steelmakers has declined during the past few months. Business in finished steel is irregular. Now and again inquiry becomes more active, but this is seldom followed by important buying. Stocks in the export markets are believed to be low, and this encourages the belief that some improvement must develop within the next few weeks.

Our Middlesbrough correspondent writes:—The market for Cleveland iron is dull. Consumers are making no move in regard to purchases to follow current contracts, and indications are that they will delay doing so as long as possible. There are no favourable features likely to influence earlier buying and as many purchases made after the reduction in prices about the middle of March have still some weeks to run, a quiet time seems likely to continue. There is only a moderate quantity of Cleveland iron available for the open market after producers' requirements for their own consuming works are provided for. Only eight furnaces are in operation and these will be reduced to seven by the end of next week. Very little business was transacted at the weekly market on Tuesday and prices were unchanged viz.: No. 1, 70s.; No. 3, 67s. 6d.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s. f.o.b. or f.o.t. There is little, if any, improvement in the demand for hematite and the production is to be further reduced. It is hoped that the lessened make will have the effect of steadying prices, but in the meantime no appreciable difference is noticeable, as makers are still willing to book mixed numbers at 74s. for early delivery, and transactions are confined to small parcels. Merchants are still in the position of having fair quantities of iron on their hands and are willing to underquote makers where their contract conditions allow them to compete. Shipments of pig iron are only on a poor scale, the clearances to 13th inst. being 6,693 tons, against 6,730 tons to April 13th. In the manufactured trades new business continues quiet. Prices are unchanged from last week. The ore market is idle. Best Bilbao rubio continues to be quoted nominally 21s. c.i.f., and the current freight Bilbao-Middlesbrough is round 5s. 6d. for early loading. Coke is being pressed for sale and is weaker in price. Good average furnace qualities are now offering at 17s. 6d. delivered consumers' works for this and next month's delivery.

Our Sheffield correspondent writes:—The paucity of business from overseas markets, notably India, China and Australia, continues to be the outstanding feature of the local steel situation and the turnover as a whole continues at a low level. The depression on the Continent tends to intensify competition from that quarter, and prices are very unsatisfactory. The buying of raw materials is still hand to mouth; there is a dearth of substantial orders in all departments. The enquiries coming in do not suggest an early revival. In the open-hearth steel department production has been curtailed at works in Sheffield and North Lincolnshire. There is a moderate call for special steels, cold wrought steel, and stampings and forgings for the motor trade. Tool makers report quietude in most branches, and the output of the plate and cutlery works is below the average of last year. New plant is being installed for the more economical production of scissors.

Our Glasgow correspondent writes:—In the sheet trade in Glasgow and district business is being fairly well maintained at recent level, and the tonnage of galvanized sheets booked during the present week is, considering the present state of the galvanized sheet trade generally, quite satisfactory. In the black sheet trade also there has been quite a good amount of business passing, including sheets for oil company's requirements involving considerable tonnage. Other branches of the iron and steel industry are finding things rather difficult. Practically all the orders being placed are for small lots for immediate delivery, and the absence of forward bookings is a source of anxiety to the steelmakers. Prices are unchanged at £8 15s. for ship plates and £8 7s. 6d. for sections (both subject to the rebate of 10s. per ton). There is no increase in the demand for semi products, and the pig iron market remains quiet.

Our Cardiff correspondent writes:—Fairly stable conditions continue to prevail in the tinplate industry. Prices on the Swansea Metal Exchange on Tuesday showed little variation compared with those in the previous week, while shipments were higher. Foreign competition continues to affect unfavourably the market for local steel bars, and in the sheet trade the Indian trouble is causing anxiety. Galvanized sheets are unchanged at £11 17s. 6d. to £12 per ton, but both production and exports are substantially lower than at the corresponding period last year.

OTHER METALS.

Tin.—In the standard market values continued on a downward course on selling pressure, offers being moderately absorbed, though Eastern advices came steady. Cash also forward 30s.-32s. 6d. lower. Standard cash quoted £147 10s. to £147 15s.; three months, £149 5s. to £149 10s.; Settlement price, £147 10s. Sales amounted to 500 tons, cash at £148 5s. to £147 10s.; three months, £150 to £149 5s. English ingots quoted £148 10s. to £149. In the East, 450 tons reported sold on the basis of £151 5s. ton c.i.f.

Copper.—In fair support, but with sellers more in evidence a weaker market resulted. Cash on balance 20s., and forward 17s. 6d. per ton down. Standard cash quoted £55 5s. to £55 10s.; three months, £55 to £55 2s. 6d.; Settlement price, £55 5s. 700 tons changed hands, three months at £55 10s. to £55; electros, £60 to £61 10s.; wire bars, £61 10s. per ton.

Lead.—Quiet and easier on liberal offerings. 350 tons sold. Good soft foreign pig, August, £18 to £17 17s. 6d.; September, £17 17s. 6d.; Settlement price, £17 17s. 6d.; English quoted £19 10s. per ton.

Spelter.—Steady at the recent decline, but dealings restricted. 350 tons sold. May, £16 7s. 6d.; June, £16 13s. 9d.; July, £16 18s. 9d.; August, £17 2s. 6d.; Settlement price, £16 7s. 6d. per ton.

Antimony.—Quiet, steady. English regulus, £40 to £46; Chinese ditto, spot, £28 10s. to £30, according to quantity; May-June, £25 5s.; crude May-June, £16 12s. 6d. per ton c.i.f.

Antimony Oxide.—May-June, £26 15s. per ton c.i.f.

Antimony Ore.—50 per cent. May-June, 3s. 6d.; 60 per cent. ditto, 4s. per unit c.i.f.

Wolfram.—Steady. Chinese May-June, 23s. 6d.; Burmese ditto, 23s. per unit c.i.f.

Aluminium, Quicksilver and Tin Plates.—Unchanged.

THE COTTON TRADE.

Liverpool, May 14th.

Values show some slight improvement on those ruling a week ago. The U.S.A. figures of consumption of American cotton during April are to-day given as 532,000 bales against 633,000 bales last year and 533,000 bales last month. Trading continues in very limited quantity. During the week some rains have fallen in the Eastern States, and this has caused some relief, but the West continues to receive too much. Spot sales for the week 8th to 14th (inclusive) are 19,000 bales, of which 12,570 are American, 1,400 Brazilian, 90 Argentine, 1,500 Peruvian, 1,010 Egyptian, 1,200 African, 760 East Indian and 470 sundries. Imports for the same period are 22,638 bales, of which 11,935 bales are American, 201 Peruvian, 5,884 Egyptian, 624 African, 2,701 East Indian, 1,293 sundries. Quotations to-day are: American Middling, 8·62; Egyptian Sakel, 14·05; Uppers, 10·32; Brazil Fair, 7·87; Peru G.F. Smooth, 8·97; West African Middling, 8·47, and East African G.F., 9·12.

Manchester, May 14th.

The conditions prevailing in the market have shown very little change. In some quarters there has been slightly more inquiry, but actual business remains very limited, and at the moment spinners and manufacturers cannot sell the considerably curtailed production. The disturbances in India continue to have a vital effect upon trade. Rather more attempts are being made to cancel contracts, and some cases are reported of customers on the other side asking for deliveries to be delayed. The news from China has not been at all encouraging, but occasional lines have been booked in dyed cloths. Retail quantities of white shirtings have been sold for Egypt, and some fair orders have been put through in finishing styles for South America. Steady support has been given by home trade buyers in a variety of goods. The industrial situation in Lancashire weaving towns tends to become worse. American yarns for home use have moved off slowly at irregular rates. Prices in Egyptian counts have been rather firmer with a few more sales. A few contracts have been put through in bundle yarns for India.

THE WOOL TRADE.

Our Bradford correspondent writes:—In all West Riding centres there is a pronounced tendency for the operatives to drift back to work on the reduced rates of wages, and in several cases, particularly in spinning mills, work is almost normal. On the other hand, the wool combers and the weaving overlookers in the Bradford district are still putting up a dour fight, and this is causing a good deal of inconvenience. The inability of some manufacturers to guarantee delivery of seasonal goods is undoubtedly resulting in loss of trade, some of the orders being diverted to the West of England and others to Scotland. It is also feared that some of the business which would have come to this centre will be turned over to the Continent. With so many worsted spinners working, the stocks of tops have been considerably reduced, and lots for prompt delivery now command very full quoted rates. Quotations for tops are also much firmer in sympathy with the advance in the raw-material markets, and when work is resumed in the combing section it will be necessary to run day and night for a time. The difficulty with most spinners is that they cannot get manufacturers to take up deliveries owing to the partial stoppage in the weaving, but quotations for yarns remain firm, the question of replacement now being one of considerable importance. Confidence in wool values seems to have been restored, and the restricted buying in recent months, especially on Continental account, is now causing importers to operate freely with a view to meeting requirements between now and the opening of the new season. As regards piece-goods, the Whitsuntide trade is being seriously retarded on account of the strike; this, indeed, is the most troublesome aspect of the dispute, which, in other respects, has caused little dislocation.

COLONIAL WOOLS.

[From a correspondent.]

The third series of London sales commenced last Tuesday, and though the position of the home trade is capable of considerable improvement, values for merinos appreciated fully 7½d., and crossbreds 7½d. to 10 per cent. This shows unmistakably that the industry is in much better heart. The movement of prices in London has fully confirmed the improvement that has taken place since the second series closed, notwithstanding that fully half the mills in the West Riding are standing. Continental buyers were very much in evidence in competing for merinos, while the home trade were the principal operators in crossbreds. This series there is a big offering of the latter, but this is not likely to be detrimental to their ready disposal, and it is not too much to anticipate that all the offerings will be cleared without much, if any, reaction. Overseas news is also very encouraging. The offerings at the selling centres in Australia are still good, and being disposed of readily. Growers must now realise that there is no necessity to adopt drastic measures to improve the selling value of wool. The information that splendid rains have fallen over large areas in the Commonwealth is also extremely welcome. An excellent clip may be expected next season. The quantity should be about the same as the current one. The immediate concern, however, is an expansion of manufacturing requirements. These will ensure good prices, and Australia will need every sovereign that can be realised for wool, wheat and dairy produce.

Increasing Interest in South American Markets

Estd. *1862*

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branches in South America, in London, Bradford and Manchester; in France Belgium, Portugal and U.S.A. with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description Status reports are supplied on request, and a Monthly Review of Market information in English or French is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

6, 7 & 8, Tokenhouse Yard, London, E.C.2

MANCHESTER: 36 Charlotte Street. BRADFORD: 33 Hustlergate.

Affiliated to Lloyds Bank Limited

HIDE, LEATHER AND ALLIED TRADES.

English market hides showed a further slight advance at the auctions held during the early part of the week, several weights in both clear and warbled ox and heifers making ¼d. per lb. more money at the sales held at Manchester. Calfskins and sheepskins are steady at round about last figures. Little alteration has occurred in foreign hides; the market remains steady with only a limited amount of business passing for tanners in this country. A fair trade has been done at origin with the United States in connection with frigorific hides, Argentine ox having changed hands on the basis of 7 $\frac{7}{16}$d., with 6 $\frac{15}{16}$d. accepted for light ox, and 7¼d. for cows. Dry River Plates are steady with B.A. Americanos selling at 7⅞d., Inservibles at 4⅜d., and Sierra Cordobas at 8¼d. In African hides Capes have changed hands at 8¼d. and 7¼d. for first and second drys, and 7⅜d. and 6⅜d. for dry-salted. The American market is cabled as steady, with Chicago heavy native steers selling at 14 cents. Inquiry for sole leather has been rather better over the past week, and although actual business continues to be confined to small quantities, there is a feeling that a further increase in the amount going into consumption will soon be experienced. Bends for manufacturing purposes are going out regularly, the call for the most part being for the lighter averages in the medium to better qualities. The repairing trade has also bought more, and fair quantities of suitable selection in both English and wetsalted have been moved off. Heavy bends and the commoner descriptions of bottom leather are not so much sought after. The offal market continues satisfactory, and average quantities of both shoulders and bellies change hands. In the upper leather sections the bulk of the business passing is in connection with the darker shades of brown in glacé kid, together with suède leather. A fair inquiry is also experienced for reptile skins, especially for imitation; willow calf is a moderate sale; so is patent leather in the medium to cheaper qualities. Semi-chrome leathers are difficult to move, and even where business is negotiated, the price accepted shows very little in the way of profit. Curriers, also, report trade as quiet, with keen competition for any business that may be going around. Shoe manufacturers have experienced an increase in the inquiries for footwear, and although some of these have not resulted in actual business, the prospects for the future are considered brighter.

THE JUTE TRADE.

DUNDEE, May 14th.

The jute trade is still awaiting some definite decision from Calcutta regarding the curtailment question. Rumours are now circulating the market that it is merely a case of fixing the extent to which production will be cultailed. Suggestions are made that the mills will revert to 54 hours' working per week as from July 1st next. It will be remembered that on July 1st last year an increase in hours was made from 54 to 60 per week. The additional quantity of jute goods which has been placed on the market each week has amounted roughly to five million yards, though even the former output was more than the world could absorb, so that prices have depreciated to a considerable extent. Stocks of goods at all producing and consuming centres have accumulated, and enormous quantities will have to be disposed of before the market can be materially affected by any restriction of production, but the moral effect should at least tend to prevent prices from falling. Outside Indian production has been very much curtailed. Few establishments in Dundee are running more than three days per week, and Continental producers are no better off. Prices of raw jute are maintaining a level above those obtainable for cloth and yarns. Old crop First Marks and Lightnings are practically unobtainable now, and are not being offered to this centre. Daisee assortment is quoted at £25, threes at £24 10s. and £23 for fours, while Tossa assortment rules at from £26 5s. to £27 5s., according to mark, threes at £26 and fours at £24, May-June. New crop best Lightnings have been reduced this week by 10s. per ton to £27 10s. August and £27 September, and Daisee assortment has been offered at £25 10s. and Tossa assortment at £28, September-October. Jute yarns are quiet, but firm all round. Common 8-lb. cops have been sold on several occasions at 2s. 8d. and 8-lb. spools at 2s. 9d. for delivery within two months, but for forward delivery 2s. 9d. and 2s. 10d. respectively would only be accepted by a few spinners. Twist is very firm at 5d. for 3-ply 8 lb., and sacking yarns are steady at 3¼d. for 24-lb. weft and 4¼d. for 8-lb. chains. Jute waste and cuttings are so scarce that rove is difficult to obtain, in consequence of which prices are tending dearer. For 48 lb. £28 is lowest, and for 200 lb. £18 to £19 is wanted. Fine yarns are selling fairly well for near delivery, but carpet qualities are quiet. Jute cloth orders are mostly for small quantities for early delivery. Prices, however, are very steady, and manufacturers are refusing to accept anything less than 3 $\frac{9}{16}$d. for 10¼-oz. 40-in. hessians and 2 $\frac{9}{16}$d. for 8 oz. Linoleum qualities are slow and heavy goods continue dull. The Calcutta goods market has ruled very steady, showing little or no change since last report.

VEGETABLE OILS AND OILSEEDS.

Variable conditions have ruled, and only a moderate volume of business has been put through. At lower levels of value the demand for linseed oil expanded, a fair trade having been done down to £39 10s. for prompt and May delivery ex Hull. Current prices are for "spot," £40 5s., and for May, £39 15s., later positions being at a discount of 20s. to 30s. per ton. Cotton oil is quiet, crude Egyptian offering at £28 10s., and common edible at £31 10s. ex Hull prompt. Other seed oils are quiet and inclined easy. In the oilseed section linseed is in only poor request in view of the slowness of the demand for the oilcake product, and Plate declined to £17 10s. for all positions. There are very few offers of Indian linseed with Calcutta for May-June loading quoted £19. The quantity of linseed on passage to Europe has increased to 137,300 tons, which is 13,400 tons more than last week. Cotton seed is easy, and black Egyptian has dropped to £7 5s. for "afloat" and May loading, and this has served to arouse a little more interest on the part of buyers. Bombay cottonseed offers obtain no response, as they are in advance of the market. The demand for oilcake is extremely dull.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Prices for spot parcels remained without change from recent decline, but there is only a slow movement, trade buyers measuring their requirements day by day. Slackness attaching to the sale of raw refining sugars epitomises at one stroke the actual state of business in consuming centres. There is a slight improvement in inquiries on Far Eastern account for parcels of old crop white Java offering from second-hands. At 8s. 6d. f.o.b. London, some interest arises on the part of exporters for Dutch J and Dinteloord granulated, in which the Irish Free State figures. Terminal sections firmer and quite a fair amount of business negotiated, mostly in the August position. Sales include: May delivery, 6s. 0$\frac{3}{4}$d. to 6s. 4¼d.; August, 6s. 3d. to 6s. 6d.; December, 6s. 7½d. to 6s. 10½d.; March, 7s. 7½d. to 7s. 10½d.; May, 7s. 9d. to 7s. 11$\frac{3}{4}$d. Cuban, 96 per cent. June, sellers, 6s. 9d. c.i.f. U.K., with Continental beet, prompt, 6s. 6d. ditto. Czecho, granulated, ready, free, sellers, 8s. 5¼d. f.o.b. Hamburg. New crop Java sugar quiet, unaltered. U.K. imports last month, 94,998 tons, against 178,089 last year; consumption, 162,749, against 169,420; stocks, 186,050, against 210,250; stocks of home grown, 41,150, against 28,900. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending May 10th amounted to 153,088 tons, against 131,045 last year. Cuban receipts last week amount to 105,224 tons, against 109,653 same time last year; exports, 113,866, against 103,331; stocks, 1,745,895, against 1,543,222. Centrals working, 70, against 22 last year. Total Java shipments for last month approximated to estimate of 114,000 tons, viz., 108,000, against 31,000 last year. British India contributed 59,000, against 9,000; Japan, 14,000, against 4,000; China, 24,000, against 9,000; with nil to Port Said, compared with 5,000.

COFFEE.—There was a better tone about this mark $\frac{2}{3}$ during the greater part of the week. Increased quantities were absorbed at firm rates with extreme prices paid for attractive qualities of foreign cleaned Costa Rica.

COCOA.—A very dull market on spot. Some fine red Grenada sold 52s. Forward positions very depressed. Accra, F/F, May-July, 32s.; and mid crop, 29s. f.o.b. Terminal: June, sold, 36s. 7½d.; and later December at 35s. 4½d.

TEA.—48,981 packages Indian offered in auction during the week accorded good general support and no material change resulted in prices. Best liquoring and tippy sorts came to a firm market. Ceylon sales of 28,217 packages evidenced a much better demand, export interest having revived and quite a cheerful market prevailed. Prices firm to dearer and orange pekoes from ½d. to 1d. higher. Java and Sumatra sales met a good reception and a firm tone ensued.

RICE.—A very quiet market continues, and prices for Burma disclose increased weakness; most other descriptions held for previous rates. Two Stars Rangoon, spot, London, sellers, 13s. 3d.; May-June, 12s.; Spanish, oiled, May shipment to London, 14s. to 14s. 3d. c.i.f.; No. 3 Burma, to Levant, quoted, 12s. 4½d. c.i.f., double bags; American blue rose from 23s. to 24s. 6d. c.i.f.; S.Q., to Cuba, 12s. 6d.; Saigon No. 1, round grain, May-June, to Europe, 12s. 6d.; Siam Super, May-June, 17s. 3d.

BEANS.—Market quiet. Madagascar butters, spot, 33s. 6d. to 34s. 6d. as to quality; afloat, 32s. 6d. to 33s.; April-May, 32s. 6d. c.i.f. London. Rangoon haricots, spot, London, 11s. 0d.; April-May, 11s. 6d.; Ohtenashi, spot, London, 19s.; May-June, 18s. 6d.; Danubian H.P., spot, London, 20s. to 20s. 6d.; May-June, 20s. 6d. c.i.f. To Glasgow, North African new, July-August, £7 17s. 6d.; Chinese ditto, £8.

PEAS.—Dull. Japanese, old crop, spot, London, 14s.; new, 15s.; afloat, 14s. 6d.; April-May, 13s. 9d. to 14s. c.i.f. Dutch marrowfats, prompt, 15s. to 15s. 6d.; small hand-picked blues, 11s. to 13s. f.o.b. terms. Calcutta (per 504 lbs.), May, 43s. 6d. Karachi, May, 41s. 6d. c.i.f. Maples: No. 1 New Zealand, new crop, May-June, 58s. 6d. Tasmanian A grade, new, afloat, 66s. c.i.f.

LENTILS slow. Bold Bombay, May-June, 61s. 6d. Calcutta Patna, to arrive, new crop, April-May, 59s. 3d.; Bombay Patna, 60s. 3d. c.i.f. (504 lbs.).

SPICE.—Pepper market quite steady and a moderate inquiry prevailed. London stocks of black 5 tons lower on the week at 989 tons, against 494 same time last year; white 47 down at 714, against 646. Lampong, April-June, quoted, 10½d.; May-July, sold, 9¾d.; August-October, 8¾d. to 9d. Muntok, white, April-June, quoted, 1s. 0½d.; May-July, 1s.; August-October, 11¼d. Cloves quiet on former terms. Tapioca quietly steady. Sago flour, April-May, Liverpool, quoted, 11s.; May-June, 10s. 10½d. c.i.f. Pimento, for shipment, held for 50s. c.i.f. London. Ginger dull.

FRUIT (Dried).—Currants steadier and trade improving. Pyrgos quoted, 36s. 6d.; Amalias, 38s.-39s.; Patras, 39s.-43s.; Gulf, 42s.-in better request. Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-60s.; Greek, 42s.-65s.; Australian, 32s.-45s. Dates quiet. Hallowie, spot, 19s.-21s.; Khadrowie, 15s.; Siar, 12s.-13s. 6d. Raisins steady, but sales limited. Valencias, quarter-boxes, at 36s.-38s. Figs easier. Genuine, 19s.-25s.; good average, 16s.

OVERSEAS TRADE RETURNS.

EVAPORATED FRUITS.—Business tends to expand, as prices are fairly attractive. Plums move off freely, especially medium sizes, and fair sales occurred of South African apricots. Peaches and pears, however, were rather scarce. Plums: Californian, new crop, 30's-40's, 60s.; 40's-50's, 55s.; Oregon, 30's-40's, 50s.; 40's-50's, 48s. Apricots: South African Royal, 50s.-112s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 95s. Peaches: Californian, choice, 50s.-55s.; fancy, 57s. 6d.-62s.; Australian, 50s.-60s.; South African, crop 1929, 42s. 6d.-52s. 6d.; 1930 crop, 45s.-57s. 6d. Apples: Californian, spot, sliced, extra choice, 35s.-65s.; Canadian, 52s. Almonds maintained. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 110s.; Majorcas, 107s. 6d.-125s.; Bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 39s. c.i.f.; sweet, spot, 72s. 6d. Hazel kernels: Kerasunde, spot, 142s. 6d.; Barcelona, 142s. 6d. French (shelled) walnuts, 135s.-137s. 6d. ex wharf London; for shipment, 130s. cwt. f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—Climatic conditions have not so far favoured the movement of Californian fruits and a spell of warm weather is needed to stimulate consumption. Holders are disposed to shade their limits in order to effect sales, also in view of a larger new pack. Australian varieties meet with fair attention, but stocks of English fruits are in small compass. Singapore pines move off slowly, both spot and forward, on about former terms. Italian tomatoes lack interest, spot supplies being in excess of requirements.

CANNED FISH.—Market steady, with moderate inquiries. Salmon: Alaska red talls, quoted, 47s. 6d.-49s.; pink talls, 24s. 6d.-26s. 6d.; and halves, 34s. 6d.-36s. Japanese crab, best quality, 87s. 7d.-90s. Lobsters scarce, while new pack prices are easier than last year, halves ranging from 130s.-135s. Sardines: Portuguese clubs, quarters, 4s.; 1-lb., 12s. per dozen tins.

CANNED MEATS.—General position unaltered, except that supplies of corned beef, ox and lunch tongues, also tinned hams, are more plentiful. Trade requirements appear to be well covered by contracts, and deliveries are moving slowly. Consumptive demand remains poor owing to unseasonable weather.

CONDENSED MILK AND MILK POWDERS.—Market quiet and prices occasionally the turn easier. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 31s.; machine-skimmed ditto, 20s.; full cream, sweetened, 56-lb. drums, 50s. English condensed milk, full cream, sweetened, 5-cwt. casks, 40s.; machine skimmed ditto, 22s. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 60s.; spray ditto, 2 by 56-lb. tins, crated, 80s. Dutch machine-skimmed milk powders, roller process, 1-cwt. cases, 26s. 9d.; spray ditto, 2 by 56-lb. tins, crated, 38s.; ditto, 1-cwt. kegs, 36s. 9d.; ditto, 1-cwt. cases, 36s. 3d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are nett, ex store, London-Hull or Goole, and cover prompt or gradual delivery to the end of June, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s.; minimum 1-ton lots. Smaller quantity, 6d. per cwt. extra. On the grocery side: Full cream, sweetened, 18s.; machine-skimmed, sweetened, 8s. 3d. per case, basis usual packing.

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

HONEY.—Market generally quiet and prices without material change. Jamaica, white, 48s.-50s.; *good amber to fine pale*, 40s.-47s. 6d.; dark to fine amber, 37s.-40s.; Cuban, pale, 40s.; light amber, 37s. 6d.; San *Domingo*, good to fine, 37s.-40s.; manufacturing, 35s.-36s.; Mexican, 35s.; Californian, 50s.; light amber, 45s. New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d. cwt.

RUBBER.

A moderate volume of business was arranged, and a steady tone resulted. American consumption last month, 40,200 tons. Sheet spot and May sold 7 1/16d. to 7d.; July, 7¼d.; July-September, 7½d.-7 5/16d.-7¼d.; October-December, 7½d.-7 9/16d.-7½d.; January-March, 7⅝d. to 7 13/16d. to 7¾d.; and April-June, 7 15/16d. *London stocks* increased 578 tons; landings for the week, 2,025; deliveries, 447; stocks, 76,118, against 31,127 last year. Liverpool, 122 down; landings, 114; deliveries, 266; stocks, 23,755, against 4,384.

GENERAL.

JUTE.—A slightly steadier tone was observable, sellers showing some reserve in face of reports as to local Calcutta mills resorting to reduced working hours in the near future. But something definite upon this point is awaited. Firsts, April-May also May-June, Continent, quoted £24 12s. 6d.; new, August-September and September-October, £25 15s.; Lightnings, May-June, £23 10s.; August-September, £24 10s.; Hearts, £21 17s. 6d.; Daisee assortment, £23 10s. c.i.f.

HEMP.—Only a comparatively small business resulted, and market ruled easier, as sellers were more prominent. J No. 2, **May-July**, quoted £25 15s.; K sellers, £24 15s.; ditto, August-**October**, £25; L No. 1, May-July, £24 10s.; L No. 2, £23 5s.; M No. 1, **£23 10s.**; M No. 2, £29 15s.; G, May-July, held for £27 10s.; H, £26. **African** sisal dull, and No. 1, May-July, including Portuguese, sellers, **£29 10s.**; No. 2, £28 10s. c.i.f. Manila receipts last week, 30,000 bales, against 30,000 last year, and 22,000 in 1928. Estimate for next week 29,000, and week after 31,000. Manila shipments last week, U.K., 1,000; Continent, 2,000; U.S.A., 3,000; Japan, 5,000; other countries and local consumption, 2,000, making stocks 169,000 bales.

SHELLAC.—Market steady, quiet. T.N., spot, 127s. 6d.; May, 120s.; August, 124s.

COPRA.—A quiet market, and closing *tone easy*. *Straits* S.D., May, to Rotterdam, sellers, £21 10s. Dutch East Indies, May, £21 10s. Ceylon, £22 17s. 6d. To Marseilles, mixed, Dutch East Indies, May, £21 10s. Smoked South Sea quoted £20 7s. 6d. *Manila* bulk, £20 5s. Plantation Rabaul and hot-air dried, £20 17s. 6d.

PALM KERNELS, to Hamburg, April-May, £14 17s. 6d.; May-June, £15 c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 16s. to 25s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43 10s.; Ceylon, *bristle, £18 10s. to £25 5s.*; cinnamon leaf oil, 5s. 6d.; for shipment, May-June, 4s. 6d.; citronelle, Ceylon, 2s. 3d.; Java, 2s. 4d.

METROPOLITAN CATTLE.—May 14.

THE MONEY MARKET.

MONEY this week has been in short supply, and 2¼ to 2¾ per cent. was paid on Tuesday and Wednesday. It is not clear how the stringency arose, and though callings by the clearing banks was the usual explanation, it hardly seems adequate. Possibly the withdrawals of the French balances, which gave rise to the month's gold shipments,

the true cause of the shortage of money. Discount rates were a little higher than they were earlier in the month, three months' bills being quoted up to 2 3/16 per cent. This rise was largely psychological, being due to the gold losses to France, and was checked before it had gone very far by the improvement in sterling registered this week, and by the small supply of bills now in the market. Money also became easier on Thursday.

* * * *

This week's sudden improvement in sterling against the franc coincided with the opening and closing of the subscription lists in Paris for the shares of the Bank for International Settlements. This makes it clear beyond doubt that the preparation for mobilisation of funds by would-be subscribers to the issue was the cause of this month's withdrawals of French balances from London and the consequent loss of gold. These circumstances are dealt with in greater detail in a subsequent "Note," which shows that the total amount of application money paid over to the Banque de France was equivalent to £63,000,000, or to over five times the sum of £11,500,000 which has lately been withdrawn from London in gold. It is understood that the Banque de France is arranging to return to unsuccessful applicants the bulk of their money at once, and the City is consequently wondering what chance there is of London recovering at least a portion of her gold losses.

* * * *

This, of course, is a possibility that must not be ruled out, and some authorities are inclined to hope that some of the gold will eventually come back. It is, however, by no means certain that, even if the funds released after the allotment of the B.I.S. shares are reinvested abroad, gold shipments from France will necessarily take place, or that the gold will not go to Berlin or Brussels instead of London. On the whole it seems wisest to write off the lost £11,500,000 altogether, and for the market to readjust its ideas accordingly. The week's general improvement in the foreign exchanges, which lifted the dollar rate to $4.86\frac{1}{8}$ and the mark rate temporarily to 20.37½ mks., or comfortably above the export gold point, will assist this process of readjustment. For one thing, unless an unknown buyer intervenes, there is a fair chance that the Bank may secure the bulk of next week's Cape gold arrivals of £442,000, though Thursday's reaction against sterling in the Berlin exchange shows that Germany may once more be able to bid for the gold.

	May 1, 1930.	May 8, 1930.	May 15, 1930.	May 22, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	3	3	3	3	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount { Call	1	1	1	1	1½ (May 1, '30)
Houses { Notice	1¼	1¼	1¼	1¼	1¾ (May 1, '30)
Market rate (3 months' bills)	2 5/16	2⅛	2⅛	2⅛ – 3/16	...

The week's Bank return shows that the Bank's gold stocks have fallen to £158,444,000, which is £6,059,000 below the highest point for the year, touched a fortnight before. The shrinkage is due to the French withdrawals, offset to some extent by the final arrivals from Australia. Even so, the Reserve still stands at £63,749,000 and the Proportion at 54¾ per cent., figures which are amply high enough for our needs. This places the gold losses in their proper perspective.

NEW YORK.

Our New York correspondent cables:—Wall Street expects the American portion of the Reparations Loan to give $80,000,000 in actual receipts, with an even larger face-value offering, depending on the price. Morgan's have made an allotment of 16,000 shares of B.I.S. Bank stock among 100 banks at par, the price and number of shares depending on the size and importance of the banks. No public offering is likely. There is a general belief that Hoover will sign the Tariff Bill if it is passed in its present form, and, while it is not liked on Wall Street, there is a feeling of relief at having it settled. The bond market is creeping forward with the further weakening in money rates, but no movement is likely in discount rate in advance of the Bank of England. New capital issues have been fairly heavy, and a Japanese loan was well taken. Brokers' loans fell off 8 millions, 67 millions of subscription stock rights in the week offsetting the other factors. The Reserve System discount rate and holdings of Government securities remain unchanged. Bills are up 15 millions, mostly on sales by dealers under repurchase agreements, while total credit outstanding is up 11 millions, with the ratio at 83.5.

THE STOCK MARKETS.

The week in the stock markets was dull and uneventful. Gilt-edged held their own, with a little to spare. Recent new issues, of high-grade character, were absorbed in satisfactory fashion. Home rails touched low points for the year, in some cases, on further unfavourable gross traffic figures, and Argentines suffered as a result of the decision not to pay interest on Cordoba Central second debenture stock. The public's attitude to industrials was apathetic. Tea and rubber shares were lower on balance, and the undertone of the oil market was less substantial, despite the satisfactory dividends recently declared by some of the leading companies. The mining markets were quiet, but little selling took place.

THE COMMODITY MARKETS.

Industry has been doing little more than mark time. In most districts the coal situation remains unrelieved, but there is a shade of improvement in the Glasgow area. Apart from the plate and sheet sections, the iron and steel trades are doing little business, but it is said that British works are once more displacing Continental producers from the home market for semi-finished steel. Stagnation in the Lancashire cotton industry continues widespread. Owing to the wages dispute, Yorkshire is to a large extent prevented from benefiting from what appears to be a definite improvement in the wool textile trades. The timber trade is active. The hide market is steady, but there is not much bulk business in leather or footwear. Vegetable oils and oilseeds are in general a quiet market. Wheat has gained very slightly on the week.

THE FOREIGN EXCHANGES.

Irregularity with only moderate activity marked the Foreign Exchange market during the week, but at times business revived for short periods, especially in the franc, which fluctuated a good deal. New York, after hesitation, moved in our favour to 4.86⅛. Montreal was better by ⅛ at 4.86⅜. The Paris rate rose from 123.86 to 123.96 for reasons discussed elsewhere. Brussels was weaker at 34.82¾, Lisbon unchanged at 108.30, while Milan lost a point at 92.70. Madrid again fluctuated rather widely, and moved from 39.80 to 39.95, after being as high as 40.00 and as low as 39.64. Amsterdam lost ⅛ at 12.08¾, as did Berlin at 20.36¾ after 20.37⅜. Switzerland moved sharply against us at 25.11⅝, as compared with 25.12¾ last week. Stockholm was better at 18.12⅜. Rio was fairly steady round about 5 7/8d., Buenos Aires lost ⅛d. at 42 7/8d., and Montevideo ⅛d. at 45⅛d. In the Far East the rupee was firmer at 1s. 5 55/64d. The yen was unchanged at 2s. 0 13/32d. Batavia lost a point at 12.08½. In the forward market New York was more wanted at rather narrower discounts of 1/16 and 3/16 cent. Paris went from 7 and 12 centimes discount to 2½ centimes premium for both periods. Milan was a little more in request at 12 and 30 centesimi discount against 13 and 32 last week. Madrid was in better demand at 2½ and 7½ centimos premium, against 1 and 4 last week. Amsterdam moved against us to ⅛ and ⅜ cent discount, and Berlin also improved to 1¼ and 3 pfennigs discount. The silver market saw a fall of ⅜d. in both spot and forward to 18⅝d. and 18 9/16d. respectively, chiefly owing to local exchange weakness in China and lack of support from the bazaars, combined with steady, if small, selling by the United States. The China silver exchanges again declined, Hong Kong losing ¼d. at 1s. 5½d. and Shanghai ¼d. at 1s. 10d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moodys-Economist Services, 6, Bouverie Street, London, E.C.4.

THE GOVERNMENT AND EMPLOYMENT.

THE House of Commons has been engaged most of this week in discussing in one form or another the problem of employment and the state of trade, and in the latter half of the week the resignation of Sir Oswald Mosley, as a protest against the Government's refusal to adopt a more active policy, has precipitated a political crisis which may possibly lead to an appeal to the country. It is true that Tuesday was devoted to the second reading of the Finance Bill, but that debate is to be included in the story of the week, for, although the Bill covers an immense variety of topics, the chief arguments, whether of criticism or of defence, were as to the effect upon industry of the new taxation which the Budget imposes at a time of depression and of difficulty.

It is natural and proper that the House of Commons should concentrate on this problem, for the unemployment figures have mounted week by week, at a time of year when they should be showing some improvement, to the neighbourhood of 1¾ millions, which is nearly half a million higher than six months ago, and, except for a short period during the coal strike, can be compared only with the level reached in 1921. It is true that the sharp set back of trade is a world-wide phenomenon, but this makes it none the less imperative that each country should devote its utmost attention to dealing with its own problem. Speakers of all parties, except those of the extreme Left, concurred in the opinion that, although unemployment might thereby be increased, the rationalisation of industry was essential, and the extent to which quack remedies have gone out of favour was illustrated by the fact that even Mr Lansbury, of Poplar fame, though paying lip service to the doctrine that in the last analysis nothing can cure unemployment short of universal Socialism, concurred in the view that rationalisation was necessary, and clearly implied that it is as impossible to get rid of the burden of the national debt as to abolish the social services. Another section of the House had, of course, their protectionist remedy to offer, but no one was able to explain how this would help our cotton and other export industries, or, if adopted over a wide field, avoid doing more harm than good. Indeed, this discussion moved the *Times* to observe that "neither protectionist nor free trade, neither mainly exporting nor mainly importing countries are immune from unemployment"; and to add that "the percentages of the population unemployed are, in the United States 4.8, in Germany 4.4, and in Great Britain 3.8." We agree with the *Times* that the experience of one country may afford no analogy whatever for dealing with the economic condition of another; it is this consideration which lends point to the request that we should be told how safeguarding can cure unemployment, seeing that the worst of the trouble is to be found in what Mr Kingsley Griffiths called the "quite unprotectable trades."

Effective replies, however, to the socialists, debt repudiators, and the protectionists did not make Mr Thomas's story anything but disappointing, and although he claimed that there are 100,000 people directly or indirectly employed on schemes sanctioned by the Government (independent of the railway scheme) involving a capital expenditure spread over a number of years of £95,000,000, he admitted that anyone who assumed that the problem could be solved by any expenditure of this kind was living in a fool's paradise. Whether this programme has been speeded up as much as possible, whether there has been delay in starting these operations, and whether other specific projects mentioned in the course of the debate could have been more rapidly launched, the discussion did not really elucidate. In the circumstances, the most important point in the opposition case was the argument that the employment problem had been aggravated by the Budget. This was advanced both by those who hold that in present circumstances the Government should suspend its debt redemption programme rather than impose new taxation at all, and by those who are of opinion that Mr Snowden should have added to indirect rather than to direct taxation.

The Chancellor, stating his case far more moderately than many of his supporters are accustomed to do, nevertheless, seems to us to minimise unduly the harmful effects of taxation. Mr Churchill and his supporters, on the other hand, while quite justified in arguing that an increase in income and surtax has some harmful reactions on industry, put their case too high. Nothing has happened since 1927 to lead us to question the conclusion reached on this matter by the Colwyn Committee. Both the majority and the minority of that Committee agreed that income taxes do not directly affect the prices of commodities. They recognised, however, that they tend to diminish savings. To what extent this happens depends on how the money is spent. If the revenue so collected is used for the repayment of debt, it is probably reinvested and is not lost to the nation's total savings. But even this transfer tends to handicap speculative and pioneer enterprise and to increase the resources seeking investment in safe securities. On the whole, the Committee took the view that income tax had not been a factor of major importance in comparison with the wider causes which have affected our export trade. It was quite properly emphasised, however, in the course of the debate, that additional direct taxation, in so far as it falls upon profits set aside to reserve, diminishes the resources which, to use a trans-Atlantic phrase, are "ploughed back" into business, and thus restricts the flow of capital into industry through that channel which experience has proved to be the most suitable and convenient way of developing industrial undertakings.

If Mr Snowden's choice of direct taxes as the source for balancing his Budget has had the psychological effect of awakening the public to the burden of taxation, we have no regrets, for if we realise that we must cut our coat according to our cloth, Parliament is more likely to insist upon applying sound standards of criticism, instead of being carried away by lavish promises, whether in the form of indiscriminate and growing payments under the heading of social services, or the offer of bounties to selected agricultural or industrial interests. While the debate revealed no argument for departing from the policy of paying our way, it underlined very definitely the need of scrutinising expenditure with the utmost care.

But if this is the state of our national finances does this not mean that the task undertaken by Mr Thomas is a hopeless one? At the last general election all parties competed for the opportunity to deal with the problem of unemployment and offered their respective cures. It fell to the lot of Mr Thomas to make good his promise. If we would be fair, we must admit that no Government, however active it had been in this field, could have prevented this country from feeling the effect of the world-wide depression that has since occurred. But it is open to the critics of Mr. Thomas to claim that more could have been achieved than he has attempted, and it is open to them to claim that action could have been taken without involving an undue additional strain upon the resources of the country. The Government has increased and enlarged the range of unemployment benefit, it has loosened the conditions for obtaining benefit and has widened the scope of the pensions acts in cases for some of which, at all events, it is difficult to plead extreme need or urgency. The most valuable idea behind Mr Lloyd George's scheme of a year ago was that instead of adding to the eleemosynary payments which we are to-day increasing, we should set the unemployed to work to produce something of value to the country. Has this sound conception been exploited by Mr Thomas to the extent that the occasion required?

To this question Sir Oswald Mosley apparently returns an emphatic negative. At the time of writing, his memorandum has not been made public, but it is generally assumed that he has proposed a scheme of

capital works involving the expenditure of some £200 millions of capital, coupled with the immediate raising of the school age and the lowering of the pensionable age. His programme has been rejected by the Government on the grounds that the additional money cannot be found for pensions and raising the school age, and that loans of the magnitude proposed required for his public works are impossible to-day. When the full facts are disclosed, it will also probably be found that the great administrative difficulty of getting capital undertakings quickly under weigh were vital considerations in the Government's decision. We may, however, assume that it is the contrast between promise and performance, enormously accentuated as it has been by the downward trend of trade, rather than the nature of the Mosley proposals themselves, that is responsible for the support that he has received and made his resignation a serious menace to the Government.

But it is also clear that no party is as sure as it was a year ago that it can deal with the situation on party lines, and it is significant that the hint in the Commons of an internal truce on the tariff question and a renewed suggestion in the Lords for an all-party conference on unemployment aroused an immediate interest. The idea propounded a year ago that a "jolt" administered by a large programme of public works would reduce a high steady figure of unemployment to a lower level and increase internal purchasing power obviously has to be modified when the country is caught in the swing of a major world-wide recession. But if for the time being we have to deal with a big increase in the numbers of the unemployed, it is surely urgent that we should endeavour to devise some other plan than that of merely maintaining these large numbers in idleness. If only the House of Commons could disencumber itself of the entanglements of party tactics, the emergency should be dealt with by discussion and agreement. It certainly cannot be resolved by arousing again the bitter passions of a General Election.

M. BRIAND'S PLAN FOR EUROPEAN PEACE.

Is there any hopeful method for exorcising war from Europe and establishing peace and confidence for her peoples, other than by drawing together in a closer circle of contact and co-operation? M. Briand, after years of first-hand study of Europe and her problems, long ago concluded that there is not. Last autumn he chose the occasion of the annual Assembly of the League of Nations for elaborating his idea of a United States of Europe, and the result was a unanimous invitation to M. Briand from the twenty-seven European States, represented at the Assembly, that he should draw up a memorandum for presentation to and discussion by the European Governments. This memorandum has now been produced and published.

When M. Briand flew his kite at Geneva, several serious objections were promptly raised. The mere phrase "the United States of Europe" suggested the idea of a close federation connoting a surrender of individual national sovereignties, for which the world is not ready. It suggested, too, the idea of separating the world into hostile economic units, and it even conjured up in some minds the establishment of a rival institution to the League of Nations. Such main initial fears are dissipated by the document issued this week. It is not unity but union—in the sense of effective co-operation—at which M. Briand aims. No sacrifice of national sovereignty is asked. On the economic side customs unity—if the published summary may be accepted—is not mentioned, although, of course, M. Briand's plan might lead logically and eventually to that; in which case Britain in her dual rôle of member of Europe and member of the British Commonwealth would have to think twice or thrice. Finally, as regards the League, the "subordination" of the newly proposed institution to the League is emphasised, and the provision made that only European members of the League should be admitted to the new organisation. Europe, M. Briand proposes, is to be a "regional entente" existing in conformity with Article 21 of the Covenant and "within the framework of the League." The machinery suggested consists of (*a*) an authoritative European Conference representative of the Governments; (*b*) an executive body in the form of a Government Political Committee; and (*c*) a Secretariat. Among the subjects outlined for discussion and co-operative effort are "general economy" (by which is meant the furthering in Europe of the League's economic policy), communications and transit, finance, labour, hygiene, inter-Parliamentary relations, etc.

Were such a plan as that which M. Briand unfolds to succeed in the fullest sense, we should expect two main advantages to accrue. There would be established in Europe the machinery of continuous consultation and co-operation on European problems, such as should prove capable of smoothing out many of those difficulties, misunderstandings and irritations, which so often threaten to be the source of a real menace to the general peace. Secondly, the League, burdened with a volume of world-wide problems, would be the stronger and the more effective for possessing inside its organisation a subordinate League (consisting of its own members) whose exclusive efforts were concentrated on furthering the dual cause of establishing security, and organising economic recovery in just that part of the world where these two problems are the most baffling. If there is any conceivable chance of these two results being achieved, then it is the clear duty, as it is the clear self-interest, of every Government in Europe to make what contribution it can towards bringing M. Briand's dream to fruition. Nor do we see why, if the plan in its initial stage shows sufficient signs of practical possibility, the British Government should withhold any jot or tittle of its maximum support. There are those who think that Britain's co-operation in a Pan-Europa would be awkward for the British Empire. To them we would recall the fact that at this very moment a seat is being kept vacant for Canada on another regional organisation, the Pan-American Union, which, incidentally, does not even happen to be co-ordinated with the League of Nations, although all except three of its present twenty-one members are also members of the League. No one, surely, supposes that when to-morrow Canada takes this seat, the British Empire will be disrupted, or even impaired in prestige. *A fortiori*, there need be no fear for the integrity of the British Empire if, the day after to-morrow, the United Kingdom and the Irish Free State take their seats in a Pan-European Union, specially designed to be within the framework of the League. British interests and European interests point in one and the same direction—always provided that M. Briand's plan approaches the problem from the right angle.

Our first impression is that this condition is amply fulfilled. In the forefront of his "Principles of Organisation" M. Briand puts "the need of subordinating the economic problem to the political." That is obviously right, since the tariff walls which are crippling Europe's economic growth like the thongs that bind a Chinese girl's feet are expressions of political disunity and distrust every whit as much as armaments are. Armaments and tariffs are the greatest problems facing the world to-day, and Europe is the *locus classicus* of both. The task of the League in approaching both these vital problems should be effectively assisted by their initial consideration in a subordinate council chamber where the representatives of the nations most concerned can meet together on common ground. So the angle of approach is right—the political angle. And as to the other reassuring points, which we have mentioned before, the Memorandum insists on the retention of national sovereignty and in terms eschews all hostile or discriminatory aims towards the non-European world.

Here, then, is a scheme which must be taken very seriously, and we trust that the British Government will between now and July 15th (the date by which M. Briand requests a reply) give its full, favourable, and constructive attention to the Memorandum. "It is the decisive hour for Europe," says M. Briand, "to listen and to

choose her fate. To unite in order to live and prosper; that is the necessity which confronts European nations to-day." Flamboyant words, perhaps. But who will be bold enough to deny their justification when he looks out upon a Europe plunged in economic depression, fettered with economic restrictions, impoverished by war burdens, war preparations, and obstructed by the lack of co-ordinated effort? Who, equally, will deny their urgency when he reads in the very newspapers which contained these proposals, the speech of one of Europe's greatest rulers in which armaments and national egotism are held out as the most "beautiful treasures" of a civilised nation. At the psychological moment M. Briand has given the Governments of Europe something concrete to work upon. If there are real statesmen in Europe to-day, his spade-work will not have been done in vain.

SINGLE PREMIUM POLICIES AND THE BUDGET.

To assist the individual in the evasion of taxation is no part of the function of life assurance institutions, and there is little doubt that the great majority of British life offices will welcome the recent action of the Chancellor of the Exchequer in putting a closure to a method of obtaining relief from surtax which has been increasingly popular in recent years.

The main features of the single-premium surtax-saving policy are too well known to necessitate any detailed explanation at this juncture. It will be remembered that the policyholder pays but a small proportion of the premium in cash, the balance being advanced by the assurance company, and the subsequent payments of interest on the loan rank as a charge on income for surtax assessment. Originally the policies usually took the form of short-term with-profit endowment assurances, and, in some cases, of whole-life assurances; and, apart from the high-yielding security obtained, the sur-tax payer obtained a fair amount of life cover. During the past two years, however, a large proportion of the total business of this class has been transacted by certain assurance companies on a pure endowment basis—that is, a policy, usually for a term of five years, containing no life assurance cover at all, but providing for the payment of the sum assured at the expiration of the term with suitable payments on death or surrender in the interim. Thus the policy had no attractive features, save as a means of obtaining relief from surtax.

The popularity of single-premium policies is clearly revealed by the figures in the table from our Insurance Supplement of last year, shown below, which gives the single premiums received for each year since 1924, the year in which the policy made its initial appearance. The figures for the past year are not yet available, but it is almost certain that the increase shown over the period has been maintained:—

	Single Premiums Received. £
1924	3,211,868
1925	7,245,091
1926	6,466,359
1927	9,679,223
1928	11,792,123

It does not follow that the whole of the single-premium policies effected during the past six years have been for the sole purpose of evading surtax, but there is little doubt that a large proportion owed their origin to this reason. From the point of view of the State, the loss of surtax revenue may be conservatively estimated at £500,000 in any one year, although it must be borne in mind that, in the case of policies involving some element of life assurance—endowment assurances, or whole-life assurances—there is some possibility of gain to the Exchequer. Should a claim arise by premature death the enhanced value of the assured's estate would result in an increased revenue through the medium of death duties.

The attitude of the life offices towards the single-premium tax-saving policy has been curiously mixed. As is well known, a large proportion of the total business was completed by one office, but, whereas a number of companies were prepared to accept business of this type, others steadfastly refused to countenance the practice in any shape or form. Perhaps the most general attitude was that of accepting such cases somewhat reluctantly at a slightly higher rate of interest than that normally charged for loans on policies.

The increasing popularity of the single-premium tax-saving life policy, coupled with the innovation of the pure-endowment type, naturally caused anticipation in the minds of life assurance officials of action by the Inland Revenue authorities. During the past few months it was a fairly open secret that the Treasury were examining the whole question, and it was, therefore, no surprise to the life offices in general when Mr Snowden revealed in his Budget speech that the loophole was to be closed.

In his speech, however, the Chancellor, while stating in no uncertain terms that steps would be taken to prevent any further relief by this means, left the exact provisions in some doubt, with the result that it was uncertain if his proposals were to be retrospective, or if they were to affect only policies taken out in the future. With the appearance of the Finance Bill, however, all doubt is at an end, and, if the terms of the Bill in their present form become law, there is little doubt that a large number of surrenders will inevitably follow.

Under Clause 12 of the Bill no deduction is to be allowed in computing the total income in any one year for the purpose of surtax in respect of interest on any loan which has been applied, directly or indirectly, towards the payment of a single premium in respect of a life policy or any similar contract. This is applicable equally to policies

already in existence as well as to policies effected in the future, provided, in the former case, that the loan was originally advanced by the insurance company. It is also intended that certain annual-premium contracts shall be brought within the scope of this Section, and it is definitely stated that any interest on borrowed money applied towards payment of premiums for whole-life or endowment assurances where the premiums are limited to a period of less than eight years, or where the premium payable in any one year exceeds 10 per cent. of the sum assured, is ineligible as a set-off for the purpose of surtax assessment. Finally, there is a provision, the effect of which is apparently to continue surtax relief on annual-premium policies otherwise excluded to the extent only, however, of interest of £100 per annum.

It will be seen that the terms of the Bill are extremely comprehensive, and, in our opinion, too drastic. We are forced to the conclusion that the Chancellor, in his efforts to eradicate an evil which, as we have shown, is relatively small in its effect, has laid himself open to a charge of unwarranted interference in the normal sphere of life assurance. If the actual figures could be obtained it is probable that, excluding the pure-endowment "tax-saving" policy, and bearing in mind the compensating gain through increased revenue from death duties, the actual loss to the Exchequer through the medium of the ordinary life assurance single-premium policy, would be found to be ridiculously small. The case against surtax-saving policies is thus based more on political grounds than on grounds of loss of revenue. It would, of course, be difficult to provide any adequate defence for the continued existence of the pure endowment single-premium policy; but it is doubtful if the Chancellor would not have been better advised to confine his attention to this particular type of contract and possibly to the short-term endowment assurance. All other forms of single-premium policies contain the element of life assurance to such an extent that this, in itself, should constitute a sufficient reason for leaving their position unchanged. The suggested clauses regarding annual premium contracts will be even more strongly resented by all connected with life assurance, and it is difficult to see any justification for their inclusion. In this connection we are forced to exclaim at the unnecessarily tortuous and complicated phraseology of the entire Clause, and particularly the use of the double negative in describing the modifications in favour of certain classes of annual-premium contracts. While we realise the necessity for adequate safeguards in a measure of this nature, the general effect is to render the particular clauses relating to annual-premium contracts almost unintelligible.

INTERNATIONAL MOVEMENTS OF CAPITAL.

One of the most satisfactory symptoms of the diffusion of economic knowledge is the steady transference of public interest from the merchandise balance of trade to the balance, visible and invisible, of payments. The question of the total balance of payments has been of particular interest during the last few years, when immense international transferences of capital in respect of reparations and inter-allied debts have had to be provided for, and when, further, some countries of first-rate economic importance, as, for example, Germany, have had an insatiable hunger for foreign capital, while others, France, for instance, have had a large volume of capital available for investment abroad. To this growing interest in the subject corresponds a steady improvement in the substance and arrangement of the data collected each year by the Economic Section of the League of Nations,* which are now presented in a form which renders them more nearly comparable.

The position, on balance, in respect of capital movements and interest payments, of some of the principal countries is shown in the following table, which is based on a much fuller table in the Memorandum. Comparison of the last two columns shows that Britain made a net addition to her investments abroad of $725 million, as compared with interest received from abroad of nearly double that amount. America, on the other hand, invested much more than she received as interest:—

Capital Movements and Net Payments on Account of Interest and Dividends in 1928.

(f) Net change only. funded public debt
(g) Year ended September 30, 1928.

Of all the countries whose official estimates were available to the League, only the United Kingdom, the United States, Holland, Switzerland, the Irish Free State and Sweden enjoy a net income from foreign investments, but a private estimate quoted by the League places French net interest receipts for 1928 at 137 million dollars, which would give her third place in the list. The United Kingdom is by far the biggest recipient, though the figures given are not comparable with those of other countries, as they exclude interest on short-term investment and outstanding Government debts. It is pointed out in the Memorandum that the British income on account of private long-term investments alone covers one-third of Europe's passive balance of merchandise trade as recorded, and a larger proportion of that balance as it would appear if allowance were made for defects in trade statistics. The net income of the United States on interest account rose by $100 million during the period 1923-28. The chief outlets for British capital are the British possessions in Asia, Africa and Oceania, though the share of South America is rapidly growing. United States lending is increasingly directed towards North and Latin America, whose combined share rose from 10 per cent. in 1924 to 32 per cent. in 1929, while the proportion lent to Asia and Oceania declined in the same period from 28 per cent. to 5 per cent.

The majority of countries are debtors, and those with the biggest interest charge are India, the Dutch East Indies, the Argentine, Australia, Germany and Canada. The following table illustrates the burden of interest charges:—

Net Interest Payments (−) or Receipts (+) per head of Population in 1927.

	$		$
Australia	− 26·0	Hungary	− 2·4
New Zealand	− 27·2	Germany	− 1·9
Canada	− 22·7	Poland	− 0·8
Argentina	− 16·0	Japan	− 0·1
South Africa	− 10·4	U.S.A.	+ 5·7
Norway	− 5·7	U.K.†	+ 30·4
Denmark	− 3·8		

† Private receipts on account of long-term investments only.

Brazil, Cuba, Chile, Bolivia and China also have very high interest payments.

There have been some noticeable changes during recent years. Canada, who owes more than any other country, has been steadily reducing her indebtedness since 1923. France is believed to have been exporting about $500 million annually in 1925-27, but this movement received a check in 1928, when large quantities of gold were imported, and French exports of capital were presumably again low in 1929, as the trade balance was passive and there were heavy flotations on the home market. Sweden, from a capital-importing country in the years immediately following the war has now become an exporter of capital.

The two latest years for which data are available, 1927 and 1928, were years of exceptionally voluminous capital movements, as the following table shows:—

Net Outflow or Inflow of Capital in Dollars per Head of Population.

	1925.	1926.	1927.	1928.
Australia*	+ 0·1	+ 29·9	+ 9·2	+ 42·7

* Years ending June 30th. Funded public debt only.
† Years ending September 30th. ‡ Year ending March 31, 1928.
§ Private estimate.
‖ Excluding Government transactions. Figure for 1925 probably too low.

Particularly conspicuous is the increase in Australian borrowing, upon which we have had occasion to comment before, while Germany, Norway and Hungary also, in a less degree, expanded their borrowings during the two years in question. New Zealand, on the other hand, in 1927-28 turned a heavy inward capital movement into a small export. This was achieved partly by heavy purchases of foreign securities and still more by substantial short-term lendings abroad.

The movements are mainly dependent on the supply of capital from the chief lending countries, and whereas the net capital export of the United States and the United Kingdom was in 1926 abnormally small, in 1928 that from the United States more than doubled and that of the United Kingdom increased by nearly one-third. It was not until 1929 that European money began to be attracted on a large scale to New York for participation in the Wall Street boom, so that next year's Memorandum may be expected to show some interesting changes in capital movements.

The other invisible elements in world trade show no very marked changes. Shipping earnings in foreign traffic show a decline in 1928 as compared with 1927. No returns for the calendar year are, however, reproduced for the United States. Total maritime freight earnings for the world in 1927 are estimated at something over $2,175 million, of which $1,615 million were earned by European ships. Approximately $350 million of the total was represented by passenger fares. Emigrants' remittances to those countries which made returns for 1928 were in most cases substantially higher than in 1927. Tourist expenditure was also considerably higher in 1928 than in the preceding year, for which the world total under this head is estimated at well over $1,150 million.

These figures are all subject to a wide margin of error, but on the basis of them it is possible to make a rough estimate of the proportion of world payments which arose from "invisible" items of trade in 1927. Interest and dividend payments of twenty-eight countries alone, not including those of the United Kingdom, amounted to nearly $2,000 million. This, with $2,175 million for shipping earnings, $300 million for emigrants' remittances from Canada, the United States and the Argentine alone, and $1,150 million for tourist expenditure, brings the total up to $5,625 million, and every item in this total is substantially underestimated. World exports of merchandise for that year amounted to $31,308 million, so that if bullion movements be excluded, invisible items gave rise to something very much more than 15 per cent. of total payments. That the ratio might be somewhere in the neighbourhood of 20 per cent. is suggested by the following table, based on totals which include movements of bullion:—

Percentage of Total Payments and Receipts on Revenue Account formed by "Invisible" Items in Latest Available Year.

	Credit Payments. (Exports). % "Invisible."	Debit Payments. (Imports). % "Invisible."
Argentine	1	22
Canada	28	34
Czechoslovakia	11	13
Denmark	11	7
Germany	12	21
India	3	19
Holland	14	1
New Zealand	6	21
Sweden	15	4
South Africa	3	23
United States	23	26

Unfortunately the British estimates only show for each item the balance between debits and credits, so that the figures cannot be compared with those of other countries, and world totals are seriously impaired by the omission of the British figures. It is high time that individual countries should take a hint from this careful analysis by the League, and do everything in their power to present items which represent over one-fifth of the international balance of payments with the fullness and accuracy that they deserve.

THE NEWSPRINT SITUATION IN CANADA.

(BY OUR OTTAWA CORRESPONDENT.)

The pulp and paper industry of Canada passed through a somewhat critical year in 1929. A drastic reduction in the price of newsprint, which was the fruit of overproduction, seriously affected the prosperity of the industry, and the stocks of all the companies manufacturing it suffered a sharp decline. It is true that, during the year, the newsprint mills operated at 85 per cent. capacity, as compared with 82 per cent. in 1928, and the aggregate output showed an increase of, roughly, 15 per cent., but the profits earned by most of the mills showed a serious falling off, and practically nothing was available for the common stockholders of several important companies. Newsprint comprises the bulk of the exports of paper products, and the exports of it showed a gain of over 15 per cent. in volume, although their gain in value was only about 5 per cent. The United States, which takes most of Canada's newsprint exports, was responsible for part of the increase, but exports to Britain and other parts of the Empire rose about 60 per cent. One notable feature of the year was Canada's increase in her lead over all other countries as a producer of newsprint. In 1928 the production of Canada's newsprint mills exceeded that of American mills by 67 per cent., but last year the American output was only half the Canadian. The subjoined table, which gives details of the output, exports and imports of newsprint of the different countries of the world gives some indication of Canada's commanding position in this particular field:—

	Products.	Exports.	Imports.
Canada	2,729,000	2,511,000	...
United States	1,392,000	19,000	2,421,000
Great Britain	636,000	108,000	408,000
Germany	623,000	172,000	...
Japan	286,000	57,000	...
Sweden	275,000	216,000	7,000
Newfoundland	256,000	258,000	...
Finland	215,000	191,000	...
France	210,000	13,000	214,000
Norway	189,000	184,000	...
World total (including other countries)	7,308,000	3,851,000	3,239,000

But in recent months the problem of over-production has been aggravated as a result of the business recession in the United States, which provides the market for about 90 per cent. of Canada's output. The setback has been responsible for a considerable decline in advertising during the first quarter of the present year, and newspaper publishers have felt it necessary to cut expenses through a reduction in reading matter. Accordingly, not a few

* "Memorandum on International Trade and Balances of Payments, 1926-28. Volume II.: Balances of Payments." Geneva. 6s.

American papers are substantially smaller than they were a year ago.

As a result of this situation, Canada's exports of newsprint for the month of March, valued at $12,918,086, although they were 3½ million dollars above the figure for February, which is always low, showed a decline of $2,694,656, or 16 per cent., compared with the figure for March, 1929. The total volume of newsprint production for the first quarter of the present year, given by the Bureau of Statistics as 602,934 tons, is rather less than the 624,538 tons produced in the first quarter of 1929, and is far below the 733,968 tons which were produced in the last quarter of 1929 before the effects of the business recession began to manifest themselves. The newsprint manufacturers have reduced wages and resorted to all sorts of economies, but they still insist that they are unable to make adequate profits, and the records of the newsprint stocks indicate the pessimistic view of their plight still taken by the Stock Exchanges.

The newsprint industry of Canada is now dominated by three large corporations, the International Paper and Power Company, which is controlled from Boston, the Abitibi Pulp and Paper Company, in which a Chicago group is heavily interested, and the Canada Power and Paper Co., which is under the ægis of the Holt-Gundy group of Montreal. There still remain outside a number of smaller companies like Price Bros., the Brompton Pulp and Paper Company, and the Mersey Pulp and Paper Company, which recently began operations at Liverpool in Nova Scotia with the advantage of a mill on tidewater, but their contribution to the aggregate annual newsprint output is negligible compared with that of the three great corporations.

Last autumn the Canadian newsprint manufacturers made a concerted effort to secure an increase in the price of newsprint to around $60, and their attempt was strongly backed by the provincial Premiers of Ontario and Quebec, who took the ground that, since many of the pulpwood limits were Crown lands, they were justified in interfering to ensure returns for the industry which would enable it to pay decent wages and offer a reasonable standard of living to its workers. At one period the two Premiers hinted at price-fixing legislation, but they did not persevere with the idea. The newsprint manufacturers might have gained their increase if they had been able to present a solid front, but the International Power and Paper Company had committed itself to contracts with the Hearst newspaper interests for large supplies of paper for several years at a price which is said not to have been much above $52. The other American publishers were naturally averse to paying a price substantially higher than what the Hearst papers were paying, and when they stood firm against the manufacturers' demands, and found support from the newspaper publishers of Canada, the producers had to capitulate and accept a price of $55.20. They would only make it a provisional bargain for the first months of 1930, and have intimated to the publishers that the arrangement would terminate at the end of June. There have been frequent conferences in New York and Montreal between the newsprint manufacturers and the publishers, but so far no agreement seems to have been reached. The producers want an increase of $5 per ton; they claim that the heavy capital expenditure entailed for a newsprint plant makes it necessary to maintain a high operating ratio if a reasonable return on the investment is to be earned. They aver that the operating ratio of 85 per cent. which prevailed in 1929 was poor enough, but coincident with the lessened demand there has been an increase in daily capacity, and, during March, the newsprint mills were only able to operate at the very low ratio of 68.4 per cent. They argue that, as the United States is every year becoming more and more dependent upon Canada for its newsprint supplies, it would be better for the consumers to meet them halfway and permit a higher price which will enable them to tide over their present difficulties. They hold that, in view of the rapid depletion of the forest resources of North America the Canadian mills will sooner or later be able to demand and get their own price for newsprint, and that it would pay the newspaper publishers in the long run to remain on amicable terms with them.

The publishers, on their side, in opposing a price increase contend that business conditions do not warrant it at the present juncture and that it cannot be considered until there is a real revival of prosperity and an increase of advertising revenue. They also make the accusation that the capitalisation of a number of the producing companies is too high in relation to the actual capital invested, and they feel no obligation to furnish revenues for the payment of dividends upon watered stocks. In the latter charge there is some justification as at different times a good deal of water has been injected into the stock of various prominent newsprint companies, and there has been a peculiar recklessness about the expansion of the newsprint industry in recent years. Now, although it is a belated move, the provincial government of Quebec, which controls more pulpwood limits than any other administration, has announced its intention of permitting the establishment of no more newsprint mills until the output of the existing plants can be profitably disposed of.

Meanwhile the *Financial Post of Toronto* suggests that the price dispute between the publishers and the producers should be settled by a board of arbitrators who would command the confidence of both parties. The newsprint manufacturers would probably be agreeable to a compromise, and, apparently, they have put forward a tentative proposal for an advance of $1 per ton on July 1st and a further rise at the end of the year to $57.50 per ton. Lately, in the hopes that some such compromise might be reached, there has been an upward movement of the stocks of some newsprint corporations, but there is little confidence behind it, as even an increase of $2.30 per ton would not enable most of the newsprint mills to pay dividends upon their common stocks after making proper allowance for depreciation and reserves. So the prospects are that the holders of Canadian newsprint stocks will have to cultivate patience and await the revival of real business prosperity in the United States before they can hope for adequate returns on their investments.

But there is one alleviating feature in the situation. It happens that each of three great newspaper companies are owners of very valuable power sites whose development and utilisation ought to yield very substantial revenues. The International Paper and Power Company has been responsible for gigantic power developments on the Gatineau and other rivers and has been able to dispose of its power at profitable prices. Now it is announced that the Abitibi Company is turning its attention to its power sites on the Abitibi River and has entered into a contract with the Hydro-Electric Commission of Ontario under which the latter will buy 100,000 horse-power which the company will develop at Abitibi Falls. Under competent management the power resources of the newsprint companies should become a steadily-increasing source of revenue and, unlike pulpwood limits, they are not of a wasting character.

THE STRUGGLE FOR FREER TRADE.

The tardiness with which tangible results have followed the tariff reduction recommendations of the World Economic Conference has caused increasing anxiety in many countries and much hard thinking as to methods of achieving progress. Interest is most active in the low-tariff countries, as is shown by the following article, which comes to us from an experienced Scandinavian observer.

When in 1927 the Economic Conference proclaimed that it would be in the interest of the world as a whole and of the individual countries to reduce economic barriers and to move in the direction of freer trade, public opinion in Scandinavian countries generally and wholeheartedly supported this proclamation. These countries themselves have more rigidly refrained from introducing new, or increasing old, protective duties than any other group of nations. They have, no doubt, on the whole benefited from their policy—a fact of which they are fully aware—but at the same time certain branches of their economic life are suffering from the many protective measures introduced in other countries, and in particular from the dumping practised by them. Those who suffer naturally ask for protection; and public opinion is beginning somewhat to waver, and to wonder whether it is right simply to do nothing in the face of the destructive measures introduced by other parties.

Hitherto Scandinavia has waited to see what might come out of the work for economic collaboration in Geneva; but after the failure of the tariff truce conference, to achieve a real tariff holiday, as proposed by the President of the Board of Trade of Great Britain, faith in the League's work on present lines in the economic field is being shaken. The League tries to work by the common consent of all interested parties. But a reduction of tariffs will probably never be effected if the League has to wait for the approval of those who are shielded by tariffs and who think they benefit from them. Probably such a change in economic policy can only be achieved after a fierce political struggle, in which those who would benefit from freer trade must make their contribution and work through their political representatives. That a body of experts in Geneva should be able to effect this change is not to be expected. Geneva can provide the machinery for negotiations; but it can hardly itself take the initiative in these controversial questions, particularly since there will have to be a struggle within each country, and the League can scarcely take it upon itself to provoke such struggles.

But if Geneva cannot act effectively, who can? It would seem that those governments who are really interested in the advancement of freer trade must boldly take the initiative. There are strong reasons in favour of common action on their part, and there is particularly one question that would seem to be suited for such common action—the question of measures against dumping. The practice of dumping is not always harmful to those who receive the dumped goods. Manufacturing firms in Holland and Switzerland and even in Great Britain have benefited in the past and benefit to-day from the fact that they get their raw materials at a lower price than their German competitors. But it cannot be denied that in many cases dumping is really damaging. It can, for example, be very disturbing to normal industrial activity if it is intermittent; and a guarantee that the foreigner will always supply the dumped goods at a low price can, of course, never be given. In the end, when the "dumper" has destroyed the production of a particular commodity in the country in which he dumps, he may increase the price and recoup himself at the expense of the consumer.

To the economic harm which may be done by dumping should be added the psychological harm. Dumping is generally carried out with the aid of a tariff. The low price charged abroad is the result of export premiums. Sometimes—as in the case of agricultural produce exported from Poland, Germany and France—there are open export premiums. The agriculturalist in the importing countries must feel it very unfair that his competitor should be able to reduce his price with State aid. It is this complaint of unfair competition which makes the strongest impression on public opinion, at least in a country like Sweden. "Unfairness" becomes the best weapon in the armoury of the protectionist.

But can nothing be done against this dumping? Experience in those countries which have tried to introduce anti-dumping measures—*e.g.*, Canada—shows that such measures are of little or no avail when taken by a single country. For any effect to be achieved, several countries must act together. In a proposal regarding the agricultural position put forward last January to the Diet by the Liberal Party in Sweden it was suggested that the Swedish Government should get into touch with other Governments with a view to some common step against dumping. No details of the proposal were given; but the idea would seem to be that the freer trade countries in Europe, such as England, Sweden, Holland, Belgium and perhaps Switzerland and Denmark, might make it clear to those countries which are dumping that the dumping will not be tolerated. Poland, Germany and France might be informed that, unless they themselves stopped dumping, which they could do in several ways, the protesting countries would take countervailing measures. These countries can point to the system adopted in the Sugar Convention of 1902. In this convention the protective duty on sugar was limited to an equivalent of six gold francs per 100 kilogrammes. If a country had a higher duty, as Sweden and Italy had, it was not allowed to export sugar in any form.

To-day the three countries who, by means of protection, subsidise their export trade, might be asked to refrain from export in all cases where the protection granted is equivalent to an export subsidy.

If the exporting countries refused to agree to an arrangement corresponding to that of the Brussels Sugar Convention of 1902, then the protesting countries would have to carry out their threat. That would mean, *inter alia*, giving up the most-favoured-nation clause, as measures taken against some countries would not automatically and equally apply to all others. The Scandinavian countries have stood out for this clause more strongly than anybody else. But if no progress is made in the work for collaboration on the basis of this clause, it may be better to let the clause go. It may even be that the countries in favour of free trade must get together and investigate whether, in common action against the high protectionist countries, they may not even consider it advantageous to take some measures *de combat*.

Some years ago it was suggested in Geneva that the different countries should be classed in different groups according to the height of their tariffs, and that any reduction of a duty by a given country should automatically apply only to countries in the same or lower groups, and should thus be withheld from countries which have very high duties. That would mean that any country which was contemplating an increase of its tariff would have to consider whether such an increase would bring it into a new group and automatically subject its export industries to higher duties in foreign countries. The disadvantage of such a contingency would naturally tend to make exporters resist an increase in the tariff. As matters stand at present, exporters often fail to appreciate that they are in any way affected by an increase in import duties in their own country. Under the proposed plan their real interests would be brought home to them more clearly. Each nation would have to consider the repercussions of any modification of their commercial policy—how it would effect their relationship with important producing countries on the Continent, with the various members of the British Empire, and with the United States.

The latter country would probably be included in the group of the highest tariff countries, and its manufacturing industries, which export a part of their produce, would no doubt, if any scheme of the kind suggested came into operation, be subject to higher duties than the same products from countries with a low tariff or none. It should, however, at the same time, be pointed out that the U.S.A. might stand to gain from measures taken against dumping of agricultural produce. In the present state of the market, with a demand for cereals which remains stationary or expands very slowly, the export of wheat, etc., at artificially low prices from Poland, Germany and France is to the disadvantage of the agricultural sections of great cereal-producing countries, such as the U.S.A., Canada and the Argentine. For these countries it would also be very necessary to consider all aspects of the problem before they decided in favour or against the measures taken in common by the "freer" trade countries.

It is not with any satisfaction that one contemplates the introduction of such a complicated commercial system as that to which the giving up of the most-favoured-nation clause treatment would lead, but it is worth considering whether it may not be more advantageous in the long run to follow a road, however risky and difficult, which holds out some hope in the future than to accept placidly the present conditions. It would, therefore, seem to be high time that those Governments which have the same interests should come together to deliberate on these questions, and on the possibility of common action.

Notes of the Week.

Lord Beaverbrook and Mr Baldwin.—As we recorded last week, Mr Baldwin, in his recent speeches, has reaffirmed that the official policy of the Conservative Party is to exclude food taxes from the programme for the next General Election, leaving that question to be decided by a subsequent referendum in the case of a Conservative victory followed by a bargain with the Dominions on Imperial trade. Lord Beaverbrook, having long ago declared this to be unsatisfactory, has become increasingly restive, and has now taken the definite step of rejecting the referendum proposal. So the rift in the Conservative lute becomes complete. Mr Baldwin continues to tour the country with his "Home and Empire" campaign, outlining a policy which the *Times* describes as consisting of "the immediately practical policy of Safeguarding with a postscript paying tribute to the desirability of the slower and more difficult policy of Empire Free Trade." Not unnaturally, the relegation of his policy to a "postscript" is resented by Lord Beaverbrook, and a battle royal has been joined between the two camps into which the Conservative Party is divided. Upon the result depends the fate of Mr Baldwin as leader and probably the fate of the Conservative Party for the next ten years. For who can believe that a Party going to the country with the "stomach tax" would have any chance of victory in these days of adult enfranchisement? Meanwhile, the eternal public discussion of the fiscal question continues. This week the House of Lords has taken its turn, and on Wednesday night debated a motion by Lord Elibank advocating an "omnibus" policy of Safeguarding, anti-dumping and Imperial economic unity—or, in other words, a whole-hogging policy of Protection and Preference. The debate, in which Lord Melchett and Lord Beaverbrook supported the motion and Lord Arnold resisted on behalf of the Government, proceeded for the most part on familiar lines. But it threw up one new and rather significant feature. The Marquess of Huntley proposed an amendment calling for a non-Party conference of all Parties to investigate causes of and remedies for unemployment, and Earl Beauchamp accepted the idea as one that commended itself to Mr Lloyd George and the Liberal Party. With the Labour Government in trouble over the unemployment problem and the Conservative Party split over their policy, Mr Lloyd George may not be the only political leader who finds the Marquess's proposal attractive.

Two Voices from Italy.—Fascismo is like the Scriptures: you can find authoritative texts in the Law and the Prophets for almost any doctrine you choose. Sometimes it is the Duce himself who utters both texts in a pair of—are we to say "complementary" or "contradictory"?—pronouncements. Sometimes the oracle comes in a kind of antiphonal chant—the prophet saying one thing and some trusted disciple the other. This was the method adopted in the latest revelation, which was inaugurated by Signor Grandi on May 8th in the Chamber at Rome and concluded by Signor Mussolini on the 18th at Florence in the Piazza delle Signoria. Signor Grandi's part was reasonable and precise and European, Signor Mussolini's was flamboyant and vague and Italianissimo; and for the ignorant man in the street, whose ear is untrained to this futurist kind of political music, it is extraordinarily hard to harmonise the two voices and apprehend any common theme. Signor Grandi was rendering an account of the Reparations Conference at the Hague and of the Naval Conference in London; and *à propos* of the former he emitted a sentiment which could not be improved upon by the best friends of peace and reconstruction. "The treaties," he submitted, "are not eternal; but if we wish that they should endure for as long as possible it is necessary to adapt them gradually and in good time with a sense of justice to new needs and new realities." Again, he explained Italy's participation in the Naval Conference of 1930, in contrast to her abstention from the Conference of 1927, by the conclusion, during the interval, of the Multilateral Treaty of Paris for the Renunciation of War as an Instrument of National Policy—thereby publicly attributing, on behalf of Italy, that same fundamental importance to the Kellogg-Briand Pact as has been attributed to it, on behalf of the United States and Great Britain, by President Hoover and Mr MacDonald. On concrete points, his disappointment at the French reception of the Italian proposals of last autumn for Franco-Italian preliminary discussions was not unjustified; his concept of "parity" as an expression of mutual trust and not a mathematical formula showed that he had got to the heart of the matter; and in sustaining the thesis that naval needs are not "absolute" but "relative," he was taking what, to the mere layman, is the reasonable point of view. The one serious stumbling-block in his speech was his insistence upon reckoning by "global tonnage"; but such questions of technical methods are eminently amenable to adjustment. In fine, Signor Grandi's speech—closing on the note that Franco-Italian co-operation was essential for Europe's recovery—was an admirable overture to the publication of Monsieur Briand's plan. And then, on the very day on which this French proposal for achieving European solidarity was published, the other voice in the Fascist antiphony blared out: "The Italian people, rather than remain prisoners within the sea that once belonged to Rome, would be capable of sacrifices far beyond the common." "To-morrow you will see an armed review of impressive character . . . because, although words are beautiful things, rifles, machine guns, ships, aeroplanes and cannon are still more beautiful . . . ." What is bewildered Europe to make of the Grandi-Mussolini duet?

The Week's Events in India.—The past week in India, like the second act of a five-act tragedy, has contributed no essentially new development, but has seen an intensification of the forces and activities already at work. At the end of last week Mrs Naidu, the wearer for the time being of Mr Gandhi's mantle, started for Dharasana with some fifty *Satyagrahas*. Stopped by the superintendent of police with a force of some sixty strong, she refused to retreat, and finally fell to writing letters by the roadside, where she remained for over twenty-four hours. Ultimately some 224 volunteers were arrested and remanded for a week, and on Wednesday, after a mass attack two thousand strong on the salt pans, Mrs Naidu and some of the other leaders, including Mr Gandhi's son, were arrested. Meanwhile another salt raid, which the police were not sufficiently numerous to prevent, took place at Wadala, and led to the arrest of over four hundred persons, though the police apparently only arrested those individuals who made it quite impossible for them to do otherwise. A bomb outrage at Moultan, in connection with the attachment of a shopkeeper's property for the payment of water tax, led to 40 arrests, and bombs were also thrown in an attack on the police in Madras. This growth of mob violence, with increasing use of explosives and the consequent necessity for the employment of force by the police, is a disquieting feature of the situation. Indeed, a change in the policy of the Government is possible as the result of the decisions at Allahabad of the Working Committee of the Congress, which has practically abandoned its profession of non-violence and has decided to organise more open rebellion in defiance of the law. Its resolutions include a boycott of foreign cloth and of British financial, insurance and shipping companies, and propaganda for the non-payment of taxes. In consequence the Government, which has hitherto treated the Congress policy as not intrinsically unlawful, is said to be considering the question whether the Congress has now forfeited all claim to the protection of the law, and whether the movement should not be resisted by every possible means. An official inquiry into the Peshawar riots is to be held by Mr Justice Shah Muhammad Sulaiman, of the High Court of Allahabad, and Mr Justice Panckridge, of the High Court of Calcutta. A court of inquiry has already found that the misbehaviour ascribed to a certain regiment at Peshawar was confined to two platoons, which are to be dealt with by the normal procedure of military law. The situation in Peshawar city is now said to be normal. Twenty-three persons have received court-martial sentences for breach of martial law at Sholapur, but the rumours of atrocities alleged to have been perpetrated during the Sholapur riots are officially denied by the Bombay Government. Meanwhile various bodies have continued their discussion of the situation. Early in the week the Council of the National Liberal Federation issued a statement defending Mr Gandhi's policy but alleging that the response it provoked was due to economic and political discontent brought about by the present irresponsible system of administration. The statement expresses disapproval of the Press Act and urges a cessation of the civil disobedience campaign on the one hand and a release of political prisoners on the other, to be followed by a conference between the Viceroy and the Indian leaders. The following day the Committee of the All-Parties Conference concluded its sittings and issued a communiqué to the Press in which it declared that no decision of the Simon Commission could affect its views on the communal question and on the general problem of minorities, which must be settled in order to arrive at a maximum amount of agreement on questions of a purely constitutional character. The communiqué concluded with an appeal for co-operation among the leaders of all parties. A sub-committee was set up to report by the end of June on the settlement of the Hindu-Moslem question and the problem of minority communities. These two announcements suggest that, in spite of the contagious character of the mob outbreaks increasingly reported, responsible Indian opinion must ultimately make its influence felt on the side of an amicable settlement.

The Ecclesiastical Dispute in Malta.—Light is thrown upon the possibilities of settling the ecclesiastical dispute in Malta by the materials for a concordat with the Vatican which were prepared about a year ago and were published on May 16th in the *Malta Government Gazette* by permission of the Governor. It should be noted that these materials were produced by the Maltese Ministry (Malta now possessing "semi-Dominion status") in consultation with the Apostolic Delegate, and that His Majesty's Government in Great Britain were in no way responsible for them. In these drafts it is declared that the idea and intention of the proposed agreement is to establish the Church's independence in all spiritual matters consistently with the position of Malta as a British dependency and a self-governing member of the British Empire. And to an outsider it would appear that this dual object would be achieved if the draft terms of agreement were brought into force. The general basis of agreement seems to be the reasonable one that the secular power should not impugn the ecclesiastical power's claim to jurisdiction in the strictly ecclesiastical field, while in return the ecclesiastical power should undertake to exercise its traditional prerogatives in certain specific matters on the borderline between the two spheres in such a way as to avoid embarrassing the secular power in the discharge of its secular functions. Under the old Crown Colony *régime* in Malta, an understanding between the British Government and the Vatican appears to have been completed in 1889 as the result of a special mission to Rome undertaken by the British Governor of the day. The situation has, of course, been altered since the war by the grant to Malta of a large measure of responsible parliamentary government; since this has opened up a new domain of public affairs in which the respective prerogatives of Church and State are at present unregulated by any agreement between the two powers. It was precisely here that the trouble arose—the Maltese prelates having taken measures, and effective measures, to influence the Maltese elections in order to bring pressure to bear upon the secular power in a dispute between Church and State over their respective powers in a case of ecclesiastical discipline. It is principally with this new field of affairs that the drafts for a concordat deal, and this in the only possible manner, that is, by providing that the hierarchy shall abstain from interference in politics, while incidentally certain just claims of the Church on minor matters are conceded by the State. Now these proposals were drafted by the Maltese Ministry and the Apostolic Delegate in consultation; the Apostolic Delegate appears to have expressed the personal opinion that a definite formal concordat was desirable; and the Governor appears to have suggested to the Foreign Office that negotiations should be started at an early date. But all this was a year ago, and meanwhile troubles have not ceased. Who is responsible for this delay—a delay from which all parties concerned have been suffering?

Dr. Nansen and the League.—A Geneva correspondent writes:—Dr. Nansen was one of the most beloved of all who came to Geneva on the business of the League. "This brave, just and compassionate man," as the Secretary-General so well described him, with a physique and personality of the finest steel, was a delegate at every Assembly. No institution could wish for a better personification of its purpose, and it was his honour that the League benefited not only by the practical services he rendered it, but also by the respect which his name everywhere commanded. In the end, his fame was as much that of a League of Nations man as that of a distinguished explorer. He obviously brought the same qualities to bear in both reputations. He was a pioneer in making the letter of the Covenant a living reality. Neither during the Corfu affairs, the disastrous period of the Special Assembly, nor at any other crisis did he fear to step on diplomatic corns. If he felt there were things that needed saying, he said them. He considered an obligation to be an obligation; he applied to everything the standards of personal honour and decency, and feared no one. It was typical of him that in the days before Germany was a member of the League he not only advocated her membership, but went off to Berlin to try to persuade the German Government to apply for admission. It was not everywhere appreciated at the time; perhaps it was diplomatically premature. But it was obviously right, and he went for it, quietly but unswervingly. The unique fact about Dr. Nansen's great services to the League is that he not only played his part in shaping the organisation, but he also did what might be termed important field work for it. It is for his unflagging zeal and resource on behalf of war prisoners and refugees that he is best known, and it is there that his impulse to decisive action had its main outlet. Even before the first Assembly he had started, at the request of the Council, on the repatriation of prisoners, and by 1922, having won the confidence both of Russia and Germany (sullen outsiders), he was able to report that 428,000 prisoners of twenty-six different nationalities had regained their homes at an average cost of below one pound sterling a head. It was also in the first year of the League that he began his work for refugees. Over a million and a half Russians scattered over Europe and the Near East were made his special care. He was the man to whom the League turned for emergency measures for 25,000 refugees threatened with starvation in Constantinople, and he it was also who drew the Assembly's attention in 1922 to the plight of the three-quarters of a million Greek refugees after the Greco-Turkish hostilities. The Assembly turned to Dr. Nansen once more to organise relief measures, which he at once undertook with amazing energy. In 1927 he shouldered the cause

of, and brought assistance to, 40,000 Armenian refugees in Syria, and his efforts in later years were devoted to a scheme, which he was working hard to put through, for the establishment of Armenian refugees in the Republic of Erivan. It is a great story of humane service. His name is secure in the annals of the League.

The Reparations Loan.—No definite progress has yet been made towards settling the details of the loan, though it is possible that something may be decided at the Paris meetings of the Treasury experts and bankers, which at the moment of going to press seem likely to last over the week-end. The only tangible result of the Basle meetings last week was that the legal experts dealing with the loan were requested to draft the form of the bond. Unfortunately their request seems to have proved premature, for the lawyers found themselves unable to get to work until certain outstanding questions had been settled. Meanwhile, in answer to a question, Mr Snowden repeated last Tuesday the generally known fact that the quota of the loan to be offered in London would not exceed the British Empire's share of the proceeds. The question referred to in last week's *Economist* as to whether the coupons attached to the bonds should be " international " or expressed solely in the currency of their original country of issue, however, has not yet apparently been settled, and some doubt is now believed to be felt as to the practicability of issuing, as at one time was suggested, a national bond with an international coupon. It is to be hoped that the bankers at their Paris meeting on Friday of this week will prove to have succeeded in solving this and other questions still remaining open, so that further delay can be avoided.

The B.I.S. Share Issue.—The Bank for International Settlements formally opened its doors on May 17th, and on the same day the final payments under the Dawes Plan were made by the Agent-General for Reparations. The Agent-General has also handed over to the B.I.S. 73.3 million marks in German currency, and the equivalent of a further 109 million marks in foreign currencies, deposited in England, France and New York. He has made sundry final payments to France and Germany, and has closed his banking accounts in various centres, and these final tasks completed, his organisation is in process of liquidation. Meanwhile the shares of the B.I.S. were issued on May 20th. The French quota of 16,000 shares were offered to the public, and as had been made abundantly clear by preliminary " unofficial " dealings at prices running up to a premium of 150 per cent., the issue was enormously oversubscribed, applications for more than 2½ million shares being lodged with the Bank of France. The total amount of application money therefore amounted to 7,830 millions of francs, or to £63,000,000. The Belgian quota of 16,000 shares was also offered to the public, and is reported to have been over-subscribed twelve times. Warned by the confusion, which it was obvious several weeks ago was arising in Paris, the Central Banks of other countries participating in the issue and the American banking group representing the United States are not making a public issue, though in some cases the shares may be placed privately. It is conceivable that the French and Belgian authorities regret that they did not follow a similar course, and, as is shown below, much unnecessary pressure upon the foreign exchanges and upon London's gold stocks in particular would have been avoided had no public issue of shares taken place.

The French Gold Shipments.—The withdrawal on French account during the first three weeks of May of £11½ million of gold from the Bank of England was an episode which does not altogether do credit to those who are working for closer international monetary co-operation, designed *inter alia* to promote economy in the use of gold. Paradoxically enough, its primary cause seems to have been the inauguration of the Bank for International Settlements, which henceforward will be one of the main agencies in promoting co-operation. Rightly or wrongly, the Banque de France decided to issue their quota of 16,000 shares to the public, and, as described above, there was such a rush to subscribe that application money totalling Frs. 7,830,000,000 was received by the Banque de France, or the equivalent of about £63,000,000. In anticipation of this rush, funds had to be mobilised in advance, and with this end in view French institutions were drawing heavily on their foreign balances right up to a day or two before the date of issue. It is, therefore, perhaps not surprising that £11,500,000 had to be taken in gold from London. According to the most recent reports, every effort is being made to return the surplus application money promptly, and it seems reasonable to suppose that part of it may find its way abroad once more and bring with it some of the gold. Unfortunately things only rarely work out that way in practice. For one thing, disappointed applicants may decide to keep their funds mobilised in readiness for the Reparations Loan issue, and in any case once foreign balances have been brought home they may be kept at home and used for other purposes. Finally, even if France parts with some of her newly-acquired gold, there is no guarantee that it will return to London. Summing up this somewhat unnecessary episode, the main gain to London is that some more of the " bad " French money—to apply to it a market expression for money whose movements are subject to incalculable influences—has been shed, and to that extent the menace to the Bank's gold stocks has been diminished. Moreover, it has gone at a time when the Bank is well able to bear the loss. Still, it is impossible to resist the thought that had a little more foresight been exercised, the episode need never have taken place.

Large Incomes and Taxation.—A question asked by Major Nathan in the House of Commons elicited from the Chancellor of the Exchequer very important information about the burden of taxation at present resting on large incomes. The present figures continue estimates made by the Colwyn Committee, which showed the amount of income tax and surtax on incomes of various sizes, and the insurance premium which is necessary in order to secure an amount at death equal to the estate duty payable, and, therefore, leaving the original fortune intact. The following tables show for 1913-14 and 1930-31 the amounts payable under these headings on incomes wholly from investment and on incomes half-earned and half from investment:—

Total Income.	Equivalent Capital.	Income Tax.	Sur- (or Super-) Tax.	Net Insurance to provide for Estate Duty.	Total.
£	£	£	£	£	£
A. On Income wholly from Investment.					
Year 1913–14.					
5,000	100,000	292	...	298	590
10,000	200,000	583	175	725	1,483
25,000	500,000	1,458	550	2,000	4,008
50,000	1,000,000	2,917	1,175	5,176	9,268
Year 1930–31.					
5,000	100,000	1,007	306	819	2,132
10,000	200,000	2,132	1,381	2,322	5,835
25,000	500,000	5,507	5,881	8,583	19,971
50,000	1,000,000	11,132	14,506	25,349	50,987
B. On Incomes half from Investment and half from Earnings.					
Year 1913–14.					
5,000	100,000	292	...	113	405
10,000	200,000	583	175	290	1,048
25,000	500,000	1,458	550	906	2,914
50,000	1,000,000	2,917	1,175	2,000	6,092
Year 1930–31.					
5,000	100,000	951	306	274	1,531
10,000	200,000	2,076	1,381	812	4,269
25,000	500,000	5,451	5,881	3,012	14,344
50,000	1,000,000	11,076	14,506	8,167	33,749

These figures are very striking. Considering only income tax and surtax (or super-tax in 1913-14), the " free " income left, after paying taxes, to a man whose income is half earned and half derived from investment, amounted, in the case of incomes of £5,000 to £4,708 in 1913-14, against £3,743 in 1930-31; in the case of a man whose income is £10,000 to £9,242 in 1913-14, against £6,543 in 1930-31; in the case of a man whose income is £25,000 to £22,992 in 1913-14, against £13,668 in 1930-31; in the case of a man whose income is £50,000 to £45,908 in 1913-14, against £24,418 in 1930-31. In the case of persons whose incomes are wholly from investment, a little less is left, though the difference is not important. Indeed, allowing for the rise in prices, it appears that the real value of the share of £5,000 and £10,000 incomes remaining after taxes have been paid (but without allowing for estate duty) is only about half what it was before the War; while that of a £25,000 income is only about two-fifths, and that of a £50,000 income only about 35 per cent. So far as insurance is concerned, the figures given in the foregoing table represent the average annual premium without profits of a man aged 45 years; and, of course, the amount insured for is also liable to death duty. Relief on the premium is given at two shillings in the pound on one-sixth of the statutory income. The figure shown for purely investment incomes of £80,000 a year means that a man with such an income cannot afford to insure sufficiently heavily to pass on his capital to his heir. Such estates can only be transmitted at their original value if invested in ways in which capital appreciates or yields more than 5 per cent. or if the owner secures some earned income. While the age at which insurance is effected is important, it is by no means the dominating factor. Thus, a man of 30 would have to pay 61.1 per cent. of the premium payable by a man of 45; a man of 35 would have to pay 70.9 per cent.; a man of 40 would have to pay 83.6 per cent., and a man of 50 would have to pay 121.8 per cent. The number of incomes falling within the range of this very heavy taxation was, in the year 1927-28, 17,916 between £5,000 and £10,000; 7,218 between £10,000 and £25,000; and 1,029 over £25,000. It is quite plain that the margin for further increases in progressive taxation on incomes of this size is not very large, if, indeed, there is any margin at all.

Employment and Cost of Living in April.—Employment showed some improvement during the first half of April, but by the end of the month the position was somewhat worse than at the end of March. According to the *Ministry of Labour Gazette*, among the 12.1 million workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at April 28th was 14.6. This compares with 14.0 per cent. at March 24th and 9.8 per cent. a year ago. The total number of registered applicants for employment was approximately 1,752,000 at April 28th, as compared with 1,731,000 at March 30th and 1,198,000 at April 29, 1929. According to the latest announcement by the Ministry of Labour, however, the numbers on the registers at May 12th had dropped to 1,739,500. With regard to the cost of living during April, there was a reduction of two points in the index number of the Ministry of Labour, which at May 1st stood at 55 per cent. above the level of July, 1914, and compares with 57 per cent. a month ago and 61 per cent. a year ago. For food alone the index recorded 40 per cent. at May 1st, as compared with 43 per cent. at April 1st and 49 per cent. a year ago. The reduction shown by the general index was chiefly accounted for by decreases in the prices of butter, milk and coal.

American Cotton Crop.—Our Manchester correspondent writes:—This week the Department of Agriculture of the United States Government has issued revised figures relating to the cotton crop for 1929. The area planted is now given as 47,067,000 acres, against 46,946,000 acres in the previous year. The area picked is returned at 45,793,000 acres, as compared with 45,341,000 acres in the previous season. The yield per acre is given as 155 lbs., against 152.9 lbs. in 1928, the total production being 14,828,000 bales, against 14,478,000 bales in 1928. The carry-over at the end of last season was 4,400,000 bales, so supplies for the season are 19,200,000 bales. A striking feature of the last twelve months has been the decline in world consumption of American cotton, and it is probable the requirements of spinners during the year will not be more than 13,600,000 bales, against 15,076,000 bales in the previous season. The carry-over, therefore, next July should be about 5,600,000 bales, or 1,200,000 bales more than twelve months earlier. At this time of the year there is always great interest in trade circles in the prospects for the new growth. On the whole, planting has now been completed, but the Government will not publish an estimate of the area under cultivation until the beginning of July. A few months ago there was a strong agitation in the United States for reducing the acreage by 10 per cent., but it is not expected that the decline will be more than 3 per cent. The policy of the Farm Board is meeting with much criticism, and the activities of that organisation have brought about a most abnormal situation. The relation between prices in Liverpool and New York is now uneconomic, and it is quite impossible for Liverpool merchants to import. The Farm Board holding of May and July futures in New York has forced prices for those months on to an artificial level, and spinners throughout the world are restricting their purchases. Farmers in America have, of course, watched the trend of events and have not been disposed to reduce their acreage owing to the anticipation of a continuance of Government support to prices. The outlook for the new crop is generally favourable. There are complaints of too much moisture in some parts of the belt and dry conditions in other sections, but the pointers at the moment are for a substantial yield, and in view of the poor trade demand and consumption buyers are exercising caution in committing themselves to contracts.

Fining in Cotton Mills.—In Lancashire cotton trade circles, writes our Manchester correspondent, there has been considerable interest in the test case in the courts relating to the custom of fining weavers for faulty work. The case has just been heard in the Chancery Division. Nominally, the defendants were a Nelson firm of manufacturers, but they are being supported by the Cotton Spinners' and Manufacturers' Association. The plaintiff weaver is being backed by the trade union. On behalf of the defendants it was held that their action was in accordance with a well-established custom of the industry. The deduction of one shilling from the operative's wages was made in respect of damage to cloth as a result of the plaintiff's negligence. Mr Justice Farwell, after hearing the evidence, found that the custom of fining in the cotton weaving industry was illegal, and he gave a verdict in favour of the plaintiff. At a meeting in Manchester this week of the Central Committee of the Cotton Spinners' and Manufacturers' Association it was decided to instruct their solicitors to lodge an appeal against the decision of Mr Justice Farwell.

The C.W.S. and Depreciation.—A correspondent writes:—An important decision by the directors of the Co-operative Wholesale Society with reference to the rates of depreciation on property was announced by Mr H. J. A. Wilkins, the president, at the last half-yearly meeting. At the outbreak of the European War the total liabilities of the society were £11¾ million and the reserves and depreciation fund totalled £5 million, or 43 per cent. of the total liabilities. Now the liabilities—including share capital—are £62¼ million, and the reserves are £15¼ million, or 24 per cent. The percentage of reserves to liabilities has thus declined by 19 per cent. to a figure which the directors feel is insufficient, in view of the amalgamations, combines and trusts which are being formed touching every stage in the manufacture and sale of the commodities produced by the C.W.S. In 1920-21 a sum of £1½ million, representing plant, machinery and fixtures, previously charged to revenue account, was utilised to meet the losses of the year. This has now been replaced, and practically the whole of the losses have

been made up. To lessen the charges on the various productive undertakings of the C.W.S. the rates of depreciation were reduced in 1923 from 2½ per cent. to 1¼ per cent. on land; from 5 per cent. to 2½ per cent. on buildings; and from 7½ per cent. to 5 per cent. on fixtures. Since then considerable sums have been devoted to special depreciation in the case of works erected or acquired at war prices. Out of the profit of the past half-year £207,547 was allocated as a further instalment in this direction. The time has now arrived when the directors feel they can revert to the original rates of depreciation. For by adequate depreciation the capital charges on the various industries are reduced and the C.W.S. enabled to give substantial advantage to the societies in membership. Thus the effects of the slump that followed the Armistice boom have been practically wiped out.

Canadian Currency in the United States.—Our Ottawa correspondent writes:—Considerable interest has been aroused in Canada by a plan sponsored by the Federal Reserve Board to limit the charges for handling Canadian funds in the United States. Heretofore, when Canadian exchange is at par in New York, Canadian money has been accepted at par at points of the border like Detroit and Buffalo, but elsewhere it has been subject to a discount which is always considerably higher than the prevailing rates of exchange, and since the American dollar is always accepted at par in Canada, Canadian travellers in the United States who have been mulcted anything from 1 to 5 per cent. on their money have often been very resentful. The new plan, which came into operation on April 15th, provides that the Federal Reserve banks will offer their facilities to member banks for the collection and conversion of Canadian paper currency into American currency at the current rate of exchange; they will absorb the cost of shipping Canadian paper currency from the member banks to themselves, but will deduct an allowance to cover the actual exchange charges and insurance and shipping charges, if any, from the Federal Reserve banks to the points where it will be converted into American currency. It is anticipated that the new plan will result in a substantial reduction in the cost of collecting Canadian currency, and that if the member banks give their cordial co-operation and pass on the benefits of this service to their customers, Canadian travellers in the United States should henceforth have little difficulty in getting Canadian dollars accepted at something near par. The scheme is also understood to contemplate the handling of all drafts against Canadian business houses on the same basis, and American currency would flow back into Canada in the same way as would drafts on business houses. It is stated also that Detroit has been chosen as the concentration and transfer point in the United States to which all Canadian currency will be shipped. Leading Canadian bankers, however, seem to be critical of the scheme, and Mr Beaudry Leman, the President of the Canadian Bankers' Association, has complained that neither his association nor any Canadian bank as far as he knew had been approached in the matter. Mr Phipps, general manager of the Imperial Bank, also declared that the arrangement ignored the vital fact that the dollars of the two countries are separate items of value.

International Codification.—Though the first Conference for the Codification of International Law, which took place recently at the Hague under the auspices of the League of Nations, has not attracted very much public attention, there can be no doubt of the desirability of steps being taken such as this gathering attempted. The Conference was, from the inherent difficulties of the problems before it, unable to carry matters very far, but it recorded some progress, and further steps will, in consequence of its labours, be easier of accomplishment. In recent years it has become more and more apparent that the legal systems of the nations, having developed under influences varying from place to place, could with advantage be co-ordinated in certain respects. There has been a call for adjustments to prevent inconveniences and hardships resulting from conflict between divergent rules. These inconveniences were felt first in connection with trading intercourse, and mercantile laws in different lands have long tended to develop on similar lines. Now the movement towards unification has broadened its scope, and national laws regulating activities of many kinds are being examined to see whether they admit of some degree of standardisation. Steps towards the progressive codification of international law were suggested in the early days of the League by the jurists who drew up the scheme for the Permanent Court of International Justice, and the subject has been much discussed in the United States. After a good deal of preliminary investigation the League selected three subjects for the first conference, namely, nationality, territorial waters, and the responsibility of States for damage caused in their territory to the person or property of foreigners. As to the third subject, the recent Conference, which opened in March and continued for about four weeks, found that little beyond examination by a committee was feasible, but with reference to nationality and territorial waters some progress was made. As to nationality, the principal difficulties arise where persons have more than one nationality, or none at all, and in connection with the nationality of married women and children. Accepting the position that it is for each State to determine under its own law who are its nationals, the Conference drew up a number of provisions on the points of difficulty, and also adopted some recommendations for the revision of national laws with a view to preventing the occurrence of the anomalous results which now frequently cause trouble. As to the important question, on which so much diversity of rule prevails, of the width of the belt of territorial sea, it was found impracticable to reach agreement, and the Conference had to content itself, for the time being, with the preparation of a series of articles dealing with the legal status of the territorial sea. On the basis of the experience gained, however, it may be practicable to prepare further work on various subjects more effectively, so that the actual Conference discussions may more readily yield definite results.

Sun Insurance Office.—In a year beset with such underwriting difficulties as 1929, the Sun—the oldest insurance office in the world—has achieved the creditable feat of producing a total net trading surplus in excess of 1928. This extremely satisfactory result has been made possible largely by the increased profits in the burglary and general department, counterbalancing a falling off in the fire department, though in the latter case an underwriting profit of 8.7 per cent. of the premiums is still very good. Last year's premium income amounted in total to £4,291,030, of which £2,572,000 was due to the fire department and £1,117,000 to the burglary and general department. For the first time since 1925 a net transfer was made to profit and loss account from the marine account, which, with a premium income of £406,000, now has a fund of £455,000. The detailed results of the past two years are set out below:—

	1928. Amount of Profit.	1928. Percentage of Premiums.	1929. Amount of Profit.	1929. Percentage of Premiums.
	£		£	
Fire	281,916	10·7	224,633	8·7
Personal accident	3,022	7·2	9,569	19·4
Employers' liability	2,982	2·0	5,504	3·7
Burglary and general	29,689	2·8	75,656	6·8
Marine	...	...	20,000	4·9
	317,609		335,362	
Less items debited to profit and loss account	120,860		121,789	
Total net trading surplus	196,749		213,573	

A further increase in the rate of dividend has been declared, the rate now being 65 per cent., compared with 62½ per cent. in 1928, and the payment is fully covered by interest earnings, leaving the sum of £220,000 as the net addition to free assets from the results of the year's working. Since the share capital consists of 240,000 shares of £10, with £2 paid up, this sum is equivalent to 9s. per share. In addition to the general reserve fund of £1,000,000, there is a credit balance in profit and loss account of £1,083,194, and from this balance the directors propose to transfer £120,000 to capital account for the purpose of paying up a further 10s. per share.

Royal Insurance Company.—Accompanying the 1929 report is a report by the actuary on the progress of the life department during the past five years and on the results of the quinquennial valuation made on December 31st last. During this period new policies have been issued for sums assured of £17,148,047, but the corresponding increase in sums assured and bonuses in force has been only £7,406,697, and the difference is a reminder of the extent of the wastage from deaths, maturities and lapses taking place every year in old-established offices, such as this. The life and annuity funds combined have risen from £16½ millions to £22 millions, and this expansion has been accompanied by a satisfactory increase from £1,394,000 to £1,645,000 in premium income. With regard to the quinquennial valuation, a net premium valuation at 3 per cent. on the same basis as before has been made, and the results, together with those of the 1924 valuation for comparison, are as follows:—

	1920–1924.	1925–1929.
	£	£
Surplus earned during quinquennium	1,516,357	2,654,796
Brought forward from previous quinquennium	95,263	311,611
	1,611,620	2,966,407
Allocations:		
To bonuses to policyholders	1,170,009	1,854,879
,, shareholders	130,000	200,000
,, carried forward to next quinquennium	311,611	911,528
	1,611,620	2,966,407

In spite of the greatly increased distribution to policyholders there still remains a large margin of surplus earnings unappropriated, and the carry-forward has consequently been nearly trebled. The rate of reversionary bonus for the quinquennium just ended is 42s. per cent., compared with 30s. per cent. five years ago, and confidence in the future outlook is such that interim bonuses on claims occurring in the year 1930 are to be paid at the rate of 45s. per cent. Turning now to results in other departments, the outstanding feature is the success of the general department, which, on a slightly reduced premium income of £5,013,000, has produced an underwriting profit of £292,817—equal to more than double the rate of profit earned in 1928. This result has gone far towards counterbalancing somewhat reduced profits on fire, personal accident, and employers' liability business, as will be seen below:—

	1928. Amount of Profit.	1928. Percentage of Premiums.	1929. Amount of Profit.	1929. Percentage of Premiums.
	£		£	
Fire	818,066	11·9	562,541	8·1
Personal accident	6,152	2·7	4,800	2·2
Employers' liability	68,933	17·6	58,844	15·8
General	126,546	2·5	292,817	5·8
Marine	85,309	7·2	104,489	8·8
Life	26,000		40,000	
Profit on sales of investments	53,090		...	
	1,184,096		1,063,491	
Less items debited to profit and loss account	385,616		504,991	
Total net trading surplus	798,480		558,500	

A dividend of 62½ per cent. has been declared, as against 60 per cent. in 1928, and the cost is nearly covered by interest earnings, leaving altogether a sum of £507,532—equal to about 2s. per share—wherewith to augment free surplus assets.

Phœnix Assurance Company.—The largest department for some years past of the Phœnix, excluding the life, has been the general department, and last year's premium income in this department showed a small increase to £3,624,000. The underwriting results, at any rate during the last five years, have been disappointingly small, and last year's figures are no exception to this experience. Altogether out of total premiums during the last five years amounting to over £18 million, underwriting profits have yielded no more than £189,000. Profits for 1929 in the other departments are, in the light of conditions prevailing last year, satisfactory, as will be seen from the details set out below:—

	1928. Amount of Profit.	1928. Percentage of Premiums.	1929. Amount of Profit.	1929. Percentage of Premiums.
	£		£	
Fire	204,494	6·1	120,809	3·7
Personal accident	7,417	4·7	3,624	2·2
Employers' liability	15,268	9·4	16,082	10·6
General	93,638	2·6	34,321	·9
Marine	...		...	
Life:				
Phœnix fund	40,000		40,000	
London Guarantee and Accident	30,000		Nil	
Law Life fund	nil		83,174	
	390,817		298,010	
Less items debited to profit & loss account	195,267		121,207	
Total net trading surplus	£195,550		176,803	

The contribution from the Law Life fund last year has arisen as a consequence to the quinquennial valuation due to take place on December 31 last, and that, and the reduced allocation to pension fund, has helped to produce a net trading surplus very little less than that in 1928. There is a large and flourishing life department, with total funds, including closed funds of acquired companies, of £15,452,000. Last year's new business amounted to £2,965,830 net of reassurances compared with £3,043,304 in 1928. In addition, a sum of £143,887 as compared with £95,864 was received as consideration money for new annuities granted. With regard to the marine account, no contribution appears in the table above in respect of either 1928 or 1929, and in fact no transfer either to or from profit and loss account has been made in any of the last five years. First-year claims have shown a steady improvement, and during the last three years second-year claims have shown a like reduction. The premium income is now £707,000, and the fund is £662,000. For the third year in succession the dividend has been maintained at 14s. per share, and owing to the automatic increase in interest earnings the gap has been reduced to £24,072. The net result of the year's operations has been to add a sum of £152,731 to surplus assets, equivalent to 15 per cent. of the nominal paid-up capital.

Overseas Correspondence.

LEAGUE OF NATIONS.

The Work of the Council Meeting — Palestine — Hungarian Optants — Arbitration and Security.

(FROM OUR CORRESPONDENT.)

GENEVA, May 19.

THE short session of the Council of the League of Nations covered a good deal of ground, though some of the main problems concerning the League's work as a whole were necessarily left over for the September Assembly. These included the proposed amendments to the Covenant to bring it into harmony with the Paris Pact, the report of the Committee on Arbitration and Security, and other subjects.

The various Foreign Ministers present took the opportunity to engage in conversations on current diplomatic questions, notably those between France and Italy in connection with naval problems and cognate issues. Mr Henderson, M. Briand and M. Grandi had several private

meetings; the German Foreign Minister, Dr. Curtius, who attended the Council for the first time, discussed with M. Briand the final evacuation of the Rhineland and the negotiations regarding the Saar, and the Yugoslav Foreign Minister, M. Marinkovitch (who presided at the Council session), discussed with the Press the improved relations between Italy and Yugoslavia, but he caused some apprehension in his references to the situation between Yugoslavia and Bulgaria arising out of the minorities agitation in Macedonia.

Nothing very precise arose, or could have been expected to arise, out of the conversations between the French and Italian Ministers, but the renewal of contact so soon after the breakdown in London has been something gained. It seems generally agreed that, though the prospects are difficult, the meetings were of a friendly character, and both Ministers accepted Mr Henderson's offer to be of any assistance if they considered his services might be usefully employed. M. Briand seems to have given assurances, which have received some subsequent confirmation, that the final evacuation of the Rhineland would take place at the end of June, and the negotiations regarding the Saar, which have been hanging on for some months, are to be resumed with a little more vigour and purpose. The general temper of all these discussions seems to have been good; a successful issue to them is, in fact, essential if anything whatever is to come of M. Briand's ambitious if still rather sketchy ideas on the organisation of a " sort of " federal union for Europe.

Mr Henderson informed the Council of the steps which had been taken in Palestine, and announced that the British Government was examining the problem of devising means, within the framework of the Mandate, of satisfying legitimate aspirations and of removing any apprehensions still entertained. The Council agreed to three neutrals whose names he submitted as the members of the commission to settle the claims of Jews and Moslems in connection with the Wailing Wall. The three members are M. Lofgren, former Minister of Foreign Affairs in Sweden, M. Barde, a Swiss judge, and M. van Kempen, a Dutchman who was formerly Governor of Sumatra.

December 1st was provisionally fixed as the date of the conference for the limitation of drug manufacture, for which a plan as a basis of discussion has already been communicated to Governments with a request for their observations within three months. The manufacturing countries are to discuss the limitation of quotas, and the Advisory Opium Committee is to meet during the second fortnight of August to prepare a draft convention on the basis of this further information for submission through the Council to the conference, which will be attended not only by manufacturing countries but by the principal consuming countries.

Mr Henderson expressed unreserved satisfaction at the settlement and removal from the agenda of the question of Hungarian optants, for which he had been the unhappy *rapporteur* on the Council. Another matter for satisfaction was the receipt of a communication from the Bolivian and Paraguayan Governments announcing the final settlement of the difficulties which had arisen between them over the Chaco district, and the resumption of diplomatic relations. The President recalled the useful contribution which had been made by the Council in securing a peaceful settlement—a contribution which was officially acknowledged in the letter from the Bolivian Government.

The Council approved of the programme for collaboration between the League Health Organisation and China in the field of public health, to which the Chinese Government is devoting a special credit of a million Mexican dollars for the creation of the necessary institutions. Incidentally, among the new members of the League Health Committee is Dame Janet Campbell, of Great Britain, and the Chinese Health Minister. Another point of note is the final suppression of the Committee of Control in connection with the financial reconstruction scheme in Hungary. This marks the successful completion of one more of the League's series of reconstruction schemes.

Amongst the list of references to the Assembly is the report of the recent meeting of the Arbitration and Security Committee on its efforts to produce a draft convention for the strengthening of means to prevent war, and to complete the scheme of financial assistance in the form of limited guarantee for loans raised by the injured state in case of war or threat of war. The British Government at the last Assembly asked that an attempt should be made to transform into a general convention the model treaty which had been prepared on German initiative; this contained the principle that the contracting parties should undertake beforehand that in any dispute they would carry out provisional recommendations of the Council with the object of preventing steps prejudicial to a settlement subsequently proposed by the Council, and in the event of hostilities having already begun, to comply with Council recommendations designed to stop them. The usual insistence by the French, Poles and others, that such a convention must also carry an enlargement of sanctions, and the preference of the Italians and the Japanese for bilateral treaties, prevented the Committee from reaching a single text. There will, therefore, be a resumption of the controversy at the Assembly, and some aspects of the sanctions question will also arise, probably, in connection with amendments to the Covenant.

On the financial assistance scheme, the Arbitration Committee was more successful; a draft convention was prepared for submission to the Assembly, though certain points of importance are left to the discretion of the plenipotentiaries who establish the final text. One of the bones of contention here is that the British insist upon its entry into force being dependent upon a general convention for the reduction of armaments. Others would like to have no such condition attached.

UNITED STATES.

Congress — Building — Industry — Loan Market — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 13.

BUSINESS, security markets and Congress are doing little more than marking time. Sentiment is a trifle better, the present state of dullness being preferred to the acute weakness in the share market and the renewed apprehensions of deepening trade recession which it stimulated. When the Tariff Bill went into conference a few weeks ago it was hoped that the differences between the House and the Senate would be patched up and a vote taken by the end of this month at least. Just now a stalemate has developed, and hope of early action is rather slender.

So far as rates are concerned, only three main schedules, those on lumber, cement and silver, are in controversy. The principal dispute has arisen over the export bounty proposed by the farm bloc of Republicans and Democrats for farm products and the " flexible rate " provision, giving the President power to change rates without consulting Congress. The latter apparently is the chief bone of contention, and a vote on the portion of the Bill already agreed upon or on the separate items in dispute is being held up by Democratic Congressmen and Republican nonconformists. Democratic leaders threaten to hold up the Bill until midsummer, but the extreme heat of a Washington summer usually operates to bring about adjournment of Congress. Most observers feel that a way will be found out of the deadlock which will send the Bill to the President within another month at least.

Convincing evidence of business improvement continues to be scanty. Some brightening is noted in building prospects. Contracts for construction let in April in principal cities east of the Rocky Mountains, as compiled by the F. W. Dodge Corporation, were 6 per cent. larger than in the preceding month, and were the largest for

any month since August, but the total was 9 per cent. below that of April of last year, and contracts let in the first four months were 17 per cent. lower than a year ago. Permits to build awarded last month were about 12 per cent. in excess of the March total. Actual building construction, while increasing moderately as a result of the open weather, is still rather backward, particularly in residential building, which had been overdone, and which is still finding some difficulty in obtaining mortgage money.

The steel industry maintains itself well, with the operating rate about 76 per cent. of capacity. Unfilled orders as of the end of April, reported by the United States Steel Corporation, fell 216,433 tons, but the month was marked by a heavy rate of shipments rather than by diminishing orders. Orders for steel, unaccompanied by specifications, have no great significance in these days of hand-to-mouth buying. Prices continue weak, and with production running slightly lower than in the first quarter it is highly improbable that steel mill earnings in the second quarter will come up to those of the first three months.

Motor production in April, estimated at 460,343 vehicles, was somewhat better than had been hoped for, and shows a gain of about 9 per cent. over April. Expectations of further gain for this month are encouraged. Sales conditions are improving slowly, and the motor industry's steel orders would be satisfactory were the heavier cars not doing so poorly. The great bulk of the production is by light car makers. Ford is now estimated to be making nearly one-third of the total output.

After some sales of copper were reported as low as 12¼ cents a pound the price stiffened to 13 cents. Heavy buying, both for foreign and domestic account, has made possible the firmer quotation, and tends to support the view of the industry that the trouble has been not so much in poor demand for the metal as in the high price. If the " buyers' strike " has been broken, some of the low-cost producers may increase output. Stocks of metal for April increased about 45,000 tons, although a slight drop in May is possible. Recent heavy sales are not, of course, the same thing as deliveries, but they are heartening. It is estimated that 325,000,000 pounds of copper have been sold since the first of the month, so that, eliminating this copper from stocks, the supply should be smaller at the end of the month, even though output is as large as in April.

The lull in new security offerings is not expected to be disturbed much until after the Reparations issue has been disposed of. This week's offering of the American portion of the Japanese loan was quickly taken, demand being particularly good in Chicago and other Western centres where no great response had been expected. The bankers who will handle the German loan have strong hopes of a successful operation, but nevertheless everything is being done to promote quick disposal of the bonds.

Meanwhile the Treasury will enter the market shortly. A bill issue of $56,000,000 matures next week, and it will be replaced by a fresh issue of non-interest-bearing Treasury bills of $100,000,000. Additional borrowing has been made necessary by renewed drafts on Treasury cash by the Farm Board, which is reported to have taken up large quantities of wheat on deliveries of May contracts. These " futures " were bought for the part of the Farm Board in an effort to arrest falling prices. It should be noted that the major portion of the May bills falling due were devoted to Farm Board needs. Increasing concern is being felt in high circles lest Farm Board wheat buying operations will eventually present a considerable financing problem for the Treasury, and even affect the income-tax rate. It is thought that the coming bill tender will attract bids of around 2¾ per cent.

Treasury officials have discussed the question of taking steps on the June 15th tax date toward refunding the remainder of the Liberty Loan issues. First 3½'s are outstanding in the amount of $1,989,000,000, due in 1932, and Fourth 4¼'s, due 1933, are out in the amount of $6,964,000,000. A little over half a billion of convertible 4 and 4¼ per cents. are also outstanding, besides about $2,000,000,000 in short terms. It is not believed, however, that anything will be done in June. The First Libertys cannot be called before 1932, and while the money market is favourable to a refunding operation, doubtless the first step will be to refund some of the short-term indebtedness.

No great change in Federal Reserve system accounts is looked for this week. The system is doing nothing actively one way or the other, after last week's cut in the bill buying rate to the level of dealers' asking rates, action which is calculated to expand Reserve Bank holdings. A decrease of approximately $100,000,000 in bankers' acceptances during April probably will be shown by the Acceptance Council report, to be issued shortly. Growing scarcity of bills, due partly to seasonal influences and partly to slack trade and weakening money rates generally, is responsible for the falling bill rates. Ninety-day asking rate is now 2½ per cent., which would suggest a further lowering of the New York discount rate. Nothing is anticipated in the immediate future at least, although a further cut in the open market bill rate is believed to be near.

FRANCE.

Reparations Loan — Bank for International Settlements — Capital Issue Market — Capital Equipment Scheme.

(FROM OUR CORRESPONDENT.)

PARIS, May 21.

THE conditions for the issue of the first part of the International Reparations Loan are proving a much harder nut to crack than the optimists who, a few weeks ago, were predicting the issue " before the end of May," allowed themselves to suspect. It is now evident that, whatever the bankers and other financial experts may think, the political factor in the situation will have to be given its due importance before there can be any question of the proportional distribution of the issue being definitely fixed. From the French point of view, the vital factor in the mobilisation of the German reparation debt is that it shall be really internationally commercialised. " We must always bear in mind," writes M. Gignoux this morning, " that now the Rhineland guarantee has disappeared, one sole guarantee alone remains to us—the internationalisation of the German debt. The scrip representing the German debt must be distributed in such a manner that, in the event of a German default, the Reich will find itself faced—not, as in the past, merely by the French creditor alone, but by creditors in a large number of countries. The failure of the debtor to keep his engagements must mean the ruin of his credit in *all* the important financial centres. Short of that, the operation will lose all its primary essential meaning, as defined in the Young Plan." This exactly expresses the attitude French opinion has taken in regard to the mobilisation of the debt, since the time when it was taking practical shape during the preliminary discussions that resulted in the drafting of the Young Plan. The financial aspects of the mobilisation scheme have always been and still are of a distinctly secondary importance. The suggestion made in some of the foreign centres to the effect that the French are anxious to limit their share of the issue to as little as possible is untenable. Estimates in reliable quarters here forecast over a week ago that, according to then existing indications, the anticipated French share of $80,000,000 of the loan might be already regarded as likely to be subscribed at least three times over, and nothing has occurred since to justify any reduction of this prognostication.

Tuesday's issue of the French share of £1,600,000 in the capital of the Bank for International Settlements was one of the most remarkable on record. The conditions of the issue called for the deposit, on application, of 25 per cent. of the nominal value of each £100 bond (or, to speak exactly, 3,078.10 francs per unit), which would be equivalent, for the whole offer, to £400,000, the balance of 75 per cent. remaining an " uncalled liability " on the

shares. It was officially announced by the Bank of France last night that the issue had been applied for 158 times over; in other words, 16,000 bonds were offered and 2,541,717 were applied for. The application money sent in totalled 7,823,659,000 francs, or over £63,000,000. The Bank of France issued a statement this morning to the effect that subscribers who have accounts with it have been, or will be, credited with 90 per cent. of their subscription money, as from this morning. As will be seen, only about one-fifth of this mass of application money could have been derived from the £12,000,000 of gold which has been moved from London and added to the Bank of France reserve since the beginning of the month. To what greater extent the gold balances of the French banks in London were drawn upon for the funds required here it is impossible to say. Nor can any clear idea be obtained as to the reason for this extraordinary rush for the B.I.S. loan, unless it be the firm faith of the French banker-capitalist that the new institution will really make sufficient profits to return a full 12 per cent. per annum to the holders of its scrip. The bonds are being dealt in here to-day, on the outside market, at a premium of 2,700 francs (as against a pre-issue premium of 4,000 francs). The only previous issue to be anything like as overwhelmingly subscribed, if memory serves correctly, was the great Ouest Etat railway issue, shortly before the war, when the application money lodged by the general public (equivalent to 10 francs per bond) totalled eleven times the amount of the entire issue.

Meanwhile, the tentative efforts that are being made by a large number of countries to float loans in the Paris market are proving increasingly difficult owing to the questionable practice which has been adopted since the war by many foreign borrowers, who have taken advantage of the depreciation of the franc to pay in paper, instead of gold, interest and redemption due to French holders. Definite judgments to pay in gold have been given by the Hague International Court against Brazil and Serbia, but these have so far been ignored by some twenty other foreign debtor States, municipalities and companies. An outstanding case is that of the city of Tokio. Judgment was obtained against this debtor in one of the provincial French courts some time ago. In a subsequent action, brought in Paris, the Court decided in favour of the borrowers. The matter is now before the Court of Cassation, whose decision is understood to be imminent. A few days ago the Finance Minister, M. Paul Reynaud, in reply to a question, stated that the issue in the Paris market of a portion of the Japanese loan, which is now being offered in New York and in various European centres, would depend on the manner in which the city of Tokio thought fit to treat the claims of French holders of its scrip.

The first business to be taken in hand when the Chambers reassemble at the beginning of June will be the translation into law of the great scheme for development by means of public works which, it is claimed, is the last remaining portion of the programme submitted by the Tardieu Cabinet when it took office. The Comité de l'Outillage National met yesterday, under the presidency of M. Tardieu (who was accompanied by the eight Ministers whose departments are interested), to consider the exact distribution of the 5,000,000,000 francs (over £40,000,000), which is to be devoted to the scheme, at the rate of 1,000,000,000 francs per annum, as from the next financial year. According to the original draft, the money is to be distributed approximately as follows:—1,750,000,000 francs to agriculture, for rural electrification, afforestation, agricultural research, opening up of isolated districts and improvement of rural telephone and wireless communications; 1,450,000,000 francs for public health and educational requirements, covering tuberculosis prevention, hospital construction, and subsidies to schools, laboratories and workshops for technical education; 1,797,000,000 francs for commercial and industrial purposes, including roads, internal waterways, ports and lighthouses, sea fisheries, mutual shipping credit, hydraulic and electric power.

Imports of merchandise in April were 4,565,770,00 francs, against 4,431,115,000 francs in March, and 5,138,426,000 francs in April, 1929. Exports were 3,887,769,000 francs, compared with 3,958,428,000 francs in March, 1930, and 4,427,906,000 francs in April, 1929.

GERMANY.

Discount Rate — Stock Market — Agrarian Programme — Unemployment Insurance — Proposed Mortgage Extension.

(FROM OUR CORRESPONDENT.)

BERLIN, May 20.

THE Reichsbank reduced its discount rate on Monday, May 19th, from 5 to 4½ per cent. Since May 1st, when the rate was lowered in New York, London and Paris, this step had been expected from the Reichsbank, as it had long been called for by the situation of the German money market and the cover of the note circulation, but the Reichsbank hesitated to make the reduction, and did not make its decision until the Young Plan went into effect and the placing of the international Reparations loan was thus assured. A lowering of the German discount rate might result in driving short-term foreign credits out of Germany. Such a development would only be welcome to German industry if a corresponding influx of foreign long-term money were assured in their place. The issue of the Young Loan brings this about, and so removes the most important reason for not reducing the discount rate. The other reasons, which have been set forth in recent numbers of the *Economist*, have had to give way before the Reichsbank's desire to help German industry and trade by lowering the rate. A reduction by 1 per cent. to 4 per cent. was even considered, as appears from the Reichsbank's official statement, but this action was temporarily postponed. The position of the Reichsbank, as the subjoined table shows, would have justified this:—

(In million marks.)

	1928. May 15,	1929.	1930.
Total loans, discounts and advances	2,046	2,890	1,654
Gold and exchange	2,252	1,820	2,876
Note circulation	3,987	4,167	4,196
Reserve against notes (per cent.)	56·5	43·7	68·5

The German private banks have been placed in a difficult position by the reduction of the discount rate. They were obliged, according to the usual custom in Germany, to reduce the rate of interest paid on time deposits. This reduction has now been made, from an average of 8 per cent. to 7½ per cent. But a simultaneous corresponding reduction of the interest on all interest-bearing accounts could not be carried out; only a part of these are reduced from 2½ per cent. to 2 per cent., but for other deposits 3 per cent. and even in part 5 per cent. is being paid, since the competition of the municipal savings banks makes it impossible for the private banks to set a lower figure. These savings banks are still able to pay 5 per cent. to 6 per cent. on deposits, since even at this figure they can invest their funds profitably as a result of the high money requirements of the German cities.

As a result of the reduction of the discount rate, the stock market has received a sharp stimulus, and the movement this time extended not only to bonds but also to shares. With the exception of iron and coal stocks, which suffered from unfavourable reports of sales, all shares rose. The greatest increase was recorded in potash; the shares of the Salzdetfurth and associated companies occupied the centre of the stage and advanced considerably.

The Government of the Reich has finally reached an agreement with the Prussian Government as to the form which assistance to the agriculturists in the eastern part of Germany shall take. This is an important political success for Herr Bruening. The Prussian Government is dominated by the Socialists, who form the Opposition in the Reich. This Opposition, if indeed it be not compelled to abstain from any criticism at all, cannot in any event indulge in sharp criticism of measures that are approved and supported by Prussia, and the Chancellor may undoubtedly be glad of the support he has won from the Prussian Government and its Socialist Premier Braun against the exaggerated demands of the farmers; he will at all times be in a position to point to the fact that he must give heed to Prussia's demand for a strict selection of the farmers to be helped, since Prussia would otherwise not grant her support, which is of great advantage financially for the agriculturists. In addition to the round 500 million marks credits for which the Reich assumes the guarantee, Prussia guarantees a further 250 millions. On top of this, the Reich will in the course of five years give outright another 500 millions.

The practical misgivings concerning the character of the aid to be given are, however, scarcely reduced by the co-operation of Prussia. The Prussian Government, which is not politically dependent on the agricultural associations, will undoubtedly strive for a more economical employment of the funds appropriated and will probably achieve this, but it remains doubtful whether it will not prove impossible to secure the return of the greater part of these credits, with the result that the Reich and the State of Prussia will have to make good their guarantee. Prussia, which has recently succeeded in balancing its budget only by a socially most undesirable burdening of all payers of house rentals, can secure additional means no more easily than can the Reich.

That the Agrarian policy of the Bruening Government gives rise to very grave misgivings is demonstrated by a new memorandum of the National Association of German Industry. This association, on the basis of a report by four prominent agrarian economic experts, declares that self-help is more important for the agriculturists than help from the State. This self-help, it asserts, which must, however, be furthered by aid from the State, is to be found above all in an improvement of the quality of farm products and in a better sales organisation. In no event should protective tariffs for farm products go so far that the conclusion of commercial treaties is rendered impossible and German export thereby endangered.

The action of the heads of the unemployment insurance department in proposing a substantial limitation of benefit came as a decided surprise. The total contributions amount to roundly a thousand million marks, the Reich Government's plans call for a further 230 millions from the Reich for the current year, and now, although a deficit of at least 330 millions remains to be met, 115 millions are to be secured by a reduction of the amount of benefit granted and a further 140 millions by increasing contributions by ½ per cent. of wages, making the total contribution 4 per cent. The Reich is to meet the remainder through credits. The deficit of 330 millions is based on an estimate of an average number of 1,500,000 unemployed for the year. The reduction of payments proposed is rather drastic. The amount of benefit, which is fixed in proportion to wages, is to be reduced in the higher wage classes to contributors who apply for benefit more than once within a year. In addition to this, juvenile workers under 17, and workers above 65, who are eligible for old-age pensions —small though these are—are to receive no benefit. The Minister of Labour has indicated that he will approve an increase in the contributions, but no decision has yet been reached concerning the economies.

On January 1, 1932, according to the present state of the law, those mortgages become due that were assumed before or during the war, were later on rendered worthless by the inflation, and in 1924 established at 25 per cent. of their face value through the valorisation legislation. The total amount of such mortgages is about five thousand million marks. If they should actually have to be repaid on January 1, 1932, a continuance of stringency in the capital market would result in great hardship, and many debtors, unable to secure the required funds, would be compelled to see their property sold by auction. Hence the Government of the Reich has drafted a Bill to make the transition easier. Mortgages are to become due only if the mortgagor expressly demands payment. The mortgagee can protest against the demand before a special arbitration body, and a maximum term of three years more will be granted him provided he can prove that he cannot secure a sufficient loan on mortgage, at an interest rate fixed by the Government, to enable him to pay off the mortgage then due. This interest rate for such mortgages after 1932 is to be set at a figure that will make it possible to negotiate the mortgages at their face value. This was not the case at the former rate of 5 per cent., which was in effect under the valorisation laws. It is believed that under the new regulation first mortgages given to banks will for the most part be permitted to run further, and that the arbitrators will in the main have to deal only with second mortgages.

IRISH FREE STATE.

Budget — Debt Redemption — New Loan — Agricultural Marketing Inquiry.

(FROM OUR CORRESPONDENT.)

DUBLIN, May 17.

THE Free State Budget was a very humdrum affair in comparison with Mr Snowden's surprise packet. The only changes in taxation are the reduction of duties on light and sparkling wines and the imposition of an annual licence fee on motor hawkers. None of the principal taxes, direct or indirect, is altered, and it is estimated that the existing taxes will yield a small surplus this year. Mr Blythe, in his Budget speech, indicated that in his opinion both revenue and expenditure have reached a stable level about which they will remain for some years. No expansion of revenue is to be looked for, but, on the other hand, all increases in expenditure will be sturdily resisted. The extension to the Free State of social services on the British scale is definitely ruled out as beyond the means of the country.

The recent increase in the rates of direct taxation in Great Britain has brought into prominence the possibility of attracting rich people to transfer their residence to the Free State, where the income tax is only three shillings in the pound and both super-tax and death duties are lower than in England. Mr Blythe stated that a certain number of people had come to live in the Free State as the result of the shilling difference in income tax, and that more might be expected to do so now that the difference has been increased. Many rich English people, not tied to reside in any particular locality, might find it well worth their while to transfer their homes to Ireland, which possesses an advantage over foreign countries in this respect because of the arrangements regarding double taxation relief. Such people could retain their British investments and yet pay income tax at the three-shilling rate. On the subject of income tax in general Mr Blythe had much to say that would scarcely find favour with Mr Snowden. He asserted, for example, that a high income tax acts as a direct burden on industrial enterprise, by preventing the accumulation of capital, and emphatically refused to accede to the demands of his opponents among the Labour Party that direct taxation should be increased.

In view of the imminence of the flotation of a fresh public loan, it is not surprising that the position of the country as regards debt received a good deal of attention in the Budget speech. The gross amount of the public debt on March 31st amounted to £25,218,000, against which the Government possessed assets valued at £11,215,000, leaving the net debt at £14,003,000. The total debt represents about 60 per cent. of one year's normal revenue, and amounts to less than £5 per head of the population. There are also certain annual payments due to Great Britain under the Treaty, the capitalised value of which may be estimated at about £6,000,000. No country in the world, it was stated, makes more ample provision for sinking fund, and the debt might be expected to disappear in fifteen years. Further borrowing, it was promised, would not be resorted to except for reproductive works. The position of the Free State as a debtor—therefore as a potential borrower—was shown to be exceptionally sound.

Within a fortnight of the presentation of this rosy picture a further loan of £6,000,000 was floated on what appeared at first sight somewhat unfavourable terms to lenders. The price of this loan was 93½, and the rate of interest 4½ per cent., so that the net yield (not allowing for redemption, 1950-70) is £4 16s. 3d. per cent. It is provided that twice yearly a sum amounting to 2⅝ per cent. of the nominal amount of the loan is to be set aside for interest and sinking fund. This loan will be accepted at par value for the payment of death duties. The money raised is needed for funding floating debt, which was incurred mainly in connection with the Shannon works. The issue has been very well received, and there is no doubt that the full amount will be subscribed before the list closes at the end of the week. That such a substantial sum could be obtained so easily and so cheaply from the Irish investor is a notable tribute to the confidence felt in the present Government by the propertied classes.

A tribunal has been set up by the Ministry for Agriculture to inquire into:—" (1) The marketing of butter produced in the Free State during the five years ending December 31, 1929, with special reference to the effect of combined marketing on the demand for and prices of butter produced in co-operative creameries, and (2) the method of marketing butter in future which would conduce most effectively to increase the demand for butter produced in the Free State, and the price obtainable for such butter relative to the prices obtainable for other butters, without adding unduly to the cost of marketing." The real subject of inquiry will turn out to be the working of the Irish Associated Creameries, established in 1928. This body handled the butter produced last year by 80 per cent. of the creameries in the Free State. Its activities have been the subject of a certain amount of criticism, while, on the other hand, the failure of a minority of the creameries to deal with it has also been the subject of some hostile comment. The whole subject is ripe for inquiry, as nothing is of such importance to the country at the present time as the adoption of the very best methods of marketing agricultural produce.

INDIA.

Budget — Trade Returns — Prices.

(FROM OUR CORRESPONDENT.)

BOMBAY (by air mail), May 10.

THE political situation is not unsatisfactory. Government have followed a policy of patience towards Mr Gandhi and his followers, but in the interest of law and order it has been found necessary to restrict Mr Gandhi's activities. He was imprisoned on May 5th as his campaign to overthrow the Government has, as the happenings in Chittagong, Peshawar, Sholapur, and elsewhere have proved, not been on non-violent principles. The breaking of the salt law has turned out to be, as every right thinking man anticipated, a failure. The picketing of liquor shops has not been peaceful. The one part of Mr Gandhi's programme which gives rise to uneasiness in business circles is the boycott of foreign cloth. Mr Patel, until recently the President of the Legislative Assembly, has been in Bombay and has been speaking in favour of a constant boycott of foreign cloth, a view strongly supported (perhaps not always openly) by the Indian millowner. The picketing of cloth shops is harassing to the owners. The millowner must needs keep on good terms with him. As President of the Ahmedabad Labour Union he has kept labour from striking, and has thus put scores of rupees into the owners' pockets. Mr Gandhi holds in a religiously minded country like this a position of unusual distinction. His position is illustrated in the ancient Sanskrit verse: " Do not tell me of holy waters or stone images; they may cleanse us, if they do, after a long period. A saintly man purifies us, at sight."

Moderate Hindu opinion (and most business men belong to this category), and Mohammedans, as well as the depressed classes, are utterly opposed to the extremism of Mr Gandhi and his campaign of civil disobedience. When the Simon Report is published, it is expected that these elements will become more vocal in favour of the Government, and on the advantages of peace and prosperity enjoyed under the British Raj. We do not doubt that the firm and sympathetic policy now being followed will lead to good results at the Round Table Conference.

The second budget of Sir George Schuster, which has recently passed the Central Legislature, is a piece of constructive statesmanship, and the considerable improvement in Indian credit in the last two months is undoubtedly due largely to this balanced budget. Indeed, it is a budget that is more than balanced, because it anticipates the demands that will be made on it by provincial governments for their nation-building services as a result of the forthcoming Report of the Simon Commission. Even after a strict attention to expenditure, it was found necessary to raise new taxation in the form of higher import duties on cotton goods, sugar, and the import duty on silver. In the Assembly agricultural interests opposed the raising of the cotton duties from 11 to 15 per cent. with a special protective duty of 5 per cent. on non-British goods. The special duty of 5 per cent. gave rise, not unnaturally, to a hue and cry because it was alleged to introduce Imperial preference which in India is unpopular because she is an exporter of raw materials and unlikely to gain from any such scheme of preferential tariffs.

The tax on silver is justified because the precious metals are imported not for currency purposes but for making ornaments, and with silver at such a low level the silver import duty will not hit hard the poorer classes. It will, indeed, raise the value of the ornaments in which their savings are to a considerable extent invested. There is, too, the new factor that the Government, being possessors of surplus stocks of silver and having a new refinery of silver in Bombay, are themselves " producers " of silver. Sir George Schuster has stated that, " if the other interests concerned show any desire to consider the possibility of joint action for the regulating of sales in order to meet the present situation, the Government of India would willingly co-operate." The protective duties on cotton goods, an unmixed blessing to Bombay's premier industry, will yield 125 lakhs of rupees, the sugar duty 180 lakhs of rupees, and the silver duty 100 lakhs of rupees (1 lakh of rupees=£7,500). The Budget provides for a real surplus from regular sources of revenue. All additional expenditure on normal increments and new services is balanced by economies, mainly on military expenditure; weak spots in the system of debt redemption as, for example, in regard to the cash certificate liability, have been removed, and the new revenue to be raised is so designed as to reduce restrictions on economic action and to lighten the burden of the poorer classes. The Finance Minister concluded his Budget by stating that " whatever political clouds may be hanging over us, or whatever political changes may be in store, it will ever be the determination of the Government of India to keep Indian finance firmly secured on an unshakable foundation."

The seaborne trade returns for the twelve months ended March are published and afford interesting reading. Exports of Indian merchandise are 310,80 lakhs rupees, as against 330,13 lakhs rupees in the preceding year. Imports of merchandise are 240,76 lakhs rupees, as against 253,31 lakhs rupees last year. The malady of a falling price level has affected India as other countries. The net imports of gold on private account are 1422 lakhs rupees, and of silver 1180 lakhs rupees, as against 2120 lakhs rupees and 1304 lakhs rupees respectively last year. The remittance of funds through purchases of sterling and other Government remittances to the United Kingdom during 1929-30 show a considerable fall—2039 lakhs rupees, as against 4102 lakhs rupees in the preceding year. Financially the year has been difficult for the Government owing to the exceptionally adverse circumstances in London, Paris, and New York last autumn, and the Government has still to face a falling price level. Their reserves are strong, and can be used when necessary. " It looks," says Sir George Schuster, " as if prices are now so low that the world will soon begin to take more interest in the products of India and be prepared to enter into commitments for the future. There is reason to hope, therefore, that a recovery from the present economic depression will not be long delayed! "

The index number of wholesale prices is now 137 (July, 1914=100). A year ago it was 149. There has been a slump in raw cotton, which is 14 per cent. above the pre-war price, while a year ago it was 42 per cent. higher. There has been a general fall in food grains, sugar, and cotton manufacturers. The cost-of-living index for the working classes in Bombay city has fallen five points since the beginning of the year. In March it was 42 per cent. above the pre-war level, the average for 1929 was 49 per cent. The high-water mark was reached in October, 1920, when it was 93 per cent. above the level of July, 1914.

The fall in the discount rate of the Imperial Bank of India of from 7 to 6 per cent. on April 3rd has been beneficial to trade. There has been a rise in mill shares, and these shares have recovered considerably from the low levels reached some time ago. The Stock Exchange was closed for three days this week owing to the arrest of Mr Gandhi. When it opened there was an improvement in the price of 3½ per cent. Government paper, as there was less political tension. Sir Purshottandas Thahordas and other leading Indian merchants have protested strongly against the habit of closing down business on political grounds for a period of days, since it has a bad effect on commerce and industry, and is viewed with very great suspicion.

Letters to the Editor.

TARIFFS: AN AMERICAN VIEW.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your readers may be interested in the views of an American business man, occasionally visiting England, on the subject of protection and free trade.

There are 43,000,000 people in your little Island, dependent largely on foreign food and raw material, for which you can only pay by the export of British labour in the shape of manufactured goods. The lower price of nearly all world commodities is, of course, seriously curtailing the purchasing power of your customers abroad, but I do not see how you would be helped by a tariff on manufactured goods. Such a tariff is simply a confession of weakness, and if I were an Englishman, I would almost view with pleasure the proposed increased tariff on food entering the United States and Germany, as it means a continuance of cheap food for Great Britain, and cheap food, after all, is the basis for good and cheap labour.

After the war your wages were rapidly increased to offset the depression in the value of the pound sterling, but now that sterling is back to par and wholesale prices in Great Britain only about 20 per cent. higher than pre-war level, there has as yet been no marked reduction in wages. I know it is unpopular to talk about lower wages, but it is necessary to face economic facts as they are, and you are now competing with cheaper Continental wages and with the lower scale of living in the Orient.

During the year ending June 30, 1914, the total export of cotton from the United States was 9,146,114 bales, of which the United Kingdom took 3,437,000 bales, practically 38 per cent., and Japan took 336,890 bales. For the calendar year 1929 the United States exported 7,580,383 bales, of which the United Kingdom took 1,533,929 bales, or about 20 per cent., while Japan increased her purchases to 1,100,837 bales. In the meantime the manufacturers of English mill machinery have been selling up-to-date machines to Japan, and, no doubt, furnishing skilled foremen to instruct Japanese labour how to work them, with the result that with their cheaper labour Japan is underselling Lancashire in China and India, and the sooner labour wakes up to this fact and consents to reduce wages, where necessary, the better it will be for British trade as a whole.

During the past year we have had some interesting lessons in the United States as to the way in which tariffs are made. The Senator from Oklahoma, an oil-producing State, wants a duty on oil for the benefit of his immediate constituents, and proposes to the Senator from Louisiana, who wants an increased duty on sugar, and the Senator from Massachusetts, who wants an increased duty on cotton cloth, that if they will vote for a duty on oil, he, in his turn, will vote for an increased duty on sugar and cloth. These bargainings are still going on, but, unfortunately, no one thinks of the ultimate consumer, who pays the tax.

Business, after all, is nothing but an exchange of goods or services. Why put artificial barriers in the way?—Yours truly,

The Cudahy Packing Company, GEORGE MARPLES.
111 West Monroe Street,
Chicago.
April 16, 1930.

A PROTECTIONIST FALLACY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Frank Morris, in your issue of the 17th, like most Free Traders, seeks to confuse the mind of the public by simultaneously putting forward two arguments, namely the price argument and the balance of trade argument, and therefore let me ask him to apply the scientific method which, if he had ever worked in a laboratory, he would know consists of retaining all other factors and circumstances and varying only the one in order to see what happens. According to the Free Trade exposition of the balance of trade, it is a matter of indifference, from the point of view of employment in this country, whether, when I go into a shop, I buy a pair of boots of American manufacture at 20s., or a pair of boots of British manufacture at 20s. The Free Trade explanation is that if I buy American boots at £1 then £1 has to go abroad to pay for them, and of necessity in the long run this £1 will not go in gold but in goods, and therefore the import of the American boots must create an equal export of some other British commodity.

If, however, instead of buying the American boot I buy the British boot, that also has to be paid for, and clearly there must be a movement of commodities from the part of the country in which the boot is bought to the part of the country in which it is made, in order to pay for the pair of boots; in other words, if the boots are bought in London and made in Northampton, then in the long run there must be an export direct or indirect from London to Northampton to pay for them.

When I buy the American pair of boots one act of production takes place in the United Kingdom and the other act of production takes place in the United States. When I buy the British pair of boots both acts of production take place in the United Kingdom.

So far as the price argument is concerned, it is the practice of the Free Trader to allege that an import duty leads to a general rise in prices of all the goods of a similar kind to those taxed, whether produced in this country or imported. This served well enough as an argument when we were without practical experience to test it, but under the various Safeguarding duties there is now such an accumulated mass of experience to the contrary that no intelligent student of the problem can any longer accept this Free Trade dictum. The explanation is familiar to those who are acquainted with factory conditions, namely that with a larger production overheads are spread over a larger production and as a consequence the costs of production are reduced.

Adjoining the Constitutional Club there is a chemist's shop where Mr Morris, after reading my letter, can go and buy some aspirin. If he had visited that shop in pre-war days he would only have been able to buy German aspirin and the price would have been at least 10d. for 25 5-grain tablets, but some shops charged as much as 1s. 3d. for this same article. As a result of the Safeguarding of the aspirin industry by Mr Lloyd George in Part I of the Safeguarding of Industries Act of 1921, it is now firmly established in the United Kingdom, and if Mr Morris suffers from any form of headache as the result of reading this letter he can relieve it with a British product, the price of which may vary anything from 4½d. to 8d. per 25 tablets, and taking the higher price of 8d., equivalent in pre-war purchasing power to 5d., he will then be able to contrast that with the pre-war price of 10d.; in other words, Mr Lloyd George, by Safeguarding, has at least halved the real price of aspirin.—Yours, truly,

351, Abbey House, HERBERT G. WILLIAMS.

TARIFF WALLS.

EVERYONE who has followed at all closely the discussions of recent years in regard to the tariffs of Europe is aware of the interest which has been stimulated in this question by Sir Clive Morrison-Bell's now famous map of European tariff walls. The ingenious device of constructing a map in which the frontier of each country is represented by miniature walls proportionate to the height of its tariffs illustrates in a remarkably vivid form the large number of obstacles to trade which exist in this comparatively small area of the globe, and brings home far more forcibly than tables or statistics the meaning of protection. The display in this material form of the situation in Europe to numerous parliaments, chambers of commerce, international conferences and other gatherings of those who largely create opinion in these matters has been a contribution of real value in stimulating interest in one of the great problems of the day. Sir Clive is to be congratulated on his persistence and untiring patience in this good work.

The adventures of the producer of this map during the course of what he aptly calls " A European Crusade " are described in a book* which, while making no attempt to debate the fundamental issue of the tariff problem, throws a very interesting light on the psychological background. Sir Clive inevitably became involved in controversy with the people of various countries as to the method of calculating the height of their various tariffs, but he was fortunate in having behind him the work done on this question by the Secretariat of the League of Nations in preparation for the World Economic Conference. He keeps in the background his own views upon tariffs, and his only answer to those who ask " What do you propose to do about it? " was that, at all events, the first step should be a tariff holiday. Indeed, he circulated a leaflet making this suggestion at the Geneva Conference, and in commenting on his effort observes:—" Though I cannot find that any notice whatever was taken of this idea, it is possible that some seed was unknowingly sown there, destined to flower later on." Sir Clive, as a Conservative member of Parliament, has often had to answer the comment of those who asked why he bothered about Europe when the really important thing to work on was an increase of Imperial trade. To this he replies in his introduction that for the last three years he has regarded himself as " seconded " from the Imperial movement for service elsewhere, and that when so many are working for this great end, " surely the activities of one private individual will not be missed if he leaves the ranks of this great army temporarily and turns to the problem of the European markets, where there is so much to hold and so much more to win." This last sentence might well be pondered by some of the more extreme of our Empire crusaders. The account of these adventures will be found of much interest at a moment when M. Briand has called attention once more to the political and economic relations of the countries of Europe in his memorandum on the project for a United States of Europe.

INTERNATIONAL STATISTICS.†

YEAR-BOOKS and statistical abstracts grow increasingly more numerous, but there are still very few which reach the level of the *Statistisches Jahrbuch des deutschen Reichs*, for it combines an exceptionally full collection of German official statistics with an international comparative section.

In the main part of the book, which relates to Germany, very skilful selection has been made from the abundant material provided by the Census and other official Federal and State figures, and the well-arranged tables which result make it possible to answer almost any statistical question, from the number of oak trees in Mecklenburg-Strelitz to the average rate of exchange on Siam during March, 1929. As is inevitable in any comprehensive collection of official statistics, the data in many cases do not go beyond 1927, but always the latest available are given, and figures for a few years back (in one case as far back as 1493) are shown for comparison.

Not the least valuable part of the book is the international survey, in which comparative tables of the more important statistics are given for a very large number of countries. The tables throughout are conveniently arranged and indexed, and as a work of reference the volume is in many ways exemplary.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Hours of Work in Coal Mines. (London) International Labour Office, 12, Victoria Street.

Report of the discussion of this item on the agenda of the Fourteenth International Labour Conference.

Europa und die Weltwirtschaft. Das Widersinn der Reparationen und die Internationale Bank. By Prof. Attilio Cabiati. (Berlin) Verlag Robert Klett and Company.

A German translation of a little Italian book which examines, for the benefit of the general reader, the effects of the international movements of capital involved in the payment of reparations.

Die Reichsschuldenverwaltung und ihre Aufgaben. By Dr. S. Schultzerstein. (Berlin) Wilhelm Christians Verlag, Unterwasserstr. 8. 4.4 Rm.

This first of a projected series of German financial studies discusses the public debt of the Reich and the problems which arise in connection with it.

La Guerra e le Classi Rurali Italiane. By Arrigo Serpieri. (London) Oxford University Press, Warwick Square. 21s. net.

This addition to the Carnegie Endowment series constitutes a very comprehensive study of the rural population of Italy and the effects upon it of the war. The text is in Italian.

International Labour Review, May, 1930. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Includes articles on " Industrial Relations in the London Traffic Combine, II.," and " The Campaign Against Unemployment in Italy."

Empire Review, May, 1930. (London) Macmillan and Company, Ltd., St. Martin's Street. 2s.

Interesting contributions to this number are: " The Palestine Report," by Major E. W. Polson-Newman, and " Vocational Psychology," by Eric Farmer.

The Rubber and Tea Quarterly, May 15, 1930. Issued by Wm. Jas. and Hy. Thompson. (London) London General Press, 8, Bouverie Street. 1s.

This number includes a special article on " Regulating Tea Production."

The Ceylon Economic Journal, March, 1930. (Colombo) Ceylon Economic Society, Ceylon University College.

Includes an article on the incidence of taxation in Ceylon, by Sir Marcus Fernando.

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

STOCK EXCHANGE PROSPECTS.

GREAT events cast their shadows behind as well as before, and though a full six months have passed since Wall Street touched bottom in last year's slump, the secondary effects of that turbulent episode are still influencing business on every Stock Exchange in the world. A study of the factors involved in the break of 1929 is, in effect, a study of prospects for the summer of 1930, and though the last few weeks have scarcely produced much food for optimism they have clarified the outlook to a significant extent. It is now possible to give an approximate answer to the "key" question, so far as the immediate future is concerned: Was last year's catastrophe merely a "market" affair, due to vicious technical conditions, which, having received drastic correction, have left no obstacle in the way of recovery, or was it one aspect of a far-reaching recession in world economic activity? At the time of the slump, and after, the former hypothesis was popular in official and other circles in America; to-day, the weight of informed opinion, here and elsewhere, is coming more and more unanimously to the latter view.

In both America and Great Britain the rise of values which preceded last year's slump was centred chiefly on industrial "equity" shares. The following table, based upon two well-known indices, shows the course of prices during the past year and a half:—

BOOM AND SLUMP.

Centre.	Nature of Index.	Boom.		Slump.		*Drop from High to Low (% of Peak Level).*
		Highest Point Touched.	Date of "Peak" Point.	Lowest Point Touched.	Date of Lowest Point.	
New York	Standard Statistics, 402 stocks. (weekly) 1926 = 100.	228·1	Mid-Sept., 1929.	140·3	2nd week, Nov., 1929.	*38·5%*
London ...	*Investors' Chronicle*, "All Business" (End-month) 1926 = 100.	127·0*	End Jan., 1929.*	95·7	End Feb., 1930.	*24·7%‡*

* 114·7 at end August, 1929. ‡ 15·0% drop from end August, 1929, level.

RECOVERY AND SECONDARY RECESSION.

	Recovery.			Secondary Recession.
	Highest Point Reached.	Date.	*Amount of Ground regained (% of Total Loss during slump).*	Present Level of Prices.
New York.....	184·8	2nd week April, 1930.	*50·7%*	174·0
London.....	101·0	End March, 1930.	*16·9%*	96·6†

† Estimated.

American stock prices, even after the "secondary recession" of the last few weeks, have succeeded in retaining their "reconquest" of 38.4 per cent. of the ground lost during last year's slump.

Hair-splitting comparison between the two indices is impossible, owing to differences in their content, and, particularly, to the fact that the American is an end-week and the British an end-month index. The figures, however, illustrate certain cardinal features, which are particularly relevant at the moment. (1) The "slump" was a much longer-drawn-out affair in London than in New York. The British decline started eight months before the American catastrophe, and continued for over three months when American prices were in the first stages of recovery. (2) The extreme limits of fluctuation were much wider in America than in Great Britain, and whereas American stocks had regained half the lost ground before the "secondary recession" of last month, British stocks had regained less than a fifth. (3) Though the pace of the American recovery of December-April may have been too hot to last, there is no sign whatever of prices going back to anything like the point touched after the slump. (4) To-day American values are about 75 per cent. higher than in 1926, whereas British values stand, approximately, at the 1926 level.

An American economist of the first rank, Professor Irving Fisher, has recently published a survey* of the Wall Street crash which is of special interest at the moment. Broadly, Professor Fisher believes that between two-thirds and three-fourths of the stock market rise, between 1926 and September, 1929, was justified. The proper study of the investor, he declares in effect, is earnings. Whereas from 1899 to 1922 net production per American worker scarcely increased at all, it subsequently rose in a steeply ascending curve to the highest rate known in history. Three features which have commonly been regarded as indicative of weakness in the market were, Professor Fisher points out, merely a legitimate and inevitable "economic" response to this tendency. First, given so rapid a rise in profits, the public was right in swinging over from bonds and preferred stocks to common stocks, because the former were automatically shut out from any share of the proceeds of expanding earnings. Secondly, the rise in the curve of common stock prices was steeper than that of *total* industrial earnings, because common stocks "went up to the extent that bonds and preferred stock could not go up." In other words, "earnings per share" rose appreciably faster than "net profits." The extensive resort of American managements to the practice of "ploughing back earnings into the business" further emphasised this tendency. Thirdly, the old rule-of-thumb method of estimating ten times the annual earnings as a fair selling price for common shares presupposed a stationary or slowly rising curve of earnings, and was entirely irrelevant when the whole *tempo* of industry had been decisively accelerated. It was only in the three months preceding the "crash," Professor Fisher believes, that the public lost its head and ignored yields and earnings. At the same time commodity prices were showing a somewhat rapid decline, and the American investment trusts had issued $1,000 million of new securities and reinvested only part of this immense sum in the purchase of existing securities. These conditions were aggravated by the Federal tax on *capital* profits, which discouraged "profit-taking" and encouraged the buying of new securities, by individuals, with the help of loans.

On this diagnosis, such "technical" factors as have just been mentioned rendered the market vulnerable to panic selling, in the course of which security prices were driven down below an "economic" level. Had industry maintained its increased *tempo* a subsequent recovery of a very considerable part of the ground might have been a perfectly justifiable phenomenon. But, unfortunately, a new factor has been introduced into the equation since last September, in the shape of a substantial *decline* in industrial earnings. In a recent article (see *The Economist*, May 10, 1930, page 1,059) we showed how this phenomenon had affected different industries. From figures subsequently available, it appears that 212 representative American companies have suffered a decline of 18.5 per cent. in earnings in the first quarter of 1930, as compared with 1929, the average decline for different groups being: General industry, 13.0 per cent.; public utility concerns, 10.5 per cent.; and railroads, 32.0 per cent.

* "The Stock Market Crash—and After." By Irving Fisher. (New York) The Macmillan Company.

The "business conferences" called by President Hoover during the crash, and the "prosperity propaganda" they put forth, were designed to cope merely with the psychological effects on industry of what was deemed to be a purely stock market reaction. On both sides of the Atlantic, however, economic observers are now accepting the view that the present setback in industrial activities is a major "cyclical" movement, not peculiar to any one country. Its intensity is, happily, very much less than that of its predecessor, the depression of 1920-21, though it has been heralded by the same phenomenon—rapidly falling commodity prices, which have impoverished the raw material and foodstuff producing countries overseas and slackened the wheels of industry in the manufacturing countries. The initial weapon against such a costly recession—cheap money—has been swiftly and courageously applied, but it is clear that recovery will be gradual rather than dramatic. The realisation of this latter fact has abruptly halted the rally in Wall Street values, and caused a sympathetic, though less pronounced, movement in sentiment on this side.

For both British and American securities, therefore, (other than those beneficially affected by cheap money, such as gilt-edged and senior industrial fixed-interest stocks), the spring and summer of 1930 are likely to be a quiet period. By the autumn it may be possible to see how far the forces of recovery are making headway.

The facts elicited in the course of this survey, however, suggest that the ultimate rally in American values is likely to start from a higher point, relative to the recent past, than that in British security prices. In other words, American shares, as a whole, are not necessarily overvalued because they stand to-day some 75 per cent. above their 1926 level while British "business" shares are back at scratch. Apart from the investment factors already mentioned, American industrial earnings increased by an average of 9 per cent. annually from 1922 to 1927, and the first nine months of last year showed an increase of 20 per cent. in profits over the corresponding period of 1928. In the case of Great Britain, our industrial profit figures show a much slower annual expansion, while the Board of Trade Production Index last year was only 11½ per cent. above the level of 1924. The securities of established British profit-earning concerns rose far less rapidly, before last year's slump, than their American counterparts, because they had no rapidly advancing "earnings ratio" on which to base a spectacular advance. The "boom," in fact, was confined in Great Britain largely to mushroom concerns, and came to an end with the first rise in Bank rate, in February, 1929.

The investor may therefore be advised during the next few months to follow the course of general economic and industrial indications even more closely than usual, particularly as regards the earliest signs of increasing stability of commodity prices and slowly expanding production, not in one but in *many* industries. There is no reason to doubt but that the process of rapid exploitation of America's economic opportunities, now suffering a temporary interruption, will sooner or later be resumed, and the investment factors relevant to a somewhat steep upward curve of earnings, to which reference has been made above will come again into play. Under such conditions, a wide field may again be opened, in America, to the long-term investor. The recovery in Great Britain will call possibly for somewhat more "selective" investment treatment, with special reference to the "newer" industries, which have an appreciable amount of virgin territory to occupy. Into this category may fall the best artificial silk, motor and electrical trades, certain companies and industries whose expansion will reflect the progress of the "southward shifting" of the centre of gravity of British trade, and various concerns which are exploiting new ideas, methods and organisation in retail selling.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 3.	June 5.

THE week left markets much as they started. The cessation of the gold drain to France was followed by talk of a further reduction in Bank rate, but this found slight credence in the "House," and gilt-edged stocks lost, after the "No change" announcement, just about as much as they had gained the previous day. New York did nothing to speak of, and industrials had an undistinguished week, a slow sagging of prices reflecting, possibly, the further rise in the unemployment figures and the weakening of the Government's position, or, more probably, the mere fact that neither the public nor the Stock Exchange could foresee anything much to go for, one way or the other, during the next few weeks. Our own view on the market outlook is set out in a leading article on the previous page.

After a quiet start, gilt-edged stocks presented a firmer appearance in mid-week, on a fair investment demand. War Loan was prominent and the old Four and a Half per Cent. Conversion Stock was outstanding on Wednesday, though a recessionary tendency followed the announcement of an unchanged Bank rate. Rumours of a coming War Loan Conversion issue were persistent, but entirely unofficial, the secret, if any, being well kept. India loans were weak on the announcement of the new issue of £7,000,000 of Six per Cents., but developed strength on the early closing of the lists. Dealings in the new loan opened on Thursday at ½ premium, and after touching 1 came back to 1⅜ premium. Only a moderate business was done in Australians, but New Zealand Five per Cents. showed conspicuous strength.

A fair business was done in foreign bonds, with increased interest in Brazilians. The discount on the new San Paulo bonds was steadily reduced. Japanese loans ruled firm on the success of the new issue, which rose to 1⅛ premium after allotment on the basis of 10 per cent. European stocks were steady, with a fair volume of dealings.

The week was depressing for railway stockholders. The home railway traffic figures afforded a comparison with the pre-Whitsun week of 1929, but, even so, were clearly unsatisfactory. Though the railways are undoubtedly feeling the effects of trade depression, the market is unable to form any clear judgment in the absence of net earnings' figures. Argentine prices were lower, the Cordoba Central decision to pay no interest on its second debenture stock coming as a severe blow. The Rhodesia and Mashonaland Railway debentures moved off satisfactorily, having risen to a small premium by Tuesday afternoon.

The industrial share market had the lethargic appearance which has become habitual in the last few weeks. No liquidation was in progress, but prices receded by a small fraction each day on a complete lack of public interest. Cables and Wireless partially recovered after a bad start, the market continuing to look forward to next month's report without particular pleasure. The Lancashire Coal and Steel scheme (described in an Investment Note on page 1176), was regarded rather as a portent in the sphere of rationalisation than a matter of market interest. Though a moderate provincial demand kept textile shares steady as a whole, sporadic selling of Fine Cotton Spinners continued on the publication of the report (dealt with on page 1177). Breweries were steady, Allsopps attracting some attention, but tobacco shares were undecided. Marks and Spencer obtained fresh support on the strong financial position disclosed in last year's accounts, and Ner-Sags were marked up on the pleasant surprise provided for shareholders by the announcement that assets in the winding-up would realise not less than £2 a share. After a dull period, Newspapers were more active on Thursday following the disclosure of increased profits by Amalgamated Press. H.M.V. and Columbia remained dull, and Vocalions were irregular, the carry-over again disclosing a bear account in these shares. Bank shares became

irregular after obtaining unobtrusive support, but only small business was done in insurance shares.

The rubber market was dull, the few shares in which any volume of business was done being all lower on balance. Tea was in quieter demand at the week's auctions, and business in the shares was on a narrower basis. Consolidated Tea and Lands, however, obtained support after being marked down on the big cut in dividends (the reasons for which are discussed on page 1,176). The leading oil company dividends were on eminently satisfactory lines, but the undertone of the market was not altogether healthy, Californian " conservation " developments being far from reassuring. The tone of the mining market was quiet, though there was no sizeable reaction, and Congo Borders reached £21¼, while N'Changas were prominent on the report, and other descriptions held their gains. Kaffirs were inactive, the only feature being the price adjustment brought about in Gold Fields and Amalgamated Mining, following the announcement of a fusion (discussed on page 1,179). Brakpans were again on offer, while Geduld lost a hard-earned improvement. Tin shares were irregular, following the mid-week decline and subsequent slight improvement in the metal. Rio Tintos went ahead to 41 on better copper prices and Tharsis added a fraction. Wilunas, in the Australian section, were inquired for on the latest developments at depth.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The stock-market trend has been downward most of the week, but is now showing signs of rallying on its oversold condition. The volume of trading is drying up, and turnover is averaging 2,000,000 shares daily, or about the early winter rate. There is as yet little sign as to which way markets will move when they break out of the present trading rut, which, in turn, is not regarded as an early probability. It is believed that trading is about three-fourths by professionals, most of whom are bearishly inclined. There is nothing in the business outlook on which to base a bull movement, and dividend reductions continue, especially among copper companies, though, on the other hand, prices have already discounted any adverse developments in sight. Holders are unwilling to part with stock, and are equally reluctant to buy more. The public is taking almost no interest. There is some talk of a break up in the Exporters' Association, but it is believed that nothing is likely to happen at the moment. Railroad earnings for April are proving slightly better than earlier in the year, though they are still well below a year ago. Rail shares are somewhat better. The April motor output showed a good rise over March, and, while it was much below last year, it was nevertheless the best of previous years. Few companies are making money except Ford and General Motors. The steel industry is maintaining its operations around 74 per cent., and Steel Corporation at 80 per cent., but prices are still weakening and are now the lowest since about 1922.

* 2-hour session.

AMSTERDAM.

During the first half of the month, the tendency on 'Change was decidedly better than in the second half, especially for Industrials. In the first place, the results disclosed by the publication of several balance sheets, such as those of Unilever and Philips Lamp Works, did not fail to make their influence felt. The report of the Philips Works for 1929 was considered disappointing, and this had a depressing effect on the level of prices. The effects of the ups and downs of the American stock markets were also apparent in Amsterdam. As a result, the market assumed a reserved aspect, so that no business of any importance was transacted. Generally speaking, prices were irregular. In tobacco shares, however, there was a firmer tone, on the satisfactory dividend of the Deli Company (21 per cent.). Sugar shares also recovered somewhat from the lowest point, partly on bear covering. A very weak tendency characterised Van Berkel's Patent on unfavourable rumours as to the business of the company. Margarine Unie shares have been in a depressed state recently, but a comparatively good demand sprang up during the last few days, which brought about an improvement in the level of prices. The demand, it appears, came chiefly from England. The market is such that there is not much stock on offer at the prevailing level, so that even a small demand causes an advance in prices. Oils were somewhat better, but little interest was taken in shipping shares.

INVESTMENT NOTES.

The Stock Exchange and the Naturalised Member.—A " House " correspondent writes:—The Stock Exchange Committee have before them a question of re-election to the Stock Exchange of members of foreign birth who, although naturalised British subjects, were not re-elected to membership during the war. According to the Stock Exchange rules in force before the outbreak of the war, it was necessary for any applicant for election or for re-election to have been a naturalised British subject for a certain number of years. In August, 1914, there were 126 members whose country of birth was Germany, Austria and Hungary. While it must be said that, at a time when national feeling was on edge, some of these members acted in a scarcely tactful manner, others had sons who fought on the British side, frequently with distinction. When the question of re-election came before the Committee, a sub-committee was appointed, and each case received separate attention. The sub-committee did its best to weigh the evidence carefully and conscientiously, and, in the event, the applications for about eighty members were refused, no reason being given for the step. Of the others, a few men came back into the " House," while others preferred to stay away during the war. There remained, however, a good many who, after living in retirement, are now having their cases considered, as a whole, by a Stock Exchange Sub-Committee. One of the duties of this body is to ascertain the general " House " feeling as to reopening the case, if applications for re-election should be made. For several years before the war, the German influence was undoubtedly felt throughout the Stock Exchange markets. It was not entirely without reason that members said one heard more German than English spoken in certain sections of the Stock Exchange. The German method, as elsewhere, was to cut profits very fine and to ensure that business should be retained within certain sets of hands. A good deal of business was undoubtedly attracted to the " House " in the process. To-day there is very decided conflict of opinion on the matter. Some members main-

tain that if the London Stock Exchange endeavours to run counter to the whole trend of modern conditions towards internationalisation, business will go elsewhere, while others contend that what are called "German methods" have done the Stock Exchange no good in the past, and can be profitably dispensed with. Of the Stock Exchange Committee in power at the beginning of the war, there now remain only four members out of thirty, so that the present Committee can be said to approach the subject with an open mind. In some quarters a referendum of Stock Exchange opinion is suggested. A very limited and unofficial canvass has suggested that the majority of members are against re-admission, but this impression might not be borne out of a full vote. The matter is exciting some attention outside the immediate precincts of the Stock Exchange.

India Borrowing.—The terms of the £7,000,000 loan issued by the Government of India this week were identical with those of the £6,000,000 loan issued last February, namely, 6 per cent. bonds at 99, except that the present series are repayable over the period 1933-35, whereas the previous series were redeemable in 1932 or 1933. As the Bank of England is prepared to accept these bonds as "floaters," that is, as equal security to British Treasury bonds for borrowing purposes, a satisfactory response to the issue was assured. Indeed, in spite of the political situation in India, the terms may be regarded as generous. It may be fitting to reiterate that while it is incorrect to say—as is still being said in certain quarters on the Stock Exchange and in the popular Press—that India loans are guaranteed or "backed" by the Imperial Government, the investor, nevertheless, has the assurance of the Secretary of State that the Labour Government has no intention of allowing a state of things to arise in which the repudiation of India's debt could become a practical possibility. As regards the present loan, the prospectus tersely stated that the proceeds would be used to provide funds for capital expenditure on railways in India and for general purposes. In an article in the *Economist* on February 22nd last, we pointed out that the India Government had a fairly heavy crop of maturing loans, mostly internal, to meet during the next seven years, and that it was committed to a development programme calling for heavy capital expenditure on railways and irrigation. The capital programme has already had to be curtailed on account of the difficulty of raising money at the present time and the tight squeeze in the Central Government's finances. Finding it impossible to float a rupee loan the India Government cannot be blamed for making sure of obtaining a favourable response to the present sterling loan, which no doubt represents its minimum requirements. The following table shows how the prices of India loans to-day compare with those of a year ago:—

	Price, May, 1929.	Flat Yield %	Present Price.	Flat Yield %
		£ s. d.		£ s. d.
India 2½% perpetual	50	4 19 0	45	5 11 0
India 3½% perpetual	69	5 0 9	63	5 12 0
India 4½% 1950–55	89½	5 0 0	83½	5 7 6

The 6 per cent. loans issued this year are not exactly comparable with the above, seeing that they are short-dated, but it is to be observed that the India 5½ per cent. loan, repayable in January, 1932, is quoted at 101½ to yield £5 10s. per cent., or £5 11s. per cent. on redemption. To offer the investor £6 1s. 3d. per cent. for three or five years is, therefore, a generous policy, whose justification is to be found in the exceptional conditions of the moment.

Lancashire Coal and Steel Scheme.—A fresh chapter in the story of Armstrong-Whitworth reorganisation, and the first in the published annals of the Securities Management Trust, opens with the announcement of the merger of five Lancashire coal, iron and steel companies—Pearson and Knowles (with Rylands Bros.), Moss Hall Coal, Wigan Junction Colliery, Partington Iron and Steel, and Wigan Coal and Iron. The first four are all members of the Pearson and Knowles group, which were acquired by Sir W. G. Armstrong Whitworth and Co. in the post-war boom. Wigan Coal and Iron is one of the oldest-established concerns in the Lancashire coalfield, and was registered sixty-five years ago. The company paid regular dividends on its £1,809,725 of called-up capital until 1924, but has distributed nothing since. The scheme has been under consideration for some time, a provisional agreement being announced by the Wigan Coal and Iron Company three months ago. The plan includes the formation of two new companies—the Wigan Coal Corporation (the "Coal Company"), with a capital of £1,746,555, and the Lancashire Steel Corporation (the "Steel Company"), with a capital of £5,750,000—to take over the joint assets indicated by their respective titles. The capitalisation of the two concerns will be as follows (in £1 shares throughout):—

Coal Company.	Steel Company.
266,743 7% Non.-Cum. Pref.	1,250,000 7% Cum. Conv. Red. 1st Pref.
591,924 "A" Ord.	1,000,000 7% Non-Cum. Red. 2nd Pref.
887,888 "B" shares.	3,000,000 "A" Ord.
	500,000 "B" Ord.
£1,746,555	£5,750,000

The Securities Management Trust, which was formed recently under the auspices of the Bank of England to assist in British industrial rationalisation, will subscribe for the "B" shares of the steel company, which carry control. The trust will also indirectly control the coal company through the allotment of the latter's "A" shares, with special voting rights, to the steel company. The first directors of both companies will be selected by the Bank of England. Messrs. J. Henry Schröder and Company, the well-known City "house," will obtain fresh capital for the combine by issuing the 1,250,000 7 per cent. first preference shares of the steel company at par. The remaining capital will be apportioned between the five merging companies on the following lines:—

	Coal Company.	Steel Company.
Pearson and Knowles.	120,237 "B" Ord. ...	325,678 "A" Ord.
	19,419 7% Non-Cum. Pref.	443,319 7% 2nd Pref.
Moss Hall ...	106,706 "B" Ord. ...	71,137 "A" Ord.
	19,643 7% Non-Cum. Pref.	...
Wigan Junction.	37,831 "B" Ord. ...	25,220 "A" Ord.
	13,981 7% Non-Cum. Pref.	...
Wigan Coal	623,114 "B" Ord. ...	773,835 "A" Ord.
	213,700 7% Non-Cum-Pref.	200,868 7% 2nd Pref.
Partington...	...	1,665,268 "A" Ord.
	...	254,244 7% 2nd Pref.

On the administrative side, the measure will enable large economies to be achieved, as a result of the improvement and modernisation of plant and methods. The construction, at Irlam, of a new dock on the Manchester Ship Canal, together with a new steel plant on the most up-to-date lines, will be carried out, as soon as the new capital becomes available, in accordance with detailed plans prepared in consultation with Messrs H. A. Brassert and Company, of London and Chicago, whose reputation as steel-plant engineers is an international one.

Lower Tea Profits.—It is unfortunate for holders of tea shares that a tangible improvement in the underlying conditions of the commodity market (which we discussed in a "Note" in last week's *Economist*, page 1120), has synchronised with the publication of a batch of unfavourable company reports for 1929. The accounts of four important companies, of which James Finlay and Company, of Glasgow, are agents and secretaries, show a heavy contraction in profits. The consequent reductions of dividends (particularly severe as regards the largest company of all,

Consolidated Tea and Lands) has come as a severe blow to the market:—

		Consolidated Tea and Lands.	Amalgamated Tea Estates.	Kanan Devan Hills.	Anglo-American Direct Tea.
Tea crop (thous. lbs.)	1928	19,559	6,147	12,820	7,888
	1929	21,125	6,476	12,893	8,456
Average price per lb.	1928	14·25d.	17·55d.	18·01d.	16·04d.
	1929	11·76d.	15·53d.	16·38d.	14·03d.
Profit	1928	£412,095	£233,242	£412,473	£195,890
	1929	£210,415	£133,561	£311,076	£148,093
Earned per ord. share	1928	22·1%	16·6%	36·2%	17·3%
	1929	5·4%	7·7%	19·5%	7·8%
Dividend per share	1928	22·5%	17·5%	35·0%	17·5%
	1929	5·0%	7·5%	20·0%	10·0%

These four companies produced 5½ per cent. more tea in 1929 than in 1928, but marketed it at a price about 22 per cent. lower. Total profits fell off by over a third, though the decline in earnings available per ordinary share was, naturally, much greater. An appreciable part of the total income of all four concerns is obtained from dividends on investments—including cross-holdings—the aggregate figure under this head, for the four companies, being £460,785 in 1928 and £331,366 in 1929. Consolidated Tea has been particularly unfortunate in that, though it owns numerous gardens in Indian and Ceylon, a considerable part of its produce comes from Sylhet. These teas, being of the "plain" variety, have suffered keenly by reason of the competition of large supplies of common tea from Java and Sumatra. Recent figures show that the Dutch market has been in a position to take less than 20 per cent. of the Dutch East Indian output, over 55 per cent. of which has come to an already glutted London tea market. The abolition of the tea duties in their entirety by Mr Churchill last year swept away the preference which Empire teas had formerly enjoyed—a condition which markedly affected the competitive position of teas from Caehar and Sylhet. By the same token, this year's agreement for co-operation between Empire and non-Empire growers in the matter of production, if it be followed up, should be of special interest to "quantity" producing companies in the future.

Fluctuations in Textile Profits.—Shareholders in British textile concerns have been prepared for the publication of unfavourable financial results by a variety of indications—consistently gloomy accounts of conditions in Lancashire, unsatisfactory foreign trade returns, and the Board of Trade's estimate that British textile production last year was only 98.5 per cent. of the 1924 figure, against an average of 111.6 per cent. for the whole of British industry. Recently published reports have borne out this view. The profits of J. and P. Coats, for instance, in the last accounting period show a decline of 19 per cent., as compared with the previous twelve months; those of the Fine Cotton Spinners (whose figures are revealed in detail on this page) a drop of 25 per cent.; the earnings of the British Cotton and Wool Dyers are down by 29 per cent., and those of Crosses and Winkworth by 78 per cent. The last-named company does not pay ordinary dividends; the other three have all reduced their distribution this year. Those investors whose experience of the Stock Exchange aspect of the industry is of long standing do not minimise the importance of these unfavourable developments or regard the immediate outlook as anything but obscure. They point out, however, that extensive fluctuations in profits have always been characteristic even of the strongest concerns in the industry. The following table shows how great these annual variations have been in the case of the three dividend-paying concerns already mentioned, the amounts earned for dividend in 1924 being taken as 100 in each case:—

	1924.	1925.	1926.	1927.	1928.	1929.
J. and P. Coats	100	118	65	120*	111†	102‡
Fine Cotton Spinners(a)	100	57	44	83	47	36
British Cotton and Wool Dyers(a)	100	81	40	98	68	48

* Twelve months to December 31; previous figures to June 30th each year.
† After allowing for special depreciation.
‡ Estimated.
(a) Twelve months to March 31st of year following.

Even the giant of the cotton thread trade, J. and P. Coats, is liable to wide annual variations in earnings. In the case of the other two concerns, earnings, it will be seen, have never regained the 1924 level, and in the last few years have had an unmistakably downward trend. The future is bound up necessarily with the progress of the efforts to put Lancashire on her feet again.

Fine Cotton Spinners.—This old-established company has again suffered from the effects of the depression in the textile industry. Net profit for the financial year ended March 31st last totals £390,568, compared with £522,618 for 1928-29 and £944,223 for 1927-28. With the addition of £214,167 brought forward from the last account, and £50,000 taken from dividend equalisation reserve, there is available for dividend the sum of £654,735. Preference and preferred ordinary dividends require £197,000. The ordinary shares receive a distribution of 6 per cent., against 9 per cent. last year, while percentage earnings, which in 1928 well covered a dividend of 15 per cent., have now shrunk to 4.4 per cent.

Year ends March 31.	1928.	1929.	1930.
	£	£	£
Net profit	944,223	522,618	390,568
Brought forward	214,726	200,449	214,167
Preference dividend	150,000	150,000	150,000
Rate per cent.	5	5	5
No. of times covered	*6·3*	*3·5*	*2·6*
Preferred ordinary dividend	47,000	47,000	47,000
Rate per cent.	5	5	5
No. of times covered	*4·8*	*2 7*	*2·0*
Ordinary capital:—			
Earned £	*747,223*	*325,618*	*193,568*
Paid £	661,500	396,900	264,600
Earned per cent.	*16·9*	*7·4*	*4·4*
Paid per cent.	15	9	6
To general reserve	*Dr.50,000*	...	...
To dividend equalisation reserve	100,000	*Dr.100,000*	*Dr.50,000*
Other allocations	50,000	15,000	10,000
Carried forward	200,449	214,167	183,135

The sum of £10,000 is transferred to welfare fund, while the carry-forward item at £183,135 reveals a drop of £31,032 on the amount brought in. Few changes are recorded in the balance sheet on either side. Reserves are still substantial at £1,157,959, but available assets at £1,010,379 are considerably below potential liabilities, while cash has fallen from £143,709 to £3,328. Sundry

additions to properties during the year bring the fixed capital item to £6,130,281, after due allowance has been made for depreciation, but the balance-sheet total is slightly reduced at £15,206,922. At their present price of £1⅛, the £1 ordinary shares give a yield of £5 9s. 1d., allowing for a final dividend of 3 per cent.

Salts (Saltaire).—In view of the unfortunate results revealed by the accounts of this old-established firm of worsted spinners and worsted stuff manufacturers for the financial year ended March 31st last, the optimistic tone of the chairman at the recent annual meeting came somewhat as a surprise. The company records a trading loss for the year of £287,978, compared with a trading profit of £45,234 for 1928-9. Income from investments totals £89,691, rents from house properties £20,865, and income tax recoverable £6,744, but the deductions of £63,284 for debenture interest, £40,000 for depreciation fund, £4,000 for directors' fees, and £17,882 for bank interest, increase the net deficit to £295,844. After allowance has been made for the sum of £65,722 brought in from the last account, there remains a debit balance of £230,122 to be carried forward.

Year ends March 31.	1928.	1929.	1930.

No dividend has been paid on the ordinary shares since 1923, while the preference shareholders have been scarcely more fortunate, last year's allocation of £84,000 being in respect of arrears for the year ended March 31, 1926. The bank overdraft has increased from £404,056 to £495,257, and stocks have been written down from £788,721 to £320,951, following a heavy slump in value. The increase in investments from £710,782 to £967,734 is almost entirely accounted for by the fusion of the company's interests with E. M. Gates and Company, by which it is hoped that "considerable economies will be effected." Some of the causes to which the board attribute responsibility for the current depression have done duty in other cases as "whipping-boys," and importance must necessarily attach to the proposed measures for the internal "rationalisation" of the company, and not merely to indefinite prognostications of an improvement in the general conditions of the industry.

Marks and Spencer.—Last year's figures of this highly progressive "chain" company were even more satisfactory than would appear at first sight. The net profit rose by £94,939 to £298,588 and, as usual, was struck after charging interest on loans, which last year were £641,232 higher at £1,003,050. The directors have declared a dividend of 20 per cent. on the ordinary capital, on which 38.42 per cent. was earned.

	1928.	1929.	1930.

Added to carry-forward	5,229	12,247	14,088

The balance-sheet figure of properties has increased by £708,257 to £2,396,465, and furniture and fittings are £80,977 higher at £267,394. Creditors are £93,472 more at £275,742, and stocks have risen by £120,991 to £346,281. Marks and Spencer, being a "cash and carry" concern, is liquid in every respect. The turnover is large and stock in trade represents only 115 per cent. of the net profit. The shares at their present price of £6 3s. 9d. yield £1 12s. 4d. per cent. on dividends and £3 2s. 1d. on earnings. The figures pay a high compliment to the directors' policy.

The Affairs of R. E. Jones.—The regrettable dispute in which the directors of this unfortunate company are involved has made little, if any, progress towards a settlement during the past four weeks. Following the poll at the extraordinary general meeting, on April 17th, and the consequent decision not to declare the result pending legal proceedings, two motions were heard before Mr Justice Clauson in the Chancery Division last week. The first, in the name of Sir N. Grattan-Doyle and two other directors, sought an injunction to restrain the declaration of the poll, on the ground that the proxies given in favour of Messrs Moxon and Bickerton were invalid, by reason of misrepresentations contained in a circular issued by Mr John Smith on April 11th. The other motion was by Messrs Moxon and Bickerton for an injunction to restrain Mr Batchelor, Sir N. Grattan-Doyle, and his two co-plaintiffs from acting as directors and from appointing a managing director. Mr Justice Clauson said that he failed to appreciate why Mr Batchelor did not declare the result of the poll, and both motions were held over for a week to enable the result to be made known. In a subsequent statement, which took the form of an affidavit, Mr Batchelor showed that all the resolutions submitted by Messrs Moxon and Bickerton had been heavily defeated, but that in each case "he had not allowed any proxy votes in favour of John Moxon or Thomas Bickerton, on the ground that neither of them used or exercised in the poll the votes of the members who had signed proxies in their favour." If this be so, and the proxies were actually not used, it is difficult to understand the *raison d'être* of the motion quoted above to restrain the declaration of the poll because certain proxies were given as the result of misrepresentation. In any case, it is not likely that shareholders will be satisfied, since the disregarding of the proxies obviously makes the declaration of the poll quite meaningless. Unless the dispute takes a happier turn, the present *impasse* suggests the likelihood of protracted and fruitless litigation.

White Star Meeting.—At last week's annual meeting, Lord Kylsant attributed the lower profit to the disappointing year experienced by the Aberdeen and Commonwealth Line. Although White Star sailings were somewhat reduced last year, he declared, the number of passengers was fairly well maintained. It has now been decided not to proceed immediately with the construction of the "Oceanic," but the "Britannic" is to make her maiden trip in June, and a sister ship is under construction. Referring to the Atlantic trade competition, Lord Kylsant said that, though the number of passengers travelling is much less than in 1913, the number is annually increasing, and the average total of passengers carried by the company on each voyage is tending to rise. The American Government has practically decided to give all its mail contracts to American ships. This development will further affect the company's earnings, but compensations are expected from the "tourist third-class," which is increasing in popularity. In view of the depression in Australia the prospects of the company's trade on this route are at present not very encouraging.

Moroccan Loan Dispute.—We are requested by the British Chamber of Commerce at Marseilles to draw attention to the lawsuit which is being brought in the Courts at Tangiers, against the Moroccan Government, by British and American holders of the Loan of 1904. This loan of 62,500,000 francs was originally contracted by the Maghzen of Morocco, its interest and sinking fund being secured on 60 per cent. of the Customs duties, with a special resident delegate of the bond holders controlling the Customs, and having the right to determine the amounts to be levied in metallic currency of Morocco in order to pay holders in "francs of France, at all times without rebate or excuse." The remaining 40 per cent. of the Customs duties constituted a guarantee for the bondholders in the event of the above provision proving insufficient. The contract was officially recognised in the Algeciras Pact, but in 1918 the French Government suppressed the bondholders' privileges, substituting its own authority for that of the bondholders' delegate, and assuring the service of the debt in depreciated paper francs. The bondholders attacked this decision in the French Courts, but, after winning their case before the Marseilles Tribunal, lost it before the Aix Court of Appeal, which maintained that Morocco, being a Sovereign State, could not be sued in France. Meanwhile, the Morocco Protectorate proposed to redeem the loan in advance of the due date. This latest example of the difficulties which the orgy of inflation during and after the war has left behind it, will be followed, on its merits, with keen interest by British bondholders outside those immediately concerned. In some respects, the Moroccan bondholders have a good case. The difficulties involved, as a result of the use of the phrase "francs of France" in the original contract, however, draw attention to a point which has frequently been urged in respect of foreign lending generally—that payment should be specified not in terms of even the soundest currency, but of gold itself.

Oil Dividends.—Favourable dividend announcements by four leading companies have served to save the oil share market from the general quietude which has settled down on Stock Exchange business. The Shell Transport and Trading Company has declared a final dividend of 15 per cent. tax free in respect of 1929, making 25 per cent. tax free for the year. This is the same distribution as for 1928, but is made on a capital increased by the issue a year ago of one new share for every five shares held, and requires £6,030,340 (taking tax at 4s. in the pound), as against £4,996,902 in the previous year. At the same time the Royal Dutch Company has declared a final dividend of 14 per cent., making 24 per cent. for the year, which is also the same as for 1928. This dividend, again, is payable on a capital 20 per cent. larger than a year ago. The Burmah Oil Company followed the Royal Dutch-Shell group with an announcement of a final dividend of 20 per cent., making 30 per cent. for the year, as against 20 per cent. for 1928. After making the usual appropriations to insurance and field expenditure reserves, but increasing the general reserve appropriations from £200,000 to £500,000, and writing down investments in subsidiary companies by £500,000, the carry forward is increased from £151,085 to £399,775. It would, therefore, appear that the company's profits have increased by over 50 per cent. last year. This is not surprising seeing that the company had the benefit of settled oil prices in India at a higher average level than in 1928 (six months of which was covered by the price-cutting war), and had also received two dividends from the Anglo-Persian Oil Company instead of one, namely an interim dividend of 5 per cent. paid in December, 1929, as well as the final dividend in respect of 1928 paid in July. The Anglo-Persian, which will publish its report next month, is also expected to increase its distribution. For the nine months ending December, 1928, it paid dividends at the rate of 12½ per cent. per annum. Last year it had the benefit of the rise in petrol prices in Great Britain, and the additional revenues from its partnership with the Royal-Dutch-Shell group in the Eastern markets outside India and China. It should, therefore, provide a very satisfactory report and be able to increase its dividends to, say, 15 per cent. or even 17½. Finally, Lobitos Oilfields has declared a dividend of 12½ per cent., as compared with 10 per cent. for 1928. After placing £50,000 to reserve account against nil last year, it carried forward £211,583, against £233,453. This did not point to great improvement, and the market was inclined to be disappointed. It is well to bear in mind that there is no change in the general oil situation in the United States. The American industry is still endeavouring to maintain prices by tightening up restriction of output. Curtailment in California is now legally enforceable. Nevertheless, the recent proposal of the California General Conservation Committee to bring down the output of the State, which is now 635,000 barrels a day, by a further 20-30,000 barrels a day, has not met with success, and the Standard Oil Company of California has in consequence cut the price of crude oil at Santa Fé Springs drastically by amounts varying from 42 cents to 95 cents per barrel. As regards other producing districts, it is by no means certain that restriction will be maintained in Oklahoma in the summer months when the demand for gasoline improves. With nearly eight months' supply of oil in storage the oil situation in America cannot be regarded as over-promising.

A Finance Fusion.—Our mining correspondent writes: —There is possibly little ground for surprise in the proposed amalgamation of the Consolidated Gold Fields of South Africa with the Amalgamated Mining Trust and the South African Gold Trust. All the companies are in the same office, have much the same directorate, and hold very similar interests. In the circumstances—as one of the circulars relative to the proposal observes—"no reason exists for the continued separate existence of these companies." Nevertheless, the scheme came as a bolt from the blue to the Stock Exchange, which immediately proceeded to adjust the quotations of the several shares in accordance with the absorption terms. The latter had been based upon a valuation of the assets. But for the fusion it is probable that the shares of the Amalgamated Trust would have been sharply marked down instead of being advanced. In the year ended March 31st last the net profit amounted to only £25,000, as against £196,400. The falling off is attributed by the directors to the unfavourable market conditions which prevailed during the period. Still, it seems strange that the company should have fared so much worse than its stable companions. In respect of 1928-29, the Trust disbursed a total of 20 per cent., besides placing £50,000 to reserve. For last year a final dividend of 2½ per cent. is to be paid, the total of 7½ per cent. being substantially in excess of the net earnings; moreover, £20,000 depreciation is written off reserve. For each of the past two financial years both the Gold Fields and the Gold Trust have paid 15 per cent.; the balances being struck at June 30th and December 31st respectively. Three Consolidated Gold Fields shares are to be given for every five Amalgamated shares, and in respect of every four Gold Trust shares, the preference capital of the latter company being replaced by a corresponding amount of Gold Fields shares. On the completion of the scheme the issued capital of the Consolidated Gold Fields will stand at £1,750,000 in 6 per cent. first cumulative preference, £1,250,000 second preference, and £2,248,000 ordinary shares. Doubtless the proposals will find general acceptance, although apparently favouring the junior concerns.

N'Changa Copper.—By the issue last year of 300,000 shares at £2 premium, this Northern Rhodesian enterprise was provided with ample funds for the prosecution of development and the erection of plant. At December 31st £60,060 had been received on account of capital and £439,700 on account of premium; from the latter amount, £34,400 underwriting and other expenses have been written off. Capital expenditure during the year totalled £114,200, and at the date of the balance sheet the cash stood at £338,000, the bulk being on deposit—£100,000 with the Anglo-American Corporation of South Africa and a corresponding sum with the Union Corporation. A further £400,000 has to come in from the issue already mentioned. An interest has been taken in the Northern Rhodesian Power Corporation, "formed with a view to investigating the possibilities of developing a central power scheme." The directors report that the

extension of the Rhodesian Railway's branch line from N'Kana to N'Changa is expected to be completed by May next year. Some surprise will doubtless be occasioned by the retirement from the board of Messrs A. Chester Beatty and W. Selkirk, although their resignation is attributed to pressure of other business. From the report of the Technical Committee it appears that the ore reserves in the New Discovery on the Dambo lode are estimated at 54,170,000 tons, averaging 3.77 per cent. copper, plus the original 8,193,000 tons worth 3.74 per cent. On the River lode, from the surface to 400 ft., the reserves are computed at 2,278,000 tons, containing 4.21 per cent. copper. Last week a cable announced that a further borehole on this deposit showed 9½ per cent. copper over 12 ft. The great bulk of the material continues to be oxidised, the treatment of which has yet to be solved. In these circumstances the quotation of N'Changa £1 shares at over £4 seems a little premature.

Associated Tin.—Having regard to the fall in the price of the metal, the showing made by the report for 1929 is no worse than might have been expected. The output of 3,060 tons is almost identical with that of the preceding period, which covered 18 months. Costs, at £82 8s. per ton f.o.r. Bukern are lower by nearly £12, and it is intimated that further substantial reductions have been effected during the current session. Due to the factor already mentioned, the profit came out at £98,500, in place of £174,600. In view of "the conditions prevailing in the metal market and in the world's trade generally," the directors consider that it would not be desirable to declare a dividend at the present juncture, but they promise a substantial interim distribution as soon as tin recovers to a more remunerative level. It may be recalled that the company has so far made one disbursement of 50 per cent., whereof 30 per cent. was in respect of 1926-27 and the balance interim on account of 1927-28. The ore reserves have been increased to 22,100 tons, representing over seven years' supply at the 1929 rate of production.

Lonely Reef.—Our mining correspondent writes:—Even if hopes in regard to developments have not been completeiy fulfilled, the shareholders in this Rhodesian proposition have had the satisfaction of a repetition for last year of the 25 per cent. dividend total paid in respect of 1928. An increase in both the tonnage and average value of the ore milled was accompanied by a modest further reduction in costs, while as regards treatment of accumulated slimes, expansion in tonnage and reduction in expense ratio more than counterbalanced some decline in the yield per ton. At £98,600 the working profit was higher by £12,100. By the appropriation of £850 the reserve (premiums on shares) is raised to a round £10,000, leaving the substantially increased balance of £16,200 to go forward. The reserve just mentioned has been established for the purpose of providing for the acquisition of new mining interests in Southern Rhodesia. Interests have already been secured in certain options, which are being prospected. On the Lonely Reef property the ore reserves have shrunk by 23,250 tons to 72,960 tons, the value being ¾ dwt. up at 15.93 dwts. The total, which represents little more than one year's supply for the mill, is irrespective of a substantial tonnage of low-grade material, from which 30 per cent. of the ore milled last year was drawn. An increased proportion of this ore is expected to be utilised during the current year; the consulting engineer also looks for a renewed economy in costs. An interim dividend at the rate of 10 per cent., as before, has been declared. The £1 shares are quoted on the Stock Exchange at 17s. 6d. Obviously they fall into the speculative category.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Liverpool and London and Globe Insurance, Incorporated Accountants, Licenses and General Insurance, Imperial Continental Gas Association, Power Investment Corporation, La Guaira Harbour Corporation, United Kingdom Tobacco, and Anglo-Oriental Mining Corporation. At the annual meeting of the Imperial Continental Gas Association the chairman said that their tariffs were among the lowest in the world. For electricity at Brussels their average receipt was 2¼d. per unit for current for lighting, 1d. per unit for motive power supplied at low tension and just under ¾d. per unit for current supplied at high tension. Presiding at the annual meeting of the Liverpool and London and Globe Insurance Co., Mr W. R. Glazebrook stressed the need for co-operation between insurance companies as being essential in the interests of the insuring public as well as of the companies themselves. The benefits of co-operative effort from the point of view of insurers and insured had been strongly emphasised by Royal and Special Commissions appointed to investigate the subject. At the Power Investment Corporation meeting the chairman announced that the company's investments were composed of 39.79 per cent. high-class bonds, 8.03 per cent. preference shares, and the remaining 52.58 per cent. of ordinary shares.

CAPITAL ISSUES.

The new issue market remained active, three borrowers raising between them £9,250,000, nominal. The largest issue, that of the *Government of India* came somewhat as a surprise, but was well received. A "Note" on this operation appears on an earlier page. The corporation issue of the week, on behalf of *Newport (Mon.)*, was "only a little one," but conditions were unfavourable, underwriters being compelled to take up 82½ per cent. The issue of convertible and redeemable debentures of *Mount Isa Mines* followed hard upon Mr. Leslie Urquhart's glowing review at last week's Mining Trust meeting. The object of the issue is to pay off outstanding debts, and enable the first unit to start its productive career in the autumn. The Queensland Government, which has been of no little assistance to the company on previous occasions, has apparently had sufficient confidence in the future of the undertaking to guarantee £500,000 of the loan. The debentures have a speculative value, for those who are interested, in view of the right of subscribers for the present issue to convert their holdings within three years into £1 ordinary shares at 30s. per share.

Government of India 6 per cent. Bonds, 1933-35.—Issue of £7,000,000 6 per cent. bonds, 1933-35, at £99 per £100 stock. Trustees are authorised to invest in this stock. The proceeds will be used to provide funds for capital expenditure on railways and for general purposes. If not previously redeemed, the bonds will be repaid at par on June 15, 1935, but the Secretary of State for India reserves the right to redeem at par on or after June 15, 1933, on three months' notice. At the price of issue, the stock gives a flat yield of £6 1s. 3d. per cent., and a redemption yield of £6 4s. 9d. per cent.

Newport (Mon.) Corporation.—Issue of £750,000 1947-67 5 per cent. redeemable stock at £99 15s. per cent. This is a trustee security. The stock will be redeemed at par on September 1, 1967, unless previously cancelled by purchase or agreement, but the Corporation will have the option of redeeming at par in whole or part at any time after September 1, 1947, on three months' notice. The rateable value of the Borough is £598,758, and a rate of one penny is estimated to produce £2,383.

Mount Isa Mines.—Issue at par of £1,500,000 8 per cent. convertible and redeemable debenture stock. The Queensland Government has agreed to guarantee £500,000 of this issue, while the Mining Trust, Ltd., will be allotted £1,000,000 in the terms of the prospectus. Proceeds of the issue will be used to repay all loans and liabilities and provide working capital for the first mill unit now being completed. The stock is convertible at the holder's option on one month's notice into £1 ordinary shares of the company to the nominal value of £2 for each £3 of stock. Any stock not converted will be redeemed at par on or before May 31, 1944, but the company reserves the right to redeem outstanding stock at £105 per £100 at any time after May 31, 1933, on six months' notice. The company was incorporated in January, 1924, and owns extensive lead-silver-zinc mines in Queensland.

Guildford Gas Light and Coke Company.—Sale by tender of £27,750 5 per cent. redeemable debenture stock, to be redeemed at par on June 30, 1950. Minimum price of issue £95 per £100 stock, yielding, at that price, allowing for redemption, £5 9s. 2d. The net revenue of the company for the year ended December 31, 1929, was £14,070, covering interest on debenture stock, including the present issue, nearly four times.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices and summary of balance sheets, will be found on page 1192 *under the heading "Company News."]*

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended May 14th:—Venezuela, 41,438 barrels; Trinidad, 14,836 barrels; total, 56,274 barrels.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during March was 23,315 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,749 barrels. Total production on the company's properties in Mexico during April was 22,416 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,681 barrels.

COMPANY MEETINGS, &c.

IMPERIAL CONTINENTAL GAS ASSOCIATION.

YEAR'S RECORD PROFITS.
INCREASED DIVIDEND.
COL. H. LE ROY-LEWIS' STATEMENT.

The 182nd ordinary general meeting of the proprietors of the Imperial Continental Gas Association was held, on the 21st instant, at Winchester House, London. Colonel H. Le Roy-Lewis, C.B., C.M.G., D.S.O. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that this year it has not been necessary to make any provision for amortisation; the charge last year was £51,000; our new subsidiary companies have placed to amortisation and other reserves the sum of £73,000, so that, taking the consolidated result, reserves prior to the formation of our own profit have increased by £22,000; our profit itself has increased by £80,000; our year's trading, therefore, shows a total improvement of £102,000.

AVAILABLE PROFIT AND DIVIDEND.

The sum available for appropriation is £666,000, out of which an interim dividend of 5 per cent. has already been paid, leaving for final appropriation the figure given in the balance sheet of £587,000. This figure of £666,000 constitutes a record for this company. If we exclude the years which benefited by the adventitious profits accruing from the liquidation of our German undertakings, the nearest approach to to-day's figure was in 1911, when the profit available for appropriation amounted to £583,000. It must be remembered that in 1911, in addition to the towns we supply to-day, the association owned the gas supply of Berlin, Hanover and Aix-la-Chapelle, and a substantial investment in the Frankfurt Gas Company. Those undertakings are now lost to us, and in the years immediately succeeding the war you received very substantial cash sums out of the proceeds of their liquidation.

I will not say that the association has risen phœnix-like from its ashes, although during the dark days of the war complete reduction to the ash stage did not seem far away; nevertheless, without indulging in any exaggerated claims, I think we are entitled to congratulate ourselves that the company has made such a good recovery.

The revival in our fortunes is largely due to the great development which has taken place in the sale of electricity, for whereas in 1913 our output of current amounted only to two million units, during the year under review the companies in which we are interested sold 148 million units of current.

On the other hand, our output of gas, which during last year amounted to 282,000,000 cubic metres, shows a drop upon the output of 1913, when it stood at 465,000,000 cubic metres.

You will see that our position, roughly, is that there has been a drop in our gas sales of 183,000,000 cubic metres and an increase in our sales of current of 146,000,000 units. It should not be deduced from this that gas has failed to make headway; the reverse is, in fact, the case, as the 1929 consumption of the towns which we still supply shows an increase of 41 per cent. upon the consumption of those towns in 1913. The drop in question is entirely due to the loss of our German undertakings. I remain hopeful, however, that in the course of a very few years, if the development which we have in mind for our gas interests does not disappoint us, we shall stand again at the 1913 gas consumption.

WORLD'S LOWEST TARIFFS.

The tariffs by means of which our profits have been earned are among the lowest in the world. Our average price at Antwerp for gas supplied for ordinary private consumption during last year, without any discount, was the very modest figure of 2s. 10d. per 1,000 cubic feet, or 7½d. per therm.

For electricity at Brussels our average receipt was 2¼d. per unit for current for lighting, 1d. per unit for motive power supplied at low tension, and just under ¾d. per unit for current supplied at high tension.

The extreme moderation of these prices proves that the exaggerated control to which public utility companies are subjected in England does not achieve the object which it has in view, for we, while operating under a system which, although not without restraints, gives public utility enterprises much greater latitude than exists in this country, are able to supply gas and current at lower prices and still earn a fair rate of remuneration on our capital. In view of the profit which is available for appropriation, your board feel justified in recommending to you an increase of the rate of dividend from 15 per cent. to 17½ per cent., less tax.

I deprecate any idea of turning ourselves into a financial undertaking. I do not wish you to understand, however, that if a brilliant sale of one of our companies were to come within the region of possibility it would necessarily be our duty to refuse to negotiate, and I hope you will understand that your board is not adverse in principle to the idea of a possible sale. As regards the programmes of the development of the Belgian companies, not merely have we had to lend back to our operating companies in Belgium the whole of the sums which they were due to pay us by way of dividend, but we have had to supply them from here with a further £350,000 of cash.

CAPITAL OUTLAYS.

During last year our enterprises spent on capital development a sum of £621,000, apportioned approximately as follows: £212,000 on the modernisation of our gas-producing works, £51,000 on our power stations, £171,000 on the development of our gas-distributing systems, and £187,000 on our electrical-distributing system. In addition, considerable sums have been spent in acquiring holdings in other undertakings. We estimate that the programme of capital expenditure of the company will leave us with a deficit at the end of this financial year of £750,000. We came to the conclusion that advantage should be taken of this situation to give our shareholders an increased share in the prosperity of the company. Proprietors will therefore be allotted rights to apply for £300,000 of new stock at a price of £250 per £100 of stock, which will give the association the additional capital sum of £750,000 it requires. This will mean that for every £100 of either new or old stock which you possess you will be entitled to subscribe for £12 of new stock which will cost you £30 in cash. Letters of rights will reach you the day after to-morrow. You will be required to pay for each £12 of new stock, £15 upon application and a further £15 on July 1st. Although by the time we receive your second instalment one-quarter of our accounting year will have gone, we intend that this new stock shall rank equally with all existing issues as if it had been in existence on April 1st last, so that it will receive its full share of any dividend or bonus which we may pay in respect of this year. The effect of this new issue will be to raise our issued capital from £2,500,000 to £2,800,000.

FINANCIAL POLICY.

At the time of our last issue it was impossible to foresee the full extent of our financial requirements, and I do not wish any of you to assume that this new issue represents finality. It is useless for us to ask you to subscribe unnecessarily large instalments of capital, as the higher cash subscription might have the effect of inducing you to sell instead of exercising your rights as we like to see you do. It would also be bad management on our part to call up more capital than we can legitimately hope to put to work within a reasonable space of time. We therefore propose to be moderate in our calls for fresh capital, and to come to you only from time to time as our requirements reveal themselves.

The suggestion has been made to me that our reserves are too big, and that they should be made the subject of a special distribution I would point out that before any distribution of this kind can be contemplated, it is necessary to examine the character of the assets which are behind these reserves. The assets in question are an integral part of our undertaking, and, if the suggestion were put into effect, it would involve a curtailment of our true sphere of activity.

It will, I estimate, be three to four years before we complete the tasks immediately before us. At the end of that time, if all goes well, the moment may be propitious for a complete reorganisation of our capital, but there are already too many unhappy examples of undertakings which have put what they would euphemistically call the "rationalisation" of their capital before the rationalisation of their industry. The prestige of our company stands high in the City, and your board are determined to be doubly sure of their ground.

I therefore ask you to dwell in pleasurable contemplation upon our reserves in the knowledge that our investments are valued on a conservative basis, and that our real reserves are far in excess of the figure maintained in the balance-sheet.

The report was adopted, other ordinary business was transacted, and the proceedings terminated with a vote of thanks to the chairman.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY LIMITED.

RECORD TOTAL INCOME EXCEEDS £13,000,000.
FUNDS INCREASED TO OVER £24,000,000.

Mr W. R. Glazebrook, chairman of the Liverpool and London and Globe Insurance Company, Ltd., presiding in Liverpool, on the 21st instant, at the 94th annual general meeting of the company, had some interesting references to make to the results of the year and to insurance conditions in general throughout the world.

The total revenue of the company now exceeds £13,000,000 sterling, which constitutes a new high record, whilst the total underwriting profits amount to £484,000, against £601,000 in 1928.

Considering that fire losses in Great Britain and some countries overseas had been substantially heavier during the year, and that the results of casualty insurance in the U.S.A. were less profitable than formerly, these figures cannot be regarded in the circumstances as other than eminently satisfactory. In the U.S.A. fire department the improved level of 1928 has been maintained, and in the accident department at home and abroad the premiums have been increased and claims costs slightly reduced. In the marine section the percentage of profit is again satisfactory. The company's total interest earnings, other than interest on life funds, increased during the year by over £22,000 to £539,000.

"COST" OF LIFE ASSURANCE.

In the life department the new business for 1929 was £1,716,000, an increase of £11,000 over 1928.

The chairman said that the expression, "Cost of life assurance," was something of a misnomer. The immediate payment of premium was of little relative importance compared with the ultimate benefits received under the contract. For example, "Globe" endowment assurances at younger ages give, at maturity, a yield of approximately 4 per cent. per annum compound interest on all premiums, with the benefits of life assurance cover thrown in.

STOCK EXCHANGE SECURITIES.

The appreciable decline which took place last year in the value of the company's Stock Exchange securities, particularly of British Government securities, had not involved the writing down of the company's securities.

CO-OPERATION BETWEEN INSURANCE COMPANIES.

The need for co-operation between insurance companies was stressed by the chairman as essential in the interests of the insuring public as well as in the interests of the companies themselves. The vast advance which had taken place in the scope and variety of the companies' activities, and the increasingly keen competition which had to be encountered in every country of importance, made it more than ever desirable that offices should co-operate to the advantage of their clients and to their own mutual benefit, in order that the expansion which each company keenly desired should not be achieved at a price too costly for success. The benefits of co-operative effort, from the standpoints of insurers and insured, had been strongly emphasised by Royal and Special Commissions appointed to investigate the subject.

The chairman referred to the marked increase in legislation affecting insurance, either directly or indirectly, which the year 1929 had witnessed, and commented upon the changes in the form of the company's accounts involved by the Companies Act of 1929.

ROAD TRAFFIC BILL.

In the Road Traffic Bill now pending there was, he said, a measure which would probably affect one of the largest individual classes of insurance business—motor insurance. Road accidents continued to increase in number, and some form of compulsory insurance, which had been engaging widespread attention on the Continent and in the United States, was likely to become an accomplished fact in this country. The object of the Bill in its present form was to compel owners of motor vehicles to hold a security bond or to effect an insurance policy sufficient to assure the payment of reasonable compensation for personal injury caused to members of the public. Whether the effect of such legislation would be to raise the rates of motor premiums remained to be seen, but the companies had decided that no increase should take place unless experience made it necessary. So long as companies are free to select their own risks, competition will ensure rates being kept to a minimum.

The report and accounts were adopted, and a final dividend of 13s. 6d. per share was declared, making 26s. per share, less income tax, for the year, against 25s. in 1928. The election and re-election of directors was approved, and a cordial vote of thanks was passed to the management, staff and agents. A warm vote of thanks to the chairman concluded the meeting.

LICENSES AND GENERAL INSURANCE COMPANY, LIMITED.

STRONG FINANCIAL POSITION.

The fortieth ordinary general meeting of the Licenses and General Insurance Company, Ltd., was held, on the 22nd instant, at 24, 26 and 28, Moorgate, London, E.C.

Mr. A. W. Ruggles-Brise, D.L., J.P., C.C. (the chairman), after expressing regret at the death of Lord Dewar, said that 1929 was in many ways one of the least profitable years experienced for some time. The trade of the world had been depressed; financial troubles had been in evidence, and politics had been obscured, all those factors combining to affect adversely the available revenue to insurance, while, on the other hand, claims and the cost of claims had increased substantially.

With regard to the fire department, it was well known that the general conditions for fire insurance had been bad. Their account was comprised of three sections—home business, foreign business and re-insurances. Of the first two they had nothing of which to complain—advances having been registered.

The reduction in the income of the re-insurance department was entirely traceable to the re-insurance received from other offices. The reason for such shrinkage was found in the fact that the available income from which their treaty companies could re-insure was smaller all round. The quality of the treaties was not in question. They believed 1929 to be an isolated instance of a disastrous fire year. They did not anticipate that the experience would be repeated. Indeed, it was quite safe to say that 1930, so far as it had gone, was encouraging, as it revealed a much improved position. The reserves for claims in suspense were adequate, and the underwriting reserves had been strengthened to a greater degree than formerly.

The effect of bad trade was evidenced in the personal accident and employers' liability departments; while the former account had slightly increased, the effect of the number of unemployed was evidenced in the latter.

The general account, which showed a satisfactory increase of £22,792 in premiums, comprised all those classes of business not specifically mentioned, such as license, burglary, third party and motor. The claim payments showed a not unsatisfactory ratio at 53 per cent., and at 56 per cent. after taking into account a substantial addition to claims in suspense. That, with the additional unexpired risk reserve required on the increased income, made a total of £18,000 retained within the revenue account, and they were still able to carry forward to profit and loss a profit of £19,676.

Comparing the position ten years ago with the present one, he said that the total premium income of the company in 1920 amounted to £270,489, and was at such figure a little restricted in character. In the nine years under review, which included the years immediately following the war, the income on a much wider and broader basis had advanced by no less than £251,214, with the accompaniment of a doubling of the underwriting reserves. To-day he could present a balance sheet in which, on the liabilities side, apart from capital, out of seventeen items, four only did not refer to reserves of one kind or another, while on the assets side no single item was other than absolutely gilt-edged and recoverable pound for pound as shown. He thought, therefore, that they could take credit for to-day's position. The bare goodwill of the company having been more than doubled, they could say truly that their company stood in a position of considerable strength, and that they could look forward with confidence to the future.

The report and accounts were unanimously adopted and a dividend of 20 per cent., less tax, for the year was approved.

POWER INVESTMENT CORPORATION, LIMITED.

INCREASED PROFITS.
TAKING ADVANTAGE OF CHEAP MONEY.
MR R. O. HAMBRO'S STATEMENT.

The tenth ordinary general meeting of the Power Investment Corporation, Ltd., was held, on the 21st instant, at 41, Bishopsgate, London, E.C., Mr R. O. Hambro (chairman of the company) presiding.

The Secretary (Mr A. E. Bendixson) having read the notice convening the meeting and the report of the auditors,

The Chairman said :—Gentlemen, you will recall that at our last meeting I warned you that times were looking less favourable for finance companies such as ours, and events have proved that the warning was justified.

On the other hand, I did not mean that I was not confident of our ability to make money, and even this year our profits show a satisfactory increase, but I foresaw the considerable fluctuations in prices, which, as you will see from the valuations of our investments, have, in fact, taken place.

On the other hand, at to-day's valuation this depreciation is less, and, in any case, our experience during last year was in common with all investment companies, and, although we were able to foresee the fall in American prices and liquidate the major portion of our American holdings, we have suffered considerably from the ruling prices of artificial silk shares, of which we are holding a fairly large quantity.

These, however, are confined to the largest German and Italian companies, and we are confident that the prices at which they are quoted are well below their intrinsic value.

ACTUALLY A NEW COMPANY.

In comparing ourselves with other investment companies, I should like to mention that the description of our annual meeting as the tenth annual meeting is misleading. We are actually a new company, and this is only the second annual meeting since we took over the shell of another company, and, therefore, we have not yet had time to build up reserves comparable to those shown by the older companies. In fact, as much as 93 per cent. of the present issued capital has been subscribed in the last three years, and the company has only been working with its present capital since November, 1928.

THE INVESTMENTS.

With regard to the items of the balance sheet, our investments are composed of 39·79 per cent. in high-class bonds, 8·03 per cent. in preference shares, and the remaining 52·58 per cent. in ordinary share holdings, of which the only large single group is the artificial silk holding, to which I have already referred.

Although we are confident that in the long run the valuation of our investments will show an improvement, in view of the present depreciation we feel that the only wise policy to pursue to-day is to strengthen our position. You will see, therefore, that we propose, out of the balance of £60,530 available after paying the preference dividend, to restrict the dividend on the ordinary stock to 5 per cent., less income-tax, or the same as last year, which will take £20,785, and to carry forward the balance of £39,745 to next year.

BANK LOANS ITEM.

Turning to the accounts which are before you, I do not think that there is much that I need comment on, but I should like to say a word on the subject of the item of £449,222 representing bank loans. You will, no doubt, have noticed that this item is considerably larger than at the corresponding period last year. But since that date the whole course of money rates has changed, and with the low rates now ruling, we felt it was an opportunity of which the company should take advantage, and which is to-day paying us well.

I should again like to point out in connection with the note on the balance sheet that of the total of £1,573,872 invested, the unquoted securities mentioned as being at directors' valuation total £279,656, of which £156,148 is in secured loans and bonds, £40,995 in preference shares, and the comparatively small amount of £82,513 is in ordinary shares.

The chairman, having replied to questions, moved the adoption of the report and accounts and the payment of the proposed dividends.

The Rt. Hon. Lord Glenconner seconded the motion, which was carried unanimously.

The retiring directors (Mr R. O. Hambro, the Rt. Hon. Lord Glenconner, and Mr E. H. Lever) having been re-elected and the auditors (Messrs George A. Touche and Company) reappointed, the proceedings terminated with a vote of thanks to the chairman.

ANGLO-ORIENTAL MINING CORPORATION, LIMITED.

SUCCESS OF CO-OPERATION AMONGST PRODUCERS.

The second ordinary general meeting of the Anglo-Oriental Mining Corporation, Ltd., was held, on the 22nd instant, at the Cannon Street Hotel, London, E.C.

Mr John Howeson, the chairman, who presided, said that, with the co-operation of the great majority of British tin-mining companies, there had, at length, been established in the Tin Producers' Association an organisation capable of safeguarding the interests of all concerned. It was, however, only fair to add that, without the wholehearted support of the great mining interests of Bolivia, and also the assurances given by the producers of the Dutch East Indies, those plans could not have been carried to so satisfactory a conclusion.

It must be regarded as a wonderful achievement that the association should have obtained the support of producers representing more than 70 per cent. of the world's output of tin, which, expressed in tons of metal, meant that out of 190,000 tons, which the world was estimated to produce in 1930 without regulation, 140,000 tons were subject to regulation, and the amount of curtailment resulting from such co-operation when carried on for a full year would exceed 30,000 tons.

While on these premises they must look forward with confidence to the reduction of surplus stocks to a figure that would ensure a fair and reasonable price for tin, the present situation was, nevertheless, grave, the need for expedition imperative, and the firm and unequivocal adherence of every British producer vitally necessary.

THE ONLY ALTERNATIVE.

He could discern only one alternative to the programme of the Tin Producers' Association, and that was to leave matters alone and so encourage each producer to pursue his own course, bidding the devil take the hindmost. Without any check upon over-production, stocks would continue to mount up and prices to fall until sufficient producers were temporarily driven to the wall. That, let them make no mistake, would be a slow, hard and costly process, for while money could be raised to pay wages there was always hope, and it would inevitably take many more months of ever-increasing loss throughout the industry before enough production was closed down to restore the balance between supply and demand. Moreover, that method of eliminating the surplus producer could only end, as it always had ended, in a shortage of production, thus stimulating renewed speculation, which would drive prices again to dangerous heights, turn consumers' minds to the finding of substitutes, and so work incalculable harm to all producers. Stability, the prime need of the industry, would then be more remote than ever. To leave things alone was the policy of despair, and the price of despair was disaster.

Producers had made their choice; let them now concentrate on the game, and follow implicitly and with all expedition the recommendations of their council. The ball was at their feet; it had only to be picked up and the game should be won for all time. They alone were responsible for the quantity of tin that was produced. The supply should be adequate, but not excessive, so that the price paid for it, while fair to the consumer, might also be equitable to those whose money had built up the industry. It was futile for producers to squander their exhaustible resources by continuing to throw upon an unwilling market a quantity of tin, beyond that which consumers immediately required.

The more they examined the question of tin supplies and read the opinions of the biggest consumers, the more shareholders would become convinced, apart altogether from their present difficulties, of the value and the necessity of the Tin Producers' Association. Nothing short of a really strong and enduring co-operation could save the tin industry from the past wild fluctuations of prices.

Dealing with their own accounts, the Chairman said that the revenue for the year under review amounted to £110,835, and the board were asking the shareholders to approve the modest distribution of 3d. per share on the ordinary shares, which would entitle the preference shareholders to participate to the extent of a further 1d. per share. After transferring £25,000 to reserves, £82,042 was carried forward, which covered the preference dividend for the whole of 1930-1931, and left £22,000 over.

The chairman, reviewing the present outlook, dealt extensively with the principal consuming industries and expressed the view that, taking everything into consideration, the prospects of consumption were by no means discouraging. As to production, the industry had had its lesson, for which a very high price had been paid. But order was emerging out of chaos; producers had earned the need for co-operation, and were determined to restore the industry to prosperity. Should further action be necessary, the means were now at hand.

The report and accounts were unanimously adopted and the increase of capital to £1,750,000 was approved.

CROWN MINES, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA.)

INCREASED BURDENS.

The thirty-fourth ordinary general meeting of shareholders was held in Johannesburg, on April 24th.

The chairman (Dr. Samuel Evans) in the course of his speech, said : Since the end of the year your directors have acquired for the company the farm Diepkloof No. 9, covering an area of 2,084 morgen and 435 square roods, including a mynpacht equal to 864 claims in extent. The price paid is 40,000 Crown Mines, Ltd., shares; *i.e.*, 34,087 ex-enemy shares and 5,913 of the reserve shares. The Diepkloof mynpacht is situated on the northern portion of the farm and adjoins the southern boundary of the Mooifontein mining area, which we acquired from the Government in 1926. We are selling to the Consolidated Main Reef Mines and Estate, Ltd., the portion of the mynpacht in extent about 274 claims situated immediately south of their property. The Consolidated Main Reef Mines and Estate, Ltd., are paying the cost of these claims to us. The portion of the mynpacht which we retain is equal to approximately 590 claims and brings the total mining ground acquired since the amalgamation in 1909 up to 1,710·1013 claims.

With the addition of our share of the Diepkloof mynpacht, we had on December 31st last 742·8593 intact Main Reef Leader claims and 957·6593 intact South Reef claims more than when the enlarged company came into existence 21 years ago. In this connection, there are, however, three important considerations which we have to bear in mind. In the first place, the ore in our present intact claims is at a greater vertical depth than the average depth of the ore in our intact claims at the time of amalgamation. Then stoping operations were being carried on at an average depth of 1,300 feet vertically. The average depth of the stopes which are being worked at present is about 3,600 feet. In the second place, the cost of equipment and the working expenses generally are very much higher to-day than in 1909 owing to the increases that have taken place in European wages, the cost of stores, &c. And, thirdly, the direct taxation burden which this industry has now to carry is three times that which existed when the amalgamation took place. Here is a comparison of the distribution of the net profits of the Crown Deep, Ltd., in the 2½ years ended June 30, 1909, and of the Crown Mines in the past two years :—

	Crown Deep. 1907–09. Annual Average.		Crown Mines. 1928–29. Annual Average.	
	Total.	%	Total.	%
Dividends	384,000	90·56	553,837½	69·079
Taxes	40,038	9·44	129,472½	16·149
Miners' phthisis levy	...	...	97,604	12·174
Miners' phthisis liability fund	...	...	20,832	2·598
	424,038	100·00	801,746	100·000

In addition to the above burdens, customs duties and railway rates are much heavier than they were prior to 1909.

FAVOURABLE FEATURES.

So much for the increased burdens which South African gold mines have now to carry. Let me add that there are a couple of favourable features which should not be overlooked :—

(1) In the first place, the improvement in the technique of the mining industry has been greater than was anticipated in 1909. For instance, the average cost of ordinary machine development is now about 47s. 6d. per foot, as compared with 58s. 8d. in 1912. There has also been a steady improvement in stoping efficiencies in recent years, the cost per fathom last year being 29s. 9d., as against 32s. 3d. in 1928; 34s. 6d. in 1927; 35s. 3d. in 1926; and 79s. 8d. in 1912. The mining costs per ton mined, excluding development, were 10s. 7·4d. in 1912 and 11s. 2·5d. last year, so that, in spite of the additional expenditure on ventilation, winding, pumping and support of workings, necessitated by the greater depth of our stopes, costs have not gone up to the extent which might have been expected as the result of the increases that have taken place in wages, the price of stores, &c. This is due to the improvements in rockdrills and other appliances, to careful study of the various operations by the management and to the very useful work performed by the investigations committee of the Central Mining and Investment Corporation, Ltd. Had it not been for the improvements mentioned, and others, the additional burdens placed on us since Union would have made it difficult, if not impossible, for us and many other mines on the Rand to work at a profit.

(2) In the second place, it was pretty generally believed twenty-one years ago that the reef would decrease in value in depth. Our experience goes to prove that that is not so to any material extent. The grade of the ore developed in our deeper ground has, on the whole, been better that was anticipated when the enlarged company was formed. I think you will agree that the following comparison of the ore reserve position and of the results of last year's development with the average figures of the fifteen years 1914–1928 is distinctly encouraging.

	Annual Average, 15 years, 1914–28.	1929.
Payable ore developed, tons	2,079,826	1,950,864
Estimated value, dwts.	6·5	6·7
Percentage payable of the number of feet driven on reef	65·0	65·5
Ore reserve :		
Available tons	8,124,526	8,896,270
Estimated value, dwts.	6·1	6·45
Total tons	9,482,834	10,841,457
Estimated value, dwts.	6·29	6·66
Tons mined	2,592,970	3,038,841
Percentage sorted	10·6	13·0
Tons milled	2,318,040	2,643,000
Yield, total in fine ounces	728,508	856,005
Yield, per ton milled, dwts.	6·286	6·478

The satisfactory feature of the figures I have quoted is the remarkable steadiness of the values over the past sixteen years. The yield per ton showed a declining tendency up to 1914, but that since 1914 the grade has been strikingly uniform, the maximum yield being 6·596 dwts. in 1927 and the minimum 5·907 dwts. in 1921. From 1921 onwards there has been a gradual improvement both in the quantity and in the value of the ore reserves. The quantity of ore mined and the output of gold were greater than in any previous year.

REVENUE AND DIVIDEND.

The revenue was lower than in 1919, 1923 and 1924, owing entirely to the premium on the gold sold in those years. The working expenditure showed an increase to £30,000, as compared with 1928, whilst the net profits were £13,000 below the 1928 figure. Last year's results compare favourably with the average results of the previous 15 years.

The dividend distributed to shareholders last year was £599,990 12s. 6d., as compared with an average dividend of £521,574 per annum during the fifteen years ended December, 1928. The costs per ton show an increase of 4s. 10d. since 1914. Had our working costs and taxation been the same last year as they were in 1914, we should have made an additional profit of £639,000. As I have already indicated, a part of the increase in costs is due to the greater depth at which we are working, but the main cause of the increase is the high taxation and other policies pursued by the Government since the Transvaal was merged into the Union.

Our revenue last year totalled £3,687,453, compared with £3,668,195 in 1928 and £3,556,679 in 1927.

Our disbursements last year compare as follows with those of 1927 and 1928 :—

	1927.	1928.	1929.
	£	£	£
Working Expenses, including Miners' Phthisis Levy, Realization Charges, Head and London Offices' Expenses, Donations, Directors' and Auditors' Fees, etc.	2,570,751	2,687,220	2,719,320
Government and Provincial Taxes	146,466	133,949	124,996
Capital Expenditure	243,813	277,311	199,446
Miners' Phthisis—Provision on account of Outstanding Liability	17,517	20,112	21,552
Annuity in respect of Undermining Rights	9,926	9,926	9,926
	2,988,473	3,128,518	3,075,240
Net Profit	568,206	539,677	612,213
Add : Balance Unappropriated at beginning of year	369,038	314,177	346,171
Bringing the Grand Total up to	937,244	853,854	958,384
Less : Dividends paid	623,067	507,684	599,991
Leaving a Balance Unappropriated at 31st December, of	314,177	346,170	358,393

The balance of £358,393 is composed of cash, after allowing for liabilities, £101,380 11s. 9d., and stores, materials on hand, interest in co-operative and other concerns, sundry debtors and payments in advance, £257,011 18s. 4d.

The working expenses per ton milled were practically the same last year as in 1928, but very much higher than in 1914.

The expenditure on account of capital last year shows a considerable decrease as compared with the capital expenditure in the previous two years.

During the next couple of years our capital expenditure will be high, but afterwards it is anticipated that it will be well under £100,000 per annum.

CURRENT YEAR'S RESULTS.

The results obtained in the first quarter of this year compare as follows with those of the corresponding period of last year :—

	1929.	1930.
Fathomage broken	48,834	47,899
Tons mined	704,456	780,158
Tons milled	613,000	681,000
Percentage of waste sorted	13·3	12·6
Yield—		
Total—fine ozs.	204,142	217,215
Per ton milled, dwts.	6·660	6·379
Value of Yield—		
Total, including silver and osmiridium	£868,446	£923,869
Per ton milled	28s. 4·0d.	27s. 1·6d.
Working Costs—		
Total	£638,444	£695,973
Per ton milled	20s. 10·0d.	20s. 5·3d.
Working Profit—		
Total	£230,002	£227,896
Per ton milled	7s. 6·0d.	6s. 8·3d.

The increase of 68,000 tons in the quantity of ore milled this year is due to an improvement in the native labour supply. The decrease in the profit per ton is attributable mainly to the greater development footage accomplished and partly to the fact that the average grade of the ore mined in the first quarter last year was abnormally high.

The development operations during the first quarter of this year compare as follows with those of the same period in 1929 :—

	1929.	1930.
South Reef :		
Footage sampled	2,740	3,050
Payable footage	1,510	1,540
Average value of payable footage, inch-dwts.	283	276
Main Reef Leader :		
Footage sampled	9,280	8,830
Payable footage	6,140	6,060
Average value of payable footage, inch-dwts.	374	397
Total development footage	20,117	26,101

You will observe that the values are satisfactory, and that the percentage of payability is well maintained.

The health conditions on the mine were better last year than in 1928 and about the same as in 1927.

To Gold Mining Companies it is satisfactory to note that the commodity we produce is now firmly established as the world's standard of value and medium of exchange. There are to-day more countries and more people using currencies based on gold than has ever been the case before, and the commodity value of gold is higher than it has been at any time since 1914.

The report and accounts were unanimously adopted.

LA GUAIRA HARBOUR CORPORATION, LIMITED.

PROPOSED HARBOUR IMPROVEMENTS.

The ordinary general meeting of the La Guaira Harbour Corporation, Ltd., was held, on the 21st instant, at Winchester House, Old Broad Street, London.

Mr J. G. B. Stone (the chairman) said that the profit was £71,344, against £64,876 for 1928. After meeting interest the surplus was £11,653, which, with the balances from 1926–28, made £33,164, held, in effect, in suspense. Gross receipts increased by £23,413, and working expenses by £16,944, of which £4,221 represented items which did not appear in 1928. The tonnage handled was 262,529, an increase of 17,257 tons, and the first quarter of 1930 showed increase over the corresponding months of 1929.

Mr H. H. Broughton (a consulting engineer, who had joined the board), after visiting La Guaira, advocated reconstruction of the jetties to make their length 1,309 ft. (against 735 ft.); with three railway tracks (in place of one) and railway sidings to facilitate speedy and economical handling. He advised also that, on the south side of the harbour, now vacant shore, nine acres be reclaimed and a quay constructed to accommodate three large steamers, with three large transit sheds and railway tracks its full length. The capital involved should be under £300,000, and the time in which the work could be carried out should not be more than two years. The consulting engineers estimated the resultant economies at fully £37,500 a year on an annual tonnage of 250,000.

The board considered that an opportune time had now arrived for such works. Their conclusions had been arrived at independently of certain proceedings by the Venezuelan Government to compel the corporation to carry out certain works—proceedings now in abeyance owing to negotiations opened by that Government for the purchase of the undertaking.

For the Macuto Railway four new tramcars were being provided, and there was every reason to expect improved results when they were in operation.

Mr H. C. Dean expressed warm appreciation of the action of the board in informimg the shareholders of the situation by circular, thereby protecting them against the danger of sale of their securities in ignorance of impending events.

The report and accounts were adopted.

At a subsequent extraordinary meeting, on a motion (which was unanimously passed) to increase the borrowing powers to £1,520,000, shareholders congratulated the directors on the excellence of the prospects now apparent, and, in reply to a question, the chairman said that the raising of £300,000 should not present any difficulty.

UNITED KINGDOM TOBACCO COMPANY (1929.)

SUCCESSFUL RESULTS—BENEFITS OF RATIONALISATION.

The first annual general meeting of the United Kingdom Tobacco Company (1929), Ltd., was held, on the 19th instant, at Winchester House, Old Broad Street, London.

Mr Arthur Donn (the chairman), in moving the adoption of the report and accounts, said : The first year of any business was almost invariably extremely difficult. However, he thought that their first year had been not at all unsatisfactory, showing, as it did, a considerable improvement on the results of the previous year, 1928.

Like all the leading manufacturers of cigarettes, they had been compelled to enter into the field of gift schemes. For some time there had been an ever-growing public demand for cigarettes with free coupons, which could be exchanged for gifts varying in value according to the number of coupons returned. Competition was fierce in every branch of the business, but in no section was it as fierce as in that free coupon business. The company had spent considerable time and money in creating and developing a brand of cigarettes, namely, Bandmaster, in that field. Everything pointed to the success of that policy, and the sales of that new line were very gratifying.

They had written off entirely the preliminary and formation expenses account of £7,821. They were able to do that by allotting the value of sundry assets acquired from the vendors, which were not valued in the apportionment of the purchase price, the profits earned prior to incorporation, and £949 taken from profits earned during 1929. In the profit and loss account there remained a surplus of £15,027 after the payment of income tax, the balance of preliminary expense and the Preference dividend and after making ample allowance for depreciation. They proposed to carry that balance forward instead of making a distribution on the ordinary capital.

With regard to the acquisition for £315,000 of the 600,000 ordinary shares of the company by Godfrey Phillips, Ltd., events had proved that that was a move in the right direction. Although he was not enamoured of the word "rationalisation," he was convinced it was a necessity among the independent concerns of the tobacco trade owing to severe competition from the combine. They had been able to effect many economies already, and had been able to avoid a capital expenditure of £100,000 on a new factory. The measure for centralising factories would come into operation during the current year; so the full benefits were still to come.

The report and accounts were adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached :

To Publisher, "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

INCORPORATED ACCOUNTANTS.

VITAL QUESTION OF "REGISTRATION."

The forty-fifth annual general meeting of the Society of Incorporated Accountants and Auditors was held, on the 19th instant, at the Incorporated Accountants Hall, Victoria Embankment, London. Mr Henry Morgan (president) presiding.

In moving the adoption of the report and accounts, the president, in the course of his address, said : The accounts cover our first year in Incorporated Accountants Hall and the first year of the Branches and District Societies scheme. After debiting £149 17s. 6d. for depreciation of furniture, and £1,258 for the service of the reserve fund for redemption of debentures, there remains a surplus of income over expenditure for the year of £1,157 6s. 2d., which is a satisfactory financial result for the year. From the point of view of the accountancy profession, the outstanding feature and the most important event for many years past has been the revival of an immediate issue of the vital question of registration. Even the strongest opponent of registration would be prepared to admit that, had a Registration Act been passed twenty or twenty-five years ago, the difficulties from which the public and the profession are suffering to-day would be practically non-existent. You must be fully aware of the course of recent events. Following upon the important statement by Sir Thomas Robinson, M.P., chairman of the Local Legislation Committee, the Society and the English and Scottish Chartered Accountants joined in a deputation to the President of the Board of Trade to request that he would set up a Departmental Committee to consider the question of registration. A Committee, under the chairmanship of Lord Goschen, was appointed, and has already taken a great deal of evidence, and that given by the Institute and the Society was published two or three days ago. It is regrettable that the Institute of Chartered Accountants are not in agreement with us in regard to our views on this question and are opposed to registration. The Institute has said that it wishes to be excluded from the operation of any legislation having as its objective the registration of the profession. The Society is opposed to any such exclusion. (Applause.) A Registration Bill must deal with the profession as a whole, and, although the Institute and the Society are incorporated in different ways, the charter does not confer upon the Institute any powers which are not enjoyed by the Society. They have the right exclusively to create chartered accountants in England and Wales. We have the right exclusively to create incorporated accountants. Beyond this, and *vis-à-vis* the public and the rest of the profession, the form of incorporation has not established a monopoly in either case. Neither chartered accountants nor incorporated accountants owe their outstanding positions to the legal form of their incorporation. Such position has been established by their reputation and character and professional skill and ability. As far back as 1907 Mr Justice Warrington, in the Chancery Division, in granting an injunction against the misuse of the term "incorporated accountant," stated that the designation conferred upon members of the society the privilege of being looked upon by persons who had dealings with accountants as holding a certain definite status indicating real reliability and integrity.

ALLEGATION OF MONOPOLY.

Objection has been taken to registration because it might constitute an attempt to obtain a monopoly of all accountancy work. I agree that the days of monopolies have passed. The principles upon which our society was founded and has carried on its work are entirely opposed to anything in the nature of a monopoly. Any person with proper professional experience, who can pass our examinations, is able to obtain the qualification of incorporated accountant, which is second to none, and the society does not debar properly qualified men or women who are not in a position to serve articles of clerkship. Under our proposals these means of entering the profession would be continued. We do not ask for any monopoly of work, and it cannot reasonably be argued that any such monopoly is implied by the stipulation that those persons who hold themselves out to the public as ready to undertake the business of professional accountants should be properly qualified by experience and by examination, and be subject to disciplinary control. As to the extent of a demand for registration within the profession and the need for the protection of the public, our information is that incorporated accountants are entirely in favour of the profession being controlled as a whole. But in advocating registration we are not actuated by selfish motives. We believe that it is a policy in the best interests of the public generally. We await with interest the findings of the departmental committee. In the meantime, our members may rest assured that the Council will put forward every effort to protect the interests of incorporated accountants.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 17, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	6,375	From Revenue	10,521
Interest, &c. on Debt	2,231	Decrease in Balances	— 277
Sinking Fund	495		
Sundries	32		
Decrease in Debt	1,665		
	10,798		10,798

The ordinary revenue for the week amounted to £10,521,700, as compared with £11,370,200 in the corresponding week last year. Income tax was lower at £273,000, against £1,060,000, but sur-tax was higher at £710,000, against £340,000. Estate duties brought in £1,300,000, as compared with £1,790,000 while customs and excise amounted to £1,596,000 and £4,960,000, against £1,365,000 and £6,970,000 respectively. Receipts from sundry loans brought in £1,430,000, as compared with nil last year. The National Debt was reduced by £1,665,100, as shown below :—

(000's omitted.)

	£		£
Treasury Bills	+ 9,653	Public Department Advances.	— 3,000
National Savings Certificates	+ 150	Treasury Bonds paid off	—24,568
4½% Conversion Loan	+16,500	Post Office and Telegraph Money	— 400
	+26,303		—27,968

The Floating Debt was increased by £6,655,000 to £627,185,000.

FINANCIAL YEAR, 1930–31, APRIL 1 TO MAY 17.

	£		£
Expenditure	97,097,042	Revenue	82,756,390

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1 to May 17, 1930, were £4,700,000 by means of purchases of sterling in India.

BULLION.

The following statistics of imports and exports of gold for week ended May 22, 1930, are issued by the Statistical Department of H.M. Customs and Excise :—

Imported into Great Britain and Northern Ireland.	£	Exported from Great Britain and Northern Ireland.	£
From—		*To—*	
France	17,403	Poland	3,400
British S. Africa	823,371	Germany	422,030
Australia	1,000,000	France	4,074,126
Other countries	160	Switzerland	22,200
		Spain	7,000
		Austria	13,965
		British India	199,462
		Other countries	866
Total declared value of imports	1,840,934	Total declared value of exports	4,743,049

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows :—

1930.	ARRIVALS.	£	1930.	WITHDRAWALS.	£
May 16	Bars bought	443	May 16	Bars sold	1,787,781
May 17	Sovs. from abroad	1,000,000	May 17	Bars sold	2,662,867
				Sovs. for export	2,000
May 19		Nil	May 19	Bars sold	500,694
May 20		Nil	May 20	Sovs. set aside	500,000
May 21		Nil		Bars sold	194
			May 21	Bars sold	214
May 22		Nil	May 22	Bars sold	195
				Sovs. withdrawn	3,000
	Total arrivals	1,000,443		Total withdrawals	5,456,945

Net withdrawals, £4,456,502.

Messrs Samuel Montagu and Company write as follows on May 21, 1930 :—

GOLD.

The Bank of England gold reserve against notes amounted to £162,383,588 on the 14th instant (as compared with £163,572,470 on the previous Wednesday), and represents an increase of £16,423,504 since January 1st last. Gold from South Africa to the value of £824,000 was available in the open market yesterday. At the fixed price of 84s. 11d. per fine ounce, £400,000 was taken for Germany and £306,000 for a destination not disclosed, but believed to be Belgium. India took £50,000, the Continental trade £30,000, and the Home trade £28,000. At the Bank of England heavy withdrawals of gold for France were again a feature during the past week, being exceptionally large on the 16th and 17th instant, when the sales of £1,787,781 and £2,662,867 respectively were announced. Altogether, withdrawals totalled £5,902,556, of which about £5,360,000 was in bar gold for France and £520,833 in sovereigns set aside. Receipts included £1,000,000 in sovereigns from Australia. The net efflux during the week under review is £4,902,113. It is believed that the withdrawals for account of France were mainly due to the need for funds by applicants for the French share of the capital of the Bank for International Settlements, the subscription lists of which closed yesterday. The French exchange is now considerably firmer, rendering further shipments of gold from London unprofitable for the present.

SILVER.

Although there have been fluctuations in silver prices, the market has shown a marked downward tendency. News was received on the 16th instant of an order made by the Chinese Government prohibiting the export of gold bars and the import of foreign silver coin. Hesitation on the part of sellers, possibly whilst considering the effects of this measure, and a demand for some bears to cover their commitments caused a sharp rise of ¼d., prices being quoted at 19¼d. and 19 3/16d. for cash and two months' delivery respectively. Subsequent movements, however, were downward, and after two successive falls of ¼d., prices touched 18¾d. and 18 11/16d. on the 19th instant. There was a slight reaction of 1/16d. yesterday, but to-day, with further selling and a lack of support, quotations lapsed to 18⅝d. and 18 9/16d. for cash and two months' delivery respectively, which price for cash is equal to the lowest on record.

China selling has been the chief cause of the weakness, but the Indian Bazaars were also inclined to take a bearish view, making fresh forward sales, besides purchases for near delivery. America, too, has been a seller, offerings on occasion having been made with some freedom.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 12th instant to mid-day on the 19th instant :—

IMPORTS.	£	EXPORTS.	£
France	30,343	British India	79,038
U.S.A.	17,484	Other countries	2,305
Netherlands	8,300		
Other countries	8,660		
	£64,787		£81,343

REPORTS AND NOTICES.

GOVERNMENT STOCKS, &c.

LONDON COUNTY FIVE-AND-THREE-QUARTER PER CENT. BONDS, 1930.—The list of applications for the conversion of £1,000,000 of these bonds into 4½ per cent. London County Consolidated Stock, 1945-85, will be closed on or before Wednesday, May 28, 1930. The terms of conversion (at the rate of £105 10s. of 4½ per cent. London County Consolidated Stock for each £100 of London County 5¾ per cent. Bonds surrendered) and other particulars respecting the offer are given in the prospectus dated May 13, 1930, copies of which may be obtained on application at the Bank of England or at the offices of the London County Council. The London County 5¾ per cent. Bonds not converted will be redeemed at par on Friday, October 31, 1930.

RAILWAYS.

THE ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LTD.—The dividend for 1929 is 7 per cent. as before. It is proposed to transfer £100,000 to the reserve account, and, after making provision for a contribution to the company's staff benevolent fund, reserve for income tax, and writing off the cost of stamp duty and expenses of the consolidated ordinary stock issued in 1929, the balance forward will be approximately £265,000, compared with £241,616 last year. It has been decided to summon the general meeting for Tuesday, June 10th, at 12.30 p.m.

LEOPOLDINA RAILWAY COMPANY, LTD.—Subject to final audit. After providing for debenture interest and interim dividends on the preference and ordinary stock, and transferring £60,000 to general reserve account, £30,000 to reserve for flood damage, £23,000 to reserve for redemption of 4 per cent. debenture stock, £14,930 to writing off balance of expenses on issue of terminable debentures, the net revenue account for the year, made up to December 31, 1929, including the sum of £103,457 brought forward, shows a balance of £389,800, out of which the board propose to pay a balance dividend of 2¾ per cent. for the half-year (less income tax) on the preference stock, making 5½ per cent. for the year, and a balance dividend of 3 per cent. (less income tax) on the ordinary stock, making 5 per cent. for the year, leaving £115,432 to carry forward.

MISCELLANEOUS.

AMALGAMATED PRESS.—Profits for the year ended February 28, 1930, amounted to £923,744, as against £873,717, and after adding amount brought in, £123,901, there is a total available for distribution of £1,047,645. Debenture interest takes £187,985, and after paying preference and ordinary dividends and taking £220,000 to general reserve, as compared with £180,000 last year, and £10,000 to pensions and allowances fund, there remains £134,660 to be carried forward. The ordinary dividend is again 15 per cent., and absorbs £180,000.

CAMMELL, LAIRD AND COMPANY.—The Second (4½ per Cent.) debenture-holders of Messrs. Cammell, Laird and Company, Ltd., at their adjourned meeting at Liverpool on May 16, defeated the resolutions put before them by the company to postpone the repayment of the debentures due in July for five years, the rate of interest to be increased meantime to 5½ per cent. The position is that while the first and third debenture holders have approved the company's proposals, the second have rejected them. The scheme was dealt with in the *Economist* of April 26 (page 954).

FORESTAL LAND, TIMBER AND RAILWAYS.—A correction:—We regret that, in our issue of May 17, it was stated that the interest on the new 6 per cent. 10-year notes absorbed £86,717. This figure should have been £35,000, the remaining £51,717 being discount on the issue and expenses. The sentence immediately following the table should read "The most striking alteration on the assets side of the balance sheet is the *increase* of £395,987 to £2,755,271." We should be glad if our readers would kindly note these corrections.

INDUSTRIAL AND GENERAL TRUST.—A special resolution for the purpose of adopting a new set of articles was submitted to shareholders of the Industrial and General Trust at the ordinary general meeting to be held on May 22nd, the purpose being to provide articles in accordance with modern practice and the Companies Act (1929).

IMPERIAL CONTINENTAL GAS.—The Directors announce that they propose to offer to the stockholders on the register when the transfer books were closed on May 8, 1930, £300,000 new capital at the price of £250 per cent., ranking for dividend as from April 1st last *pari passu* with the stock already issued. Letters of right (with renunciation forms) entitling holders to subscribe for the new stock at the rate of £12 new stock for each £100 of stock now held, will be posted on May 22, 1930.

METROPOLITAN HOUSING CORPORATION LIMITED.—The First report from the date of incorporation, March 21, 1929, to March 31, 1930, shows a net profit, before providing for income tax, of £70,378. Deducting £14,211 provision for income tax there remains a balance of £56,167, from which the directors recommend transferring £7,378 to reserve, £2,000 to special reserve for social services, and the payment of a dividend at the rate of 8 per cent. per annum, which leaves £10,169 to be carried forward. As £12,621 already stands to reserve, being proportion of dividend received from Metropolitan United Estates, Ltd., applicable to period prior to incorporation of the Corporation, the above allocation makes the reserve £20,000.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Lack of sunshine and cold winds are adversely affecting cereal crops in the United Kingdom, and in some districts winter wheat lacks colour, while spring sowings are backward in growth. The young plants have had sufficient moisture, and a spell of warm weather is now needed to ensure a good start. Native wheat is sparingly offered at the principal statute markets, but owing to lack of demand, rates marked no improvement on the week. Imported descriptions met with moderate support, and rates are maintained with difficulty in face of liberal Canadian offerings, also renewed competition by Argentine varieties, several cargoes of the latter being sold to United Kingdom millers, 63½ lbs. Rosario old crop, at 37s. 4½d., and 62½ lbs. ditto, new crop, 37s. 1½d., early shipment. The general position remains unaltered, and market sensitive to weather and crop reports, which, to a large extent, will govern the future course of prices. Available supplies, however, must not be overlooked, and much will depend on

extent of European purchases during the next few months. So far, new crop prospects are favourable in all parts of the world, though excessive moisture and lack of sunshine is retarding growth in Europe. With Southern Hemisphere shipments decreasing, larger quantities must be taken from North America, and signs were not wanting of increased purchases of Canadian on European account. Recent heavy bookings of cheap Continental grades by United Kingdom millers require a certain amount of strong wheat for mixing purposes, and points to a steady demand for Manitobas, but there is yet little indication of any substantial export movement necessary to reduce large surplus holdings. Meanwhile, North American sellers refrain from pressing unduly, pending further progress of new sowings. Flour prices were advanced slightly both on spot and for shipment parcels, but buyers still restrict purchases to immediate needs. Feeding stuffs experienced a slow movement and values are again on a downward course following freer offers of new crop Plate maize, also from the Danube and South Africa. At the moment, shipments are retarded owing to recent unfavourable climatic conditions, but lack of consumptive demand counteracts any firming influence. Barley and oats dull and lower to sell.

WHEAT.—Easier. No 1 Northern Manitoba (Atlantic shipment), ex ship, 44s.; No. 2, ditto, 43s. 3d.; No. 3, 43s.; No. 4, Manitoba 41s. 6d.; No. 5, ditto, 39s.; No. 6, 33s.; No. 2 hard winter, 40s. 6d.; No. 2 mixed Durum, 37s. 9d.; Rosafe, 62½ lbs., 40s.; Barusso, new crop, 62½ lbs., ex ship to arrive, 39s.; Australian, 43s.; choice white Karachi, 41s. 6d. per 496 lbs.; English, 8s. 4d.-8s. 6d. per 112 lbs.

FLOUR.—Quiet. London straight run, 36s. per sack for country deliveries, and 35s. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 33s.-36s.; Australian, 30s. 3d.-31s. ex store. On c.i.f. terms, Manitoba top patents, May-June, 32s.-32s. 6d.; export, ditto, 29s. 6d.-30s.; Australian, 28s.-28s. 6d.; French, prompt, 24s.-26s. per 280 lbs. Argentine, low grade, May, £6 per ton.

MAIZE.—Dull. Plate, landed, 29s.; ex ship, 27s. 9d.; afloat, new, 27s.; April-May, 26s. 3d.; May-June, 25s. 9d.; June-July and July-August, 24s. 9d.; No. 2 white flat African, 29s. 6d. landed, per 480 lbs. Yellow maize meal, £8 per ton, f.o.r. London. Yellow African, £6 per ton ex ship.

BARLEY.—Inactive. Californian, old, landed, 34s.-40s.; new, ex ship, 34s.-40s., as to sample; Chilian brewing, 33s.-37s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 34s.-36s. per 448 lbs. Black Sea, ex ship to arrive, f.a.q., 17s. 9d.; landed, on sample, 18s. 3d.-19s. 3d. Persian, 17s. per 400 lbs. English, malting, 7s. 3d.-8s. 9d.; feed, 7s.-7s. 2d. per 112 lbs.

OATS.—Dull. Plate, landed, 13s. 9d.; ex ship, to arrive, 12s. 9d.; Chilian, white, 20s.; ditto, tawny, 15s. German, landed, 18s. 3d.; ex ship, to arrive, 16s. 9d. Mixed Canadian feed, 12s. 6d. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27:—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to May 17	Cwts. 130,531	Cwts. 88,053	Cwts. 251,856	Cwts. 170,754
37 weeks to May 17	8,448,116	8,962,183	9,516,590	10,615,472
Average price of English wheat per cwt.	s. d. 8 9	s. d. 10 0	s. d 11 3	s. d. 12 4

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	May 22, 1929.	Jan. 2, 1930.	May 7 1930.	May 14, 1930.	May 21, 1930.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.	122	113½	148⅜	105	105⅛	107⅛
Chicago (No. 2 Winter)—Cents per 60 lb.	116⅜	103	130¼	100⅜	102⅜	103⅛

The visible supply of wheat in Canada at 66,306,000 bushels shows a decrease on the week of 3,236,000 bushels. Supplies a year ago stood at 75,623,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports a slightly improved export demand for coal and an increase in prices owing to the reduction of the subsidy. The general position of the industry is no better and there has been a further set back in blast-furnace coke, the price of which has dropped to 14s. at ovens. Even this concession fails to tempt business, as buyers still refuse to place contracts.

Our Glasgow correspondent writes:—Business in the coal trade has been a little brisker this week and in one or two instances prices have become firmer. Among nuts, trebles and nuts are about 6d. to 1s. dearer than a week ago, with Fifeshire qualities in a stronger position than Lanark or the Lothians. In round coals, Lanarkshire splint qualities are firmly inclined. Shipping prices are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s.; splint best, 15s. 6d.-16s.; splint second, 14s. 6d.-15s.; navigation, 16s.; navigation second, 14s. 6d.; Hartley, 16s.; steam, 12s. 6d.; trebles, 12s.-12s. 6d.; doubles, 11s. 6d.; singles, 10s. 6d.; pearls, 10s.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 13s.-14s.; doubles, 11s. 6d.-11s. 9d.; singles, 10s. 9d.; pearls, 10s. 6d. LOTHIANS.—Prime steam, 12s.; secondary steam, 11s. 6d.; trebles, 13s.; doubles, 11s. 6d.; singles, 10s. 6d.; pearls, 10s. 6d. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 12s. 6d.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The past week has been another period of unrelieved depression on the Cardiff coal market. In the seven days ended May 17th shipments from the South Wales ports totalled 507,200 tons, compared with 572,670 tons in the corresponding week last year, and it is anticipated that this week's volume of trade will also show a decrease. Collieries are losing time in practically every district, and the diversion of business under the new Egyptian contract is reacting unfavourably on Monmouthshire coals. All the sidings are congested with loaded wagons and the continued low level of outward rates of freight is having no effect on the demand for tonnage. Prices, however, are stationary on the basis of scheduled minima. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 45s.; rubbly culm, 11s. to 12s. 3d.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s.; pitwood, ex ship, 25s. 9d. to 26s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron & Steel Exchange:—Rather more business has been stirring of late, and this improvement, slight as it is, has afforded some relief to the British steelmakers, as in many districts works were finding it difficult to keep their plant in operation. The improvement is the result of some expansion in export business, but the home trade, although still below normal, remains the more active of the two departments. The buying of pig iron continues on hand-to-mouth lines, and while producers state that they anticipate an increase in cost as a result of the Coal Bill, and see no prospect of decreasing their prices, consumers believe that the slackness in the demand and the gradual accumulation of stocks will bring about a reduction. There has been a certain amount of buying of semi-finished steel, the greater part of the business having gone to the British works. The character of this market appears to have materially altered during the past month or two. Not long ago the bulk of the trade in this description of steel went to the Continental steelworks; but of late the British works appear to have recaptured the market, and few transactions in foreign semi-finished steel are heard of. The demand for nearly all descriptions of finished steel is unsatisfactory. Some of the export markets are showing more life, but generally speaking the overseas demand is almost stagnant.

Our Middlesbrough correspondent writes:—There is no improvement in the volume of business passing in Cleveland iron, and transactions are confined to odd parcels that are required in excess of purchases made some time ago; but the tonnage of iron available for the market from the current make is practically all going into consumption and stocks at the furnaces are not large. Before long further purchases will have to be made to renew contracts that will expire, and producers prefer to wait rather than try to induce business by further reducing prices which might not have the desired effect with consumers in their present mood. The market on Tuesday was decidedly quiet and business confined to a few small lots on home account, there being nothing doing for export. Prices remained at 70s. for No. 1, 67s. 6d. No. 3, 66s. 6d. No. 4 foundry, and 66s. No. 4 forge f.o.b. or f.o.t. In the hematite trade there is a slightly better feeling in view of the reduction of output, but this is not yet reflected by any great

increase of business. Makers, however, are less keen to cut prices and adhere to 74s. for moderate lots of mixed numbers, but for large quantities for early delivery they would probably accept 73s. 6d. Shipments of pig iron are on about the same scale as last month, the clearances to 20th inst. being 11,404 tons, against 11,685 tons to April 20th. In manufactured steel new business is slow to mature, but Dorman, Long and Company, Ltd., are understood to have secured a useful order for 13,500 tons steel rails and fishplates for the Union of South Africa for early delivery. In shipbuilding, Smith's Dock Company, Ltd., of South Bank, are reported to have received an order for nine whalers for Norwegian owners, to be delivered by June, 1931. Prices for steel materials under the rebate scheme for home consumption are unaltered at: Plates, £8 15s.; joists, £8 10s.; sections, £8 7s. 6d. In other lines iron crown bars are £10 15s.; heavy steel rails, £8 10s.; 21/24-gauge black sheets, £9 12s. 6d.; and 24-gauge galvanised corrugated sheets, £12, also for home use. The demand for sheets is slightly better. In the ore market there is still no buying, best Bilbao rubio is quoted nominally 21s. c.i.f., but less would be accepted. The current freight Bilbao/Middlesbrough remains about 5s. 6d. Coke is difficult to dispose of and the production is being reduced. Good furnace qualities are freely offering at 17s. 6d. per ton delivered works, and less has been accepted for odd prompt lots. The number of furnaces in blast on the North-East coast at present was 36, but the two at Jarrow are going out this week-end.

Our Sheffield correspondent writes:—Business is still shrinking, especially in the heavy sections. There has been a rather severe curtailment of the production of open-hearth steel since the beginning of the month. Fewer furnaces are operating than at any time since the coal dispute in 1926, and the depression is now affecting the Lincolnshire steel works which had been running full time for a long period. Here bookings have fallen off, and the works cannot see business for more than a week ahead. Stocks are accumulating at several blast furnace plants. There is no bulk demand for foundry pig iron, steel billets or scrap. In the lighter branches activity is confined to cold rolled strip, hacksaws, and engineers' small tools. Business is meagre from China, India, Australia, and other export markets. Cutlery and plate makers report reduced turnovers compared with a year ago. Prices generally are weak, with no official changes.

Our Glasgow correspondent writes:—Dullness characterises all departments of the iron and steel industry in the West of Scotland. Steel-making plants continue operations at far below output capacity, and buyers are confining their purchases to present needs only. In the manufactured and semi-finished sections there is also generally a poor demand. Sheetmakers are doing a steady business both for home and export, and are able to keep plants fairly well employed, although not fully so. In the tube trade there is a slight improvement in demand.

Our Cardiff correspondent writes:—Fairly normal conditions have prevailed on the Swansea tinplate market this week. With their order books well filled makers are not pressing sales, but inquiries are described as satisfactory and prices are steady at from 18s. 4½d. to 18s. 6d. per basis box. Galvanised sheets are unaltered at £11 17s. 6d. to £12 per ton, while prices of bars are stationary at last week's figures.

OTHER METALS.

TIN.—Market depressed and prices moved to lower levels due to liberal offerings and a slow demand, together with weaker Eastern cables, but later irregularity ensued. Standard cash changed hands at £143 15s. to £141 15s. to £144 to £142 12s. 6d., and three months, £144 10s., £146, £143 5s. and £143 8s. 9d. to £145 17s. 6d. to £144 12s. 6d. In the East, sales were reported at £148 5s. to £146 2s. 6d. to £145 2s. 6d. to £148 5s. per ton c.i.f.

COPPER in fair request, but with sellers to the fore prices exhibited irregularity and weakness resulted, closing firm. Standard cash sold, £54 1s. 3d. to £55 5s. to £54 12s. 6d., with forward dates showing slight irregularity, three months moving from £53 to £54 and £53 15s. to £55 2s. 6d. to £54 10s. ton.

LEAD opened firmer, but with business restricted, values subsequently gave way on selling pressure. Good soft foreign pig, May, sold, £17 15s. to £17 13s. 9d.; June, £17 13s. 9d. to £17 17s. 6d. and £17 13s. 9d. to £17 16s. 3d.; July, £17 16s. 3d.; August, £17 15s., £17 18s. 9d. and £17 15s. to £17 17s. 6d. ton.

SPELTER firm with fair general inquiries. May, sold, £16 7s. 6d.; June, £16 12s. 6d. to £16 13s. 9d. to £17; July, £17 to £17 5s.; August, £17 2s. 6d. to £17 5s. to £17 10s.; September, £17 6s. 3d. to £17 12s. 6d. ton.

ALUMINIUM steady. Home trade, £95; export, £100 per ton.

QUICKSILVER quiet. Spot, £21 14s. net, per bottle.

TIN PLATES steady, with a moderate trade passing. I.C. coke, prompt and forward, 18s. 4½d. to 18s. 6d. per box f.o.b. Swansea.

ZINC OXIDE quiet at £27 to £33 as to quality, per ton, delivered United Kingdom.

ANTIMONY quiet and tendency easier. English regulus, £40 to £45; Chinese regulus, spot, £28 10s.; May-June, £25; crude, May-June, £16 10s. per ton c.i.f.

ANTIMONY OXIDE.—May-June, £26 15s. per ton.

THE COTTON TRADE.

LIVERPOOL, May 21st.

There is very little change in values from those ruling a week ago. Business has been very quiet and fluctuations have been within a narrow compass. Crop news on the whole has been rather favourable, though in the earlier part of the week there were fears of too much rain in certain sections. The U.S. consumption of cotton during April was 532,000 bales, against 509,000 bales in March and 632,000 bales in April last year. The total consumption of cotton in U.S.A. for the first nine months of the season was 4,856,000 bales against 5,306,000 bales for the same period last year. Spot sales for the week 15th to 21st (inclusive) are 18,000 bales, of which 8,220 are American, 2,100 Brazil, 170 Argentine, 900 Peru, 4,320 Egyptian, 1,050 African, 460 East Indian, and 780 sundries. Imports for the same period are 59,253 bales, of which 6,654 American, 97 Brazil, 3,133 Argentine, 1,046 Peru, 25,507 Egyptian, 2,509 African, 19,626 East Indian, and 681 sundries. Quotations to-day are: American Middling, 8·57; Egyptian Sakel, 13·85; Uppers, 10·16; Brazil Fair, 7·87; Peru Smooth, 8·97; West African Middling, 8·47; and East African G.F., 9·12.

MANCHESTER: May 21st.

In some respects the market has not been quite so dull as during the last two or three weeks, there being a little more activity for certain minor outlets, but conditions generally remain depressed, and the business transacted has been considerably less than the requirements of producers. In the cloth section great interest continues to be centred on the situation in India. Trade continues practically at a standstill, and there is a little more uneasiness with regard to the completion of old contracts, as finance is getting more difficult. The outlook with regard to China is still poor, and the quantities sold at the auctions in Shanghai are of retail dimensions. A few more contracts have been arranged in white shirtings for Egypt and in printed and dyed goods for South America and the West Coast of Africa. A fair miscellaneous business has also been done in home trade fabrics. Curtailment of production throughout Lancashire is now on a very large scale, and probably the output of yarn and cloth is smaller than on any previous occasion, except when there has been a strike or lockout. Restricted quantities of American and Egyptian yarns have been sold at irregular rates.

THE WOOL TRADE.

Our Bradford correspondent writes:—On account of the restricted turnover in tops and yarns, due to the partial stoppage in the West Riding mills, it is difficult for traders here to form an unbiassed opinion as to the outlook. Difficulties are being encountered in the manipulation of material at all stages, but chiefly in the combing and weaving sections of the industry, and the dislocation naturally tends to become more acute with the passing of time. In the circumstances, mill owners are inclined to give all their attention to the present trouble and leave the future to take care of itself. On the Continent, however, conditions are very different, and all reports from the chief centres emphasise the increasing activity. Employment in France and Germany is more regular, and prices of tops are hardening. In short, Continental spinners and manufacturers appear to have confidence in current values of wool, and it may be that they are also getting a certain amount of business which would have come to the West Riding if there had been no strike. Wool is selling freely in the primary markets and in London at very firm rates, and in Australia, Japanese buyers are operating in a spectacular manner. It would appear, therefore, that

has been re-established as a world commodity, and there seems to be a general desire in most countries to replenish depleted stocks. In Bradford, quotations for tops and yarns are very firm, but there is only a restricted demand for lots for prompt delivery; speculative buying is negligible. Meanwhile a certain amount of seasonal trade is being lost owing to the inability of firms to guarantee delivery, and for this reason the outlook is viewed with some anxiety.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The Continent is exercising the strongest influence in deciding the prices for merinos at the London sales, while the big quantities of crossbreds catalogued daily are being readily taken up by the home trade. The small proportion of withdrawals clearly shows that the market is good, and it now seems certain that there will be a firm finish at the end of next week. Notwithstanding strike conditions in Yorkshire it is recognised that wool is right at its present price. This week 30d. has been paid for greasy Tasmanian merino wool There has also been a very good display of greasy New England fleece, which has sold up to 21½d. The demand for these superfine wools has been good, showing how much the trade appreciates quality. The improvement seen at the opening is fully maintained, and on the whole we think the demand for both merinos and crossbreds has broadened, resulting in the bulk of the wools realising a further 2½d. to 5 per cent. improvement. Better reports are forthcoming from France. There has evidently been some improvement during the month. Considerable orders for tops have been received, and no doubt the Russian business has helped to move some of the stocks at several centres. There is also fairly healthy demand for the finest yarns from Germany.

HIDE, LEATHER AND ALLIED TRADES.

The upward tendency of the market for hides and skins from home slaughtered cattle continues, at the auctions held in the north this week advances of from ½d. to ⅝d. per lb. were recorded for most weights in the former. Calfskins were a better market, and here also higher prices were realised. Tanners are growing rather anxious about the position of market hides, as despite the continual rise in the price of raw material it is impossible, for the time being at any rate, to obtain compensating advances for finished leather. The tone of the foreign hide market also shows an improvement, and there appears a greater inclination on the part of tanners to do business on the present basis of values. In the South American market frigorific hides are slightly firmer, Argentine ox having changed hands on the basis of 7¼d., with Montevideo ox realising 7 5/16d., and light ox 6 13/16d. Saladero hides have also received rather more attention, 8,700 Liebigs having changed hands at satisfactory prices. In dry River Plates B.A. Americanos have made 7¾d., Cuyabanos 6¾d., Sierra Cordobas, summer haired, 6d., and B.A. Inservibles 4⅞d. A fair amount of business has been put through in connection with Africans, drysalted Capes having been sold at 7⅞d. to 6¾d., and drys at 8¼d. and 7¼d. The American market is cabled as slightly firmer, with Chicago heavy native steers selling at 14½ cents. Little change has occurred over the week in connection with the demand for sole leather, and considering the general state of trade of late, the market continues more or less satisfactory. Although shoe manufacturers continue to take up limited supplies of bends suitable for their trade business seems to be rather unevenly distributed, with the result that some firms are inclined to view the position as a little less favourable. Demand from the repairing section is fairly well maintained, and a regular day to day trade is being done with this branch in both English and wetsalted bends in the medium to better qualities. Bellies and shoulders continue to move fairly freely. The price position is maintained in the face of a market more or less clear of accumulations, and it is only in the hope of obtaining something like a bulk order that any concession is suggested. Demand for upper leathers covers most descriptions, but the usual run of orders being received is for small quantities only. Glacé kid, suède and patent are all enquired after, with business in connection with the latter only possible at low prices. Willow calf is also a steady seller, while the call for reptile skins is mainly confined to pythons, imitations to a large extent are taking the place of real lizards. Shoe manufacturers report business as steady, with no large orders coming to hand.

20 BISHOPSGATE, LONDON, E.C.2.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Imports of European sawn building woods were higher in April by some 12,470 Petrograd standards (of 165 cubic feet), and in the four months by nearly 60,000 standards than in the corresponding periods of 1929. On the other hand, planed and dressed wood imports were lower by some 400 standards in April and 85 standards less in the first four months. The demand for these general building woods has been keeping up well during the past four or five weeks, but it is to be feared that although the selling may prove satisfactory as regards volume, profits are not very satisfactory. The question of a successful year's turnover will depend largely upon building trade requirements this season. Official returns of costs of buildings for which plans were passed during the first quarter of this year and even before that have been very encouraging. An analysis of the April returns in the *Ministry of Labour Gazette*, however, shows that early future timber consumption conditions are not of so cheering a character, showing a drop in building costs of over £1¼ millions sterling, which includes one of £677,600 on new houses. These deficiencies may be accounted for to some extent by the Easter holidays, the immediate and the pre- and post-Budget fears, so that it would be better to reserve judgment as to the decline until the returns for this month are published in the second half of June. Rumour has been busy in the spot and forward markets for building and joinery woods on the subject of an early understanding between the British consortium of timber importers and the Russian shippers, for the former to buy Russian wood in bulk. This is looked upon with great favour by the majority of the largest importers. The object of such an understanding—stabilising the market for Russian goods—seems to be more necessary now than ever, as it would have some effect in maintaining a steady spot market for all building woods, and give more measure of confidence in buying forward. On the other hand, there are other importers who consider that as things have gone so far, a free market is the best, and are conducting their businesses accordingly, but even they cannot feel and work comfortably. The uncertainty is undoubtedly delaying forward business, and negotiations are mostly for early delivery. The hard and fancy woods section of the trade continues dull. For mahogany logs the results of the auction sales in London this week indicated that buyers cannot face shippers' reserve limits, even though stocks in first hands are low, and not much is expected. For other logs the demand is slow, and with few slight exceptions—selected logs of cedar, Black Sea walnut, boxwood—shipments are not advisable. Teak supplies at ports of shipments continue scarce, and forward values remain firm, stocks here being sufficient at the moderate rates of demand. American lumber shipments in April, unfortunately, in view of the poor demand, were again on the heavy side. Plywood imports were down in April by 3·9 million square feet, but up by 36 million square feet for the four months compared with a year ago.

VEGETABLE OILS AND OILSEEDS.

Market conditions generally are quiet in most sections, and only a small volume of business is reported. Linseed oil is in somewhat improved demand, and is firmer. Current value of raw oil on spot being £41 15s., and for May delivery £41 ex Hull. Later positions are at a substantial discount, and have attracted some interest. Cotton oils are in slow request, crude Egyptian offering ex Hull at £28 10s. and common edible £31 10s. Other seed oils are quiet and inclined easy. In the oilseed section linseed is in very poor demand, but values are about steady. Plate on passage to Hull has been done at £17 10s., and June shipment to Liverpool at £17 12s. 6d., while Calcutta for shipment has been done at £18 12s. 6d. and £18 15s. The quantity of linseed now on passage to Europe is 121,100 tons, or 16,200 tons less than last week. Cottonseed is very quiet, the market being characterised by an almost complete absence of demand. Prices have thus further eased, and black Egyptian to Hull, June loading, has changed hands at £7 2s. 6d., which represents current value. Demand for oilcakes is better, and about normal for the season of the year.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—General position remains unaltered, with a fair business passing in British refined goods also home-grown granulated at late rates. Raw refining kinds experience a moderate movement, but Java markets remained dull. T.L. granulated ex refinery, 20s. 4½d.; ex wharf, 20s. 3d. Cuban, 96 per cent., afloat, 7s.; June, 7s. 0¾d.; July, 7s. 1½d.; Peruvian ditto, June, 7s. 0¾d., c.i.f. U.K. White Java to India, July-September, 9s.; October-December, 9s. 1½d.; Hungarian crystals ditto, October-December, 9s. 9d.; German crystals, June, 8s. 7½d. c. and f. Terminal markets steadier, with dealings on a fair scale. Raws, May, sold 6s. 3d.; August, 6s. 5½d. to 6s. 6d.; December, 6s. 9¾d.; March, 7s. 10½d.; May, 8s. 0¾d. cwt. White kinds quiet. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending May 17th, 152,925 tons, compared with 132,072 at same time last year. Cuban receipts for past week totalled 115,901 tons, against 101,261 last year; exports, 151,455, against 119,556; stocks, 1,704,714, against 1,524,379. Centrals working, 30, against 11.

COFFEE.—A steady tone governed the spot market, offerings being fairly well absorbed, particularly medium grades, while bold sizes showed slight irregularity. Kenya medium, 65s. to 70s.; Costa Rica, common to fine, bold, 90s. to 150s. 6d.; peaberry, 108s. 6d. to 171s.; Vera Paz, good to fine, bold, 135s. to 146s. 6d.

COCOA.—Market remained dull on spot. Trinidad fine quoted 65s.; Grenada, 52s. 6d.; Accra, 38s. 6d. Forward positions steady. Accra, F.F. grade, May-July, quoted 32s. 6d.; and mid crop London contract, 28s. 6d. f.o.b. Terminal market, after being firm, assumed a quiet and easier tone. July sold 35s. 3d. to 34s. 9d.; September, 36s.; December, 36s. 1½d. cwt.

TEA.—In auction, Indian offerings for the week totalled 54,993 packages. Opening rates were firm under good support, particularly for clean common and medium descriptions, but later the market displayed quieter features in view of heavy supplies catalogued for next week, and rates were barely maintained. 28,453 packages Ceylon met a generally quiet movement, and with quality falling off, prices marked a good deal of irregularity, while mostly ½d. to ¾d. per lb. lower on balance. Finest brokens and some thick fannings, however, sold steadily. Export inquiry was restricted, and all the plainer kinds of leaf teas were a weak feature. Java and Sumatra descriptions met a moderate demand, and trend of prices in buyers' favour.

RICE.—Market quiet, but fully steady. Two stars, Rangoon, spot, London, 13s. 3d.; May, also June, 12s. 1½d.; American blue rose, 23s. to 24s. 6d.; Siam No. 1, May-June, 12s. 4½d. c.i.f. Beans quiet. Madagascar butters, afloat, also April-May, 32s. 9d. Japanese peas, April-May, also May-June, 13s. 9d. c.i.f.

SPICE.—Pepper market firmer, with improved inquiries, sellers showing more reserve. Lampong, black, April-June buyers, 10¼d.; May-July, 9¾d.; August-October, 8¾d.; white Muntok, April-June, sold, 1s. 0¼d.; May-July, 11⅞d.; August-October, 11⅝d. Cloves quiet. Zanzibar, spot, 11¾d.; May-June, 11⅞d. per lb. Pimento strong and June-August sold 64s. cwt. c.i.f. Tapioca dull. Singapore flake to Havre, May-June, 12s. 9d.; Penang seed to Hamburg, 14s. Sago flour, May-June, 10s. 10½d. c.i.f. U.K. Desiccated cocoanut quiet; fine cut, also medium, spot, 31s.; halves, afloat, 30s.; May-June, 29s. c.i.f. Ginger dull. London stocks of black, 156 tons up on the week, at 1,145 tons, against 1,526 at same time last year, white 21 tons lower at 693, against 678 tons last year.

FRUIT (Dried).—Currants firm with fair inquiries. Pyrgos, quoted, 36s. 6d.; Amalias, 38s.-39s.; Patras, 39s.-43s.; Gulf, 42s.-45s.; Vostizza, 47s.-58s.; Australian, new crop, 40s.-62s. Sultanas firm and Australians sell freely. Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-60s.; Greek, 42s.-65s.; Australian, 32s.-45s. Dates quiet. Hallowie, spot, 19s.-21s.; Khadrowie, 15s.; Siar, 12s.-13s. 6d. Raisins firm with moderate sales. Valencias, quarter-boxes at 36s.-38s. Figs easier. Genuine, 19s.-25s.; good average, 16s.

EVAPORATED FRUITS were in better request, particularly apricots and plums, low rates being maintained. Plums: Californian, new crop, 30's-40's, 60s.; 40's-50's, 55s.; Oregon, 30's-40's, 50s.; 40's-50's, 48s. Apricots: South African Royal, 50s.-112s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 95s. Peaches: Californian, choice, 50s.-55s.; fancy, 57s. 6d.-62s.; Australian, 50s.-60s.; South African, 1929 crop, 42s. 6d.-52s. 6d.; 1930 crop, 45s.-55s. 6d. Apples: Californian, spot, sliced, extra choice, 35s.-65s.; Canadian, 52s. Almonds firm. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 110s.; Majorcas, 107s. 6d.-120s. Bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 35s. c.i.f. Sweet, spot, 70s. Hazel kernels: Kerasunde, spot, 142s. 6d.; Barcelona, 142s. 6d. French (shelled) walnuts, 135s.-137s. 6d. ex wharf London; for shipment, 130s. cwt. f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—The demand for Californian fruits is improving but prices slightly irregular, packers showing more disposition to market stocks in view of larger new pack prospects. Australian descriptions move off steadily at about late rates. Singapore pines quiet on spot, with prices barely steady for shipment parcels. Italian tomatoes experienced a slow movement, but sellers adhered to former terms.

CANNED FISH.—Market steady with improved inquiries. Salmon: Alaska red talls, quoted, 48s.-49s. 6d.; pink talls, 24s.-26s.; and halves, 34s. 6d.-36s. Japanese crab, best quality, 87s. 6d.-90s. Lobsters in limited supply, halves ranging from 130s.-135s. Sardines: Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Corned beef, ox and lunch tongues, also tinned hams, were in fair supply, but trade requirements fail to expand due to unseasonable weather.

CONDENSED MILK AND MILK POWDERS.—There is a good business doing at slightly reduced prices. Dutch condensed milk: Full cream, sweetened, 5 cwt. casks, 31s.; machine-skimmed ditto, 19s. 9d.; full cream, sweetened, 56 lb. drums, 50s. English condensed milk: Full cream, sweetened, 5 cwt. casks, 40s.; machine-skimmed ditto, 22s. Dutch full cream milk powders: 26 per cent. butterfat, roller process, 1 cwt. cases, 60s.; spray ditto, 2 by 56 lb. tins, crated, 80s. Dutch machine-skimmed milk powders: roller process, 1 cwt. cases, 26s. 6d.; spray ditto, 2 by 56 lb. tins, crated, 38s.; ditto, 1 cwt. kegs, 36s. 9d.; ditto, 1 cwt. cases, 36s. 3d., all per cwt. All English prices basis carriage paid nearest station. Dutch prices are nett, ex store London/Hull or Goole, and cover prompt or gradual delivery to the end of June, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. Minimum 1-ton lots. Smaller quantity 6d. per cwt. extra. On the grocery side: Full cream, sweetened, 18s.; machine-skimmed, sweetened, 8s. 3d. basis per case usual packing.

HONEY.—Market dull, available supplies being in excess of requirements. Jamaica, white, 48s.-50s.; good amber to fine pale, 40s.-47s. 6d.; dark to fine amber, 37s.-40s.; Cuban pale, 40s.; light amber, 37s. 6d.; San Domingo, good to fine, 37s.-40s.; manufacturing, 35s.-36s.; Mexican, 35s.; Californian, 50s.; light amber, 45s.; New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d. cwt.

RUBBER.

Market steady but dealings restricted. Plantation standard sheet, spot, sold 6¾d. to 6 13/16d.; May, 6¾d. to 6 13/16d.; July-September, 6 13/16d.; October-December, 7 1/16d. to 7¼d.; January-March, sellers, 7¼d.; January-December, 7¼d. per lb. London landings for the past week amounted to 2,427 tons, deliveries, 1,613; stock, 76,932, against 30,955 at corresponding period last year, being an increase of 814 tons on the week. Liverpool landings, 850; deliveries, 157; stock, 24,448, against 4,216 at same time last year, showing an increase of 693 tons on the week.

THE MONEY MARKET.

MONEY was stringent early in the week, and on Tuesday up to 2¾ and even 3 per cent. was paid. There is no doubt that the withdrawals of French money earlier in the month have left the market rather short of funds, and another cause of the stringency is that the Bank of England is known to hold a large number of May and June

maturities. As and when these bills are paid, the money goes into the Bank, and so is lost to the market, and this week's reduction of £6,370,000 in the Bank's earning assets may be an illustration of the extent to which this factor is at work. Nevertheless, the Bank is thought to be taking care to prevent money from becoming overscarce, and it is believed that on Tuesday the Bank bought some short bills at 2⅛ per cent.

* * * *

Partly owing to the shortage of money, discount rates are definitely higher than earlier in the month. Early June bills are regarded as equivalent to "money," and so were quoted as high as 2½ per cent. Late June bills were 2⅛ and July bills 2⅛-$\frac{3}{16}$ per cent. The market rate on three months' bills was on Wednesday a full 2$\frac{3}{16}$ per cent., while longer dates were quoted at 2¼ per cent. for four months and 2½ per cent. for six months. The three months' rate was fractionally easier the following day. There is no change in the supply of bills in the market. Some German bills have been offered by German banks at 2$\frac{3}{16}$ per cent. and at times "$\frac{1}{32}$ under," but holders of German bills are now much more inclined to keep them until maturity, in preference to discounting them in London than they were several months ago. There have been some purchases of bills on Dutch account, but Paris is at present not a buyer.

* * * *

Early this week there were rumours of an impending reduction in Bank rate, and, on Wednesday, these imparted some strength to the gilt-edged market. It has, however, been clear all along that a reduction this week was most unlikely. There is no sign of any real improvement in the Paris exchange, and while some authorities are inclined to share the view expressed in last week's *Economist* that London is well quit of some more of the French money lodged here, it is recognised that the Bank has lost a fair amount of gold and that at the moment there is little prospect of the losses being recovered. Germany is still buying the major portion of each week's supply of Cape gold, and lately an "unknown buyer" has been in evidence. This is believed to be Belgium, and, in any case, the Belga now stands at a point where gold could be shipped at a profit, if the Belgian authorities thought fit. Finally, next week the Government are issuing, in preparation for the War Loan dividend, £45,000,000 Treasury bills against maturities of £30,000,000. This should raise discount rates again, a fact which argues against a reduction in Bank rate.

The current week's Bank return shows that even after the French gold withdrawals the Bank occupies a strong position. The reserve has fallen by £1,764,000, this being mainly the result of an increase of £1,437,000 in the note circulation, but, as described above, the Bank's earning assets have fallen by £6,370,000, so that the proportion stands at the very high figure of 57¼ per cent. On the liabilities side the main change is a fall of £7,936,278 in public deposits.

NEW YORK.

Our New York correspondent cables:—The influence of month-end dividend and holiday cash preparations on the money market is negligible; payments total $750,000,000. The Treasury is expected to sell $500,000,000 of certificates on June 15 to meet a like amount maturing. Brokers' loans are up $7,000,000, probably all due to the remainder of the conversion of American Telephone bonds, which involved cash payments. There is no sign yet of the trade recovery, and none is anticipated before late summer or autumn; but business is only poor compared with 1929. The Reserve System return shows that the gold movement has virtually stopped. Discounts are up 38 millions, due to the month end; bill holdings are down 11 millions; Government securities are unchanged, and a moderate rise in circulation for holiday cash has brought down the Reserve ratio to 82.9 per cent. A feature of the brokers' loan report is the drop of 81 millions on account of out-of-town banks and 32 millions on corporation account, all of which has been taken over by local banks.

THE STOCK MARKETS.

The stock markets had again a dull appearance, investors being disinclined to move until the full extent of contemporary depression was made clearly ascertainable. Gilt-edged, however, continued to improve, rumours of a War Loan conversion being persistent. Home Railway stocks held their ground in a listless market, but fresh weakness occurred in Foreign Rails. The industrial markets were featureless, and dealings in rubber, tea and oil shares were greatly restricted. Though base metal prices showed signs of greater stability, mining shares were generally neglected.

THE COMMODITY MARKETS.

The trade depression shows no signs of recovery. Business in most coal districts continues to decline, though Glasgow reports a slight expansion in shipping activity. Improvement in the iron and steel industries is hard to find; such buying as is taking place is in small lots for immediate delivery. Raw cotton has fallen a few points on favourable crop reports and continued slackness of demand, and there is no sign of recovery in Manchester. The better position of the world wool markets is maintained, but the Bradford situation remains unchanged. The jute trade remains depressed. Hides and leather remain firm, with a fairly satisfactory outlook but no great bulk of business actually passing. The demand for vegetable oils and oilseeds is slightly better. Wheat is firmer.

THE FOREIGN EXCHANGES.

Conditions were very little changed in the Foreign Exchange market this week, but business was perhaps a little quieter owing to the holiday on the Continent on Thursday. New York was uncertain, and the rate declined from 4.86⅛ to 4.85$\frac{15}{16}$, after 4.86 on Wednesday and 4.86⅛ on the 22nd. Montreal improved fractionally to 4.86¼. Paris gained three points at 123.98, after being over 124. Brussels was stronger at 34.81¾, but Milan lost seven points at 92.77, after 92.82 and 92.72. Madrid was uncertain, and after improving from 40.00 on the 22nd to 39.77 on the news of a Government inquiry in the exchange, the rate reacted to 39.95. Amsterdam went against us from 12.08¾ to 12.07⅞, after being higher and lower, as was Berlin before settling fractionally stronger at 20.36½. Switzerland gained 25.11½. Stockholm appreciated sharply from 18.11, while Oslo and Copenhagen gained ¼ and tively at 18.16. Of the South American exch was hesitant and lost $\frac{1}{32}$d. at 5$\frac{27}{32}$d. Buenos steady on the whole, but lost ⅛d. at 42¾d., a video lost ¼d. at 45d. In the Far East the ru to local conditions, and lost $\frac{1}{16}$d. at 1s. 5$\frac{15}{16}$ forward market dollars were unchanged at $\frac{1}{16}$ discount. Paris was in better demand at premiums of 3½ centimes for both deliveries. weaker at wider discounts of 13 and 34 centesim 12 and 30 last week, as was Madrid at prem and 7 centimos, these last rates representing ⅛ in each case. Amsterdam was unchanged at cent. discount, but Berlin was rather firmer at 1$\frac{1}{16}$ 3 pfennigs discount, against 1¼ and 3 pfennigs. silver market established new low records for both s and forward, owing to selling by China and the bazaar and the absence of any real support. Spot fell to 18d. and forward to 17$\frac{15}{16}$d., a loss of ¼d. in each case. The China silver exchanges declined in sympathy, Hong Kong losing 1⅛d. at 1s. 4⅜d., and Shanghai 2d. at 1s. 8d.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

WESTMINSTER AND WORK.

The threat of an early General Election has been removed by the Government's victory in the House of Commons on Wednesday, when Mr Baldwin's censure motion on the unemployment issue was defeated. From one aspect the victory was not convincing, for it was only achieved through the decision of the Clydeside malcontents and the whole of the Liberal Party to abstain from voting. But no matter how the majority of twenty-nine was secured, the fact that it was secured is entirely satisfactory, for the simple reason that a General Election at this juncture could do the country no good and might perform for it a great disservice. It would, on the one hand, merely delay the production of those schemes of productive work whose rapid completion is essential to a forward unemployment policy, and it would also mean that the country would be distracted by political strife and the position of the Cabinet placed in jeopardy at a moment when it requires all the prestige and confidence which can be derived from security of tenure in order to deal with the Indian situation. In abstaining from the lobby, therefore, Mr Lloyd George and his Liberal colleagues have rightly interpreted their duty to the country, and there can be little doubt that politicians themselves of all parties are glad to be relieved of the necessity of placing their own disunited policies before the gaze of a critical electorate.

So the crisis has ended. But if we read last night's debate aright, its occurrence has served a useful purpose. The chief interest in the discussion centred around the apologia of Sir Oswald Mosley, whose resignation from the Cabinet was the immediate occasion of the storm. In a cogent speech, which had a remarkably good reception in the House, Sir Oswald gave a summary of the schemes which he had unsuccessfully pressed upon the Cabinet. There is nothing very new about them; for the most part they follow in essentials the lines of those which were propounded a year ago by Mr Lloyd George on the Liberal side and Mr Thomas on the Labour platform, although in scope they go much further. Sir Oswald would get rid of one large lump of unemployment by a general gift of pensions at the age of sixty and at the other end of the scale by raising the school age, both of which proposals figured prominently in Mr Thomas's election speeches. Within limits there is much to be said for both. It was proposed a year or two ago that a limited pensions scheme for coal miners then 60 or over should be instituted, the means to be provided out of a special fund in order to meet the special grave emergency in that industry. Sir Oswald, with the enthusiasm of inexperience, would apply the system to the whole industrial field—an exuberant extension, fruitful in implications, which rightly caused Mr Thomas to reject the idea. Nor can Sir Oswald carry conviction with his comprehensive schemes by which he proposes to put 800,000 men in work at a budgetary cost of £10 million, a project which seems far to outbid Mr Lloyd George's famous pledge and was, indeed, rather contemptuously dismissed by the Liberal leader. Further, Sir Oswald was guilty of a cardinal blunder in pressing for the immediate raising of large scale loans, before the schemes on which the money is to be spent have been worked out. The only possible order of events is schemes first and loans afterwards.

Nevertheless, Sir Oswald hit one nail firmly and truly upon the head, and that is the most important nail of all. The great merit of his exposition of the unemployment problem lay in his recognition that, if real progress is to be made, the question must be regarded by the Government of the day as one of grave national emergency, and that emergency measures must be taken to sweep away red tape and departmental circumlocution. Sir Oswald quoted the analogy of the great war, and submitted that, for the special purpose of curing unemployment, there was need of an administrative reorganisation comparable with that which was found indispensable in the pursuit of victory in the field. The real complaint against the Government is that they have not concentrated on this problem as the one great vital national emergency. The explanation is obvious. The driving force necessary can only come from the head of the Government, and for the most of his first year in office it has so happened that Mr MacDonald has been very heavily engaged in fruitful work in the sphere of international politics. Possibly the most hopeful feature of Wednesday's debate is the assurance that the Prime Minister himself intends to concentrate his attention upon unemployment, and is also ready to co-operate in a real sense with leaders of other parties who may have anything to contribute. In our view Mr MacDonald would have done well to seek such co-operation at the outset of his term of office. Had co-operative effort in dealing with unemployment succeeded, the Government would have had the credit; had it failed, the blame would almost certainly have been placed, rightly or wrongly, on the failure of other party leaders to support the Government of the day in emergency measures which they considered necessary. For we must remember that the last election was fought out on the unemployment issue, and any Government returned to power at that election could claim that the country had demanded of it that all necessary measures should be taken.

As a result, then, of the political events of the last ten days we expect to see one good result, and that is the introduction of more driving power into the machinery which Mr Thomas is charged with directing. It must be confessed that the speeches of Mr MacDonald and Mr Thomas were both eloquent illustrations of the urgent need of outside stimulus. The Prime Minister revealed a lack of grip of the subject which, as we have suggested, is explicable by his prolonged immersion in other matters of an exacting and absorbing nature, while Mr Thomas's defence of the measures he has taken is stultified in the eyes of those who make a practice of judging by results. At the same time, Mr Baldwin had nothing to contribute and Mr Churchill did little more than repeat his new policy of a tariff for revenue, which is rather like applying a mustard plaster to an open wound. There was nothing, indeed, in the speeches of the leaders of the official Opposition to suggest that they would deal with the position more successfully than the present Government, and it was just because they were as unsuccessful in their five-year term as Mr Thomas has been in his first year that the country displaced them from office.

Much of the increase of our unemployment is due, as Mr MacDonald correctly expounded, to world causes. So far as they are operative, the Government of the day can do no more than patiently pursue a constructive liberal policy in international relations; and there the Government's record is better than that of its predecessor. But there are domestic influences also at work, and there are domestic remedies within the power of the Government to apply. The position is too serious for party tactics, too serious, indeed, for anything but "all hands to the pump." The responsibility must of necessity rest upon the Government. But no party will avoid the censure of the country if it puts grit rather than oil into the machinery. We believe that the attitude of the country, now that the political crisis is past, is to say to the Government, "Get on with the job and make up for lost time. Speed up the conception and perfection of sound and reproductive work schemes and create emergency machinery to secure their rapid commencement and vigorous prosecution." If a minority Government is to obey that call it must have, not merely freedom from political and departmental obstruction and destructive criticism, but an assurance of active co-operation and support for sound and effective measures. Such co-operation Mr Lloyd George has promised on behalf of the Liberal members. But co-operation will not flourish unless the right atmosphere is created, and it lies mainly in the power of the Prime Minister to create it.

SUDAN: THE STUMBLING-BLOCK.

In commenting upon the breakdown of the Anglo-Egyptian negotiations at the moment when it occurred, we promised to return to the subject as soon as the publication of a White Paper gave us an exact and authoritative account of the course of the negotiations and the position in which their failure—within an ace of success—has left us. The White Paper has now appeared;* and, as we had hoped, it throws a flood of light not only upon the past but upon the future.

The most important passage in this very full collection of documents is the concluding paragraph of the first Paper: the "Memorandum on the Negotiations":—

"The Secretary of State for Foreign Affairs made it clear to the Egyptian Delegation that, if they found after their return to Egypt, and after discussion with their friends there, that there was any hope of the draft treaty becoming an accepted instrument, it was still available, and he and his colleagues were prepared to try to reach agreement with regard to the few remaining passages in the note annexed to the treaty in order to make signature possible."

This means that, at any rate during the lifetime of His Majesty's present Government in Great Britain, the Egyptians can have for the asking a settlement of Anglo-Egyptian relations on terms which are acceptable to them in respect of three out of the four points reserved in the British Government's unilateral declaration of February, 1922. The one outstanding point of difference is the question of the Sudan; and even in regard to the Sudan the regulation and allocation of the Nile Waters has already been settled to the satisfaction of all parties by the Nile Waters Agreement of 1928. The residue of the Sudanese problem ought not to prove intractable to the joint efforts of Anglo-Egyptian statesmanship—especially when we take into account the cordiality of the atmosphere in which the recent negotiations came to an end. Neither in Egypt nor in Great Britain, this time, have there been any recriminations. There have only been expressions of goodwill; and Nahas Pasha's references to his British colleagues have been as friendly since his arrival in Egypt as before his departure from London. In these circumstances it is worth examining closely what the exact points of difference are in regard to the Sudan, and considering what the prospects of overcoming them may be.

In the British draft for an Anglo-Egyptian treaty, which was handed to the Egyptian Delegation on April 17th, the Sudan was dealt with in one Article, as follows:—

"While reserving liberty to conclude new conventions in future modifying the conventions of 1899, the High Contracting Parties agree that without prejudice to Egypt's rights and material interests the status of the Sudan shall be that resulting from the said conventions. Accordingly, the Governor-General shall continue to exercise on the joint behalf of the High Contracting Parties the powers conferred on him by the said conventions."

The Sudan was dealt with further in three heads of a draft exchange of Notes, by which the British draft for a treaty was supplemented. The question of the indebtedness of the Sudan to Egypt was to be examined with a view to settlement on fair and equitable lines by representatives of the Treasury and the Egyptian Ministry of Finance as soon as the treaty came into force. There was to be no discrimination in the Sudan between British subjects and Egyptian nationals in matters of commerce and immigration or the possession of property. If the treaty were worked in a friendly spirit, the British Government were to consider sympathetically a proposal for the return to the Sudan of an Egyptian battalion simultaneously with the withdrawal of the British forces from Cairo. Finally, for making international conventions applicable to the Sudan, a procedure was suggested which was calculated to make it clear that, in the international status of the Sudan, both Great Britain and Egypt were concerned on an equal footing.

Over the question of finance and treaty-making no difficulties seem to have arisen. The crux was the question whether or not the treaty should give Egypt a positive title to negotiate for a revision of the Conventions of 1899. On this, the British negotiators sought to meet the Egyptian point of view by introducing into the treaty a general provision entitling either party to initiate friendly discussions, within one year from the coming into force of the treaty, with regard to any question arising out of the application of any Article in respect of which any difficulty might have arisen. The Egyptians, however, did not care for this general Article; and they made a series of counter proposals, in which the Sudan was dealt with specifically.

The first Egyptian counter-proposal was to replace the Sudan Article in the British draft treaty by one of two alternative drafts, providing that the question of the Sudan should be reserved for future negotiations within one year from the ratification of the treaty, or alternatively that the question of the Sudan should be reserved for future negotiations without any specification of time-limit, but that in that case the *de facto* position obtaining in the Sudan before 1924 should be restored meanwhile.

This second alternative, of course, would have meant restoring the Egyptian personnel in the Sudan administration and the Egyptian units in the garrison and reincorporating the Sudan Defence Force into the Egyptian Army. That is, it would have meant rescinding measures which had been taken in 1924 as a matter of urgency because a number of Egyptian officials and officers in the Sudan had then been seeking, by political agitation, to make the task of the British Governor-General impossible. The British negotiators were unwilling to entertain this suggestion for fear that Egyptian officials and officers, if reintroduced into the Sudan, might attempt to prejudice the situation there in the same manner as before.

The second Egyptian counter-proposal was that the British draft for the Sudan Article in the treaty should stand with two minor amendments, on condition that a statement of the Egyptian position should be written into the settlement in the form of a Note declaring that the Sudan Article did not in any way affect Egypt's right of sovereignty over the Sudan and the joint administration thereof by the two High Contracting Parties. The British negotiators were ready to agree to the proposed amendments to the text of the Article in the treaty, but found the combination of the Article, thus amended, with the proposed Egyptian Note unacceptable.

Finally, the Egyptian Delegation agreed to the original British text of the Sudan Article with the addition of a sentence applying to the Sudan specifically that provision for friendly discussions, within the period of a year, of any difficulty arising, which the British negotiators themselves had suggested as a clause of general application. This third Egyptian counter-proposal seemed to offer a way out of the difficulties over the Sudan which had arisen so far; but at this point the Egyptian negotiators raised the question of immigration into the Sudan from Egypt; and it was over this that the negotiations actually broke down.

In this matter the Egyptians were not content that there should be no discrimination between British subjects and Egyptian nationals—the formula that the British draft for an exchange of Notes had proposed. They wished it to be made clear that the immigration of Egyptians into the Sudan would be subject to no restriction. And the fresh formula—suggested on the British side—that the Governor-General should not exercise "unreasonably" the right which any Government must possess to control immigration in the interests of its own nationals had to be abandoned, because the Egyptian Delegation insisted on the omission of the word "unreasonably." The issue over which the negotiations broke down is thus clear and concrete. Can a solution be discerned which will satisfy both parties and so remove the last impediment to a comprehensive Anglo-Egyptian settlement?

The question of "political" immigration may first be cleared out of the way; for Egypt can hardly dispute the Governor-General's right, within reason, to exclude would-be immigrants on political grounds. Down to their expulsion in 1924, a number of Egyptians in the Sudan did deliberately take advantage of their residence there in order to prejudice the situation by political agitation. It is not reasonable that the Sudan Administration should be exposed to the risk of this occurring again. Whatever the final settlement of the Sudan question may be, it evidently ought to be reached by free and peaceful negotiation, to the exclusion of any kind of illegitimate pressure.

The crux is the question of *bona fide* immigration from Egypt into the Sudan for the purposes of commerce or agriculture. And here, again, it seems impossible to take away the Governor-General's right to restrict immigration, within reason, on strictly economic grounds. True, the Sudan is a large country with great possibilities of supporting an increased population. But it is not a country like Manchuria, or the Middle West of Canada and the United States, where a squatter can simply settle down and plough the land. It is a country like Palestine or 'Iraq or parts of Australia, where settlement must keep step with the development of irrigation schemes which have, by their nature, to be under Government control. Subject, however, to this vital economic consideration, might it not be agreed that the Egyptian peasant who is *bona fide* seeking a homestead in the Sudan should be given priority over any other applicant? After all, Egypt's need for an outlet for a surplus agricultural population is, or very soon will be, greater than the need of any of the tropical African territories of the British Empire. By agreeing that the Egyptian peasant should have this priority over agricultural colonists of British nationality we should be recognising one of Egypt's very pressing material needs. And we suggest that, if once this priority were conceded, the Egyptians could afford to wait until the question of the ultimate political destiny of the Sudan settled itself. After all, the people who colonise a country eventually become the owners of that country in every sense. And from the British point of view there is no objection to a *bona fide* colonisation of the Sudan by Egyptian peasants up to the limits of the economic capacity of the Sudan for absorbing immigrants at any given time. We need only insist on the Governor-General retaining a free hand to restrict *bona fide* immigration within these limits and to exclude political agitators. Is not some agreement possible on these lines?

THE WORLD DEPRESSION.

For some months past the survey of the state of trade which we publish in our Monthly Supplement has been growing more definitely discouraging. Those people who can find comfort in adversity from the knowledge that their misfortunes are widely shared will derive consolation of this chill character, for what it is worth, from the Supplement which accompanies this issue of the *Economist*, for the fact which it brings out most clearly is the universal character of the present trade depression. Details vary widely from country to country, as reference to the Supplement will show, but certain broad characteristics are to be found in such marked degree in almost every industrial country as to merit fuller consideration.

The most universal symptom of the stagnation which has overtaken trade throughout the world since the seismic upheaval of last autumn on the New York Stock Exchange, is the fall in wholesale prices. The table below, based on fuller tables which will be found in our Supplement, shows the movement of wholesale prices in six countries, during the last thirteen months:—

Wholesale Prices Indices.

	France. July, 1914=100	Germany. 1913=100	Belgium. April, 1914=100	Italy. 1913=100	United States. 1926=100	United Kingdom. 1913=100
1929—						
March	653	140	869	461	98	138
June	623	135	848	447	96	132
September	610	138	846	437	98	132
October	602	137	838	436	96	130
November	596	136	834	431	94	127
December	588	134	823	425	94	127
1930—						
January	576	132	808	417	93	124
February	575	139	791	408	92	121
March	565	126	774	400	91	119

With the single exception of Germany, all these countries had a lower price level in November than in any preceding month of 1929, yet by March, 1930, there had been a further fall of 7.2 per cent. in Belgium and Italy, 6.0 per cent. in the United Kingdom, 6.7 per cent. in Germany, 5.2 per cent. in France and 3.8 per cent. in the United States. Owing to the very varied composition of these indices it is difficult to compare details of the movement in the respective countries, but two groups, foodstuffs and textiles, stand out as having fallen universally by very much more than the average amount. The importance of the part played by the decline in textiles is perhaps the most universal characteristic of the movement, as the figures below show:—

Percentage Decline between December, 1929 and March, 1930.

	In Total Index.	In Textiles Index.
France	4·0	10·0
Germany	5·8	11·0
Belgium	6·0	14·7
Italy	6·0	8·5
U.S.A.	3·5	4·3
United Kingdom	6·0	11·6

On the other hand metals and minerals have everywhere fallen less than the average, and hides and leather, where they are separately shown, have generally not declined more than the average of all prices. Some light on this may be thrown by the following table of stocks in the principal centres:—

Stocks of Raw Materials.
(000's omitted.)

		1928.	1929.
Cotton (world visible, bales)	December	7,766	8,098
Silk (U.S.A., bales)	December	72	118
Copper (N. & S. America, short tons)	December (refined)	65	171
	,, (blister)	250	266
Tin (world visible, long tons)	December	25	28
Zinc (at U.S.A. refineries, short tons)	December	45	77
Lead (U.S.A. and Mexico, short tons)	November	157	162
Crude petroleum (U.S.A., barrels)	December	484	535
Hides and skins (U.S.A., lb.)	December	268	271
Rubber (world, long tons)	October	178	280
Wheat (world, quarters)	December	61,330	67,440

This shows, as was to be expected, a sharp increase in the stocks of textiles and wheat, an uneven, but on balance less than average increase in the stocks of base metals and only a negligible increase in the stocks of hides and skins in the U.S.A. The existence of these stocks is at once a witness to the degree of depression in the markets for raw materials, and an evil portent for the immediate future.

The present depression has something of the character of an acute attack, supervening upon a chronic form of the same disease. For over a decade now, as was pointed out by Mr A. Loveday in the January issue of *Index*,* world economy has been suffering from the maladjustment consequent upon a general shifting of demand from staple articles to products of a more luxurious and more varied character. This has three important consequences: in the first place it renders a large part of the equipment of certain industries permanently superfluous, and requires a change-over from the production of coarser to finer grades of food, textiles and other articles of universal consumption; secondly, it

FIXED DEPOSIT ACCOUNTS.
Rates will be quoted on application.

reduces the scope for mass production with its attendant economies; and lastly, as demand for luxury goods is more fickle than that for staple articles of food and clothing, it means not merely an immense initial adaptation of industry to new conditions, but a permanent state of comparative instability in which similar acts of adaptation over smaller areas of production at a time will constantly be required. As this change in the general character of demand is consequent upon the levelling up of the standard of living and the increase of leisure which have been going on steadily since the war, and will, it is to be hoped, continue, this increased instability of industry must be accepted as a new element in world economics which has come to stay.

Concurrently with this development has come the industrialisation of backward countries, so that markets which might have taken the coarser products of the textile industries in the older countries, when the home demand shifted to finer products and to silk and rayon, have instead been supplied to a large extent from their own newly established factories, and the world productive capacity has become redundant. As a result of the war the productive capacity of the mineral, metallurgical, engineering and shipbuilding industries is also in excess of world requirements. This situation was being slowly but steadily taken in hand by a process of rationalisation, when, just as the patient was beginning to show signs of recovery, the monetary events of last autumn caused a critical relapse, and it is perhaps significant that in the United States, where the staple industries are most fully rationalised, and where a large part is played by such luxury goods as, for example, radio, motor cars and gramophones, as lend themselves to mass production, the fall in prices during the last few months has been the least pronounced.

A further symptom of the universality of the present trouble is to be found in the recent foreign trade returns of the principal countries. Those for which April figures are available are shown below:

EXTERNAL TRADE IN APRIL.

(000,000's omitted.)

	Imports.			Exports.		
	April, 1929.	March, 1930.	April, 1930.	April, 1929.	March, 1930.	April, 1930.
Germany (Rm.)	1,255	884	888	1,231	1,104	977
France (Fr.)	5,138	4,431	4,566	4,428	3,958	3,888
U.S.A. ($)	411	300	308	426	370	334
Holland (Fl.)	234	226	204	169	156	142
Switzerland (Fr.)	244	229	236	178	159	163
United Kingdom (£)	104	93	84	71	62	55

Every country in the above table carried on less foreign trade in April this year than last, and all except Switzerland exported less in April than in March, though imports went up in April in every country except Holland. Of the twenty-eight countries whose March trade returns will be found in our Supplement, only six show an increase in both imports and exports as compared with March, 1929. They are: Belgium, Denmark, Sweden, Norway, Estonia and Lithuania—all North European countries. Eleven countries experienced a decline in both imports and exports.

The causes of so widespread a lack of confidence are necessarily complex. Some have been indicated above, but the suggestion of remedies is even more difficult. So far as credit policy is concerned, it is clear that, however prominent a part monetary troubles may have played in the accentuated depression of the last few months, there are other causes of the trouble which require more than purely financial means for their eradication. As the public is acutely conscious, the failure of retail prices to keep pace to anything like a reasonable extent with the fall in wholesale prices has helped to prevent the slump from bringing its own ultimate remedy in the form of stimulated consumption, and the history of the restriction policies which have recently been adopted by the producers so many raw materials suggests that the only way to make a fortune nowadays is to create, not wealth, but scarcity. There are signs that this discrepancy between wholesale and retail prices is at last beginning to be reduced, but the widening margin, even among wholesale prices, between the cost of raw materials and the cost of finished goods suggests that rationalisation has not yet sufficiently reduced production costs. The experience of the United States has taught the world that reduction in labour costs does not necessarily mean reduction in wages, but reduction in labour costs, as in all other costs, there must be, if the present abundance of the world's available resources is to cease to be a menace and become the foundation stone of prosperity.

NATIONAL INCOME OF U.S.A.

THE American national income is one of the most important economic factors in the modern world. It has been stated that the 120 million inhabitants of the United States enjoy a national income roughly equal in size to that of the 480 million inhabitants of Europe, or of the 1,000 million inhabitants of the rest of the world outside Europe and the U.S.A. If this is the case, then American income constitutes approximately one-third of the total income of the world; but even if this fraction is not exact, accurate knowledge concerning it is a matter of great consequence, both because of its size and because of the importance of its fluctuations from year to year.

Fortunately we are now in the position of possessing fairly full and reasonably precise information upon this vital topic. The latest researches carried out by Dr. Willford I. King* show in definite form the astonishing growth of wealth which has characterised and been responsible for America's industrial development during the last twenty years. The table which follows shows the estimated "realised income" of the United States both in millions of "current" dollars—*i.e.*, the actual yearly figure—and in millions of "1913 dollars"—*i.e.*, of dollars with a purchasing power over consumable goods approximately equal to that of the dollar in the pre-war year:—

U.S.A. ESTIMATED REALISED INCOME.

(Millions).

Year.	"Current" dollars.	"1913" dollars.	Year.	"Current" dollars.	"1913" dollars.
1909	29,605	31,300	1919.....	65,949	38,017
1910	31,430	32,380	1920.....	73,999	37,573
1911	31,858	32,920	1921.....	63,371	36,710
1912	33,977	34,656	1922.....	65,925	40,565
1913	35,723	35,756	1923.....	74,337	45,164
1914	35,647	35,250	1924.....	77,135	46,758
1915	37,205	36,636	1925.....	81,931	48,412
1916	43,288	39,559	1926.....	85,548*	50,421*
1917	51,331	40,242	1927.....	88,205*	52,892*
1918	60,408	40,150	1928.....	89,419*	54,022*

* Preliminary estimate.

The "realised income" shown in the foregoing table represents that part of the aggregate income of individuals which remains after eliminating changes, whether positive or negative, in the values of stocks or property of any kind. It includes an estimate of the value of services rendered to their owners by durable, direct or consumers' goods. This item—which Dr. King terms "imputed income"—is arrived at, in the case of non-residential property, by applying a fixed rate of interest—namely, 6 per cent.—to the estimated value of these goods in the hands of consumers; and, in the case of residential property, by directly estimating the rental value of urban homes occupied by their owners. In 1913 the "imputed income" was estimated at 2,330 million dollars and in 1928 at 5,300 million dollars. The estimated "realised income" excludes, on the other hand, the value of services rendered by housewives and householders to their own families; the value of services rendered by individuals to themselves; the value of goods and services received by employees in the guise of expense accounts; and money earned through odd job em-
