Mr W. C. Bacon (Chairman of the Company) presided, and in the course of his address, said: I am pleased to meet you again and to present what I hope you will agree is a satisfactory report for last year. The year under review has been a most eventful year, and great efforts have been made in every direction towards re-establishing the trade of the country. I need not enter into detail. You will all have carefully followed the methods which are being employed to improve the cotton trade and restore the prosperity of our staple industry. It is to be hoped that the strenuous efforts which are being put forward will eventually be successful, and regain for us our prominent position in the world's trade.

RESULTS FOR THE YEAR 1929.

As you are all well aware of the depressed state of trade in this district throughout practically the whole of last year, I am sure you will agree that it is gratifying that the tonnage—6,344,000 tons of sea-borne traffic—using the port of Manchester in 1929, has only once been exceeded in the history of the company, and that was in the year 1926, when the traffic was abnormally affected by the large imports of coal arising out of the unfortunate coal strike in that year.

The net receipts of the whole undertaking, Ship Canal, Bridgewater Canals, and working of railways, amounted to £854,225, and miscellaneous receipts to £47,779, making a total of £902,004, as shown in account No. 8. Deducting from this miscellaneous charges, chief rents, wayleaves, rent on elevators, docks and transit sheds, together amounting to £105,250, there remains a net revenue for the year of £796,754, as compared with £761,352 for 1928—an increase of £35,402.

The dividends, as you are aware, are the same as last year, but whereas in 1928 the carry-forward was reduced by £12,545, this year the carry-forward is increased by £11,068, which means an improvement on the year of £23,613.

When so many other companies have had to reduce their dividends, although I should have been very glad if we could have done better, I am sure you will regard it as not unsatisfactory that we have been able to maintain last year's dividends and to increase the carry-forward.

PROSPECTS.

As regards the prospects of our own undertaking. In spite of the present conditions of trade and the unavoidable difficulties arising therefrom, there are some encouraging features.

There is the steady increase in traffic to which I have already referred, and particularly the increase last year. I see no reason why the weight of traffic for the current year should not at least equal that of the past year—indeed there are certain trades to which we have every reason to look for an increase.

Nothing phenomenal, however, can reasonably be expected until there is some general tendency towards better trade conditions. Under the stringent conditions existing at present, we find both shipowners and traders clamouring for decreased charges. As stated in the report, reductions were made in the company's charges as from October 1st last, and we were glad to have the opportunity of making substantial concessions in order to pass on the benefit arising under the De-rating Act of 1929. Every endeavour was made to distribute the reductions fairly; in fact, partly from the stress of competition and also in the hope of increasing and consolidating the trade of the port, the reductions in charges already sanctioned amount to more than the relief which the company have received under the De-rating Act. It is hoped and believed that this policy will ultimately benefit the company, although it may mean some slight temporary reduction in net revenue.

CURRENT YEAR.

We have begun this year well. January shows an increase of £641 in gross receipts. This, of course, seems a small figure, but it should be borne in mind, having regard to the reductions in charges arising out of de-rating, that for the first nine months of the year decreases are to be expected and, up to a point, can be incurred without any reduction in net revenue.

Speaking generally of the present state of trade of the country, it seems to me that too many people are looking to the Government to get them out of their difficulties. My own view is that the best way the Government can help is to interfere with trade and trade conditions as little as possible. Both individuals and companies should realise that they must work out their own salvation and not rely on the efforts of Governments or others.

The report and accounts were unanimously adopted.

THE UNDERGROUND.

CONTINUED EXPANSION—TRAFFIC PROBLEMS.

The annual meeting of the Metropolitan District Railway Company, the London Electric Railway Company, the City and South London Railway Company, the Central London Railway Company, the London General Omnibus Company, Ltd., the Metropolitan Electric Tramways, Ltd., the London United Tramways, Ltd. the South Metropolitan Electric Tramways and Lighting Company, Ltd., the London and Suburban Traction Company, Ltd., and the Underground Electric Railways Company of London, Ltd., were held, on the 27th ultimo, at the Caxton Hall, Westminster, London, S.W.

The Right Honourable Lord Ashfield, who presided, said in the course of his speech: The traffic for the year 1929, as measured by the number of passengers carried, shows some small advance upon that for 1928. The total number of passengers carried by railway, tramway and omnibus amounted to 2,175 millions. The tramways carried 9 per cent. of this total, the railways 18 per cent., and the omnibuses 73 per cent. These figures bring out in a forcible manner the predominance of the omnibuses within your group of companies. If I look further afield at the whole of the traffic carried by local agencies in Greater London, I find that the omnibus share amounts to about 53 per cent. of the whole, so that this predominance is complete and it is also unique, for nowhere else in the capital cities of the world can the omnibus show anything approaching so substantial a share in the fostering of local movement. During last year the passengers carried by the railways increased by 7 per cent., those carried by the tramways increased by 4 per cent., and those carried by the omnibuses by just over 1 per cent.

A SATISFACTORY FEATURE.

Perhaps the most satisfactory feature is the increase in the traffic carried by the tramways. It has been the habit in recent years to depreciate the value of the services rendered by tramways in the carriage of passengers, but we have found that if steps are taken to bring the standard of comfort of the tramcars up to that customary upon the railways and omnibuses, and that if steps are taken to increase the general speed of operation of the tramways, the passengers carried by the tramways will increase in numbers, proving that tramways serve to deal effectively and economically with considerable volumes of traffic upon the streets. The average speed of operation of our tramways has now turned 10 miles per hour, which, having regard to the growing congestion of the streets, is a not unsatisfactory figure; indeed, as good a record as may be found anywhere. Owing to the predominance of the omnibuses, the increase in the total volume of traffic carried for the year is just over 2 per cent., and I must admit this compares badly with the increases of recent years, which have reached 7 or 8 per cent. In the two preceding years we recorded a growth in the number of passengers carried exceeding 100,000,000 in the year, but this last year this growth has fallen to approximately 49,000,000.

SEVERE WEATHER.

The principal cause of this decline was, without doubt, the exceptionally severe weather of January and February, coupled with the widespread influenza epidemic. From the losses of those early months, the summer made but a poor recovery. But if last year started ill, by comparison this year starts well, for the advance that was noted at the close of last year is consistent, and continues into this year. But I should warn you that the increases in traffic now shown upon the published weekly returns include for the first time the results for the omnibuses formerly belonging to the London Public Omnibus Company and that some allowance (about two-fifths of the total increase) should be made for this fresh factor.

OMNIBUS RECEIPTS.

There has been a falling-off in the average receipt per passenger carried by the omnibuses during the year which has also mitigated against the largeness of our fortunes. Even a quite small change in the average receipt per passenger, when multiplied by the millions of passengers that we carry, makes an appreciable difference. The fall in this case was only three-hundredths of a penny, but if the 1929 passengers had been carried at the 1928 average receipt, instead of at the lower receipt, the gain would have been close upon £200,000. In spite of this one adverse factor, the traffic receipts for 1929 amounted in the aggregate to £17,300,000, an increase of £200,000 over 1928, or 1·2 per cent.

So far as expenditure is concerned, the Omnibus Company had to face an enhanced cost for petrol. Our contribution in petrol tax for the year 1929 amounted to £380,000, in itself a serious abstraction of our funds, and entirely apart from the amount which we paid in respect of licensed vehicle duty, amounting to £435,000, so that under these two heads alone the omnibuses contributed to the revenues of the State during last year a sum of £815,000, or almost 7½ per cent. of their gross revenue. No other form of transport makes a like contribution. Except for this one factor, costs were generally lower during the year.

The average wage paid to our employees throughout this group of companies amounted to £4 3s. 7d. per week, an increase of 1s. 3d. over 1928, so that we can honestly claim not only to have sustained, but even advanced the standard of living of our 45,000 employees, for during the year 1929 the cost of living fell somewhat below that of 1928.

INCREASING EFFORT.

Everywhere that you may look within our undertakings, you will find increasing effort. It is impossible for me to put before you all the figures that would illustrate this. Our accident record, as compared with 1928, has fallen, and in relation to the work performed is indeed the best record that we have so far had. If you take one element in that record, the number of fatalities which have occurred in connection with our transport undertakings, whatever may be the cause, amounted in 1929 to 117 only, out of a total of approximately 1,500 occurring on the streets of London alone. Only one fatal accident occurred for almost every two and a half million car miles run.

I need hardly add that we cannot be held to blame for these fatalities, for in all but two accidents we were entirely exonerated from blame by the coroner's juries which inquired into their circumstances. Our expenditure on the settlement of claims has fallen to the lowest level that we have so far obtained. The delays on the railways are down to four minutes per 10,000 car miles run. This is another record, and is mainly due to the greater care and attention which has been paid to our rolling stock.

NEED FOR FURTHER RAILWAYS.

London is indeed remarkable as a metropolis, for in spite of the depression in trade and of the falling birth rate, it continues to grow all the while. It has always been the place in which the wealth of the country is spent, though it is rapidly becoming as well the place in which the wealth of the country is gained. The Londoner can scarcely understand the gloomy prognostications, the pessimistic forecasts which from time to time fill our newspapers and periodicals. London requires more underground railways. So far as private enterprise is concerned, no one can allege that we have not faithfully discharged our task to the limits of our strength. There may come a time when underground railways will have to be found and provided by public authorities just as roads are now found and provided.

The report and accounts were adopted.

GENERAL INVESTORS AND TRUSTEES, LIMITED.

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

The twenty-third ordinary general meeting of this company was held, on the 27th ultimo, at Winchester House, London, E.C.

Mr Gerald T. Moody (the chairman) said that the gross revenue was less than in the previous year by some £2,000, and the net revenue by about £7,200, of which a considerable part was to be attributed to additional interest paid on debenture stock. Nevertheless, they had earned more than 21 per cent. on the ordinary stock, and the directors had no misgivings in recommending a final dividend on that stock of 11 per cent., less tax, making a total distribution of 17 per cent. actual for the year. They also recommended that £10,000 be carried to reserve account, increasing it to £275,000, that £2,000 be added to staff superannuation fund, and that £4,356, be carried forward, compared with £3,502 brought in.

The fall in revenue was without doubt to be attributed indirectly to the whirlpool of speculation to which he referred at the previous annual meeting, not that the company had directly or indirectly had any interest in the group whose affairs had been occupying the attention of the courts, but because, in view of the impending collapse of the Stock Exchange boom, the directors had considered it wisest to abstain from participating in syndicates and in underwriting. At the close of the accounts on the 31st ultimo they had upwards of 50 per cent. of the ordinary stock represented by cash, Treasury bills, and British Government securities.

Throughout the year they had been playing for "safety first," and no doubt stockholders would agree that the policy had been more successful in their case than in that of an eminent politician. The valuation on January 31st last showed, after providing for liabilities, dividends and other allocations, a substantial surplus over the issued capital and reserve account, but the aggregate value was not so satisfactory as it was a year ago. Fortunately, the company, in following conservative methods, had accumulated a reserve account of £275,000, and, as this sum had paid income tax, the gross appropriation was really £343,750, or exactly 86.8 per cent. on the ordinary stock. In the future it might not be necessary or even desirable to make such large contributions to that account or to so generously increase the staff superannuation fund, which had now reached a substantial aggregate, so that stockholders need not anticipate any reduction in their dividend.

The report and accounts were unanimously adopted.

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCIETY.

PROSPECTS OF A RECORD BONUS.

The 106th annual general meeting of the Clerical, Medical and General Life Assurance Society was held, on the 27th ultimo, at 15 St. James's Square, London.

Mr Francis E. J. Smith (the Chairman) said that as to their net new business, although below that of 1928, the total of over £1,700,000 would, up to two years ago, have been hailed as a record, and it exceeded by nearly £400,000 the average figure for the last complete quinquennium. The number of policies issued had been practically identical with that of the previous year, but there had been a decrease in the average sum assured, reflecting undoubtedly the difficult conditions ruling throughout the year.

They continued to receive a very substantial amount of new business from their connections with the Employers' Liability Assurance Corporation, and, as there was an equally important flow of business in the reverse direction, the usefulness and value of such a liaison to both companies would be appreciated.

The vast bulk of their new business had taken the form of simple whole-life or long-dated endowment assurance contracts, and in these days, when there was an undoubted tendency to short-dated contracts, emphasising the investment rather than the protective aspect of life assurance, that was particularly gratifying.

He had often referred to the advantages conferred by a carefully selected with-profit whole-life policy or endowment assurance. Such a policy offered three advantages. It increased the value of the estate of the assured in the event of early death to an extent out of all proportion to the premiums paid; it reduced the liability to pay income tax, and it was a care-free gilt-edged investment which steadily appreciated in value.

TRADING RESULTS.

They had received in 1929 a smaller sum by way of single premiums, a decrease which reacted directly upon their total premium income and to some extent upon their expense ratio. The net rate of interest which they had earned remained at the highly satisfactory level of £4 16s. 9d. per cent.—a fact which augured well for their 1931 bonus. Claims by death had been heavier than usual, but in character they had been good while in volume they represented only 68 per cent. of the amount anticipated and provided for.

Surrender payments in 1929 had been heavy—a fact which was not surprising in view of the monetary conditions ruling during the year. None the less, it was remarkable that in spite of enhanced outgo their life assurance fund showed an increase of no less than £424,539, and exceeded at the end of the year, for the first time in their history, £10,000,000. In less than 10 years that fund had increased by more than 50 per cent.—ample evidence of the vitality of the Society.

Mortgages on property out of the United Kingdom, standing at £512,000 odd, gave them a very satisfactory yield; all were thoroughly well secured on house property in or near Toronto and represented the fruit of their C.M. and G. Canadian Investments, Ltd. With the cash remitted to Canada for further investments—£10,000 odd—they had now almost reached their self-imposed limit, for the board had long ago decided not to invest more than approximately 5 per cent. of their total assets in that particular way.

While their Indian and Colonial securities showed small expansions, "Other debentures and debenture stocks" had grown from £250,000 to £400,000. A new feature in their balance sheet was the preference and ordinary stocks of an investment trust company. In spite of the fall in prices during the year, their Stock Exchange securities were worth £73,681 in excess of their book value.

They had quite recently formed a new subsidiary, the Clerical, Medical and General Investment Trust, Ltd. It had been found by experience that by spreading risks widely a most effective means could be created whereby a higher return for money could be obtained with safety.

BONUS PROSPECTS.

In the report the directors had expressed their complete confidence that the bonus to be declared a year hence would be a record one. He wished to make clear the main grounds upon which their confidence rested. They knew that mortality had been consistently favourable, and that the backbone of the remainder of their profits consisted of interest. The surplus disclosed in 1926 had enabled them to declare record rates of bonus and to make important additions to their reserve strength. Since 1926 not only had the average rate of net interest increased, but it had been upon a broader basis of reserves. That increasing scale of prosperity compelled the belief that the optimism which the directors had expressed would be entirely justified.

The report and accounts were adopted.

LEYLAND MOTORS, LIMITED.

SUCCESSFUL RESULTS FOR THE YEAR.
GOOD POSITION AND PROSPECTS.

The eleventh annual general meeting of the shareholders of Leyland Motors Limited was held at the head offices of the company at Leyland, Lancashire, on Wednesday, February 26, 1930, at 3 o'clock in the afternoon.

Mr J. H. Toulmin, J.P. (the chairman of the company), presided.

The secretary (Mr T. Phillips-Conn) read the notice convening the meeting and the auditors' report.

The chairman, in proposing the adoption of the report and the accounts for the year ended September 30, 1929, said:—

Ladies and gentlemen,—As you have had the directors' report and accounts before you for some days, I propose, with your permission, to take them as read.

FURTHER PROGRESS.

The accounts for the year ended September 30, 1929, which are submitted for your consideration to-day, disclose the result of a further steady advance by your company, and the board feel confident that you will find the position a satisfactory one.

INCREASED PROFIT.

The gross profit is £758,295 and the net profit (after making full provision for income tax, depreciation and all contingencies) is £559,373, an increase of £153,375 on the profit of £405,998 for the previous year. It may be of interest to you to know that this constitutes a record profit since the inception of the company.

DIRECTORS' REMUNERATION.

One entry makes its reappearance in the profit and loss account after an absence of a considerable number of years. Provision has been made for the additional remuneration payable to the three full-time directors in accordance with Article 84(A) of the company's articles of association. This remuneration is not payable until the remainder of the arrears of the dividends on the 7½ per cent. preference shares have been paid, but it is evidence of the Company's return to prosperity that the provision is necessary.

The directors' fees, amounting to £795 17s. you will no doubt consider a very small sum. This item only covers the fees paid to myself for the year and those paid to Mr Walker for part of the year. Mr Thorold did not, on account of his absence, receive any fees.

THE BALANCE SHEET.

You will observe, if you examine the balance sheet, that the financial position has been considerably strengthened. The amount owing to creditors at September 30th last was £438,346 and this figure included a very considerable sum by way of provision for income tax and contingencies, but did not include anything for our bankers. Twelve months previously we owed to creditors £871,819, including a considerable bank overdraft.

At the same time the total of debtors and stock-in-trade was £320,000 less than it was twelve months previously and the cash at the Bank and in hand amounted to £302,644.

Your directors have now given effect to a suggestion that has been made at these meetings on former occasions by setting aside a sum of £5,000 to establish a pensions and benevolent fund. It is our intention to add to this fund from time to time so that we may be enabled to deal adequately with suitable and deserving cases.

The subsidiary company which we control is Leyland Motors (South Africa) Limited. The formation of this separate company was rendered necessary by the regulations of the South African Government. No outside money is invested in the company; so far as our organisation is concerned, it is considered a depot exactly like our other overseas depots.

DIVIDEND POSITION.

With regard to dividends, you are all aware, of course, of the position. The dividends on the 6 per cent. preference shares have now been paid up to December 31st last, and consequently the holders of these shares are not present at our meeting to-day. The dividends on the 7½ per cent. preference shares have been paid up to December 31, 1927, and we shall pay off the remainder of the arrears as soon as our cash resources will allow us with safety to do so. It is quite true that at September 30th last we had over £300,000 in cash, but out of that amount we have distributed £229,800 in dividends and we have also paid a very large sum for income tax.

Since we met here last year we have distributed £324,600 in cash to the preference shareholders.

Your directors are firmly of the opinion that the stability of your company must be still further strengthened by the conservation of its liquid assets and by the creation of adequate reserves. We have, therefore, recommended to you the setting aside, out of the year's profits, to a general reserve fund, the sum of £120,000.

Land and buildings, plant and machinery and tools and equipment, which are for the first time shown separately in the balance sheet in accordance with the requirements of the new Companies Act, have been maintained in a high state of efficiency.

FULL ORDER BOOKS.

The output is constantly increasing and the reputation of our vehicles has never been higher. The new range of goods models has steadily gained in favour, whilst the passenger models, both four-cylinder and six-cylinder, have continued to attract buyers who are determined to have the best. The works are fully employed and our order book is still in a very satisfactory condition as we have received more orders since September 30th last up to the present time than we did in the corresponding period last year.

EXPORT POLICY.

Your directors are aware of the importance of the overseas markets as an outlet for our increasing productions. I am glad to inform you that several members of the Board, and some of our higher officials, have visited various countries during the year and have studied, at first hand, the needs and the possibilities of the markets in these countries, and we look forward with confidence to an increasing trade generally overseas.

HEAVY OIL ENGINES.

Considerable attention has been given by the technical experts of the company throughout the year to heavy oil engines, and a number of different types have been tested and exhaustive tests and experiments are proceeding.

TROJAN INTEREST TERMINATED.

References have appeared in the press from time to time regarding the Trojan car. As you are aware, the Trojan car was manufactured and sold by us under a licence from Messrs Trojan, Ltd., of Croydon. This licence has now been surrendered and your company is no longer concerned in any way with the production or sale of Trojan cars or vehicles. The Kingston works are now being utilised for the production of our own chassis and bodies.

MCKENNA DUTIES.

I cannot let this opportunity pass without making an observation on the McKenna duties and the possibility of the withdrawal of those duties. Having regard to the present position in the United States, your directors view with considerable trepidation the possibility of the removal of the tariff on heavy vehicles and cars imported into this country. In our opinion, the removal of the tariff would inevitably deal a severe blow to the whole motor industry and would add, still further, to the already serious unemployment in this country. We trust, however, that the Government will decide the question by having regard only to the needs of industry.

RETIREMENT OF DIRECTOR.

It is with regret that I have to refer to the retirement from the board of Mr W. J. Thorold, but I wish to express our appreciation of the valuable assistance he has given us in the past. Mr Thorold's business in the United States and Canada has grown to such an extent as to make it impossible for him to be in England and he has therefore asked up to accept his resignation. He has written assuring the company of his good wishes and has promised to continue to help us in every way possible in Canada.

The board elected Mr Walter Davies, who has been known to many of you for a long period, to fill the vacancy created by Mr Thorold's retirement.

TRIBUTE TO STAFF.

Finally, I am exceedingly glad to state once more that the relationship between the management and the employees has continued to be most cordial and I wish, on your behalf and on behalf of the directors, to thank all the 6,000 employees of the company for their co-operation and excellent service during the past year.

The chairman then moved the adoption of the directors' report and statement of accounts as at September 30, 1929. The motion was duly seconded, and, after the chairman had replied to certain questions put by individual shareholders, was carried by the meeting.

The formal resolutions were passed confirming the payment of the half-yearly dividends on the 6 per cent. cumulative preference shares and arrears of dividend to December 31, 1927, upon the 7½ per cent. cumulative preference shares.

Mr Walter Davies, who was appointed a director of the company by the directors, and who retired in accordance with the Articles of Association, offered himself for re-election and was re-appointed.

Messrs Geo. A. Touche and Company and Messrs Davies and Crane were reappointed joint auditors to the company.

The proceedings then terminated.

BORAX CONSOLIDATED, LIMITED.

HEALTHIER POSITION—HOPEFUL OUTLOOK.

The thirty-second ordinary general meeting of Borax Consolidated, Limited, was held on the 26th ultimo, at the Cannon Street Hotel, London, E.C.

The Rt. Hon. the Earl of Leven and Melville (the chairman) said that the company had had a bad year from the profit-making point of view, and as a consequence the directors were, for the first time in 31 years, or since the formation of the company, not able to recommend a dividend on the deferred ordinary shares. They had considered it advisable in October last to inform the shareholders as to the position, being also led to that course by a number of unauthorised statements in the Press as to impending agreements. He was glad to say that competitive sellers had for the most part relieved the strain by quoting higher prices than those of the last six months of the company's financial year, and, while there were still some disturbing elements, there was a reasonable prospect that the improvement could be maintained.

The balance of profit and loss account, £160,624, was only about half that of the previous year, and it was evident from the figures that this had not fully covered the prior charges.

THE CURRENT YEAR.

As to the current year, the industry was in a much healthier condition, but it had had a bad time, and could not be expected to make a miraculously quick recovery. The company had to clear off old contracts at unremunerative prices before they could benefit by the very moderate increase which had taken place. The directors hoped for some further increase, but they realised that prices should be kept at such a level as would best foster enlarged industrial uses. There was a good prospect of borax finding new outlets. Their trouble had been a too large production of borax from various sources in comparison with the demand. The opening of new outlets would, therefore, help to solve the difficulties consequent upon over-production, leading to cut-throat competition and, consequently, no reasonable margin of profit.

During the past year the company had been in a state of reorganisation, but with the increasing demand which was certainly taking place—their sales of borax to date being ahead of last year—with a saving in distribution expenses and the cutting out of every expense capable of reduction, and a moderate recovery of prices, and with the advantages of low costs due to the new mineral, the directors looked to being able to show again a satisfactory profit and loss account.

PREDOMINANT POSITION.

It would appear from the values set upon their shares that some undue pessimism must exist as to the position of the company. They should look back upon its record of 30 years, during which a large amount had been earned without a set-back. They had had declining profits for a year or two, and had had a bad year in 1929, but the position did not appear to call for so drastic a decline in values.

The company still had a predominant position in a growing industry; they had enormous reserves of raw material in their mines, and their works in various countries were up to date. That at Wilmington, California, was the largest borax refinery in the world and was equipped with the most modern plant for economical production, and they had a very fine worldwide organisation for the distribution of their goods. They had also a freehold property on Searles Lake of large potential value, containing the brines from which potash and borax were being produced, and available, should they at any time determine to proceed with its exploitation. In view of all that, it certainly seemed that the fall in values was overdone, and that the prospects of the business were not as bad as the values set upon the company's shares indicated.

The report and accounts were adopted.

THE CITY OFFICES COMPANY, LIMITED.

FREEHOLD OF PALMERSTON HOUSE ACQUIRED.

The ordinary general meeting of the City Offices Company, Ltd., was held, on the 25th ultimo, at Palmerston House, 34 Old Broad Street, London, Mr E. M. Rodocanachi (chairman) presiding.

Mr W. E. A. Norman, A.S.A.A. (general manager and secretary), read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: The past year has again been a good one for this company, notwithstanding the many financial troubles in the second half of last year.

The future of business this year will depend to a great extent on the Budget. If the Chancellor is ill-advised enough to increase direct taxation, either by increasing income tax or surtax or death dues, he will seriously retard any recovery in trade and industry. It does seem to be most regrettable that Mr Snowden, following in the footsteps of Mr Churchill and guided by the present Permanent Officials of the Treasury in this matter, should refuse to consult the bankers of the City of London on financial questions. Surely it stands to reason that men who have spent their lives in studying financial questions should be able to give valuable advice, even to the Chancellor of the Exchequer for the time being. The Bank rate has now been reduced to 4½ per cent., and that should greatly assist trade and industry.

In the early part of last year we were able to buy the freehold of the small remaining portion of Palmerston House, and I can congratulate the shareholders on now owning the freehold of the whole of Palmerston House. Your board is now carefully considering the future of Palmerston House. In a few years it should be possible to offer the site on the market for a new building, and as our site is about 30,000 ft. super you will realise that it is very valuable. The Cecil Hotel has been sold for a million and a half, and I understand the area there to be about 90,000 ft. super. Our site, in the centre of the City, should be even more valuable, *pro rata*.

Having reviewed the salient items in the accounts, he observed that the directors on this occasion had been extra cautious in the matter of the dividend—30s. per share, less tax, for the year—and, instead of increasing the dividend, had decided to put £4,000 to the equalisation of dividend fund, against £2,000 for the previous year.

The resolution was unanimously adopted.

THE ENGLISH ELECTRIC COMPANY, LIMITED.

FINANCIAL REORGANISATION SCHEME APPROVED.

Meetings of the holders of debentures, debenture stock and shares in the English Electric Company, Ltd., and also an extra-ordinary general meeting of the company were held, on the 25th ultimo, at Kingsway Hall, London, W.C., to consider a financial reorganisation scheme.

Mr W. L. Hichens (chairman of the company), addressing the extra-ordinary general meeting of preference and ordinary shareholders, said that it had been apparent since the heavy losses disclosed in the balance sheet for 1927 that the financial reorganisation of the company must be undertaken at the appropriate moment. The most urgent need at that time was to reduce the fixed charges, and, as the result of economies, losses had been reduced from £123,000 in 1926-27 to £33,000 in 1928.

It was clear that the company was over-capitalised, and the result of the scheme was to write down the existing capital by £1,755,000. The scheme would result in a reduction in charges for interest and sinking fund from £182,000 to £72,000 per annum. As regarded the provision of new machinery, the new capital of £750,000 which Messrs Lazard Brothers would provide, was sufficient not merely to liquidate the indebtedness of the company to its bankers, but also to enable important improvements to be carried out, resulting in reduced costs. Another necessity for success was a bigger turnover, and that required unquestioned financial stability. That was secured under the scheme.

With regard to the financial aspect of the scheme, as the new preference shares would be buttressed by the £750,000 of new ordinary shares which Messrs Lazard Brothers would subscribe, and assuming that the new ordinary shares might reasonably be expected to yield in course of time a satisfactory return, it was a fair inference that the new preference shares would in time have a market value at least equal to their nominal value.

The resolutions were carried without dissent by the requisite majority at all shareholders' meetings. The meeting of the holders of the 5½ per cent. sinking fund first mortgage debentures was adjourned for three weeks in the absence of a quorum. At the meeting of the holders of the 6 per cent. convertible debenture stock the resolutions were approved on a show of hands by the necessary majority, but, to comply with the requirements of the Court, a poll was taken, the result of which will be announced later.

MAPLE AND COMPANY, LIMITED.

TURNOVER MAINTAINED IN ADVERSE CONDITIONS.

The fortieth annual general meeting of Maple and Company, Ltd., was held, on the 27th ultimo, on the company's premises, Tottenham Court Road, London.

Mr C. C. Regnart, who presided, said that the period under review had opened normally, and gave promise of their usual successful results until the end of August, when, first the American slump and then the Hatry crash, came in rapid succession. In a business such as theirs which, although extensively engaged in the manufacture and supply of household furniture and other goods always in demand, had also a very important and profitable luxury side, the effects were immediate. Another factor which had to a large extent interfered with the normal flow of orders was the very unsatisfactory political and industrial state of the country generally.

Notwithstanding those handicaps, however, there was a bright side to the picture, and although their profits were appreciably smaller, the total turnover for the whole year, including foreign branches and factories at home and abroad, had practically been maintained at the same level as in 1928. All things taken into account, the results as a whole were therefore satisfactory.

GOOD PROGRESS WITH NEW BUILDING.

In regard to their new building, good progress had been made. Their show windows in Tottenham Court Road had always been of the greatest value to the business, and under the new conditions would become doubly so.

The whole scheme when completed would give them 31 new windows in Tottenham Court Road and, together with those in Euston Road and Gower Street, a total of 60, undoubtedly the largest window display of furniture in the world, and when completed they would have the finest entrance hall in London. The main central block had been entirely rebuilt, which, taken together with the provision of new lifts, would in every way add to the comfort of their customers.

Of the item of sundry book debts and debit balances, less reserves, standing at £968,980, a large sum was represented by hire purchase accounts.

The report and accounts were unanimously adopted, and the final dividend of 10 per cent., making, with the interim payment, 12½ per cent. for the year, was approved.

B. MORRIS AND SONS, LIMITED.

SUCCESSFUL RESULTS—GOOD PROSPECTS.

The annual meeting of B. Morris and Sons, Limited, was held on 26th ultimo, at Winchester House, London, E.C.

Mr W. Somers L. Schuster (the chairman), after comparing the figures in the balance sheet with those of the previous year, said their profit on trading at £20,429 showed an increase of £1,652 and the item of interest was higher by £648. During the past year trading had been most difficult for the smaller outside firms and the advertising campaign had been intense. The company, as far as their capital account was concerned, was in a very liquid position, as their stock of tobaccos, debtors, cash, and investments amounted to over £231,000 and their creditors were only £7,149.

Mr A. J. May (managing director) said: Last year was certainly a bad trading year, and the fact that we show a reasonable profit is something to be thankful for. The company is in a very sound financial position. Very shortly we are introducing new lines of cigarettes, tobaccos, and cigars, and we shall make every effort to increase our turnover this year. We are always trying to improve the business, but these new lines are a little better than anything we have done previously, and I think there is a very good chance of successful sales resulting.

Cigar consumption in this country remains stationary, but we are getting our share of the trade, and I hope this year we shall get more. We have had for many years a small export trade in cigars with Australia, and although Australia has always imposed substantial protective duties on cigars we have, by sacrificing a portion of our profit, been able to maintain our business there and keep a number of cigar workers fully employed here. Now the Australians have made their tariff prohibitive, and also eliminated the preference that we had over cigars manufactured outside England. I am afraid that that trade is lost temporarily, and in consequence our workers are now out of employment.

We produce many types of cigars, of varying qualities, and we have a large sale for a full-size Corona to-day, which is made entirely from Empire-grown tobacco. The brand of this cigar is the "Las Cruzana Corona," and they retail at 6d. each.

There is not much else I wish to say, except to impress upon you that I am optimistic as to the company's prospects, and no effort will be spared by all connected with your company to show an improvement in our profits.

The report was unanimously adopted.

SELFRIDGE AND COMPANY, LIMITED.

INCREASED PROFITS—PROGRESS DURING 21 YEARS.

The twenty-second annual general meeting of Selfridge and Company, Ltd., was held, on the 24th ultimo, at the company's store, Oxford Street, London, Mr. H. Gordon Selfridge (the chairman) presiding.

The Secretary (Mr A. H. Youngman) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said that he was pleased to be able to present a very agreeable report of the past year's business. The profit shown was, all things considered, the best in their history, and the entire condition of the business, even as viewed from an intermural standpoint, was most excellent.

With their approaching anniversary—March 15th—this business became 21 years old, and in this attainment of their majority it was perhaps well to look back over those busy years. During those 21 years the feelings of the public towards the business of retail distribution had shown an extraordinary change. The great distributing house had won a position equal in prestige and dignity, and often superior in opportunity, to any other financial, commercial or professional activity to which man could direct his attention. All this had been done by serious, thoughtful, fearless work. It had not come by chance. It was instead a harvest grown from seeds of determination, of careful judgment, of continual energy, of the real, genuine love of work and accomplishment, and of earnest and undeviating attention to business detail.

21,000 EMPLOYEES.

During these years the house of Selfridge had grown with almost each succeeding year. They started 21 years ago with 1,100 employees, whereas the number in this individual business was now between 4,000 and 5,000—the past year had shown the heaviest pay-roll in their history—while in the entire Selfridge businesses there were 15,000 on their rolls. The premises had been added to continually, and further necessary additions were in contemplation. From a totally unknown firm some 21 years ago they now numbered among their many thousands of well-satisfied, permanent customers names from every part of London and from every town or district of Great Britain as well. The returns had increased continually, the past year having shown the highest of any.

GROWTH IN PROFITS.

The profits had shown equal progress. In the first year they were £6,100; the second, £36,200; the third, £50,200; the fourth, £104,000; the fifth, £131,500; the sixth, £134,800; the seventh, £150,200; the eighth, £225,100; the ninth, £258,700; the tenth, £322,800; the eleventh—the boom year of 1919—£372,400; and this year, £481,312. If the profits of all the Selfridge businesses, including those of the provincial branches, were added together, the total would exceed the £900,000 mark. Floor area was vital to the development of a business like theirs, and they were forced to feel that the selling capacity of the premises at Oxford Street had nearly been reached. If the buying public had more money to spend the company's returns would automatically increase, but all over Europe the same condition existed. The public had not the money to spend, so while the management would strive to increase the business in every way possible, greater selling space was its pressing need.

TOTAL ASSETS (31/12/28): Fmk.2,934,742,000.

KANSALLIS-OSAKE-PANKKI
(National Joint Stock Bank)

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND
Established 1889.

The chairman then dealt with the balance sheet, and said that the least agreeable item on the sheet this year was the charge of £31,002 to make good the guarantee to shareholders of Wm. Whiteley, Ltd. It had been a little more difficult than they anticipated to bring that fine old business up to the mark which they had set for it, but they would surely and without any possible question finally accomplish it.

In conclusion, he expressed the hope that the Government of this country would establish a lead to all others by reducing to the extreme minimum the art of simple government and correspondingly reduce the costs of governing. We were, all over the world, being over-governed, and at a continually increasing cost.

The report and accounts were unanimously adopted, and the dividends as recommended were agreed to.

The formal business having been transacted, a cordial vote of thanks to the Chairman terminated the proceedings.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 22, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts	£
Supply Services	6,300	From Revenue	25,952
Interest, &c., on Debt	879		
Sinking Fund	1,404		
Sundries	469		
Decrease in Debt	16,663		
Increase in Balances	237		
	25,952		25,952

The ordinary revenue for the week amounted to £25,952,300, as compared with £26,351,200 in the corresponding week last year. Income and Super tax were at £13,120,000 and £2,600,000, against £13,967,000 and £2,060,000 respectively. Customs brought in £2,059,000, as compared with £3,050,000, and Excise £6,290,000, against £5,734,000.

With five more weeks to run to the close of the financial year, revenue stands at £603,645,100, as compared with £626,130,800, and expenditure at £683,992,100, against £668,364,600. The accounts to date, therefore, show a deficit of £80,347,000, as compared with a deficit at this time last year of £42,233,800.

During the week the National Debt was reduced by £16,663,000, as shown below :—

INDIA COUNCIL REMITTANCES.

No remittances were made by the Government of India to the Secretary of State for India in Council during the week ending February 22, 1930.

BULLION.

The following statistics of imports and exports of gold for week ended February 27, 1930, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	*To*—	£
France	3,457	Poland	1,704
Venezuela	2,438	Germany	3,200,880
British South Africa	1,035,183	France	9,677
Other Countries	341	Austria	11,600
		Netherlands	2,131
		Switzerland	15,400
		British India	15,751
		Other Countries	900
Total declared value of Imports	1,041,419	Total declared value of exports	3,258,043

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1930.	ARRIVALS.	£	1930.	WITHDRAWALS.	£
Feb. 21	Bars bought	5	Feb. 21	Sovs. for export	2,000
,, 22		Nil	,, 22	Sovs. for export	2,000
,, 24	Sovs. from abroad	250,000	,, 24		Nil
,, 25		Nil	,, 25		Nil
,, 26	Sovs. released	100,000	,, 26		Nil
	Bars bought	1 656			
,, 27	Sovs. from abroad	30,000	,, 27		Nil
	Total	381,661		Total	4,000

Net arrivals, £377,661.

Messrs Samuel Montagu and Co. write on February 26, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £150,971,511 on the 19th instant (as compared with £150,936,551 on the previous Wednesday), and represents a decrease of £2,934,804 since April 29, 1925—when an effective gold standard was resumed. £1,480,000 of bar gold, being the balance of the shipment from Spain, was offered in the open market on Thursday last, and the whole of this amount was secured by Germany at 84s. 11d. per fine ounce. In the open market yesterday £786,000 of bar gold from South Africa was available, and was realised at 84s. 11d. per fine ounce. There was again a good demand from Germany, and about £711,000 was secured for that country. The Home and Continental trade requirements amounted to £55,000, and £20,000 was taken for India. Movements of gold as announced by the Bank of England show a net influx of £347,661 during the week under review. Receipts amounted to £351,661, which included £250,000 in sovereigns from South Africa and £100,000 sovereigns "released."

SILVER.

The market has developed an easier tone. Although China has worked both ways, re-selling from this quarter, together with offerings from India and the Continent, have served to depress prices still further. Following a decline on the 20th instant to 19 13/16d. and 19 11/16d.—the lowest rates hitherto reached—prices re-acted the next day to 20d. and 19 7/8d., following a demand from China. This, however, was not maintained, and subsequent movements were gradually downwards, the prices quoted to-day 19 3/4d. and 19 5/8d. for cash and two months' delivery respectively, constituting new low record prices for silver. The Indian Bazaars have bought for shipment by this week's steamer, and America has both bought and sold, without, however, exerting pressure in either directions.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 17th instant to mid-day on the 24th instant:—

Imports.	£	Exports.	£
Germany	18,127	British India	49,680
France	68,182	Other countries	7,970
U.S.A.	39,428		
Mexico	148,000		
British India	92,086		
British West Africa	12,475		
Other countries	17,671		
	£395,969		£57,650

Indian Currency Returns (in lacs of rupees).

	Feb. 22.	Feb. 15.	Feb. 7.

NOTICES.

The Midland Bank announces the opening of new branches at 132 Victoria Street, Bristol, and at 9, Walnut Road, Chelston, near Torquay, Devon.

Mr Daniel B. Grant has been appointed a vice-president of the Guaranty Trust Company, of New York, and also of the Guaranty Company, of New York.

Lloyds Bank, Ltd., announce that a sub-branch of the bank is now open at 13 School Road, Tilehurst.

Barclays Bank Limited announce that they have opened sub-branches at Cottenham, Cambridge, and Histon, Cambridge, both attached to Cambridge local head office.

Company News.

REPORTS AND NOTICES.

Mr George Heath, director of George Heath, Ltd., of Birmingham, and Rootes, Ltd., London, has joined the board of the Robertson Automatic Variable Speed Gear Company, Ltd.

Mr William Herbert Peak, O.B.E., late managing director of the Marconiphone Company, Ltd., has joined the board of the Oliver Typewriter Manufacturing Company, Ltd.

Liebig's Extract of Meat Company, Ltd., announces that Mr Eastman Bell has been elected to a seat on the board.

MISCELLANEOUS.

IMPERIAL CHEMICAL INDUSTRIES, LIMITED.—With regard to rumours current that the company is contemplating making either a preference or a debenture issue, the directors wish it to be known, in the interests of the shareholders, that there is no truth whatever in these rumours. The company is closing its books for 1929 with a satisfactory increase in earnings over 1928, and has ample cash resources for all its requirements.

P. AND O. AND TANGIER.—The P. and O. Company has received advices from Messrs M. H. Bland and Company, of Gibraltar, that, although some contraction in the Bland Line sailings will, until further notice, occur, the passenger services to and from Tangier, connecting at Gibraltar with the outward and homeward P. and O. mail steamers on Tuesdays and Fridays respectively, will be maintained as heretofore.

BIECKERT'S BREWERY COMPANY (1900), LTD.—On March 6 next stockholders will be asked to approve the scheme mentioned at the last annual meeting. Preference stockholders will be repaid at par, together with interest of 5 per cent. to the date of liquidation. The remaining assets will belong to the holders of £610,000 of ordinary stock. Cerveceria Bieckert has recently been formed to acquire all the brewery assets in Argentina, the company being $5 (£1) shares. Present holders of ordinary stock will receive 10 $1 shares in this company for every £10 held in Bieckert's Brewery Company (1900). Bieckert's Brewery Investment Company, with a capital of £612,000, will be formed to acquire the investment assets of the Brewery Company, holders of ordinary stock will receive one new £1 share for every £1 already held in the brewery concern, accounting for £610,000 of the capital.

THE DUTCH FORD MOTOR COMPANY IN 1929.—At the general meeting of shareholders of the Dutch Ford Motor Company, at Rotterdam, the chairman, Mr August Philips, stated that only 10 per cent. dividend was declared, because large reserves were necessary for the new factory-building. The financial year, which closed on October 31st, will, in the future, end on December 31st. The earnings during the past year are:—Gross earnings, 3,730,024 florins; working expenses, 697,087 florins; depreciation, 1,167,646 florins; nett earnings, 1,865,291 florins; dividend, 10 per cent. The earnings of the Ford Motor Company, of Holland, amounted, in 1925, 1,890,160 florins; in 1926, 1,225,829 florins; in 1927, 875,962 florins; in 1928 (10 months), 965,593 florins; in 1929, 1,865,291 florins.

ENGLISH ELECTRIC COMPANY.—Extra-ordinary meetings of the preference and ordinary shareholders and the debenture stockholders were held on February 25th. The resolutions were carried by the requisite majority without dissent at all the shareholders' meetings. The meeting of the 5½ per cent. debentures was adjourned for three weeks in the absence of a quorum. At the meeting of the 6 per cent. convertible debenture stock, the scheme was approved on a show of hands by the requisite majority, but to comply with the requirements of the Court, a pool was taken, the result of which will be made known later.

FORD MOTOR COMPANY.—The first annual report of the Ford Motor Company, covering the period from incorporation to December 31, 1929, shows profits of £1,013,507, after making ample provision for depreciation, less £195,000 for income tax. A dividend of 10 per cent. is proposed on the £7,000,000 ordinary capital, which before deduction of tax will absorb £700,000. The carry-forward is £258,507. These results do not include dividends for 1929 receivable from affiliated companies, each of which have traded successfully. A reserve has been established of £811,736, and out of this fund it is proposed completely to write off patents, designs, etc., £350,000, goodwill £250,000 and preliminary expenses £68,324, leaving the reserve at £143,412. Meeting, Hotel Cecil, W.C., March 7th, noon.

HOME AND COLONIAL STORES.—The latest Home and Colonial accounts compare with 1928 as below:—

	1928. £	1929. £
Net profit	454,090	576,265
Additional from Meadow Dairy	...	87,920
Brought in	128,260	131,940
To reserve	45,410	105,370
Carried forward	131,940	140,510
Ordinary dividend and bonus	250,000	395,245
Ordinary capital	1,000,000	1,580,975

Meeting, Winchester House, March 7th, at noon.

LONDON BRICK COMPANY AND FORDERS.—The following table shows a comparison of results for the past year with 1928

	1928. £	1929. £
Total revenue	334,430	426,525
Brought in	218,670	220,000
Available	553,100	646,525
Fees	1,100	3,525
To gen. depreciation	125,000	150,000
Pref. dividend	32,000	32,000
Ord. dividend amount	175,000	240,000
Ord. dividend rate per cent.	20	20
Forward	220,000	221,000

Meeting, Connaught Rooms, Great Queen Street, Kingsway, W.C., March 7th, at 12 noon.

SWEDISH MATCH COMPANY.—A preliminary report for 1929 shows net profits of Kr. 54,242,103, against Kr. 48,961,568 for 1928. Including the amount brought in from 1928, there will be Kr. 64,229,908 at the disposal of the general meeting, as against Kr. 55,645,463 for the previous year. The board will propose a dividend for 1929 of 15 per cent., which is the same as for the previous year. This company has concluded an agreement with the free City of Danzig whereby monopoly rights for the manufacture and sale of matches in Danzig City and Territory are transferred to the Swedish Match Company for thirty-five years. The company will pay the city 1,000,000 Danzig gulden (£40,000) and certain annual fees, and will take over from the city $1,000,000 6 per cent. Bonds at 93 per cent. The agreement will come into force when ratified by the Danzig Diet.

Nigeria: London Tin Corporation, 270 tons; Associated Tin, Nigeria, 200 tons; Juga Valley, 20 tons; Tin Properties, 17 tons; Junction Tin Mine (Nigeria), 6 tons.

ONVERWACHT PLATINUM, LTD.—The reduction plant treated 2,850 tons during the month of January, 1930. The crude platinum produced is estimated to yield 452 ounces refined platinum and allied metals, equivalent to 3.172 dwts. per ton milled.

FABULOSA MINES CONSOLIDATED.—Our production of tin barrilla for the past month was 3,916 quintals of 46 kilos, approximately 177 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Dry and seasonable climatic conditions have prevailed over the United Kingdom during the past week and farmers were able to make good some arrears of spring work. The rapid growth of winter crops has been arrested and reports as to condition of cereals are now couched in a more favourable vein. Despite the limited offerings of native wheat at the principal Statute markets, demand fails to improve, and prices continue on the easy side. On the import market, the recent heavy declines in values attracted buyers, and a good business resulted both to the United Kingdom and Continent, particularly in Plates and the lower grade Manitobas. Portugal has purchased about 30,000 tons of Plate wheat for March shipment, while Italy continues to absorb Australian on passage. The market, however, is still dominated by the North American situation, and pressure on the part of Canadian sellers proved a feature, though acute competition was forthcoming from Argentina for European custom. At the moment, prices are steadying up again, mainly due to buying operations by the Farmers' National Grain Corporation in the United States, which influenced higher offers from both Chicago and Winnipeg. Importers, however, refused to follow the upward trend in face of a heavy statistical position, so that the market has again relapsed into a quiet state. Although fairly substantial quantities of overseas wheat will be needed by European consumers before next domestic harvests, the immediate need is by no means pressing. France still figures as an exporter, and liberal supplies of wheat and flour have been shipped of late to the United Kingdom. Flour prices have not followed the full declines in wheat, although shipment offers were on a lower basis. The main obstacle is the difficulty in selling offals, despite the very low rates ruling, which militates against any substantial reduction in flour. Dull conditions prevailed for feeding stuffs, and regarding Plate maize, the small inquiry was chiefly centred on new crop positions, now that prices are on a par with current supplies. Barley and oats continued neglected.

Wheat.—Easier. No. 1 Northern Manitoba (Vancouver shipment), ex ship, 44s. 9d.; No. 2 ditto, 43s. 9d.; No. 3, 42s. 6d.; No. 4 Manitoba, 41s. 6d.; No. 5 ditto (Atlantic shipment), 40s.; No. 6 ditto, 32s. 9d.; Rosafe, 63½ lbs., arrived, 38s. 9d.; Barusso, 63½ lbs., ex ship, to arrive, 39s. 6d.; Australian, 42s. per 496 lbs.; English, 8s. 2d.-8s. 5d. per 112 lbs.

Flour.—Dull. London, straight run, 37s. per sack for country deliveries and 36s. London area. Of imported, Manitoba patents, 34s.-37s.; Buffalo, 35s.-37s.; Australian, 32s. 6d. ex store. On c.i.f. terms, Manitoba top patents, February-March, 34s. 6d.-35s.; export ditto, 34s.-34s. 6d.; Australian, 30s. 6d.-31s.; French prompt, 25s. 6d.-27s. 6d. per 280 lbs. Argentine low grade, February-March, £6 2s. 6d. per ton.

Maize.—Easier. Plate, landed, 26s. 6d.; ex ship, arrived, 25s. 3d.; February-March, 25s. 6d.; March-April, 25s. 6d.; new, April-May, 25s. 6d.; May-June, 25s. 3d., per 480 lbs. Yellow maize meal, £7 15s. per ton, f.o.r. London. Yellow African, £6 10s.; white, £6 5s. per ton, ex ship.

Barley.—Inactive. Californian, old, landed, 36s.-42s.; new, ex ship, 36s.-42s., as to sample; Chilian, brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs.; Danubian, landed, 23s. 6d.; Black Sea, ex ship, 20s. 6d.; Persian, ditto, 20s. 6d. per 400 lbs.; English malting, 7s.-11s. 6d.; feed, 6s. 3d.-6s. 6d. per 112 lbs.

Oats.—Dull and weak. Plate, landed, 16s. 3d.; ex ship, to arrive, 15s. 3d.; black Plate, landed, 16s.; Chilian white, 22s.; ditto, tawny, 16s. 6d.; German, landed, 17s.; ex ship, to arrive, 15s. 6d.; mixed Canadian feed, 13s.; South Russian, 14s. 6d.-16s., as to quality, per 320 lbs.; English, 5s. 6d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929–30, 1928–29, 1927–28, 1926–27:—

	1929–1930.	1928–1929.	1927–1928.	1926–1927.
Estimated sales of home-grown wheat—				
1 week to February 22	Cwts. 227,903	Cwts. 324,562	Cwts. 258,268	Cwts. 292,000
25 weeks to February 22	6,459,961	6,807,130	6,359,748	8,719,102
Average price of English wheat per cwt.	s. d. 8 9	s. d. 9 9	s. d. 9 4	s. d. 11 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Feb. 27, 1929.	Jan. 2, 1930.	Feb. 11, 1930.	Feb. 19, 1930.	Feb. 26, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	130½	148⅜	128⅞	116⅜	114
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	123¼	130⅞	119	110½	105⅞

The visible supply of wheat in Canada at 74,709,000 bushels shows a decrease on the week of 262,000 bushels. Supplies a year ago stood at 84,164,000 bushels.

THE COAL TRADE.

COAL.—Our Sheffield correspondent writes:—The position is again worse and prices for export have eased a further sixpence per ton. Bookings on overseas account are rather meagre, and the home trade is not at all satisfactory. Coke is a flat market, and blast-furnace sorts can be bought as low as 15s. at ovens. Furnace owners are taking reduced tonnages.

Our Glasgow correspondent writes:—The market is still dull. Supplies are in excess of demand, coal is accumulating, and prices continue to droop. Prices for shipment may be put at the following (f.o.b. district ports): LANARKSHIRE.—Ell best, 16s.; splint best, 17s. 6d.-18s.; splint second, 16s. 6d.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; steam, 14s.; Hartley, 18s.; trebles, 14s.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 10s. FIFE.—Screened navigation, 18s.-19s. 6d.; first-class steam, 14s.; third-class steam, 12s. 6d.; trebles, 13s. 6d.; doubles, 13s.; singles, 13s.; pearls, 13s. LOTHIANS.—Prime steam, 14s.; secondary steam, 13s. 6d.; trebles, 13s. 6d.; doubles, 12s. 9d.; singles, 13s.; pearls, 13s. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s.; trebles, 14s.; doubles, 13s.; singles, 13s.; pearls, 13s. 3d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Except in the market for anthracite coals there has been no material change this week in the position of the Cardiff coal markets. The dearth of new business continues, and notwithstanding heavy contract commitments, many of the collieries are finding it difficult to maintain regularity of work. Operations under the marketing scheme are virtually in abeyance pending the fate of the Coal Mines Bill, and in a statement issued this week by the group of minority collieries who are contesting the Government measure it was stated that the scheme "after about three months' experience has proved almost impossible to work." The Great Western Railway Company is reported to have declined to renew its contracts with South Wales colliery companies at the prices tendered under the marketing scheme, and has actually purchased some Yorkshire coal. Quotations for all grades of large coal are nominally unchanged, and those for smalls are firmly maintained. The demand for anthracite is active and shipments are increasing. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 20s.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; best Eastern Valleys, 17s. 6d. to 18s.; best small steams, 14s. 6d. to 14s. 9d.; cargo smalls, 14s. 3d. to 14s. 6d.; coking smalls, 14s. 6d. to 15s.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 24s. to 28s.; machine-made cobbles, 43s. to 45s.; French nuts, 44s. to 46s.; stove nuts, 42s. 6d. to 45s.; rubbly culm, 11s. 9d. to 12s. 6d.; foundry coke, 35s. to 37s. 6d.; patent fuel, 20s. to 22s. 6d.; pitwood, ex-ship, 24s. 3d. to 24s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Trade in iron and steel is still below the normal for the time of year. There has been slightly more activity in the home market, and the buying has been of a general character. The position of some of the British steelworks, however, so far as orders are concerned, is causing concern owing to the small tonnage of new business which is coming forward to take the place of contracts which are being completed. In the pig-iron department, which for some months has been comparatively better off than the other iron and steel markets, business has been slow this year; but, nevertheless, prices are being maintained, although in some districts iron is being put into stock. Buying of semi-finished steel is also confined principally to near requirements, and few consumers care to commit themselves forward to any extent. The stabilisation of prices by the Continental works has diverted a little business to British makers, but consumers of this class of material, for the most part, are not well placed as regards orders, and are not experiencing the anticipated demand for their finished products. Overseas buying has been quiet for some time, and although now and again there has been a slight spurt of activity, this has soon died down. Economic conditions abroad are not favourable to an active export trade at the moment; but the belief is growing that overseas stocks are light and that foreign buyers must shortly come into the market.

Our Middlesbrough correspondent writes:—Trade in Cleveland iron continues on the same restricted lines as have ruled for some time past, and there are no immediate signs of improvement. Consumers refuse to buy more than is actually required for their immediate needs at present prices, and makers so far decline to make concessions notwithstanding the fact that coke is now obtainable at about 3s. per ton below the top figure reached a few months ago. No business has resulted to this district in connection with the offers recently invited by the Scottish Light Castings Association, and it is understood that they have decided to defer buying altogether for the present. In any case the prospects of securing even a portion of the business for Cleveland iron was considered to be very poor, with Continental and other irons offering at so much less. The business reported at Tuesday's weekly market by makers was of a hand-to-mouth nature, at the unchanged figure of 72s. 6d. for No. 3; No. 1 was 75s.; No. 4 foundry, 71s. 6d., and No. 4 forge, 71s., f.o.b. or f.o.t. Shipments of pig iron to 25th instant amount to 15,473 tons against 15,776 tons for the same period of January. The hematite trade does not improve. Business is confined to small quantities, mostly on home account, for which makers have realised 78s., but for larger quantities they would accept 77s. 6d. for delivery over a few months. There is very little new demand from the Continent at present, but moderate shipments are being made against old contracts. In the heavy steel trades most mills are busily employed on contracts in hand, but new business coming to hand at the moment is not of great volume. The sheet trade is showing some slight improvement and indications of better business are noticeable. Prices for steel materials for home consumption under the rebate scheme are unchanged, viz.: Plates, ¾ in. up, £8 15s.; sections, £8 7s. 6d.; joists, £8 10s. Other quotations are: Iron crown bars, £10 15s.; heavy steel rails, £8 10s.; 24-gauge galvanised corrugated sheets, £11 15s., and 21-24 gauge black sheets, £9 15s., also for home use. In ore the position is unaltered. With ample supplies on hand and large quantities to receive under contracts, consumers are not making further purchases. Best Bilbao rubio is nominally 22s. 6d. c.i.f. for early delivery, and the current freight Bilbao-Middlesbrough for prompt loading is about 6s. 6d. For delivery ahead the nominal quotation is 23s., as freights are likely to rule higher in the Spring. The supply of coke is in excess of demand and prices are weak. Good furnace qualities are offering at 21s. delivered works, and a trifle less would be accepted for good lines. The number of furnaces in blast in the district remains at 42.

The depression in most sections of the iron and steel industry continues as acute as before. Consumers generally have reduced their deliveries of raw materials, and stocks are beginning to accumulate at the furnaces. There is practically no forward buying. Prices are unchanged but weak. The steel trade has few cheerful features. Suppliers of scrap state that deliveries are on a reduced scale, and there has been no forward buying for three months. To-day's value of basic scrap is 10s. below the price last year down to November. Exports of scrap have declined, while imports have increased. The depression is particularly noticeable in the commoner basic grades of steel. Rather more acid steel is being melted in Sheffield this week. Export demand for steel is sluggish. A good deal of the work is on hand in the steel forges and foundries, mostly for shipbuilding and special engineering jobs. The tool branches, while not actually slack, are feeling the influence of the general setback of the country's trade, with the result that the orders are mainly for small quantities. Demand for cutlery and electro-plate is poor.

Our Glasgow correspondent writes:—Purchases of pig iron continue to be on a small scale, as purchasers are evidently only providing for their immediate needs, and holding off in anticipation of a fall in price. While steelmakers are still keeping plants steadily employed, there is no decided increase in bookings for forward delivery. In most branches of the iron and steel industry the position is much the same as reported a week ago. Local structural engineers have secured a little more business within the past week, and there is some improvement in the demand for galvanised sheets for export. Prices are stiffer, to-day's price for export lots of galvanised and corrugated sheets in fair quantities being £11 15s. per ton for 24-gauge, f.o.b. Glasgow. In the black sheet trade the demand is fairly good, and there has been an increase in the number of mills in operation during the present week as compared with a week ago.

Our Cardiff correspondent writes:—Business in the tinplate trade is still moderately active, but outputs apparently are in excess of the immediate absorbing capacity of the market, and prices have again ranged from 18s. 3d. to 18s. 9d. per basis box, compared with 18s. to 18s. 3d. at the corresponding period last year. Shipments continue fairly satisfactory, and stocks at the end of last week totalled 207,076 compared with 260,319 boxes at the corresponding period in 1929. Galvanised sheets are still suffering from lack of support, and prices have further declined to £11 7s. 6d. to £11 10s., which represents a drop of £2 2s. 6d. per ton during the past twelve months. Reports are current of the intention of makers to re-establish a minimum limit. Bars are unchanged, but both tin and spelter are a shade lower than they were a week ago.

OTHER METALS.

TIN.—The standard market presented dull features, and prices further gave way on selling pressure combined with lower Eastern cables. Standard cash changed hands at £173 5s. to £170 10s. and £171 5s.; three months, £176 to £173 10s. and £173 15s. In the East, sales were reported at £177 17s. 6d. to £175 5s. and £176 ton c.i.f.

COPPER displayed slight irregularity, but prices fairly steady on balance, as sellers refrained from pressing. Standard cash sold at £69 10s. to £69 12s. 6d. and £69 5s.; three months, £68 15s. to £68 12s. 6d. to £68 15s. and £68 12s. 6d.

LEAD.—Liberal dealings were recorded, but supplies proved excessive and a weaker market resulted. Good soft foreign pig, February, sold at £21 3s. 9d. to £19 15s.; March, £21 to £19 18s. 9d.; May, £21 to £19 10s.; June, £20 ton.

SPELTER.—Easier on liberal offerings, but business was on a fair scale. February, sold £19 1s. 3d. to £18 6s. 3d.; March, £19 to £18 8s. 9d.; April, £19 3s. 9d. to £18 15s.; May, £19 7s. 6d. to £18 17s. 6d.; June, £19 7s. 6d. to £19 1s. 3d. ton.

ANTIMONY steady. English regulus, £42 10s. to £50; China ditto, spot, £30 15s.; February-March, £26; March-April, £25 15s.; China, crude, February-March, £17 10s. per ton c.i.f.

ANTIMONY OXIDE.—February-March, £26 per ton c.i.f.

ANTIMONY ORE, 50 per cent., February-March, 4s.; 60 per cent. ditto, 5s. per unit c.i.f.

WOLFRAM quiet. Chinese, February-March, 31s. 9d. Burmese spot, 36s. per unit c.i.f.

ALUMINIUM maintained. Home trade, £95; export, £100 per ton.

QUICKSILVER quiet. Spot, £22 15s. per bottle.

ZINC OXIDE dull. Spot, £29 to £36 per ton as to quality, per ton, delivered United Kingdom.

TIN PLATES steady, with moderate inquiries. I.C. coke, prompt and forward, 18s. 6d. to 18s. 9d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, February 26th.

Values are about 20 points lower than a week ago, and a new low price-level for the season was seen yesterday when the March position was traded in below 8d. per lb. A little short covering has taken place, but there has been very little trade buying. The cotton representative on the Farm Board is reported to have said that cotton might sell as low as 10 cents if last season's acreage be again planted. The Board is reported to hold at least 1,000,000 bales of spots and futures, and this fact has been encouraging to bears. The sentiment of the market at the moment is against cotton. Spot sales for the week 20th to 26th (inclusive) are 24,000 bales, of which 10,940 bales are American, 3,700 Brazil, 210 Argentine, 4,900 Peru, 1,600 Egyptian, 1,980 African, 500 East Indian, and 170 sundries. Imports for the same period are 39,647 bales, of which 29,826 bales are American, 2,210 Brazil, 736 Peru, 360 Egyptian, 3,517 African, 1,791 East Indian, and 1,207 sundries. Quotations to-day are: American Middling, 8·44; Egyptian F.G.F. Sakel, 13·35, F.G.F. Uppers, 10·16; Brazilian Fair, 8·04; Peru Good Fair Mod-Rough, 9·50, Good Fair Smooth, 9·14; East African Good Fair, 9·49, and West African Middling, 8·49.

MANCHESTER, February 26th.

Trading in the market has again been under the influences of a falling tendency in raw material rates, and owing to the uncertain outlook with regard to future values buyers have not been in the mood to operate with any freedom. Although prices are much more attractive than for a long time back, there is a fear of a further downward movement. In cloth for India a miscellaneous business has been done, but there is a good deal of nervousness as to what may happen to the import duties this week-end, and merchants have restricted their commitments. News from China has been very unsatisfactory. It is reported that at the auction sales in Shanghai demand is dragging and prices falling, the clearances being very poor. A sorting-up business has been done for Egypt, the West Coast of Africa and South America. Demand for the home trade has been rather quieter. There are indications of more looms running out of work in the near future. Quotations in American and Egyptian yarns have favoured buyers and limited operations have occurred from day to day. Despite the low prices ruling, it is difficult for spinners to prevent further loss of ground.

THE WOOL TRADE.

Our Bradford correspondent writes:—The wool textile industry as a whole continues to suffer from a general feeling of uncertainty. Although much better reports are coming from the primary markets, indicating that wool is moving freely at firm prices, users, both in the West Riding and on the Continent, are alarmed at the big supply of wool still to come on to the market, and they persist in their policy of only buying for current requirements. The fear of a further fall in values keeps them from buying far ahead, and in all sections there seems to be a strong determination to avoid carrying stock. In the circumstances it is not surprising to find a slack market in which marked irregularities in prices are in evidence. The larger topmakers realise that wool cannot be bought to make tops at prices now ruling in Bradford, and many prefer to await developments rather than make further concessions. Moreover, few believe that values will fall much below to-day's level, but it is a more difficult matter to convince users. There are inquiries for most qualities of tops, but prices are invariably on a low level. Similarly, inquiries for yarns suggest that manufacturers are not at all anxious to buy except at cheap rates, and as weak sellers are to be found quotations frequently show wide discrepancies.

COLONIAL WOOLS.

[FROM A CORRESPONDENT.]

The Sydney and Melbourne sales have been continued under satisfactory conditions. All reports indicate firm values, a slight hardening tendency being seen here and there. Cables from Melbourne received last Monday stated that wool was selling on a basis of 2s. 4½d. for decent 64's delivered and combed Bradford. This is a very reasonable price, but we understand it is fully as much as can be made there for the combed article. Trade seems to have fallen off during the past fortnight, and the steady fall in Antwerp "futures" indicates rather less confidence in that centre. So long as wool continues to sell as well as at present, we think it policy for growers and sellers to meet the market. There will be enough wool available for all requirements for the remainder of this year. The paramount need is increased consumption. The

policy adopted with regard to the stabilisation of values, nevertheless, deserves support, for the prices now ruling cannot satisfy either Australasian or South African growers. Some consolation should be found in the fact that at its present cost wool is an attractive proposition, and that strenuous endeavours are being made to increase the output of partly and fully manufactured goods. Some success has been achieved towards the reduction of overhead charges, though the contention of spinners and manufacturers is that their costs are still higher than on the Continent, which makes it very difficult to compete in either home or foreign markets.

HIDE, LEATHER AND ALLIED TRADES.

Hides from domestic cattle continue to realise lower figures, and at the sales held in the North this week a further reduction of ¼d. per lb. has been recorded on all classes. The general opinion is that bottom has not yet been touched, and with supplies more than sufficient to meet present requirements there will be a further fall in values over the week-end. Calfskins are just about steady in value, but a weaker tendency all the time is in evidence, as is also the case with sheepskins. The position of imported hides has again become unsatisfactory, and the drop in prices during the past week has resulted in tanners taking no larger supplies than are required for immediate needs. This has brought about a feeling of uneasiness all round, and unless an improvement in the demand sets in, further concessions will have to be made to induce business. In the frigorific market sales of Argentine ox have been made on the basis of 8d., light ox at 7⅞d., and Montevideo ox at 8 3/16d. Saladero hides are very quiet, and apart from a sale of Salto ox at 8d. nothing of importance has been done. Small business is being transacted with the Continent in connection with dry River Plates on the basis of 8⅜d. for B.A. Americanos, 5d. for Inservibles, and 9½d. for Cordoba Sierras. The demand for Cape hides is not so good, and drys have changed hands at 8⅜d. and 7⅜d. for firsts and seconds, with dry-salted selling at 7⅜d. and 6⅜d. Australians also are a shade easier. The Chicago market is cabled as steady, with best heavy native steers selling at 14 cents. Business in connection with sole leather keeps up fairly well, and although most of the orders coming to hand are for just sufficient to cover immediate requirements, the total usually results in a fair turnover. Demand from the repairing section of the trade has perhaps not been quite so good as of late, but a steady regular business is being done in light bends of medium to good quality for shoe-manufacturing purposes. There appears to be no increase in the consumption of dry hide bends, and whatever orders for these are going the rounds of the trade are keenly competed for. Shoulders and bellies sell well, particularly the latter in certain substances. Prices for most descriptions are unchanged, and the general tendency of tanners is to abstain from asking higher figures in the hope that this will make for an improvement in the demand. The call for upper leather is satisfactory on the whole, and the bulk of the inquiry continues to be concentrated on brown glacé kid, together with willow calf, both of which descriptions are being moved off in regular decent-sized parcels. Improvement has been experienced in the demand for some of the better grades of patent, while here and there suede calf has come in for more attention. Semi-chrome leather are quiet, and even where sales are effected they are usually at very low figures. Reptile skins and novelty leathers move off regularly, but the demand for these is not large. Shoe manufacturers report an improvement in the number of orders for spring goods coming to hand, but are of the opinion that the majority of the larger buyers are withholding the placing of their bulk business until the last moment. This does not make for uniformity of working, with the result that some firms are still compelled to resort to short time.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Imports of sawn deals, battens and boards in January declined by some 27,480 loads (of 50 cubic feet) compared with the first month's import of 1929, and planed and dressed woods showed a falling-off of 15,490 loads, both decreases being helpful to a largely-stocked spot market. The sawn wood receipts would have been much lower but for the heavy and final month's shipments of the 1929 season from Russia, which in volume far outweigh those of each of her principal competitors, Finland and Sweden. The spot demand over the past month has been good, but generally values are weak, with little trade between merchants, who are generally well supplied. Consigned goods offered for forced sale must be proving unremunerative to their shipper owners. Deliveries from docks for consumption purposes have been very satisfactory compared with the early weeks of 1929, and with still further improvements as meteorological conditions become more favourable for outside work the present large stocks should be well worn down by the end of April, when preparations will be in progress for the opening of the new season's shipments.

Provided nothing untoward occurs this year the building industry should have a busy time. The improvement in the volume of building contracts towards the end of 1929 has been followed by still more satisfactory returns in January. In other industries also there seems to be a change, if but slight, for the better, and this may become more pronounced as confidence grows. Some people are of opinion that if industry were left to fend for itself, and not be "mothered" so much, it would soon become more stable. According to official reports from Russia, only 650,000 standards are to come forward from that country this year, and not 750,000 standards, so that the 200,000 standards suggested increase compared with 1929 in the export to the U.K. has been cut down by a half, owing, it is said, to the mild weather in Russia this winter and the expected increase in the domestic demand. Thus half the battle is over, so far as additional supplies are concerned. Before the above announcement, however, many importing houses, including some of the largest, agreed to buy in bulk, through a company of which they will be shareholders, and into which all importers are invited. In early January the Russian authorities expressed their disapproval of selling their timber in bulk this year, but the impression prevails that very shortly, if they have not done so already, the leaders of the two parties—importers and shippers—will work in unison with the object of keeping the British market steady during the whole season.

Hardwoods in log form are arriving more sparingly compared with the opening weeks of 1929, and prices are firm generally. There is a little more movement in British Indian logs, but less in Canadian. Hardwood lumber supplies from the U.S.A. are much heavier, and shippers' quotations show disparity, which does not inspire confidence amongst buyers. Slight increases also are noted in Canadian and Indian sawn hardwood imports, and receipts again increased from Poland. Less plywood has come into the country this year compared with the early weeks of 1929. This is but temporary, as although stocks are large here orders are booked up well ahead in producing centres, and the consumption is ever on the increase.

VEGETABLE OILS AND OILSEEDS.

Generally quiet conditions rule in the markets for oilseeds and their products. Linseed is again easier and demand here is very meagre, although the Continent has been a buyer to some small extent. Plate on spot has dropped to £17 5s., and for shipment April is quoted £17 2s. 6d. Bombay linseed for February-March shipment has been done at £19 5s.; March-April at £19 2s. 6d.; and April-May, £19 1s. 3d. to the north Continent, and these figures about represent current values. The quantity of linseed on passage to Europe, at 165,800 tons, is 18,600 tons less than last week. Egyptian cottonseed is quiet and buyers holding their hand in view of recent purchases and a large exportable surplus in Egypt. Current value of black on spot and afloat is around £7 12s. 6d., and for shipment, £7 7s. 6d. In the oil section, linseed oil on spot is in better supply and cheaper at £42 per ton naked ex Hull mill and March steady at £40 10s., and April-August, £39 6s. Cotton oils are in rather poor supply, current quotations of crude Egyptian being £28 and common edible £31 ex Hull prompt. Rape and castor oils are easier. Prices of oil cakes have been marked down 10s. to 20s. per ton in order to stimulate trade and reduce stocks.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Trade demand fails to revive and as far as the U.K. markets are concerned, affairs are held in check pending the Budget. Certain weakness in the New York centre, occasioned by liquidations of the March position was partly reflected in the London Terminal sections. Apparently, there is more inquiry for British granulated on export account. Russia figures in this, and tonnage has been booked prompt loading from London to South Russia. Very slow markets result in Java, but holders there manifest no disposition to press for business. Continental kinds dull. Raw refining sugars meet a poor demand from British refiners. 250 tons Peruvian, 96 per cent. afloat, Liverpool, sold 7s. 1½d. c.i.f. Terminal sections slightly irregular and easy, but quite a fair amount of business was effected. Of raw, March delivery sold 6s. 3d. to 6s. 1½d. and 6s. 2½d.; May, 6s. 9¾d.; August, 7s. 3d. to 7s. 2½d. and 7s. 3d.; and December, 7s. 8½d. Of white, August delivery changed hands at 10s. Cuban receipts for the past week: Old crop, 2,858 tons, against nil last year; exports, 28,592, against nil; stocks, 47,400, against 1,615; new crop, 175,713, against 232,886; exports, 13,808, against 123,458; stocks, 651,911, against 818,978. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending February 22nd totalled 238,103 tons, against 153,396 at corresponding period last year.

COFFEE.—There was rather more tone in the spot market during the week. This was marked in the case of the finer qualities, which sold with fair freedom at full rates. On the other hand, however, ordinary grades were difficult to sell, even though sellers were willing to grant a further price concession.

COCOA.—A very dull and depressed market, with financial complications recorded in America. Sales in spot goods still unimportant. Accra, F/F, March-May, sold, 37s. to 35s.; April-June, 37s. to 36s. f.o.b. old contract. Terminal: March, sold, 41s. 6d. to 40s. 6d.; May, 41s. 3d. to 40s. 9d.; December, 43s. 6d. to 42s. 9d.

TEA.—Indian auctions during the week amounted to 50,475 packages. Apart from some irregularity, quite a firm market

predominated, competition being well sustained and fairly evenly distributed. Attractive tippy teas also those with pronounced autumnal flavour were eagerly sought after, while clean common mostly cleared at higher prices. 27,423 packages Ceylon were brought under the hammer, and with further improvement marked in quality, quite a buoyant market was evidenced. Prices disclosed an irregular advance of ½d. to 1d. lb. There was a good inquiry for China sorts during the week, especially Keemuns, in the region of 1s. 7d. to 2s., and these are now in small supply. Java and Sumatra auctions firm to dearer with good competition accorded most qualities.

RICE.—Very quiet. Only retail sales at about late rates. Two Stars Rangoon, spot, London, quoted, 13s. 9d., with a small business in February-March shipment at 10s. 9d. c.i.f. London/Continent. No. 3 ditto, to the Levant, quoted, 10s. 10½d. c.i.f. double bags. Spanish oiled, February-March, sellers, 14s. 9d. to 15s. 9d. as to quality. American blue rose from 23s. to 24s. c.i.f. S.Q., to Cuba, 11s. Saigon No. 1, round grain, February-March, to Europe, 11s. 8d. Siam Super, February-March, 15s. 3d.

BEANS.—Market very firm for butters, which are in sustained request, partly on American account. Others remain comparatively slow. Madagascar butters, afloat steamer "Clan Chatton," quoted, 34s. 6d.; "Clan MacNeil," 33s. 6d.; "Bourbonnais," 33s. 3d.; "Belgrano," 33s. 6d.; "Ravenfjord," 32s. 9d.; January-February sold at 32s. 9d. to 33s. c.i.f. London. Ohtenashi, spot, London, 22s. 6d.; afloat, 21s. 3d.; February-March shipment, 21s. c.i.f. Rangoon haricots, ex store, 11s. 6d.; February-March, quoted, 12s.; new crop, March-April, 13s. c.i.f. London.

PEAS.—A dull and uninteresting market was again experienced. Japanese old crop, spot, London, 14s.; new, 15s. 3d.; spot, Liverpool, 16s. 6d. Parcels per steamer "Lahore," afloat, to London, sold, 14s. 6d. to 14s. 3d.; February-March, sellers, 14s. 9d.; March-April, 14s. 9d. c.i.f. Dutch marrowfats, prompt, 16s.; small hand-picked blues, 11s. f.o.b. terms. Calcutta, March, 55s.; Karachi, nominal, c.i.f. Maples quiet. No. 1, New Zealand, February-March, old, 57s.; new crop, March-April, 58s. Tasmanian A grade, new, February-March, 65s. c.i.f.

SPICE.—Pepper received fair attention and a firm tone prevailed. Lampong, also black Singapore, spot, London, quoted, 1s. 1¼d.; March-May, sold, 1s. 1⅜d.; Muntok, white, January-March, quoted, 1s. 4¼d.; March-May, buyers, 1s. 5d. London stocks of black reduced 13 tons on the week to 1,091, against 1,234 last year, and white 79 tons lower at 1,116, against 460. Tellicherry, spot, 1s. 2d.; Aleppy, 1s. 1½d.; Muntok, spot, 1s. 5½d. lb.; Tellicherry, February-April, 134s.; and Aleppy, 132s. cwt. c.i.f. Cloves firm, quiet. Zanzibar, spot, 9¾d.; February-March, 9½d. Sago flour, also Dutch Farina, unaltered. African ginger, spot, 55s.; February-April, 38s. c.i.f.

FRUIT (Dried).—Currants: Market steady, but generally quiet. Pyrgos quoted 36s.-37s.; Amalias, 37s. 6d.-39s.; Patras, 39s.-42s.; Gulf, 42s.-48s.; Vostizza, 49s.-58s.; Australian, 36s.-38s. Sultanas quiet. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-75s.; Greek, 42s.-65s.; Australian, 34s.-48s. Dates sell steadily. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s. 9d.-14s. Raisins quiet of sale. Valencia, quarter-boxes, 45s. Figs dull. Layers, 32s.-40s.; genuine, 28s.-33s.; good average, 23s.

EVAPORATED FRUITS.—There is a steady demand for apricots at steady rates, of plums, large sizes meet with attention, but the smaller counts are difficult to move, owing to high selling limits. Other descriptions without material change. Plums, Californian new crop, 30's-40's, 70s.; 40's-50's, 67s. 6d.; Oregon, 30's-40's, 57s. 6d.; 50-60's, 52s. Apricots, South African new crop, Royal, 57s. 6d.-117s. 6d.; Australian, 62s. 6d.-72s. 6d. Pears, Californian Lake County fancy, 87s. 6d.; extra, 97s. 6d.; Australian, 65s.-85s. Peaches, Californian, choice, 57s. 6d.-62s. 6d.; fancy, 67s. 6d.-72s. 6d.; Australian, 50s.-60s. Apples, Californian spot, sliced extra choice, 60s.-69s.; Canadian, 64s. Almonds firm, and shipment prices rapidly advancing, owing to damage to the coming crops, which is definitely confirmed from Spain. Mazagan, 112s. 6d.; Mogador, 110s.; P.G. Sicily, 125s.; Majorcas, 112s. 6d.-130s.; Bitter-Jordan, new crop, 180s.-195s. Apricot kernels: Indian, sweet, spot, 75s.; China, bitter, for shipment, 37s. 6d., new crop c.i.f. Sweet, spot, 75s. Hazel kernels: Kerasunde, spot, 145s.; Barcelona, 137s. 6d. New crop, French (shelled) walnuts, 140s. ex-wharf London.

CANNED GOODS.

CANNED FRUIT.—Business in Californian fruits fails to expand as consumers anticipate new pack prices being on a lower basis, compared with current supplies. Australian varieties move off slowly at about late rates. Fair supplies of Singapore pines are available, but spot trade quiet. Shipment parcels are firmly held. South African scarce, on spot, while new pack prices fail to attract. Italian tomatoes in ample supply, with trade below normal for the time of year.

CANNED FISH.—Salmon in fair demand, and market firm. Alaska red talls quoted 48s.-50s.; pink talls, 25s.-26s.; and halves, 34s.-36s. Japanese crab firm and fancy qualities quoted 97s. 6d.-102s. 6d. Lobsters realise full rates. Halves range from 135s.-140s. Sardines steady, with Portuguese in demand. Clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEAT.—Market firm, especially for ox tongues on limited offerings, but trade restricted. Lunch tongues sell readily at the recent advance, also cooked hams.

CONDENSED MILK AND MILK POWDERS.—Market fairly steady, with a good demand. Dutch condensed milk, full cream, sweetened, 5 cwt. casks, 36s. 9d.; machine skimmed ditto, 21s. 9d. full cream, sweetened, 56 lb. drums, two in a crate, 52s. 6d.; English condensed milk, full cream, sweetened, 5 cwt. casks, 41s.; machine skimmed,ditto, 23s. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1 cwt. cases, 68s.; spray ditto, 2 by 56 lb. tins, crated, 87s. 6d.; Dutch machine skimmed milk powders, roller process, 1 cwt. cases, 26s. 6d.; spray ditto, 2 by 56 lb. tins, crated, 38s. 6d.; ditto 1 cwt. cases, 37s. 6d.; all per cwt. All English prices basis carriage paid nearest station. Dutch prices are nett, ex-store, London/Hull or Goole, and cover prompt or gradual delivery to the end of April, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s.; minimum 1 ton lots. On the grocery side, full cream, sweetened, 19s.; machine skimmed, sweetened, 9s. 3d. basis per case, usual packing.

HONEY.—Market remains dull, especially for the lower grades. Jamaica, white, 56s.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s.; fine white Cuban, 49s.; San Domingo, good, 46s.; manufacturing, 41s.; Californian, white, 55s.; light amber, 50s.; New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d.; Ukrainian, light ambers, 45s.-49s. 6d.; whites, 49s. 6d.-52s. 6d. per cwt.

RUBBER.

Business was conducted on quiet lines and prices disclosed slight weakness. Sheep, spot and March sold, 8¼d. to 7 15/16d.; April, 8¼d. to 8d.; April-June, 8⅛d. to 8 3/16d.; July-September, 8 5/16d. to 8 7/16d.; October-December, 8⅞d. to 8 11/16d. London stocks, 66 tons higher on the week. Landing, 1,821; deliveries, 1,755; stocks, 62,725; against 25,005 last year. Liverpool 27 up: Landings, 333; deliveries, 306; stocks, 19,704, against 4,157 same time last year.

GENERAL.

JUTE.—A generally quiet market resulted, but prices ruled fairly steady. First, February-March, to Hamburg, sellers, £25 10s.; March-April, Antwerp, sold, £25 15s.; Hamburg, buyers, £25 10s.; April-May, sellers, £25 12s. 6d. Lightnings, March-April, £24 5s.; Hearts, £21 10s.; Daisee assortment, £23 5s.

HEMP.—Manila more reservedly held, as buyers showed more desire to operate. J2, February-April, quoted, £31; K, March-May, sold, £30 5s.; L1, quoted, £28 10s.; M1, February-April, sold, £25 15s., and ditto, March-May, at £25 5s. to £25 10s. African Sisal No. 1, f.a.q., February-April, sellers, £35; marks, £35 10s. c.i.f. Receipts last week cabled 27,000 bales, against 50,000 last year and 21,000 in 1928. Estimate for next week, 34,000, and week following 33,000. Shipments last week: 15,000 to the U.K.; 6,000, Continent; 9,000, U.S.A.; 4,000, Japan; and 6,000 other countries. Stock now 180,000 bales.

SHELLAC.—Quiet but steady. T.N., spot, 125s.; March, 115s.; May, 119s.; August, 123s.

COPRA.—Was a dull and further depressed market. Straits S.D., February-April, Rotterdam, sellers, £21 10s.; Dutch East Indies, £21 10s.; Ceylon, £22 10s.; sun-dried, South Sea, £20 15s.; smoked ditto, to Marseilles, sold, £20 10s. to £20 7s. 6d.; Dutch East Indies quoted at £20 12s. 6d.; Manila, £20 10s.; Palm kernels, March-April, to Hamburg, quoted £15 2s. 6d. c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 14s. to 28s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43; Ceylon, bristle, £19 to £25; cinnamon leaf oil, 4s. 10d.; for shipment, March-April, 4s. 6d.; citronelle, Ceylon, 2s. 3d.; Java, 2s. 4d.

METROPOLITAN CATTLE.—February 26.

THE MONEY MARKET.

FOUR PER CENT.

MONEY this week was distinctly usable. The payment of railway dividends temporarily immobilised a certain amount, estimated at some nine or ten millions, while the clearing banks seemed to be making up more hea

than has been customary during recent weeks. The result was that, prior to the reduction in Bank rate, 4 per cent. was charged for old money, while rates for new money at times ran up to 4½ per cent., or even higher. Short bill rates were a trifle firmer in sympathy, but the three months' " market " rate stood at 3⅝ per cent. on Wednesday, or a little lower than a week ago.

* * * *

The reduction in Bank rate, followed by similar movements in Sweden, Denmark, and Holland, is extremely welcome to the money market, simply because it again brings Bank rate and discount rates into line with each other. Prior to the reduction, the market was having to pay 3½ per cent. for its weekly money, which forms the bulk of its supplies, and with bill rates down to 3⅜ per cent. brokers were working at a loss. The fall in Bank rate automatically brings the rate on weekly fixtures down to 3 per cent., and while discount rates have still to settle down, it seems unlikely that they will change much in comparison with those ruling during the last days of the 4½ per cent. Bank rate. Hence brokers should once more have an adequate margin in hand between loan rates and discount rates.

* * * *

This week's Cape gold consisted of £250,000 sovereigns and £1,091,000 bar gold. The former automatically went into the Bank, and is the principal cause of the increase of £311,000 shown by this week's return in the Bank's gold stocks. The bar gold was sold at 84s. 11⅛d. per ounce, and after satisfying Indian and trade demands, the remainder, amounting to £990,000, was secured by an " unknown buyer," generally believed to be the National Bank of Belgium. The immediate gold outlook is considered favourable. Another £250,000 in sovereigns will reach the Bank next week, while the £7,000,000 gold on its way from Australia will shortly arrive. Moreover, no central bank to-day is anxious to obtain fresh gold. The German exchange is now above the gold point; the franc is at a rate where Paris is more likely to lose than to gain gold; and the New York rate, which lately has given rise to some anxiety, improved on Thursday to 4.86$\frac{3}{32}$. The anticipations of a reduction in the Federal Reserve rate, which accounted partly for this movement, were not fulfilled; but it seems unlikely that a lower rate in New York will be long delayed.

	Feb. 13, 1930.	Feb. 20, 1930.	Feb. 27, 1930.	Mar. 6, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4½	4½	4½	4	4½ (Mar. 6,'30)
Banks' Deposit Rate	2½	2½	2½	2	2½ (Mar. 6,'30)
Discount { Call	2½	2½	2½	2	2½ (Mar. 6,'30)
Houses { Notice	2¾	2¾	2¾	2½	2¾ (Mar. 6,'30)
Market rate (3 months' bills)	3 7/8 – 15/16	3 15/16 – 7/8	3 7/16	3 5/16	...

No sign of this week's stringency is to be found in the Bank return, for bankers' deposits have increased on the week by £12,981,000, while public deposits are £4,312,000 lower. The Bank, too, has added £4,166,000 to its holding of Government securities, which should have eased the position. The apparent contradiction between the greater ease suggested by the Bank return and the shortage of money that actually existed confirms the view that the stringency was due to clearing bank callings and to the temporary immobilisation of funds caused by dividend payments.

NEW YORK.

Our New York correspondent cables:—Call money stands at 3½ per cent., and there has been a decline of ½ per cent. in rates for time money and commercial paper. Three reductions in the bill rate this week have brought 90-day bills to 3⅜ per cent. In view of this, and considering the Bank of England reduction, there were expectations of a lower Reserve discount rate; but there is still some fear in Washington lest speculation should be unduly stimulated, and our lower open-market rate in any case lessens the danger of drawing gold from your side. This week's statement of the Reserve System reflects end-of-month operations, with a drop of $28 millions in bills and only a nominal gain in Government securities. The System's total credit is $60 million down to only $1,078,000,000. The repayment of $38 million of member bank borrowings—now only a third of their volume a year ago—the easy positions of the member banks, and the continued gold imports from Japan and South America, all combine with slack business to account for our lower interest rates.

THE STOCK MARKETS.

The Stock Markets were quiet at the outset, but showed improvement, particularly in the investment sections, before and after the announcement of the reduction in Bank rate. Gilt-edged stocks were consistently firm, apart from some selling of India Loans on the inauguration of Mr Gandhi's " disobedience " campaign. Home Rails recovered part of their recent losses after going ex-dividend. Business in industrial shares was patchy, although the decline of prices during the last few weeks was arrested. Rubber shares were dull on the recession in the price of the commodity, but tea shares reflected the firmer tone at the week's auctions. Oil shares were firmer on better news from America, but depression in the mining markets was emphasised by a further decline in base metal prices.

THE COMMODITY MARKETS.

It is difficult to find encouraging signs in the condition of markets this week. Reports from the coalfields are anything but cheerful. In the principal iron and steel markets orders are still failing to come forward in satisfactory volume, but output is fairly well maintained so far. Cotton prices still tend downwards and business in Manchester is unsettled. Rumours of increased confidence in the wool trade do not appear so far to have produced any effect on the wool textile industries. Low prices in the jute trade are not attracting buyers in any volume. The hide and leather markets are scarcely changed. Vegetable oil and oilseeds are tending downwards.

THE FOREIGN EXCHANGES

Dullness characterised the Foreign Exchange markets during the past week, the volume of turnover being comparatively small. Sterling was steady against the dollar and a new record of depreciation was recorded in the Spanish Exchange. New York ranged between 4.85⅞ and 4.86, with forwards quoted $\frac{1}{32}$ and ⅛ cents discount for one and three months until the close, when 4.86$\frac{3}{32}$ was quoted for spot. Montreal improved to 4.88$\frac{1}{16}$, as against 4.88¾ a week ago. Paris also improved steadily and was quoted 124.21 at the close. Brussels remained unchanged at 34.89. Spain depreciated from 39.80 to the record highest rate of 42.10, later rallying to 41.20. Berlin was in good demand throughout at 20.36⅝, as also was Switzerland, which fell away to 25.15½. The Scandinavian currencies showed no change except Stockholm, which was at one time as low as 18.10. Milan was again weaker at 92.80. Amsterdam continued steady at 12.12½. Among the South American Exchanges Buenos Aires improved to 42⅝d., but fell away to 42$\frac{5}{16}$d. at the close. Rio was better at 5$\frac{19}{32}$d. In the Eastern Exchanges Japan was better at 2s. 0$\frac{5}{16}$d. and rupees remained at 1s. 5⅞d. In the forward market Paris was quoted at premiums of 10 and 20 centimes for one and three months, consequent upon the fall in the spot exchange. Spanish pesetas were in strong demand at 7 centimos premium for one month and 22 for three months. Amsterdam was 1 and 2 cents premium and Swiss forwards were somewhat more offered at premiums of ½ cent and 1¼ cents. In the silver market new low levels continued to be established, and on March 4th 18⅛d. for spot and 18⅛d. for forward were the prices quoted. The announcement of the imposition of an import tax on silver by India was the chief bear factor. An improvement to 18$\frac{15}{16}$d. and 18$\frac{9}{16}$d. occurred at the close, but the market continues weak. The silver exchanges naturally reflected this weakness, and Hong Kong was 1s. 6¼d. and Shanghai 1s. 11¼d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moodys-Economist Services, 6, Bouverie Street, London, E.C.4.

THE PRESS LORDS' "VICTORY."

To allow political opponents or rivals the chance to cry " Victory " over sixpence, when they have demanded the moon, is a stratagem as old as human vanity; and in the speech which he delivered on Tuesday to the National Union of Conservative Associations, and which gave so dramatic a turn to the Press Lords' campaign, Mr Baldwin showed himself to be no mean judge either of tactics or character. With considerable astuteness he devised (or agreed, it may be, to provide) a convenient exit for those who had rushed headlong after the Empire Crusade but were now alarmed at the prospective results of splitting the Conservative Party; and though no reference in his speech was made to the United Empire Party, he carefully afforded means whereby the Chief Crusader might " save face."

In his speech, a few weeks ago, at the Coliseum, Mr Baldwin had declared definitely that he would not make food taxes an issue at the next General Election. That declaration, which brought the Beaverbrook-Rothermere combine into the field with threats of scores of anti-Baldwin candidates, he repeated on Tuesday—with one important qualification. As soon as he was returned to power, he said, he would summon an Imperial Conference to devise means of closer economic co-operation within the Empire, and to discuss unconditionally (as any such conference could obviously do) the possibility of extension of fiscal reciprocity. If, in the process of discussion, it emerged that food taxes were a necessary part of such co-operation, he would be prepared to submit the proposal to a referendum. In other words, Mr Baldwin will not rule out food taxes from his discussions with the Dominions, but he will not stake the fortunes of his party on asking for a mandate for them, nor, if he can help it, will he allow them to become an election issue.

The sequel has been curious. Whatever view we may take of the value of the referendum as a constitutional right, it is certain, as Mr Baldwin well knows, that on a popular vote any proposal to tax food would emphatically be rejected. Nevertheless, the protagonists of the Empire Party have hailed the declaration as a sign of " conversion " to their policy, and Lord Beaverbrook, at all events, appears to be making haste to demobilise his separate organisation. " The Empire Crusade asked nothing more of the politicians than that," declared the *Daily Express* on Wednesday morning; and in the evening its stable-companion, the *Evening Standard*, was urging the Crusaders to recognise that their task now was to make Mr Baldwin's " way easy " towards the achievement of his " practical plan " for realising the United Empire Party's aim.

What deductions are to be drawn from this preposterous humbug? So far as Lord Beaverbrook is concerned, it is clear that this week has been the climax in the precipitate decline of the so-called " Empire Free Trade " conception. The first stage was when Lord Beaverbrook regretfully recognised that the Dominions were not in the least likely to accept in any circumstances—with or without food taxes—complete free trade. In order to justify the title of his campaign he retreated to the idea of an economic unity between Britain and the non-self-governing Dominions. Now that he accepts Mr Baldwin's plan, he is free, in theory, to go on advocating food taxes without any official ban on his advocacy, but in the realm of practical politics, as distinct from " some day " referenda, food taxes have virtually been abandoned; and the quiet burial, which we foresee, of the original " Imperial " idea, is calculated to damp regrettably the enthusiasm irresponsibly aroused for the cause, commendable in many ways, of Empire unity.

What, then, is left? Though John Brown's body, in Crusader's dress, lies a-mouldering, it does not follow that his soul, in even more questionable fiscal shape, will not go marching on. On this point it is worth considering what the other noble lord has to say. If food taxes have gone, except in the fantastic form of a referendum, safeguarding remains. After welcoming Mr Baldwin's " conversion " to the United Empire Party, and patting him on the back for changing his opinions like the Duke of Wellington, Peel, Gladstone and even Lord Oxford, the *Daily Mail* assumes that in lifting the ban in this curious way upon food taxes, Mr Baldwin has swallowed the whole of Lord Rothermere's policy. In doing so, it uses some very significant words. It observes that, in regard to unemployment and " the ever-growing invasion of our home market by imports of foreign goods which we ought to make here," Mr Baldwin emphasised the value of safeguarding. " *He appeared to use this word when what he really meant was protection.* That is certainly what Conservatism and intelligent opinion throughout the country is looking for. *In the future Mr Baldwin could well afford to drop such camouflage. . . .*" In other words, having disencumbered himself from food taxes, Mr Baldwin is expected to go out for the full programme of the protection of manufactured goods.

For this plain speaking we are grateful to Lord Rothermere. It would clear the air to get rid of words which appear to mean something different from the policy of whole-hogging Protection, but are really precisely the same. And it is towards such a policy, if we read the signs aright, that the Conservative Party will tend more and more to be driven by the influence of a transmuted " Crusade "—now visibly true lineal descendant of the Tariff Reform League—in which Lord Rothermere bids fair to become the dominant partner.

At this point other considerations also arise. Though Mr Baldwin has not deigned to refer to Lord Rothermere's policy at any point, that policy, unlike the distant and romantic fantasy of a Free Trade Empire, deals in a spirit of out-and-out reaction with immediate and difficult questions, such as the position of India, the House of Lords, the Palestine Mandate and other questions very near the surface of the political sea. Whether the weapon of the new party, whose main plank collapsed a little too quickly for Lord Rothermere's purposes, will remain in being, we cannot say, but Lord Rothermere's campaign undoubtedly represents those forces tending to drive Mr Baldwin and the Conservative Party from its more liberal leanings and to restore in it the forces of extreme Conservatism.

It remains to be seen how far Lord Beaverbrook is prepared to follow his noble partner in pursuance of a policy begotten of a vendetta against the Conservative leader, and leading from the abandonment of Palestine and Prussianism in India to a crazy dream of a semi-fascist England. The controller of the *Daily Express*, we fancy, has fewer millions to his credit than the ruler of the Associated Press. Regarded as " feature copy," from the point of view of the popular daily, high politics are cloying food for readers, and " circulations " may indicate to Lord Beaverbrook's attentive eye the advisability of a change of " stunt." If this be what the future holds for the Empire Party—no longer united, imperial, or a party—nothing will be there for tears.

Indeed, apart from the fiscal issue itself, the most important feature of this episode in our political history is the test which it will afford of the extent to which public opinion can be influenced by the irresponsible propaganda of one or two men in control of linked newspaper combines. Experience of elections in recent times has shown that the influence of the popular Press is much less than might be assumed from mere figures of net circulation measured in millions; but the suppression of inconvenient news—carried in one case to the extent of omitting all reference to an important pronouncement by the Conservative leader on the main issue—the distortion of facts, and the absurd exaggeration of promised support, have been carried to such lengths as to give an entirely false impression to the readers of a chain of journals.

numbering nearly half the electorate. The attempt to manufacture mass opinion by such methods is a real danger to the political life of a democracy, one of whose chief needs is a fair and disinterested daily Press.

The only satisfaction in an unpalatable business is to record the honourable decision of Mr Gerald Barry to resign the editorship of the *Saturday Review*, a distinguished journal whose recent prestige owed much to his conduct of its columns, rather than submit to the indignity of having to accept responsibility for a leading article, inserted by order of the proprietor, acclaiming in Lord Beaverbrook's policy (which the *Saturday* had attacked in its previous issue) the salvation of Conservatism. If the power of the Press is to be prostituted in the interests of policies on which masses of the electorate can be denied even the means to pass fair judgment, the political future of England is dark; and the moral of this ugly instance of an abuse of the rights of ownership of the mechanism of "opinion" should be taken to heart by the reading public, and remembered when the next instalment of the Press Lords' propaganda is launched.

FRANCE AND THE NAVAL CONFERENCE.

Last Sunday, March 2nd, another French Ministry was formed—this time by M. Tardieu once again—and, on Wednesday, the new President of the Council obtained in the Chamber a larger majority than even the most sanguine of his supporters had expected. The ministerial declaration appears to have received a cold reception in the Senate, and Wednesday's session in the Chamber was marked by stormy hostility on the part of the extreme Left; but, on a division, a vote of confidence in the Government was carried by a majority of 316, against 263 votes. On the whole, it looks as though M. Tardieu now has a chance of surviving for some time, and since M. Poincaré—the only French statesman who could be certain of forming a really stable government in this Chamber—has definitely refused, for reasons of health, to resume office, this measure of qualified stability is probably all that France can hope for in the present circumstances. The new Ministry is weakened in some ways by the dropping of M. Loucheur, who may have proved not to fit into M. Tardieu's scheme, but who is a personality that counts for much in French industry and finance as well as in French politics. On the other hand, though the new Government is rather of the Right Centre than of the Left Centre, M. Tardieu has been successful in obtaining important adhesions from the ranks of the Radical Left. If all the promises which he has secured are loyally honoured, he may contrive to remain in office for the life of the Chamber, though questions of taxation —the dangerous ground on which M. Tardieu's Ministry came to grief the week before last—are a potential cause of yet another crisis.

What effect is M. Tardieu's return to office likely to have upon the fortunes of the Naval Conference in London? If the French had ever had their hearts in the Conference, they might have felt some embarrassment, if not compunction, at having kept four other nations waiting upon the vagaries of French internal politics; and in that case the French delegation might have been expected to return to London in a more conciliatory mood. Actually, French opinion seems to have hardened; and there is a tendency in the French Press to represent the French memorandum as being the country's last word. Monsieur Tardieu will lead the delegation again; but it is rumoured that he will spend fewer days of the week in London, and more in Paris, than before. The watchword is that he is needed at home, and that the first claim on a French Prime Minister's time and energy is to attend to the delicate business of parliamentary politics. An international conference which France neither initiated nor particularly desired must take second place.

This is not very promising; and the best that can be said is that the new French delegation is likely to represent the opinion of the Chamber and the country on the naval question effectively; so that, whatever stand the delegation may take, we shall at least know that—for good or evil—its acts are likely to be endorsed. There is no significance in the replacement of Monsieur Leygues at the Ministry of Marine by Monsieur Dumesnil, who drafted the report on naval estimates for this year's Budget. The Chamber may dislike some of the taxation which Monsieur Tardieu's last Minister of Finance proposed, but there seems to be no disposition in France, as there is in the United States, Great Britain, Japan, and Italy, to seek retrenchment along the line of reductions in naval strength. The naval question has not been a matter of controversy in the recent French political crisis. The controversy, as far as it went beyond certain concrete questions of taxation, ranged round personal and party rivalries in the present and the past. The only overt reference to naval matters during the crisis seems to have been Monsieur Léon Blum's rather vague and timid plea for reductions on the day when Monsieur Chautemps met the Chamber; and this gesture of Monsieur Blum's appears, rather significantly, to have contributed to the defeat of the Ministry which he was by way of supporting.

Nevertheless, even if the French remain intransigent, it is already clear that the Conference will not have met in vain. The inevitable interruption in the work of the Conference owing to the temporary non-existence of a French delegation encouraged the opponents of agreement in the United States to lift their voices—though it was obvious that the cause of the delay was quite extraneous to the Conference itself, and could not be taken fairly as an indication that it was failing. Nevertheless, on the Friday of last week (February 28th), Senator McKellar made a speech in the Senate at Washington in which he urged President Hoover to recall the American delegation from London. This challenge was taken up on Sunday, on the wireless, by Senator Borah, the Chairman of the Senate Committee on Foreign Relations, and by Mr Adams, the Secretary of the Navy. Senator Borah urged that "in the great battle for humanity, Americans should be the last to quit the field." Mr Adams declared that "we are here, as the British papers put it, to sit till we settle," and made the point that "it does not cost as much to keep this whole delegation in commission as it does one of the smallest cruisers."

The vigour of these replies is welcome; and so is the volume of public support which has rallied to the Administration. In the United States, public opinion on current political events makes itself felt through mass bombardments of letters and telegrams—joint or individual—addressed to members of the House of Representatives and to Senators and to the President himself; and during the last few days a bombardment of this kind has begun. The largest and most formidable missile that has been shot so far is an appeal for "reduction, not mere limitation, of armaments" which has been signed by 1,200 distinguished American men and women and been telegraphed to the delegation in Paris. The signatories urge the acceptance of "the principle of joint conference in the case of disputes which otherwise might lead to war." In American politics, such demonstrations count for a great deal; in the Senate, there is already a perceptible change of tone; and the reassuring message issued to the American Press on Thursday by Mr Stimson is an indication of the need felt by the American delegation to respond to the agitation at home.

Meanwhile, in London, the time has not been lost. Apart from certain important technical matters on which work has been going forward, there has been a thorough discussion of the problem of cruiser ratios between the American and Japanese delegations; and sufficient progress appears to have been made to render the conclusion of a three-Power agreement, at any rate, probable. But between a three-Power and a five-Power agreement there is a difference, and one that especially concerns the British Empire. For the United States and Japan, it is almost a matter of indifference what navies may be afloat in the Channel or in the Mediterranean. It is far from being so for the States Members of the British Commonwealth of Nations; and in any three-Power agreement which we might succeed in making with the United States and Japan, the French and Italian factors would have to be taken into account. From Italy we need expect no serious obstacles. As long as she secures parity with France, she seems inclined to set the absolute figures for her requirements reasonably low. It is only the French memorandum that threatens to raise the absolute figures of all naval strengths all round. Perhaps a three-Power or even a four-Power agreement can be secured in which the French demands are momentarily left out of account and an agreed set of ratios is translated into absolute figures on the much lower scale which the four other Powers seem, on the whole, prepared to adopt. A proviso could then be inserted that, if some other Power shows signs of building on a scale which threatens to upset the balance, the parties to the agreement should assemble in conference, on the motion of any one of them, to consider what steps they should take. If such an agreement, with such a proviso, were concluded between the United States, Great Britain, Japan and Italy, we hardly think that France would deliberately evoke the special four-Power conference which, we suggest, might be held in reserve—as a measure of "security"—by the other four Powers.

THE INDIAN BUDGET.

It has always been the tradition of those in charge of India's finances to ensure a balanced budget; and in deciding this year, at the risk of being criticised for imposing fresh taxation in a time of trade depression, to adhere firmly to the canons of sound finance, Sir George Schuster was fully justified on two main considerations. Firstly, sufficient damage had been done to India's credit by irresponsible talk at the Lahore Congress to make it particularly desirable that her finances should be given a foundation whose solidity is above suspicion. Secondly, at a stage when India, in the Finance Member's own words, "stands at the threshold of a new constitutional advance," there would have been grave and obvious objections to a finance policy which failed to establish a real surplus, from regular sources of revenue, in the central Budget.

The budgetary problem which Sir George Schuster had to face was not devoid of difficulty. Although India has enjoyed a succession of good monsoons, industrial depression—particularly in Bombay—has had an adverse effect on the yield of direct taxation. Central Government expenditure, other than military, has had a slightly upward tendency, and the encashment of Savings Certificates —with accrued interest for which, as in England, due provision was not originally made—has been a growing embarrassment. A year ago the Finance Member indicated that in his next Budget the need for additional taxation might have to be boldly faced, and in his present Budget speech he stated that on a review of the past three years he had reached the conclusion that normal growth of revenue had definitely failed to fill the gap made by the final remission, under Sir Basil Blackett's *régime*, of the Provincial Contributions.

The year 1928-29 had closed not, as expected, with a surplus of 30 lakhs, but with a deficit of 106 lakhs, against which the whole of the then available balance standing to the credit of the Revenue Reserve Fund amounted to only 74 lakhs. Revised estimates for 1929-30 indicated a net deterioration on all budget heads of 66 lakhs, while the transfer (for which provision had been made in the last Budget) of 90 lakhs from the Revenue Reserve Fund could not be made, since that fund had been exhausted on account of the 1928-29 deficit. To fill the gap thus caused there was a windfall of 156 lakhs, representing the sum held in suspense in the German Liquidation Account; but for the forthcoming year 1930-31 the Budget estimate showed a prospective deficit on the basis of existing taxation of 410 lakhs, made up as follows:—

	Lakhs.
Deficit estimated on last year's basis (90 lakhs), *less* net improvement on main revenue heads (5 lakhs)	85
Deterioration in main commercial departments, railways, posts and telegraphs	99
New administrative services (including civil aviation 24.5 lakhs)	146
Net addition to interest on deadweight debt	107
Special provision for accruing interest on Savings Certficates	88
Increase in provision for reduction, etc., of debt	27
Total	552
Less—	
Reduction of military expenditure	80
Economies in civil estimates	62
Net deficit	410

In order to help the Burmese cultivator it is proposed to lower the export duty on rice from 3 annas to 2 annas 3 pice per maund at a cost of 30 lakhs, and the resulting deficit of 440 lakhs is to be met by the following new taxation:—

Kerosene.—Excise duty is raised from 1 to 1½ annas, the import duty being reduced from 2½ to 2¼ annas.

Sugar.—Import duty is raised 1½ rupees per cwt.

Income Tax.—Super-tax is raised one pie in the rupee on incomes of Rs. 15,000 and upwards, with a corresponding increase in super-tax on all grades other than the flat rate on companies.

Silver.—The old import duty of 4d. per ounce on silver is re-imposed, subject to full rebate on re-exports.

Cotton.—The import tariff on cotton piece-goods is raised from 11 per cent. to the general tariff rate of 15 per cent. An additional protective duty of 5 per cent. will be levied on non-British plain-grey cotton piece-goods for three years.

From these sources Sir George Schuster estimates that the gain to the Budget for 1930-31 will be:—Kerosene, 35; sugar, 180; income tax, 70; silver, 100; and cotton, 125 lakhs—leaving a surplus estimated at 70 lakhs. Moreover, as the indirect taxes operate from March 1, a surplus of 35 lakhs is expected in 1929-30 as an offset to the deficit of 32 lakhs realised in the closed accounts for 1928-29. Borrowing in the forthcoming year is to be restricted to a loan in India of 23½ crores, of which 16.1 crores are to be utilised for redeeming outstanding loans, principally 1930 bonds.

In the course of his Budget speech the Finance Member announced the willingness of the Government of India, so far as sales of surplus silver were concerned, to co-operate with other interests in considering the possibility of joint action for the regulation of sales in accordance with world demand. As regards sugar, he thought that, in view of the present low world price, the increased import duty would not be seriously felt at present by the consumer; and in the case of kerosene he claimed that the proposed changes (which, incidentally, will prejudice to some extent the preferential position of the Burma Oil Company in the Indian market) should not result in increased prices.

From many points of view, including that of the interests of Great Britain, the most important and controversial of the new tax proposals is that concerning cotton goods. Referring to a message which had been addressed by the British Government to the Government of India, conveying an appeal that consideration should be given to the reactions of higher import duties on the export trade of Lancashire, Sir George Schuster was at pains to point out that the inviolability of the Fiscal Autonomy Convention—"an integral part of the Consti-

tution of India "—was unreservedly recognised by His Majesty's Government. In adhering to its proposal to raise the duty on piece-goods to the general tariff rate of 15 per cent., the Government of India had felt bound to give first place to the interests of India. Revenue was needed, and the Customs was the chief available source.

To this thesis no objection can legitimately be raised in this country; the appropriate ratio between indirect and direct taxation is a matter for India herself to decide, and the growing competition from up-country mills may prevent internal prices rising by the full amount of the new duty. But when the Finance Member passed from the question of revenue to that of affording the Bombay mills, in the emergency of their present depression, "an immediate relief and an immediate stimulus," his proposals are more open to criticism. The "additional" duties have evoked strong protests from Japanese exporters, who have pointed out that Japan buys more from India than she sells, and has refrained, so far, from putting a high tariff on Indian pig iron. As between Japanese and Lancashire mills, the ultimate effects of the proposals, which may well be to drive Japan to concentrate more on fine goods, in view of the minimum per lb. provided in the new tariff, are not strictly India's concern; but in his endeavour to satisfy the demands of the Bombay millowners for protection greater than that afforded in fact by the general tariff (theoretically and formally a "revenue" tariff only), and at the same time to soften the blow for Lancashire by preferential treatment, Sir George Schuster has taken the serious step of short-circuiting the Indian Tariff Board. The Board, which has hitherto been a valuable safeguard for the consumers' interests, is to review the effects of the additional "protective" duty before the end of the three years' period fixed at present as the limit of its operation; but we do not agree with the Finance Member's *dictum* that "the proper time for a tariff board inquiry would be when progress in reorganisation and rationalisation made it possible to assess the ultimate prospects of the industry." Apart from the question whether rationalisation is not more likely to be retarded than stimulated by protection, and the equally questionable implication that no duty up to 15 per cent. can be defined as "protective," this imposition of an immediate duty, without reference to the Tariff Board, is an unfortunate precedent.

With this reservation, Sir George Schuster may be congratulated on a sound and statesmanlike Budget, which should do much both to restore confidence in Indian securities and to provide a solid basis for future administrative purposes. Fresh taxation is never palatable, but at India's present stage of development to starve beneficial services would be the worst of false economies. In this connection, Sir George pointed out, "there was the consideration that the Central Government, after the constitutional revision, would inevitably have to relinquish some sources of revenue to the provincial governments, in whose hands the real nation-building services lay." Indeed, the Finance Member referred to the criticism that the 1919 reforms had failed to achieve their full effect owing to the lack of adequate funds in the control of the provinces. Whatever recommendations the Statutory Commission may make in their Report on this matter, the Finance Member was clearly right in the exercise of his office to emphasise the "paramount importance of creating reserves" to strengthen India's financial resources at a critical juncture in her political history.

RAILWAY FINANCES.—I. RECEIPTS.

In a leading article in the Stock Exchange section of last week's issue we reviewed the accounts for 1929 of the four British railway groups. All of them made economies in expenditure, and two enjoyed an increase in receipts, which was very largely the result of the improvement in the coal export trade. We propose now to analyse more closely the gross receipts, the main categories of which are shown in the following table:—

GROSS RECEIPTS.
(000's omitted.)

	Passenger Trains.		Freight Trains (excluding Livestock).		Total Railway Receipts (including Livestock).		Total Gross Receipts (including ancillary businesses).	
	1928.	1929.	1928.	1929.	1928.	1929.	1928.	1929.
	£	£	£	£	£	£	£	£
London Midland and Scottish	29,780	28,723	42,538	42,997	73,870	73,195	82,258	81,661
London and North Eastern	19,585	19,097	33,413	35,367	54,112	55,561	61,424	63,295
Southern	17,134	16,969	5,498	5,656	23,019	22,993	26,517	26,507
Great Western	13,059	12,781	16,832	17,654	30,486	31,028	35,528	36,184
	79,558	77,570	98,281	101,674	181,487	182,777	205,727	207,647

Passenger train receipts, which include the revenue from mails, parcels, excess luggage and goods by passenger train, were lower in each case. Freight train receipts were higher, and, on the London and North Eastern and the Great Western, the increase was more than enough to offset the decline in passenger train revenue. A by no means negligible revenue, worth from £3½ million in the case of the Southern Railway to £8½ million in that of the London Midland and Scottish, is produced by ancillary businesses in the form of hotels, steamboats, road services, docks, harbours and wharves, canals, and parcels collection and delivery. Both the London Midland and Scottish and the London and North Eastern substantially increased their revenue from road transport, but that of the Great Western declined. As the two companies mainly concerned with coal exports, the London and North Eastern and the Great Western both increased their revenue from docks, harbours and wharves. Other changes in these non-railway items were of no special significance.

The second table shows passenger receipts in more detail. Season ticket traffic has been excluded throughout for the sake of clearness. Gross revenue from this traffic fell in three of the four groups: London Midland and Scottish, £3.1 million to £2.9 million; London and North Eastern, £2.3 million to £2.2 million; and Great Western, £9.0 million to £8.8 million. The Southern Railway alone enjoyed an increase of season ticket revenue, from £2.6 million to £2.8 million.

*PASSENGER TRAFFIC.
(000's omitted.)

	Total Number carried.		Receipts.		Average Fare per Passenger.		Coaching Train-Miles.	
	1928.	1929.	1928.	1929.	1928.	1929.	1928.	1929.
			£	£	s. d.	s. d.		
London Midland & Scottish	318,514	315,748	19,850	18,865	1 2·96	1 2·34	88,625	89,306
London & North Eastern	199,920	213,613	12,488	12,064	1 2·99	1 1·55	60,130	62,195
Southern	202,067	208,838	11,995	11,707	1 2·25	1 1·45	48,325	50,650
Great Western	131,026	132,339	8,986	8,781	1 4·46	1 3·92	38,923	39,311
	851,527	870,538	53,319	51,417	1 3·03	1 2·18	236,003	241,462

* Excluding season ticket traffic.

On all four groups there was an increase in the coaching train mileage, and only on the London Midland and Scottish was there a decline in the number of passengers carried. This was particularly marked in short journeys, and is partly attributable to the Lancashire cotton stoppage during the holiday season. Each of the other groups carried more passengers than in 1928, though there was a decrease in revenue in every instance, owing to the more general use of week-end tickets and similar facilities. There are signs, however, that these facilities have opened up new "markets" for railway transport in certain districts. The decline in the average fare per passenger amounted to nearly 1½d. on the London and North Eastern in spite of the fact that this was the only group which carried a larger number of first-class passengers than in 1928. Apparently this increase is accounted for mainly by short-distance travellers, since the average first-class fare fell from 6s. 4.31d. to 5s. 10.26d., whereas in no other group did it fall more than 2d., and on the Great Western it rose by nearly 4d.

Freight traffic receipts, as indicated in our last article, clearly reflect the fact that the industrial improvement last year occurred principally in the export section of the coal industry:—

FREIGHT TRAFFIC (LIVESTOCK EXCLUDED).
(000's omitted.)

	Tonnage.		Receipts.		Average Receipt per Ton.		Freight Train-Miles (in relation to Receipts).	
	1928.	1929.	1928.	1929.	1928.	1929.	1928.	1929.
			£	£	s. d.	s. d.		
London, Midland & Scottish	143,505	149,333	42,538	42,997	5 11·14	5 9·10	52,495	53,125
London & North Eastern	136,831	150,983	33,413	35,367	4 10·61	4 8·22	38,599	40,597
Southern	16,895	17,760	5,497	5,656	6 6·09	6 4·44	6,934	7,087
Great Western	75,311	81,815	16,832	17,654	4 5·64	4 3·79	21,994	22,686
	372,542	399,891	98,280	101,674	5 3·31	5 1·04	120,022	123,495

The increase in revenue was much greater in the London and North Eastern and Great Western groups, which carry the bulk of this traffic, than in either of the others, in spite of a heavy increase in the freight tonnage of the London Midland and Scottish. As the chairman of the last-named company explained, the recovery in tonnage occurred in the low-rated traffic, while the high-rated classes continued to suffer from road competition. This is reflected in a decline of about 2d. in the average rate per ton. In no case has the number of train-miles run increased in as great a proportion as the tonnage carried. In so far as this indicates better-filled trains and not an increase in short hauls, it is a satisfactory sign of greater economy in working.

The remaining table shows the distribution of freight traffic among the main groups and the percentage which the receipts from each group forms of the total from the three categories:—

FREIGHT TRAFFIC (LIVESTOCK EXCLUDED).
(000's omitted.)

	Merchandise.†		Coal, coke and Patent Fuel.		Other Minerals and Merchandise.‡

* Originating on the company's lines.
† Classes 7–21.
‡ Classes 1–6.

This analysis, like all the others, is dominated by the coal situation. In every case the proportion of the total revenue derived from the fuel group has risen, and in the case of the Southern Railway, which is beginning to feel the benefit of the exploitation of the Kent coalfields, this is the only category in which the tonnage has not declined. In all cases the proportion of revenue derived from merchandise has fallen, and on all lines except the Great Western the actual receipts from this group were lower. Not only is road competition naturally the most severe in this class, but also the depression in the textile industries has deprived it of a large volume of high-rated traffic. Since it is on this group that the railways depend for about half their gross revenue from freight traffic and for something not very much less than a quarter of their total gross receipts, it is clear that in default of a marked recovery in the output of our manufacturing industries the possibilities of economies in railway working are of great immediate importance. With this side of the railway accounts we shall deal next week.

KREDITBOLAGET

GREAT BRITAIN'S FOOD.

We referred briefly in a recent article to a report* published last month by the Ministry of Agriculture, which has attracted very much less attention than it deserves. Its value is threefold: It provides a census of agricultural production which forms a pendant to the Board of Trade census of industrial production; it throws light on changes since the war in an important part of our standard of living; and last, but by no means least, it provides a storehouse of cold facts which may be used with salutary effect in the heated controversy now raging over the sources, actual and to be desired, of our food supplies.

The census of agricultural production relates to the average of the four agricultural years beginning 1924-25, but the general trend of production and prices during those years is reflected in the following table, showing the estimated value of agricultural and horticultural produce sold off farms:—

VALUE OF PRODUCE SOLD.
£ million.

	1924–25.	1925–26.	1926–27.	1927–28.
Livestock and livestock products	192·9	190·6	177·0	183·7
Farm crops	68·2	54·7	57·1	57·8
Fruit, vegetables, flowers, &c.	25·1	25·5	21·7	24·7
Total	286·2	270·8	255·8	266·2

The results of the inquiry into agricultural production in these four post-war years, compared with those of the Agricultural Census of 1908, show that net output increased by 77 per cent., from £108,600,000 to £191,700,000. The corresponding increase in the net output of industries covered by the Census of Production Act was from £675 million in 1907 to £1,604.5 million in 1924. Thus the contribution of agriculture to the total has fallen from 13.9 per cent. to 10.7 per cent. A rather rough estimate of numbers engaged in agriculture and horticulture in Great Britain places them at 1,280,000 in 1925, as against 1,400,000 in 1908. The corresponding figures for industry were 6,687,000 in 1907 and 7,613,000 in 1924, so that the proportion of people occupied in agriculture has fallen from about 17½ to 14½ per cent. Net output per person employed has risen from £77.6 to £149.8, an increase of 93 per cent., which is a lower rate of increase than in any other industrial group except mines and quarries (43 per cent.) and iron and steel (89 per cent.). The average increase over all groups except agriculture and mines and quarries was 124 per cent.

It is evident that, whether considered from the point of view of the value of its output, of the employment it affords, or of its produce per head of persons employed, British agriculture is not holding its own. It has fallen from first to third place in respect of numbers employed, and from a strong third place in respect of output it has fallen to a weak fourth, supplanted by textiles and challenged by the food, drink and tobacco group. Its position is not merely weaker than it was, it appears to be still declining.

* *The Agricultural Output and the Food Supplies of Great Britain.* (H.M. Stationery Office, 1s. net).

That this downward movement is far from being attributable to any decline in the demand for the products of agriculture appears from the following table, in which the average *per capita* supply of certain staple foods, and the proportion of expenditure on them, in the two periods 1905-09 and 1924-27, are compared:—

	Average Supply per Head.		Proportion of Estimated Total Value (including Duties).	
	Pre-war.	Post-war.	Pre-war.	Post-war.
			Per cent.	Per cent.

A slight decrease in the consumption of fish appears, from the rise in expenditure on that item, to have been due to higher prices. The only other perceptible fall is a decline in the consumption of butter in favour of margarine, the consumption of which has more than doubled. Expenditure on vegetables, fruit and nuts has risen substantially, and the table gives a general impression of a definite rise in the standard of living. Except to the very limited extent that exotic products, such as cocoa and tropical fruits, may have met a potential demand for products that could have been grown at home, it is therefore impossible to argue that there is anything wrong with the market for the products of British agriculture.

It remains to see from what sources the growing demand for foodstuffs in this country has been met, and here the report acquires an unusual degree of topical interest. The table below shows the proportions of the main items in our food supply which come from home, Empire and foreign sources in the two periods under consideration, 1905-09 and 1924-27.

SOURCES OF FOOD SUPPLY OF GREAT BRITAIN.

	Pre-war.			Post-war.		
	Home Production.	Empire Imports.	Foreign Imports.	Home Production.	Empire Imports.	Foreign Imports.
Foodstuffs normally produced in Great Britain:	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
Wheat flour	20·0	27·9	52·1	15·0	43·4	41·6
Meat (inc. rabbits and lard).....	52·0	17·0	31·0	44·3	17·2	38·5
Poultry and eggs.....	45·7	17·1	37·2	49·8	13·7	36·5
Dairy produce	47·6	21·6	30·8	48·7	25·4	25·9
Vegetables.....	72·3	7·7	20·0	70·3	7·2	22·5
Raw fruit	57·7	14·1	28·2	44·0	17·6	38·4
Total of above ...	47·2	19·1	33·7	44·1	21·5	34·4
Fish.....	78·5	8·4	13·1	61·3	7·7	31·0
Total (inc. fish)....	48·4	18·7	32·9	44·9	20·9	34·2
Foodstuffs not normally produced in Great Britain:						
Fruit and nuts.....	...	8·2	91·8	...	19·0	81·0
Margarine.....	...	18·6	81·4	...	38·2	61·8
Sugar	...	5·2	94·8	6·2	23·3	70·5
Cocoa	...	38·5	61·5	...	88·5	11·5
Grand total	43·3	17·7	39·0	39·3	21·6	39·1

From this it appears that, as far as those foodstuffs which are the produce of British agriculture and horticulture are concerned, foreign imports have done little more than keep pace with the growth of consumption. In so far as British output has failed to do so, the gap has been almost entirely filled by Empire products. Exceptions to this are meat, fruit and vegetables; but, as far as wheat is concerned, the Empire has expanded its contribution at the expense even more of the foreign than of the home producer. Home produced poultry and eggs have expanded at the expense of imports of all kinds, and home and Empire dairy produce have made great headway against that imported from non-British countries. This greatly complicates the task of those who would tax foreign foods, since competition between foreign and British produce is not apparently so keen in most cases as competition between home and Empire goods.

In the food-tax movement, by which the Press Lords hope to force an Imperial breakfast, lunch and dinner table upon every Briton, the two most important objectives are wheat and meat, which together form not very much less than half our total expenditure on food. Now, in the years 1926-28 we imported an average of 104 million cwts. of wheat annually, of which 51 million cwts. came from the Empire and 53 million cwts. from foreign countries; Canada sent an average of 36 million cwts., Australia 11 million and India 3 million; 30 million cwts. came from the United States, 19 million from the Argentine, and practically all the rest was spread thinly over a large number of foreign countries. If we are to eat only Imperial bread, over 50 million cwts. more must be provided by Canada, Australia and India, unless some new wheat-producing country can be developed within the Empire. But last year Canada found wheat prices so little to her liking that her contribution fell to a round 27 million cwts., whereas her *pro rata* share under a system of Imperial self-sufficiency would have been nearly 75 million cwts. The price that would be necessary to bridge this gap would send wages, and consequently production costs, to a level which would fatally handicap Great Britain in the struggle to sell her manufactures in the markets of the world.

Meat presents a different problem. Almost half our consumption still consists, as it did before the war, of beef, and in the beef trade the most important development of recent years has been the steady growth in our net imports of chilled beef (from 133,000 tons in 1909 to 519,000 tons in 1927) at the expense of the frozen product. That is why the foreign proportion of our beef imports has risen so sharply, since chilled beef comes almost entirely from the Argentine, while at present our Australian imports are practically all frozen. The transport of chilled beef from Australia, if not a physical impossibility, would be a very costly proposition. A more serious check still to any project for substituting Australian for Argentine beef is the frequency of severe drought in Australia, which renders the possibility of a substantial increase in the cattle population of the Commonwealth extremely problematical.

There is a further difficulty. Writing in *The Times* the other day, Sir William Haldane called attention, not for the first time, to the fact that the entry of the United States on to the world beef market as an importer has deflected all the Canadian beef supply from Great Britain and is making steady inroads in the exportable surpluses of South America and Australasia. This movement began in 1927, and in these days of "baby beef" there should have been some sign by now of an increased output in those countries if the supply were at all elastic. But Sir William Haldane quotes statistics to show that herds are actually declining in those countries. If the beef producing countries of the Empire cannot respond to the sharp stimulus of a heavy, and presumably permanent, American buying movement, what response can we expect to the offer of the protection of a tariff wall?

The minor foods are, for the most part, taking care of themselves. Home production of poultry and eggs is a growing proportion of consumption, and dairy produce is coming increasingly from home and Empire sources. Fruit and vegetables, on the other hand, are coming increasingly from foreign sources. Geographical considerations play a large part here, as many of these goods are too perishable to come from any but neighbouring countries except at a cost greater than they would bear. If Lords Beaverbrook and Rothermere get a chance of poking their umbrellas into the delicate mechanism of international trade we do not envy the task of the political and economic mechanics whose business it will be to get that intricate machine back into working order when they have done with it.

THE PRUDENTIAL.

FOR the first time for ten years the dividend on the "A" shares appertaining to the life branches of the Prudential Assurance Company's business has not been increased; but there is no evidence in the report and accounts of any falling off in the remarkable prosperity of an institution whose national importance is illustrated by the simple fact that there are now in existence over 26,000,000 Prudential life policies, assuring in the aggregate a sum of £660,000,000. Approximately one-half of the total population of this country is insured in the Prudential. Again, the total assets of the company now amount to £229,000,000, this representing an increase on the year of no less than £9,000,000, and the total income is £43,000,000.

Turning now to the detailed figures of the year's working, the following table shows the course of the total new life business during the past five years in the ordinary branch and industrial branch respectively:—

Year.	Ordinary Branch. New Business. Sums Assured.	Industrial Branch. New Business. Sums Assured.
	£	£
1925	14,641,970	47,583,623
1926	14,924,208	45,349,654
1927	16,941,000	53,735,678
1928	17,401,001	58,511,995
1929	17,606,949	63,182,236

The new business in both branches has again registered an increase, though the advance in the industrial branch is very much greater than in the ordinary branch. In face of the gradually changing character of industrial life business, the industrial total is a very large one, for, apart from the adverse effect of the Widows' and Orphans' Pensions Act on industrial business, there is a growing tendency to effect in the ordinary branch policies which a generation ago would undoubtedly have been effected as industrial branch policies. The main sources from which the company's surplus is earned are the excess of expenses reserved in the valuation over and above the amount absorbed, and the excess of the net rate of interest earned over and above that assumed in the valuation, which, in the case of both branches, is now 3 per cent. The actual experience of the company during the last five years in regard to expenses and interest is shown below:—

Year.	Expense Ratio. Ordinary Branch.	Expense Ratio. Industrial Branch.	Net Rate of Interest. Ordinary Branch.	Net Rate of Interest. Industrial Branch.
	Per cent.	Per cent.	£ s. d.	£ s. d.
1925	11·7	26·59	4 15 4	4 19 6
1926	11·0	25·90	4 14 3	5 8 3
1927	11·2	25·47	4 14 8	5 9 0
1928	10·8	24·89	4 16 6	5 7 7
1929	10·4	24·79	4 19 7	5 9 11

In every respect the 1929 figures show an improvement over those for 1928, the improvement being particularly marked in the rate of interest. The differences in the respective rates of interest earned by the ordinary branch and the industrial branch are at first sight curious, but are explained by the fact that these branches are assessed for income tax as separate entities and according to different methods. The reduction in the industrial branch expense ratio is now necessarily much less spectacular than was the case some years ago. The present expense ratio compares with over 40 per cent. in 1920, and the saving represented by the difference now amounts to an additional profit on the present premium income of nearly £3,000,000 per annum.

The usual annual valuation of liabilities in both branches has been made on the same bases as formerly, and the results of the valuations of the last three years are compared below:—

Ordinary Branch.	1927.	1928.	1929.
Surplus earned during the year from trading	2,868,073	2,884,124	3,203,959
Capital profits	...	...	51,490
Brought forward from previous year	192,523	194,889	201,743
	3,060,596	3,079,013	3,457,192
Allocations:—			
To Bonuses to policyholders	2,130,396	2,365,902	2,477,808
,, Investment reserve fund	500,000	250,000	500,000
,, Shareholders a/c	235,311	261,368	273,471
,, Carried forward to next year	194,889	201,743	205,913
	3,060,596	3,079,013	3,457,192
Industrial Branch.			
Surplus earned during the year	5,203,614	5,444,404	5,739,419
Brought forward from previous year	259,256	264,847	276,572
	5,462,870	5,709,251	6,015,991
Allocations:—			
To Bonuses to policyholders	2,916,667	3,265,306	3,316,062
,, Investment reserve fund	500,000	250,000	500,000
,, Common contingency fund.....	250,000	250,000	250,000
,, Special contingency fund	366,667	483,333	483,333
,, Bonuses to outside staff...	500,000	520,408	528,497
,, Shareholders account ...	664,689	663,632	651,529
,, Carried forward to next year	264,847	276,572	286,570
	5,462,870	5,709,251	6,015,991

The increase in the surplus in each branch has been notably greater in 1929 than in 1928, and the reason for this is no doubt largely to be found in the big forward jump in the rate of interest earned. In the ordinary branch the bonus to policyholders has been maintained at the same rate as in 1928, viz., a reversionary bonus of 50s. per cent. for whole life assurances and 46s. per cent. for endowment assurances, calculated in both cases on the sums assured. The industrial branch bonus is allotted at different rates and by a different method for pre-1928 policies and post-1922 policies. For post-1922 policies a simple reversionary bonus of 34s. per cent. has been declared, the same rate as last year, and all such policies therefore share in bonus on the same basis as ordinary branch policies. For pre-1923 policies the bonus is allotted at rates varying according to the number of years' duration. The rates have again been increased somewhat for policies of short duration, while the period for which they are guaranteed has been extended for a further year to 15 years, i.e., to March 1, 1945.

The company's general branch is concerned with fire, accident and marine business, and the results for 1929 appear on the whole to have been rather less favourable than for 1928, which itself was hardly satisfactory. The detailed results of the underwriting are set out below:—

	1928. Amount.	1928. Percentage of Premiums.	1929. Amount.	1929. Percentage of Premiums.
Underwriting profit:—	£	%	£	%
Fire	18,481	2·4	6,909	0·8
Employers Liability (Home)	8,901	11·2	1,774	1·9
Employers Liability (Irish Free State) ...	386	50·5	451	66·4
Miscellaneous	28,359	8·6	16,720	3·7
Marine	61,665	16·8	102,970	44·0
Sinking Fund	11,054	...	12,742	...
Sickness and Accident	33,593	...	44,211	...
Investment and exchange profit.....	220	...	101,681	...
Fees	3,315	...	4,491	...
	41,872	...	71,289	...
Less:—				
Corporation profit tax	...	...	...	...
Income tax	8,735	...	40,135	...
Total net surplus ...	33,137	...	31,154	...
Net interest earnings	93,320	...	112,913	...
Dividend	66,667	...	66,667	...
	26,653	...	46,246	...
Total net increase in surplus assets	59,790	...	77,400	...

The results in the fire department are not unexpected in view of the heavy claims known to have been universally experienced. The loss in the marine department represents interest and capital profits left in the account, but it is none the less disappointing to find that the retention of so large a sum in the account should have been considered necessary. Although the total net increase in the surplus assets is nearly £20,000 greater than in 1928, this result has been achieved only by taking credit for capital profits, amounting to over £100,000, on investments realised. The combined results in all departments have enabled the directors to maintain the dividends at the same rates as for 1928, namely, 94 per cent. on the "A" shares and 25 per cent. on the " B " shares, free of income tax in both cases. At the present prices—£21¾ for the "A" and 38s. for the " B "—the yields on these dividends are £5 8s. per cent. gross and £3 6s. per cent. gross respectively.

As we have said, this is the first occasion for ten years in which the "A" shares' dividend has not been increased. Since the published accounts fail to supply the reason, it is interesting to speculate if the general depression in investment values has induced a sense of caution. It is noticeable in this connection that allocations to the investment reserve fund have been raised from £500,000 to £1,000,000, and the fund now amounts to £10¼ million. The balance sheet itself affords evidence of considerable activity during the year, notwithstanding the huge figures involved. Increases have occurred of £2,400,000 in home mortgages, of £4,090,000 in loans on stocks and shares (mostly in the industrial branch) and of £2,770,000 in debentures. British Government securities have been realised to the extent of £9,525,000, but ordinary shares have risen by £4,400,000. The constitution of the balance sheet assets is now as follows:—

	£
Mortgages and loans	39,790,000
British Government securities	57,850,000
Ordinary shares	27,289,000
Other Stock Exchange securities	86,078,000
Properties and ground rents	8,360,000
Reversions and miscellaneous assets	9,203,000
	228,570,000

The certificate appended to the balance sheet makes it clear that, apart from the investment reserve fund, the market values of the assets are in excess of the book values. But, clearly, the hidden reserve must have been greatly reduced by last year's depreciation which, in the case of the Prudential, holding as it does £171 million of Stock Exchange securities, may well have been £8 million. The financial strength of the Prudential remains, however, enormous, and there are few things more certain in this uncertain world than that the onward progression in the disbursements for dividend will soon be resumed.

Notes of the Week.

Bank Rate at 4 Per Cent.—Another stage in the downward trend of money rates was reached on Thursday, when the Bank of England lowered its discount rate from 4½ to 4 per cent. The country has thus definitely re-entered the region of " cheap money," for it is not since the autumn of 1925 that the Bank rate has been as low as 4 per cent., and then the rate, whose justification at the time was questionable, remained in force only for two months. The motives actuating this week's reduction are patent. The recession alike in Stock Exchange activity and in world trade made short money more plentiful; falling wholesale prices have suggested the need of all possible monetary correctives; and producers are badly in need of a psychological stimulus such as central banks can give them by reducing their rediscount rates. Judged on narrower and more technical grounds, the Bank of England can justify its action by pointing to the recent rise in the franc exchange, the steadiness of the dollar, and the cessation of German gold purchases. It knows that there is no conscious demand from abroad for gold, and that foreign central banks have recently been adding to their gold stocks only because their statutes force them to buy such gold as is offered to them. In so far as its own gold stocks are concerned, once the £7,000,000 now on its way from Australia arrives, they should be more than ample for all immediate and prospective needs. Finally, the money market had already seen its own rates fall to levels consonant with the new Bank rate, so that the Bank's decision put an end to a period of anomaly and confusion. Lower rates were announced on the same day by the National Banks of Holland, Denmark and Sweden, though not—as had been expected—by the New York Federal Reserve Bank. A cable from our New York correspondent, which will be found on p. 502, suggests that the Washington authorities are nervous lest an impetus should be given to renewed Stock Exchange speculation; but it seems doubtful if a downward move in the New York rate (particularly in view of the decline in that centre's open-market rates) will be long delayed. Gradually a phase of world-wide cheap money seems likely to be reached.

Parliament and the Tariff Truce.—Last Tuesday's debate in the Commons on Mr Graham's part in the Tariff Truce Conference, now proceeding at Geneva, was interesting chiefly in the degree to which it revealed the essentially protectionist attitude of the Conservative Party. In their insistence that a breathing space for the negotiation of lower tariffs would be " a bad bargain for this country to enter into at any time," and in their expressions of glee at the prospect that the conference might fail to achieve all that its supporters hoped, Sir Philip Cunliffe-Lister and other Conservative speakers showed clearly that their professed objection to Great Britain's hands being " tied by the truce " in any discussion of economic co-operation with the Dominions, was not the real mainspring of their attitude. Desiring tariffs for tariffs' sake, they were out to attack any proposal which appeared to place an obstacle in the way of their attaining that deplorable ideal. In his reply, Mr Graham developed much the same broad arguments as he had used with admirable effect when the conference opened at Geneva a fortnight ago. Tariff retaliation, he said, could only mean a considerable duty over a wide range of imported commodities such as would reduce this country's volume of trade and seriously aggravate unemployment. The Government had no idea of allying this country with a European bloc either against the Empire or against the United States. They refused to be parties to economic discrimination of any kind, and were simply seeking the maximum agreement they could obtain on tariff reduction. He had found at Geneva a desire to recognise that economic nationalism had gone too far, and, as the Economic Conference of 1927 had pointed out, was strangling international trade. Although one country was definitely against the truce, and another was unsympathetic, he still hoped they might get a formal agreement on terms which would allow them to proceed with detailed negotiations for lowering tariffs progressively and as rapidly as they could. The widespread desire to exclude agricultural commodities admittedly presented difficulties, but he was hopeful that good results might be attained in relation to particular large groups of products like iron and steel, machinery and plant, or textiles. If the conference succeeds in paving the way to fruitful negotiations on these lines, it will not have been held in vain.

The Coal Bill.—The Government's very proper decision not to force the House to discuss vital points in Part 1 of the Coal Mines Bill at a late hour of the night has meant that more time will have to be allotted to this measure, and it has been agreed that two days next week shall be given for the completion of the Committee stage, with a further two and a half days for Report and Third Reading. The progress made last Wednesday was slow. Much time was spent on amendments of no great substance, and the only important phase of the debate was that relating to a Conservative amendment designed to exclude from the provisions of Part 1 all the coal supplied to the iron and steel industry. Mr Graham objected that the quota plan, which the House had in principle endorsed, was possible only if its scope included all pits; and the amendment was defeated by 269 to 161 votes. The position, however, of mixed undertakings deriving their fuel from pits whose output is transferred to associated works, and not sold in the open market, presents problems of great difficulty, as the experience of the German coal kartel has demonstrated. Rigid application of a single uniform quota to such concerns is open to serious objection, and the Government will do well, when the question comes up again on Clause 3 of the Bill in connection with the district schemes, to consider how far a desirable amount of elasticity can be given to the quota plan in this respect.

Politics and Religion—" Salade Russe."—The Archbishops of Canterbury and York have asked that Sunday, March 16th, shall be observed in all churches within their provinces as a day of prayer on behalf of those who are suffering oppression in Russia through loyalty to their religious beliefs. The Evangelical Free Churches in England appear to have chosen the same date; and the Pope has already asked Roman Catholics to join him in an intercession on March 19th. This action on the part of various ecclesiastical authorities—some " established " and others " disestablished " from the British Government's point of view, but all possessing adherents in the ranks of the British Army and Navy—confronted the Government with a problem. What should be done, on those dates, by Army and Navy chaplains in religious services which are part of the routine of Army and Navy discipline? If the request of the various religious authorities were complied with at official services conducted by ecclesiastics who are at the same time public servants of the Government, it might be claimed that such action would constitute a political act on the British Government's part—an act of official unfriendliness towards a foreign country with whom we are officially on good relations — and the Soviet Government would have reason to complain. The terms of the Army Council's order on the other hand, that intercessory prayers for Russian subjects should not form part of " religious services in the Army . . . in view of the political character which the controversy has assumed," were assailed in the House of Commons on Tuesday on the grounds (*a*) that they interfered with the expression of a deep religious feeling approved by the heads of the religious bodies concerned, (*b*) that it is not the business of the military authorities to lay down what intercessions should be made at services conducted by their chaplains, and (*c*) that the reference to politics begged a question which the advocates of intercessory prayers do not admit even to be open. The Government satisfied its critics by explaining that the embargo did not apply to voluntary services and the Prime Minister expressed his readiness to consult with the leaders of the other parties on how to overcome certain difficulties of detail, entailed by the fact that soldiers of some sects attend compulsorily places of worship where the bulk of the congregation is civilian. With regard to the debatable question of the bearing of political prejudice on the religious aspects of this issue, it is noticeable that some of the most distinguished representatives of the Church of England—for instance, the Bishop of Gloucester and the Bishop of Durham—have publicly emphasised the importance of keeping the religious intercession on behalf of Christians in Russia completely disentangled from political action and the danger of allowing a genuinely religious movement to be made the cloak for a political manœuvre. To an entirely detached observer it would appear that, unhappily, this entanglement has already taken place; but it is still not too late for the mischief to be undone. It can only be undone by the private initiative of the churches themselves; but the Government has at least kept the ground clear for them.

The Drift in Spain.—More than ever it appears that the retirement of the Marquis de Estella was the beginning, and not the end, of a rather deep political convulsion in Spain. As we have noted already, public dissatisfaction with the late *régime* has been tending, since the self-elimination of the dictator, to concentrate against the King, who still remains as a visible target; and a sensational shot was fired in this direction by a former Conservative Prime Minister, Señor Sanchez Guerra, in a speech which he delivered at Madrid on Thursday, February 27th. In this speech Señor Guerra did not go so far as to declare for a republic; but he did assert quite openly that the King, in giving his sanction to the dictatorship, had violated the constitution. Such a pronouncement, made publicly and deliberately and coming from such a quarter, has naturally given Spanish public opinion a further impulse towards the left. But, perhaps, the most powerful effect of Señor Guerra's speech upon the political situation in Spain will prove to be the indirect effect of the reaction which it seems to have produced in General Berenguer's Government. The delivery of the speech was followed by a collision between the crowd and the police in the streets; there have been sporadic demonstrations since; and the Government has been unwise enough to initiate restrictive measures which are likely to conjure up the very dangers which they are intended to avert. The fact is that General Berenguer's Government could only hope to succeed in their extremely difficult task if they could persuade the Spanish people to regard them as sincere liquidators of the dictatorship and restorers of a constitutional *régime;* whereas they seem actually to be drifting, through sheer timidity, into the dangerous and hardly tenable position of ministers whose first concern is to defend the Throne, even if that means a reversion to dictatorial methods. They have now refused permission to Don Melquiades Alvarez, the leader of the Reformists, and to Señor Lerroux, the leader of the Republicans, to hold meetings and address their supporters. They have refused permission for the holding of a national agrarian congress. And the holding of a general election for the Cortès (the constitutional parliament of Spain) seems to be further off than ever. This is not the way to save the Monarchy from a fall or the country from a revolution.

King Faisal and King Abd-el-Aziz.—At the beginning of last week King Faisal-al-Hashimi of Iraq and King Abd-el-Aziz al-Saud, of Najd and Hijaz, met on board a British warship in the Persian Gulf, under the auspices and in the presence of the British High Commissioner for Iraq. The meeting was cordial, and it accomplished practical results, for the two rulers were accompanied by their respective ministers and advisers, and these succeeded in negotiating a comprehensive protocol, regulating the relations between the two countries, before the meeting broke up. This achievement represents a considerable triumph for British diplomacy, as was handsomely acknowledged by the Arab parties themselves; and we stand to be rewarded by finding our whole position in the Middle East greatly simplified. For both these Arab kingdoms are in treaty relations with Great Britain; and if there had been a serious clash between them, which we had failed to avert, we should have been much embarrassed. The trouble between Najd and Iraq began in 1921, when they became immediate neighbours as a result of Ibn Saud's conquest of the intervening Arab kingdom of Jabal Shemmar. Since that year incidents have abounded. Najdi tribesmen have raided Iraq; Shammar refugees in Iraq have raided Najd (in spite of the Iraq Government's loyal efforts to restrain them); and Najd has demanded the removal of certain police posts constructed by the Iraq Government on the border between the Desert and the Sown, though these posts lay a long way to the right side of the boundary upon which the two Governments, under British mediation, had agreed. Thus the relations between Najd and Iraq had remained bad in spite of the treaty signed at Muhammarah on May 5, 1922, the protocol signed at Uqair on December 22nd of the same year, the agreement signed by Ibn Saud and the late Sir

Gilbert Clayton at Bahrah on November 2, 1925, and the abortive negotiations between the same two persons at Jiddah in the summer of 1928. The difficulty in the relations between Najd and Iraq is inherent; for, since the dawn of history, the hungry steppe-dwellers have constantly coveted the rich alluvial soil of Mesopotamia, and have taken possession of it whenever political opportunities occurred. During the last ten years the problem was aggravated because Ibn Saud's marches on the Iraq side were governed by a "wild man," Faisal ad-Dawish, who was recalcitrant towards his own master. This situation was cleared up last year, when Ad-Dawish twice rebelled against Ibn Saud and was twice defeated—taking refuge, after his second defeat, in Iraq and being interned by the British Air Force in garrison there. There still remained the dynastic feud between the two kings—a rivalry of 150 years' standing, which was turned into an apparently mortal feud in 1925-6, when King Abd-al-Aziz invaded and conquered the Hijaz and caused first King Faisal's father Husain and then his brother Ali to lose the throne of the ancestral patrimony of the Hashimi House. King Faisal's present reconciliation with the family enemy is an act of great broadmindedness and magnanimity. At last the horizon seems clear and the summary of the new protocol, as telegraphed to London, indicates that the thorniest points have been grasped and dealt with. The instrument is reported to provide for the establishment of a permanent frontier commission similar to the commission appointed under the tripartite treaty of 1926 between Iraq, Turkey and Great Britain to look after the Mosul frontier. In regard to the maintenance of Iraq police posts in the desert, Najd is reported to have accepted the Iraqi point of view; and it has been arranged that, if full agreement on this subject is not reached within six months, the dispute is to be settled by a court of arbitration whose award Ibn Saud has pledged himself to accept in advance. We may hope that a tiresome chapter in recent Middle East history has now been closed.

The Balance of Payments.—The current issue of the Board of Trade Journal contains the usual annual estimate of our balance of foreign payments on account of revenue transactions in 1929, with revised figures for 1928. The details, which are admittedly only estimates subject to a considerable margin of error, are given below:—

Balances of Income and Expenditure in the Transactions (other than the Lending and Repayment of Capital) between the United Kingdom and All Other Countries.

Particulars.	1927.	1928.	1929.
	In million £'s.		
Excess of imports of merchandise and bullion	390	358	366
Estimated excess of Government receipts from overseas*	1	15	22
Estimated net National Shipping Income†	140	130	130
Estimated net income from overseas investments	285	285	285
Estimated net receipts from short interest and commissions	63	65	65
Estimated net receipts from other sources...	15	15	15
Total	504	510	517
Estimated total credit balance on items specified above	114	152	151

* Including some items on loan accounts.
† Including disbursements by foreign ships in British ports.

The balance on bullion transactions was one of £16 million exports, but it must be remembered that the 1928 figures excluded an export of £18.4 million which had been pledged as security for a loan some years earlier. The merchandise import balance of £382.3 million was £30.6 million higher than in 1928, owing to an increase in imports and decrease in exports. On Government transactions, consisting mainly of receipts and payments in respect of loans between governments, reparation receipts and receipts on account of Indian home charges, the excess of receipts was seven million more than last year; the increase was mainly in reparation payments. The estimated income from shipping, which is only "net" from the national point of view and bears no relation to profits, is put at the same level as that of 1928, as it is believed that the relatively high freights early in the year must, on balance, have at least offset the subsequent low level. The estimate of net income from overseas investments for 1929 involves additional complications as compared with 1928, since, on the one hand, British securities have been growing more popular in the United States, while, on the other hand, the Stock Exchange collapse in New York has probably led to some bargain-hunting there by British investors. Further, many companies reduced their dividends in 1929, so that the Board of Trade has adopted the familiar statistical practice of assuming that unascertainable items on opposite sides are of equal weight, and has left its estimate unchanged. In connection with short interest and commissions, it is perhaps surprising that no change is made in the estimate, since it is pointed out that high money rates in New York must have been profitable to British lenders. The last item, which includes, among other things, emigrants' remittances and tourist expenditure, has also been left unchanged, though it is recognised as a doubtful, and probably a conservative estimate. On balance, therefore, the amount available for investment abroad was scarcely changed from last year.

The Civil Estimates.—The first impression on the taxpayer made by the Civil Estimates for 1930-31 is one of considerable discomfort, for including the revenue departments, but not the Post Office, they total £307.8 million, comparing with original estimates for the preceding year of £250.5 million, and with final estimates (including supplementaries) of £261.1 million. As it is extremely unusual for a Government to get through the year without presenting supplementary estimates, it seems fairest to compare £307.8 million with £250.5 million, and on this basis the estimates show an increase of £57.2 million. These figures, when analysed in the light of the appendix to the estimates which shows the main increases and decreases, are not quite so alarming as they originally appear, because much of the growth of expenditure is due to the fact that the coming financial year is the first to bear the full burden of de-rating, which accounts for £30 million of the increase. Moreover, £15 million of that apparent addition is merely a bookkeeping operation, as it will be balanced by the forthcoming disappearance from Consolidated Fund charges of £15 million hitherto paid under this last head in the shape of Exchequer contributions to Local Taxation Accounts. Against the remaining £15 million there is available, if the Chancellor decides to use it, the balance of the Rating Relief Suspense Account, amounting to £20 million, though Mr Snowden no doubt realises that this is in reality a "reserve" item in the internal balance sheet, and is therefore non-recurring. Subtracting this £30 million, for de-rating from the original increase of £57 million, there remains £27 million, of which £11 million represents the difference between last year's original and final estimates. The balance, £16 million, is made up as follows:—Next year's cost of the 1929 Pensions Act, £5 million; that of the 1929 and 1930 Unemployment Insurance Acts, £6.5 million; that of the fresh Education grants, £2.8 million; various grants for Development purposes, Agriculture and Forestry, £3.2 million, representing some of Mr Thomas's efforts to cure unemployment, and (most deplorably) including an extra £1,150,000 for the beet-sugar subsidy; and miscellaneous grants to Housing, Health and Unemployment Insurance and Old Age Pensions, £2.7 million. These make £20.3 million, and deducting certain savings, such as £2.1 million in respect of War Pensions, the final figure of £16 million is reached. Thus, of the £57 million increase, £11 million represents the margin for supplementary estimates, £30 million gross (£15 million net) represents the full cost of de-rating, and £16 million is new expenditure, part of which in its turn will probably show a further increase in subsequent years when its full burden is felt. Meanwhile the revenue returns to date suggest that revenue for 1929-30 will fall appreciably short of Mr Churchill's very optimistic forecasts.

Naval Estimates.—In view of the growth of expenditure shown by the Civil Service Estimates, it is the more satisfactory to find in the Navy Estimates for 1930 a reduction of £4,126,000, the net total being £51,739,000, against £55,865,000 last year, and £57,300,000 for 1928-29. The explanatory memorandum issued by the First Lord of the Admiralty shows that the decrease is due mainly to the reductions which the Government have made in the shipbuilding programmes of 1928 and 1929. As already announced from time to time in Parliament, seventeen vessels altogether have been cancelled in the programmes of these two years, including four cruisers (three of the 10,000-ton type, armed with 8-in. guns), four torpedo boat destroyers, five submarines, one submarine depôt ship, two sloops and one netlayer. The revised 1929 programme of construction consists only of one 6-in. gun cruiser, one destroyer leader, four destroyers and five minor vessels; and the provision for new construction is reduced to £5,603,481, as compared with £8,621,626 a year ago. Had the full programmes of 1928 and 1929 been put into effect, the First Lord points out that the new construction provision in these estimates must have been in the neighbourhood of £10,000,000, so that the retrenchment represents in all a saving of over £4,000,000. As to future shipbuilding, the Government have very properly decided not to formulate any proposals until the results of the Naval Conference have been fully considered; and a decision whether the three submarines of the 1929 programme not yet definitely cancelled are to be proceeded with is also deferred until the Conference has been concluded. Apart from expenditure on new construction, the explanatory memorandum states that, whereas last year's vote provided for 99,800 officers and men as the maximum number to be borne during the year, the number to be reached by April 1, 1930, is 97,050, which is expected to fall to 94,000 by April 1, 1931. For the ensuing year the net saving on pay is £254,000, offset in part by the automatic growth of the non-effective votes. With regard to the Singapore Base, Mr Alexander states that it has been found "that it would not be economical to retard the work contracted for"; and there is an increase of £200,000 in expenditure under this head. The estimates are a welcome evidence of the Government's determination to economise on armaments within the limits imposed by considerations of national security, but it must be pointed out that a serious element of uncertainty is imported into this section of next year's Budget by the warning given in the explanatory memorandum that, after the Naval Conference, "if necessary, a supplementary estimate will be presented" to cover both the suspended 1929 submarines and a possible new construction programme for 1930.

Our Index Number.—The slump in wholesale prices continued last month with undiminished severity, our index number at the end of February recording a further decline of over 2 per cent. The latest figure, as may be seen from the following table, is nearly 12 per cent. lower than a year ago:—

AVERAGE, 1927 = 100.

	Feb. 1929.	Nov. 1929.	Dec. 1929.	Jan. 1930.	Feb. 1930.
Cereals and meat	101·2	90·6	92·3	89·2	85·4
Other foods	88·5	84·0	83·6	83·1	83·0
Textiles	99·9	83·6	82·6	76·7	74·7
Minerals	96·4	92·4	92·4	92·6	90·5
Miscellaneous	91·4	89·8	89·2	88·0	87·0
Complete Index	95·6	88·3	88·3	86·1	84·2

The heaviest decline during February occurred in cereal prices, wheat, barley, oats and rice all cheapening substantially. Meat was dearer, and among "other foods" a fall in the value of coffee was balanced by a rise in the price of cocoa. After the violent slump of the previous month, wool quo

A Wheat Forecast.—An interesting survey of the wheat situation in the first four months of the present crop year, August to November, 1929, is contained in the January issue of "Wheat Studies" (published by the Food Research Institute of Stanford University, California). The year began with extremely large carry-overs in the principal centres, and although the crops harvested in the chief exporting countries were small, that is likely to be offset by a decline of import requirements, thanks to the excellent wheat, rye and feed grain crops of Europe. The following table shows wheat production in the principal producing areas:—

(Million bushels.)

	U.S.A.	Canada.	Europe.*	India.	Argentina.	Australia.	World.*
Average, 1909-13	690	197	1,347	352	147	90	3,004
Average, 1924-28	848	433	1,267	329	247	144	3,475
1928	930	567	1,408	291	340	160	3,915
1929	807	294	1,411	318	200	112	3,380

* Excluding Russia.

Though the Canadian crop was very small, its quality appears to be excellent. The relatively large European crop is attributable more to high yield per acre than to high acreage, the yield being particularly high in France, Italy and Spain. Both in the United States and Canada farmers marketed their wheat early, driving cash prices to unusually wide discounts below futures. Thanks to that fact and to heavy sales by the Argentine, stocks of wheat in Canada at the end of November, at 222.8 million bushels, were 38.7 million bushels more than at the same time in 1928, and far higher than in any previous year. Figures for net exports of wheat and flour from the principal exporting countries in August-November are given below:—

(Million bushels.)

	1924.	1925.	1926.	1927.	1928.	1929.
U.S.A.	149·0	35·2	104·8	126·1	74·4	66·5
Canada	76·0	123·9	109·3	112·9	189·5	69·9
Argentina ...	26·7	20·3	7·8	21·7	39·5	73·0
Australia ...	14·7	12·2	6·8	12·2	17·7	14·5
Total	266·4	191·6	228·7	272·9	321·1	222·9

The unusually small total is as interesting as the high proportion shipped from the Argentine. In these circumstances the wheat pools of Canada held out for a rise in prices in the New Year, and if they are doomed to disappointment it is only on account of the heavy inward carry-overs and the good crops in importing countries. Wheat prices in the first four months of the crop year were well below the general post-war average, though better, outside Europe, than in 1928. The review in "Wheat Studies" contains the following tabular forecast of developments in the wheat situation during the current year:—

(July-June for U.S.A., August-July for Others).

(Million bushels.)

	U.S.A.		Canada.		Argentina.		Australia.	
	1928-29	1929-30	1928-29	1929-30	1928-29	1929-30	1928-29	1929-30
Initial stocks	142	262	78	104	90	120	43	45
New crop	915	807	567	294	307	200	160	112
Total supplies ...	1,057	1,069	645	398	397	320	203	157
Net exports	147	180	406	210	224	170	109	70
Seed requirements.	88	90	45	45	23	24	14	14
Consumed for food	511	515	44	44	61	63	31	31
Feed, waste and errors	49	70	46	20	−31	3	4	4

Total disappearance	1,057	1,069	645	398	397	320	203	...

Upon this estimate, with its reduction of Canadian exports to one-half, the reviewer predicted that international cash wheat prices would be maintained in the New Year at about $1.38 a bushel (British parcels), an expectation which was certainly not realised.

Shipbuilding Rationalisation.—An important and promising step towards the rationalisation of the shipbuilding industry is marked by the registration of National Shipbuilders Security, Ltd. The chief objects of the new company, which will have a nominal capital of £10,000, but will be empowered to borrow up to £3,000,000, are stated in the memorandum of association to be:—

(1) To assist the shipbuilding industry by the purchase of redundant and/or obsolete shipyards, the dismantling and disposal of their contents, and the resale of the sites under restrictions against further use for shipbuilding.

(2) To enter into contracts with shipbuilders and others for the payment to the company of any sum or sums of money for the advancement of the purposes of the company.

(3) To purchase, take on lease or otherwise acquire shipyards, workshops, docks (graving or otherwise), factories, wharves or any other conveniences for the building, repairing or docking of ships or vessels of any kind, and to sell, dispose of or deal with and turn to account the same in such manner as may be thought fit.

Attention was recently directed in these columns (*Economist*, February 22, page 398) to the urgent need of eliminating surplus capacity in the shipbuilding industry and concentrating production in the more efficient yards. The present plan, as distinct from the alternative policy of promoting mergers (the capital loss in subsequently extinguishing the less efficient components representing a charge on the future revenues of the amalgamated concern) is based on the principle that it should pay shipbuilders, while retaining existing independence of management, to contribute jointly to the cost of "buying out" and dismantling redundant units. As the break-up value of the yards acquired is likely to be appreciably less than the price which will have to be paid to their owners as an inducement to sell, the remaining yards will have to make up the cost of the difference from economies gained by working more nearly at full capacity. The scheme thus bears a resemblance to that attempted unsuccessfully in 1928 by the Scottish mineowners, whose efforts towards eliminating surplus pits were frustrated by a counterbalancing expansion of output from the mines remaining in production. Given broad views and readiness to co-operate for the common interest, the shipbuilding "purge" should have better results, but though we welcome the plan as an interesting experiment whose objects are indisputably sound, it remains to be seen how far the new company can succeed in purchasing "uneconomic" yards without paying inflated prices. A merger gives complete control over assets amalgamated; Shipbuilders Security, Ltd., though support is said to be promised from a large majority of the concerns in the industry, will have no compulsory powers over the "unwanted" or—still more important—their creditors. The success of the scheme will clearly depend on the degree to which the joint-stock banks are prepared to work in conjunction with the new company and to use their position as creditors in the interests of the industry's collective future prosperity.

London's Transport Problems.—At the meeting of the Underground Railways, on Friday of last week, Lord Ashfield had much of general interest to say with regard to the problems of London traffic. Having referred to the remarkable growth of industry and population in the Greater London area, he emphasised the magnitude of the demand for increased traffic facilities which this growth was entailing. The resources of the Underground Group did not grow at the same rate as the possibilities of traffic, and though, so far as private enterprise was concerned, his companies had faithfully discharged their task to the limits of their strength, the lag between the demand for service and the production of service constituted the real traffic problem of London. "There may come a time," he said, "when underground railways will have to be found and provided by public authorities, just as roads are now found and provided." He went on to emphasise once again the point which he has made more than once before, that "the construction of such railways leads to the creation of land values, which escape entirely the burden of contributing to the agency which has created them." He regretted that the tentative solution embodied in the Bills promoted in

Parliament last year had been rejected by the Government, but he disclaimed any desire to be dogmatic as to the way in which the London traffic problem should be solved. Mr Herbert Morrison, the present Minister of Transport, had stated that "the end in view can be fully achieved, and the public interest can be fully safeguarded only if existing sectional financial interests are consolidated by the substitution of a single and simple form of public ownership for the complicated network of separate interests, private and municipal." Further, the Minister had declared that their intention was "to provide for the principle of commercial management of a self-supporting consolidated transport system." They had appointed Sir William McLintock to investigate the situation and he had undertaken to give Sir William all the information he might require "provided it is regarded as confidential, and, as the lawyers say, without prejudice." If the interests of shareholders, staff and passengers were equitably provided for, he was ready, without any sort of political bias, to co-operate with this or any other Government in any scheme which provided for the consolidation of services on efficient lines. If Mr Herbert Morrison, on whom the responsibility for evolving the scheme now rests, fails to work out a satisfactory solution of an admittedly difficult problem, it will not be for lack of broad views or readiness to co-operate on the part of the chairman of the Underground Group.

World Trade, 1926-28.—The League of Nations annual *Memorandum on World Trade and Balances of Payments* is now divided into three volumes instead of the former two. Volume I,* which deals only with trade balances, is now published and contains some very interesting analyses. The trade of the world is given in millions of dollars, as follows:—

	Imports.	Exports.	Total.
1926	32,117	29,770	61,887
1927	33,740	31,308	65,048
1928	34,475	32,233	66,708

Although growth has been substantial, it was at a lower rate in 1928 than in 1927, and this position is altered only to a negligible extent when various adjustments are made for price changes and other misleading elements. The difference between total imports and total exports is a matter not only of insurance and freight, but also of middlemen's commission, produce of fisheries, and incompleteness or undervaluation of returns. The following table of percentage distribution of trade by Continental groups shows that the share of Europe, which amounts to over one-half, is increasing, while those of Asia and Oceania are declining slightly:—

	Imports.			Exports.		
Group.	1926.	1927.	1928.	1926.	1927.	1928.
Europe(*a*)	53·3	55·9	56·5	45·5	47·3	47·3
North America(*b*).....	17·0	15·7	15·6	20·2	19·3	20·2
Caribbean(*c*)	2·2	2·0	1·9	2·9	2·8	2·5
South America	5·4	5·3	5·5	6·3	6·8	6·9
Africa.....	4·1	4·4	4·5	4·2	4·5	4·7
Asia(*d*)	14·9	13·7	13·3	17·7	16·3	15·4
Oceania	3·1	3·0	2·7	3·2	3·0	3·0

a Including U.S.S.R. *b* Canada, U.S.A., Newfoundland, Greenland, St. Pierre et Miquelon. *c* Mexico to Panama, both inclusive, and West Indies. *d* Excluding Asiatic Russia.

From the figures of absolute amounts it appears that Europe alone has a heavy balance of imports, the three American groups have a substantial export surplus and the trade of the remaining groups is approximately balanced. Europe's excess of imports, adjusted for freights, middlemen's profits and errors of valuation is estimated at $3,200 million. It is suggested that the invisible exports which balance this may be: $1,200 million interest on foreign investments, $800-900 million shipping receipts, $300 million receipts from tourists, $300 million emigrants' remittances, and $500 million covering capital borrowings, banking operations, insurance services and other commissions. From the more detailed European figures emerges the interesting implication that the increased demand for manufactured goods, which has been noticeable, comes mainly from European countries and especially from those which are highly industrialised. The growth in world trade, expressed as a percentage of trade in 1926, is shown in the table below:—

* League of Nations (Geneva). 4s.

Group.	Imports.		Exports.		Total.	
	1927.	1928.	1927.	1928.	1927.	1928.
Europe	110	114	109	113	110	113
North America.....	97	98	101	108	99	103
Caribbean.....	98	93	100	94	99	93
South America	103	111	115	120	109	116
Africa.....	110	117	111	119	111	118
Asia	96	96	97	94	97	95
Oceania	104	95	100	102	102	98
Total	105	107	105	108	105	108

The heavy fall in imports into Oceania was wholly due to the decline in Australian imports. Asiatic exports contracted mainly as the result of the fall in the prices of rubber, sugar and silk. The trade of the British Empire, which amounted to 28.6 per cent. of the trade of the world in 1928, grew by only 2 per cent., as compared with a growth of 8 per cent. in world trade. Even when allowance is made for the difficulties attending the comparison, and for the fact that the heavy fall in rubber prices plays a large part in reducing the later figure, it remains evident that Empire trade is developing at a slower pace than that of the rest of the world. This circumstance is very largely attributable to the contraction of Australian trade.

P.O. versus I.C.C.—The controversy between the Post Office and the Imperial Communications Company, on which we commented in a "Note" last week, has been carried a stage further by the publication of correspondence which passed between the company and the secretary to the Cabinet Wireless Telephony Committee last January, and of a letter which the company has now addressed to the Prime Minister, with an appeal that the question whether the company's wireless stations should be used for the Post Office overseas telephony services should be re-examined in public by an authoritative body, such as a Select Committee of the House. While we are still of opinion that the financial importance to the company of the disputed telephone business is apt to be exaggerated, the Postmaster-General has not given any convincing reason for the refusal of his Department to accept the company's proposal, made in the January correspondence now published, that its system and that of the Rugby station should be subjected to comparative working tests under identical conditions. The company's complaint that it has been left in the dark as to the questions put to the wireless experts called in by the Cabinet's Committee and the basis on which their conclusions were reached, is not without substance. From the point of view of Imperial interests it would be unfortunate if a company such as the I.C.C., whose status is in many ways analogous to that of a public concern, should continue to feel, rightly or wrongly, that it has suffered injustice at the hands of a Department of H.M. Government; and it is to be hoped that no feeling of *amour-propre* on the part of the Postmaster-General will prevent him from acceding to the not unreasonable request that the technical and financial merits of the two telephonic systems should be re-examined in a way which will satisfy the I.C.C. that its claims have not been turned down without proper and impartial consideration.

German Concessions in Russia.—German-Soviet trade relations, writes a correspondent, are at present severely strained as a result of the reported obstruction by the Soviet authorities of the activities of the Deutsch-Russische Saatbau A.G. (Drusag), a German agricultural concession. Some years ago the German Government invested considerable capital in the firm with the proclaimed object of promoting German-Soviet relations. The Drusag has since been very successfully developed; its production of selected seeds and raising of breeding cattle have made it the agricultural backbone of the North Caucasian districts. The firm had recently arrived at a profit-earning stage, and were about to use their right to export a percentage of their profits to Germany. But since the Moscow Government announced its intention of putting an end to the New Economic Policy, the Drusag has been subjected to numerous restraints. The

manager of the concession, Dr. Dittlow, and his assistant, Dr. Weimert, were accused of petty offences and heavily fined. A letter sent by Dr. Dittlow to the German Ambassador in Moscow was intercepted, and the courier, a German employee, arrested; a second letter, carried by the wife of the original courier, was similarly intercepted and its bearer arrested. Meanwhile, the local tax authorities suddenly seized the typewriters and motor-cars of the firm, declaring the land rent, which was only due on March 1st, to be already in arrears. At the same time, the trade unions have claimed a contribution amounting to 3 per cent. of their salaries from all German employees as from 1927 for the support of the Factory Workers' Council, in spite of the fact that the Germans do not participate in this organisation. The position of the firm was rendered still more difficult by bureaucratic obstacles which were placed in the way of the sale of a large contingent of cattle. German circles allege that all these measures are part and parcel of a concentrated effort to involve the Drusag in financial difficulties in order to make it impossible for the firm to fulfil the concession contract. Reported utterances of Soviet district officials are taken to prove the intention of the authorities to appropriate the concession's workings. On the other hand, the Moscow authorities deny the allegations, and disclaim all intention of embarrassing the concession. The Berlin Foreign Office has up to now dissociated itself from the Press attacks, but public feeling is becoming so strong that tension between the two countries can no longer be denied, particularly as the Soviet determination to harass foreign concessions has been made evident in a number of other cases. It seems that two motives prompt the Soviet action apart from general policy: in the case of concessions producing industrial goods for mass consumption the Soviets have lost a good deal of interest since the development of their own State factories; in other cases it is the transfer of profits abroad which is inconvenient to the Soviets but cannot be prohibited without violating the contracts. Both these reasons contributed to the arbitrary closing down of the flourishing Austrian textile concession, B. Altmann. The difficulties placed in the way of the Lena Goldfields are another case in point. German feeling has been aggravated further by a recent campaign of the Soviet trade Press criticising the business methods of German industrialists. On the Soviet side, the blow to the Russian match trade by the granting by the German Government of a monopoly to the Swedish Match Trust (which has since been followed by a similar arrangement on the part of the Dantzig Free State) is considered to be cause for resentment, as is also the provisional German-Polish agreement on rye exports. The key to the situation may perhaps be found in a recent speech of Rykow on foreign concessions in Russia, in which he said: "We need foreign capital but we do not need foreign capitalists."

Lancashire Cotton Corporation.—The Lancashire Cotton Corporation, Ltd., which was formed at the beginning of last year, continues to absorb more mills and from time to time it is necessary for the directors to authorise an increase in the capital. This week there has been an increase of £309,250, divided into £270,000 ordinary shares, £8,000 preference shares and £31,250 deferred shares for the purpose of absorbing five companies. The shares will be allotted to creditors and shareholders as soon as the liquidators of the several companies have completed their figures. The companies concerned possess about 720,000 spindles. The Corporation has now actual control of 42 companies, operating about 4,200,000 spindles. The issued capital is now £2,499,196.

Scottish Widows' Fund.—Although swollen by a large increase in single premium business, the total new business for 1929 of the Scottish Widows declined from £3,173,220 to £2,899,759, a circumstance due, no doubt, to the fact that 1928 was productive of an unusually large influx of business on account of the then forthcoming quinquennial bonus distribution. Nevertheless, the 1929 total is still well above the level of that secured in 1927. The society has the advantage of a very large premium income over which to spread its overhead charges, and the expense ratio works out, therefore, at a low figure, being only 11.2 per cent. for 1929, compared with 11.8 per cent. in 1928. The rate of interest earned is slightly higher, having risen from £4 13s. 6d. per cent. net to £4 14s. 9d. per cent. net. The balance sheet, when compared with that for 1928, shows evidence of a good deal of activity during the year. The principal movements have been a further substantial reduction in British Government securities from £9,572,000 to £8,360,000, with increases particularly in holdings of debentures and preference stocks and of foreign Government securities. Ordinary shares have also risen from £393,000 to £719,000, though they still represent a very small proportion of the total balance-sheet assets now amounting to almost £30,000,000. Two matters of special interest affecting the society were referred to in the course of his speech by the chairman at the annual meeting held this week. In the first place, in alluding to the exceptionally difficult financial conditions prevailing last year, he stated that, these notwithstanding, the depreciation suffered on the Stock Exchange securities in 1929 amounted to less than 4 per cent. of their value. Since the society's holdings of Stock Exchange securities amount to approximately £24 million, this statement means that the amount of the depreciation in 1929 was approximately £900,000—a moderate figure both absolutely and in comparison with investment indices. The chairman also announced an impending revision of the rates for whole life with-profits assurances, and that in a downward direction. The society's whole life with-profits assurance rates of premium have for many years been rather above the average, and this, combined with the more favourable experience both in regard to interest and mortality, makes some adjustment desirable. It is stated that the interests of existing policyholders still paying premiums at the old rates will be safeguarded by means of an adjustment in the reversionary bonuses allotted to their policies. The announcement is accompanied by a declaration of faith in whole life assurances as compared with endowment assurances in the following terms:—

> "For far too long the fundamental purpose of life assurance has been largely obscured by the popularity of a form of assurance whose chief attraction is the satisfactory manner in which it fulfils all the requirements of a thoroughly safe investment. I need not tell you that all we and others have said regarding the advantages of endowment assurance as a means of investing small annual savings still holds good, but we feel strongly that there is a distinct danger of too much attention being given to this alluring form of assurance and too little to the family provision aspect, which, after all, is the real origin and purpose of life assurance."

Clerical, Medical and General.—The annual accounts of this life assurance society include, as is customary, a complete list of the Stock Exchange securities held. Contrary to the general trend, British Government securities have been increased during the year by the purchase of £160,000 4½ per cent. Treasury Bonds 1932-34. Increases have also occurred under the heading of Debentures and Colonial Government and Municipal securities. Although capital profits and losses are not given effect to in the accounts, their amount is stated and, for last year, worked out at £122,000. This represents a loss of some 4 per cent. on the average value of the Stock Exchange securities, which, in the light of the conditions of last year, must be regarded as moderate. As to the remainder of the assets, United Kingdom mortgages have declined, rather unexpectedly, by £250,000, but Canadian mortgages have increased by £113,000, and now amount to just over £500,000. These Canadian mortgages are arranged through the medium of a subsidiary company established in Canada called the Clerical, Medical and General Investments, Ltd., and the chairman, in his speech, stated that the board have decided not to invest more than approximately 5 per cent. of the society's total assets in these Canadian mortgages, *i.e.*, £500,000 at the present time. The new business in 1929 has registered a large decline, from £2,027,955 to £1,700,842. The expense ratio is slightly higher, 15.1 per cent., compared with 14.7 per cent. in 1928. The rate of interest earned was £4 16s. 9d., compared with £4 17s. 5d. per cent. The year 1930 will mark the completion of the first quinquennium in the society's second hundred years of existence. In this connection the directors express in the report their confidence that the bonus to be declared a year hence will be a record, and point to the fact that the average net rate of interest earned during the current quinquennium has been £4 16s. 3d. per cent., compared with £4 12s. 9d. per cent. during the whole of the preceding quinquennium.

Refuge Assurance Company, Ltd.—With its chief office situated at Manchester and the bulk of its connections centred in the Midlands and North, the Refuge has been particularly exposed to the effects of the industrial depression. Considered in the light of these circumstances the 1929 report is a satisfying document. The new business both in the ordinary branch and in the industrial branch has registered an advance, in the ordinary branch from £6,377,442 to £6,479,796, and in the industrial branch from £16,952,369 to £17,711,086. The combined rate of interest earned on both funds worked out at £5 3s. 1d. per cent. net, against £5 2s. 10d. per cent. net in 1928. The expense ratio was 15.6 per cent., against 16.1 per cent. in the ordinary branch, and 37.1 per cent., against 37.3 per cent., in the industrial branch. It must again be stated that the expense ratios experienced by the Refuge are high, both absolutely and relatively. In connection with the industrial branch the chairman made the interesting statement that despite the fact that the premium income is more than doubled since the war it is collected by only three-fifths of the number of agents, while the head office staff has been decreased by one-tenth. While fully acknowledging the efforts made in this direction, it is obvious the company is still open to strong criticism on the ground of its heavy rates of expense. The figures relating to the sums assured in force are given in the report and since wastage by lapses and surrenders is an important element in this class of business, it is interesting to observe the extent of this factor in 1929. After allowing for the claims it appears that surrenders and lapses in 1929 were responsible for a wastage in the ordinary branch of sums assured for £974,000, equivalent to approximately 15 per cent. of the total new business for the year. Not unnaturally the wastage from this cause in the industrial branch is much greater and apparently amounted to sums assured equal to £9,880,000, equivalent to over 55 per cent. of the new business for the year. The results of the usual annual valuation made on the same bases as formerly are as follows:—

	1928.	1929.
Ordinary Branch:—		
Surplus earned during the year.....	1,077,630	1,089,490
Brought forward from previous year...	726,447	725,592
	1,804,077	1,815,082
Allocations:—		
To Bonuses to policyholders	880,636	924,532
„ Shareholders account	97,849	102,726
„ Investment reserve fund	100,000	250,000
„ Carry-forward next year	725,592	537,821
	1,804,077	1,815,082
Industrial Branch:—		
Surplus earned during the year.....	567,024	467,092
Brought forward from previous year...	37,571	44,715
	604,595	511,807
Allocations:—		
To Bonuses to policyholders	407,728	164,842
„ Shareholders account	52,152	47,274
„ Investment reserve fund	100,000	250,000
„ Carry-forward to next year.....	44,715	49,691
	604,595	511,807

In the ordinary branch a reversionary bonus of 44s. per cent. simple has again been declared, and for the second time an amount has been voluntarily set aside in the industrial branch for distribution to policyholders, though it is noticeable that the allocation on this occasion is for a much reduced amount. The distribution has again been utilised for the purpose of increasing the benefits under various tables in order to bring them into line with those now offered under the current and more favourable prospectus. The rate of dividend has been maintained at 50 per cent. on the company's capital of £300,000.

Overseas Correspondence.

UNITED STATES.—INDUSTRIAL RECESSION—PRICES—SHARE MARKET—MONEY.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 21.

DEVELOPMENTS of the week have done little to clarify the trade situation and sentiment generally is a shade less optimistic. From a statistical standpoint there is little to support the idea that trade is recovering and that the remainder of the year will bring further improvement. Key industries are rather uneven. The best performance continues to be given by the steel industry, which has raised its operating rate to 82 per cent. of capacity this week. However, the rate of gain since the beginning of the month has slowed down markedly, and consumers who had been counted on to increase their orders are not doing so. Railroad buying is the main influence, but it seems to be near the peak. Motor trade takings of steel have been a disappointment, and current orders do not suggest that the industry will do much better next month than it has this month. Last year the steel trade reached its highest rate of operation in May, but normally March is the best month. It is now fairly certain that steel is going to have no better than an average year.

Automobile production in February is running slightly ahead of January, but the rate of output is at only about one-third capacity for the industry. High-priced motor-car makers are feeling a considerable slump, the largest sales being made by cheap car manufacturers, with Ford expecting to turn out about a third of all the cars made this year. The most serious drawback to the motor trade is the used-car problem, which is worse than it has ever been. Quite possibly the public will buy almost as many cars this year as last year, but low-priced vehicles will be favoured as well as second-hand machines. At the moment, sentiment around Detroit is relapsing from the convalescence which it experienced early this month.

The building industry is showing no improvement as yet. Contracts let and permits issued for new construction in January and so far this month are well below a year ago, in spite of easier money. However, with the coming of spring some improvement should be shown, and public construction works are going forward. Distribution of goods, as measured by railroad traffic, is the lowest since 1923, and railroad earnings are feeling the loss. January earning statements are now being published, and they show a falling-off of approximately 50 per cent. from a year ago.

Commodity prices continue to fall, and the extensive drop in wheat and persistent weakness in cotton are causing some anxiety, although perhaps less attention is given here to falling commodity prices than on your side. It is doubtful if business is suffering much from lower prices, except in so far as hesitation is caused, but much further deflation would do a great deal to upset confidence. Commodity prices, according to the Bureau of Labour Statistics, dropped three-fourths per cent. in January, the decline coming principally in farm products. At 93.4 the

index compares with 94.2 for December and with 97.2 for January of last year, a decline of nearly 4 per cent. Wholesale prices are now the lowest for eight years. A comparison by groups follows:—

INDEX NUMBERS OF WHOLESALE PRICES.

	Jan., 1929.	Dec., 1929.	Jan., 1930.
All commodities	97·2	94·2	93·4
Farm products	105·9	101·9	101·0
Foods	98·8	98·6	97·2
Hides and leather products	113·6	107·4	105·1
Textile products	96·4	90·4	89·4
Fuel and lighting materials	82·5	81·3	79·9
Metals and metal products	103·6	102·1	101·2
Building materials	96·6	96·2	90·2
Chemicals and drugs	95·9	93·6	93·0
House-furnishing goods	96·6	97·3	97·3
Miscellaneous	80·5	79·8	78·7
Raw materials	96·7	95·0	94·0
Semi-manufactured articles	97·3	94·3	93·0
Finished products	96·5	93·9	93·3
Non-agricultural commodities	94·9	92·1	91·4

Unemployment, while decreasing, is greater than a year ago. The Bureau of Labour's general index for employment in manufacturing industries was 90.2 for January, as compared with 91.9 per cent. in December and 95.2 per cent. in the same month last year. However, the Bureau notes that, since January, there has been a small but sustained increase in employment.

The operations of the Farm Board to date have been a disappointment to friends of the scheme. Farmers themselves, while depressed by the fall in prices of their products since the Board was constituted, never looked to it for much help. It is doubtful what the Board could do to improve the situation, and students of the situation feel that the less the Board does now the better off the farmers will be in the long run. The experience of the Canadian wheat pool has done nothing to build up hope in artificially controlled markets. If the Board spends money enough for the purchase of wheat it conceivably will support prices for a while, but that would only serve to aggravate the malady of over-production later on.

Views on the business position are of three kinds. One is that bottom has been touched and that improvement will be continuous from now on. This view is held by bankers and business men; it is belittled by the economists. Number two is that Government expenditure for construction, seasonal improvement and the general feeling of confidence is creating a "hump" in the business line which will be followed by another dip before the year is out. Thirdly, there is the idea that no real improvement is to be expected before autumn. Economists, who look mainly to statistics, are divided on the two latter views. Bankers and others who rub shoulders with business men throughout the country are inclined to be more optimistic, and do not believe the recession will deepen.

At the moment the share market has turned irregular, and is this week going through its first recession of importance in over a month. Public participation is rising slowly, and the week brought a further gain of $44 million in brokers' loans. The position probably has become overbought for the present, and, so far as can be ascertained, the advance has outdistanced business recovery. Apparently the market is discounting hopes of trade revival; certainly it is not reflecting merely such improvement as is now visible. Stocks have, nevertheless, some factors in their favour. It may be confidently assumed that the banking consortium has at last disposed of the remainder of its shares bought for support purposes last autumn, and that load is consequently off the market. Moreover, a good deal of money from Europe is now seeking our securities, as well as rising home investment demand. If, of course, the spring proves to be a disappointment for trade, the market may have to go through another setback. Bonds also are improving, but new capital issues are not rising much, if any, the total for this week being $85 million, against $160 million in the preceding week.

March 1st financial settlements are not expected to disturb the money market to any extent. A 4½ per cent. rate probably will not be exceeded for call money, and 3½ per cent. doubtless is the lowest likely to be seen for some time. Later in the year another drop in the Federal Reserve Bank discount rate is anticipated, but the Board at Washington is reluctant to do anything which might encourage stock speculation, even at the risk of withholding a needed stimulant from trade. This week's statement for the System shows an increase of only $2 million in reserve credit outstanding, and the reserve ratio has risen to 78.5 per cent.

FRANCE.—NEW CABINET—FINANCIAL PROGRAMME—MONEY—INDUSTRY.

(FROM OUR CORRESPONDENT.)

PARIS, March 5.

M. TARDIEU, in spite of the refusal to co-operate—admittedly due to personal animus—of the Socialistic-Radical group, has succeeded in forming a veritable "concentration" Cabinet, embracing practically all the Centre groups. The new Ministry appeared before the Chamber to-day and secured a majority of 53 votes. The outstanding features of the Ministry are the presence in it of two prominent members of the Radical-Socialist Party in the Chamber (M. Dumesnil, who takes the Ministry for Marine; and M. Falcoz, Under-Secretary for Public Works), and three leading members of the same Party in the Senate (MM. Marraud, Education; David, Agriculture; and Rio, Under-Secretary to the Ministry of Marine); and the holding of six other portfolios, including those of Finance, Postmaster-General and the Air, by members of the Radical Left, or Loucheur group, whose split led to the successive defeats of both M. Tardieu and his would-be successor, M. Chautemps. MM. Dumesnil and Falcoz were formally expelled from the Radical-Socialist Party yesterday, but it is already known that, whatever may be the feelings of MM. Herriot, Daladier and the other "die-hards" of the group, the support of a fair number of other members of their party is henceforth assured to M. Tardieu. The removal of M. Loucheur, who is expected to figure among the anti-Tardieu section in future, leaves the way open for a final remodification of the National Insurance Scheme designed to render it practicable (both financially and otherwise) for coming into operation on July 1.

The country generally has welcomed the new Ministry as likely to meet its immediate needs, while M. Tardieu's success, both tactically and in regard to his choice of his men, is regarded even by his opponents as constituting a further marked personal triumph. The business world is showing increasing satisfaction in regard to the importance M. Tardieu has attached, in forming his Ministry, to the problem of financial and economic development. Four portfolios have been allotted to finance alone. M. Paul Reynaud, the new Finance Minister, is one of the leaders of the younger section of the Nationalists. He is a specialist in international economic relations, has travelled much, particularly in Germany and Mexico, and is a strong advocate of close economic *rapprochement* between France and Germany as the best means of preserving peace between them. M. Reynaud is only 45, but seven years before the Young Plan was ever heard of he was the advocate in the Chamber of the policy of binding French and German interests together as the preliminary step towards a sentimental *rapprochement*. While M. Raynaud's special function as Finance Minister will be to deal with foreign financial problems, that of M. Germain Martin, Minister for the Budget, will be to devote himself to the technical realities of the coming finance Bills. He also is of the younger and modern school, for he is still well under 50. He won a high reputation in the financial and economic section at the Quai d'Orsay during the war, and did well as Postmaster-General in the last Briand and the first Tardieu Cabinets. The two Under-Secretaries have for some time been recognised as among the Chamber's coming men. M. Francois Poncet, who fills the newly-created post of Under-Secretary for National Economy, will form the connecting link between the Departments of Agriculture, Commerce, Colonies, Public Works and Labour in the cause of national economic development, which is to form an outstanding feature of the new Ministry's programme.

The customary Ministerial declaration of policy, which was read in both Houses this evening, proved to be a characteristically Tardieu document, which may be summed up as an appeal to Parliament to drop party squabbles and get on with the country's business. The new Cabinet's programme is for the Chamber to vote the Budget as quickly as possible—it should have gone to the Senate by March 1—and then take in hand (1) the application of the plan for improving the country's economic equipment (already sanctioned), and (2) a whole series of "massive reductions of taxation designed to relieve production and trade." Further, before the end of the present session, a comprehensive scheme of fiscal reform is to be presented, designed "to correct the crying inequalities of a fiscal system which has too often been elaborated from day to day under pressure of circumstances." For the purpose of clearing up the muddle in which the Budget has been placed owing to recent party squabbles, M. Tardieu proposes the short and simple course of taking as the basis of discussion the proposals of the Chamber Finance Commission as they stand, and leaving further taxation relief to be dealt with in a separate measure. This method commends itself to common sense, if the Budget is to be ready for application by the end of March. The postponement of the coming into effect of the promised taxation relief—which, it is hoped, may become effective at the end of the first quarter of the new financial year—may thus compensate to some extent for the expected deficit accruing from the present quarter (due to the extension of the past financial year). This, it is estimated, will amount to about 2,500,000,000 francs, owing to the fact that, while expenditure during the three months will remain normal, the revenue belonging to the current three months of the expiring financial year will be appreciably lower, from the fact that the yield from direct taxation at this period is practically nil. So far as the Budget itself is concerned, much will depend on the attitude taken by the Finance Commission of the Chamber. The possibility of delay, necessitating a resumption of the vicious system of monthly votes on account (*douzièmes provisoires*), lies in the fact that, owing to the play of the group system, the Socialist Radical and Socialist Parties are in a majority in the Commission, and may refuse to facilitate progress in view of their refusal of M. Tardieu's recent proposals for a truce in party warfare.

Money remains abundant and cheap, in spite of a large outflow of unemployed capital to foreign centres where higher rates prevail. Day-to-day money rates to-day were 2½ and 3 per cent., and the private discount rate remained unchanged at 2⅝ per cent. For last Friday's settlement purposes the official rate ruling in the Parquet for carrying over money was 1¾ per cent., as against 1⅞ per cent. a fortnight before. In the Coulisse the rate remained at 5 per cent., as on February 15. Carrying over charges for Bank of France shares were 30 francs, and for Credit Foncier scrip 10 francs, and equally low in many other instances. During the week the rate for the mark in Paris has again touched gold export point, but on no occasion dropped so low as to render further outflows of gold to Germany profitable.

Last night, prior to the new Ministry's appearance before the Chamber to-day, M. Tardieu, the Ministers of Finance and for the Budget and a number of high officials of the Finance Ministry had an important conference with representatives of the leading banks to discuss the measures necessary "to restore the French market to its place as an international financial centre." The experts laid before the Ministers proofs of the excessive burden of many of the existing taxes on securities and Bourse operations, and opinions were exchanged as to the best methods for remedying the evils complained of.

Iron and steel production figures for January show fractional declines under both headings, due to the coming into practical operation of the 10 per cent. cut in output agreed upon, as from November, by the countries forming part of the European Steel Cartel. The total output of pig iron for the month was 876,000 tons, against 879,000 tons in December and 904,000 tons in January, 1929. The output of steel was 804,000 tons, against 812,000 tons in December and 842,000 tons in January, 1929. The slowing down which is affecting certain industries has left the French metallurgic producers untouched, and plants are still working to capacity. Internal prices remain firm, but it is reported that forward orders show a tendency to diminish, which accounts for the special efforts now being made by Continental producers in general to pay still greater attention to the export markets, and to push forward the organisation of common selling agencies in each foreign market. The dissolution of the entente between the Continental phosphorous iron producers, owing to disagreement between its members regarding the division of the export markets, is considered particularly unfortunate, in view of British efforts to develop export trade.

GERMANY.—FINANCIAL PROBLEM—ECONOMIC SITUATION—UNEMPLOYMENT—PRICES—MONEY—CAPITAL.

(FROM OUR CORRESPONDENT.)

BERLIN, March 5.

THE Government parties still find it impossible to agree on a method of bringing the finances into order. Yet the only point of difference now is in respect of a still uncovered deficit of 100 million marks in the unemployment insurance. The Socialists insist firmly on their proposal to meet this deficit by an "emergency sacrifice" to be made either by all payers of income taxes, by persons in the higher income classes, or by civil service officials and employees with fixed salaries. The German People's Party rejects this proposal with equal decisiveness, while the Centre supports the Socialists' demand but insists that in any case the financial problem must be solved before the Young Plan is accepted. It is this which constitutes the crucial difficulty. On Sunday and Monday it was generally believed that the Finance Minister was about to resign, and that the German People's Party would withdraw from the coalition. But since nobody knows how, after such a collapse of the present Government majority, any other could be formed and the Young Plan steered through Parliament, the negotiations among the parties were not broken off. It is hard to imagine that an issue of no very serious importance could shipwreck a Government that has overcome greater obstacles.

The new quarterly report of the "Institut für Konjunkturforschung" indicates that, in this institute's opinion, Germany has nearly reached the low point of her economic depression. From 1927 up to last autumn Germany's economy suffered a comparatively moderate decline. True, the bitter winter of 1928-29 and the credit crisis brought on by political events in the spring dealt a heavy blow to production. But the army of the unemployed was reduced in the course of the summer more rapidly than even optimists had expected, export trade appeared to be compensating in part for the lessened domestic demand, and although the uncertainty in the credit situation became greater, this appeared—except as to some branches of business, among them the textile industry—rather in the light of a desirable clarifying process than a dangerous unsettling of affairs. Strong support was afforded German economy at that time by the favourable situation of the iron and coal production of Western Germany, which was better employed and made higher profits in 1929 than in 1928.

But in the autumn the economic decline was intensified in a critical manner, and since the beginning of the year the situation has become very much worse. Despite the mild winter, building operations have come to an almost complete standstill, since the difficulty of securing credits increased to an intolerable point. With the economic depression in most other countries exports have fallen off, and the period of prosperity in the iron and coal industry has come to an end. As a result, the unemployment figures have reached a new high record. On January 31st they totalled 3,200,000, and to this figure must be added 1,300,000 workers on short time. A full quarter of all industrial labourers are without any employment whatever, and if one counts also those working on short time it brings the figure up to a third of all industrial employees. The production index of the

" Institut für Konjunkturforschung " dropped from 109.8 in June and 101.3 in October to 95.9 in January, as compared with 100 for 1928. The price development is most interesting.

WHOLESALE PRICE INDICES.

	(1913 = 100.)				(1926 = 100.)	
	Materials for Production.		Goods for Consumption.		Free Prices.	Regulated Prices.
	Raw Materials.	Finished Goods.	Raw Materials.	Finished Goods.		
1929.						
January	137·0	137·7	153·4	174·7	101·9	104·6
April	137·4	137·6	151·2	173·0	99·7	104·8
July	139·1	138·7	145·0	171·4	96·9	104·9
October	138·2	139·6	136·5	169·5	95·1	105·3
1930.						
January	136·7	139·5	129·2	168·4	90·4	105·0

These figures show that there has been a considerable drop in prices for goods for consumption, but not for materials for production. " Regulated " prices are the prices for those wares that are controlled by a cartel or other monopolistic agreement. The great difference between the price movements of the " free " and the " regulated " prices shows the great efficacy of these agreements in Germany. It can safely be assumed that the stability of the regulated prices increases the downward pressure on the free prices. The decline in the price for raw materials is very striking, and in the case of raw materials for consumption it has almost reached the proportions of a collapse. And Germany's economic life is affected not only by the shifts of the country's own economic situation; the international raw material crisis exercises a strong influence. This would assuredly be made still more apparent by the figures given above if these included the statistics for February. At the beginning the drop of the international prices for raw materials probably intensified the depression in Germany for the reason that it brought a reduction in the value of old stocks on hand, and possibly also placed difficulties in the way of export to countries that export raw materials. But in the long run the reduced expenditures for raw materials cannot but lessen the burden on Germany's economic life and favour its recovery.

The money market has gained greatly in liquidity in the course of the depression. A large part of this is naturally due to the liquidity of the international money market. That foreign currency is flowing in in considerable amounts evidences the high level of the Reichsmark. But the smaller demands for credit from domestic sources also help to ease the situation. The rates for daily money maintained themselves at from 4 per cent. to 6 per cent. during February, and a temporary stiffening at the last moment was merely due to inadequate preparations for the month-end settlements. The situation of the Reichsbank has become easier, although the last report does not make this clearly apparent, since—as is always the case at or immediately after the end of February—it is, for technical reasons, not typical. The cover, in gold and foreign currencies, of the note circulation, amounted to 70.1 per cent. up to the end of the month, and then dropped to 59.9 per cent. The Reichsbank's holdings of gold increased by 146,000,000 marks from the end of January to the end of February. Of this increase, 20 millions came from Paris and the rest from London.

The easing of the money market has as yet had little effect on the market for long-term capital. This alone explains why the progress of the depression was not checked by a better supply of credit. The " Institut für Konjunkturforschung " points to the fact that, in other countries as well, the easing of the money market has been more pronounced than the easing of the capital market. Long-term loans in Germany are greatly hampered by the uncertain credit position. From January, 1929, to January, 1930, the daily number of bankruptcies has increased almost a third. But the capital market, too, shows signs at least of the beginnings of recuperation.

BELGIUM.—BANK REPORTS—INDUSTRIAL SET-BACK—AGRICULTURE—EMPLOYMENT.

(FROM OUR CORRESPONDENT.)

LOUVAIN, March 1.

THE reports, just issued, of the big Belgian banks are valuable for the light they throw on the general business trend, and for the forecasts of the future they embody. Financially, 1929 was in general a good year. It was especially so in banking, which enjoyed a particularly large revenue from current transactions, on account, *inter alia*, of the considerable margin between the rates paid on deposits and the interest obtained on loans. On the other hand, the revenue from new issues was very much less plentiful than previously, and the banks have even in a few cases suffered losses from the insolvency of clients.

In the reports of the National Bank of Belgium and the Société Générale de Belgique, as well as in official declarations to the general annual meetings of both companies, the fact was emphasised that Belgian costs have reached parity with those of foreign industries, and that great caution in estimating the future must be exercised. The fact can no longer be ignored that the period of exceptional profits is over, and that to-day many industries are struggling to keep from losing ground. Warnings are being delivered in high places against excessive public expenditure. Manufacturers dare not protest much in public against additional social charges, but they are, nevertheless, very uneasy as to the effect on their competitive power of the measures now contemplated. A Bill now before Parliament will extend family allowances over all Belgian industries; a second Bill, which the Government has framed under the inspiration of the German system and of the Bill recently voted in France, is intended to enforce compulsory insurance against illness and invalidity. A third measure under consideration concerns annual holidays with pay for all workmen. Manufacturers remark that these additional charges will have to be shouldered in a period of probable economic depression, and, that, on the other hand, the standard of life of Belgian workmen has improved considerably since the war, and is actually comparable with the standing of the working classes of the other industrial countries.

The returns of the big banks once more show the enormous power wielded by the banks in directing and controlling the economic activity of Belgium. The country is indebted to them in part for the speedy post-war industrial restoration and for the impetus of recent years; but public acknowledgment of this is mixed with a certain feeling of distrust.

This year will be fertile in anniversaries for Belgium. It is in celebration of the centenary of her independence that two international exhibitions will take place, one in Antwerp and the other at Liége, and 1930 is also the eightieth anniversary of the foundation of the National Bank of Belgium, the charter of which was granted on May 5, 1850. Business people are afraid that this jubilee year will not be as favourable as had been hoped, as uneasiness about the economic situation has not disappeared, rather the contrary. There is no actual crisis, but depression is extending more widely. In metallurgy there is some recovery; the diamond industry is in a less bad position and is operating at 60 per cent. of normal output. Partial unemployment prevails in the glassware industry; the textile industry is still depressed. In the Belgian Congo there is a real commercial crisis. Belgian agriculture is no longer enjoying the favourable situation by which it has recently been characterised. This industry has been severely hit by the fall in sugar prices; and as the result mainly of dumping from France wheat cultivation is not very profitable. Nevertheless, the position is not serious, and the " Boerenbond " (League of Agriculturists) have not in their recent publications given way to a pessimistic tendency. The prices obtained for eggs, bacon and butter and the income from cattle raising are fairly profitable. Horse breeding gives rise to complaint; the effects of the growing use of motor traction have been keenly felt, and the prices are very low. In short, Belgium has lost the preferential position she has had recently and no longer enjoys the brilliant prosperity of the years 1928-29. On the other hand, there is still little unemployment, and hands dismissed in certain industries easily find employment in the coal mines.

NORWAY.—BANK RESULTS—INDUSTRY—FOREIGN TRADE—UNEMPLOYMENT—BOURSE.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, February 28.

AT the recent annual meeting of the Committee of Deputies of the Norges Bank, the President, Mr Rygh, characterised the past year as a period of decided progress and stabilisation, although the general decline on the world markets during the latter half of the year brought some uncertainty into the situation. In his remarks bearing upon the future line of economic policy to be followed, he emphasised the fact that it had been, and would still be, the aim of the Norges Bank to keep the discount rate as low as possible, with due regard to all interests concerned. He called attention to the necessity of following up the good results which were reached during the past year, and pointed out the chances now awaiting our trade and industry in the form of a favourable situation on the money market. The result of the activities of the Norges Bank during 1929, as shown in its balance sheet, clearly reflects the process of liquidation that has been going on, and probably will continue during the present year. As a consequence, the net profit of the Bank has been reduced by some 3 million kroner, but the dividend is maintained at 8 per cent. as for several years past. Most of the bank reports for 1929 show satisfactory results, at any rate when allowance is made for the somewhat unfavourable interest conditions that prevailed last year. This is especially true of the savings banks, which are obliged to invest a considerable part of their resources in fixed interest securities.

The general industrial outlook is promising, especially in view of the fact that labour peace will be secured in those branches where agreements were due to expire this year, or where regulation was to take place on or before July 1st, according to the official price index. As to the former group, including among others the textile and foodstuffs industries, the parties have agreed to maintain the present wage scales, while in the latter group, consisting chiefly of the iron, mineral, canning and milling industries, the employers have decided not to demand the reduction of wages which they would be entitled to put into effect according to previous agreement. This arrangement includes about 50,000 workers, and is, consequently, of very far-reaching importance. Of special interest in connection with industrial developments is the fusion that has just been announced between the Lilleborg Fabriker (Soap Factories) and the De Nordiske Fabriker (De-No-Fa) (Oil Factories of Fredriksstad). Lilleborg's share capital will be increased by 100 per cent. and the new capital, which will then aggregate 6 million kroner, will be taken up wholly by the De-No-Fa at a rate of 150 per cent. The old capital will be converted into 10 per cent. cumulative preference shares, which will be placed on an equal footing with the new shares. Fifty per cent. of De-No-Fa's share capital is now held by Messrs Lever Brothers, while Lilleborg own 70 per cent. of the remaining half, in addition to which the latter firm has also bought one-half of the share capital of the A/S Brödrene Lever, Oslo.

According to foreign trade returns for January, the value of imports amounted to 80.9 million kroner, 7.7 millions in excess of the figure for the same month last year. At the same time the value of exports has risen by 3.5 million kroner, from 60.3 million kroner in January last year to 63.8 million kroner this year. The excess of imports over exports consequently amounts to 17.1 million kroner, against 12.9 million kroner last year. Of the import items, the most conspicuous is the import of ships, which has risen by 12.3 million kroner, compared with January, 1929.

Reports from the various labour exchanges, as at January 15th, show an increase of about 500 unemployed persons, compared with the situation as at December 15, 1929, the figure being now 22,550. Compared with the same month last year, however, there is a decline of about 1,800, and the decrease in December, 1928, amounts to about 5,500. The cost-of-living index of the Central Bureau of Statistics, as at February 15th, shows a reduction of 1 point, while the wholesale price index has been reduced by three points from the preceding month. The Bank rate reductions that have already taken place in London and New York, and the possibilities of further reductions in the near future, have not failed to influence bonds quotations on the Bourse, where dealings have taken place at rising prices. Both banking and shipping shares, and also whaling shares, have been firm, while industrials are somewhat irregular.

TURKEY.—CURRENCY REGULATIONS—THREATENED TREASURY DEFAULT—STATE BANK.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, February 26.

DESPITE prolific legislation and the enactment of hurried, last-moment measures by the National Assembly, the position of Turkey is steadily going from bad to worse, and nobody knows what may happen if the agricultural situation turns out to be as bad in 1930 as it has been for the past three years. Of this, fortunately, there are as yet no indications, but, owing to the mild weather so far experienced, vegetation is, on the whole, very forward, and the winter has still to run its course.

By an unprecedented concourse of circumstances, a position has arisen which is seriously hampering the activities of the mercantile community. The break in the value of the Turkish lire towards the end of last November and the vigorous intervention of the fiscal authorities which ensued, have rendered operations in the foreign exchanges a singularly delicate and difficult matter. Relative stability has been imparted once again to the national currency, but at what cost the following projected Treasury regulations will show. It must be borne in mind that this Ordinance has been drawn up in the conviction that the trouble with the Turkish currency is attributable in great part to the machinations of malevolent persons both in this country and abroad, and to the speculative operations of fishers in troubled waters. A draft law now lying on the table of the House, entitled " A law for the preservation of the Turkish currency," provides, *inter alia*, for the following contingencies: Banks and other establishments which prove refractory to the provisions of this Ordinance are liable to prosecution, to withdrawal for a period of from 15 days to two years of permission to operate, and to the imposition of fines varying between 500 and 1,000 liras. Banks and other establishments which persist in engaging in reprehensible practices will be closed for good, and the same penalty will

be inflicted on all their branches. Bank managers, bank clerks and all other persons contravening the decisions of the Council of Ministers in any circumstances whatever will be liable, on conviction, to the penalties laid down in Sections 358 and 359 of the penal code (imprisonment of from three months to five years and fines running from 50 to 500 Turkish pounds). The law in question is to remain in force for a period of three years from the date of its promulgation.

These drastic legislative measures give the uncomfortable impression of a vigorous attempt at enforcing stability of the national currency with a big stick. To the growing restiveness of the harassed trader must now be added the very natural nervousness of the bank manager and of his head of exchange. That there may have been individual cases of outside speculators slipping in and out to take their profit when the lira was fluctuating fitfully some few months ago is highly probable. But to argue, from those premises, that serious banking establishments—some whose names are household words in overseas mercantile communities—have been indulging in wholesale speculative deals at so critical a juncture in the economic history of this country is to overlook, if not completely to ignore, the veritable source of the evil which lies at the root of the whole trouble. If the exact nature of that evil is not appreciated in this country, its essence, at all events, is understood in financial circles abroad, the truth being that the heavy Treasury purchases carried out on a weak and exiguous exchange market for public works developments should have been materially restricted some two years ago instead of only now. They might even, at that period, have been suspended altogether, as has now became necessary, until such time, at least, as the country's adverse trade balance and the generally unfavourable economic situation have been restored to the normal by natural causes and remedies. It will be readily understood that the various restrictions and prohibitions now in force or still being contemplated, have had a very baneful effect on trade in general, even on that section of it which is still sound and more or less normal, and that, as a consequence, many business houses are entering into voluntary liquidation.

To add still further to the confusion, the recent announcement of the Minister of Finance, that Turkey may not be in a position to meet her next coupon liability to foreign bondholders a few months hence, has introduced into the sphere of State finances that undesirable element of uncertainty and suspense which, unfortunately, already characterises the atmosphere of the money, exchange and produce markets. The occurrence foreshadowed does not appear, in its essence, to be a threatened default by reason of the depletion of the coffers of State, but an understandable reluctance to come on to the market for the requisite exchange wherewith to remit cover for account of the bondholders. To put the whole matter in a nutshell, events have led the Government into an *impasse*. Either the Treasury must honour its signature, purchase exchange and see the value of the national currency rapidly decline, or it must default. The Turkish Government are unquestionably faced by a serious dilemma from which snap-legislation is scarcely likely to extricate them. That their credit has been seriously affected already is reflected in the heavy drop in Unified Bonds, which have lost over 50 points on this market since the Minister made his ominous announcement.

Although legislative measures are to be proceeded with immediately after the Bairam festival, which falls due a week hence, with a view to the early establishment of the State Bank, it has not yet been revealed whence this institution's working capital is to come. Up to three days ago, it was anticipated that a portion at least of the necessary funds would be provided by the Ottoman Bank group, but, since then, the negotiations between the bank's delegates and the Treasury officials at Angora have been abruptly broken off. The pourparlers were held up in the first instance by the question of the quota of capital to be contributed by the Government and the foreign syndicate respectively. This difficulty was apparently overcome and the negotiations were resumed. A deadlock was reached finally, however, over the demand set up by the foreign group to be invested with power to inspect every quarter the records of budgetary revenue and expenditure kept at the Treasury. This claim, as the price of foreign participation, was immediately rejected by the Turkish Ministry on the grounds that it was incompatible with the dignity of an independent State, and that it was too reminiscent of methods resorted to by foreign financial groups in the old days of the capitulary *régime*. There matters rest. The semi-official press are making much of the point that a State bank, as a national institution, should unquestionably be built up with national resources exclusively. This probably inspired statement leads one to wonder why the Ottoman Bank was approached at all if the Government can put up the requisite funds. If the Government cannot do so, there will then probably be an appeal to the nation on patriotic grounds. Any appeal of this kind—if appeal there is to be—would come at a very awkward and inopportune moment.

HONGKONG.—SIR CECIL CLEMENTI—NEW YEAR CELEBRATIONS—TEXTILE IMPORTS—STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

HONGKONG, February 1.

By the departure of Sir Cecil Clementi for the Straits Settlements, Hongkong has lost a Governor whose services have been of inestimable benefit to the Colony as well as to British prestige in the Far East. Arriving in Hongkong at the height of the anti-British boycott, Sir Cecil at once set himself to the task of restoring harmony with Canton, and the cordial relations which exist to-day, not only between the British and Chinese in this Colony, but also between the Hongkong Government and the Canton authorities, are the result of his untiring labours. His profound knowledge of the language, culture, and people of China has been a great asset in winning Chinese goodwill, and his policy has been carried out without any suggestion of subordinating British interests. The whole-hearted tributes paid to Sir Cecil Clementi by press and public must have mitigated his keen regret at leaving the Colony where he has spent no less than eighteen years of his official career.

In the face of strong disapproval on the part of the Nanking Government, the Chinese New Year's Day has been widely observed with all the customary enthusiasm. The official adoption of the Gregorian calendar and the elaborate ceremonies held in Nanking and the provincial capitals on January 1st have made no impression on the public. The Commissioner of Police in Nanking has been dismissed from office because of his failure to suppress the celebrations of the lunar New Year, and the Maritime Customs, which were closed for the first three days of January, with the intention of ignoring the Chinese New Year, were, after all, forced to close during the festival, although the latter was disguised by the euphemism "Spring holidays." But, while the Chinese cling to their time-honoured New Year's Day, they have ceased to regard the previous day as the occasion upon which all financial obligations must be brought to a final settlement. No longer does the dealer feel bound to choose between payment in full or bankruptcy, and each year sees more and more outstanding debts brought forward into the new account. The complaint of bad trade has persisted for several years, and the prospects of a change for the better grow steadily worse. Customs statistics continue to record an annual increase of trade, but there can be little doubt that much business is being carried on at a loss. Piracy, brigandage, irregular taxation and currency depreciation are as troublesome as ever, and to these must be added the extra strain on the import trade by reason of the deplorable slump in the price of bar silver, and the consequent revision of the system of Customs revenue, which amounts to a surcharge.

So far as Hongkong is concerned, the fall in exchange does not appear to be paralysing imports to the extent which was feared. In piece-goods the restricted buying of recent years has left the market in a comparatively healthy state, and such stocks as remain in the godowns have been brought in at rates of exchange 25 to 30 per cent. above the present level. The buying season for woollens, for shipment July/August, has certainly been

delayed by the headlong fall in exchange, but now that the New Year festival is over dealers are coming forward with firm offers. Owing to the severe drop in the value of raw wool Bradford is able to quote prices which are not very far above dealer's ideas, despite an eighteenpenny dollar, and already some substantial orders have been booked. No doubt there will be several regular lines which will prove difficult to negotiate, but in such cases the market will probably be content to take a lower quality. The fact remains, however, that stocks are low and demand exists, and it is to be hoped that low exchange will not prove an insuperable obstacle to the booking of new business. Fancy cotton piece-goods, which have been arriving from Manchester during the past month, have already started to go into consumption and sales of stock goods, remaining over from previous seasons, have been effected at satisfactory prices, which indicate a firm market. Much, however, depends upon the political situation in the interior, and while Canton and the surrounding districts are quiet, fresh trouble is looming up in Kwangsi and the important distributing centre of Wuchow may once again be cut off from Hongkong.

Restricted trade and low exchange have brought about easy money conditions in Hongkong, and a mild boom on the Stock Exchange has already set in. Share values are being pushed up regardless of dividend returns, and as the Chinese are becoming more and more familiar with Stock Exchange operations, it is only too likely that their natural proclivities for gambling will create an unhealthy situation, such as that which existed in 1925, and lead to disastrous losses.

Letters to the Editor.

ROAD FINANCE AND MOTOR TAXATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I was much impressed by your correspondent's article on "Road Finance and Motor Taxation," and have been interested in the subsequent correspondence on the subject.

"Ratepayer's" view that a rent should be charged for using the roads appears to me to be unreasonable. The roads have evolved from bridle paths and cart tracks, and have been gradually improved through the ages to cope with new types of traffic. Until the period of motoring they must be regarded in the light of common land, being owned by the community at large, and the community having free use of them. At the advent of motoring there could have been no question of charging a rent for the use of the roads. They were in the nature of a bequest from previous generations, to be maintained and improved and passed on to succeeding generations. The birth of motoring, however, gave rise to an unprecedented expenditure on roads, some of which must be regarded as capital expenditure; for it involved purchase of lands and laying of completely new and expensive road surfaces.

The motorist should be charged a share of the costs of maintenance and of capital expenditure, and as the latter is met almost exclusively out of loans, this means that he should be charged a share of interest on the loans, and of the repayments, as and when they are made. Beyond this it is difficult to see what charge can reasonably be made to the motorist.

In showing that present motor taxation more than covers the increased cost of roads due to motoring, your correspondent took into account the amount of "Loan Charges," and as these include, as well as interest, repayments of capital and payments into sinking funds, he proved conclusively that the motorist was being over-charged.

If "Ratepayer's" scheme of charging a rent for using the roads were initiated, the motorist would benefit under it at least to the same extent as he paid. The value of the roads before motoring days he shares equally with the rest of the community, so that a rent charge in respect of this would not effect any transfer of wealth between motorist and ratepayer, and in respect of the increased value of the roads since motoring days, the motorist would be entitled to receive rent to an amount representing the extent to which he is financially responsible for improvements and maintenance, and as this responsibility is, in fact, roughly equal to his share in the use of the roads, his contribution in rent would be roughly equal to his claim on the rent fund.

"Ratepayer" seems to think that the railways are a model of land transport from which all deductions concerning land transport should be made. Because the chief expenditure of the railways is a capital charge, he suggests that it should be the same with all other forms of land transport. No one would suggest this in the case of transport by the "tank" or by pack-horse, and in this respect the motor comes somewhere between these and the railways. It does not possess the flexibility of movement of a "tank," and it needs a better and wider road surface than the pack-horse, but it has infinitely more flexibility of movement than the railway train and does not need such an expensive permanent way, nor so many bridges, tunnels, stations, etc. Moreover, the motor was fortunate enough to be able to make use of the existing roads, while at the same time improving them for the pre-motoring users. In fact, it has many natural advantages over the railways, and for many kinds of transport is superior to the railways, and had the steam engine and motor vehicle been invented at the same time, it is unquestionable that much less would have been spent on the railways and much more on the roads. The problem of to-day is to attain the proper equilibrium between the two modes of transport so that all transport is being done in the most economical way possible.

In conclusion, I should like to refer to the letter from "Railwayman." One does not know, of course, whether "Railwayman's" desire to increase motor taxation is the official desire of the railway companies, but if so, does it mean that the object of the railways in obtaining their almost monopolistic interest in road transport is, not to carry out the proper co-ordination of rail and road transport, but rather to stunt the natural growth of the latter in an effort to divert as much traffic as possible back to the railways and maintain an artificial value of railway capital?

The Stock Exchange.

ARGENTINA AS A BORROWER.

When last we reviewed the status of Argentine investments (the *Economist*, May 11, 1929) we were at pains to point out that while Argentine Government stocks were rated highly among foreign securities, they were not to be regarded as immune from the risks attaching to even the best investments of their class—in short, that "an agricultural nation must expect to meet bad as well as good times arising out of circumstances largely beyond its control, however well its activities may be spread." If the investor did not appreciate this truism at the time, recent events have furnished him with ample opportunity to do so, for Argentina has been called on to face the consequences of bad times much more speedily than appeared possible when those words were penned.

The root of Argentina's present trouble is the slump in world values of wheat and wool, her failure to dispose of a significant proportion of last season's large wheat crop through lack of demand from Europe, and the poor crops of wheat and linseed harvested this season. In Liverpool there has been an unprecedented accumulation of Argentine wheat, and in the last quarter of 1929 both wheat and wool were being shipped from the Argentine unsold owing to the congested state of the European markets. This trouble has occurred, unfortunately, at a time when Argentina has been compelled to foot the bill in respect of very heavy imports of manufactured goods in the first nine months of 1929. In December last, the Government effectively stemmed the export of gold obtainable from the Conversion Office by suspending the exchange of gold against presentation of paper. The inevitable result has been a sharp fall in the Argentine dollar, which has reached 42 5/16d., against a par value of 47.57d.

Argentina's unexpected departure from an entirely unfettered gold standard, to which she returned in August, 1927, occasioned considerable surprise and criticism. The gold reserves of the Conversion Office are still extremely strong, amounting to about £85 million, or 77 per cent. of the existing note issue, and although the country lost £34.8 million of gold in 1929, it had, in fact, gained £34.7 million in 1927-28. The Argentine authorities may urge by way of palliation—though scarcely of justification—of their policy that their country does not possess effective machinery for controlling fluctuations in currency requirements. Heavy speculation in the exchange may doubtless have been an additional factor in the decision of the Government to take drastic action. Nevertheless, their policy has generally affected Argentine credit in the foreign gold markets, as the following table shows:—

	High, 1929. Price.	Red. Yield %.		Mar. 5, 1930. Price.	Red. Yield %.	
Gov. 4% Rescission Red. 1943 ...	88½	£5	5 0	84½	£5	14 0
„ 5% Intern'l 1909, Red. 1945	97¼	£5	5 0	92	£5	16 0
Port of the Capital 5% Red. 1949	97¾	£5	4 0	90¾	£5	17 0
Buenos Ayres, Province of, 3½%, Red. 1974	62	£5	18 0	57½	£6	8 0
Buenos Ayres, City of, 5%, 1909 Red. 1946	97	£5	5 0	90¾	£5	18 0

It has been seriously questioned in some quarters, of recent weeks, whether a redemption yield of over 6 per cent. is not a more reasonable return to expect from Argentine Government stocks, having regard to economic possibilities, than the 5¼ per cent. redemption yield basis on which they were quoted a year ago. [The yield in the New York market was always about ½ per cent. higher.] In the first place, the national debt of Argentina has been increasing at a somewhat rapid rate. The next table will show that, since 1923, the external debt (excluding that of the provincial governments) has more than doubled, while the total of external, internal and floating debt has increased by nearly 23 per cent.:—

ARGENTINE GOVERNMENT DEBT.
In Millions of paper pesos (= ·44 of gold peso).

	External.	Internal.	Floating.	Total Million $	Total Million £
1923	539	777	875	2,191	191·0
1924	687	836	747	2,270	198·0
1925	833	911	485	2,229	194·4
1926	888	957	397	2,242	195·5
1927	1,104	1,052	446	2,602	227·0
1929*	1,119	1,152	415	2,686	234·3

* At June 30th.

An increase of over 100 per cent. in external debt in six years can be judged only by reference to the extent to which the new money has been put to productive uses. It is natural that a new country with exceptional natural wealth should import capital for its development. The next table shows that, although the Argentine export trade, 65 per cent. of which consists of wheat, maize and other cereal crops and linseed, has doubled since 1913, it has not progressed greatly since 1923:—

ARGENTINE OVERSEAS TRADE.
(In millions of gold pesos).

	Exports.	Imports.	Balance.
1913	519	496	+ 23
1924	1,011	829	+ 182
1925	868	877	− 9
1926	792	822	− 30
1927	1,009	857	+ 152
1928	1,030	901	+ 129
1928 (Sterling equiv.) in million £) ...	204·1	178·6	+25·5

These figures should not obscure the fact that the *invisible* balance of payments as distinct from the *visible* returns of trade in merchandise, is adverse to Argentina. An estimate of the balance of payments of the country has been made by Señor Carlos A. Tornquist, the eminent Argentine banker, in his annual review of the economic position of his country. The following are his figures for the Argentine economic year ended September, 1928:—

	Million £.
Interest on external debt	12·7
Railway dividends	15·6
Other dividends on foreign capital	7·5
Foreign residents' remittances	6·7
Travellers	3·9
Cedulas and Securities imported	2·0
Total	48·4

These outgoings, totalling over £48 million, set against the favourable visible balance of trade of £25.5 million, leave an unfavourable invisible balance of £22.9 million in 1928, which was increased to £52.7 million by the net import of £29.8 million of gold. This debit balance of £52.7 million was met partly by foreign borrowings, £7.1 million of which Señor Tornquist traced to banking credits, and £20.2 million to new capital issues, while he was unable specifically to determine the balance.

Argentina, indeed, is bound to be a heavy borrower for some years to come. Apart from fluctuations in national prosperity, to which any country relying mainly on the export of primary products is peculiarly susceptible, the time is still distant when Argentina's own annual savings will provide all the capital required for developing the economic resources of her admittedly rich domain. Her Government finances, however, are on a satisfactory basis. In the 1929 budget total of $705 million paper pesos (which allowed for a surplus of $1 million paper pesos), 48 per cent. of revenue was accounted for by import duties, 21 per cent. by revenue duties and miscellaneous taxes, 21 per cent. by State enterprises and only 10 per cent. by direct taxation. Of the total expenditure of $704 million paper pesos, about $217 million was required for the service of the national debt. The latter figure represents by no means a negligible proportion of the whole, but the proportion is not sufficiently high to disturb the tax-paying community. It is likely, however, to receive more attention at a time when low prices for wheat and wool have significantly reduced the contemporary national income or when inclement climatic conditions have diminished the total volume of the national output, than in comparatively favourable years, such as Argentina has, until quite recently, experienced.

The "bad times" from which Argentina is now suffering are doubtless temporary and look worse because of the very prosperous years immediately preceding, but they serve to illustrate the risks attendant upon investment in the debt obligations of an agricultural nation. Whether borrowing and increased production in Argentina have been exactly proportionate to each other in the last ten years is another question, to which events in the comparatively near future may provide an answer. On the nature of that answer depends the possibility of Argentina's ability to raise new money in the capital markets of the world at a price of less than, say, 6 per cent. The Province of Buenos Aires, whose credit is on a different basis, recently accepted an offer from a group of American bankers for a loan of $8,000,000 U.S. in the form of 6½ per cent. bonds at 90. The test may come shortly, seeing that the Argentine Government recently borrowed £5,000,000 from London bankers in the form of 5¾ per cent. Treasury bills repayable at the end of this year.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 18.	March 20.

The new Account, like its immediate predecessors, opened under dull auspices, synchronising with the publication of higher Civil Service estimates, which emphasised the market's fears of increased taxation in the next Budget. Monetary prospects, however, improved consistently as the week progressed, and the investment sections showed an encouraging accession of firmness, which was accentuated after the announcement of the Bank of England's decision on Thursday. Some slight amount of bear covering took place in industrial shares, and the reduction in Bank rate was naturally reflected in Thursday's prices; but, as a whole, although the downward trend of prices of recent weeks was arrested, the tone remained apathetic, and there was no evidence to suggest that cheaper money had produced any fundamental change for the better in the general situation.

Only a moderate business was done in Gilt-edged at the beginning of the week, though prices were fully maintained. By Wednesday afternoon, however, expectations of a reduced Bank rate had become more general, Three-and-a-Half per Cent. Conversion Loan being a feature. Thursday's news caused a marking up throughout the list, Funding Loan being particularly firm. The Indian Budget disclosures and the opening of Mr Gandhi's campaign depressed India loans, but selling appeared to have run its course by mid-week. Dominion and Colonial stocks were steady, though dealings were on a small scale. The result of the South Africa loan came as a disappointment to the market, where this borrower had always been well regarded. Recent Corporation issues continued to be slowly but steadily absorbed.

The outstanding feature of the Foreign Market was an improvement in Brazilians, the effect of prospective Sinking Fund purchases being reinforced by favourable news regarding the elections. A moderate demand was again in evidence for European loans, though prices showed only fractional changes. Japanese Bonds were in moderate demand.

Liquidation of Home Rails ceased early in the week, and with the advent of a few buyers prices became noticeably harder before the stocks (except North-Eastern) went ex-dividend on Thursday. The traffic returns were again favourable, though comparison with 1929 continued to be vitiated by last year's "frost" factor. Underground were again conspicuously satisfactory, but the stocks failed to hold the whole of an early advance. Among foreign rails, Argentines were steadier on a small turnover, the general expectation that the forthcoming interim dividends would be maintained offsetting the depressing traffic returns. Havanas were again on offer on the passing of the preference dividends, but Antofagastas improved on a few small buying orders. Canadian Pacific was unfavourably affected by the continued decline in receipts.

The Industrial markets opened with a continuance of the apathy which had characterised business in earlier weeks. The carry-over revealed a decidedly small open position. Subsequently, however, Mr Baldwin's speech was taken as a bull factor, and a modest amount of inquiry for some of the better class shares induced some bear covering in mid-week. The Bank rate announcement tended to strengthen stocks which had previously shown a firmer tendency, rather than to improve values as a whole, and Thursday's tone was somewhat irregular after a first spell of tentative marking-up following the announcement. International Nickel were freely dealt in on both sides of the Atlantic before the publication of the report (discussed in an "Investment Note" on page 530), but subsequently encountered profit-taking. In other directions New York was an uncertain quantity, business in Internationals being confined largely to Hydro-Electrics and Brazilian Traction. Cables and Wireless recovered a part of last week's losses, and bear closing induced a partial rally in Courtaulds before the meeting. Little business was done in breweries, and tobacco shares were again influenced by budgetary fears, though a stronger tendency intervened before the end of the week. Dunlops came on offer, and Turner and Newall were lower on forced selling from the provinces. Mr Baldwin's pronouncement was seized upon as a reason for putting Newspaper shares better. Imperial Chemical showed a slow, but steady, improvement. Ford shares rose sharply on the report (discussed on page 528), and Guys were higher on a good profit showing, but the remainder of the motor share market suffered from scattered selling. Bank shares lost ground and Insurance shares, though steadier, were largely neglected.

Dealings in rubber shares dwindled to small dimensions, though prices showed only a slight decline. The spurt in the commodity, after the Rubber Growers' Association's acceptance of the May no-tapping proposals, had entirely subsided by the beginning of the week, and quotations resumed their mid-February level. Anglo-Dutch developed unexpected weakness, with a moderate recovery on Wednesday. Tea again had a firmer tendency at the week's auctions, and share prices were higher when changed, though no appreciable volume of outside demand was experienced. The oil market opened with London a bear, on provincial selling and the unfavourable result of the "Shell" issue, and New York a bull, on well-informed expectations of a decline in crude output. Ultimately, the latter tendency triumphed, and prices became firmer, with a few exceptions, of which V.O.C. was the most noteworthy. Attocks rose sharply on rumours of a coming favourable statement regarding developments at depth.

Depression in the mining markets was emphasised by a further fall in metal prices. Silver touched a new low level, the shares of Santa Gertrudis and Burma Corporation weakening in sympathy. Tin had fallen to £161 12s. 6d. by Thursday, but the share market paid more attention to the satisfactory interim dividend announcements of several leading companies, and quotations remained steady. Rhodesians were firm at the opening, and Roan Antelope and Bwana M'Kubwa strengthened on encouraging quarterly reports, but many issues reacted later to the general lethargy, and Congo Border were marked down to 14 on Thursday, after touching 13½. Tintos were offered from Paris, but firmed up later. Sub Nigel were a strong feature on Johannesburg demand, while Globe and Phœnix added a fraction on rumours of good developments.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The forward movement of shares has been resumed, despite less favourable trade statistics, on the idea that the beginning of a business recovery is not far distant. The week's rise of $94 million in brokers' loans is indicative of increasing public interest. The majority of industrial shares are now at new high levels for the year, but increasing irregularity is shown among erstwhile market leaders, such as United States Steel, and the railroad group is doing little. Sugar shares, including beet and Porto Rican companies, have rallied, the Senate adopting a higher tariff schedule. Strength is best sustained in the tobacco, amusement, public utility and electrical manufacturing groups, where earnings are expected to be up to or above last year's level. The steel industry shows a further decline of 2 per cent. in operating capacity, now 78 per cent., and only moderate progress is being made in the motor trade, while unemployment is admitted at three million by the Department of Labour. It is believed, however, that a steady reduction is now in progress, as the warmer weather permits building operations and other outdoor work to be begun. The National Automobile Chamber of Commerce estimates the February automobile output of this country and Canada to be 358,300 cars, against 287,477 in January and 497,705 a year ago; but motor shares are dull. The bond market is strong and more active, all Government issues now standing at par or higher. The progress of the tariff is slow, but little notice is taken of labour disturbances.

PARIS.

During the month of February, the Paris Bourse continued to undergo the same experience as in the second half of January. Successive interventions by the banks having so far failed to restore any appetite for investment business, the markets rapidly atrophied and prices continued to crumble. Transactions during February were so few and far between that the smallest purchases or sales caused considerable variations in quotations, giving the market a nervous aspect, though, correctly speaking, apathy was its dominant note. Even "rentes" were affected. The political crisis which occurred in the second fortnight of February caused further uncertainty, and depressed the market. Normally the decline in prices following the heavy selling at the end of January would have brought in many buyers, but in point of fact the response on "change" was negligible.

INVESTMENT NOTES.

The Stock Exchange Committee.—Notices are now exhibited in the Stock Exchange, writes a "House" correspondent, announcing that on Thursday week, March 20th, a ballot of members will be held for the appointment of a Committee of thirty members to be called "the Committee for General Purposes," to hold office for twelve months from March 25th next. "The names of the persons on the existing Committee willing to serve again, and of all new candidates, their proposers and seconders, shall be publicly exhibited," according to Rule 1 in the Stock Exchange book, "in like manner during three business days previously to such a ballot being held." The method of election is governed by the Deed of Settlement, in which it is laid down that every member of the Stock Exchange shall have a vote, and shall give a single vote to each of the thirty men he wishes to see elected. If he votes for less than thirty, or if he gives more than one vote to a single candidate, his list is disqualified. Obviously, however, it is practically impossible for every one of thirty men to be personally known to each of 4,000 electors. In practice, a member of the Stock Exchange usually knows, more or less intimately, about ten of the proposed Committee, has a vague idea of another ten, and has no practical knowledge of the remainder. The younger a member, the less likelihood of his being able to judge as to the fitness of any particular candidate. Many endeavours have been made to alter this system of voting, but the only means of doing so would be to effect a change in the Deed of Settlement, and this is a matter, not for members as such, but for the proprietors of the Stock Exchange. The position affords a striking example of the disadvantages of dual control of the Stock Exchange by members (as such) on the one hand and by member-shareholders on the other. The duties of Stock Exchange Committee-men have been increasing so rapidly of late that it is not always an easy matter to persuade hard-working and experienced members who would make excellent committee-men to accept nomination for a thankless and exacting office. During the past five months—*i.e.*, since the Hatry crisis—it has been nothing unusual for Stock Exchange Committee-men to serve on ten to twelve committees per week. The General Committee sit on Monday, but out of their work spring many side issues. A year ago, one of the older members of the Committee said: "Now we shall have a quiet time." Never was fair hope more unkindly frustrated. Some kind of relief is frequently proposed, one suggestion being that a small number of paid men should sit on the Committee, and give up the whole of their time to the more mechanical work with which the Committee must deal. A Committee-man's office at present is purely honorary. He gets his lunch for nothing, and has the right to enter the Stock Exchange at times when it is closed to the ordinary member. He has no other privileges, though, possibly, a philosophic member might regard his liability to be taken to task, and roundly reproached inside and outside the "House," as tending to relieve the monotony of life. It may be that, at the next election, certain of the present members will resign. Whoever comes in, however, will find the work more arduous than ever before, except during part of the war period. It may be hoped that the public, as well as members of the Stock Exchange, will give due recognition to that fact.

General Store Profits.—The accounts of the leading London shops and stores for the past year reveal a satisfactory state of affairs. Sales, as a whole, have been more than maintained and expenses, for the most part, reduced. The following table shows the results for 1928 and 1929 of seven London stores and one provincial concern (Messrs Lewis's, of Liverpool, Manchester and Birmingham). The total profits of the eight

companies were £3,008,941 last year, against £2,910,565 in 1928:—

* See text below.

One large company, Maples, has recorded a decline in profits, for reasons which are not stated in the balance sheet, but may not be unconnected with the interruption to normal business involved in the rebuilding of the company's Tottenham Court Road frontage—an operation which should, of course, have beneficial reactions on future earning power. In any case, the company is more "specialised" than any of the others in the list, and may have been affected to some extent by the activity of other furniture houses in pushing "hire purchase" business. William Whiteley served more customers than in 1928, but business "has become more difficult" in certain departments, and Messrs Selfridge have again been called upon to make up the ordinary dividend to the guaranteed level of 25 per cent. The profits of the other six companies increased, last year, in the aggregate, by £187,323, or 7 per cent., though only in one case, Swan and Edgar, were dividends raised. It is doubtful, however, how far these results reflect increased working-class, as distinct from middle-class expenditure, though it is natural to expect the increase of nearly 6 per cent. in industrial activity, and the rise of 200,000 in the number of insured workers in employment last year to be reflected in retail purchases. Whether the outlook for the next few months is equally promising is, however, an open question. The decline of 9 per cent. in wholesale commodity prices last year has not yet been adequately reflected in retail prices. The total stock-in-trade of Lewis's, Selfridge, and Thomas Wallis, at the date of the last balance sheets, was valued at £1,008,723, a decline of 6¼ per cent., as compared with the total a year earlier. The total stock-in-trade of Harrods and William Whiteley, on the other hand, at £1,355,550 showed an increase of 3¾ per cent. Were the companies to find it necessary to write down their stocks of saleable goods to an appreciable extent, a year hence, the result might not be sufficiently formidable to involve an absolute decline in profits, but it might prevent their expansion at a rate comparable with that of the past twelve months.

Australian Finance.—We last discussed the position of Australian Government stocks in the *Economist* of February 15th, when we took cognisance of the efforts of the Australian Loan Council further to reduce its loan programme. It is now reported that at a meeting on February 21st the Loan Council agreed that the future loan programmes of the various States should be reduced to a basis which could be financed mainly in the Australian instead of the overseas markets. It was also agreed that reductions should be made which within twelve months would bring the rate of expenditure down to one-half the level of the financial year ending in June next. To achieve this object immediate steps were to be taken to reduce the current rate of expenditure and Governments were to frame their loan programmes for the next financial year to conform with the new policy. The net loan expenditure of the Commonwealth and States during the financial year ending in June may be put at about £44,000,000, so that the loan programme for next year will total about £22,000,000. The Loan Council added that £10,000,000 of sinking fund moneys were being used in the current year for the redemption of Australian debt. This sum should increase in subsequent years, and should greatly assist future borrowing on the reduced scale. This announcement will be welcomed by investors in Australia. At a recent conference of premiers, Mr Scullin, the Prime Minister, stated in his opening speech that fundamentally the position of the Commonwealth was sound, although the present outlook might cause "temporary misgivings." The latest figures of subscription to the Australian £10,000,000 Conversion Loan total over £12,000,000, including over £3,000,000 in cash.

Ford Motor Company.—This company has a capital of £7,000,000, of which £4,200,000 is held by the Ford Motor Company of America. In the prospectus announcing the public issue of 2,800,000 shares of £1 at par in December, 1928, the company gave no estimate of future profits. It merely gave figures of the profits earned in the past four years by the companies acquired—namely, Ford Motor (England), Henry Ford and Son, of Cork, and the subsidiaries in France, Germany, Spain, Sweden, Denmark, Belgium, Holland, Italy and Finland. These average profits were equivalent to over 13 per cent. (£910,000) on the new company's capital of £7,000,000. They were derived principally from assembling and marketing, and only to a limited extent from manufacture, and were, of course, concerned with the old "Model T." The first report of the new company for the period ended on December 31st disclosed net profits, after depreciation, of £1,013,507, which include £104,512 in respect of profits of affiliated companies earned prior to their reorganisation and received by way of dividends and premium on sales of shares, but do not include dividends receivable from these affiliated companies in respect of trading in the year 1929. These profits are equivalent to 14.48 per cent. (before taxation) on the ordinary share capital of £7,000,000. Income tax requires £195,000, and a 10 per cent. dividend, less tax, is paid, leaving £258,507 to be carried forward. A reserve has been established of £811,736, but it is not clear how it has been secured. Out of this reserve it is proposed to write off the whole of patents and goodwill (£350,000 and £250,000 respectively) and all the preliminary expenses (£68,324). The balance sheet shows a surplus of cash and bills over debts of £2,950,337. Land and buildings stand at £571,540, plant at £301,468, and investments in and loans to affiliated companies at £4,169,109. The net assets work out at £1 2s. 9d. per £1 share. It should be understood that the profits have been derived from the assembling and marketing of the Ford "Model A" cars in Great Britain, and not from manufacturing (except as regards the manufacture of tractors at Cork). The report states that good progress has been made with the erection of the new factory at Dagenham, in Essex, and that plant and tools requisite for the manufacture of tractors have been installed at Cork and are in full production. A point on which the market would welcome definite information is the extent of the earnings of the affiliated companies which have not been brought into the Ford trading account. The report states that the Continental companies, with the exception of the Italian, have been reorganised during the year, and 40 per cent. of each company's interest has been disposed of in the country where it has been incorporated (excepting that the company's remaining interests in the Swedish and Finnish companies have been invested in the Danish company). It is also stated that each of the affiliated companies has traded successfully during the year. The Dutch subsidiary, for example, earned good profits and has been able to write off all preliminary expenses and a part of the goodwill and to pay a 10 per cent. dividend. Ford Motor shares are at present quoted at £3 cum dividend, to return a yield of nearly 3½ per cent. The shares, after the issue in December, 1928, rose at one time to 4 9/16.

Midland Counties Electric Supply.—The value of the investor's "equity" in the progressive electrification of Great Britain is well shown by the accounts of this prosperous company, which in eight years has increased its capital by £2,000,000 in seven instalments. Net profits

for the year ended December 31st last totalled £218,668, against £190,100 in 1928 and £168,050 in 1927. In spite of the fact that new capital cannot at once achieve its full earning power, percentage earnings on ordinary shares have risen progressively for the last three years. This year the distribution on the ordinary shares has increased from 6½ per cent. to 7 per cent. out of 8.4 per cent. earned.

Financial year ends December 31.	1927.	1928.	1929.
	£	£	£
Net profit ...	168,050	190,100	218,668
Brought forward ...	4,023	4,106	5,676
Preference dividend...	71,341	78,000	84,000
Rate per cent. ...	6	6	6
Ordinary capital :			
Earned, £ ...	*96,709*	*112,100*	*134,668*
Paid, £...	77,341	88,495	112,000
Earned per cent. ...	*8·0*	*8·2*	*8·4*
Paid per cent. ...	6·5	6·5	7·0
To reserve...	12,500	15,000	16,177
Other allocations ...	6,785	7,035	7,589
Carried forward ...	4,106	5,676	4,578

A further allocation of £16,177 is made to reserve, bringing that item to £60,000. In addition, £7,589 is set aside for debenture redemption, and issued debenture stock totalling £375,000 now stands at £298,220. Cash is down from £152,519 to £15,836, and the debts from other companies, which, last year, amounted to £170,556, have apparently been paid. On the other hand, investments have risen from £3,823,815 to £4,356,439, while the premium on the last issue of £250,000 ordinary £1 shares has been added to the investment reserve account, which stands at £169,609. At the present price of 28s., the £1 ordinary shares give a yield £5 5s. 6d. per cent. allowing for a dividend of 7 per cent.

Lamport and Holt.—The investing public has little direct concern in Lamport and Holt, as the ordinary capital is held predominantly by Elder, Dempster and other members of the Royal Mail group, and interest on the two issues of cumulative preference shares has been in arrear since June 30, 1925. Investors will regard the report and accounts for the year to December 31st last rather as a sidelight on the Royal Mail position; and the picture presented is not reassuring. Profit, after debenture interest, is given as £35,583, against £27,041 in 1928, but this figure is struck before providing for depreciation and losses of subsidiaries, for which the company proceeds to set aside £95,200 and £10,538 respectively, after bringing in £50,000 from reserve. The new Companies Act has added enormously to the informative nature of the balance sheet. A year ago the assets side included the laconic entry: "Ships and Shipping Investments, £7,159,527," out of a balance-sheet total of £8,150,458. On this occasion, the splitting-up of the conglomerate into its constituent items reveals that the company's investments in its chief subsidiary—the Liverpool, Brazil and River Plate Steam Navigation Company, which provided no depreciation last year on its fleet and wharf properties—stands at £2,440,117 (cost, £3,000,000, less reserve £559,883), while the parent has made loans to this and other subsidiaries ("less amounts written off and reserve") amounting to £905,083. Investments and loans to shipping companies—presumably to other members of the Royal Mail group—at cost, account for a further £2,671,270, but an illuminating note shows that the value, at December 31st last, of such of these investments as had a market quotation, was no more than £1,000,090, against a balance-sheet "cost" figure of £2,003,256. The auditors' report points out that "the investments in subsidiary companies and the general investments (the latter appear at £834,289) are included at their book values, which are considerably in excess of their present values under existing conditions." If, for argument's sake, the £6,875,319 of assets to which this remark applies be taken at two-thirds of their book value, and the company's vessels (shown at cost, less 5 per cent. per annum depreciation) at their present book value, approximately 77 per cent. of the £2,240,000 ordinary capital appears to be unrepresented by any existing assets. The actual position is, of course, unascertainable without inside knowledge of the finances of the whole group, but one thing, at least, is certain: that Lamport and Holt is not making any contribution, directly or indirectly, to the current earnings of the Royal Mail Company.

Inveresk Meeting.—The meeting of the shareholders of the Inveresk Paper Company was a stormy affair, but ended with an agreement betwen Mr Binder, the chairman, and Mr William Harrison, the ex-chairman, to co-operate. After these two gentlemen had delivered their speeches, Mr Harrison's solicitor announced that they had agreed to shake hands, bury the hatchet, forget the past, and to work together in the shareholders' interests. This statement was greeted with considerable applause from the shareholders present, the supporters of Mr Harrison being in strong force. Mr Binder did not attempt to reply in his speech to Mr Harrison's attack on the scheme for the amalgamation of Provincial Newspapers, Ltd., Daily Chronicle Investment Corporation and United Newspapers (1918), Ltd., except to clear Sir Thomas Catto's name, which had unnecessarily been introduced. This scheme of amalgamation, Mr Binder declared, was now dead. Although alternatives had been discussed, no practical decision had been reached. The company's banks were continuing their support for the time being, but the question of finding further funds to complete the newspaper programme remained to be solved. The place for its consideration, Mr Binder rightly pointed out, was the board room, not the rostrum. The investments, which stood in the balance sheet at a book value of £6,638,000 had, Mr Binder declared, a present value of less than £4,800,000. It was evident, he said, that some assets might have to be sold in order to lighten the burden of bank overdrafts of £1,151,954. The company's troubles, he added, were mainly financial. A large number of properties were sound and only required to be relieved of financial burdens to yield satisfactory dividends. Viscount St. Davids, on behalf of a large number of preference shareholders, remarked that before the company was out of its troubles it would be necessary to create debentures, that the preference shareholders would consent to such an issue, but that if the issue had to be made before July 1st, he would ask that their voting powers should come into force at once. The present position of the preference shareholders was that on July 1st, if the preference dividends remained unpaid, they would be entitled to vote and they would then out-vote the ordinary shareholders. A resolution for the adjournment of the meeting was lost and the report and accounts were finally carried. How Inveresk Paper will get out of the hands of the banks and into an independent and sound financial position naturally remains no less a problem with Mr Binder and Mr Harrison working together than before. The Stock Exchange, however, takes a more hopeful view of the outlook, the £1 ordinary shares, which earned 2.7 per cent. last year, having advanced to 11s.

Anglo-Foreign Newspapers. — Sir Robert Donald, chairman of the Anglo-Foreign Newspapers, Ltd., has a deservedly high reputation as a journalist. His speech at the extraordinary general meeting of his company,

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

which had been called so that shareholders might receive a statement of the position without waiting for the annual general meeting later in the year, was probably the finest piece of journalism that has ever appeared in company meeting reports. The company's position, however, is anything but a happy one. It was formerly under the auspices of the Carmelite Trust and Associated Anglo-Atlantic (now in liquidation), two finance companies of the Horne group. The shareholders subscribed £1,312,500 on a prospectus which gave no details of the properties acquired or to be acquired. Some of the troubles of the company, according to Sir Robert Donald, were pre-natal. Plans had been made by the two parents, Carmelite Trust and Associated Anglo-Atlantic, to apply a large part of the capital to certain " interlocking " transactions—including an investment of £500,000 in Carmelite Trust shares acquired from the Associated Anglo-Atlantic and the purchase of certain options from Carmelite Trust for £145,000. These transactions altogether absorbed £720,000, or more than half the capital subscribed. After paying the preliminary expenses, the amount remaining was only £680,000. Investments were then made in certain shares of the Rothermere group (some of them acquired from Carmelite Trust at the ruling market prices) and some other marketable securities at a cost of £528,559, and later in certain trade and technical papers, at a cost of £396,000, which, we understand, now include a controlling interest in Industrial Newspapers, Ltd. Sir Robert Donald explained that, while he was engaged upon negotiating for newspaper properties, he became dissatisfied, and offered a letter of resignation to the chairman in June. The result was the appointment of a Committee of the Board to handle negotiations. The independent directors, however, finding it impossible to obtain full information about the management of the company's affairs, became more and more dissatisfied. They arranged for an accountant to investigate the position in October, and became convinced that it was advisable to separate from the Horne group. Finally came the bankruptcy of Mr H. S. Horne and the removal of the company's offices from the City to Westminster under the " independent " directors' management. There is a large sum in dispute with Carmelite Trust, arising out of certain purchases made for the company by that trust. The revenue of the company Sir Robert estimated at £46,000 from subsidiary newspaper companies, and £20,000 from investments; a total of £66,000, against a total annual expenditure of £16,000. Although the operations of the first year would show a considerable loss, the company was now paying its way. Bank loans amounted to £140,200, and, in addition, there was a sum due to the Carmelite Trust of £141,956. against which there would be a substantial offset. After making full allowance for depreciation of the company's investments, the net assets amounted to £751,422, or 57 per cent. of the company's capital. Other properties were being acquired which were full of promise. On the whole, Sir Robert Donald was fully entitled to the shareholders' vote of confidence for a frank and illuminating speech.

International Nickel.—The report of the International Nickel Company of Canada for the twelve months to December 31, 1929, is, despite the exhaustive nature of its figures and comments, a difficult document to interpret, for three reasons. The results for the first time show the effects of the merger with Mond Nickel; the company is still in the development stage, though it is pushing forward with an ambitious programme with considerable energy; and the year's trading experience is not necessarily fully representative of possible conditions in 1930. In the first three quarters of 1929, sales at times actually exceeded production, but in the last quarter, shipments of nickel from the Port Colborne refinery fell off by 20 per cent., though foreign business and sales from the Huntington works held up remarkably well. Over the whole twelve months $1.47 was earned per common share, against $1.05 in 1928, and dividends were paid aggregating ninety cents per share.

Years Ended December 31st.	(Thousand $) 1928. (International Nickel of Canada only.)	1929. (International Nickel and Mond Nickel.)
	$	$
Capital—		
7% Cum. pref.	8,912	27,628
Common, no par (13,758,208)	46,909	57,361
Debentures of British subsidiaries	...	7,627
Ten-Year Notes	1,800	1,500
Total income (after expenses, ordinary repairs, and maintenance)	16,707	31,154
Net profit	12,399	22,236
Preferred dividends	557	2,041
Common — Earned per share	$1·05	$1·47
Common — Total dividend	4,331	12,376

Developments proceeded apace last year, approximately $1,400,000 being expended in Great Britain and nearly $30,000,000 in Canada. To complete the company's programme, further expenditure of $1,250,000 and $10,000,000 respectively is envisaged. Monthly output from the Frood mine reached 37,600 tons in December last, and, it is hoped, will attain at least 4,500 tons daily by midsummer and 6,000 tons by the end of this year. The company has now proved, on its various properties, ore reserves of 202,620,000 short tons. The Frood high-grade ore, and the reserves at other mines now being worked, indicate a life at the present annual rate of nickel consumption of 25 years. This estimate, however, does not take into consideration the possibility of lateral extensions and probable Frood ore below 3,000 feet, or the large reserves in other mines and in the upper Frood levels. The average grade of proved ore below the 1,400-foot level in the Frood mine runs: nickel, 2.39 per cent.; copper, 3.62 per cent.; a total of 6.01 per cent. The company has on its books 14,119 preferred shareholders and 54,241 common shareholders. Future expansion is necessarily taken into account in the present price of $40⅝ per share, but immediate prospects must depend on whether world consumption of nickel maintains last year's increase of 16 per cent.—which, in its turn, is contingent on an early revival of activity in the larger metal-consuming industries.

Baltimore and Ohio Railroad.—Although the total operating expenses rose by 4.65 per cent. in 1929, the total revenue was 3.63 per cent. higher, and operating profit $580,929 greater at $64,848,742. Freight ton-miles increased from 20,243 millions to 20,657 millions, more than offsetting the decline in passenger miles from 768 millions to 728 millions. Some 9,038,071 passengers were carried, the total being 1,219,925 less than in the previous year. Joint facility rents, other rents and interest were heavier, and the net profit, consequently, $333,023 lower at $28,767,908, a decrease of 1.14 per cent. After paying the 4 per cent. preference dividend, and increasing the ordinary dividend to 6½ per cent., $11,045,597 of the year's profit was added to the surplus, which now stands at $16,039,570.

	Years ended December 31. 1928.	1929.
	$	$
Net earnings	29,100,931	28,767,908
Dividend on 4% preferred stock	2,354,528	2,354,528
Common stock — *earned*	12·43%	10·30%
Common stock — paid	6%	6½%
Common stock — amount	12,911,275	15,367,783
Increase in surplus	13,835,128	11,045,597

During the year the ordinary capital was increased to $256,295,434 by the issue of 411,077 $100 shares at par, the money being partly utilised in replacing obsolete rolling stock. The increased mail revenue was due to increased rates. The ordinary shares are secured by net tangible assets of $1.44 per each dollar paid up. At their present London price of 121 the $100 shares yield £5 7s. 5d. per cent.

SUMMARY OF THE ANNUAL REPORT OF THE AMERICAN TELEPHONE AND TELEGRAPH COMPANY FOR 1929.

Measured by the number of telephones added to the national network, by the amount of money expended for growth and service improvement, and in other particulars with respect to service, 1929 was a record year in the history of the Bell System according to the annual report of the American Telephone and Telegraph Company in which President Walter S. Gifford tells the 469,801 stockholders the results of operations for twelve months ended December 31.

The number of stockholders increased 15,205 during the year and the average number of shares of capital stock outstanding was 13,113,746. Net earnings per share available for dividends were $12.67. The corresponding figure for 1928 was $12.11 per share.

For the System as a whole, the report says, " The revenues from local exchange service increased $47,000,000 or 7.3 per cent. over the previous year, and revenues from toll and long-distance service increased $45,000,000 or 14.5 per cent. The increase in total operating revenues was $95,000,000 or 9.8 per cent.

" The total plant and other assets at the end of the year amounted to $4,228,000,000 and the net earnings were at the rate of 6.8 per cent. on the cost of plant and other assets. Over one-half of the present telephone plant of the Bell System has been constructed during the last five years.

" About 900,000 telephones—the largest number in any year—were added. To provide for growth and to improve service, $588,000,000 was spent on construction of new telephone plant and $45,000,000 on construction of new manufacturing facilities. These expenditures of $633,000,000 were the largest in any one year and furnish a basis for still further progress. It is expected that the expenditures for 1930 will be over $700,000,000."

The report emphasises the extension and improvement of service. During the past five years the average time required for completing a long-distance connection has been cut from 7.5 minutes to 2.4 minutes, and in 1929 more than 70 per cent. of the long-distance calls were handled while the calling subscriber remained at the telephone.

Since 1926 there has been a series of reductions in long-distance rates, two occurring within twelve months and each resulting in a saving to telephone users of approximately $5,000,000 annually. In about three years, the charge for a New York–San Francisco call has been reduced from $16.50 to $9.00, and a Chicago–New York call from $4.65 to $3.00.

The average elapsed time between receipt of a customer's order and the installation of service has been reduced in five years from 4.7 to 2.7 days, and the proportion of customers' orders currently subject to delay because of lack of facilities has been reduced from 10 per cent. to 2 per cent.

At the end of the year there were more than 20,000,000 telephones inter-connected in and with the Bell System and practically any one of these can be connected promptly not only with any other telephone in the United States, but with 9,000,000 others in Canada, Cuba, Mexico and Europe.

Two additional short-wave transatlantic radio telephone channels were added during the year, making one long-wave and three short-wave channels now available. Work is being pushed on the transatlantic telephone cable which will " not be subject to the inherent uncertainties of radio." Ship-to-shore service was inaugurated to and from the steamship Leviathan, and it is expected in due course that this service will be extended to other steamships.

Successful demonstrations of two-way plane-to-ground telephony have resulted in requests for this equipment from air transport companies and Government departments. Such telephone communication for navigational purposes will add greatly to the safety and efficiency of transportation by air.

The number of employees, including the manufacturing division, increased 59,000 to a total at the end of the year of 454,000. Due to growth and turnover it was necessary to train 175,000 new employees. Approximately 90,000 of the employees are stockholders.

It is stated by Mr. Gifford that the business of Electrical Research Products, a subsidiary of the Western Electric Company, is limited to making arrangements for the commercial use of such contributions to the progress of electrical science as modern high-speed submarine telegraph cables and the recording and reproduction of sound for use in connection with phonographs and talking motion pictures by concerns operating in the fields in which they are applicable. " The American Telephone and Telegraph Company neither directly nor indirectly, through Electrical Research Products or otherwise, owns any stock in any motion picture enterprise or any other commercial undertaking operating in these fields."

" While the business of Electrical Research Products is of great importance in its own field, its earnings obviously cannot be a material factor in an enterprise of the size of the Bell System."

Western Electric Company's new plant at Point Breeze, Baltimore, Maryland, was put in operation and provision made for large additions to the plants at Hawthorne (Chicago) and Kearny, New Jersey.

New Capital Issues in February.—In the table below we show the new capital raised in London by issue to the public or shareholders in February and recent periods:—

(000's omitted.)

Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	Total.

February, 1930 ...	350	13,034	9,065	Nil	22,449

The figures for February show a decided improvement over those of the previous month, the total sum raised being £8,460,000 more than in January, and only £3,060,000 short of the figures for February, 1929. Sales of National Savings Certificates exceeded encashments by £350,000. The British Government also announced the issue of a 4½ per cent. conversion loan, but at the time of going to press the amount involved is unknown. There was an increase of £4,001,000 in other issues for employment in the United Kingdom, the Shell Transport and Trading Company's issue of £5,000,000 7 per cent. second preference shares, at 25s. per share, which involved £6,250,000, representing nearly half the total of £13,034,000. Other important home issues included the Metropolitan Railway's issue of £2,000,000 in 3½ per cent. debenture stock at 65½ and the Hull Corporation's £1,500,000 in 5 per cent. redeemable stock at 99, of which 85 per cent. was left with the underwriters. No money was raised by any foreign government or industry during the month. The chief overseas flotations were the Indian £6,000,000 6 per cent. 1932/34 bonds at 99 and the Nigerian £2,650,000 5 per cent. 1950/60 inscribed stock at the same price. Only two companies offered their new issues to the public, namely, the Shell Company and the Olympia Company, which offered 450,000 £1 7 per cent. cumulative preference shares at par, and 450,000 5s. ordinary shares at par. The month closed with the announcement of the South African Government's *intention to raise* £6,000,000 in London during March.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following meetings:—London, Midland and Scottish Railway, Anglo-International Bank, Prudential Assurance, Refuge Assurance, Scottish Widows Fund and Life Assurance Society, Provident Mutual Life Assurance Association, National Provident Institution, Midland Counties Electric Supply, Metropolitan Electric Supply, Inveresk Paper, Courtaulds, and Spencer, Turner and Boldero. At the annual meeting of the London Midland and Scottish Railway, the chairman said that, in pursuance of the policy of the rapid elimination of gas lighting as the normal form of illumination, the board had authorised the conversion from gas to electric lighting of 2,250 coaches, and the work of conversion was proceeding at the rate of about 20 vehicles per week. Presiding over the meeting of the Midland Counties Electric Supply Company, Mr G. Balfour said that the units sold during the year aggregated 165,602,000, an increase of 24 per cent. over the output for 1928. At the meeting of the Provident Mutual Life Assurance Association the chairman said that, though it was the policy of the board to invest a large proportion of the assets in long-dated or irredeemable securities, it was a duty to members to earn as high a rate of bonus as was consistent with prudent finance, and part of the company's funds were, therefore, invested in securities of a less rigid type.

CAPITAL ISSUES.

The capital market remains "difficult," and it is clear that a number of recent borrowers, including many of the highest status, have appreciably over-estimated its capacity. Last week's "Shell" issue, which was closed on the first day, was nevertheless left as to 82 per cent. with underwriters, for a single reason—that its price was too dear. This week the *South African Government* made an attractive issue of 5 per cent. stock at 98½. South Africa is a popular borrower, whose existing debt is very largely represented by profit-earning public assets. The terms, moreover, were more favourable to the investor than those of any South African loan since 1921. Nevertheless, underwriters were called on for about half their total engagements—the large amount, £6,000,000, rather than the price, being responsible. The remaining issue of the week, *Cinzano*, took the form of an offer for sale of shares in an international vermouth-producing enterprise. The company's business connections are well established, but voting power is so arranged that control remains with "inside" interests.

ISSUES OF THE WEEK.

Union of South Africa 5 per cent. Inscribed Stock, 1945–75.—Issue of £6,000,000 5 per cent. stock at £98 10s. per cent., repayable at par on July 1, 1975, the Government of the Union of South Africa having the option to redeem the stock, in whole or in part, at par, on or after July 1, 1945, on three months' notice. The Government of South Africa will comply with the requirements of the Colonial Stock Act, 1900, so that trustees may invest in this stock. The loan is raised for railways, harbours, irrigation, land settlement and other public works.

Cinzano, Ltd.—Offer for sale of 575,000 Class "A" ordinary shares of £1 each at par. The company was incorporated in 1927 to take over interests in Cinzano companies in different parts of the world. The shares now offered for sale have been acquired from the Holding Italiana S.A., of Turin. Profits for 1929 totalled £198,429, against £114,556 in 1928, and allowed payment of 9 per cent. on ordinary capital.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction:—**Lewis's Investment Trust, Ltd.** Issued capital, £2,350,000, divided into 1,175,000 7 per cent. cumulative preference shares of £1 each and 1,175,000 ordinary shares of £1 each. Incorporated in July 1929, to acquire deferred ordinary shares in Lewis's, Ltd., and provide a financial instrument for the development of a number of other businesses under the same control.

COMPANY MEETINGS, &c.

LONDON MIDLAND AND SCOTTISH RAILWAY COMPANY.

NET REVENUE AND DIVIDEND INCREASED.
LARGE REDUCTION IN EXPENSES.
RECEIPTS AFFECTED BY INDUSTRIAL DEPRESSION.
ROAD TRANSPORT DEVELOPMENTS.
SIR JOSIAH STAMP ON THE OUTLOOK.

The Seventh Annual General Meeting of the London Midland and Scottish Railway Company was held at Euston Station, London, N.W. 1, on Friday, February 28, 1930.

Sir Josiah Charles Stamp, G.B.E., Chairman of the Company, presided.

The Chairman: I will now ask the Secretary to read the notice convening the meeting.

The Secretary (Mr Owen Glynne Roberts) read the notice.

The Chairman: Ladies and Gentlemen,—We have followed the method adopted last year, and received by you with approval, of issuing a condensed statement of financial results for the general use of the stockholders, leaving those who may be specially interested on particular points to ask for the full statements.

Will you follow while I go over the broad features of the business of the year.

RESULTS OF THE YEAR'S WORKING.

RAILWAY TRAFFIC RECEIPTS.

The losses in Passenger Traffic Receipts for the year were severe, partly offset by improvements in Mineral and Coal Traffic. Shortly, the receipts were:—

	Worse. £	%	Better. £	%
Passengers	1,154,000	5.0	—	
Parcels, Mails, etc.	—		97,000	1.4
Merchandise (Classes 7 and over)...	360,000	1.6	—	
Minerals, etc. (Classes 1 to 6) ...	—		203,000	3.1
Coal, Coke, etc.	—		616,000	4.5
Live Stock	53,000	6.1	—	
	£651,000	0.9	—	—

Generally, our receipts were affected adversely by the continued depression of trade in the heavy and textile industries in the area covered by the L.M.S. system. While on the year the volume of unemployment of the whole country showed a *decrease* of 3 per cent., there was actually an increase of 7½ per cent. in the North-Western area. In Lancashire, Yorkshire (West Riding) and Lanarkshire, mainly areas peculiar to the L.M.S., there arises about 40 per cent. of the unemployment in the whole of Great Britain. This inevitably reacted on our traffic receipts as regards both Merchandise and Passengers.

The excessive depression in trade in the area of this Railway is also reflected in the Bankers' Clearings. The Metropolitan Clearing for 1929 showed an increase of 1.5 per cent. over 1928, but Liverpool, Manchester and Bradford taken together decreased over 6 per cent. The shrinkage in the case of Bradford was as much as 13.3 per cent., a sad commentary on the state of the wool textile industry, whereas the other eight large centres not so completely identified with the L.M.S. showed a decrease of 1.15 per cent. only. Again, in shipbuilding the tonnage launched on North-East Coast during 1928 was 90,000 greater than upon the Clyde. In 1929 it was 180,000 greater; there was a lesser output on the Clyde of 40,000 tons, whilst the North-East Coast increased by 50,000.

Apart from this general cause, the Passenger receipts were further adversely affected by road competition and steps were taken to counter it by the extension of cheap fares, but while there were only 2 per cent. fewer passengers, the receipts were 5 per cent. less. What they would have been had reductions in fares not been made it is difficult to say, but the loss of volume, notwithstanding these reductions, indicates that diminished charges were not the main cause of the decline and, in fact, our passenger department can point to large blocks of new traffic in particular areas attracted by special fares. In Lancashire our losses were particularly severe, a contributory factor being the stoppage in the cotton trade at the height of the holiday season. There is again a noticeable reduction in the short distance traffic, although this traffic has the lowest fares, and I will later refer to the steps we are taking to share in this diversion to the public roads where we are permitted by Parliament to do so.

The receipts from Parcels and Mails traffic conveyed by Passenger Trains show a general improvement, and now represent nearly one-fourth of the passenger train receipts.

Merchandise receipts (excluding the heavy or mineral classes) declined, and in this connection I would again draw attention to the severe depression in trade in the manufacturing areas of Lancashire, Yorkshire (West Riding) and Lanarkshire, where extensive unemployment exists. Further, an analysis of the business done shows that the high rated traffics most susceptible to road competition have suffered most. On the other hand, many of the low rated traffics improved and the traffic which is collected or delivered by the Company's cartage arrangements was substantially greater and its volume was the highest since amalgamation. This traffic has been materially increased by the extended railhead distribution and container facilities which have developed rapidly.

The Mineral Classes show a welcome improvement, and the loss in iron ore traffic in 1928 was more than recovered last year, a decrease of 532,000 tons against 1927 being turned into an increase of 700,000 tons over 1928.

In considering the improvement in the coal receipts it is necessary to bear in mind that the striking expansion last year was mainly in the export trade, which improved by 20 per cent., compared with an improvement of 4 per cent. in the home trade, and as only 9 per cent. of our own coal receipts are from exports, our share was relatively small compared with other railways dealing more with export coal.

The de-rating allowances paid by the Government through the medium of railway charges on certain classes of traffic are not deductions from railway receipts, as the rebates are paid out of a central pool into which is paid the relief of rates. There is no evidence of any marked improvement in the selected traffics conveyed by us except iron ore, and the Company's interest in export coal, the main traffic to which rebates apply, is, as mentioned, small.

RAILWAY EXPENDITURE.

Against the loss in receipts there is the substantial reduction of £780,000 in working expenses, which are seen in the summary statement accompanying the report. It must be remembered that this follows a reduction of £2,500,000 a year ago, and is quite apart from the 2½ per cent. deduction from salaries, wages, etc.

There was a reduction of £610,000 in operating expenses.

The reduction in operating expenses is a general one, an exception being locomotive coal, which cost £65,000 more. As we ran 2,200,000 more miles the saving is even more marked than would appear from the reduction of £610,000, and the Board are most appreciative of the very great support they have had from all grades. It is not a mere stinting of outlay regardless of reactions, but part of a continuous survey of all our operations with a view of ensuring that each is conducted in the most economical manner consistent with the fullest efficiency and safety, and without falling short of meeting reasonable public demands. As indicating the growth of these demands in one direction I would again refer to the diminished size of goods consignments which are loaded or unloaded by our station staff. Each year since amalgamation the average weight of such consignments has fallen. To those who talk indiscriminately of larger goods wagons I would point out that in handled traffic we carry 390 consignments for each 100 tons, compared with 347 in 1923. Notwithstanding this, each year since 1925 the cost per ton has been reduced by improved methods and appliances.

There is an increase in maintenance over 1928 which is entirely in Rolling Stock. 1928 was specially low because of an abnormal quantity of Locomotive renewal work, and the severe frost in the early part of 1929 caused considerable damage to carriages, especially paint work, which represented about £80,000 of abnormal cost.

It will be seen from the tabular statement attached to the report that the repair position has been further improved upon for all classes of stock, and it has never been in better condition. The reduction in time taken to pass rolling stock through the shops has

been striking, and the resultant increase in stock has given us the means to provide adequately for large developments of traffic. It would be false economy to let down the standard of efficiency of our stock because of depressed traffic, and it is in times of depression that overhaul is most desirable, constituting in fact an outlay on behalf of the future. It is in this direction rather than by reduction of maintenance efficiency and adding to reserves that the Board have proceeded, and I mention this in reply to certain friendly critics who suggest that we should set aside monies to general reserve. The amount charged to the expenditure of the year and credited to renewal provisions is £5,250,000—not a haphazard figure, but arrived at in great detail on scientific lines.

The Renewal and Maintenance Funds were charged in the year with £6,500,000 in respect of the non-capital portion of new work, and now stand at just under £20,000,000. The outlay on new works met by these funds, and that met out of capital, has not only contributed greatly to the efficiency of the undertaking, but has incidentally been of great value to the industry of the country in a time of difficulty. It has totalled £50,000,000 in the period since amalgamation.

The continuous reduction of the salaries and office expenses in General Charges has been referred to at several of these meetings. In 1922, immediately prior to amalgamation, they totalled £961,000, and in 1929 £589,000, a reduction of nearly 40 per cent., there being a further reduction in 1929 of £24,000. This is an easily isolated example of the steady fruition of the economies resulting from fusion of administrative staffs.

With these reductions in expenditure the Net Railway Receipts show an increase of £104,000

And I now come to the other income.

Road Motor Transport show a loss of £6,000

but this is mainly attributable to the fact that the services are new and are not yet fully established. As the report indicates, by far the greater part of our interests in road services will be as shareholders in Road Companies, and these do not affect the returns for 1929.

In Steamboats there is a very satisfactory improvement of £85,000

and the net receipt of £193,000 is by far the best result we have had. The Irish Services, generally, have shown marked improvements.

Canals and Docks, together, are better by £25,000
but Hotels and Catering are less by £31,000
and Collection and Delivery by £97,000

There has been a large growth in carted traffic which, as I explained a year ago, is not directly remunerative.

Joint Lines are better by £31,000

The other Accounts are all better, and I need mention only Rents £52,000

a steadily improving figure due to the efforts to obtain new income from railway curtilages, and Interest items £68,000

to which the freeing of cash resources through the reduction of stocks of stores by a further £1,100,000 has materially contributed.

The only other item I need mention is the increased effect of the 2½ per cent. deduction from Fees, Salaries and Wages for a whole year, as against 4½ months in 1928 ... ... £670,000

I have been asked to say whether the policy of the Board is to distribute to the Shareholders an increase which is admittedly not on a permanent basis, and the answer is an emphatic "Yes." It was originally stated to be given by special deduction from the normal payments for wages and salaries in order to contribute aid to dividend paying revenues, and it has so been treated. That is one of the reasons why the amount has been isolated in our accounts, and not confused with normal expenditure.

In these circumstances the Board feel that it is due as a part of the dividend as it becomes available.

The summation of these figures is a Net Revenue for the year of £17,175,000, or more by	£904,000
and adding the increased amount brought in	£100,000
the additional amount available for ordinary Stock, prior charges being practically the same, is	£1,004,000
out of which the board recommend an increase of the dividend from 3½ per cent. to 4½ per cent., absorbing...	£952,000
and carrying forward £212,000, or more by	£52,000

and at the close of my remarks I shall ask you to adopt that recommendation.

In the summary statement sent you there are one or two new figures which will be of interest to you.

At the foot of page 3 you will see that an approximate analysis is given of the disposal of the receipts of the year from all businesses showing the relative weight per £ of the chief divisions of outgoings, and the figures speak for themselves. Of course, the Coal and other purchases (4s.) also include a large proportion paid in wages, in addition to the sums paid direct by the Railway, viz. :—10s. 9d., and to dispose of an inquiry from a stockholder I may mention that the 4s. 3d. for interest and dividends includes debenture interest.

On page 4 we give an analysis of the number of holdings in each class of the Company's stocks. It is of interest to note that in the fixed interest and prior stocks the majority of holdings are in the "£400 and upward" classes; but in the ordinary stock, which bears the main burden of fluctuations in industrial fortunes, well over 50 per cent. of the holdings are under £300. The total number of accounts is about 300,000. In this connection it is interesting to observe that the pay roll covers 249,000 people, in 1921 it covered about 285,000, and in 1923 268,000—an important index of the progress of reorganisation.

The Balance Sheet shows that our liquid resources have been well maintained, and I have already mentioned the further large reduction of £1,100,000 effected in stock of stores and materials. The last item, "Road Motor Suspense Account," is in respect of omnibus undertakings purchased by the Company, which will not be wholly retained by them, but will form part of undertakings in which we will have a joint interest. The profits from these undertakings will accrue to the new Companies, and have not been brought into our Net Revenue.

ADMINISTRATION.

You will have noticed from the Report that Mr James Hamilton Houldsworth has resigned from the Board. Mr Houldsworth was a Director of the old Caledonian Railway Company and came on to this Board at the amalgamation. We, in London, shall miss his charming personality, but the Company will not lose the benefit of his experience and advice as he will remain a member of the Scottish Local Committee.

The Board have appointed the Rt. Hon. Walter Runciman, M.P., and Major Glyn, M.P., to two of the existing vacancies.

Mr Runciman's wide experience will be of the utmost value to the Company, and it is perhaps unnecessary for me to refer to Major Glyn, who was a Director of the Caledonian Railway and has been a member of the Scottish Committee for some time with untiring zeal in the Company's interests.

There have been several retirements from the ranks of the higher administration.

Mr Evans, Vice-President, unfortunately found it necessary to retire through ill-health; he has recently had to undergo a serious operation, from which, however, we understand he is recovering satisfactorily. Mr Clower, Chief Officer for Labour and Establishment, with his imperturbable patience and tact, had won a unique position, especially in his pioneer work in welfare and co-operation, for which the Proprietors owe him a debt of gratitude.

Mr Gee was Chief Accountant of the London and North Western Railway Company before succeeding to that position with this Company, and has rendered faithful service over a long number of years.

Mr Evans' position as Vice-President for Railway Traffic Operating and Commercial Section has been filled by the transfer of Mr Quirey, who has been succeeded as Vice-President for Finance and Service Departments by Mr W. V. Wood, while Mr G. L. Darbyshire and Mr E. Taylor have succeeded Mr Clower and Mr Gee respectively.

It is with very great regret that I have to refer to the death, in March last, of Mr R. W. Reid, who was Vice-President for Works and Ancillary Undertakings. Mr Reid was a young man of brilliant attainment and proved worth, and by his death the Company suffered a well-nigh irreparable loss.

After very careful consideration your Directors have appointed Sir Harold Hartley, C.B.E., F.R.S., to succeed him, and also to act as Director of Scientific Research.

As you are aware, at the head of the several Engineering Departments we are fortunate in having chief officers each being at the very forefront of his own particular branch of the profession, and we are confident that Sir Harold Hartley's special experience and qualities, in collaboration with them, and as their General Manager, so to speak, will be of the greatest service to the Company.

SCIENTIFIC RESEARCH.

The process of amalgamation of the railways brought into one system a number of scientific laboratories engaged in the testing of materials, metallurgical investigations and kindred scientific work, and the late Mr Reid did excellent work in rearranging the functions of these various laboratories and reorganising them. I have for some time been greatly impressed by the possibilities of research, having regard to the large quantities of materials of all kinds used by us and the immense variety of processes involved. Some months ago I appointed a Committee to consider the suitability of our present arrangements to their present task, and the scope for further research upon definite and co-ordinated lines, and particularly the relationship existing between experimental testing in the shops, the laboratory work and the work of the outside research associations with which we are affiliated. On this Committee I had the help of some eminent men in the scientific field and in the world of industrial research. The report of the Committee was gratifying from the point of view of the excellence of the work now being done by our scientific staff, and the arrangements in the laboratories. They were favourably impressed by the high standard attained in the work and by the large amount of research in improving existing processes and developing new methods. But they confirmed our view that considerable scope existed for further intensive directed research, and recommended the appointment of an officer with special attainments, for co-ordinating the work and securing the necessary contacts between the Railway and Associations or Industrial Laboratories, together with the assistance of an Advisory Committee. We are now well on the way to carry out the recommendations of this Committee, and the present personnel of the Advisory Committee, who will meet from time to time to consider the programmes of research and their progress, will be, under Sir Harold Hartley as Chairman, Sir Harold Carpenter, F.R.S., Professor of Metallurgy in the Royal School of Mines; Sir Herbert Jackson, K.B.E., F.R.S., Emeritus Professor of Chemistry and Director of the British Scientific Instrument Research Association; Mr W. Rintoul, Joint Research Manager of Imperial Chemical Industries, Ltd.; Dr. Frank Smith, C.B., C.B.E., F.R.S., Secretary of the Royal Society and Secretary to the Department of Industrial and Scientific Research, together with certain of our own technical officers. These gentlemen have all a very cordial interest in the development of research along the lines I have indicated, and I have to express my deep appreciation to them for their willingness to assist and the public spirit they have shown.

REMISSION OF GOVERNMENT PASSENGER DUTY.

It will be remembered that 1929 Budget proposals included the remission of Railway Passenger Duty, subject to the expenditure by each of the Railway Companies of a sum equivalent to the capitalised value of the duty paid in 1928 upon schemes of development and improvement—preferably such as would benefit the heavy industries—which would not, in the ordinary course, be embarked upon at the present time.

The capitalised value of our proportion of the duty is £2,400,000, and a list of works to be undertaken by the Company has been agreed. These schemes include :—

(*a*) The building of 30 "Garratt" Locomotives for heavy coal trains;
(*b*) The building of 25 mixed traffic engines;
(*c*) Remodelled and improved Goods and Passenger Station accommodation (mainly the former);
(*d*) Additional traffic siding accommodation;
(*e*) Additional and improved running facilities and safety appliances;
(*f*) Strengthening of railway bridges to make them suitable for heavier engines;
(*g*) Accelerated conversion of a large number of passenger carrying vehicles from gas to electric light;
(*h*) Improvement of coal shipping appliances at various ports.

The schemes, taking into account the benefit of the remission of Passenger Duty, will be remunerative.

DEVELOPMENT (LOAN GUARANTEES AND GRANTS) ACT, 1929.

Under this Act grants are made to assist public utility undertakings in the carrying out of works calculated to promote employment. So far as the Railway Companies are concerned these grants take the form of an interest payment spread over a period (not exceeding 15 years) on the Capital portion of approved schemes; the extent to which the expenditure is calculated to promote employment in the United Kingdom and to the probability of the expenditure not otherwise being incurred in the near future are material points.

A number of schemes have been submitted, and those already approved, are :—

(1) Electrification of the Wirral Railway.
(2) Widening and electrification between Dagenham and Upminster, and the provision of two new Stations between Barking and Dagenham; this is a portion of our L.T. & S. Line which runs through the Becontree Housing Estate of the London County Council.
(3) Widenings :—
  (*a*) About 1¼ miles long between Broadholme and Ambergate on the Company's Derby to Manchester Line; and
  (*b*) About 1 mile long at Mirfield on the Company's L. & Y. Line between Halifax and Wakefield.
(4) Additional marshalling siding accommodation at Crofton Junction on the Company's L. & Y. Line near Wakefield for dealing with the increasing traffic from the Yorkshire Coalfield.
(5) Acceleration of conversion of coaching stock from gas to electric lighting.

Up to the present, schemes involving a total expenditure of approximately £1,800,000 have been approved by the Treasury, the portion of this amount which will rank for grant of interest at various rates and for various periods being approximately £1,450,000.

Further schemes, amounting in total to between £3,000,000 and £4,000,000 are under consideration, and only such proposals will be put forward as will, with the assistance to be obtained from the Treasury, be remunerative to the Company.

Schemes submitted do not include those in which reconstruction is to be met out of our large Capital Renewal Funds, nor those in which Parliamentary Bills have yet to be promoted, so that the range of possible immediate assistance is more limited than is usually supposed.

ROYAL COMMISSION ON TRANSPORT.

I referred last year to the nature of the evidence which had been given on behalf of the Railways.

The Railway Companies were asked to give further evidence regarding the progress made in co-ordinating rail and road traffic since the Companies obtained their Road Transport powers, and in December last I gave evidence on the position of the Companies generally; at the same time expressing our views on other evidence affecting railway matters.

The Commission have not yet completed their labours, but have issued two interim reports, the first dealing with the control of traffic on roads, and the second with the licensing and regulation of public service vehicles; the latter question having received early attention by the Government in the Road Traffic Bill which they have introduced in Parliament.

ROAD TRAFFIC BILL.

This Bill is mainly based upon the recommendations contained in the Royal Commission Report, but it also proposed (in part 5) to grant extensive powers to Municipal Authorities to operate road transport undertakings. This part of the Bill was rejected by the House of Lords.

The other provisions of the Bill are generally considered reasonable, and with regard to the licensing and regulation of Road vehicles and services, follow the suggestions made to the Royal Commission by the Railway Companies.

RAIL AND ROAD TRANSPORT.

A year ago I outlined the policy of your Board and their proposed action to establish the Company in the Omnibus business of the country, consistent with the full powers conferred by Parliament under the Road Transport Act, 1928. This policy has been steadily pursued, the primary object being to attain as between the Railway and the established road services the fullest measure of collaboration, and the encouragement of the development of each form of transport on complementary lines for the benefit of both classes of undertaking and the travelling public.

During the year, over the whole field of the Company's operations we have succeeded in reaching such arrangements for co-operation by way of a substantial interest in the principal Omnibus Companies, as well as in the omnibus services of a number of Municipalities in the Company's territory. In other cases where circumstances have been favourable to such a course, the Company has acquired a number of Omnibus concerns, either wholly or in joint ownership with the London and North Eastern and Great Western Railway Companies.

The Company's nominees are being elected to the Boards of these Omnibus Companies, and also on the Joint Standing Committees, which have been, or are being, set up to deal with matters of mutual interest.

These partnerships and acquisitions representing an interest in over 5,000 omnibuses and forming part of a scheme of co-ordination as between railway and road travel, which have been announced in the Press from time to time, are summarised in the Report, and, as they take effect, in the main, as from January 1, 1930, the results of working are not reflected in the Accounts for 1929.

The new relationship between the Railway and Omnibus undertakings is necessitating continuous review of the circumstances where the railway and road services are on common or adjacent routes, with a view of producing, as far as possible, harmony of interest and economy of resources with opportunities for the exchange and development of business, without detriment to public requirements. The process must be gradual, but each month should witness some new benefit from the policy pursued.

One of the more important of these benefits will be the elimination of inconvenient, superseded, and, therefore unremunerative railway services, together with the substitution of road services for local trains of little earning value.

In the carriage of merchandise traffic by road, the difficulties encountered are more pronounced owing to the wider range of interests involved, and the diverse ownership of goods transport vehicles, which stand out in marked contrast to the road passenger vehicles, but the policy of operating railway road vehicles where expedient continues to be developed.

In the main, the traffic carried throughout by road represents short distance business, which traders require to be collected and delivered on the same day.

Regular road transport goods services, which cater mainly for miscellaneous traffic, have also been established, and the Company's radial collection and delivery services, together with railhead depot and distribution facilities, are increasingly demanded by traders.

RAILWAY RATING.

The Government have introduced a Railway Rating Bill which proposes to set up a central authority for England and Wales, which will apportion between the various local rating bodies the rateable valuations for the railways as a whole, and it is hoped this will provide a satisfactory solution of a problem which has been a source of trouble and expense for many years.

CONTAINERS.

I have referred in previous years to the railway container which the Company has persistently encouraged. It has now passed the experimental stage, and taken its place as an established means of transport from door to door for certain classes of traffic.

As a means of providing new, and safeguarding old, business, our early expectations have been fully realised, and the carriage value of container traffic is now approximately £200,000 per annum, a large proportion of which has been secured from road or water competition, or held against such competition.

To meet the steady increase in this method of transport, further orders for containers have been placed, which, on completion, will make the total stock 2,546.

Apart from the success obtained in the home trade, the use of containers for the transport of continental traffic is becoming important, and our containers are now in regular service for the conveyance of express parcels traffic and registered luggage between Basle, Paris, Dunkerque and our system.

STAFF.

Last year I made reference to the Agreement entered into with the Trade Unions in July, 1928, under which Railway employees —and you will recollect that the Directors also participated in this arrangement—contributed 2½ per cent. of their total earnings towards meeting our heavy decreases in revenue. The Trade Unions gave notice to terminate the Agreement on November 12, 1929, and as a result of further negotiations, it was agreed that the deduction should continue until May 12, 1930, and that until November 12, 1930, both the Companies and the Trade Unions should be debarred from asking for a general revision in rates of pay or conditions of service.

I also referred a year ago to the extension amongst our own employees of the spirit of co-operation which has been manifested in varying degrees in our great industries generally. I am pleased to say that the opinion I formed last year that a substantial advance on the right lines had been achieved, has been strengthened by the experience of the past 12 months. At all meetings of Local Departmental Committees discussion takes place on the question of co-operation with the Company's Officers in advancing the interests of the business through increased efficiency, or economy in methods of work. In regard to the activities of the Company in combating road competition, I have recently taken the opportunity of issuing to each member of the staff a Circular, setting out what has been done by the Company in securing a share of the omnibus business of the country since Road Powers were obtained in 1928, and urging a continuance of the effective help which has already been afforded to the Company by all sections of the staff.

LOCOMOTIVES.

As regards new development, I may say that the three "Garrett" Locomotives, to which attention has been previously drawn, provided for experimental purposes, proved satisfactory, and a further 30 engines of this type have been ordered for working the heavy mineral and empty wagon trains to and from London, now handled by two engines. In addition to saving one set of men per train, they will displace 68 old freight tender engines.

As regards Repairs, the rationalisation of the works, to which I have previously referred, is now yielding even more striking results. I spoke two years ago of 12 days as the new record time for a locomotive out of traffic for heavy repairs, and can now report that this has been halved. At one time, at Crewe for example, men spoke of months, where they now break records in hours. Thus, a particular type in 1920 took two-and-a-half months, in 1925 five-and-a-half weeks, in 1927 12 days, and in 1930 47 working hours. This remarkable result, which, so far as I know, has not been beaten anywhere in the world, is only possible through a high level of co-operation between management, foremen and workmen. You will have seen from the statistical statement that the number of engines under or awaiting repair has fallen from 1,958 to 554 in six years, and this reflects the great progress made from a technical and organisation point of view.

The Carriage and Wagon Works are also holding their place as foremost exponents of modern factory methods.

Experiments are in progress, following the success of the "Royal Scot," with much higher boiler pressures, designed in the interests of research into fuel consumption.

The extended experiments conducted with a four-coach train driven by an internal combustion engine using heavy oil have been completed, and although the running costs were materially less than those of a steam train, the reduction was more than counterbalanced by the annual charges, including interest and maintenance. In view of the use by foreign countries of the Diesel Oil Electric Engine, the question is being further explored.

STEEL SLEEPERS.

Public attention has been much directed of late to the subject of the use of steel sleepers.

Many of you know that the experimental adoption of steel sleepers on the railways in this country dates back 50 years, but so far as the lines embraced in the L.M.S. Group are concerned, these early sleepers have, with few exceptions, been taken from the track and put into sidings or scrapped, the results and experience of them having demonstrated that certain disadvantages, as compared with wooden sleepers, were associated with their use.

More recently the question of steel as opposed to the wooden sleeper has forced itself prominently to the front by reason of :—

(*a*) The threatened shortage of Baltic timber;

(*b*) The depressed condition of the British steel industry;

and in common with the other Railway Companies, your Board has authorised further substantial tests to be made.

The question is not, of course, wholly one of the reduction of unemployment, and must remain essentially an economic one, involving consideration of the comparative costs and lives of steel and wood sleepers, and other comparative suitabilities in view of the growing developments in track circuiting and other electric track appliances designed for still further ensuring safety and the general problem of electrification.

When the results of research, and deliberations by the British Railway Technical Officers with the representatives of the National Federation of Iron and Steel Manufacturers are known, we shall be in a better position to decide the future policy as to their extended use.

HIGH CAPACITY WAGONS.

In view of the utility and efficiency of high capacity wagons on the Continent, the developments in this country in connection with super electrical power stations, and large gas undertakings, and the importance of obtaining definite working data to determine the practical and financial economy by their adoption, we provided, experimentally, thirty 40-ton self-discharging vehicles fitted with vacuum brake for the conveyance of coal in full trains from the coalfields to the Company's Stonebridge Park Generating Station.

The vehicles are at present in service from Derbyshire Collieries, and three trains conveying 400 tons of fuel, with a gross weight of 580 tons are run weekly, and have proved advantageous both from a working and unloading standpoint. The round trip, colliery to colliery, occupies about 36 hours only.

THIRD CLASS SLEEPERS.

After taking into account a small element of transfer from First to Third Class, the new arrangement has been fully justified by the receipts. Since the introduction of Third Class Sleepers, which has not entailed additional trains, the demand has steadily grown.

LIGHTING OF TRAINS.

In pursuing the policy of the rapid elimination of gas lighting as the normal form of illumination, your Board have authorised, in addition to the normal programmes, the conversion from gas to electric lighting of 2,250 coaching vehicles under the arrangements agreed with the Government in connection with the "Remission of Passenger Duty" and Development (Loan Guarantees and Grants) Act, 1929, schemes, to which I have already referred.

The work of conversion is proceeding at the rate of about 20 vehicles per week.

COAL MINES BILL.

The provisions of the Coal Mines Bill at present before Parliament are of vital interest to us, not only as large consumers but also as Transport Agents, by reason of the effect upon industry generally of any increase in cost.

Various estimates of the increase in coal prices for home consumption as a result have been given, and if they are in any measure correct, it may form a material additional burden. For example, taking 2/6 per ton for illustrative purposes, the first cost of this on the annual coal bill of your Company, including payments for material affected by coal prices, would be £950,000. There are only three ways of dealing with this increase in expenditure, namely, by taking it out of Railway profits and dividends, by increasing freight rates, or by reducing wages.

The various issues raised by the Bill and the constant series of amendments are receiving very careful consideration.

PARLIAMENTARY PROMOTIONS.

Your Directors have decided to seek powers to construct new railways, of a total length of 4½ miles from our lines at East Ham to the lines of the Port of London Authority near Customs House Station. These railways would give us additional and improved access to the docks of the Port of London Authority, particularly those of more recent construction, a very necessary matter, having regard not only to the probabilities of still further Eastward extensions of those docks, but also to the increasing road transport competition for dock traffic and the improved facilities which are being afforded such competition, such as by the proposed expenditure of £2,518,000 on the construction of the new Victoria Docks Road—further road works being under contemplation.

The Bill also seeks the necessary powers to enable the carrying out of a number of other works, including several widenings of line to ease congested traffic sections, strengthening of bridges, etc. The great bulk of the expenditure on these proposals in the Bill is upon works in respect of which the Company will be assisted, either in connection with the remission of Passenger Duty, or under the provisions of the Development (Loan Guarantees and Grants) Act, 1929.

TILBURY-DUNKERQUE SERVICE.

This Company has, naturally, a great interest in the progress made by the new cross channel service, Tilbury-Dunkerque, run by the French Company Alsace Lorraine Angleterre in connection with our system.

It is now possible, in the light of experience of the new service during the past two years, to record a continued and steady increase in the carryings. All heads of traffic in 1929 show expansion, averaging well over 30 per cent. above 1928, and our anticipations are being confirmed.

This position has been secured by maintaining an uninterrupted service, and acceleration of the Continental services and through connections.

The introduction of Customs facilities for the examination of registered baggage at St. Pancras instead of Tilbury, and the employment of containers have further enhanced the popularity of the service.

MAIN LINE ELECTRIFICATION.

Electrification has been engaging the attention of the Government, and you will be aware that in view of the progress which is being made towards widespread availability of high tension electrical energy, they have appointed a Committee of three, Lord Weir, Chairman, Sir Ralph Wedgwood, and Sir William McLintock, to consider and report upon the economic and other aspects of the electrification of the railway systems in Great Braitain, with particular reference to main line working.

It is not the intention, however, that the inquiry shall in any way interfere with, or delay any particular schemes of suburban, or other electrification which may be otherwise under consideration. While it is easy to over-state or over-estimate the possibilities of main line electrification, we propose to assist the Committee in every way possible to arrive at sound conclusions upon the prospects.

It is more hazardous than ever to indulge in prophecy as to the industrial prospects of the country on which the fortunes of our Company are so greatly dependent. We are handicapped by three important factors: first, unexampled depression in the staple trades; second, severe road competition selecting particularly the more highly rated traffics which have in the past made an important contribution to net receipts; and third, a range of rates and fares round about 50 per cent. higher than before the War, against a range of labour costs greatly in excess of this figure. We have fought these handicaps by the economies of re-organisation and constant overhaul of operations and processes. So effective have these been that a revival of trade in our area that may seem merely fractional on the national figures as a whole, would suffice to restore a more attractive return upon the Company's Ordinary stock.

Ladies and Gentlemen, I now beg to move "That the report now read, with the statements of accounts, be received and adopted."

I shall ask the Deputy Chairman to second that resolution, and then I shall be pleased to hear any comments which shareholders may desire to make.

Mr E. B. Fielden, M.P. (deputy-chairman), seconded the resolution.

SHAREHOLDERS' REMARKS.

Mr Walter Spyer criticised the size and remuneration of the board, and asked by whom the number of directors and the amount of their remuneration was fixed. He thought that there was some scope for economy there.

Sir Ernest Moir commented upon the appointment of Sir Harold Hartley to be vice-president for works and ancillary undertakings on the ground that, though the gentleman might be a brilliant scientific man, it was unwise that he should be appointed over the heads of technical officials who had risen from the ranks of the company. He did not think that that would add to the feeling of *esprit de corps* among the staff.

Mr E. C. McAdam congratulated the directors and all the employees who had contributed to the flow of economy during the past year. The stockholders hoped, he said, that they would be able to repeat those congratulations in future years. He trusted that the board would not rest content with what they had achieved, as there must be many more economies which could be effected. He proceeded to point out where, in his opinion, further economies were possible, particularly in connection with canals, docks, and the collection and delivery of goods. He criticised the small reduction which had been effected in the number of employees on the wages list in comparison with the large reduction in the amount of passenger and goods traffic. The company was not a philanthropic society, and it should be run on a practical business basis. He had given notice of a resolution which he wished to propose with regard to the superannuation fund, but had been informed by the chairman that it was out of order.

Mr John Hedges said that, in his opinion, a good deal of economy might be effected by closing down branch lines which did not pay. He also thought that they could do with fewer directors.

Sir William Fry said that he was opposed to the practice of some shareholders in attending the annual meetings of the company and attacking the administration of the undertaking in such a way as to run the risk of damaging the value of the interests of thousands of shareholders who were unable to attend. Many matters which might properly be the subject of written communications sent to the technical officers of the company were ventilated at the meetings to the detriment of the undertaking as a whole. He knew perfectly well that they possessed a board of directors of which any company might be proud.

Miss Budge supported the remarks of Mr McAdam, and expressed dissatisfaction with the dividends which had been paid to the stockholders ever since the amalgamation. She wished to know whether the board had made contracts for the supply of coal at lower prices than they were likely to get it at in the future.

CHAIRMAN'S REPLY.

The Chairman, in reply, said that the size of the board had been fixed by statute. Their remuneration had been fixed by resolution of the stockholders, but the board had voluntarily accepted the 2½ per cent. reduction previously referred to. With regard to the appointment of Sir Harold Hartley, he did not agree that civil engineers could not serve under anyone but a civil engineer. Sir Harold would be vice-president over a technical department, not in the capacity of an engineer, but as an administrator and general manager, and the board were satisfied that, by reason of the great experience which Sir Harold Hartley had had in dealing with industrial matters, the reorganisation of factories and other things, in addition to his high scientific attainments, they had made a wise choice. With regard to coal contracts, they had always made their coal contracts ahead, and they had some running into 1931 at prices which, in the circumstances, would compare very favourably indeed with those of 1929. (Hear, hear.)

The resolution was carried unanimously.

The Chairman next proposed the payment of the dividends as recommended.

This resolution was also seconded by the Deputy-Chairman and unanimously approved.

The retiring directors and auditor were re-elected and the proceedings terminated with a cordial vote of thanks to the chairman, directors and staff.

REFUGE ASSURANCE COMPANY, LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.

BONUS TO ORDINARY BRANCH POLICYHOLDERS MAINTAINED AT £2 4s. 0d.

FURTHER ALLOCATIONS OF PROFITS TO INDUSTRIAL BRANCH POLICYHOLDERS.

INCOME EXCEEDS £10,775,000.

FUNDS £45,945,704.

The sixty-sixth annual ordinary general meeting of the Refuge Assurance Company, Limited, was held, on the 3rd instant, at the Chief Office of the company, Oxford Street, Manchester.

Mr J. Wilcock Holgate (the chairman of the company) presided.

The Secretary (Mr John W. Moss) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, which were taken as read, said :—Gentlemen, before referring to the accounts it is perhaps desirable that I should make some reference to the general trading conditions in this country, a matter with which, by the nature of our business, we are brought into the closest contact at every point. It cannot be said that the hope of improvement to which expression was given a year ago by so many—and in which I myself shared to some extent—has been realised in any substantial degree. It is true that some important branches of our trade, including coal, iron, and steel, have shown signs of slight improvement in certain areas; but the great textile industries upon which so much depends in this part of the country, where we conduct a very considerable proportion of our business, are in a substantially worse position now than twelve months ago, and success has not yet attended the many determined attempts to restore to the great exporting trades of Lancashire and Yorkshire that prosperity which is so essential to the many thousands whose employment and livelihood depend on this world trade. The figures of unemployment, always a reliable barometer of the condition of trade, are at present far from encouraging, and constitute a striking indication of the urgent need for improvement in industrial conditions generally; and I regret to say that—without in any way expressing a view as regards safeguarding our industries, or the tariff question generally; matters, perhaps, unsuitable for discussion at a meeting of this character, but which are, I believe, exercising the minds of increasing numbers of our people at the present time—I do not see how the atmosphere of confidence inseparable from sound trading conditions can be restored until at least some indication is forthcoming that an end is approaching with respect to the excessive national and local expenditure and consequent excessive taxation which have constituted such an oppressive burden on our industries during recent years.

The industrial conditions to which I have referred have been accompanied during the past twelve months by two further factors, which combine, I think, to distinguish 1929 as a year of a quite exceptional character for those engaged in the business of life assurance.

In the first place, there occurred in the early part of the year a serious increase in mortality generally, due principally to the prevailing influenza epidemic, an event naturally of considerable importance to a company with connections so widespread as are those of the Refuge. This increase was reflected at once in our claims experience, and caused our claim rate to mount to a figure which, in our post-war experience, has been exceeded only by that occasioned by the similar visitation which occurred in the winter of 1918-19. I propose to make some further remarks on this subject when dealing specifically with the mortality experience of the company during the year.

The second and equally disturbing feature of the operations covered by the last twelve months appears in the exceptional conditions which prevailed in the financial world during the year. It is not my intention to deal with the subject in detail at this stage; my remarks will fall more properly under the head of investments. I desire only to state that the results of our financial activities during 1929 are such as we may justly regard with a considerable degree of satisfaction.

CONTINUED PROGRESS.

Coming now to the report, you will observe that progress has been maintained in every field of the company's activities; and when it is considered how adverse were the conditions, both industrial and financial, under which this progress was secured, I think you will agree that it is a significant indication of the strength and vitality of your undertaking.

The total premium income amounted to £8,657,185, an increase of £322,058 over that of the previous year, and the total net interest income was £2,122,339, showing an increase under that heading of £157,387. Our total funds now stand at £45,945,704, showing an increase of £3,079,444. The amount paid in claims by death or maturity during the year was £4,503,058—a figure which represents the payment of approximately £15,000 each working day—and the total sum paid under this head since the inception of the company is now £61,480,654. The aggregate surplus shown by the valuation of the two branches of the company's business is £2,326,889, which includes £770,307 brought forward from the previous valuation. After the transfer of £500,000 to the investments reserve funds, an amount which, having regard to existing conditions, it has been deemed prudent to add, and which brings the amount of those funds up to £1,600,000, it is proposed to allocate £1,089,377 to the policyholders, and £150,000 to the shareholders, the balance of £587,512 being carried forward. It is interesting to observe that of the payment to shareholders, more than two-thirds of the amount—*i.e.*, £102,726, is contributed by the ordinary branch, the industrial branch providing the remaining £47,274.

INDUSTRIAL BRANCH.

The basic function of a life assurance company is the provision of immediate financial assistance and protection in the event of death; and to-day it is recognised that our own and similar undertakings are performing a valuable service in bringing before the insuring public the benefits resulting from the making of such provision. These benefits were of unusual value in the industrial branch during 1929, the amount paid in respect of claims by death being £1,825,679, showing an exceptional increase of £288,756 over the corresponding figure for the preceding year. This increase is due, in part, to the increases in the sums assured consequent on the operation of the scheme set up last year whereby a portion of the surplus was allocated to policyholders, and for which, of course, provision was already made, and also to the fact that our claims experience in 1928 was very light; but in the main the influenza epidemic in the earlier part of the year must be held responsible.

The new business consisted of 934,991 policies, assuring the sum of £17,711,086. The premium revenue was £4,739,174, an increase of £106,392 over the corresponding figure for 1928, and the net income from investments, after deduction of income tax, was £745,435, showing a net yield of £5 3s. 7d. per cent. on the entire assets of the branch, both invested and uninvested, the corresponding figure for each of the two preceding years being £5 3s. per cent. The death claims, as I have already said, amounted to £1,825,679, and £315,830 was paid to policyholders under matured endowment assurances. The expense ratio for the year was 37.11 per cent., showing a slight increase on the corresponding figure for the preceding year, and the claim ratio was 45.18 per cent., as compared with 38.70 per cent. in 1928 and 40.87 per cent. in 1927. The industrial branch fund now amounts to £14,236,542, having increased by £1,013,984 during the year.

In a comparison of the increase in the premium income for 1929 with the corresponding figure for the preceding year, it is necessary to have regard to the fact that in 1928 there occurred an additional weekly account, making a total of 53 weekly accounts in that year, as against the normal 52 applicable to 1929.

INDUSTRIAL BRANCH VALUATION.

The valuation of this branch has again been made on the basis of the English Life Mortality Table No. 8 Males, with interest at 3 per cent. for all classes of policy except adult single whole life assurances by weekly premiums, and infantile whole life assurances by weekly premiums not exceeding one penny, which are valued at 3½ per cent. As regards these policies, the valuation has been further strengthened, the percentage thrown off the office premiums before valuation varying from 35 per cent. upwards, and providing in every case a net positive liability. The remaining policies, including the whole life assurance by monthly premiums, have again been valued on a strict net premium basis.

The resulting surplus is £511,807, which includes £44,715 brought forward from the preceding year. The sum of £250,000 is transferred to the investments reserve fund, and in pursuance of the policy introduced a year ago it is proposed to set aside £164,842 for allocation amongst the policyholders in this branch. From the remainder it is proposed to allocate to the shareholders the sum of £24,774, and to declare a dividend of 7½ per cent., absorbing £22,500, the balance of £49,691 being carried forward unappropriated. It will be noted that the total proportion of surplus allocated to the shareholders represents rather less than 1 per cent. of the premium income in this branch for the year.

The number of industrial branch policies at the valuation date was 6,338,070, assuring the sum of £88,256,178, and the average duration of the policies was ten years and eight months.

ALLOCATION OF PROFITS TO POLICYHOLDERS IN THE INDUSTRIAL BRANCH.

I do not think any one circumstance connected with the company occasioned me more pleasure than the announcement I was privileged to make in my address to you a year ago, that we had then reached a stage in our progress which enabled us to allocate to our policyholders in the industrial branch a very large sum as a first step toward bringing up the benefits of our older members to the latest and most favourable scale. It is very gratifying to report that, despite the prevalent adverse conditions, we are this year in a position to set aside a further sum for this purpose, and it is proposed, as I have already said, that the sum so allocated to our policyholders in the industrial branch shall be £164,842; notwithstanding that policies in this branch are in form non-profit. The effect of this second allocation is to complete the process of putting all our policies in the industrial branch permanently on the latest and most favourable scale of benefit, with the exception of whole-life policies under Tables 1, 2, 3, and 12, 13, 14, in respect of which the additions to the sums assured under the original contracts to bring them up to the 1927—the latest, and much improved—scale of benefits will be made in respect of claims by death occurring between to-day and March 1 of next year.

I think you will agree that this result is a very happy fulfilment of the hopes I expressed a year ago that we should be able to increase still further the benefits we offer to policyholders in this company, an ambition which, of course, it is our intention continuously to pursue.

ORDINARY BRANCH.

In the difficult conditions prevailing to-day, and no less amongst that class of the community which normally assures in the ordinary branch than amongst that from which our industrial branch policyholders are drawn, the increased new business which we are able to report is a result we may justly regard as eminently satisfactory. You will be glad also to observe that the expense ratio for the year, at 15.58 per cent., shows a decrease on the corresponding figure for 1928. The number of policies issued in the year was 50,454, assuring the sum of £6,479,796, the annual premiums payable thereon being £441,079 and the single premiums £170,518. The premium revenue for the year was £3,918,011, an increase of £215,666 over that of the previous year, and the net income from interest, after deduction of tax, was £1,376,904. The net rate of interest earned on the entire assets of the branch, invested and uninvested, was £4 15s. 2d. per cent., as compared with £4 15s. 8d. per cent. in respect of the previous year. Payments under the head of claims amounted to £2,361,549, of which £815,854 was paid in respect of deaths, and £1,545,695 to policyholders under matured endowment assurances. You will observe that the amount of the claims by death shows an important increase over the corresponding figure for 1928, due to causes to which I have already referred. The number of deaths so occurring was, however, well within the expectation.

The ordinary branch fund now amounts to £29,340,254, showing an increase during the year of £1,663,220.

ORDINARY BRANCH VALUATION.

The ordinary branch has again been valued by the OM table of mortality in conjunction with interest at 3 per cent. Only the net premiums, corresponding to the ages at entry, have been taken into account, and on this stringent basis the result of the valuation reveals a surplus of £1,815,082, which includes the sum of £725,592 brought forward from the previous year. Of this surplus, the sum of £250,000 is transferred to the investments reserve fund, and from the remainder it is proposed to maintain the reversionary bonus at the present figure of £2 4s. per cent. on with-profit policies, absorbing £924,535, and to allocate £102,726 to the shareholders, the balance of £537,821 being carried forward unappropriated. You will observe that the amount carried forward is materially less than was the case last year, but the difference is considerably more than accounted for by the unusually large amount transferred this year to the investments reserve fund.

The total number of ordinary branch policies existing at December 31, 1929, was 540,554, assuring the sum of £63,646,002, including bonus additions of £6,587,801.

MORTALITY.

If it is true that the proper study of mankind is man, then the proper study of a life assurance company is mortality; and in this connection the past year has been of the greatest interest. Since the exceptionally severe epidemic of influenza which occurred in the winter of 1918-19 there have been similar outbreaks of lesser intensity in 1922, 1924, 1927 and 1929. In each case the epidemic arose early in the year, and reached a climax about the end of February, the outbreak of 1929 being exceptional, not only in its severity, but in its persistence, normal conditions not being resumed until the end of May, five months after the first signs became evident. In this connection, and as affording an illustration of the intimate and widespread contact of the company with the general life of the community, it is interesting to record that the curve representing the progress of our claim ratio during the period in question reproduces very closely the characteristics of the curve representing the progress of the death-rate per 1,000 of "107 county boroughs and great towns" of England and Wales, but deferred a week or a fortnight throughout its course. This may be explained as representing the short period elapsing between death and the payment of the claim, and provides a striking example of the operation in practice of one of the first principles of this company—prompt payment of claims, a principle to which the Refuge has throughout its history endeavoured to give effect.

You will remember that in my address last year I referred to the effect of meteorological conditions upon our claim rate, and I made the statement that what is usually termed "seasonable" weather is not necessarily accompanied by a diminution in the number of our death claims. It is rather curious how immediately our recent experience has provided a justification of these remarks. Both the wintry weather of the opening months of the year and the hot dry summer were accompanied in the case of this company by a claim rate above the normal; whilst the heavy rains and unusually mild conditions which set in early in November exerted a most beneficial effect on our mortality experience.

INVESTMENTS.

I now come to the matter of the investments of the company; and, having regard to the numerous and, in some respects, very exceptional adverse influences of the year, you will no doubt regard my observations on this subject as being of more than usual importance.

As you are all no doubt aware, the year 1929 has been marked by a series of financial events, both at home and abroad, which might certainly, and fortunately, be described as without parallel in recent times.

I need not take you through the whole of the financial history of the twelve months. I will only allude to two of the outstanding events. At home, the greatest sensation of the year was caused by the Hatry crash; and, in this connection, I am pleased to inform you that this company was not interested either in any of the Hatry group of companies, or, fortunately, in the fraudulent scrip which was issued by those companies. Abroad, perhaps the most important event was the slump in American securities in the late autumn, and I am glad to say that here again we escaped all but the favourable consequences of this débâcle, in that our direct holding of American securities at the time of the fall amounted to less than one-third of 1 per cent. of our total investments, and those were of a comparatively non-speculative character. These are facts which I think afford reason for considerable satisfaction. They do not, however, as you may well realise, indicate that, unlike all other financial institutions, we have by any means escaped the consequences of the serious and almost general depreciation in the value of investments which occurred during the year under review. This depreciation, based on market values, amounts to 3⅝ per cent. of our total funds, and it is, perhaps, some comfort to reflect that, had the whole of our funds been invested as to one-half in long-dated and the other half in comparatively short-dated British Government securities, the result as regards the amount of depreciation during the year would have been less favourable to the company than actually has been the case. Before I leave this question, I am pleased to state that, prior to transferring the sum of £500,000 to the investments reserve funds, those funds were very considerably more than sufficient to cover all our depreciation as at December 31st.

The invested funds of the company as at December 31st last amounted to £44,907,561, showing an increase during the year of £3,617,478. This increase in the amount of the investments is larger

than the actual increase in funds, for the reason that we commenced the year with an exceptionally large bank balance, which has, during the year, been absorbed by investment. The principal increases during the year in the amounts of our investments under their respective classifications are as follows :—

	£
Railway and other debentures and debenture stocks—home and foreign	859,706
Indian and Colonial Government securities	688,827
Railway and other preference and guaranteed stocks ...	503,546
Mortgages on property within the United Kingdom ...	449,544
British Government securities	395,112
Railway and other ordinary stocks	294,965
Loans on the company's policies	239,073

The amount of interest (less income tax) has, for the first time, exceeded £2,000,000, the exact figure being £2,122,339. This shows a net yield on the combined life assurance funds of £5 3s. 1d. per cent., against £5 2s. 10d. last year and £5 2s. 11d. in 1927. Similarly the net yield on the total assets, invested and uninvested, is £4 17s. 11d., against £4 18s. in 1928 and £4 18s. 1d. in the preceding year. I am sure you will agree that the ability of the company to maintain these net yields is most gratifying, and, I hope, affords some indication of the attention given to this very important phase of the company's business.

NATIONAL HEALTH INSURANCE.

This company, as you are aware, through its membership of the National Amalgamated Approved Society, plays an important part in the operation of the national scheme of health insurance. On behalf of the society, the company administers the national health insurance of a membership of 655,000, an increase of nearly 5,000 as compared with the corresponding figure in respect of the previous year. In the course of the year 1,328,474 payments of benefit were made, amounting to £829,101, including £78,609 in respect of maternity benefit. In the preceding year the corresponding payments of benefit numbered 1,234,000, amounting to £759,941. The number of new members admitted to the "Refuge" section of the society was 42,142.

I referred a year ago to the serious and increasing number of claims on the sickness funds of societies throughout the country, which constituted so disturbing a feature of national health insurance at that time, and I announced that the management of the National Amalgamated Approved Society had set up a scheme of sickness visitation designed to eliminate those claims which could not be justified on medical grounds, and which were antagonistic to the interests of the general body of insured members. This scheme has been in operation during the last twelve months, and has been attended by a considerable measure of success, as may be gathered from an examination of the figures I have just read. Whilst fully securing the interests of genuine claimants, the system sets up an immediate supervision over all claims submitted, and ensures that no claim is allowed to persist which is not in accordance with the basic principles of the scheme of national health insurance.

I am glad to observe that the subject of maternal mortality is at last attracting a great deal of public interest. It is a most serious consideration that, whereas the infantile mortality rate has fallen steadily for many years, there has been no such decrease in the rate of maternal mortality, which is as high now as it was 30 years ago. Nor does the matter rest there. It is a fact that there exists also a great deal of female sickness consequent on and directly attributable to the incident of childbirth; and the means to be adopted to secure an improvement in this respect constitutes a problem of peculiar importance to approved societies.

It is gratifying to be able to report that the experience of the National Almalgamated Approved Society is such as to justify us in the belief that amongst the approved societies' membership the maternal mortality rate is very much less than amongst the population generally. So far as the membership of the National Amalgamated Approved Society is concerned, one of the reasons to which this result may be attributed is the extent to which our members take advantage of the specialist treatment and advice to be secured at the different ante-natal clinics and maternity and child-welfare centres up and down the country; and it is improbable that our experience differs materially from that of other approved societies. It seems, therefore, that a most promising line of advance towards the solution of the problem lies in the direction of a further extension of the system of clinics providing expert ante-natal and post-natal advice, coupled with the provision of adequate cash benefits, such as it is the aim of the approved societies to provide.

SURVEY.

In these days such terms as "rationalisation" and "reorganisation" are commonplaces in their application to industry, in the sense that only by some such radical operation may prosperity be restored, and it appears to me that we are entitled to take some credit for the fact that reorganisation, in the case of this company, takes a very different form, and is, in fact, a process which is continually at work. Year by year we have adjusted our methods to suit current conditions, and we have never hesitated completely to remodel, if necessary, any phase of our work, if by so doing we could avail ourselves of modern ideas, methods or machinery.

As a direct result of the operation of these principles, we have the fact that our industrial branch premium income, though more than double the corresponding pre-war figure, is now collected by three-fifths the number of agents, whilst over the same period the staff employed at chief office has decreased by one-tenth. From the policyholder's point of view the success of the system is evident from the fact that never—even during the war—have we decreased the benefits we offer for a given premium. On the contrary, we have made successive increases, as will be seen from the following table, which serves also to illustrate the value to our policyholders of that portion of the substantial allocation of surplus made in respect of each of the last two years, increasing the benefits under adult whole life assurances by weekly premiums. As already stated, claims under such assurances, arising by death before March 1st next, will be paid on the 1927 scale of benefits shown below, whatever the scale under which the policy was originally issued.

SUM ASSURED.

Payable at Death for a Weekly Premium of One Penny.

Age at entry.	1887 scale. £ s.	1910 scale. £ s.	1923 scale. £ s.	1927 scale. £ s.
11 ...	10 0 ...	10 17 ...	12 19 ...	15 6
30 ...	6 3 ...	6 12 ...	6 19 ...	7 18
45 ...	3 14 ...	4 1 ...	4 2 ...	4 9
60 ...	1 18 ...	2 2 ...	2 2 ...	2 4

These successive increases in benefit in the industrial branch, to which the numerous increases in the reversionary bonus provide the counterpart in the ordinary branch, have not occurred haphazard, but constitute the logical outcome of the policy of careful management and continuous attention to expense which has secured since 1920 a reduction of over 12½ in the figure representing the industrial branch expense ratio, which now stands, as I have already said, at 37.11 per cent. of the premium income for the branch.

In conclusion, I am glad to add that the attitude of the public towards the company, as expressed in their contact with members of our Field Force, continues on the cordial footing to which we have become accustomed. For this happy state of affairs we are greatly indebted to our men in the field, upon whom rests the responsibility of establishing and maintaining that element of personal contact between policyholder and company which is so valuable an asset in business life to-day, and to which we attach a very great importance.

TRIBUTE TO THE STAFF.

My last observation brings me to a subject which I think I must always have been approached with pleasure by my predecessors in the chair, as it is now by me. I refer to our officers and staff, both at the chief office and in our branches; and I take this opportunity of paying a very warm tribute to the energy and enthusiasm which have characterised their work during a period which, in many respects, repeated the difficulties of the preceding years. In the face of these difficulties the progress which has been achieved entitles us, I think, to regard the year under review as one of success, and I am sure you will desire me to express your sincere appreciation of the efforts of all who have contributed to this gratifying result.

The relations between the management and all grades of the staff continue on the cordial footing which has become a Refuge tradition, and to which we attach a very great value. We are greatly indebted to our various staff associations for their helpful collaboration throughout the year in the discussion and solution of those difficulties which arise from time to time, and which may so easily mar the smooth working of an organisation such as ours; and we desire to put on record our appreciation of this spirit of helpful co-operation, which has been in the past, and will, we hope, continue to be in the future, so great an asset to the company.

Gentlemen, I have now much pleasure in moving the adoption of the annual report and accounts.

The report and accounts were adopted.

Messrs William Eber Thornton and James Proctor Green were reappointed directors of the company.

Messrs Walton, Watts and Company were reappointed auditors.

The meeting terminated with a vote of thanks to the chairman.

THE PRUDENTIAL ASSURANCE COMPANY, LIMITED.

CONTINUED PROGRESS IN EVERY BRANCH.
SIR EDGAR HORNES' REVIEW.

The annual general meeting of the Prudential Assurance Company, Ltd., was held on Thursday, March 6, 1930, at the Chief Office, Holborn Bars, London, Sir Edgar Horne, Bart., the chairman of the company, presiding.

The secretary, Sir George May, K.B.E., having read the notice convening the meeting and the auditors' report,

The Chairman said: In the report of your directors for the 81st year of the company's existence you have once again a record of continued progress in every branch of the company's business.

In the general branch the combined premium income for 1929 from all sections other than marine was £1,611,455—that is, £225,325 more than for the year 1928.

GENERAL BRANCH.

In common with the general experience our fire losses have been heavier than in recent years, the combined loss ratio for the fire, accident, employers' liability and miscellaneous classes being 50·6 per cent. of the premium income during 1929, as compared with 47·3 per cent. for 1928, thus showing an increase of 3·3 per cent.; since, however, the proportion of premium income absorbed in expenses fell by ·8 per cent.—*i.e.*, 40·6 per cent. for 1929 as against 41·4 per cent. for 1928, the total outgoings show a net increase of only 2·5 per cent.

MARINE BUSINESS.

Last year I dealt with the new arrangements which we had made for the underwriting of marine risks as from January 1, 1929. In pursuance of our agreement with him, Mr G. Garfield Sharman has written on our behalf a restricted amount of such business, the premiums received being £58,379 and the claims amounting to £12,523.

Although our agreement with the Royal Exchange Assurance in respect of this class of business terminated on December 31, 1928, they had necessarily to accept during 1928 a number of risks commencing during 1929 and for which premiums amounting to £175,675 were paid in that year. The total marine premiums received during 1929 thus amounted to £234,054, whilst the total claims were £417,091. The fund at the end of the year was £601,059.

Unhealthy conditions persist in the marine market, and we still adhere to the policy of restricting the amount of marine business written for us, but we believe that in due course this section of our business will make its contribution to the profits of the company.

ORDINARY BRANCH.

The total amount of premiums received in this branch for the year was £11,713,684, that is £65,163 less than the corresponding figure for 1928, but as the single premiums received were less by £97,041, the income from premiums other than single premiums increased by £31,878.

In this branch the number of policies in force is 1,054,138, securing sums assured and accrued bonuses to an aggregate amount of £187,547,449, or approximately one-eighth of the total ordinary life business in force in the British Isles.

Group schemes of death benefits and of pensions are being viewed with increasing favour by employers and the Prudential is taking its part in meeting and stimulating the demand for them.

The average amount of life assurance per head of the population is still far too small, a very large proportion having most inadequate protection and a great number none whatever. This neglect appears to be even more marked amongst those classes of the community which enjoy relatively large incomes and to which ordinary rather than industrial assurance is applicable. The duty of every married man to make suitable provision for his wife and to ensure that his children enjoy the security of a good education and a fair start in the battle of life seems to be lost sight of and I wonder sometimes if wives and mothers appreciate their position and dependency.

INDUSTRIAL BRANCH.

In the industrial branch the total payments to our policyholders amounted to some £12,500,000, in addition the reserves which we hold to ensure the due payment of claims in the future arising under our existing policies were increased by about £4,000,000, so that during the year approximately £16,500,000 has been paid to or set aside for the use of our policy-holders in this branch.

The premium income for the year was £17,385,175, an increase of nearly £250,000 over that for 1928.

In this branch we have now more than twenty-five millions of policies in force securing maximum sums assured with accrued bonus amounting to over £470,000,000, but, although these figure show that a proportion of the industrial population realise the duty of providing for their dependants, the amount of the provision is only a small fraction of that required.

The mortality, more particularly during the first quarter, was exceptionally heavy, and had the effect of increasing the death claims paid by the company by nearly £1,000,000 in excess of those paid in 1928.

The average duration of the whole-life premium-paying policies in force in this branch is 18 years, which must be a rather surprising fact to those whose impression of industrial policies is that they are invariably lapsed after payment of premiums for a short period only. Circumstances compel holders to lapse their policies in some cases, but we safeguard their interests so far as possible by granting free policies after one year's premiums have been paid. In this connection I may refer to the Industrial Assurance and Friendly Societies Act, 1929, which affects us mainly with regard to certain endowment policies issued on the lives of children under age 10. Under the provisions of this Act, cash surrender values are granted after payment of one year's premium, and this provision is extended to policies lapsed after December 31, 1923, provided application is made before May 10, 1930. Should there be any of our policyholders who have lapsed policies to which the Act applies and who have not yet claimed their surrender values, they should do so without delay. To those whose policies are in force, and they form the great bulk, I would point out that they will be acting in their own best interest by maintaining them until maturity, and so obtaining the large bonuses which are being given under our profit-sharing scheme.

APPROVED SOCIETIES.

The four Prudential Approved Societies operating in Great Britain and Northern Ireland during the year 1929 paid to or on behalf of their members benefits under the National Health Insurance Acts amounting approximately to £5,198,600; making a total of over £48,982,000 since the inception of National Health Insurance in July, 1912.

Included in the amount paid during the year is a sum of £556,873 expended on treatment benefits granted as a result of the surpluses disclosed at the valuations of the societies. Of that sum, £358,691 was spent on dental treatment and dentures. Other treatment benefits provided for members were hospital, convalescent home, ophthalmic, nursing treatment, and the provision of medical and surgical appliances where necessary.

By the distribution of these sums in this way, we feel that our societies are not merely assisting in the administration of insurance against loss of health, but that they are taking a large and important part in the prevention and cure of sickness.

SURPLUS FOR THE YEAR.

As a result of the valuation of the company's assets and liabilities in the respective branches, the surplus that has emerged is in total £9,742,691, made up as follows :—

	£
Industrial branch.....	6,015,991
Ordinary branch	3,457,192
General branch.....	269,508

DISTRIBUTION.

In accordance with our articles of association, these amounts have been dealt with as follows :—

Description.	General Branch.	Ordinary Branch.	Industrial Branch.
	£	£	£
Allocated as bonus to participating policyholders	...	2,477,808	3,316,062
Transferred to profit and loss account for dividend and bonus to holders of "A" shares issued before November 21, 1929	16,667	273,471	651,529
Transferred to profit and loss account for dividend to "B" shareholders.....	50,000	...	...
Bonus to members of outdoor staff	...	...	528,497
Total surplus distributed...	66,667	2,751,279	4,496,088
Investment reserve fund	...	500,000	500,000
The common contingency fund ...	...	...	250,000
The special contingency fund.....	...	...	483,333
Additional reserves.....	84,895	...	...
Total to reserves	84,895	500,000	1,233,333
Transferred to profit and loss account for income tax	37,000	...	...
Carried forward	80,946	205,913	286,570
Grand total	269,508	3,457,192	6,015,991

SHAREHOLDERS.

The dividend and bonus to holders of "A" shares are the same as declared last year, but, in accordance with the terms of issue, the new "A" shares do not participate in our profits until next year.

The dividend on the "B" shares is also at the same rate as last year, and you will remember that your board thought it proper to warn you then that a rapid increase in the rate was not to be expected.

POLICY HOLDERS.

In both the industrial and ordinary branches the same rates of reversionary bonuses have been declared for 1929 as for 1928, that is to say in the industrial branch a rate of £1 14s. per cent. of the sum assured by all participating policies issued since January 1, 1923, whilst in the ordinary branch £2 10s. per cent. has been added to the sum assured under whole life policies and £2 6s. per cent. in the case of endowment assurances. In the industrial branch the bonus on policies issued before 1923 range from 11 per cent. to 70 per cent. according to duration, and the period for which these rates have been guaranteed is increased from 14 years to 15 years except in respect of policies issued in the Irish Free State, where the guarantee is for one year only. Cash surplus to a total amount of more than £19,000,000 has been allocated to our industrial branch policies since the inception of our profit-sharing scheme.

EXPENSE RATIO.

The expense ratio has been continuously reduced from 40·5 per cent. in 1920 to 24·79 per cent. in 1929. This, together with the increased rate of interest and the modification in the basis of assessment for income tax in the industrial branch, has enabled us to give to policyholders in this branch increased benefits, the extent of which is illustrated by the following table, which also shows the amounts distributed to the shareholders from the industrial branch :—

Year.	Sum Assured at Age 11 for a Weekly Premium of 1d.	Net Amount to Shareholders from the Industrial Branch.	Cash Allocated to Policyholders.	Rate of Reversionary Bonus Declared.	Free Policies Granted.
	£ s.	£	£		
1920 ...	10 5	318,083	Nil	...	After 5 years' premiums paid.
1921 ...	10 5	441,303	200,000	...	" " "
1922 ...	10 5	489,562	500,000	...	" " "
1923 ...	12 0	501,526	906,650	£1 5% vesting after 15 years	" " "
1924 ...	14 10	616,930	1,719,301	£1 10 " 15 "	" " "
1925 ...	14 12	647,282	2,097,737	£1 10 " 10 "	" " "
1926 ...	14 12	652,448	2,500,000	£1 10 " 5 "	After 3 years' " "
1927 ...	14 12	664,689	2,916,667	£1 12 " 5 "	" " "
1928 ...	14 12	663,632	3,265,306	£1 14 vesting immediately	After 1 year's " "
1929 ...	14 12	651,529	3,316,062	£1 14 "	" " "

Bonuses on Claims on Policies issued before 1st January, 1923, have been paid at rates varying from 2½ per cent. to 70 per cent.

This shows how the increasing prosperity of the company has been devoted for the most part to increasing the benefits granted to our policyholders. It is not unfair to compare these results with those that are being obtained by the remaining policyholders in the Post Office life assurance scheme, who will not in any circumstances share in profits, even if any are made. You will remember that the Post Office ceased to transact new business last year. We offered to take over all the existing policies and to give the policyholders all the benefits to which they were entitled and, in addition, bonuses similar to those which Prudential policyholders receive; our offer was not accepted but is still open.

OUTDOOR STAFF.

The amount of surplus profits allocated to the outdoor staff under the distribution of profits scheme has increased from £227,642 in March, 1924, to £528,497 this year and we are continuing the procedure adopted last March of reserving a portion for distribution quarterly in order to encourage a steady influx of remunerative additions to the company's industrial branch premium income. Some objection to this arrangement has been raised by those interested, but, in view of the material growth of the amount to which our representatives are entitled, it is considered that the new method of distribution is wise and equitable from every point of view.

In this country the Prudential agent is becoming increasingly the friend and adviser on insurance matters of the many families upon whom he calls week by week, and it is very gratifying to find that the pecuniary position of our employees on the outdoor staff is steadily improving year by year.

Further points with regard to our expenses which I would like to make clear are that they include adequate provision for pensions and our contributions to charities. The staff pensions are provided for under a scheme whereby the pension fund is held under the control of trustees. The assets of the pension fund are therefore not included in our balance sheet, as they are held strictly in accordance with the terms of the trust deed.

INVESTMENTS.

The past year has been a most eventful one in the investment world. During the early months, boom conditions continued, but with the approach of the General Election, the rise in prices was checked and it was not long before market values in practically every section became adversely affected. The downward movement was accentuated, firstly, by the Hatry sensation, and, later, by the American crash, which occurred just after the raising of our Bank rate to 6½ per cent., the highest figure for about eight years. These happenings naturally had far-reaching effects and exercised a most depressing influence on all markets generally, and one from which they have not yet recovered The experiences of 1929 have shown how essential it is to pursue a conservative course in the distribution of profits and the necessity for building up ample reserves to provide for such catastrophes as those we have recently witnessed. In this connection I think we can congratulate ourselves on what I may call our post-war policy. We have been subject to a certain amount of criticism occasionally for building up our reserves as we did, but the present situation completely justifies the lines on which your directors have acted. Estimates have been made by various authorities as to the average fall in market prices during the year 1929 and we are satisfied that our depreciation is, in any case, below the average of insurance companies. You will, however, by reference to our total funds, realise what a tremendous strain we have undergone. It gives me much pleasure, therefore to be able to assure you that there is still a satisfactory margin between the market value and book value of our investment without recourse to the reserve funds, as shown in the balance sheet.

It is customary at our annual meeting to comment on the distribution of our investments and I may point out therefore that our funds are now held as follows :—

United Kingdom	68 per cent.
India and the Colonies ...	10 per cent.
Foreign countries	22 per cent.

Dealing with our Stock Exchange securities only, the percentages are as follows :—

Government and municipal	54 per cent.
Debentures and bonds	20 per cent.
Guaranteed and preference stocks...	10 per cent.
Ordinary stocks and shares	16 per cent.

With conditions such as we have had there has been no difficulty in obtaining a remunerative rate of interest on our surplus funds, which have been invested during the year to give a gross return of approximately 6½ per cent.

NET YIELDS ON ORDINARY AND INDUSTRIAL BRANCH LIFE FUNDS.

A year or so ago, in discussing the net yield shown on our ordinary branch and industrial branch life funds, I suggested that there were signs that they were approaching a "peak," and further increases could not therefore be indefinitely relied upon. Whilst still holding this view, it is satisfactory to know that the rates have once more improved, the figures now being :—

Ordinary branch £4 19s. 11d. per cent., an increase of 3s.

Industrial branch £5 9s. 11d. per cent., an increase of 2s. 4d.

It has more than once been pointed out that these percentages do not represent the rates at which our funds have been invested, but are the net yields based on the actual assurance funds, and are the measure of the surplus interest earned when compared with the valuation rate of 3 per cent.

You will see from the company's accounts that effect has been given to the alterations rendered necessary by the Companies Act, 1929.

GENERAL SURVEY.

It will be seen from the figures for the year 1929 that the Prudential continues to progress although the general economic conditions of the country have not yet shown that improvement for which we have for some time been hoping. We believe that such improvement will eventually take place, but precedent to its accomplishment a new spirit of confidence and enterprise in the country must arise. The revival of industry requires a very large outlay of capital, which will not be forthcoming until the present uncertainty as to the course of future legislation is removed.

The insurance industry in this country, during a time of very great difficulty, has been one of the few which have shown continuous growth, and it is recognised as an absolutely safe avenue for the investment of savings. To mention this fact may seem unnecessary, but it is generally overlooked that conditions have been very different over a great part of Europe. The more thrifty of the population who had sought the protection of life assurance had the mortification of seeing their life cover practically disappear owing to depreciation of currencies. Over a large portion of the Continent the result has been a loss of faith in the security offered by life assurance, and, although currencies have now for some time been more stable, confidence is but slowly being re-established. With such recent and bitter experience before them, those who want to assure their lives are naturally looking for proper safeguards that their savings shall not again be reduced in value, and the security afforded by British insurance companies is eagerly sought.

In our own Colonies and Dominions conditions are different; life assurance there, as here, has the highest reputation for soundness and financial security, and we may expect in the next few years a much greater relative increase in population and wealth than is probable in this country.

DEVELOPMENT IN INDIA AND CANADA.

It was with these considerations in view that your directors obtained in November last your authority to increase the capital of the Company in order that the life business of the Prudential may be developed abroad as opportunity offers. As you know, we had previously started business in India, and I am happy to say that our activities there have developed favourably, the volume and quality of the business exceeding our expectations. In addition, steps are being taken to start life business in Canada, where we have for some years had an office for the transaction of fire business. The question of the best procedure to adopt with regard to developing our business on the Continent is also receiving our careful consideration, and in due course we hope to see valuable connections established there.

In thus broadening the basis of our operations for the future there is no suggestion that ample scope does not exist for further development at home; we shall continue to exert every endeavour in that direction, and I am confident that the Prudential will in the future, as in the past, lead the way amongst British life offices.

LIFE ASSURANCE AND DEATH DUTIES.

Although the attitude of Somerset House is not encouraging, I should like once more to put forward the view that it would be very much in the interests of the country and also, I think, of the Treasury itself, if they would agree that life assurances earmarked for the purpose of paying death duties were not added to the aggregate of the estate so far as they were employed for that particular purpose. An enormous encouragement to make suitable provision would be given in all those cases where the partition of estates or the sale of works of art would otherwise be inevitable. The celerity with which estates could be wound up and the economy both to the Treasury and the successors would be considerable, while the very large additional income which insurance companies thus secured would enable them to supply still greater assistance in promoting the prosperity of the State. Such a step would remove the only valid objection to an ideal method of turning what is now a capital tax into a charge on revenue by the payment of periodic premiums under the policy. In suggesting an alleviation of the effects of a tax on capital, such as death duties, it is interesting to note the words of the Chancellor of the Exchequer, who said in a recent speech that the country must pay its way, but that he would not use capital to meet current and recurrent expenses.

CONTRIBUTIONS TO HOSPITALS.

You will be interested to know that the scheme which we inaugurated some years ago for assisting the voluntary hospitals of the country by annual subscriptions for the support of beds and cots to be named after the company has proved a great success, and has met with ready and general acceptance by hospitals both in London and the provinces.

At the present time 404 hospitals have taken advantage of the offers we have made to them. The name of The Prudential appears over 268 beds and 425 cots, and the number is being added to week by week.

I have shown you that in the past the Prudential has always increased the benefits it gives to its policyholders as and when opportunity occurred. It is our intention still to pursue that policy and, in addition, to continue to improve our organisation, and so to extend the scope of our activities that all connected with the company—whether as policyholders, members of the staff, or shareholders—may have additional reasons to be satisfied with their interest in the Prudential.

The chairman concluded by moving the adoption of the report and accounts.

Mr Frederick Schooling, F.I.A. (deputy chairman), in seconding the motion, said that the industrial branch revenue account showed that the claims by death had amounted to £5,529,005; in 1910 the death claims paid were £2,529,301. The increased outgo under this head had thus been substantial, but not more so than would be expected considering the growth of the company. A striking feature, however, was the amount paid in matured endowments. During 1929 these amounted to over £5,000,000, which compared with £53,000 in 1910. The reduced expense ratio had enabled them to give the excellent reversionary bonus of £1 14s. per cent. in the industrial branch, and those to whom the payment of annual, half-yearly or quarterly premiums in the ordinary branch was not convenient could be recommended with confidence to consider the endowment tables in the industrial branch.

He believed the idea was still prevalent in some quarters that the Prudential only catered for the small assurer. That idea was fallacious, since every year a substantial proportion of the ordinary branch new business was made up of policies for £500 or more. Last year, for example, they issued 8,751 policies for at least £500 each, the aggregate sum assured being £7,176,649 and the average £820, a result which in no small measure was due to the rate of bonus they were able to declare.

VIEWS OF SIR WILLIAM PLENDER.

Sir William Plender, Bt., G.B.E., said that the balance sheet presented disclosed assets aggregating £228,000,000, an increase over 1928 of £9,300,000; but large as was this figure, it was small compared with the amount of the aggregate dealings in the purchase and sale of securities during the year which passed before the auditors and his firm.

The valuation made by the actuary had revealed a surplus from the life business, excluding the sum brought forward from 1928, of nearly £9,000,000, and after the allocation of £1,733,000 to investment reserves and contingency funds, would permit of £5,793,000 being distributed by way of bonus to the participating policyholders of the ordinary and industrial branches, and £528,000 to the members of the outdoor staff. He had been much interested in seeing the table in the report which showed that, since the initiation of the profit-sharing scheme 22 years ago, industrial branch policyholders and the outdoor staff had been allotted bonuses amounting to no less than £23,560,000. This was a great achievement, and it should bring home both to the industrial branch assured and to the outdoor staff the fact that their interests were well served by the company. Further interesting facts were the low expense ratio and the satisfactory rates of interest earned upon the combined life funds and on the new investments made last year.

A few months ago he was in Canada. Much was said to him about the progress of that great Dominion, and it was abundantly evident that it had a future of illimitable possibilities. But remarks were occasionally heard which pointed to the belief that England was not in some respects as alert as her children overseas, and when he told the Canadian people that an institution at home had over 27,000,000 life policies in force and completed an annual valuation of each risk by the middle of February, and announced during that month the individual bonuses, they were not a little surprised. He told them it was the Prudential, which, though 81 years old, was still virile, progressive and unrivalled. (Hear, hear.) They marvelled at the organising skill which enabled such results to be accomplished, and admitted that even they, with all their mechanical contrivances and restless energy, could not equal such an achievement. (Applause.)

The resolution was carried unanimously.

Votes of thanks were accorded with acclamation to the chairman and directors, as well as to the management and indoor and outdoor staff, for their services during the past year, and the proceedings terminated.

PROVIDENT MUTUAL LIFE ASSURANCE ASSOCIATION.

FURTHER PROGRESS—RECORD INCREASE IN FUNDS.

The annual general meeting of the Provident Mutual Life Assurance Association was held, on the 5th instant, at the offices, 25–31, Moorgate, London.

Mr Owen Hugh Smith (the chairman) said: Gentlemen, the association continues to progress and to prosper. The premium income was £873,000, an increase on that of the previous year of £34,000. This does not include any business on the single premium plan, under which nearly the whole of the single premium is advanced by the office. We have never issued a single policy on this plan. Our funds have increased during the year by £616,000, which is the largest increase in the history of the association. This remarkable increase in our funds has occurred in a year when the new business has been lower than in the previous year. The large distribution of surplus made in 1928 naturally attracted an exceptional volume of new members in that year.

The ratio of expenses to premium income has fallen to 13.6, as compared with 14.5 in the previous year. This is, with one exception, the lowest in our history. The net rate of interest earned on our funds has risen to £4 17s., which is, with one exception, the highest we have ever recorded. It is indeed remarkable that both these ratios, which measure such important factors in our profit-earning power, should in this one year be almost the best on record.

INVESTMENT OF THE FUNDS.

I now come to what is, perhaps, the most important duty imposed on your board, and that is the investment of the funds of the association. The principles which should guide those responsible for the investment of life assurance funds are quite rightly the subject of much discussion and criticism in the Press and elsewhere. It would be difficult to exaggerate the importance of these problems, because the whole fabric of life assurance is built on the earning power of money. We invest our funds to meet our obligations. Every time we issue a life policy we enter into an obligation to pay a sum of money at some unknown date in the future. Our primary and paramount duty, therefore, is so to invest our funds as to enable us to discharge these liabilities, most of which will not mature for many years hence. A large proportion, therefore, of our assets are held in the form of long-dated or irredeemable securities which can be counted upon to produce a steady flow of interest yield. By this policy we endeavour as far as it is practicable to marry our liabilities to our assets.

But apart from this, our first duty, to meet our liabilities as and when they occur, we have also a duty to our members, secondary and subordinate to the first, to earn as high a rate of bonus for them as is consistent with prudent finance. This bonus, unlike the sum assured, is not a fixed liability. It results from the surplus earning power of the Association. It is reasonable, therefore, that to provide a benefit of a less rigid and more elastic character we should invest part of our funds in securities of a less rigid type. Consequently, we have for many years invested a limited proportion of our funds in ordinary stocks, and you will see from the balance sheet that we have continued this policy during the past year. Forty years ago we had 20 per cent. of our funds invested in ordinary stocks; last year the corresponding percentage was 14, which includes many investments, technically classed as ordinary stocks which are essentially different in character, such as gas companies' stocks carrying maximum rates of dividend.

VALUE OF THE ASSETS.

During the past year there has been a general fall in market values on the Stock Exchange, and several groups of companies have come to grief. I am glad to be able to tell you that the association has never had any interest, either direct or indirect, in any of those concerns. The fall in the market value of our investments is 3.3 per cent. of the mean fund, which contrasts with a fall of 6.4 per cent. on long-dated British Government securities. It has been our consistent practice not to bring into revenue any profits on securities realised or appreciated in value, with the result that, notwithstanding the fall to which I have just referred, the market values of our assets exceed the values in the balance sheet by a substantial sum without taking into account the investment reserve fund of £160,000.

In conclusion, I have again to report that the usual actuarial investigation has been made as at December 31st last. It is clear from this that we have fully maintained for the first two years of this quinquennium the high profit-earning power which enabled us to declare a record bonus two years ago. We have therefore had no hesitation in continuing the interim bonus at this rate.

The report and accounts were unanimously adopted.

ANGLO-INTERNATIONAL BANK, LIMITED.

INCREASED PROFITS IN YEAR OF EXCEPTIONAL DIFFICULTIES.

The fourth ordinary general meeting of Anglo-International Bank, Ltd., was held, on the 28th ultimo, at Winchester House, London, General the Hon. Sir Herbert A. Lawrence, G.C.B. (the chairman) presiding.

The Secretary (Mr J. Back) having read the notice convening the meeting and the report of the auditors,

The Chairman said: At the two previous meetings I mentioned that the process of liquidating the affairs of our predecessors was bound to be protracted, in view of their widespread international interests, but I am happy to be able to report that much progress has been made during the past year. I may here mention that we have recently entered into an agreement with the British-Hungarian Bank, whereby they take over our Budapest branch. We have thus taken a further step in carrying out the policy we have adopted of developing our relations with Central Europe through the medium of local banking connections, instead of through branches of our own.

THE PAST YEAR.

The year has been one of exceptional difficulty. At the commencement of the year, the continued boom on the New York Stock Exchange was attracting considerable funds from Europe to America at high rates of interest. This, apart from diverting money which would normally have been employed on the London market, and causing a rise in interest rates, had an unfavourable effect on the sterling-dollar exchange, and in February the Bank rate was increased from 4½ per cent. to 5½ per cent., and eventually, in September, to 6½ per cent. This proved effective, so that it was possible gradually to reduce the Bank rate until, in December, it stood at 5 per cent., although there was still a demand for gold from Germany and France. In fact, the ability of the Bank of France to increase their gold stocks, which amounted, at the end of the year, to the equivalent of no less than £342,000,000, was a particular feature of the year. The general uncertainty of outlook which prevailed throughout the year naturally entailed a restriction of normal business activities, and the adoption of a policy of caution. This policy is reflected in the figures contained in the present accounts, as compared with those submitted to you at our last meeting.

THE ACCOUNTS.

Turning to the principal items in the report and accounts, which are in your hands, the cash in hand and with bankers, money at call, and balances with bankers abroad, amount to £731,000. If to this be added the British Government Securities and Treasury Bills, our immediately available cash resources are brought up to a total of £1,396,000. Other investments, which are valued at market or purchase price, whichever is lower, have been reduced from £750,000 to £645,000, if we include the small item of £15,000 under the heading of investment in subsidiary company, which we are now showing separately, to comply with the new Companies Act. The bulk of our investments is made up of our holdings in banks of first-class standing on the Continent.

As regards the acceptance branch of our business, there is, this year, a contraction in the figures for outstanding acceptances and guarantees from £3,147,000 to £2,567,000. Similarly, the item advances to customers and other accounts has been reduced from £4,438,000 to £3,811,000, including the item advance to subsidiary company, while, on the other side of the balance sheet, deposits are lower. At the same time, we have maintained a higher percentage of liquidity.

Despite the contraction in the balance-sheet figures, we are able to show an increase in current profits, which, for the period under review, amount to £117,695. This amount, together with the sum brought forward from 1928, brings the total standing to the credit of profit and loss account to £138,227. Of this total your directors propose, in order further to strengthen the position of the bank, to place £100,000 to contingency reserve and £10,000 to premises amortisation, carrying forward the balance of £28,227 2s. 4d.

I would add that, although some of the events of 1929 must eventually have a beneficial effect, conditions are likely to remain unsettled for some time to come. A great deal has been done in recent years, notably by the League of Nations, towards the settlement of international questions, and the stabilisation of monetary conditions, but some time must still pass before really satisfactory economic relations between the various countries are finally established. Viewing the situation as a whole, your directors feel it advisable to continue to exercise caution in the development of the bank's position.

The Chairman having dealt at length with conditions in Europe, concluded by moving the adoption of the report and accounts, which were unanimously adopted.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

REVISION IN RATES OF PREMIUM.

NEW PROSPECTUS TO BE ISSUED SHORTLY.

The 116th stated annual meeting of the Scottish Widows' Fund and Life Assurance Society was held in the society's office, Edinburgh, on Tuesday, March 4, 1930, A. W. Robertson Durham, Esq., C.A., F.F.A. (chairman of the ordinary court of directors), presiding.

The Chairman, in opening the proceedings, expressed his regret—which would be shared by all present—that the president, Lord Strathmore, was unable to be present and take the chair.

The Deputy-Manager and Secretary read the notice convening the meeting and the minutes of the 115th stated annual meeting, held on March 5, 1929, which were approved; and the report and accounts were taken as read.

In moving the adoption of the report and accounts the Chairman, after referring to the changes which have taken place in the directorate and to the new business, said:—The investment of the society's large accumulated funds is a matter which receives the unremitting attention of your directors, and the manner in which they are invested is shown in the balance sheet. Following the course that has been indicated in the speeches in recent years, there has been a further reduction in the amount invested in British Government securities, although the sum so invested still remains at the large total of £8,359,606. The year under review has been a particularly difficult one in the financial world. Owing to high money rates, there have been opportunities for investment at remunerative rates of interest, but, on the other hand, there has been a corresponding depreciation in almost all classes of securities.

MARKET VALUE OF SECURITIES.

My predecessor told you last year that the market values of our securities showed a considerable surplus over the balance-sheet figures, and pointed out the importance of this inner reserve as a buffer against possible depreciation of prices in the future. He probably hardly realised at the time how soon the truth of this statement was to be brought home to all those responsible for the investment of funds. I am glad to be able to tell you, however, that, notwithstanding the all-round fall in the value of Stock Exchange securities, the values brought out by our stringent valuation made on the basis of the market selling price as at December 31st last, as compared with those of December 31, 1928, show the small depreciation of less than 4 per cent. on the values of these securities. A substantial margin remains in hand in the difference between the market values and the balance-sheet figures, so that we are still in a very strong position to face the vicissitudes of the future.

RATES OF PREMIUM REVISED.

There is another matter of special interest to which I wish to refer. Your society is shortly to issue a new prospectus, and it will be found that some of the rates of premium have undergone a revision. Changed conditions since the war, including rates of interest and also mortality, in respect of which the society has investigated its own experience, have indicated that the rates for whole-life with-profit assurances are relatively high. These rates have over important sections of the table been generally reduced. In order that holders of whole-life with-profit policies effected at the old rates may not suffer any injustice on this account, it has been decided that at future distributions of surplus an adjustment will be made in the reversionary bonus allotted to these policies. A corresponding adjustment will be made in the intermediate bonus on such policies which become claims or are surrendered before the date of the next investigation.

ADVANTAGES OF WHOLE-LIFE ASSURANCE.

In this connection I want to draw the members' attention to a special leaflet which is being sent to them with the annual report.

For far too long the fundamental purpose of life assurance has been largely obscured by the popularity of a form of assurance whose chief attraction is the satisfactory manner in which it fulfils all the requirements of a thoroughly safe investment. I need not tell you that all we and others have said regarding the advantages of endowment assurance as a means of investing small annual savings still holds good, but we feel strongly that there is a distinct danger of too much attention being given to this alluring form of assurance, and too little to the family provision aspect, which, after all, is the real origin and purpose of life assurance. So keen were our ancestors on making adequate provision for their dependants that they practised "candle-end saving" economy in order to provide the necessary premiums. Unfortunately, there is not the same keen appreciation of the privileges of whole-life assurance to-day. Nevertheless, there are signs of an awakening, and evidence is not wanting of a swing of the pendulum in the direction of whole-life assurance. The special leaflet to which I have just referred deals with this vital question, and I commend it to the serious notice of the members and other connections of the society.

In conclusion, I would repeat that we are a mutual society of members insuring each other, and, as such, one of the outstanding examples of co-operative enterprise in its best form. In no way can the success of this enterprise be furthered more effectively than by the introduction of new members by the existing members. We appeal, therefore, to all the members to continue the good work of co-operation by bringing the society to the notice of their friends and putting them in touch with one of our branches.

The directors' report, together with the accounts as audited, were adopted unanimously.

NATIONAL PROVIDENT INSTITUTION.

SATISFACTORY RESULTS AND PROSPECTS.

The ninety-fourth annual meeting of the National Provident Institution for Mutual Life Assurance was held, on the 28th ultimo, in London.

The Hon. Vicary Gibbs (the chairman) said that during the past year they had transacted a satisfactory amount of new business, policies having been issued for over £1,200,000. Taking the two years 1928 and 1929 together, they showed a substantial increase over the new business transacted in the first two years of the last quinquennium, and as their renewal premium income had increased by over £15,000 it would be understood that the purpose of new business had been amply met.

Referring to the financial stringency experienced last year, the chairman said that the Hatry frauds and American and general speculation only affected their securities through the consequent rise in the value of money. It would be best to take as a basis for comparison the date of their last valuation of assets and liabilities—namely, November 20, 1927. The Bank rate ruling at that time was 4½ per cent., and there was then a difference in their favour of £541,000 between the market value and book value of their Stock Exchange securities, the book value being £5,100,000. On November 20th last the Bank rate was 6 per cent., although it was reduced to 5½ per cent. the following day. The market value of the Stock Exchange securities at that date was £5,648,000, or £417,000 in excess of the book values, amounting to £5,231,000. In other words, there was roughly a shrinkage in value in the two-year period of only 3 per cent., and this shrinkage was rapidly disappearing.

At their next meeting they would have before them the results of the valuation that would be made at the end of this year. They had in hand now sufficient profit to enable them to declare a bonus at the end of the year at the same rate as they did in 1927. Consequently, he could not anticipate that the 1930 bonus declaration would be anything but entirely gratifying. The board had decided to increase the interim bonus payable by 5s. per cent. on the sum assured in respect of claims arising on and after March 1 under whole life policies, by death, or endowment assurance policies by survival.

The report was unanimously adopted, and the proposed alterations in rules were approved.

SPENCER, TURNER AND BOLDERO, LIMITED.

The thirty-sixth annual general meeting of Spencer, Turner and Boldero, Ltd., was held, on the 27th ultimo, at 18 Duke Street, Lisson Grove, London.

Mr John Boldero (the chairman) first referred to the great loss which the company had sustained in the death of its managing director, Mr Henry John Turner. Proceeding to deal with the report, he said that, considering the generally adverse conditions of trade, and some disappointments in two of their minor departments, they had come through the somewhat troubled waters of the past year in good style and with the flag flying high. A year ago he ventured to speak of the period then under review as "a good average year." The past 12 months had not been so good, judged by the figures, and, in explanation, he would remind shareholders of the gradual, but persistent, fall in prices of the goods handled by the company.

The net profit for the year was £40,633, and, with £41,164 brought forward, there was an available total of £81,798. The directors recommended a final dividend on the ordinary shares at the rate of 9 per cent. per annum, making 7 per cent. for the year, and £39,043 remained to be carried forward.

In connection with the accounts the chairman pointed out that the total reserve funds as shown in the balance sheet stood this year at £169,072, as compared with £157,661 in the previous accounts; also that among their assets they had Gilt-edged investments standing at £90,758 and cash to the amount of £45,696.

The report was unanimously adopted.

MIDLAND COUNTIES ELECTRIC SUPPLY COMPANY, LIMITED.

CONTINUED EXPANSION DURING THE YEAR. INCREASE OF CAPITAL APPROVED.

The seventeenth ordinary general meeting of the Midland Counties Electric Supply Company, Ltd., was held, on the 3rd instant, at Winchester House, Old Broad Street, London, Mr George Balfour, J.P., M.P. (the chairman), presiding.

The Secretary (Mr Wm. C. Bryden, C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that he was glad to be able to report continuation of the progress of the business of the subidiary companies owned by their company. It was gratifying to know that notwithstanding the very rapid growth of capital expenditure their forecast of previous years had proved correct, namely, that they should by the development of the business due to previous expenditure, be able to overtake the service of new capital year by year before it could reach the production stage. With an expenditure of something like £400,000 per annum in recent years largely for providing services in new territory each year, it was no small achievement to be able not only to maintain but to increase the dividend so as to provide a moderate return on the shareholders' capital, notwithstanding the fact that the money spent could not produce any substantial return during the year in which it was expended.

PROGRESS SINCE 1919.

Summarising the progress of the company, he said that in the year 1919 they had £847,500 invested in properties, and in 1929 that had grown to £4,340,800, of which about 88 per cent. was in electric light and power property. Compared with the movement of capital the trading balances had grown from £48,391 in 1919 to £349,209 in 1929, of which £340,000 was from electricity supply.

With regard to the power and lighting properties, the units sold during the year aggregated 165,602,000, an increase of 24 per cent. over the output for 1928. The output for 1929 was more than three times that of 1924. In 1919 the unit output was 9,784,000, and in 1929 it was 165,602,000. The development of their business in new areas and the growth of business in districts previously served had resulted in an additional 5,604 consumers being connected during the year, bringing the total number of consumers now supplied from the company's mains up to 26,181. In 1919 the number was 2,567. The total load connected to the plant was now 125,180 kw., an increase of 19,880 kw. as compared with the previous year.

Extensions to the transmission and distributing systems involving the provision of 118 miles of extra high tension lines and 135 miles of low tension distributors had been brought into operation during 1929. They now owned 746 route miles of extra high pressure line and 598 route miles of low tension line. Supplies had been made available during the year in 46 parishes in rural districts, and altogether they were now affording supplies in 3 boroughs, 26 urban districts, and 180 parishes.

PROPOSED INCREASE OF CAPITAL.

During the year, 250,000 ordinary shares had been issued at a premium of 6s. per share. That exhausted the authorised capital and, as the continual expansion of the undertakings meant the continual absorption of fresh capital, shareholders would be asked to authorise increasing the capital by £500,000 to £4,500,000.

With regard to the accounts, the available balance was £158,578, and it was proposed to pay a dividend at the rate of 7 per cent. on the ordinary shares. He was a bold man who ventured to forecast results in these times of industrial uncertainty, but, having regard to the business contracted for, the extensions of their transmission and distributions in hand, and to the natural growth of the business, they should be able to look forward to steady growth, and that indication was warranted by their present returns.

If the Coal Mines Bill was passed in its present form, it was very probable that the cost of coal would be increased, as it had been clearly indicated that public utility undertakings would have to pay more for their coal and pass the additional cost on to the public. Whatever legislation was sound and necessary they must accept and take the rough with the smooth, but he could hardly believe that that artificial attempt to readjust industry could be of any benefit to the country.

The report and accounts were unanimously adopted.

At a subsequent extra-ordinary general meeting resolutions were unanimously passed increasing the capital of the company from £4,000,000 to £4,500,000 by the creation of 500,000 new shares of £1 each.

A vote of thanks to the chairman, directors, staff and employees concluded the proceedings.

METROPOLITAN ELECTRIC SUPPLY COMPANY, LIMITED.

CONTINUED PROGRESS.

The forty-third ordinary general meeting of the Metropolitan Electric Supply Company, Ltd., was held, on the 5th instant, at Winchester House, London.

The Secretary (Mr A. J. G. Beaumont) having read the notice convening the meeting and the auditors' report, Mr George Balfour, M.P. (the chairman), said that the accounts submitted recorded the continuation of the progress which the directors had reported for several years in succession. This progress amply justified the policy they had adopted of keeping all the plant and mains right up to date, and, in particular, their policy of rapid extension and absorption in the western area. In 1924 they sold in that area 27,600,000 units as against 117,300,000 units sold last year, and the receipts for the same years were £193,017 and £488,794 respectively.

The constantly increasing amount payable in rates did much to stop the cheapening of the supply. The company had made, and were about to make, reductions in price, but the question could be more comprehensively dealt with were it not for the uncertainty and magnitude of increasing rates. As an indication of the burden, he might say that, whereas in 1924 the Metropolitan Company and its subsidiaries paid about £27,000 in local rates, last year—only five years later—they paid over £58,000. This was a matter which more directly interested the consumer, as every penny saved in rates would pass over to the consumer and not in any manner benefit the shareholders. This question had, so far as the power supply side of their business was concerned, become more important and pressing since the passing of the De-rating Act.

The company made a considerable reduction in price in 1928, and as a result the consumers benefited last year to the extent of £71,000 as compared with the previous year. They were going steadily forward to do the best they could for their consumers, and further reductions would be made to take effect from the end of the current quarter. Meantime, it was of interest to record that to-day their average price was exactly one-half the average price in 1924. The gross receipts amounted to £974,591, an increase of £113,363 over the previous year. The balance on revenue account was £348,200, and the directors recommended a further dividend, making a total of 10 per cent. for the year.

The report and accounts were unanimously adopted.

CONQUISTADORES!

¶ It is a far cry since the adventurous days of the Spanish Conquistadores and their pioneer expeditions to the ancient American civilisations.

¶ To-day, a great and growing volume of overseas trade is transacted annually by the Republics of the New World, and unrivalled facilities for every description of modern banking business are afforded by

COURTAULDS, LIMITED.

CONDITIONS IN THE RAYON INDUSTRY.
EFFECT OF SILK DUTIES UNCERTAINTY.
SITUATION IN AMERICA AND ON THE CONTINENT.
SUBSTANTIAL TECHNICAL PROGRESS.
GROUNDS FOR CONFIDENCE IN THE FUTURE.
MR SAMUEL COURTAULD ON DIVIDEND POLICY.

The seventeenth ordinary general meeting of Courtaulds, Ltd., was held, on the 6th instant, at Cannon Street Hotel, London, E.C.

Mr Samuel Courtauld (chairman of the company) presided.

The Secretary (Mr E. Kettle) having read the notice convening the meeting and the report of the auditors,

The Chairman, who was received with applause, said: Ladies and gentlemen, I will now submit to the meeting that the directors' report and balance sheet, circulated among the ordinary shareholders, be taken as read. (Agreed.)

I will now move: "That the report of the directors dated the 14th February, 1930, and the balance sheet of the 31st December, 1929, now submitted, be, and the same are hereby received and adopted, and that a final dividend on the ordinary shares for the year ended the 31st December, 1929, of 6 per cent., free of income tax (making with the interim dividend already paid 10 per cent. total for the year, free of income tax) be declared and paid to holders of ordinary shares on the register at the close of business on the 14th February, 1930."

It is three years since I last came before you and explained the reasons for a marked falling-off in the earnings of this company. I am putting it this way intentionally, because, to-day, it seems to be assumed, and, indeed, it has been publicly stated, that this is the first time for many years that Courtaulds have experienced a decline in profits, and the present set-back, of a kind which all developing industries must encounter from time to time, is spoken of as something unheard of. I will now merely draw your attention to the fact that for 1926, as compared with 1925, our trading profits declined from £5,111,000 to £3,840,000; for 1929, as compared with 1928, they declined from £5,171,000 to £3,743,000—not very dissimilar figures, you will agree. However, I shall return to this point later.

CAUSES OF DECREASED PROFITS.

The two principal causes for our decrease in profits are matters of common knowledge. They are firstly the growing uncertainty about the future of the English silk duties, which began to make itself felt about the time of the last General Election, and, secondly, the set-back to American industry caused by the Wall Street collapse. The first cause has been by far the more important so far as we are concerned, and, as mentioned in the directors' report, the main fall in our profits has occurred in this country. I will, therefore, deal with the English position first.

As I am now going to touch on matters which have a political side, and as I am concerned to give only such facts as I can see, and to make only such deductions as I honestly believe in, and as I am concerned above all to avoid any exaggerated bias or any suspicion of a partisan attitude, I will begin by being perfectly fair and say that the uncertain fate of the artificial silk duties, although it is by far the greatest, is not the only difficulty with which our English business has had to contend throughout the year.

OVER SUPPLY AND PRICE CUTTING.

It would be idle to ignore the unsatisfactory conditions which have prevailed all over Europe; over-supply and consequent price-cutting were much in evidence in England as well as on the Continent in the previous year, and, as I said at our last meeting, we could not expect to regain a stable condition of trade in a moment. Still, at the end of 1928, when prices had been recently readjusted, and the rapid rise of production by home competitors was coming to an end, there were distinct signs of returning confidence, bringing with them the promise of better business for us. As a matter of fact, according to official returns, English production of rayon yarns only increased by 4 per cent. in 1929, so it cannot be said that increasing output was an important factor in causing trade conditions to get so much worse during the year. We believed that, by Christmas, we should have a period of steady, if gradual, improvement to look back upon, provided that no Government action, or inaction, shook the foundation of the commercial position.

THE SILK DUTIES.

You may say that we should have foreseen a change of Government, and, following that, the upset of the silk duties; at any rate we warned you of the serious consequences which we felt sure would follow the second event. Frankly, we did not expect that a Labour Government would take any action which could only result in an immediate increase of unemployment: still less did we expect them to make precedent an excuse for keeping an important industry in a state of paralysis by refusing to declare their intentions. More realistic treatment of urgent industrial problems was one benefit at least which we hoped would follow the accession of a Labour Government to power. For our part, if the duties were to be—or are to be—removed, we would far sooner have met the blow at the earliest possible moment and taken what steps we could to meet the new conditions before uncertainty and apprehension had driven large sections of the consuming industries away from the use of rayon.

At the present time the total weekly hours worked in our factories have been reduced by over 33 per cent., as compared with a year ago, and wages and production have fallen in proportion, but even so, our stocks of yarn show no diminution as the fall in sales does not appear to be fully arrested. Our present output is actually less than half of what it would be if the whole of our plants, including the second Wolverhampton unit, were working at full capacity. This is the state to which we have already been brought, mainly as the result of political uncertainty.

REMOVAL OF DUTIES A FIRST-CLASS CALAMITY.

I told you last year what I thought would be the result of the actual withdrawal of the protection afforded to English rayon manufacturers by the existing duties, and I have seen no reason to modify my opinion since then; that is, that their removal would be a first-class calamity to all those engaged in the industry. I believe that it would be followed by many weaker producers disappearing from the field altogether, and that so far as Courtaulds are concerned it would definitely put an end to any hope of further expansion in this country and very probably result in a permanent shrinkage.

If the duties are to go you may rely upon our putting up a very strong fight against the foreign competition which will follow, and with our large uunits of production, high standard of quality, and proximity to our chief market, we shall have certain advantages which cannot be taken away from us. Nevertheless, the low rates of wages paid by Continental competitors much outweigh these advantages. It is still a fact that in several competing countries the rate of wage is less than half of ours, and in many qualities of rayon yarns this represents a saving to the foreigner of more than the 1s. per lb. which is the amount of protection we now have, and, other things being equal, would ensure him a very handsome profit while forcing us to sell at or under cost.

LOWER WAGES OR LESSENED EMPLOYMENT.

I am pleased to be able to say that I have never had occasion to accuse our workpeople, male or female, of any lack of goodwill, skill or industry—(applause)—in fact, I hold them to be better workers than any others to be found in Europe. Nevertheless, it is mathematically impossible for any conceivable degree of skill to make up for more than a small fraction of the extra wage cost. I have no hesitation in making this assertion, for the unique position we occupy in being intimately acquainted with the working of factories which operate on practically identical lines in several different countries gives us the surest possible guidance in forming a judgment. It is, therefore, difficult to resist the conclusion that without some measure of protection we shall be faced with two alternatives: either a lowering of wages or a permanent curtailment of production—that is to say, the abandonment of important sections of the business with consequent lessening of employment, and the concentration upon qualities of output which embody a comparatively small labour factor. We have hitherto refused to

consider reductions of wages, because we felt that our profits warranted the payment of a high scale, but without some degree of protection it is difficult to see any other alternative than the equally disagreeable one which I have just referred to.

Those who adhere rigidly to the old Free Trade school may say that the present state of affairs has been caused by the original imposition of the duties having fostered unhealthy expansion, but I would submit that the powers that be should look at things as they are and not concern themselves too much with ancient history at such a critical moment. (Hear, hear.) There are many thousands of people dependent upon this industry for their living to-day; it is useless to argue, as some people will, that they should have been employed in some other trade, or that they should have emigrated, because they are in fact now with us, and they stand in imminent danger of being thrown into the ranks of the unemployed.

GOVERNMENT POLICY.

Whilst I am on this subject, may I say that the present deplorable position could not conceivably have arisen had the Government been composed of business men or paid due attention to business interests. (Applause.) Any commercial man of experience could have foreseen that a threat of repealing a duty a year hence would infallibly have the effect of a general paralysis upon the industry concerned, resulting, as the critical day approached, in an almost complete standstill, with a consequent enormous increase in unemployment. I do not wish it to be understood that I am criticising the present Government in particular; how often do we find in Budget debates in the House of Commons that decisions are taken in a comparatively few minutes, and upon imperfect information, in matters affecting the vital interests of hundreds of employers and the very livelihood of tens—if not hundreds—of thousands of workpeople.

I feel that it is high time, in this great commercial country, that large questions affecting industry should cease to be treated in this summary fashion or be made the sport of party politics—(hear, hear)—and that our statesmen should recognise them as one of the chief, if not the chief, among objects of governmental concern.

NATIONAL VALUE OF RAYON YARN.

Then there is another point I should like to put forward for consideration beyond these walls. Rayon yarns produced in this country are nearly 100 per cent. British from the initial raw materials upwards, and this cannot be said of any other thread or fibre used by the great textile trades. The cost of our own average viscose thread, analysed according to the cost of its constituent parts, is 85 per cent. English; 10 per cent. may be attributed to the cost of the pulp, which is frequently, and may be always, an Empire product; only 5 per cent. is at present necessarily foreign in origin. On the other hand, a raw silk thread is 100 per cent. foreign; in the case of a cotton thread of an average quality about two-thirds of the ultimate cost is accounted for by the imported raw cotton and only one-third is expended in England; and the same thing is true of many qualities of worsted and linen. Any Government, present or future, which is concerned to attack unemployment and the adverse balance of imports, would do well to realise that the manufacture of rayon yarn has a national value under these two headings to a degree which is not true of any other textile. (Hear, hear.)

RETURN ON CAPITAL.

As I wish to make it perfectly clear that in my belief this industry is not in a position to withstand any heavy shocks to-day, I can show you another side of the picture which will reinforce what I have already said. Our own English rayon branch in 1929 only earned about 9 per cent. gross upon the money which has actually been sunk in it, and the rate since the end of the year must be lower than this, and this is in spite of the fact that we have the largest units—and therefore almost certainly the lowest costs—and realise the highest average selling prices of all the spinners of viscose yarn in this country. It is, of course, true that through our depreciation policy in past years we have written off a proportion of the capital expenditure on plant and buildings—but no more than we have believed to be necessary, although some manufacturers may appear to hold a different view—and therefore the position is rather better for us to-day than it would be if all the capital expenditure was of recent date.

The profit which is equivalent to this 9 per cent. is arrived at after making all depreciation allowances for the year but before the payment of income tax. When the income tax upon these English earnings and the income tax upon our investment income are added together it appears that, excluding the payment of excise duties, Courtaulds' contribution to the national exchequer in respect of 1929 will amount to a great deal more than the whole net profit yielded by their industrial operations in England, and there is food for serious thought in the fact that, as things are to-day, it would actually be a financial advantage for this company to become domiciled abroad instead of retaining its domicile in this country.

BUSINESS OUTLOOK.

I have now said nearly all I can about the state of business in England, and it is really quite impossible to forecast the future at all closely without knowing what the Budget will contain. It is quite certain, however, that 1930 cannot under any circumstances be a very successful year for the English rayon trade, for even if the duties are retained, it is hardly possible that the very serious loss of profit for the first four months can be recouped by any expansion in the rest of the year. I must also ask you to note that all I have said about last year's difficulties and the present uncertain outlook of our yarn-producing branch applies with even greater force to our weaving branch, which at present is working only half time, with, I regret to say, the prospect of still further reductions in view.

POSITION IN AMERICA.

I will now say something about America. We are informed that the Viscose Company made steady progress for the first ten months of the year, with a gradually increasing output, which actually amounted to about 50 per cent. of the total American production of rayon yarns; and there was some reduction of the manufactured stocks with which 1929 started. Then, as you know, at end of October the Wall Street collapse gave a far-reaching shake to national confidence; the upward curve was suddenly reversed; sales were severely curtailed, and the loss of two months' growing trade adversely affected the expected balance of profit for the year; consequently it was no use looking to America for any increased income to offset our loss of English profit; even so, the dividends received from that country account for much more than half of our total profits for the year.

The present American outlook is not very clear; the first wave of depression seems to have passed, and there is evidence of a return towards normal trade conditions—at any rate, among manufacturers of the staple fabrics which consume the larger part of the Viscose Company's output, for the luxury trades do not appear to be making the same recovery. But another factor we have to consider is the growth of competition among the American producers of rayon yarns; there will probably be a large increase of output during 1930, and the recent check to consumption may be found to have resulted in letting production get ahead of it. If this is the case, salesmen will have a difficult period to face, though they do not expect the industry to be thrown into a state of chaos such as has prevailed on this side of the Atlantic.

SITUATION IN EUROPE.

I now come to the Continent of Europe and our interests there. I need not tell you that 1929 did not witness any improvement in the Continental rayon industry; that much is evident from the fall in share values. Production continued to grow rapidly, increasing by about 34,000,000 lbs., or 19 per cent., during the year, and price-cutting was keener than ever, resulting, as always, in a general unsettling of markets and a frightening away of consumers. The only satisfactory feature of the situation is that Continental producers at last seem to be realising that such a game is not worth playing, for if continued it can only result in ultimate loss to all.

Certain agreements and fusions of interests have already been made which should result in some elimination of overlapping and wasteful competition, but the field has not yet been fully covered, and there are further difficulties to be overcome before we can say that the outlook is settled. I need hardly tell you that we have taken what part we could in helping to bring about a better state of affairs. Courtaulds have hitherto always stood for conciliation, agreement and ordered growth.

This brings me to the subject of our own Continental commitments. Owing to the over-production and price-cutting which I have noted, it is, we believe, true to say that little, if any, profit was made by anyone in the Continental rayon industry during 1929, and as regards the factories in which we are directly concerned, at Calais and Cologne, this was no disappointment to us, as they were too recently started to justify the expectation of profits accruing at such an early date. The other companies, however, in which we are interested to large amounts as shareholders, suffered heavy falls in the prices of their shares, bringing the book values of these investments far below the prices which we paid for them, even though these prices were themselvss far below the highest point reached by these shares. Consequently, when we followed our invariable and the only sound practice of writing down all our quoted investments to market prices at the end of the year, we found that we had very heavy sums to write off.

REASONS FOR MAKING CONTINENTAL INVESTMENTS.

Now I have no doubt that some of you have asked why we ever made these investments. If they were to be regarded merely as financial speculations or valued merely by the probable direct yield from them, there would be some justification for doubt, although we might claim that every expansion in a business of this nature is necessarily a speculation, and that, though we may sometimes have guessed wrong, yet we have often guessed right. But these investments were never regarded by us in this way; we acquired very important holdings, coupled with certain rights and obligations, in two large European rayon companies, with the main object of helping to stabilise world markets, and postpone, if we could not finally avert, the chaotic position in which unregulated competition has now after all reduced the industry on the Continent.

We should naturally have liked these investments to have earned us handsome dividends, but we did not count upon these, and we were even prepared to face such a writing-down of values as has actually occurred, for we believed that even so we should be substantially better off on balance. This belief I hold to have been justified, for the steps which we took in January, 1927, to prevent a wide market collapse continued to make themselves felt beneficially for about two years, and there is no doubt that they played a very important part in producing the satisfactory results which we laid before you for the two years prior to 1929. Moreover, these investments, which in our opinion are now valued upon a solid basis, represent a series of alliances which should prove of inestimable worth to us in future negotiations, especially in the event of this country being laid open to attack by Continental importers through the removal of the artificial silk duties. (Hear, hear.)

GROUNDS FOR CONFIDENCE.

As I have already kept you a long time endeavouring to give you a true picture of the difficulties which are naturally uppermost in all our minds, I will now mention more briefly the grounds which we have for confidence. In the first place we have made continued and substantial technical progress during the year, specially towards the simplification of methods, with important possibilities in the way of reduced costs. I need say no more about these except that they will undoubtedly add to our competitive strength and, though we do not flatter ourselves with the possession of a monopoly of brains, under anything like fair conditions we shall not fear a trial of strength with anybody. (Hear, hear.)

Then as to our financial methods, in spite of reduced earnings we have continued to write down our plants at the usual rates of depreciation as hitherto, whether they have been in full work or not, so that our present-day costs of production will reap the full benefit of this.

BOARD'S DIVIDEND POLICY.

Now, finally, I am going to try to meet two lines of criticism to which we have been subjected—one, that we should have put ourselves in the position of being able to equalise dividends by distributing less liberal dividends in the past, and the other that we should have distributed a higher dividend this year and should not have written our special losses out of profits. It is evident that these two criticisms are to some extent mutually destructive, and they bring us back to this: that you cannot please everybody, unless everybody wants the same thing. (Laughter.)

To those who think that we should have declared a lower dividend last year and that the declaration which we did make raised false hopes as to the future I would reply as follows. We had frequently been found fault with in the past for being illiberal to our shareholders, and for adding to what were called unnecessarily large reserves. Last year we had exceptionally satisfactory profits to deal with. We started by adding £1,000,000 to general reserve, and then we gave our shareholders the direct benefit of the remainder, believing that they are entitled to a higher-than-average rate of distribution after an exceptionally good year, and feeling that anyone who is not wilfully blind must realise that an industry which has been expanding at such a prodigious rate as this is necessarily speculative in character, and that downs must be expected as well as ups.

At the same time we did our best to avoid raising undue future expectations by clearly warning our shareholders to expect reduced profits in 1929. I said at our last meeting that the "*very best* we could hope for" was that profits would not diminish, and I gave substantial reasons for showing how unlikely it was that even this maximum of possible good fortune would be attained. I cannot believe that the majority of our shareholders would like dividends to be kept down to such a low level that any possible decline from one year to the next would be for ever ruled out.

NEED FOR SUBSTANTIAL RESERVES.

Other critics have suggested that we should have paid a higher dividend this year and written down our Continental investments out of general reserve, or alternatively that we should have set apart a portion of the general reserve for the equalisation of dividends, and drawn upon that. Now I will point out that we have actually drawn £700,000 from last year's carry-forward towards the writing-off of these investments and the payment of the dividend, which in principle, though not perhaps in amount, comes to what these people desire. But the underlying reasons for not taking from general reserve in one form or another are two. In the first place we believed that the declaration of a dividend higher than 10 per cent. for the year would have been definitely misleading, for it would have indicated, we thought, that the period of difficulty through which we were passing was merely temporary, and encourage hopes of an earlier revival than we think to be likely.

COMPETITION.

The second reason is this. We cannot rule out the possibility that the real fight is yet to come, and it would be folly to deplete our reserves in advance of that event. (Hear, hear.) I said earlier that Courtaulds had hitherto stood for conciliation and agreement. Up to the present we have believed that it has paid us—and also benefited the whole industry—to uphold a steady level of prices, even if it involved putting some restriction upon the expansion of our output. Lately, however, we have begun to feel that our forbearance has sometimes been taken improper advantage of, and that others have sought to advance their frontiers or stake out claims while we have held our hand. We do not intend to look on at this for ever, for if we did we might find that the whole of our territory would be taken from us. At any rate, we feel that under present circumstances a large reserve of liquid resources may prove to be the most potent argument for a conclusion which will give us the position to which we are entitled. (Hear, hear.)

DIFFICULTY OF STABILISING DIVIDENDS.

To return to the question of the stabilisation of dividends, I think it is necessary to reiterate what I have often tried to establish in the past. The world's output of rayon yarn, which was a comparatively small thing before the war, has been multiplied nearly six times since 1922, the first year of which I have comprehensive statistics, and now exceeds 400,000,000 lbs. per annum, which is four times the world output of raw silk. All the time new discoveries have been made and technique has constantly been changing. Now it is idle to say that an industry in this condition of rapid growth and rapid change is not highly speculative in character, or to compare it with manufactures which have had a mature life of a hundred years or so. This being so, I repeat that it seems to me impossible to guarantee stabilised dividends without fixing them at an unduly low level.

No one regrets more than we do that the shares of our company have been made a gambling counter, but from the nature of the case we can neither guarantee a steady level of earnings nor immunity against occasional losses. It is, therefore, impossible to prevent fluctuations in the price of our shares, and no stabilisation of dividends would stop this, for, after all, it is not the amount distributed, but the amount earned and the value of the assets which are the paramount factors in determining the true value of a share—(Hear, hear)—coupled, of course, with the view taken of future prospects; and of these we have always endeavoured to give you the most sober and carefully-balanced estimate.

EXPECTATIONS FOR 1930.

Now, what I have said cannot have been very encouraging, and may, perhaps, have seemed rather involved, as I have touched on so many problems. I will, therefore, endeavour to give you a summarised view of our expectations for 1930. I must ask you to note that I am not able to take into account the effects of a possible economic world crisis, which some people think we may have to face before long. Certainly, it is true that there must be underlying causes for the general depression which is affecting the whole of European trade to-day, and it is equally certain that these general causes are beyond the control of those who are directing this industry.

Leaving this out of account, the probabilities seem to be as follows. At the best it hardly seems likely that we shall avoid some further diminution of our English profit this year. In America, also, there seems reason to fear a shrinkage, though not

to anything like the same extent as we are threatened with here if the duties are abolished. On the Continent no considerable profits are to be looked for at an early date. On the other hand, it is most unlikely that we shall have to face a writing down of assets on any scale comparable with what has recently occurred. With these views before you you will no doubt be able to grasp the possibilities and probabilities as well as we can do ourselves.

Now, I have kept you a long time, so I will not go through the balance sheet item by item. It is made out in the new form required by the Companies' Act, and is quite easy to understand, and, after what I have said, I hardly think that any more detailed explanations are necessary.

I will ask the deputy-chairman, Mr Stanley Bourne, to second the resolution. (Applause.)

Mr Stanley Bourne (deputy-chairman) seconded the resolution.

The chairman then invited questions.

SHAREHOLDERS' QUESTIONS.

Mr D. A. Thomas said that he had written to the directors asking for certain information, but had been unable to obtain it. He considered that all the shareholders had a right to obtain information regarding their undertaking in order that they might get an idea of what the future of the company would be. He had also asked for permission to go over the company's works at Wolverhampton and Coventry, but had been refused that permission. When he was in America he had been allowed to go over many works, and he thought that he ought to have the same privilege in this country. He understood that about half their dividends came from the profits of the Viscose Corporation in America. He would like to know whether that was correct.

Mr Savory: I should like to ask what is to-day's market value of the company's investments in Government securities at present standing in the balance sheet at £9,810,882. I ask this because in 1921 the company held £4,000,000 in Government stocks which were valued at the low market price then ruling, when War Loan was quoted about 82 and Conversion 3½ per cent. about 62; apparently these stocks are still valued at these prices. If this is the case, I respectfully suggest that when so much has this year been written out of profits off the value of the Continental investments, our holding in gilt-edged securities might have been written up to to-day's market value.

THE AMERICAN VISCOSE CORPORATION.

I should also like to ask what profit was made last year by the American Viscose Corporation. In asking this question I am fully aware that the same question has been put to you at previous meetings, but you have informed us that it is not in the interest of the shareholders that the information should be given. In view of the fact, however, that this information is public property in America, I cannot see why the English shareholders should not also be told. In the Senate at Washington last month Senator Wheeler read out the profits of the Viscose Company for the three years 1926, 1927 and 1928, and he gave them as $27,609,050, $29,051,180 and $31,645,901. It appears to me that when all the depressing factors are brought forward, the shareholders should be given some better idea as to the value of the American investment, as otherwise many English shareholders are scared out of their holdings owing to their not having this information.

I notice that investments in and advances to subsidiary companies are this year valued at £18,363,758, whereas at the end of 1927, and also, I believe, last year, the American Viscose Corporation alone was valued at £18,557,248. May we take it that the American Viscose Corporation has now redeemed the balance of its preferred capital, or have you written down the value of this investment?

May I suggest that this year, if profits are sufficient, instead of a sum being placed to the reserve fund, the directors start a dividend equalisation fund. Your dividend policy seems to be something like a switchback railway, and if you could set aside sums to a dividend equalisation fund so that when you increase the dividend shareholders can feel satisfied that the increased dividend will be maintained in the future, it would greatly benefit them and would also remove the ordinary shares from the speculative category into which they have been brought by the dividend policy.

Mr Mason said that he would like to draw attention to the item of "Balance for the year, including interest and dividends on investments and after charging depreciation of buildings, plant, etc., and expenses of management, and providing for contingencies." He would like to have that item analysed in order that the accounts might be more intelligible. With regard to the item of investments, the directors knew what their value was, but that item was no help to him in forming an opinion of what his shares were worth. He knew he would be told that it was not in the interests of shareholders that such information should be disclosed, but he considered that that was a completely worn-out tale, and he was tired of it.

CONFIDENCE IN THE BOARD.

He had much faith in the ability of the chairman and his co-directors. They had been through a very trying year, and it was highly probable that they had still further troubles ahead, but he had not the slightest doubt that they would emerge from them triumphantly. His fervent wish was that the chairman and his colleagues might have good health, and then he was convinced that things would be all right with the company.

He would like to know whether they had paid a visit to the Chancellor of the Exchequer to explain their views as to the effect of a removal of the silk duties. In his (the speaker's) opinion, such removal would be madness. (Hear, hear.)

Mr Disney asked whether it would be possible for the meeting to pass a resolution protesting against the possible withdrawal of the silk duties.

Mr Price said that the chairman had referred to severe price-cutting which was taking place between the company and its competitors. He would like to know what the policy of the board was in that matter. Was it feasible to open negotiations with their competitors and arrange something in the nature of a stabilisation of prices? He understood that many other companies were agreeable to adopting that course, and he believed that the position was that it only needed the goodwill of Courtaulds to bring about such a state of affairs. Surely it would be beneficial to everyone concerned.

RETAIL TRADE.

Mr Rumbold said that he would like to say a few words with regard to the retail trade. The value of the goodwill of the name of Courtauld was enormous, but he did not think that much use was being made of it so far as the customer was concerned. In fact, he thought that that goodwill was being depreciated. When ladies went into a shop and asked for artificial silk they got it, but if they asked whether it was Courtaulds no one could tell them whether it was or not. (Hear, hear.)

It was true that Courtaulds did advertise in certain papers certain names of their products, but the name of Courtaulds did not appear. He wished that steps might be taken to advertise the name of the company to a greater extent.

Mr Howard, supporting the previous speaker, said that since the last meeting he had consulted upwards of 1,000 ladies, and they had all told him that they had been unable to obtain Courtaulds' goods. He would suggest that some easily remembered name should be adopted their products, as was the case with some of their competitors.

Mr Morris said that he thought that a good deal of the falling off in the company's profits was accounted for by the fact that acetate silk was to a very great extent interfering with the sale of viscose, and he would like to know whether the manufacture of the company's acetate silk, which had recently been commenced, was giving satisfaction. He regretted that Courtaulds had not recognised the possibilities and potentialities of acetate silk six or seven years ago, when they would not have had anything like the competition which they were meeting to-day.

He had seen it stated publicly in print that Courtaulds were no longer the largest manufacturers in Great Britain in regard to length, weight, or quality of output, and he would like to know whether that was true or whether the company still remained the premier company.

CHAIRMAN'S REPLY.

The Chairman: If there are no other questions, I will try to answer those which have already been put. Mr Thomas wants to know whether he can visit our English works. Without knowing whether Mr Thomas has any direct business connection with us, I cannot answer that; but our rule is that no one visits our works unless they have business to do there. It may seem hard, but when you think that we have 70,000 shareholders, how can we possibly prevent all kinds of people going into our works and picking up information if we allow any shareholder to go? (Hear, hear.) When Mr Thomas goes to America he goes as a stranger, and I suppose with credentials and introductions, and gets shown their works. I venture to say that no works in America would allow 70,000 shareholders to go through. (Hear, hear.) Mr Thomas also asked some other questions about the American company which were also asked by Mr Savory. Mr Savory asked one thing about the market value of our Government securities. We have always stated on our balance sheet, I think, that these securities are valued either at or under cost, whichever is the lower. We do not write them up, and we do not write them down unless they go below what they stand at in our books. These Government securities some time ago did hold a large hidden reserve, but there has been a large fall in Government securities, as in everything else, and although there is still a small surplus in that figure, it is nothing like what it was a year or two ago. However, they are still somewhat above to-day's market price.

Then Mr Savory wants to know a good deal about the American Viscose Corporation's figures, and so on, and quotes some figure given by Senator Wheeler in the Senate. Those figures I have seen myself, and I have examined them. They are only an estimate, and I must tell you that they are extremely inaccurate. They are miles from the truth in most respects, and I believe they were challenged by a Republican Senator on the other side. Senator Wheeler made some fantastic statements about the cost price of viscose yarn which were not, I suppose, 50 per cent. or 100 per cent. within the truth. His other figures are absolutely valueless for anyone who wants to form any idea of the profit.

VALUE OF AMERICAN INVESTMENTS.

As to the valuation we place upon the American investments, two years ago we stated the figure at which we valued them. I think it was £18,500,000. That was stated by us in our report, I believe. Since then the preferred stock has been sold, and since them the Canadian company has been incorporated. Those, however, are relatively small things. The vast proportion of that figure—perhaps 80 per cent. or 90 per cent.—is still accounted for by the American shares. They have not been written down. The American ordinary stock we hold stands at the same value to-day as it did two years ago. I might perhaps refer a little to this question that we always get—this hoary question—about the American investment, and I am afraid that some of my answers will also be hoary. I should like to say that we do not resent this question. It is perfectly natural that shareholders should want to know all they can about their investments, and I must ask you to believe that we fully realise our responsibility in administering this large investment for you. But we are still of opinion that it is to your best interests to withhold financial details. (Hear, hear.) I think we can also maintain that the past history of the American investments justifies this.

It would be perfectly easy for us to give you the whole of the figures, and it would be pleasant for us to do it here because it would put a stop to this distrust and also reduce our load of responsibility. At the same time, it would be utterly wrong for us to do so from a business point of view. Very many people, especially our competitors, would give a great deal to know these figures, and when they got them you may be quite sure they would not use them to our advantage. None of our important competitors issue figures which will tell you anything at all. We are always examining their balance sheets, and would only like to know. No single company of any importance gives the information you wish us to give. Most of these companies are linked up with other companies. They are subsidiaries of other companies. Many of them are private companies. There are no reliable statistics going about or figures to be got from balance sheets at all; and, of course, they do not publish their profits. If we gave away all you ask for it would simply amount to giving away the plan of your defences to the enemy. I must adhere to our previous practice of not giving any figures. At the same time, I might refer to one or two previous statements I have given, which may help you a little. Mr Thomas was not quite right. I said that much more than half of our profit this year came from America, which is the fact.

AMERICAN RESERVES.

Then as to the American reserves, some people think they have enormous, fantastic reserves in America. I think that at a previous meeting I stated that the policy of the American directors in regard to reserves was just about on a par with our policy here. You may infer what they put to reserve from what we would consider reasonable in their circumstances—and you know what we do. (Laughter.) At the same time, I do not want you to think there is any mysterious hidden treasure there. The reserves, we believe, are what are reasonable for a company in that position. Business is business on both sides of the Atlantic, and not a fairy tale anywhere.

Another thing: we stated when we last revalued the American assets that the valuation we put on the shares was fully covered by our share of the solid assets. That means that there is no water in them, and I think we stated that there was a little bit to spare. (Laughter.) I would like you to understand that there is nothing extraordinary there. The position is the same to-day. I think this ought to enable you to form some kind of view as to the worth of those investments, but I cannot give you any more detailed figures.

Mr Savory also said—though I cannot agree with him—that our dividend policy has been mainly responsible for the speculation in our shares. The opportunity for speculation is given by the fluctuation in profits, which we cannot stop. I think the responsibility for it probably lies with people whose interest it is to foster speculation; it certainly is not ours.

Mr Mason said he could not make out from the balance sheet what the profit was. On the first page of the report we state that the trading profit was £3,743,827, which, of course, is after payment of income tax. I am much obliged to Mr Mason for his kind expression of trust, and hope we shall continue to keep that trust. He asks if we have been to the Chancellor of the Exchequer. The answer is "No," because the Chancellor would not see us. (Laughter.) In all fairness, however, I must say we have seen other Government officials; we have seen the Chancellor's Secretary, and I believe the Chancellor is fully acquainted with our views, although we were not allowed to state them to him in person.

Mr Disney makes the interesting suggestion that this meeting should pass a resolution to the Chancellor, but I am afraid, knowing the Chancellor's temperament and political complexion, it would be of no use at all.

Mr Price asks about price-cutting and negotiations. We continually negotiate about price-cutting, but perhaps Mr Price will know what I mean when I say that we only negotiate with what we call solid people who have something to offer and who are likely to be an important factor in the business. (Hear, hear.)

Mr Rumbold raised very interesting questions about Courtaulds' name and goodwill in the retail trade. He is there touching on questions which I personally do not know much about, because I am not on the commercial side of the business, but I think I can say this: this interesting and difficult question continually has our attention.

POLICY.

The next shareholder who spoke—Mr Howard—compared our policy with Celanese policy. There are various things one could say about that. Our biggest customers are the wholesale trade who are manufacturers of stockings and all kinds of things, and even as far as our woven goods are concerned we send them to the wholesale and do not deal with the retail direct. Those manufacturers mostly have their own trade-marks and goodwill, and the most suicidal thing we could do would be to alienate them. We have to consider that first, and whether we can with them evolve a policy of advertising which will bring our name forward without hurting their interests. We have to consider their interests first. We are investigating the question of special trade-marks and so on.

A Shareholder: May I suggest that when when you actually go into the retail trade you should do it thoroughly?

The Chairman: But we are not in the retail trade. I might point out that a very small percentage of our rayon yarn is used by our own weaving branch, and some of those goods are advertised, but by far the bigger part is sold by us in the form of yarn and always goes through the hands of other manufacturers.

Mr Howard: Could you possibly suggest that it might be for the advantage of the company if the wholesalers had the word "Courtaulds" on their advertised goods? (Hear, hear.)

The Chairman: I would not say more than that is the kind of question we have been investigating recently. Mr Howard says: "Why not follow Celanese policy?" but as to following their policy, would you like us to follow their policy in making profits? (Laughter.)

The resolution was then put to the meeting and carried unanimously.

The chairman referred to the appointment to the board of Mr John Coldbrook Hanbury-Williams and moved his election as a director. Mr Hanbury-Williams, he said, had youth, strength and energy, and they expected him to be of great assistance to them on the commercial side.

Mr S. Bourne (deputy-chairman) seconded the resolution, and it was unanimously adopted.

The chairman then moved that Mr S. Bourne, Mr S. A. Courtauld and Sir Thomas Latham, Bt., be re-elected directors.

Mr G. J. Bell seconded the motion, which was unanimously approved.

On the motion of Mr L. Denny, seconded by Mr H. P. Lawson, Messrs W. Elles-Hill and Company and Messrs Price, Waterhouse and Company were reappointed joint auditors.

A vote of thanks to the chairman, directors and staff concluded the proceedings.

INVERESK PAPER COMPANY, LIMITED.

POSITION AND OUTLOOK.
THE NEWSPAPER INTERESTS.
MR B. H. BINDER'S VIEWS.

The seventh annual general meeting of the Inveresk Paper Company, Ltd., was held on the 4th instant, at Winchester House, Old Broad Street, London, and adjourned to the Cannon Street Hotel, London.

Mr B. H. Binder, F.C.A. (the chairman), said that he had hoped that it would not be necessary to add much to the full report sent to the shareholders, but they had received circulars from Mr Harrison and Mr Wingfield, and it would be necessary to refer to some of their statements. The proxies lodged by shareholders and the support promised by those present at the meeting were overwhelmingly in his (the chairman's) favour and assured that the resolutions which he would later on propose would be carried. In July next voting rights would be acquired by the whole of the Preference shares if, as at present appeared to be likely, their dividend was not paid before then; in that event the voting control of the company would pass to the Preference shareholders, and he had received assurances of support from large holders of those shares.

MR HARRISON'S STATEMENTS.

Mr Harrison had included in his circular a long letter which he had written to him (the chairman) on February 15th, regarding a proposed scheme for the fusion of three companies connected with daily newspapers in which the Inveresk company was largely interested. Various ideas had been explored to put matters on a permanent and sound basis, in particular some amalgamation of the newspaper companies, which seemed the only feasible method to relieve the Inveresk company of serious financial obligations in connection with those newspaper companies, which had heavy floating liabilities, and to enable the Inveresk company to retain its equity interests. Thefurgent necessity for providing new money was the main consideration.

The details of the scheme recently discussed had always been subject to adjustment, but, as unanimity was impossible on the lines on which they were working, all parties had withdrawn it. That scheme was therefore dead. Nothing very definite or practical had yet been substituted, and the finding of further funds was still a problem to be solved.

"DAILY CHRONICLE" AND "SUNDAY NEWS."

Referring to the *Daily Chronicle* and the *Sunday News*, the chairman said that those two newspapers had, in the past, made substantial profits over a long period of years and, if their financial position was put right, there was no reason why they should not, in their new and more attractive form, again become profitable.

The company's troubles were mainly financial. A large number of the properties were sound and only required to be relieved of financial difficulties to enable them to remain valuable investments and to yield satisfactory dividends. He had been in conference for some time with direct representatives of very large holdings of each class of shares in the company and had considered with them methods for bringing about an improvement in the state of the company's affairs. All were agreed that the company had valuable assets, which, with their present capable technical management, and under improved administration, could be made more valuable.

THE BOARD.

With regard to the board, Messrs Smith and Faichen did not seek re-election, it being proposed that their technical knowledge should be utilised on a special technical management committee for the paper mills. A temporary sales advisory committee had already been set up and a purchasing committee, previously in existence, had been made more effective. In place of the two retiring directors it was proposed to elect Mr Allan Hepworth and Mr W. C. Thorne, who had had a wide and successful commercial experience and were both ordinary shareholders.

As regarded his (the chairman's) position, in October last he had been appointed financial adviser by the board, and when Mr Harrison resigned the chairmanship he had been asked by the board to take the chair and had agreed to do so temporarily. On December 18, 1929, he had been unanimously appointed director and chairman.

The chairman concluded by moving the adoption of the report and accounts.

Mr A. W. Gotch Berrill seconded the resolution.

MR HARRISON'S REMARKS.

Mr W. Harrison, LL.B., said that it had been his privilege for six years to lead the company as its chairman, and he was glad, at that late hour, to see for the first time the olive branch held out to him and some evidence of fair play towards himself. During the last three or four months he had suffered greatly, but he was perfectly willing, in the interests of the shareholders, to bury the hatchet, let bygones be bygones, and begin afresh to rebuild and rehabilitate that great undertaking. (Applause.) He proceeded to trace the course of events in connection with their newspaper interests until the financial crises in London and New York had finally prevented the issue of capital which had been designed to ease the financial position.

He described how he had been unexpectedly confronted with a demand for his resignation from the position of chairman, and complained that since that time, in spite of his intimate knowledge of the business, he had not been consulted. The thing which had pained him most was that he had been accused of purchasing interests without proper investigation and without regard to their intrinsic merits. After all, everyone was liable to make mistakes, and they would not make any money unless they did. If there was any minute of the board showing any written protest against anything which he had done up to December 31, 1929, let it be produced!

It was no use getting hot-headed or indulging in personalities. They were in the hands of the banks for the time being. The company possessed assets of great value, and they ought to protect them.

ATTITUDE OF PREFERENCE SHAREHOLDERS.

Viscount St. Davids said that he represented a large number of first preference shares and he could state that the holders of those shares would agree to having an issue of debentures placed in front of them in order to help save the company, provided they were immediately given votes, and he also understood that the holders of the second preference shares would adopt a similar attitude. (Applause.) He recommended all shareholders to pull together and support the chairman.

Mr C. Stanley Crosse (solicitor for Mr Harrison) said that he was able to announce that Mr Harrison and Mr Binder had agreed to shake hands and bury the hatchet. (Loud applause.) They had agreed to forget the past and to work in the shareholders' interests and in those interests alone.

The chairman said that he understood that Mr Harrison had taken great exception to certain words in his report. Those words had been put in to indicate his (the chairman's) views at the time and had never been intended to reflect upon Mr Harrison's personal character. (Hear, hear.)

After some further discussion, the report and accounts were adopted, a resolution for the adjournment of the meeting, proposed by Mr G. Arthur Wingfield, having been lost on a show of hands, A poll was demanded. Mr. Wingfield's motion was defeated at the poll, the actual result of which was:—

For the resolution	139,659
Against the resolution.....	673,846
Majority against resolution	534,187

The formal business was duly transacted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 1, 1930:—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS	£
Supply Services.....	5,883	From Revenue.....	21,405
Interest, &c., on Debt	5,027	Decrease in Balances	568
Sinking Fund.....	1,946		
Sundries	757		
Decrease in Debt	8,361		
	21,973		21,973

The revenue for the week amounted to £21,405,000, as compared with £25,033,100 in the corresponding week last year. Income tax and super-tax were lower at £14,335,000 and £2,110,000, against £17,248,000 and £2,410,000 respectively. Customs were higher at £2,210,000, against £1,877,000, while Excise brought in £1,193,000, against £1,219,000. Ordinary receipts amounted to £17,000, as compared with £19,600. With four more weeks to run to the end of the financial year, the deficit on the year's accounts stands at £72,554,300, as compared with £31,710,000 last year. During the week the National Debt was reduced by £8,361,000, as shown below:—

(000's omitted.)

	£		£
National Savings Certificates	+ 200	Treasury Bills	— 12,061
Public Dept. Advances	+ 4,000	Sundries	— 500
	+ 4,200		— 12,561

The Floating Debt was reduced by £8,035,000 to £701,210,000.

FINANCIAL YEAR, 1929-30, APRIL 1 TO MARCH 1.

	£		£
Expenditure	697,604,363	Revenue	625,050,064
		Decreases in balance	3,717,756
		Amount borrowed	68,836,543
	697,604,363		697,604,363

ESTIMATES FOR FINANCIAL YEAR, 1929-30.

	£		£
Expenditure.....	691,564,000*	Revenue	746,060,000
Sinking Fund	50,400,000		
Surplus	4,096,000		
	746,060,000		746,060,000

* This figure includes the new Exchequer Contributions of £15,560,000 to Local Revenues, &c.

SELF-BALANCING REVENUE AND EXPENDITURE.

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1, 1929, to March 1, 1930, were £24,715,000, of which £15,215,000 was remitted by means of purchases of sterling in India and £9,500,000 transferred from the Paper Currency Reserve in England to the Home Treasury.

BULLION.

The following statistics of imports and exports of gold for week ended March 6, 1930, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	£
From—	
France	5,811
Brazil	51,930
British West Africa	36,513
British South Africa	1,340,152
Australia	30,000
Other Countries	22
Total declared value of imports	1,464,428

Exported from Great Britain and Northern Ireland.	£
To—	
Poland	3,425
Germany	148,760
Netherlands	6,448
France	20,333
Austria	20,500
Egypt	1,000
Bombay via other Ports	42,422
Other Countries	850
Total declared value of exports	243,738

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1930.	ARRIVALS.	£	1930.	WITHDRAWALS.	£
Feb. 28	Bars bought	23	Feb. 28		Nil
Mar. 1	Foreign coin bought	10	Mar. 1	Bars sold	1,703
Mar. 3	Sovs. from abroad	250,000		Sovs. for export	2,000
,, 4		Nil	,, 3	Bars sold	5,163
,, 5		Nil	,, 4		Nil
,, 6	Sovereigns from abroad	30,817	,, 5		Nil
			,, 6		Nil
Total		280,850	Total		8,866

Net arrivals, £271,984

Messrs. Samuel Montagu & Co. write on March 5, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £151,326,826 on the 26th ultimo (as compared with £150,971,511 on the previous Wednesday), and represents a decrease of £2,579,489 since April 29, 1925, when an effective gold standard was resumed. Gold from South Africa to the value of £1,091,000 was available in the open market yesterday. Germany was again in the market, but was outbid by an undisclosed buyer (rumoured to be Belgium), who secured £990,000 at the fixed price of 84s. 11½d. per fine ounce. Of the balance, India secured £35,000, the Home trade £20,000, and the Continental trade £46,000. Movements of gold as announced by the Bank of England show a net influx of £271,167 during the week under review. Receipts amounted to £280,033, which included £250,000 in sovereigns from South Africa and £30,000 in sovereigns from Australia.

SILVER.

Silver prices have fallen heavily during the week. Following the news received on the 28th ultimo of the proposal contained in the Indian Budget to impose an import duty on silver of 4 annas per fine ounce, there was a sharp decline to 19⅛d. and 19 1/16d., a drop of 9/16d. in the cash and ½d. in the two months' quotation. Prices continued to fall until yesterday, when 18⅝d. and 18½d. were quoted for the respective deliveries, but hesitation on the part of sellers to-day caused a reaction to 18 11/16d. and 18 9/16d.

China has been a heavy seller, but America has also offered freely, and the market found little support except for Indian Bazaar buying to cover bear sales. Recent shipments to India having considerably reduced stocks, a demand for silver for immediate delivery raised the premium on cash silver to ½d. on the 3rd instant; this eased to ¼d. yesterday, but was increased to ⅜d. to-day.

The rumour has been current that the Chinese Government are also contemplating the establishment of an import duty on silver, but as yet there has been no official confirmation.

Events of the week have created a feeling of depression and the outlook, whilst not encouraging, must be considered uncertain.

No fresh Indian Currency Returns have come to hand.

The stocks in Shanghai on the 1st instant consisted of about 91,600,000 ounces in sycee, 132,000,000 dollars, 19,000 silver bars and 6,300,000 Saigon dollars, as compared with about 90,700,000 ounces in sycee, 129,000,000 dollars, 21,640 silver bars and 6,300,000 Saigon dollars on the 22nd ultimo.

Statistics for the month of February last are appended:—

	BAR SILVER per oz. std. Cash delivery.	Two mos. delivery.	BAR GOLD per oz. fine.
Highest price	20 7/16d.	20½d.	84s. 11½d.
Lowest ,,	19⅛d.	19 1/16d.	84s. 10½d.
Average ,,	20·008d.	19·878d.	84s. 11·22d.

REPORTS AND NOTICES.

The Great Britain office of the Canada Life Assurance Company has received advice from their head office in Toronto that their general manager, Mr T. G. McConkey, died on January 22nd.

BANKS.

THOS. COOK AND SON (BANKERS), LTD.—The principal items from the balance sheet of this private banking company for the year ending October 31, 1929, are set out below, with corresponding figures for the previous year. Current, deposit and other accounts have increased by £156,246, and the total amount, 43 per cent., is represented by cash on hand at bankers and in transit, and money at call and short notice, while a further 31 per cent. is held in the form of British Government Treasury Bills. £10,000 has again been added to the reserve fund, making a total of £110,000.

Liabilities.

	1928.		1929.
Capital—250,000 shares of £1 each (10s. paid)	£125,000	...	£125,000
Reserve Fund	£100,000	...	£110,000
Current, Deposit and other Accounts ...	£2,912,815	...	£3,069,061

Assets.

	1928.		1929.
Cash and Currencies on hand and at Bankers	£532,970	...	£504,389

British, Colonial and Indian Government Securities	£326,808	...	£388,070
Advances to Customers and Other Accounts	£250,573	...	£290,234
Indian Treasury Bills	£117,057	...	£199,231

RUBBER, &c.

THE BRAUNSTON (MALAY) RUBBER ESTATES, LIMITED.—The twentieth annual report and accounts shows that the rubber sold for the year ended September 30, 1929, amounted to 515,207 lbs. (against 355,248 lbs. in the preceding year), resulting in a profit of £5,728 (against £1,454), although the average price realised was reduced from 10.52d. to 9¼d. per lb. With the amount brought forward there is a total available profit of £12,130 from which the directors recommend the payment of a dividend of 6 per cent. (last year 5 per cent.), £7,060 to carry forward (last year £6,402).

TELOGOREDJO UNITED PLANTATIONS, LIMITED.—The directors have decided to curtail the production for 1930 by 10 per cent., thereby reducing the production figure to 4,250,000 lbs., or thereabouts. The directors state that the matter has been discussed with both English and Dutch interests similarly concerned, and have reason to think that there will be other companies which, in their own interests, will adopt a like policy. Should this be the case, general production must be appreciably reduced, which will react on the price of the commodity and enable sales to be effected at a real profit instead of at a price merely covering the cost of production or with a fractional margin over.

MISCELLANEOUS.

ENGLISH ELECTRIC COMPANY.—At the adjourned meeting of of the 6 per cent. debenture stockholders of the English Electric Company, Ltd., Mr W. L. Hichens, the chairman, announced the result of the poll, which was as follows:—For the resolution, 769,401; against the resolution, 9,100. The chairman declared the resolution carried by the requisite majority as an extra-ordinary resolution.

HUDSON'S BAY COMPANY'S LAND SALES.

NEISNER BROTHERS, INC.—We are advised by cable from New York that this variety chain stores have placed their common stock on a $1.60 annual dividend basis, payable quarterly from April 1, 1930 (to shareholders of record March 15th). The company reports earnings for the year 1929 at $4.18 on present outstanding common stock, amounting to 206,215 shares. This compares with the 1928 figures, when the company earned $5.10 on 125,000 shares. The additional number of shares outstanding are accounted for by a bonus distribution of 60 per cent., no new shares having been issued for cash. This company has been associated in the management for the past year of British Home Stores, Ltd., in England, and we understand important developments in this latter company are foreshadowed during the next twelve to eighteen months, when it is expected the company will have many new large stores in operation.

RICHARD THOMAS AND COMPANY.—At a meeting of Preference shareholders, held on January 22, a resolution was put and declared carried unanimously, appointing Messrs George Cursons, J.P., Harold Jeans, and W. H. Charles, F.S.A.A., with power to add to their number, as a committee for the protection of the rights and interests of the preference shareholders. The resolution also invited the preference shareholders to contribute towards the expenses of the committee in varying amounts according to the number of shares held, but not exceeding £5 in any instance.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Another week of fine dry weather over the United Kingdom enabled farmers to push ahead with field work, and excellent progress was made in preparing the ground for spring crops. In these circumstances, the seeded area is expected to be quite up to average, despite the unsatisfactory level of prices obtained this season. Winter cereals present a healthy appearance; the recent cold spell is checking rapid growth; oats in particular are showing up well. Offerings of native wheat on the principal statute markets are exceedingly small, and with prices marking a further decline, growers are afforded little encouragement to bring supplies forward. On the import market, United Kingdom millers purchased freely of Canadian and Plate qualities in near positions at the lower level of prices recently ruling, but on immediate wants being covered the market again relapsed into a quiet state. Continental inquiries were not much in evidence, as stocks on hand are apparently sufficient for present needs, but orders were circulating more freely from Mediterranean countries, and part cargoes of Australian were booked to Italy. The International situation is still largely influenced by large surplus holdings in the Northern Hemisphere, and buying operations on a fairly extensive scale by the Farm Board Corporation in the United States proved unsuccessful in raising prices on a higher level, as the movement was not followed on this side. Canadian sellers show more disposition to press sales, but in market circles it is thought that the effort has been left too late, and that there is little prospect of large available supplies being absorbed this season. Liberal quantities, however, will be needed by importers before the next domestic harvests become available, and a favourable opportunity arises to facilitate exports from the Dominion, provided prices are sufficiently attractive. Of feeding stuffs, a fair consumptive demand continues for Plate maize, and owing to reduced supplies coming forward, near positions command a premium. New crop loadings, however, tended easier on favourable preliminary estimates and competitive offers of European varieties. Flour prices were unaltered but tendency weaker, the market being disturbed by acute competition in the milling industry, and it was reported that sales have been made at considerably under recognised list prices.

Wheat.—Easier following the recent decline in forward offers. No. 1, Northern Manitoba (Vancouver shipment), ex ship, 44s. 6d.; No. 2, ditto, 43s. 6d.; No. 3, 42s. 3d.; No. 4, Manitoba, 41s. 6d.; No. 5, ditto (Atlantic shipment), 40s. 3d.; No. 6, ditto, 32s. 6d.; No. 2, mixed Durum, 40s.; No. 2, hard winter, 42s.; Rosafe, 63½ lbs., arrived, 40s. 3d.; Barusso, 63½ lbs., ex ship to arrive, 40s. 9d.; Australian, 42s. 9d. per 496 lbs.; English, 8s. 2d.-8s. 5d. per 112 lbs.

Flour.—Dull and tendency easier. London straight run quoted 37s. per sack for country deliveries, and 36s. London area, but business reported done under these prices. Of imported, Manitoba patents, 34s. 6d.-37s. 6d.; Buffalo, 36s.-38s.; Australian, 32s. 6d. ex store. On c.i.f. terms, Manitoba top patents, March, 34s.-35s.; export ditto, 31s. 6d.-32s. 6d.; Australian, 30s.; French, prompt, 25s. 6d.-27s. 6d. per 280 lbs. Argentine, low grade, March-June, £6 2s. 6d. per ton.

Maize.—Firmer for near positions. Plate, landed, 27s. 3d.; ex ship, 26s. 3d.-26s. 6d.; March-April, 26s. 3d.; new, April-May, 26s. 3d.; May-June, 26s. per 480 lbs. Yellow maize meal, £7 15s. per ton f.o.r. London. Yellow African, £6 7s. 6d.; white, £6 2s. 6d. per ton ex ship.

Barley.—Quiet. Californian, old, landed, 36s.-42s.; new, ex ship, 36s.-42s. as to sample; Chilean brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs. Danubian, landed, 23s. 6d.; Black Sea, ex ship, 20s.; landed, 21s. 3d.; Persian, ex ship, 20s. per 400 lbs. English malting, 7s.-11s. 6d.; feed, 6s. 3d.-6s. 6d. per 112 lbs.

Oats.—Weak. Plate, landed, 15s. 9d.; ex ship to arrive, 14s. 9d.; black Plate, landed, 15s. 9d.; Chilian white, 22s.; ditto tawny, 16s. 6d.; German, landed, 17s.; ex ship to arrive, 15s. 6d.; mixed Canadian feed, 13s.; South Russian, 14s. 6d.-16s. as to quality, per 320 lbs. English, 5s. 6d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27:—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to March 1	Cwts. 212,459	Cwts. 312,567	Cwts. 252,969	Cwts. 257,674
26 weeks to March 1	6,672,420	7,119,697	6,612,717	8,976,976
Average price of English wheat per cwt.	s. d. 8 7	s. d. 9 9	s. d. 9 6	s. d. 11 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Feb. 22	227,903	233,785	44,007	8 9	7 11	6 4
Mar. 1	212,459	193,343	48,105	8 7	7 11	6 2
Feb. 27, 1926	276,693	198,858	69,356	11 10	9 5	8 11
Feb. 26, 1927	292,000	222,972	89,837	11 10	11 2	8 3
Mar. 3, 1928	252,969	168,217	75,839	9 6	10 8	10 4
Mar. 2, 1929	312,567	183,167	74,491	9 9	10 4	9 8

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	Mar. 6, 1929.	Jan. 2, 1930.	Feb. 19, 1930.	Feb. 26, 1930.	Mar. 5, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	128⅜	148⅜	116⅜	114	111
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	121¼	130¼	110⅛	105⅞	106½

The visible supply of wheat in Canada at 74,412,000 bushels shows a decrease on the week of 297,000 bushels. Supplies a year ago stood at 84,712,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes: Conditions in the South Yorkshire coal industry still tend to grow worse. There has been a gradual contraction of exports from the beginning of the year, accompanied by a shrinkage of prices. Quotations have receded another sixpence this week. Inland sales of house and industrial fuel are considerably below the average for the time of year. The market for blast furnace coke remains stagnant, as users have not placed any contracts for a long period, and prices are down about 1s. 6d. per ton, or even more from the level of December.

Our Cardiff correspondent writes: There has been no improvement, nor any sign of it, in the position on the Cardiff coal market. The shipments from the South Wales ports last week totalled only 554,300 tons, compared with 588,000 tons in the previous week, and with 640,350 tons in the corresponding period last year, while this week there have been days when as many as 23 tips have been idle. Not only are inquiries scarce, but in several instances contractors have not lifted a ton under orders placed last year, while cases have been reported to-day where merchants have intimated their willingness to cancel contracts on an indemnity basis of 2s. 6d. per ton. Under these conditions stoppages are increasing, and it is feared that several of the pits that were re-opened last year will be again closed down. The Portuguese State Railways have placed an order for 120,000 tons of small coals, on the basis of 14s. f.o.b., and the Egyptian State Railways are in the market for 250,000 tons of large coal for delivery between May and September. The coal [illegible]dit for the South Wales coalfield for the three months ended [illegible]st January showed a credit balance of £484,454, equivalent to [illegible]94d. per ton, compared with a loss in the previous three months of [illegible]8d. per ton. Current market conditions give little hope of an [illegible] satisfactory audit for the three months ended April. Owing [illegible]gular working of the pits costs are increasing, while prices [illegible]ls have recently shown weakness for the first time for [illegible]. A break in large coal prices is being prevented by the [illegible]edule.

[illegible]ng are the current approximate quotations: Best [illegible]s.; seconds, 19s. 3d. to 20s.; best drys, 18s. 9d. to [illegible]ins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to [illegible]n Valleys, 17s. 6d. to 18s.; best small steams, 14s. 6d. [illegible]go smalls, 14s. 3d. to 14s. 6d.; coking smalls, 14s. 6d. [illegible]xcite best large, 36s. to 37s. 6d.; Red Vein large, [illegible]; machine made cobbles, 43s. to 45s.; French nuts, [illegible]ove nuts, 42s. 6d. to 45s.; rubbly culm, 11s. 3d. to [illegible]oke, 36s. to 38s.; patent fuel, 20s. to 22s. 6d.; pitwood, [illegible]d. to 25s. 9d.

IRON AND STEEL.

[illegible]xtract the following from the weekly report of the London [illegible]nd Steel Exchange: Current business in iron and steel has [illegible]disc[illegible]ell below the normal for the time of year. The situation [illegible]duri[illegible] the British steel industry is concerned does not improve, [illegible]mills[illegible]ough a certain amount of inquiry has been received of late [illegible]60 h[illegible]omparatively small proportion of it has materialised into [illegible]July [illegible] As a consequence, works are running irregularly, and [illegible]situati[illegible]ases the steel manufacturers are finding a difficulty in [illegible]the re[illegible]eir plants employed. In the pig-iron department the [illegible]industr[illegible]s shrunk considerably of late, and stocks are accumu[illegible]there [illegible]hough not sufficiently seriously to embarrass the pro[illegible]now q[illegible] factor which may have considerable bearing upon the [illegible]shipm[illegible]n this department, however, is the decision of the foreign [illegible]fibre, [illegible]producers' entente which has maintained Continental [illegible]prepa[illegible] some time, to withdraw restrictions as regards export [illegible]of re[illegible]d to allow the members to quote individual prices. As [illegible]Aug[illegible]uence, offers at much cheaper rates than for a long time [illegible]Aug[illegible]en received in this country. In the semi-finished steel [illegible]De[illegible]ment business has been slow; but the British producers have obtained a certain amount of business, principally for prompt or near delivery. Consumers, however, seem to be well covered for the time being. The demand for finished steel has not improved, and both British and Continental works appear short of orders. The fixing of prices by the Continental Steel Cartel has to some extent resulted in buyers curtailing their forward purchases, and there is talk of the Cartel further reducing its production.

Our Middlesbrough correspondent writes: Extreme dullness still prevails on the market for Cleveland iron and the volume of business passing is reduced to a minimum. Producers are making a firm stand against conceding any reduction in prices and consumers pay current figures only in cases of absolute necessity and for such quantities as are needed to carry them on from week to week. No change in the position occurred at the weekly market on Tuesday and business was again on very restricted lines at 72s. 6d. for No. 3 for early delivery, but there was nothing doing forward. No. 1 remained at 75s.; No. 4 foundry, 71s. 6d.; and No. 4 forge, 71s. f.o.b. or f.o.t. The clearances of pig iron and manufactured materials for last month, compared with January, are as follows:—

	January, 1930.	February, 1930.
Pig iron	16,656	16,168
Manufactured iron.....	3,812	1,404
„ steel	51,003	48,019
	71,471	65,591

This month, to 4th inst., the clearances of pig iron total 3,780 tons, against 630 tons to February 4th. Hematite is a weak market. Only small quantities on home account are being purchased, export demand having fallen away considerably owing to Continental competition. Mixed numbers are now offering by makers at 77s. 6d. per ton for delivery over a few months, and this price would be shaded for substantial business. Merchants are prepared to accept less than makers' prices for export and also for home destinations where their contract conditions allow them to compete. The steel trade is very quiet as far as new business is concerned, but most mills are still well employed on old contracts. Prices for different materials are unchanged from last week, except that galvanised corrugated sheets, 24-gauge, are higher at £12 to £12 5s. In the ore market consumers are still holding off, but sellers are weaker in their ideas of prices. Best Bilbao rubio is now offering for early delivery at 22s. per ton c.i.f., and tonnage Bilbao/Middlesbrough is obtainable at 6s. to 6s. 3d. Coke is offering very freely and the price is again lower at 20s. 6d. delivered works for ordinary furnace qualities.

Our Sheffield correspondent writes: There are still no signs of a buying movement in the iron and steel trade, and it cannot be said that the position is any better than last week. Most depart-

The Publisher:
"THE INVESTORS' CHRONICLE"
20 BISHOPSGATE, LONDON, E.C.2.

ments report severe stagnation as regards the booking of new business and the tonnage on makers' books is rapidly dwindling. Nor are the inquiries coming in at present such as inspire hopes of activity in the near future. Production of open-hearth steel has not, however, been curtailed, and in North Lincolnshire full employment of plants is reported. The steel sheet rollers are badly off for orders. There is a moderate inquiry for steel forgings and castings for ships. Engineers' requirements have fallen off considerably this year, except in the electrical department. Activity has eased somewhat in the machine tool trade. Some of the overseas markets are buying Sheffield products on a decreased scale. A general improvement is anticipated after the Budget secrets are revealed. Iron and steel prices are weak, but not quotably changed. The market for steel scrap is as flat as ever.

Our Glasgow correspondent writes: Business in the pig iron market remains very quiet, with a continued absence of buying on anything like a large scale. Steelmakers are able to keep plants going, but at the majority of the works new business is coming in very slowly. Contracts placed with Clyde yards during the week include one placed with Messrs Denny and Brothers, Ltd., of Dumbarton, for a cargo vessel by the London Midland and Scottish Railway Co.; and The Greenock Dockyard Company, Ltd., of Greenock, have received an order for a motor tanker of about 10,000 tons deadweight from the British Tanker Company, Ltd., of London. The engines for the latter will be supplied by another Greenock firm, Messrs John G. Kincaid & Company, Ltd. The demand for re-rolled steel bars shows some improvement. Sheetmakers are somewhat better off for work this week, a considerable tonnage having been placed with local sheetmakers for early delivery, and there has been a slight increase in the number of mills in operation. Prices are firmer, and to-day's price for 24-gauge galvanised and corrugated sheets is £12 2s. 6d. f.o.b.

Our Cardiff correspondent writes: General conditions in the South Wales steel and tinplate industries remain practically unchanged, and confidence in the future outlook is maintained. Quotations for tinplates are ruling at the same figures as last week, namely, from 18s. 3d. to 18s. 9d. per basis box, while galvanised sheets are firmer at from £11 7s. 6d. to £12 5s. 0d. per ton, compared with £11 7s. 6d. to £11 10s. per ton the previous week. Prices of bars are unaltered. Shipments of tinplates last week were over 20,000 boxes greater than in the previous week, and stocks have been slightly reduced.

OTHER METALS.

TIN.—The market developed increased weakness on liberal offerings and lack of adequate support, and was further influenced by lower Eastern advices. Later movements were attended by some irregularity, but the downward movement was not arrested. Standard cash changed hands at £168 to £163 2s. 6d.; three months, £170 10s. to £163 15s. In the East, sales were reported at £173 10s. to £168 2s. 6d. c.i.f.

COPPER in slow demand and prices moved in buyers' favour, offerings being in excess of requirements, but later values partially recovered. Standard cash, sold, £68 10s. to £67 10s.; three months, £68 2s. 6d. to £67 2s. 6d. and £67 16s. 3d.

LEAD easier on liberal offerings, but a fair business done. Good soft foreign pig, March, sold, £19 13s. 9d. to £19 2s. 6d.; April, £19 15s. to £19 5s.; June, £19 12s. 6d. to £19 15s. and £19 2s. 6d. ton.

SPELTER in moderate request, and with holders pressing, the tone was easier. March, sold, £18 7s. 6d. to £18 10s. and £18 1s. 3d.; April, £18 13s. 9d. to £18 3s. 9d.; May, £18 15s. to £18 7s. 6d.; June, £19 to £19 2s. 6d. to £18 13s. 9d. ton.

ANTIMONY quietly steady. English regulus, quoted, £42 10s. to £48 10s.; Chinese ditto, spot, £30 10s. to £30 15s.; March-April, £26. Chinese, crude, March-April, £17 per ton c.i.f.

ANTIMONY OXIDE, March-April, £26 ton c.i.f.

ANTIMONY ORE, 50 per cent., March-April, 3s. 9d.; 60 per cent. ditto, 4s. 6d. per unit c.i.f.

WOLFRAM weak. Chinese, March-April, 31s. 3d.; Spanish, prompt delivery, 33s. 3d. to 33s. 6d. Burmese, spot, 36s. per unit.

ALUMINIUM maintained. Home trade, £95; export, £100 ton.

ZINC OXIDE quiet. Spot, £29 to £36 as to quality per ton, delivered United Kingdom.

QUICKSILVER steady. Spot, £22 17s. 6d. per bottle.

TIN PLATES barely steady. I.C. coke, prompt and forward, 18s. 4½d. to 18s. 7½d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, March 5th.

The downward trend of prices continues and a new low point was reached to-day when May were quoted at 7·94d. and July 7·99. Closing prices to-day, May 8·00, July 8·05; closing prices Wednesday last, May 8·15, July 8·23; high price of the week, May 8·29, July 8·36; low price of the week, May 7·94, July 7·99. The tone of the market is very nervous and very little resistance has been shown to belated long liquidation. No confidence has been felt in the action of the Farm Board to sustain prices, especially in view of the good crop of outsiders this year. Spot sales for the week February 27th to March 5th (inclusive) are 27,000 bales, of which 14,820 bales are American, 4,050 Brazil, 2,700 Peru, 1,620 Egyptian, 1,850 African, 1,100 East Indian, and 860 sundries. Imports for the same period are 66,015 bales, of which 14,693 bales are American, 12,567 Brazil, 1,395 Peru, 10,916 Egyptian, 1,039 African, 24,147 East Indian, and 1,258 sundries. Quotations to-day are: American Middling, 8·28; Egyptian Sakel, 13·75; Uppers, 10·02; Brazil Fair, 7·88; Peru G.F. Mod-Rough, 9·50; Smooth, 8·98; West African Middling, 8·33; and East African G.F., 9·33.

MANCHESTER, March 5th.

The tone of the market has continued unsettled and although in some quarters inquiry has been fairly extensive trade has not shown any real expansion. Buyers are still afraid of lower values and there is determination in most directions to operate with caution. A disturbing factor has been the increase in the duties on cotton goods entering India. Light bleaching cloths and fancies have been sold in moderate quantities for Calcutta and Karachi, but grey shirtings remain decidedly dull. There is no probability of trade on freer lines for China in view of the further drop in silver, and business has been at a low ebb. Shippers to the Near East have provided occasional orders and some trade has been done for the West Coast of Africa and South America. It is reported that some of the home trade houses are not taking deliveries very well. In American and Egyptian yarns there has been much irregularity in prices. Sales of any importance have been quite isolated and spinners cannot improve their position.

THE WOOL TRADE.

Our Bradford correspondent writes:—All markets continue to be more or less depressed, and are waiting for something to turn up. The news from overseas is stimulating topmakers to maintain quotations with a fair measure of firmness. At the same time it is possible to buy both merino and crossbred tops at a fraction under values ruling a good fortnight ago. We do not say that the market is weak, but there is some disposition to sell even if a fraction less has to be taken. As low as 2s. 3d. has recently been accepted for an ordinary 64's top, but a better article still commands 1d. more. Wool can not be picked up on this basis in Australia in fact, out of Melbourne, which this season has provided reasonable wool, the cost will be 2s. 4½d. for good average The resumption of sales in New Zealand also shows continues to sell freely, although topmakers are not f business at all profitable. It is rather significant that tops are procurable at one price, and while 15½d. quotation, some spinners say they can buy at 1 it is not so much the price that concerns the majority of the trade as a marked absence of important new b is only a hand-to-mouth turnover, and this is due belief that there is nothing as yet to warrant higher

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The auctions are being continued in Australia this reported firm values at Sydney and Perth, though impression that, apart from fine merinos, prices are here slightly on the easy side. In any case, there is no more than is likely to appear at a time like the present. There faction to be derived from the fact that the bulk of the selling steadily, all sections apparently being willing buyer shows that the raw material is wanted, and that in spite pessimistic expressions, many buyers are not without fidence in the future. The Perth sale last Tuesday came the level of prices current in other centres, no sale ha held there since January 14. The prices current are by great, and if wool cannot be consumed at to-day's confidence that is now being shown is very much mispla understood that average 64's tops made out of wool Perth will cost around 2s. 4d. A cable was received las by the British Wool Federation from the Wool Buyers' A asking for demands for increased offerings at Melbourne, Adelaide and Perth to be supported. Evidently the Ass had complained that selling brokers were not submitting s wool in these centres, though no complaint was made about and Brisbane. The Continental section of buyers were of the

11 10

opinion, and on Tuesday the Federation sent a cable to the effect that its importing members were prepared to give their support to the Buyers' Association in Melbourne. It is to be feared that if more wool is not offered, similar action will be taken to that at Wellington. There should have been a three days' sale at Melbourne last week, and another either at Melbourne or Geelong this week. There is nothing to indicate any advance in values, and if growers are willing to sell, frequent auctions should be held at other places besides Sydney. The trade recognises that so far Sydney and Brisbane are doing splendidly in the way of offering wool, but others have not been putting forward their full quota.

HIDE, LEATHER AND ALLIED TRADES.

Market hides were again slightly easier on average at the auctions held in the North, and although the declines in values were not quite so pronounced as compared with those of the past week or so, the conditions ruling in the leather industry at present do not hold out much hope of higher prices being realised for the time being. Calfskins were fairly steady in face of a satisfactory demand for these goods. Business in connection with imported hides still continues dull, and although a limited amount of business has been done with tanners here in England this week, certain descriptions have again made lower figures. In the South American market what sales that have occurred in connection with Argentine ox have been on account of the United States, who have taken supplies on the basis of 8d., with light ox sold at 7⅞d., and Montevideo ox at 8¼d. Second Argentine ox and cows have changed hands at 6 9/16d. and 6⅜d., respectively. Any change that may have occurred in connection with dry River Plates has been in favour of buyers, B.A. Americanos being quoted at 8⅜d., and M.V. Americanos at 9¼d. B.A. Inservibles have sold at 5d. and River Plate summer-haired at from 6½d. to 7¼d. African hides are slightly weaker, Capes having changed hands at 7⅜d. and 6¾d. for first and second dry-salted, and 8⅛d. to 6½d. for drys. Mombasas have not been inquired after, but a fair business has been done in unbathed Adis Abebas heavies at from 6¾d. to 6⅞d. The Australian market is weaker with small business taking place, while latest cable advices from the United States report the market as steady, with Chicago heavy native steers selling at 14 cents. No expansion has been experienced in the demand for sole leather, and trade continues on steady lines, with a regular if limited day-to-day call for most descriptions. In bends, manufacturers' requirements are chiefly concerned with light to medium weights in wet salted, while the repairing section continues to take up the selections suitable for the class of business they do. Although the demand for dry hide bends is not good, fair numbers of the better-class tannages are being moved off. Bellies and shoulders are about the best feature of the market, and anything of a substance to meet immediate requirements is not long in finding a purchaser. Prices remain unchanged; generally the market is firm for all descriptions, and where there is anything suggesting a concession on quotations, it is usually in the hope of obtaining a larger order than is immediately in view. A steady moderate trade characterises the position of the upper leather market, with the bulk of the inquiry still centered upon willow calf and glacé kid. The cheaper grades in the latter are most in request, but here and there an improvement is noticed in the inquiry for better skins. A slightly better trade has been done in box calf, while the turnover in regard to patent has been rather more. Semi-chrome leathers are still a slow sale, and in order to effect business low prices have to be accepted. Reptile ins move steadily, but business in this direction is not up to ectations. Improvement has been noticeable in the call for particularly in some of the lower grades. Shoe manufacturers the position as moderately satisfactory; orders for spring o still on the small side, but it is hoped that as the season some of the larger buyers of footwear will be in the r larger quantities.

THE JUTE TRADE.

DUNDEE: March 5th.

in the jute trade remains stagnant. Prices of all es are very low and attractive, but the requirements of of jute goods are being met by the purchase of only antities in a hand-to-mouth manner. Production is in f demand, with the result that stocks of unsold goods at suming centres are large. Spinners and manufacturers in dee and on the Continent of Europe are steadily curtailing r production by decreasing the number of working hours and putting off machinery, but though the latest figures from Calcutta disclose the fact that stocks of hessian cloth at that centre increased during the month of January by 27½ million yards, the Calcutta mills still give no indication of diverting from their policy of working 60 hours per week, which were increased from 54 hours from July 1st last. The jute trade is anxiously watching the political situation in India, as, should any trouble arise at the mills there, the result may bring about important developments in the jute industry. Prices of the fibre have declined since last report, but there is at the moment a steadier tendency. Best First Marks are now quoted at £29 10s. and best Lightnings at £27, March-April shipment. Some transactions have been recorded in new crop fibre, though ploughing has only just begun. It is reported that preparations for the new crop are being retarded owing to a lack of rain. Best first marks in a short group have been sold for August shipment at £30 10s. and best lightnings at £29, and for August-September lightnings have been done at £28 10s. and £28. Daisee has touched the lowest point since 1923, when offered at £24 for assortment on Saturday last. The cheaper sellers have now, however, withdrawn, and £24 10s. is wanted for Daisee assortment, £24 for threes and £22 for fours, while Tossa assortment is offered at £25 17s. 6d., threes at £25 7s. 6d., and fours at £24, March-April. Prices of jute yarns are very indefinite in the absence of business to test them. While spinners continue to name 2s. 9d. for common 8-lb. cops and 2s. 10d. for 8-lb. spools, buyers claim that offers of 2s. 8d. and 2s. 9d. respectively would be accepted. Spinners are emphatic in their declaration that they would rather curtail their output further than submit to lower terms, which would only accentuate the loss already being made. Twist is round about 5d. for 3-ply 8-lb., with some spins obtainable at less. Sacking yarns are steady at 3½d. for 24-lb. weft and 4½d. for 8-lb. chains. Rove is improved and spinners will not sell further at less than £17 for 200-lb. and £27 for 48-lb. Carpet yarns and fine qualities are quiet and mostly nominal. Manufacturers declare that they are making a loss of ¼d. per yard of hessian cloth sold meantime, therefore they have no incentive to go on producing. The quoted rates for hessians are 3⅜d. for 10½-oz. 40-in. and 2⅝d. for 8-oz. Linoleum hessians are dull, as also are heavy goods. Calcutta fabrics have ruled about unchanged during the period under review, though business has been very quiet.

VEGETABLE OILS AND OILSEEDS.

Conditions in the markets do not improve. On the contrary, the downward tendency has become accentuated, and prices generally are lower. In regard to linseed, Indian shippers have offered freely at ruling rates, and a fair business appears to have been done, while Plate linseed has been neglected, and has fallen very sharply in value. Plate, on spot, has dropped to £16 12s. 6d., and for forward shipment, £16 17s. 6d. has been paid to Hull for April-May. Bold Bombay to the Continent has been done at £18 13s. 9d., May-June. The quantity of linseed on passage to Europe is now 151,900 tons, as against 165,800 tons last week, and this is predominantly Argentinian. Cottonseed has been a lifeless market. Egyptian shippers showing little disposition to concede anything but late business has transpired in black Egyptian to Hull at £7 5s. on passage and to April. In the oil section demand for linseed oil continues on quiet lines, and prices have further receded, raw oil or spot ex Hull declining to £40 5s. while for March £38 10s. is quoted, and for April-August £38 2s. 6d. Cotton oils are not so steady, and crude Egyptian has fallen back to £28, with common edible quoting £31 5s. The demand for linseed cakes is better, but generally the demand is below normal for the season of the year.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—General quietness continues, and no sustained or appreciable broadening is anticipated until the advent of the Budget. British refined marked a reduction of 3d. to 6d. as to description and Anglo-Scottish granulated 1½d., but this failed to stimulate demand to any extent. Raw refining kinds steadily held, though quiet after recent liberal absorption. Russia is a potential buyer, as prices are so much lower than obtain for their native sugars for home consumption. Foreign refined dull. Czecho granulated, April-June, to the U.K., quoted 9s. 3d.; July-August, 9s. 5½d.; November-December, 9s. 7½d. f.o.b. Hamburg. Java markets very slow, and white, March-April, to Calcutta, quoted 9s. 10½d.; July-September, 10s., and October-December, 10s. 1½d., c. and f. terms. Polish crystals, 8s. 6d. f.o.b. Danzig. Terminal markets steady, and quite a fair amount of business was effected in raw. May delivery, sold 6s. 6⅜d. to 6s. 8½d.; August, 7s. to 7s. 1½d.; December, 7s. 6d. to 7s. 7½d. White, March, 8s. 6⅜d. Stocks of raw sugar in the three principal ports of the United Kingdom for week ending March 1st totalled 232,655 tons, compared with 152,755 at corresponding period last year. Cuban receipts last week: new crop, 161,347 tons, against 242,759 last year; exports, 21,447, against 113,124; stocks, 791,447, against 947,380. Receipts of old sugar, 750, against nil; exports, 24,217, against nil; stocks, 23,942, against 1,615. Centrals, 155, against 163.

COFFEE.—The market can only be described as very quiet during the greater part of the week. A few fine liquoring qualities met with fair patronage at steady rates, but medium and ordinary continued to move off slowly and rates favoured the buyer. Most kinds of foreign cleaned were comparatively neglected.

COCOA.—The small and unimportant transactions in spot goods were at unchanged prices. Forward positions, after being steadier, assumed a quieter tone. Accra, F/F, March-May, sold 37s., and April-June, 37s. 9d. to 37s. 6d. f.o.b. Terminal: March sold, 41s. to 41s. 3d.; May, 41s. 4½d. to 40s. 9d.; July, 42s. to 41s. 4½d.; September, 43s. to 42s. 10½d.; and December, 43s. to 42s. 9d., and again at 43s.

TEA.—At public sales of Indian during the week, 51,915 packages were brought forward and met with active and well-distributed competition which resulted in quite a buoyant market. All finest autumnal teas made high averages. Good medium to fine, mostly ½d. to 1d. dearer; useful common, about ½d. up; commonest showed but little change. Ceylon sales of 22,889 packages accorded exceptionally brisk support and prices ruled higher in all directions, mostly ½d. to 1½d. In the case of finest teas, these advanced 1d. to 2d., and medium brokens from 1d. to 2½d. Java and Sumatra sales met with active competition at ½d. to 1d. advance. There is quite a good inquiry for China kinds, especially Keemuns, from 1s. 9d. to 2s. 2d.

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

RICE.—Market without further marked change, but trade is quiet in all directions. Two Stars, March-April, small sales made at 10s. 7½d., c.i.f. terms. No. 3 ditto, to the Levant, quoted 10s. 10½d. c.i.f. double bags. Spanish, oiled, February-March, sellers, 14s. 9d. to 15s. as to quality. American blue rose from 23s. to 24s. c.i.f. S.Q. to Cuba, 11s. Saigon No. 1 round grain, March-April, to Europe, 11s. 3d. Siam Super, March-April, 15s. 1½d.

BROKEN RICE quiet. Burma 1A, March-April, 10s. 6d.; B1, 10s. 4½d.; A2, 10s. 1½d.; B2, 10s.; Saigon 1 and 2 mixed, 10s. 3d.; Siam C1, 9s. 6d.; C3, 9s. 3d. c.i.f.

RICE BRAN dull, and afloat sellers at £3 12s. 6d.; for shipment, March-May, £3 15s.; July-December, £4 10s. per ton ex ship terms.

BEANS.—There is a steady inquiry for butters, but other kinds remain rather difficult of sale. Madagascar butters, per "Clan Chattan," quoted 37s. to 38s. landed terms; "Clan MacNeil," 35s. 6d.; "Bourbonnais," 34s. 6d.; "Bolgrano," 35s. 6d.; "Ranenfjord," 34s.; February-March, at 34s. 3d. c.i.f. London; "Ohtenashi," spot, London, 22s. 6d.; afloat, 21s. 6d.; March-April shipment, 21s. 6d. c.i.f. Rangoon haricots, ex store, 11s.; February-March, quoted 11s. 6d.; new crop, March-April, 12s. c.i.f. London. Danubian H.P., spot, London, 22s. 6d.; February-March, 22s.

PEAS.—A quiet, but steady, market continues. Japanese old crop, spot, London, 14s.; new, 15s.; spot, Liverpool, 16s. Parcels per steamer "Altai Maru," afloat to London, sold, 13s. 6d.; February-March, sellers, 14s.; March-April, 14s. c.i.f. Dutch marrowfats, prompt, 15s. 6d.; small hand-picked blues, 10s. 9d., f.o.b. terms. Calcutta, March, 55s. Karachi, nominal c.i.f. Maples quiet: No. 1 New Zealand, February-March, old, 57s.; new crop, March-April, 58s. Tasmanian A grade, new, February-March, 65s. c.i.f.

SPICE.—Pepper met a quiet demand and prices in forward positions proved slightly weaker. Lampong, January-March, quoted 1s. 1⅛d.; March-May, 1s. 1⅛d.; May-July, 1s. August-October, 11⅜d.; Muntok, white, January-March, 1 March-May, 1s. 4⅜d.; April-June, sold, 1s. 4⅜d.; May-July 1s. 4⅛d.; August-October, 1s. 2⅞d. c.i.f. London stock week reduced 95 tons, black now amounting to 1,0 1,193 same time last year; white, 1,102, against 495. January-March, quoted 132s. cwt. c.i.f. Cloves quie Zanzibar, spot, 9¼d.; March-May, 9⅛d. c.i.f. Sago German, Polish and Dutch Farina, unaltered. Tap quiet. African ginger, spot, London sold, 47s. 6d., wit February-April at 35s. cwt. c.i.f.

FRUIT (Dried).—Currants: Market steady, with a passing. Pyrgos quoted, 36s.-37s.; Amalias, 37s. 6d.-39 39s.-42s.; Gulf, 42s.-46s.; Vostizza, 49s.-58s.; Australian, Sultanas quiet. Smyrna, medium to fine, 44s.-60s.; Crota 75s.; Greek, 42s.-65s.; Australian, 34s.-48s. Dates steady. Ha spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s. 9d.-14s. Raisins Valencia, quarter-boxes, 40s.-45s. Figs quiet. Layers, 32s.-40s genuine, 26s.-33s.; good average, 23s. Of evaporated fruits, a better demand was dealt with for plums, and there was also a better movement in peaches. Apricots, however, remained quiet, and other descriptions without material change. Plums, Californian, new crop, 30's-40's, 70s.; 40's-50's, 67s. 6d.; Oregon, 30's-40's, 57s. 6d.; 50's-60's, 52s. Apricots, South African, new crop, Royal, 57s. 6d.-117s. 6d.; Australian, 56s.-72s. 6d. Pears, Californian Lake County, fancy, 87s. 6d.; extra, 97s. 6d.; Australian, 65s.-85s. Peaches, Californian, choice, 57s. 6d.-62s. 6d.; fancy, 67s. 6d.-72s. 6d.; Australian, 50s.-60s. Apples, Californian, spot, sliced, extra choice, 60s.-69s.; Canadian, 64s. Almonds, quiet and occasionally the turn easier. Mazagan, 110s.; Mogador, 107s. 6d.; P. G. Sicily, 122s. 6d.; Majorcas, 110s.-130s. Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels, Indian, sweet, spot, 75s.; China, bitter, for shipment, 37s. 6d.; new crop, c.i.f. Sweet, spot, 75s. Hazel kernels: Kerasunde, spot, 145s.; Barcelona, 137s. 6d. New crop, French (shelled) walnuts, 140s. ex-wharf London.

The PRUDENTIAL ASSURANCE COMPANY LTD.

CANNED GOODS.

CANNED FRUIT.—Spot demand for Australian continues restricted, and little interest so far is manifested in new pack, while business in Californian is restricted to immediate requirements. Singapore pines quiet, at late rates, with adequate supplies available, while forward quotations tend easier. African and Hawaiian steadily held.

CANNED FISH.—Salmon in quiet demand, but market steady. Alaska red, talls, quoted 48s.-50s.; pink talls, 25s.-26s.; and halves, 34s.-36s. Japanese crab, in small supply and fancy qualities, quoted 97s. 6d.-102s. 6d. Lobsters quiet of sale. Halves range from 135s.-140s. Sardines steady. Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEAT.—Market quiet, but ox tongues realise full rates on limited offerings. Lunch tongues firm, and most sizes reservedly offered. Cooked boned hams sell well at full rates.

CONDENSED MILK AND MILK POWDERS.—A steady demand continues at occasionally easier prices. Dutch condensed milk, full cream, sweetened, 5 cwt. casks, 36s. 3d.; machine skimmed, 21s. 3d.; full cream, sweetened, 56 lb. drums, two in a crate, 52s. 6d. English condensed milk, full cream, sweetened, 5 cwt. casks, 41s.; machine skimmed, 23s. Dutch full cream milk powders, 26 per cent. butterfat. Roller process, 1 cwt. cases, 66s. 6d.; spray, ditto, 2 by 56 lb. tins, crated, 83s. 6d. Dutch machine skimmed milk powders, roller process, 1 cwt. cases, 26s. 6d.; spray, ditto, 2 by 56 lb. tins, crated, 38s. 6d.; ditto, 1 cwt. cases, 37s.; all per cwt. All English prices basis, carriage paid nearest station. Dutch prices are nett, ex-store, London–Hull or Goole, and cover prompt or gradual delivery to the end of April, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s.; minimum 1 ton lots. On the grocery side, full cream, sweetened, 19s. 6d.; machine skimmed, sweetened, 9s. 1½d. basis per case, usual packing.

HONEY.—Market remains dull, and manufacturing grades tend easier. Jamaica, white, 56s.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s.; fine white, Cuban, 49s.; San Domingo, good, 46s.; manufacturing, 40s.; Californian, white, 55s.; light amber, 50s.; New Zealand, light amber, 50s.-85s.; white and water whites, 65s.-87s. 6d.; Ukrainian, light ambers, 45s.-49s. 6d.; whites, 49s. 6d.-52s. 6d. per cwt.

RUBBER.

Market fairly steady but quiet. Sheet, spot and March, sold, 7 9/16d. to 7½d.; April, 7 11/16d. to 7⅞d.; April-June, 7 13/16d. to 7 15/16d; July-September, 8 1/16d. to 8d.; October-December, 8 5/16d. to 8¼d. London stocks increased 1,658 tons on the week, landings being 2,816; deliveries, 1,158; stocks, 64,383, against 25,441 last year. Liverpool stocks, 989 tons higher. Landings, 1,204; deliveries, 215; stocks, 20,693, against 4,255 last year.

GENERAL.

JUTE.—A quieter market prevailed and prices gave way, as sellers were more aggressive. Firsts, February-March, Hamburg, £24 5s.; March-April, usual ports, £24 10s.; April-May, sold, £24 12s. 6d.; Lightnings, March-April, quoted, £23 7s. 6d.; Hearts, £20 15s. sellers.

HEMP.—A dull tone continues for Manila parcels and prices meantime mark a drooping tendency, though sellers do not unduly press for business. J 2, March-May, quoted, £29 10s.; K, £29; L 1, £27 10s.; L 2, £24 5s.; M 1, £24 10s.; M 2, £23 10s. Sisal unaltered. No. 1, f.a.q., African, March-May, £33 10s., and good marks £34 c.i.f. Receipts last week cabled 33,000 bales, against 44,000 last year and 28,000 in 1928. Estimate for next week, 34,000, and week after, 33,000. Shipments from Manila last week, 7,000 to the United Kingdom; 5,000 to Continent; 9,000, U.S.A.; 7000, Japan, ; and 2,000 other countries, stock being 184,000 bales.

SHELLAC.—Quiet. T.N. spot, 127s. 6d.; March, 117s.; May 119s.; August, 123s.

COPRA.—Market steadier, an improved demand being met with more reserve. Straits S.D., April, Rotterdam, sold £21; Dutch East Indies ditto, quoted, £21; Ceylon, £22 2s. 6d.; South Sea, sun-dried, £19 15s.; plantation Rabaul, £20; hot-air dried, £20. To Marseilles, mixed Dutch East Indies, Padang excluded, February-March, £19 16s. 3d.; smoked, South Sea, £19 10s.; Manila, £19 10s. c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 14s. to 28s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43; Ceylon, bristle, £19 to £25; cinnamon leaf oil, 5s. 9d.; for shipment, March-April, 4s. 6d.; citronelle, 2s. 3d.; Java, 2s. 3d.

METROPOLITAN CATTLE.—March 5.

PRELIMINARY NOTICE.

SELECTED LAND & PROPERTY COMPANY LIMITED.

Authorised Capital - - £100,000

divided into

180,000 Ordinary Shares of 10/- each

and

40,000 Deferred Shares of 5/- each.

The holders of the Ordinary Shares are entitled to 60 per cent., and the holders of the Deferred Shares to 40 per cent., of the profits which, in respect of each year, shall be distributed as dividend.

On a winding-up the holders of the Ordinary Shares are entitled to preferential repayment of capital. Surplus assets (after repayment of capital to Deferred shareholders) are to be divided as to 60 per cent. amongst the holders of Ordinary Shares, and as to the balance of 40 per cent. amongst the holders of Deferred Shares.

AN ISSUE will be made next week of:

100,000 Ordinary Shares of 10/- each at par.

The Prospectus will show that:—

(1) The Company has acquired valuable freehold properties ripe for development at Whitton, Twickenham, and South Harrow, upon which the building of upwards of one thousand houses and shops has been commenced. At Whitton the Southern Railway is building a new Station, on the Windsor-Hounslow Loop Line, actually adjoining the property. Whitton Station is thirty minutes from Waterloo. The South Harrow property, which is already laid out in roads, is served by the District Railway (South Harrow Station), and Northolt Park Station (L.N.E.R.). The Twickenham Estate consists of valuable frontages, principally main road, and is within five minutes of Strawberry Hill Station, Southern Railway.

(2) The properties have been independently valued by Messrs. Knight, Frank and Rutley.

(3) There are no promotion or intermediate profits.

(4) A careful estimate of profit shows earnings on the shares offered, over the next three to four years, of an aggregate of approximately 67 per cent., without taking into consideration the possibilities of a large area of land under option at Whitton, comprising 107½ acres.

(5) The auditors' report shows that during the 21 months, ended December 31st, 1929, the average rate of profit earned on **all** capital employed, including loans, was 32·3 per cent.

Copies of the Prospectus and forms of application will be obtainable from the Brokers:

Messrs. COLEGRAVE & CO.,
3, Throgmorton Avenue,
London, E.C., and Stock Exchange,

or the Registered Offices of the Company:

146, Bishopsgate,
LONDON, E.C. 2.

THE BALTIMORE & OHIO RAILROAD COMPANY

OFFICE OF THE PRESIDENT.

Baltimore, Md., February 28, 1930.

To the Stockholders of

THE BALTIMORE AND OHIO RAILROAD COMPANY:

To promptly inform you of the results obtained from the operation of your property for the year ended December 31, 1929, the President and Directors submit herewith a condensed income statement, compared with the preceding year, together with balance sheet, as of December 31, 1929, and certain other general information which it is thought will be of interest.

The Annual Report in the customary form will be prepared and forwarded later to those stockholders who have or may advise the Secretary of the Company of their desire to receive a copy.

The net income for the year available for dividends and other corporate purposes, after the payment of interest, rentals, taxes and other fixed charges, was.....$28,767,908. This is a decrease of only $333,023, compared with 1928, in which year was earned the largest net income in the history of your Company.

After paying the 4 per cent. dividend upon the Preferred Stock, there remained .....$26,413,380 equal to $11·24 per share on the average amount of common stock outstanding during the year. Quarterly dividends at the annual rate of 6 per cent. were declared on the common stock for the first six months of the year, and at the annual rate of 7 per cent, for the last half of the year. The total dividends declared on the common stock amounted to .....$15,367,783, leaving a surplus from the operations for the year of .....$11,045,597. The total accumulated surplus of your Company on December 31, 1929, was .....$114,468,786·22

Your Company increased its capital by the issue and sale of $41,107,700 additional common stock at $100·00 per share to its stockholders as of June 20, 1929. This sale not only provided funds necessary for additions and betterment to the property, but increased the ratio of capital stock to total capitalisation, thereby placing the Company in a better credit position. The ratio of stock to total capitalisation is 36·41 per cent. and the ratio of funded debt is 63·59 per cent.

During the year there was an increase in investment in road of		$15,293,860
and in real estate of		2,367,735
New equipment was acquired at a cost of	$14,560,820	
and old equipment retired in the amount of	7,408,929	
Resulting in a net increase in Investment in Equipment of		7,151,891
Total increased investment in property used in transportation service		$24,813,486

The additional equipment consisted of one heavy freight locomotive, one gas-electric car trailer and 100 steel-underframe caboose cars built at our Company's shops: and there were purchased fifteen all-steel baggage cars, ten all-steel baggage and mail cars, 100 all-steel express cars, 2,675 all-steel box cars, 1,700 all-steel hopper cars, 700 all-steel gondola cars and certain miscellaneous pieces of equipment.

Eighty-seven locomotives, eleven passenger train cars, 6,314 freight-train cars, 864 pieces of work equipment and fourteen pieces of miscellaneous equipment, no longer suitable for modern and efficient service, were retired during the year.

On June 16, 1929, a new passenger train, known as the "Columbian," was inaugurated. This is a special feature train, operating between Washington, Baltimore, Philadelphia and New York. The equipment includes a Colonial Diner, an Observation-Parlour car and Club-Lounge car, in addition to the regular Pullman equipment, as well as individual seat coaches that offer Parlour Car comfort without extra cost.

There was a decline in volume of traffic for the last three months of the year. Notwithstanding this, the revenues increased as follows:—

Freight revenue	$8,273,958
Mail revenue	1,618,953
Express revenue	226,530
Miscellaneous revenue	54,158
Total	$10,173,599
The decline in passenger traffic continued throughout the year, the loss in such revenue having been	1,573,504
Net Increase	$8,600,095

The increase in mail revenue is due to increased compensation paid by the Government, the revenue for the year 1929 including not only the increased current rates, but an adjustment paid by the Government in July of $1,331,824 covering the period May 9, 1925, to July 31, 1928.

The increase in freight revenue was 4·2 per cent., as compared with an increase of 2·05 per cent. in revenue-ton miles, while passenger revenue decreased 6·64 per cent., as compared with a decrease of 5·2 per cent. in revenue passenger miles.

The property is in good physical condition, and has been well maintained, there having been a very liberal maintenance programme, as indicated by an increase in maintenance expenses of $6,883,767, or 9·26 per cent., when compared with 1928.

Transportation expenses increased $529,082, or only 0·64 per cent., notwithstanding an increase in operating revenues of over 3·00 per cent.; an increase in tons of revenue freight handled of 4·71 per cent., and an increase in revenue-ton miles of 2·05 per cent. As a result of this better performance, transportation expenses required but 33·80 cents o each dollar earned in 1929, as compared with 34·81 cents in 1928.

The ratio of operating expenses to operating revenues in 1929 was 73·58 per cent., as compared with 72·86 per cent. in 1928. The increase is due to additional maintenance.

The Management again commends the Baltimore and Ohio service to the shareholders, and through them, to the general public. Your co-operation is solicited so that a greater proportion of the traffic moving to and from the territory served by your Company may be secured. The interest and assistance manifested by the shareholders in the past has been most helpful, and it is hoped you will take advantage of every opportunity to continue this co-operation.

DANIEL WILLARD, President.

THE BALTIMORE AND OHIO RAILROAD COMPANY, European Traffic Manager, Thomas W. Jacobs, 23-25 Billiter Street, London, E.C. 3.

A BUSINESS JOURNAL

The day has passed when a financial newspaper could adequately serve its readers merely by presenting a mass of market statistics with a little formal comment.

The financier to-day, be he banker, broker, jobber or private investor, needs every news facility that modern resource can give to him.

The Financial News

contains early, full and reliable news on all market movements, trade events and financial tendencies. This news is accompanied by well-informed and expert comment and is augmented, when suitable, by charts and graphs. A special page is devoted to Wall Street.

FOR THE SPECIALIST

In addition to its general service the "Financial News" contains many features of direct interest to the specialist. These include daily "NOTES FOR INVESTORS" and "ROUND THE 'HOUSE'" which deal with Stock Exchange matters. On Monday appears an article on "ACCOUNTANCY PROBLEMS," on Tuesday "MINING MARKET NOTES," on Wednesday an article on "SECRETARIAL PRACTICE," on Thursday "THE INVESTORS' LIST" and on Saturday "THE SMALL INVESTORS' GUIDE."

For bankers, practitioners in and students of the money market the daily article "LOMBARD STREET" is of especial value.

THE MONEY MARKET.

STRINGENT conditions prevailed early in the week, and on Tuesday, when several of the clearing banks were calling, a small amount had to be borrowed at the Bank. The continued influx of revenue was probably the main reason for this stringency, and the latest

revenue returns show that heavy collections were made during the most recent week. New money on Wednesday was 4 per cent., with old money at 3½ per cent., but rates eased appreciably the following day.

* *

Last week's reduction in Bank rate to 4 per cent. caused only a small narrowing of the gap between Bank rate and the market rate of discount, for this week the latter has been as low as 3 per cent. This has inspired talk of yet another reduction in Bank rate, but at the moment this seems unlikely, especially as there was a particular cause of this week's low bill rate. This was that the March 7th Treasury bill issue was missed by the market, and subsequent purchases to replace the week's maturities forced down discount rates. The Treasury bills in question were bought partly on French and American account, and it is believed partly by the London clearing banks. If this suggestion is correct, it is an explanation of the Tuesday callings by some of the banks.

* * * *

This week's Cape gold again went to an "unknown buyer," the price paid being 84s. 11d. per oz. There is little doubt that the actual destination of this gold is Switzerland. Thus the Bank of England was only able to secure the £250,000 that came from South Africa in the form of sovereigns, though on Thursday £300,000 of earmarked sovereigns were released. Next week and the following week no sovereigns are coming, and the bar gold for the two weeks will only amount to just over £1,000,000. On the other hand the £7,000,000 in sovereigns known to be on the way from Australia will arrive very shortly, while this week the shipment of a further £2,000,000 was announced. It is also believed very strongly that other shipments will follow. The Bank's gold stocks are already £152,623,000, so that, with the Australian gold, they will be fully adequate.

	Feb. 20, 1930.	Feb. 27, 1930.	Mar. 6. 1930.	Mar. 13, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4½	4½	4	4	4½ (Mar. 6,'30)
Banks' Deposit Rate	2½	2½	2	2	2½ (Mar. 6,'30)
Discount ∫ Call	2½	2½	2	2	2½ (Mar. 6,'30)
Houses ⎩ Notice	2¾	2¾	2½	2½	2¾ (Mar. 6,'30)
Market rate (3 months' bills)	3 13/16–7/8	3 7/16	3 5/16	3 1/16	...

The Bank return reveals a rather surprising increase of £3,152,000 in the note circulation. Bankers' deposits have fallen by £4,693,075, and this alone is evidence of this week's stringency. The increase of £1,119,000 in discounts and advances shows that only a small amount had to be borrowed at the Bank.

* * * *

The February statements of the nine English clearing banks show that, since the preceding month, deposits have fallen by £53.3 million, cash by £13.4 million, and discounts by £24.6 million. Advances have risen by £3.1 million.

	Feb., 1929.	Nov., 1929.	Dec., 1929.	Jan., 1930.	Feb., 1930.
Capital and reserves.....	130·8	130·8	130·7	130·5	130·5
Acceptances	230·8	215·2	169·6	164·4	159·8
Deposits (including undivided profits, &c.).....	1,773·4	1,751·4	1,773·3	1,767·5	1,714·2
Total liabilities	2,139·0	2,097·4	2,073·6	2,062·4	2,004·5
Coin, notes, balance at bank, and cheques in course of collection	240·5	242·0	266·3	248·0	234·6
Money at call.....	133·4	139·7	139·0	139·9	125·7

Total assets	2,139·0	2,097·4	2,073·6	2,062·4	2,004·5

Compared with February of a year ago, bank "cash" has contracted by 2.5 per cent., and deposits by 3.3 per cent. Investments have fallen by 5.7 per cent, while advances have risen by 0.5 per cent.

NEW YORK.

Our New York correspondent cables:—There was a reduction from 4 to 3½ per cent. in the Federal Reserve discount rate, the delay of a week in making the change being due to the slow movement of the Washington board. The Reserve statement shows another drop in bill holdings, but maturities have been heavy. The discounts system is down 40 millions, and is now at only 226 millions. The total Reserve credit is 30 millions lower and the reserve ratio is up at 80.8 per cent. Gold is still arriving from Japan and South America, about 100 millions net having been received since the first of the year. Little change has occurred in the industrial situation, steel industry operations being slightly lower at 75 per cent. Oil shares have improved a trifle on an increase in the California crude oil price and reduction in mid-continent output. Motor shares are a bit firmer on hopes of April sales. Amusement issues have reached new high levels, and there is an expectation that a Columbia Victor merger will be arranged. Public utilities are holding back on the renewed investigations of the State Control Board. Rails have been retarded by poor earning statements.

THE SHARE MARKETS.

The share markets had a slightly harder tone, but interest was centred predominantly on fixed-interest stocks of high status. Gilt-edged were consistently firm, the new Four and a Half per Cent. Conversion Loan opening at a premium, and other recent trustee issues continued to be well absorbed. Home rails were quiet after attracting moderate investment buying, and Argentinas were marked down on the interim dividend statements. Some activity occurred in International stocks, and industrial share values, with a few exceptions, were fully maintained. Rubber shares were dull, and oils attracted meagre interest, despite better transatlantic news. The outstanding feature of the mining markets was the firmness of tin shares, following a sharp recovery in the price of the metal.

THE COMMODITY MARKETS.

Trade in general has scarcely held its own this week. In spite of favourable freights, the demand for coal is highly unsatisfactory and prices are weakening. Inquiries maintain some hope of a revival in the iron and steel trades, but little business is actually passing. Raw cotton prices have continued to fall, but the consumption figures published on Wednesday were decidedly bullish. The position in both the cotton and wool textile trades remains thoroughly unsettled. The hide, leather and footwear trades are fairly steady. Oilseeds and vegetable oils, especially linseed, are in poor demand.

THE FOREIGN EXCHANGES.

The outstanding features of the foreign exchange market during the past week were the strength of sterling against the dollar after the reduction in the Bank rate to 4 per cent., and a severe break in the German exchange. The New York rate rose from 4.86 3/32 a week ago to 4.86⅜, and closed steady, though somewhat under the best at 4.86 7/32, with forwards at 1/32 cent and 1/16 cent discount for the one and three months periods. Montreal was steady at 4.88⅛. Paris was again lower at 124.24, but Brussels improved to 34.88½. A distinct appreciation in Spain, though not wholly maintained, took the rate to 39.35 at the close, as against 41.20 a week ago. The resignation of Dr Schacht signalised the commencement of a rapid depreciation of the German mark to 20.43½; a subsequent rally to 20.38⅝ occurred at the close, as against 20.36¾ a week ago. Switzerland was erratic, closing at 25.13¼, an improvement of 2¼ cts. on the week. Milan depreciated to 92.80, while Amsterdam was steady at 12.12⅜. In the South American exchanges Buenos Aires was weak at 41 15/16, but Rio showed distinct improvement at 5⅛d. Among the Eastern currencies, Japan was better at 2s. ⅜d. In the forward market Paris was in better demand for three months ahead at 22 centimes premium, and Spanish forwards were in good demand at last week's prices. Forward Amsterdam was slightly more offered at ⅞ cent and 1⅞ cents premium, while the premium on forward Switzerland disappeared, business being done at par. Berlin forward fluctuated considerably, and closed at 1⅜ pfennigs and 5½ pfennigs discount, for the respective one and three months periods. Silver continued erratic, and with considerable demand for spot supplies. On account of bear covering, the close was better for spot at 19¼d., but forward delivery continued weak at 18 3/16d. Hong Kong was 1s. 6½d. and Shanghai 1s. 11⅝d.

FRANCE AND "SECURITY" AT SEA.

This week, events in the Naval Conference have been moving fast, and much of the ambiguity in the situation has been "cleared up"—if that phrase is appropriate to a situation which, though far from hopeless, is still obscure. The attitudes of both the British and the American Governments towards suggestions for some kind of political understanding, as a matrix for a technical agreement, have now been made public. President Hoover dare not commit the American Delegation to agreeing to an understanding, even for the limited purpose of joint consultation between the parties, in the event of circumstances arising which seemed to threaten the foundations on which the tonnage agreement would be built, Though we may understand, we none the less regret this decision. In respect of the limited but still vast area of the Pacific, in which four out of the five naval Great Powers were interested, the United States did go this length at the Washington Conference; and the Four Power Pact, which was concluded then, made possible that measure of limitation of naval strength which was there and then agreed upon. It is a pity that the United States should halt at this half-way point—and no doubt American and French friends of peace are feeling that it is also a pity if Great Britain is unwilling to supplement and complete the Rhine Pact by a Mediterranean Pact on the lines of Locarno.

But on this point Mr MacDonald has been as explicit as Mr Stimson has been in rejecting a consultative pact. In refusing "a Mediterranean Locarno," Mr MacDonald is correctly interpreting the prevalent current of British public opinion. Although the assumption of naval obligations towards France and Italy in the Mediterranean would substantially raise the premium paid for peace-insurance by Great Britain, this might, indeed, be good business. The British Government justified Locarno to the British nation by submitting that, under present conditions of land-warfare, the Rhineland was the real military frontier of Great Britain, and it might equally be argued that the Mediterranean is our vital line of maritime communications. But frankly, opinion in this country has not been impressed by the attitude hitherto adopted by France. All the efforts that have been made by other nations, and in particular by Great Britain, to reassure her by Locarno Agreements, by Pacts and the like seem to have been brushed aside as of little account, and grave doubt is felt whether even an undertaking in regard to the Mediterranean would be followed by a really adequate reduction of armaments. Any proposal from France would have to be really far-reaching if it is to remove the prevailing scepticism as to France's military policy, which seems to be built up on the mixed motives of fear and ambition.

For the present, therefore, we must take it that the possibility either of a Mediterranean Locarno or of a Five-Power Pact for consultation without any regional limitation has to be ruled out of the reckoning. This being so, what can we still hope to see accomplished? We do not hope for very much from the Anglo-French investigation of figures—exhaustive and conscientious though these may be. As far as that goes, it is good news that Mr Dwight Morrow has been taking part in these discussions, and this not as a mere passive "observer." If anybody can coax such investigations into bearing fruit it will be this eminent American diplomatist, who has succeeded in settling the quarrels between the Mexican Government and American Big Business and between the Mexican Government and the Catholic Church. This time, however, we fear that Mr Morrow may be up against an even less tractable problem than those which he has solved so brilliantly. Even under his auspices, haggings over figures between French and British experts cannot be expected to do much towards releasing the world from the burden and menace of competitive naval armaments. The best news of the week is that some progress has apparently been made in conversations concerning Franco-Italian relations, for the crux of the Conference—the root of French intransigeance—is the rivalry between France and Italy in the basin of the Western Mediterranean. If this difficulty could be overcome by a direct understanding *à deux* between the two Powers directly concerned, then the prospects of the Conference would not only improve at once but would become really promising.

What is this Franco-Italian problem? The best point of departure for a study of it is to examine the demand which Italy has put forward for naval "parity" with the strongest naval Power on the European Continent. That means, of course, with France, and France has, so far, shown herself unwilling to follow the lead which Britain gave when she accepted "parity" with the United States. These two problems of "parity" have many points of similarity. In both cases a younger naval Power is claiming the right to come abreast of an older naval Power and to remain abreast of her. In both cases, the older naval Power has objected, partly for the sentimental reason that she is the older Power, and partly on the practical ground that she has greater or more important or more vulnerable assets to defend with her naval strength than her younger rival has, and that, therefore "mathematical parity" (Mr Churchill's phrase) spells strategic inferiority for her. The argument of the British Admiralty about the British Empire's need for a larger number of light cruisers, in order to protect longer lines of maritime communication, is too familiar to English readers to need enlarging upon. It is a precisely similar argument *vis-à-vis* Italy, that is causing the French delegation at the present Naval Conference to make what seem to the rest of us fantastic demands for tonnage in cruisers and destroyers and submarines.

Apart altogether from the fact that France borders on two seas, whereas Italy touches only one, both France and Italy have territorial possessions on the African shores of the Western Mediterranean. But that bare fact is the whole extent of the likeness. For consider: the African possessions of France are immense and productive; those of Italy are narrow and barren. French Africa is a source of military "man-power" on which France depends for fighting in Europe; Italian Africa is a drain upon Italian "man-power," and if this drain were stopped, the fighting strength of Italy in Europe would be increased. Hence, in a European war, it would be a deadly blow to France if the Italian Navy were to prevent the transport of French colonial troops from the African to the European shores of the Western Mediterranean, whereas it would put Italy at no military disadvantage if the French Navy were to prevent the transport of Italian troops from the European to the African shores of the same sea. The French Admiralty's conclusion is that "mathematical parity" of naval strength between France and Italy would place France at Italy's mercy; and conversely that strategic parity between the two Powers would require that France should have a sufficient margin of auxiliary craft to protect her maritime lines of communication against a possible Italian attack.

It will be seen that the technical problems of Franco-Italian and Anglo-American naval parity are remarkably similar. Unfortunately, the political backgrounds are not equally so; for, as between France and Italy, nobody can venture to assert that war is "unthinkable." Still it is worth remembering that the solution of the less difficult Anglo-American problem was reached by discussions *à deux* between the British and American Governments. It is not too much to hope that similar discussions between the French and Italian diplomatists might succeed in clearing the air in the Western Mediterranean sufficiently to enable our London Conference to go forward with better prospects of success than it appears to have at this moment.

BUDGET PROSPECTS.

A YEAR ago we wrote that Mr Churchill, in his Budget for 1929-30, might ride for a fall, relying either on a return to power or on leaving an uncomfortable legacy to his successor. Since then the fall of Mr Churchill has duly taken place, and Mr Snowden has never tired of bewailing the discomfort of his inheritance. Yet legacies, like other troubles of this life, have to be dealt with and not deplored, and, in view of the anxiety with which the nation is now looking at its household accounts, it is of interest to consider how bad the position actually is.

The basis of any forecast for the new financial year must be the results of the year now drawing to its close, and while the last few weeks of the year may upset to some extent previous calculations, expenditure and revenue to the end of February can provide a fairly reliable guide, when compared with the corresponding position in previous years. The first table deals with revenues that cover the three-year period 1927-30:—

(000,000's omitted).

Stamps	23·6	27·0	26·8	30·1	22·3	31·0
Other inland revenue	2·3	2·6	1·4	2·5	0·7	2·5
Inland Revenue	369·3	418·1	349·5	406·9	343·0	412·0
Customs	104·5	111·6	111·6	119·0	111·5	119·9
Excise	130·2	139·2	126·5	134·0	119·9	130·6
Motor vehicle duties (Exchequer share)	4·9	4·9	4·0	4·2	4·5	4·7
Total tax revenue	608·9	673·8	591·6	664·1	578·9	667·2
Non-tax revenue	85·6	92·5	83·3	94·0	72·4	79·1
Total ordinary revenue	694·5	766·3	674·9	758·1	651·3	746·3

When the results to date are compared with the final results for 1927-28 and 1928-29, allowance being made for the discrepancy of a day in dates, it looks as though tax revenue may fall perhaps £12 million short of Mr Churchill's estimate. Non-tax revenue is peculiarly difficult to forecast, but it looks as though the estimate will be realised. Taking all factors into account, it is difficult to arrive at a conclusion more optimistic than that total ordinary revenue seems likely to be in the neighbourhood of £734 million, as compared with an estimate of £746.3 million—a deficiency of, say, £12 million.

The next table shows for the same period the course of expenditure:—

(000,000's omitted.)

	1927-28.		1928-29.		1929-30.	
	To Mar. 10th.	Complete year.	To Mar. 9th.	Complete year.	To Mar. 8th.	*Budget Estimate.
	£	£	£	£	£	£
National Debt Int.	308·9	313·8	307·5	311·5	306·8	304·6
Other Cons. Fund services	18·0	24·4	17·2	23·1	16·9	23·9
Supply services	326·2	359·0	316·3	347·0	341·8	372·9
Total, ordinary expenditure	653·1	697·1	641·0	682·2	665·5	701·4
Sinking Fund	62·8	65·0	51·9	57·5	44·5	50·4
Grand total	715·9	762·1	692·9	739·7	710·0	751·8

* Including Supplementaries.

The interest on the National Debt seems likely to exceed the estimate by some £6 million. In this case, as the sum of the interest and sinking fund is fixed at £355 million, we must proceed on the assumption that the sinking fund will receive no more than has already been placed to its credit—*i.e.*, £44 million. On this basis, and assuming that the Supply Services spend the whole of their votes, including supplementary estimates, total expenditure, including debt interest and sinking fund, seems likely to reach the full £752 million, of which £44 million will be all that is available for the Sinking Fund. As Mr Snowden's statutory obligations in this connection amount to £50 million, it is evident that the fixed amount of £355 million for debt service is inadequate.

The final results for the year may be summarised thus:—

PROBABLE RESULTS OF BUDGET FOR 1929-30.
£ (000,000's omitted.)

Revenue	734·0
Expenditure other than debt redemption	708·0
Sinking Fund	44·0
Deficit	18·0

Thus, the margin between revenue and expenditure, other than debt redemption, is likely to be £26 million. In order to redeem £50 million of debt under his statutory sinking funds, Mr Snowden must, therefore, borrow £24 million, of which £6 million are required to make good short-payments on his sinking fund.

The preceding results, together with the estimates of next year's expenditure, which have now been published, enable us to form some opinion of the Budget problem for next year. Inland Revenue for the present year is likely to yield somewhere about £400 million, but, in view of the setback in trade, business profits, and Stock Exchange activity, it is likely that Mr Snowden will take a conservative view of next year's yield. It may be that his department will not venture to count on more than £390 million. Customs, Excise and Motor Duties are likely this year appreciably to exceed £250 million. It is doubtful whether that figure will be exceeded under the less favourable circumstances of 1930-31. These two items give a total tax revenue of £640 million, which, with a non-tax income at this year's figure of £79 million, makes a probable revenue for 1930-31 on the existing basis of taxation of £719 million. If Mr Snowden ventures to budget again for this year's revenue the total will be £734 million.

As regards expenditure we are on surer ground. Excluding the Post Office, the Civil Service and Revenue Department estimates total £308 million, and the Fighting Services £110 million. The service of the National Debt may for the moment be kept at £355 million, though it is to be hoped that Mr Snowden is recognising the inadequacy of this figure. The sum of £15 million, formerly payable to local authorities, now disappears from other Consolidated Fund charges, leaving a residuum of only £8 million. Thus we arrive at a grand total for ordinary expenditure and sinking fund of £781 million.

If we must assume that the trade setback will reduce revenue on the present basis of taxation by £15 million, this means the substantial deficit of £62 million, and even on this year's revenue the deficit will be £47 million. These are very serious figures. They leave no margin for the remission of direct taxation, and in fact it is difficult to see how Mr. Snowden is going to raise this money. It is true that he has one windfall to hand in the shape of the £20 million in the Rating Relief Suspense Account, but apart from its inadequacy it is a capital reserve which can only be used in one year. For the rest, he must rely upon additional taxation, and this at a time when the burden upon the country is already so heavy that any further increase may not only seriously militate against the chances of an early recovery from the present setback, but may even defeat its object of raising fresh revenue. This is the real problem that Mr Snowden is having to solve to-day.

BANKS AND INDUSTRY IN ENGLAND AND GERMANY.—II.

(BY A BANKING CORRESPONDENT.)

CO-OPERATION between German banks in new issue and industrial business, and in most questions of industrial reorganisation, is largely due to the development of the so-called "Konsortial" system. The majority of important German firms, public authorities, etc., are not financed by a single bank, but by a banking syndicate. These syndicates generally comprise one or more D-banks and a number of private or provincial banks. All issue business is carried out by the syndicate, and it also plays an important part in credit business. The principal members of the syndicate keep the banking accounts of the company. While the majority of current advances (overdrafts, acceptance credits, etc.) are granted by the banks individually, most really large credits, particularly those with a duration of six months and over, are granted by the syndicate as a whole. Each member has a certain quota, and, in the case of a syndicate credit, would be expected to advance a proportional amount. It is rare for a bank to refuse to take up its quota, as in that case it would run the risk of exclusion, which would involve losing issue and other profitable business. This, of course, tends to consolidate the syndicate.

The result of the system is that, in all the really important banking and financial transactions carried out by an undertaking, the banks work together. Even in the case of credits which they have granted individually, it is quite customary for them to exchange information, and, indeed, it has been suggested that a regular inter-bank credit control organisation should be created. This confines their competition largely to internal rivalry, within the syndicate, for quotas or for the leadership. While it is quite common for a new bank to be admitted to a syndicate either at the request of the company or at that of the banks, it is exceedingly rare for a company to abandon one syndicate for another. It may be argued that a company thus loses the advantage of a choice between varied suitors for its favour, but, if it works with a strong banking syndicate, it can reckon on valuable support in difficult times and on the satisfactory placing of its issues.

The principal members of the banking syndicate of a company are, as a rule, represented on its board of directors. A German board of directors, however, differs fundamentally from its English counterpart. It is known as the "Supervisory Board" (*Aufsichtsrat*), and, as its name implies, has no executive functions. The managing directors (*Vorstand*) are entirely independent of the board, and directly responsible to the shareholders. The board has merely consultative and supervisory functions. It is entitled to demand information on the conduct of the company's business; it receives confidential reports; it must, as a rule, approve important financial transactions, such as debenture issues; and it is required to endorse the annual report and accounts. It is, as a rule, much larger than an English board, and meets only two or three times a year. Thus it is not strictly correct to describe the representation of banks on supervisory boards as "participation in the direction of industry." The representatives of the banks act as expert financial advisers and at the same time as liaison officers between the banks and their customers. They do not have time, nor are they qualified to do more than this except in special circumstances.

It is the practice in German banks for most of the principal officers, managing directors, heads of departments, managers of large branches, etc., to be delegated to the boards of a certain number of companies. The number of boards of which each individual officer is a member depends on circumstances, but some leading bankers are on the boards of as many as a hundred companies. This representation is kept more or less independent of the current work of the bank. For instance, the usual business negotiations between a company and its bank are not necessarily conducted by the delegate to the board. He will, however, be kept currently informed, and is asked his opinion. He is expected to keep in permanent touch with the company and to watch its development. In his capacity as member of the board he will receive current confidential reports, which are, as a rule, sent out fairly often, auditors' reports, details regarding balance-sheet valuation, etc. He will also keep in touch with his banking colleagues on the board, the representatives of the other banks in the syndicate.

The possibility of continually watching the development of their customers is an important element of security for the banks. They do not receive information only when matters are really bad. Owing to this present contact, they are in a position to make their influence felt considerably before this stage is reached, and to initiate and suggest reorganisations, amalgamations, and similar remedial measures much earlier than English banks, which can interfere, and, as a rule, are informed only when matters have got really serious. Acting, as they do, in the capacity of financial advisers they can make suggestions without arousing resentment, and their experience of conditions in other industries and in different firms in the same industry naturally stands them in good stead. In England, on the other hand, there is often a tendency to look upon interference by the banks as a disgrace, as a sign of potential insolvency—a frame of mind which is certainly not conductive to permanent confidential relations between bankers and their customers. Incidentally the confidential relations between bankers and their customers in Germany find apt expression in the fact that many companies hold their shareholders' meetings and board meetings in rooms placed at their disposal by their banks.

It is sometimes urged, in criticism of the German system of industrial banking, that it brings about such a close connection between the interests of a bank and those of its industrial customers that the bank can no longer remain unbiassed in granting credits, and tends to tie up its funds more than under the English system. This argument is based on a precisely similar fallacy to that advanced by certain critics of English banking. These maintain that English banks do not extend sufficient credit facilities to their industrial customers, and state that, under the German system, a more liberal credit policy is ensured. Neither statement is substantiated by the facts. As far as Germany is concerned, the shortage of capital has compelled the banks to be extremely conservative in granting facilities and to insist, as a rule, on considerably stricter requirements in respect of security than are asked in England. They have been quite unable, even had they been willing, to provide funds to carry old customers who were just keeping their heads above water and hoping against hope for better things, as many English banks have done. Circumstances have compelled them to ration credits fairly strictly and to adopt a deliberate policy of favouring the most efficient. They have had to put up with very severe criticism from those who went under, but, on the whole, the policy has played a beneficial part in the rationalisation of industry.

THE WOOL TEXTILE SITUATION.

An American economist some years ago, referring to the importance of group psychology in the trade cycle, remarked of boom periods that it is hard to find a silent man in a cheering crowd. To-day, in the wool textile industry, the person difficult to find is the optimist. A long series of disappointments and difficulties, aggravated by a protracted deadlock over wages and the recent slump in raw material values, has resulted in depression becoming a habit of mind; and, in their evidence before Lord Macmillan, sitting as a Court of Inquiry into the wage dispute, the employers put forward, as their considered view, the pessimistic conclusion that there were "only two alternatives: a substantial reduction of wage rates, or the bleeding to death of the industry."

In his Report,* issued at the end of last week, Lord Macmillan agreed with the employers that a reduction of wages is imperative, and found that "in present circumstances and upon its present basis the industry is in a most unsatisfactory if not an actually dangerous position." His recommendations as to the extent of the wage-cut to be applied—roughly, 9 per cent. of current rates—and the effect of this proposal on earnings are discussed in a Note on p. 581, but, apart from the question whether wool workers' wages should be regarded as "high" or "low" in relation to the cost of living or to earnings in other industries, Lord Macmillan was forced to conclude that the industry at present has not the ability to pay current rates out of its proceeds; and a sample inquiry into the accounts of representative concerns in different branches of the trade convinced him that "during the past five years the financial position of the industry has become progressively worse, and has now reached a really critical stage."

The crux of the situation lies in the export trade. The home market has failed to regain the volume of pre-war years, but competing imports, as the following table shows, are not a serious factor in comparison with the pre-war position:—

Net Imports of Woollen and Worsted Goods.

	Average 1909-13.	1924.	1927.	1928.	1929.
Woollen and worsted yarns million lbs.	28·5	17·8	18·0	17·8	20·3
Woollen and worsted tissues, million sq. yds.	71·3	27·1	35·6	38·1	33·8

A rough calculation on the basis adopted last year by the Committee on Safeguarding indicates that in 1929 British production of woollen and worsted tissues amounted to about 400 million square yards, against 443 million in 1924, and 550 million in 1912, and home consumption to 279 million square yards, as compared with 252 million in 1924, and 398 million in the pre-war year. Thus the ratio of retained imports to British production, which was 13.1 per cent. in 1912, amounted last year to only 8.5 per cent.—a figure showing an increase as compared with 6.1 per cent. in 1924, but not suggestive of lack of ability on the part of British firms to hold an adequate proportion of the home market.

The picture presented by statistics of exports is less agreeable:—

Exports.

	British Exports.			Continental Exports.*		
	Tops.	Yarns.	All Tissues.	Tops.	Yarns.	All Tissues.
	Mn. lbs.	Mn. lbs.	Mn. Sq. Yds.	Mn. lbs.	Mn. lbs.	Mn. Sq. Yds.
1924	41·1	65·9	233	...†	84·3	119
1925	32·0	57·4	188	53·9	84·3	115
1926	33·6	47·3	169]	76·8	99·1	119
1927	41·9	69·1	180	89·2	141·4	125
1928	34·4	66·0	179	86·0	128·2	132
1929	32·7	63·6	163	80·2§	121·0§	130§

* Exports from Belgium, Czecho-Slovakia, France, Germany and Italy.
† Belgian figures not available.
§ Estimated for Italy.

It is clear from the foregoing figures that the chief wool textile producing countries on the Continent have gained ground very substantially in the export markets, since 1924, at the expense of Great Britain; and though the catastrophic decline in the value of wool, which has brought down the price of 64's tops from 43d. a year ago and 55d. in March, 1928, to 28½d. per lb. to-day, is causing a temporary restriction of demand affecting all European producing countries, the striking contrast between the trend of British exports and that of our chief competitors' sales abroad during the past five years is disquieting.

In submitting to Lord Macmillan their case against a reduction of wage rates, the workers' representatives suggested that the economic condition of the industry could be adequately improved by other means. A large number of small firms, they considered, should be eliminated, and production should be concentrated in bigger units, by allocating separate classes of goods, as far as possible, to particular plants. A centralised body of employers should be established for the purpose of making long-term arrangements with the wool growers and of bringing pressure on distributors to pass on to the consumer the benefit of lower prices. New machinery, in their opinion, was required in many mills; dyeing charges and the profits of the large clothiers represented a heavy burden on the industry; and duplication of salesmen involved a considerable element of waste.

The employers, who asserted somewhat surprisingly that the benefits of de-rating amounted to no more than one-half of 1 per cent. in the cost of cloth, submitted to the Court that "infinite variety was an essential requirement of the industry," and that bulk production was already carried to the limit of its usefulness. Existing machinery was adequate; salesmanship was satisfactory; over-capitalisation was not a material factor; and though competition might be diminished and weak sellers eliminated by "rationalisation," the result of that process "would merely be to raise the average price and would thus be of little avail in view of the fact that the industry was already unable to sell its product because of its being too dear." Out of total costs of production, starting with wool on the sorting board and finishing with the piece of cloth in London, materials, including dyes, accounted for 50 per cent., and wages for over 32 per cent. In the latter element economies had to be sought.

Lord Macmillan was naturally not in a position to pass a considered judgment on the possibility of improving the structure and organisation of the whole wool textile industry. He had, in fact, to rest content with the finding of last year's Safeguarding Committee that the industry was conducted with "reasonable efficiency." Given the present critical situation, it is difficult to demur to his conclusion that lower wage-rates are necessary; but his comment that "the controllable proportion of the total cost of production represented by charges other than those for raw material and wages is too small for an adequate cure to be discoverable in this field for the difficulties of the industry," is open to criticism. Rationalisation can achieve economies, not only in "other charges," but in labour costs as well, without necessarily reducing rates of wages; and, in any case, it is hard to believe that a 9 per cent. cut in wages can make all the difference between disaster and success for the wool textile trade. A strong representative central association to co-ordinate the various sections of the industry, to examine the need for re-equipment and the possibility of eliminating surplus capacity, and to deal with the important questions of "finishing" costs and distributors' margins, is badly wanted. It is to be hoped that, if Lord Macmillan's recommendations on the wage issue are adopted by both sides, the way will be open for employers and employed to join in the formation of such a body.

RAILWAY FINANCES.—II. EXPENDITURE.

Last week we examined the gross receipts of the four railway groups in 1929 and found that in the aggregate they were nearly £2 million higher than in the preceding year, in spite of a fall in the passenger receipts of every group. Examination of the expenditure of the railways presents much more difficulty, owing to the inadequate treatment of wages in their otherwise excellent analyses of costs. In the various abstracts which set forth the detailed items of expenditure under such heads as

"maintenance of rolling stock," "traffic expenses," and so on, various categories of wages are shown separately, but there are many items, such as repairs and renewals in the companies' shops, which must entail a heavy labour cost of which no indication is given. Nor is the total wages bill directly indicated. A still more serious obstacle at present to a comparison of the railways' position is their failure to adopt a uniform treatment of the 2½ per cent. cut* in wages and salaries which is in force until next May. In the accounts of the London and North Eastern and the Southern groups its effect is shown, as would be the case with any ordinary wage reduction, in lower general expenditure. The other two groups, regarding it as in the nature of a temporary gift from their employees, show it on the income side of their accounts, retaining on the expenditure side all wage payments as though they had been made at standard rates. As they do not give any indication of the proportions in which it is allocated as between different sections of their activities, this completely invalidates comparison between the accounts of the four groups.

The first table shows the total expenditure, including that on ancillary businesses, as given by the railways themselves. The figures in italics represent the result of our deduction of the amount saved in wages by the railways which do not allow for this in their accounts:—

Expenditure.
(000's omitted.)

	1927.	1928.	1929.	Inc. or Dec. in 1929.	
	£	£	£	£	%
London, Midland and Scottish	70,300	67,559	66,878	− 681	−1·1
Adjusted for wages cut	...	*67,140*	*65,789*	*− 1,351*	*−2·0*
London and North Eastern	53,666	50,738	50,896	+ 158	+0·3
Southern	21,906	21,143	20,914	− 229	−1·1
Great Western	30,016	29,408	29,209	− 199	−0·7
Adjusted for wages cut	...	*29,227*	*28,736*	*− 491*	*−1·7*
Total	175,888	168,848	167,897	− 951	0·6
Adjusted total	...	*168,248*	*166,335*	*− 1,913*	*−1·1*

If the expenses on railway working be taken alone, the reduction as compared with 1928 was £778,000† on the London Midland and Scottish; £48,000 on the London and North Eastern; £168,000† on the Great Western; and £272,000 on the Southern. Except in the case of the Southern Railway, the reductions are very much less than those effected in 1928, as was foreshadowed in the statement of Sir Josiah Stamp a year ago, to the effect that expenditure in 1928 had been brought down to a level which might be considered the new standard. These figures do not yet reveal the full extent of the economies which are being effected by rationalisation, for the railways are evincing growing appreciation of the importance of productive capital outlay, and much of their capital expenditure during the past year is calculated to yield economies in running costs in the future.

About 90 per cent. of railway expenditure and nearly 80 per cent. of total expenditure occurs under the three heads analysed below. This table takes into account the full economies, including those realised from the wage cut, which have been effected by the London and North Eastern and the Southern Railways:—

Principal Items of Railway Expenditure.
(000's omitted.)

	Maintenance of Ways and Works.		Maintenance of Rolling Stock.		Locomotive Running and Traffic Expenses.		Total Engine Miles.	
	1928.	1929.	1928.	1929.	1928.	1929.	1928.	1929.
London and N. Eastern	£ 5,988	£ 6,015	£ 8,502	£ 8,939	£ 25,361	£ 25,072	168,564	175,339
Southern	3,392	3,474	2,900	2,917	10,063	9,895	70,635	72,959

Economies were in both cases concentrated on locomotive running and traffic expenses. In view of the increase in the total number of engine miles, especially on the London and North Eastern, these economies are more substantial than might appear at first sight, and expenditure was reduced from a percentage of 46.87 of total receipts in 1928 to 45.13 per cent. in 1929 on the London and North Eastern and from 43.71 to 43.03 per cent. on the Southern.

The corresponding table for the other two groups shows only the economies achieved in *personnel*, in organisation and in technique, since the effect of the wage reduction is not included:—

Principal Items of Railway Expenditure.
(000's omitted.)

	Maintenance of Ways and Works.		Maintenance of Rolling Stock.		Locomotive Running and Traffic Expenses.		Total Engine Miles.	
	1928.	1929.	1928.	1929.	1928.	1929.	1928.	1929.
London Midland & Scottish	£ 7,762	£ 7,675	£ 10,053	£ 10,289	£ 35,510	£ 34,894	230,798	233,013
Great Western	4,019	4,046	4,082	4,116	13,721	13,667	95,434	97,770

The London Midland and Scottish, though it ran over two million more miles, achieved, wage reduction apart, a saving of £610,000 on locomotive running and traffic expenses, in spite of an increase of £65,000 in the cost of locomotive coal. Its ratio of expenditure under this head to total receipts was reduced from 48.07 to 47.67 per cent., and that of the Great Western from 45.01 to 44.05 per cent. The abnormal weather of last spring had some adverse effect on expenditure for maintenance, both of ways and works and of rolling stock. The increase in expenditure on rolling stock is regarded by the railways, in particular by the London Midland and Scottish, as equivalent to the building up of a hidden reserve, since outlay which might legitimately have been made out of capital is debited to the current expenditure of the year. The ratio of total expenditure (once more, not allowing for wage reduction, on the London Midland and Scottish and the Great Western) to total receipts was:—London Midland and Scottish, 79.46; London and North Eastern, 77.9; Southern, 79.05; Great Western, 78.84. The biggest reduction is shown by the London and North Eastern, whose ratio fell from 80.08 in 1928, and the smallest by the London Midland and Scottish, on which it was already only 79.79 in 1928.

The part played by the coming into operation of the Local Government Act, 1929, in improving the position of the railways, is difficult to determine, since not only was its application confined to the last quarter of the year, but also, as its benefits are passed on in the form of freight rebates, its effect should appear not on the expenditure side of the account, but in an unascertainable increase in traffic. Undoubtedly, some of the improvement in the coal export traffic may be attributable to this measure.

In view of the importance of wages and fuel in the expenditure of the railways, it would be interesting to have an exact analysis of the part they play. As already indicated, they are not separately distinguished under all the headings of the railway accounts, but in the group "locomotive running" and "traffic expenses," which form about half the total, wages and salaries are separately shown for all except minor items, so that an examination of these groups gives a fair idea of the general movement of these two important elements in railway costs. In the table below, expenditure on wages and fuel respectively is shown as a percentage of total locomotive running and traffic expenses, but it must be remembered that the miscellaneous items excluded, such as cleansing, lubricating and lighting of vehicles, also include an unspecified labour cost. Wages have been omitted in the case of the London Midland and Scottish and the Great Western,

* The total amounts involved in 1929 were: L.M.S. £1,089,018; L.N.E.R. £821,508; S.R., £300,000; G.W.R., £473,030.
† These figures do not reflect the saving from the 2½ per cent. cut in wages and salaries.

as for the reason already given, their inclusion would be misleading.

LOCOMOTIVE RUNNING AND TRAFFIC EXPENSES—MAIN ITEMS.
(000's omitted.)

	Wages and Salaries.			Fuel.		
	1927.	1928.	1929.	1927.	1928.	1929.
	£	£	£	£	£	£
London Midland and Scottish	...	...	...	6,485	5,796	5,797
Percentage of expenditure....				*17·6*	*16·3*	*16·6*
London and North Eastern....	19,299	18,739	18,483	5,049	3,973	4,150
Percentage of expenditure....	*71·3*	*73·9*	*73·7*	*18·6*	*15·7*	*16·6*
Southern	6,724	6,575	6,427	2,620	2,187	2,146
Percentage of expenditure ...	*63·1*	*65·7*	*64·9*	*24·6*	*21·8*	*21·7*
Great Western	...	...	...	2,364	2,065	2,028
Percentage of expenditure....	...	...	...	*16·7*	*15·1*	*14·8*

Since the wages and salaries shown in the above table constitute between 31 and 37 per cent. of the total expenditure of each railway, their movement is significant. The London and North Eastern, even allowing for the 2½ per cent., only reduced its wage bill in these groups by just over a quarter of a million, presumably owing to the great increase in traffic, since a more detailed examination of its accounts shows that savings on the wages of those sections of the staff whose number is not immediately affected by the volume of traffic were partly balanced by increases in those sections of the wage bill which vary directly with the traffic. The comparative smallness of the net reduction, therefore, is a reflection of better business.

Had it been possible to include the figures of the other two groups in the same table, it would have been seen that, even without the 2½ per cent. reduction, the London Midland and Scottish effected a saving of half-a-million, which was fairly evenly distributed over the various components. The Great Western, however, before allowance is made for the 2½ per cent., shows a small all-round increase. In this connection it is noteworthy that the Great Western is the only group in which "General Charges" have gone up, and that the rise is due to an increase in superannuation and benevolent funds.

The item "fuel" includes electric current, and also the whole expenditure under an undifferentiated heading "fuel, lighting, water, and general stores," but the bulk of the expenditure under this heading is on coal. It is, however, an interesting commentary on the progress of electrification that over one-quarter of the fuel bill of the Southern and nearly one-fifth of that of the Great Western (partly owing to its ownership of sections of the tubes in the West London suburbs) is for electric current. This, no doubt, helps to explain the fact that, in spite of higher coal prices, and an increase in train miles worked, these two lines have slightly reduced their expenditure on fuel, while that of the London and North Eastern has risen and that of the London Midland and Scottish has remained stationary.

The general impression given by these returns is that economies in running expenses resulting from grouping have spent their first impetus and must necessarily be effected more gradually in future. Capital expenditure, to which a special incentive has been given by the Loan Guarantees and Grants Act, and by the conditions attached to the repeal of passenger duty, will be dealt with in our final article.

THE POLITICAL OUTLOOK IN CANADA.

(BY OUR OTTAWA CORRESPONDENT.)

THE fourth session of the Sixteenth Federal Parliament of Canada has now opened, and the chief speculation in the lobbies of Parliament is whether or not it will be the last. The King Government has now weathered three sessions without ever being in serious danger of defeat, and its parliamentary position can be reckoned impregnable; but there is evidence of a distinct swing of public opinion in favour of Conservatism, and the shrewder Liberals are not blind to the grave perils which lie ahead, because they are well aware that the path of the King Government has been greatly smoothed in recent years by Canada's participation in the general economic prosperity which has been vouchsafed to the whole North American continent. Now, however, a variety of factors have combined to produce a definite business recession. Agriculture had a very bad year in 1929, the drought reduced the volume of the crops, and now the grain marketing crisis threatens a further reduction in farming revenues. The newsprint industry is still in difficulties; the mining industry has been hard hit by the brokerage scandals; and unemployment in most of the cities is severe. All these circumstances make for a disgruntled and querulous electorate, and opponents of the Government, who charge it with maladministration, are getting an attentive hearing.

The King Ministry is, therefore, definitely on the defensive, and is seeking for policies which will revive its waning fortunes. The Speech from the Throne outlined a very modest programme of legislation, and the chief measures foreshadowed concerned the recapitalisation of the Canadian National system, the control of radio broadcasting, the consolidation of the Grain Act, and a revision of the soldiers' pension plan. There was a strange silence about the tariff, although it is the issue which the Conservatives are attempting to keep in the forefront, and the silence is interpreted as indicating that the Government has not yet made up its mind upon its policy. The final form of the Smoot-Hawley Bill is still uncertain, but it promises to inflict serious penalties upon a variety of Canadian interests. Liberal propagandists strive to prove that the aggregate damage threatened to Canadian trade is not large, but it is sufficiently serious in prospect to have created a widespread feeling of resentment throughout Canada against what is regarded as American fiscal selfishness. The Conservative politicians and papers have, naturally, been doing their best to exploit this sentiment, and they have been taking the line that a body blow against the economic life of Canada is imminent, and that some defensive economic strategy through the medium of higher tariffs is the most urgent need of the hour. Furthermore, the Conservatives contend that they are the only party willing and able to undertake the necessary reprisals and that, therefore, the national interest demands their return to power at the earliest possible date.

The King Government cannot, in the state of public sentiment, afford to disregard this campaign, and they are aware that they must find ways and means of meeting the popular demand for a vigorous fiscal policy. The tone of the Liberal Press, and utterances of the Prime Minister and some of his colleagues, suggest that the Government is contemplating a measure of tariff revision whose fundamental feature would be a substantial increase in the British preference. Such a policy offers possibilities of substantial political dividends, but it would also involve some risks. It would be popular in ports like Vancouver and Halifax, and it would please the farmers; but it would be very unpalatable to Quebec, whose manufacturers, owing to their geographical position, suffer more from British competition than do their brethren in Ontario and the West. Since they have never had any enthusiasm for the British preference, and have repeatedly agitated for its abandonment or curtailment, they would strongly dislike its augmentation, and their views would certainly find expression in Ottawa through French-Canadian Liberal members. The King Government is more dependent than ever upon the saving strength of the Quebec Liberal bloc, and must move warily before it embarks on tariff policies which will offend it. What Ministers probably want to do is to postpone any serious tariff revision for this session in the hope that the Imperial Economic Conference, which has been fixed for next September, may yield them material for an attractive tariff policy.

But, apart from the tariff, there promises to be no lack of material for sharp controversy during the session. The Government has, so far, not disclosed its hand about its plan for the recapitalisation of the Canadian National Railways, and it is understood to be contemplating the merits of three alternative schemes. But, whatever plan is proposed, it is quite certain that the political friends of the Canadian Pacific Railway will have considerable criticism to offer of a measure which must, if it is to accomplish anything, involve the transfers of some of the C.N.R.'s present financial burdens to the general national debt. Again, the King Government is more or less committed to implement the findings of a report of a Royal Commission which investigated the radio and broadcasting situation and recommended a plan of national control by the Federal Government, tempered by a certain measure of provincial autonomy in regard to programmes. The scheme has many merits and commands substantial support, but it has also evoked vigorous opposition. The opponents of the principle of public ownership dislike it, and the owners of existing broadcasting stations have been conducting a strenuous campaign against it under the leadership of *La Presse* of Montreal, the most influential French-Canadian paper, which the King Government can scarcely afford to offend.

When the measure amending the Canada Grain Act comes up for discussion there will be a grand assize on the whole grain marketing situation. Already two western members have filed resolutions asking, in the one case, for a searching investigation of the trading methods of the Canadian grain exchanges, and, in the other, for a termination of the practice of optional trading in grain. The Conservatives will not miss the opportunity of charging the Government with responsibility for the policy of holding wheat for higher prices, which has so far proved completely disastrous, and cost the western farmers millions of dollars. Legislation will also be introduced to transfer the natural resources of three western provinces from Federal to Provincial authority, and Mr Bourassa threatens to raise the question of the inadequate protection secured for the Catholic minorities in the agreements concluded with the Provinces of Manitoba and Alberta.

The King Government will certainly not bless him for raising this religious issue at Ottawa, as it has already emerged in the country and is causing Ministers more worry than any other question. It was a revolt of Protestant Liberals, who were dissatisfied with the ascendancy exercised by the local Roman Catholic hierarchy over the late Liberal administration in Saskatchewan, that terminated last June the long Liberal control of that province, and the fires of religious prejudice which were then kindled have spread to other provinces. There is now in existence a Canadian replica of the American Ku Klux Klan, which has branches in every province west of the Ottawa river, and is carrying on a persistent campaign of propaganda, partly directed against the Roman Catholic Church and partly against the political domination exercised by French Canada at Ottawa. The anti-Catholic agitation has recently received fresh momentum from the attitude taken by the Roman Catholic hierarchy towards the proposal to divest Parliament of some of its responsibilities for divorce by the establishment of a divorce court for Ontario, while there have been fierce protests throughout Quebec at educational legislation proposed by the new Government of Saskatchewan, which will tend to diminish Roman Catholic influence in educational matters. As a result, there is in progress throughout the Dominion a solidification of Protestant sentiment which, at a general election, would certainly operate to the benefit of the Conservative Party.

On the other hand, the emergence of this religious controversy will help to keep intact the Liberal *bloc* in Quebec, and as Ontario for the same reason will give the Conservatives a large majority, the real battleground of the next election promises to be the three prairie provinces, where all the seats save one are at present held by Liberals or Progressives. The political experts are all agreed that the Liberals must prepare themselves for substantial losses in these regions, but it is doubtful if the Conservatives will make many gains because the western farmers are still suspicious of the merit of their high protectionist policies. The Progressive Party, although shorn of its former Parliamentary strength, is still alive, and, since it always secures a stimulus from low prices for farm products, it might increase its strength to 30 or 35 at the next election, and hold a decisive balance of power in the next Parliament.

There is no sign that Lord Beaverbrook's United Empire Party has aroused any serious interest in Canada. Its programme has received warm commendation from two papers only of high standing, the Toronto *Globe* and *La Presse*, and the comments of other papers have ranged from critical analysis to ironic condemnation. It has also been rejected as impracticable by Mr Beatty, the president of the C.P.R., and, during the debate on the Address in Parliament, no speaker thought it worth mentioning. The cold fact is that, while Canada and the other Dominions might appreciate the free preferential entry of their food products into the British market, they are not ready to offer to scrap their own protectionist systems, and they discern no prospect of the United Empire or any British party securing a mandate for food taxes. There is, however, throughout Canada some uneasiness about the present situation in respect to Imperial relations, and a feeling that the nationalist idea has been pushed too far. The Conservatives' devotion to local protectionism prevents them from challenging the King Ministry openly on this particular issue, but they will exploit it in various ways at the next election. This event cannot be delayed beyond eighteen months, and certain signs are interpreted as indicating that the King Ministry may decide to appeal for a new mandate either at midsummer or in the late autumn.

Notes of the Week.

The Government's Defeat.—The process of subjecting the Coal Mines Bill to salutary amendment led on Tuesday to the Government's first defeat in the House. The proposal to permit a levy on coal for the purpose of "facilitating the sale" of particular classes—in plain words, subsidising exports—was riddled by volleys of devastating criticism from both the Opposition parties. This "inverted form of Protection," based on the strange principle of favouring foreign, at the expense of home, consumers, and calculated inevitably to provoke retaliation on the part of every other coal-producing country in Europe, found few friends to defend it. Mr Graham, palpably uncomfortable in pleading a cause which ran counter to the strong recommendations of the World Economic Conference and his own attitude at Geneva, could do little more than ask that the coalowners should be trusted not to abuse the powers which he had agreed to give them. The House was not prepared to approve a thoroughly vicious principle in the hope that the evil begotten might be "only a very little one"; and the offending section was deleted from the Bill by 282 votes to 274. Apart from causing the usual flutter of excitement over a division in which the Government is worsted, the result has no great political significance. The levy proposal was extraneous to the main purpose of the Bill and should never have been incorporated in it; but there was no shadow of reason why the Government should regard its excision as a vote of no confidence. Indeed, other amendments were moved on Tuesday whose adoption would have greatly improved the Bill; and the Government's success in resisting them was due more to luck than merit. With the single qualification that scope might thereby be given for unfair subterfuges in declaring the direction of sales, there is much to be said for the amendment moved by Mr Clement Davies excluding from the operation of the quota all coal produced for export. Another amendment, proposed by Major Nathan, that mines belonging to industrial undertakings should be freed from restriction of output needed for the concern's own use, deserved a better fate than rejection. Asked to defend the economic absurdity of compelling a firm to buy coal "outside," because its own pits are prevented from raising the coal required, and available, Mr Graham had no real answer. He persuaded the House that the Liberal proposal to make the establishment of voluntary marketing syndicates part of the Bill was premature at the industry's present stage of organisation; but very proper dissatisfaction at giving the owners complete *carte blanche* as to the method of fixing "standard tonnages" was allayed only by Mr Graham's promise to endeavour to frame wording designed to bring the standard into close relation with present-day output. The Bill seems likely to leave

The Education Estimates.—The estimates for the current financial year may be summarised in the following table:—

Group.	1929. £ (000).	1930. £ (000).	Increase (+) or Decrease (−). £ (000).
Grants to L.E.A.'s	39,213	42,626	+ 3,413
Grants to Non-L.E.A.'s	1,657	1,847	+ 190
Pensions (net)*	— 75	134	+ 209
Other expenditure (net)	891	889	— 2
Net total	41,686	45,496	+ 3,810

* Less contributions from teachers and employers.

A memorandum issued with the estimates dissects this increase of £3,810,000 in a different way, £2,124,000 being ascribed to the "development and normal growth" of the education services and the remaining £1,686,000 to the changes brought about by the Local Government Act of 1929. Of this last sum £720,000 represents an annual payment, known as the "Residue Grant," to Local Education Authorities, formerly made out of the Consolidated Fund and now transferred to the Board of Education's vote. Thus the apparent increase of £3,810,000 must, from the taxpayers' standpoint, be reduced to £3,090,000. It should be added that in subsequent years this sum so transferred will amount to £807,000. The remaining £966,000 of the £1,686,000 is due to the reduction made by de-rating in the net total rateable values of hereditaments liable to education rates, and in the need of the Exchequer to make up the resulting loss to local authorities. Thus this sum should be regarded as part of the financial assistance given by the State under the de-rating scheme to certain classes of ratepayers. The increase of £2,124,000 due to the normal growth of education will arouse mixed feelings in the heart of the "progressive" taxpayer. He is rightly inclined to regard money spent on education as money well spent, but the state of the national finances makes him scrutinise with the utmost care the way in which public money is being spent, even when the object is a worthy one. The increase of £190,000 in grants to other than local education authorities represents in the main additional help given to secondary school pupils and to the training of teachers. The expansion in the needs of the local education authorities is due to a variety of causes, of which the principal is the increase of 1,250 in the number of full-time teachers. It is churlish to criticise such an increase when the difficulties under which many overburdened teachers are labouring are borne in mind, but the cost of educating an elementary schoolchild has already risen from 95s. 2d. in 1913-14 to 235s. 4d. in 1927, 250s. 7d. in 1929, and—so the Board estimates—to 260s. 6d. for 1930 and there are obvious limits to such an expansion. In short, the country is probably near the point where it will have to weigh carefully the claims of an enlightened education policy, with all its moral and material advantages to the nation, against the urgent claims of the taxpayer.

The Army Estimates.—The estimates for 1930-31 are £40,500,000, a figure which compares with original estimates for 1929-30 of £40,545,000 and with adjusted estimates (including supplementaries) of £41,105,000. In interpreting the new year's estimates two facts must be taken into account. The first is that the 1930-31 estimates now presented include the cost of the troops in China, an item which hitherto has appeared in the form of a supplementary estimate. The other is that the War Office now has to bear the cost of maintaining the forces formerly employed on the Rhine and paid for under the Versailles Treaty by Germany. Part of this new cost had to be borne by the War Office in 1929-30, and a supplementary estimate for £560,000 had therefore to be presented a short time ago. The new financial year has to bear the full burden, amounting to £950,000. Allowing for these facts, it is fair to compare the new year's estimate of £40,500,000 with the old year's adjusted estimate of £41,105,000. The difference represents a saving of only £605,000, and while the Army Council apparently regard that figure as a measure of the care with which they have scrutinised each item of expenditure, the taxpayer will hardly be jubilant about so meagre a reduction.

The Air Estimates.—The net total of Air estimates laid before Parliament for the coming financial year is £17,850,000, as against £16,960,000 for the year now drawing to its close. As the following table shows, "true" gross estimated expenditure has increased from £20,013,100 to £21,073,800:—

	1929.* £ (000).	1930. £ (000).	Increase (+) or decrease (−). £ (000).
True gross expenditure	20,013	21,074	+ 1,061
Less super-cut	...	150	150
Gross estimate	20,013	20,924	+ 911
Less Fleet Air Arm grant	1,067	1,267	+ 200
Less other appropriations-in-aid	1,986	1,807	— 179
Net expenditure	16,960	17,850	+ 890

* Includes Supplementary Estimates.

The "super-cut" of £150,000 represents an overhead deduction to discount possible under-spending. It is spread over all the votes and is not specifically allotted to any one vote. Last year's super-cut was £650,000, but experience has shown that this was too large. It may be added that the super-cut only appears in the original estimates for the year, and is subsequently absorbed as the figures are revised. That explains the absence of the super-cut for 1929 in the above table. The use of such an accounting device is in any case open to question. Coming to the actual estimates, a memorandum which accompanies them states that they allow for a broad continuity of air policy and do not prejudice the outlines of the Home Defence schemes, but that for the coming year the approved increases of the R.A.F. are of small dimensions, and are designed to demonstrate once more the Government's desire to avoid disastrous competition in air armaments. The main feature of the 1930 programme, therefore, will be the consolidation of existing home units. The increase in some of the service votes is held to be consistent with this policy, and, indeed, to be mainly consequential on existing commitments. The net increase in the civil aviation vote amounts to £89,000. This represents mainly subsidies to Imperial Airways, Ltd., for a weekly service to India and daily services on certain routes in Europe, and an initial payment in connection with an Imperial air service to South Africa.

International Cotton Statistics.—Our Manchester correspondent writes:—The International Federation of Master Cotton Spinners' and Manufacturers' Associations has this week published the half-yearly statistics of consumption and stocks throughout the world. With regard to consumption, the feature of the returns is the decline in American cotton; for the half-year ended January 31st last the amount used was only 7,083,000 bales, against 7,463,000 bales in the previous half-year and 7,613,000 bales in the six months ended January 31, 1929. On the other hand, there has been a striking increase in the consumption of East Indian cotton, the amounts for the last three half-years being 2,985,000 bales, 2,604,000 bales and 2,574,000 bales. An appreciable increase has also shown itself in the use of "sundry" cottons, the amounts for the last three half-years being 2,632,000 bales, 2,455,000 bales and 2,184,000 bales. These sundry cottons are not specified, but for some time now there has been increasing use of Brazilian, Peruvian and African qualities. The consumption of all kinds of cotton throughout the world during the last three half-years has been 13,202,000 bales, 13,014,000 bales and 12,868,000 bales. Thus, during the past half-year, compared with the same six months in the previous season, there has been a decline of 7 per cent. in the world consumption of American cotton, but an increase of 16 per cent. in the consumption of other kinds of cotton. These figures go to prove that growers in the United States are losing their supremacy as suppliers of cotton. With regard to stocks, the mills of the world held 4,931,000 bales of all kinds of cotton on January 31, 1930, against 5,294,000 bales on January 31, 1929. It is significant that world mill stocks of American cotton at the end of last January were 2,742,000 bales, as against 2,958,000 bales a year earlier. The recent decline in the price of American cotton is undoubtedly largely due to the falling off in consumption and the continuance of the poor demand. Exports from the United States total 900,000 bales less than at the same time last season. The price of American cotton in Liverpool is now 1½d. a pound lower than at the beginning of the year and over 3d. a pound cheaper than a year ago. The authorities in America are endeavouring to arrange for a reduction in the acreage this spring, but it is not expected that the decline in the area under cultivation will be important. The International Federation has also published some interesting statistics relating to the amount of short time worked in the cotton mills of the world during the half-year ended January 31st last. This information is given in the form of spindle-hours stopped in each country, calculated in weeks of 48 hours. The figure for Great Britain is given as 7,092 weeks, but is exceeded by Austria with 8,191. Canada is given as 4,735, Norway 4,406, Brazil 4,233, Italy 3,930, Japan 3,091, Switzerland 2,903, Russia 2,650, Germany 2,356, and China 2,130. It is evident from these statistics that the depression in the cotton industry is world-wide.

Wool Textile Workers' Earnings.—We discuss in a leading article the general grounds on which Lord Macmillan based his finding that a reduction of wages is necessary in the wool textile industry. The present wage system is highly complex. For time workers there is added to a base rate, firstly, 10 per cent., and secondly, 72.5 per cent. "cost-of-living" bonus. Since December, 1922, the minimum weekly wages of time workers in the manufacturing departments have been: men in scheduled occupations, 54s. 10d.; men in unscheduled occupations, 52s. 8d.; women, 32s. 3d. For these grades Lord Macmillan proposes a reduction of the 10 per cent. addition to 5 per cent., and of the "cost-of-living" addition from 72.5 to 64 per cent. The reduction in full-time weekly earnings would be 9.249 per cent., or 5s. 1d., 4s. 10½d., and 3s., respectively, in the three classes given above. In the case of piece workers, whose system of percentage additions is even more complicated, Lord Macmillan recommends an effective reduction of 8.766 per cent. The recommendations of the Committee have been accepted by the employers, who had asked for reductions ranging from 15.23 to 18.47 per cent., and it seems probable that the operatives will also agree to the finding. Lord Macmillan's suggestion that, in considering the relation between current and pre-war earnings, regard should be had to the "greatly expanded social services" at the wage-earners' disposal, begs a rather large question, but the operatives agreed with the employers that rates of wages had increased since the war by a substantially greater percentage than the cost of living figure. In this industry, as in others, the difficulty is that short-time working results in unduly low earnings even when rates per hour are a heavy burden on production costs.

British Car Production in 1929.—The current issue of *The Motor Trader* contains the results of the annual survey which that journal makes of the output of the British motor industry. Production in 1929 is stated to have amounted to 180,426 cars, as compared with 154,495 in 1928, 161,920 in 1927, and 107,000 in 1924. Five firms alone accounted for nearly 90 per cent. of last year's output. An interesting analysis of car-production in h.p. categories yields the following results:—

NUMBER PRODUCED.

	1927.	1928.	1929.
10 H.P. and less	38,992	50,586	73,289
12 and 14 H.P.	102,081	78,967	67,399
16 H.P.	11,220	12,398	24,758
18 H.P. and over	9,627	12,544	14,980

The inference to be drawn from the foregoing figures is that demand for cars in this country is tending to divide sharply into two lines. The "medium" powered car is rapidly giving place to more powerful vehicles at one end of the scale, and to the "baby" type (with the lowest tax) at the other. Average prices of British cars in the 18-26 h.p. class have fallen from £649 in 1927 to £557 in 1928, but—power for power—still compare unfavourably with those of American makes.

Shipping Freight Index Number.—The general level of whole-cargo shipping freights, as measured by our index number, was 5.8 per cent. lower in February than in the previous month, when the same rate of decline was recorded. The current index figure is 28.3 per cent. below that of a year ago, and 23.4 per cent. lower than the average for the last pre-war year. The following table summarises recent movements of the various group indices:—

AVERAGE 1898–1913 = 100.

	Average, 1913.	Feb., 1929.	Dec., 1929.	Jan. 1930.	Feb., 1930.
European Waters	110·0	122·7	117·3	104·2	98·1
North America	113·1	125·1	95·5	94·2	92·6
South America	123·4	121·5	94·6	95·1	95·5
India	106·3	117·4	109·0	99·8	93·4
Far East and Pacific	117·4	122·0	93·4	85·2	78·9
Australia	127·9	136·2	91·7	88·1	75·7
Total	116·3	124·1	100·3	94·4	89·0

Outward coal freights to South America had a firmer tendency in consequence of the further violent fall in homeward quotations from that quarter; elsewhere coal rates declined. Grain chartering was still on a very small scale, there being no signs of any appreciable revival in European demand for wheat. Business in miscellaneous cargoes such as ore, timber, sugar, and nitrate was scarce, and liner services by offering low rates for "parcels" continued to make heavy inroads into the "tramp" vessels' market. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade	80·1	— 9·3	South America—outwards	120·4	+13·3
Bay—outwards	105·4	— 3·7	South America—homewards	70·5	—12·6
Bay—homewards	125·8	— 4·8	India—outwards	111·6	— 4·2
Mediterranean—outwards	95·7	— 4·3	India—homewards	75·2	— 8·7
Mediterranean—homewards	100·3	— 5·5	Far East, etc.	78·9	— 6·3
North America	92·6	— 1·6	Australia	75·7	—12·4

Expressed as a percentage of the average for 1913, the total figure of our index number for February works out at 76.5, as compared with 81.2 in January, and 106.7 a year ago.

Progress of Krupps.—The Krupp report for the year ending September last supplements the record of the steel and coal rationalisation programme and results of the Vereinigte Stahlwerke A.G. It notes the completing stages of a similar comprehensive and costly technical reorganisation, and it is particularly interesting for its revelation of a financial policy so conservative that it could only be adopted by a family concern owned by wealthy members. For the second year in succession the dividend is passed, although the net profit, at £345,000, was one million marks more than in 1927-28. In the preceding year a substantial contribution was made out of the net profit to the pension fund, and £200,000 was carried forward. From the £545,000 thus available at the end of the past year £95,000 is carried forward, and £450,000 is placed to a special depreciation account in respect of the re-equipped works and new plant. The explanation given is that this reconstruction has had to be undertaken at a cost which does not offer the possibility of a remunerative return in the conditions likely to prevail in the future. Hence the decision to write it down immediately out of the gains of a good year. For ordinary depreciation £690,000 was allocated, taxes took £780,000, social insurances £600,000. The firm's own benefit funds received £265,000.

and interest and miscellaneous charges £262,000. Loans were shown at just over £4,000,000 at the end of September, £150,000 less than two years earlier. When the gold mark accounts were resumed in 1924 after the inflation the share capital was put down at £8,000,000, and it remains at that amount. The book value of the works and plant is shown at just under £10,000,000, which is £550,000 less than in 1925, although the works have been largely reconstructed and extended since that date. For instance, during the past two years a new blast furnace and associated plant has been erected at Essen-Borbach. The Krupps concern is one of the few "vertical" organisations which appears to be managed with a high degree of success. It is specially notable that the profit last year was mainly derived from the stainless and other high-grade steels and manufacturing departments, which include agricultural machinery, locomotives, heavy motor vehicles, cash registers, and the more modern commercial machines. The production of coal, 8,001,000 tons, was just above the previous year's level, and 400,000 tons over 1913. Iron production at 1,292,000 tons, raw steel at 1,587,000 tons, and rolling-mill products at 1,159,000 tons were all below the 1927-28 tonnages. The great change in the organisation of the works since the war is indicated by the fact that, while the production of iron and steel is only a few thousand tons above 1913, the rolling-mill products have jumped from 834,000 tons to 1,159,000 tons. The report state that, with the starting of the new blast furnaces, the Essen works are placed on a new and long-planned foundation, that important economies in production are anticipated, and that the plant associated with the blast furnaces will make possible important improvements in the power economy of the works, presumably by the provision of larger and better quality gas supplies. During the year a new forge press has been installed to meet the utmost demands for the new types of heavy machines and high-pressure work. The continued rationalisation of the Rhinehausen ironworks is noted, but the reorganisation of the coal mines is reported to be virtually completed. The firm now employs altogether 68,000 persons, apart from 21,000 engaged in the works of subsidiaries and commercial organisations. The general picture presented by the report is in sharp contrast to the state of affairs during the first intense rationalisation measures, when the total number of workers fell to under 50,000, and the employees at the Essen works were reduced from over 40,000 in 1920 to 18.000.

Eastern Banking and Silver.—The latest report of the Hong Kong and Shanghai Bank affords a striking illustration of the effects of the fall in the price of silver to record low levels during the course of last year. In compiling the sterling portion of their balance sheet the directors very properly base it on the rate of exchange current on December 31st, this being the day on which the accounts are made up. At the end of 1928 the exchange was 2s. 0½d. for the Hong Kong dollar, but by the end of 1929 it had fallen to 1s. 7½d., and the effects of the 20 per cent. fall in the sterling value of dollars, which in a sense are the bank's stock-in-trade, are to be found all through the balance sheet. Some of these effects are illustrated in the following brief table:—

	End 1928. $ mn.	*End 1929.* $ mn.	*End 1928.* £ mn.	*End 1929.* £ mn.
Notes	48·4	64·9	4·9	5·3
Current accounts	376·2	434·9	38·0	35·3
Fixed deposits	171·8	219·9	17·4	17·9
Cash	100·0	125·8	10·1	10·2
Investments	117·1	129·4	11·8	10·5
Discounts, loans, and credits	268·5	335·6	27·1	27·3
Bills receivable and items in transit	192·2	235·9	19·4	19·2

This table makes it clear that the expansion in the dollar value of these items is almost entirely the effect of the depreciation of the dollar, for their sterling equivalent is unchanged. Unfortunately, the uncertainties of the past year, of which the shifting value of the dollar was probably not the least, made a commensurate increase in the bank's profits out of the question. Their actual growth in dollars was only from $13,430,000 for 1928 to $14,148,000 for 1929, and expressed in sterling they fell from about £1,350,000 to about £1,150,000, or by £200,000. This has entailed a reduction of the cash bonus from £2 to £1 per share, making this year's total distribution to the shareholders £7 per share, absorbing £1,120,000, as against £8 per share, absorbing £1,280,000, for 1928. These results are an apt measurement of the extent of the losses inflicted upon bankers and equally upon traders with the Far East by the fall in the price of silver, which, it is only fair to add, is an event entirely beyond their control.

United Kingdom Provident Institution.—The annual report for 1929 of the Institution is accompanied by a report by the Actuary on the triennial valuation for the years 1927, 1928 and 1929. The results of this valuation and of the two preceding triennial investigations are as follows:—

	1921–1923. £	1924–1926. £	1927–1929. £
Surplus earned during triennium *from normal sources* of profit, *i.e.*, interest, mortality and expenses, &c.	675,752	1,361,641	1,512,186
Add appreciation on securities written up	1,198,479	nil	nil
	1,874,231	1,361,641	1,512,186
Deduct depreciation on securities written down	nil	126,544	nil
	1,874,231	1,235,097	1,512,186
Add brought forward from previous valuation	37,423	160,822	148,206
Total amount available	1,911,654	1,395,919	1,660,392
Allocations:			
Bonuses to policyholders	1,450,832	1,247,713	1,435,508
Transfer to investment contingency reserve	300,000	...	...
Carried forward to next valuation	160,822	148,206	224,884
	1,911,654	1,395,919	1,660,392

At the end of 1923 the securities were revalued on the basis of their then market values and, from the appreciations thus brought to light, a sum of £300,000 was set aside for an investment contingency reserve. Since that time the securities have been valued on the principle of writing off depreciation but of taking no credit for appreciation. Thus, in the triennium just ended, although no figure appears in respect either of appreciation or depreciation, the necessary writing off has been accomplished by utilising £200,000 from the investment contingency reserve. The valuation of liabilities has been maintained on the same basis as formerly and, since the rate of interest assumed is only 2½ per cent., the basis is a very stringent one indeed. The rates of reversionary bonus declared as the result of the valuation have already been announced and it is sufficient now, therefore, to say that they range from 41s. per cent. per annum compound to 45s. per cent. per annum compound, these rates representing increases varying from 4s. per cent. to 5s. per cent. over the corresponding rates declared at the preceding valuation. As regards the year 1929 it is pleasing to see that the new business has taken an upward turn, having been increased from £3,109,870 to £3,335,080, though the increase secured has been due partly to a larger volume of single premiums and partly, no doubt, to anticipations as to the coming bonus distribution. It is interesting to observe that the amount paid under death claims in 1929 was £622,000, comparing with only £485,000 in 1928. It is clear that mortality has been less favourable to the institution than previously and the reports so far published of other life offices appear to indicate a not dissimilar experience. The net rate of interest earned last year was £4 11s. 11d. per cent. Although this represents an advance on that for 1928 it is still substantially lower than that of any other mutual life office. The ratio of commission and expenses to the premium income worked out in 1929 to 12.4 per cent., *compared with* 12.5 per cent. in 1928.

The Australian-Canadian Trade Treaty.—Our Ottawa correspondent writes:—The hearing by the Tariff Advisory Board of the application of the dairying interests of Canada for increased protection, which had for its objective the denunciation of the trade treaty concluded with Australia in 1925, produced a great deal of interesting evidence, but did not materially advance the cause of the opponents of the treaty. For one thing, they were unable to make out any very strong case against it, and for another their application was opposed by the spokesmen of the Canadian Council of Agriculture, which fears that the general agrarian case against protectionism would be weakened by any special protective concessions to the dairy farmers. It was disclosed in the hearing that the real grievance of the Canadian dairyman is against New Zealand, which automatically secured the benefit of the Australian treaty. Two years ago, when Canadian dairymen protested to Ottawa that the bonus of 6 cents per pound paid on Australian butter exports under the Paterson scheme gave rise to unfair competition, the Canadian Government imposed a special dumping duty of 3 cents per pound. Since that time imports of Australian butter, which faced a duty of 4 cents per pound, have been almost negligible, but there has been a heavy inflow of New Zealand butter, which, being liable to no dumping duty, only pays at the rate of 1 cent per pound. The Australians, therefore, consider themselves unfairly treated in the Canadian market, and apparently intimation has reached Ottawa that the Australian Government would not be unsympathetic to an adjustment of the terms of the treaty which would put their dairymen on an equal footing with their New Zealand competitors. So it is understood that negotiations are to be opened with Australia for an amendment of the treaty which will bring the rate on butter up to the ordinary British preferential rate of 4 cents per pound, and in that event the Canadian Government would withdraw the anti-dumping duties. The spokesman of the dairying interests declared that such an adjustment, which would undoubtedly mitigate the severity of the competition of New Zealand butter, would secure an abatement of their agitation against the treaty until at least the new rates had been given a fair trial. Business interests in British Columbia have been working hard to save the treaty from denunciation, as it is proving beneficial to them.

Britannic Assurance Company, Ltd.—Reviewing the salient features of the year, the chairman, in his speech at the annual meeting, placed in the forefront the effects of the influenza epidemic which raged in the early months of 1929. It appears that in the industrial branch claims by death absorbed, in 1929, £970,000, compared with only £820,000 in 1928, and, of the increase of £150,000, over £130,000 is attributed directly to the results of that epidemic. In one week alone the Britannic had to meet no less than 4,364 death claims for a sum assured amounting to £37,000. The accounts show that the business has made good progress. In the ordinary branch the new business has been maintained at about the same level, viz., £2½ million, but in the industrial branch has been increased from £6,807,482 to £7,630,297. The expense ratio worked out at 13.4 per cent. in the ordinary branch and 36.1 per cent. in the industrial branch, being slightly higher in each case than the 1928 figures. The interest earnings, however, have registered a substantial advance, the net rate of interest having been increased from £5 1s. 11d. to £5 5s. per cent., and the chairman ascribed this principally to advantageous purchases towards the end of last year of large additional holdings of ordinary shares. The balance sheet indicates that investments in ordinary shares have been increased during the year by £355,000 to £1,547,000, equivalent to nearly 9 per cent. of the total balance sheet assets. The usual annual valuation of the liabilities has been made in each branch, and the results are as follows:—

	1928. £	1929. £
Ordinary Branch		
Surplus earned during the year	237,709	289,602
Brought forward from previous year	61,327	96,073
	299,036	385,675
Allocations:—		
To Bonuses to policyholders	182,667	201,130
„ Shareholders account	20,296	22,239
„ Investment reserve fund	...	45,000
„ Carried forward to next year	96,073	117,306
	299,036	385,675
Industrial Branch—		
Surplus earned during the year	350,237	423,525
Brought forward from previous year	54,513	104,750
	404,750	528,275
Allocations—		
To Bonuses to policyholders	...	50,000
„ Shareholders account	100,000	200,000
„ Staff pension fund	100,000	...
„ Investment reserve fund	...	90,000
„ Written off cost of British Legal	100,000	75,000
„ Carried forward to next year	104,750	113,275
	404,750	528,275

The ordinary branch reversionary bonus has been maintained at the same rate as for 1928, viz., 42s. per cent. A modest amount has been set aside in the industrial branch for the first time for policyholders and will be utilised for the purpose of paying bonuses at varying rates on policies becoming claims between January 1, 1930, and March 31, 1931. The investment reserve fund, it will be noticed, has been credited with £135,000 on this occasion, against nothing in 1928, and now amounts to £500,000; and in this connection the chairman stated that the market value of the assets is still in excess of the book values apart from the investment reserve fund. A further £75,000 has been written off the cost of acquiring the British Legal business, leaving this asset in the balance sheet at a reduced figure of £75,000, which will, no doubt, be finally extinguished in the current year.

Provident Mutual Life Assurance Association.—Mr Owen Hugh Smith, in his annual speech at the meeting held this week, devoted himself largely to considerations affecting financial policy, and justified his action, quite rightly, on the ground that the investment of the funds forms the most important duty imposed on the board. In the management of the investments the Provident Mutual relies upon an investment policy designed to match the assets with the liabilities. The argument is that, since the liabilities incurred are of a deferred nature falling due over a series of years in the future, therefore the investments should be made as far as possible in securities redeemable in like fashion. While this policy is adhered to so far as the investment of the reserves of the sums assured is concerned, the Association has for some time past invested a considerable portion of the remaining balance of the funds in ordinary shares, and, at the present time, some 14 per cent. of the total funds are invested in this way. The events of 1929 have provided a stringent test of this policy, and it may be said with truth that the results have been entirely satisfactory. At the end of 1928 there was a hidden reserve in the book values of the investments amounting to £320,000, in addition to which there was an investment reserve fund amounting to £160,000. Mr Owen Hugh Smith disclosed that the capital loss during 1929 amounted to 3.3 per cent. of the total mean fund, *i.e.*, equal to about £225,000. Thus the hidden reserve still stands at a figure of just under £100,000, and the investment reserve fund is preserved intact. A loss of 3.3 per cent. during such a year as 1929 is not only moderate in itself, but is approximately only one-half of the depreciation suffered by any representative index of British Government long-term securities.

The Maritime Insurance Company.—This old-established company, centred in Liverpool, transacts marine business only, and, since 1924, has been controlled by the Scottish Union and National by virtue of its ownership of the share capital. In view of this association it is unfortunate that the accounts are presented in so unintelligible a form. The underwriting account is drawn up on the model common to fire insurance, but, having regard to the well-known time-lag in marine claims, this form precludes intelligent analysis by an outside critic. The chief fact which emerges from the account for 1929 is that the transfer to profit and loss has been maintained at the same figure as in each of the last two years, viz., £15,000. Out of this sum £10,000 has been allocated as provision for special contingencies of an unstated character. The dividend remains the same as before, viz., 6 per cent., but interest earnings would have permitted the declaration of as much as 13 per cent. without trenching upon underwriting profits. From the balance sheet it is clear that the company is in an extremely strong position. Two years ago £400,000 of reserves were capitalised in order to wipe out the liability on the share capital. In spite of this there is now a general reserve fund of £200,000 and a profit and loss account balance of £228,000 against the capital of £500,000.

Industry — Tax Prospects — Money — Mergers — Security — Gold Movements.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 1.

FROM a business standpoint the first two months of the year were both an encouragement and a disappointment. Marked improvement in the steel industry during January stimulated the hope that the bottom of the business recession was reached and that recovery would be continuous, although gradual. The motor industry also gave signs of better times a month ago. However, after further gain, at a diminishing rate, early in February, the steel trade last week had its first setback since the beginning of the year, and the operating rate is at about 80 per cent. of capacity, compared with virtually full rate a year ago. Ordinarily March is the peak month in steel, but this month is unlikely to show any great improvement over February.

Railroad buying continues heavy, and the building construction industry is expected to increase its orders as the weather opens up, but motor buying has slackened. In fact, the motor business seems to be at the lowest point that it has been at this season for a good many years. Judging by available output reports and steel shipments, the industry as a whole is not running at more than 65 per cent. Instead of preparing for heavy sales this month the leading manufacturers are increasing their efforts to rid their dealers of used cars, the number on hand being estimated at 1,250,000. It is planned to devote $15,000,000 to the junking of at least 400,000 used cars in the next twelve months. The bulk of the sales are going to Ford, Chevrolet and other cheap cars, but no talk is heard of price-cutting.

While the fall of commodity prices is not viewed with the same alarm here as on your side, the country generally and the financial community in particular was considerably disturbed by the sharp break in wheat prices and the further decline in cotton this week. After March deliveries had sunk to below a dollar a bushel on the Chicago market, a drop of approximately 60 cents a bushel since the Farm Board took up its duties last July, a sudden rally developed on news that the Board was buying. Prices recovered about 15 cents a bushel, and the situation is now easier. The chairman of the Farm Board, Mr Legge, admits that the board has bought or contracted for 25,000,000 bushels. Mr Legge said that the future of the market was anybody's guess, and it is believed that, while willing to do what he can, he has no great hopes of ultimate benefit to the farmers through the Board's operations. Temporary stability can be given the market if the Board decides to use enough money, but it has no means of curtailing production, and its future policy is obscure. The immediate effect on trade may not, nevertheless, be great. Farmers have disposed of most of their wheat, their income for 1929 was fully up to the average, and the surplus is being carried by speculators, the Farm Board, millers and allied organisations.

President Hoover has not helped matters much by his statement warning Congress of a 40 per cent. rise in taxes if pending appropriation bills were passed in their entirety. Democratic Congressmen and the Republican progressive element joined in accusing the President of attempting to fix the blame in advance for higher taxes which may come next year. The 25 per cent. reduction on some categories of income recently voted by Congress to apply to 1929 incomes was decided upon as a gesture to offset the business slump and the stock market break, and was scarcely consistent with Hoover's plans for greatly increasing Government expenditure on public works. Tax receipts on both the March 15th and the June 15th collection dates are virtually certain to fall below those of a year ago. Meanwhile, the struggle over the Tariff Bill continues, with the farm group holding the balance of power and blocking some of the proposals made by eastern manufacturing interests for higher rates. Tariff increases demanded by rural politicians will doubtless be voted, and it looks as though the flexible clause will be retained. It is unlikely that a Bill can be agreed upon for another two months. Only mild interest is taken in the Naval Conference, and even in Wall Street the week's developments regarding the Bank for International Settlements have failed to make much of a stir.

The selection of Gates McGarrah and Leon Fraser as the American members of the board was expected and met with general approval. Mr McGarrah, who presumably will be president, has made it clear that the new bank's relations with the Federal Reserve Bank will be, at least to begin with, much the same as those obtaining between the Reserve and the European central banks. "As far as maintaining close relations with the Federal Reserve Bank is concerned," he said, "its relations will be about as close as those now maintained with the Bank of England and the Bank of France."

Suggestions from London that Governor Harrison, during his London visit, may arrange for the purchase of British Government securities by the New York Reserve Bank are not understood here. It is pointed out that the Reserve Banks have no authority to buy foreign Government obligations, though, of course, they may and do purchase foreign bills. This week's Reserve System statement indicates that the Reserve authorities are not pursuing more vigorously their cheap money policy; on the other hand, they are maintaining cheap money. Declining currency circulation, gold imports and the purchase of about $20 million in bills (for the account of the Reserve Bank, incidentally) and the Government securities offset in part the reduction of $34 million in member bank borrowings. Member bank borrowings are now only $342 million, a drop of $610 million from a year ago, and the member banks throughout the country are steadily reducing their loans on securities as well as commercial loans. March settlements are usually heavy, and last year they brought a jump to 12 per cent. in call money. This time the rate weakened to 4 per cent. and time funds also declined ¼ per cent. to 4¼ per cent. The money situation is summed up by the Reserve Bank in its March bulletin as follows:—

"Notwithstanding the decline in money rates, and the fact that the position of member banks with respect to indebtedness is more comfortable than at any time since 1927, there have been few indications of any pressure of surplus funds seeking investment, and the weekly reports received from member banks have indicated up until the third week of the month a further contraction, rather than expansion, of bank credit."

An interesting industrial development is the agreement between the Standard Oil Company of New York and the Vacuum Oil Company to merge into a $900,000,000 corporation, to be known as the General Petroleum Corporation. Both companies were formerly units of the old Standard Oil Company, which was dissolved by court decree in 1911 as a violation of the anti-trust laws. The Government plans to bring a "friendly" suit to test the validity of the union, but the fact that it is attempted reveals the changed attitude of the country toward industrial combinations. The merger was arranged to meet growing competition from the Royal Dutch-Shell organisation, and the Vacuum Company's lubricating oil business, and widespread marketing facilities will help to round out Standard as a world factor in the oil trade.

In accordance with its plan for railroad consolidations, drawn up in compliance with the Transportation Act of 1920, the Interstate Commerce Commission approved the proposed merger of the Great Northern Railway with the Northern Pacific into a 15,000-mile system, although refusing to sanction continuance of ownership by those roads of the Burlington system. A union of the two Northern lines was attempted in 1901, but was blocked by the Supreme Court.

The progress made by security markets in February was obviously in anticipation of trade recovery rather than a reflection of it. Investment buying has been a factor, but nevertheless professional operations for the rise have been considerable, and Wall Street is sceptical of much further progress from this point. It was learned during the week that the banking consortium headed by J. P. Morgan and Company had dissolved, having sold the remainder of the shares bought last autumn to ameliorate panicky conditions in the market. The group originally subscribed about $240 million and used somewhat over $100 million. This stock was sold at a slight profit, perhaps just over $1 million, although no profit was aimed at.

The country gained $48,500,000 net in gold in February, of which $34,000,000 came from Japan, the bulk of the remainder from Brazil. As much more is expected from Japan and a moderate amount from South America during the next month or so.

FRANCE.

Budget — Caillaux's View — Trade Returns.

(FROM OUR CORRESPONDENT.)

PARIS, March 12.

THE Chamber is slowly proceeding with the Budget for 1930-31, but whether it will be able to complete its work in time for the measure to be passed into law before April 1st, the beginning of the new financial year, is not yet certain. Both the Premier and the Minister for the Budget, M. Germain Martin, insist that, if it is humanly possible on their part, resort to *douzièmes provisoires* shall be avoided, but the outlook is not promising. M. Chéron's original estimates provided for a surplus of some 122,000,000 francs, but this has already been swallowed up by additional expenditure which has been voted without any corresponding increase of revenue. The revelation by M. Chéron, in one of his last speeches in the Chamber, that the Treasury possesses liquid resources of about 20,000,000,000 francs resulted in such an overwhelming volume of demands for reductions of taxation and increased expenditure that the estimates had been completely upset, even before the first Tardieu Cabinet fell. On February 5th M. Chéron submitted to the House a balance providing for estimated revenue of 49,565,000,000 francs and expenditure of 49,443,000,000 francs. By February 15th the Finance Commission and the Chamber between them had reduced revenue to 48,655,000,000 francs and increased expenditure to 49,349,000,000 francs, equivalent to a deficit of 694,000,000 francs. Other demands made by the Finance Commission down to the same date would have brought total estimated expenditure, had they been granted, to 50,223,000,000 francs, and would have implied an estimated deficit of 1,565,000,000 francs. Since then confusion has become worse confounded. M. Chéron proposed to avoid adding to the existing taxation by taking 560,000,000 francs from German reparation payments to compensate for loss of revenue due to the prolongation of the present financial year (instead of 1,000,000,000 francs, as first proposed). This the Finance Commission afterwards increased to 1,150,000,000 francs. Yesterday the Commission decided to recommend that the amount to be taken from the German payments for the benefit of the Budget should be increased to 1,840,000,000 francs. Exactly what the position of the Budget balance is at present, no one appears to know. The *Temps* to-night remarks that "the Finance Commission would be rendering a real service by making known what the situation of the Budget is to-day."

In a remarkable article published this morning in *Le Capital*, M. Caillaux throws a curious light on the methods which he alleges are adopted in connection with the preparations of French Budget estimates. It is the custom, he states, for demands for credits to be inflated to a figure substantially larger than that actually required, in respect of given items of proposed expenditure. The unexpended balance, after the close of the financial year concerned, remains in the hands of the Treasury until such time as the accounts for the Budget year in question are definitely closed. This, as a rule, represents a period of several years, during which the non-employment of artificial "surpluses" of this kind is entirely ignored and the amounts in question lie in accounts that are inactive. (As a matter of fact the accounts of the Budget for 1914 were not closed until some two or three years ago, as mentioned in the *Economist* at the time. The whole of the Budgets for the years 1922 to 1929 are still in the form of what is known as "provisional accounts," none of them having yet been definitely closed.) As a concrete instance of the practice in question, M. Caillaux assets, on information which he describes as "certain," that the credits opened in respect of pensions exceeded by nearly 2,000,000,000 francs the amount really required; or, in other words, that instead of asking the taxpayers for 7,000,000,000 francs to meet the cost of pensions, those responsible demanded 9,000,000,000 francs, the unrequired balance of which is still lying idle. M. Caillaux expresses the opinion that the practice of artificially inflating expenditure in this way is due to the fact that the Finance Minister, overwhelmed by crushing Parliamentary work, is compelled to leave the task of drawing up the estimates to his permanent officials. "To extract from the taxpayers, as has been done since July, 1926, three or four milliards a year more than is indispensable to balance the Budget," M. Caillaux concludes, "is a veritable spoliation of the people." Even more forceful is his statement that, "at the Ministry of Finance at present nobody knows where he is."

Official returns of new issues of capital during February show that these totalled 3,261,000,000 francs (£26,300,000), against 1,313,000,000 francs in January, exclusive of the customary emissions of railway bonds (which last year averaged about 300,000,000 francs a month). The month's issue of bonds alone totalled 2,790,000,000 francs (or nearly 86 per cent. of the whole), which sets up an entirely new high monthly record for these descriptions. The previous high record was one of 1,622,000,000 francs in October last, as compared with a monthly average of 567,000,000 francs in 1929 and of 298,000,000 francs in 1928. The average rate of interest offered for bonds during February was 4¾ per cent., against 5 per cent. in January and December, a mean of 5.36 in 1929 and of 6.3 per cent. in 1928. The average yield from other forms of issues with fixed yield during February was 3.77 per cent., against a mean of 4.89 per cent. in 1929 and 5.33 per cent. in 1928; and that from issues with variable yield was 2.98 per cent., against a mean of 2.70 per cent. in 1929 and of 2.72 per cent. in 1928. The index figure representing quotations on the Paris Bourse of 300 issues of variable revenue is returned for February as 479 (on the basis of 100 in 1913), against 496 in January, an average of 507 in 1929 and of 415 in 1928. Insurance company issues (15) are given the index figure of 1,050 for February (against a mean of 650 in

1928); banking issues (30) one of 343, against 323 in 1928; foreign issues (17) dealt in here, one of 588, against a mean of 659 in 1928.

The widespread depression in industry throughout the world, owing to declining prices and other causes, does not appear to have affected this country, and industrial production is well maintained. The general index figure representing production levels in the principal industries during January is returned unchanged at 144, as compared with a mean of 139 during 1929 and of 127 in 1928 (base: 100 in 1913). Engineering trades advanced 3 points in January, to 162; extractive industries 6 points, to 132; leather, 8 points; paper, 10; and motor-car production, 26, to 639. Metallurgical output fell off 4 points, to 126; building 3, to 137; and rubber trades 24, to 938. Railway receipts fell off in January from 289,000,000 francs to 276,000,000 francs, and the average daily number of trucks loaded from 66,300 to 64,300. Incoming cargoes, however, totalled 4,753,000 tons (against 4,560,000 tons in December, and a monthly average of 3,868,000 tons in 1928), and outward-bound tonnage totalled 3,699,000 tons (against 3,649,000 tons in December, and a monthly average of 3,868,000 tons in 1928). There is still a shortage of labour in certain industries, notwithstanding the presence of over 3,000,000 foreign workers in the country. Unemployment continues to be microscopical, the total number of workers "on the dole" throughout the country in the week ending March 1st having been 1,651. The number of workers seeking employment through the labour bureaux during the same week but sent away unsatisfied was 13,027, while jobs left vacant through lack of labour totalled 14,121. The number of foreign labour units entering the country during the week was 2,715, the vast majority of whom were absorbed by the coal and iron mines, metallurgical works and construction undertakings.

Coal production returns for January indicate a total output of 4,998,000 tons in the 26 working days (with an effective labour force of 302,363 units), as compared with 4,465,000 tons in December (24 working days), with 301,425 units employed. The average daily output was 192,236 tons, against 186,070 tons in December, 1928, and 174,152 tons in January last year. The output of metallurgical coke by the colliery plants was 414,797 tons, against 397,460 tons in January, 1928.

The general index figure for wholesale prices at the end of February is returned by the Statistique Générale as 574 (on the basis of 100 as representing prices of similar commodities in 1913), or at exactly the same figure as at the end of January, when prices showed a drop of 14 points as compared with the figure for December. The figure for French domestic products, which fell off 17 points in January, is marked up 7 points on the month to 611, while that representing prices in France of imported commodities, which dropped 10 points in January, is returned at 509, or a further drop of 11 points. The general figure for foodstuffs is returned at 523, or a point lower, although meats are 20 points higher and sugar and coffee 4 points dearer; vegetable foods having gone down 10 points. All raw material figures are returned lower. The index figure for retail prices in Paris, which at the end of January stood at 609, is returned for the end of February at 589, against 602 in February, 1929, and 522 in 1928.

GERMANY.

Dr. Schacht's Resignation. — Dr. Luther — Discount Rate. — Money Market. — Bourse.

(FROM OUR CORRESPONDENT.)

BERLIN, March 11.

THE resignation of Dr. Schacht as president of the Reichsbank occasioned as much general surprise as have many of his earlier actions. What moved him to resign is not quite clear even to his intimate friends. The step was taken immediately after the Reichstag committee had accepted the Young Plan and the Hague protocols. Dr. Schacht gives as the reason for his action his difference of opinion with the Government regarding the decisions reached at the Hague. He believes that the second Hague Conference not only did not improve the result reached at the first conference, but made it worse. He protested against the decisions of that first conference in his well-known memorandum of December 5th. Now he renews his protest in the strongest possible form by resigning.

Except for the initial shock to the Bourse, the repercussion was surprisingly weak. In the last few months Dr. Schacht has created much opposition, and the bitterest among his opponents regarded his departure as a triumph. But, despite all this, his retirement means a serious loss for Germany's public life. For, no matter what opinion one may hold as to some of his actions, his is a personality of colour and character, of courage and ideas, and Germany's public life is not so rich in interesting personalities that the departure of one of the most interesting of these will not leave a gap. In the last analysis, Schacht is a victim of the Paris Reparations Conference. Opinion is divided as to whether his tactics there were correct from the beginning, or whether he could have achieved more than he did achieve. But in any event, he signed the Young Plan only under protest. He saw plainly that it would come far from fulfilling the perhaps exaggerated hopes with which he had come to the conference. He did not return to Germany in triumph, as he had perhaps hoped, but full of resignation and bitterness. His position was not rendered easier by the fact that the other delegate, Dr. Vögler, withdrew just before the signatures were affixed to the Plan, and that industry for the great part stood behind Vögler. That made him doubly sensitive to the fact that the subsequent negotiations among the Governments, instead of bringing changes in Germany's favour, made the Plan worse in some respects. Snowden's attitude with regard to the liquidated property made an especially deep impression on Schacht.

He was treated with every honour by the German Government. No one reproached him with the relative failure at Paris. But the Government, for its part, was found wanting in its handling of finance. It will be recalled that Dr. Schacht's memorandum of December 5th demanded a radical financial reform as a condition precedent for the fulfilment of the Young Plan. Schacht forced this demand through before Christmas by making his co-operation in solving the Government's monetary difficulties dependent on the formation of an amortisation fund for the floating debts. The result was the overthrow of Dr. Hilferding, the Minister of Finance, and his Secretary of State, Popitz. The Reichstag submitted within 24 hours to the dictate of the president of the Reichsbank. Schacht stood on the pinnacle of his power.

Two weeks later this position was lost. Schacht had refused to go to The Hague as a member of the German delegation to the second conference. He was besought to go at least as an expert adviser. He went to The Hague, and caused a sensation for the whole world by at first refusing to enter the directorate of the Bank for International Settlements; whereupon the Government, with quick decision, compelled him to submit by announcing that a law would be enacted making his participation legally compulsory. Schacht's prestige was severely shaken at home by this action, and was also lessened abroad. There is no doubt that he considered resigning even while at The Hague. That he did not do so at that time was probably due not only to consideration for the Government, but also to the hope that the Reichstag would reject the Young Plan.

Since the last Hague Conference little had been heard of him. He kept carefully in the background, and the Government undertook no reprisals against him. He came to the front once more with his protest against appointing Quesnay as director-general of the Bank for International Settlements—a step which, of course, was taken in agreement with the Government. Moreover, he had seen himself in the agreeable position of being able to reduce the discount rate three times in the last few weeks. The "Schacht case" seemed to have been forgotten. But now he himself has made it a live issue by his unexpected resignation. For the present he intends to withdraw to private life. But no one believes that he will long be contented with the simple life of a farmer, no matter how much he may believe it himself.

The general council of the Reichsbank has named Dr. Hans Luther as Schacht's successor. The choice has encountered remarkably little adverse criticism. For Luther, although a director of the Gemeinschaft Deutscher Hypothekenbanken, has never had anything to do with practical banking. He was head mayor of Essen, then Minister in charge of food supplies, Minister of Finance and Chancellor. As Minister of Finance he balanced the German budget in 1923 and thus really stabilised the mark, and in 1924, together with Stresemann, he signed the London Agreement which put the Dawes Plan into effect. As Chancellor he signed the Locarno Pact. Luther was overthrown in 1926 on the flag question, but only a few months later he was already regarded in steadily widening circles as a coming man, especially after he became leader of the movement for a reform of the structure of the Reich.

Luther is a member of the German People's Party, but not a member of Parliament. His choice as Schacht's successor is a symbolic act. There was definite purpose in the selection of a man with whose name, together with Schacht's, the stabilising of the German currency will be connected in history, and who furnishes every guarantee to the whole world that he will assure the independence of the Reichsbank and the stability of the German currency. But Luther is much more obsessed than Schacht by political enthusiasms, and where Schacht has been reproached with interfering in political affairs it is hard to see how Luther, who is still of a youthful temperament despite his 51 years, can be induced to keep his hands out of politics. In the circumstances it can hardly be assumed that he will remain head of the Reichsbank for a long time to come. It is more likely that he will again play a political part in one of the next Cabinets, whether as Chancellor or Minister of Finance, and that he will before very long be succeeded in his new post by a banker.

The Reichsbank reduced its discount rate on March 7th from 6 to 5½ per cent. Just as in England, so in Germany, the lowering of interest rates is proceeding by degrees, and the Reichsbank is slowly feeling its way in order not to lose to too great extent its contact with the rates of the open markets. The last changes of discount rates were:—January 12, 1929, from 7 to 6½ per cent; April 25, 1929, 7½ per cent.; November 2, 1929, 7 per cent.; January 13, 1930, 6½ per cent.; February 4, 1930, 6 per cent.; March 7, 1930, 5½ per cent. The last reduction of the discount rate was based on a somewhat different ground than the earlier ones. From the end of December, 1929, to the end of January, 1930, the bank's total assets —discount, treasury bills and advances—dropped from 3,191 million to 2,315 million marks, but at the end of February it amounted to 2,382 millions. This figure corresponds almost exactly to that of the preceding year, and the note circulation is almost as large as at the same time last year, when the discount rate was 6½ per cent. A heavier demand for credits is also to be expected in the coming weeks as a result of the usual seasonal recovery at the beginning of spring. That the Reichsbank, despite these facts, nevertheless decided upon a further reduction of the rate, is due to three reasons. First is consideration for the economic depression in Germany, which makes it desirable to stimulate business. Then the further reductions of discount rates abroad—in London and Amsterdam—increased the disparity between the German and foreign rates. The third and most important reason has to do with this second reason, which the Reichsbank also emphasises in its official statement, namely, the fact that the last few weeks have brought a large inflow of gold and foreign currency. At the end of December the bank's holdings of gold and of drafts payable in foreign currencies, which can be exchanged for gold at any time, amounted to 2,687 million marks, at the end of January to 2,694 millions, and on March 7th to 2,864 millions (2,811 millions on March 7, 1929). More than 60 per cent. of the note circulation is covered by gold and foreign bills, a further increase appears unnecessary, and further receipts of gold from England are not desired. In reducing its discount rate the Reichsbank followed a policy of co-operation with the banks of issue.

The German private banks followed suit by reducing their interest rates for loans by ½ per cent. But the association of all the large banks has decided not to reduce interest paid on deposits, but to encourage saving by maintaining the former rates. The German banks now pay 3 and 3½ per cent. on deposits subject to withdrawal daily.

The Berlin Bourse, which remained stagnant throughout the last few weeks despite all political and economic happenings, had an eventful day on Friday, March 7th. The parliamentary crisis, the delay in ratifying the Young Plan and also the steadily increasing economic depression have, as a result of the sharp downward movement of prices last year, not caused any sharp drop, but merely a slow crumbling of quotations. But the sudden happenings of March 7th had a different result. The report of the resignation of the President of the Reichsbank brought extensive short selling to which no resistance was offered, and within an hour Reichsbank shares lost 15 per cent., Saltdetfurth 13 per cent., Siemens 12 per cent., I.G. Farben 5 per cent., etc. The following days brought a calmer feeling, and the losses were largely made good. The Bourse has become convinced that Dr Schacht's resignation will bring no change in the policy of the Reichsbank and no immediate consequences for Germany's economic and financial life.

SWEDEN.

Foreign Trade — Production — Prices — Agriculture — Money.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, March 3.

AGAINST the background of general depression which has indisputably characterised the economic life of the greater part of the world since the autumn, and which is also visible in Sweden, it must be said that the two first months of 1930 have revealed an unexpectedly favourable development. The statistics of foreign trade in January are very interesting from this point of view. In the first place, the volume of foreign trade was unusually great for the season, largely owing to the unusually mild winter. They also show that in most cases there was a very good market for the main articles of export. Finally, they show that industry in general was not only busily engaged during January, but also that there are signs of continued activity, since imports of industrial raw materials and semi-manufactures were considerable. The total imports rose to 116 per cent., and exports to 103 per cent., of the corresponding totals in the preceding year, which were themselves high as a result of similar conditions. The passive balance of Kr. 25 million was quite normal for the time of the year, as there is always an excess of imports during the winter months, owing to the cessation of shipping facilities in northernmost Sweden.

As regards the most important commodities, exports of pulp rose by 17 per cent., paper and cardboard by 12 per cent., and iron ore by 37 per cent. As these industries work on long-dated contracts and, therefore, feel the effects of depression comparatively late, this result is perhaps not surprising, but the much more sensitive mechanical engineering industry shows throughout a very satisfactory position. Whilst the electrical and motor industries maintained their export position, shipments of ball-bearings increased by 15 per cent., of separators by 25 per cent., and of telephones by 39 per cent. Especially marked is the improvement in separators, which, throughout the previous year, showed very poor figures. It should also be mentioned that the export of matches increased by 26 per cent. In timber there was a setback of 16 per cent., which is a clear sign of the waiting attitude of the market. Similarly in the reduction of 15 per cent. in the iron and steel industry we can perceive the effects of the depression.

The general activity, of which most of these figures are evidence, is seen still more clearly in the figures of production. *Svensk Finanstidning's* index of production, which embraces the most important branches of industry, rose, in January, to the highest point on record, 151

(1923-4=100). Even if the figure is relatively high, owing to the fact that it is based on a limited number of commodities, yet the tendency is very illuminating. At the end of last year the figure fell from 137, in November, to 130, in December. It need scarcely be pointed out that the high figure in January is primarily due to pulp. Production in this industry reached 232 per cent. of the 1923-24 figure, though the figure for iron ore, with 217, was not far behind. It should also be emphasised that employment in the majority of the other industries represented in the index number was remarkably good and considerably surpassed that of last year. A pronounced exception, however, is timber, in so far as sawn goods fell to 91 per cent. of the 1923-24 figure, as compared with 102 in December and 104 in January last year. The outlook in this industry is now considered brighter, however, as it appears that the shipments from Russia will by no means reach the figures stated. Finally, the reduction of output in the iron and steel industry, which set in at the end of last year, has not continued, but production has been fully maintained and even exceeds the January figure for 1929.

The activity which is disclosed by these figures in most of the staple industries is particularly notable in view of the fact that the fall in prices in the world markets has been quite as marked in Sweden as elsewhere. The official Swedish price index number fell last year from 145 in February to 134 in December, and continued its downward course in January this year to 131. The downward movement did not, however, cease then, and, although the official index for February has not yet been computed, it is certain that a drop at least equal to that in January, and probably greater, will be shown for the month. The evidence on which this is judged is found in the weekly index of raw material prices calculated by the *Svensk Finanstidning*, which has recorded a very substantial decline. Whereas in December the average was 121, the index for January was 118, and in February it dropped successively to 114 and to 112, the latter figure being reached on February 27th. It should be noted here that industrial raw materials, which last year moved slowly downwards, last month contributed in a very large measure to the fall in the price level, although foodstuffs, and primarily cereals, did in the last few weeks set the pace of the decline. Hence, Sweden, like many other countries, is now going through a serious agricultural crisis, which since last autumn has been the primary consideration in political circles. The present Conservative Government have sponsored a highly contentious bill which aims at assisting agriculture, partly by increasing the grain duties and by statutory prescription as to the percentage of Swedish wheat to be used by the flour millers, and partly by State grants for building silos and storing grain. Even if temporary measures for aiding agriculture are generally accepted as sound and needful, such an out-and-out protectionist programme has a very meagre chance of being accepted by a Riksdag in which the Conservatives are in a minority. As, moreover, the industrial advance in Sweden since the war has proceeded on Free Trade lines, a *volte face* of this kind might easily have fatal consequences for the principal Swedish export industries.

In the money market the first two months of the year have passed without anything noteworthy occurring. The turn of the year gave rise to no complications, and, as usual, a diminution of credit requirements marked the early part of the year. In December and January figures published by the Bank Inspection show a reduction of 72 million kronor, against 28 million kronor a year ago, and an actual credit increase of 29 millions two years ago. This is largely due to the present ample supply of foreign currency, which caused the banks, particularly in December, to effect very substantial realisations. The turn of the year always brings a change-over in this direction, as the balance of payments, simultaneously with the trade balance, veers round to passive. The deterioration of the payment balance in January went no farther than to 45 million kronor, however, which is close to the normal for that month. In this connection attention should be paid to the fact that, not only did trade show a passive result of 25 million kronor, but capital movements between Sweden and foreign countries resulted in an export surplus of 13 millions. This notwithstanding that bank claims abroad show the seasonal record balance of 538 million kronor for January, as against 475 million kronor a year ago. It is not surprising, therefore, that the Swedish exchange has been unusually high this year. The supply of foreign currency has, on the whole, been equally ample in February, and the Riksbank reserves for that month constitute a record. The quotations for the leading foreign currencies in Stockholm are all below par, with the exception of German marks, and this at the time of year that normally is one of weakness for the Swedish krona. This circumstance has given rise to criticism against the Riksbank for not following the latest discount reduction in London and New York.

FINLAND.

Money Market — Production — Employment — Foreign Trade.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, February 24.

THE turn of the year brought about an appreciable easing in the previous stringency of the money market. Though this improvement is partly a seasonal phenomenon, it points to the fact that the lowest point has already been passed.

The accumulation of savings is still very slow. The increase in deposits in the joint stock banks for January was only 33 million marks, compared with 183 and 206 millions in the previous two years, and deposits in the savings banks grew by only 6 million marks during the same month, as against 38 and 105 millions in the preceding years. This is due, of course, to smaller earnings and greater unemployment. Actual saving has, however, probably not fallen off nearly as much as deposit business in the financial institutions would seem to indicate. At the same time, the credits of the joint stock banks were reduced in January by 26 million marks, whereas they rose 35 and 161 millions in the same months in the two previous years. The difference between the credits and deposits of the joint stock banks was consequently reduced by 59 million marks to 2,026 millions, compared with 1,997 millions a year ago, and 2,356 millions at the end of November last. The position of the joint stock banks towards foreign countries did not undergo any particular change in January, but, on the other hand, the banks were able considerably to reduce their re-discounted bills at the Bank of Finland.

The improved state of the money market made itself felt to a higher degree in the position of the Bank of Finland. The total credits of the bank were reduced during January by 74 million marks, and during the first fortnight in February by a further 13 millions, chiefly owing to a fall in bills re-discounted from 550 million marks at the end of December to 462 millions on February 15th. This item stood at 677 million marks at the end of 1928. At the same time the foreign balances of the Bank of Finland grew from 670 million marks at the end of 1929 to 744 millions in the middle of February. The improvement in the position of the Bank is clearest in the advance in its cover percentage. The ordinary cover was only 51.7 per cent. of the bank's total liabilities, payable on demand at the end of 1928, but had already risen to 60.8 per cent. at the end of 1929 and to 66.3 per cent. by February 15, 1930.

The large number of bankruptcies, the multitude of protested bills and the dullness of the Stock Exchange indicate that times are still hard. The reduction in the note circulation and in clearing business are clear signs of the weaker pulse of economic life. The state of the money market should be affected by the altered possibility of obtaining foreign long-term loans. An agreement was signed early in February between the Central Bank for the Co-operative Credit Societies and a syndicate composed chiefly of French banks for a bond loan of 300 million French francs at a nominal rate of 5 per cent. for a term of 30 years. The borrowers have, however, in addition, to pay the taxes due to the French State. The proceeds of the loan are to be employed partly for redeeming short-term credit and partly for loans to assist agriculture.

The building industry is at a low ebb, and the textile, leather and metal trades, besides other branches supplying the home market, are going through a bad time. The principal exporting industries also are finding their markets unsatisfactory. The sawmills especially are having trouble owing to Russian competition. However, the work of developing industry goes on, and a considerable amount of new construction is being undertaken, particularly in the chemical pulp industry. The labour situation was made still worse by the winter setting in late, so that work in the forests could not be begun at the usual time. The number of unemployed registered at the municipal employment bureaux amounted to 12,751 at the end of January, compared with only 4,731 a year before. In the first weeks of February, however, there was a small reduction.

Foreign trade, which had been adverse during the last two years, especially in 1928, showed exceptionally gratifying results in January, 1930. Whereas the balance of trade usually shows a surplus of imports for that month of 150-300 million marks, the value of exports in January last was about 10 million marks larger than the value of imports. This is partly a result of the heavy imports in December last, but at the same time it indicates a clear tendency towards a more favourable balance of trade.

JAPAN.

Price Decline — Money Market — Foreign Trade — Crops.

(FROM OUR CORRESPONDENT.)

TOKYO, February 12.

THE first month of the effective gold standard was marked by a more rapid fall in the general level of prices, a heavier decline in trade turnover and in the demand for credit, growing unemployment, and an increase of labour disputes. The downward movement in commodity prices was greatly accelerated during last month. The Bank of Japan's wholesale index number for January registered a substantial drop of 1.8 per cent., as against December last, reducing it to 201.4, or 13¼ per cent. lower than a year ago, and a little more than 60 per cent. above the pre-war level. Out of 56 products 35 participated in the decline. The trade depression was intensified, and the contraction in foreign trade was particularly heavy. The immediate trade outlook is not bright, in view of the sharp fall in the price of silver and the break in American prosperity.

In 30 days after the removal of the embargo the Bank of Japan lost 60.6 million yen of its gold holdings, and the note circulation contracted to 1,197.7 millions which, as compared with the corresponding date of 1929, is 205 millions lower. Despite the gold efflux and the contraction in the note issue, no fundamental turn in the monetary trend has been in evidence, and money rates have remained almost unaffected, the slowing down of trade and business having neutralised the effects of the Bank's loss of its gold holdings. With a falling market the numbers out of work have risen sharply and the movement for wage reductions has seriously set in. Trade disputes have naturally arisen in great numbers, though exact official figures are not yet available. The issue centred primarily upon the proposed wage cuts and dismissals.

Foreign trade figures for last month are extremely disconcerting. The January returns show that, as compared with the corresponding month of last year, imports fell by 58.4 million yen, or 24 per cent., and exports by 35.9 millions, or 20 per cent., the total turnover being thus 94.3 millions, or 22 per cent. lower. The contraction of both imports and exports is spread widely over the whole list, but the decline in imports is largely accounted for by raw cotton, beans, iron and steel, timber, raw wool, and wheat flour, while raw silk, wheat flour, cotton goods, and sugar are chiefly responsible for the falling off in exports. Trade with China is also discouraging. Imports from and exports to the neighbouring republic during last month are respectively 6 millions and 18.6 millions lower than a year ago.

The rice crop for 1929 was revised by the final report of the Department of Agriculture and Forestry recently published, the year's actual yield being placed at 59,725,000 koku, an increase of 1,353,000 koku upon the previous estimate. In comparison with 1928, the yield is lower by 577,000 koku (0.96 per cent.), but is 750,000 koku (1.27 per cent.) above the five years' average. The total value at the ruling price is 1,642.5 million yen, or a decrease of some 200 millions upon the preceding year. The actual cocoon crop for last year is finally put at 102,093,000 kamme, valued at 654,995,000 yen in the report of the same Department, as against 93,849,000 kamme at 551,679,000 yen. Thus the farmers' loss of revenue from rice has been offset to the extent of only a little more than by the gain in silk.

Books and Publications.

THE CONVERSATIONS AT MALINES.*

THE documents of the four meetings between representatives of the Catholic and Anglican Churches, in 1921-25, have just been published by Lord Halifax, who was one of the prime movers on the Anglican side. The most interesting document is a memorandum in French, by a writer whose name is not made public, which was read aloud at the last meeting by the late Cardinal Mercier. This document surveys the conditions on which reunion might be considered acceptable from the Roman side; and it is inspired by the same largeness of view as has been shown by the Roman Church in admitting certain Oriental congregations to union with itself at various times between the fourteenth century and the present day. Consciously following these precedents, the author of the anonymous memorandum shows intransigence on one point and one only: the supremacy of the Pope. In return for the acknowledgment of this, he is willing to make far-reaching concessions in every other part of the field: local church government, canon law, rites and discipline. He envisages the transformation of the Archbishop of Canterbury into a Roman Patriarch, governing the whole Catholic Church in England, and he explicitly accepts the logical corollary, that is, the extinction of the present Roman dioceses in this country. This statesmanlike document did not lead at the moment to positive results; the conversations at Malines were abortive; but we regard these conversations, and the documents which they evoked, as signs of the times which hereafter, in retrospect, may appear to be of greater historical importance than they appear to many people to-day. The settlement to which the anonymous writer looks forward presupposes two previous events: the disestablishment of the Church of England and a definite and permanent schism between its Evangelical and Catholic wings; and both these events have come well within the range of possibility since the rejection of the new version of the Prayer Book by Parliament.

These possibilities open up interesting vistas of new "inter-ecclesiastical" relations. The Roman Church, reinforced even by one wing only of the ex-Protestant Episcopalian Church in England, might be-

*"The Conversations at Malines, 1921-25." Philip Allan & Co. Price 3s. 6d.

come a greater power in the world as a whole than it has ever been at any time in its history; for the lead given by the hypothetical action of the Anglo-Catholics in England would probably be followed by the Catholic-minded wings of the (non-established) Episcopalian Churches in the other English-speaking countries. After that, the remnants of the Orthodox and other Oriental Churches (Jacobites, Gregorians and Nestorians) could hardly hold out; and the Pope would find himself at the head of a Church extending into every corner of the world and comprehending all Christians except the Protestant Evangelicals. In self-defence, the Evangelicals would probably form a counter-union. Indeed, the traditional fissiparous tendency of these sects has already shown symptoms of being reversed in Canada and in Scotland. Thus, in both the Protestant and the Orthodox worlds, we should see the end of the official connection between Church and State; and all the Christian Churches would fall into line with Jewry and Islam by becoming universal organisations, transcending the limits of States, nationalities and races.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Functions and Operations of Central Banks. By M. H. de Kock. (Johannesburg) Juta and Company, Ltd. 5s.

A useful booklet written with special reference to the South African Reserve Bank.

Lehrbuch der Finanzwissenschaft. By Dr. Bruno Moll. (Berlin) Verlag von Reimar Hobbing.

A monumental work of German scholarship which should be of great value to the student of the theory of public finance.

Manuel Elémentaire d'Economie Politique. By P. Boninsegni. (Paris) Pichon and Durand-Auzias, 20, Rue Soufflot.

A French text-book of economic theory. The English beginner must not build too great hopes on the inclusion of the title of the word "Elementary."

Balance Sheets. By Philip Tovey. Second edition. (London) Isaac Pitman and Sons, Ltd., Parker Street. 3s. 6d. net.

A most useful popular guide.

Meetings. By F. D. Head. (London) Sir Isaac Pitman and Sons, Ltd. 5s.

A new edition of a recognised book of reference on procedure at company meetings.

The Economic Journal, March, 1930. (London) Macmillan and Company, Ltd., St. Martin's Street. 6s. net.

Includes articles by Professor Macgregor on "The Coal Bill and the Cartel," and by Professor Cannan on "The Problem of Unemployment."

The Nineteenth Century. March. (London) Constable and Company, Ltd., Leicester Square, W.C.2.

Includes articles on "The Coal Mines Bill," by Sir Richard Redmayne; "Slum Clearance," by Mr E. D. Simon; and a very interesting article on the activities of Clarence Hatry and the lessons to be drawn from them, by Mr E. D. Davenport.

NOW READY.

THE
DISCOUNT MARKET
IN LONDON

By H. W. GREENGRASS, Cert.A.I.B. A descriptive survey of the organization and recent development of the London Money Market, from the point of view of the discount broker. An interesting and informative book for all interested, actively or otherwise, in finance. Demy 8vo, cloth, 195 pp. 6s. net.

Of a Bookseller, or

PITMAN'S, Parker St., Kingsway, LONDON, W.C.2.

Empire Review, March, 1930. (London) Macmillan and Company, Ltd.

Includes an article by Mr Amery on "Mr Baldwin's Speech and After."

The Ratio Controversy in India. A Retrospect. By Sir Johangir C. Coyajee. (Calcutta) The Book Company, Ltd., College Square.

A retrospect of the controversy over the exchange ratio of the rupee.

Indian Affairs. March, 1930. (London) Edson, Ltd., 8-9, Essex Street, Strand, W.C. 2. 5s.

The first issue of a new quarterly on the lines of "Foreign Affairs" but devoted exclusively to India. It contains a varied and interesting collection of articles on Indian social and economic problems.

L'Agriculture de la Roumanie pendant la Guerre. By G. Jonesco-Sisesti. (London) Oxford University Press, Warwick Square. 5s.

L'Occupation Ennemie de la Roumanie et ses Conséquences Economiques et Sociales. By Gr. Antipa. (London) Oxford University Press, Warwick Square. 6s.

Published by the Carnegie Endowment for International Peace, these two volumes cover a phase of vital importance to Roumania's economic history.

Le Ravitaillement de la France Occupée. By Paul Collinet and Paul Stahl. (London) Oxford University Press, Warwick Square. 4s. 6d.

Another addition to the Carnegie Endowment series.

Osterreichs Landwirtschaft. (London) Austrian Legation, 18, Belgrave Square.

A booklet, in German, on Austrian agriculture.

The Recall of Public Officers. By Frederick L. Bird and Francis M. Ryan. (London) Macmillan and Company, St. Martin's Street. 17s. net.

A study of the operation of the recall in California.

The Stock Exchange.

BUILDING SOCIETIES.

BUILDING societies are outside the orbit of the Stock Exchange, but their operations directly interest a considerable body of investors, large and small. After a period of comparatively placid evolution for nearly a century-and-a-half, apart from a couple of failures which reflected discredit on individuals but not on the movement, the latter has developed with phenomenal rapidity since the war. The total assets of the building societies of Great Britain increased from £77 million in 1919 to £268 million in 1928, while the amount advanced each year on new mortgages rose from under £16 million in 1919 to £52 million in 1926, £56 million in 1927 and £59 million in 1928. The total for 1929 may have been as much as £70 million. Indeed, it is clear that a significant proportion of the total savings by individuals in Great Britain last year was attracted to the building societies. This result is the more striking since it was achieved in a year when wholesale commodity prices declined by 10 per cent., when Stock Exchange security values fell by something like 25 per cent., the deposits of the English joint-stock banks declined by £38 million, and the total emissions of new capital in the London market fell off by £84 million.

The reasons for the contemporary popularity of the movement are not far to seek. A yield of, say, 5 per cent. on building society shares, withdrawable at comparatively short notice, is attractive to the small investor, who can obtain only 2½ per cent. from the Post Office Savings Bank, and only £4 2s. 9d. per cent. from National Savings Certificates if he is prepared to leave his money untouched for ten years. The yield appeals to the larger investor because, being net (income tax is paid by the societies, usually at a "compounded" rate of 1s. in the pound), it is at least 1 per cent. higher than can be obtained from Gilt-edged securities. Investment in a building society involves no brokerage or taxation, carries no risk of market depreciation, and, by general admission, is well secured. The making of advances on long-term mortgage on house property is a specialised business, by no means immune from risk, but the best societies have built up a technique and tradition which have, in the past, largely eliminated the speculative aspect and given a gratifying solidity to their operations. Borrowers are carefully chosen, advances are limited to a percentage of the market value of the mortgaged property which affords the society satisfactory "cover," and the loans, in practice, become largely self-liquidating.

There are over a thousand building societies in existence with average assets of £260,000 each, but the total includes over forty societies with assets of more than a million pounds (the largest being the Halifax, with £59 million, and the second largest the Abbey Road, with £19 million), while at the other end of the scale are a number of societies with less than £1,000 of assets. The following table shows the progress made by five representative institutions in London and the provinces during the last three years:—

(000's omitted.)

		Halifax.†	Abbey Road.	Leeds.	Burnley.	Woolwich.
		£	£	£	£	£
Due to shareholders (excluding interest)	1927	37,160	7,042	6,143	4,410	4,394
	1928	44,517*	11,338	7,015*	5,144	6,304
	1929	49,377*	16,885	7,999*	5,921	9,242
Due to Depositors (excluding interest)	1927	8,360	767	2,033	801	348
	1928	7,949*	612	2,676*	806	631
	1929	8,000*	1,185	3,340*	897	676

Total assets	1927	46,981	8,252	8,728	5,586	5,772
	1928	54,155	12,585	10,174	6,376	8,236
	1929	59,394	19,167	12,002	7,277	11,403

* Including interest.
† For 1927 and 1928 the joint results are given of the Halifax Permanent and the Halifax Equitable, now merged in the Halifax Building Society.

Recent progress has been phenomenal, particularly in the case of the London societies, which pay a higher rate of interest to shareholders and depositors and charge a higher rate to borrowers than their provincial colleagues. This phenomenon is significant, not merely as a reflection of the boom in residential property in the Greater London area, and the more rapid advance of post-war prosperity in the South than in the North of England, but also as representing a potential source of friction within the movement. It is alleged by some spokesmen that the London societies have "invaded" the territory of the provincial institutions by offering higher rates on shares and deposits, based on the appreciably higher charges which borrowers in the London area are willing to pay. Some of the London societies also pay commission for the introduction of new borrowers. The rate has never been published, but from internal evidence may, in certain cases, be something up to 1 per cent. of the principal of the mortgage.

That the principles followed by building societies in granting mortgages have in the past been conservative is suggested by the extremely low ratio of defaults. The following table shows for the societies already mentioned the proportion of mortgages foreclosed or upwards of twelve months in arreas in proportion to the total outstanding:—

	No. of Mortgages Outstanding.	No. in Possession or over 12 Months in Arrears.	Amount of Mortgages Outstanding.	In Possession or Over 12 Months in Arrears.	
				Amount.	% of Whole.
			£	£	
Halifax	118,560	None	44,783,385	None	...
Abbey Road	30,260	None	18,010,248	None	...
Leeds	23,030	1	10,626,287	1,625	0·015
Burnley	17,533	3	6,335,914	1,863	0·029
Woolwich	21,305	16	10,897,751	11,190	0·103

In none of the five societies is more than 0.1 per cent. of the total in default—a result which affords tribute to the care with which the societies' *clientèle* has been chosen. How far the general impression is correct that the building societies obtain their members, both investors and borrowers, predominately from the working classes is an interesting question. The average investment of shareholders in the five societies whose figures have been discussed, at the end of last year, was £228, but there is some reason for assuming that the "law" of distribution which obtains in the case of most savings institutions is not altogether inapplicable to the building societies. This "law" was summed up by a recent official body* as follows:—"In any savings bank four-fifths of the deposits are in one-fifth of the accounts." External evidence supports the view that the excellent facilities and vigorous propaganda of the societies have attracted a good many middle-class and comparatively wealthy investors, who before the war would have looked mainly to the Stock Exchange for the placing of at least part of their resources. The *borrowing* members of the societies are, however, mainly persons of moderate means. Of the total mortgage advances of the five societies of £90½ million (excluding amounts in default) some 82 per cent. was in respect of mortgages on which not more than £1,000 was outstanding, the average debt in this group being £372. In the case of the remaining 18 per cent. of the total mortgages, the average loan was £1,844. On the whole, it may be said that while the societies appear to attract, in the main, the small investor, there is one side of their business which is by no means of negligible importance and cannot by any computation be brought under the heading of small investment.

* The Committee on Municipal Savings Banks.

Without endorsing the claim made by some spokesmen of the movement, that building society "securities" should be made trustee investments, it may be admitted that the movement has much to teach the Stock Exchange in the way of effective advertisement of its facilities. The available evidence suggests that the smaller investors, in particular, have taken due note of the fact that while millions of pounds have been lost by subscribers to new commercial companies during recent Stock Exchange booms, subscribers to building societies have not lost one penny of their capital.

There is, however, a conservative school of thought, both inside and outside the movement, which, while welcoming the evidence of virility and progress which the last few years' experience has furnished, is inclined to regard the present rate of expansion as showing "boom" symptoms. Holders of these views are impressed with the possibility that some societies may be tempted to invest in mortgages of less than traditional soundness. The results of such a development might not immediately be apparent, since many societies have substantial internal reserves, and properties in "default" do not reach the schedules until payments are at least twelve months in arrear. On the other hand, if, owing to a decline in general money rates or any other reason, a number of societies were compelled in the future significantly to reduce their rates to investors, a shrinkage of funds might ensue, and the withdrawal facilities of some societies might be put to a severe test. If new mortgage advances were simultaneously restricted the effect on property values might be disquieting. Without necessarily endorsing these views, we are doubtful whether the movement can continue indefinitely to find *safe* new mortgage investments at the rate of the last two or three years. Whether it may be driven (possibly against its inclination) to invest a somewhat larger proportion of its resources in other directions (possibly along semi-investment trust lines), or to seek new fields for mortgage investment, it is as yet too early to say. Some of the most progressive leaders of the movement have already envisaged the possibility of co-operation in the work of slum clearance, possibly under the auspices of the national or local authorities. While, however, the movement is scarcely likely to show an indefinite expansion on the lines of the last few years, it may be concluded that its place among the major investment interests of Great Britain is a permanent one.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket. March 18.	Account. March 20.

The "House" was slightly more cheerful than of late, members being inclined to pay less attention to unfavourable outside factors, such as the decline in the February trade returns, and the publication of dismaying Public Estimates, and more attention to the admittedly favourable monetary outlook. The volume of dealings showed no measurable expansion, but ordinary share values maintained a faintly perceptible upward trend. Interest, however, was centred mainly on the market for gilt-edged and other fixed-interest securities of the highest class. The strength of these securities, the favourable opening price of the new Conversion Loan, and the steady absorption of recent Home Corporation issues afforded welcome evidence that the steadily declining tendency of short-money rates was, at long last, finding some reflecting in the trend of long-term rates.

Though business was not on a large scale, British Government stocks were consistently firm, the favourable money position and the expectation of the early arrival of gold from Australia assisting market sentiment. Three-and-a-Half per Cent. Conversion Loan was singled out for attention early in the week. The new Conversion Loan opened at a premium of $\frac{1}{8}$, rising to $\frac{3}{16}$, on Thursday, when it was known that subscriptions had been larger than had been anticipated. The over-

RECORD PROGRESS by the "ABBEY ROAD"

LONDON'S LARGEST BUILDING SOCIETY

Consider the following figures—a tribute to sound management and proof of the confidence of the investing public. During 1929:

SHARE CAPITAL INCREASED by £5,660,000

DEPOSITS INCREASED by £578,000

MEMBERSHIP INCREASED by 38,000

MONEY ADVANCED in 1929 TOTALLED £8,800,000

WHY NOT SHARE SUCH PROSPERITY?

No Investor in the Abbey Road has ever lost a 1d. piece of his capital. The yield is generous—up to 5% free of income tax. Liquid assets now total £1,000,000 invested in gilt edged and trustee securities.

Address your enquiries to Harold Bellman, General Manager, ABBEY ROAD BUILDING SOCIETY, Abbey House, Upper Baker St., N.W.1

City Offices: 101 Cheapside, E.C.2, and 145 Moorgate, E.C.2.

West End Office: 108 Victoria Street, S.W.1

5% FREE OF INCOME TAX

C.V.S. 12

subscription of the Southampton loan strengthened the Home Corporation market, despite the knowledge that further issues were pending. India loans were unaffected by the start of Mr Gandhi's march, the new Six per Cents. showing further appreciation. Dominion and Colonial stocks were moderately active, last week's South African Loan being steadily absorbed. Commonwealth stocks were dull, despite the good response to the Australian Internal Conversion Loan.

The outstanding feature of the foreign market was the strength of Brazilian bonds on the firmness of the milreis, but an unexpected reaction occurred on Thursday, marking down being general. Greek loans were in intermittent demand. Among Far Easterns, Chinese were better in anticipation of a favourable announcement regarding the coupon on the 1912's, which falls due at the end of this month. Turkish Unified were better on rumoured negotiations for a loan from Swedish Match.

The week's Home Rail traffic figures were disappointing, affording comparison with the first week of "normal" conditions after last year's severe frost. The stocks encountered profit-taking, Great Westerns being most affected. The reduction in the interim dividends of B.A. Western and Central Argentine coincided with weakness in the Argentine Exchange, and further unsatisfactory gross traffics. Great Southerns held their ground, but other stocks were marked down. Antofagastas showed further dullness, and Leopoldina did not hold on early gains.

Business in the Industrial markets showed no large expansion, but a better tone prevailed in the absence of further cold douches such as the Courtauld speech. A moderate demand was in evidence for internationals, Nickels gaining ground, while Hydro-Electrics were bought after the report, which came fully up to market expectation, though the large contribution to profits made by the realisation of investments was looked at askance in some quarters. Molasses and Unilevers, on the other hand, came on offer. Substantial but premature reports of a merger agreement between Gramophone and Columbia encouraged a mild burst of speculative activity, which tailed off as the week progressed. A fair business was done in electrical shares. Selected motor shares were active on the Austin figures and the doubling of the Tilling-Stevens dividend. Dunlops continued firm, market forecasts of a 15 per cent. dividend gaining support. The unexpected increase in Stewarts and Lloyds deferred distribution produced a slight accession of interest in "heavy" engineering shares. Profit-taking followed the publication of the Pinchin Johnson report and share bonus (dealt with in an "Investment Note" on page 596). Breweries were steady, but a steady trickle of pre-budgetary selling depressed the value of tobacco shares. Cables and Wireless were harder. Insurance shares were firm on selective investment buying, but bank shares were consistently inactive.

The rubber share market was dull and featureless, the commodity falling steadily but persistently. Stocks of rubber in the East showed a further increase in February. Tea shares were marked up in a few instances, but little business was done. The oil share market remained deaf to the blandishment of news from America suggesting the continuance of a lower level of output than a year ago, though prices improved, in mid-week, in a few instances, the Eagle issues coming into prominence on bear closing in Paris. The mining share market, with one or two exceptions, failed to attract marked attention. Kaffirs registered a fairly general decline, though Union Corporation and Rand Mines showed an improvement at the close. Rhodesians had a quiet week, N'Changa, Rhodesia Katanga and Bwanas being all easier on balance. After a weak opening, Tintos advanced sharply on an improvement in copper prices, and remained an active market despite offers from Paris. A recovery in silver brought an appreciable gain to Burma Corporation, while Santa Gertrudis and Mexican Corporation also rose, and 'Frisco Mines were a strong feature. Tin rallied sharply on the news of the Dutch adherence to restriction (described in an "Investment

FOREIGN STOCK EXCHANGES.

NEW YORK.

Share markets were irregular, with interest shifting into stocks with the best prospects, but pools were still striving to interest the public in speculation with some measure of success. There was a further increase this week of 137 millions in brokers' loans. Much of the gain, however, was due to subscription payments of 80 millions of new stock offered some time ago and maturing on Tuesday. Opinion as to stock prospects remains very mixed. There is a general admission that prices are well ahead of a trade recovery, but it is believed that the cheap money policy of the reserve banks will help to stimulate a revival, and the yields of good stocks are higher than the interest charges for carrying on margin dealings. Bonds appear to be more active than for many months, and prices are the highest of the year, with Government issues leading. New financing is on the increase, and most issues are going well. Bankers here do not expect the Reparations loan before June 1. The Treasury offer of $450 million of certificates was doubly oversubscribed, since the rate was attractive and the banks were desirous of obtaining Government deposits. An extra 50 millions were placed, due entirely to the Farm Board's demand for cash, and Congress appropriated another 100 millions in addition to the original 150 millions. Many people are becoming seriously concerned at the prospect of a rising debt and, possibly, of greater taxation if the tendency of the Board to spend money on piling up a wheat surplus continues.

INVESTMENT NOTES.

Home and Foreign Investment.—Much public interest has been aroused by a circular, signed by Mr O. T. Falk, and sent to the clients of the firm of which he is a member. The circular, which was deliberately drafted in dogmatic form, expressed a very pessimistic opinion of the industrial future of this country, and, therefore, suggested selling the shares of almost all industrial companies operating at home; saw little hope of a revival of the American bond market, and, therefore, recommended selling Government and other bonds of almost all the financially weaker countries of the world; suggested that there was no assurance that currency stability would be maintained, and, therefore, recommended investing a large part of any fund in the strongest currency in the world, namely, the American dollar; and, generally, advised investment in the United States and Canada rather than elsewhere. We need hardly say that, though there is force in many of Mr Falk's arguments, his conclusion, which has been propounded in a slightly varied form by Lord Rothermere, is not one which we endorse. It may be that over a period of years the share index in the United States will rise more than that of British or European investments, but there are other considerations. On the one hand, there is a risk in buying American securities, arising from the lack of detailed knowledge by the British investor of the American market. On the other hand, the resistance to depression that has been shown by many gilt-edged and other British securities should not be overlooked. The ordinary English investor is at least as likely to lose money by plunging into the American market as by purchasing carefully selected investments at home. The episode, however, has raised a very different question. Even if the views expressed in the circular had been sound, it is suggested that they ought not to have been expressed, since, if they were generally acted upon, the very decline which they envisaged would be precipitated. Undoubtedly a flight from the pound, stimulated by such advice as this, would have bad reactions in this country. Our actual capital cannot, it is true, be exported, and every seller must find a buyer for his stock; but a heavy slump in British securities, together with the effect upon the exchanges and upon the money market which would result from a large outward movement, would undoubtedly make it difficult for our industries to finance themselves or to get new capital except at exorbitant prices. In extreme cases—for example, in anticipation of war—everyone would agree that such an action would be unpatriotic, and the Government would be justified in intervening to stop it; and at all times there may be forms of investment which are undesirable. But our economic position in the world has been built up on the basis of a free capital market, and a glance at any analysis of new issues in recent years will show that, far from an excessive proportion of our capital having gone abroad, the London market is supplying more than ever before to home industry; and it is notorious that, in addition, there has been a substantial inflow into this country of money from other countries. There is an ebb and flow in this matter, but there is no suspicion either now or in the recent past of a crisis resulting from unwillingness to invest at home. In the circumstances, it would be absurd to say that those whose business it is to advise on investment should not faithfully express their views. In our opinion the particular comments in this circular were far too sweeping; but the views which it contains have frequently been expressed in private and acted upon by large investment concerns. For our part, we think it is all to the good that such opinions should be brought into the open where they can be publicly debated. The unfortunate part about this affair is that a circular which makes such wide generalisations has been given publicity which will bring it to the notice of those who have not facilities to act upon it with the necessary discrimination, and who may be frightened out of safe investments for exceedingly risky ones.

Subscription of New Government Loans.—In reply to a Parliamentary question, the Chancellor of the Exchequer has given revised figures of the result of the Five per Cent. Conversion Loan issue last year. Cash subscriptions were £155,325,000 and conversion applications £80,372,000—a total of £235,697,000. The latter figure represented the maximum amount of Five per Cent. War Loan which might have been converted into the new loan under the terms of the option given to subscribers. Actually only approximately £88,500,000 was so converted—a disappointing result, which leaves the gigantic bulk of the Five per Cent. War Loan very much as before. The abnormal market conditions of the last four months, and, possibly, the fact that interest on Conversion Loan, unlike that on War Loan, is deducted at the source, may have mitigated against widespread acceptance of what, on a long view, was in many respects an attractive option. The net result is that the Treasury has still to make its first effective inroad into the mass of the Five per Cent. War Loan—a task which cannot indefinitely be postponed. The result of the Four-and-a-Half per Cent. Conversion Loan issue was announced by Mr Snowden on Thursday. Total cash applications amounted to £60,800,000, while conversions aggregated £32,000,000, the former amount being well in excess of market anticipation.

A Strange Capital Proposal.—Accompanying the 1929-30 report of Swan and Edgar is a circular asking shareholders to express their opinion on a suggestion that they should convert part or whole of their holdings into 7 per cent. cumulative preference shares, with priority in a winding-up, but no voting rights. The company's earnings have increased from 4.2 per cent. to 8.2 per cent. of its ordinary capital during its three years of existence under its present auspices, but preliminary expenses of £75,000 remain to be written off, and goodwill stands at £230,953. Shareholders who decided to "convert" 100 per cent. of their holdings into preference shares would give up entirely their share in the equity of the company's future expansion for a dividend below the actual present earnings of their shares. They should be quite clear as to the effect of the "writings-off" which the company proposes to effect in the future. These allocations will not represent so much money *lost* to the shareholders; they will have precisely the same effect as ordinary appropriations to reserve, increasing *pro tanto* the working capital of the company and the value of the ordinary shareholders' equity. The proposed preference capital would, however, be limited to 50 per cent. of the issued capital of all classes. If *all* the ordinary shareholders converted 50 per cent. of their holdings, therefore, the position as regards voting power, etc., would be unchanged. But holders, before expressing their opinion, should ask what the Drapery Trust intends to do with its own holding of shares. Not only is the latter substantial, but the Trust has an option on the £350,000 of unissued capital of Swan and Edgar at 25s. a share until February, 1932. If the latter forbore to exchange any large part of its shares for preference shares, every such conversion on the part of other holders would tend to increase the proportion of the total voting power, and the equity of the company, controlled by the Trust. The scheme, in short, has a number of extraordinary features, and shareholders may be advised to await next Wednesday's meeting for fuller details.

Tin Restriction.—The Tin Producers' Association announce that producers with a normal output of 137,799 tons of metallic tin a year are curtailing, or have agreed to curtail, their output to the extent of 24,096 tons, and that an aggregate curtailment of 30,000 tons per annum should not be unobtainable. These figures take into account producers representing practically the whole of the output of the Dutch East Indies and Bolivia. It is certainly important that the Dutch East Indies Government has agreed to limit the output of Banka to a maximum of 22,000 tons of metal a year (the rate last year), while the Billiton Company, in which the East Indies Government has an interest, is limiting its output to the average production of the three preceding years (which implies a definite reduction as compared with 1929). The output of Banka and Billiton represents more than 95 per cent. of the total production of the Dutch East Indies. That restriction has started in good earnest is shown by the lower supply figures for February:—

In Tons.

	F.M.S.	Unfed. M.S.	Straits Imports*	Banka Shipments	Total Eastern Production
January, 1930 ..	6,128	214	3,370	1,402	11,114
February, 1930	4,768	200 (est.)	2,986	694	8,648

* Including imports of ore for smelting from the Dutch E. Indies, Siam, Borneo, Sumatra, Japan and China.

Whether a curtailment of even 30,000 tons will be sufficient to bridge the gap between demand and supply cannot, of course, be determined at this stage. The estimates of the Anglo-Oriental Mining Corporation gave

OTIS & CO.
Established 1899

Underwriters of Stocks and Bonds

Cleveland New York
Chicago Philadelphia

the following figures for world production and consumption last year:—

	1928. Tons.	1929. Tons.
Supplies.		
Production of Federated Malay States	61,935	67,040
Production of Unfederated Malay States	2,499	2,326
Other imports to Straits Settlements	31,953	35,124
Total Straits Supplies	96,387	104,490
Banka shipments	14,229	13,376
Australian shipments	1,180	824
Standard arrivals	22,698	28,867
Other United Kingdom actual and prospective supplies	24,735	24,829
Total Supplies	159,229	172,386
Consumption.		
Total U.S.A.	81,530	94,316
Other countries	71,072	71,584
Total World Consumption	152,602	165,900
Excess of Supplies	6,627	6,486

The deliveries of tin in the United States show a considerable falling off this year, the figures for January and February this year being 5,815 tons and 4,940 tons, as compared with 8,795 tons and 6,750 tons respectively a year ago. It is idle to speculate upon the probable 1930 consumption, but it is not unreasonable to suppose that if a curtailment of 30,000 tons in output is reached, any excess of supply over demand this year will not run into very large figures. There has been some recovery in the price of tin this week from the low level of £159 per ton, which it reached last Friday, but on ehas to go back to 1922, when the price of tin averaged £160 a ton, to find quotations similar to those ruling to-day.

Courtaulds and the Rayon Outlook.—Mr Samuel Courtauld, at the general meeting of his company, took a conservative, not to say pessimistic line for which shareholders were doubtless well prepared. Mr Courtauld declared that the removal of the silk duties would be a first-class calamity, while in the artificial silk industry in general over-supply and price-cutting were in evidence throughout Europe. British production of rayon yarns in 1929 increased by 4 per cent., while Continental production increased by about 19 per cent. As regards the outlook for Courtaulds, even if the silk duties were retained, it would hardly be possible to recoup the serious loss of profits of the first four months of this year by any expansion in the rest of the year. On the Continent price-cutting was still severe, although certain agreements and fusions of interest had recently been made which should result in some elimination of overlapping and wasteful competition. Mr Courtauld defended the company's Continental investments, which have had to be written down by £1,651,856, on the ground that they represented a series of alliances which should prove of great worth in negotiating for trade agreements and control of prices. On the whole he looked to the future with confidence, having in view the substantial technical progress which the company had made and the great financial strength which it had attained, but he could not hold out any hope of material improvement in the profits for 1930. Without imputing special motives to Mr Courtauld this depressing picture may well have been somewhat overdrawn. Mr Courtauld's reference, for example, to the American Viscose Company's pursuance of the same policy as the present company in regard to reserves, must surely have implied that, if half the company's net profits were derived from the American subsidiary, the total net *earnings* of Courtaulds for 1929 were really in the neighbourhood of £4,000,000 or 16.6 per cent., tax free, on the ordinary share capital. The dividend rate of 10 per cent., tax free, would therefore seem to be well covered.

Pinchin Johnson.—The accounts of these large paint and varnish manufacturers reveal a further advance in net revenue. Dividends are maintained at 30 per cent., less tax, absorbing £331,189, against £283,495 in 1928. As a result of last year's bonus share distribution, which allotted one new ordinary share for every three held on March 14, 1929, percentage earnings on the increased capital have dropped from 42.2 to 32.2, against a dividend of 30 per cent.:—

Year ends December 31—	1927.	1928.	1929.
Net profit	262,942	354,325	381,532
Brought forward	30,571	52,273	80,103

Carried forward	52,273	80,103	84,446

* Free of tax.

The directors have again decided to capitalise a portion of the reserve fund—which stands in the balance sheet at £898,413—by the issue of one new ordinary share for every ten, an increase which may bring earnings and dividends in closer correspondence. The business of the company has been extended by the acquisition of a majority interest in another important Australian undertaking, and certain Continental interests have been consolidated. Both these undertakings have earned satisfactory profits, which are not shown this year in the balance sheet. At £2 7/10 the 10s. ordinary shares give a yield of £6 8s. per cent., allowing for a final dividend of 2s.

Austin Motor Company.—The year 1929 was a very satisfactory one, the trading profit being £436,146 greater at £1,297,446 and the net profit £309,873 higher at £605,848. Of the increase of £126,223 in administration charges £122,177 represented an additional provision for income tax, while mortgage interest was £26,860 less. The 7 h.p. "Baby" car is now being manufactured in England, America, France and Germany, and this model has doubtless made a material contribution to the improved figures:—

	Years ended Dec. 31. 1928. £	1929. £
Net earnings	295,975	605,848
Brought forward	115,639	59,664
Preference dividend	119,000*	14,000

* 8½ years' arrears of dividend to December 31, 1928.
† 3 years' arrears of dividend to June 30, 1923.
‡ 6½ years' arrears of dividend to December 31, 1929.

The 7 per cent. preference dividend was covered 43.3 times by last year's earnings. The directors took the opportunity of paying the arrears on the "B" preference shares, which dated back to June 30, 1923. Had the holders of the "B" preference received only a normal year's dividend the amounts earned on the preferred and deferred ordinary shares would have been 70.9 per cent. and 120.6 per cent. respectively. After paying the dividends and carrying £46,060 to the sinking fund, £71,452 was carried forward. Cash in hand was £180,275 higher, while creditors decreased by £244,075 and accrued charges by £109,416. During the year £48,142 of debenture stock were redeemed, and £46,060 was added to the sinking fund. The year's results are distinctly creditable to all concerned.

William Hollins.—The profits for 1929 show a decrease of more than 25 per cent. as compared with 1928, and are the lowest since 1923, when £108,122 was earned. The dividend, which last year was raised to 8½ per cent., has now reverted to the 7½ per cent. rate paid for each of the preceding six years:—

	Years ended December 31st. 1927. £	1928. £	1929. £
Net profit	139,435	153,446	114,847
Preference dividend	18,000	18,000	18,000
Number of times covered	7·7	8·5	6·38
Ordinary *Earned*	*10·5%*	*10·66%*	*7·6%*
Ordinary Paid	7½%	8½%	7½%
Ordinary Amount	86,673	107,950	95,250
To General Reserve	25,000	25,000	Nil
Increase in carry forward	9,761	2,496	1,597

No comment is made in the report on the lower profits, but to some extent they may be a reflection of the general fall in the value of textile materials. The fire at the Via Gellia Mill in March last may also have been a contributory influence. Stocks figure this year at £806,070, as compared with £909,430 in 1928. Debtors are some £20,000 higher at £316,611 and creditors remain practically unchanged. A continued satisfactory feature of the accounts is the strong liquid position; surplus quick assets, after providing for dividend requirements, amount to £1,012,916, as compared with total assets of £2,087,801. In 1929 a sum of £82,567 was expended on new buildings and machinery, making a total of over £300,000 provided for this purpose out of the company's resources during the last four years. The shares are quoted around par, as against 26s. a year ago.

British Metal Corporation.—Despite the fact that metal prices have fallen heavily throughout the year in almost every market, the wide interests of this company have enabled the directors once more to report a satisfactory profit. Though down nearly £10,000 on last year, the net revenue, at £195,039, covers preference dividend three and a half times, and allows the payment of 10 per cent. on the ordinary capital, the same as last year, out of 15.6 per cent. earned for dividend. The following table sets out the results for the past three years:—

	Financial Years ended Dec. 31, 1927.	1928.	1929.
Net profit	195,454	204,452	195,039
Brought forward	23,278	24,732	25,184
Preference dividends £	54,000	54,000	54,000
Rate %	6	6	6
No. of times covered	*3·6*	*3·8*	*3·6*
Ordinary capital:—			
Earned £	*141,454*	*150,452*	*141,039*
Paid £	90,000	90,000	90,000
Earned %	*15·7*	*16·7*	*15·6*
Paid %	10	10	10
To reserve	50,000	60,000	50,000
Carried forward	24,732	25,184	26,223

The sum of £50,000 is set aside as allocation to reserve, bringing that item to £550,000, while the carry-forward is only slightly increased at £26,223. This is the last balance sheet to be published before the fusion of interests with Henry Gardner and Company, under the name of Amalgamated Metal Corporation, comes into effect. Shareholders of the British Metal Corporation were offered one preference share of the new company for each old preference share, and two new ordinary shares in exchange for each old ordinary share, while ordinary shareholders of Henry Gardner were offered eight new ordinary shares in exchange for every five previously held. The proposal was accepted by the holders of 97 per cent. of the ordinary and preference shares of the British Metal Corporation, and the directors report that the arrangements for amalgamation will shortly be completed.

First Co-operative Investment Trust.—We have had occasion in the past (see the *Economist* of October 5 and October 12, 1929), to criticise the investment policy of the Co-operative Investment Trust, of which Mr Emil Davies is chairman. We find proof in the annual report of the First Co-operative Investment Trust, published this week, that our criticism did not err on the side of severity. For the half-year ended July 31, 1929, this Trust reported that the depreciation on its investments was more than covered by its reserves and carry forward. The report for the year ending January 31, 1930, however, shows a depreciation on the book cost of investments (taking quoted securities at middle market prices, and unquoted securities on the basis of the best information available) of no less than 18.1 per cent. After allowing for investment reserve of £40,000, entrance fees reserve of £21,055, and an appropriation out of profits this year of £10,000, this depreciation is reduced to 14.1 per cent. This is a serious loss. The First Co-operative Trust was formed in 1924, and the index for "all securities," compiled by *The Investor's Chronicle*, shows an appreciation of 6.9 per cent. in values between the end of 1923 and January 27, 1930. As regards dividend policy, Mr Emil Davies admitted in the August issue of the Trust's organ, *The Rainy Day*, that, "by distributing income up to the hilt, or nearly up to the hilt, we render it almost impossible to build up reserves adequate to the capital," and concluded by saying that "with a view to adding to the reserves the directors propose to aim at dividends of 6½ per cent. per annum." The interim dividend for the first half of the year to January 31st last was 3 per cent., and the dividend for the last half was 2½ per cent., making 5½ per cent. for the year. The report states that the investments, excluding loans, number 664. The management of such a large number of securities calls for extraordinary skill and care. It is gratifying to find that some improvement can already be detected in the distribution of the holdings. The proportion of bonds to the total holdings has increased, as compared with a year ago, from 34.65 per cent. to 47.29 per cent., while that of preference shares has been reduced from 23.60 per cent. to 18.94 per cent., and that of the ordinary shares from

For quick starting use WINTER SHELL

Specially blended for cold weather

Stuarts

41.75 per cent. to 33.77 per cent. Moreover, the percentage of public utility holdings has increased from 5.33 per cent. to 13.32 per cent. Issued capital has risen from £1,555,268 to £1,651,396 8s., but income has fallen from £59,678 in the first half of last year to £48,299 in the second half. This may be, in part, the result of selling high-yielding but speculative securities for "safer" but less remunerative investments. As regards the difficulty of allowing members to obtain repayment of their ordinary shares, which, obviously, could not take place at par in view of the existing depreciation on investments, we understand that the Trust has offered facilities for bringing buyers and sellers together, and has continued to make loans to members against shares where it has been shown that hardship would otherwise be involved. This is probably the most the Trust can do in the circumstances, but it falls below the high ideals claimed for investment trust practice under co-operative principles, which were so strongly insisted upon when the Trust was launched.

New Scottish Investment Trusts.—In connection with the leading article which appeared in the *Economist* of February 8th, on "Some Investment Trust Results," we have received certain interesting figures from a correspondent, showing how the recent investment trust companies formed in Scotland have fared in the general reaction which has overtaken the security markets. The figures are taken from the last published accounts of each company and the year of the company's formation is given in brackets after the company's name:—

RESULTS RECENTLY DECLARED BY SCOTTISH INVESTMENT TRUST COMPANIES.

	Invested Funds.	Depreciation. Amount.	Depreciation. % of Book Value.	Bank Overdraft.

As regards the trend of prices in the security markets, it may be recalled that November 13th was the day of New York's worst slump. November was, therefore, probably the most unfavourable period for valuing a company's investments. Since that date appreciable improvement has been shown in New York, as will be apparent from the average yield of fifty industrial common stocks compiled by the Standard Statistics Company Inc. of New York, which, at November 14, 1929, was 5.23 per cent., and on March 6, 1930, 4.43 per cent.

American Telephone and Telegraph.—This company, which owns the "Bell" system, has a virtual monopoly of telephonic communication in the United States. Owing to the complicated system of subsidiary company accounting, and the shadowy line separating expenditures charged to capital account from those deducted from earnings, the actual net profit shown varies considerably according to the manner of accounting. There is no doubt, however, that profits are fully keeping pace with the increasing capitalisation. The principal sources of revenue are dividends from operating subsidiaries, including the Western Electric, which manufactures all the equipment used, as well as the general electrical appliances sold to the public. Earnings derived from operation of long distance lines under contract with associated companies, *plus* interest and miscellaneous receipts, however, make up nearly as large a total as is paid in dividends. On the basis of these revenues (amounting last year to $275,695,907, a gain of 17 per cent.), the company reported, after deducting expenses, depreciation, taxes and interest, net income available for dividends of $116,378,771.

(Thousand dollars.)

	1926.	1927.	1928.	1929.

Carried forward.....	30,494	79,174†	39,349	49,811
Earnings per share	$11·95	$11·76	$12·11	$12·67

* Not including $47,938,865 special dividend paid by Western Electric on profits accumulated over a period of years on business outside the telephone system.

† Including Western Electric special dividend.

Actual earnings, including the undivided equity in subsidiary income, amount to a much larger figure than the $12.67 shown, estimated at $1 a share for 1929, and account, in part, for the high market value placed on the stock. Since 1921, the company has maintained a $9 annual dividend rate, which, it is believed, will not be increased, though this could be effected by the simple process of increasing dividends paid by subsidiaries or by obtaining a larger proportion of new capital from low interest-paying bonds instead of by fresh share issues. The company, however, has for many years obtained its new capital largely through sales of shares to stockholders carrying "rights" averaging a net addition to their real income of about $3 annually. For 1930 new capital expenditure of $700 million is envisaged, and a new stock or convertible bond issue is expected in the near future. The company's long-term debt is now only 31 per cent. of its total capital liabilities.

Hydro-Electric Securities.—The annual report of this corporation for the year ended December 31st last reveals a remarkable leap in profits. Net revenue for 1929 has increased from $1,794,702 to $6,893,863, an advance of $5,099,161. A large proportion of the increase is, however, accounted for by sales of investments at a favourable time, income from this source totalling $4,121,478, as against $610,311 for the preceding year. Profits from other sources amount to $2,772,385, compared with $1,184,391 for the previous twelve months. Dividends on the class "B" preferred stock take $1,000,000, compared with last year's $332,520, and the common shares, which before received no allocation, this year take $852,129, or $1 per share. According to the report, the corporation's investments, which were valued at $79,194,233 at December 31st last, show at that figure an advance of $35,436,435 over their original cost price, and since the date of valuation this appreciation has further increased. The report is fully up to market expectations, but in view of the large part played by receipts from what must necessarily be regarded as an abnormal source, the year's results do not afford a very satisfactory guide to future possibilities.

South African Gold Trust.—Our mining correspondent writes:—Although the payment of a final dividend of 2s. per share brings the total distribution for the past year to 15 per cent., as in 1928, the earnings showed a setback, £80,000 being received from the operating company, the New Gold Trust, against £90,000. Last year's profits of this concern, at £179,800, showed only a small falling-off; and an expansion to £47,100 in the amount required for depreciation on investments was more than counterbalanced by reduction in the sum needed for taxation. Moreover, the appropriation to reserve is £25,000, against £30,000—raising that fund to £75,000. Consequently the cut in the dividend from 9½ per cent. to 8 per cent. is chiefly attributable to the carrying forward of £16,300, or £12,700 more than brought in. Investments at cost figure at £970,400, a shrinkage of £65,500; loans at short call have jumped from £17,300 to £165,500. Altogether, therefore, it would appear that the directors have been anxious to build up a liquid position. At the last annual meeting the question of publication of a list of investments was referred to in terms which suggested such a procedure to be unlikely. On the present occasion, however, a schedule is supplied of the company's principal holdings. They comprise interests in oil and artificial silk companies, gold and silver mines shares. On the basis of the past two years' dividends South African Gold Trust shares, at $1\frac{5}{16}$, yield fully 12 per cent., allowing for the amount included in the price.

Modder B.—The details of operations for 1929 reveal the satisfactory feature that a renewed decline in the value of the ore crushed was almost counterbalanced by reduction in working costs. Consequently, the working profit showed only a small shrinkage, and the company was able to maintain its dividend at the rate which had prevailed for the three preceding years. Somewhat increased amounts were required under the headings of taxation and miners' phthisis, with the result that the credit balance was drawn upon to a moderate extent.

Year ends December 31.	1927.	1928.	1929.

Carried forward.....	373,447	356,050	336,939

* Including forfeited dividends and credit on capital account.

In view of the intimation as to the position of the mine given by the consulting engineers in their 1928 report, it is no matter for surprise that the ore reserves should display a substantial falling off both in quantity and grade. It is again emphasised that "the areas remaining to be proved (on the Main Reef leader) are small and of doubtful value." The results of prospecting on the South Reef have been "very disappointing." Earnings during the current year are expected to be maintained on the 1929 rate. The cash position is strong—a surplus of £336,900, against an outstanding liability of £119,500 in respect of miners' phthisis. Nevertheless, the 5s. shares appear fully valued at current quotation of 14s. 6d.

Distribution of Stockholdings on the L.M.S. Railway.—The abridged statement of the accounts of the London Midland and Scottish Railway for 1929, submitted to stockholders, gives an analysis of the distribution of holdings of the company's capital. The company has 298,182 separate stockholders—a total exceeding by 49,114 that of the company's employees—and the average holding is, apparently, £1,384. The actual number of holdings is 376,776, some individuals having holdings in more than one stock.

NUMBER OF HOLDINGS OF L.M.S. STOCKS.

Holdings.	4% Debenture.	4% Guaranteed.	4% Preference.	4% Preference. 1923.
£1—£100	4,929	3,012	13,273	11,731
£101—£200	6,130	3,781	11,160	11,059
£201—£300	5,306	3,203	8,796	6,804
£301—£400	4,518	2,762	7,132	5,492
£401—£500	4,528	2,953	7,266	4,462
£501—£1,000	12,313	7,295	18,290	9,093
£1,001 and upwards ..	19,536	9,505	24,805	8,061
	57,260	32,511	90,722	56,702

	Ordinary.	5% Red. Deb.	5% Red. Pref.
£1—£100	26,579	2,985	3,393
£101—£200	19,778	5,584	6,117
£201—£300	13,481	250	1,401
£301—£400	9,163	286	480
£401—£500	8,914	467	671
£501—£1,000	17,895	647	1,332
£1,001 and upwards ..	18,290	758	1,110
	114,100	10,977	14,504

Of the total holdings, 17.5 per cent. are for nominal amounts of £100 or less, 43.0 per cent. of £101 to £500, 17.7 per cent. of £501 to £1,000, and 21.8 per cent. of over £1,000. In the case of the older debenture, guaranteed and preference stocks, which have a large "trustee" ownership, the largest number of holders, in the groups shown in the table, is to be found in the "£1,001 and upwards" category. In that of the ordinary stock the "£1 to £100" group, and in those of the newer stocks the "£101 to £200" group, include the largest number of holders. The difference between the pre-war and post-war stocks in this respect throws an interesting light on recent investment tendencies.

Canadian Pacific Earnings.—The setback to Canadian prosperity in the later months of 1929 is reflected in the cabled figures of receipts and expenditure of the Canadian Pacific Railway. For the first time for several years gross railway and steamer earnings declined by 8 per cent., and total net income available for dividends (after deducting fixed charges and pension fund) by 14 per cent.:—

	1927. $	1928. $	1929. $
Gross earnings: Railways and lake steamers	201,145,751	229,039,297	209,730,955
Working expenses	161,630,180	177,344,845	166,586,411
Net earnings	39,515,571	51,694,452	43,144,544
Special income	11,876,560	12,677,683	15,232,220
Total income	51,392,131	64,372,135	58,376,764
Fixed charges	15,378,867	15,308,698	16,149,003
Surplus	36,013,264	49,063,437	42,227,761
To pension fund	600,000	750,000	750,000
Available for dividends	35,413,264	48,313,437	41,477,761

Dividends on the preference stock have taken $4,674,790 and on the common stock $30,750,000, the surplus carried forward being $6,052,971, against $14,892,257 a year ago. At 210¼xd the common stock yields £4 17s. 6d. per cent. A year ago the price was 252 x.d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Hungarian General Creditbank, Britannic Assurance, Scottish Provident Institution, Trade Indemnity Company, British and German Trust, River Plate Trust Loan and Agency, Skefko Ball Bearing, British Metal Corporation, Ford Motor, Harrods, and Joseph Nathan and Company. At the British and German Trust meeting the chairman, referring to the new International Bank, said it was to be hoped that it would ultimately lead to a more concerted monetary policy throughout the world, which would eliminate the necessity of frequent changes in Bank rates, with their resultant adjustments in the volumes of internal circulation, cost of production and wage standards. Presiding at the annual meeting of British Metal Corporation, Mr C. V. Sale said that tin was an outstanding example of the ill-effects of unrestrained competition. As a result of the cycle: low prices, scarcity, high prices, over-production, heavy stocks and low prices, tin sold in 1927 at £320 per ton, was offered to-day at £164 per ton. At the meeting of the Ford Motor Company the chairman said that contracts had been placed to the value of over £1,400,000, while payments in respect of work done amounted to approximately £390,000.

CAPITAL ISSUES.

The fourth British corporation loan of the year—that of the *Southampton Corporation*—was the largest so far, and was offered on the same terms which had proved initially unattractive to the public in the case of its predecessor. Last week's decline in Bank rate, however, and a change for the better in that incalculable quantity, public appetite, were reflected in the oversubscription of the loan, applicants for large amounts receiving only 60 per cent. The remaining issue, *Sackville Estates*, was a real property proposition of more than average merit. Nearly 70 per cent. of the issue had, however, been taken firm.

Grace National Bank

Hanover Square, New York, U.S.A.

A thoroughly organized international bank, giving special attention to the requirements of European banking correspondents.

Southampton Corporation.—Issue of **£1,650,000 5 per cent.** redeemable stock, 1947-1967, at £99 per cent. Repayable at par on March 31, 1967, if not previously cancelled by purchase in the open market or by agreement, but the Corporation may redeem at par at any time on or after March 31, 1947, on three months' notice. The rateable value of the County Borough is £1,266,738, and a penny rate is estimated to produce £4,950. The outstanding debt of the Corporation is £3,689,787. Trustees are authorised to invest in this stock.

Weston-super-Mare Gaslight Company—Issue by tender of £30,000 6 per cent. redeemable preference stock, to be redeemed at par on January 1, 1940. Minimum price, par. The net revenue of the company in 1929, after deduction of debentures, totalled £17,345, covering dividend on preference stock, including the present issue, 5.1 times. The present issue is to pay for the extension of works and plant rendered necessary by the constantly increasing demand for gas.

Sackville Estates, Limited.—Issue of **107,640 shares of £1** each at par. No part of the issue has been underwritten. The company was incorporated in England in 1893 to acquire and develop a freehold estate which now consists largely of warehouse property. The present issue is for the purpose of repaying bankers in connection with the purchase of all the shares in Kendal-Sinclair Estates, Ltd.

[Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, shorter notices, and dividend announcements will be found on page 618, under the heading "Company News."]

COMPANY MEETINGS, &c.

BRITANNIC ASSURANCE COMPANY, LIMITED.

CHAIRMAN'S SURVEY OF PAST YEAR'S RESULTS.
HEAVY TOLL OF INFLUENZA EPIDEMIC.
SUBSTANTIAL SUM ADDED TO INVESTMENT RESERVE.

The sixty-fourth annual ordinary general meeting of the shareholders of the Britannic Assurance Company, Ltd., was held on Friday, March 7th, at the chief offices, Broad Street Corner, Birmingham, Mr J. A. Jefferson, F.I.A. (chairman), presiding.

The Assistant Secretary (Mr F. A. Powell, A.C.A.) read the notice convening the meeting and the auditors' report.

Mr Jefferson, in moving the adoption of the report, said:—I presume I may, as on previous occasions, take the directors' report and accounts, which have been in your hands for some days now, as having been read. (Agreed.)

SALIENT FEATURES.

It has been my custom before dealing with the figures of the company to review as briefly as possible the salient features of the year to which the accounts refer. The first feature that would naturally come to one's mind is the influenza epidemic which was raging just about twelve months ago, and you will probably remember that, at our last annual meeting, I informed you of the drain on the company's resources caused by these epidemics, stating that at the time of the meeting our death claims in the industrial branch were £35,000 in excess of those of 1928. I also well remember that in 1927, in my reference to the epidemic of 1926, I appealed to the medical profession, pointing out the enormous scope that lay before them in the direction of investigating the cause, prevention and, naturally, the remedy of this oft-recurring disease. It will no doubt bring home to you the effect of these scourges when I tell you that the figure of £35,000 mentioned had, in the following seven weeks, increased to £131,000. Normally, of course, we expect our claims to increase as the business grows, and a reference to the accounts will show that in the industrial branch our death claims for 1929 exceeded those for 1928 by practically £150,000, and of this increase over £131.000 was incurred during the epidemic. In one week alone, namely, the tenth week of the year, we had to meet no less than 4,364 death claims for a sum assured amounting to £36,969—by a long way the highest figures in the company's history. In this connection may I also draw your attention to the words of Sir Thomas Neill in his last annual report of the National Amalgamated Approved Society, in which he expressed the hope "that the serious character of the last epidemic of influenza will so have impressed the Minister of Health and those responsible for the health of the country that, while the statistics are available, a committee will be set up to inquire where the weight of the illness has been, whether the treatment has been equal to the needs, and what, if any, improvements in methods of treatment can be recommended to protect the community as far as possible against a similar visitation Please do not think your directors are complaining at having to pay these claims, because, as we have so often stated, our business consists of having to pay just claims, but it is because of our unique position that we are able to see and have practical experience of the enormous drain these epidemics inflict on the country as a whole.

ENDOWMENT POLICIES.

The next outstanding event which followed very closely on the influenza epidemic was the passing of the 1929 Industrial and Friendly Societies Act, which was given Royal Assent on May 10th last. So much misunderstanding of the true position appears to exist that I feel it my bounden duty to you, as shareholders, and also to the holders of our 4,000,000 policies, to explain as briefly as possible exactly what led up to the position in which we found ourselves last year. For years all companies and societies had been in the habit of issuing endowment policies on the lives of children, that is, policies providing for the payment of a sum of money on the survivance of the child to a given age, or for the return of premiums in event of earlier death. We always considered this class of business to be perfectly legitimate, and that the return of premiums on the death of a child could be ignored in considering the statutory limitations imposed by Parliament on the sum assured that could be paid on the death of a child under ten years of age. Our views had, on more than one occasion, been confirmed by the powers that be, whose assurances on the matter were sufficient to remove any doubt that might exist regarding the legality of these contracts. However, when the Industrial Assurance Act, 1923, was before Parliament, those acting on our behalf suggested an amendment that would have removed even the slightest possibility of doubt, but, on the very distinct assurance that same would be quite unnecessary, the amendment was withdrawn. Imagine, therefore, our astonishment when we learned that, based on a decision of a magistrates' court at Merthyr Tydfil against one of the friendly societies, all these policies, numbering many hundreds of thousands, issued in perfectly good faith, were to be deemed illegal. That such far-reaching consequences should follow from such a decision may strike you as remarkable, but, after prolonged conferences and consultations, it was found that the only practicable way to remedy this most unsatisfactory state of affairs was to seek new legislation, and the irony of the whole position is that this new legislation would have been absolutely unnecessary if the simple amendment to which I have referred had been accepted in 1923.

FREE POLICY PRIVILEGES.

Time does not permit me to go into further details, but I must refer to one point because of its bearing on the figures with which I deal later. I refer to the cash surrender value and free policy privileges which were imposed upon the offices by the new Act. These were of an unprecedentedly generous character, and they affect existing as well as future contracts, and come into operation after only twelve months' premiums have been paid.

May I point out that the purely ordinary life offices always have been able and are still continuing to issue similar policies on the lives of children, free from any restrictions either as to the amount assured or the conditions governing cash surrender values and free paid-up policies.

You will remember the pleasure it gave me last year to make a preliminary announcement that we were considering some scheme of bonuses to our clients in the industrial branch. The directors considered many schemes, and, finally in August, we launched what we believed to be a logical and at the same time a simple scheme, under which policies, with certain few exceptions, which, becoming claims by death or maturity prior to March 31st of this year, have a cash addition to the sum assured varying from 5 per cent. for policies ten years in force to 20 per cent. for policies forty years or more in force. During the period the scheme was in operation last year the cost was over £11,000, and you will notice that, out of this year's surplus, we have allocated the sum of £50,000 to carry on the same scheme until March 31, 1931. Although we have committed ourselves for one year only, that is simply characteristic of our usual cautious policy, and if we did not believe that we could continue some such scheme as a permanent feature we should not have introduced it at all.

NATIONAL HEALTH INSURANCE.

Since our meeting of last year I am very proud indeed to inform you that I have been elected president of the National Amalgamated Approved Society—a society with which my late father was so closely connected, and who had so much to do with its formation. Having myself been associated with the society since its inception, I have had the great satisfaction of seeing its registered office staff grow from a solitary typist to its present total of 1,530.

Since the Insurance Act came into force in 1912 our agents have been actively engaged in this work of National Health Insurance; recruiting new members, collecting contribution cards and paying the members' benefits under the Act. This has been of very great service to the compulsorily insured persons who are also policyholders of the company, and to-day our representatives are serving over 340,000 insured members of the National Amalgamated.

During 1929 our representatives paid to these members no less than 663,621 benefit payments in respect of sickness, disablement and maternity benefits—amounting in all to a total of £424,922—representing an average payment of £1 5s. per member. You will see, therefore, that your company, although primarily engaged on life assurance, is also taking no mean part in the great work of National Health Insurance.

HOUSE PURCHASE SCHEME.

On several occasions I have referred to our house purchase scheme, and it may interest you to know that during the year under review we completed 768 cases for a total amount advanced of £355,000. From this you will see the average amount advanced per case is over £450, and once again I submit that we are doing excellent work

in this connection in helping to create a body of small capitalists—a feature which, I think you will agree, is very desirable in the interests of the nation. Since the scheme was launched—namely, in 1908—we have made advances in nearly 8,500 cases; and, of course, you must remember the hiatus caused by the war and the shortage of houses which followed for some years. Of these cases, approximately 3,500 have been repaid. This number includes many where the premature death of the mortgagor liquidated the debt in terms of the scheme and left the widow in full and unencumbered possession of the house. In many cases the mortgage was repaid by the borrower surviving the maturity date of the policy—thus enabling him to enjoy the fruits of his early thrift.

EFFECTS OF THE HATRY CRASH.

I can well imagine you are all expecting me to say something on another matter of great importance affecting our results for last year, namely, the financial position as affected by the unfortunate Hatry crash and the heavy deflation which occurred on the collapse of the American markets following the reckless gambling there. These occurrences, as you can well understand, seriously affected the market values of securities of every class, and no financial institution escaped their effect. Further, the depression caused by these occurrences was at its worst at the close of 1929, *i.e.*, the very time as at which we are required to revalue our Stock Exchange securities. Under such circumstances, it affords me very great pleasure to assure you that this company came through the ordeal remarkably well, thanks to the conservative policy which we have pursued in past years. I notice at some recent annual meetings statements have been made as to the effect on the values of the company's securities of the widespread depreciation following these occurrences, and I am glad to be able to assure you that the depreciation we experienced did not even encroach upon our special reserves. The fact that we have added a substantial sum to our investment reserve fund is a step taken purely as a precaution against any possible similar occurrence in the future. As was to be expected, there has been a substantial improvement in the values of securities during the few weeks of the present year which have already elapsed, and I find that this is represented by a sum of over £100,000 so far as the assets of this company are concerned.

A GENERAL SURVEY.

Taking a general survey of the accounts, I think you will agree our figures show that, despite the adverse circumstances to which I have already referred, we have had quite a successful year, and, on referring to my remarks last year, I see I stated that 1929 held out brighter prospects for us than we had had for some years past. I think the report we are now considering confirms those views, and in this connection I might say that our industrial debit for 1929 shows the largest increase made since the boom year of 1920, and is, in fact, 50 per cent. greater than our debit increase for 1928. I have often stated that a company like ours can be likened to a very sensitive barometer in that its progress indicates the economic conditions of the working classes, whose financial position is, in turn, dependent on the prosperity of the country generally. If this be accepted as a fact, then all I can say is that our results, as also the results of our friendly rivals which have already been published, show clearly that matters are not altogether bad in the old country, and, frankly, my own view is that we all require to cultivate a more optimistic outlook, and to have greater confidence in the future. At any rate, I am still an optimist, and I venture to say that, satisfactory as 1929 was for us as a company, I believe that the year 1930 will be a still better year.

INTEREST YIELD.

I would like to refer to the matter of our interest yield, both in this branch and the industrial branch. Our gross interest yield in the ordinary branch was £5 15s. 6d. per cent., which shows an increase of 3s. 6d. per cent. over the previous year, and in the industrial branch the yield was £5 14s. 7d. per cent., showing an increase of 4s. 1d. per cent. I am, of course, very pleased to report these increases, but I should like to explain how they have arisen. In the first place, during 1928 I purchased a considerable amount of ordinary shares, which brought no income into that financial year, as, of course, one does not take into account accrued interest on ordinary stocks as one does with fixed-interest-bearing securities. In the second place, the serious depression that existed in the latter half of the year on the Stock Exchange gave me opportunities of investing our surplus funds at very much better rates than had appertained for some years past.

Referring very briefly to Mr Murray Laing's valuation of the ordinary branch, you will notice that we have, out of the surplus disclosed, transferred £42,000 to the investment reserve fund.

We have again maintained our rate of reversionary bonus of £2 2s. per cent.—the cost being just over £200,000, and you will note we have carried forward the substantial sum of £114,000. Your directors, guided by Mr Laing, feel that it is wise, in the interests of our policyholders, to carry forward approximately one-half of the cost of the bonus, and this is in addition to the £50,000 contingency fund, which we still maintain.

In regard to the ordinary branch business of the British Legal, you will note a surplus is disclosed of just over £7,000, inclusive of some £2,500 brought forward from 1928. Out of this surplus we have transferred £3,000 to the investment reserve fund, and carried out our contract under the amalgamation agreement to provide a bonus of £1 per £100 sum assured to the with-profit policyholders, and have carried forward a balance of just over £3,000.

EXPENSES RATIO.

On the matter of expenses there is a slight increase as compared with last year—the ratio being 36.09 per cent. for 1929, as compared with 35.94 per cent. for 1928. The increase is very slight, and is more than accounted for by the fact that our new business costs have risen from 8.39 per cent. to 8.80 per cent., but this latter is a feature we do not regard with any regret in view of the fact that I have already been able to report such a satisfactory increase in our debit.

You will notice that out of the surplus disclosed by Mr Laing's valuation we have written £75,000 off the cost of acquiring the British Legal Assurance Company, which leaves only £75,000 still to be dealt with, and I have not the slightest doubt that this item will entirely disappear from our next balance sheet, and I am sure we can all congratulate ourselves on the manner in which we have been able to deal with this item.

The sum of £80,000 has been transferred to the investment reserve fund, and, as already stated, £50,000 has been allocated to the bonus scheme for Britannic policies.

As a result of the various transfers to investment reserve fund, amounting in all to £135,000, this fund now stands at the very substantial figure of £500,000.

In the general branch you will notice our premium income now amounts to £65,189, as compared with £52,644 last year. Whilst the growth is not rapid, it is quite substantial, and, moreover, as the premium income steadily increases year by year so will our profits from this branch increase. Our relations with the British General, I am glad to say, are still of the most cordial nature.

FEATURES OF THE BALANCE SHEET.

As is my usual custom, I would now like to draw your attention to a few of the more interesting features of the balance sheet.

Our mortgages on property have increased by £267,000, and this is mainly on account of our house-purchase scheme, to which I have already referred.

British Government securities as at December 31st last actually show a slight decrease, but at the present moment there is a considerable increase under this heading as we invested a quarter of a million in the new conversion loan issued in November last.

The three classes of Indian and Colonial securities have increased by over £240,000, as we still have great faith in our Colonies.

There is a small increase in our foreign Government and municipal securities of approximately £80,000. The major portion of our surplus funds has been invested in the three classes of debenture, preference and ordinary stocks—the total amount being over three-quarters of a million, of which approximately £400,000 was invested in ordinary stocks, and here again may I say that the very greatest possible care is taken with regard to the selection of these investments, and it is mainly due to our holdings in ordinary stocks that I have been able to report to you such a satisfactory interest yield.

Before closing you will allow me to take this opportunity of offering my personal thanks to my colleagues on the board, the staff at chief office and the field staff generally throughout the country for their loyal co-operation during a year which has not been without its difficulties. When a board of directors has such a loyal staff as we have we feel we can face any troubles that may come along and emerge from them triumphantly.

ACTUARY'S REMARKS.

Mr Murray Laing, in seconding the resolution, said the impression conveyed by the chairman's lucid survey of the company's financial position was one of "Britannic stability." The shareholders had grown accustomed year by year to the statement that the financial position of the company is thoroughly sound, but he wished to emphasise the fact that such an assurance given at the present time meant much more than in normal times. The far-reaching effects of the financial crisis of 1929 were such as to test the stability of every institution having large sums invested in Stock Exchange securities. The reassuring announcement, therefore, would be as welcome to the shareholders as it would be comforting to the policyholders.

He was glad to be able to say that, despite the heavy claim rate in the early months of last year, the mortality experienced for the year, taking the company as a whole, was "within the expectation."

This is a tribute to the stringency of the standards used in the valuation of the liabilities. It was highly satisfactory to be able to show, this year, surpluses which, in the aggregate, are in excess of those of any previous year, and it afforded him special pleasure to point out that the factor which more than any other had rendered such a position possible had been the very welcome increase in the rate of interest earned on the company's funds, a result for which the greatest credit was due to the chairman, whose special attention is given to this most important branch of the company's work.

PROFIT-SHARING SCHEME.

The maintenance of the ordinary branch bonus of 42s. per cent., and the definite announcement of a profit-sharing scheme to the policyholders in the industrial branch, who, in terms of their contracts, are not legally entitled to any such profits, were features of special significance.

VALUE OF LIFE ASSURANCE.

Results such as these ought, he thought, to bring home to every thoughtful person the outstanding advantages of life assurance—advantages which render it by far the best form of investment for those of moderate means. The number of occasions in the past few months when one has read in the Press of limited companies in difficulties or in liquidation, or of individuals who have been ruined if not driven to despair through the collapse of the company in which their savings have been invested, have been all too frequent. Much of this misfortune has been due to the impossible, and therefore alluring, prospects held out to investors by unscrupulous company promoters, and to the amazing credulity of the unwary investor anxious to "get rich quick." The end of all such cases is either loss or ruin. The wise man, and the happy man, is he who applies his savings to provide, by means of life assurance, for the protection of his dependants and for his own future needs, and he ventured to suggest that the present time is a most opportune one for bringing home this lesson. The "Britannic" exists to provide life assurance for all classes, and it is the constant aim of the company to offer the best benefits and the best service at the lowest rate of cost consistent with sound principles.

THE LARGE AND SMALL INVESTOR.

Satisfactory as the progress had been during the past year, Mr Laing did not think that even yet it is sufficiently recognised that the "Britannic" caters for those of substantial means as well as for the smaller investor, and he mentioned that, of the new business of £2,500,000 transacted in the ordinary branch last year, no fewer than 1,161 policies were for sums assured of £500 and upwards, the total amount assured under such policies being £840,000. The sums assured at risk in the ordinary branch amount, with bonus additions, to over twenty million pounds, which sum includes no less than a million and a-quarter of bonus additions. Certificates for this year's bonuses to the number of over 100,000 would, he stated, be issued to their branch offices throughout the country that day, and would, he hoped, be the means of bringing further business to the company from satisfied policyholders.

The report and accounts were unanimously adopted. Mr S. J. Port was unanimously re-elected a director of the company, and Messrs Flint and Thompson re-elected auditors to the company.

Votes of thanks to the directors, officials and the inside and outside staffs of the company for their loyal and efficient services throughout the year, and to the chairman for presiding, terminated the proceedings.

TRADE INDEMNITY COMPANY, LIMITED.

SATISFACTORY PROGRESS IN A DIFFICULT YEAR.

The twelfth ordinary general meeting of Trade Indemnity Company, Ltd., was held, on the 11th instant, at Cannon Street Hotel, London.

Mr C. E. Heath, O.B.E. (the chairman), said that, although the progress which the directors were able to report continued to be slow, they felt that it was satisfactory. Trade was undoubtedly bad, and this affected them in two ways; not only was there less business to insure, but there was also extra need of caution, which in itself also tended to diminish the company's account. Notwithstanding these drawbacks, their gross premiums had risen from £202,000 to £234,000, an increase of about 17 per cent. on the previous year. The number of policies had grown from 3,463 to 3,760, an increase of nearly 10 per cent. Their net premiums did not show so large an increase, but they, too, were greater than in the year before.

In addition to bad trade, there had been competition. A certain amount was to be expected, but he really thought they had some grounds for complaint as regarded competition from the Government Department. They had been told all along that when the insurance companies had taken up the business the Government would be content to stand aside. The Trade Indemnity Company could now certainly claim to represent the bulk of the great insurance companies. Their reinsurers' total funds amounted to the very large sum of about £400,000,000, and, although a great deal of that money belonged to life insurance and was not available for the company's purposes, this enormous sum was at least proof of the influential status of their supporters.

GOVERNMENT'S EXPERIMENT.

The Committee which had lately considered the matter, so far from recommending that the Government should now at all events work with the company, had suggested a further prolongation of the Government "experiment"—to use the Committee's own word. He was afraid the country had paid rather dearly for the experiment, which had cost the taxpayer well over a million, largely, he was afraid, to the benefit of the foreigner. It could not be said that the company's business was experimental. Those who were conducting it had had well over twenty-five years' experience of the subject, so that they were long past the experimental stage. They had insured one way or another last year something like £25,000,000 of transactions. Perhaps 40 per cent. of this could be reckoned as business which the Overseas Department was authorised to undertake. Of the remaining 60 per cent., a good part was connected with what eventually became export trade. All of it could certainly be said to promote employment, and it was done by carrying out their duty of making credit as good as cash. He hoped that those at the head of affairs would take note of these facts and give credit to the great insurance companies for what they had done.

Their foreign connections were still quite satisfactory. The participation in their friends' risks had been profitable, and the information given to the company by them, backed as it was by their participation in the risks they had recommended the company to take, had proved trustworthy. It was exceedingly important that their information from abroad should be the best obtainable, and he could imagine no better plan than that on which they had been working for some years. The information they themselves were able to give with respect to British firms was equally valuable to the foreign credit insurance companies. Their special friend in Germany, the Hermes Company, had worked in close co-operation with them, and had always been at one with them as to what were safe and what were unsafe classes of risk.

WORKING RESULTS.

His anticipations of a year ago, so far as the underwriting results of 1928 were concerned, had turned out to be correct, and they were able to transfer £25,457 to profit and loss account instead of £10,622. The net result of 1928 working was that they put £10,000 to reserve instead of £15,000, and paid the same dividend as last year, namely, 6 per cent., less tax.

In respect of 1929, the result of the underwriting so far had not been so good. The ratio of losses as compared with the same moment in 1928 had gone up, but they were not over the average, and the directors had every hope that the year would eventually prove to be satisfactory.

In conclusion, the Chairman paid a warm tribute to the services of Mr H. S. Spain, the chief underwriter, of Mr Herring and Mr Patrick, who were now responsible for most of the underwriting—subject, of course, to Mr Spain's general supervision—and to Lord Francis Hill (the secretary), and the whole staff.

Mr C. H. Falloon seconded the motion, which was carried unanimously.

THE SCOTTISH PROVIDENT INSTITUTION MUTUAL LIFE ASSURANCE.

RECORD NEW BUSINESS.

POPULARITY OF THE DISTINCTIVE SYSTEM.

TOTAL FUNDS, £21,622,342.

The ninety-second annual general meeting of the Scottish Provident Institution was held in Edinburgh on Wednesday, March 12, 1930, Mr George M. Brown in the chair.

The Chairman, in moving the adoption of the report, said :—

The net new ordinary business completed during 1929 amounted to £3,098,580. This constitutes a record. It shows an increase of over £300,000 on the figures of the previous year.

THE DISTINCTIVE SYSTEM.

The most interesting feature of the year's business is that these record figures are mainly due to the renewed popularity of the distinctive system of whole-life assurance, which has been the specialty of the institution since its foundation. Last year, as our chairman explained to you, we reduced the rates of premium for new entrants. This revision of rates commended itself to the members, the staff and the agents of the institution, and you have now the evidence of an immediate and gratifying response by the public.

Though this form of assurance is known as "whole life," the name does not imply that the premiums need be paid throughout the whole of life. Whole-life assurance may be secured either by continuous yearly payments or by a limited number of payments. As a matter of fact the bulk of our business is done on the limited payments scales.

It was round this idea of whole-life assurance with these alternative methods of payment, that the institution's distinctive system was built up. It was considered possible to offer the assurance at very low rates, to provide unquestionable security, and yet, by careful selection of lives, by careful investment of funds and by economical management, to accumulate a surplus. Finally, it was decided to divide such surplus as might be accumulated among those policyholders only who proved to be good lives.

That, briefly, is our distinctive system. To-day, modernised, as it were, in the light of present-day mortality experience and present-day investment conditions, it is renewing its youth and still expanding the institution's business in the face of the most severe competition. The figures that we present to you to-day are a remarkable tribute to the wisdom of those who thought out our distinctive system ninety years ago.

NEW PREMIUMS.

The net new premiums amounted to £149,403. This is about £42,000 less than we received in 1928, but when I point out that single-premium payments amounted in 1928 to £108,000 and in 1929 to only £63,000, the difference is explained. Much of the single payment business done in recent years has been effected for the purpose of securing relief from super-tax or sur-tax. As the chairman stated five years ago, the institution has not sought after this class of business. The amount done by us has been only fractional compared with what has been transacted elsewhere, and very few of our policies have been burdened with loans at their inception. The board do not regret that single premium business has been further diminished in 1929. It has been more than replaced by healthier business of a less financial and more purely insurance character, the premium income from which will be spread over a number of years.

LARGE ANNUITY BUSINESS.

We have, as you will see, transacted a very large annuity business during the past year. The consideration money received was no less than £390,759, with a further sum of £965 representing the first of a series of annual payments for annuities commencing later in life. The deaths of annuitants already on the books relieved the institution of the payment of sums amounting to £9,726.

The aggregate amount of the claims, less reassurances, was £1,112,729, this total being £141,000 less than that reported in 1928. The ratio of the actual to the "expected" death claims was 69 per cent., showing a satisfactory experience.

RECORD INCREASE.

The total funds now amount to £21,622,342, an increase during the year of, in round figures, £885,000, the largest increase we have ever reported. The decrease in claims and the large amount received as the price of annuities have been important factors contributing to this result.

It is satisfactory to find that there has been a further increase in the rate of interest realised on the total funds, the gross rate being £5 12s. 7d. per cent. and the net rate, after deduction of income tax, being £4 18s. 4d. per cent.

INVESTMENTS.

It will doubtless be of interest to you if I say a few words about our investments. We have no confession to make about interests in that group of companies of which so much has been heard in the last few months—for we had no such interests—or about losses in America—for our American holdings are very few and very small. Unfortunately, the indirect effects of financial scandals and financial crises are not confined to particular classes of securities. Every one present realises, I am sure, that no insurance office or investment company of any sort, however careful and however well advised, could go through 1929 without its investments being more or less affected by the severe drop in values in the last three months of that year, when every group on the Stock Exchange List showed a depreciation. Under these circumstances it is highly satisfactory that at December 31, 1929, not only was our reserve fund intact, but the market value of our Stock Exchange securities, taken in the aggregate, showed a substantial surplus over the value at which they stand in our books.

NEW BRANCHES.

The position of the institution in London has been further strengthened during the year. We have for years past had the chief London office at 3, Lombard Street, and the West End office in Pall Mall. So great is the competition for business in the City, however, that we are apt to miss opportunities unless we can offer facilities for its transaction in the immediate vicinity of its origin. A little over a year ago we decided to open a new branch in Chancery Lane, in the Law Courts district. The returns from that branch have already justified our action. Encouraged by this experience we are now going to open a fourth office in Lime Street, E.C., which is expected to bring in a further accretion of good business.

STEADY EXPANSION.

The report presented to-day bears witness to another year's satisfactory progress on traditional lines. The normal business of the institution is the issue of contracts affording either protection against the common consequences of death or provision for old age, and the board is well content to see that normal business expanding gradually but surely and steadily without startling figures or sensational developments. The results of the past year afford ample evidence that there is still scope for an institution conducted on these principles and offering to the public a sound and attractive form of assurance against the chances and changes of human life.

The motion for the adoption of the report was seconded by Mr H. M. D. Watson, C.A., and carried unanimously.

HUNGARIAN GENERAL CREDITBANK.

INCREASED NET PROFITS.

DIVIDEND MAINTAINED.

RESERVE APPROPRIATIONS.

The board of the Hungarian General Creditbank, on their meeting, held on March 6, 1930, established the balance for the business year 1929, closing with a net profit of 7,496,453.12 pengö, as against 7,446,928.64 pengö in the year 1928. The shown profit does not comprise the business results of the foreign branches.

DIVIDEND AND RESERVES.

The board of directors decided to submit to the sixty-second ordinary general meeting, convoked for the 19th inst., a motion to allot, the same as the previous year, a dividend of 5.50 pengö per share, making 4,554,000 pengö in all. The board of directors is going to propose further the appropriation of 800,000 pengö for the strengthening of the ordinary reserve fund; 200,000 pengö for the depreciation reserve fund; 300,000 pengö (free of royalties) for the endowment of the Employees' Pension Institute, established under Act XL of 1928 on behalf of the employees in active service; 350,000 pengö (free of royalties) for the Pension Fund of the retired employees; 850,000 pengö (free of royalties) for remunerations to the staff, and finally 50,000 pengö for the relief funds of the employees.

BALANCE SHEET ITEMS.

The chief items of the balance sheet show the following development since December 31, 1928 :—

The amount of "Debtors" advanced from 192.6 million pengö to 199.1 million pengö; that of "Bills Discounted" from 101.6 million to 106.5 million pengö. The amount of "Stock in Hand" increased by 0.5 million pengö, and that of "Sundry Investments" by 0.9 million pengö, which increase proceeds mainly from the payments effected in connection with the taking over of new shares of the different banking institutes and industrial undertakings appertaining to the concern of the bank on occasion of their increase of capital.

SAVING DEPOSITS AND CURRENT ACCOUNT DEPOSITS.

"Savings Deposits" and "Current Account Deposits" show an increase of 24.1 million pengö, 4,000,000 pengö thereof falling to the share of the former and 20,100,000 pengö to that of the latter. The amount of "Sundry Creditors" decreased by 21.6 million pengö, so that by December 31, 1929, foreign capital entrusted to the custody of the bank rose to 346 million pengö.

MORTGAGE LOANS.

"Mortgage Loans serving as security for Mortgage Bonds" figures at the close of 1929 at $7,623,793 ($7,462,066 at the end of 1928); the mortgage loans—excepting $841,072 granted upon houses—are covered by agricultural properties. Out of the mortgage loans the amount of 12.3 million pengö was transferred to the Banks Co-operative Society for the issuing of mortgage bonds, while the bank's own mortgage bonds in circulation rose from 8 million pengö to 18.2 million pengö as a result of 10.2 million pengö having been placed within the last year.

The capital of the pension funds increased from 5.6 million pengö to 6.4 million pengö, that of the employees' relief funds from 372,000 pengö to 508,000 pengö.

CAPITAL.

The bank's visible capital advanced from 63.5 million pengö to 64.5 million pengö, which amount does not include the assets of the pension and relief funds.

The total on one side of the balance sheet appears at 457.8 million pengö, as against 443.9 million pengö in the year 1928.

The aggregate turn-over on one side of the ledger advanced to 25,460 million pengö (22,431 million pengö in 1928).

The proposed dividend of 5.50 pengö per share is equal to returns of 11 per cent. on the face value of the shares and to an interest of 7.06 per cent. on the bank's visible capital.

SKEFKO BALL BEARING COMPANY, LIMITED.

MARKED GROWTH AND DEVELOPMENT OF THE BUSINESS.

ENLARGEMENTS AND EXTENSIONS.

SIR HENRY PENSON'S REVIEW.

The twentieth ordinary general meeting of the Skefko Ball Bearing Company, Ltd., was held, on the 7th instant, at the Skefko Works, Luton.

Sir Henry Penson, before moving the adoption of the report and statement of accounts for the year ended December 31, 1929, referred to the very severe loss which the company had sustained through the death of Mr Harold Bendixson, a very valued member of the board.

Turning to the achievements of the past year he went on to say :—The past year has been one of marked growth and development in every branch of the company's business, and the report and balance sheet cannot fail to give cause for satisfaction to the shareholders.

INCREASED PRODUCTION.

The necessity of producing a large number of different types and sizes of ball and roller bearings has always been the principal obstacle in the way of lowering the costs of production in the ball-bearing industry, and it is gratifying, therefore, to be able to state that we have overcome this difficulty to a great extent in the new extension to our works at Luton, now in full production. The results of the continuous efforts of your company to rationalise production will clearly be seen, I think, from the following table of the average daily output of ball and roller bearings per factory employees during the last five years : In 1925, 6.2; 1926, 8.4; 1927, 9.8; 1928, 10.9; and in 1929, 12.2. In view of this increase in production per employee it is perhaps only natural, yet very gratifying, that the average pay in the works should now be higher than it has ever been since the post-war boom period.

There is a general impression prevailing that rationalisation leads to increased unemployment, but I am happy to say that, in spite of new labour-saving methods of production introduced by your company, employment is now given to more people than ever before—with the exception of a short period in 1925.

OUTPUT.

The output in our ball factory has reached approximately 1,000,000 balls per day—which is more than the quantity used in our production of ball bearings. Sales of loose balls have increased considerably, but the price level is still very depressed. With the addition to the new factory, the production of bearings has increased as anticipated, but even now it is insufficient to meet the demand. I am glad to say that this increase in demand comes from all classes of industries—with the exception of agriculture, which is, of course, at present in a very depressed state. The following facts indicating the order position may, perhaps, be of interest : Unfilled orders at December 31, 1929, were 51 per cent. higher than the previous year. Orders from the motor-car and motor-cycle industries, which in 1927 amounted to about 1,100,000 bearings, increased to 2,000,000 bearings in 1929. In view of the present general conditions of British industry, it is worthy of note that orders in hand for the first month of this year are 19 per cent. higher than for the corresponding period of last year.

In line with the satisfactory increase in production and sales, I am pleased to say that the scope of application for both ball and roller bearings continues to expand, particularly in the heavier applications where hitherto the use of anti-friction bearings has not been so general.

I would refer particularly to the steadily increasing use of our double-row self-aligning roller bearings for such applications as railway axle boxes, steel-rolling mills, paper-making machinery, cement-making machinery, and other similar fields where load and speed conditions are particularly severe. In every instance, especially in the case of railway axle bearings, which are now in use on 83 important railways of the world, the adoption of roller bearings has proved a success, and we may therefore look forward to a growing demand for our larger products.

NEW EXTENSIONS.

I have already referred to the recent enlargement of the works, but expansion does not stop here. The considerable increase in demand for the products of your company, as well as the desirability of procuring more floor space for office accommodation and rationalisation of production in the original factory at Luton have necessitated new extensions. Part of these are now under construction, and the remainder will be commenced in the immediate future. These latter extensions will increase the productive capacity of the factory by approximately 30 per cent.

I am glad to be able to say that these important additions to buildings and plant will be made without the necessity of obtaining new capital in any form.

BALANCE-SHEET ITEMS.

The principal items of the 1929 balance sheet will be seen from the following table, which also shows the position at the end of the two previous years :—

	1929.	1928.	1927.
	£	£	£
*Net profit for year	60,056	40,930	28,652
Bank overdraft	—	21,603	37,801
Cash at bank	30,727	—	—
Creditors and bills payable ...	106,155	70,793	73,294
Plant and properties (less reserves)	222,656	236,842	240,513
Debtors (less reserves)	123,065	95,264	83,709
Stocks	307,752	302,437	286,372
* After charging depreciation, reserves, etc., amounting to ...	45,330	42,867	26,951

The increases in stock figures, as well as in debtors and creditors, are accounted for by the increased turnover.

PROFITS.

The net profits, after charging depreciation, reserves, taxes, directors' and auditors' fees, etc., for the last three years have been (in per cent. of the share capital) : 1927, 6 per cent.; 1928, 8 per cent.; and in 1929, 12 per cent.

For the present year the net earnings, before charging depreciation, reserves, etc., are about £105,000, which represents 21 per cent. of the capital working in your company, so that I think you will agree with me that the net profit is conservatively calculated.

BRITISH CAPITAL.

It is also of special interest to note that during the period under review the International SKF concern, to which the company is affiliated, has made a second issue of shares in London. I am glad to be able to put on record that now, after this second issue, there is more than £2,000,000 British capital working in SKF, and I think I am right in saying that this is a larger amount of British capital than is invested in all the other ball and roller-bearing industries of the world put together.

The report was unanimously adopted.

The retiring directors were re-elected, and Messrs Price, Waterhouse and Company were re-appointed auditors.

BRITISH AND GERMAN TRUST, LIMITED.

INCREASED DIVIDEND ON THE ORDINARY STOCK.

INVESTMENT POSITION.

MR A. R. WRAGG ON GERMANY'S ECONOMIC AND TRADE PROBLEMS.

The fourth annual general meeting of the British and German Trust, Ltd., was held, on the 11th instant, at the offices of the company, 41, Threadneedle Street, London, E.C.

Mr A. R. Wragg (chairman of the company) presided.

The Secretary (Mr D. H. Scott) having read the notice convening the meeting,

The Chairman said: Gentlemen,—As the report and accounts have doubtless already received your consideration, I will, with your permission, take them as read. (Agreed.)

In February, 1929, the company increased its authorised capital to £1,500,000 by the creation of 750,000 shares of £1 each, 500,000 of which were issued as 5½ per cent. second preference shares (since converted into stock), carrying the right until March 13, 1933, to subscribe at the price of £2 per share for one £1 ordinary share in respect of every £2 of second preference stock held, the balance of 250,000 shares remaining unissued in the form of £1 ordinary shares, to be held in portfolio pending the exercise of the above subscription right. The proceeds of the issue of second preference shares were gradually invested in suitable securities.

LOANS AND INVESTMENTS IN GERMANY.

The book value of our total investments and loans amounted as at December 31, 1929, to £2,254,907 7s. 3d. Of this sum mortgage loans in Germany were represented by £895,129 19s. 6d. This shows a reduction, in consequence of sinking fund repayments, of £51,464 11s. 2d., as compared with the figure of £946,594 10s. 8d. at which they stood a year previously.

We have received satisfactory reports from our advisory council in Germany regarding the position of these loans, on the strength of which the board is satisfied that all the companies to whom the trust has granted loans are good for their engagements, and should be, as far as one can anticipate, in a position to fulfil their obligations *vis-à-vis* the trust.

The various classifications of our miscellaneous investments, having a book value of £1,359,777 7s. 9d., are set out in the report. It will be seen that the trust's investments in Germany, including mortgage loans, amount to 49.48 per cent. of the total.

NET REVENUE AND DIVIDEND.

After allowing for all charges, including taxation, a net revenue of £80,346 16s. 4d. is shown, which, I think you will agree, is a very satisfactory figure. Adding the amount of £19,076 4s. 10d. brought forward from 1928, making in all £99,423 1s. 2d., and deducting dividends paid on July 15, 1929, and January 15, 1930, on the preference stocks, a balance of £57,789 14s. 4d. remains, out of which the expenses incurred in connection with the issue of the second preference shares, amounting to £12,666 1s. 8d., have been entirely written off. Out of the remaining £45,123 12s. 8d. the directors now recommend the payment of a dividend of 8 per cent., less tax, on the ordinary stock, absorbing £25,600, and leaving a balance of £19,523 12s. 8d. to be carried forward.

As has been pointed out in the report, the amount earned on the ordinary stock, before writing off the expenses of the increase of capital and issue of 5½ per cent. second preference shares (but after charging income tax) is equivalent to 12.1 per cent., less tax.

The company did not have the benefit of the proceeds of the issue of the second preference shares for a full year, and consequently the income available for the ordinary stock for the current year should show a substantial increase over the above figure.

VALUATION OF INVESTMENTS.

During the year capital profits of £12,726 1s. 10d. were realised. This amount, together with the balance standing at the credit of this account as at December 31, 1928, in all £61,962 5s. 10d., has been transferred to a depreciation reserve, and this reserve has been deducted from the total book value of the investments before arriving at the balance-sheet figure. A valuation of the investments as at December 31, 1929, on the basis stated in the balance sheet, gives a figure of £2,188,854 13s. 2d., which is £66,052 14s. less than the book value appearing on the balance sheet.

This depreciation is naturally a great disappointment to your directors, and we hope that it is only temporary, but a similar position has had to be faced by the board of every trust company throughout the country owing to the world-wide fall in security values during the past 12 months. Taking all the circumstances into consideration, the board felt justified in recommending an increased dividend on the ordinary stock of the company, especially as an 8 per cent. dividend only represents two-thirds of the amount actually earned on the ordinary stock. Moreover, as I have already pointed out, we anticipate an increase in earnings for the current year.

It may be of interest to you to know that since the formation of the company, only four years ago, it has been possible to write off completely £94,000 of preliminary and issue expenses and debenture discount.

GENERAL CONDITIONS.

I will now turn for a moment to the consideration of world conditions during 1929. The general tendency has been distinctly unfavourable, and the year will long be remembered for the very pronounced shrinkage in Stock Exchange values throughout the world. The prices of raw materials have also fallen except in a few cases where stabilisation has been effected by artificial means. Industry in general is passing through a difficult time, but the downward trend of money rates and the cheapness of raw materials should, after the necessary period of readjustment, lead to renewed activity.

One of the difficulties which must be recognised is that caused by the tremendous expansion which has taken place since the war in the whole vast industrial apparatus of the world. This expansion has taken place at a rate which, sooner or later, was bound to become disastrous unless consumption could keep pace with it, and this it has failed to do.

It is true that big efforts, and in many instances successful ones, have been made to attain a more scientific control of production by amalgamation and cartelisation of kindred concerns. But it is also unfortunately true that this country lags behind in that respect, and is, doubtless, therefore feeling the result of the present crisis more severely than other countries. From time to time one reads of international agreements concluded between these different combines, and hears only too often of the difficulty of getting this country into line, principally because there are not sufficiently big combinations in this country with which to negotiate.

The large proportion of our total industrial production which has to find a market overseas makes us more vulnerable to a general trade depression than other countries, and at the same time our home market is subjected to the severe competition of similar products manufactured abroad under conditions which are often much more favourable. This is due principally to thorough rationalisation of our competitors, and only partly to the lower wages and lower standards of living prevailing abroad.

LAISSER-FAIRE IN INDUSTRIAL DEVELOPMENT.

I am, of course, not suggesting that amalgamations or the cartelisation of industry is the whole solution of the problem with which the world is confronted. But it certainly is an important step in the right direction, because it opens the way to international agreements, which, long as they may take to negotiate, should in the end, from the point of view of the world as a whole, lead to a wiser investment of capital and a better direction of the activities of labour than has been the case for the last few decades. The indiscriminate investment of new capital and uncontrolled growth of industry has been the result of *laisser-faire*—the policy of non-interference with industrial development. This policy doubtless gave the great impetus to the industrial expansion during the latter part of the last century and placed England at that time at the top of the world's industrial nations, but in my view it has had its day, and is tending to undermine the immense structure which it has erected. This applies not to one particular country, but to the whole world, although some countries will be affected much sooner than others, according to the proportion between their industrial and agricultural population. The large increase in unemployment in the United States, which I believe is not entirely due to the after-effects of the Stock Exchange crisis, is focussing American attention on this problem. The *laisser-faire* policy is partly based on a theory of the mobility and adaptability of labour which has been shown in practice to be far less than the older theoretical economists would have us believe. I think it is clear that, if we look ahead another generation, further unbridled industrial expansion will lead to trade wars of an intensity hitherto unknown, and to attempts, which we should all deplore, to depress the standard of living of the wage-earner. I hope and believe that the necessary measure of control over industrial development can be exercised by private enterprise through the means of international agreements, because

if not it might be that Governments would feel impelled to attempt to influence the lines along which such expansion should take place.

IMPORTANCE OF TRAINED PERSONNEL.

A matter of equal importance to the rationalisation and physical amalgamation of companies in the same line of business is the training of the *personnel* to manage these larger units. This would at first sight appear to be an obvious and inherent part of the larger problem. I fear, however, there is sometimes a tendency to overlook its vital importance. An amalgamation may be brought about, the new and larger unit may be rationalised and efficiently equipped, and under the direction of the leading personality in the original group of companies may prosper. But unless an integral part of that amalgamation is a proper scheme of "training for management," whereby the most promising men in the organisation are selected, trained, and fairly rapidly advanced to positions of increasing responsibility, the new concern cannot achieve efficiency of that enduring quality which can alone maintain our position among the industrial nations of the world.

I have touched on these theoretical problems at the annual meeting of a trust company because I consider them at the present time of vital importance to this country and therefore to the investing public.

POSITION IN GERMANY.

In view of the substantial interest which this company has in Germany I shall devote the rest of my speech to giving you some information about the situation in that country as it has developed during the last year.

The main factor in the economic life of Germany during the past year has been the series of conferences, in Paris, Baden-Baden, and the Hague, dealing with the reparations problem. The internal political excitement, as well as the international tension caused by these conferences, has undoubtedly retarded the rate of progress recorded since the inflation period. It was only in January of this year that the Hague Conference agreed on recommending the adoption of the Young Plan of payments. In view of the advantages to all concerned, there is, I think, little doubt that it will be ratified in due course by the Governments concerned. Although it may be less elastic than the Dawes Plan, there is no doubt to my mind that it will give Germany a breathing space for the next few years, both because her immediate burdens are substantially less than those borne under the Dawes Plan, and because it does away with all foreign control and leaves Germany the full responsibility of settling her own financial affairs. The psychological effect alone of this abolition of control and the elimination of the irritation caused thereby should not be underestimated.

The creation of the Reparations Bank, which will handle the different payments from debtor countries to creditor countries, lifts the reparations problem from the political sphere to a purely economic one, and, as such, can only be welcomed by all concerned. There is little doubt that this bank will become an important factor in international debt settlements. It may also, in the course of time, be used by the various central banks for the purpose of international payments now made in the form of gold, thus doing away with the necessity of costly gold shipments from one country to another. It is to be hoped that it will ultimately lead to a more concerted monetary policy throughout the world, which should eliminate the necessity of frequent changes in the Bank rates, with their resultant adjustments in the volumes of internal circulation, cost of production, wage standards, and all the other factors linked up therewith.

GERMAN MONETARY AND TRADE STATISTICS.

A point to which I should like to draw particular attention is the situation arising out of the breakdown of the Paris Reparations Conference in May last year. Large amounts of foreign money were withdrawn from Germany, resulting in the reduction of the gold reserves of the Reichsbank from about £140,000,000 to about £90,000,000, but adequate proof was furnished that the mechanism of the German money market and its controlling organ, the Reichsbank, is such as to inspire great confidence in the stability of the Reichsmark. Credit restriction and a restriction in the volume of circulation were applied, so as to prevent the gold cover from declining below the legal minimum of 40 per cent., and, as a result of subsequent increases in the official rate of discount, the Reichsbank succeeded in the course of the year in inducing an influx of gold, so that to-day practically the whole of the losses have been made good and the position is as strong as it was at the beginning of 1929.

Out of the great mass of statistical material bearing upon Germany's development during the past year the most striking figures are no doubt those for production of coal, brown coal, coke, steel, pig iron, and potash. It is remarkable to note that, in comparing these figures with the production figures for the same territory before the war (*i.e.*, leaving out those territories which now belong to other countries), they all show a very substantial increase. They also show a considerable advance on the figures for the preceding two years.

Another feature worth mentioning is the fact that the published trade figures show an excess of exports over imports of Rm.48,000,000 (about £2,400,000), compared with an adverse balance of Rm.1,204,000,000 (about £60,000,000) in 1928. Imports remained stationary at about Rm. 13,432,000,000, while exports, including reparation deliveries, rose to about Rm.13,480,000,000, compared to Rm. 12,450,000,000 in 1928 and Rm.10,950,000,000 in 1927. It cannot be said, however, that this big increase in exports has brought with it a proportionate increase in profits. On the contrary, in many cases exports have been made at a loss in the endeavour to keep industries going and to retard the increase in the number of unemployed, which has risen to 2,210,000 in the first months of this year (compared with 710,000 on August 1, 1929, and 2,220,000 a year ago.

SHORTAGE OF NEW CAPITAL.

In the autumn of last year the depression prevailing all over the world became likewise more pronounced in Germany, which, in addition, continued to suffer from a great shortage of new capital. During the past year the influx of foreign capital into Germany only amounted to 37.5 per cent. of the figure for 1928 (Rm.600,000,000, against Rm.1,600,000,000). Internally also the accumulation of new capital appears to have lagged far behind that of the year 1928 to judge from the falling off in the rate of increase of savings and bank deposits. The increase in Savings Bank deposits of Rm.1,472,000,000 (about £73,500,000) fell short of the increase during the preceding year by Rm.560,000,000 (£28,000,000), while the increase in bank deposits only amounted to a fraction of the increase during 1928.

Owing to the difficulty of raising long-term money either at home or abroad, a considerable amount of short-dated indebtedness has been incurred during the past year, principally by the municipalities, and it was reported last autumn that the aggregate short-dated indebtedness of German towns with a population of over 50,000 amounted to Rm.1,800,000,000 (£90,000,000). Serious efforts have been made to adjust this situation. An actual embargo has been placed on the incurring of further short-term debts, and restrictions have been imposed with regard to current expenditure. It should be borne in mind, however, that a large part of this short-dated indebtedness has been incurred for reproductive purposes, such as the extension of gas and water works and the building of power stations, and that such public utilities, besides providing for the interest and amortisation of such indebtedness, should in due course, in addition, increase municipal revenues.

The difficulty of raising long-term money has also had its effect on the finances of the Reich, as evidenced by the lack of success attending the issue of the Government loan in the early part of last year. In addition, the very large increase in unemployed, with its resultant unforeseen expenditure, led to a severe shortage in the Treasury, so that the floating debt reached the figure of Rm.1,694,000,000 (about £85,000,000), as compared with Rm.768,000,000 (about £39,000,000) at the end of 1928. Legislation was passed in December last to readjust this position to the extent of about Rm.450,000,000 (about £22,000,000) during the current Budget year, and this, together with the proceeds of the loan of Rm.500,000,000 (about £25,000,000) concluded with the Swedish Match Monopoly, as well as the margin created in next year's Budget by the adoption of the Young Plan, should tend towards re-establishing a normal position in the finances of the Reich.

BEGINNING A NEW PHASE.

To sum up, it is my impression that the successful issue of the Hague Conference and the adoption of the Young Plan in due course by the various Governments concerned will mean the beginning of a new phase in Germany. In the middle of a severe world-wide financial and economic crisis, Germany had to deal last year with problems affecting her future for generations to come. The political and psychological effect of all this no doubt retarded her rate of progress. The fact that none the less her relatively new political and economic organisation has worked smoothly confirms me in my opinion that Germany has consolidated her position as one of the leading countries of the world, and that she offers to-day as good an investment risk as any other European country.

I now have pleasure in formally moving:—"That the directors' report and accounts for the year ended December 31, 1929, submitted to this meeting be and are hereby received and adopted, and that for the year ended December 31, 1929, a dividend on the ordinary stock of 8 per cent., less tax, be declared and paid."

Lord Ashfield seconded the resolution, which was carried unanimously.

Messrs. Deloitte, Plender, Griffiths and Co. were reappointed auditors, and a cordial vote of thanks to the chairman concluded the proceedings.

Ford Motor Company Limited

PROFITS EXCEED £1,000,000

ENTIRE CAPITAL REPRESENTED BY TANGIBLE ASSETS

THE first ordinary general meeting of Ford Motor Company, Ltd., was held, on the 7th instant, at the Hotel Cecil, London.

Sir Percival Perry (chairman of the company), in the course of his speech, said: The profit of £1,013,506 14s. 9d., as shown on our accounts, has been earned—excepting as explained in the profit and loss account—entirely from our own trading.

Notwithstanding that a large sum of our capital is represented by such investments, we are able, out of our independent trading profits, to recommend a dividend of 10 per cent. upon the entire capital of £7,000,000.

In addition to the trading operations, we have during 1929 been occupied with transactions affecting our capital assets, with the result that we have been able to create a reserve fund of £811,736 7s. 10d. It is proposed out of this reserve entirely to write off £350,000, patents, licences, &c., £250,000 goodwill, and £68,324 balance of registration and preliminary expenses.

Our company is, therefore, in the fortunate position of owning most valuable goodwill, patents, trade marks and other exclusive rights, and at the same time having its entire capital represented by tangible assets.

DAGENHAM PROGRESS.

Regarding Dagenham. Our plans there are going ahead according to programme. We expect, during the current year, to commence manufacturing operations in some departments. But it will not be until 1931, or probably 1932, that everything is completed.

We own approximately 491 acres of freehold land, and our own factories will, in the first instance, occupy approximately 71 acres, with 41 retained for immediate development.

Contracts have been placed already to the value of over £1,400,000. Contracts are now being negotiated to the value of over £1,000,000, and payments to date in respect of work done amount to approximately £390,000. Our associated European Companies have many and considerable commitments for securing bigger and more profitable future business.

ECONOMIES OF INDUSTRY COUPLED WITH HIGH WAGES.

Almost everyone interested in the economies of industry is aware of the Ford theory (and practice) of high wages. For example, the average wage paid at our Manchester works (2,670 men) is 2s. 9¾d. per hour, and at Cork (6,705 men), 2s. 3¾d. per hour. We work only a 40-hour week. Wages paid in Ford factories throughout Europe are, having regard to variations in the cost of living, in proportion.

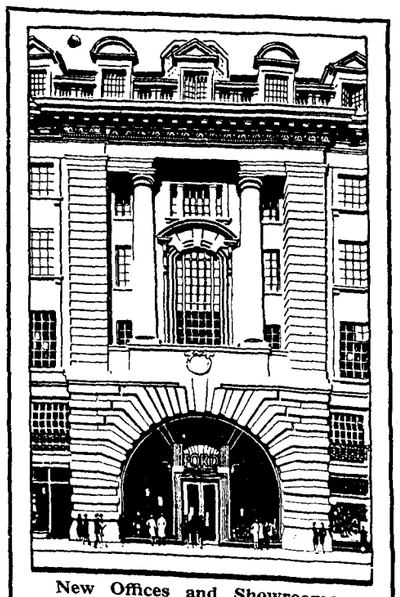
LEAGUE OF NATIONS TARIFF TRUCE.

There is another aspect of our business which is not quite so pleasant to contemplate. Sitting at Geneva at the present time there is a committee of the League of Nations endeavouring to bring about what is called a tariff truce among the nations of Europe. Simultaneously many of the individual Governments are proposing to increase existing protective duties. Personally, I hope and believe that common sense and economic wisdom will prevail so as to alleviate, if not entirely eliminate, any increase of burdens upon international trade.

BRITISH CARS AND PATRIOTISM.

In our own country at the present moment there are two outstanding subjects which are calculated closely to affect our interests. The first is a concerted movement on the part of certain of our competitors in business to persuade the public that what is described as a British vehicle is not only a better vehicle, but is more valuable in the hands of the user as denoting an expression of patriotism and devotion to the national interests.

If we are to examine what "British" means, I think we shall find that the Ford car is and will be more honestly British than any other automobile which is offered for sale on this market. This company was formed to acquire the monopoly of supply and



New Offices and Showrooms: 88, Regent Street, London, W.1.

sale of Ford vehicles in certain European, African and Asiatic territories. It did not start with any pious hopes, or prospectus anticipations, the realisation of which were dependent upon speculation of British capital or the exercise of superior British brains and organisation. Business had been already created which was immensely profitable and in every commercial sense highly satisfactory.

By the magnanimity and altruism of Mr Henry Ford and his son, Mr Edsel Ford, we were guaranteed the provision of capital sufficient to carry out the only stipulation made in respect of the business, viz., that we should erect and equip manufacturing resources in this country adequate to carry on and extend the profitable business which already had been created and developed. We have made good progress toward the attainment of our objective. In approximate figures to-day the Ford car, represented by its retail price at Manchester, contains less than 20 per cent. of imports. When our works at Dagenham are completed even this very small quantity of imports will be entirely eliminated.

The figures submitted in our accounts to-day include no less than £2,500,000 export trade. I think this is a volume of British automobile export which will bear favourable comparison with that of any other manufacturer.

THE MCKENNA DUTIES.

I wish to take this opportunity most emphatically to deny certain statements which have been made, viz., that the imposition of import duties has impelled foreign manufacturers to establish industrial works in Britain. Please let me be clear. The magnificent gesture of Mr. Henry Ford was made long years before the McKenna or any other sort of protective duties were mooted.

I think I may tell you frankly that our company does not object to the McKenna duties, and really does not care whether they are continued or removed, or varied. Whatever happens in that regard, I believe I can come before you next year with equal satisfaction.

Our company possesses an enterprise at Cork in the Irish Free State which employs nearly seven thousand men and which earns for us considerable profits, and which exports into the markets of the world a product of which we, as Britishers, can be very proud.

The report and accounts were adopted unanimously.

FORD MOTOR COMPANY Limited, 93 Regent Street, London, W.1

THE BRITISH METAL CORPORATION, LIMITED.

SUCCESSFUL OUTCOME OF WORLD-WIDE OPERATIONS.

MR CHARLES V. SALE REVIEWS PROBLEMS OF PRODUCTION AND PRICES.

The ordinary annual general meeting of the British Metal Corporation, Ltd., was held, on the 12th instant, at the Fur Trade Sale Room, Garlick Hill, London, E.C.

Mr Charles V. Sale (chairman of the corporation) presided.

The Secretary (Mr F. G. Palm) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—This is our 12th annual general meeting, and I may say that each year is like the last in this, that it brings its own problems to lead us through new experiences. The year 1929 has been no exception; indeed, the difficulties have seemed greater than for some time past, perhaps because the future seems more obscure. Nevertheless, we come before you with profits only slightly less in total than 12 months ago, and I am sure you will join with me in offering congratulations to the managing directors, since the successful outcome is largely due to their untiring efforts and skilful handling of your affairs.

BALANCE SHEET.

If you have compared the accounts with those of previous years, you will have noticed certain differences in form arising from the provisions of the Companies Act of 1929. Besides these there are differences of some magnitude in the component figures due to the continuous development of your business. You will see in the comparison an increase in paid-up capital, in creditors, and in profit and loss, and you will see also that in the course of the year our Government securities have been sold and our stocks of metals and ores have been reduced. Let me give you the figures :—

Capital	+£100,000
Creditors	+£410,000
Profit and loss	+£ 51,000
Government securities	−£399,000
Metal and ore stocks	−£168,000
Total	£1,128,000

Against this you will find a small increase in cash, debtors, etc., and a large increase in investments, shares, and advances to subsidiary companies.

Again let me give you the particulars :—

Cash	+£74,000
Debtors	+£ 6,000
Furniture	+£ 7,000
Investments, shares, and advances to subsidiaries	+£1,041,000
Total	£1,128,000

"ALL ASSETS THOROUGHLY GOOD."

All your assets are thoroughly good. Stocks of metals are principally held against forward sales and the sums set down for debtors need give you no anxiety. I may add that the market value of your investments where the securities are quoted on the Stock Exchange, and the valuation of those not so quoted, exceed in the aggregate, and by a satisfactory margin, the book valuation as they stand in the balance sheet.

A year ago I told you of our intention to found the British Metal Stockholders Trust, Ltd., for the purpose of dealing with the "fixed finance" which is such a necessary adjunct to our business. The capital is £500,000, all of which belongs to your corporation and is the principal item in the total of shares in subsidiaries.

ADVANCES TO SUBSIDIARIES.

Amounts owing to subsidiaries include sums advanced to the British Metal Corporation of Canada, Ltd., for the development of its Stirling mine in Nova Scotia, and to the British (Non-Ferrous) Mining Corporation, Ltd., in which we have a substantial interest, for the development of their mining properties.

The investments include holdings acquired on favourable terms shortly after the general decline in the price of securities—holdings which we believe will be a factor making for closer relations with friends interested, as we are, in non-ferrous metals. It is in this connection that we have in our accounts the item of secured creditors £355,000.

IMPORTANT FUSION OF INTERESTS.

This leads me to the most important statement which I have to make to you—the fusion of interests with Messrs Henry Gardner and Company, Ltd., foreshadowed in a circular letter issued in October, the details of which were set before you in December.

Messrs Henry Gardner and Company, Ltd., of which the chairman, Mr Henry Gardner, is a well-known authority in the metal trade, has many important connections; it includes among its largest shareholders the Consolidated Mining and Smelting Company of Canada, Ltd., and the International Nickel Company of Canada. Like ourselves, it carries on a world-wide business, and latterly we have both come to see that there are many opportunities for co-operation, as, for example, in the supply of markets from the nearest producer.

Such co-operation we believe will promote efficiency and reduce costs, to the benefit both of producer and consumer, and so we have, as you know, joined hands in forming the Amalgamated Metal Corporation, Ltd., to acquire and hold the shares of both Henry Gardner and Company, Ltd., and the British Metal Corporation, Ltd. Each firm will continue trading as a separate entity managed by its own board, but the board of the Amalgamated Metal Corporation, consisting of directors of both companies, will constitute a meeting place where policies may be compared and agreed, and measures taken for the common interest.

EXCHANGE OF SHARES.

An offer for the exchange of shares was submitted to the respective shareholders on January 23. Following the receipt of acceptances representing over 98 per cent. of the shares, the final steps were taken a few days ago, and share certificates in the Amalgamated Metal Corporation will be posted to you in the course of the next few days.

Before leaving this subject I must mention the issue of one hundred thousand new shares, bringing the paid-up ordinary share capital of the British Metal Corporation, Ltd., to the same figure as that of Henry Gardner and Company, Ltd.—namely, £1,000,000. Fifty thousand of these shares were offered at par to the managing directors as compensation for adjustments under the fusion plan, and the remaining fifty thousand were offered, also at par, to the existing shareholders in the proportion of one new share for every eighteen original shares.

Full particulars were given in a circular dated December 10, and I need only say that the offers have all been accepted and the larger capital is shown in the balance sheet before you.

WIDE RANGE OF NON-FERROUS METAL PRICES.

I said a few minutes ago that the year under review had brought its own problems. Among these were a wide range of prices and over-production. Electro-copper has varied from £112 to £77; standard copper from £97 to £66; zinc from £29 to less than £20; lead from £30 to £21; and tin from £230 to £173.

The year closed slightly above the lowest, namely :

	£	s.	d.
Electro-copper	83	0	0
Standard copper	68	0	0
Zinc	19	12	6
Lead	21	18	9
Tin	178	2	6

Since then zinc, lead and tin have fallen to much lower levels, the decline in building and the falling away of enterprise since the financial crises of the autumn being one cause of these lower prices.

INCREASED USE OF NON-FERROUS METALS.

It is interesting, however, to notice the wonderful strides in the use of non-ferrous metals during the last two decades and the number of low-cost mines which have been brought into the producing stage in recent years. We may better realise the extent of these additions by making a comparison between production in 1908 and 1928 :—

	1908. Tons	1928. Tons.
Copper	745,000	1,660,000
Tin	111,000	182,000
Lead	1,060,000	1,620,000
Spelter	710,000	1,390,000

STRUGGLE FOR MARKETS.

Thus improved technical skill applied to the operation of larger units under entirely modern methods has brought into existence a great tonnage of metals, which can be sold, and in some cases profitably sold, at existing prices, and so the struggle for markets is a deadly one for many of the older and smaller producers—employers and workmen alike.

Something might be done by way of control or regulation of supplies, but the task is not an easy one. The market for copper has been controlled by American influences since 1927, and the price in relation to the general index figure has been higher during 1929 than almost any other commodity. At the same time, the knowledge that producers are bearing the burden of stocks is a weakness in the situation.

ZINC AND LEAD.

The world's production of zinc is largely secondary, by which I mean that it is produced by companies whose primary object is the production of lead and silver, and it is therefore particularly difficult to avoid over-production. Such was the experience last year of the International Cartel, which, faced with a sudden decline in demand, was recently compelled to suspend its operations. Efforts, however, are now being made to renew the arrangements.

Much progress has been made in co-operation between the producers of lead. Here the difficulties of making any measures entirely effective lie in the fact that a certain proportion of the world's production comes from ore smelted on account of small mines.

TIN—ILL-EFFECTS OF UNRESTRAINED COMPETITION.

Tin is an outstanding example of the ill-effects of unrestrained competition: low prices, scarcity, high prices, greater production, heavy stocks, low prices. In 1927 tin sold at £320; to-day it is offered at £164, and at every stage in such a rapidly moving cycle there must be someone—producer, distributor, or consumer—involved in a serious risk or suffering a heavy loss.

Conservation of natural resources is becoming a world-wide question. In nothing is it more apparent than in tin, one of the rarely found, as it is one of the most useful, metals; and it should not be beyond the wit of man to devise some means for hoarding these riches of the earth until they are required.

Towards this end a comprehensive scheme has been arranged—to which all the principal producers in the world are parties—for the curtailment of production during 1930, and it is hoped by these means to restore the market to such a reasonable level as will be fair to all interests.

CENTRALISATION OF OFFICES.

Those of you who have followed the career of the corporation since its formation in 1919 will remember the extension year by year of our relations with the leading producers and smelters of non-ferrous metals, not only within the Empire, but also outside.

For some time past it has been our desire, and the desire of several of our friends, to house our respective offices in one centre—an ambition which has now been realised. We have acquired jointly with them a proprietary interest in Princes House, No. 93, Gresham Street, and since our removal have experienced the benefit of the closer touch which is necessary in the common interest.

TRIBUTE TO THE SECRETARY.

Let me say here that the corporation owes a special meed of thanks to Mr F. G. Palin, the secretary, for the way in which he has prepared and conducted the arrangements for these new offices, and also for the judgment and discretion which he has exercised in carrying through the formalities in connection with the formation of the Amalgamated Metal Corporation, Ltd.

He has worked from early to late for many months in order that the business should be carried on without interruption, and the happy result is due to his efforts. (Hear, hear.) These thanks I am sure you will extend to the secretarial staff, who have worked so well under Mr. Palin. (Hear, hear.)

As our trade expands so does our staff increase, and to every member alike—new and old—we should like to convey our appreciation of the excellent service they have rendered during the year under review.

THE DIRECTORATE.

Since our last meeting there have been several changes in our directorate. Sir Charles Fielding, one of the original directors; Sir Sothern Holland, and Mr A. W. Tait, another of the original directors, have retired. May I take the opportunity of expressing your cordial thanks to these gentlemen for their valuable services over so long a period?

To fill these vacancies we have elected:—

Sir Evelyn Wallers,
The Hon. R. M. Preston,
Mr J. C. Budd, and
Mr William Mure,

the latter two as additional managing directors.

ALLOCATION OF PROFITS.

In conclusion, may I refer once more to the accounts? The dividend of £54,000, or 6 per cent. per annum., on the preference shares has been duly paid. We now recommend the transfer of £50,000 to the reserve fund; this is £50,000 less than the transfer made a year ago, but on that occasion we brought in £40,000 from the reserve for contingencies. We also recommend a dividend of 10 per cent. on the ordinary shares ranking for dividend on December 31st, say, £90,000. After charging these sums there will be a balance to be carried forward of £26,233, against £25,184 a year ago, which I trust you will consider satisfactory. (Cheers.)

I now move: "That the directors' report, balance sheet, and profit and loss account for the year to December 31, 1929, as now presented, be and they are hereby received, approved and adopted."

Captain Oliver Lyttelton, D.S.O. (one of the managing directors), seconded the resolution, and it was carried unanimously.

THE DIVIDEND.

The Chairman next moved: "That a dividend of 10 per cent., payable less income tax, in respect of the year 1929 upon the ordinary shares Nos. 1 to 900,000 be and it is hereby declared payable on the 13th instant to the shareholders registered on February 26, 1930, when the transfer books were closed."

This resolution was seconded by Sir Evelyn A. Wallers, K.B.E., and unanimously approved.

The Chairman further moved: "That Mr J. C. Budd, Mr William Mure, the Hon. R. M. P. Preston, D.S.O., and Sir Evelyn A. Wallers, K.B.E., who were elected directors since the last general meeting and now retire, and Mr W. S. Robinson and Mr W. A. Tennant, who retire by rotation, all of whom are eligible and offer themselves for re-election, be and they are hereby re-elected directors of the company."

Sir Cecil L. Budd, K.B.E., seconded the resolution, and it was passed unanimously.

On the motion of Mr W. H. Dixon, seconded by Mr R. Battersby, Messrs. Deloitte, Plender, Griffiths and Company were reappointed auditors, and the proceedings then terminated.

RIVER PLATE TRUST, LOAN AND AGENCY COMPANY, LIMITED.

SATISFACTORY RESULTS.

The forty-ninth ordinary general meeting of the River Plate Trust Loan and Agency Company, Ltd., was held, on the 10th instant, at the offices, 52, Moorgate, London, Mr James Anderson (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:— The year under review was not a favourable one for our business, either in the River Plate or in London. Under these circumstances there is reason for satisfaction in our being able to submit to you to-day a balance sheet showing assets free of depreciation and profits sufficient to meet our usual dividend with a large margin over.

Our balance sheet is of a simple character, the items constituting our assets and liabilities being clearly set out. Our assets are for the most part comprised in two items: (1) loans on mortgage of real estate in Argentina, and (2) investments in London. The mortgage loans appear in the balance sheet at £2,030,000, equal to 35 per cent. of our total assets. In the earlier years of the company this percentage of loans to total assets was very much greater. In 1913 the loans reached the large total of £4,510,000, equal to 82 per cent. of the total assets.

After reviewing the conditions which led to this large displacement of capital from the River Plate to London, the Chairman said:—Coming to our principal asset—namely, investments in London—I would point out that our holding in British Government securities, which now stands at £585,900, shows a reduction of £114,762, due to sales during the year, the proceeds being invested in securities yielding a larger rate of interest. The general investments, now appearing at £3,071,200, show an increase of £286,806. These investments, as stated in the report, were valued at the close of the year, and notwithstanding the low prices then prevailing the results showed a substantial appreciation on the figure at which they appear in the balance sheet.

Turning now to our profit and loss account, I would point out that the gross profits for the year amounted to £428,831, which

was £16,008 less than those of the previous year. The decrease is entirely due to our having this year applied the profits on investments realised during the year in reduction of the price at which our investments stood in the books, instead of carrying them to profit and loss account as heretofore. These profits amounted to the exceptional sum of £62,738, and had we followed the usual course of passing them to profit and loss account, the gross profits for the year would have shown an increase of £46,730.

The net profits amounted to £323,188, which the directors recommend being dealt with as follows:—

1. Dividends paid and accrued on Five per Cent. Preference stock, £75,000.
2. Interim dividends of 11 per cent. on "A" shares and 4 per cent. on "B" shares, both paid October 1, 1929, £95,000.
3. Further dividend of 13 per cent. on the "A" shares, making 24 per cent. for the year, £65,000.
4. Further dividend of 5 per cent. on the "B" shares, making 9 per cent. for the year, £50,000.
5. Reserve fund (raising it to £1,200,000), £25,000.
6. Addition of £13,188 to the amount carried forward, raising it to £225,275.

Now, a few words as to the outlook. We cannot expect the current year to yield quite such satisfactory profits as those shown in the accounts under consideration to-day. The fall in exchange is likely to entail a loss on the remittance of our profits, but to what extent it is impossible to say. If the average rate for the year does not fall below the minimum point touched since the conversion office was closed, the loss would be about £15,000. We may also have to put up with reduced dividends on certain of our investments, but, taking both adverse factors together, I see no reason to doubt that the profits for the current year will be amply sufficient to enable us to continue the rates of dividend we have been accustomed to pay for years past.

The resolution was carried unanimously.

JOSEPH NATHAN AND COMPANY, LIMITED.

INCREASED NET PROFIT.

The thirtieth ordinary general meeting of Joseph Nathan and Company, Ltd., was held, on Tuesday March 11th, at Glaxo House, 56, Osnaburgh Street, London, N.W.

Mr Alec Nathan (the chairman) said that he hoped shareholders would agree that the accounts showed an improved position on last year. The reserve account now stood at £25,560, which, with the £5,000 they proposed allocating from the balance of profit in hand, would bring that item to over £30,000. The total amount outstanding in subsidiary companies was increased by £53,000. Each of their subsidiaries was a trading concern, and, as the business ebbed and flowed in the various parts of the world, so would vary the amounts due to or from the parent company. Those movements were an indication of a greater volume of trade.

With regard to the profit and loss account, "provision for losses in subsidiary companies" was a reserve created to cover losses arising in three subsidiaries. Of a total of £3,990, £3,000 arose from the working of their factory in Australia. That factory had found itself in considerable disadvantage in exporting its products on account of the operation of the Paterson Scheme for subsidising butter exports from Australia. Before arriving at that loss in the Australian subsidiary, a sum greater than the loss itself had been provided in their accounts by way of depreciation. They had taken steps to work that factory in such a way as would limit, if not eliminate, that particular loss, whilst the merchandising part of the business in Australia was working at a profit. Profits of subsidiary companies had been included only to the extent of dividends shown. They did not normally take out by way of dividends from their subsidiary companies every penny of profit which they earned. Some of their subsidiaries were pure trading companies, and from those they naturally looked for an adequate return on their capital. Others were really operating units for the parent company, formed into subsidiary companies for taxation and other grounds. From those subsidiaries they looked only for limited manufacturing profit.

To sum up the profit and loss account, they had a balance of net profit for the year of £65,377, as against £61,216 in the previous year. It would, he thought, be admitted that that was both a gratifying and a satisfactory result. He would like to make a further comparison and mention that that profit of over £65,000 was the highest which they had had since 1921, and in itself was stronger evidence than any verbal statements that the affairs of the company were efficiently and economically managed. With the carry-forward from last year of £26,883, there was available for appropriation £92,260. They had paid a year's dividend on the preference shares, and proposed to pay one year's dividend on the 8 per cent. preferred ordinary capital, to place £5,000 to reserve and to set aside £4,000 for the balance of income tax liability. As they had on January 1st last paid a further half-year's dividend on the preference capital, they now had in hand £14,760.

Shareholders would probably now have reached the stage of asking why an ordinary dividend had not been recommended, but they would remember that each year he had urged them to support the directors' policy of conservative finance and to endorse the directors' action of building up adequate reserves. The directors were all pleased to recognise, however, that the time was nearly at hand when it would be the privilege of the directors to recommend an ordinary dividend. If the results of the current year were similar to those of the past year, the directors would feel justified in recommending a dividend on the ordinary shares. As to the immediate future, no special emphasis need be laid on any one section of the business. All departments were in a healthy state. The results up to date for the current year were satisfactory and somewhat better than last year. The directors felt confidence in the company's future.

The report and accounts were unanimously adopted.

HARRODS LIMITED.

PROGRESS AND PROSPERITY MAINTAINED.

The fortieth annual general meeting of Harrods, Ltd., was held, on the 10th instant, on the company's premises, Brompton Road, London, Sir Woodman Burbidge, Bart., C.B.E. (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, after referring with regret to the resignation from the board of Mr Edgard Cohen, owing to failing health, and to his valuable services to the company, went on to say that they also regretted to announce that Mr R. H. Griffith, the company's secretary, was retiring on pension, having reached the retiring age of all their managers and officials. Mr Griffith took with him the best wishes of the board for continued health and happiness and their appreciation of his efficient services throughout the past 19 years.

Proceeding, the Chairman said that the net profits for the past seven years, each ended January 31, had been as follows:—

	Net Profit £
1924	567,800
1925	634,634
1926	693,048
1927	705,958
1928	721,751
1929	775,156
1930	834,188

The yearly results clearly indicate that the progress and prosperity of the company had been well maintained year by year. It was well known that the year 1929 was a difficult year for trading, and particularly during the second half. Taking into consideration the unfavourable trading conditions that prevailed not only in this country, but in most other countries of the world, he thought that they had every reason to be pleased with the net results. Their total trade for the year showed an increase over the previous year. Although this increase did not reach the figure which the board anticipated, yet he considered the results to be quite satisfactory.

NUMBER OF CUSTOMERS AGAIN INCREASED.

The records of their last year's trade revealed that they had again shown an increase in the number of customers served, and of this increase a substantial portion was with cash customers. The number of their yearly individual transactions with cash and credit account customers totalled many millions, and to have again maintained a satisfactory increase such as they had experienced year by year for many years past was a very healthy feature.

To maintain their steady rate of progress, and to continue to retain the goodwill of their customers, the company continued to aim at constant improvement of their organisation, a high standard of all-round efficiency in their staff, and in every detail of the business, and a service which for quality and value they were determined should remain unequalled.

CURRENT YEAR'S PROSPECTS.

Last year was a difficult one for retail trading, and as to the possibilities of trade during the current year, many people appeared to be rather pessimistic in their outlook, but personally, and speaking more particularly as to the outlook for their own business, he took an optimistic view. So far as the business was concerned, they would have noted from what he had said at the annual meetings that the board had given unremitting attention to the improvement of the business, the perfecting of its organisation, the adapting of their policy to present-day needs, with the sole object of making Harrods an increasing centre of attraction,

and providing for the company's ever increasing number of customers a service which for quality and value should stand pre-eminent. The company was in a strong financial position, and the business prosperous and progressive. He had, therefore, no doubt that at the end of the current year the board would be in a position to put before the shareholders trading results equal to, if not better than, those which he had put before them that day, and this equally applied to their subsidiary companies.

The report and accounts were unanimously adopted and other formal business transacted.

Mr Douglas Hankey proposed a cordial vote of thanks to the chairman, to the board and the staff for their successful conduct of the business during the year under review. Also, the shareholders, he said, would like to join the board in their tribute to Mr Griffith, the secretary, following upon his devoted services to the company during the past 19 years, and to convey to him their wishes for much happiness in his retirement.

The resolution was carried with acclamation, and the chairman having briefly responded, the proceedings terminated.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 8, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts	£
Supply Services	11,325	From Revenue	26,201
Interest, &c., on Debt	166		
Sinking Fund	495		
Sundries	328		
Decrease in Debt	13,629		
Increase in Balances	258		
	26,201		26,201

The revenue for the week amounted to £26,201,000, as compared with £23,701,300. Income tax and super tax amounted to £14,644,000 and £3,730,000, as compared with £12,820,000 and £3,260,000 respectively. Customs brought in £2,612,000, against £2,689,000, and excise £1,107,000, against £1,072,000. Ordinary receipts were higher at £1,150,000, against £233,600, but special receipts were lower at £521,000, against £1,650,200. Revenue to date amounts to £651,251,100 and expenditure to £709,917,700. The deficit is thus £58,666,600, and compares with a deficit of £18,120,200 at the corresponding date last year. During the week the National Debt was reduced by £13,629,500, as shown below :—

(000's omitted.)

	£		£
National Savings Certificates	+ 100	Public Dept. Advances	— 3,150
4½% Conversion Loan	+ 6,130	Treasury Bills	— 16,143
5% Conversion Loan	+ 200	Interest on National Savings Certificates	— 800
Sundries	+ 34		
	+ 6,464		— 20,093

The Floating Debt was reduced by £19,320,000 to £681,890,000.

FINANCIAL YEAR, 1929-30, APRIL 1 TO MARCH 8.

,, 12	Sovs. for export	2,000
,, 13	Sovs. for export	4,000
	Total	17,436

Net arrivals, £534,271.

Messrs Samuel Montagu and Co. write on March 12, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £151,601,773 on the 5th instant (as compared with £151,326,826 on the previous Wednesday), and represents a decrease of £2,304,542 since the 29th April, 1925—when an effective gold standard was resumed. Gold from South Africa to the value of £937,000 was offered in the open market yesterday. The exchange with Germany having moved in favour of sterling, there was no inquiry from that quarter this week, but £720,000 was taken by an undisclosed buyer (believed to be Switzerland) at the fixed price of 84s. 11d. India took £50,000, the Continental trade £92,000 and the Home trade £30,000. Of the balance, a further £20,000 was taken by the trade to-day at 84s. 11¼d. Movements of gold as announced by the Bank of England show a net influx of £269,088 during the week under review. Receipts amounted to £282,524, which included £250,000 in sovereigns from South Africa and £30,817 in sovereigns from Brazil.

SILVER.

Although prices have fluctuated, some recovery was made from the low level touched last week. Inquiry from China lent the market more steadiness, and by the 8th instant quotations had risen to 19 3/16d. and 18 15/16d. for cash and two months' delivery respectively. Offerings from the Continent and India since served to depress the forward quotation, which lapsed to 18⅝d. yesterday, but reacted to 18 13/16d. to-day in the absence of further selling, with cash delivery quoted at 19¼d. A continuation of the demand from India for silver for near delivery, however, helped to maintain the cash quotation, and the premium on silver for prompt delivery increased yesterday from ¼d. to 7/16d.

America has been only a moderate seller, but sales on Continental account have steadily continued.

The following were the United Kingdom imports and exports of silver *registered from mid-day* on the 3rd instant to mid-day on the 10th instant:—

Imports.	£	Exports.	£
France	86,837	Netherlands	27,393
Mexico	54,054	Hong Kong	38,541
Irish Free State	20,000	British India	268,891
Canada	27,894	Other countries	3,803
British West Africa	18,491		
Other countries	7,291		
	£214,567		£338,628

Indian Currency Returns (in lacs of rupees).

MISCELLANEOUS.

ANGLO-NORWEGIAN HOLDINGS, LTD.—Net profits of $438,003 (£89,709) for the first nine months of operation are reported by Anglo-Norwegian Holdings, Ltd., the largest unit in the whaling industry in which British capital is invested, formed last March under the banking auspices of Messrs. Dawnay, Day and Company, Ltd. After payment of preferred dividends, absorbing $99,750 (£20,205), on the 19,000 7 per cent. preferred shares outstanding, a balance of $338,253 (£69,504), or 80 Canadian cents (3s. 4d.) per share, remained available for the common stock. Of this sum, $88,716 (£18,229) has been utilised for the redemption of 1,000 preferred shares, while a dividend of 25 Canadian cents per share, absorbing a total of $105,000 (£21,575), has been declared on the common stock. This dividend is payable to holders of British depository receipts on March 31, 1930, at the offices of the Guaranty Trust Company, 32 Lombard Street, E.C.3. The balance of $144,537 (£29,700) is carried forward to next year. Capitalisation of Anglo-Norwegian Holdings, Ltd., consists of 20,000 7 per cent. cumulative preferred shares of $100 each, of which 2,000 have now been redeemed, and 420,000 common shares of no par value. Current assets are shown in the balance sheet at $107,766 (£22,143) against current liabilities of $14,360 (£2,950), while total assets stand at $3,248,712 (£667,543).

BURMEISTER AND WAIN, LTD.—For year ended December 31, 1929 : A dividend of 8 per cent. is announced on capital of Kr. 30,000,000 ; also 2 per cent. on new capital of Kr. 5,000,000 (against 8 per cent. on capital of Kr. 23,000,000) for 1928.

	1928. Kr.	1929. Kr.
Net profit	(6,089,458·94)	7,012,966·07
Brought forward (After taxes, etc.)	(75,803·65)	124,706·67
To reserve and renewals (including depreciation of Kr. 2,366,900·11)	(3,700,000)	4,000,000
Labourers' welfare fund	(100,000)	100,000
Carried forward (subject to directors' fees, taxes, etc.)	...	435,535.75

C. AND E. MORTON, LIMITED.—The net profit of C. and E Morton, Ltd., preserved provision merchants, for 1929 amounted to £100,254 (as compared with £100,663 in 1926, £100,379 in 1927, and £124,463 in 1928).

STEWARTS AND LLOYDS.—A profit of £694,000 is announced for 1929, comparing with £582,114 for 1928, which included £139,929 surplus on liquidation of the South African Company. The directors have provided £200,000, against £175,000, for depreciation, and a dividend of 7½ per cent., against 5 per cent., is to be paid on the deferred capital of £4,113,592. Reserve allocation is increased by £10,000 to £150,000, and the carry-forward is raised from £122,895 to £125,000. With this year's addition the reserve is now £1,815,000.

BURMA CORPORATION, LTD.—During the month of January, 41,429 tons of ore were mined, including 2,814 tons of high-grade ore. 25,000 tons of ore were milled in the treatment plant, producing 10,520 tons of leady concentrates. 14,101 tons of lead-bearing material, including 4,027 tons of high-grade ore, were smelted in the blast furnaces, producing 7,253 tons of hard lead for treatment in the refinery. Refinery products were 6,750 tons refined lead and 608,741 ounces refined silver. Of silver production 25,347 ounces were recovered from the treatment of copper matte. Zinc plant produced 4,800 tons zinc concentrates, assaying 8.0 ounces silver, 4.5 per cent lead and 51.5 per cent. zinc. In addition to the above, 1,100 tons copper matte were produced from the treatment of accumulated smelter by-products and 7,217 tons copper ore. 100 tons of refined antimonial lead and 200 tons of nickel speiss were also produced. Included in the tonnage of refined lead is 78 tons recovered from the smelting of copper ore.

SULPHIDE CORPORATION, LTD.—During the four weeks ended January 25, 1930, 8,612 tons of Central Mine ore were milled at the Central Mine, producing 1,553 tons of leady concentrates (including 43 tons from the de-leading plant), which assayed 49 ozs. silver and 65 per cent. lead, together with 2,156 tons zinc concentrates assaying 6 ozs. silver, 3 per cent. lead and 50 per cent. zinc per ton.

BROKEN HILL SOUTH, LTD.—For the four weeks ended February 8, 1930, 37,240 tons of crude ore were treated and produced 7,484 tons of leady concentrates assaying 69 per cent. lead and 26 ozs. silver per ton; also 7,662 tons of zinc concentrates assaying 50 per cent. zinc.

NORTH BROKEN HILL, LTD.—For the month of January the production was as follows: 39,802 tons of crude ore were treated, assaying 14·5 per cent. lead, 8·6 ozs. silver per ton and 10·8 per cent. zinc, producing 8,470 tons lead concentrates assaying 63·7 per cent. lead, 34·7 ozs. silver per ton and 7·7 per cent. zinc; also 6,650 tons zinc concentrates assaying 49·1 per cent. zinc, 2·6 per cent. lead and 3·3 ozs. silver per ton.

(*v*) Fifteen months.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions have remained favourable for outdoor work, and farmers are busily engaged on spring sowings, an early completion being possible, despite the late start. Large areas of land have been already seeded to oats and barley, but the wheat acreage is likely to be increased at the expense of feeding stuffs owing to the difficulty in finding an outlet for the latter, despite exceptionally low prices current. Little interest is evinced in native wheat, though supplies remain in small compass at the principal statute markets, prices being adversely influenced by general trade depression. Imported descriptions moved off slowly, buyers adopting a reserved attitude in face of slumping prices and increased offers from North America. Large surplus wheat supplies in Canada and the United States remain the chief factor in the international situation, and it would appear that a serious attempt is at last being made to hasten the export movement. Prices on the other side have declined sharply on selling orders of Canadian grades, but European importers remain aloof pending further developments, while under the knowledge that stocks must be considerably reduced in the near future to make room for the coming harvests. The United States position is also proving burdensome, giving rise to considerable uneasiness, and reports were current that large quantities of hard winter wheat may be unloaded on the European market shortly. Argentine sellers followed the reduction in Northern prices and offered freely on competitive terms which accelerated the downward movement. The weakness of wheat was duly reflected in the market for feeding stuffs, prices in some instances being now below pre-war level. Plate maize declined sharply under increased selling pressure by Argentine shippers, particularly in forward positions, and competition from the Danube becomes more acute. The Argentine new crop is progressing favourably, and a considerable increase on last season's yield is practically assured. Barley and oats were difficult to vend, though prices were again marked down.

WHEAT.—Dull and again easier. No. 1 Northern Manitoba (Vancouver shipment), ex-ship, 43s.; No. 2 ditto, 42s.; No. 3, 40s. 6d.; No. 4 Manitoba, 39s. 6d.; No. 5 ditto (Atlantic shipment), 37s. 6d.; No. 6 ditto, 30s. 6d.; No. 2, mixed Durum, 39s. 6d.; No. 2 hard Winter, 41s. 6d.; Rosafe, 63½ lbs., 39s.; Barusso, 63½ lbs., ex-ship to arrive, 39s. 6d.; Australian, 41s. per 496 lbs. English, 8s.-8s. 2d. per 112 lbs.

FLOUR.—Dull and weak. London straight run, quoted, 35s. per sack for country deliveries and 34s. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 34s.-35s.; Australian, 31s. 9d. ex-store on c.i.f. terms. Manitoba top patents, March-April, 33s.-33s. 6d.; export ditto, 30s. 6d.-31s.; Australian, 28s.-29s.; French, prompt, 25s. 6d.-27s. 3d. per 280 lbs. Argentine low grade, March-June, £6 per ton.

MAIZE.—Easier. Plate, landed, 26s.; ex-ship, 24s. 9d.; March-April, 24s.; new, April-May, 23s. 6d.; May-June, 23s. 3d. per 480 lbs. Yellow maize meal, £7 10s. per ton f.o.r. London. Yellow African, £6; white, £5 17s. 6d. per ton ex-ship.

BARLEY.—Dull and weak. Californian old, landed, 36s.-42s.; new, ex-ship, 36s.-42s. as to sample. Chilian brewing, 36s.-44s.; Chevalier, 40s.-44s.; Australian, 40s.-41s.; Smyrna, 40s.-41s. per 448 lbs. Black Sea, landed, 20s.; Persian, landed, 19s. per 400 lbs. English malting, 7s.-11s. 6d.; feed, 6s. 6d.-6s. 9d. per 112 lbs.

OATS.—Quiet. Plate, landed, 14s. 6d.; ex-ship to arrive, 13s.; black Plate, landed, 14s. 6d.; Chilian white, 20s.; ditto, tawny, 16s.; German, landed, 16s. 6d.; ex-ship to arrive, 15s. 3d.; mixed Canadian feed, 13s.; South Russian, 14s.-15s. 6d. as to quality per 320 lbs. English, 5s. 6d.-6s. 4d. per 112 lbs.

FIGURES OF ASSURANCE

AMP

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £74,000,000. Annual Income £10,500,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY

73-76 King William St., London, E.C.4 — Established 1849.

D. E. WALKER, Manager for the United Kingdom.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27:—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to March 8	Cwts. 178,438	Cwts. 240,677	Cwts. 281,322	Cwts. 214,744
27 weeks to March 8	6,850,858	7,432,264	6,894,039	9,191,720
Average price of English wheat per cwt.	s. d. 8 4	s. d. 9 9	s. d. 9 7	s. d. 11 8

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Mar. 1	212,459	193,343	48,105	8 7	7 11	6 2
Mar. 8	178,438	164,139	39,462	8 4	7 8	6 1

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	Mar. 13, 1929.	Jan. 2, 1930.	Feb. 26, 1930.	Mar. 5, 1930.	Mar. 12, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	132¼	148⅜	114	111	104⅜
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	125½	130⅜	105⅜	106½	105½

The visible supply of wheat in Canada at 74,139,000 bushels shows a decrease on the week of 273,000 bushels. Supplies a year ago stood at 86,251,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—The trend in the coal trade is still reactionary. Last week there was a further decline in the volume of export bookings and a loss from 6d. to 1s. per ton in prices. Inland trade, too, is far from brisk. Business in blast furnace coke continues on a very restricted scale and this fuel can now be bought at 15s. 6d. or even less at ovens. Forward business in coke has been practically at a standstill for a long period.

Our Glasgow correspondent writes:—There has been no change for the better in the shipping branch of the trade. Orders are still scarce, and the collieries are being forced to cut their prices to get coal off their hands. The only steady spots are navigation qualities and Lanarkshire prime splint coal. The following are the ruling prices for shipping business (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s. 9d.; splint best, 17s. 6d.-18s.; splint second, 16s. 9d.; navigation, 17s. 6d.-18s. 6d.; navigation second, 15s. 6d.-16s.; Hartley, 18s.; steam, 14s.; trebles, 13s. 6d.; doubles, 12s. 9d.; singles, 12s. 3d.; pearls, 11s. 6d.-11s. 9d.; dross, 10s. FIFE.—Screened navigation, 18s.-18s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 13s. 6d.; doubles, 12s. 6d.; singles, 12s. 6d.; pearls, 12s. 3d.-12s. 6d. LOTHIANS.—Prime steam, 13s. 9d.; secondary steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 12s. 3d.; singles, 12s.; pearls, 12s. 3d. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 13s. 9d.; trebles 13s. 9d.; doubles, 13s.; singles, 12s. 6d.; pearls, 12s. 3d.; dross 10s. 6d.

Our Cardiff correspondent writes:—The situation on the Cardiff coal market is unchanged. There has been no period since the war when the market has had so great an advantage in low freight rates. For many destinations, and notably for the French and Mediterranean trades, the current rates are lower than they have been for over twenty years, but the demand for coal remains extremely inactive, and collieries, therefore, are almost entirely dependent on their contract commitments. Moreover, there are no indications of improvement in the immediate future, for stocks abroad, and particularly at the principal importing centres, are exceptionally heavy; while, with so enormous a quantity of shipping laid up, depot requirements are at a minimum. Schedule prices, however, are being maintained for large coals, but quotations for different classes of smalls are for the first time for many months showing a weakening tendency. Shipments, however, are being fairly well maintained and in the week ended March 8th they totalled 577,200 tons compared with 554,300 tons in the previous week, and with 656,108 tons in the corresponding week last year. During February the coal, coke and patent fuel shipments from the South Wales ports totalled 2·2 million tons compared with nearly 2·5 million tons in January and with 1·5 million tons in February, 1929. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 20s.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 9d. to 14s.; coking smalls, 14s. to 14s. 3d.; cargo smalls, 12s. 9d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 23s. 6d. to 28s.; machine-made cobbles, 43s. to 45s.; French nuts, 44s. to 46s.; rubbly culm, 11s. 3d. to 12s.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 26s. 6d. to 26s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Lethargic conditions continue to rule in the iron and steel trade; but hopes that an improvement is near at hand have been encouraged by an increase in the volume of inquiry. There has been, however, a noticeable absence of important business, and the orders which have come to hand have been nearly all for small tonnages and for comparatively near delivery. This, of course, indicates a want of confidence in the near future, and there is no doubt that the consuming trade are following an extremely cautious policy and covering only their immediate requirements. The demand for pig iron appears to be gradually shrinking, and contracts that are worked off are not being replaced as consumers prefer to resort to hand-to-mouth buying. As a consequence, stocks are growing, although the producers state that they have not reached a tonnage which is causing them anxiety. In Scotland the producers are experiencing keen competition from imported iron from the Continent and India. The demand for semi-finished material remains irregular. Recently, some fair-sized inquiries were in the market, but only a proportion of this developed into actual business. Manufacturers of finished steel material, both in this country and on the Continent, are finding conditions difficult, and there is talk of fresh restrictions of output by the European Steel Cartel. It is, however, generally assumed that stocks in consumers' hands are low, and any improvement in trade would result in active buying which would quickly give a better appearance to the market.

Our Middlesbrough correspondent writes:—The market for Cleveland iron is entirely devoid of animation and business during the past week has again been most disappointing. Consumers are holding out for lower prices which in spite of increasing stocks, producers refuse to concede, consequently trade is almost at a deadlock. The usual weekly meeting on Tuesday was very quiet and the only business reported was a few small lots by makers for early delivery to home consumers at 72s. 6d. for No. 3. Other qualities were unchanged, viz.: No. 1, 75s.; No. 4 foundry, 71s. 6d.; and No. 4 forge, 71s. f.o.b. or f.o.t. There is an entire lack of interest in forward business on home account and export trade is almost stagnant. Shipments of pig iron are opening out better, but they are mostly against old contracts. The clearances to 11th inst. total 10,288 tons against 5,579 tons to February 11th. The hematite market shows just a little improvement, but the orders coming to hand so far are for small quantities. Stocks are increasing in makers' hands and they are now willing to accept 77s. for mixed numbers for delivery over a few months. Merchants are prepared to accept less than this figure. Dorman Long and Co. have secured an important order for a new bridge at Cairo for which they were the lowest tenderers in competition with five other British and Continental firms. They have also just booked 5,000 tons constructional steelwork for a large new hotel at Shanghai. Orders have just been placed on this coast by the Anglo-Saxon Petroleum Co., Ltd., London, for six large tankers of 11,500 tons d.w. each, two with Swan Hunters and two with Hawthorn, Leslie and Co. on the Tyne, also two with Furness Shipbuilding Co. on the Tees. These orders will improve the prospects of the producers of shipbuilding materials and other requirements in connection with new steamers. Prices for steel materials for home use under the rebate scheme are unchanged, viz.: Plates, ⅜-in. and up, £8 15s.; sections, £8 7s. 6d.; joists, £8 10s. Other home quotations are: Iron bars, £10 15s.; heavy steel rails, £8 10s.; 24-gauge galvanised corrugated sheets, £12; and 21/24-gauge black sheets, £9 15s. In the ore market there is practically no demand, but sellers are offering odd prompt cargoes at cut figures without finding an outlet. Best rubio can now be obtained at 21s. 6d. c.i.f. for prompt and the current freight Bilbao/Middlesbrough is about 6s. Coke is very weak, and with supplies in excess of requirements good furnace qualities can now be obtained at 20s. delivered works.

Our Sheffield correspondent writes:—The position is much the same as it has been since the beginning of December. The local staple industries appear to be in the grip of the wave of depression which has settled upon trade in all parts of the country and also in nearly everywhere abroad. The production level of open-hearth steel is being maintained, but makers are unable to obtain forward contracts to provide for future outputs and for that reason the situation gives cause for anxiety. If a general buying movement is delayed two or three more weeks a drastic curtailment of production cannot be avoided. This applies equally to pig iron. Special steel strip, automobile requisites, and steel for the electrical industries, are in a fairly healthy condition, though rather less active than in the early months of last year. Sales overseas of ordinary commercial steels are below the average and the steel sheet department is exceptionally quiet. A few firms producing light steels of high quality are fairly busy. Makers of hand-tools complain of the paucity of export orders and severe internal competition. The turnover of the cutlery and plate branches is considerably down compared with the opening months of last year.

Our Glasgow correspondent writes: Business in the iron and steel trades remains very much as during recent weeks. In no branch can it be said that there is a distinct improvement, but the plants recently in operation are able to keep going, and there are more enquiries on the market than for some little time. Local structural engineers have within the past few days secured contracts, mainly for export, and it is announced that two of the motor tankers which the Anglo-Saxon Petroleum Company, Ltd., have recently placed are to be built by Messrs. Harland and Wolff, Ltd., of Govan, Glasgow. The improvement indicated in the sheet trade last week is maintained, although bookings generally are for early delivery. Prices are unchanged.

Our Cardiff correspondent writes: Quiet conditions have prevailed in the South Wales steel and tinplate markets this week. Tinplates rolled from foreign bars have been sold at 18s. per basis box, but nominally quotations have remained unaltered at from 18s. 3d. to 18s. 9d. Galvanised sheets are a shade steadier market, at from £11 17s. 6d. to £12 0s. 5d. per ton. Bars are unaltered at £6 10s. for the local make, and £5 9s. per ton for the imported bar. Shipments last week were lower than in the previous week, and stocks were reported at 212,906 boxes as against 191,973 boxes the previous week and 292,706 tons at the corresponding period last year.

OTHER METALS.

TIN.—The standard market opened with a dull and easier tons, in sympathy with lower Eastern cables. Values subsequently responded sharply on further developments in the restriction scheme, but dealings were attended by a good deal of irregularity at times and closing tone weak. The output of tin and tin ore from the Federated Malay States during February amounted to 4,768 tons, compared with 4,896 tons at same period last year. Standard cash sold at £159-£166 10s. and £162; three months, £162 to £168 10s. and £164 5s. In the East business was recorded at £167 to £165 5s.-£168 5s. and £165 15s. ton c.i.f. terms.

COPPER market firmer, especially for cash, sellers showing more reserve, with buyers more in evidence. Later movements disclosed slight weakness. Standard cash changed hands at £67 7s. 6d. to £70 10s.; three months, £66 13s. 9d. to £68 5s. and £67 10s. ton.

LEAD irregular, but steady on balance, with liberal dealings recorded. Good soft foreign pig, March, sold £18 11s. 3d.-£18 7s. 6d.-£18 10s.; April, £18 13s. 9d.; May, £18 16s. 3d. to £18 15s.; June, £18 17s. 6d.-£18 13s. 9d. and £18 15s. per ton.

SPELTER in good demand at slightly fluctuating prices. March sold £17 18s. 9d.; April, £18 6s. 3d. to £18; May, £18 10s. to £18 8s. 9d.; June, £18 15s.-£18 7s. 6d. per ton.

ANTIMONY quietly steady. English regulus, £42 10s. to £48 10s.; Chinese ditto, spot, £30; March-April, £26 5s.; Chinese, crude, March-April, £17 per ton c.i.f.

ANTIMONY ORE, 50 per cent., March-April, 3s. 9d.; 60 per cent. ditto, 4s. 6d. per unit, c.i.f.

ANTIMONY OXIDE, March-April, £26 ton c.i.f.

WOLFRAM steady. Chinese, March-April, 30s. 3d.; Burmese, 30s. per unit c.i.f.

ALUMINIUM quiet. Home trade £95; export £100 ton.

QUICKSILVER steady. Spot, £22 17s. 6d. per bottle.

Increasing Interest in South American Markets

Estd. *1862*

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branches in South America, in London, Bradford and Manchester; in France Belgium, Portugal and U.S.A. with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description Status reports are supplied on request, and a Monthly Review of Market information in English or French is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

ZINC OXIDE quiet. Spot, £29 to £36 per ton, as to quality, delivered U.K.

THE COTTON TRADE.

LIVERPOOL: March 12th.

During the week prices have continued to fall, and show a decline from Wednesday last of some 35 points. The consumption figures issued last evening by the New York authorities and the International Federation are distinctly bullish. The New York authorities (Garside) say the year's consumption will approximate last year's (25,891,000 bales), while the International Federation figures show a consumption for the six months ending January 31st, amounting to 13,202,000 bales, against 12,866,000 bales for the corresponding period last year, an increase of 334,000 bales. At the same time there is a decrease of American, 530,000 bales, but an increase in the use of East Indian and sundries of 864,000 bales. Our market at one time to-day showed an advance of 15 points from last night, this however, has been almost entirely lost on resumption of liquidation. Spot sales for the week 6th to 12th (inclusive) are 25,000 bales, of which 13,310 are American, 3,300 Brazil, 50 Argentine, 2,300 Peru, 2,400 Egyptian, 1,400 African, 700 East Indian and 1,540 sundries. Imports for the same period are 40,886 bales, of which 11,455 bales are American, 11,045 Brazil, 1,599 Peru, 9,397 Egyptian, 4,930 African, 1,668 East Indian, and 792 sundries. Quotations to-day are American Middling, 8·06; Egyptian Sakel, 13·60; Uppers, 10·02; Brazil Fair, 7·66; Peru G.F. Mod-Rough, 9·25; Smooth, 8·76; West African Middling, 8·11; and East African G.F., 9·11.

MANCHESTER: March 12th.

Although some spinners and manufacturers have experienced rather more inquiry, there has not been any particular expansion in the volume of trade during the past week. The further decline in raw-material rates has had a very unsettling effect, and although prices for manufactured goods are more attractive, merchants hesitate to commit themselves to contracts of weight. Shippers of cloth to India have received rather more cables asking for prices to be wired out, but the response in the way of bids has not been encouraging. A few more scattered sales, however, have occurred in white goods for Calcutta, Bombay and Karachi. Speaking generally, there is less anxiety with regard to the political situation. Certain advices from China have been slightly better, but at the auctions in Shanghai business continues limited, and very little fresh buying on this side has taken place. Miscellaneous transactions have been put through for the Near East, South America and the Continent, chiefly in printing and finishing styles, but most of the contracts have been for retail quantities. Home trade demand continues rather quieter. Trade in the yarn market has been disorganised. Very few American mills are receiving prices at the moment which are better than stopping. A restricted turnover has taken place in Egyptian counts.

THE WOOL TRADE.

Our Bradford correspondent writes:—Raw wool is remarkably cheap, and tops are quoted below the pre-war level of values, yet there is still no sign of returning confidence. Small sales are being made all the time, but only for current requirements and mostly at unsatisfactory prices. In addition to the lack of a keen demand for yarns and piece-goods, there is the menace of accumulated stocks of raw wool in Australia, and until consumption throughout the world is more in keeping with supplies, there is not much prospect of any material improvement in trading conditions. Meanwhile there is a strong feeling, both in this country and on the Continent, that the selling interests in Australia should work more in harmony with users. There is urgent need for the appointment of a strong and representative committee, representing all sections of the industry, from the grower to the manufacturer, to deal in a statesmanlike manner with the balance of the clip and inaugurate a marketing policy which can be supported by all. The present system of limiting offerings without consultation with the consumers is creating a bad impression and tends to frustrate the object in view—namely, the stabilisation of values. There is only a spasmodic inquiry for tops and yarns, and quotations are merely nominal. Taken all round, the position is definitely in favour of the buyer, and the expectation of a further decline in prices at the Colonial wool auctions which open in London next week results in offers still lower than those recently ruling. It is a serious position for all concerned, but an early settlement of the wages dispute may have a good effect, especially if agreement can also be reached on the wool marketing problem.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

Prices in Brisbane are in harmony with those current in Sydney, and as far as can be ascertained the demand for wool, particularly anything of fine quality, will continue fairly satisfactorily. One probable result of the splendid growing season which Australia is experiencing is that superfine quality merino will be exceedingly scarce next season, while there will be a big weight of medium quality. Even now there are indications of super 70's and upwards selling at relatively better prices than ordinary 70's and below. No doubt this is partly attributable to fashion in ladies' wear favouring very fine, soft, clinging fabrics, and these can only be made out of the finest merino wool. Further trouble has developed between sellers and buyers in Melbourne, and there is some justification for the opposition shown to the policy of sellers. No sale has been held at Melbourne or Geelong for a fortnight until this week. Buyers have been kept waiting without any real reason, and the opinion here is that about 40,000 bales could have been sold at current values. It is to be hoped that a more considerate attitude will be taken up. Buyers have no desire to force the hands of selling brokers, but it is felt that as there is such a huge weight of wool awaiting sale, no less than 21,000 bales per week should be offered. The programme for the London sales which will commence next Tuesday has been announced. It is well known that about 188,500 bales are available, but the selling brokers state that only 164,000 bales are likely to be catalogued. It is evidently not thought advisable to offer much wool at once, and no doubt increased quantities will be offered if buyers make an encouraging response. It is already anticipated that there will be a decline of about 10 per cent. compared with the close of the last auctions in both merinos and crossbreds. The vacation has been most disappointing, tops having undergone a definite fall, and the turnover has been very small indeed.

HIDE, LEATHER AND ALLIED TRADES.

Cattle hides were just a shade firmer at the auctions held in the North so far this week, and in view of the fact that there seems to be a slightly better inquiry it is expected that the week-end sales will show similar results. Owing to the changes in classification that have been agreed upon, a comparison of prices realised would not give a true indication of the position. Hitherto there have only been two classes—first and seconds, but from now onwards hides from English cattle will be sold as "clears" and "warbled," for each of which class there will be three selections. Business in connection with imported hides remains quiet, and although prices have exhibited a further downward tendency no increased buying on the part of tanners in this country has been experienced. In South American hides, Argentine ox are now changing hands on U.S.A. account at the equivalent of 7⅞d., with light ox sold at 7⅛d., and seconds at 6⅝d. In the River Plate market, B.A. Americanos are unchanged at 8⅜d., while Sierra Cordobas have sold at 9d. and B.A. Anchos at 7d. In spite of the fact that a fair amount of business has been done in connection with African hides, prices for Capes are lower, sales of dry-salted having been made at 7⅜d. and 6⅜d. for firsts and seconds, with drys making 8¼d. and 7¼d., in the same selections. With lower figures quoted for Australian hides, a little more interest is being taken. A fair amount of business continues to be done in connection with sole leather, and although some firms are inclined to experience a slight easing off in the demand the general opinion is that this is only temporary. Manufacturers of footwear continue to come into the market for regular if small supplies of light to medium-weight bends, but the heavier averages for this class of trade are not moving off as fast as could be wished. Better-class repairing bends are a steady sale, and although there has been no improvement in the call for these, inquiry on the whole has been up to that of the previous week. Satisfactory business continues to be done in offal and, generally speaking, the demand is such as to keep stocks in low compass. Prices all round are fully maintained, and it is only in connection with a line of goods that might be hanging fire that there is any idea of shading values a fraction. A regular day-to-day business is being done in upper leathers, and although orders are limited in size the number coming to hand makes for a fair aggregate over the week. The bulk of the inquiry still continues to be for glacé kid in black and brown, together with willow calf, while in certain directions there has been a steady demand for box calf. Patent leather also moves off regularly, but inquiries for semi-chrome box leathers are usually restricted to something very cheap. Although a fair turnover continues to be done in reptile leathers, the call for the real article has fallen off somewhat; to counterbalance this, imitation grains have made increased sales. Shoe manufacturers report the position as about the same as that of last week; orders for footwear are received fairly regularly, but there has been no increase in the size so far.

VEGETABLE OILS AND OILSEEDS.

The weakness in the markets for linseed and linseed oil has been accentuated and prices have, in sympathy with wheat and larger supplies, further receded. Pressure to sell Indian linseed has been a strong factor and Argentina has been largely neglected. Plate on spot has fallen to £15 15s., while business on passage is reported at £16 and April-May at £16 2s. 6d. and £6 5s. Latest business in Calcutta linseed has been done at £17 7s. 6d., March-April to Hull, and £17 5s., June to London; and bold Bombay May, £17 15s. to the Continent. Large arrivals of linseed at European ports have reduced the quantity afloat to 135,000 tons, or 16,800 tons less on the week. The lower values of Egyptian cotton seed has brought in a good demand from crushers, who have bought freely for March and April loadings, but have refused to entertain later shipments. Latest business in black Egyptian has been done at £7 3s. 9d. to Hull. In the oil section consumers of linseed oil have bought very sparingly indeed. Prices have still further fallen, raw oil, ex Hull mill for prompt delivery, having dropped to £36, with April to August quoted £35 5s. Cotton oils are a shade easier, crude Egyptian offering at £28 5s. and common edible at £31 5s., prompt, ex Hull. Other seed oils are quiet and nominally unchanged. Demand for oil cakes and meals is poor.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—This market continues quite steady, and previous prices are repeated for all spot goods. Pending the Budget, trade buyers seem to have measured their requirements day to day. The general outlook is decidedly less depressed; in fact, the undertone gradually improves, and a feature is extending interest on the part of buyers regarding forward deliveries. Recent large movement in the U.S.A. of refined also assists, while influencing position of raw sugars, and in this connection it is interesting to note quite heavy bookings of tonnage from Cuba on American account. Early vessels largely favoured. Raw refining descriptions firmly held, and a steamer cargo Cuban and/or San Domingo, April, to the U.K., sold 7s. 6d. c.i.f. Terminal markets steadier, with fair support accorded. Of raw, May delivery sold 6s. 10½d. to 6s. 11½d. and 6s. 10½d.; August, 7s. 3d.; December, 7s. 8½d. Czecho granulated, April, sold 9s. 6d., f.o.b. Hamburg. U.K. imports last month, 97,484 tons, against 148,978 last year; consumption, 127,803, against 163,321; stocks, 301,050, against 277,650; stocks of home-grown, 71,350, against 48,300. Cuban receipts last week: old crop, 7,354 tons, against nil last year; exports, 18,076, against nil; stocks, 13,220, against 1,615; receipts, new, 172,353, against 244,254; exports, 19,519, against 158,696; stocks, 941,889, against 1,032,540. Centrals at work, 156, against 163. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending March 8th totalled 231,241 tons, against 140,644. Later spot prices were, advanced by 3d. per cwt.

COFFEE.—There was decidedly more tone about the market during the week and better progress made at the auctions. A parcel, fine colory Costa Rica, sold 170s. Moderate absorption resulted of the East Indian offerings. Brazilian kinds for shipment generally steadier.

COCOA.—In auction, a moderate quantity offered failed to elicit any tangible support, and as a result only a few unimportant or odd lots found buyers. Sellers, however, were not inclined to grant price concessions. Some fine red Grenada sold 53s.; dark weathered, 48s.; good red St. Lucia, 51s., and Jamaica, 51s. Forward positions quiet and easier. Accra, F/F, April-June, sold, 36s. 6d. to 37s., and again at 36s. 6d. f.o.b. Terminal section, after showing a good deal of activity, assumed a quieter tone. Prices are easier. March sold, 41s. 6d. to 41s. 9d. and 41s. 7½d.; May, 41s. 4½d. to 40s. 9d., 40s. 3d.; July, 41s. 9d. to 41s.; September, 42s. 1½d. to 41s.; December, 41s. 1½d. to 41s.; March, 41s. 3d.

TEA.—Indian auctions during the week produced 51,954 packages, which met a good general demand. Fine tippy and autumnal-flavoured teas made firm to dearer prices, useful medium being firm. Common and low medium rather irregular, but frequently fractionally higher. Ceylon sales of 18,448 packages accorded very active support, and improved quality much appreciated by buyers. Prices advanced ½d. to 2d. lb. All grades up to 1s. 6d. were eagerly sought after. Java and Sumatra auctions met a brisk demand at firm to dearer prices. There is a sustained demand for China teas, and supplies of Keemun between 1s. 9d. and 2s. are getting limited.

RICE.—Burma and Siam firm in local markets, but European interest in same remains restricted. Spanish firm with buyers more in evidence, and market is partially assisted by rate of exchange. Burma two stars, spot, London, 13s. 6d., with business from second-hand in March-April at 10s. 6d., shippers asking 10s. 10½d. Saigon easier. Spanish oiled, March-April sellers, 14s. 6d. to 14s. 9d. as to quality. American blue rose from 23s. to 24s. c.i.f. S.Q. to Cuba, 11s. Saigon No. 1 round grain, March-April to Europe, 11s. 9d. Siam Super, March-April, 15s. 1½d.

DIE BANK
A Weekly Review of International
BANKING AND FINANCE
Conducted by
Alfred Lansburgh.

DIE BANK is written by practical Bankers and Economists for the Man of Affairs who would keep in touch with world problems and events.

DIE BANK is a critical journal of finance whose editorial policy reflects contemporary thought among European Bankers and Industrialists.

DIE BANK devotes special attention to Banking and financial happenings in Germany, but its surveys and special articles carry world-wide appeal.

DIE BANK is now in its twenty-third year of issue; pursuing an editorial policy free of all political ambitions, its articles are

Trenchant. Practical. Businesslike.

Printed in Roman type and handy format,
DIE BANK
epitomises everything in International financial affairs that the busy man would wish to know and understand.

levels, 2⅝ per cent. being the ruling rate for three months' bills on Wednesday, with earlier maturities quoted at 2⅞-3 per cent. Money, too, had become very easy by the middle of the week, old money being quoted at 2½-⅝ per cent. and new money at 2½ per cent. Hence, so far as the money market was concerned, the stage was set for the Bank rate reduction.

* * * *

Gold movements, too, were favourable, for on Friday the first of the Australian gold, amounting to £1,025,000, reached the Bank. More significant still, on Tuesday the Bank secured a substantial part of the Cape gold in the market at its minimum buying price of 84s. 10d. The Bank has not succeeded in doing this for a very long time, so its achievement of this week makes it clear that the recent world scramble for gold has now reached its end. If so, the Bank should continue to receive, without having to bid for it, its share of the new Cape gold. Next week only £211,000 is arriving, but £969,000 is expected the following week, and, if the Bank keeps all the Australian gold, its stocks may easily touch £170,000,000 before long.

* * * *

Thus, just as was the case a fortnight ago, there was every argument in favour of reducing Bank rate, and indeed it is quite possible that a 3 per cent. rate will soon be in force. In addition to more general considerations, the market realises that a period of really cheap money will be of the utmost assistance to the Chancellor, who is credited with the desire to make a further breach in the great outstanding mass of 5 per cent. War Loan. Some argue that his recent conversion operations, which have helped him to make such big reductions in the volume of Treasury bills, have had as their real objective the driving down of discount rates, thus permitting of successive Bank rate reductions at the earliest possible moment. It has also been suggested that recent failures of the money market to secure the week's quota of Treasury bills can be explained by tenders emanating at least from semi-official sources, and this week's increase of £4,441,000 in the Bank's holding of Government securities is significant. In short, the Chancellor is supposed to have taken every opportunity of a technical character which might accelerate, in London at least, the world decline in money rates.

	Feb. 27, 1930.	Mar. 6, 1930.	Mar. 13, 1930.	Mar. 20, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4½	4	4	3½	4 (Mar. 20,'30)
Banks' Deposit Rate	2½	2	2	1½	2 (Mar. 20,'30)
Discount { Call	2½	2	2	1½	2 (Mar. 20,'30)
Houses { Notice	2¾	2¼	2¼	1¾	2¼ (Mar. 20,'30)
Market rate (3 months' bills)	3 7/16	3 5/16	3 1/16	2½-½	...

Immediately after the reduction, discount rates were extremely unsettled, and anything from 2¼ to 2⅛ per cent. was quoted for three months' bills, with Aprils at 2⅜ per cent. and Marches at 2⅝ per cent. Later in the day the rate was called 2⅜ per cent. Rates of weekly fixtures automatically became 2½ per cent., while those for money over the night were quoted at either side of 2 per cent.

NEW YORK.

Despite sharp cuts in the bankers' bill rate, bringing the demand rate for 90-day maturities to 2½ per cent. and the drop in commercial bills to 3¾ per cent., with call funds a drug on the market at 1½ to 2 per cent., surprise over the failure of the Reserve Bank to lower its discount rate has been tempered by the recollection that on previous occasions a delay of a week or two elapsed. A reminder has also come from Governor Young that the mechanics of the System make for delay. The actual Reserve credit in the market this week was nearly $90 million lower and the System reserve ratio was 82.5 per cent. The Member Banks are flush with funds, due in part to a Treasury overdraft at the Reserve Banks of over $200 million, having an additional $60 million paid off. The discount policy and the failure of the Reserve Bank's buying rate to go down as fast as the open-market rate brought a drop of $70 million in the Reserve's bill holdings, due to maturities. Government security holdings are up $47 million, entirely as a result of Treasury borrowings.

THE STOCK MARKETS.

The effects of cheap money were markedly in evidence in the stock markets. Gilt-edged quotations rose more rapidly than at any time during the last few years, considerable quantities of stock being dealt in. The movement spread to the markets for foreign bond and domestic industrial prior charges, and was accompanied by a perceptible hardening of industrial " equity " share quotations. Apart from a number of mining counters, however, the more speculative sections of the Stock Exchange remained outside the orbit of the week's accession of activity. Rubber shares were idle, and orders for tea shares were on a meagre scale, though the tone was firm. Oil shares showed an improving tendency in the middle of the week, but increased American crude production had a restrictive influence on the market.

THE COMMODITY MARKETS.

Such slight change as is discernible is, on balance, for the better. The situation in the coal trade does not improve, and some collieries appear likely to close down. There is a shade more inquiry for steel, and a reduction in pig-iron prices is expected to stimulate business, but new contracts are still far behind completed orders. The tinplate market is steady. A slight advance in cotton prices has had a beneficial effect, and inquiry for Manchester goods is slightly more promising. Wool prices are a little more encouraging, but the demand for dress goods fails to revive. Jute trade reports are as gloomy as ever. Trade in hides, leather and their products remains steady, but on only a moderate scale. Linseed and linseed oil have taken a sharp upward turn. Other oilseeds and oils are quiet.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was generally quiet, with slight irregularity in some of the Continental exchanges and sterling holdings its own well against the dollar. New York opened the week at 4.86 5/16 and stood at 4.86¼-⅜ immediately after the Bank rate reduction. Montreal improved from 4.88⅛ to 4.86½. Paris moved strongly in our favour from 124.24 to 124.31, after being higher. Brussels remained unchanged at 34.88¾, but Milan gained three points at 92.87 and Madrid made a fair recovery from 39.35 to 38.50. Amsterdam, after hesitation, was unchanged on balance at 12.12⅜. Berlin was also inclined to irregularity, but gained ⅜ at 20.38¼. Switzerland improved from 25.13¼ to 25.12⅝. The Scandinavian exchanges were generally firm, Stockholm standing at 18.10¼, Oslo at 18.17⅛ and Copenhagen at 18.16⅜. Constantinople was fairly strong at 1,025, nominal. Of the South American currencies Rio lost 1/16d. at 5 11/16d., but Buenos Aires showed signs of improvement and gained 3/16d. at 42⅛d. Montevideo was rather better at 43¾d. The premium for 90 days' Lima on London advanced from 28¾ per cent. to 29¼ per cent. In the Far East the rupee was inclined to weakness at 1s. 5 13/16d., but the yen was firm and unchanged on balance at 2s. 0⅜d., after having been a little better. Bata was firm at 12.12½. In the forward market dollars [illegible] proved from discounts of 1/32 and 1/16 cent to par a cent discount respectively. Paris was more wan[illegible] 10 and 23 centimes premiums, whilst Brussels im[illegible] slightly to par and one centime discount. Mil[illegible] quoted at 12 and 31 centesimi discount, and Mad[illegible] steady around about 7 and 19 centimos for t[illegible] periods. Amsterdam gained ⅛ cent for each perio[illegible] and two cents premium, Berlin being unchanged[illegible] and 5½ pfennigs discount. Silver was rather bett[illegible] India and China buying and with only small par[illegible] offer. Spot gained ⅛d. at 19⅜d. and futures ¼d. at [illegible] The Chinese silver exchanges were differently aff[illegible] Hong Kong remaining unmoved at 1s. 6½d., w[illegible] Shanghai lost ¼d. at 1s. 11⅜d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Bouverie Street, London, E.C.4.

THE EARL OF BALFOUR.

THERE are few men in our public life whose passing will occasion more widespread regret, not only among his own countrymen, but among his innumerable friends abroad, than that of the Earl of Balfour, who died on Wednesday last, at the age of 81. To the public the A. J. B. of pre-war days was essentially a party man, unrivalled in the tricks of the parliamentary game and admirably equipped with all the lighter weapons of debate, if not with the heavier armament of enthusiasm and conviction. But with the war he seemed to shed his party attachments like a cloak, and, at an age when most men retire from active life, a second phase in his career opened, in which his great qualities reached their full flower under the inspiration of great causes. After the war he never really returned to party politics, but, as one of the elder statesmen standing somewhat aside from the political arena, crowned an exceptionally long life in the public service by one or two achievements of first-class national importance. There has been no other Prime Minister the record of whose Premiership has been so far surpassed by his achievements in semi-retirement.

Lord Balfour's ascendancy as a party leader, even more than that of Lord Oxford, belongs to a past generation, nor can it be said that he has left a mark upon the history of his time. If it is of interest to recall his career to-day, it is not merely because his death removes one of the great political figures of the later Victorian era, but because his long life covers the period of final transition from the aristocratic tradition in British politics to a more democratic age. And with the changing times, Balfour changed; not by becoming a democrat or by developing enthusiasm for the social and economic questions of the day—these never greatly interested him—but by adjusting his outlook on international and Imperial affairs, which finally became his chief interest, to the spirit of the times. For twenty years a leader in the fight against Home Rule for Ireland, he lived to be a member of the Government which created the Irish Free State. Creator of the Committee of Imperial Defence and the Prime Minister responsible for the Franco-British Entente, he became our first representative on the Council of the League of Nations.

Historians may dispute whether he or Joseph Chamberlain was the more responsible for the downfall of the Conservative Party in 1906. Succeeding to the leadership of the House in 1891, almost as a family inheritance, and promoted again in 1902 when Lord Salisbury relinquished the Premiership, he was quickly faced with the " raging, tearing " propaganda of the Tariff Reform campaign. The story of how he precariously maintained his position for three years, sacrificing colleague after colleague, steering with immense subtlety and finesse a course which avoided a definite break with any wing of his party, has often been told, and has no doubt been carefully studied by Mr Baldwin, who finds himself in a like predicament. (Indeed, Mr Baldwin's declaration in favour of tariffs for bargaining purposes is simply a modern version of Balfour's argument for " retaliation.") He " played for time " with masterly skill, but to his party's ultimate undoing; for the long delay enabled the Free Trade case to be fully stated and to achieve in 1906 the unexampled victory in which Mr Balfour and nearly all his Cabinet lost their seats.

Apart from his early measures in Ireland, Mr Balfour's only important legislative achievements in home affairs were the Education Bill, which was the cause of the bitter religious controversy that gave rise to the passive resistance movement, and the Licensing Bill, which created saleable vested interests in liquor licences, and marshalled the temperance movement against him. As a guide to Conservatism, his strategy was more than once at fault. His was the policy of mobilising the House of Lords against the legislation of the Liberal Parliament, and, though at the last moment he counselled the House of Lords to give way without forcing the King to create new peers, he was in a large measure responsible for the policy which led to the restriction of the powers of the Second Chamber. From that error of generalship he was not destined to recover, and dissatisfaction with his leadership in his own party was followed by his retirement in 1912.

At a very early stage in the war, however, he was drawn back into counsel. Thanks to his long-standing interest in questions of defence, he was able to be of great use in organisation, and was a member of the Munitions Committee which preceded the setting up of the Ministry of Munitions. When Lord Kitchener proved obstinate in refusing to allow key men to be badged and retained in workshops—on the ground that if any man wished to fight for his country, he was entitled to do so—it was Mr Balfour who was deputed to use his arts of persuasion with the Secretary for War. It was he who was sent to restore harmony at the Admiralty when the first Coalition was formed in May, 1915; and when the Lloyd George administration was formed, he succeeded to the important post of Foreign Secretary. From that time onwards there is a series of episodes intimately connected with his name, in connection with which, incidentally, he figures as the draughtsman of some of the great State papers of our time. One of these was the famous Declaration in which this country announced its support of the policy of creating a Jewish National Home in Palestine. In the same year he went on his first mission to the United States when America entered the war. Contact had to be established with the Government at Washington, which had been carrying on correspondence, at times extremely bitter, in regard to British naval policy. Traditional suspicion of Britain had to be overcome and a liaison established between the various sections of the United States administration and the Allies. In this task Lord Balfour laid the foundations of the smooth working and co-operation which proved so important during the next two years.

At Versailles Lord Balfour was overshadowed by Mr Lloyd George, but to him fell the task, in conjunction with the representatives of other countries, of launching the League of Nations. Those who conceived of Balfour as a cold intellectual were surprised at the depth of feeling which developed in him for the ideal of the League, and led him to rally to its defence when visiting America at a later date and to express " the faith that is in me." An even more striking personal success was the second visit to America and the negotiation of the Washington Treaty, which put an end to the threatened battleship competition between England and America. In his two American visits, Balfour was supremely happy in assisting a better understanding between England and America, which he believed to be of the greatest importance to the future of the world.

It yet remained for him to draft two great State papers. The first was the Balfour Note to the debtors of Great Britain in August, 1922. The Note, unfortunately, aroused antagonism in America by giving currency to the false idea that the American Treasury had refused in the war to lend to our Allies. This was an unfortunate blemish, but the document stands out as putting on record the willingness of this country to wipe off the slate some £1,000 millions of war debts due to us, and to remit all payments if America would do the same—a great gesture which unfortunately failed to prevent the French marching into the Ruhr. Last of all came the great document of 1926 defining the mutual relations of Britain and " the autonomous communities within the British Empire, equal in status . . . and freely associated as members of the British Commonwealth of Nations."

All who knew Lord Balfour fell under the spell of his charm. A lover of music and a man of varied intellectual interests, for many years Chancellor of Cambridge University and deeply interested in education and scientific progress, he was too

detached in outlook, too apt instinctively to view both sides of a question, too distrustful of enthusiasms which he could not share, ever to lead great popular movements to victory. By circumstances removed from the common dust of the arena, a supreme sceptic by temperament and conviction, he was too much the cool, aloof philosopher to be the wholly successful politician. Never those of a popular orator, his speeches, which were nearly always *ex tempore*, were often fascinating to follow because they revealed the processes of his thought. When he had wandered far into a long and involved sentence in which it seemed he must inevitably be lost, he would hesitate until he found the *mot juste* and round off the whole with perfect artistry. *Grand Seigneur*, born a little out of his time, Lord Balfour was not a leader of men; but with his judgment ripened by years of experience and his intellect undimmed by age, he became one of the nation's most wise and trusted counsellors. We mourn the loss of a great and representative Englishman.

THE CHANNEL TUNNEL.

A FEW weeks before he left office last year Mr Baldwin appointed a sub-committee of the Committee of Civil Research, under the chairmanship of Mr E. R. Peacock, "to examine and report on the economic aspects of proposals for the construction of a Channel Tunnel or other new form of cross-Channel communication." The Committee of Civil Research having been absorbed in the Economic Advisory Council, the Channel Tunnel Report,* issued last Friday, has the distinction of being the first official document to be published under the new Council's auspices. Subject to a minute of dissent on the part of Lord Ebbisham, the Committee's conclusions are as follows:—

1. None of the other new forms of cross-Channel communication suggested can be regarded as a satisfactory alternative to a Channel Tunnel.
2. On the available evidence it appears probable that the geological and engineering difficulties likely to be encountered could be successfully overcome. There must, however, remain an element of doubt regarding the practicability of constructing the tunnel until a pilot tunnel, estimated to cost £5,600,000, has been successfully driven right across the Channel.
3. If the pilot tunnel is successfully constructed, the practicability of subsequently constructing the traffic tunnels may be regarded as established. The cost of the latter tunnels is estimated at about £25,000,000. There would be no difficulty about their operation and upkeep.
4. If a Channel Tunnel is constructed, it is desirable on economic grounds that the work should be carried out by private enterprise and should not be accorded any special financial assistance by Government.
5. A Channel Tunnel could be built, maintained, and operated by private enterprise at a cost which would permit of the traffic through it being conveyed at rates not higher than those at present in force on the short cross-Channel route.
6. Although some interests would probably be adversely affected, the construction of a Channel Tunnel, by creating new traffic and thus increasing trade, would be of economic advantage to this country.

On the technical side of the question, the alternative schemes which were brought before the Committee consisted of (*a*) a train ferry; (*b*) a "tube" across the bed of the sea; (*c*) a cross-Channel jetty; and (*d*) a rail and road cross-Channel bridge. The last-named of these projects, estimated to cost £75,000,000, was vouched for as feasible by such eminent authorities as Sir Murdoch Macdonald and M. Huguenin; but the Committee consider that the cost would be prohibitive, and that the bridge would be a serious obstruction to navigation. This consideration would apply with even greater force to the jetty scheme; the "tube" project was pronounced by the Committee's technical advisers to be impracticable; and though a Dover-Calais train ferry could be established, at an initial capital cost estimated at about £2,000,000, it would be obligatory to employ boats of shallow draught, and therefore of relatively small size, rendering it necessary to split the trains, and offering few, if any, advantages over the existing boats in rough weather.

* C.M.D. 3513. H.M. Stationery Office. 3s. net.

For these reasons the Committee conclude that there is no alternative to the proposals put forward by the Channel Tunnel Company. The consulting engineers, who advised the Committee were of opinion that a tunnel must be driven through the relatively dry "lower chalk," upon whose continuity under the Channel (a probability provable only by an experimental pilot tunnel) the practicability of the Tunnel depends. The pilot tunnel and its accompanying drainage tunnel would take five years to complete. If that were successful, the construction of two traffic tunnels would offer no great difficulties, and could be finished in a further three years.

Proceeding next to examine the financial aspects of the scheme, the Committee were advised that, if the French and English railways provided the necessary electric locomotives and rolling stock, maintenance (after the initial £30 million capital cost) should not absorb more than £500,000 a year. Having examined various estimates of probable traffic, they are of opinion that if the Tunnel were opened in 1930 it might be expected to secure in that year 2,357,000 passengers, while as regards goods it "would probably secure a substantial traffic at present rates in view of the greater speed and regularity of its service . . . though bulky and less profitable traffic would continue to use the sea route." Financially, the enterprise (at least, so far as the experimental tunnels are concerned) would be speculative, and should be left to private enterprise; and the return on capital, though likely to increase in time, would at best be probably meagre in the early years of the Tunnel's working.

Turning to the wider issues of public advantage, the Committee cannot promise that the Tunnel would provide much employment. On the experimental tunnels work would be afforded directly for 250 men, and indirectly for 750 men; and during the construction of the traffic tunnels employment, direct and indirect, would not exceed 6,000 men per annum. Against this, there would be a small displacement of personnel from cross-Channel ships and harbours.

That there is a case for the Tunnel, however, the Committee, with the exception of Lord Ebbisham, are agreed. Unfortunately, there is no possibility of including a motor track in the Tunnel, there being no known way of disposing of the exhaust fumes which would accumulate; but even a railway tunnel would contribute much to fostering *tourisme* in Great Britain, particularly in the case of American visitors to Europe. As regards commerce, the Committee have examined at some length, and very properly rejected, arguments that the Tunnel should be opposed as being calculated to increase imports and throw people out of work in this country. In a few special classes of fruit and vegetables the opening of the Tunnel would probably be followed by some increase of foreign competition, which British growers, given better organisation, should have no difficulty in meeting. With regard to goods, the area of disturbance would be very small in relation to our total imports, and as the movement on this route is mainly inwards the railways would have every inducement to "confer substantial benefits upon British manufacturers" by quoting low rates for export traffic in order to fill trucks which otherwise would be returned empty. "On the whole," the Report concludes, "we are of opinion that the advantages that would accrue to this country from a Channel Tunnel would be likely to increase with the passage of years."

Lord Ebbisham's minute of dissent merits only passing reference. His prejudices in favour of the *status quo*, the restriction of imports, and the maintenance of our situation of insularity led him into a position in which he should logically have declared for the replacement of cross-Channel steamers by sailing vessels; indeed, the puerility of "economic" opposition to the scheme is equalled only by the folly of the "strategic" argument that London—attainable in half an hour by enemy aircraft based on foreign soil—could be menaced by invasion from a tunnel which could be destroyed in a few seconds, and in any case would be a hopelessly vulnerable "bridge-head."

The Report has been described as "unenthusiastic." Very properly, in our opinion, the Committee have been

assiduously careful not to overstate the Tunnel's advantages. No one would suggest that its construction would be a factor in international development and commercial progress comparable with the opening of the Suez or Panama Canals; and were it a question of State subventions for the enterprise the balance of advantage might be altered. But if private capital is forthcoming for a venture which, if engineering difficulties can be overcome, holds the promise of enormously "civilising" communications between this country and the Continent, it would be a surrender to ignoble forces of panic and unreason for the Government not to lift the veto which militarist obstruction has succeeded in maintaining, for too many years, upon the Tunnel scheme. It may be that in some future period air services will render the Tunnel superfluous, but to oppose its construction, as some critics do, on the assumption that we can afford to defer improvement of existing land communications until aviation has relegated railways to the scrap heap, is unduly to bid the opportunity of to-day wait upon the visionary chances of a distant morrow. We hope that no regard for vested interests or mythical conceptions of "defence" will deter the Government from agreeing to put no further obstacles in the Channel Tunnel's way.

POLITICAL ISSUES IN THE UNITED STATES.

(BY A CORRESPONDENT.)

THE year which has elapsed since Mr Hoover assumed the Presidency of the United States has witnessed remarkable and unexpected developments in American politics. At the election held in November, 1928, the Republican Party seemed to have secured complete control of both Houses of Congress. President Hoover, although not a favourite with the Republican machine politicians, commanded a large measure of popular confidence; he was trusted by "big business"; and most progressives regarded him as an enlightened Liberal in his views. Moreover, he contrived to pick a very presentable Cabinet, and inherited for his administration the conditions of well-diffused national economic prosperity which smooth the path of any Government. It looked as if he had before him a primrose path, which, unless he made grievous mistakes, would probably bring him without much difficulty a second term in the White House.

Such were the forecasts, but never have the perils of political prophecy been better illustrated. The Hoover administration has been navigating almost continuously in troubled waters. Its difficulties began when the President, in accordance with his pre-election pledges, called a special session of Congress to deal with the problem of farm relief. The Agrarian *bloc* had set their hearts upon the measure known as the McNary-Haugen Bill, whose fundamental feature was a State subsidy to help the marketing of the exportable surplus of farm produce, but the Hoover administration set its face against this plan, as reeking too much of Socialism, and propounded an alternative scheme under which a Federal Farm Board was to be established and endowed with a revolving fund of 500 million dollars, to be spent on the encouragement of co-operative organisations and general assistance in the marketing of farm produce and the stabilisation of its prices. This Farm Marketing Bill was hotly debated for weeks, with the agrarians battling to get their subsidy scheme tacked on to it; but, in the end, the Hoover administration had its way, and the Federal Farm Board is now functioning, not, however, without a certain measure of friction.

A tariff revision measure was a complementary part of the farm relief programme, and President Hoover, in the message by which he summoned the special session, explicitly stated that the revision should be limited to items affecting agriculture. But in the United States, as in other countries, once a tariff is opened up for dissection it usually becomes very difficult to set any limits to the revision process. Many industrial interests discerned a splendid opportunity, when the farmers were being accorded tariff largesse, to claim a share of the plunder which was going. They were well endowed with political allies

in the lower House, and the result was the Smoot-Hawley Bill, which carried protectionism to most extravagant lengths. Strong criticism of this measure by the Democratic Press was supplemented by equally vigorous attacks from Western Republican papers, and, when the Bill reached the Senate, it received short shrift. Senator Borah, who had played a large part in the election of Hoover, but had soon reverted to his old *rôle* of critical independence, joined the Radical Senator Norris, of Nebraska, who had supported "Al" Smith at the last election, in organising a revolt of Republican Progressives against the Bill; and at least a dozen of the latter, mostly representatives of middle-western States, formed an alliance with the Democrats, which gave the combination power to work their will. They retained the agricultural duties, but they proceeded to apply the pruning hook with great vigour to the industrial schedules. The "Old Guard" of Republican high protectionists, who were handicapped by the very inept leadership of Senators Smoot and Watson, put up a feeble fight, and there came into existence a fresh group nicknamed "The New Guard," consisting of moderate Republicans who were loyal to the Hoover administration, but were willing to support substantial modifications in the original Bill in some directions.

The result is that the Republican Party is bereft of any semblance of solidarity, and the fissure between the Western insurgents and the others has been steadily growing wider. The Hoover administration no longer possesses any assurance that it can get its legislation through Congress, and its plans are, as a result, in serious confusion. President Hoover has many qualifications for his high office; he has given evidence of real liberality in international affairs; and he has shown great courage in tackling the disarmament problem. But he has not manifested much skill in handling the problems of human management which continually fall to an American President. He has not added to his popularity with the professional politicians who control the Republican machine; the Democrats have no affection for him; and in Washington there is now an atmosphere of hostility towards the President which has had no parallel since the later days of Woodrow Wilson. Both Democratic and Republican legislators are revealing uncompromising antagonism to nearly everything that the President undertakes.

To aggravate the troubles of the Hoover administration there is the Prohibition issue. The Republican leaders had fondly hoped that, after a "wet" Democratic candidate like Governor Smith had been so badly defeated in 1928, the programme of more rigid enforcement of the Prohibition laws, to which President Hoover was pledged, would be successfully carried out. But now the whole liquor question has suddenly boiled up again, and threatens to obscure all other issues. The "drys," headed by Senator Borah, are attacking the administration for its laxity; while the "wets," sensing that public feeling has been deeply aroused by the accumulating evidence of lawlessness and by the numerous killings laid at the door of prohibition officials, have renewed their drive for alcoholic freedom. Congress at present has seven or eight resolutions before it on the liquor question, some sponsored by "wets" and others by "drys," and the Judiciary Committee of the House of Representatives is at present taking evidence about the results of prohibition since the passage of the 18th Amendment. The "wets" have been over-

Notes of the Week.

Liberals and the Coal Bill.—It had been anticipated that Thursday would be a critical day in the House of Commons for the Coal Mines Bill. An amendment had been tabled jointly by Conservative and Liberal members to delete from Clause 3 the sub-section giving the owners in each district power to determine the price "below which every class of coal in the district may not be sold or supplied." Though it was almost certain that a few Liberal members might abstain in the division, there was a possibility that the Government might suffer a further defeat; and as the price-fixing proviso was understood to be regarded by Mr Graham as a much more important element of the Bill (or, perhaps one should say, of his "deal" with the coalowners) than the already negatived "levy" proposal, there was talk of the whole Bill being withdrawn. This situation was unexpectedly altered by the announcement made after a Liberal Party meeting on Tuesday night that the Party had decided that, "owing to the present situation in relation to the Naval Conference, it would not be in the national interest that any critical situation should arise in the House of Commons," and that the Party would "refrain (in the Committee stage) from proposing or supporting any vital amendment, while reserving its full liberty of action on the Report and Third Reading stages." This political *volte face* has come as something of a surprise, for it might be argued that considerations of "not embarrassing the Government during the Conference" applied with little less force last week, when the Liberal votes defeated the Government on the "levy" clause, and with still greater force on February 27, when the majority of the Party, following the official flag, endeavoured unsuccessfully with a "no quotas" amendment to defeat the vital principle of Part I of the Bill. It is, however, certainly the case that the Conference is at the crisis of its fate. The Liberal leaders have no doubt been made aware of the delicate state of the negotiations. If the Government carried out its threat of withdrawing the chief measure of the session as a result of defeats in the House, the position of our negotiators would undoubtedly be weakened. But this explanation leaves the coal issue itself in a state of great uncertainty which needs to be clarified by statements both from the Government and from the Liberal leaders. Bluntly, the issue is whether provisions which are economically indefensible, and are clearly distasteful to the majority of the House and to public opinion outside, are to be allowed to slip through in Committee for reasons entirely unconnected with the Bill itself. What is the final intention of the Liberal Party in these matters? Are these clauses to become law or are they merely reprieved in order to be slaughtered at a later stage? For our part, we regret that there should be any slackening in the attempt to remedy what we regard as glaring defects in a piece of industrial legislation of first-class importance. Though there is a case for quota-regulation as an interim measure, a crude system of minimum price-fixing, without proper provisions being imposed for "grading", and without any form of real organised marketing, is an economic monstrosity. If this section had been negatived, we see no convincing reason why the Bill should have been dropped; for with a quota system in existence it is obvious that the mineowners, if they are capable of any united action at all, would have been in far stronger a position than ever before to prevent internecine competition. If the Prime Minister really regards Parliament as a Council of State, he should be prepared to accept the decision of the House on matters of this kind. While he is entitled to ask for every consideration when he desires to be freed from embarrassing divisions in circumstances like the present, he can claim this indulgence only on condition that Parliament will be given a suitable opportunity to express its real opinion. This means postponing the final stages of the Bill until the Naval Conference is over.

Parliament and "Defence" Estimates.—Painfully aware that the Five Power Conference, like the old lady in one of Anatole France's stories, *vivait, mais si peu*, the Commons spent Monday and Tuesday debating the Naval and Air Force Estimates in a spirit of endeavour to be discreetly reticent, but, as the lawyers say, "without prejudice." Mr Alexander underlined the magnitude of the voluntary reduction which Great Britain had made in naval strength by reminding the House that, on pre-war values, the current estimates represented only 54 per cent. of the 1914 expenditure. Mr Churchill could not wholly disguise his apprehensions at this evidence of unilateral disarmament on our part, but, though he was all against prematurely discounting Conference chickens in terms of cruisers given up before our essential needs were determined, he was content on this occasion to play the part of statesman, not Navy League orator. Commander Kenworthy, who followed, found in pessimism the better part of candour, and his estimate of the probable fruits of the Conference was undoubtedly endorsed in silence by many other members. Under the circumstances, however, the House as a whole was content to hope for the best, accept the Estimates as a provisional measure, and "let it go at that." Next day, presenting the Air Estimates, Mr Montague succeeded in demonstrating convincingly enough that British air policy was eminently unprovocative. Despite our commitments overseas, our Air Force was substantially exceeded in terms of first-line strength by France and Italy, and the gross figures of expenditure were less than those of five years ago, though other Powers showed large increases. Speaking for the Conservative opposition, Sir Samuel Hoare urged that the Government should endeavour to secure limitation of air forces on the basis of parity with France and Italy, while, among the Government's supporters, Mr Kinley's ambition to abolish the R.A.F. *in toto* was matched by Mr Malone's anxiety to know why the Government, who boggled over naval parities, were content with less than a half-Power standard *vis-à-vis* France in the air. The assurance from Mr Montague that the Government desired to give a lead in the way of peace, but could not disarm in any element without common action by all the Powers, ended a not particularly illuminating debate.

Mr Baldwin and Mr Bagehot.—In the debate on fiscal policy at the end of last week, which roamed over very familiar ground and naturally failed to extract from Mr Snowden any statement as to his Budget intentions, Mr Baldwin spent much of his time discussing the economists of the last century and the intellectual domination they acquired over the House of Commons. He expressed astonishment that the reasoning of these insular theorists should still influence the Labour Party. It was this insularity and lack of understanding of other nations' points of view which had sent Mr Graham to Geneva on what he described as a hopeless quest, and he quoted in support some phrases from Walter Bagehot, in which he observed that "out of England Free Trade is almost everywhere unpopular," and that our economic policy was regarded by foreigners as a means of enriching England and ruining them. His implication was that Bagehot realised that other countries might be justified in meeting Free Trade in England by protecting their own market, and in any case would not follow our lead. But let us see what Mr Bagehot actually said. Speaking of Free Trade in the very paragraph quoted by Mr Baldwin, he writes:—

> "Experience shows that no belief is so difficult to create and no one so easy to disturb; the Protectionist creed rises like a weed in every soil. 'Why,' M. Thiers was asked, 'do you give these bounties to the French sugar refiners?' 'I wish,' replied he, 'the tall chimneys to smoke.' Every nation wishes prosperity for some conspicuous industry; at what cost to the consumer, by what hardship to less conspicuous industries, that prosperity is obtained, it does not care. Indeed, it hardly knows, it will never read, it will never apprehend the refined reasons which prove those evils and show how great they are."

Bagehot goes on to explain that the English conception of political economy and of Free Trade is applicable to a commercially developed society, and that though it

inated in England there is nothing especially English of out it.

> "It is the theory of commerce, as commerce tends more and more to be when capital increases and competition grows. England was the first—or one of the first—countries to display these characteristics in such vigour and so isolated as to suggest a separate analysis of them; but as the world goes on, similar characteristics are being evolved in one society after another."

Here, indeed, is the point which Mr Graham realised, but Mr Baldwin has missed. The World Economic Conference, consisting of Government-selected representatives of the chief countries of the world, pronounced in favour of the reduction of tariffs, and events have shown that the changing opinion which this Conference reflected is most definitely marked in those countries which are most industrially developed, and have also become increasingly dependent on overseas supplies of food and raw materials—Germany, Belgium, Holland, Italy, Japan. Elsewhere there is reaction against the excesses of protection, but for certain countries greater freedom of trade is becoming a necessity. We must support every possibility of removing obstructions to trade, not from "intellectual pride," but because trade is the first concern of our economic life.

President Hindenburg and the Young Plan Bills.—The characteristic feature of President Hindenburg's career is that he has always shouldered heavy responsibilities and carried out unpleasant duties when people round him have been inclined to shirk. This quality in his character came out at the time of the Russian invasion of East Prussia; it came out during the German *débâcle* in 1918; and it was displayed again last week when he signed the four principal Bills embodying the terms of the Young Plan, and ordered them to be promulgated at once. In a sense he was merely performing his presidential duty, since the Bills had come up to him after passing the Reichstag and receiving the approval of the Reichsrat. Yet the duty was not quite easy to perform in the face of a clamour from the right wing of the Conservative Party that the President should either take a referendum on the matter or resign. Hindenburg did neither of these things, but signed the Bills and took the offensive against his critics in a striking public statement addressed to the German nation. In this document he submits that "despite the heavy burden which it lays upon Germany for many years to come, the Young Plan represents an improvement on the Dawes Plan and a political and economic advance along the hard road towards the liberation and reconstruction of Germany." Having carefully gone into the question, he declares, he cannot shift the responsibility for the final decision from his own shoulders. Hence his signature. The statement concludes with an appeal for national unity and co-operation in the task of reconstruction, with the aim of at last recovering the country's economic liberty. The effect of the President's action has been to complete the discomfiture of the Conservative extremists. Already the moderate wing of the party was edging away from them; and, finding themselves isolated, they have rather ignominiously collapsed. The result has been to strengthen the present Government in Germany and to increase the prospect of stability in Germany directly and also indirectly in the world at large. In showing himself once more a good citizen of his own country, the President has done service to a wider cause.

The Death of General Primo de Rivera.—General Primo de Rivera has been spared from living to witness the full extent of the national reaction away from his Directory—a reaction which is still in full swing and may turn out to be a more important chapter in Spanish history than the Directory itself. The truth is that the Directory has been rather a colourless *régime*, for good and for evil. It has been for good in so far as it has been practically bloodless; for evil in as much as it has repressed the intellectual life of Spain without throwing out many fruitful ideas of its own, and has suspended an ill-managed parliamentary constitution without putting the Spanish electorate into training for making better use of the constitutional machine. The most important event which occurred in Spanish history while General Primo was in power was the closing of the running sore in Morocco through the overthrow of Abdu'l-Karim and the establishment, for the first time, of effective Spanish authority throughout the whole extent of the Spanish Zone. For this blessing Primo de Rivera had ultimately to thank Abdu'l-Karim himself, who, by attacking the French in 1925, made Franco-Spanish co-operation against him inevitable and thereby sealed his own doom. It must be said for the Spanish dictator, however, that he was quick to seize the opening which Abdu'l-Karim's false move had given him; and that, under his personal pressure, the Spanish army and navy played an effective part in the joint operations of 1925-26, including the difficult landing in Alhucemas Bay. If the variations in General Primo's Moroccan policy are almost the only really interesting things in his career as a statesman, it is because they are almost the only evidences of intellectual power or originality. Before the great opportunity came in 1925 he was a consistent advocate of evacuation. Indeed, his first incursion into politics was a speech which he made in 1916 when he was military governor of Cadiz. He proposed bluntly that Spain should offer Ceuta to Great Britain in exchange for Gibraltar and should abandon the rest of her Moroccan zone to the Moroccans; and if conservatism on both sides had not blocked the way, the exchange, under modern conditions of warfare, would possibly have been a good bargain for all concerned. This speech cost the Marqués his governorship; but when he found himself master of the situation in 1924 he showed that he had the courage of his opinions by withdrawing the Spanish advanced posts from the interior of the Jibalah. In home affairs it cannot be said that the Marqués de Estella's mind was equally fertile. But he appears to have been an amiable character and not a bad dictator, as dictators go. The improvements effected under his *régime* in Spain's road system are perhaps the most solid monument of a rule neither strikingly successful nor particularly open to criticism.

Switzerland and Gold.—Just as the cessation of the world scramble for gold is raising hopes that the need for economy in its monetary use is now being generally realised, Dr. Bachmann, president of the National Swiss Bank, has made a somewhat disquieting speech. Addressing the annual meeting of his shareholders, he is reported to have said that Switzerland should not regard the gold exchange standard as a permanence, but should envisage the prospect of the return of gold coins to circulation. To this end she should collect as much gold as possible. Dr. Bachmann later said that there was no generally valid currency policy, each country having to guide its policy by its own needs, and that it was not the duty of central banks to take measures against price fluctuations. If Dr. Bachmann is correctly reported, he is deliberately setting himself in opposition to world banking opinion, and if many countries shared his opinion and acted on them, there would be an end to the growing spirit of co-operation between central banks. It may be that Dr. Bachmann was concerned to show that the presence of the B.I.S. in Switzerland will not mean any loss of financial independence, but it is to be feared that his remarks were more influenced by the strong feeling which still persists in Switzerland in favour of gold currency, which was of course in circulation there long after it had disappeared elsewhere in Europe. But there is not enough gold to re-establish gold currencies at the present level of prices, and it will bring disaster if nations attempt to act in this matter from a purely nationalist point of view and ignore the effect on the world situation. It is the duty of those in responsible positions and who have knowledge to make this clear to the public in their own countries.

The Latest Bank Rate Reduction.—If six months ago anyone had suggested that by March, 1930, Bank rate would be standing at 3½ per cent., the three months' bill rate at under 2½ per cent., with a keen competition for bills in progress, he would have been in grave danger of being regarded as an irresponsible jester. Yet the change has come about, and this week's reduction is only the latest, and perhaps only the penultimate, stage in the rapid decline in money rates which has followed the Wall Street collapse. The causes of the institution of the 3½ per cent. rate are much the same as characterised previous reductions, namely, adequate gold stocks, steady exchanges, falling commodity prices, and trade badly in need of a stimulus. Other causes of a more technical nature are discussed in our usual review of the money market. One point that is made there, however, perhaps merits some further comment, and that is the effect of the recent Bank rate reductions upon national debt policy. There is no doubt that a period of really cheap money would be of inestimable help to the Chancellor in his conversion operations, and it is clearly the Chancellor's duty to take every opportunity that the downward trend of international money rates affords him. In any case, if his operations have had the effect of accelerating the decline in Bank rate, criticisms that his recent conversion issues were over-expensive lose some of their force. Trade and industry will in their different ways gain just as much from a lower Bank rate as the Chancellor faced with the problems of balancing his Budget and dealing with the 5 per cent. War Loan.

Trade and Falling Prices.—An interesting article in the current *Review* of the Westminster Bank deals with the reactions on trade of the recent violent fall in the wholesale price level—a question recently discussed on more than one occasion in these columns. Contrasting the curve of the *Economist* wholesale price index with that of the Ministry of Labour index of the cost of living, the writer of the article finds " strong presumptive evidence that the fall in commodity prices is being ' held up ' somewhere between primary producer and ultimate consumer." The prejudicial effects on the rate of recovery of equilibrium between supply and demand, in a period of temporary over-production, exercised by a " hold up " of this nature are obvious; and there is little room for doubt that in many branches of " finishing," of " making up," and of distribution the healthy influence of competition is being negatived by a tendency for retail prices to become " conventionalised." The immutable " fifty-shilling suit " is parallelled in the case of many finished commodities. But there is a danger lest the official cost-of-living index should be regarded with too little qualification as a perfect register of retail prices. Apart from the fact that its basic date, July 1914, was a period of prices somewhat cheaper than those of the year 1913, to which the *Economist* and other wholesale indices are related, the Ministry of Labour index is " weighted " for the strictly limited purpose of reflecting changes in the cost of a theoretical working-class family budget. The ratio between present and pre-war retail prices over a much wider range of commodities requires fuller investigation.

Mr Runciman on Monetary Policy.—In an address to the members of the United Kingdom Provident Institution on Wednesday, Mr Runciman called attention to the tendency of security and commodity prices to move in opposite directions. He illustrated his point by the history of the last half-century and explained the connection by pointing out that, provided there is a steady growth in the volume of credit (this depends, he added, mainly on the increase of gold and, to a less extent, on economies in the use of gold) when prices and trade shrink, credit becomes available for speculation. He went on to explain the difficulties of recent years by suggesting that, in carrying out the restoration of the gold standard, the Bank of England, by its monetary policy, and the Treasury, by maintaining an excessive floating debt, had restricted credit unduly and prevented the see-saw of security and commodity prices following the normal course. If we [illegible]0.
from theory to practice, it is difficult to trace any c[illegible]
pensating movement of the kind suggested by Mr Ru[illegible]uri
man, who, indeed, only suggests that it operates in t[illegible]on
long run. But, in recent times, at all events, other influences have been so important that this view could hardly be the basis of investment policy. These other influences include, for example, the effect upon British securities of the exodus of capital to America during the years of the Wall Street boom; and the fall of industrial securities during depression must be considered jointly with the tendency, when money is cheap and trade is slack, of gilt-edged securities to rise. But, whether this theory is of practical application or not, there can be no question but that ample credit and cheap money are very necessary conditions in the present depressed situation. Mr Runciman, who reserves his chief criticism for Government financial policy, approves the return of the gold standard, but thinks it was too precipitate. On this point we differ from him. In our view this country had two courses open to it. One was to return to gold at par as quickly as possible; the other to return to gold at a lower value of the pound to the dollar. There is a case to be made for each of these two courses; we believe that there was no case for a middle course, and that prolonged uncertainty or a more long-drawn-out movement towards parity would have been disastrous.

Unemployment and the Lord Privy Seal.—Before the General Election each party had its specific for unemployment. Meanwhile the unemployment figures have steadily swollen, and now the Labour Party itself is no longer at one on the question. Sir Oswald Mosley has submitted to the Cabinet a memorandum severely critical of the activities of the Government in this connection, and in particular of the Lord Privy Seal's principle of alleviating unemployment by stimulating exports. As an alternative, Sir Oswald Mosley proposes the establishment of a National Planning Council which would plan schemes of work to be financed by a public loan, and mobilise the unemployed to carry them out. As he believes the only hope to lie in the home market, his scheme would involve a restriction of imports and the protection of agriculture by National Imports Boards. It is said that support for this sweeping proposal, in which there is more than a trace of Mr Wheatley's hand, was forthcoming at Wednesday's meeting of the Parliamentary Labour Party. Certainly the recently issued White Paper, which sets forth the results so far achieved by the attempts of Mr Thomas to speed up development work for the relief of unemployment, makes uninspiring reading for the Left Wing. It summarises the schemes already approved under the Development (Loan Guarantees and Grants) Act (but not necessarily begun), as follows :—

(000's omitted.)

Nature of Schemes.	Total Estimated cost of Approved Schemes.			Estimated Employment Value (in man-years).
	Under Part I.	Under Part II.	Total.	
	£	£	£	
Railways (excluding docks).....	7,988	...	7,988	34
Docks and harbours (including railway-owned docks and harbours)	3,237	3,213	6,450	27
Water supply	736	2,489	3,225	13
Electricity	...	10,561	10,561	44
Gas	1,142	342	1,484	6
Sewage	...	4,033	4,033	17
Land reclamation and drainage	...	1,196	1,196	5
Sea defence works	...	430	430	2
Unclassified roads	...	2,696	2,696	11
Miscellaneous	...	1,263	1,263	5
Total.....	13,103	26,223	39,326	164

The equivalent of a year's employment for 164,000 men is provision for only ten times the number who were added to the live register during the course of the first week in March. This does not seem a very rosy fulfilment of the hopes the electorate were invited to place in the Labour Party, even when it is supplemented by a further 8,000 man-years under colonial development

[illegible]nes, and 100,000 man-years from the Road Fund. of [illegible]e some of these schemes cannot be begun for some du[illegible]e, their repercussions, through demand for materials, r[illegible] the general prosperity of industry, upon which alone the solution of the unemployment problem depends, are not likely to be very marked.

Cotton Trade Organisation.—Our Manchester correspondent writes:—The valuable work which has been done by the Joint Committee of Cotton Trade Organisations during the last few months has now developed into the registration of the British Cotton Textile Association, the objects of which are to promote and protect the cotton trade of Lancashire and the surrounding districts. The association has been registered as a company limited by guarantee, without share capital, and with not more than fifty members, each liable for £10 in the event of winding up. It will not be a trading organisation, but will facilitate and supervise the co-operation of firms in the different sections of the trade in the manufacture and marketing of standard goods, particularly where the trade in such goods is not being done or is being lost by Lancashire. Several sub-committees of the Joint Committee have been at work investigating specific openings for Lancashire goods in various markets, and the new association will help to translate the work of these sub-committees into increased trade for Lancashire by bringing it to the notice of those most likely to be interested, and by arranging for the production of chosen cloths by syndicates working under its auspices. The subscribers to this new company consist of representatives of the Shipping Merchants' Committee of the Manchester Chamber of Commerce, the Master Packers' Association, the Piece Dyers' Association, the Calico Printing Employers, the Bleaching Trade Advisory Board, the Master Spinners' Federation, and the United Textile Factory Workers' Association. The management of the association will be vested in a Council and the subscribers mentioned are acting as provisional members. Meantime, important negotiations are taking place between the representatives of several merchant houses for the purpose of bringing about amalgamations. The movement has been brought about by the smaller amount of foreign trade available and the necessity for all firms to reduce their overhead costs. It is probable, if the negotiations are successful, that a number of manufacturing and merchanting firms will be combined.

Employment and Cost of Living in February.—The increase in unemployment which occurred during the last week of January continued throughout February. According to the *Ministry of Labour Gazette*, among the 12.1 million workpeople insured against unemployment in Great Britain and Northern Ireland the percentage unemployed (wholly and partially) at February 24th was 13.1. This compares with 12.6 per cent. at January 27th and 12.1 per cent. at February 25, 1929. The total number of registered unemployed was approximately 1,582,000 at February 24th, as compared with 1,534,000 at January 27th and 1,430,000 a year ago. With regard to the cost of living, the index number of the Ministry of Labour at March 1st stood at 61 per cent. above the level of July, 1914. This compares with 64 per cent. at February 1st and 66 per cent. a year ago. For food alone, the index recorded an increase of 50 per cent. at March 1st, as compared with 54 per cent. a month ago and 57 per cent. a year ago. The fall during February was chiefly accounted for by reductions in the prices of eggs, flour and bread, butter, potatoes and fish.

Iron and Steel Production in February.—Although new business is not coming forward as fast as old orders are worked off, production, both of pig iron and steel in February was well maintained. Five blast furnaces which had been damped down since the beginning of the year resumed operations during the month, and two furnaces were blown out, so that the number of furnaces in active operation increased to 162, compared with 159 at the end of January. Pig-iron production amounted to 597,000 tons, which, though less than the January total, was at a higher daily rate. Steel production increased from 771,100 tons in January to 776,400 tons in February; that there was an increase in production in spite of the shorter month was due in the main to the January production in Scotland being below normal on account of the New Year holidays. Imports of iron and steel amounted to 259,400 tons, some 50,000 tons less than in January, but 100,000 tons more than in February, 1929, when imports were exceptionally low on account of the severe weather conditions prevailing on the Continent. The increased rate of importation of pig iron noticed in January was maintained at 22,300 tons, but there was a decline in the imports of billets, blooms and slabs from 72,800 tons to 53,200 tons, and of sheet and tinplate bars from 56,800 to 38,500 tons. Exports of iron and steel amounted to 294,300 tons, compared with 351,800 tons in January, and 380,100 tons in February, 1929. A substantial proportion of the falling-off was due to the decline in exports of pig iron from 36,600 tons to 20,800 tons.

Reciprocity and the South American Markets.—The D'Abernon Report, recently published, considerably amplifies the account of the visit of the Economic Mission which was given to the Press on its return. Its interest is threefold: in the stress the Mission lays on the importance to each other of the markets of Britain and South America, and the steps it took to receive and to make suggestions for rendering the produce of the South American countries and of Great Britain more acceptable to each other; in its reiteration of the respects in which British business methods fall short of the standard required to maintain the British share in the import trade of these countries—points which are patiently made in almost every report to the Department of Overseas Trade from overseas countries, and which can hardly be too frequently emphasised; and, lastly, in the importance it attaches to the possibility of concluding reciprocal agreements which would secure some concession to this country in return for the free access to the British market which South American products enjoy. Argentina, in particular, is very favourably disposed to British goods, and obtained 19.4 per cent. of her imports in 1928 from this country, which, as an exporter to Argentina, is second only to the United States. We are, however, steadily losing ground to the United States and, in spite of the fact that we take 99 per cent. of Argentine exports of chilled beef, 54 per cent. of her frozen beef, 93½ per cent. of her frozen mutton, and a substantial share of her wheat, we receive no preference under her somewhat harsh tariff regulations. The D'Abernon Mission is of the opinion that, especially in view of the increasing movement towards Imperial Preference, the maintenance of our free market is a valuable bargaining instrument, by means of which we could exact tariff concessions from Argentina, though, unhappily, the first attempt at applying this policy, in connection with the artificial silk duties, did not secure the approval of the Argentine Parliament. A similar line of action is suggested in connection with Uruguay, where the most pressing economic need is for the restoration of the pastoral industry. This industry depends very largely upon the British market, but its products are at a disadvantage here as compared with those of the Argentine, and it is

suggested that there is an opening in this connection for negotiations which would benefit the exports of Great Britain and of Uruguay alike. Perhaps the most interesting suggestion on these lines is that Great Britain should consider a repeal of the coffee duty if Brazil were prepared to offer a sufficiently substantial concession in return. This hardly seems the moment to invite Mr Snowden to forgo even £200,000 of revenue unless it can be shown that it is an investment likely to bring immediate profit. Unfortunately, the halving of the coffee duty in 1924-25 coincided approximately with the institution of coffee control in Brazil, so that it is impossible to argue anything as to the value to Brazil of such concessions from the fact that our imports of coffee from that country rose sharply in 1924 and 1925 and then declined heavily. Lord D'Abernon's exposition, however, of the ways in which a country having an almost completely free market may yet obtain trading advantages from highly protected countries is of real value.

Frankfurter Allgemeine.—Following the negotiations that have been going on for months, there is finally some prospect that the Frankfurter Allgemeine Versicherungs Gesellschaft matter will be adjusted by a private composition between creditor-stockholders and the directors, writes our Berlin correspondent. The collapse last August of this once leading German insurance company played a very strong part in shaking confidence in Germany's credit. Now that assets and liabilities are accurately known, the German banks represented on the board of directors have made proposals to the creditors and stockholders, who are to make their decision by the end of this month. Most of the main creditors have already accepted the offer. By means of complicated proposals—for instance, the postponing of the German banks' claims—a settlement of 40 per cent. is guaranteed to the creditors. This would mean that they would lose in the main only from 20 to 30 per cent. of their claims, since they granted credits to subsidiary companies which are able to distribute from 30 to 40 per cent., and the Frankfurter is liable only as a guarantor to pay the debts of its subsidiaries. The losses of the stockholders will be much heavier. A share of the Frankfurter Allgemeine with a nominal value of 400 marks was quoted at 800 marks on the Bourse at the beginning of 1929. Now only 60 marks is offered for it. Creditors and stockholders who accept this offer must, at the same time, undertake to make no further claims against the members of the board. Only if this be done does the offer of the German banks interested hold good, which means a sacrifice for them of some 10 million marks. This offer, however, cannot be said to be entirely voluntary, for the comprehensive report just submitted by the stockholders' committee concerning the causes of the collapse expressly and unreservedly establishes the complete responsibility of the supervisory board and the board of directors. The board of directors also violated the law, and will have to answer for it in the criminal courts. The supervisory board did not exercise the requisite control, and the company's managers enjoyed a confidence which can to-day be designated as incomprehensible. They tried to make good losses suffered between 1922 and 1925 by more and more risky undertakings, and nobody learned anything about these transactions until the collapse was already inevitable.

Commonwealth Bank Report.—The existing exchange difficulties of Australia make the report of the Commonwealth Bank, covering the second half of 1929, extremely interesting, especially as it contains a lengthy summary of the recent financial situation. The steady dissipation of Australian balances in London, the depreciation of the exchange, and the present heavy gold shipments are ascribed to two main causes. One is "the great drop in wool values, coupled with a large diminution in wheat production resulting from drought conditions," and the other is "the general financial disturbance, largely contributed to by the speculative monetary operations in America, owing to which the usual channels of oversea supply of loan moneys have been unavailable to Australia, at any rate on terms acceptable to borrowers in this country." The report recalls that during the period under review £11,000,000 of gold left Australia, of which £8½ million were shipped through the Commonwealth Bank. It then proceeds to justify the passage of the Commonwealth Bank Bill at the end of last year. Its defence of the provision in the Bill empowering the Government, on the advice of the bank, to prohibit the export of gold is more ingenious than convincing, for the bank argues that inasmuch as the Government has always had power under the Customs Act to prohibit the export of any commodity, all that the new Act has done is to declare specific powers and provide specific penalties in respect to the prohibition of gold export. The report next states that the bank could not possibly desire to advise any action which would savour of Australia's departing from the gold standard, but that the position must be controlled and the available gold used in the best interests of Australia by a single authority in possession of the necessary knowledge. On this last point, namely, the advisability of mobilising Australia's gold, most people will be in agreement, and indeed it conforms to modern monetary theories. On the other hand, the maintenance of the gold standard means that gold must be free to leave the Dominion, and that everyone, both inside and outside Australia, must know that this freedom exists. Finally, we would suggest that Australia cannot expect permanently, any more than other countries, to rely upon the influx of capital from abroad to maintain her financial and commercial equilibrium.

The Latest American Bank Merger.—The amalgamation movement in American banking, which was temporarily checked by the Wall Street slump, has now begun again in momentous fashion with the announcement of the official terms of fusion of the Chase National Bank, the Equitable Trust Company, and the Inter-State Trust Company. The new bank, which, it is claimed, will be the world's largest bank, will have a capital of $148,000,000, further surpluses and reserves of $220,000,000, and deposits of $2,073,644,656. The merger will be effected by means of an exchange of shares, the capital of the Chase National Bank being increased for this purpose, and Equitable Trust shareholders are to receive four Chase shares for five of their original holding. Mr Albert H. Wiggin, chairman of the Chase National Bank, will act as chairman of the governing board, and Mr John McHugh, of the Chase National Bank, as chairman of the executive committee. Mr Winthrop Aldrich, president of the Equitable Trust Company, will be the new bank's president. Apart from its importance, this merger is of some interest to the City of London, in view of the existing relation between the Chase authorities and Lord Melchett in connection with the Finance Company of Great Britain and America. It will be interesting to see the extent to which the American banking amalgamation movement continues in the very different circumstances that now obtain as compared with last year.

Employers' Liability Assurance Corporation.—As it is usually the first of the large composite companies to issue its accounts, the report of the Employers' Liability is always eagerly awaited, the more so on this occasion since fire results are expected to be poor and accident results uncertain. Though the Employers' Liability emerges none too satisfactorily from this scrutiny, the fact is due not so much to the results themselves as to the unusual distribution of the business, which has, in this instance, been rather favourable to it. For the main interests of the Corporation—and this has in the past been a point for criticism—are centred in United States casualty business, which has in 1929 yielded a fair margin of profit. Total premiums have expanded by £194,000 to £7,686,000, divided into £6,860,000 general business (principally American casualty business), £440,000 fire, and £386,000 accident.

underwriting results of the past two years are set the below:—

	1928 Profits. Amount. £	1928 Profits. Percentage of Premiums. %	1929 Profits. Amount. £	1929 Profits. Percentage of Premiums. %
Fire	45,053	11·0	4,839	1·1
Accident	33,587	9·0	26,521	6·9
General	225,715	3·4	266,603	3·9
Investment and exchange profits	36,240		19,922	
	340,595		317,885	
Less taxes	147,843		237,332	
Total net surplus	£192,752		£80,553	

The surplus for 1929 is stated to have been adversely affected by the incidence of taxes which have almost entirely been responsible for the falling off in the net result. A satisfactory feature (though a natural one, following upon the sale of the American subsidiaries) is the growth in net interest income from £242,000 to £291,000, as a result of which the "gap" between that item and the cost of the normal dividend of 80 per cent. has been reduced to £17,000, and will probably disappear this year. Some important movements of a capital nature have occurred during the past year. A special contingency reserve of £150,000, created in 1921 out of profits, to provide against the failure of certain reinsurance companies, has disappeared, and final settlement of this question has released a balance of £45,000. Investment reserve fund has been augmented by £53,000 to provide for further losses in a subsidiary, the Merchants Marine, whose accounts are the subject of separate reference in another note in this issue. Lastly, it appears that the book values of the Stock Exchange securities exceed the market values by £75,000. The net result is that general reserve and investment reserves stand at the large total of £2,807,000.

Scottish Provident Institution.—For ninety years the Scottish Provident has been associated with a distinctive system of bonus distribution for whole-life assurances. Under this system bonuses are deferred until such time as the premiums paid, accumulated at 4 per cent. compound interest, are equal to the sum assured, and the Institution has been able to claim with justice that its with-profit policies were offered at rates of premium as low, and even lower, than the non-profit rates of many other offices. Since the war, however, there has been a persistent downward tendency in non-profit rates owing to superior interest earnings and to more favourable mortality experience, so much so indeed as to upset the validity of the Institution's claim. In these circumstances the rates of premium were reduced some eighteen months ago, and as a result the chairman was able to point to a new business in 1929 exceeding by £300,000 that for 1928, the total for the former year being £3,098,580. The rate of interest earned has been increased from £4 14s. 8d. per cent. in 1928 to £4 18s. 4d. per cent. in 1929, and the explanation is probably to be found in the continued movement away from British Government securities and in the direction of higher-yielding debentures and preference stocks. The balance sheet shows also that holdings of ordinary stocks have been increased during the year by nearly £600,000, and now amount to £2,575,000, equal to over 12 per cent. of the total balance-sheet assets.

Provident Association of London, Ltd.—At the end of 1929 the total assets of this company amounted to £10,614,970. Included in this sum is an amount of £4,680,000, representing the life assurance fund devoted to the transaction of ordinary and monthly premium life assurance business. In respect of such business the Association issued policies last year for new sums assured of £1,976,000, compared with £1,982,000 in 1928. But the main interest of the Association has always been centred in the transaction of what is technically known as "bond investment business." The term is an unfortunate one, for the business is simply that of issuing what are virtually sinking fund assurances, the main purpose of which is to serve at some later date as collateral security for raising loans on small house properties. The Association guarantees that after the policy has been one year in force it will advance up to 80 per cent. of the value of the house proposed to be purchased for occupation, and the proportion gradually rises up to 100 per cent. after five years in force, provided always that the amount of the advance neither exceeds £1,000 nor the face value of the policy. A statement accompanying the annual report indicates that altogether there has been advanced in this manner the sum of £16,372,339. At the present time there are outstanding in respect of this large sum advances totalling £5,897,010 granted to 16,795 individual borrowers, yielding an average advance of about £351. It might be thought that at a time of mounting unemployment and continued industrial depression in certain industries a large number of defaults would be unavoidable. On the contrary, the statistics show that 99 per cent. of the total amount outstanding is represented by advances on which the interest is regularly paid or is not more than six months in arrear. It appears that the Association has had to enter into possession of only 50 properties for total advances amounting to £18,500, and that interest is in arrears for more than six months on a further 92 loans. These figures are a testimony, not only to the underlying soundness of the business but the careful management of the Association.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during February amounted to 818,188 ozs. of fine gold, as compared with 882,801 ozs. produced during January. In February, 1929, the output amounted to 815,284 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	796,768	823,692	796,270	839,782	843,857	876,452	882,801
February	760,617	753,925	753,924	779,339	816,133	815,284	818,188
March	795,671	825,479	834,340	860,511	877,380	866,529	...
April	768,923	787,519	803,303	824,014	825,907	872,123	...
May	809,003	813,249	849,214	859,479	886,186	897,598	...
June	773,053	780,251	852,145	855,154	862,343	856,029	...
July	829,437	818,202	860,134	851,861	867,211	889,480	...
August	809,571	808,218	843,854	863,345	891,863	889,601	...
September	799,422	797,247	839,939	842,118	857,731	849,553	...
October	827,583	812,832	853,296	855,743	897,720	888,690	...
November	802,313	787,633	840,276	848,059	872,484	861,593	...
December	825,273	791,455	836,157	851,225	859,761	851,134	...
Total	9,597,634	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	...

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	June, 1929.	July, 1929.	Aug., 1929.	Sept., 1929.	Oct., 1929.	Nov., 1929.	Dec., 1929.	Jan., 1930.	Feb., 1930.
Gold mines	192,595	190,031	190,062	190,5b.	189,739	186,941	184,280	190,663	196,752
Coal mines	15,928	15,914	15,867	15,733	15,533	15,320	15,326	15,288	15,495
Diamond mines	5,029	4,845	5,071	4,814	4,555	4,561	4,811	5,889	6,584
	213,552	210,790	211,000	211,114	209,827	206,822	204,417	211,840	218,831

There was an increase in the number of natives employed in all branches of mining during February.

Sun Life Assurance of Canada.—The slump in the American and Canadian stock markets in the autumn of last year lends particular interest to the speech of Mr T. B. Macaulay, the President of the Sun Life Assurance Company of Canada, at the annual general meeting held recently in Montreal. In the course of his address he said: "The investor who buys for permanent holding is but little concerned as to the prices which may be bid for his stocks by those who frequent the exchanges. What interests him is to know that his dividends will not only be paid regularly, but will gradually increase with the passing years." Applying this test to the Sun Life of Canada's investments in stocks, he pointed out that

since the slump in the stock market began about October 1 the dividends received by Sun Life of Canada had actually increased. He also declared that the company, even on the blackest of the black days in the stock market, had about £7,191,000 of excess valuation on its securities intact, while to-day the company's securities are valued at £20,000,000 more than the figures at which they are carried in the company's accounts. Mr Macaulay pointed out that new assurances paid for amounted to £134,476,000, an increase of 48 per cent. over the previous year. Total assurances in force exceed £493,000,000, an increase of over £103,000,000. The total assets are now £116,752,000. Profit earnings for the year have risen to nearly £8,807,000. The sum of £4,645,000 has been distributed as profits to policyholders, and in addition to all this over £1,200,000 has been added to the undistributed surplus, now more than £12,392,000.

An Austrian Economic Exhibition will be held at the London School of Economics, Houghton Street, Aldwych, from March 27th to April 10th. The object of the exhibition, which has been organised by the Vienna Chamber of Commerce, and the representatives of various Government Departments and leading Austrian scientific and economic institutions, is to represent pictorially the problems created by the disintegration of the Austro-Hungarian monarchy and the substitution for that economic unit of a number of independent States with Customs tariffs of their own. The various sections into which the exhibition is divided will describe the disappearance of many old industries and their replacement by new ones; the gradual restoration of Austrian finances; the development of Austrian basic industries; and the remarkable strides made in tourist traffic. Visitors will have at their disposal the services of a number of expert guides.

Money — Share Markets — Issue Market — Industry — Tariff.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 7.

THE undercurrent of optimism over the prospects for trade recovery grew a trifle stronger this week. Tangible evidence of improvement is still meagre, and the persistent strength in the share market, coupled with softening money rates, is largely responsible. The banking community was surprised that the local Federal Reserve Bank did not reduce its discount rate from 4 to 3½ per cent. Such a move was plainly suggested by what transpired in the money market here and by your reduction, to say nothing of the growing insistence on an active cheap-money policy by the Federal Reserve authorities in order to stimulate trade recovery. Action next week* is now regarded as a virtual certainty, and the delay may be set down to the slowness with which the Federal Reserve machinery sometimes works and the conflicting views held among the Washington board.

There was a pronounced easing of interest rates, and much of it is directly traceable to Reserve Bank policy. Call money on the Stock Exchange finally fell to 3½ per cent., and funds outside the Exchange were going begging at 3 per cent. These are the lowest rates in effect since January, 1928. Time funds also dropped, a reduction of ¼ per cent. being made in the 30-day rate, bringing it down to 4 per cent., while two and three months' loans fell ½ per cent. to 4½ per cent. The same reduction was made in 4-6 months' money, which was quoted at 4½ per cent. An incident of the week was an offering of 12 months' money at 5 per cent. The offer had no takers, but it was the first time in recent [illegible] that anyone was willing to make such a long-term [illegible]. The bankers' bill market was the weakest of all, the [illegible] reductions, of ⅛ per cent. each, occurring in as many days. The Federal Reserve Bank followed the first two with a drop in its buying rate, which closed the week at 3⅛ per cent., against a dealers' asking rate of 3⅜ per cent., but it is expected that the Reserve will make a further reduction. Maintenance of its buying rate at the dealers' asking price invites sale of bills to the central bank.

While slack business and only moderate demand from the security markets are contributing to the surplus supply of short-term credit, the Reserve Banks are now active buyers of bills. Last week's statement of the system showed a gain of only $18 million, and this week there was an apparent reduction of $28 million. But the real situation is obscured by the heavy maturities of bills held. This week, for instance, maturities amounted to between $75 and $80 million, so that the Reserve Banks actually purchased some $50 million. It is understood that the market could not supply them beyond that limit, and it is expected that next week will show a substantial addition to their holdings.

Share markets have risen irregularly on a combination of investment buying and professional operations. Public participation is increasing, but is not of large proportions. This week's rise of $94 million in brokers' loans reflects a rise in margin trading, since the net gain in prices was not substantial; but in addition the necessity for shareholders to find the money to meet approximately $80 in payment for recent new stock issues was an important factor. Bonds responded vigorously to cheapening money. The last remaining Government securities selling below par were lifted to or above that figure, and the demand for high-grade rail issues carried them forward in the best market seen for a good many months.

It is apparent that the forthcoming Treasury issue, to provide for the next tax date (March 15) maturities and to provide other money, will be well taken. The issue is announced for $450 million, against maturities of a little over $400 million, the extra $50 million being added to meet additional demands from the Farm Board for its wheat and cotton purchases. The Treasury was compelled to sell $56 million in Treasury bills on February 18 to supply the Farm Board, and since the Board has announced its intention of continuing support of the wheat market it is very probable that the entire $150 million appropriated by Congress will be used up. About half has now gone into the commodity markets, without appreciable benefit to anyone.

The new Treasury issue will bear 3¼ per cent., against 3⅜ per cent. on last December's issue and a 3.3 per cent. yield on the February bill tender. It will retire 5⅛ per cent. certificates sold last June, which was the highest rate paid by the Government since 1922. The new issue, being liberally priced, is certain of oversubscription. New security issues by corporations this week were 110 millions, of which $3 million were stock and $10 were bonds for foreign account. The total compares with $62 million last week. The heaviest offer was the American and Foreign Power issue, which went fairly well. Shortly an offering of $40 or so of common stock of International Telephone and Telegraph Company will be made, and some Bell System telephone financing is impending.

Long-term money is following short-term funds rather slowly and there is still difficulty in finding " second mortgage " accommodation, which is holding back revival of the building industry. Contracts awarded in February in the States east of the Rocky Mountains, representing about 91 per cent. of the total construction volume of the country, were 2 per cent. under January and 12 per cent. under the same month last year. However, February usually is a poorer month than January and the trade regards the figures as indicating some improvement. From now on there should be a seasonal increase in building activity.

Elsewhere trade statistics are at best only mildly encouraging. Railroad car loadings are not increasing; the total for the past eight weeks is 6.5 per cent. below that

* [The rate was reduced to 3½ per cent. on March 13. Ed. *Economist.*]

the a year ago, and the greatest loss is in forest projects, reflecting the building slump. Stocks of crude and refined petroleum reached a new high record level in January, and February copper statistics are expected to reveal a gain of 15,000 tons or so in refined metal. Automobile production in February, as estimated by the National Automobile Chamber of Commerce, was 358,300 vehicles, against 283,477 in January and 497,705 in February of last year, a figure which exceeded early expectations. The steel industry dropped back another 2 per cent. last week and is now at 78 per cent. of capacity, although the United States Steel Corporation is maintaining its 85 per cent. rate and will show a gain in unfilled orders as at March 1st. Both pig-iron and steel-ingot output rose last month over January. Steel production was 4,067,971 tons, compared with 3,786,450 in January, and was only 259,000 tons under February of last year. Pig-iron output was 2,838,920 tons, against 2,827,464 in January. The daily rate of 101,890 tons was under the 114,507 rate of a year ago, but was higher than February, 1928, which was 100,004 tons.

Beet sugar and Porto Rican sugar shares rose with the passage by the Senate of the higher sugar tariff and cement company stocks also jumped on the approval of the cement tariff. However, the House has yet to have its say and no early passage of a Bill by both Houses is likely. The victory of the high duty Senators on sugar and cement is interpreted by some observers as presaging the break up of the Democratic-Insurgent Coalition, with early adoption of the majority of the higher duties, but the wish may be father to the thought.

FRANCE.

Budget — Revenue — Bourse — Bank Dividends.

(FROM OUR CORRESPONDENT.)

PARIS, March 19.

PARTY politics appear to have been allowed to drop for the moment, and both the Chamber and the Senate have again settled down to the real work of Parliament. The Lower House, alarmed apparently by the growing discontent of the public at the dangerous delay with the Budget, and under the driving force of M. Tardieu, hastily completed the discussion of the Accounts, and, after a full 24 hours' continuous sitting that ended only at 10 a.m., sent the Finance Bill to the Senate just before the end of the week. There is now a strong probability that the measure will pass into law before the beginning of the new financial year on April 1st, although this is by no means yet assured.

The Budget, as sent to the Senate, showed the following balance:—

	Francs.
Estimated revenue	50,409,229,780
Estimated expenditure	50,200,990,116
Estimated surplus	208,239,664

M. Chéron's figures, as laid before the Chamber on February 14th, it may be recalled, showed estimated expenditure of 49,349,000,000 francs. A portion of the increased expenditure was voted before the fall of the previous Tardieu Government, and the rest after M. Tardieu resumed office. The Budget totals set forth above, however, by no means appear to represent the exact situation. Before the Bill had even left the Chamber, its *rapporteur* (M. de Chappedelaine) announced that the estimated surplus of 208 millions should be regarded as more apparent than real, as additional credits amounting to 431,500,000 francs must be added. These, he said, after allowing for annulments of credits proposed by the Government, would bring the estimated surplus down to 10,739,644 francs. The additional credits include 150,000,000 francs for the national insurance scheme, 120,000,000 francs for additional naval construction, 160,000,000 francs for general pensions and 1,500,000 francs for workmen's pensions.

Yesterday the Senate Finance Commission threw a bombshell into the financial world by announcing that the so-called " balanced Budget " sent up from the Chamber, instead of showing a surplus of even 10 millions, really forecast a deficit of 555,000,000 francs (or nearly £4,500,000). Exactly on what foundation this startling statement rests has not yet been made clear. It was sufficient, however, to have a very undesirable effect on yesterday's Bourse, and apparently to confirm the recent statement of M. Caillaux that, " At the Ministry of Finance nobody at present knows where he is."

The credits for 50,200,990,000 francs opened under the Budget Bill, as it went to the Senate, were made up as follows:—

	Francs.
Public debt service	22,542,488,000
Presidential and Parliamentary salaries	104,063,000
Departmental expenditure	25,577,738,000
Cost of collecting revenues, working cost of monopolies, &c.....	1,387,917,000
Reimbursements, restitutions, &c.	618,782,000

The total estimated expenditure under the Budget for 1926 was 40,556,000,000 francs, so that, taking the 50,200,000,000 francs provided for under the 1930 Bill as an approximate basis, French budgetary expenditure has increased by about 25 per cent. during the past four years. The draft estimates of the 1930-31 Budget, as laid before the Chamber in May, 1929, provided for total expenditure of 48,666,000,000 francs. Estimated departmental expenditure, which then stood at 24,061,000,000 francs, has since been increased by 1,500,000,000 francs. Estimated revenue has similarly been increased from 48,722,000,000 francs to 50,409,000,000 francs, without imposition of new taxation and in spite of the fact that, under special votes passed in July and December last, the taxpayer has been granted relief since then totalling about 2,000,000,000 francs. The explanation is to be found in the fact that the estimated revenue for 1930-31 has been based on calculations approximating much more closely to the real yield from taxation than has been the practice in recent years.

The revenue returns for February indicate total recoveries under the general Budget (exclusive of yield from Posts, Telegraphs and Telephones, and from the tobacco monopoly and other sources now diverted to debt extinction through the Caisse d'Amortissement) of 3,041,992,000 francs, of which 2,993,903,000 francs was from " normal and permanent sources." The yield for the month was 306,103,800 francs in excess of Budget estimates for February, 1929 (which is the only approximate comparison possible, in view of the extension of the 1929 financial year beyond the period for which Budget estimates exist). The yield from indirect taxation, which totalled 2,650,676,000 francs, was 118,777,000 francs more than in February, 1929. The six main sources of indirect taxation all showed substantial gains on the month. Recoveries from registrations and stamp duties were over 16 millions larger in each case, taxes on securities produced over 32 millions more, Customs duties 53½ millions more, and the yield from the turnover tax, which is one of the best indications of the general economic situation, was 37½ millions larger. The most striking item in the return is that showing the yield from taxes on Bourse operations, which was only 32,986,000 francs during the month, or 39,447,000 francs less than in February, 1929, representing a falling-off of practically 55 per cent. This amply justifies the current complaints of the Bourse as to the enormous reduction in the volume of business during the past six months or more. Further confirmation of the stagnation in the stock market is afforded by the report that brokers operating in the Coulisse market alone have, since the end of November, found it advisable to reduce their clerical staffs by over 2,000 men owing to the reduction in the volume of business.

The present stagnation of the Bourse is apparently almost entirely due to two factors: first, the indefensibly heavy burden of taxation on securites; and, secondly, the enormous volume of mortgage-bond issues that have been offered during the past year or more. There are instances in which the rate of taxation on securities amounts to a hundred times the burden imposed before the war, while in the case of certain coupons the deduction made at the source is equivalent to more than the dividend yield. An operator who buys 100 Rio Tintos at, say, 6,000 francs, and re-sells

them the same day, is called on to pay 1,200 francs (say, £10) in taxation on the transaction, or nearly 2½ times the brokerage due. Mortgage-bond issues, which totalled over 15,000,000,000 francs during 1929, and which amounted to 2,790,000,000 francs (£22,500,000) in February (against the previous record monthly figure of 1,622,000,000 francs in October), continue in large volume. New issues of this kind last week totalled 226,500,000 francs, against 478,500,000 francs the previous week (which included three large offers of 100,000,000 each). The vast bulk of these offerings have been readily absorbed. The subscription lists for the Crédit Foncier issue of 600,000,000 francs 4 per cent. bonds opened on Monday and had to be closed the same day, the entire issue having been taken up. Criticism is now being voiced to the effect that certain of the recent issues furnish the holder with very indifferent security for his money, and there seems to be a probability that the volume of offerings of this kind will be substantially smaller in the near future. Whether the slowing down of these issues will bring back to the Bourse any substantial portion of the great stream of surplus capital that has for months past been finding its way to the banks instead remains to be seen. The paradox of the situation is that, although money awaiting investment was never so abundant in France before, the Bourse is, for all practical purposes, in a state of semi-starvation. This morning's decision of the Ministerial Council to bring in a Bill for reductions of taxation " notably on securities and Bourse operations " proved most opportune, and resulted in a sharp recovery on to-day's Bourse.

Most of the leading banks have now announced their dividends for 1929, and their balance sheets in nearly all cases show a marked increase in both net profits and dividends, notwithstanding (in most cases) substantial increases in capital during the year.

GERMANY.

Young Plan Ratification — Finance — Polish Treaty — Bank Results.

(FROM OUR CORRESPONDENT.)

BERLIN, March 18.

ON March 12 the Reichstag adopted the Young Plan and the enabling Acts necessary to put it into effect. The fight continued up to the last minute, for the Plan has no convinced defenders anywhere in Germany. In a lengthy speech the Chancellor again summed up all the reasons favouring acceptance of the Plan—that it brought in any event a lightening of the annuities of the Dawes Plan, that it freed Germany from most controlling restrictions, and, above all, that only through its acceptance could the liberation of the Rhineland be attained. But the defenders of the Young Plan have a hard fight to carry on against the Nationalist resistance to a plan which declares itself to be the " final " regulation of the Reparations obligations and burdens Germany for two generations with enormous payments.

The outcome of the vote in the Reichstag was long uncertain, not merely as a result of these considerations arising from the Plan itself, but also because of the tactical situation into which the parties had manœuvred themselves in their battle over the reform of the finances. The Centre had demanded that the vote on the Young Plan and the financial measures be taken simultaneously. The purpose of the demand was to take advantage of the foreign political pressure under which the Young Plan placed the Social Democrats, to compel them to make unpopular concessions regarding taxation, for it was not certain whether they would not later choose to disclaim responsibility for the financial measures and go over to the Opposition. But the Centre was not able to achieve its purpose because between the right and left wings of the Government coalition there were differences of opinion that could not so easily be bridged over. Thus there was danger that the Centre might abstain from voting, and the Chancellor very properly declared that he would not be satisfied with a small majority for a law of the historic importance of the Young Plan, but would resign.

It was at this point that President von Hindenburg intervened. He summoned Dr. Brüning, the leader of the Centre, and give him a moral guarantee that the financial measures would be carried through. This meant that in case difficulties should arise in the Reichstag the President would either bring the measures into operation by an emergency decree or would authorise the Government to dissolve the Reichstag. This news naturally made a great impression on the Reichstag. President von Hindenburg signed the Young laws immediately, but not the treaty of liquidation with Poland. The Constitution empowers the President to order the holding of a referendum on any Act which has been passed by the Reichstag and which he is unwilling to sign. Herr von Hindenburg has both political and legal misgivings against the treaty with Poland. The legal misgivings are due to the fact that jurists of high standing declare that the treaty amounts to a change of the Constitution, and hence requires a two-thirds majority, whereas it received only an absolute majority in the Reichstag. Probably President von Hindenburg will overcome these misgivings; if he does not, the Government will feel itself bound to resign.

In the meantime the commercial treaty with Poland has been signed. It is provisional, to run only for one year. But it is nevertheless the end of a Customs war that has now been going on for almost five years. This conflict arose from the fact that in 1925, with the expiration of the period fixed by the Treaty of Versailles, Germany refused to admit Polish coal unless Poland would make corresponding concessions in some other field. At that time nobody looked for a long conflict, for Poland was in a very difficult situation. But the English stoppage came in 1926, freeing the Polish Upper Silesian industry from its troubles, and thus made Poland little disposed to make any concessions to Germany. In addition to the coal question, the matter of imports of swine caused the greatest difficulties. The more critical the situation of the German farmers became, the more disposed they were to resist the danger that Polish swine might utterly destroy the German market. Poland for her part opposed the entry of all important industrial products by a system of import prohibitions which made it impossible for any normal trade to be carried on.

The new German-Polish treaty is based on most-favoured-nation treatment as to Customs duties. But in practice this is of little significance, since Poland will continue to admit only small specified quotas of the most important German goods, so that free trade is out of the question. On the other hand, Germany concedes to Poland an import quota of 200,000 head of swine yearly and 320,000 tons of coal monthly. Difficulties have also been caused by questions regarding the right of settlement, which Germans in Poland enjoy to only a limited extent, and by questions concerning licensing of German shipping companies to engage in the emigrant traffic. The only concession secured was a permit for the German lines, Hamburg-Amerika, Lloyd and Hamburg-Süd, to establish seven branch agencies for propaganda. The new treaty is an experiment, and time alone will show how it will turn out. In any event, it is a symptom showing that the tension in the relations between Germany and Poland is slowly beginning to relax.

The depression on the Bourse, which has now lasted for weeks, still continues. Despite the ratification of the Young Plan, the further lowering of the discount rate, and the prospect of securing long-term foreign loans in the not too distant future—the German railway and German post sections of the international Reparations loan—there is no interest in German stocks, since the economic situation here and the prospects of an improvement through a reform of taxation are still regarded with scepticism. A particularly depressing factor in the last few days has been the discussion of the balance sheets of the large German banks. The Dresdner Bank and the Commerz-und-Privatbank have now published their reports as at December 31, 1929, and both have declared

the same dividend as in the preceding year. But profits were smaller in 1929 than in 1928, and the insolvency of clients, as well as the fall in price of the banks' own security holdings, have made it necessary to write off large sums. In 1927 and 1928 the banks were able to build up strong reserves; in 1929 there could not only be no thought of this, but in some cases the reserves had to be drawn on to pay the dividends. Two other large banks have not yet published their reports, but the Darmstädter Bank has already made it known that it will declare the same dividend as in the preceding year. The Deutsche Bank und Disconto-Gesellschaft, the largest banking concern in Germany, whose fusion dates only from September, 1929, has not yet concluded its discussions regarding the dividend. The quotation for the shares of the Deutsche Bank has dropped about 10 per cent. in the last few weeks, and the Bourse fears that the dividend will be reduced from 10 to 8 per cent., which might also cause the big German industrial concerns to exercise caution in determining their dividends for the past year. In the first months of the current year business has been so bad for all banking and industrial enterprises that they have reason for not distributing among their stockholders the entire profits of 1929.

HOLLAND.

Money Market — Capital Issues — Foreign Trade.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, March 7.

THANKS to the plentiful supplies of money on the Amsterdam market in the month of February—the average rates for prolongation money were 2.9550, against 2.8831 in January and 4.7857 in February, 1929—the new issue market assumed a brisker aspect. Developments in the new issue market in the Netherlands show a continuation of the tendencies noted in the preceding month. On the one hand, the continuance of the ample monetary situation provides many public authorities and official bodies with a long-awaited opportunity for negotiating long-term loans or for converting outstanding issues into loans at lower rates, but, on the other hand, industrial activity is still too dull and industrial prospects are generally too uncertain to open up the possibility that private enterprises will avail themselves of the plentiful supplies of capital by marketing new issues.

In view of these circumstances, it is not surprising that practically all the issues in February were again for debentures, which accounted for no less than 52.5 million guilders out of the total of 55.1 million (conversions excluded). In comparison with that amount, the total of the shares issues, 2.6 millions, makes a very poor impression. The extent to which circumstances in the market have changed is apparent on comparing with February, 1929, when, of an aggregate of 100.9 million guilders issued, 69 millions were for share issues and 31.8 millions for debentures.

Foreign issues predominated heavily again in February, not only in the big total of the debenture issues, but also in the modest amount of the share issues. New capital taken up for domestic and foreign issues of shares and debentures in February is summarised in the following table:—

	Shares (guilders).	Debentures (guilders).	Total (guilders).
Domestic	120,000	11,242,500	11,362,500
Foreign	2,550,000	41,284,375	43,834,375
	2,670,000	52,526,875	55,196,875

With an aggregate of about 14 million guilders, loans to official and public bodies form a considerable share of the above debenture issues. Only one foreign Government loan was offered to the Dutch investor in February, but the amount offered was considerable, viz., $3,000,000 5½ per cent. bonds of the Republic of Cuba at 98 per cent. Shares in Chrysler and in Paramount-Famous-Lasky were introduced on the Amsterdam exchange, whilst also 20,000 shares without nominal value in Marshall, Field and Company, Inc., were brought on the market at $51. Among the foreign industrial issues in February, considerable interest was centred in the issue of 3 million dollar profit-sharing bonds in Siemens and Halske. Belgium was represented in our issue market to a larger extent than has been the case for some time. There was also an issue of 4 million guilders 7 per cent. bonds at 97½ per cent. by the Ruhrverband.

According to the official statistics for January, 1930, the value of the imports into the Netherlands during that month was 220,555,012 guilders, whilst that of the exports was 151,857,607, making a balance of imports over exports to the value of 68,697,405 guilders. The figures for the month of January in the years 1927-30 are as follows:—

(Million guilders.)

January.	1927.	1928.	1929.	1930.
Imports	188·0	216·3	232·6	220·6
Exports	135·1	139·5	152·2	151·9
Import balance	52·9	76·8	80·4	68·7

Contrary to the usual experience, the January exports this year are higher in value than in December, but nevertheless are a trifle lower than the exports in January, 1929; the value of imports in January, 1930, was about 12 million guilders less than in January, 1929.

The weight of merchandise exported and imported during the month of January in the years 1927-30 is set forth in the following table:—

(Metric tons.)

January.	Imports.	Exports.
1927	2,035,568	1,095,422
1928	2,068,142	1,122,225
1929	2,346,966	1,223,094
1930	2,697,649	1,394,191

Coal is largely responsible for the increase in the weight of imports in January, 1930, as compared with 1929. As to the January exports, about one-third of the 171,097 tons increase, as compared with January, 1929, is attributable to coke. The export trade was, generally speaking, fairly satisfactory in January, 1930, although the value of manufactured articles exported showed a slight decline from 68.1 million guilders in January, 1929, to 66.3 millions in January, 1930. There was an increase in the value of the imports of these articles from 89.1 million guilders in January, 1929, to 94.4 millions in January, 1930.

AUSTRIA.

Conference — Loans — Foreign Trade — Industry — Electricity — Labour — Money.

(FROM OUR CORRESPONDENT.)

VIENNA, March 8.

AN economic conference, representing employers and workers as well as the most various circles of commerce, industry and finance, is now sitting. The purpose of this conference is to devise concrete measures for the combating of unemployment and of economic distress. It is once more pointed out that taxation should be reduced, and also that manifold misuse is made of unemployment benefit and that this misuse might be largely obviated. The tendency seems to be, however, to under-estimate the grave disturbances which have taken place in international export trade and to overlook the excessively sharp competition which characterises foreign trade in general. For this reason views as to the probable success of this conference differ widely. It is quite certain that a large number of agricultural labourers and of other seasonal workers are so well acquainted with the provisions of the unemployment law that for a good part of the year, when there is nothing available in their line, they draw a steady pension and do not trouble to take other work even when they can get jobs yielding modest pay.

Complaints were made at the conference about excessive taxation, but until the Government raises a new loan no important cut can be made in taxation. It is announced that the State investments will be accelerated. The housing scheme is also to be put into operation very shortly.

Meanwhile it appears that the plan to issue abroad the housing bonds, which are to be handled by the Credit Institute for Public Work, is not to be put into execution for the time being. The financial groups, which have under consideration the floating of the big investment loan, have expressed the wish that the housing scheme obligations should not be introduced in foreign markets until the investment loan has been completed. In consequence, it is possible that bonds to a value of 60 to 70 million schillings, or perhaps a little less, will be taken over by the Austrian banks, savings banks, insurance companies and mortgage institutes. The proceeds will serve to liquidate the second mortgage, which is guaranteed by the Government as far as amortisation and interest service are concerned. Politics are coming to the fore again, for the City of Vienna wishes the Government to give its approval to the foundation of a Municipal mortgage institute, and points out that the former Federal Chancellor, Streeruwitz, gave his approval in principle.

The deficit in the balance of foreign trade amounts to 81 million schillings for the month of January, as imports amounted to 211 millions and exports to only 130 millions. There was no improvement at all in exports, and it is of interest that, according to calculations made by the Financial Administration, the total deficit in foreign trade for the years 1923 to 1928 amounts to 6,775 million schillings. During the same period, however, long-term debts to foreign countries have increased by only about a thousand million schillings. The difference was covered partly by sales of shares, factories and plants, and partly by the growth of the foreign tourist traffic and other invisible exports. After deduction of the sums spent abroad by Austrians there resulted for the year 1926 a credit balance of 158 millions, for 1928 a credit balance of about 250 million schillings. One very important credit item is constituted by the profits of middlemen, which amount for the year 1928 to about 120 millions, while revenue from transit traffic is estimated for the same year at 71 millions.

Among the Austrian industries which are passing through a severe crisis is the textile industry. Among other measures of support it demands further tariff protection, as the Government had, naturally, declined to grant premiums on exports. Imports of textile raw materials have also fallen off greatly. In the month of January alone imports of cotton, flax, hemp and other raw materials for the textile industry are 11 million schillings less in value than in January of last year. Imports of wool alone have fallen from 12.3 million schillings to 5 millions. Exports of cotton yarn have fallen by nearly 40 per cent.

From the economic negotiations, which are shortly to begin with Germany, the lumber industry expects an improvement of the present export conditions. The high duty which Germany imposes on sawn timber, hampers export to such an extent that Austria is endeavouring to get permission to export to Germany at least a limited quantity of this commodity. Exports to Russia are declining. Even banks which are interested in trade in this direction are in doubt about extending their connections after the recent events in regard to the " Altmann " textile concession, the most important Austrian enterprise in Russia, which, as is well known, was confiscated. There appears to be a move towards improvement in the iron industry, and the Alpine Montangesellschaft (iron trust) is, therefore, contemplating an increase of output. It is also probable that the company will decide upon the distribution of a slightly higher dividend for the past business year.

There is a sharp conflict between the Austrian concerns generating electric energy with water power and the German groups, which are trying to gain the decisive influence, not only over electricity concerns pure and simple, but over the whole of the Austrian export of current. From Germany also comes a proposal that a company be formed, the majority of whose shares should be in the possession of the Austrian State, and that this company should try to gain decisive influence in the electricity enterprises of Austria. The question of exploitation of electricity is the more important in Austria, as, after the nomination of the new President and the new general director, the fight as to whether the Federal Railways should be run in a greater measure by electricity will certainly break out again in sharper form than ever. For political reasons it has so far been impossible to complete the nominations. For a time the general director of the Alpine Montangesellschaft was one of the most likely candidates, but he desired more freedom in the choice of his collaborators than the Government wished to permit, as he considered a radical reform of the railways to be necessary.

In the official commercial report hope is expressed of a gradual improvement in economic life after the beginning of the year, and this is urgently necessary for merchants, as they are hard hit by the slowness of sales. One wish of all organisations of creditors and of banks has been fulfilled, in so far as the Government has drawn up a new regulation to cover compositions with creditors, which decrees that the lowest rate which the debtor may pay be raised from 35 per cent. to 40 per cent. Furthermore, creditors are to have more stringent auditing powers, while the process of liquidation is to be less costly than heretofore.

In the building trade the workers have demanded a 10 per cent. rise in wages. Otherwise there are no strikes, lockouts or wage demands in the foreground at present. On the occasion of the economic conference, the Federal Chancellor demanded that wage movements should cease, and expressed his disapproval of the demands of the building trade workers. It must also be taken into consideration that the index figure of wholesale prices fell in February from 125 to 123, and that the index of the cost of living also sank from 113 to 112 during the same period. For some time now emigration of Austrians to France has been on the increase, and it appears that individual qualified workers have found very satisfactory positions there.

On the stock and share market there is very little doing. Isolated advances, such as that on State Railway shares, which rose considerably, are attributable to manipulations of the exchange, bull movement, and unfounded rumours. The biggest rises were registered on the investment market and particularly on pre-war rentes, due, in this case, to hopes of valorisation. The public is still averse from purchasing shares, and, in spite of the low rates offered by the banks and savings banks for call money, it prefers to keep its money on deposit and available at any moment. Since the Austrian National Bank last lowered its bank rate the banks and savings banks have been paying only 4¼ per cent. on deposits. The recent changes in the statutes of the National Bank, whereby the charter is prolonged for a further 15 years and the State's share of the net profit has been increased, have now been ratified. The bill portfolio, which had diminished greatly, showed a rise of 4 million schillings at the beginning of March, as against the amount of 193 million schillings last reported. This fact, which is not unfavourable, is attributed to the pronounced need of credit in the provinces.

CANADA.

Unemployment — Grain Market — Industry — Trade — Brokerage Scandals.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 25.

THERE are so many workless people to be absorbed this spring that the Government intends to give as little encouragement as possible to immigration, and the sentiment of the country about assisted immigration is reflected in resolutions upon the order paper by Western members which seek to terminate in one case all immigration subsidies and in the other to abolish the Immigration Department as a separate organisation by absorbing it in the Labour Department.

The grain market situation continues to cause grave anxiety to all classes of the community. The leader of the Conservative Opposition in the Manitoba Legislature has been urging that the Federal Government should be requested to take over the whole of the unsold

the wheat and handle it on the lines of the policy followed during the war years. It appears that there is on the Federal statute book legislation authorising the creation of a National Wheat Board and the machinery necessary for its operation, and all that would be necessary would be to appoint its personnel. But Premier Bracken, in the Manitoba Legislature last week, declared that he felt the Conservative leader's suggestion to be ill-considered and untimely, because it would only tend to disturb further the market at a time when stabilisation was badly needed, and because it would probably bring about the destruction of the wheat pools which he felt ought to be preserved in the interests of the Canadian farmer. He declared that his Government discerned no alarm in the situation and that, contrary to current rumours, the pools' margins with the banks were being well maintained.

Following this statement, on Saturday, 22nd, Premier Bracken and the Premiers of Saskatchewan and Alberta held a conference in Regina, which was also attended by wheat pool officials, and arrived at an agreement for uniform legislation by the three provincial legislatures to supplement the guarantee given by their Governments to the leading banks, and to finance adequately the balance of the crop of 1929. The Premiers stated that the central selling agency of the pools had given the Governments fullest information concerning their financial condition, and proved to the satisfaction of the Premiers that they had been conducting their business in conformity with the aims and objects of the pool organisation. The Premiers also added that they desired to make it plain that their action had only been taken in order to supplement the undertaking already given, and not because there had been any impairment of the pools' margin with the banks, or because any doubt existed about the financial position of the pools, who had on deposit with the banks collateral valued at more than 15 per cent. in excess of the total of the banks' loan to the pool.

Naturally business of all kinds is very adversely affected by these untoward developments, and a gloomy view is now taken of the outlook for the spring and summer trade. For the time being the flow of orders to the East from the Prairie Provinces has almost dried up, and both in wholesale and retail circles general business is reported to be in a very depressed condition, with many lines of industry showing evidence of a marked curtailment of operations; for example, the production of motor vehicles in January is given as 10,388 units, which is less than half the total of 21,501 reported in January, 1928. The farm implement plants are also running far below their capacity, and as a consequence of these declines in activity the primary iron and steel industries are, apart from work supplied by the railways' order, faced with a scarcity of orders. The railway earnings of both the railway systems are running every week between 10 and 20 per cent. below the parallel figure for the previous year, and the cumulative total of carloadings for the year up to February 15, placed at 383,535 cars, shows a decline of 27,774 cars compared with the parallel figure for 1929, the decline for the last week recorded being 8,406 cars. The newsprint industry, already depressed by unsatisfactory prices, is beginning to experience further troubles from the curtailment of business in the United States, which reduces advertisements and cuts down the size of newspapers; in January the newsprint output, placed at 205,305 tons, was 9,000 tons below the figure for January, 1929, and the Canadian mills only operated at 71.4 per cent. of their capacity, as compared with an operating ratio of 82.3 in January, 1929. Numerous mines, which brokerage houses now involved in trouble had been financing, have been shut down.

These unsatisfactory conditions find reflection in the foreign trade returns for January, the figures, with the comparative totals for January, 1929, being as follows:—

	January, 1929.	1930.
	$	$
Exports	94,942,041	73,507,327
Imports	96,959,301	84,910,377
Total trade	191,901,342	158,417,704

THE BOOKLET
EDUCATION
The booklet "EDUCATION" outlines two plans to ensure a complete Education for your children. High fees and early enrolment are factors which demand a settled sum of money being available for the Educational period. The plans described show how this can be accomplished.
Legal & General Assurance Society Limited
10 Fleet Street, London, E.C.4
Assets exceed £21,000,000. General Manager—W. A. Workman, F.I.A.

The adverse balance for the month is therefore 11½ million dollars, and for the first ten months of the fiscal year the total decline in trade is 181 million dollars, while a favourable balace of 133 million dollars has been transformed into an adverse one of 90½ millions. How far the grain marketing situation is responsible for this state of affairs can be gauged from the fact that in the ten-month period exports of " agricultural and vegetable products " were valued at 337½ millions, a reduction of roughly 236 millions.

In the latest issue of the Government's Commercial Intelligence Journal Mr Harrison Watson, Canadian Trade Commissioner in London, discusses some reasons why, apart from the heavy reduction in grain exports to Britain, there was a decline in Canada's contribution of other leading food products to the British market; he enumerates the percentage losses as follows: Flour, 23.7; bacon, 35; hams, 14.9; cheese, 21.3; and canned salmon, 9.3; while the live cattle trade has entirely disappeared since 1929, and butter exports are now almost negligible. According to Mr. Watson, one factor is the unwillingness of Canadian exporters to maintain regular supplies demanded by the British market in face of the low prices prevailing in it, and their preference for the American market as more profitable. But he also points out that the Canadian exporter is confronted with keen competition from other countries, which have overhauled their methods since the war and by improved organisation in regard to production, standardisation and distribution have been able to lower prices to levels formerly unprofitable.

At the conference of provincial attorney-generals at Toronto about the mining and oil brokerage situation an agreement was reached on a uniform plan of legislation, which will protect the public from illegal " shortselling " and bucketing practices and prevent a recurrence of other irregularities which have been revealed.

NORTHERN IRELAND.

Unemployment Insurance — Road Traffic Tribunal — Belfast Corporation — Census of Production.

(FROM OUR CORRESPONDENT.)

BELFAST, March 6.

FOLLOWING the passage of the Unemployment Insurance Bill by the Imperial Parliament, early in February, the Northern Ireland Parliament, which had been adjourned on January 14th, reassembled on February 18th for the purpose of passing a similar measure for the six-county area. The additional cost to the Northern Ireland Unemployment Fund, on the basis of a continuance of 16 per cent. unemployment, is estimated at approximately £404,000 per annum. The measure was passed through all its stages and Parliament prorogued on February 24th.

The first application to the Tribunal recently established under the Motor Vehicles and Road Traffic Act to fix motor omnibus fares and rates in Northern Ireland was heard on February 12th, when the Belfast and County Down Railway Company applied for permission to increase the fares charged on the public service vehicles which it operates between Belfast and Holywood. The appointment of this Tribunal is a corollary to the legislation which has been passed with a view to the abolition

of indiscriminate competition between motor bus companies by the introduction of a system of licensing specified services for specified routes. At the opening sitting the Chairman of the Tribunal, Sir Lynden Macassey, K.C., made a statement regarding the general principles upon which the Tribunal would work. The statutory jurisdiction of the Tribunal extends only to the fixing of fares and the rates to be charged for the conveyance of luggage and parcels, but no appeal from its decisions can be made except on questions of law. In fixing fares the broad principle which will be adopted is that fares should, as far as practicable, be on such a basis as will yield gross receipts equal to, but not in excess of, the sum which, after providing for working expenses and a fair allowance for renewals, depreciation and reserve, will yield, with ordinary efficiency of operation and management, a reasonable return upon the capital necessarily and properly invested.

The Belfast Corporation has adopted a resolution to promote a Bill in the Northern Ireland Parliament asking for certain additional powers. Organised opposition has been offered to clauses of the Bill dealing with canvassing by members of the Council, the terms of superannuation of certain officials, the registration of butchers' shops, the provision of buildings for the accommodation of waiting vehicles, power to contribute to the rent of an aerodrome, and the regulation of street trading. A plebiscite on these clauses of the Bill is being taken. The estimated expenditure of the municipality for the coming financial year will amount to £1,276,754, of which £342,313 will be met by Government grants, miscellaneous receipts, and payments by the gas, tramways and electricity undertakings, leaving £934,441 to be provided out of the rates. A rate of 10s. 5d. in the £—one penny less than in 1929-30—has been struck.

The Ministry of Commerce has announced that a census of production will be taken in Northern Ireland in 1931, simultaneously with the similar inquiry in Great Britain. In 1924 the Board of Trade conducted the industrial census in Northern Ireland on behalf of the Northern Government, but next year the census will be taken by the Northern Ireland Ministry of Commerce. Preliminary forms in connection with the census have already been distributed.

Letters to the Editor.

CANALISING EMPIRE TRADE.

TO THE EDITOR OF THE ECONOMIST.

DEAR SIR,—The campaign for Empire Free Trade started by the two Press Peers will almost certainly appeal to many persons who are governed by impulse and who do not look very deeply into the consequences of a proposal which at first sight seems to be politically patriotic and economically profitable. I have neither the political position nor the social standing to justify my intrusion into the controversy. But I happen to have had practical experience of this scheme in its various forms since it was first proposed by the late Mr J. H. Hofmeyer at the Colonial Conference of 1886. Mr Hofmeyer's scheme would have provided about seven millions sterling as a contribution to the maintenance of the British Navy. Mr Cecil Rhodes took it up warmly, and I confess that I was at first greatly attracted by it.

No one doubted—I certainly did not—that it would involve a sacrifice by the Mother Country. But I considered that the political advantages to be gained might be worth this sacrifice. Both Hofmeyer and Rhodes believed that it would benefit South Africa, that an Imperial tariff against the outside world would favour South African wine as against French or German wine and so forth, while the Cape Dutch, who were the chief wine growers, would find their material interests bound up with the Imperial connection. I shared that belief, and it was not until I went to Mauritius as Colonial Secretary that I found I was mistaken. Mauritius and Reunion are sister islands of the Mascarenhas group. Both are of volcanic origin. The climate of both is the same, the soil of Reunion is believed to be the richer of the two, and Reunion is a little more than one-fourth larger than Mauritius. Both are peopled by French and Indians, and the Code Napoleon is in force in both islands. But Reunion is virtually a French Department. It sends a Senator and two Deputies to the French Parliament. There is free trade between France and a Customs tariff against the world outside the French Empire. Lord Beaverbrook's scheme is, in fact, in force as between France and Reunion.

In the British colony of Mauritius there is no discrimination, and trade is free to flow in the most profitable channels.

Here, then, I found an opportunity of comparing the various schemes of an Imperial zollverein, Empire Free Trade, preference, and similar proposals, and bringing them to the test of practical experience. With the assistance of my office staff and the British Consul at Reunion I worked out the following table, which is published in the Colonial Report on Mauritius for the year 1908. The figures are for 1907, and French francs were converted into rupees for the purpose of comparison:—

Year 1907.	Mauritius.	Reunion.
Population	373,336	173,912
Area (sq. miles)	705	969·7
Imports.		
Value of Imports from Mother Country given in rupees	7,960,799	4,647,590
Value of Imports from Sister Colonies or Possessions given in rupees	16,671,921	2,889,615
Value of Imports from Foreign Countries given in rupees	6,528,375	1,157,386
Total Imports given in rupees	31,161,095	8,694,592
Exports.		
Value of Exports to Mother Country given in rupees	7,024,615	7,983,153
Value of Exports to Sister Colonies or Possessions given in rupees	37,291,918	137,995
Value of Exports to Foreign Countries given in rupees	2,031,183	264,986
Total value of Exports given in rupees	46,347,716	8,286,134

These figures are conclusive. The Imperial Free Trade as practised between France and her colonies successfully canalised all trade, but without any material benefit to inter-Imperial trade, whilst it was absolutely disastrous to foreign trade.

This point would be brought out still more conspicuously if I were to give the shipping returns. I have not got the complete returns for Reunion. I know, however, that by canalising the trade with France, Reunion had practically only one regular line of steamers—the Messageries Maritimes—whilst Mauritius had the Messageries Maritimes, the Union Castle Line, the British India Line, and the Clan Line, besides numerous tramp steamers.

The effect of canalising the trade with France and shutting out the rest of the world had the following consequences for the French colony:—(1) The richer and larger island maintained only about half the population. (2) The trade was enormously reduced. (3) The population were poorer.—Yours faithfully,

GRAHAM BOWER.

Studwell Lodge, Droxford.

Books and Publications.

INDUSTRIAL ARBITRATION.*

WHAT Lord Amulree does not know about the modern developments of industrial arbitration in this country could easily be written on a sixpence, and students of the subject will, therefore, be very glad to know that he has decided to publish the results of his labours. The scope of Lord Amulree's book, short as it is—of its 224 loosely printed pages 34 are occupied with appendix matter—is very wide. It starts with the fourteenth-century Statute of Labourers, and pursues the history of wage regulation and conciliation through the ages, including reference to the Elizabeth regulation, the powers of the justices, Speenhamland and the Combination Acts, the Victorian schemes of arbitration, voluntary and compulsory, the Trade Boards Acts, the Ministry of Munitions and the Committee on Production and all the war-time expedients, right down to the Industrial Court and the wage tribunals of the present time. And a summary appendix gives relevant quotations from all the principal Acts mentioned.

In apologising for adding to the number of books already in existence on the subject, Lord Amulree says that "it has always seemed to me that while it is essential that a person called upon to arbitrate should possess certain qualities such as industrial knowledge, patience, and impartiality, it is also an advantage to have that philosophic background which comes of acquaintance with the history of this and cognate methods of settling industrial differences." With this sentiment one may very heartily agree, while remarking, at the same time, that it seems to indicate a considerably longer and more elaborate book than the present one. If one sets out to deal, in 192 pages, with the history of conciliation and arbitration as well as with the details of the various schemes themselves, one can hardly fail to make the historical treatment a little dry and meaningless for those not well acquainted with the general industrial history of the period—and few arbitrators, we fear, have been soundly trained in general economic history. In some parts of his book, particularly down to the repeal of the Combination Acts, Lord Amulree does very skilfully manage to relate changing attitudes on wage-regulation to changing economic and political conditions; but he does not extend this treatment to the Victorian age, though a very interesting study could have been made of the effects of general economic conditions on the general attitude to arbitration, both in the mid-tide of "Victorian prosperity" and in the fluctuations which followed the 1878 depression. Again, the account of the present railway wages boards would have been more interesting and more fruitful if it had been related to the other parts of the 1921 Railways Act; the compulsory amalgamations, and the existence of the Railway Rates Tribunal, have certainly contributed to the success of the Wages Boards in a way which should be carefully considered by anyone proposing to transplant the wage-fixing machinery, without the rates tribunal, into the mining industry. The Whitley Council proposals, again, are discussed without sufficient stress being laid on the wide difference between the application of "Whitley principles" to privately-owned and to State-owned industry; and even the history of the Industrial Court—of which, not unnaturally, Lord Amulree is a strong supporter—might have been made more interesting by more reference to the change of industrial atmosphere between 1919 and 1929. Finally, one feels the need of some comparison of English conditions with those of other countries, particularly the Dominions. Why does the British trade unionist raise a howl at compulsory arbitration for any but "sweated" trades, while his Australian brother accepts it with complete calm but without thereby becoming any less militant? Anyone who has conversed with an Australian labour leader cannot but have received illuminating ideas on this question.

To say this, however, is only to say that Lord Amulree has not written the authoritative work on his subject which we should like to have from him, and which he is so obviously qualified to execute. We venture to hope that he may soon do so. In the meantime, the present little book is to be heartily recommended as a model of concise, moderate, and intelligent statement.

* "Industrial Arbitration in England." (Oxford University Press. 12s. 6d.).

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Economic Development of the British Overseas Empire. Vol. II. By the late L. C. A. Knowles and C. M. Knowles. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 12s. 6d. net.

Economic historians will welcome this completion of the late Dr. Knowles' invaluable work on the Empire. Part I. is devoted to a comparative examination of Dominion problems, and Part II. to Canada. Like the preceding volume, this work fills a serious lacuna in economic literature.

France. By André Siegfried. (London) Oxford University Press, Warwick Square. 9s. net.

Professor Siegfried's gift for interpreting the people of one country to those of another is already well known. That he should apply it to the interpretation of his own people and their politics to the Anglo-Saxon nations is very opportune at this moment of desperate striving to see each other's point of view. We hope he will next undertake the complementary service of explaining us to his fellow-countrymen.

Company Law and Practice. By Herbert W. Jordan and Stanley Borrie. 17th edition. (London) Jordan and Sons, Ltd., Chancery Lane. 10s. net.

Among the flood of works recently published on this subject none has supplanted this admirably arranged volume. This seventeenth edition has been completely rewritten in the light of the Companies Act, 1929, and it is, as usual, fully documented and indexed.

Danger Spots in World Population. By Warren S. Thompson. (London) Alfred A. Knopf, Ltd., 37, Bedford Square. 21s.

The thesis is that the differential pressure of peoples on their resources is one of the most important causes of war, and the author analyses the population problem, in the countries where it is most crucial, from this point of view.

New Zealand Official Year Book, 1930. (London) New Zealand Government Office, 415, Strand. 7s. 6d. net.

The publication of this indispensable work of reference at a price of 7s. 6d. is an act of philanthropy for which every statistician should daily return thanks. It has an answer to almost every conceivable question about New Zealand.

The China Year Book, 1929-30. Edited by H. G. W. Woodhead. (London) Simpkin, Marshall, Ltd., Stationers' Hall Court. 42s. net.

This solid volume, packed with statistics, is a monument to what can be achieved by determination in the face of extraordinary obstacles. It contains a wealth of social and economic information of every kind.

Political Handbook of the World. Edited by Walter H. Mallory. (New York) Council of Foreign Relations, Inc., 25, West 43rd Street. $2.50.

Contains concise information on the rulers, the political parties with their programmes and leaders, and the Press of sixty-four countries.

Cost of Government in the United States, 1927-28. (New York) National Industrial Conference Board, Inc., 247, Uark Avenue. $3.00.

An exceptionally exhaustive collection of statistics of Federal, State and local finance.

State Income Taxes. Vol. I. Historical Development. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. $2.00.

An account of the motives for the adoption, the original laws, and subsequent history of income tax in twenty of the United States.

Complete Practical Income Tax. By A. G. McBain. Fifth Edition. (London) Gee and Co. (Publishers), Ltd., 6, Kirby Street. 7s. 6d. net.

A very thorough and comprehensive account, with numerous examples. Authorities are quoted throughout, and there is an excellent index.

Income Tax Personal Allowances at a Glance. By Harry C. King. (London) Gee and Co. (Publishers), Ltd., 6, Kirby Street. 1s. net.

A convenient quick-reference pamphlet.

Dizionario Commerciale. Compiled by Professor N. Spinelli. (Turin) S. Lattes and C., Editori. Part I, 35 lire. Part 11, 55 lire.

Indispensable to the economist who has to deal with Italian matter.

THE OIL OUTLOOK.

THE situation in the oil industry to-day is of more than ordinary complexity. There was an enormous over-production of crude oil and its products last year, as is shown by the following figures, covering 75 per cent. of the world's oil trade:—

FIGURES OF AMERICAN PETROLEUM INSTITUTE.

(Thousands of U.S. barrels.)

	U.S. Production and Imports (all oils).	U.S. Consumption and Exports (all oils).	Excess of Supply.
1928	991,746	966,013	25,733
1929	1,114,169	1,047,681	66,488

Producers and refiners are now curtailing output to an extent which has never before been deemed possible in this most individualistic of American industries. The question is whether "restriction" has not come too late to prevent a decline in oil prices and whether the oil industry is not now entering upon a period of intensive competition at low prices.

Before we consider the oil share market in the light of this situation we will deal first with some of its complications. In the *Economist* of December 21, 1929, in an article on "Co-operation in the Oil Industry," we reviewed the extent to which rationalisation had been carried out. As far as production was concerned we came to the conclusion that international co-operation was unlikely, if not impossible, and that it would be foolish to prophesy how long restriction would be maintained in the United States while production in Venezuela was unrestricted. At the present time restriction in the American oilfields has been tightened up, and a considerable fall in the daily average output has resulted, as the following table will show:—

DAILY AVERAGE CRUDE OIL PRODUCTION IN THE UNITED STATES, 1930.

(Figures of American Petroleum Institute.)

	Barrels.		Barrels.
Jan. 4.....	2,652,000	Feb. 1.....	2,595,000
„ 11.....	2,689,250	„ 8.....	2,613,800
„ 18.....	2,661,700	„ 15.....	2,652,950
„ 25.....	2,615,000	Mar. 1.....	2,624,000
		„ 8.....	2,535,000

This sharp decline in American production has been due mainly to the agreement arrived at between the Californian producers gradually to bring down the State output, as from March 1st, from a level in excess of 700,000 barrels to 619,000 barrels a day. Field committees and umpires have been appointed to carry this scheme into effect, and every company except two in the southern fields of California has pledged itself to respect the field umpires' decisions. At the same time, restriction is being maintained in Oklahoma, while in Texas, although the State Governor views all restriction schemes as a breach of the Anti-Trust laws, a certain amount of voluntary restriction is in force.

Last year the domestic consumption in, and export from the United States of all oils amounted to over 2,870,000 barrels per day. If the American oil industry could reduce its crude oil production below 2,500,000 barrels a day, and keep it at that level for some time, the stability of oil prices might be assured. But too great a reliance must not be placed upon restriction agreements among American oil producers. Such agreements can be broken with impunity at any time by any company, and it is difficult to believe that the independent oil companies will maintain a self-denying ordinance for an indefinite time while the big combines in Venezuela—Standard Oil (Indiana and New Jersey), Royal Dutch-Shell, and Gulf Oil—produce as much as they can and dump their surplus on the Eastern seaboard of the United States. The Royal Dutch-Shell have offered to restrict in conformity with the restrictions in America, if the three other groups in Venezuela follow suit, but there is as yet no sign of the latter agreeing. Another factor which makes the maintenance of "restriction" far from easy—at any rate in California—is the increase by the Standard Oil Company of California of 25 cents per barrel in its posted prices. The wisdom of first restricting crude oil output and then increasing crude oil prices is difficult to perceive.

The gasoline market presents even more obscure complications. The over-abundance of gasoline is due not only to too much crude oil being refined, but to the recovery of gasoline from crude oil having been still further improved by the increase of "cracking" at the refineries. The gasoline recovery last year was 44 per cent. of the crude oil refined, as compared with 41 per cent. in 1928. For American refiners to increase their gasoline output while producers of crude oil have been restricting their production is an obvious anomaly. Bulk gasoline prices, taking the United States motor grade of gasoline ex Oklahoma refineries, fell from 9 cents per gallon in May, 1929, to 7 cents per gallon by the end of the year and to 6 cents per gallon last month. In spite of this decline, export prices were maintained last year at a fixed level by the American Oil Exporters' Association, the price for the United States motor grade of gasoline being 8½ cents per gallon at bulk ports. Last month the Association reduced their gasoline price schedule by 1 cent per gallon, and it is considered likely that further reductions will be made. Whether the Association can hold together in the face of increased competition in the world markets and a falling price level in America seems doubtful.

In considering the effect of these complexities on the oil share market a distinction must be drawn between the purely producing oil companies, the localised producing, refining and marketing companies, and the international groups. The producing concerns, such as the V.O.C. Holding (which is now to be merged with Venezuela Oil Concessions), Lobitos, Anglo-Ecuadorian, Apex Trinidad, British Controlled Oilfields and Mexican Eagle, have enjoyed a higher average price for their crude oil during 1929, but will be affected by the reduction in American crude oil prices which was made in January this year. The localised producing, refining and marketing companies, such as the Anglo-Persian and Burmah Oil, should have increased their profits considerably last year, but are now threatened with a price-cutting war in India, the Vacuum Oil and the Standard Oil of New York having purchased further supplies of Russian kerosene for the Eastern markets—an ominous step in view of past history. The Anglo-Persian has had the full benefit of the 2¼d. per gallon rise in the price of petrol in Great Britain since March last year, which was so much extra profit, seeing that the company was not selling at a loss before the rise was made. Moreover, the Anglo-Persian has had the advantage of 50 per cent. of the net profits in all the Eastern markets outside India and China as the result of its alliance with the Shell group in the Consolidated Petroleum Company. The Burmah Oil Company has benefited from stable prices in India, and has also had the advantage of receiving, during 1929, an interim dividend from the Anglo-Persian Oil Company, as well as the final dividend in respect of 1928. It is, therefore, possible that both Burmah Oil and Anglo-Persian will show increased earnings and dividends in respect of last year. The international oil groups, such as the Royal Dutch-Shell, may be assumed to have increased their profits again last year, and to be well prepared for the more intensive competition which has now arisen. Indeed, experience shows that this group invariably emerges from a price-war with a stronger hold on the oil markets than before. Unlike the Anglo-Persian, it can always take advantage of low crude oil prices by purchasing its supplies in the cheapest market. The next table will show the yields at the present market

of the four "leaders" in the London oil share market:—

	High, 1929.	Low, 1929.	Present Price.	Div. Rate.	Yield (ex Div.)
Royal Dutch, 100 fl.	38⅜*	29⅝	31⅞	24%	6·3%
Shell Transport, £1....	5 15/16*	84/4½	4 9/16	25%†	5·5%† / 6·9%‡
Burmah Oil, £1	97/7½	74/4½	3 23/32	20%	5·4%
Anglo-Persian, £1	73/1½	98/9	3⅞	12½%	3·2%

* Cum-bonus. † Tax free. ‡ Gross.

If the Burmah Oil increased its dividend to 25 per cent. and the Anglo-Persian to 15 per cent., the yields would be 6.8 per cent. and 3.9 per cent. respectively. It is surprising to find such a high yield from Shell Transport, which belongs to a group that has eliminated to such a large extent the risks attaching to the oil business. In the prospectus which the Shell Transport and Trading published for the recent issue of 5,000,000 7 per cent. second preference shares it was stated that since 1897 the company had paid out to its ordinary shareholders over £66,000,000 in tax-free dividends. Since 1926 these dividends have been at the rate of 25 per cent. tax free. It would require a very exceptional period of stress in the oil markets before the Royal Dutch and Shell Transport were forced to reduce their dividends.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 1.	April 3.

Cheap money spoke in the stock markets this week with no uncertain voice. Dealings in gilt-edged stocks were on a very large scale, and on few occasions in the last seven years have prices moved upwards with greater rapidity. The expectation, and realisation, of a further reduction in Bank rate doubtless influenced market sentiment to some extent, but the fundamental causes of the movement went much deeper. Their nature is discussed in an "Investment Note" on page 655. Foreign bonds, industrial prior-charge stocks and even industrial preference shares shared in the general tendency, though to a less conspicuous extent. Before the end of the week ordinary shares also exhibited distinctly firm signs, this development, however, being attributable less to enhancement of confidence in the industrial situation than to adjustment of yield bases to conform with the newly prevailing rates for money generally.

The gilt-edged market, which opened strongly on Monday, became a cynosure of attention by mid-week, when a heavy turnover was accompanied by rises in price which surpassed even the most optimistic expectations. The movement extended throughout the list, Funding Loan, Three-and-a-Half per Cent. Conversion Loan and Four per Cent. Consols being particularly in evidence. Five per Cent. Conversion Loan rose to 103¾ by Wednesday, while the new Four-and-Half per Cent. Conversion scrip was dealt in at 2¾ premium the following day. The most noteworthy laggard in the movement was the Five per Cent. War Loan, the market being strongly of the opinion that a conversion operation was pending. India loans shared in the general rise. Dominion and colonial stocks had a consistently firm tone, but attracted only the "marginal" business of the market. The rapid over-subscription of the Swansea Loan (large applicants for which received only 36 per cent.) was accompanied by further buying of recent Home Corporation issues, which are now at a premium in every case.

Numerous stocks were singled out for attention in the foreign market. Greek bonds displayed further strength, and German Sevens obtained support. Unexpectedly large buying of Brazilians revealed an appreciable shortage of stock. Chinese issues were in favour, speculative buying of the 1912's continuing in anticipation of an announcement regarding this month's coupon.

Among Home Railway stocks, public interest was concentrated entirely on prior-charge, and, to a less extent, preference issues. Ordinary stocks might have obtained more attention had the week's traffic returns been of a less unfavourable character, all the four groups showing a decline in gross revenue as compared with the corresponding week of 1929, when traffic continued to be affected by the cessation of frost-bound conditions. Poor traffic returns, however, failed to offset the better tendency of Argentine stocks, on a further recovery in the exchange and the appearance of "cheap" buyers. Little interest was shown in other foreign rails, apart from Leopoldinas, which rose in sympathy with Brazilian stocks generally.

The week opened in quiet fashion among Industrial shares. The market's correct forecast of the Bank of England's decision, the stronger tone of New York, and the better sentiment of the "House" as a whole, were reflected, however, in a stiffening of quotations from Wednesday onwards, though the volume of business showed no great expansion. New York was a buyer of International Nickel and Ford Motors, while Continental support was forthcoming for Kreuger and Toll issues, on the belief that cheap money would enable the group to fund part of its heavy portfolio of foreign Government obligations on profitable terms. Despite intermittent profit-taking, Cables and Wireless continued to make slow recovery, and Imperial Chemical was a better market. Buying of Electrical shares was stimulated by the favourable reports of three large companies (analysed on page 656 of this issue), and the instantaneous success of the North Metropolitan debenture issue. A moderate amount of business gave motor shares an active air, Dennis and Rolls-Royce showing the largest gains. After some weeks of dullness, buying of Brewery shares showed modest revival, and Tobacco shares were firmer under the lead of British-American Tobacco. Textile shares, though registering only moderate gains, had a better appearance than for some weeks past, but the securities of companies engaged in the "heavy" industries remained irregular, despite the better showing made by the Powell Duffryn figures (discussed on page 657). The Gramophone market attracted less attention in the absence of further circumstantial reports of pending mergers, the announcement that the Decca Company would not pay its half-year's preference dividend being unwelcome, though not unexpected. Among quasi-international stocks, Unilevers and United Molasses were prominent. The Insurance share market tended further to broaden, and bank shares maintained a firm tone.

Rubber shares remained outside the orbit of the week's increase in activity. The commodity showed little change, despite the announcement of further adhesions to the May tapping "holiday" policy, and dealings in the shares were of negligible proportions. A firmer tone ruled in the tea share market, where the paucity of buying orders was more than offset by the scarcity of stock. After a slow start, oil shares had a better appearance on tentative buying from New York and bear closing in Paris, but the improvement was checked by higher American crude production figures. A Royal Dutch $40,000,000 4 per cent. fifteen-year debenture issue was announced from New York.

Following a dull opening, the mining share market took on a more favourable tone before the end of the week. Kaffirs, after being almost entirely neglected, even by Paris, later hardened considerably on the receipt of more encouraging advices from the Cape. Rhodesians regained some of their mid-week losses, N'Changa being in demand in a somewhat erratic market. Tin shares were a firm feature before Thursday's recovery in the metal, with Hong Kong and Bangrin leading. Coppers were better, Rio Tinto hardening on a modest demand. Rhodesia Katanga were a strong feature on an excellent progress report, and in the asbestos list Mashaba added a fraction. Burma Corporation and Santa Gertrudis were in request under the influence of a small advance in silver.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Our New York correspondent cables:—Industrial news is unimportant, and, while the downward turn may be halting, there is not yet any real improvement. The Chase National Bank merger means a continuance of the old management, and not a Rockefeller dominance. The bond market is the best for eight years, with a rush of corporation money from the call market to securities, and of investment money out of the banks. New issues are increasing, perhaps too rapidly, but so far have been all well taken, railroads being the principal borrowers. Investments are overflowing into stocks, which are rising moderately but steadily, with the trading volume now over 4 million shares daily. Attention is chiefly concentrated on issues with a settled dividend policy, and a strong cash position, but the pools are able to attract a good public following in an assortment of stocks. Chemicals, tobaccos, steels, and even oils are better. Fresh interest is being taken in motor shares under the lead of General Motors, which are rising on a turn in the tide of sales. General sales for February, at home and abroad, were 126,196, against 106,509 in January, and 175,148 a year ago. Interest is being taken in utilities and oils with natural gas possibilities. There is a growing belief that there will be no prolonged business depression, in which case low interest rates will make the current high yields on assured dividend-paying stocks attractive. The steel trade is operating at 75 per cent. capacity. Steadier money rates are looked for with the repayment of the Treasury borrowing on income-tax collections, which, to date, is running $40,000,000 above a year ago. The general money market conditions are the easiest since 1924 and the discount rate is now high and dry, with only sentimental effect. A reduction is, nevertheless, expected later unless a bull movement in shares, with rising brokers' loans, proves too much for the Washington board. Loans are up $121 million, making a gain during the past month and a-half of nearly $500 million.

AMSTERDAM.

The predominant feature of the Amsterdam stock market during the past month was again the low level of money rates, which, however, failed to exercise any beneficial influence either on trade or on the prices of stocks and shares. Generally speaking, trading was extremely quiet, and quotations underwent a further decline. The resignation of Dr. Schacht resulted in a sudden depression. It was only in the debenture market that the undertone remained at all firm, and several State and Municipal loans advanced slightly. This tendency, coupled with the ample supplies on the money market, caused a brisker feeling in the issue market and several issues of loans were offered to the public, including 37.8 million guilders of 4½ per cent. Dutch East Indies bonds at 96 per cent. Among the leading shares, Aku artificial silk were particularly weak, dropping below par for the first time on rumours that no dividend would be distributed for 1929. Philips and Margarine Unies were also decidedly lower, while Royal Dutch were easy, and sugar issues were extremely quiet.

INVESTMENT NOTES.

The Strength of Gilt-edged Stocks.—The persistent decline of money rates between the New York slump at the end of last October and the latest reduction in the Bank of England's minimum figure has at long last begun to exert its inevitable influence on the long-term capital market. This week's new capital issues, which have been of high-grade investment character, have been fully and rapidly subscribed, while the gilt-edged market has been extremely active, with a larger volume of business and a more rapid rise in prices than at any time since 1922-23.

The movement has shown signs of spreading, though in less striking fashion, to prior-charge and other fixed-interest industrial securities. This week's pace has obviously been too hot to last for long, but conservative market opinion has regarded it less as exhibiting "boom" symptoms than as reflecting the rapid catching up of the "arrears" of sound investment which have been accumulating for many weeks past. The movement can be regarded as the inevitable sequel to a period of cheap money following a major downward movement in values, and also as a first stage in the process of recovery. It will be welcomed in more than one quarter. To Mr Snowden it offers the possibility of converting part of the Five per Cent. War Loan (which has lagged noticeably behind in this week's advance) at a lower rate of interest. To industry it offers the prospect of raising fresh capital at reasonable rates whenever good security is available. The movement is the more likely to command itself to the investor, since the new securities which are likely to be offered for subscription in the next few weeks will carry a much lower risk of eventual loss than the doubtful "boom" company shares of recent years.

The "Marking" of Bargains.—The week's Stock Exchange Committee election has seen the advent of twelve new candidates, while only three retiring members have refrained from seeking re-election. The result will be of more than usual interest in view of the recent discussions of the Committee's policy regarding "permission to deal." During the past few days the Committee has issued a notice declaring that such permission has been refused in the case of the Rosey Cross Asbestos Company, and has warned members of the "House" against attempts by outsiders to make irregular use of Stock Exchange facilities. The text of both announcements will be found on page 681. Whenever application is made for leave to deal, writes a Stock Exchange correspondent, certain papers have to be furnished to the Share and Loan Department. Every application must be supported by a Stock Exchange firm or member, who is assumed to be conversant with the details given in the returns by the company. The broker is invited to attend before the sub-committee of the Stock Exchange Committee charged with the duty of sifting new issues, which is probably the most important, from the public standpoint, of all the sub-committees which sit nowadays in the Stock Exchange. Upon it rests the responsibility for granting leave to deal, for though the full Committee of the Stock Exchange have the right to veto its decision, their veto is rarely exercised. In busy times this sub-committee is one of the hardest-worked of all. When permission to deal has been

given, the broker making the application is informed, and requested to acquaint the dealers in the market with the Committee's decision. Dealings begin, the marking of bargains is effected in one or other of the Stock Exchange Daily Lists, and the quotations find their way into the newspapers on the following day. It is the List of "unofficial" quotations which provides the purveyor of ramp shares with a golden opportunity for disposing of rubbish. The free advertisement it affords, with its *imprimatur* of Stock Exchange acknowledgment, is invaluable to him. Mr Lloyd George would doubtless be amazed at the unexpected developments which have followed his insistence, at the end of 1914, that such a List should be established as a war measure. In some respects, of course, shares marked in the Supplementary List are at a disadvantage as compared with those in the Official List. Banks and other institutions will generally advance cash against the security of stocks and shares quoted in the latter List, but securities in the former are, generally speaking, of less value as collateral. But its markings are regarded by many thousands of clients as an invaluable guide to the prices they can expect to receive or to pay when they deal in the stocks and shares in question. The outsider who wishes to give the impression of market activity in a particular share has merely to send a handful of orders every day, with a request that the bargains shall be recorded. To-day's popular plan is to flood the country, over a given week-end, with circulars relating to certain shares, to continue the campaign with sheaves of telegrams, broadcast through the provinces and the towns, to obtain the marking of a number of bargains in the Stock Exchange List, and then to sell as many as possible for whatever price the outsider cares to fix. This matter is closely engaging the Stock Exchange Committee's attention. The problem of retaining the benefits which publication of the Supplementary Lists affords, while obviating the dangers of loss to the public which its columns permit, is not an easy one. The Committee cannot discriminate between the good and the indifferent, but they can put down their foot firmly in the most glaring instances of abuse of their facilities.

Electricity Supply Profits.—The steady progress of the electrical generating industry was fully maintained last year, and was duly reflected in the earnings of the leading companies. The following table shows the results of three large supply concerns in different parts of the country:—

		City of London.	Clyde Valley.	Newcastle-upon-Tyne.
		£	£	£
Sales of current	1928	734,593	749,541	639,908†
	1929	778,272	792,172	668,374†
Net profit	1928	387,178	304,297	614,786
	1929	407,848	354,495	688,784
Earnings, per ordinary share, per cent.	1928	28·26	20·52	12·16
	1929	29·15	14·12	12·64
Dividends paid per ordinary share, per cent.	1928	10	8	6
	1929	10	8	6

† Profits on sales.

The City of London Electric Lighting Company increased its sales of electricity by 5.9 per cent., while its net profit was 5.3 per cent. higher at £407,848, covering the preference dividend of £48,000, 4.7 times. No mention is made of the number of consumers, but the units sold, at nearly 89 millions, were 11.3 per cent. more than in 1928. The ordinary capital of the Clyde Valley Electrical Power Company was increased during the year to £2,100,000 by the issue of £900,000 in £1 shares. The number of consumers increased by 21.75 per cent. to 48,700, and the revenue from power by 5.6 per cent. to £792,172. Expenses being practically the same as in 1928, the net profit was 16.5 per cent. higher at £354,495, covering the preference dividend of £58,000, 6.1 times. The contingency fund was increased by £152,500 (against £120,000). This fund now stands at £1,280,000. A new 20,000 k.w. 50-circle turbo-alternator has been installed at the Yoker Power Station, and is distributing power to the "Grid" lines of the Central Scotland Electricity Scheme. During the year £447,428 remaining unpaid on the ordinary capital of the Newcastle-upon-Tyne Company was called up. Profits on sales increased by 4.4 per cent. to £668,374, and the net profit was 12 per cent. higher at £688,784, covering the preference dividend charge of £181,948, 3.7 times. The contingency reserve was increased by £175,000 to £930,437, and £75,000 was added to the renewals reserve. The system has been wholly maintained out of revenue. The improved results of the Newcastle Company are particularly gratifying, as the company is dependent to a very large extent upon demand from industry, and the trades of its area have in the past suffered severely from depression.

Building Societies: Rates Charged to Borrowers.—In a leading article in the *Economist* of last week (p. 591) we referred to the fact that the London societies paid a higher rate of interest to shareholders and depositors, and charged a higher rate to borrowers, than their provincial colleagues. We described this phenomenon as representing a potential source of friction within the movement. An interesting light is thrown on this question by the table given below, which shows for the past two years (so far as results are available) the average effective rates charged to borrowers by each of the 43 largest societies. The mortgage balances have been taken as the arithmetic mean of the opening and closing balances of each year, while the interest assumed in the calculations is the accrued interest brought into the profit and loss account. Slight statistical errors may be involved in some cases, due to technical questions which need not be described in detail. Interest, for instance, does not generally include fines, entrance fees or redemption fees. Some societies, on the other hand, are accustomed to bear all or part of legal expenses themselves. On the whole, however, the resulting figures can be regarded as giving a reasonably accurate statistical picture.

* Total Mortgage Interest expressed as percentage of mean advances.
† Not yet available.

The results show that none of the largest societies with a London head office charges significantly less than 6 per cent. to its borrowers, while only one provincial society shows a rate above the 6 per cent. level. The arithmetical average for the thirty-one societies for which two years' figures are available comes out at 5.823 per cent. for 1928-29 and 5.825 per cent. for 1929-30. The weighted average for the twelve largest societies (which in 1928-29 had total assets of £143 million) is 5.870 per cent. and 5.801 per cent. respectively. In the earlier of the two periods the mean rate of interest charged by thirty-two provincial societies was 5.512 per cent., and that of eleven London societies 6.614 per cent. This difference of a full 1 per cent. is a most significant feature. It is understood that an agreement exists to the effect that loans in the London area are not to be made at less than 6 per cent. At a recent meeting of a representative association, a prominent London building society manager referred to this agreement, declaring that "to advance money at 5¼ per cent. was a half per cent. below the agreed minimum in London." So far as this condition applies to provincial societies making a part of their advances in London, it tends to raise the "provincial" society average referred to above. The discrepancy between rates in the Metropolis and elsewhere would, therefore, appear to be even larger than the figures indicate.

Baird Television Scheme.—The end of the 1928 company boom left the system of "parent and offspring finance" completely discredited. While some corporate "families" have gone into liquidation, others are busy joining together what should never have been put asunder, and the task of eliminating duplication of values and over-capitalisation is proving anything but easy. The Baird Television proposals offer a case in point. The Baird Development Company was floated in 1927, and took over the sole British rights and a two-thirds interest in the foreign and colonial rights in the Baird patents. In 1928, before the probable value of the "rights" could even approximately be ascertained, Baird International Television was formed to take over the remaining third, and now owns three-fifths of the deferred shares of the Development Company, which carry voting control. When amalgamation was found advisable, the directors came up against the difficulty that it was quite impossible to place any definite capital value on the Baird inventions as a whole, or to allocate their value as between British and foreign rights. Apparently, inability to define the indefinite led to the submission of the question to the virtual arbitration of Sir Mark Webster-Jenkinson, whose powers of unravelling a complex financial situation had already been demonstrated, *inter alia*, by his part in the Vickers and Armstrong reconstructions. Sir Mark would seem to have decided that the only solid basis for a scheme was the preservation, as far as possible, of the respective rights of shareholders in the business as a whole, leaving the future to disclose what those profits would be, with due attention to the fact that the International Company had £207,811 of cash and the Development Company only £21,322. Accordingly, the former is to absorb the latter and change its name to Baird Television, Ltd. Holders of the £100,000 preferred ordinary shares of the Development Company will receive 800,000 5s. preferred and one 5s. deferred ordinary in the new concern. Holders of 200,000 1s. deferred in the Development Company (exclusive of 300,000 shares held by the International) will receive five preferred and two deferred 5s. shares for every four 1s. shares now held. The "A" shareholders of the International will give up their cumulative rights and dividend arrears, but will receive preferred shares in the new concern, share for share. Holders of "B" shares (*i.e.*, Television, Ltd., the vendors) will receive 10 new deferred for every 14. They will relinquish their former control of the company, but will participate in what, if all goes well, should be an increased surplus of profits. The amalgamated company will have on issue, in all, 1,050,000 5s. preferred, entitled to a 10 per cent. non-cumulative dividend and 40 per cent. of residual profits, and 1,000,000 5s. deferred, entitled to the remaining 60 per cent. The scheme is equitable as regards the outside shareholders, and will presumabiy be sanctioned at the meeting on April 7th.

Powell Duffryn.—At the last annual meeting of this important steam-coal concern the chairman held out some hope of a real improvement in the financial results, which during the last four years have fluctuated uncertainly between insignificant profits and large debit balances. It was then stated that rigid economy was being observed wherever possible, that Stephenson Clark and Associated Companies, Ltd., had been appointed sole vendors of the company's output and all wagons transferred to them, and that the company's coke ovens were again working at full speed. The accounts for the year ended December 31st last certainly afford some justification for restrained optimism. The debit balance of £207,905 with which the company was left at the close of last year has been cancelled by drawing on the reserve fund. Trading profits for the year amount to £309,475, and net profits, after deduction of debenture interest, to £44,090:—

* Debit balance eliminated by transfer from reserve.

The balance sheet reveals a far from happy state of affairs. The bank overdraft has increased from £320,771 to £449,303, while amounts owing to creditors are up by £63,622 to £825,693. Available current assets are less than a third of current liabilities. The general reserve has been depleted by £387,029. The present price of the £1 ordinary shares is 10s. 6d.

Amalgamated Anthracite Collieries.—The report of this company for the year ended December 31st last affords an example of the elementary possibilities of rationalisation in one branch of the coal industry. Early in the year the activities of Amalgamated Anthracite and its subsidiaries, Henderson's Welsh Anthracite Collieries and Welsh Anthracite Collieries, were concentrated under single control. Side by side with this improvement went the pooling of wagons, the establishment of a central purchasing section for colliery stores, a single sales organisation, and the adoption of a uniform system of accounting. The directors' assertion that "recent amalgamations have already resulted in increased efficiency and in economies, both in administration and working costs," has been borne out by the accounts. The year's trading shows a gross profit of £662,893, and a net profit of £439,159 representing 4.5 per cent. earned on the ordinary capital, and revealing a marked improvement on last year's net loss of £309,461, or the meagre profit of £7,857 for 1927. The sum of £270,835 has to be deducted, being the debit balance from last year's account, while the remaining £168,323 is carried forward. The balance sheet shows some improvement in the direction of liquidity, though the situation is still far from satisfactory. Current liabilities now stand at £2,460,331, against £3,590,131 at this time last year, while liquid assets have likewise declined from £787,774 to £504,498. Fixed assets remain practically unchanged, and, once again, nothing has been written off for depreciation on plant and machinery, which "has been fully maintained." The item which last year appeared at £3,587,285 to the account of "creditors" has now been subdivided, and is shown as £612,035 owing to creditors and £1,820,447 to bankers, a collective decrease of £1,154,803. Investments are up from £2,203,675 to £2,511,846, but cash stands at the negligible total of £233. The present price of the ordinary £1 shares is 6s. 6d., and of the preference shares 15s.

Thomas Tilling.—The earnings of Thomas Tilling, Ltd., in 1929 were practically the same as in 1928. The report gives no reason why profits have not improved with the increase in the number of passengers carried on the roads, but, presumably, net receipts were adversely affected by the 2½d. per gallon rise in the price of petrol in March last year. The company operates omnibuses in London under an agreement with the London General Omnibus Company, and owns, jointly with the British Electric Traction Company, a controlling interest in Tilling and British Automobile Traction, which operates

motor-bus services in many parts of the country. The results for the past three years are shown:—

Years ended December 31.	1927.	1928.	1929.
	£	£	£
Net profits	219,477	228,678	225,120
Ordinary { Earned after tax	38·49%	40·23%	39·56%
Ordinary { Paid subject to tax	15% and bonus 15%	20%	20%
	£	£	£
To reserves	50,000	100,000	100,000
Carried forward	60,984	67,693	70,843
Preference dividends	16,500	16,500	16,500

The company is earning about 50 per cent. (gross) on its ordinary share capital, against dividends of 20 per cent. (gross)—a fact which partially explains the relatively high market price of the ordinary shares. Moreover, agreements have been entered into between Tilling and British Automobile Traction and the London and North Eastern and the London Midland and Scottish Railways for the co-operation of traffic by road and rail, and for the acquisition by the railway of a certain proportion of the shares in the omnibus companies. It is assumed that Tilling and British Automobile Traction have made handsome profits on the shares sold to the railway companies, and that the investments of Thomas Tilling in allied and subsidiary companies, which stand in the balance sheet at £1,055,986, probably contain a large hidden reserve. The **balance sheet as at December 31, 1929,** shows a very strong financial position and a surplus of net assets applicable to the ordinary shares, at book values, of £2 3s. The ordinary are quoted in the market at 4⅝, to yield 10½ per cent. gross on earnings, and £4 3s. 5d. per cent. gross on dividends.

Swan, Hunter and Wigham Richardson.—In spite of the highly competitive conditions in the shipbuilding industry, this Tyneside company made satisfactory progress last year. Net profits have risen from £168,696 to £188,388, following last year's increase of £43,316, and for the first time since 1926 ordinary dividends are covered by earnings.

	Year ends December 31, 1927.	1928.	1929.
	£	£	£
Net profit	125,380	168,696	188,388

The large demand for oil-carrying ships is providing the company's shipyards and engine works with good employment, twenty-three such ships being at present under construction in various yards. The accounts for the past year reveal a satisfactorily liquid position, with available assets in excess of current liabilities by £685,000. Investments, showing a decline of £174,719 at £2,140,823, carry an uncalled liability of £90,994, of which £88,157 is in respect of subsidiary companies. The large item of "cash and bills" has increased by £43,269 to £1,029,495. At their present price of £1⅝ the £1 ordinary shares give a yield of £6 15s., allowing for a final dividend of 4½ per cent., less tax.

British Insulated Cables.—The accounts of this eminently prosperous cable manufacturing company for the year ended December 31st last reveal a fresh increase in turnover and profits. Net revenue is shown at £536,551, an increase of £62,376 on last year's total. As a result of the recent bonus share distribution, by which the company's capital was augmented to the extent of 500,000 £1 preference shares and 333,333 £1 ordinary shares, preference dividends now take £57,500 instead of £30,000, and though the ordinary share earnings are up in amount by £34,876, percentage earnings reveal a decline from 33.3 to 28.7. Following their traditionally conservative policy, the board again recommend the distribution of only 15 per cent.:—

	Year ends December 31, 1927.	1928.	1929.

	£	£	£
To reserve	200,000	299,966	198,333
Carried forward	305,880	250,089	280,807

Reserve account now stands at £900,000, despite the bonus deduction of £833,333, while this year's further allocation of £198,333 will considerably enhance the total. The balance sheet shows a satisfactory liquidity, current liabilities, at £690,938, being well covered by available current assets of £1,188,660. The directors announce that a sum of £300,000, provided over a period out of revenue for the settlement of taxation and other claims, is no longer required. This amount has been set aside to form a "dividend equalisation account." At their present price of £3 11/16 the £1 ordinary shares give a yield of £4 4s. per cent., allowing for a final dividend of 10 per cent., and a yield on earnings of nearly double this figure.

Provincial Cinematograph Theatres.—An increase of over 18 per cent. in the net profits of the Provincial Cinematograph Theatres, Ltd., comes as a welcome surprise to shareholders who feared that the advent of talking films would dislocate the company's business. The company, which is now controlled by the Gaumont-British Picture Corporation, owns or controls about 120 cinema theatres. Its subsidiary theatre companies, Associated Provincial Picture Houses and the Albany Ward Theatres, have prospered and have maintained their dividends at 10 per cent. and 8¾ per cent. respectively. New theatres have been opened—the Regent, Bournemouth, and the Regent, Ipswich—which have proved to be satisfactory investments, and a controlling interest has been acquired in the City Cinema, Leicester. The theatres which are being erected near Victoria Station, in London, and in Bradford and Edinburgh, are nearing completion and will be open within the next six months. The results of Provincial Cinematograph Theatres for the past three years are shown in the following statement:—

(Years to January 31.)	1928.	1929.	1930.
	£	£	£
Net profit (after depreciation)	286,807	269,523	349,083
Preference dividends	52,500	52,500	52,500
Preferred ordinary div. of 7½%	85,993	133,109	150,000

	£	£	£
General reserve	30,000	18,045	20,000
Goodwill written down	25,000	nil	45,034*
Carried forward	115,066	105,934	110,482

* Expenses of first mortgage debenture issue written off.

The capital structure is somewhat unusual. The "A" and "B" preference share capital amounts to £700,000, the 7½ per cent. participating preferred ordinary share capital to £2,000,000 and the ordinary capital (in 10s. shares) to £500,000. In front of the share capital rank £1,250,000 6 per cent. 1st mortgage debenture stock, which was issued last year, and mortgages of £1,040,300. The risks of the business are therefore largely borne by the preferred ordinary shareholders. After 7½ per cent. is paid on the preferred ordinary capital the ordinary shares are entitled to dividends aggregating £75,000 per annum, less tax. The balance is then divided equally between the preferred ordinary and the ordinary shares until the preferred ordinary shares have received 15 per cent., after which the ordinary take the balance. The £75,000 dividend on the ordinary shares is equivalent to a dividend of 15 per cent., which has been the rate maintained for the last three years. The preferred ordinary dividends of 7½ per cent. were covered nearly twice on last year's profits, while the ordinary shares earned 22 per cent. The present market price of the preferred ordinary shares is 18s., which allows a yield of £8 16s. 9d. per cent. on dividends of 7½ per cent.; and that of the ordinary shares is 15s., which returns over 11 per cent. on dividends of 15 per cent. and over 16 per cent. on earnings.

Anglo-Norwegian Holdings.—Despite the leading part played by Great Britain in Arctic and Antarctic exploration, the British investor's interests in the economic exploitation of the Polar regions have been largely negligible. An exception to this rule, however, is provided by Anglo-Norwegian Holdings, which was incorporated last March, under the laws of Quebec, to acquire interests in two whaling companies (registered in Norway and the Falkland Islands respectively) and the entire capital of a third. Certain of the company's 7 per cent. redeemable preferred shares of $100 (of which $1,900,000 was outstanding on December 31st last) and of its common shares of no par value (420,000 in issue) have been deposited in New York with the Guaranty Trust Company, and bearer certificates issued against them are quoted in the "Supplementary List" of the London Stock Exchange at £17 for the preferred and 14s. for the common shares. A further $100,000 of preferred shares have been redeemed since December 31, 1929. The first nine months of the company's existence have been a profitable period, the two established concerns in which an interest was acquired having earned amounts in excess of their average annual profits at the time of the company's incorporation, while the third—the Falkland Whaling Company, which was formed only last year—has enjoyed a satisfactory fishing season. The net income of the holding company for the nine months to December 31st last was $438,003, which included no income from Falkland Whaling. Preferred dividend has taken $99,750, and a dividend of 25 cents (Canadian currency) is being paid on the common shares, requiring $105,000. Deducting the cost of redemption of 1,000 preferred shares during the year, the company is carrying forward a surplus of $144,537, equivalent to 34 cents per common share.

First Co-operative Investment Trust.—In commenting upon the annual report of the First Co-operative Investment Trust, in the *Economist* of March 15th, we compared the depreciation shown on its investments—amounting to 18.1 per cent., or 14.1 per cent. after allowing for reserves—with the appreciation of 6.9 per cent. shown in the *Investors' Chronicle* index for all securities between the end of 1923 and the beginning of 1930. It has been pointed out to us that, although the First Co-operative was formed in 1924, it began with only a small capital—£28,691, as at January 31, 1925—and that, allowing for the successive yearly increases in capital to the present total of £1,651,396, a more correct comparison would be between the average level of security values at October 31, 1927, and the beginning of 1930. The *Investors' Chronicle* index over this period shows, in fact, a decline of 18.5 per cent. We have gladly acknowledged the improvements already made in the investment portfolio of the First Co-operative, which we understand have followed upon the appointment by Mr Emil Davies of an investment expert who joined the board last autumn. Some improvement can also be perceived in the position of Redeemable Securities and General Investment Trust, which has fared the worst of all Mr Emil Davies' trusts. The report published last week disclosed a depreciation on its investments of 18.9 per cent., or 16.58 per cent. after allowing for reserves and carry-forward, but the percentage of bonds to the total has been increased from 30.31 per cent. to 37.04 per cent., and the proportions of preference and ordinary shares reduced from 22.22 per cent. to 21.68 per cent., and from 47.47 per cent. to 41.28 per cent. respectively.

Massey-Harris Company.—The total sales of Massey-Harris, the largest manufacturers of farming implements in the British Empire, showed an increase of 16.7 per cent. in the year to November 30, 1929, though sales in Canada, which are normally responsible for 50 per cent. of the company's turnover, were adversely affected by the short crops. The financial results are shown:—

	(Years ended Nov. 30.) 1928.	1929.

* On old shares.

Last year the company carried through an important scheme of capital reorganisation, which included the redemption of the 7 per cent cumulative preferred shares and the issue of 120,899 redeemable 5 per cent. cumulative preferred shares of $100, the issue of 241,798 common shares of no par value at $60, the writing off of bond discount and expenses, the redemption of bank advances, and the creation of certain reserves. The slump in wheat values and short Canadian crops have left their mark on the balance sheet. Cash has fallen from $260,781 to $76,649, and bills and accounts receivable have risen from $16.9 million to $22.8 million, as compared with a year ago. This was partly due to the increased turnover of the company, especially in power farming machinery, which is sold on a long credit basis. Inventory stocks on November 30th were also unusually high, amounting to $31.8 million, as compared with $25.8 million a year ago. As regards the prospects for 1930, the chairman, at the general meeting, stated that, while crop conditions were unsatisfactory in Argentina and Australia, they were good in South Africa, that winter wheat prospects were favourable in Europe, United States and Canada, and that there was nothing to indicate that seeding conditions in the spring would not be satisfactory. The prosperity of a farm implement manufacturing company, however, depends upon that of the farming community, which has suffered a severe check as a result of the fall in cereal values. The common shares have fallen to 32, and will yield over 9 per cent. if last year's dividend is maintained on the new capital.

A Royal Mail "Merger"?—At the general meeting of Lamport and Holt, Lord Kylsant, in reply to a shareholder, declared that he hoped to see all his shipping interests ultimately as one company. In five years, he added, that might be brought about. Neither question nor answer, however, appears in the official version of the proceedings advertised in the Press. It is not easy to see how such an amalgamation could ever be practicable, seeing that the services carried on by the Royal Mail group of companies are so diverse in character and geography. There are the West African lines—Elder Dempster, British and African Steam Navigation, African Steam Navigation—and the Union-Castle line serving

South and East Africa. There are the South American lines—Lamport and Holt, Pacific Steam Navigation, Nelson Steam Navigation—and the Argentine Navigation Company operating in Argentine coastal waters. There is the White Star line engaged in the express passenger Atlantic service. There is Coast Lines, Ltd., serving this country, not to mention R.M.S.P. Meat Transports, Bullard, King, and others, as different in trade as any to be found in the shipping industry. How companies with such diverse interests could be operated from one head office—which is what amalgamation implies—is not at all clear. The accounting problem, again, would be incredibly complicated. A further announcement on the matter would be welcomed by shareholders.

MINING NOTES.

East Rand Proprietary.—Our mining correspondent writes:—As happened a year ago, the Stock Exchange took a mildly favourable view of the annual report. Undoubtedly there are favourable new features. A fresh expansion in tonnage and average yield has been accompanied, despite heavy development outlay, by only a small expansion in costs. The net surplus—cost of administration being exceeded by sundry receipts—comes out at £140,850, against £103,040. Expenditure on capital account and on excess development, although less than before, again absorbs substantial sums, leaving £297,250 to be carried forward, or £76,000 more than brought in. The difference would be sufficient to provide a dividend of 5 per cent. upon the company's capital of £1,500,000. Cash assets, at the date of the balance sheet, amounted to £147,000, and the net cash to £150,200. The company is faced with considerable further capital expenditure, and a payment to the shareholders does not seem likely in the near future.

	1927.	1928.	1929.
Tons milled	1,586,500	1,685,700	1,721,500
Revenue per ton	22/0	22/3	22/10
Costs per ton	21/6	21/1	21/3
Profit per ton	-/6	1/2	1/7
Total working profit £	112,540	96,340	135,300
Ore reserves tons	3,130,000	3,624,000	3,414,270
Value per ton dwt.	6·4	6·4	6·3

The expansion indicated by the latest ore estimate obviously arises from the inclusion of the "considerable tonnage of the low-grade main reef in the area west of the Driefontein incline"—referred to in the report of the consulting engineer. This would also to some extent account for the small decline in grade. Development in the different sections of the property was attended with mixed results; but the concrete fact is that, while the payable ore developed was about the same as before—around one and a quarter million tons—the value averaged no more than 5.9 dwts., as against 6.4 dwts. in 1928. The available tonnage represents about two years' supply for the mill.

Crown Mines.—Our mining correspondent writes:—Having regard to the magnitude of its operations, the steadiness exhibited by the results of this company for some time past is really remarkable. During the past four years the variations in the working profits have been confined within about £100,000—this amount representing the decrease in last year's total compared with that of 1926. Variations in the dividends are therefore attributable in the main to fluctuating capital expenditure requirements. Last year the crushing of a record tonnage was rather more than offset by a slight decline in average yield, the working cost ratio remaining at 20s. 5d. per ton. Net capital outlay, however, amounted to £207,400 in place of £285,300, while taxes were somewhat down at £125,000. Thus a substantial increase in the dividend rate became practicable, still leaving a rather larger sum to be carried forward than brought in. Of liquid assets totalling £358,400, rather over £100,000 is represented by net cash. We contrast the results of the past three years:—

	1927.	1928.	1929.
Tonnage milled	2,508,000	2,611,000	2,643,000
Revenue per ton	28/1	27/10	27/7
Working costs per ton	20/4	20/5	20/5
Profit per ton	7/9	7/5	7/2
Total working profit £	970,690	969,090	947,100
Net profit £	984,050	978,900	977,850
Earned per cent.	104·7	104·1	104·0
Dividends £	623,070	507,680	599,990
Rate per cent.	67½	55	65
Carried forward £	314,180	346,170	358,390
Ore reserves tons	10,224,740	10,962,250	10,841,460
Average dwt.	6·5	6·7	6·7

The payable ore developed during 1929—1,950,800 tons, averaging 6.7 dwts.—fell 911,460 tons and 0.3 dwts. short of the 1928 results. But the latter were exceptional, an unusually large footage having been performed. As the additional treatment plant did not come into full operation until August, a fresh expansion in tonnage milled should occur this year. "Further heavy capital expenditure" is foreshadowed for 1930 and 1931, after which less will be required. The company still has a large undeveloped area in the south-western section of its property, albeit in the central section the workings are getting towards the boundary. According to unofficial information from Johannesburg, arrangements are being made to acquire additional dip ground from the Union Government. The 10s. shares appear moderately valued at 3 5/16, giving a return of just over 10 per cent. gross.

Durban Roodepoort Deep.—A further improvement in both the quantity and value of the ore crushed being accompanied by an appreciable saving in costs, last year's operating profit came out at £46,640, as compared with slightly under £20,000 for both 1927 and 1928. The saving in expenditure was only to a small extent accounted for by reduction in the development tonnage from 28,550 to 25,890. Less administration expenses, the net surplus figures at £39,700, the whole of which—like the surpluses of the four preceding periods—has been absorbed by capital outlay, still leaving a cash deficiency of £23,200. At 1,626,800 tons the ore reserves indicate an expansion of 138,200 tons, the value being a trifle higher at 7.4 dwts. As the payable tonnage opened up during 1929 was 444,100 tons, as compared with 553,300 tons extracted, it is obvious that the growth in the reserves must be attributable to the inclusion of material previously developed in part. A somewhat similar position exists now, as a large proportion of 300,000 tons of payable main reef on the lower levels "has been regarded as insufficiently blocked out for valuation and inclusion in the current ore reserve." The prospects of the mine as a whole, however, have been considered sufficiently promising to warrant the increase of the treatment plant. To carry out this work, to clear off the remaining £40,000 debentures, and to place the finances on a sound footing, a reconstruction has just been carried through. For each £1 share previously held, shareholders are being given one 10s. share, and offered additional shares in the proportion of three for every four. The issue, underwritten by the parent undertakings, will bring in about £160,000, leaving a small margin over the estimated requirements. Under the new conditions the yearly earnings are expected to be increased by £25,000 to £35,000. Taking the medium figure, and adding it to last year's net earnings, a total of approximately £70,000 is arrived at—equal to about 15 per cent. upon the new capital of £375,000, after allowance for taxes, etc.

Rose and Geldenhuis Deeps.—In the case of each of these old-established Witwatersrand propositions, the latest annual statement indicates the nearness of exhaustion. Although with the first-named the development footage was less than one-half the 1928 total, the available ore reserves at 714,300 tons show an increase of 41,000 tons. This apparent anomaly is largely due to the reopening of old workings and stoping in doubtful areas. If allowance be made for sorting, the above-named quantity represents less than a year's supply for the mill; but there are a

further 249,400 tons of the higher grade of 5.3 dwts. in shaft pillars, etc. Thanks chiefly to the sorting out of an increased proportion of waste rock the Geldenhuis Deep earned £40,300 in place of £11,300, and paid 5 per cent., as against 2½ per cent. As with the Rose Deep, a greatly reduced development footage was performed, but in this case the available ore reserves at 504,200 tons, indicate a small decrease. The total, including pillars, stands at 736,000 tons—less than a year's supply.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Eastern Bank, United Kingdom Provident Institution, British Insulated Cables, Midland Electric Corporation for Power Distribution, Radiation, Spratts Patent, Dickins and Jones, and R. M. C. Textiles. At the annual meeting of British Insulated Cables the chairman, commenting upon the growing use of overhead wires instead of underground cables, prophesied that, as the former were costly to maintain, unsightly, relatively dangerous and unreliable in operation, it was only a question of time before history, as exemplified by the Post Office adoption of underground cables, would repeat itself. Referring to conditions in Irak, Mr J. S. Haskill told shareholders of the Eastern Bank, Ltd., that trade conditions had shown no improvement, the fall in silver, and consequent depreciation of the kran, having badly hit merchants trading with Persia. The Right Hon. Walter Runciman's speech at the United Kingdom Provident meeting is discussed in a "Note of the Week."

CAPITAL ISSUES.

The new issue market continues to reflect the decline in the effective rate for long-term borrowing, which has been in evidence since the drop in Bank rate on March 6th, and has been stimulated by this week's further reduction. Apart from a small issue by the *Selected Land and Property Company*, and an issue by tender of £5,000 ordinary shares by the *Godalming Gas and Coke Company*, this week's offers were all of fixed interest stock of high investment status. The *Swansea Corporation Loan*, with a maximum life of twenty-five years, offered the investor a flat yield of £5 1s. per cent. and a redemption yield of £5 1s. 5d. The *North Metropolitan Electric Power Supply* debenture stock was well covered, and in view of its future redemption at a premium of 2½ per cent., its 5½ per cent. flat yield, and its prospect of enjoying a freer market than the small amount of 5½ per cent. debenture stock hitherto outstanding, was a reasonably attractive security. The price of the debenture stock offered on Thursday by *Tate and Lyle* was even lower, the stock, covered nearly ten times by average profits, giving a running yield of £5 12s. 10d. per cent. and a redemption yield of £5 13s. 2d. per cent.

Swansea Corporation.—Issue of £1,500,000 5 per cent. redeemable stock, 1945-55, at £99 per cent. The stock is repayable at par on March 31, 1955, but the Corporation reserves the right to redeem the stock at par on any half-yearly interest date on or after March 31, 1945, on three months' notice. The stock is a trustee security. The total debt of the borough is £5,655,113, and the rateable value approximately £1,000,000, on which basis a rate of one penny in the £ is estimated to provide £3,800. The proceeds of the issue will be used for the extension of electricity and water undertakings, etc., the erection of a mental hospital, and for the repayment of existing loans.

Godalming Gas and Coke Company.—Issue by tender of 500 ordinary shares of £10 each, minimum price par, ranking for a standard dividend of 7 per cent., subject to sliding scale, equally with the existing similar shares. The profits of the company for 1929, after deduction of debenture interest and preference dividends, totalled £3,476, which is more than sufficient to cover the standard rates of dividend on the ordinary capital, including the present issue.

North Metropolitan Electric Power Supply.—Issue at par of £750,000 5½ per cent. debenture stock, redeemable by 1966, but the company reserves the right to repay at 102½ per cent. the whole of the debenture stock on giving six months' notice. Provision will be made for the redemption of the present issue by means of a cumulative sinking fund accruing from July 1, 1903, and applied annually in the purchase of stock at or under 102½ per cent., or by drawings at 102½ per cent. Net revenue for 1929 totalled £400,225, covering interest on loans and debentures, including the present issue, 4.7 times.

Tate and Lyle.—Issue of £1,250,000 5½ per cent. Mortgage debenture stock at £97½ per cent., repayable at par by means of a cumulative sinking fund of 1 per cent. per annum, commencing in 1935. Any stock not previously redeemed will be repaid on September 30, 1965; but the company reserve the right to repay the stock in whole or part at par on or after September 30, 1945, on three months' notice. The average net profits for the past six years totalled £683,623, covering interest on the present issue 9.9 times. The company was incorporated in 1903 to acquire the business of Henry Tate and Sons, Ltd.

Selected Land and Property Company.—Issue of 100,000 ordinary shares of 10s. each at par. The company was incorporated on March 15, 1928. In the period to December 31, 1929, the average rate of profit per annum earned on the total capital employed (including loans) was over 32 per cent. The present issue is to be used for development purposes in West and South-West London.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction:—**Dalgety and Co.** Particulars are offered with regard to the issue of £500,000 4½ per cent. redeemable debenture stock to be sold privately at the price of 80 per cent. Issued capital, £6,500,000; outstanding debentures, £3,166,368. **Pentland Investment Trust.** Issued capital, £500,000, divided into £300,000 5 per cent. cumulative preference stock and £200,000 ordinary stock. No dividend has yet been paid on the ordinary stock.

[Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, shorter notices, and dividend announcements will be found on page 675, under the heading "Company News."]

COMPANY MEETINGS, &c.

NATIONAL BANK OF EGYPT.

RESULTS OF A DIFFICULT YEAR.

DIVIDEND MAINTAINED AT 18 PER CENT.

The thirtieth annual general meeting of the shareholders in the National Bank of Egypt was held on Thursday, March 20th, at the Head Office of the Bank, in Cairo.

Sir Bertram Hornsby, C.B.E. (the Governor), presided.

DIRECTORS' REPORT.

The directors' report was as follows :—

The directors present to the shareholders the balance sheet and profit and loss account for the year ending December 31, 1929.

The gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for doubtful debts, amounts to :

	£	s.	d.	£	s.	d.
				1,099,870	4	6
After deducting from this sum :—						
For directors' fees	13,833	6	8			
For current expenses	464,350	12	9	478,183	19	5
there remains				621,686	5	1
In conformity with Article 49 of the Bank's statutes a dividend of 4 per cent. is payable on the share capital				120,000	0	0
After this distribution there remains				501,686	5	1
Adding to this the balance brought forward from last year				221,794	12	9
the amount available is				723,480	17	10
The directors consider it prudent to allocate to special reserve for contingencies a sum of				75,000	0	0
which leaves				648,480	17	10
From this amount the directors recommend the payment of an additional dividend of 14 per cent. on the share capital which will absorb				420,000	0	0
and to carry forward the balance of				228,480	17	10

The total dividend for the year will thus be at the rate of 18 per cent., equivalent to £1 16s. 0d. per share. An interim dividend of 8s. having been paid on September 2, 1929, there remains to be distributed the balance of £1 8s. per share.

BALANCE SHEET, DECEMBER 31st, 1929.

LIABILITIES.

	£E.	MM.	£ST.	s.	d.
Share capital— 300,000 fully paid shares of £10 each	2,925,000	000	3,000,000	0	0

	42,591,142	991	43,683,223	11	8

There is a contingent liability in respect of bills rediscounted of £633,944 4s. 3d.

V. HARARI,
JOHN HOME,
Directors.

B. HORNSBY,
Governor.

REPORT OF THE AUDITORS.

We have examined the books of the National Bank of Egypt and in our opinion the above balance sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs as shown by the books. We have also verified the cash, notes and securities at the head office and at the Cairo and Alexandria branches, and have found the same correct. The London returns have been audited and certified by Messrs. Deloitte, Plender, Griffiths and Co., chartered accountants.

THE GOVERNOR'S SPEECH.

DIFFICULTIES OF PAST YEAR.

SUDAN TRADE FIGURES.

The Governor, addressing the shareholders, said : Gentlemen, From the report of the board which is in your hands, you will see that the gross profit for the year 1929 was £1,099,870. From this have to be deducted the expenses, amounting to £478,184, leaving a net profit of £621,686. Your directors propose to allocate £75,000 to the special reserve fund, and to pay a dividend at the rate of 18 per cent., requiring £540,000, the balance of £6,686 being added to the carry-forward.

Our net profits have decreased by about £30,000 as against last year. Contrary to general opinion, your bank has not benefited by the high rates of interest which prevailed in the principal financial centres of the world during the last quarter of the year. The higher rates we had to pay on our deposits were not compensated by the increased rates on our advances; for as you may see from the balance sheet, the latter form less than half our assets, the larger proportion of which is invested in Government securities bearing a fixed rate of interest. Our special situation as bankers to the Egyptian and the Sudan Governments, and as having the privilege of issuing notes, necessitates the maintenance of a very liquid position, which these to holdings of easily realisable securities provides.

BALANCE SHEET ITEMS.

As regards the figures of the balance sheet, there are several differences from last year which reflect both the lower value of cotton and the decrease in the quantity exported. Advances on merchandise are £1,709,000 lower, and bills of exchange are down by £1,778,000, whilst on the liabilities side there is a decrease in deposits from the public of £868,000, despite the fact that the number of accounts continues to show a steady expansion.

The note issue has followed the usual seasonal variations, but though in the early months the amount was higher than in the corresponding period of 1928, the average for the whole year was over £540,000 lower. The usual statement of the maximum and minimum for the last five years is appended :—

1925	£E.41,900,000	£E.28,700,000
1926	£E.35,300,000	£E.25,300,000
1927	£E.33,600,000	£E.24,400,000
1928	£E.33,900,000	£E.22,300,000
1929	£E.31,900,000	£E.22,000,000

IMPORTS AND EXPORTS.

I also append the totals of imports and exports for the same period, reminding you once again that in order to make them synchronise with the cotton crop, we take the twelve months from September 1st to August 31st. Under the influence of the price at which the 1928–29 crop was realised, there was last year a favourable trade balance of roughly £E.2½ million. It is probable that the current year will show less favourable results.

September 1st to August 31st.	Imports.	Exports (including re-exports).
1924–1925	£E.56,257,511	£E.67,952,808
1925–1926	£E.55,973,075	£E.52,855,630
1926–1927	£E.48,230,223	£E.45,823,035
1927–1928	£E.51,565,388	£E.54,310,983
1928–1929	£E.54,730,378	£E.57,195,388

Towards the end of the year 1928 the banks in Cairo established a clearing house for the exchange of cheques, and their example was followed in Alexandria a few months later. The records show that for the whole year the total amount cleared in Cairo was over £E.75 million, whilst in Alexandria the total for seven months was over £E.36½ million. The actual number of cheques passing over the Cairo clearing house is considerably greater than in Alexandria, whilst in the latter town the average amount per cheque is much higher. In the course of time the records of the two clearing houses will afford a valuable index to the commercial and financial activities of the country.

ADVERSE FACTORS.

In my remarks last year I expressed myself in a somewhat optimistic vein regarding the country's prosperity. In the interval several factors have arisen to modify the situation, though I still maintain the view that it is fundamentally sound. In the first place, the crisis in New York, coupled with higher rates for money, could not fail to have a repercussion here, of which one indication was the fall in the market price of local securities. Fortunately, these securities on the whole are in strong hands, and the market was but little affected by such liquidations as took place.

Further, the increase in the Customs Tariff which came into force last month led to the importation of goods on a scale well beyond the country's normal needs. It is possible that the absorption of these surplus stocks may give rise to some difficulty, especially when they have been obtained purely as a speculation with borrowed money. The prudent attitude adopted by the Banks for some time past leads me to consider that the difficulties may not be so great as some people anticipate.

COTTON PRICES.

Finally, and most important, the price of cotton has fallen to a level which no longer corresponds to the conditions to which the economic life of the country has adapted itself. In an endeavour to arrest the decline, the Government has again intervened, and has fixed minimum prices at which it will buy futures or take up any cotton tendered against contracts. As a result, the Government had, up till a few days ago, become the owner of 125,000 bales of cotton, to which must be added the 29,000 bales it still possesses as the result of its intervention in 1925-26. The action of the Government in this respect, though it may momentarily relieve the situation, will throw a burden on the whole country unless it proves possible in the course of time to unload these stocks at satisfactory prices.

It is a curious phenomenon that throughout the world the price of agricultural products has fallen, as witness the case of wheat, wool, coffee, sugar and rubber. It would seem that in time the situation should result in a fall in the cost of manufactured goods which would to some extent compensate the agriculturist. But, even so, there can be little doubt that if cotton prices should become stabilised round about their present level, there will have to be considerable readjustment in the economic life of Egypt.

SUDAN TRADE FIGURES.

Reports from the Sudan indicate that the general financia situation has improved. Last year's Gezira cotton crop gave satisfactory results both as to yield and to price; the outlook for the current season is less promising owing to attacks of parasites and the lower value of cotton. Good rains were responsible for an exceptionally heavy crop of durra, so that it was possible to remove the embargo on exportation. Owing to low prices obtainable abroad little has been exported, and the bulk of the crop has remained in the country and forms a reserve of food supply against possible crop failure in the near future. The following table of imports and exports shows that, compared with 1928, the latter increased by about £E.1 million, represented largely by cotton, and the former by about £E.400,000, chiefly in the form of piece-goods.

	Imports.	Exports (including re-exports).
1925	£E.5,437,727	£E.4,168,364
1926	£E.5,574,401	£E.5,190,505
1927	£E.6,155,314	£E.5,229,419
1928	£E.6,463,206	£E.5,947,026
1929	£E.6,856,114	£E.6,809,122

DIRECTORATE.

In the course of the year H.E. Adly Pacha Yeghen, yielding to an imperious need, assumed the position of Prime Minister and resigned from the board. Having successfully accomplished the duty he was called on to perform, Adly Pacha Yeghen was able to resume his collaboration in our affairs, and we submit his re-election to your confirmation. We also ask you to confirm the appointment of H.E. Aly Pacha Maher whom we were pleased to welcome as a colleague in the month of January. Mr. John Home retires by rotation at this meeting, and we submit his name for re-election.

Your interests continued to be served by a loyal and devoted staff to whom our thanks are due for their service during the past year.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached :

To Publisher "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

THE UNITED KINGDOM PROVIDENT INSTITUTION

INTIMATE CONNECTION BETWEEN MOVEMENT OF SECURITY AND COMMODITY PRICES.

EFFECT ON SECURITY PRICES OF RECENT MONETARY DISTURBANCES.

NATIONAL DEBT POLICY.

TRIENNIAL VALUATION.

COMPOUND BONUSES AGAIN INCREASED.

MR WALTER RUNCIMAN'S SPEECH.

The annual meeting of the members of the United Kingdom Temperance and General Provident Institution was held, on Wednesday, March 19th, at the Cannon Street Hotel, London, E.C.

The Right Hon. Walter Runciman, M.P. (chairman of the institution), presided.

The Chairman, in presenting the report and moving the adoption of the balance sheet, said: Ladies and Gentlemen,—We have discussed at the annual meetings of this Institution for some years past the growing movement for thrift in its various forms, and, although life assurance pure and simple is our main object, we also play a not inconsiderable part in adding to, and safeguarding, the savings of provident men and women. We are accordingly concerned in the means by which these savings can be made to grow and can be secured against diminution and depreciation. It is the duty of trustees like ourselves to regard our investments with—as nearly as may be—scientific care. The instinct of the business man must be fortified by the constant vigilance of economists and statisticians, although it is the business man who, having heard his experts, takes the final decision. As an illustration of the dissection to which our money matters are subjected, I may remind you of conclusions we drew from a close examination of national finance last year, when we came to the conclusion that the failure of this country to liquidate her debt was having, and would continue to have, a detrimental influence on the value of funds committed by our policyholders to us to invest and conserve.

SECURITY PRICES AND COMMODITY PRICES.

Since 1862 stock prices have fluctuated upwards generally as and when commodity prices have gone down. Apparently the factors which produce changes in commodity prices affect the prices of first-class irredeemable securities to almost a like degree, but in the opposite direction.

If these factors caused commodity prices to rise, in the long run they produced a fall in security prices to pretty much the same extent. Conversely, factors which cause a prolonged fall in commodity prices may be expected to produce a long period rise in security prices. What are the simple facts governing commodities? The chief influence can be comprehensively described as the supply of credit. The supply of commodities increased at about 3 per cent. per annum between 1850 and 1910, and there appears to have been a roughly equal increase in the supply of credit. The latter depended mainly on the supply of gold and on economies in the use of credit. As the supply of gold went up steadily at the rate of about 2¾ per cent. per annum, and economies in the use of credit are to be added to this percentage, together they probably brought the total increase in credit to about 3 per cent.

We know in fact that a fall in commodity prices has in the past been accompanied by a rise in the price of securities. If commodity prices fall the commodity markets will use a less share of the total supply of credit, and the security markets will use a larger share. Such, subject to what I have said on the increase in gold, etc., was the experience of the second half of the 19th century, and we can fairly infer that in the long run our excessive supply of credit will cause commodity prices to rise, and this rise will go so far that the stock markets will be denuded of funds, and the price of the securities which are the foundation and frame of life assurance funds will fall just as far as commodity prices have risen. The see-saw works just as consistently when prices have swung the other way. Let me add that these consequences follow only in the long run, and they appear to be dependent moreover on the free working of the gold standard.

RECENT MONETARY DISTURBANCES.

If we inquire into the happenings of the past few years we find that Britain has undergone since the re-establishment of the gold standard the following experiences, namely, (i) a severe fall in the amount of what are called Other Deposits of the Bank of England from about £110,000,000 to about £90,000,000, (ii) an increase in our already huge floating debt, and (iii) a considerable fall in commodity prices in the region of from 20 to 25 per cent. At the same time the country's total annual savings (compared to pre-war standards) have been much diminished, owing to heavy taxation and other causes. Britain's difficulties during the most recent years have been due largely to (i) the profligate management of national finance, to (ii) a year of disastrous labour disputes, which cost the industry and commerce of this country not less than £275,000,000, and to (iii) the return to the gold standard, which, although absolutely right in itself, was too precipitate. Owing to the fact that the £ sterling was worth less than $4.86⅔ in April, 1925, when we reverted to the gold standard, the Bank of England had to aim at depressing British prices compared with those of the rest of the world, and at the same time make the investing of money in England attractive to foreigners.

There seemed to be two alternative methods by which this policy could be carried out: one was by raising the Bank rate considerably, and the other was by maintaining a moderate Bank rate and reducing the volume of credit. The second method is that which has been pursued, and for its purpose it has succeeded. Its purpose was a steady reduction in the total volume of credit, and that reduction has, in fact, been continuous.

EFFECT ON SECURITY PRICES.

Now we are back to the principle which I enunciated at the beginning, namely, that the rise in security prices which follows a fall in commodity prices is due to an increase in the volume of credit available for security dealings, and this increase of credit is obtained at the expense of the credit available for commodity dealings. As, however, owing to Bank of England policy, the volume of credit as a whole sustained a continuous reduction at its source, it has been not at all certain that the see-saw law would hold good—it was not certain that security prices would rise even although commodity prices fell. It is never safe to rely too confidently on the complete and untrammelled working of even the most pellucid theory.

NATIONAL DEBT POLICY.

Could the inevitable deflation following the return to the gold standard have been made shorter and less painful? The process might have been shorter and sweeter if it had included a vigorous effort to reduce really and actually the country's national debt, including especially the floating debt. I have often pressed this point when addressing you. In 1925 the floating debt was £742,195,000. It was £737,345,000 in 1929, a miserable reduction of under £5,000,000 in four years. What a contrast to the French treatment of her floating debt! There may be other aspects of French financial policy open to criticism, but she has made no mistake in attacking her floating debt with spirit and vigour, with the result that no short-term Government securities are now issued in France with a less term than two years, and, at the beginning of January, the rate for the two-year bonds was reduced to 3½ per cent. It is significant that French Rentes have advanced from 54 in January, 1927, to 90 in January, 1930.

It is probable that, if an energetic policy of real debt redemption and floating debt reduction had been followed by our Government as the necessary companion and concomitant of the return to the gold standard, we should have seen the rise in security prices for which we had reason to hope, and industry and commerce would also have been spared many of the troubles of recent years. Some of the healthy operations of economic law have been neutralised by errors in Government financial policy, and our Institution as the trustees of your funds has reason to regret that the Exchequer's return to financial good health should have been delayed by the follies of Government improvidence. We have nothing to do here with party politics: I can only record the events and movements of the world of money which concern great investment institutions so profoundly. Happily, there are already some signs of light in the prevailing gloom. The Exchequer is making a determined and successful effort to reduce the floating debt, and we appear to be near the advent of an era of cheap money. If the canons of sound national finance are now followed by the Government we may look forward to a period of rising security prices and somewhat better conditions under which to operate our staple industries.

NEW BUSINESS.

The net new assurances completed during the past year constitute a record in the history of the Institution. For us to pass the three million mark is almost customary, and the net new business in 1929 consisted of 5,239 policies, assuring £3,335,080, an increase in the sums assured of £225,000 over the corresponding figure for the previous year. In view of the continued depression under which the trade of the country is labouring, this must be regarded as a satisfactory result.

MONTHLY PAYMENTS.

I need hardly tell you that new business of this volume is not secured without effort. It represents steady work on the part of our branch secretaries, staffs, and agents. We are not averse to new ideas. For instance, during the last few years we have met the expressed and unexpressed wishes of many applicants for convenient monthly payments of premium. This method of payment is obviously required by that large section of the community which draws monthly salaries, and the scheme we introduced in April, 1928, has met with instant success. We do not restrict the scheme to persons who have a banking account, as we felt that such a restriction automatically excluded a large proportion of those with whom the monthly payment of premiums would be most popular. Since the scheme was introduced we have issued over 1,500 policies, assuring £675,000, under which premiums are paid monthly, and of these more than half have been effected by members who pay their premiums otherwise than by a banker's order.

HOUSE PURCHASE POLICY.

Perhaps the most urgent problem with which our members have been confronted during the period since the war is that connected with housing. The necessity for purchasing a house presents a serious difficulty in many cases, and in order to overcome this the directors, some years ago, formulated a scheme under which a substantial proportion of the purchase price was advanced, the mortgagor effecting an endowment assurance for a term of 20 years or less to provide for the repayment of the advance at the end of the period or on the borrower's death, should that occur before the maturity of the policy. This scheme offers favourable terms to the borrower, and at the same time affords an outlet for the investment of the Institution's funds on excellent security and at a satisfactory rate of interest. That the scheme met a legitimate demand is proved by the fact that since it was inaugurated in 1922 the amount advanced totals nearly £750,000, covered by assurances of a like amount.

SURTAX POLICIES.

Another fashion of comparatively recent growth is that of effecting single premium policies under which a high percentage of the single premium is advanced by the office. No objection can, of course, be raised to such policies when a genuine and substantial element of life assurance is involved. We have not, however, pressed these policies on our clients, yet during the last six years the Institution has issued assurances of this type to the extent of over £1,100,000. Two-thirds of this sum consisted of whole life assurances, and the remainder of endowment assurances with an average term of over 15 years—only two policies were issued of shorter terms, and these had 10 years to run.

STRIKING PROGRESS.

Any office can secure a large influx of new business by spending large sums on advertising and on over-generous commissions, but to secure a steadily increasing volume of new assurances without the payment of extravagant commissions or extensive advertising, an insurance institution must offer solid advantages and enjoy the confidence of the assuring public. In both these respects the Institution occupies a high place among the great British life offices, and, in support of this opinion, I submit the new business figures for the last three triennial periods.

Three-year Period.	Net New Business. No. of Policies.	Sums Assured.
1921-1923	12,749	£5,787,499
1924-1926	14,800	8,947,829
1927-1929	15,110	9,486,069

TRIENNIAL VALUATION.

Our triennial valuation was made as at December 31st last, and you have before you the actuary's report on the results. An actuarial report is necessarily of a somewhat technical character, and you will naturally be more interested in the results that emerge rather than in the report itself. There is, however, no reason why our members should not appreciate the main factors which conduce to our prosperity and contribute to the production of bonuses.

INTEREST YIELD.

The most important element is the margin by which the net rate of interest earned on the life assurance fund exceeds the valuation rate, that is, the rate which it is assumed will be earned in the future. The Institution's valuation is made on the exceptionally low basis of 2½ per cent., and as the net rate actually earned on the life assurance fund is £4 11s. 11d. the margin of profit is over £2 per cent., and the annual contribution to profits is, therefore, substantial.

MORTALITY.

The next factor in order of importance is mortality, and the profit from this source arises from the fact that the mortality experienced by our members is lighter than that provided for in assessing the rates of premium to be charged. The method usually adopted to indicate an office's mortality experience is to compare the actual claims with those expected according to the table used in the valuation, and while this is not altogether a reliable criterion it may be taken as a rough indication of the comparative lightness or otherwise of the mortality experienced.

TEMPERANCE AND GENERAL.

The Institution keeps separate records of the mortality experienced among the with-profit policyholders in the "abstaining" and "general" sections respectively. The object of this separation is to determine the share of bonus which may properly be allotted to each section, and it is interesting to observe how the two sections compare.

Death rates are, of course, subject to fluctuation from year to year, but if we deal with triennial periods these fluctuations are to some extent smoothed out, and I will, therefore, give you the percentages of actual to expected deaths in respect of the last three triennial periods. Although variations occur in the differences between the ratios of the actual number of deaths to the number expected among abstainers and non-abstainers respectively, the abstainers, year after year and triennium after triennium, invariably show a distinct superiority.

The percentages of actual to expected deaths among assurers in the temperance and general sections respectively are as follows:—

Triennial Period.	Temperance Section.	General Section
1921-1923 ...	53.5 ...	72.2
1924-1926 ...	51.1 ...	67.7
1927-1929 ...	54.5 ...	61.9
and the average of nine years is...	53.0 ...	67.3

EXPENSES.

A third important contribution to profits arises from the fact that the amount actually absorbed in expenses is less than that for which provision is made in the valuation. Other things being equal, the lower the ratio of expenses to premiums the greater is the margin of profit available for distribution, and as the Institution's expenses are low—especially low for a progressive office transacting a large new business—the profit from this source makes an important contribution to bonuses.

The usual method of measuring an office's expenses is to show the percentage of this item to total premiums received, but as these percentages are apt to be distorted by the variations in the sums received by way of single premiums I give the figures as adjusted after making a suitable allowance for this disturbing factor.

Percentages of expenses to premiums, adjusted to allow for single premiums, were in—

Three-year Period.	Percentage.
1921-1923	14.4
1924-1926	14.3
1927-1929	13.8

It will be seen that not only are the expense rates low, but that notwithstanding the constant increase in our new business—with its consequential outlay—the percentages show a steady decrease.

I have no hesitation in saying that the position disclosed under each of these three main heads is thoroughly healthy.

RESULTS OF THE VALUATION.

I now turn to the valuation itself.

ASSETS.

Dealing, first, with the valuation of the Institution's assets, you will notice that we have again adopted the stringent method of writing down to market selling prices all Stock Exchange securities which stood in our books at a higher figure, while stocks which were valued at less than the market selling price have not been written up. The depreciation thus disclosed amounted to about £200,000, and has been dealt with by recourse to the investment contingency reserve, set up for this purpose some years ago. I may add that this depreciation was largely due to factors of a temporary nature, some of which have already during the past two months turned in our favour. Assets other than Stock Exchange securities have, as usual, been valued on a strictly conservative basis.

LIABILITIES.

I need not trouble you with a detailed account of the basis used in valuing the institution's liabilities under its assurance and annuity contracts further than to state that the valuation is stringent, and that, in consequence, our reserves are maintained at a high level.

WORKING PROFIT.

You will see from the valuation balance sheet that the surplus disclosed is £1,599,215, of which £148,206 was brought forward from the previous valuation. Deducting this amount from the surplus of £1,599,215, and adding £61,177 paid as interim bonuses during the triennium, we have £1,512,186 as the working profit of the three years, apart from fluctuations in the value of the assets.

INCREASED BONUSES.

In view of this satisfactory result, the directors felt that a substantial increase in the rates of bonus was justified. The cost of these increased compound bonuses, which range from 41s. to 45s. per £100 per annum, is £1,374,331, and the corresponding reversionary bonus additions amount to £1,882,714. Regarded as a whole, these bonuses are the largest declared since the present system of profit distribution was adopted forty years ago.

The increase in the rates of bonus declared on policies in the current series of whole-life and endowment assurances is 4s. per £100 per annum, except in the case of whole-life assurances in the temperance section, where the increase is 5s. This special increase is justified by the superior longevity of our total-abstaining members assured under whole-life policies.

A SUBSTANTIAL CARRY-FORWARD.

After making provision for the new bonuses, the balance remaining of the surplus is £224,884, which is carried forward undivided. It may possibly be thought in some quarters that it is not necessary to carry forward so large an amount, but I would remind you that the cost of bonuses on the compound system is cumulative, and a substantial carry-forward is essential in order to maintain them.

TRIENNIAL BONUSES.

I would remind you that in any comparison of our bonuses with those of other offices a triennial compound bonus is worth appreciably more than a similar rate of bonus compounded quinquennially. Over a period of 20 years a bonus at the rate of 41s. compounded triennially will produce as good a result as a 42s. bonus compounded every five years.

INTERIM BONUSES.

In accordance with our usual practice, interim bonuses will be allotted to policies becoming claims by death or survivance during the current triennium at the same rate as those now declared. Such policies are, therefore, at no disadvantage in this respect as they secure all the benefits of an annual distribution of profits.

The Right Hon. Lord Clwyd seconded the adoption of the report and accounts, and the resolution was carried unanimously.

The members' auditor (Mr Francis William Le Blount Lean) was reappointed, and a vote of thanks was passed to the officers, staff, resident secretaries, district representatives, and local agents of the Institution.

A vote of thanks to the chairman brought the proceedings to a close.

THE EASTERN BANK, LIMITED.

CHAIRMAN'S REVIEW OF INDIA'S TRADE CONDITIONS.

The 20th annual general meeting of the shareholders of the Eastern Bank, Ltd., was held, on the 19th instant, at the office of the bank, 2 and 3, Crosby Square, London, E.C., Mr J. S. Haskell (chairman) presiding.

The Secretary (Mr R. Carter) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the profits for the year, including the amount brought forward, totalled £167,990, and after carrying £30,000 to the reserve fund, thereby increasing it to £480,000, they were able to recommend a final dividend of 5s. per share, which with the interim of 4s. paid in October last was equal to a distribution of 9 per cent. for the year, less tax, the rate maintained during each of the eight preceding periods. That would leave a balance of £47,990 to be carried forward, an increase of £3,520. A year ago the amount carried to reserve was £25,000 and £5,000 was allocated to buildings account. He felt that the result would be as gratifying to the shareholders as it was to the directors; it could not have been achieved without unremitting labour and watchfulness on the part of the managers and staff here and abroad, to whom he desired to express the thanks and gratitude of the board for their unstinted efforts. (Hear, hear.)

Referring to the balance sheet, the Chairman said there was no important variation as compared with the previous year calling for special notice, except that their securities at or under market prices current on December 31st last were lower by £870,000. That variation was due partly to repayment in full of short-dated bonds amounting to £287,000, and partly to sales effected with little or for their unstinted efforts. (Hear, hear.)

IMPORT AND EXPORT FIGURES.

The imports and exports of merchandise during 1929 amounted to £186,600,000 and £246,000,000, against £186,000,000 and £253,500,000 in 1928. The imports of gold and silver in 1929 amounted to £13,500,000 and £7,600,000, against £15,800,000 and £10,800,000 in 1928. There was thus a visible balance of trade in favour of India of £38,500,000 in 1929, against £40,900,000 in 1928. In the above figures of imports for 1929 British manufactures showed a decrease of £5,700,000, of which £4,300,000 was accounted for by Lancashire piece-goods; the decrease was largely attributable to increased competition by Japan and other foreign countries. China had now become a serious competitor with the Indian mills in the Indian market, whereas formerly she used to import from India to the extent of several millions a year. The past year, far from showing any improvement in business, had been very disappointing. The depression was general almost everywhere, and was extenuated by dear money at home, overproduction in raw material and manufactures, and a heavy drop in silver. Piece-goods were affected by the steady fall in raw cotton, and commodity prices everywhere fell to a very low level, the London averages being the lowest for years. That fall not only affected our export trade, but led to goods being dumped in this country from the Continent and elsewhere in large quantities regardless of price. In India proposals had been made in the Budget to increase the general import duty on cotton goods from 11 per cent. to 15 per cent., with 5 per cent. extra on non-British goods. That step was considered to be the only way of saving a local industry which was on the verge of bankruptcy from foreign competition.

CONDITIONS IN IRAQ.

In Iraq trade conditions had shown no improvement, the fall in silver and consequent depreciation of the kran having badly hit merchants trading with Persia. Imports showed some increase, but exports, on the other hand, had been disappointing. The political situation in India was causing a great deal of anxiety, and it was impossible to forecast what the future had in store for that country, but he could not imagine that the Government would allow the situation to get out of hand. Their policy was to conserve their resources and exercise great caution in the conduct of the affairs of the bank and thus be prepared for any emergency. He did not, however, wish it to be understood that he was pessimistic, but if nothing unforeseen happened he was confident that they should be able to maintain their position as hitherto.

Sir James Leigh-Wood, K.B.E., C.B., C.M.G. (deputy-chairman), seconded the motion, which was agreed to unanimously; the retiring directors and the auditors were reappointed, and the proceedings terminated with a hearty vote of thanks to the chairman, directors, and the staff, both at home and abroad.

BRITISH INSULATED CABLES, LIMITED.

ANOTHER SUCCESSFUL YEAR OF TRADING.
RAILWAY ELECTRIFICATION WORK IN INDIA.
FACTORIES WELL EMPLOYED—GOOD VOLUME OF ORDERS IN HAND.

The thirty-fourth ordinary general meeting of shareholders of British Insulated Cables, Ltd., was held, on the 21st instant, at Exchange Station Buildings, Liverpool.

Mr. D. Sinclair, the chairman of the company, was unable to preside over the meeting owing to indisposition. In his absence the chair was taken by Sir Alexander Roger (the vice-chairman) who explained that Mr Sinclair, in a message to the shareholders, greatly regretted being unable to meet them on this occasion, but the doctor thought it would be wiser for him not to venture out. He had therefore requested him (Sir Alexander) to read his speech to the meeting.

The Secretary (Mr. W. Kerfoot) having read the notice convening the meeting,

The Vice-Chairman, in moving the adoption of the report and accounts, said the chairman congratulated the shareholders on another successful year of trading. The company had made a profit of £685,980, as compared with £617,951 for the previous year, a very satisfactory result. After bringing forward the balance of £250,089, and paying directors' and trustees' fees, debenture interest, preference and interim ordinary dividends, a disposable balance remained of £745,806. Allowing £100,000 for depreciation of property and plant, and transferring £198,333 to reserve account, £447,473 remained available for dividends. A further dividend of 10 per cent. on ordinary shares was recommended, making, with the interim dividend already paid, a total distribution of 15 per cent. for the year. This left £280,806 to be carried forward.

CAPITAL AND RESERVES.

While the amount of debenture stock remained unchanged, the ordinary capital had been increased by the bonus issue of 333,333 shares a year ago, and now stood at £1,666,666. A new item appeared of 500,000 "A" 5½ per cent. cumulative preference shares, which constituted part of the bonus disbursed last year. The result was the total share capital was now £2,666,666, compared with £1,833,333 in the previous year. The bonus distributions had the effect of reducing the reserve account to £701,667, but, by the proposed transfer of £198,333 from profit and loss, the reserves would be brought up to the round figure of £900,000. Having regard to the large amount of capital this was no more than was prudent and necessary.

DIVIDEND EQUALISATION.

The item "Dividend Equalisation Account" appeared for the first time in the balance sheet, a sum of £300,000 having been set against it. Hitherto provision had been made to cover contingencies such as exceptional taxation and liabilities that could not be exactly estimated. It was now considered that £300,000 could not be required for such contingencies and it had been decided to utilise it for founding a dividend equalisation fund. Although for so many years the company had paid steady dividends, it was, after all, a trading and manufacturing company, liable to its ups and down, depending upon the course of trade. They had been fortunate in the past, and shareholders would agree it was wise to make provision for possible less happy times, even although they hoped they would never come.

WORKPEOPLE'S FUND.

Referring to the £50,000 set aside last year as a "Compassionate Fund for Workpeople," the interest on which was to provide allowances for the company's workpeople and dependants, the Chairman said this sum had been invested in British Government securities and had given relief to many deserving cases. It was not intended to form a special trust in this matter, but both principal—in the remote contingency of its being no longer required—and any balance of interest remaining unexpended at the end of each year should revert to the revenue funds of the company.

Plant and buildings were written down to £1,509,301, and the fact that, last year, £144,478 was spent on new plant and buildings indicated they were by no means standing still.

INVESTMENTS.

Investments stood at £1,263,753, as compared with £909,562 a year ago, the increase being primarily accounted for by the acquisition, in conjunction with another company, of practically the whole of the share capital of a cable-manufacturing company of considerable size. The results had justified expectations from the point of view both of business and of earnings on the investment. Other investments, without exception, were giving a satisfactory return as well as, in most cases, a considerable volume of orders for the company's manufactures.

The agreement for the sale of the Electric Supply Company of Victoria had been completed, and they would part with their holding in that company in 1932 on very satisfactory terms. The Midland Electric Corporation for Power Distribution, Ltd., continued to do well, especially considering the poor state of trade in the Black Country.

The Closer Working Agreement continued to be increasingly valuable in the interchange of research and factory methods. By its help the company had substantially improved the quality and lowered the cost of many of its manufactures, a matter of vital importance when they had to compete with the lower range of wages paid by Continental manufacturers.

He was pleased to report that his remarks of last year, referring to the cordial relations between the company and its workpeople, still applied.

RAILWAY ELECTRIFICATION.

A tour of the Near East had been made on the company's behalf by Sir Alexander Roger and Mr. Johnstone Sinclair, who reported that the company's name for good work stood high in the East. As a result of their visit the company was hoping for a still larger volume of business. They had practically completed during the year the track electrification of the main line of the Great India Peninsula Railway, to the entire satisfaction of the consulting and railway engineers. This work, with the Bombay suburban electrification carried out for the same company a few years ago, constituted the most important railway equipment work yet carried out in the British Empire.

"Bearing in mind the important similar work we have done in Australia and South Africa," the Chairman remarked, "we believe our experience to be unique and such as to enable us to undertake similar work on the largest scale for the British railways when their conversion to electric traction takes place. This, we think, cannot now be much longer delayed."

They had practically completed the Scottish overhead "Grid" system, and many of the lines were in use. They believed the work had given entire satisfaction to the Central Electricity Board, but owing to the difficulty of securing permission for wayleaves, the work was interfered with and extended beyond the time required for economic construction.

NEW WORK IN HAND.

New work in hand included a large extension of the supertension cable work for the London Power Company, an underground trunk telephone line for the Post Office from Manchester to Chester, and an overhead connecting link between the national "Grid" system and the new Clarence Dock power station for Liverpool. Large contracts were good to have, but they liked best the aggregate of everyday orders as being the most profitable, because of the fact that mass production methods could be applied to them.

CONSIDERABLE PLANT EXTENSIONS.

Their factories were generally well employed, with a volume of orders in hand in excess of last year. A large number of process improvements had been introduced. A considerable extension of plant had been made for the production of aluminium wire and extensions for the making of condensers and enamelled wire were in progress, orders having outrun their manufacturing facilities in both these commodities. Plant was being put down for the manufacture of "Rockbestos" wire, for which they had obtained world rights outside the two Americas. This was a conductor insulated with a special preparation of asbestos in such a way as to be especially suitable for use in situations where permanence in high temperatures was a desideratum, such as for heating and cooking apparatus and winding wires for generators and motors.

He was of opinion that the volume of business would be maintained, but there would be no great rush of new business following on the completion of the national "Grid" system, as had been

contemplated in some quarters. The cheapening of the cost of electric supply could only come about when a very considerable extension of the use of the current had taken place. This extension would only come gradually unless there were generally available a system of free or assisted wiring such as had been introduced by some of the supply companies with which the British Insulated was connected, the expenditure of a good deal of money being a deterrent to the householder.

Commenting upon the growing use of overhead wires instead of underground cables, the Chairman prophesied that because they were costly to maintain, unsightly, relatively dangerous and unreliable in operation, it was only a question of time before history, as exemplified by the Post Office adoption of underground cables, would repeat itself.

TRIBUTE TO WORKERS.

He concluded by expressing the directors' deep appreciation of the hard work and loyalty of the staff and workpeople. The success of the company depended on a continuance of the spirit of team work now so much in evidence, and he asked the shareholders to join in an expression of thanks to all in the company's service. (Applause.)

The report and accounts were adopted, the dividend as recommended declared, and other formal matters transacted.

MIDLAND ELECTRIC CORPORATION FOR POWER DISTRIBUTION, LIMITED.

DIVIDEND MAINTAINED.

A GOVERNMENT ANOMALY.

The thirty-second ordinary general meeting of the Midland Electric Corporation for Power Distribution, Ltd., was held, on the 21st instant, at the Exchange Hotel, Liverpool.

Mr. G. H. Nisbett, J.P., M.I.E.E. (a director), presided in the absence of the chairman, Mr. D. Sinclair, through indisposition.

Mr C. Heathcock (the secretary) having read the notice convening the meeting,

Mr. Nisbett moved the adoption of the report and accounts for the year ending December 31st last, and read the following speech on behalf of the chairman :—

The directors' report and printed accounts have been in your possession for some days and I assume it is your wish that they be taken as read.

The Chairman moved the adoption of the report and accounts for the year ending December 31st last. He said : The directors' report and printed accounts have been in your possession for some days and I assume it is your wish that they be taken as read.

The accounts are printed in considerable detail and, to a large extent, are self-explanatory. I propose, however, to refer specifically to several items, and will deal with these in the order in which they are printed.

CAPITAL EXPENDITURE.

The sum of £64,770 expended during the year is concerned with the normal development of the company's distribution system. It is largely due to extensions of mains in new districts and increasing the capacity to supply the demands from domestic consumers along existing routes.

You will observe an additional column has been added to show the writing-off of balances remaining on the books in respect of assets which were sold during the year.

REVENUE ACCOUNTS.

Turning to the revenue accounts, the cost of electricity, at £179,196, shows an increase of £10,393 over the figures for the previous year which is almost balanced by additional sales. This increase in the cost of current calls for a little more explanation than that suggested by the increased sales figure. Two years ago I stated that, in the early years of purchasing electricity, it was expected the cost would be slightly higher than the cost to this company to produce, and last year I reported we had neither lost nor gained much by the change. In the year under review, however, the cost per unit purchased is distinctly higher. This is due to the fact that each of the undertakers who are taking supply from the West Midlands Joint Authority anticipated an increase in load last winter and asked for additional supplies. The authority spent over £600,000 in new plant to meet this expected growth in demand, but, unfortunately, the industrial load fell rather than increased, and the sinking fund charges on the new plant had to be met by an increased charge for current. Your directors feel this to be a temporary disability, and see no reason to modify the statement made two years ago, that ultimately the authority will supply current cheaper than the company could generate for itself.

We have used every endeavour to increase the domestic load, and this is reflected in increased receipts.

Rates and taxes, at £38,121, have increased by £5,135 in comparison with the previous year. This is due to an additional charge of £8,000 for local rates and a reduction on taxes. The anomaly still remains of one Government Department pressing industry to take supplies of electricity from public undertakings, while another gives private generating stations rating relief that is denied to the public station. I will leave the profit to the end and now deal with the

BALANCE SHEET.

On the assets side it will be seen that £40,000 has been transferred to depreciation to strengthen this account, which now stands at £282,605.

A large sum is shown for cash and investments due to the sale of assets, and the fact that the industrial depression has not permitted reserves to be entirely used in extensions of the business. Your directors are now exploring the possibility of investing this money in electricity supply undertakings not necessarily contiguous to our own area.

On the liabilities side the strengthening of the reserve account will be noted, I hope, with pleasure. The sum of £44,675 transferred from credit balances largely represents the excess of the purchase price over the balances remaining on the books in respect of assets sold. We should have much preferred to retain the areas sold, but our rights would have expired in 1940, and, in the meantime, the supply was being developed in the areas on a system that was not entirely suited to the purchasing authority. We, therefore, agreed to stand aside so that it could develop the supply in such areas in conformity with its existing system, and a price was agreed that was fair and reasonable to both parties.

A further sum of £30,324 has been transferred from profits, and the reserve account now stands at a total of £100,000.

PROFIT AND DIVIDEND.

If you will now turn to the front page of the report you will see the directors' proposals in respect of the accounts clearly set out. The net profit of £151,365 is £3,000 less than the profit of the previous year, but when it is borne in mind that we paid substantial increases on the cost of electricity and rates, and did not increase our charges, the result can be considered as satisfactory.

Your directors recommend a final dividend of 5½ per cent., making, with the interim dividend of 2½ per cent., a total distribution of 8 per cent. for the year. It is proposed that the balance of £35,589 remaining be carried forward to next account.

EXTENSION OF TENURE.

I mentioned last year that nineteen local authorities had the right in 1940 to purchase the company's distribution system in their respective areas, and that the company was endeavouring to obtain an indication of their views on the matter. Negotiations have proceeded throughout the year, but, with so many councils involved, progress is necessarily slow.

LOYAL SERVICE OF STAFF.

Before moving the adoption of the report and accounts I wish to express the appreciation of the board for the loyal and efficient service the whole of the staff have rendered during the past year, and I feel that you will wish to joint the directors in a hearty vote of thanks to them all. I will ask the officers present to accept it and convey it to their absent colleagues. (Applause.)

The report and accounts were adopted, and other formal business transacted.

R.M.C. TEXTILES (1928), LIMITED.

INCREASE OF CAPITAL APPROVED.

The second ordinary general meeting of R.M.C. Textiles (1928), Limited, was held, on the 14th instant, at the Hotel Cecil, London. Mr J. M. Waterhouse, the chairman and managing director, said that the profit balance available was £37,674; an interim dividend of 4 per cent. had already been paid, and it was now proposed to distribute a final dividend of 6 per cent. for the year. In common with almost all commodities, wool had declined considerably, and the board had to follow a hand-to-mouth policy until prices became more stable. The lower values, however, were a distinct advantage in that they permitted of the company offering goods at more attractive prices. The company was engaged in a vitally necessary basic industry, and now that the fashion in ladies' wear had taken a definite turn in favour of wool goods, there was a general tendency for the greater use of wool, of which the main attributes were warmth and comfort, allowing the wearer to be

smartly and warmly clad without weight, thus making for the health of the people. The company's 1930 range was the best and most comprehensive yet issued, and their customers reported that it was outstandingly successful. Orders were being received, both as to number and size, in advance of any previous experience, and it seemed reasonably certain that the extra efforts made would lead to such an increase of turnover as would keep their extended plants running to full capacity for many months to come.

The company's subsidiary branches—the dyeing and finishing works, the silk and dress goods section, and their Paris establishment—were all operating satisfactorily.

Dealing with the proposed increase of capital, the chairman said that to meet with the ever-increasing demands made upon them the board had acquired the freehold of Victoria Mills, Keighley, and also the undertaking of one of the largest self-contained Scottish Border factories manufacturing a range of first-class Scottish cheviots and Saxony fabrics. With the object also of handling rapidly and effectively the ever-growing output of the company, it had been decided to erect in London a central, commodious and distinctive building. The larger capital, taking into account a resultant saving of over £7,000 a year in bank interest, should yield a minimum net profit of £60,000, which would leave £52,000 available for the ordinary capital, or 17⅜ per cent.

The report and accounts were unanimously adopted, and the increase in the capital of the company to £400,000 was unanimously approved.

RADIATION, LIMITED.

CONTINUED DEVELOPMENT AND PROSPERITY.

The ordinary general meeting of Radiation, Ltd., was held, on the 17th instant, at the Cannon Street Hotel, London, Mr H. James Yates presiding.

The Secretary (Mr T. N. Jennings) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said :—It is with much pleasure that I meet you once again in the gratifying position of being able to report to you the continued development and prosperity of your business, and that, as a consequence of increased turnover, our profits for 1929 show an increase on the previous year, which, I think you will agree, is a matter for congratulation, considering the many difficulties which most manufacturing concerns had to face during 1929.

On a comparison of the balance sheet and profit and loss account of Radiation, Ltd., with those of the previous year, you will notice the increased amount of net income of £294,779 appearing in the profit and loss account, which compares with £277,924 last year.

"RADIATION" A HOUSEHOLD WORD.

According to my usual custom, I propose, with your permission, to make some reference to our past year's work and progress. First of all, it is perhaps interesting to recall that, when this company was formed, much thought was given to finding a title that would be as distinctive as possible of the fundamental work and apparatus in which the respective companies were concerned, and as for many years past I had personally devoted much of my energy and time to research on the subject of radiation, it was decided that no better name could be adopted for the company than "Radiation, Ltd." We also succeeded in registering this word "Radiation" as our trade mark. During the past year our right to this mark was challenged, but I am pleased to be able to state that, notwithstanding this challenge, which was most severely contested, not only did we succeed in retaining our "Radiation" trade mark in the class in which it was originally registered, but registration of it was granted to us in the other classes for which we had applied. It was clearly necessary to protect the name "Radiation" in every respect by every legal means available, especially having regard to the valuable goodwill which has been created by the vast amount of work and expenditure incurred in establishing that name as being distinctive of our goods.

I can assure you that your board will continue—as they have done in the past—to take every step possible to defend and maintain the exceptional position they have created for your company, not only in this country, but throughout the world. I may mention that our most important trade marks, patents and registrations are protected throughout the world.

"Radiation" has become a household word, and is what I might call the hall-mark for all goods of the class we make.

"BEAM" RADIANTS FOR GAS FIRES.

At our annual meeting last year I referred at some length to the new "Beam" radiant for our gas fires, which is the result of our continued research work, and no doubt you have seen it extensively advertised. I hope that our shareholders are using these new "Beam" radiants in their Radiation gas fires.

Our investigations of the effect of radiant energy on the human skin indicated the important part played by the visible and short infra-red rays in stimulating the deeper portions of the epidermis. The results have led us to the view that the degree of comfort attained on exposure to an incandescent source of heat is much affected by the capillary blood flow, which appears to exert a predominating influence. We have continued our investigations of the physical and physiological problems involved in the study of the action of radiant energy on the body, and we now have reasons for believing that exposure to our gas fires with "Beam" radiants may stimulate the power of resistance to certain types of infection. A confirmation of these views will place these gas fires of ours in a position which the gas fire has never hitherto attained.

The "New World" cooker, with its automatic control, the "Regulo," which is the result of many years' experimental research work, has set up the standard by which all other gas cookers are judged. The sales during the past year, not only in this country, but in many parts of the world, have exceeded all previous figures.

THE "SUNHOT" BOILER.

Another piece of our apparatus that has proved most successful is our new type of self-contained hot-water boiler for domestic purposes, called the "Sunhot." In view of the enormous number of new houses that have been and still are being erected, a great demand has been created for reliable and efficient means of providing economically an adequate supply of hot water, and one of the advantages of our "Sunhot" boiler is that it does not involve the introduction of a larger gas meter or service pipes—an important feature from the point of view both of the householder and of the gas undertaking. Our pioneer work in this direction is already bringing its reward.

I continue to devote as much of my personal attention as possible to the research work being carried out in our central laboratories at Radiation House, and I hope to be able to tell you in due time of the further important developments which we have in hand, and which, I feel sure, will be the means of adding to the prosperity of your business.

BURDEN OF TAXATION ON INDUSTRY.

With regard to the future, all those who are responsible for the control of industrial concerns must view with great anxiety the difficulties which this country has to face. The increasing expenditure undertaken by the State in so many directions will be a burden that this country cannot sustain without disastrous consequences unless measures are taken for enabling it to compete successfully in the world's markets and so keep our people fully employed.

The State can only be run by money collected in the form of taxes from industry and commerce. If trade is bad, unemployment increases and the amount of taxes collectable is reduced. If, to overcome the latter effect, the rate of tax is increased, this does not get us out of the vicious circle. The real crux of our unemployment difficulty is that our costs are already too high to enable us to compete successfully with the costs of production of other manufacturing nations, and it is high time this fact was fully realised so that effectual means may be taken to grapple with the problem.

Methods can be found to increase the trade of the country by enabling our industries to compete successfully in all the markets of the world, and so reduce unemployment to normal conditions. By this means taxation can then be reduced and profits on industry increased, so that adequate wages may be earned by the people of this country to enable them to live in an independent, self-respecting fashion, and at the same time sufficient money can be provided out of industry for the requirements of the State.

These matters of unemployment and taxation on industry are very difficult, but I have great confidence in the future of your business if these difficulties can be overcome on some such lines as I have indicated.

The Chairman concluded by moving the adoption of the report and accounts, and the motion having been seconded and carried, the proceedings terminated with a vote of thanks to the chairman and the directors.

DICKINS AND JONES, LIMITED.

PROFITS INCREASED.

The thirtieth annual ordinary general meeting of Dickins and Jones, Ltd., was held, on the 20th instant, at the offices, 29 Argyll Street, London.

Sir Woodman Burbidge, Bt., C.B.E. (Chairman) presided, and, in moving the adoption of the report, said it was a pleasant task to be able to place before the shareholders the results of another year's trading, which, he was sure, would be regarded as eminently satisfactory. It would be idle to suggest that the year through

which they had passed had been anything but a difficult one for the trade generally, yet, notwithstanding the disadvantages with which the trade had had to contend, the results showed an increase in profits over the preceding year, the amount being £129,367, against £125,632. Adding to this the balance brought forward from last year of £39,131, the amount available to be dealt with was £168,498. An interim dividend at the rate of 10 per cent. per annum on account of profits was declared and paid on the ordinary shares for the half-year to July 31, 1929, and the directors recommended that a balance dividend be paid at the rate of 14 per cent. per annum, for the second half-year, making together 12 per cent. for the year, the same as for last year. A balance of £47,748 was carried forward.

The reserves remaining in hand, after the payment of the dividends, would stand at £235,840, apart from the preference shareholders' special reserve fund and the Hanover House employees investment and bonus fund. During the period of rebuilding appropriations of profits amounting in all to £60,000 were made to a leases amortisation fund, which sum had been invested in 4 per cent. War Loan, and would, with accumulations of interest and without further appropriations, produce a sum sufficient to replace the whole cost of the company's main block of buildings, both freehold and leasehold, at the expiration of the Crown lease.

It would be noticed that to conform with the provisions of the new Company Law there had been a slight deviation from the manner in which the accounts had hitherto been presented.

The position of the company was viewed by the directors with complete satisfaction. Leaders in fashion the house had always been since its foundation a century and a quarter ago, and their steadily increasing clientèle were fully aware that quality with economy was invariably the key-note of their merchandise and prices.

The report was unanimously adopted.

SPRATT'S PATENT, LIMITED.

CONTINUED PROSPERITY.

The forty-fourth annual ordinary general meeting of Spratt's Patent, Ltd., was held, on the 18th instant, at the Cannon Street Hotel, London, E.C., Mr S. T. Lethbridge (chairman and managing director) presiding.

The Secretary (Mr A. A. Stow) having read the notice convening the meeting and the auditors' report,

The Chairman said: It is gratifying to your directors that, in spite of the depression in trade generally which prevailed throughout the year under review, we are enabled to present a balance sheet which reflects the continuance of the prosperity which has been our good fortune over a period of years.

The quality of our foods is always maintained, regardless of the cost. The fallacy of low-priced dog foods cannot be too strongly emphasised by me. Innutritious or unbalanced foods, whether for human beings or animals, are dear at any price. We human beings are able to discriminate in the choice of our foods, but the dog cannot do so and has to rely absolutely upon his master, whose duty is to provide him with a wholesome diet. It is mistaken kindness to give sweet and very soft foods, which do not necessitate using the teeth for thorough mastication, and thus quickly conduce to pyorrhœa, dental troubles, bad breath and indigestion. A healthy dog's mouth should be bright, clean and sweet, and this can only be ensured to feeding once a day with whole dry biscuits which require reduction by the teeth, thereby hardening the gums and cleaning the teeth.

Another important factor is that the foods should be free from contamination. Until more or less recently dog foods were delivered to the shopkeeper in one cwt. bags and openly displayed either inside or outside his premises, thus exposing them to all kinds of objectionable and dangerous contamination, which I leave to your imagination. To-day our foods are as carefully protected from this as are foods for human consumption. They are supplied in sealed bags and cartons containing anything from one lb. upwards, and delivered to the trade in outer cases. A slightly higher charge is necessary, but I am convinced that the true lover of dogs is willing to pay this and have the guarantee that his dog is receiving a genuine Spratt's product in a clean and wholesome condition.

I always regard our shareholders as partners in this business, and as such they can render valuable service by recommending the company's foods to their dog-owner friends and others whom they may meet.

The report and accounts were unanimously adopted, and a final dividend of 1s. 6d. per share, less tax, making with the interim dividend, 12½ per cent. for the year.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 15, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts	£
Supply Services	7,639	From Revenue	28,811
Interest, &c., on Debt	22		
Sinking Fund	615		
Sundries	198		
Decrease in Debt	20,262		
Increase in Balances	75		
	28,811		28,811

The ordinary revenue for the week amounted to £28,810,800, as compared with £29,114,300 in the corresponding week last year. Income tax brought in £11,773,000, as compared with £11,175,000, and super tax £4,610,000, as compared with £5,070,000. Customs were higher at £2,151,000, against £1,849,000, but Excise at £1,280,000 was £495,000 lower. Ordinary receipts amounted to £3,800, against £64,000, but Special receipts were nil, against £1,140,000. The total ordinary revenue to date amounts to £680,062,000, and expenditure to £718,391,600. Thus, with two more weeks to run to the end of the financial year, the deficit is £38,329,600, as compared with a surplus of £2,233,400 at the corresponding date last year. During the week the National Debt was reduced by £20,262,000, as shown below :—

(000's omitted.)

	£		£
National Savings Certificates	+ 50	Public Dept. Advances	— 5,100
		Treasury Bills	— 14,112
		Interest on National Savings Certificates	— 700
		Sundries	— 400
	+ 50		— 20,312

The Floating Debt was reduced by £19,225,000 to £662,665,000.

FINANCIAL YEAR, 1929–30, APRIL 1 TO MARCH 15.

	£		£

Net arrivals, £1,311,115

Messrs Samuel Montagu and Co. write on March 19, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £151,873,749 on the 12th instant (as compared with £151,601,773 on the previous Wednesday), and represents a decrease of £2,032,566 since April 29, 1925—when an effective gold standard was resumed. There was less competition for the South African gold available yesterday in the open market. About £818,000 was on offer, and at the fixed price of 84s. 10½d. per fine ounce, £200,000 was taken for a destination not disclosed, £150,000 for Germany, £65,000 for the Home and Continental trade and £45,000 for India. A welcome feature was that the Bank of England secured £335,000 at the statutory buying price. It is more than two months since the Bank received any of the open market supplies. Movements of gold as announced by the Bank of England show a net influx of £1,581,607 during the week under review. Withdrawals amounted to £255,973, of which £250,000 was in bar gold for a destination not known. Receipts totalled £1,837,580, which included £425,000 in sovereigns "released," £335,000 bar gold and £10,000 in sovereigns from Irish Free State, and £1,025,000 in sovereigns from Australia. We understand that the gold already shipped from Australia to this country amounts to £9,000,000.

SILVER.

The week under review has been quiet. Although Continental sales have eased somewhat, America has been more willing to sell, but the moderate demand from China has been sufficient to maintain a steady tone. There has been a little forward selling on Indian account as well as purchases for shipment and to cover bear sales. The demand for prompt delivery, however, having been less insistent, the difference between the two quotations gradually narrowed, and by the 18th instant the premium on cash silver had diminished to ⅜d. To-day, owing to an absence of selling, there was a rise of 3/16d., carrying quotations to 19⅜d. and 19 5/16d. for cash and two months' delivery respectively.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 10th instant to mid-day on the 17th instant :—

IMPORTS.	£
Java	8,400
France	63,486
Germany	6,100
Egypt	6,150
Irish Free State	10,000
Canada	17,382

THE DECCA RECORD COMPANY, LTD.—The directors regret that the results of trading to date will not permit of the payment of the half-year's preference dividend due on the 31st instant. The company has passed through considerable initial difficulties but, at the same time, the directors are able to say that the drastic reorganisation recently carried out has resulted in substantial economies, and Decca Records have shown by increasing sales that they are now rapidly establishing themselves in popular favour. The company's financial year will be closed on March 31, 1930, and thereafter, at the earliest possible date, the directors' report and accounts will be circulated to shareholders.

ANGLO-NORWEGIAN HOLDINGS LIMITED.

ANNUAL GENERAL MEETING.

SUCCESSFUL WHALING OPERATIONS.

PRESIDENT'S ADDRESS.

The annual general meeting of Anglo-Norwegian Holdings, Ltd., was held on March 18th in Montreal. Following is the text of the address of the President, Major-General Guy Dawnay, C.B., C.M.G., D.S.O., M.V.O., read to the shareholders:—

The Board is glad to be able to submit a satisfactory Report with the Accounts of your Company covering the period from its incorporation on March 22nd 1929, to December 31st 1929. Though this is only a nine months' period, it takes into account dividends from the operating Companies (excluding the Falkland Whaling Company Limited) in respect of a complete year.

The Accounts call for little comment other than is included in the Directors' Report. On the Liability side of the Balance Sheet the sum of $1,025,000 (£210,617) standing against the 420,000 Shares of Common Stock of no par value represents the actual amount received by the Company for those Shares.

With regard to the contingent liability referred to in the note, special attention is drawn to the fact that the value of the catch made up to the end of the year 1929 was already at that date more than sufficient to cover the liability.

PREFERRED SHARES REDEEMED.

As stated in the Directors' Report, the Company purchased for redemption during the period under review 1,000 Preferred Shares. Since the date of the Accounts the Company has purchased for redemption a further 1,000 Preferred Shares, the Preferred Capital of the Company being thereby reduced in all by 10 per cent. within the first year of the Company's existence, thus appreciably increasing the value of the equity appertaining to the Common Stock.

In the course of the year, the Falkland Whaling Company, of which your Company owns the whole capital, was formed. During the current fishing season—the first season of this Company's existence—its operations have been eminently satisfactory; and it appears that, as was anticipated at the time of the formation of the Anglo-Norwegian Holdings Limited, it should produce results comparable to that of the original Anglo-Norse Company.

With regard to the latter Company, your Directors decided during the year to acquire further Shares of the Anglo-Norse Company, thereby increasing your interest in that Company, on reasonable terms, from 50 per cent. to approximately 67 per cent. This should prove itself a very advantageous investment for your Company.

OPERATING COMPANIES' STRONG POSITION.

The Board directs your attention to the very strong position disclosed by the Accounts of the operating Companies in which you are interested. The Tonsberg Company, in its Balance Sheet as at 30th June, 1929, showed Surplus and Reserve Funds and Undivided Profits amounting to $1,666,201 (£342,370), while its fleet and land stations have been written down to $1,161,869 (£238,740). Apart from the allocation for ordinary depreciation, this Company placed $179,240 (£36,830) to extraordinary depreciation during the year. It also showed Cash at Bank and in hand of $1,059,249 (£217,654), while its entire capital amounts only to $1,026,814 (£210,989).

The Anglo-Norse Company, in its Balance Sheet of the same date, showed Surplus and Reserve Funds and Undivided Profits amounting to $663,157 (£136,265), while its fleet had been written down to $848,173 (£174,282). The Company had at that time in Cash at Bank and in hand $423,123 (£86,943), and its Accounts showed a temporary advance of $474,630 (£97,527) to the Falkland Whaling Company, which was repaid in the month of July, 1929. In effect therefore it had the practical equivalent of $897,753 (£184,470) in cash at the date of its Balance Sheet, against a capital of $837,100 (£172,007.)

In the case of both Companies, the profit for the year considerably exceeded the amounts shown as their average annual profits at the time of the incorporation of your Company, taking the profit for the period under review on the same basis of calculation.

The dividend policy of the operating Companies has been markedly conservative; but the proportion of the net profits shown by these two Companies accruing to the benefit of your Common Stock amounts to approximately $550,000 (£113,000). Of this sum about three-fifths has been either reserved in the operating Companies or applied to reduction of the Capital of your Company.

CURRENT SEASON—ASSURED SUCCESS.

As regards the prospects for the season now current and drawing towards its close, there are two main factors to be taken into account.

On the one hand the whole of the production of Whale Oil of the three operating Companies for the next two years has been sold at a price which is lower than that obtained last year; on the other hand your new subsidiary Falkland Whaling Company Limited has been in full operation since the beginning of the fishing season and its profits should fully offset the effect of the lower level of Whale Oil prices. Having regard to the catches already made by the three expeditions and to the fact that the Whale Oil has been sold in advance your Board anticipates that the net results to your Company should be at least as satisfactory as those shown by the gratifying figures in the Accounts now before you.

ANGLO-NORWEGIAN HOLDINGS LIMITED.—Cont.

REPORT.

The Directors submit herewith the Balance Sheet as at 31st December, 1929, and the Report of the Auditors of the Company, together with the Income Account for the period from the date of the Company's incorporation.

The Company's net income, for the period of approximately 9 months, to 31st December, 1929, amounts to $438,003, which is exclusive of any income from the Company's Investment in Falkland Whaling Company Limited, incorporated in July, 1929, and now in active operation.

During the period the Company purchased for redemption, and has redeemed, 1,000 Preferred Shares at a cost of $88,716.

The dividend on the 19,000 Preferred Shares remaining outstanding, paid on 31st December, 1929, required $99,750.

The balance, being surplus, carried to the Balance Sheet, is $249,537.

The Directors have resolved that a dividend of 25 cents per Share (Canadian currency) be paid on the Common Stock on the 24th March, 1930, to Stockholders of record on the 21st March, 1930. The payment of this dividend will require $105,000.

The Directors retire at this Meeting in accordance with the By-laws of the Company, and, being eligible, offer themselves for re-election.

The Auditors, Messrs. Peat, Marwick, Mitchell and Co., retire at this Meeting and offer themselves for re-appointment.

By Order of the Board,
A. H. LANG,
Secretary.

Montreal, 24th February, 1930.

NOTE.—There is a Contingent Liability under Guarantee in respect of Advances which may be made to a Subsidiary Company by its Bankers of an amount not exceeding £100,000. At 31st December, 1929, no such advances had been made, but the Bank had given acceptances to the extent of £85,000 covered by the catch made prior to 31st December, 1929.

G. P. DAWNAY,
FRANK B. COMMON,
} Directors.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF ANGLO-NORWEGIAN HOLDINGS LIMITED.

We have examined the above Balance Sheet with the books and vouchers of the Company and have obtained all the information and explanations which we have required. In our opinion the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

PEAT, MARWICK, MITCHELL & CO.,

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of February are as follows:—Production of oil, 29,370 tons; deliveries, 28,080 tons.

THE ATTOCK OIL COMPANY, LTD.—Production for February, 20,449 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended February 26:—Venezuela, 37,061 barrels; Trinidad, 9,885 barrels; total 49,946 barrels. Production for the week ended March 5: Venezuela, 38,363 barrels; Trinidad, 10,648 barrels; total, 49,011 barrels. Production for February: Venezuela, 146,481 barrels; Trinidad, 43,653 barrels; total, 190,134 barrels. Deliveries for February: Venezuela, 145,426 barrels; Trinidad, 17,624 barrels; total, 163,050 barrels. Production for the week ended March 12:—Venezuela, 38,886 barrels; Trinidad, 11,946 barrels; total, 50,832 barrels.

DACIA ROMANO PETROLEUM.—Production for February, 5,133 tons.

HECTOR WHALING, LTD.—Catch report to March 9, 1930:—

	Season 1928-29.	Season 1929-30.
Number of expeditions reporting	Three	Four
Catch for week ending March 9, in barrels of oil	3,500	7,635
Catch for week ending March 16th, in barrels of oil	2,800	12,965
Total catch to date in barrels of oil	113,700	173,300

THE KERN RIVER OILFIELDS OF CALIFORNIA.—The total production during the month of February amounted to 109,858 barrels, or, approximately, 15,694 tons.

THE MEXICAN EAGLE OIL.—Production for the week ended February 22, 1930, was 276,000 barrels. The production for the week ended March 1, 1930, was 277,000 barrels. The production for the week ended March 8, 1930, was 273,000 barrels.

SERVICE PETROLEUM COMPANY.—Production from the company's wells at Guna-Ocnitzei and Ceptura for the week ending March 16th was 1,051 tons (7,357 barrels).

STEAUA ROMANA (BRITISH).—The production of the Steaua Romana Company, Bucharest, for the month of February, was 64,870 tons.

TAMPICO OIL.—The total production on the company's properties in Mexico during February was 17,820 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,337 barrels.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during February, 28,300 tons; oil purchased during February from other companies, 39,400 tons.

VENEZUELAN CONSOLIDATED OILFIELDS.—Total production for the month of January, 51,012 barrels (7,288 tons). Production for week ended 1st instant, 10,144 barrels (1,449 tons). Production for the week ended February 8, 9,421 barrels (1,346 tons). Production for the week ended February 15, 8,437 barrels (1,206 tons). Production for the week ended February 22nd, 7,927 barrels (1,133 tons). Production for the week ended 1st inst., 8,009 barrels (1,144 tons.) Production for the week ended March 8th, 7,856 barrels (1,122 tons). Total production for the month of February, 34,132 barrels (4,876 tons). Production for the week ended March 14th, 9,220 barrels (1,317 tons).

VENEZUELAN OIL CONCESSIONS.—Production for the week ended February 15th was:—Bolivar district, 125,071 metric tons; Maracaibo district, 6,195 metric tons. Total, 131,266 metric tons. Production for the week ended March 1st was:—Bolivar district, 121,137 metric tons; Maracaibo district, 6,330 metric tons; total, 127,426 metric tons. The production for the week ended March 8th was:—Bolivar District, 122,697 metric tons; Maracaibo District, 6,153 metric tons; total, 128,850 metric tons. Production for the week ended March 15th was:—Bolivar district, 122,026 metric tons; Maracaibo district, 5,891 metric tons; total, 127,917 metric tons.

VIKING WHALING.—Production of 285,000 barrels of whale oil to January 11, 1930; January 15, 1930, was 48,150 barrels. Production of 58,300 barrels of whale oil to January 31, 1930. The production was 68,400 barrels of whale oil to February 15th. The manager reports company's floating factory, s.s. "Vikingen," closed operations for the season on March 2nd. Total catch amounts to 82,000 barrels.

REPORTS AND NOTICES.

Mr Chas. L. Dalziel, of Higginson and Company, merchant bankers, London, has been appointed to a seat on the London board of the Bank of New South Wales.

The Eastern and Overseas Products, Ltd., inform us that Mr Einar Winther, formerly chairman of the General Commercial Company of London, Ltd., has been appointed managing director of this company, and that Mr A. Peech has resigned his seat on the board. Mr G. Ventura has resigned his position as managing director of the company.

MISCELLANEOUS.

BONA FIDE STOCK EXCHANGE PRICES.—The following notice has been posted by order of the Committee for General Purposes over the signature of its secretary, Mr A. L. F. Green:—

"Recent events have demonstrated so clearly the importance of ensuring the genuineness of all transactions which take place on the Stock Exchange that the Committee for General Purposes desire to direct the special attention of members to the fact that any arrangement which permits of a non-member dictating prices at which members shall deal is contrary to the principles on which the business of the House is based, and is calculated to react injuriously upon its credit and reputation.

"It is therefore essential that members should be constantly on their guard against any attempt to make irregular use of the Stock Exchange and its facilities."

BRITISH ENKA ARTIFICIAL SILK COMPANY.—The profit and loss account shows a working loss of £69,655 for 1929, to which is added debenture interest and sundry items, less interest received, totalling £12,953, and £74,667 for depreciation of buildings, machinery, plant, etc., making the total loss £157,275 for the year. Trading has been adversely affected by the unsatisfactory conditions which have prevailed in the rayon market throughout the year under review, and by certain technical difficulties in the No. 2 factory. The sale of the production at steadily falling prices, coupled with unduly hgh costs of production due to the difficulties in question, account for the loss shown.

THE ENGLISH ELECTRIC COMPANY, LIMITED.—At the adjourned meeting of the holders of the 5½ per cent. sinking fund of the first mortgage debentures of the English Electric Company, Ltd., held March 18, the resolution approving and sanctioning the scheme for reorganisation of capital was carried unanimously. Mr Harold G. Brown, the chairman of the meeting (representing the debenture trustees), declared the resolution carried by the equisite majority as an extraordinary resolution.

LIPTON, LIMITED.—Net profit for year ended January 4th, 1930, after charging debenture interest, is £118,377. The ordinary shareholders are to receive 10 per cent. The sum of £25,000 is put to special reserve for first preference dividend equalisation, and £20,000 is put to general reserve. The carry forward is £8,127.

ROSEY CROSS ASBESTOS MINES OF RHODESIA, LIMITED.—An application for leave to deal in 1,400,000 shares of 1s. each, fully-paid, Nos. 1 to 1,400,000, of Rosey Cross Asbestos Mines of Rhodesia, Ltd., was made to the Committee of the Stock Exchange on December 16, 1929, and was rejected.

SALT UNION, LIMITED.—Net profit for 1929 was £220,526 against £229,882 for 1928. The ordinary dividend is again 12½ per cent. The carry forward is increased from £23,984 to £27,126. Imports for foreign salt were 69,918 tons, against 69,810 tons for 1928.

SAVOY HOTEL, LIMITED.—Trading profit for 1929 was £230,774 against £236,002 for 1928. Allocations of £50,000 to general reserve and £5,000 to staff superannuation and benevolent fund have been provided for. The ordinary dividend is 10 per cent., against 12½ per cent. for 1928. Carry forward is increased from £35,627 to £45,701.

SWAN AND EDGAR.—Mr M. de Selincourt, presiding at the meeting of Swan and Edgar, held on March 19th, referred to the proposal to split the company's shares into preference and ordinary shares. A letter had been sent to the shareholders, of whom there are nearly 6,000, putting the plan before them, but up to the present they had had replies from only 2,291; of these, 1,756 were in favour of the proposal and 535 against. The board hoped to receive a much larger response to their circular before Monday next, or they would not be encouraged to proceed. The chairman added that he himself—one of the largest shareholders—proposed to exchange the bulk of his holding into preference shares, but that the Drapery Trust, whose business it was to hold ordinary shares in drapery concerns, did not intend to convert.

UNITED DRAPERY STORES, LIMITED.—The report and account for the year ended February 28, 1930, show a net profit, after charging all expenses and making full provision for income tax, of **£102,413, as compared with £86,521** last year. To this is added premium on shares issued during the year, £12,500, and balance brought in from the previous year, £3,269, making a total available balance of £118,183, compared with a corresponding figure of £88,698 last year. During the year the capital was increased from £750,000 to £1,000,000, and an interim dividend on the old and new capital, at the rate of 5 per cent. actual, was paid on September 24, 1929, absorbing, less tax, £40,000. It is now proposed to write off preliminary expenses £20,000, and to pay a final dividend at the rate of 6 per cent. actual, making 11 per cent. for the year, absorbing £48,000, leaving to be carried forward £10,183, as compared with £3,269 last year. The dividend of 11 per cent. compares with 10 per cent. paid for the two previous years.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Snowfalls in some parts of the country interrupted farm work during the past week, but seeding operations are well forward, and the bulk of the spring acreage is already drilled. The recent spell of fine weather considerably benefited winter crops, which now present a healthy appearance. Small supplies of native wheat are reaching the principal markets and encountered a fair inquiry at the low rates current. On the import market, trading was on a slightly larger scale, and values responded to higher quotations from Chicago and Winnipeg. Canadian descriptions were offered freely under competition from Argentine sellers who were always willing to shade prices in order to secure business. On the other hand, abstention by the United States authorities from the export of wheat at market parity here favours the Canadian movement. The American Farm Board Corporation have apparently decided to hold surplus stocks under Governmental financial support, with a view to the progress of new crops, also in the hope that European requirements will show marked expansion in the near future. Meanwhile, importers are disinclined to book ahead, and confine their purchases to immediate needs. United Kingdom millers must necessarily come into the market from time to time in order to replenish stocks, while a better demand arises from Mediterranean countries, for Canadian grades up to May shipment. There is no evidence, however, that Continental takings will assume important proportions, as France still offers supplies for export, and the German import tax may be increased to render overseas purchases prohibitive. Of feeders, a better consumptive demand was dealt with for Plate maize, and values have lately taken an upward turn on small shipments and reserved offers of near positions. So far, Danubian offers for spring shipment fail to attract much attention. Barley is still obtainable at cheap rates, but oats have recovered slightly from the extremely low level of prices recently ruling.

WHEAT.—Firmer. No. 1 Northern Manitoba (Vancouver shipment), ex ship, 43s. 6d.; No. 2 ditto, 42s. 6d.; No. 3, 41s. 6d.; No. 4 Manitoba, 40s. 3d.; No. 5 ditto (Atlantic shipment), 38s. 6d.; No. 6 ditto, 30s. 6d.; Rosafe, 63½ lbs., 38s.; Barusso, 62½ lbs., ex ship, to arrive, 37s.; Australian, 40s. 6d. per 496 lbs. English, 8s.-8s. 2d. per 112 lbs.

FLOUR.—Steady. London straight run, 35s. per sack for country deliveries, and 34s. London area. Of imported, Manitoba patents,

Time tests all things.

THE CHATWOOD SAFE

Offers the highest degree of security it is possible to buy.

It is built by craftsmen who have behind them the inspiring tradition of a firm with almost three-quarters of a century's experience.

It is offered to those who desire to have contented protection for their treasure.

It has stood the greatest of all tests—the test of time—and is accepted by bankers throughout the world.

The Chatwood Safe is the cheapest Safe that can be bought having regard to the degree of security offered.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	Mar. 20, 1929.	Jan. 2, 1930.	Mar. 5, 1930.	Mar. 12, 1930.	Mar. 19, 1930.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	122	129⅜	148⅜	111	104⅜	108⅜
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	123½	130⅞	106½	105½	104⅜

The visible supply of wheat in Canada at 75,152,000 bushels shows an increase on the week of 1,013,000 bushels. Supplies year ago stood at 86,783,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports more export inquiry for South Yorkshire coal, but a further decline of current business, accompanied by a drop in prices. Steams are now quoted at about 16s. 3d. f.o.b. The home price is 15s. 6d. and 15s. 9d. at pits. Extreme quietude characterises the home trade in industrial fuels of all kinds and house coal. The market for blast coke is severely depressed with low prices. Deliveries under contract are, however, maintained.

Our Cardiff correspondent writes:—Advices from the collieries report increasing irregularity of work and in some of the steam-coal areas the closing down indefinitely of a number of pits is anticipated. There has been no improvement in the state of business on the Cardiff Exchange, and shipments continue substantially below those in the corresponding period last year. In the week ended March 15th the total exports were 564,400 tons, compared with 577,200 tons in the previous week, and with 605,707 tons in the corresponding week in 1929. At the annual meeting of the Monmouthshire and South Wales Coalowners' Association on Tuesday it was reported that the assured production for the present year was 47·8 million tons, compared with 44·8 millions in 1929, representing an increase of over 3 millions, or 6·75 per cent. It is understood, however, that, notwithstanding the depressed state of the market, the authorised production under the marketing scheme will continue for the June quarter on the basis of the allocations for the first three months. Prices are generally easier, and for those grades of small coals which have been for so long a period a firm market at prices considerably above the minimum schedule, current quotations are about 1s. per ton less than those ruling at the beginning of the year. During the past week or two there have been published the trading results of three important colliery undertakings. The Amalgamated Anthracite Collieries, Ltd., show a net profit of £288,818 in 1929, compared with a loss of £309,460 in 1928; the Powell Duffryn Steam Coal Company Ltd., a net profit of £44,089, compared with a loss in the previous year of £231,805; and the Penrikyber Colliery Company a profit of £14,088, as against a loss of £8,324. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Western Valleys, 18s. to 18s. 6d.; Black Veins, 18s. 6d. to 18s. 9d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. 9d. to 13s.; coking smalls, 13s. 9d. to 14s.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 23s. 6d. to 28s.; machine-made cobbles, 41s. to 45s.; French nuts, 44s. to 46s.; stove nuts, 41s. to 45s.; rubbly culm, 11s. to 12s.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s. 6d.; pitwood, ex ship, 26s. 6d. to 26s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—A little more business has been stirring in the iron and steel markets than of late. In the home market conditions have slightly improved, and there has been a certain amount of replenishment of stocks. The shipyards also continue to provide work for those steel makers who specialise in shipbuilding material. It cannot be said, however, that the present situation or the outlook is satisfactory, since there is a steady reduction in the volume of work in hand owing to new business failing to come forward in sufficient quantity to take the place of the contracts worked off. The situation in the pig-iron department has not been improved by the collapse of the arrangement between the Continental producers regarding selling prices, as a result of which there is a distinct threat of a revival of foreign competition in the British home market. Quiet conditions continue to rule in the semi-finished steel department, and in some districts the output of this class of material is shrinking. Rather more overseas business has been transacted in finished steel recently, and the inquiry from some of the overseas markets has a more genuine appearance than for some time past. The competition from the Continent, however, is keen, and the business transacted on export account is below the normal for the time of year.

Our Middlesbrough correspondent writes:—Business in Cleveland iron during the past week has been at a minimum, but on Tuesday the Associated Makers announced a reduction in prices of 5s. per ton all round, and it is hoped that this will have the effect of stimulating business. A reduction has been looked for for some time past, and it seems unfortunate that it was not made earlier, as otherwise orders might have been secured to this district that have gone in other directions. Prices are now: No. 1, 70s.; No. 3, 67s. 6d.; No. 4 foundry, 66s. 6d., and No. 4 forge, 66s., f.o.b. or f.o.t. Shipments of pig iron have fallen off recently, the total to 18th inst. being 12,881 tons against 9,681 tons to same date in February. In hematite a fair number of small orders are being booked for home account, but there are no contracts of volume to be obtained at present. There are inquiries on the market for export, but business is slow to mature, although one or two moderate-sized lots have been sold. With stocks increasing, makers are anxious to make sales, and are now willing to accept 76s. 6d. for mixed numbers and less than this would succeed for substantial lines. Merchants have fair holdings of hematite, and are prepared to shade makers' prices where they can compete. In the steel trade business is quiet. Specifications against contracts on the books of the manufacturing works are not coming to hand as freely as would be welcomed, and operations in some departments are adversely affected. Prices for all commodities are unchanged from last week. The ore market is idle, and best Bilbao rubio is offering for early delivery at 21s. 6d. c.i.f., the current rate of freight Bilbao-Middlesbrough being about 5s. 9d. Coke continues in excess of demand, and ordinary furnace qualities are weak at 20s. delivered consumers' works. The number of furnaces blowing in the district is reduced to 41.

Our Sheffield correspondent writes: Local industry continues depressed, although for some classes of steel inquiries are more numerous, and it is felt that consumers have let their stocks down to such an extent that they cannot keep off the market much longer. The long absence of buying of foundry pig iron has forced a reduction of 5s. on the Cleveland makers, and this should stimulate business. Steel prices are steady. Overseas demand generally is poor, and the Australian market is particularly unsatisfactory, so far as Sheffield is concerned. The scrap trade is stagnant, but it is believed that the worst of the situation has been passed. Prices are unusually low. Makers of special steels complain of severe Continental competition at cut prices in their home market. Unemployment remains on a large scale. The cutlery, plate and tool branches are quiet.

Our Glasgow correspondent writes: Business still remains quiet in Glasgow and neighbourhood. During the present week some substantial orders for steel structures, requiring British material, have been placed with local structural engineers, and in this branch of the industry most of the works have sufficient orders on hand to keep them going for some months to come. Makers of iron bars and also makers of re-rolled steel bars are finding business scarce. At the steel sheet plants, while work on hand is not sufficient to keep all mills running at full capacity, there is a considerable improvement in the bookings for export and the home business continues to be very satisfactory. The seasonal demand for hay sheds, the manufacture of which is quite an important feature in the West of Scotland, is also satisfactory.

SUN LIFE ASSURANCE COMPANY OF CANADA

A TOWER OF STRENGTH

1929

New Assurances Paid for - £134,476,000
An Increase of £43,809,000

Assurances in Force (net) - £493,404,000
An Increase of £103,627,000

Total Income (net) - - £35,518,000
An Increase of £5,776,000

Surplus earned during the Year - - - - £8,807,000

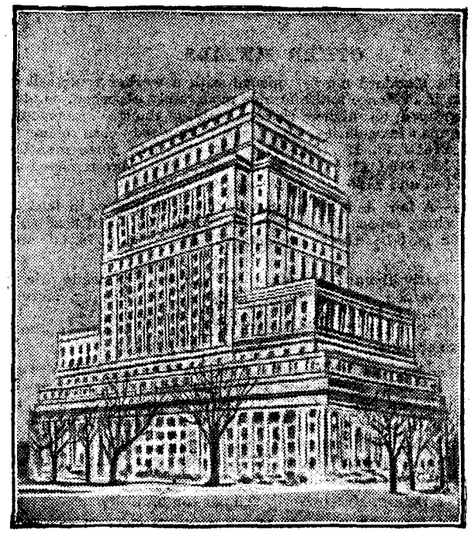
Payments to Policyholders and Beneficiaries - - £14,213,000

Surplus and Contingency Reserve- - - - £14,960,000
An Increase of £1,205,000

Total Liabilities - - - £101,792,000
(Including paid up Capital)

Assets, at December 31st, 1929 - - - - £116,752,000
An Increase of £16,281,000

The high rate of dividends allotted to participating policyholders is continued and the special dividend on maturing policies extended and increased.



NEW HEAD OFFICE, MONTREAL.

EXTRACTS FROM DIRECTORS' REPORT

New policies paid for numbered 161,391 for a net amount of £134,476,262, an advance of £43,809,606, or more than forty-eight per cent. over the previous year. This marked increase and the fact that the average policy, for the first time, exceeded £800, afford impressive evidence of the ever-growing popularity of the Company.

After deducting amounts reassured, the total assurances in force amount to £493,404,870, an increase of £103,627,623. This advance is notable not merely for its magnitude, but because when allowance is made for terminations by death and maturity, it represents a remarkably high rate of continuance and evidences great satisfaction on the part of our policyholders.

The amount paid to policyholders since organisation, together with the amount at present held for their security or benefit, exceeds the total amount received from them in premiums by £28,621,330.

The rate of interest earned on the mean invested assets has risen to 7.02 per cent. This figure includes a certain amount from bonuses and stock privileges accruing on many of the Company's holdings; but if these were entirely eliminated the rate would still be 6.60 per cent.

A net profit of £2,687,113 was realised from the redemption or sale of securities.

The surplus earned during the year, based on the values entered in the accounts, amounted to £8,807,585, but from this sum substantial appropriations have as usual been made to further strengthen the position of the Company.

An additional £2,054,794 has been deducted from the market values of our securities as a provision against possible market fluctuations, raising the amount thus set aside for this purpose in the accounts to £6,164,384.

A further £205,479 has been written off the Company's buildings.

£191,301 has been appropriated to raise the annuity reserves to the Rutherford table of valuation, with interest at 3½ per cent. This exacting standard requires reserves £545,753 in excess of those of the Dominion Government standard.

£246,575 has been set aside as additional provision for claims arising from total disability, death claims as yet unreported, and possible claims under cancelled policies on which a surrender value or reinstatement might be applied for.

£4,645,123 has been paid or allotted as profits for the year to policyholders.

The special amount entered as a liability to provide for unforeseen contingencies has been maintained at £2,568,493.

After making all these deductions and allocations, £1,205,938 has been added to the undivided surplus, bringing the total over liabilities, contingency accounts, and capital stock to £12,392,006.

In accordance with our usual conservative practice the securities owned by the Company have again been valued at figures much below the market quotations current at the close of the year. This under-valuation represents an important element of strength to the Company additional to the specific provisions in the statements.

Your Directors are pleased to announce that the high scale of profits at present allotted to participating policyholders will be continued during the ensuing year, while the Special Dividend on maturing policies, introduced last year, has been extended to include policies maturing after having been in force five years or longer, and the scale of benefit has been increased.

The business of the Company has always been conducted under the exacting provisions of the Canadian Insurance law and the rigid supervision of the Insurance Department of the Government of Canada. Ever since we entered the United States in 1895, the Company has been under similar supervision there and is now subject to the regulations of thirty-eight States of the Union which require periodical examination of the affairs of all companies licensed in their territory. In the discharge of their regular duties a committee of twenty-two examiners, representing the States of Michigan, Massachusetts, Minnesota, Ohio, Tennessee, Washington, Virginia, West Virginia, Florida and the District of Columbia recently completed an exhaustive examination into every department of the Company's affairs The report of this committee makes gratifying reference to the liberal treatment accorded to our policyholders, and provides authoritative testimony to the Company's strength. Even adopting the low valuations placed by us on our securities, the committee still reported a surplus at the close of last year £274,093 in excess of the figure claimed by the Company.

SUN LIFE ASSURANCE COMPANY OF CANADA

(Incorporated in Canada in 1865 as a Limited Company.)

Administrative Offices for Great Britain & Ireland - 2, 3, 4, Cockspur Street, London, S.W.1

Our Cardiff correspondent writes: Fairly stable conditions continue to prevail in the South Wales tinplate industry. On the Swansea Metal Exchange on Tuesday it was reported that inquiries were good, and that Japan has recently placed an order for 60,000 boxes of oil plates for delivery over June and July. Prices are nominally unchanged, at 18s. 3d. to 18s. 9d. per basis box, and shipments last week showed a substantial increase, compared with the previous week. Galvanised sheets have been steady, at from £11 17s. 6d. to £12 5s. per ton. There has been no change in the prices of tinplate bars, and imports of foreign material show a slight decrease.

OTHER METALS.

TIN.—The standard market opened with a weaker tone, sellers being more in evidence and offerings moderately absorbed. Later values improved on higher Eastern cables, though movements showed some irregularity at times. Standard cash changed hands at £161-£160 12s. 6d., £162 10s.-£164 5s.; three months, £163-£162 15s.-£165, £166 5s. In the East, sales were reported at £165-£164 5s., and £166 10s. ton c.i.f. terms.

COPPER.—A fair demand prevailed, but tone weaker in face of liberal offerings, especially for near positions. Standard cash sold £69 to £68 7s. 6d.; three months, £67 5s. to £66 17s. 6d. and £67 2s. 6d.

LEAD.—Fairly liberal dealings resulted at generally steady prices, as sellers refrained from pressing. Good soft foreign pig, March, sold £18 10s.-£18 11s. 3d. and £18 10s.; April, £18 13s. 9d. to £18 12s. 6d., £18 13s. 9d.; May, £18 13s. 9d. to £18 15s.; June, £18 15s.; September, £18 17s. 6d. to £18 18s. 9d.

SPELTER.—Market firmer, and sellers more reserved in face of improved inquiries. March sold at £17 18s. 9d. to £18 5s.; April, £18 to £18 7s. 6d. and £18 6s. 3d.; May, £18 5s. to £18 10s. to £18 8s. 9d.; June, £18 6s. 3d. to £18 13s. 9d.; July, £18 15s. ton.

ANTIMONY rather firmer. English regulus £40 to £48 10s. Chinese ditto, spot, £29 10s. to £30; March-April, £26. Chinese, crude, March-April, £17 5s. per ton c.i.f.

ANTIMONY OXIDE, March-April, £26 per ton c.i.f.

ANTIMONY ORE—50 per cent., March-April, 3s. 6d.; 60 per cent. ditto, 4s. 3d. per unit c.i.f.

WOLFRAM maintained. Chinese, March-April, 29s. 6d. per unit c.i.f.

ALUMINIUM steady. Home trade, £95; export, £100 ton.

QUICKSILVER quiet. Spot, £22 17s. 6d. per bottle.

TIN PLATES in moderate demand, and market steady. I.C. coke prompt and forward, 18s. 3d. to 18s. 6d. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL: March 19th.

On the week cotton shows an advance of about 43 points. The trade demand has not been at all extensive, but the covering of a "short" interest is probably the chief reason for the advance. At the same time, trade would seem to be somewhat stimulated by the advance. Spot sales for the week 13th to 19th (inclusive) are 29,000 bales, of which 15,185 are American, 2,400 Brazilian, 4,500 Peruvian, 4,330 Egyptian, 720 African, 1,350 East Indian, and 515 sundries. Imports for the same period are 37,489 bales, of which 23,295 are American, 104 Argentine, 67 Peruvian, 7,735 Egyptian, 5,537 East Indian, and 751 sundries. Quotations to-day are: American Middling, 8·29; Egyptian Sakel, 13·65; Uppers, 10·17; Brazil Fair, 7·99; Peru G.F. Mod-Rough, 9·25; Smooth, 9·09; West African Middling, 8·44; and East African G.F., 9·44.

MANCHESTER: March 19th.

The tone of the market has been rather steadier in sympathy with the firmer rates for raw cotton. There has not been any distinct improvement in the amount of business done, but spinners and manufacturers have experienced a larger inquiry and the turnover as a whole has been rather better than recently. Producers, however, have had to accept very unsatisfactory prices. An increased inquiry has come through in piece-goods for India, but negotiations have been hampered by uncertainty relating to the effect of the import duties. Rather more transactions have been arranged, however, for Calcutta, Bombay and Karachi in dhooties and light whites. Some advices from China have been rather more encouraging and slightly better clearances are taking place in Shanghai, but new business is very limited. In small lots there has been a little more activity for Egypt and South America, and further buying has taken place in home trade fabrics. Rates in American and Egyptian yarns have been steadier and spinners have sold more freely. Some users have recently adopted a policy of going short and a fair amount of covering has taken place.

THE WOOL TRADE.

Our Bradford correspondent writes:—At the opening of the London sales greasy merino wool was no more than five per cent. cheaper. This shows that there was more buying power and more definite requirements to fill than had been previously acknowledged. The opening sale and the steadiness which has since been maintained has exerted a very beneficial effect here, the low quotations for fine tops having been withdrawn. There are now no sellers of average 64's at less than 26d., and at the moment there is some indication of more business to be done. The sharp decline in crossbreds leaves the market here still rather weak, particularly as values have continued to fall in New Zealand. All the influences recently operating in the crossbred market have been towards depression, English pulled wools having received a severe blow at the recent Bristol fair. Under these circumstances and in view of the poor state of the Continental trade, no marked recovery in tops seems likely. The worst drag upon both merinos and crossbreds is the slow development of the demand for dress goods. The current London sales are the last this year at which any wool bought can possibly come into consumption for the season's trade. Indeed, before now there should have been some big repeat orders for styles already submitted, but instead of that current contracts are being delayed, if not actually repudiated.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

General satisfaction was expressed in London last Tuesday with the opening results of the second series of wool sales. The merino selection was on the poor side, being chiefly second-hand parcels, though a few straight clips from Queensland were offered. The competition was better than expected, Bradford, French and German buyers being well in the running, and the second-hand parcels were fairly readily taken up. Although these showed a distinct loss, the fact that these were bought at 5 per cent. below last sales shows that interest in wool has not entirely disappeared. Scoured merinos seem to have suffered the most loss, for the top lot of Dagworth at 22d. was cheap. If the present level of prices is maintained to the finish, the trade will surely begin to realise that the bottom has been touched. It is not so much a question, however, of what wool is costing, as what prospect there is for consumptive requirements to expand. Any improvement in values will be entirely dependent upon this. Crossbreds sold mostly at a good 10 per cent. below last sales closing rates, this decline being no more than was anticipated. Whilst merino wool in Australia has kept fairly steady, New Zealands are fareing rather badly. At every selling centre in the Dominion since the dispute over the quantity of the offerings, prices have moved downwards. At Invercargill last Monday values were the lowest of the whole season, and a reflection of this in London was inevitable. The 10 per cent. decline applies to both greasies and slipes, the latter being very reasonable indeed. It is significant that the decline at the last series of London sales has been very pronounced in fellmongered wools, and there is no doubt that the fall at Bristol last Wednesday week has had an adverse influence on the market value of similar qualities of New Zealand slipes. The National Bank of Australasia has received a cable from Melbourne stating that another large wool clip is indicated by the good summer rains. This will partly make up for the lower prices which are having to be taken for wool.

HIDE, LEATHER AND ALLIED TRADES.

It is not possible to say how prices for market hides went at the auctions held last week, as supplies were sold under the new classification recently agreed to by the hide markets and tanners. Under this arrangement hides are now sold as clears and warbles, with firsts, seconds and thirds in each class. The clears consist of those free from warbles, while firsts in the warbled class consist of hides well flayed with not more than four warbles; seconds, hides with up to 25 warbles, and badly flayed with four warbles; thirds, all hides containing more than 25 warbles. Calfskins were slightly easier, as was also the case with sheepskins. Business in connection with foreign hides continues to move on rather quiet lines, and although a moderate amount of trade has been negotiated with home tanners for certain descriptions, the general atmosphere of the market is dull, with prices tending downwards. The only exception to this latter remark is in connection with frigorific hides, in which a fair amount of business has been done on account of the U.S.A. for Argentine ox at 7¾d., light ox at 7⅞d., and Montevideo ox at 8¼d. The River Plate Market for dry hides has been quiet, with lower prices ruling for most descriptions. B.A. Americanos are quoted at from 7⅞d. to 8d., while sales have been made in B.A. Inservibles at 5d., and Sierra Cordobas at 9d. African hides are also weaker, sales of Capes having been made at 7½d. and 6½d. for first and second dry salted, with drys realising 8d. and 7d. for the same two selections. Australians are also weaker, and interest has been evinced in these at the lower figures. A steady trade is being done in connection with sole leather, and although orders continue to be for limited quantities, they make for quite a respectable total. Medium to better grade bends are being taken up on account of shoe manufacturers in the lighter weights, and for these prices are held for firmly. Common bends are not much in request, and any weakness that may be apparent is in connection with these. The repairing trade comes into the market regularly for supplies, but business in this direction might be larger. Offal sells steadily all the time, the inquiry covering both bellies and shoulders. Little alteration has occurred in connection with the position of upper leathers; black and brown glace kid, together with willow calf, accounts for the bulk of the orders coming to hand, with further improvement reported in connection with the sale of patent. Better business has also been put through in connection with suede leather, and in some quarters quite a respectable turnover is spoken of. Full chrome box leather goes out in regular parcels, but producers of semi-chrome are far from satisfied with the position, as orders are very limited and then only for goods at a cut figure. Business with curriers continues on the quiet side, and consists mainly of small orders for kip butts and waxed splits. Trade in shoe manufacturing circles shows no great expansion; orders for spring and summer footwear are coming to hand, but not for quantities which make for a good turnover.

THE JUTE TRADE.

DUNDEE: March 19th.

Very dull conditions continue to prevail throughout the jute trade. Business in all commodities is reduced to a minimum, and there are no signs of improvement ahead. Even the fact that six of the Indian jute mills are idle, on account of strikes, has failed to stimulate the market into activity. Production at all producing centres continues in excess of demand, with the result that huge stocks of jute goods are available, which consumers seem to be in no hurry to absorb. Other industries throughout the world are in a state of depression, and the jute trade, being dependent on them, is consequently very slow. Curtailment of production is taking place at all centres outside of India and in Dundee, and on the Continent there is every probability that some of the works will have to be closed down for an indefinite period unless conditions improve. A drop in the price of the fibre has not helped spinners, as they must purchase their supplies so far ahead. The average cost of their stocks is therefore considerably in excess of the present level at which raw jute can be purchased. Up to date, Dundee has imported this season from August 1, 1929, 762,000 bales of jute, compared

with 859,000 bales for corresponding period of last season, while the quantity afloat brings the total supply in view of 823,000 bales, compared with 963,000 bales last year. Owing to the serious extent to which production has been curtailed, Dundee spinners will require about 150,000 bales less than last season. The lower prices for raw jute are £28 for best First Marks, and £25 10s. for Lightnings. while £23 has been done for Daisee assortment, and £25 is wanted for Tossa assortment, March/April shipment. Speculative sellers have been more prone to offer new crop at steadily declining rates. Grade First Marks have been sold at £26 10s., and good Lightnings at £26, August/September, while Daisee assortment has been sold at £25, £24 10s., £24 5s. and £24, for September/October, for which position £26 could be done for Tossa assortment. Several thousands of bales of new crop have been purchased, but generally spinners are rather afraid to buy in view of the uncertain outlook for the trade. Jute yarns are very quiet, and prices are more or less nominal. The value of common 8 lb. cops is 2s. 8d., and 8 lb. spools 2s. 9d., but there are no buyers at these prices. Twist is obtainable at 4⅝d. for fairly good spins of 3 ply 8 lb., and sacking yarns have sold in small quantities at 3$\frac{7}{16}$d. for 24 lb. weft, and 4⅜d. for 8 lb. chains. Rove has been bought at £16 15s. for 200 lb., and £26 10s. for 48 lb. Fine yarns keep steady, and carpet yarns are unchanged at 4$\frac{7}{16}$d. to 4½d. for 14 lb. warp. Orders for jute cloth are difficult to obtain, even at the unremunerative prices which manufacturers are willing to accept. The value of 10½ oz. 40 in. hessians is from 3½d. to 3⅝d., according to width, the narrow widths being obtainable at the lower rate, and for the wide widths the higher rate must be paid. Linoleum hessians and heavy goods are extremely dull.

VEGETABLE OILS AND OILSEEDS.

A marked change has come over the market for linseed and linseed oil prices having taken a strong upward turn. The withdrawal of offers of Indian seed and a revival of demand have operated in favour of Plate, and values have advanced at least 20s. per ton. Wednesday's closing price being £17 per ton on spot, and for shipment t May. The strength of the position has also been contributed to by the reduced supplies on passage to Europe, which, at 104,800 tons, is 31,300 tons less than a week ago. Low prices of Egyptian cotton seed have induced some trade, but insufficient to stiffen prices to any extent, these now being the lowest for 15 years past. Supplies near at hand are at a small premium. Black for March and April loadings has been done at £7 and £7 1s. 3d., and Sakellaridis at £6 12s. 6d. A shade above these figures are current values. In the section of oils, linseed oil, which, a few days ago, dropped to £34 10s. per ton naked, ex Hull mill, for all positions has moved up sharply to £38 5s. on spot and £37 15s. for March and April delivery. Supplies are small, owing to the restricted "crush" and the difficulty mills have in disposing of the oilcake product, despite still further reduced prices. Cotton oils are steady, crude Egyptian being quoted £28 10s., and common edible £31 5s., ex Hull. Other seed oils are quiet. Oilcakes move off very slowly indeed.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Previous quotations were repeated for all spot goods but new business is difficult to arrange, trade buyers being mainly occupied in taking delivery of quantities purchased previously. Cables from Cuba record renewed opposition to the Single Seller Agency and further developments are awaited. Raw sugars steady, quiet. Terminal sections generally steady and a feature proved a large business in the December position of raw. March delivery, quoted, 6s. 7½d.; May, buyers, 6s. 8½d.; August, sold, 7s. 0¾d. to 7s.; December at 7s. 6d.; January, 8s. 2¼d. Cuban receipts last week 194,795 tons, against 248,692 last year; exports, 34,706, against 141,694; stocks, 1,100,659, against 1,132,986. Stocks of old, 13,220, against 1,615 last year. Stocks of raw sugar in the three ports of the United Kingdom for the week ending March 15 amounted to 248,067 tons, against 139,537 last year.

COFFEE.—Apart from a sustained demand for really fine qualities which fetch full prices, the market is quiet and a shade easier. Fine coloury bold Costa Rica sold 168s. 6d.

COCOA.—Only a small business resulted in spot goods at about late prices. Forward positions advanced, but a quieter tone set in later. Accra, F/F, April-June, sold, 35s. to 35s. 6d. to 35s. 9d. f.o.b. Terminal, April, sold, 40s. 9d. to 41s.; May, 40s. 6d. to 41s.; July, 40s. 6d. to 41s. 3d.; September, 41s. 6d. to 42s.; December, 41s. 4½d. to 41s. 9d.

TEA.—Indian auctions during the week totalled 47,868 packages which met with brisk support, especially finest liquoring kinds and those with autumnal flavour. Prices for such very firm to frequently dearer. Good medium teas firm, but low ditto and common the turn in favour of buyers. Ceylon sales of 17,291 packages came to a fairly active market. Good medium and fine sorts in particular well sought after and frequently ½d. to 1d. dearer. Finest steady. Plain and common denoted slight irregularity. Java and Sumatra irregular at mostly ½d. to 1½d. per lb. decline. There is quite a good demand for China teas and Keemuns are getting scarce in the region of 1s. 9d. to 2s.

RICE.—Market quiet, but at the same time firm, particularly with regard to Burma grain. Two Stars, spot, London, quoted, 13s. 6d.; and shippers ask 11s. 3d. for ditto March-April, c.i.f. London/Continent. No. 3 Burma, to the Levant, quoted, 11s. 6d. c.i.f., double bags. Spanish, oiled, March-April, sellers, 15s. 9d. to 16s. as to quality. American blue rose from 23s. to 24s. c.i.f. S.Q., to Cuba, 11s. 3d.

BROKEN RICE quiet. Burma 1A, March-April, 10s. 4½d.; B1, 9s. 10½d.; A2, 9s. 10½d.; B2, 9s. 4½d. Saigon, 1 and 2 mixed, 9s. 10½d. Siam, C1, 9s. 4½d.; C3, 9s. c.i.f.

RICE BRAN dull, and afloat sellers at £3 10s.; for shipment, April-May, £3 15s.; July-December, £4 5s. per ton ex ship terms. Saigon, March-April, £3 15s. c.i.f.

BEANS.—A dull market continues, but prices show no material change. Parcels per "Clan MacNeil," quoted, 33s.; "Bourbonnais," 33s.; "Belgrano," 33s.; "Ville de Rouen," 32s. 6d.; and February-March, 32s. 6d.; March-April, 32s. 6d., c.i.f. London. Rangoon haricots, spot, London, 10s. 9d.; February-March, 12s.; March-April, 12s. 3d. c.i.f.; Ohtenashi, spot, London, 21s. 6d.; March-April shipment, 20s. 6d. c.i.f.; Danubian H.P., spot, London, 22s.; February-March, 21s. 6d.

PEAS.—A dull market, and prices mark a weaker tendency. Japanese, old crop, spot, London, 14s.; new, 14s. 6d. Parcels per steamer "Altai Maru," afloat, to London, quoted, 14s. 3d.; February-March, 14s.; March-April, 13s. 10½d. c.i.f. Dutch marrowfats, prompt, 14s. 9d.; small hand-picked blues, 10s. f.o.b. terms. Calcutta, March, 45s. 6d.; April-May, 43s. 6d. Karachi, April-May, 43s. c.i.f. Maples quiet. No. 1 New Zealand, March-April, old, 55s.; new crop, March-April, 58s. Tasmanian, A grade, new, March-April, 65s. c.i.f.

SPICE.—Pepper market presented quiet features and slight weakness governed forward positions. Lampong, March-May, quoted, 1s. 0⅞d.; May-July, 1s. 0½d.; August-October, 11¼d. Muntok, white, March-May, 1s. 3⅞d.; May-July, 1s. 3⅝d.; and August-October, 1s. 2½d. London stocks of black reduced by 32 tons on the week and white 57. Cloves firm. Zanzibar, spot, nominally 10¾d., and forward, 10½d. c.i.f. Pimento, spot, 9d., and to arrive, 73s. 6d. c.i.f. London. Tapioca dull. Singapore flake, March-April, to France, quoted, 15s.; Penang seed, to Hamburg, 15s. Sago flour, April-May, to U.K., buyers, 10s. 9d. c.i.f. Dutch farina, 8s. 3d. f.o.b.

FRUIT (Dried).—Currants: Market steady, with a fair business passing. Pyrgos, quoted, 35s.-36s.; Amalias, 37s. 6d.-39s.; Patras, 39s.-42s.; Gulf, 42s.-46s.; Vostizza, 49s.-58s.; Australian, 37s.-38s. Sultanas in better request. Smyrna, medium to fine, 44s.-60s.; Cretan, 42s.-75s.; Greek, 42s.-65s.; Australian, 32s.-48s. Dates quiet. Hallowie, spot, 21s.-23s.; Khadrowie, 16s.; Siar, 13s.-14s. Raisins neglected. Valencia, quarter-boxes, 40s.-45s. Figs quiet. Layers, 32s.-40s.; genuine, 26s.-33s.; good average, 23s.

EVAPORATED FRUITS.—Steady conditions continue to prevail, but trade slow to expand. High selling limits retard business in Californian plums, but South African and Australian apricots experienced a good movement. Other descriptions unaltered. Plums: Californian new crop, 30's-40's, 68s.; 40's-50's, 66s.; Oregon, 30's-40's, 57s. 6d.; 50's-60's, 52s. Apricots: South African Royal, 57s. 6d.-117s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 87s. 6d.; extra, 97s. 6d.; Australian, 65s.-85s. Peaches: Californian, choice, 57s. 6d.-62s. 6d.; fancy, 67s. 6d.-72s. 6d.; Australian, 60s.-60s. Apples: Californian, spot, sliced, extra choice, 60s.-67s.; Canadian, 62s. Almonds easier. Mazagan, 107s. 6d.; Mogador, 105s.; P.G. Sicily, 115s.; Majorcas, 110s.-125s. Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels: Indian, sweet, spot, 75s.; China, bitter, for shipment, 37s. 6d.; new crop, c.i.f., sweet, spot, 77s. 6d. Hazel kernels: Kerasunde, spot, 145s.; Barcelona, 136s.; French (shelled) walnuts, 135s., ex wharf, London.

CANNED GOODS.

CANNED FRUITS.—Demand for Californian descriptions is still somewhat restricted and confined to popular lines. Loganberries are in light supply, while peaches attract attention for prompt shipment. There is a moderate call for apples, apricots and pears. No business of importance is reported in Australian new pack. Market rather featureless for Singapore pines, though buyers show rather more interest in shipment parcels. Italian tomatoes quiet, with ample supplies available. New pack quotations are much on a par with last season.

CANNED FISH.—The demand for salmon still lacks animation, but general tone firm. Alaska red talls, quoted, 48s.-50s.; pink talls, 25s.-26s.; and halves, 34s.-36s. Japanese crab in fair request, and fancy qualities, quoted, 97s. 6d.-102s. 6d. Lobsters steady, but trade without improvement. Halves range from 135s.-140s. Sardines steady, with best quality in small supply. Portuguese clubs, quarters, 4s.; 1-lb., 12s. per dozen tins.

CANNED MEAT.—Trade restricted, but ox tongues firm on short supplies. Lunch tongues are reservedly offered at full rates. Cooked boned hams also sell well.

CONDENSED MILK AND MILK POWDERS.—Market steady. Dutch condensed milk: Full cream, sweetened, 5-cwt. casks, 35s. 6d.; machine-skimmed ditto, 21s. 3d.; full cream, sweetened, 56-lb. drums (two in a crate), 52s. 6d. English condensed milk: Full cream, sweetened, in 5-cwt. casks, 40s.; machine-skimmed ditto, 23s. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 65s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 83s. Dutch machine-skimmed milk powders: Roller process, 1-cwt. cases, 26s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 38s.; ditto, 1-cwt. cases, 36s. 6d.; all per cwt. All English prices basis carriage paid nearest station. Dutch prices are nett, ex store, London-Hull or Goole, and cover prompt or gradual delivery to the end of April, 1930. Stocks: available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s.; minimum 1-ton lots. On the grocery side, full cream, sweetened, 19s. 3d.; machine-skimmed, sweetened, 9s. basis per case, usual packing.

DUNLOP

—the standard by which all tyres are judged. Wherever you may travel, you see this famous tyre and hear of its all-round excellence and satisfactory performance.

Fort DUNLOP

—the tyre that was introduced in order to provide a special tyre to meet new and exacting conditions. The modern high-powered car, with its extraordinary efficiency in braking and speed, at once suggested a special tyre—and Dunlop, ever the leader, produced the 'Fort.' No surprise is felt at its immediate success. The 'Fort' Dunlop is so obviously a 'master' product. The 'Fort' is the incomparable tyre and a proven economy.

HONEY.—Market quiet and trend of prices in buyers' favour. Jamaica, white, 56s.; good amber to fine pale, 45s.-52s. 6d.; dark to fair amber, 42s.-44s.; fine white Cuban, 49s.; San Domingo, good, 45s.; manufacturing, 38s.; Californian, 55s.; light amber, 50s.; New Zealand, light amber, 50s.-85s.; white and water-whites, 65s.-87s. 6d. per cwt.

RUBBER.

Business again confined to a narrow limit and market without new feature. Sheet, spot and March sold, 7⅛d.; April-June, 7⅛d. to 7 1/16d.; July-September, 7 1/16d.; October-December, 8 3/16d. To New York, estate sheet, April, May and June, equal quantities monthly, sold 7⅛d., c.i.f. terms. London stocks increased 467 tons, landings being 1,594 tons, deliveries, 1,127; stocks, 66,885, against 26,442 last year. Liverpool, 122 higher, landings, 410; deliveries, 288; stocks, 20,849, against 4,100.

GENERAL.

JUTE.—Weakness was again the salient feature, and with Alpine stocks of jute-manufactured goods in European and American centres the raw material is afforded no encouragement. The close was steadier. First, February-March, Hamburg, quoted, £23; March-April, sellers, £23; April-May, sold, £22 12s. 6d. to £23; May-June, £22 17s. 6d. to £23; new crop, August-September, quoted, £24 12s. 6d.; Lightnings, April-May, £22; Hearts, £20. Arrivals in Hamburg for the first half of present month total 46,471 bales, stocks at 109,600 being rather over 6,000 up on the fortnight. Antwerp stocks amount to 11,500.

HEMP.—A firmer market for Manila qualities, buyers being more prominent and sellers somewhat reserved. J2, March-May, quoted, £29 15s.; K, ditto, £29; L1, sellers, £28; L2, quoted, £24 15s.; M1, sold, £25; M2, quoted, £23 15s.; G, April-June, sold, £29 15s.; H, quoted, £29 10s.; streaky one, £43 10s.; two, £37 10s.; three, £35, c.i.f. African sisal No. 1, f.a.q., March-May, £33 15s.; marks, £34 5s. c.i.f. Receipts last week cabled 32,000 bales, against 24,000 last year and 25,000 in 1928. Estimate for next week 32,000, and week after 33,000. Manila shipments last week: 5,000 to U.K.; 6,000, Continent; 14,000, America; 3,000, Japan; 3,000 other countries; and stock 184,000 bales.

SHELLAC.—Dull of sale. T.N., spot, 122s. 6d.; May, 110s.; August, 113s.

COPRA.—A stronger market was evidenced on increased buying, partly on covering account. Straits S.D., April, to Rotterdam, quoted £21 5s. Dutch East Indies, February sold, £21 5s., and Ceylon quoted at £22 5s. To Marseilles, mixed Dutch East Indies, Padang excluded, quoted £20 5s.; smoked, South Sea, sold £20; Manila F.M., £19 15s.

MISCELLANEOUS.—Coconuts, quoted, 17s. to 25s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43; Ceylon, bristle, £19 to £25; cinnamon leaf oil, 5s. 6d.; for shipment, March-April, 4s. 6d.; citronelle, Ceylon, 2s. 4d.; Java, 2s. 4d.

THE MONEY MARKET.

MONEY this week has been comfortable, with rates for day-to-day money at 2½ per cent., while 3½ per cent. has been paid for money into April. In view of the shrinkage of £7,212,000 in bankers' deposits disclosed in

this week's Bank return, it is surprising that greater stringency has not prevailed, but the current shortage of bills may be an explanation. Discount rates averaged 2¾ per cent. for early April bills, at 2¼ per cent. for "running" Aprils, and at 2 3/16 per cent. for May bills, while the three months' market rate of discount was 2⅛ per cent.

* * * *

There is a fairly general belief that next month will witness a rise in discount rates, and that the present abnormally wide spread of over a point between Bank rate and market rate will no longer persist. There are several grounds for this view. One is the obvious one that next month three months' bills will have ceased to be the popular end-of-June maturity. Another is that in a week's time the period of heavy revenue collection will have come to an end, and with it probably the huge weekly reductions in the volume of outstanding Treasury bills. Next, the recent low rates at which Treasury bills have been issued are ascribed in part to heavy American buying, and this month's rise in the dollar exchange supports this theory. The only obvious explanation of these American purchases is that the buyers were relying upon Mr Snowden's avowed policy of reducing the volume of Treasury bills to drive down the rate, and so enable them to resell and take a quick profit. Clearly, once the position is reversed and Treasury bill issues are increased, any buying of this character will come to a summary end.

* * * *

If a substantial proportion of the final call on the Conversion Loan is paid up in advance next month it may also lead to a rise in rates, for, according to the terms of issue, advance payments can be made under discount at the rate of 3½ per cent. The view has been expressed that the attempt will be made to obtain the turn existing between this rate and the present low money and discount rate, and clearly if Bank rate is reduced to 3 per cent. next month there is a possibility of a curious situation arising. On the other hand, holders of Conversion Loan may prefer to keep it in a partly-paid form, on the ground that in this form it is more saleable.

Market rate (3 months' bills)	3 5/16	3 1/16	2¼–⅛	2⅛	...

This week's Bank return contains several interesting changes. There has been a substantial increase of £3,414,000 in the note circulation, and as the week's gold acquisitions only amounted to £1,751,000, the reserve has fallen by £1,663,000. Revenue collection accounts for the rise of £5,904,000 in public deposits, and for much of the contraction of £7,212,000 in bankers' deposits. On the other side of the account, £2,071,000 of Other securities have been allowed to run off, while the Bank's holding of Government securities has been increased by £2,402,000, thus leaving the amount of the Bank's earning assets practically unchanged.

NEW YORK.

Our New York correspondent cables:—Money is slightly firmer owing to preparations for end-of-month financing, and no immediate change in the discount rate is expected. The week's statement of the System shows a drop of $32 million in Government securities, due to the payment of the Treasury overdraft, a rise of $71 million in bills on repurchase agreements, and discounts stationary, resulting in a rise of $40 million in total Reserve credit outstanding and a drop from 82.5 to 81.8 per cent. in the reserve ratio. The gold movement has been negligible in the past week, and, with $75 million received from Japan, it is believed that imports have come to an end. The Tariff Bill is still to be fought over in joint session of the Senate and the House, and less attention is being paid to it than to signs of somewhat better trade. The decline in the steel industry has been checked, and the motor trade is confident of a good recovery in April. Savings bank deposits are rising rapidly, and mortgage money is once more abundant; this is expected to stimulate the building industry, where revival will mark the turn in general business. $200 thousand gold are being shipped to London in connection with special transactions.

THE STOCK MARKETS.

Last week's accession of activity in the stock markets was not maintained, a tendency towards profit-taking being in evidence. Gilt-edged showed a slight recession, but the undertone of the market remained firm, with wide public interest. Home rails were sold on the assumption that lower traffic returns, in conjunction with increased national unemployment figures, betokened a falling-off in trade activity. The industrial markets were patchy, a number of satisfactory company reports failing to stimulate buying to any marked extent. Increased interest was shown for rubber and tea shares, and dealings in oils tended slightly to broaden. The mining markets became comparatively quiet after a firm opening, and a reassurring official statement failed to overcome the apathy of holders of diamond shares.

THE COMMODITY MARKETS.

There is no improvement in the coal situation, which is intensified by the depression of shipping. Though the iron and steel trades remain depressed, such slight change as there has been is in the direction of improvement. The tinplate market is rather more active. Raw cotton is steadier, and an improved demand for piecegoods has checked for the moment the spread of depression in Manchester, though prices throughout the spinning section remain poor. In spite of the difficult labour situation, news from the wool textile centres is definitely better and wool prices are firmer. Business in the hide and leather trades continues steady on a moderate scale. The hardwood market is steady; vegetable oil and oilseed markets are slightly firmer; and wheat prices are unchanged on the week.

THE FOREIGN EXCHANGES.

Only moderate activity has prevailed this week. In the earlier part of the week many of the exchanges moved well in our favour, but later there was a tendency in the other direction. Sterling was strong against New York and from 4.86¼ last week went to 4.87 1/16 at one time, reacting later to 4.86⅝. Montreal weakened from 4.86½ to 4.86⅜. Paris gained three points at 124.28, after being 124.33 and 124.25½. Brussels was better by 1¼ points at 34.87½ and Milan improved from 92.87 to 92.80. Madrid was less irregular than of late, but lost 55 points on balance at 39.05. Amsterdam showed little change at 12.12½. Berlin was unchanged on balance, after hesitation, at 20.38¼. Switzerland was decidedly weak, and lost ⅝ at 12.13¼. The Scandinavian exchanges were generally firm, Stockholm gaining ½ at 18.09⅝, Oslo ⅛ at 18.17 and Copenhagen ¼ at 18.16⅜. The South American exchanges were stronger, Rio gaining 1/16d. at 5 3/32d. and Buenos Aires ⅛d. at 42 3/32d. after 1 5/16d. Montevideo appreciated sharply from 43 3/32d. to 44 3/32d. The premium on 90 days Lima on London was 24¼ per cent., nominal, against 29¼ per cent. last week. In the Far East the rupee was steady and gained 1/32d. at 1s. 5 27/32d. The yen and Batavia were unchanged at 2s. 0⅜d. and 12.12½ respectively. In the futures market, New York remained unchanged from last week. Paris was a little more wanted at 11 centimes premium for one month, while Brussels went from par and ½ centime discount to ½ centime discount for both periods. Berlin remained unchanged. The silver market was not very active, but prices advanced initially by ⅝d. for both spot and forward, on Chinese buying. Later prices sagged steadily to 19 7/16d. for spot and 19⅜d. for forward, a decline of 9/16d. and 7/16d. below the highest for the week. The China silver exchanges were not much affected, Hong Kong remaining at last week's level of 1s. 6⅛d., whilst Shanghai lost ⅛d. at 1s. 11¼d.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

PARTIES AND ECONOMIC POLICY.

SAVE for the single, but very important, exception of cheaper money, with its promise of better times to come, it cannot be said that the economic outlook, which is reviewed in our monthly Trade Supplement, is bright. It is true that the unemployment figures are being somewhat artificially swollen by the restoration to the register of numbers of persons who have been in receipt of poor relief, but when the utmost allowance is made for this addition, the figures are the worst for many years past. Wholesale prices show no sign yet of recovery from their recent slump, and though the heavy industries have not as yet had to curtail production, they are nervous about future orders.

We are, in fact, in the trough of a depression. Nor does the international situation at the moment show many encouraging features. The United States Senate, after a long and fluctuating battle, has passed the Tariff Bill in a form which contains many big increases of duty. Discussion of the measure in joint session has still to come, and agricultural interests will resist strongly the increases in tariffs on manufactured products unless they get a greater *quid pro quo* than they see at present; but, so far, the forces in favour of moderation, though they have proved much stronger than was imagined, have not been able entirely to check the influence of vested interests at Washington. In Europe, also, the "Preliminary Conference with a view to Concerted Economic Action" has revealed the great difficulty of removing trade barriers; and though the protocol, which deals with the basis of future negotiations, has been signed by fifteen countries, the convention relating to commercial treaties will not become binding until November, and will operate only for a short period. While the agreement, in the words of the Chairman, "gives formal recognition, novel in character, to the inter-dependence of European commercial policies . . . and includes an engagement to meet again to proceed with what has now been begun," the Conference has taken "only a first hesitating step on the road" towards greater freedom of trade.

Whether the forthcoming Budget will send the trade barometer up or down is still Mr Snowden's secret. Forebodings have been generally expressed so gloomy that it is difficult to believe that reality will not come as a relief. The latest revenue returns suggest that the Chancellor's deficit may be rather less than was anticipated a week ago, and it may be presumed that in the present state of trade he will make every possible effort to produce a reassuring Budget. If he can succeed in this, and with the European situation clarified by the coming into operation of the Young Plan and the final evacuation of the Rhineland, we may hope to see, with the return of spring, some lightening of the gloomy depression of the last few months.

It is obvious, however, that in present circumstances economic policy must dominate politics, and it is, therefore, pertinent to consider how the position of parties in this respect has been affected by recent events. The Conservative Party, after making what it thought was a good recovery from one of its periodical attacks of fiscalitis, has had a mild relapse. In a letter to the *Times* Lord Salisbury, speaking with the prestige of the Conservative leader in the Lords, pointed out bluntly, but firmly, that even assuming that high protection or the economic unity of the Empire could do the great things claimed for them, no results could be expected for a long time to come. Lord Salisbury thought it necessary to give lip-service to Safeguarding (which he still manages to distinguish from Protection), but he expressed the view that it might be not merely useless, but dangerous, to confuse what can only be an ultimate aspiration with immediate needs. The reasons for our inability to compete in the markets of the world were stated in the Balfour Report to be our out-of-date equipment and our low standard in the higher control of industry, while the D'Abernon Report accused our merchants of want of adaptability and enterprise. What was wanted, therefore, was a new spirit in Capital and Labour, elimination of bad organisation and trade union restrictions, and drastic economy. This douche of cold water has naturally not been to the liking of Lord Beaverbrook, who will not allow any one to question the merits of Empire Free Trade as an immediate panacea. The Chief Crusader has summoned his journalistic troops express with fife and drum to do battle against this heresy, and the Conservative camp is once more astir with rumours of civil war.

This domestic controversy, however, clearly has little bearing on the immediate situation, and interest chiefly attaches to the policies of the Liberal and Labour Parties, and the measures which they can combine to take—the more so since it now appears that the likelihood of an early Election is much reduced. The decision of the Liberal Party not to vote against the price-fixing clause of the Coal Bill has been followed by a crop of rumours of a pact between the Liberal and Labour Parties, the alleged terms of which vary from a fusion to an *entente* based on an agreement about electoral reform. Political life would indeed be dull without the opportunity of speculating on such matters, but the substantial point is apparently that the Liberal Party does not propose to push its opposition to the Coal Bill to the point of defeating the Government. It is not clear what this decision means so far as the Bill itself is concerned. It has already been very substantially changed in comparison with the Bill which was attacked on Second Reading. It now provides for compulsory amalgamation; the provisions for safeguarding the consumers' interests are strengthened; and, most important of all, there is a time limit for the so-called "marketing" clauses. The proposal to establish a national export subsidy has also been negatived, though this objectionable system remains possible in the separate district schemes. In addition to the quota system, however, the provision for fixing enforcible minimum prices still remains. This, we believe to be a serious and quite unnecessary defect in the Bill, for which the Liberal Party, which, in solemn words, has assumed in a special degree in this Parliament the *rôle* of watch-dog for the public interest, cannot entirely avoid responsibility. The decision to let this clause through will not make matters easier for the Party in the country.

The argument, we suppose, for accepting the clause is that in the last resort it is the Government which must decide what questions are, or are not, matters of principle on which it stakes its existence; and the party which is giving general support—just as much as a section of a coalition—must balance from time to time the demerits of accepting something less than its demands with the desirability of keeping the Government in office. There is almost universal agreement that it would be undesirable at present to have a General Election, not merely because of the critical state of the Naval Conference, —though this week's news shows that that is a really important factor—but because in an early election there would be a complete confusion of issues.

But if the Liberal Party is to keep the Government in power, it is of vital importance to know what is the economic policy which is the basis of the understanding. It cannot be said that the record of the Government in this respect is reassuring. One of the chief planks of the Liberal policy a year ago was to make a gigantic effort to get rid of the wasteful and demoralising system under which a substantial proportion of the population are being maintained in idleness. The Labour Party agreed on the need of finding work, but laid more stress on the need of maintenance. In the event, the amount of work that has been provided is very small, while the dead-weight charge of maintaining the unemployed in idleness

has immensely increased, owing to increased rates of benefits, relaxation of the conditions of benefit, and a setback in trade.

The Unemployment Insurance Act was succeeded by the Coal Bill, with its provisions for maintaining prices, and though the Government has resisted the amazing suggestion of Lord Olivier to guarantee a minimum price of £15 a ton to the sugar growers of the West Indies, they are said to be contemplating a similar suggestion with regard to wheat. On Thursday, indeed, the official organ of the Labour Party stated definitely that the Government had decided to introduce a quota system compelling millers to use a certain proportion of British wheat in all flour ground, and was deliberating between two alternative methods of guaranteeing a " sure price " to the farmers, either by means of a statutory Import Board or by undertaking to purchase the home output at a fixed quotation. Both these suggestions show that there are members of the Labour Party who ignore the dangers inherent in any attempt to fix prices by decree and who think that the State, with better fortune than King Canute, can command the economic tides. If particular industries must be helped at the public expense, we shall at least know where we stand if we subsidise them, instead of incurring the unlimited liability which these price-regulating schemes imply.

Such schemes are no doubt attractive to many of the Government's supporters. But they are matters of much too great importance to be the subject of Party " deals," and in the present circumstances, if they are to be brought forward at all, it should be after consultation on merits and not as part of a political bargain. In other words, they should only be embarked upon if it is clear that they represent the true judgment of the House. If the Government were to attempt rash experiments, it would obviously be suicidal for the Liberal Party to countenance them. It has an unanswerable claim to fairer representation in Parliament, and we do not doubt that if it plays the *rôle* that is expected of it in this Parliament, the justice of its claim will prove irresistible. But the essential condition of its independent existence is that its influence should be used, without regard for political expediency, in unhesitating support of sound economic policy.

RELIGION IN RUSSIA.

The Decree of April 8, 1929, respecting Religious Associations, which was enacted by the All-Russian Central Executive Committee and the Council of People's Commissars of the Russian Socialist Federal Soviet Republic, was recently published, in translation, as a British Parliamentary Paper (Cmd. 3511). The decree, which applies to all religious believers, is partly a consolidation and partly an extension of previous legislation. The general policy inspiring it is plain. Religious societies and groups are not suppressed; but their activities are rigorously confined to religious affairs, and these are interpreted so narrowly that what remains lawful might seem hardly worth doing at all. Probably the Government hopes that this view will be taken sooner or later by the believers themselves, and that they will then put their organisations into voluntary liquidation—a process for which an elaborate procedure is laid down in the decree.

Some idea of the restrictions upon religious association which the decree imposes may be gathered from the following examples. A citizen may only belong to one religious association. He may not belong to any at all until he has attained the age of eighteen years. Each religious society or group may only use one building for religious worship. No contract for the administration and use of religious property may contain any reference even to relevant commercial or industrial transactions. Religious associations must be registered by the civil authorities, and these may exclude any individual member from the (elected) administrative body of an association. Religious associations may not (*a*) create mutual credit societies, co-operatives or commercial undertakings, or, in general, use the property at their disposal for other than religious purposes; (*b*) give material assistance to their members; (*c*) organise for children, young people and women, special prayer and other meetings, or, generally, meetings, groups, circles or departments for biblical or literary study, sewing, working or the teaching of religion, etc., or organise excursions, children's playgrounds, public libraries or reading rooms, or organise sanatoria and medical assistance. The teaching of any form of religious belief in State, public and private teaching and educational establishments is prohibited (such teaching being permitted exclusively at special theological courses privately organised by special permission of the civil authorities). The work of ministers of religion is to be restricted to the area in which the members of their association reside.

On the other side, it is only fair to note that provision is made for appeals against liquidations of religious associations, that the construction of new places of worship is allowed, subject to conformity with the building regulations; that religious services may be performed at cemeteries or crematoria, and also in hospitals at the request of a person who is dying or seriously ill, and that no special permit is required for religious services in connection with funerals, in spite of the general prohibition against the performance of religious services elsewhere (whether indoors or out of doors) than in buildings specifically handed over for religious use.

It would be interesting to compare this decree in detail with the restrictions in force to-day against Communist Party organisations in various " Capitalist " countries in Europe and America; for it must be remembered that Religion is regarded by the dominant elements in the U.S.S.R. in much the same light as Communism in other parts of the world. The letter of the decree, however, is of less practical importance than the spirit in which it is administered—and this is a matter on which good evidence is notoriously difficult to obtain. The only unimpeachable evidence that we have comes from the authors of the decree themselves. On March 15th the Central Executive Committee of the Russian Communist Party issued a fresh order to local branches of the Party which deserves quotation :—

> The Central Committee considers it necessary to take note of the absolutely indefensible departures from Party policy in the struggle against religious prejudices. We refer to the administrative closing of churches without the consent of the overwhelming majority of local populations. Such action usually leads to the strengthening of religious prejudices. . . .
>
> Resolutely discontinue the practice of the administrative closing of churches under the pretence that such closing is the voluntary desire of the population. Permit the closing of churches only when it is really desired by an overwhelming majority of the peasants, and then only after the regional executive committees have given their approval.
>
> For jeering at peasants' religious sentiments prosecute the guilty with the utmost rigour.

We may deduce from this order that the zest of the petty officials in the provinces has outrun the discretion of the statesmen at Moscow; that the decree of April 8th has been interpreted by some of these officials as an instruction, or licence, to wipe religion out, by fair means or foul; and that Moscow—whether or not it began by conniving at this interpretation of its will—has awoken to the fact that it is impolitic to allow its subordinates to go beyond the letter of its decree.

This does not mean that Moscow has abandoned or even moderated its " anti-religious " policy. The necessity of repressing an excess of zeal among the small fry is always confronting revolutionary Governments; and parallel instances could no doubt be cited from the recent history of Turkey, Mexico and China. As for the vigour of the language, that is the normal Moscow style. To understand the significance of this order to go slow in the execution of the " anti-religious " decree, one should read it in conjunction with the similar order, couched in equally vigorous language, which was issued earlier in the month by the same authority with regard to the decree for the communisation of agriculture :—

> In a number of regions the voluntary principle has been replaced by compulsion to enter collective farms under the threat of expropriation or deprivation of electoral rights. An exceptionally rough and disorderly criminal attitude toward the population has been observed on the part of some minor officials; it takes the form of banditism, the division of property, and arrests of the middle class, even of poor peasants.
>
> As a result of these stupid distortions we have in a number of regions the discrediting of the collective movement, and the withdrawal of peasants from a number of hastily organised and completely unstable communes of collective farms.

It is evident that all this is a question of tactics, not of policy. And the Bolsheviks have shown themselves good tacticians ever since they came into power a dozen years ago. They thoroughly understand how to *reculer pour mieux sauter*. Did not Lenin himself practice the manœuvre courageously when he sanctioned " the New Economic Policy "? And they understand equally that no Government, however despotic its *régime*, and however overwhelming its apparent strength, can safely or effectively go beyond a certain point in defying—or anticipating—public opinion. Did not they wait a dozen years before making any general attack at all upon religion and peasant proprietorship, the two targets of the present campaign?

But do not let us quarrel with these practical measures of moderation on account of possible ulterior motives or ultimate intentions. The " dragonnades " are to cease; and by that much the sum of ill-doing and of suffering in the world to-day will be diminished.

THE SUGAR PROBLEM.

If the Government find themselves in the embarrassing position of being placed on the defensive *vis à vis* Lord Olivier, the West Indian sugar planters, and their " sympathisers " in this country (how rich the milk of human kindness in the Protectionist coconut!), they have largely themselves to thank. The delay in publishing the recommendations of Lord Olivier and colleague, Mr Semple, has not been satisfactorily explained. Their Report* is dated February 1, 1930, and to withhold it for seven weeks, and then to release it ten days after the announcement of the Government's own policy for helping the sugar Colonies, gives obvious scope for the attack delivered by Lord Hailsham in the House of Lords on Tuesday—that the Government, unwilling to adopt recommendations characterised by the Commissioners as peculiarly urgent, was endeavouring to evade its responsibilities by procrastinating until the need for remedial measures had lapsed, the sufferer being dead. It would have been better to publish the Report as soon as it was received, and the same applies to the case of Sir Francis Watts' Report† on the Mauritius Sugar Industry, also issued only this week, but dated December 20, 1929.

For there is nothing in either of these Reports to justify criticism of the Government's decision not to adopt the proposals advocated by the signatories. Lord Hailsham's suggestion that, if the recommendations had been made known earlier, public opinion would have forced the Government to act on the lines proposed by Lord Olivier is as unwarrantable as his description of the Government's policy as " callous brutality." The cabled offer of March 14th (printed as an appendix to Lord Passfield's " Statement‡ of Policy " on these Reports), to join with Colonial Governments in guaranteeing up to 15 per cent. of banking advances made to finance the coming sugar crop, represents the limit of what the British Government can fairly be called upon to do, and is not ungenerous. The rejected proposals emphatically merited rejection.

Sir Francis Watts reaches the conclusion that the Mauritius sugar industry is conducted with no " marked lack of care and efficiency "; but that average costs of production, f.o.b., are about £13 per ton, as compared with an average selling price in 1929 of £12 2s. 10d. per ton. He considers that " even with the continuation of the present tariff preferences granted by the United Kingdom and Canada, the industry cannot meet the present low prices," and recommends that for at least five years a grant-in-aid should be given by H.M. Government equal to the difference between £13 and the average selling price.

The main recommendations of the Olivier Commission are :—

(1) That, pending the results of endeavours which the Government should make to eliminate, in concert with other Powers, " the disturbing factors of high tariffs and subsidies," the policy should be " at once to set on foot the rationalisation of the sugar trade of our own Empire on the basis of a guarantee of *reasonable local costs of production* " (our italics).
(2) That a single purchasing agency should be set up to purchase all sugar for the United Kingdom, buying Imperial sugar at a guaranteed minimum of £15 per ton, c.i.f. (average West Indian costs, f.o.b., are put at £13 7s. 6d. per ton), and non-Empire sugar at the market price.
(3) That meanwhile the British preference on Imperial sugar should be raised to 4s. 8d. per cwt., a proposal involving the retention of the general sugar duty at a level not less than that figure.

In the " Statement of Policy," issued by the Colonial Office, pointed reference is made to Mr Snowden's announcement last July, that so long as there was a duty on sugar the preferences would be maintained, but that " the Government would not deal with the difficulties of the sugar industry by way of preference." For the rest, the Government undertake to consider what steps they can usefully take to eliminate subsidies and tariffs (Lord Passfield, crossing swords in the Upper House with his one-time Fabian comrade, Lord Olivier, must have been uncomfortably aware that the sugar-beet subvention is an awkward beam in the British eye), but they are not prepared either by grant-in-aid or guaranteed

price to " require the community in the United Kingdom to contribute some millions of pounds a year to the sugar industries in the Colonies concerned."

We welcome the decision. Generosity is a virtue in nations as in individuals, but if the British taxpayer is to be asked to contribute to the profit and loss account of every industry in the Empire which can make out a case of " urgent need," where is the process to stop? For the matter of that, charity might well begin at home. But even if there were good reasons for giving to the Colonial sugar industry assistance not vouchsafed to the British wheat-farmer, the Australian wool-grower, or the rubber-planter in Malaya, we should oppose as economically indefensible any policy which aimed, like the proposals in these Reports, at the artificial maintenance of a particular selling price in a period not only of overproduction of many commodities, but of a rapidly declining general price level.

Remembering the pre-war price of rubber, we cannot understand what the Olivier Commission means by its conception (for what period, and in relation to what standard?) of " reasonable local costs," or why any industry should be entitled to protection by Government from losses entailed by over-optimistic calculation of future demand. The Report points out that world output of sugar rose from 21.4 million tons in 1923-24 to an average of 25.6 million tons in the four next crop years, and to over 28 million tons in 1929. Although consumption in the same period has risen more or less steadily from 21.2 million to nearly 27 million tons per annum, the estimated accumulated surplus last December amounted to more than 5 million tons. Side by side with the expansion of output of cane-sugar there has been a rapid increase in the production of beet-sugar stimulated by protective duties, bounties and rebates. From an average of 25s. 9d. per cwt. in 1923, the open market price of sugar in London (96 degrees raw sugar parity) had fallen by the end of 1929 to 8s. 3d. per cwt. Under these circumstances the necessity of a contraction of the industry, however painful, is fairly obvious.

The position, in fact, of the world sugar industry is similar at the moment to that of the producers of a dozen important raw materials. The situation is complicated by the existence of tariff duties, which result in the consumers in many countries paying for sugar prices which, if received by the producer, would more than cover his costs; but though knowledge that this is so may be tantalising to the sugar-grower, there is no escape from the fact that the " free " market price is the measure of the ratio between demand and supply. All attempts artificially to impede the restoration of lost equilibrium between those two factors are useless in the long run, and when they take the form of State assistance, they are doubly objectionable, for they further distort the situation. We are glad that the Government, except in their limited and temporary offer to ease the immediate credit situation in the West Indies, have refrained from a policy of mistaken kindness.

The Reports and the Statement, however, very forcibly emphasise the need of international action. Thanks to subsidised production in many countries, including our own, the pre-war sugar troubles have been almost exactly reproduced. Two years ago the Consultative Committee of the Economic Organisation of the League called attention to the false situation that was being created, and set in train an investigation with a view to seeing if it were possible to reach an agreement on the limits of Protection in the sugar industry. It is an interesting coincidence that this same problem was to the fore at the time when the Tariff Reform movement of 1903 arose in Great Britain, and the over-production which was then stimulated by tariffs and export subsidies, was at that time met by international agreement to limit national Protection. The League report did not grapple very effectively with the problem, but the Government's expression of its willingness to co-operate in international action may perhaps reopen the question with better results.

A QUARTER'S NEW CAPITAL.

CONDITIONS in the new issues market during the past quarter furnished a striking contrast with those of a year ago. In the first three months of 1929, whereas rising short money rates were beginning to affect adversely the market for fixed-interest-bearing securities, the boom in speculative industrial issues, though near its climax, was still in full swing. This year the position has been reversed: the market in speculative issues has been virtually " dead," but the rapid fall in money rates has led to a quickening in the market for gilt-edged issues and first-class bonds.

The first of the following tables shows the destination geographically, distinguishing Government from " other " borrowings, of the new capital raised in the first quarter of recent years:—

DESTINATION OF NEW CAPITAL.

	First Quarters of Years.					
	1913.	1926.	1927.	1928.	1929.	1930.
United Kingdom—	£	£	£	£	£	£
Government	Nil	5,455,100	68,253,800	85,761,000	1,900,000	38,360,000
Other	7,542,000	39,708,300	47,651,200	48,646,000	56,220,000	29,933,500
	7,542,000	45,163,400	115,905,000	134,407,000	58,120,000	68,293,500
British Possessions—						
Government	7,626,600	8,134,000	5,380,600	17,930,100	23,590,000	14,625,800
Other	14,327,500	6,541,400	15,135,900	3,672,600	2,801,100	1,453,200
	21,954,100	14,675,400	20,516,500	21,602,700	26,391,100	16,079,000
Foreign countries—						
Government	3,523,600	8,800,500	Nil	4,765,100	3,650,000	Nil
Other	17,325,000	6,389,100	8,466,900	8,269,000	8,791,900	3,360,000
	20,848,600	15,189,600	8,466,900	13,034,100	12,441,900	3,360,000
Grand total	50,344,700	75,028,400	144,888,400	169,043,800	96,953,000	87,732,500

Our figure of British Government borrowings is made up of two items: (*a*) The proportion of the cash subscriptions (totalling £60,800,000) to the 4½ per cent. Conversion Loan available after covering the unconverted balance of short-term debt maturing, and (*b*) the " net sales " of Savings Certificates. All the other figures in our calculations are exclusive of issues or portions of issues made for conversion or repayment purposes.

Apart from British Government operations, the amount of new capital destined for the United Kingdom represented little more than half the corresponding figure a year ago; and the totals for British possessions and foreign countries also showed large declines in comparison with the first quarter of 1929. Moreover, a further analysis of the aggregates in the next table shows clearly how inactive the market has been during the past three months except for Government and Corporation borrowings:—

CLASSES OF BORROWERS.

(£ million)

	Total.	British Government.	Foreign and Colonial Govt.	British Colonial and Foreign Corpn.	Foreign Railways.	Mines, Finance, and Exploration.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1923	271·4	77·7	95·8	4·8	5·4	15·5	7·7	64·5

During the past quarter, excluding Government and Corporation borrowings, new capital raised for all other purposes totalled only £18.8 million, as compared with £27 million in the previous quarter and £67.5 million in the first three months of last year. Even in the case of Governments and municipalities it was only in the latter half of the quarter that conditions for new issues became encouraging. In February, after the issue of £6 million Government of India 1932-33 Bonds, yielding the high rate of £6 11s. per cent., the Nigerian Government offer of 5 per cent. 1950-60 stock at 99 failed to secure a good response; and even at the beginning of March the Union of South Africa 5 per cent. 1945-75 stock, issued at 98½ to yield £5 2s. per cent., was by no means fully subscribed. Among home issues, the Central Electricity Board's £7 million January issue (ranked with Corporations in the foregoing table) met with a poor reception; and in February the results of the Hastings and Hull 5 per cent. loans, issued at 99, showed that the public appetite, even for first-class bonds giving a yield over 5 per cent., was not yet keen. But the successive reductions of Bank rate on March 6th and March 20th completely transformed the situation. Issues of 5 per cent. loans at 99 for Southampton and Swansea went well; and an equally good response was made to the subsequent Bristol loan issue, with the same rate of interest, at 99½. At the end of March, as the following table shows, the principal issues made during the past three months showed substantial appreciation over their issue price:—

Month of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, March 27, 1930.
1930.		£		
January ...	Central Electricity Board 5% Stk., 1950-70	7,000,000	97½	1½ pm
January ...	Central Argentine Railway 5% Deb. Stk., 1967-87	3,000,000	89½	92⅝
February ...	4½% Conversion Loan, 1940-44	†92,800,000	95	4⅞ pm
February ...	Govt. of India 6% Bonds, 1932-33	6,000,000	99	102½
February ...	Nigeria Govt. 5% Ins. Stk., 1950-60	2,650,000	99	2⅜–⅞ pm
February ...	Metropolitan Railway 3½% " A " Deb. Stk.	2,000,000	65½	4–4½ pm
February ...	Shell Transport and Trading 7% 2nd Pref. £1	5,000,000	25/-	par-3d pm
March	Union of South Africa 5% Ins. Stk., 1945-75	5,250,000	98½	2⅜–⅝ pm
March	Southampton Corporation 5% Stk., 1947-67	1,650,000	99	2⅜–⅝ pm
March	Tate and Lyle 5½% Deb. Stk.	1,250,000	97½	1½-2 pm
March	Swansea 5% 1945–55	1,500,000	99	2⅛–⅝ pm
March	Bristol 5% 1950–60	2,500,000	99½	...

† Includes £55,740,000 for Conversions.

The Shell and Tate and Lyle issues were the only important industrial issues made during the quarter. British railways were represented by a £2 million Metropolitan Railway debenture loan yielding £5 6s. 9d.; and the Central Argentine Railway raised £2,685,000 on 5 per cent. debentures at 89½. Investment trust borrowing was negligible as compared with a year ago; and of the comparatively small total for general business the bulk was offered to shareholders only. The next table completes our analysis:—

ANALYSIS OF NEW CAPITAL APPLICATIONS.

	Total for First Quarters of Years.			
	1927.	1928.	1929.	1930.

Manufacturing & Miscellaneous	7,466,100	12,351,400	14,116,800	4,282,900
Total.....	144,888,400	169,043,800	96,953,000	87,732,500

Though foreign loans are likely to be held back until the forthcoming issue of Reparations Bonds has been placed, there is little doubt that the next few months will see a further broadening of activity in the new capital market, at least so far as gilt-edged stocks and well-secured industrial debentures and prior charges are concerned. Public interest in new enterprises of a speculative character may be slow to revive, but it should be possible for a good deal of banking credit to be " unfrozen," in the case of established concerns, by means of funding short-term indebtedness. The benefit to industry should be considerable, and there is the further satisfaction that investors are unlikely in the present position of the new issue market to be tempted by offers involving them, as happened last year, in heavy capital losses.

It should be appreciated that the new capital issues included in our quarterly surveys take no account of Stock Exchange " introductions," an aspect of the capital market which we discussed fully in the *Economist* of July 27, 1929 (page 175). In the following table we show the total amounts involved in these " introductions " during the past five quarters. " Cash values " are calculated on the assumption that the whole of the nominal value of the stock " introduced " is taken up at the price at which dealings on the Stock Exchange open:—

TOTAL CASH INVOLVED IN ISSUES BY STOCK EXCHANGE INTRODUCTION.

	United Kingdom	Colonies.	Abroad.	Total.
	£	£	£	£
Year 1929—				
1st Quarter.....	15,191,600	393,700	3,094,400	18,679,700
2nd Quarter	9,465,500	1,284,400	2,166,400	12,916,300
3rd Quarter	3,574,700	217,100	5,778,300	9,570,100
4th Quarter	733,400	304,400	1,437,500	2,475,300
Total Year 1929 ...	28,965,200	2,199,600	12,476,600	†43,641,400
Year 1930—				
1st Quarter.....	3,982,300	1,477,000	8,399,900	‡13,859,200

† Nominal amount of capital introduced, £31,519,934.
‡ Nominal amount of capital introduced, £12,244,078.

The aggregate destined for " abroad " represents the amount of the Greek " Refugees " loans " introduced " in February. The total for the first three months of 1930 shows a considerable expansion as compared with the previous quarter, but is substantially below the figure for the corresponding period of last year.

BANKS AND INDUSTRY IN ENGLAND AND GERMANY.—III.

(BY A BANKING CORRESPONDENT.)

[*Previous articles in this series, now concluded, appeared in the* Economist's *issues of March 1st and March 15th. In these articles our correspondent examined the divergence between British and German banking policy with regard to industrial financing, and described the relations between the administration of German banks and their customers under the " Konsortial " system.*]

THERE remain to be considered a few further points in considering the relation of the banks to industry in Germany. One of these is a practice which considerably strengthens the hands of the banks in dealing with industrial undertakings. In their general terms for accepting securities for safe custody they reserve the right to vote in shareholders' meetings as proxies for their customers, unless the customer directs otherwise. As a rule, customers are content to leave their interests in the charge of their banks. This system has been much criticised, and it has been stated that the banks are often interested parties and should therefore not vote on their customers' shares. In cases where decisions are placed before a shareholders' meeting which affect the interests of a bank, it is, however, usual for the bank to circularise customers whose shares it holds and to request instructions. The system may in many respects be open to objection, but in practice it has worked fairly well, since

the chief interests of both banks and shareholders are in the well-being of companies with which they are connected.

In considering what English banks can learn from a study of conditions in Germany, it must be realised that there can be no question of adapting the actual mechanism of German industrial banking to this country. The difference in the system of company administration would of itself preclude delegation of bankers to the boards of their customers. The system of voting on shares held in safe custody could not be adopted as a general rule, although there is no reason why in special circumstances bankers should not circularise customers and ask for their proxies. The syndicate system, too, is based on a combination of investment and commercial banking which is not likely to be adopted in England without considerable modification. In spite of all this, however, a number of the objects aimed at by German banks could be attained in England by comparatively simple measures suited to the prevailing conditions.

Closer collaboration between the banks in their relations with industry should not present insurmountable difficulties. As explained, the principal advantage of banking representation on boards is that the bank is kept in constant touch with developments and that really confidential relations are established. It should not be impossible to establish organised industrial departments, whose business would be to keep in touch with the principal industrial customers of the bank, to study industrial conditions, and to advise on matters of finance. Intelligent industrialists would probably welcome development on these lines, since the lack of firms of high standing which are prepared to carry out and assist in industrial financing cannot really be of benefit to them. A department of this kind might also keep in touch with the issuing side of industrial finance. It might, for instance, appraise on prospectuses bearing the bank's name. It might keep in touch with issuing houses doing industrial business, even if they are in no way connected with or supported by the bank, thus ensuring a certain measure of that collaboration between commercial and investment banking which was dealt with in the preceding article. One of its most important functions could be to advise customers of the bank on the best way to carry out transactions which do not really fall within the province of commercial banking.

This, in fact, is an important feature of the service given by German banks. If a customer—say a contracting firm—has a contract which requires financing over a long period, and approaches his bank, he will not be told that this is not its business. The bank will certainly not be inclined to carry the business itself, but it will, if possible, organise a syndicate to do so under its leadership, in which it will take a small participation. A German industrialist can, in fact, go to his banker and receive advice and assistance on anything connected with finance; and there seems no reason why English banks, without any sacrifice of principle, should not enable their customers to do the same.

The factor of *personnel* has also an important bearing on the question whether it is possible and desirable for English banks to modify their reserved attitude towards industry and general business. The incomparable efficiency of the English system of commercial and what is perhaps best described as "current" banking is obtained by very intensive specialisation. It may be, however, that this specialisation is not the most suitable method of producing the *personnel* required to initiate and carry out an active policy in industry and business. Another feature also requires consideration. There is no doubt that industrial banking, particularly industrial reorganisation and issue business, requires wide knowledge and experience and absolutely first-rate ability. Banks in Germany would doubtless not claim that they have solved the question of *personnel*, but they do offer, to those who attain the highest positions, financial inducements commensurate with those obtainable in any other line of business. The same holds good for bankers in America, particularly investment bankers. Incomes of five figures (sterling) are by no means exceptional prizes in Germany, and those who get right to the top receive a good deal more. While the importance of this should not be exaggerated, the problem of attracting exceptional ability and giving it scope to unfold itself is one of the most vital of those which confront the huge organisations of banking and business to-day.

In this connection, it is to be observed that German banks do not select their higher executives by any means exclusively from among the ranks of their officials. It is perfectly possible to work right up to the top from a clerkship, and many leading bankers have done so, but it is not unusual to bring men in from outside. There is a fairly free exchange of *personnel* between the joint-stock banks and private banking and Stock Exchange firms. In fact, a very large proportion of leading bankers have had a Stock Exchange training, either in a private firm or in the Stock Exchange department of their banks. The Stock Exchanges have always been in close contact with industry, and the wide knowledge of the principal companies and industries gained there have stood bankers who have had this training in good stead. There are also a considerable number of lawyers in responsible positions, although they have less often attained the highest honours. They are mostly recruited in the middle twenties, after having completed their legal training. Occasionally, too, industry has been drawn on, but it is more usual for industry to recruit its financial executive from banks than *vice versa*. On the whole, while the banks are quite prepared to bring in men from within the banking and financial world, whenever they think it desirable, absolute outsiders are less often appointed than in America, where corporation lawyers and technical men quite often enter both commercial and investment banking in middle life. The system is really something between the freedom of choice (disregarding family considerations) exercised by private City firms in England and the strict "Civil Service" recruitment of the joint-stock banks.

Before concluding it may be well to explain that the account which has been given of the German banking system applies in the first instance to the large joint-stock German banks, and to a lesser extent to the limited number of private banks which still remain in the first class. There are a large number of small private banks, which in England would be known as brokers, whose business has nothing in common with that of the principal firms, and also many provincial banks which are gradually and inevitably being absorbed. There is, indeed, a great superfluity of institutions claiming the description "bank," and the present difficult situation is having the healthy result of weeding them out. Fortunately this weeding-out process has been completed in England. It is obviously inadmissible to draw from this, as did a writer in a recent number of *Martins Bank Review*, conclusions regarding the soundness or unsoundness of the German system, whose distinctive characteristics, so far as the major banks are concerned, this series of articles has endeavoured to depict.

WOMEN AND THE FACTORY ACTS.

Sooner or later, it may be supposed, the Government will introduce its Factories Bill, and then the controversy, which has long been smouldering, between those who hold that women are not physically fitted for employment at all times and in all conditions that are possible to men, and those whose attitude suggests that they regard the terms "man" and "woman" as linguistic anachronisms corresponding to no surviving physiological facts, will presumably burst into flame. Without entering into the controversy as to the motives which have inspired industrial legislation for the protection of women, or discussing whether its continuance is necessary, the Home Office has endeavoured to clarify the issue by elucidating one important point. It is claimed by the complete "equalitarians" that restrictions on the employment of women have placed them at an unfair disadvantage. This is a question of ascertainable fact; and the results of the

efforts of the Home Office to ascertain it are embodied in a concise White Paper.*

The figures below, showing changes in the percentages of men and women employed in various industries, certainly suggest *prima facie* that women's employment has not been prejudiced by the Factory Acts:—

PERCENTAGE OF MALES AND FEMALES EMPLOYED.

	1890.		1907.		1928.	
	Males.	Females.	Males.	Females.	Males.	Females.
Textiles	39·5	60·5	37·5	62·5	36·1	63·9
Non-Textiles	*84·5*	*15·5*	*77·2*	*22·8*	*72·9*	*27·1*
China and earthenware	62·3	37·7	53·8	46·2	49·9	50·1
Food and drink	84·2	15·8	71·2	28·8	64·0	36·0
Tobacco	36·7	63·3	25·2	74·8	27·9	72·1
Metal (excluding extraction and foundry)	92·7	7·3	94·2	5·8	87·0	13·0
Printing, bleaching, dyeing and lace warehouses	72·9	27·1	72·9	27·1	67·7	32·3
Clothing	40·4	59·6	33·9	66·1	32·0	68·0
Paper, printing & stationery	73·2	26·8	64·1	35·9	62·5	37·5
Chemicals	90·4	9·6	84·0	16·0	81·3	18·7

It is, of course, possible to argue that the steady rise in the percentage of females in all these industries might have been even more marked in the absence of any restrictions on their employment, but the more detailed analysis in the report does not support this. An inquiry was made into the causes which have operated in the past to determine the distribution of women in industry, and a similar investigation was made into industries recently established. In both cases the conclusions are approximately the same, apart from a substantial element of tradition in the older industries, that the choice as between men and women for employment on a given operation is determined by a wide variety of considerations in which legal limitations play a very small part indeed.

It is only necessary to enumerate the legal restrictions on the one hand, and the other economic considerations on the other, to see that this could hardly be otherwise. The daily period of women's employment is limited to twelve hours, to be taken between specified times; their overtime is restricted; they may not work at night or on Sundays; a minimum of half-holidays is prescribed; they may not work for more than a given time without a break, and fixed meal times must be allowed. Further, they may not clean moving machinery, and their employment in a few processes is prohibited or restricted. Nearly all these regulations have their parallel as far as men are concerned in trade union rules, which are rigidly enforced, and apart from trade union action, men's conditions in industries where both men and women are employed have been largely assimilated to those laid down for women. Indeed, knowledge that this would be so was largely responsible for the support by men of the earlier Factory Act agitations. Law or no law, on the other hand, women are cheaper; they are said to take more kindly to monotonous work; and for certain processes they have a natural aptitude. Against this they have less physical strength, and the probability that they will leave their employment on marriage renders it a doubtful investment, both for them and for their employers, for them to spend time in learning highly skilled processes. It is the balance of these considerations that mainly determines their employment.

According to this report the employment of women in the cotton, wool and worsted, boot and shoe and lace industries is entirely determined by their suitability or unsuitability for a given job, and is little influenced by considerations of wages. In jute, pottery and the light metal trades, on the other hand, wage considerations play an important part. With the doubtful exception of certain branches of the lace trade, none of these industries appear to be deterred by legislative restrictions from employing women where they would otherwise be economically desirable. In the tinplate industry women were formerly, owing to the isolation of the communities concerned, employed on very heavy work, and they have now been largely displaced by labour-saving machinery. In the Hinckley hosiery industry they are excluded from certain perfectly suitable processes by trade union agreement, owing to the fact that the district does not provide enough alternative employment for men. This and similar instances suggest that the most effective potential check on the expansion of women's employment lies in the necessity of preserving some sort of balance between the employment of men and women, since the proportions in which they exist are outside human control.

In the newer industries, similar conditions obtain. Light processes in the rayon industry, which require delicacy of touch, are regarded as women's work, whereas the processes preparatory to spinning are considered unsuitable. Similarly in the tobacco, gramophone and electrical fittings industries women are assigned light repetition work which would be of too blind-alley a character for men, but which women prefer as being more immediately remunerative. In those few industries where women have lost ground, the cause has generally been changes in machinery or in processes, or, in a few cases, trade union opposition to their employment.

A few cases are, however, cited of the exclusion of women from certain occupations as the result of the Factory Acts. The most important of these instances formed the only subject of complaint to the Home Office in recent years—namely, the effect of the prohibition of night work in preventing trained women electricians from taking charge of small country stations. A letter to the Press by the president and secretary of the Women's Engineering Society points out the hardship of this, but in view of the peculiar conditions of the work it would seem not beyond the bounds of possibility to make an exception for it without modifying the general principle. Other instances of exclusion are certain operations in connection with perishable food, which have to be carried on on Sunday, but the whole body of such cases does not represent a very serious volume of employment.

For the most part, the Factory Acts reflect a body of public opinion so strong that the conditions they prohibit would not be likely ever again to become prevalent. Thus their effect is rather to safeguard a minority of women than to hamper the majority. In so far as they directly affect the choice between men and women for given classes of work, they tend rather to redistribute women among different occupations than to diminish the numbers of them in employment. It seems likely that men's trade unions will always try to reserve to themselves a certain field of employment; the effect of factory legislation is to encourage the reservation to them of that part of the field which is least suitable for women.

* "A Study of the Factors which have operated in the past, and those which are operating now, to determine the Distribution of Women in Industry." Cmd. 3508. H.M. Stationery Office. 9d. net.

BUDGET SUPPLEMENT

With The Economist of April 5th there will be published a special Supplement dealing with the National Finances. It will include an analysis of the accounts for the year ended March 31st, and the course of Revenue and Expenditure in recent years. As a handy form of reference, the Supplement will be of the greatest value to all those interested in Mr. Snowden's forthcoming Budget.

Notes of the Week.

The Naval Conference.—The return of M. Briand to London on Wednesday opened a new phase of the Naval Conference, the question whether sufficient guarantees can be given to France to induce her to agree to a substantial reduction of her tonnage revealing itself finally as the determining factor in the matter of a Five-Power Agreement. The situation has so far changed that the French are no longer insisting on a Mediterranean Pact of Guarantee, which Mr MacDonald, in the almost aggressive declaration of his wireless address to America, refused to consider. The demand for security is not abated, but there appears to be a new disposition in French quarters to seek it within the framework of the League of Nations. To that extent there is an approximation between the British and French views, for the Prime Minister has made it clear that while he will not go beyond the confines of the League Covenant, the Kellogg Pact and Locarno, he will not shrink from the fulfilment of any of the obligations falling on Great Britain as a signatory of those instruments. That particular aspect of the discussion resolves itself into one single question: What assurance can be given to the French that Article XVI of the Covenant will be applied, at a moment of crisis, immediately and effectively enough to justify France in relying on that Article for protection —at any rate for partial protection—instead of on her armies and fleet? There is clearly common ground here on which the two parties can stand, but one or two public contributions to discussion, such as Sir Austen Chamberlain's recent letter to *The Times*, suggesting that Great Britain is more concerned about evading obligations under Article XVI than about executing them, have inevitably awakened French suspicion and led France to demand embarrassingly explicit assurances which it may be difficult for the Prime Minister to give. Even if this corner can be rounded—and the two parties are clearly more *en rapport* in this matter than they were before M. Briand's departure—there remain the question of Franco-Italian parity and the question of America's association with any Pact that may be concluded. On the latter issue new light has been cast by an official American statement provoked by the need for disposing of various inaccurate assertions in London papers. It looks now as if the United States, provided France's troubles about security can be settled without her, will be willing to conclude a consultative treaty on the basis of the Pacific Pact, and not limited to any particular area, such as the Mediterranean. The psychological value of that would obviously be great, and it would be grossly short-sighted on France's part if she frustrated such advances by showing herself impossibly exacting in the matter of precise guarantees. The discussions now in progress are necessarily delicate and can hardly fail to be decisive, but so long as they continue hope of the conclusion of a Five-Power Pact need not be abandoned.

The Legacy of the War in the Balkans.—The Balkan problem is like the Hydra. When you cut off one of its many heads two new heads promptly sprout up from the stump, making the monster more monstrous than ever. The moral is that this problem can never be solved by violent methods. Yet for centuries everybody concerned has tried to solve it in this way. Fiume, it will be remembered, was annexed to Italy after the war by violence, in contravention of existing treaties. The excuse was that the population of the port was Italian by nationality; but the unfortunate Fiumans, who were given no choice about "satisfying their national aspirations," had also no choice about paying a prohibitive economic price for this problematic political blessing. The port of Fiume was cut off by a frontier and a Customs barrier from the hinterland on which its prosperity—nay, its existence—depended; and under this *régime* it has been dying a painful and lingering death from inanition. The Italian Government, waking up to the fact that the liberated city is really *in articulo mortis*, has now tardily applied a positive remedy. It has declared Fiume a free port—an act of common sense which would have saved endless political tension and economic damage if everybody had agreed to its being taken in 1919. It remains to be seen whether the situation at Fiume can still be saved; for during the last ten years the Jugoslav Government has naturally been developing other ports—for instance, Susak, just across the road, not to speak of Spalato—to replace the lost port of Croatia. Unhappily Fiume may be raised from her bed of sickness only to find that her "job" in life has now been taken over permanently by her neighbours. Another legacy of the war in the Balkans is the *imperium in imperio* of the Macedonian refugees in Bulgaria. In their own country these militant Macedonian nationalists cannot hold their own against their Jugoslav masters, who emerged from the peace settlement fully armed. But defeated Bulgaria can neither refuse asylum to refugees from Bulgaria Irredenta nor control these refugees when they arrive—Bulgaria being disarmed by treaty, whereas the Macedonian revolutionaries take their arms with them wherever they go, in defiance of everybody. From bases of operations on Bulgarian soil they raid across the frontier in order to harry the Jugoslav administration in their lost Macedonian homelands. The Bulgarian Government fails to prevent these raids. The Jugoslav Government holds the Bulgarian Government responsible, makes demands for drastic repression of the refugees, and more or less openly threatens to take sanctions if the Bulgarian Government does not give it satisfaction. Then the Powers, anxious to forestall this unseemly and dangerous *dénouement*, reinforce the Jugoslav representations with more courteously-worded representations of their own. This scene has been played many times already since the war. It was played again last week, and it will continue to be played until the trouble that perpetually brings it on to the stage is remedied.

Mr Gandhi on the March.—Mr Gandhi is marching slowly from his home at Sabarmati, near Ahmedabad, towards the coast, with the avowed intention of breaking the salt laws by making salt for himself in the Government pans. It is no secret that he is playing for arrest, but the Government of India have so far refrained from playing into his hands. They have arrested the second in command of the movement, Mr Patel; they have refrained from arresting the leader; and, before they are driven to do what Mr Gandhi wants, they may find several alternative moves still open to them. Presumably they will wait and see whether the procession really reaches the salt pans and whether the leader and his companions succeed in making salt if and when they arrive there. And, even supposing that they do succeed in making it, the Indian Government may then elect to strike at the creature rather than at the creator—in other words, to confiscate the illegally manufactured salt rather than to imprison the Mahatma. In fact, Mr Gandhi's latest *démarche* might be treated as a farce if the prime mover were not, as he is, a man of unusual distinction; and if he had not rather perversely re-entered politics in order to preach intransigence at a moment when reconciliation and co-operation are within reach, if only all those concerned exert themselves to secure these two *summa bona* of political life. Of course, Mr Gandhi still proclaims that the campaign to overthrow the Government is to be a campaign of "non-violence," and that his attack is directed against institutions and not against human beings. But, unfortunately, the moderation of his formal programme is obscured by the violence of his language. This violence grows as the march continues; and it almost looks as though Mr Gandhi's bitterest grievance against the Government was their refusal to play the part which he has assigned to them in his comedy. We cannot help marvelling, once again, that so fine a character should behave in a way which can only be described as childish and irresponsible. Mr Gandhi cannot claim to be an innocent in politics; that defence would debar him, *à priori*, from appearing on the politic stage. Nor can we file the defence on his behalf when we recall that, already once before, a similar campaign which was inaugurated by Mr Gandhi under the same banner of "non-violence" did lead to bloodshed and that Mr Gandhi publicly acknowledged, and repented of, his error of judgment. That frank confession was characteristic of the Mahatma, but this repetition of the mistake of which he stands confessed is apparently characteristic too. Let us hope that it will not come to further bloodshed before he recognises his mistake for the second time.

China Boiling up Again.—Unfortunately it looks as though the trouble in China, which we foresaw a month ago, is now on the point of coming to a head. The two north-western tüchüns, Yen Hsi-shan and Fêng Yühsiang, are openly making common cause against Chiang Kai-shek, the President and Generalissimo of the Kuomintang Central Government at Nanking. The opposing armies are lining up somewhere along the northern borders of the two sorely-tried provinces of Honan and Shantung. And China may be on the eve of a worse bout of civil war than she has experienced since the campaigns of 1926 and 1927. Even in the far south, the Communists and "Ironsides," whom the Nanking Government has several times defeated and dispersed, but has never succeeded in stamping out, are threatening to issue from their lairs in the highlands between the Yangtse Valley and Canton. Indeed, if once the fighting begins, the three Eastern Provinces in Manchuria seem to be the only fraction of China that is likely to remain at peace. "The Young Marshal" at Mukden, Chang Hsüeh-liang, stumbled into a little war of his own last year against the Russians—an adventure in which he lost the greatest amount of "face" that it is possible for a Government to lose. It will be only common sense if, this time, he takes his turn of looking on while the rest of China is at war. All the same, such common sense would deserve the gratitude of China and the world; for, so long as Manchuria remains untouched, it may continue to be a place of refuge for the ruined peasantry of the war-zone—a land of promise in which, if only they can reach it, they may look forward to enjoying the long-forgotten experience of reaping where they have sown, instead of seeing the fruits of their labours ruthlessly swept away by predatory soldiers and brigands. Moreover, so long as, in Manchuria, the local Chinese Government holds aloof, the civil war may burn itself out elsewhere without so much risk of bringing on another international crisis. Yet, when all is said, the general prospect is distinctly discouraging. The conflict, if it comes, will cost hundreds of thousands, perhaps millions, of lives—not in casualties, but in famine and disease among the civil population—and it will push an already ruined country a long stage further down the path towards utter economic disorganisation. Yet the cause of the trouble is a meaningless clash of personal interests—the mutual fears and irreconcilable ambitions of three major "war-lords" and a host of smaller fry. All reasonable Chinese have become exasperated at the political bankruptcy of their country; but they have not yet found a means of making their will effective against the men of the sword.

The Egyptian Delegation Arrives.—The Egyptian delegation, led by the Prime Minister, Mustafa Pasha Nahas, has now arrived in London in order to begin negotiations with Mr Henderson on the basis of the provisional agreement between the Foreign Secretary and Nahas Pasha's predecessor in office, Muhammed Pasha Mahmud. Nahas Pasha, as leader of the Wafd, is better qualified from every point of view than any other Egyptian statesman to take the lead in negotiating a definitive settlement with Great Britain on his country's behalf; and his followers have been wise enough to leave him a free hand by refraining from any preliminary discussion of the provisional Henderson-Mahmud agreement in the new Egyptian Parliament. Thus the negotiations start under exceptionally favourable conditions —so favourable that such an opportunity, if now lost, is unlikely to recur again for many years. Nahas Pasha has made public statements which indicate that he appreciates this important point, and it is certainly not less appreciated on the British side. We welcome the arrival of the Egyptian delegation, and we look forward with great hope to a successful result of the joint labours into which they and Mr Henderson are about to enter. In the well-intended but abortive negotiations of 1928 between Sarwat Pasha and Sir Austen Chamberlain, the stumbling-block was the question of the British forces in Egyptian territory. It was over this that Sarwat Pasha fell, because Nahas Pasha, as leader of the party which commanded a majority in the coalition Government of the day, declined to endorse what Sarwat Pasha had done. This time there is little danger of Nahas Pasha rejecting what Mahmud Pasha has accepted under this head, since the present British Government has rightly agreed to the essential accommodation on this point for which Sir Austen Chamberlain failed to secure the approval of his colleagues in the late Conservative Ministry. This time the crux is likely to be the Sudan —a problem which was left over by Sarwat Pasha and Sir Austen Chamberlain for future discussion, while Mahmud Pasha and Mr Henderson have agreed in a general way to settle it on the basis of the *status quo*. It is to be hoped that on this point, as on the rest, Nahas Pasha will not demand substantially more than what satisfied his predecessor.

The Beam Controversy.—The Postmaster-General's defence of his Department in the House of Commons on Wednesday does not wholly remove the impression that the Imperial Communications Company has not been accorded a "square deal" in the matter of overseas wireless telephony. Mr Lees-Smith had no real answer to the criticism that the experts, whose answers to specific technical questions drawn up by the Post Office have now been published (Cmd. 3526), were asked to give an opinion restricted, if not distorted, by the nature of the questionnaire addressed to them. On the question whether the company's system would be more expensive than that of the Post Office, he admitted that the Rugby and Baldock services would cost, at his estimate, £43,000 a year, against the rental of £40,000 asked by the I.C.C.; but he argued that when the cost of providing land lines (£20,800 a year) was included, and when consideration was given to the fact that the company proposed to charge a royalty of 10 per cent. on receipts over a certain figure, the public would obtain the benefits of substantial savings under the Post Office system. This may be so, though when allowance is made for the fact that the Post Office aerials have to be erected at a considerable capital cost (whereas the beam aerials are ready for use), the figures of estimated savings are not very impressive, even if one accepts the accuracy of the curiously high estimate of the cost of land lines. Moreover, on grounds of equity, it should not be forgotten that the company is paying the Government a rental of £250,000 for the use of the beam stations in any case. Mr Lees-Smith, we think, was gravely at fault in importing into this unfortunate controversy an element of political bias, as he did by depicting the Post Office as the taxpayers' friend and the company as a capitalist concern out for monopoly profits. In fact, the company is a semi-public body, invested with statutory obligations, and to discourage its working, for the advantage of a Department of State, is in no way to the public interest. Friction and rivalry between the Post Office and the I.C.C. are calculated to be of the greatest disservice to the development of Imperial communications, and for this reason it would be a wise and statesmanlike act on the part of Mr Lees-Smith to have the whole issue re-submitted to impartial investigation by a competent body whose proceedings should be public, and before whom all the parties should have the fullest opportunity to state their case.

Unemployment.—The coming into operation last week of the Unemployment Insurance Act apparently caused a considerable access of "re-registrations." Persons who had ceased to be eligible for benefit under the old Act now turned in great numbers to the exchanges, and, according to the Minister of Labour, most of the increase of 31,675 in the number of persons wholly unemployed on March 17 was due to this movement, the greater part of which occurred in Scotland. Even allowing for this, however, the number of unemployed at 1,621,800 is higher than it has been at this season since 1922, and it has been steadily rising during the last two months. Though regrettable, it is, therefore, not surprising that a financial resolution is to be proposed, authorising the introduction of a Bill to increase the borrowing powers of the Unemployment Fund by £10,000,000 to £50,000,000 during the deficiency period. As the fund has already borrowed up to £37,450,000, and as outgoings at the present level of unemployment are expected to exceed the revenue by about £275,000 per week, while interest payments in the neighbourhood of one million pounds fall due at the end of March and September, it is evident that the present limit of borrowing must very soon be exceeded. The wisdom of last year's Act, which was passed on the eve of a trade recession and has added to the strain upon the fund by increasing both the amount of benefit and the number of people eligible for it, is another matter.

Wool Wages Crisis.—The menace of a stoppage once more hangs over the wool textile industry. On Monday it was announced at a meeting of the Joint Industrial Council that, notwithstanding the recommendation of the National Union of Textile Workers that their members should bow to an unpleasant necessity, the result of the ballot vote taken by all the unions concerned was a majority of over seven to two against acceptance of the modified wage reduction recommended by Lord Macmillan and accordingly pressed by the employers. On Wednesday a meeting of federated firms in all sections of the industry decided to post notices of reductions in accordance with Lord Macmillan's findings. In response to this decision the secretary of the operatives' side of the Joint Industrial Council stated that, when notices were posted, the unions, having regard to the results of their ballots, would give instructions to cease work. The deadlock is thus complete, and an accommodating spirit among the operatives is unlikely to be engendered by the wording of the employers' official *communiqué*, which announced that the resolution to post notices was carried "with the greatest enthusiasm." Though the employers doubtless desired to impress on the unions that there would not be a repetition of the vacillation and lack of unity which characterised their attempts to secure a wage reduction last year, "enthusiasm" in this connection would be a revolting sentiment, and the phrase was as tactless as, we trust, it was misleading. The attitude, however, which the operatives have taken up appears to us to be indefensible. Though a 9 per cent. wage reduction, as we have said (*Economist*, March 15th, p. 574), seems unlikely to be sufficient, without concerted measures of rationalisation, to solve the industry's problems, some immediate alleviation of the present financial strain is imperative; and though both sides were careful to point out in advance that Lord Macmillan's findings would not be legally binding, the operatives, faced originally by demands for a wage cut much more severe than that now proposed, did in effect assent to arbitration. To refuse now to accept the award is a policy not calculated to enhance the unions' prestige or to command public sympathy.

Lancashire and the Eight-Loom System.—Our Manchester correspondent writes:—Developments in the weaving section of the Lancashire cotton industry may result in labour difficulties in the near future. Twelve months ago the employers and the operatives in the Burnley district came to an agreement whereby ten firms started an experiment in production which provided for each firm to work four per cent. of their looms on the "eight looms per weaver" system. It was arranged that the looms should be run at a slower speed and the weavers have been assisted by extra hands in cloth carrying, weft carrying and oiling and cleaning. It was agreed that during the experiment the weavers should receive a fixed weekly wage of 50s., but this was reduced last summer, in accordance with the wages reduction of 6¼ per cent., to 46s. 10d. This new system has met with a considerable amount of success. The employers have been enabled to reduce their costs and the weavers have received higher wages, as under the old system of four looms the average was from 40s. to 42s. a week. The agreement was for twelve months, and the period expires at the beginning of next week. Negotiations have recently taken place between the two sides and the Burnley Operative Weavers' Association has handed over the negotiations with the employers to the Operative Weavers' Amalgamation. Employers have proposed to pay 50s. a week for eight looms, but the representatives of the workpeople have suggested a different arrangement which would give the operatives a wage of 55s. to 56s. a week. Early this month the Burnley Manufacturers' Association sent a *questionnaire* to the members, who were asked if they were in favour of adopting the system of running eight looms to a weaver, provided arrangements could be made without causing trouble with the operatives' association. They were also asked if they were willing to agree to steps being taken for the adoption of the new system even if arrangements could not be made with the operatives' association. It is understood that the replies have been almost unanimous in favour of pressing the demand. Amongst the operatives there is considerable uneasiness as to the effect of the proposed changes. The workpeople are being balloted on the question, and it is understood the result will be announced at a special meeting of the General Council of the Operative Weavers' Amalgamation to be held in Manchester this Saturday. In trade circles it is hoped that a satisfactory agreement will be reached. It is held that only by such methods can Lancashire expect to meet foreign competition. The change suggested is likely to cause some temporary displacement of labour, but employers are convinced that in due course the eight-loom system will result in a larger amount of total employment in the district.

The German Shipping Merger.—A correspondent writes:—The announcement of the merging of the two leading German shipping companies ends a long-standing maritime rivalry. The remarkable feat after the war of re-creating out of nothing a formidable mercantile fleet was accompanied by an increasing element of competition between Hamburg and Bremen. The announcement that the United States would release the proceeds from the liquidated German property brought a fresh stimulus to both groups, and on the strength of these prospects large building programmes were inaugurated; the Lloyd Company laid down the two super liners, Bremen and Europa; and the "Hapag" decided to concentrate on a smaller type of liner and on an expansion of freight tonnage. Both lines competed also in acquiring interests in supplementary lines, the North German Lloyd developing close relations with both the Hansa and the Hamburg South America line. Considerable shipbuilding interests also came under the control of the two leading groups. Competition was beginning to prove uneconomic, and informal negotiations with a view to ending the competition were opened in 1927 at the instigation of interested bankers, but broke down on account partly of personal and partly of technical difficulties. The struggle redoubled its fierceness; only last year the Lloyd torpedoed the North Atlantic pool conference while the Hapag obstructed the Lloyd's plans in Czechoslovakia. The delay in the return of the American liquidation funds and new difficulties in the international freight market eventually led to a reopening of negotiations. It is said that two bankers, Jacob Goldschmidt, head of the Darmstädter Bank in Berlin, and Herr Schroeder, of Bremen, brought about the reopening of conversations. The position of the banks is strong, for the bank debts of the shipping concerns are formidable, the "Hapag" showing six and a half million pounds and the Lloyd four and a half millions unconsolidated debts in their respective balance sheets. The success of the negotiations has been rather sudden, and has been known to be against the wishes of many leading personalities in both firms; it may therefore take some time before the letter of the new agreement will be animated by the spirit of active co-operation. The treaty which has now been announced as coming into force on April 15th provides for a fifty years' pooling of all profits, all vessels and services to be run under joint control, all property to be pooled, reserve and depreciation to be brought to approximately equal amounts, and equal dividends to be declared. The co-ordination of time tables, agencies and, to a great extent, publicity will lead to considerable economies. The pooling is to be carried out on a basis of absolute parity. At present the share capital of both concerns is roughly the same at 160 million marks, reserves of the "Hapag" being 18 million marks and of the Lloyd 30 million marks. The former has a fleet of about 1,700,000 tons, the latter of 935,000 tons. The concerns are to be continued as separate units, retaining name and flag as before. Separate boards will continue to sit in Hamburg and in Bremen under the control of a joint supreme board. The new merger comprises, with its two million tons fleet, about half the German mercantile marine. However, it is more than likely that the associated lines, notably the Hansa and Hamburg South America line, will soon join the group, and that it will thus eventually include about two-thirds of the total tonnage of German shipping. Fears have been voiced that the merger will lead to a freight monopoly to the disadvantage of the trade, but it is pointed out that international competition will prevent any undue exploitation of the position by the new combine. One of the effects of the merger will incidentally be a heavy curtailment of orders to the shipbuilders, and it is expected that fresh fusions will be necessary in this branch of the industry. The alliance will enable many ships to be withdrawn from lines hitherto competitive, and be used for the revival of a number of routes which were served by German lines before the war. The pooling of services will thus strongly increase German competition in international shipping. It would be surprising if this prospect did not lead to further efforts towards rationalisation in other countries.

British Sales to Australia.—In view of current discussions of Empire trade, special interest attaches to an analysis of Australia's imports given in his annual report* by the British Senior Trade Commissioner. The report covers the year ending August, 1929, but the latest year for which figures were available for this analysis was 1927-28. Merchandise imports in that year were £146,896,818, of which the United Kingdom sent 42.7 per cent. and other countries 57.3 per cent. The most important single competitor with this country is the United States, whose share has increased, with scarcely a break, from 11.9 per cent. in 1913 to 24.3 per cent. in 1928-29, while that of the United Kingdom has steadily diminished during the same period from 59.7 per cent. to 39 per cent. When £38,581,304 of Australia's imports have been excluded as consisting almost entirely of goods in which the United Kingdom is debarred by natural conditions from competing, her share in the remainder amounts to £62,261,126, or 57½ per cent. Dividing this portion further into "severely competitive" and "other," the British shares appear as 30 and 85 per cent. respectively. In the "severely competitive" section are many articles in which there seems to be no good reason why the United Kingdom should not play a larger part. The tariff has no doubt been responsible for a check to import trade in general, but it cannot be blamed for the comparative decline of British trade as compared with that of foreign countries. Mr. Dalton lays a large share of the blame for this on the failure of British manufacturers to realise that the London merchant engaged in Australian trade no longer plays his former part of direct seller, since the Australian department stores now, for the most part, do their own importing. It is therefore no longer enough to show samples in London, since "London shipping" no longer has authority to buy. One of the most essential developments in salesmanship is the maintenance of agents in Australia, who should preferably be Australians with an established connection, in order that samples and patterns may be available for the personal inspection of the Australian retailer.

France and Mesopotamian Oil.—Hopes are entertained in France (writes our Paris correspondent) that the question of the outlet of the pipeline which is to bring the French share of the Mesopotamian petrol to the Syrian coast is now on the eve of settlement. The reports of the three experts (French, British and American), who had the duty of considering, from a strictly commercial point of view, the various routes proposed for the pipeline have resulted in a detailed *questionnaire* being sent by the directors of the Irak Petroleum Company (formerly known as the Turkish Petroleum Company) to the French High Commissioner in Syria and the British High Commissioner in Palestine, in order to clear up certain points at issue. The fact that the delegate sent by the company to settle questions of detail on its behalf is the representative of the Compagnie Française des Pétroles on the expert commission concerned has given rise to a belief here that the French views as to the most suitable point for the Mediterranean end of the pipeline are likely to find acceptance. The British interests concerned, it will be remembered, desire that the pipeline should reach the sea at Haiffa, which is under the British mandate, while the French are anxious that Tripoli, which is under their own mandate, shall be selected. The pipeline question is a capital one for the French, as it appears to be the only obstacle now in the way of their obtaining delivery of their share of the Mesopotamian oil, of which they have been allotted some 23 per cent., like their British, American and Irak Petroleum Company partners. With their share of the Irak petroleum at their disposition, the French will be largely independent of American and other foreign supplies, and will thus be in a position to reduce substantially their existing deficit balance of trade.

The Currency of Hong Kong.—The review of conditions in China contained in the speech of the chairman of the Hong Kong and Shanghai Bank (which is reported in full on another page) presents a gloomy picture of conditions in that country. While acknowledgment was made of the Nanking Government's success in surviving three serious crises, it seemed to the chairman very doubtful whether the position of the Government had been strengthened, and he thought that the political events of 1929 had proved how vain were the hopes that the Nationalist victory towards the end of 1928 meant the abolition of all the old disruptive forces of the country. The section of the speech, however, which commanded the closest attention of the audience was that dealing with the slump in the price of silver and its reaction upon the currency of Hong Kong. An authoritative opinion to the effect that there is little prospect of any appreciable recovery in the price of silver, taking into account all the factors which have led to the present excess of supply over demand, forces one to realise the futility of suspending business operations in the hope of a return to a more favourable rate of exchange. A decline of 25 per cent. in the exchange value of the dollar during the course of a year is undoubtedly a serious matter which is bound to restrict, for a time, imports from gold countries. Nevertheless, depreciation of this magnitude has been faced before, and, while it may cause some measure of dislocation, trade will ultimately adjust itself to a lower level of exchange. Of greater moment to the business interests of Hong Kong is the position of the local currency *vis-à-vis* the currency of South China. On this point the chairman of the bank was somewhat vague. He referred to the decision of the banks of the colony to bring the currency back to a silver basis, whereby silver dollars were put into circulation, but he did not mention that parity with silver has never actually been reached, so that Hong Kong notes are still at a premium above

their silver content. As there is no demand for these newly minted dollars in the neighbouring provinces, with which Hong Kong trade interests are so closely identified, the question arises whether the time has not come for Hong Kong to adopt a gold currency basis.

Hitherto this proposal has been condemned on the ground that Hong Kong is bound to follow Chinese currency, and as long as that remains on a silver basis Hong Kong cannot make a change; but the recent adoption of a gold standard by French Indo-China suggests that the question of reforming the currency of Hong Kong might very well be reconsidered.

INSURANCE NOTES.

Merchants' Marine Insurance Company.—This company, whose shares are owned by the Employers' Liability, is an old-established concern founded in 1871. The share capital was acquired by the Employers' Liability in 1921 for £750,000, but successive writings down to £125,000 have been necessary, in addition to which a further £343,000 has been set aside as an investment reserve to provide for further losses. The parlous condition of the Merchants' Marine and the consequent drain upon the resources of the Employers' Liability are a conspicuous example of the tragic state of marine insurance. Two years ago, however, the situation was taken in hand and drastic changes were made. In pursuance of this policy the premium income has been curtailed, and the first fruits are seen in the results of the 1928 underwriting account, namely, a greatly reduced loss of £40,000. The final outcomes of the last six underwriting accounts have been as follows:—

Underwriting Account:	Loss. £
1923	85,000
1924	101,253
1925	96,743
1926	187,411
1927	175,776
1928	40,000

The 1929 account shows premiums of £286,000, compared with £368,000 in 1928, and the balance remaining after meeting expenses and first year's claims is equal to 60 per cent. of the premiums, against 63 per cent. in 1928. This result justifies the directors in the hope "that the underwriting account of 1929 will approximately balance." In addition to the marine business there is a small fire and general account with premiums of £63,000, which produced in 1929 a loss of £2,000, compared with a profit of £6,500 in the previous year.

London Life Association.—The London Life, as it is now constituted, is the result of the fusion of three distinct companies, the London Life, the Clergy Mutual, absorbed in 1919, and the Metropolitan, added in 1928. The combination is a powerful one, controlling funds in excess of £21 million and transacting a new life business amounting to nearly £3 million per annum. It has won this position for itself on merits and without the aid—or rather in spite of the absence—of an agency organisation remunerated by commission; for it is well known that the association pays no commission whatever. The year 1929 was the first complete year since the recent absorption of the Metropolitan, and the exploitation of this new connection has yielded a greatly increased new business in every department—life, annuity and sinking fund. Life business totalled £2,927,608, compared with £2,502,925 in 1928, new annuities for £125,224 were issued, compared with £95,977, and new sinking fund policies for £611,163 were completed, compared with £219,978. Moreover this was achieved without increasing the expense ratio, which remained at the same figure, namely 5.6 per cent. of the total premium income. On the investment side interest earnings were fractionally lower at £4 11s. 11d. per cent. net. The capital position is disclosed with commendable frankness. The association suffered depreciation during 1929 amounting to £675,055, but realised profits reduce the net loss to £519,894. This latter figure is equal to about 8 per cent. of the Stock Exchange securities and to 2¼ per cent. of the total funds—a result which cannot be considered unsatisfactory in a year of universal depreciation such as 1929. The usual annual valuation of the liabilities of all three offices has been made and the results of that relating to the London Life are as follows:—

Reduction of Premiums Fund.

	1927. £	1928. £	1929. £
Surplus earned during the year	143,601	153,361	164,551
Investment profits realised	37,156	25,523	77,393
Brought forward from previous year	20,982	33,450	34,076
	201,739	212,334	276,020
Allocations:			
Strengthening of valuation reserves	18,144	21,244	33,693
Provision for increase in rates of reduction of premium	115,365	121,044	129,060
Investment reserve fund	34,780	22,831	77,687
Staff superannuation fund	...	13,138	3,581
Carried forward to next year	33,450	34,077	31,999
	£201,739	£212,334	£276,020

The profits earned in this fund are allotted in the form of reductions of the full rates of premium payable, and the provision made for this purpose has again permitted an increase of 3 in the rate of reduction, which now, therefore, ranges from 136 per cent. in the oldest series to 51 per cent. in the current series. But, as was foreshadowed last year, these favourable terms can no longer be extended to new entrants and a new series is to be created with a commencing rate of reduction of 46 per cent.

Reversionary Bonus Fund.

	1927. £	1928. £	1929. £
Surplus earned during the year	121,649	128,536	166,438
Investment profits realised	8,639	6,666	23,013
Brought forward from previous year	12,691	7,751	20,438
	142,979	142,953	209,889
Allocations:			
Bonuses to policy holders	90,846	108,675	122,667
Valuation reserves	33,874	...	29,794
Investment reserve fund	10,508	8,972	28,463
Staff superannuation fund	...	4,868	1,317
Carried forward to next year	7,751	20,438	27,648
	£142,979	£142,953	£209,889

The reversionary bonus for "with profits" policies has been maintained at the rate to which it was raised last year, namely 40s. per cent. compound. The valuations made of the Clergy Mutual and of the Metropolitan show them to be at least as prosperous as the parent company. The year just passed marks the centenary of the Clergy Mutual and the event has been signalised by the distribution of a special reversionary bonus of £1 per cent. in addition to the normal bonuses.

Marine and General Life Assurance Society.—In spite of the fact that 1929 was the closing year of a quinquennial valuation period, this society's volume of new business showed a reduction from £380,911 to £333,606, this being the second successive year in which the total had failed to register an increase. The society is the smallest among the mutual offices, and the slow rate of expansion has evidently disappointed expectations quite legitimately founded on the undoubted merits of its contracts. During his remarks at the recent annual meeting the chairman played upon the familiar theme of whole-life assurances versus endowment assurances, and bewailed the popularity of the latter. "Whereas in 1913," he said, "whole-life policies formed 60 per cent. of the total of assurances in force in British offices, the percentage to-day is under 40, the average amount of a whole-life policy being £500 and of an endowment £200 only, and the premium for either policy being about the same," and he went on to make the point that £200 is a wholly inadequate amount of cover, and that it would be a much sounder proposition to spend the same premium in providing the larger policy for £500. As regards the quinquennial actuarial valuation, a change has been made in the basis hitherto adopted for the annuities in the direction of employing a more stringent mortality table, though at 4 per cent. interest

instead of 3 per cent. The results of the past two valuations are as follows:—

Marine and General.

	1920–1924. £	1925–1929. £
Surplus earned during quinquennium	300,225	474,785
Investment profits taken credit for	17,233	...
Brought forward from previous valuations	1,400	15,616
	318,858	490,401
Allocations:		
To bonuses to policyholders	303,242	406,753
Carried forward to next valuation	15,616	83,648
	318,858	490,401

The increase in the surplus earned is in part a reflection of the larger volume of existing business, but is due also to more favourable interest earnings and to lower expenses. As a result of greater prosperity the reversionary bonus to the with-profits policyholders has been increased, and the increased distribution still leaves a comfortable margin of earnings in contradistinction to the position five years earlier. In allotting the bonuses the society has adopted the now familiar plan of granting differential rates as between whole-life and endowment assurances. On this occasion the rates are as follows:—

	Per cent. compound per annum.
Whole-life assurances	50/–
Endowment assurances:	
Original term 30 years or over	50/–
„ „ 20 years to 29 years	48/–
„ „ under 20 years	46/–

Five years ago the bonus declared was a compound reversionary rate of 40s. per cent. per annum.

Norwich Union Fire Insurance Society.—Over the period of the last five years it is curious to observe that, the general department excepted, the total premium income of this society shows an actual decline. The exception in the general department is accounted for by the fact that a large proportion of this business is transacted by subsidiaries. The beginning of this period coincides with the acquisition of control by the Norwich Union Life Society from the Phœnix, and it might have been expected that the exploitation of the life connections would have furnished additional income, the more so, indeed, as, this company being a mutual company, all profits of the fire company go to enhance the bonus of the life company's policies. Although the premium income has failed to show expansion the underwriting results have been remarkably stable, and those for 1929 no less so than for previous years. This result in 1929 has been achieved in spite of a poor fire account, and is owing to improved employers' liability figures and to a less unfavourable outcome of the marine department. The details of the past two years are as follows:—

	1928 Surplus. Amount. £	1928 Surplus. Percentage of Premiums. %	1929 Surplus. Amount. £	1929 Surplus. Percentage of Premiums. %
Fire	144,847	6·4	100,333	4·6
Personal accident	3,045	2·3	2,287	1·8
Employers' liability	3,283	1·3	17,681	7·0
General	56,857	4·0	61,372	4·0
Marine	–16,805	–8·4	–5,280	–2·7
	191,227		176,393	
Less taxes, etc.	67,824		46,411	
Total net surplus	123,403		129,982	

Interest earnings show a customary increase, and, after allowing for debenture interest, amount to £190,168, this being some £20,000 short of the sum required to meet the usual dividend of £6 per share. The Norwich Union Life has exercised a wise restraint in resisting the temptation to pay larger dividends before strengthening the fire company's resources. On this occasion a sum has again been applied towards paying up some part of the uncalled liability, which will then amount to but £1 on each of the 44,000 shares of £25. The extinction of the remaining balance should be easily within the capacity of the 1930 profits.

Life Association of Scotland.—Exact comparison with the previous year's accounts of this office is precluded by the fact that the last report covered a broken period from April 6, 1928, to December 31, 1928. But it is clear that the new business organisation has produced a greatly enlarged volume of business. In 1929, new business totalled £1,133,540, a figure which compares well with that for the last complete year (April 6, 1927, to April 5, 1928), namely, £961,699. Interest earnings worked out for last year at £4 12s. 11d. per cent. net, compared with £4 11s. 6d. per cent. net, though, in spite of the increase, the rate is still rather below the average of other comparable offices. The next periodical valuation and distribution of bonuses is due to take place at the end of this year, and will be made in respect of the 4¾ years from April 6, 1926. The company has a small paid-up share capital of £87,500, consisting of £40 shares, each with £8 15s. paid up. The dividend was raised a year ago to 32s. 6d. per share, and the price is now £37, compared with £44 at this time last year.

Abstainers' and General Insurance Company.—This company, whose head office is centred in Birmingham, transacts a considerable volume of ordinary life business and a small fire and general account amongst the lower middle classes. The 1929 balance sheet again shows that the greater part of the increase in the funds has been invested in mortgages on properties, from which source much of the business is derived both in the form of life policies and in fire and accident insurances. A complete list of the Stock Exchange securities is furnished in the report, and it is evident from this that the company pursues a very inactive policy, one security only in the list having been sold during 1929. In view of the recent phenomenal improvement in long-term gilt-edged stocks it is noticeable that nearly one-half of the total holding of £656,000 British Government securities is in the form of 5 per cent. War Loan, which has participated only to a relatively small extent in the general rise. New life business in 1929 was transacted for a total of £790,288, compared with £794,482 in 1928. In addition, there was a fire and general premium income amounting to £41,791, as compared with £35,844 in 1928, and in respect of this total a net surplus of £2,517 was earned. The triennial valuation of the liabilities of the life department was made, and the results of this for the last two trienniums are as follows:—

	1924–26. £	1927–29. £
Surplus earned from trading during triennium	201,213	225,736
Investment profits realised	12,124	– 18,096
Brought forward from previous triennium	27,229	1,824
	240,566	209,464
Allocations:—		
To Bonuses to policyholders	153,173	205,947
„ Strengthening of reserves	57,000	...
„ Investment reserve fund	11,319	– 18,522
„ Staff pension fund	10,000	5,000
„ Shareholders' account	7,250	10,000
„ Carried forward to next triennium	1,824	7,039
	£240,566	£209,464

The rate of reversionary bonus has been raised from 34s. per cent. for the triennium 1924-26 to 40s. per cent. for whole-life assurances and 38s. per cent. for endowment assurances for the triennium just ended. It will be observed that the cost of this increased bonus absorbs a considerably higher percentage of the total trading surplus than before.

Scottish Widows' Fund.—A new and attractive general prospectus has just been published by the Scottish Widows, and it contains, as foreshadowed by the chairman in his recent speech at the annual meeting, the revised rates for whole-life with-profits assurances. Specimens of these rates and of those which they replace are as follows:—

Age at Entry.	Old Rates. £ s. d.	New Rates. £ s. d.
25	2 6 6	2 3 10
35	2 18 2	2 16 3
45	3 16 4	3 16 4
55	5 12 4	5 10 3

The reductions exemplified by the above specimens are appreciable, and the society's new rates are brought down to about the level of the average charged by other comparable offices. It is evident that the society attaches importance to the fostering of whole-life assurances instead of endowment insurances, and that it intends to make a determined attempt to cultivate this class of business.

Overseas Correspondence.

UNITED STATES.

Industry — Foreign Trade — Money — Farm Board — Tariff — Reparations.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 14.

ACTIVE pursuit of a cheap money policy by the Federal Reserve authorities, culminating this week in a 3½ per cent. discount rate at New York and an all-round weakening of interest rates, focuses attention on the unsatisfactory state of trade. Here and there some improvement in business is discernible, but on the whole activity is not much greater than it was a month ago.

March is usually the best month of the year for the steel industry, but the operating rate is about 75 per cent. of capacity, against 80 per cent. a fortnight ago. Motor-car output has not increased, and will turn out to be rather low for this month, although producers are confident that buying next month will be good and that the used car situation will shortly show great improvement. Cotton consumption in February was sharply lower than in January and in February of last year. Rubber used by the tyre factories also reflected the slowdown in the motor industry, and the copper statistics for February revealed a gain of 29,000 tons in surplus refined metal. Another increase in stocks is expected for March. Producers are still confident that they can hold the price at 18 cents, and easier money will help them to do so; but it is still an open question whether the price, admittedly too high, will not have to come down. Railroad traffic continues to run lower than for this season in any year since 1924 or 1925, and net earnings of the roads in February was 28 per cent. lower than last year. On the other hand, less is heard of unemployment, and outdoor work has already begun in the farming country. It is safe to say that the worst of the business recession has been seen, but recovery promises to be slow.

Foreign trade figures for February show a sharp decline, both in exports and imports, but the export excess was still large. Exports at $351 million were $90 million below those of last year and, with the exception of July, 1927, were the lowest since March, 1924, when the country was experiencing a business recession. Imports of $281 million were $88 million below last year, and also were the smallest since early in 1924. The trade figures summarise the gold movement of the first two months and show a net gain of $63 million. Since the beginning of March a good deal of gold has come from Japan and Brazil, and releases from earmark at the Federal Reserve Bank since January 1st have added nearly $25,000,000 to our net gain. Including metal reported on the way from the Far East and South America, it is likely that our net increase for the first quarter will be at least $150 million.

Gold imports are thus adding their share to easier money conditions. Slack trade and falling commodity prices are doing even more, and finally the Federal Reserve, it is believed, is preparing to increase its outstanding credit. This week's statement reveals Reserve Bank purchases of $72 million of Government bonds, which was not quite enough to offset reduction in member bank borrowings and a decline in bill holdings, owing to heavy maturities, so that total earning assets of the system dropped to $1,049,000,000, as compared with $1,421,000,000 a year ago, and the ratio rose to 80.8 per cent. With member bank indebtedness negligible, clearly there is no reason why the Reserve should not assist the money market. At this writing it has not reduced its buying rate for bills to meet the latest (and fifth within a week) cut in dealers' asking rates, but it is expected to do so. It is believed that the Reserve authorities are willing to go as low as 3 per cent. with the discount rate if necessary to help trade recovery.

Treasury financing over the tax date is a contributing factor to the current ease in money, which is marked by call money at 2½ per cent. outside the Stock Exchange and 4 per cent. for time money and commercial bills. Bankers' bills are 3⅛ per cent. asked for 90-day maturities. The Treasury offering of $450 million of certificates met with subscriptions of $1,290,000,000, of which $483.8 million was allotted, and the issue, which bore a 3¼ per cent. coupon, went to a premium. To-day the Treasury meets maturities of $405 million in notes and on Monday has to pay off $100 million in Treasury bills sold last December. The overdraft at the Reserve Banks to provide for immediate needs pending collection of first quarter income tax cheques was approximately $200 million. This addition to member bank reserves was anticipated yesterday and was partly responsible for the extreme ease in call funds. Tax collections this quarter are expected to fall below those of a year ago, and lower revenues from that source, together with increasing demands on the Treasury made by the Farm Board, are making it probable that the income tax rate will have to be raised next year.

In addition to its original appropriation of $150 millions the Farm Board has secured an additional $100 millions, and the end is not yet, nor has the price of wheat or cotton been raised. Few people at Washington appear to have the courage to withstand the demands of the western congressmen for appropriations, although members of the Farm Board themselves recognise the futility of attempting to raise the world price of wheat by piling up an unsold surplus here, carried by Government money. This summer's harvest promises to be larger than last year's.

The prospect for passage of a tariff is somewhat brighter with the defeat of the Democratic-Progressive Republican coalition on questions of reconsideration of the sugar, tobacco and cement duties. Optimists are predicting a bill ready for President Hoover's signature by the end of April. It is now fairly certain that the bill will contain considerably higher rates for a great many important commodities.

Bankers here were gratified with the selection of Dr. Luther to head the Reichsbank and the ratification by Germany of the Young Plan. However, it is not believed that a reparation bond issue can be floated before June 1st. Writing in the current number of *Foreign Affairs*, Mr Thomas W. Lamont, after noting that the total amount of reparation bonds which can be offered the public will not be greater than $2,000 to $2,250 million, and that the first offering may be approximately $300 million, says:

> "It is not improbable that these are the only reparations bonds that the American investment markets will ever have a chance to offer—an amount far below the fantastic figures which some of our headline writers have for several years been predicting would be 'dumped' on the American market."

Referring to alleged opposition by Washington to the Bank for International Settlements, Mr Lamont writes that President Hoover and Secretary Stimson "would be among the last persons in the world to attempt to turn back the hands of the clock and to declare the international banking co-operation which has been an immense contribution to American prosperity shall never be again." Admitting that there is no legal connection between German reparations payments and foreign debt payments to this country, Mr Lamont points out that in fact there is close connection, and that during fifty-eight years Germany will pay her creditors $9,000 million and the creditors will be paying the United States $6,000 million, "an economic link that it would be hard to ignore," and, he adds: "Whether we like it or not, Germany has underwritten the debts of the Allied governments to our Government."

FRANCE.

Budget — Young Plan — Tax Relief—Money—Foreign Trade — Tourist Traffic.

(FROM OUR CORRESPONDENT.)

PARIS, March 26.

THE Senate, after five sittings devoted to the general discussion of the Budget and the departmental expenditure of the Ministry for Foreign Affairs, this morning disposed of the Colonial Office Estimates and took up the Army Estimates. With barely five days left before the beginning of the new financial year, this is regarded as ominous, and the feeling is growing that, in spite of the fact that an extra three months has already been given in which to dispose of the annual Finance Bill, resort to at least one *douzième provisoire* now appears to be inevitable. An agreement is stated to have been arrived at between the Senate Finance Commission and the Government on most of the points at issue, but it is practically certain that all M. Tardieu's driving force will be necessary if the two Houses, in their present temper, are to be induced to get the Budget passed into law before midnight on Monday next. Party political cross-currents are largely responsible for the delay, and it is still quite possible that the Government may have some difficulty in assuring a majority for its Finance Bill. The whole situation is incoherent, and anything may happen between now and a week hence.

A similar situation prevails in regard to the ratification of the Young Reparation Plan and cognate decisions of the Hague Conference. The Parliamentary groups have been repeatedly in conference as to the line they should take in regard to ratification, and here, too, the situation of the Ministry is by no means assured. The Socialists assert that they have decided, by a majority, to vote for ratification, even if M. Tardieu makes the question one of confidence in the Government. Sceptics, however, are inclined to take this notification with a grain of salt. It is recalled that, before the first appearance of the short-lived Chautemps Cabinet before the Chamber, M. Léon Blum and his followers decided not to extend their support to the new Ministry—and subsequently voted solidly for it. The Marin Nationalists, on the other hand, are known to be divided in regard to certain points in the Hague decisions. Finally, the attitude of the Radical Socialists remains more than doubtful. With only six weeks left before the issue of the first portion of the international reparations loan is due, the whole situation is daily becoming increasingly difficult. One important factor in connection with the issue of the French part of the loan is the question whether the scrip offered here is to carry the same burden of taxation as ordinary French issues, or to be granted some kind of special exemption in this respect. Rentes and certain other public funds are exempt from taxation, and it would seem reasonable that, from the nature of the issue itself, the new loan should be similarly privileged, in order to facilitate dealings in it in the international market. This, however, would involve a special modification of the existing law, which might be included in the Bill which is to be introduced, immediately the Budget is disposed of, for the purpose of bringing about taxation relief and particularly in regard to the imposts on securities and on Bourse operations.

Unofficial statements are in circulation to the effect that the relief proposed will total about 1,500,000,000 francs, of which 1,000,000,000 francs will apply to the two categories of imposts just mentioned. The taxes on Bourse operations, it is asserted, are to be reduced by 50 per cent.; but so far no mention has been made of any modification in the incidence of the *tax de transmission*, which is generally regarded as the prime cause of the ordinary investor's desertion of the Bourse during the past twelve months. In 1929 taxes on securities and Bourse operations yielded a total of 5,750,000,000 francs. Of this, 3,855,000,000 francs represented income tax alone—18 per cent. on coupons of French issue and 25 per cent. on dividend payment of foreign issues circulating here. The actual relief to investors, therefore, if the total is to amount to the 1,000 millions asserted, would not be more than 20 per cent., and a good deal less if no modification is made in the (sometimes cumulative) transfer tax. On the other hand, the reduction of 20 per cent. accorded last August in registration duties on sales of building properties has already been more than compensated for by increased yields.

Money rates continue to go lower. Day-to-day money, which a week ago ruled at 2½ per cent., and has since stood at 2¼ per cent., was to-day unable to find employment at that level. The private discount rate has dropped below 2⅜ per cent., and the banks are finding it difficult to secure more than a very small supply of commercial paper even at that figure. Money rates, it is generally believed here, will not reach their lowest level until May. No further bank rate reductions, either in Paris, London or New York, are expected here until at least after the end of this month. Issues of mortgage bonds continue in large volume, and many more are foreshadowed. January and February issues of these descriptions totalled 3,817 millions, and the March total is expected to be around 2,000,000,000 francs, which will bring the total for the past 15 months to over £100,000,000. This week's issues include 10,000,000 francs 4½ per cent. 25-year bonds by Chargeurs Réunis, 50,000,000 francs 4½ per cent. 30-year bonds by Saint Frères (linen, hemp and jute), 100,000,000 francs 5 per cent. 37-year bonds by Voitures à Paris and several other large issues, most yields being "demi-net" (free of all imposts except transfer tax).

The foreign trade returns for February are:—Imports, 4,807,926,000 francs (or about 30,000,000 francs more than in January), and exports, 4,017,787,000 francs (an increase of 303,000,000 francs on the month), as compared with 5,149,000,000 francs and 4,113,172,000 francs in February, 1929. The month's exchanges show a deficit of 790,139,000 francs as compared with an adverse balance of 1,063,000,000 francs in January. The figures for the first two months of the year show a total adverse balance of 1,853,000,000 francs, which would be equivalent to about 20 per cent. of the total imports, as compared with a deficit of about 30 per cent. in the corresponding period of 1913. None of these figures confirm the curious general belief which appears to prevail here to the effect that during recent months the economic situation has changed for the worse. Production figures remain steady, and all other factors suggest that the general situation is sound.

According to figures compiled by M. Vallat, director of the Office National du Tourisme, the Government organisation for the development of tourist traffic in this country, "invisible exports" of this kind represented a total revenue to France in 1929 of 15,000,000,000 francs (about £121,000,000). These receipts, M. Vallat estimates, were divided in about equal thirds between (1) the Paris hotels and luxury trades, (2) the casino towns and other pleasure resorts of the country, and (3) the ports and excursion centres. British visitors to France far outnumbered those of any other nation, with a grand total of 759,359 persons (exclusive of 121,686 "special excursionists" who visited the war graveyards, and of tourists in transit to Italy, Spain and other points). Spaniards (534,000) and North Americans (220,000) came next in order. M. Vallat's estimate that the 220,000 American tourists spent an average of $2,200 each in the country, however, appears to be questionable.

GERMANY.

Shipping Merger — Interest Rates — Polish Treaty — Agricultural Policy.

(FROM OUR CORRESPONDENT.)

BERLIN, March 25.

THE great economic event of the past week was the combination of the two leading German shipping companies—the Hamburg-America (Hapag) and the North German Lloyd. Negotiations had been going on for years between these two old competitors, and it was often prophesied that an agreement was about to be reached, but every time the negotiations broke down. The new agreement

amounts in practice to a fusion; the two companies remain only formally separate in order that the old names shall continue to exercise their proved drawing power on both public and shippers. But a joint directorate, composed of two leading personages from each company, will conduct their affairs along the same lines, and profits will be reckoned together, so that each company will in future be able to declare the same dividend. The result of the new agreement will be a uniform navigating schedule in international traffic and joint representation in dealing with foreign competitors, although two different flags will still be carried.

The negotiations were facilitated by the fact that both concerns are of about the same proportions. The Lloyd has a capital of 165 million marks, the Hapag of 160 millions, while loans and other long-term obligations of the Lloyd amount to roundly 100 millions and of the Hapag to 140 millions. This difference is compensated for by the fact that the Lloyd can look for receipts of about 100 million marks when property sequestrated in America is released, while the Hapag has claims from the same source aggregating nearly 150 millions. The Lloyd's fleet, including new ships that will be ready this year, comprises 942,000 gross register tons, that of the Hapag 1,100,000 tons, and the value of the two fleets is about equal, since the Lloyd's three great trans-Atlantic ships represent a particularly great value. Passenger traffic between Germany and North America makes up the chief item in the Lloyd's business, whereas freight traffic is more important for the Hapag—another factor that facilitated the fusion.

Two very important reasons are responsible for the fact that it was so difficult to carry the negotiations through. Through the placing in service of the two gigantic steamers "Europe" and "Bremen" the Lloyd secured an advantage which the Hapag was not willing to accept as a basis for the negotiations. As long as a year ago the Hapag demanded, as a condition precedent for the combination, that one of the new ships must sail under its name. Now, under the pressure of foreign competition and in view of the increased difficulties of earning profits for the existing fleet, the Hapag surrendered without an equivalent the idea of building new ships to compete with the new Lloyd vessels. It was more difficult to reach a compromise on one other point. For decades the Hapag has been connected with Hamburg's economic life and the Hamburg port, and the Lloyd in like manner with Bremen. That the mutual jealousy and desire for independence of the two companies were overcome is due to the co-operation and doubtless also to the considerable financial pressure of certain bankers. Almost the entire German shipping business is now under uniform direction, a fact that will hardly work out to the disadvantage of German shippers, since the competition of foreign shipping concerns in the German ports and also in the nearby port of Amsterdam is very strong.

Following the lead of the most recent decisions of the Bank of England and the Federal Reserve Bank of New York, the Reichsbank on March 24th put into effect its fourth reduction of the discount rate for this year. The new rate of 5 per cent. has been in effect only once since the stabilisation of the mark—at the beginning of 1927. It contrasts sharply with the interest rates that are being paid to satisfy Germany's urgent long-term money requirements. Even in the last few weeks from 10 to 11 per cent. has been paid for mortgages on new buildings and for credits to municipalities—both, in view of the great shortage of dwellings and the heavy municipal indebtedness in Germany, the two chief sources of the demand for money. Only in the last few days have there been signs of an improvement. But recently the quotations for German domestic loans—state and municipal obligations, mortgage bank certificates, etc.—gave a yield of from 9 to 9½ per cent. Now 7 per cent. state loans have risen to about 82 and 8 per cent. loans to 90, and in part even higher. A further rise in German bonds is looked for, and the interest of the Bourse in them is much stronger than in stocks, which are completely neglected. The Reichsbank itself gives striking expression to the discrepancy between its lowered discount rate and Germany's capital shortage when it says, in its official notice of the rate reduction:—

"The German public will have to realise that a rate of 5 per cent. does not correspond with the domestic money and capital situation in Germany, and that not the least of our reasons is the compulsion exercised by the pressure due to low rates abroad (imports of gold, etc.), to adjust ourselves to the foreign rates for money."

President von Hindenburg, as was to be expected, ultimately signed the treaty of liquidation with Poland. But, as in connection with the signing of the Young Plan, he again gave his reasons in full in a letter directed to the Chancellor but intended for the public. In this he states that his signature was conditional on the carrying through by the Government of a great programme to aid the eastern provinces of Germany. The agricultural crisis in these districts has become so catastrophic that thousands of farmers must become bankrupt in the next few months if they are not helped by the State. East Prussia is doubly affected, first by being cut off from the rest of Germany by the Polish Corridor, and second by the fall in the price of rye, which forms the basis of East Prussian farming. In addition to this is the fact that big estates predominate in the eastern districts, and these are so heavily in debt that the interest charges are crushing them. President von Hindenburg requests the Government to appropriate large sums to be employed in helping the landowners to pay their interest and thus in making it possible for them to hold their property. If this be not done, there is no way of checking the emigration of great numbers of people from these provinces.

In response to this appeal the Government has presented a so-called "eastern programme," which provides for appropriations of more than 300 million marks to be used in the next ten years. The money is to be used for interest payments, reductions of taxes, freight rebates and amortisation. In addition, railways and streets are to be improved and electric current made more widely available. Before this programme is approved by the Reichstag that body will have to consider a sharp increase of import duties on agricultural products. This will be the third within nine months. The critical development of grain prices on the world market, and especially the danger of dumping by America and Canada, compels Germany to take more and more drastic and far-reaching measures. But these increases of duties are also a danger for wide circles of the German agriculturists themselves. In the main they favour the raising of cereals, but they burden cattle raising and the production of butter and eggs, since the German farmers who have to buy fodder grain have to pay about twice as much for it as do their competitors in Denmark and Holland. In this respect the interests of the German west and the east lie far apart. But no one knows how long this crisis in grain prices will last, since it is impossible to foresee the Canadian and American price policies, and in the meantime it is impossible to permit the whole German east to be ruined.

ITALY.

Exchange Payments — Bank of Italy — Prices — Foreign Trade — Bourses.

(FROM OUR CORRESPONDENT.)

TURIN, MARCH 13.

EXCHEQUER payments on account of effective expenditure exceeded receipts by 1,492.6 million lire in January, chiefly owing to the fact that payment of interest on Consols and other State debts was made this year in January, when it fell due, instead of being made in advance in December. As the result, cash in the Treasury, which had diminished from 2,352 million lire at June 30, 1929, to 2,241.2 at December 31, decreased further to 1,208.4 at January 31, 1930, while Treasury floating debts rose by 459.8 million lire. Usually the situation of the Treasury improves in spring, but the closest supervision will be necessary if the growth in expenditure, against which Treasury and parliamentary Budget committees alike are expostulating, is to be checked.

If the Treasury situation is somewhat strained, the position of the Bank of Italy continues to be easy. Comparing the figures at December 31, 1927 (the first balance sheet published after stabilisation), March 31, 1928 (the time of maximum total reserves), December 31, 1929 (when discounts and advances were at their maximum) and February 20, 1930 (last balance sheet published), we obtain the following table (in million lire):—

	Dec. 31, 1927.	Mar. 31, 1928.	Dec. 31, 1929.	Feb. 20, 1930.
ASSETS:				
Gold	4,547·1	4,660·5	5,190·1	5,189·8
Other gold exchange reserves	7,558·8	7,855·6	5,151·1	4,790·4
Total reserves	12,105·9	12,516·1	10,341·2	9,980·2
Discounts, advances and day-to-day prolongations	5,520·0	3,911·7	6,233·7	4,384
Other debtors	769·9	1,021·3	722·6	1,336·5
LIABILITIES:				
Notes issued	17,992·2	17,264·8	16,774·3	15,716·8
Circular cheques	657·3	604·6	602·8	409
Private deposits	2,066·7	3,022·6	1,082·1	1,569·2
Treasury deposits	1,105·7	181·5	1,788·6	959·5
Other creditors	1,435·7	968·5	1,058·1	894·9

The outstanding fact is the decrease in the gold exchange reserves from the maximum of 7,855.6 million lire at March 31, 1928, to 4,790.4 million at February 20, 1930, a decrease only partly counterbalanced by the increase in the gold proper from 4,660.5 to 5,189.8 millions, leaving a net decrease in the total reserve of 2,535.9 million lire. Against this, there is, however, as a set-off, the decrease, between the same dates, of 1,548 million lire in the notes issued and of 1,453.4 million lire in the private deposits. Nor are there symptoms of credit inflation, as discounts, advances and day-to-day loans, after going up at the end of December, fell sharply again. Treasury accounts are the most erratic items in the balance sheet; their variations seem to follow those of the discounts, etc., item. Nobody knows anything about "other" debtors and creditors; an hypothesis put forward in Signor Mazzuchelli's monthly reviews in *Revista Bancaria* (perhaps the most eagerly scanned financial article in Italy) being that "other" debtors includes a secondary or hidden gold exchange reserve.

These figures suggest that the deflationist policy is ruthlessly persisted in. One result at least has been reached: the decrease of wholesale prices. According to Professor Bachi the average price index for 49 imported commodities decreased from 631.8 for 1926 to 492 for 1927, to 454 for 1928, to 454.4 for 1929 and 453.3 for January, 1930. The indices for 95 commodities produced and consumed in the country were, respectively, 595.8, 505.7, 477.6, 447.9 and 416, and those for 33 exported commodities: 550.3, 462.5, 438.5, 406.6 and 352.7. Thus wholesale prices are falling rapidly; so rapidly that in February gold prices (on the 1913 basis), according to the Milan Provincial Economic Council, were only 120.8 against 122 in England, 129.8 in Germany and 140.9 in the U.S.A. Export prices are, moreover, much lower than import and internal prices, a circumstance which should pave the way to an increase of exports. Exports, indeed, in 1929 were 329.8 million lire higher than in 1928, and imports 620.4 million lire lower, so that there was a decrease in the trade import excess of 950 million lire. But as the cereal import item alone decreased by 1,413 million lire, it appears that other items contributed an increase in the import balance of 463 million lire. In consequence, industrialists and merchants are complaining that lower prices are not bringing the usual compensation of increased exports. Unemployment in agriculture rose from 89,804 at the end of October, 1929, to 145,342 at the end of January, 1930, but in the preceding year the increase was greater—from 75,473 to 170,444. In all other branches of employment (industry, trade, etc.) unemployment rose from 207,578 at the end of October, 1929, to 320,889 at the end of January, 1930, against an increase from 206,906 to 291,445 in the preceding year. Employment appears thus to be improving in agriculture and slackening in industry and trade.

The announcement by the Bank of Italy of the reduction of the official rate of discount from 7 to 6½ per cent. on March 1st did not change the mood of the market. The Bourses were not even roused by the news of the fusion of two of the Big Four banks, the Credito Italiano and the Banca Nazionale di Credito. The fusion aims at concentrating in the Credito Italiano all ordinary deposit and discount operations, leaving to a subsidiary body, called the Banca Nazionale di Credito, the function of long-term financing of industry.

The strong position of the Bank of Italy is well illustrated by the announcement that yesterday the Finance Minister and the Governor of the Bank of Italy had agreed to raise the embargo on gold and to abolish all restrictions on purchases and sales of foreign exchange. Old restrictions were lately enforced with much leniency; but their legal persistence was unfavourable to import of capital, as foreigners feared that difficulties might be placed in the way of re-export. Exemptions from income tax for foreign loans and debentures issued in foreign countries were at the same time extended to the end of 1933. The financial Press hopes that these measures will be the prelude to a new impetus to industry, which needs more capital than can be provided for by internal savings.

POLAND.

German Treaty — Trade Depression — Finance — Foreign Trade.

(FROM OUR CORRESPONDENT.)

WARSAW, March 22.

AFTER negotiations which lasted five years, a commercial treaty with Germany was signed on March 17. By this treaty an end is put to the protracted commercial war between the two countries. The difficulty of reaching an agreement was not only due to divergent economic interests, but also to political issues which were involved in the negotiations. The signature of the treaty marks an important step in the direction of the pacification of Central Europe. The beginning of normal commercial intercourse between Poland and Germany must necessarily have a stabilising effect on the economic conditions of this part of the Continent, and satisfaction at the conclusion of the treaty is expressed on both sides of the frontier.

The characteristic feature of the treaty is the application of quotas for the most important articles of export. The quota for Polish coal has been fixed at 320,000 tons monthly, and for pigs at 200,000 yearly, rising during the next two years by 75,000 yearly, so as to reach 350,000. In the same manner the export of a number of important industrial products from Germany into Poland is limited. A special agreement between Polish and German coal producers has been signed, with the object of avoiding a fall of coal prices in Germany. The Polish pigs are to be supplied exclusively to meat factories and cannot be sold on the free market. The Reichsverband of German Industry has guaranteed the purchase of this quota at market prices. The treaty does not contain any tariff stipulations, and is based exclusively on the most-favoured-nation clause. In consequence, the two countries are completely unhampered as far as their tariffs are concerned.

Transit is free, and veterinary regulations limit the use of those sanitary rules which were used often with the purpose of prohibiting the import of living animals. The three great shipping companies—Hamburg-America, Norddeutsche-Lloyd and the Hamburg-South America—will obtain concessions for the transport of Polish emigrants from Gdynia and Danzig on an equal footing with other foreign companies. The treaty has been signed only for one year, but it is automatically prolonged.

Without doubt, some Polish industries, especially those created during the commercial war, will suffer from German competition. This loss, however, will be more than outweighed by the gain to the fundamental branches of economic life. Polish agriculture not only benefits by the extension of the German market but also by the

transit facilities which render the access of food products to other countries more easy.

The importance of the German market for Polish agriculture is illustrated by the fact that though during the commercial war special high tariffs were established for Polish products, the export of eggs to Germany, for instance, amounted in 1928-29 to 25,000 tons, which is 50 per cent. of the whole exports. The reduction of the Customs duties from 25 marks for 100 kilogrammes to 5 marks will contribute to a great increase of this export. This is also true of butter and of other articles of food, which even during the commercial war were imported in growing quantities into Germany. The coal and iron industries will also profit.

The trade depression from which Poland has been suffering for several months is gaining in intensity. The number of unemployed is steadily rising. From 186,000 at the end of 1929 it has increased to 329,000 in March. The coal industry, which has so long withstood the declining tendency, is already affected by the trade depression. The consumption of coal decreased from 3,518,000 tons in December to 2,947,000 tons in January. The decline is due, in the first instance, to a smaller home consumption (1,780,000 tons in January of this year, 2,284,000 in December, 1929, and 2,516,000 tons in January, 1929). The exports remained nearly stationary, and in comparison with January of last year even increased slightly.

The Budget receipts of the Government also reflect the changed economic conditions. Hitherto they have steadily grown. During the financial year 1928-29 they amounted to 3,008 million zlotys, as compared with 2,786 millions in 1928-29. The situation during the present financial year is illustrated by the following table:—

BUDGET RECEIPTS.

	Million zlotys. 1928–29.	1929–30.
First quarter	683·1	728·8
Second quarter	704·4	723·7
Third quarter	836·9	809·3
January	256·9	250·0

During the first two quarters the revenues were greater during the present financial year than in 1928-29. During the third quarter, however, they declined, and January again gave smaller receipts.

Foreign trade is at present characterised by a rapid decline of imports and exports, as may be seen from the figures below:—

	Million zlotys. Imports.	Exports.	Balance.
October, 1929	257·2	259·4	+ 2·2
November, 1929	243·4	256·1	+12·7
December, 1929	214·4	254·8	+40·4
January, 1930	216·7	218·5	+ 1·8
February, 1930	181·7	218·1	+36·4

In comparison with October imports have decreased by 55, exports by 41.3 millions.

JUGOSLAVIA.

Foreign Trade — Money — Industrial Depression — Agricultural Income.

(FROM OUR CORRESPONDENT.)

BELGRADE, March 16.

TRADE in 1929 showed an active balance of 327 million dinars (£1,200,000). Exports were 7,921.7 million, and imports 7,594.7 million dinars. The following table shows the movement of foreign trade during the last six years:—

	Exports.	Imports.	Difference. Million dinars.
1924	9,538·7	8,221·7	+ 1,317·0
1925	8,904·5	9,752·8	+ 151·7
1926	7,818·1	7,631·7	+ 186·4
1927	6,400·1	7,286·2	− 886·1
1928	6,444·6	7,835·3	− 1,390·7
1929	7,921·7	7,594·7	+ 327·0

The upward trend continued in January, 1930, when 420,180 tons, worth 616.2 million dinars, were exported, as against 198,960 tons, worth 425.7 millions, in 1929.

Conditions in the money market are equally satisfactory. From December 31st to February 28th the metal cover of the National Bank increased from 380 to 405 million gold dinars, sundry assets from 1,607 to 1,686 million paper dinars, while current accounts maintained their post-war record figure of 1,408 millions (as against 1,410 at the end of 1929). Savings deposits and current accounts with private banks have swollen from 10,300 millions at the end of 1928 to 11,790 million dinars at the end of 1929. The influx of foreign capital, especially into the electrical and mining industries, is steady.

This abundance of money is affecting economic life in several ways. State receipts for the first three quarters of the fiscal year 1929-30 are 9,090 million dinars, as compared with 8,207 millions last year, the chances being that, by the end of the year, the record figure for 1925-26 of 12,067 million dinars may be equalled. Bankruptcies in January and February numbered 133, as against 188 during the first two months of last year. The interest rate is showing signs of further abatement from its present level of 9-14 per cent., and State securities are rising. Thus the dollar loans since quoted on home bourses have risen: the 8 per cent. Blair loan from 80 on November 18th to 93.50 on March 14th, and the 7 per cent. Blair loan from 71 to 85.50, internal loans being stiffer in sympathy.

Yet, in spite of these favourable conditions, the stagnation in business, which dates from 1927-28, is only very slowly being relieved. Export industries, it is true, had an excellent year, but those which have to rely on the home market are still working at half capacity, and internal trade is not as lively as might be desired. The reason for this lies in the still unsolved problem of agriculture. Owing to the low prices of corn, the position of the peasant has improved little, in spite of a bumper harvest. According to the calculations of the National Bank, the 18 million quintals of maize produced in 1928 represented a value of 4,848 million dinars (£18,000,000), while the 41 million quintals harvested in 1929, at their present value, amount to no more than 5,614 millions (£20,400,000). In other words, for 124 per cent. more maize produced the peasant receives only 15 per cent. more in value, so that his low average income is hardly improved. The official computation of a peasant's average income was in 1925 4,239 dinars, in 1926 3,518 dinars, in 1927 3,231 dinars, and in 1928 3,414 dinars (£13), while the net profit on capital sunk in agriculture in Jugoslavia is reckoned by economists to vary between 0.23 per cent. and 2 per cent. If we add to this the uncertainties after a fairly dry winter, as well as the necessity of paying off old debts, it is no wonder that the peasants, four-fifths of the population, continue to be very modest buyers of industrial articles. Industry therefore, in so far as it produces for the home market, and relies on expensive home capital, still remains very much of a speculation. To some extent, it is true, its development is encouraged by the large migration of peasant labour to towns which thereby maintains a low average wage. The number of industrial workers has increased from 354,000 in 1923 to 565,000 in 1928, while the average daily wage has varied between 22 and 25.20 dinars ever since 1924. But, on the other hand, its growth is checked by the reluctance of home capital to finance enterprise in a transitional state like the present, except at an interest rate which neither industry nor trade can afford.

AUSTRALIA.

Reduced Purchasing Power — Money Rates — Coastal Shipping — Bank Returns — Imperial Policy.

(FROM OUR CORRESPONDENT.)

MELBOURNE, February 10.

EXPORT trade has been slow, owing to the low prices ruling for wool and the need for spreading out the sales, and because of the reduced wheat harvest, which is approximately 110 to 115 million bushels, against 159 million bushels for 1928-29. Curtailment of imports, however, has hardly started to take effect, though it is obviously necessary, in view of the smaller purchasing

power of the country resulting from the season's production and the difficulty of floating loans abroad. Both these factors are reflected in growing degree in the state of employment in the cities. Even if exchange could be provided, therefore, importers would still have to face a shrinkage in the demand for these goods.

As the result of the conference in Melbourne on January 23rd, the Commonwealth Bank has come to an arrangement with the ordinary banks whereby the gold held by these will become available for the Commonwealth Bank, "in accordance with general needs as they may arise." Provision is made for the "rationing of London exchange in such manner as will make available, as far as possible, London exchange to meet present needs." It has since been announced that deposit and overdraft rates are to be slightly raised, though this step is taken, as always, with reluctance. There is also reluctance to raise exchange rates any further, though those now quoted (with a selling T.T. rate of 2⅛ per cent. premium) do not fully reflect the position as indicated by what is obtainable in the outside market. The deposits of the ordinary banks in Australia for the December quarter are practically unchanged in the aggregate, as compared with a year previously, but advances and securities together show an increase of £31 million.

The report of the Tariff Board on the Coastal Clauses of the Navigation Act expresses the opinion that it is neither practicable nor desirable to substitute for the present clauses some other form of protection to coastal shipping. In the opinion of the Board, the Australian shipping companies have not abused the protection afforded to them, and the admission of overseas vessels into the coasting trade, while it might temporarily improve the service, would ultimately react unfavourably upon it.

The quarterly average returns to December 31, 1929, of the twelve ordinary banks (exclusive of the Commonwealth Bank of Australia) show deposits and other principal totals within Australia and New Zealand (but not including London figures) compared with the previous quarter and a year ago as follows:—

	Dec. 31, 1928. £	Sept. 30, 1929. £	Dec. 31, 1929. £
Deposits—			
Australia	277,059,038	279,175,619	277,245,549
New Zealand	53,732,096	57,367,766	55,015,135
	330,791,134	336,543,385	332,060,684
Advances and securities:—			
Australia	260,497,024	281,924,385	292,017,154
New Zealand	54,065,917	55,677,018	60,061,739
	314,562,941	337,601,403	352,078,893
Coin and bullion (Australia and New Zealand)	33,144,738	30,901,042	27,916,205
Australian notes and cash with Commonwealth Bank	27,256,888	19,971,529	21,396,987
Legal tender notes of other banks (N.Z. only)	74,559	64,151	75,388
	60,476,185	50,936,722	49,388,580

While deposits have been almost stationary, as compared with a year ago, advances and securities show an increase of £37,515,952 in Australia and New Zealand. Australia alone shows an increase of £31,520,130, advances being larger by £33,409,317, but Government and municipal securities smaller by £1,889,187. The increase in Australian advances reflects the manner in which the banks have met country requirements in a somewhat unfavourable period, in addition to substantial trading requirements. Owing to the comparative slowness of the wool sales, the decline in the wool market, and the reduction in the wheat harvest, the supply of fresh money available for reducing overdrafts or increasing credit balances is at present less than usual, and it is not expected that the monetary situation will become settled before March, 1931, while the proceeds of the 1930-31 season, which will then be in hand, will depend upon the character of the producing season in the meantime. The large increase in advances during the past year has been balanced partly by reduction of local cash holdings in different forms, and partly by drawing upon London funds which do not enter into the quarterly averages.

The Commonwealth Bank of Australia (not included in the above figures) has, in the six States, deposits £29,346,437, or an increase of £3,769,395 on the year; advances (including short-term loans), £21,052,122, or an increase of £4,706,799, and Government and municipal securities £14,139,249, or an increase of £2,768,552, these figures being averages for the December quarter.

The local Stock Exchanges have shown pronounced weakness so far this year, though towards the end of January the lower prices were followed by more business. Commonwealth Government securities maturing within the next three to five years are quoted at prices showing yields of 6 to 6¼ per cent. Shares have been influenced by the lower distributions already announced by some of the banks and leading public companies, while much interest attaches to the outlook for trading and industrial concerns in face of the shrinkage in turnover and the difficulty of dealing with expenses.

The "Empire Free Trade" debate in the House of Commons was followed by a statement by the Commonwealth Prime Minister, Mr Scullin, that such a proposal is entirely impracticable, and that the Ministry believe in giving first preference to Australian products and, after that, to the products of Great Britain and the other Dominions. Mr Scullin's statement is simply in accordance with Australian protectionist views for many years past.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

How Britain is Governed. By Ramsay Muir. (London) Constable, 10-12, Orange Street. 12s. 6d. net.

A critical and constructive examination of the working of the British system of government in recent years. The growth of bureaucracy, the defects of the electoral system and the party system, and the ineffectiveness of the House of Lords are discussed, and remedies are suggested.

New Zealand in the Making. By J. B. Condliffe. (London) George Allen and Unwin, Ltd., Museum Street. 15s. net.

A thorough and interesting account of the economic development of New Zealand.

About Russia. By Ernest J. P. Benn. (London) Ernest Benn, Ltd., 154, Fleet Street. 6s. net.

Mr Benn claims as his principal qualification the fact that he has not visited Russia. His book contains some interesting "gossip" collected in the Baltic States, but consists largely of reflections and comments upon those Soviet practices and institutions which are generally known.

Moscow Unmasked. By Joseph Douillet. (London) The Pilot Press, 2, Little Essex Street. 8s. 6d. net.

This book makes no pretence at impartiality, but the author's unusual qualification of thirty-five years' residence in Russia, first as Belgian Consul, and later as a member of Dr. Nansen's mission for famine relief and of other international organisations, entitle his very interesting account of conditions in Russia to be heard with respect.

The Legal History of Trade Unionism. By R. Y. Hedges and Allan Winterbottom. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 7s. 6d.

A thorough and scholarly piece of work, fully documented, which will at once leap to a foremost place among books on trade union law.

International Labour Review. March, 1930. (London) George Allen and Unwin, 40, Museum Street. 2s. 6d.

Includes a summary of recent developments in the family allowance system.

The Stock Exchange.

AMERICAN CHEMICAL COMPANIES.

THE net value of the output of the American chemical industry in 1927 was something like $813 million—a figure equal to that of the American tobacco or rubber industries and a little more than half that of the electrical equipment industry. Its attainment is the outcome of a truly remarkable growth in practically all branches of the industry. This growth was in evidence before the war, but it received an unprecedented stimulus during the war, and has more than maintained its velocity ever since.

The bulk of the industry in the United States is concentrated in the hands of three companies, who, despite the rigour of the Anti-Trust laws, have succeeded in building up gigantic combines, with far-flung ramifications, extensive capital resources, and unrivalled sales, research, and other facilities. The three companies are the Allied Chemical and Dye Corporation, the du Pont de Nemours Company, and the Union Carbide and Carbon Corporation. The total assets of these three companies in 1928 (excluding du Pont's investment in General Motors) were $665,383,000, so that this triple group is nearly twice as large as the German I.G. or Imperial Chemical Industries. There are, however, in America some fifty other chemical companies with assets ranging from $300,000 to $50,000,000. Each one of the "Big Three," however, has a wider scope than any dozen of the other fifty, and has such extensive vertical and horizontal connections that it may be said to embrace practically the entire industry in which its sphere of interest lies.

The Allied Chemical and Dye Corporation, formed as a merger of several important companies in 1920, is mainly engaged in the manufacture of basic chemical products. In 1928 its net tangible assets amounted to $226,854,000, and its net income for dividends was $26,962,000. Net tangible assets may be defined as total assets less "intangibles" (goodwill, patents, etc.), current liabilities, and funded debt. Among the company's subsidiaries are the General Chemical Company, manufacturing acids and heavy chemicals; the Solvay Process Company, manufacturing alkalies; the Semet Solvay Company, engaged in the by-product coke-oven industry; the Barrett Company, making coal-tar products; the National Aniline and Chemical Company, making dyes and intermediaries; and the Atmospheric Nitrogen Company, making synthetic ammonia and other nitrogen products. All of these companies manufacture strictly basic products or the raw materials of other manufacturing industries.

E. I. du Pont de Nemours is one of the most remarkable and interesting of all the great American corporations. It is also one of the oldest. Its expansion during recent years has been phenomenal, even if its recent large investment in General Motors be excluded. This investment of surplus funds, which was first effected in 1919, has enabled the company to derive a larger income from General Motors than from its vast chemical interests. In 1928 its net tangible chemical assets (excluding the General Motors investment) were $229,681,000, and its net income for dividends, on the same basis, was $23,883,000. The magnitude and importance of the General Motors holding is shown by the total 1928 figures for the whole of du Pont's interests. Net tangible assets were $369,418,000, and net income for dividends was $64,098,000. Strictly speaking, therefore, du Pont is now more of a motor company than a chemical concern. Its chemical activities include the manufacture of explosives, artificial silk (rayon) and cellophane, dyes and intermediaries, lacquers, paints and varnishes, nitro-cellulose, coated fabrics (Fabrikoid), synthetic plastics (Pyralin, Viscoloid, motion-picture film), synthetic ammonia and other nitrogenous products, and heavy chemicals (by the Grasselli Chemical Company). Its principal lines centre around cellulose and nitro-cellulose products, many of which are finished and go directly into consumption.

The Union Carbide and Carbon Corporation had net tangible assets of $208,848,000 in 1928, and net income for dividend of $31,140,000. Its assets are thus rather lower than those of the other two, but its earnings are higher, since it is engaged in entirely different fields, and is, therefore, less competitive. Its main activities centre round electro-chemical and metallurgical products, carbon products, compressed gases, and welding equipment (Linde Air Products Company and the Prest-O-Lite Company), miscellaneous chemicals from natural gas, and other products.

Up to 1927 the earnings record of the American chemical industry was remarkable. During the preceding four years the profits of fourteen chemical and drug companies increased at the average rate of 12.3 per cent. per annum, according to figures collected by the Federal Reserve Bank of New York. This is well above the average increase of 9 per cent. per annum shown by 381 industrial companies during the same period. During the last year or two, however, the rate of annual increase in the chemical industry as a whole has not been fully upheld. The shares of all three companies fell heavily in the New York "slump" last year:—

† Estimated.

The merger movement was still in full swing last year. Horizontal integration took place in the alcohol and solvents industry. The du Ponts strengthened their position vertically by the acquisition of the Grasselli interests. The American Cyanamide Company, the Monsanto Chemical Works, and the Newport Company each took over several smaller companies. In the American chemical industry the profit-earning capacity of the larger is demonstrably in excess of that of smaller concerns, and any downward tendency in profits will tend to strengthen the policy of organisation in large units. On the other hand, there is still room in the industry for smaller producers who manufacture specialised products or offer some special service.

WAR LOAN CONVERSION PROSPECTS.

THOUGH gilt-edged values have receded slightly from the high levels reached early this week, the prospect of the maintenance of cheap money for some little time to come has caused the market to canvass the possibility of the Treasury's staging a large-scale conversion operation in respect of the Five per Cent. War Loan in the relatively near future. This stock has always been popular with dealers, but its gigantic bulk, while making for ready negotiability, has made it a veritable millstone round the taxpayers' neck, since it has tended to drag down the price of all British securities to its own 5 per cent. level. There is general agreement, firstly, that the present low level of money rates (which is partly a reaction from the abnormal conditions of the Wall Street boom), offers the Treasury an opportunity not likely to recur for some time; and, secondly, that the conversion of a substantial part of the £2,184 million outstanding would raise the status of British Government credit as a whole. Here agreement ends, the market being divided as to the respective merits of a relatively modest attempt to convert a few hundred millions of the War Loan, and a bold gesture in the shape of an offer to exercise the Treasury's option to repay the whole amount at three months' notice. The present level of gilt-edged values, which clearly bears on the matter, may be seen from the following table: —

Stock.	Amount Quoted.	When Repayable.	Present Market Price.	Yield (%) at Present Price. Flat.	Earliest Possible Redemption.	Latest Possible Redemption.

† Free of income tax. ‡ *Ex* dividend.

The whole question would seem to turn on the way interest rates generally may be expected to move in the future. If it be sound to budget for a steady decline in the trend of rates (apart from temporary ups and downs) over the next few decades, it would obviously be regrettable were the Chancellor of the Exchequer to exercise his option and commit this country to the payment of, say, 4½ per cent. for thirty, forty or fifty years—to discover that in a comparatively short time, the general level of money rates made something like 4 per cent. or even 3½ per cent. a more appropriate figure. There are, in any case, many cogent reasons why the Treasury should not create another block of stock of anything like the unwieldy and burdensome dimensions of the Five per Cent. War Loan.

But the present opportunity is a really favourable one, and any relief of the interest charge would be very welcome, for it would go to swell the sinking fund and progressively improve British credit. It is possible that the ingenuity of the Treasury might design a scheme not of one, but of a series of conversion issues, the terms of which would help to create in the public mind the idea that long-term interest rates are going to be much lower than present figures, and that only comparatively short-term issues can be expected at present rates. But whether this is possible or not, in our view it would be very doubtful wisdom at the present stage to exercise the option in regard to the whole of the loan. This option is the most powerful weapon that the Government possess, and having waited so long, they should not employ it until it can be used to the maximum advantage. Although the yield basis of British Government securities has dropped already, we have little doubt that before very long it will be on an even more favourable basis. It would be a mistake to sacrifice the greater opportunity for a smaller advantage in this year's Budget.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 1.	April 3.

LAST week's pace was obviously too hot to last, and the markets were soon tested by profit-taking, though the undertone, in gilt-edged stocks at any rate, remained steady. While British Government securities were clearly waiting on a further reduction in Bank rate (which the market correctly diagnosed as unlikely to follow immediately after last week's change), the halt in the recovery of industrial values was regarded as a not unhealthy sign. The last thing desired by the authorities responsible for monetary policy would be the use of cheap money, which should be a stimulant for depressed industry and a stabiliser of commodity values, as the fuel for a speculative boom on the share markets either of London or New York. In any case, the secrets of the Budget, regarding which the Stock Exchange was showing so much concern a week or two ago, have still to be revealed.

Gilt-edged stocks opened firm with a fair accumulation of week-end orders, but the increasing promise of the monetary situation did not prevent the onset of profit-taking, though wide interest was still shown and the tone remained firm. The new Conversion Loans made good progress before reacting on Wednesday, while Funding Loan, exceptionally, gained ground after going ex-dividend in mid-week. Speculation continued to be rife in investment circles regarding the possibility of a conversion operation in Five per Cent. War Loan. India stocks improved after a temporary reaction, but Australian loans failed to hold their ground. The market for Home Corporation Loans was again well supported, Brighton Fives making a fresh advance, and other recent issues fetching a considerable premium despite selling by "stags" in certain cases.

In the Foreign market a sharp reaction in Brazilians, after last week's advance, was the leading feature, though support in the later dealings caused prices to close above the worst. European stocks continued in demand, Bulgarians attracting some little attention. Paris was a tentative buyer of Turkish Unified on increased hopes of a settlement of outstanding questions regarding the service of the debt. Among Far Easterns, Chinese were marked lower on the threatened renewal of civil war.

For holders of Home Rails, the week was an unsatisfactory one. The large falling off in traffic receipts as compared with 1929 being no longer entirely explainable by abnormal activity after last year's "frost," there was a tendency to regard the decline and the heavy increase in the Ministry of Labour's unemployment figures as parallel indications of depressed industrial conditions. All the "group" stocks were lower, London Midland and Scottish, with the heaviest traffic decline, faring worst. Among Foreign Rails, Argentines showed remarkable strength at the beginning of the week, on better labour prospects and the improvement in the peso exchange, though a quieter tendency supervened. Havanas showed some recovery, associated in certain quarters with rumours of acquisition by American interests. The approval of the Bill for splitting Canadian Pacific stock provoked a sharp rise on Wednesday afternoon.

The Industrial markets were patchy. Though America gave some support to selected international stocks, the tone as a whole lacked confidence. The preliminary publication of the Imperial Chemical results, which are

set out on page 715, produced a slight rise in the deferred shares, but left the ordinary slightly lower on balance. Recent buying of Cunards was vindicated by the improved earnings shown for 1929 (described on page 715), the market, however, regarding rumours of the possible absorption of the White Star Company as too nebulous to merit immediate consideration. Cables and Wireless were bought at the opening, but a subsequent reaction was accentuated by Wednesday's Parliamentary debate, the tenour of which was unfavourable to the company's case. Profit-taking affected the leading brewery and tobacco shares. Iron and steel shares had a slightly firmer appearance, and a moderate amount of buying of the leading textile issues was reported from the north, though Courtaulds finished easier. Motor shares held their ground with a little to spare, Fords maintaining their recent gains. The Swedish Match group was firm on reported arrangements with the French Government in regard to the group's holding of bonds. Electrical issues remained in quiet but steady demand. Pinchin, Johnsons were again a firm spot. Investment buying gave a consistently firm appearance to bank shares, but slight irregularity developed in the insurance share market.

The plantation markets were, on the whole, better than for some weeks past. The slight decline in the price of rubber, reversing the upward trend of the preceding days, was not reflected in share values, which were all slightly higher where altered. Tea share quotations were helped by the firm tone of the week's commodity auctions, but only a small amount of business was done. Dealings in the oil market tended to broaden, the American crude production figures being lower, while fears of an Eastern price "war" receded, for the moment, into the background.

During the earlier part of the week the mining market was fairly active, but interest fell away towards the close. Kaffirs opened strongly on a fair inquiry from the Cape. "Johnnies" were in brisk demand on the publication of a very satisfactory group of reports (dealt with on page 717). Brakpan mines were a good feature. Rhodesians rallied after a quiet start, Congo Border adding a further fraction and Rhodesia Katanga proving a strong market on a wider appreciation of the company's potentialities, but a relapse set in later. The announcement that the Commonwealth Government would pay a premium on gold produced in Australia brought advances to several Westralian securities. The increased Tinto dividend and bonus had little effect on the shares, copper issues generally being quiet. De Beers rose slightly on the statement of Mr Havenga, the Union Minister of Finance, that the conference of producers had resulted in agreement on policy, but the diamond market as a whole remained in lethargic mood.

FOREIGN STOCK EXCHANGES.

NEW YORK.

A bull movement is in progress, with shares gaining momentum and investment trust and public buying important factors. Contrary to general expectation, brokers' loans for the week ended last Wednesday show a decline of $21 million against the recent sharply rising trend. This emphasises the part subscription to new issues played in former gains, and indicates that buying has been of a better character than was supposed. Prices are rather irregular despite the upward trend, and new high levels have been reached in turn by more than a hundred stocks representing motors, steel, tobacco, chemical, public utility, electrical manufacturing and miscellaneous groups. Odd-lot buying has been the heaviest for a long time, and this is always a sign of public interest. While opinion is still leaning to the view that the rise is starting too soon and going too far, considering the continued lag in general trade, it promises to continue under the stimulant of cheap money. The volume of trading in stocks, ranging between 4,500,000 and 5,000,000 shares, is the largest since December. Trading in bonds is slowing down somewhat, but a good tone is maintained. There are slight signs that the market is being over-supplied with new issues, and this week's offerings fell to about 150 millions, against over 200 millions in the two preceding weeks.

CANADA.

The Canadian stock markets were, on the whole, dull and unsatisfactory in the first half of March. With the grain market impasse still unsolved, and general uncertainty prevalent regarding the immediate business outlook there was a natural hesitancy as regards market commitments and a lack of real buying power, despite occasional spurts in sympathy with New York. While some popular favourites, like Brazilian Traction and International Nickel, had a loyal following, other well-seasoned stocks were completely neglected. Companies chiefly dependent on Western business, such as farm implement manufacturers, were out of favour, and the prospect of a smaller programme of new building construction was another adverse factor. Distillery stocks were driven down by the introduction of the Government's Bill to place a ban on official clearances for liquor exported to the United States. Though this measure may cut into distillery profits, some stocks are selling at absurdly low levels in relation to capital assets and earning power. There is little confidence about the immediate future of the newsprint stocks, but rumours of further amalgamations are in the air. Power stocks have held up reasonably well. The bond market is active, many bond salesmen having disposed of more bonds in the last four months than in the whole of the last few years. The mining market has gone from bad to worse, several brokerage houses having closed their doors. Western oil stocks have improved on news of successful drilling operations in the Turner Valley.

INVESTMENT NOTES.

The Stock Exchange's New Year.—The fiscal year of the Stock Exchange ends on March 24th. On Tuesday last, writes a Stock Exchange correspondent, the new Committee held its first sitting. Twenty-seven members of the previous Committee were returned to office, and three new candidates—two brokers and one jobber—were elected. The final dividend on Stock Exchange shares will be announced next Wednesday, after the customary meeting of the managers. Members look for a repetition of the dividend of £9 per share declared at this time last year, which made £13 for the year. The shares are regarded as being £36 paid, and the share capital is £720,000, debenture debt and leasehold redemption account, when added, bringing the total to a trifle over a million pounds sterling. The Stock Exchange committee who have just gone out of office may be said to have adopted a more courageous and forward policy than has been shown in the past, and to have broken away in several directions from long-established conventions in the matter of conservatism and tradition. From the practical point of view, the new Stock Exchange Committee are faced with matters relating to division of membership—a purely domestic affair—and with the task of dealing with abuses which have sprung up through the easy complacence with which broker-members part with half their commission to people claiming to act as agents. At this latter point, the public interest is closely touched, for many people complain, not without reason, that Stock Exchange charges are high, and that the official scale of brokerage weighs heavily upon the investor and speculator alike. If the charges were to be reduced, business would be stimulated, but the stock-broker's reply is that he has to return so much of his remuneration that he obtains very little more than half

the amount paid, the other half going to people who claim the right to share in the gross brokerage. Certain of the provincial exchanges entirely forbid their members to share commissions. The result is that an agent who receives an order in local shares from a client in a provincial town will send that order to London, whence it will very probably be returned, if the market is a local one, to the town from which it emanates. The client will pay at least two unnecessary charges in order that the agent may receive the half-commission from London which the local Stock Exchange forbids him to claim from its own members. Within the past few years, scores of tiny syndicates have been brought into being for the express purpose of obtaining a division of commission. The question bristles with thorny points, as do other problems with which the new committee are faced, such as the protection of the investor against manipulation of the markets, which was discussed in these columns last week. The new Stock Exchange year opens, however, with a strong and experienced Committee in power, who can be trusted to carry on the active policy of protection of the public interest initiated by the preceding Committee.

The Hatry Crisis—An Obituary.—The Stock Exchange, on Wednesday, was the scene of a pleasing ceremony, when the four members of the unofficial committee responsible for the successful Hatry settlement scheme—Messrs F. S. Cokayne, H. L. U. Clarke, C. B. Lemon and F. I. Pitman—were presented by their fellow members of the " House " with gifts of old silver as a token of gratitude. As the names of another unofficial committee which played an invaluable part in the negotiations have not yet, to our knowledge, been made public, it may be well to set them on record, so that those concerned may also obtain their due meed of acknowledgment. The members in question were Messrs Ian Anderson, George Ansley, George A. Gilbert, George Grundy, James G. Hart and Robert H. Shelton. These gentlemen, representing buying and selling brokers directly concerned in the Hatry *impasse*, came together after the historic meeting of November 25, 1929, at which the Chairman of the Stock Exchange Committee described to the members of the " House " the serious nature of the difficulties which had then arisen. The subsequent discussions lasted for some time, and, after the manner of larger and more public conferences, were called on to surmount more than one potential crisis. The terms eventually arrived at, however, formed the broad basis on which Mr Claude Lemon, and subsequently the other three members of the " Pitman Committee " founded their proposals for the final settlement, though these differed as regards percentages and in certain other respects from those originally suggested. A circular which has been confidentially circulated in the " House " this week, relates the inner story of the whole affair, from the meeting at the Bank of England on September 19, 1929, to the final settlement, without a hitch, on February 13, 1930. The circular reveals in striking fashion both the extraordinary difficulties which were overcome and the public services rendered by those whose assistance, personal or financial, made possible the final settlement.

Capital for Rationalisation Schemes.—The investor has heard much of " rationalisation " during recent months. Like other " blessed words," the term tends to become a commonplace. That the conception for which it stands, however, is of great moment to British industry may be inferred from the recent statement of the president of the Institute of Chartered Accountants, Sir William Plender, that the more he probed into the causes of declining trade in basic industries the more he was persuaded that only by the aid of rationalisation could the foundations of industrial life be made stable. These words are not the platitude of an outsider, but the considered judgment of an observer possessing inside knowledge of the finances of a very large number of British concerns. Much of Sir William's discussion of the merits of rationalisation covered ground already familiar to readers of the *Economist*. One point emphasised by Sir William, however, has not always been sufficiently stressed in the past. Adequate supplies of new capital are an indispensable condition precedent to schemes of rationalisation. Sir William recognised, by implication at least, that those companies and industries which stand most in need of rationalisation may, *ipso facto*, be least in a position to provide the necessary resources. Among possible outside sources, Sir William mentioned " financial institutions possessing available capital "—an ambiguous phrase which leaves it uncertain whether the speaker expected the joint-stock banks to join in the work of providing long-term capital, or was referring rather to such institutions as the merchant bankers or the trust companies. A further source, he declared, was " the investing public." Sir William declared explicitly that he included in this term the public of the United States. This declaration opens up a long vista of possibilities. Sir William is clearly not among those who would endeavour to discourage the investment of American funds in British companies, or would view with favour the restrictive clauses recently inserted in some articles of association. As a possible final resort, he concluded, the Government of Great Britain was not to be excluded as a capital-provider, but any form of direct governmental assistance he regarded as open to grave objection. Sir William Plender's views will find support among many thoughtful investors, and afford an instructive commentary on the restrictionist proposals of the Malayan Tin Dredging directors, discussed below.

Malayan Tin and British Control.—An unusual circular has been addressed to the shareholders of Malayan Tin Dredging, Southern Malayan Tin Dredging and Southern Perak Dredging companies by the directors under the lead of Mr C. V. Stephens. Meetings are called for April 14th for the purpose of amending the articles to ensure that the companies will remain under British control. The circulars state that recently there has been heavy buying of Malayan tin shares on foreign account, and that it seems probable that control may in many cases pass outside this country. Foreign interests, it is said (we understand that the circulars refer to the Patino interests), have lately pressed for representation on the boards of several of the most efficient producers. If control passed into foreign hands it is declared that the domicile of the companies would be changed to avoid British taxation and that orders for machinery would be given to foreign countries. With a view " to maintaining the present successful policy and safeguarding the interests of the shareholders " of Malayan Tin Dredging, Southern Malayan and Southern Perak, the directors—Messrs C. V. Stephens, W. J. Payne, H. Ashworth Hope and A. J. Kelman—propose that they shall remain in office for five years, and that the articles shall provide that the directors and secretary shall at all times be British subjects and the company remain a British company registered in Great Britain. A curious feature of the existing articles of these three companies is that the directors are entitled to 5 per cent. of the surplus profits after 10 per cent. dividends have been paid—in the case of Southern Malayan this 5 per cent. being paid free of income tax. The proposal that the present directors should remain in office for five years is therefore of a severely practical nature. We have, on earlier occasions (see the *Economist* of June 22, 1929, page 1386), given our reasons for regarding attempts to exclude American capital from the British market as a sign of misplaced enthusiasm. To differentiate between the rights of British and foreign shareholders in British companies is a two-edged policy with dangerous potentialities in view of the enormous foreign investments which this country holds. There is a demand in India, for instance, to limit coast-wise shipping to Indian-owned or -controlled bottoms. How is it possible to combat such demands as this if responsible British companies encourage the idea of

" keeping out the foreigner "? If the Patino or other outside interests are large shareholders in the Malayan tin companies, that they should have a representative on the board is a reasonable request, particularly as we understand that they do not seek to control the board or to influence its decisions. It might even, in the long run, be beneficial to the British tin-producing industry if American interests—who represent the world's largest consumers of tin—were to have some participation in the profits of the Malayan companies. A friendly agreement between producers and consumers of different countries may be of indubitable benefit to any and every industry.

Vickers, Ltd.—The accounts for 1929 are not so informative as those for the previous year, the statement of combined assets and liabilities and the balance sheet of Vickers-Armstrongs being omitted. Net profits show a small improvement on the 1928 figure, though the 1927 level has not yet been regained. The dividend is maintained at 8 per cent. and is covered approximately twice over :—

(Years ended December 31st).	1927. £	1928. £	1929. £
Net profit	992,985	939,903	941,971
5% preferred dividend	37,500	37,500	37,500
5% non-cum. preference dividend	37,500	37,500	37,500
5% cum., tax free, preference div.	343,190	343,190	343,190
Available for ordinary :			
Amount	*574,795*	*521,713*	*523,781*
Per cent.	*17·5*	*15·9*	*15·95*
Paid on ordinary :			
Amount	262,730	262,730	262,730
Per cent.	8	8	8
To reserve	238,211	250,000	250,000
Increase in carry-forward	73,853	8,982	11,051

The outstanding feature of the accounts is the exceedingly strong liquid position. After deducting all current liabilities, including the dividend payments, surplus liquid assets total £5,180,188, an increase of £561,000 over the previous year. Included in the amount is nearly £4,500,000 in gilt-edged securities. The reserve fund is brought up to £1,000,000 by this year's allocation, in addition to which the contingent liabilities and capital reserve now amounts to £3,266,404, most, if not all, of which may ultimately become a " free " reserve. Following the formation of Vickers-Armstrongs, Metropolitan Cammell and the English Steel Corporation, Vickers is now purely a holding company, having no direct trading interests. The shares received in the various companies stand in the balance sheet at the written-down value of the assets transferred, which is, of course, far below their nominal value. The biggest discrepancy is in the holding of Vickers-Armstrongs, which has a nominal value of over £12,000,000 and is taken into the accounts at £6,282,870. The ordinary shares are priced around 8s. 9d., giving a yield of approximately 6¼ per cent., allowing for the dividend. The 5 per cent. tax-free preference shares at 18s. 6d. return £6 15s. gross.

Imperial Chemical Industries.—The directors of this great chemical merger announce that for the year ended December 31st last net profits amount to £5,780,208, compared with £5,212,703 for the previous twelve months. With the addition of the £108,807 brought forward, there is therefore a sum of £5,889,015 available for distribution. Of this total £529,020 is to be placed to general reserve, against £1,000,000 last year, and £350,923 carried forward to the next account. Preference dividend takes £1,407,755, leaving £3,601,317 for allocation to ordinary and deferred shareholders, against £2,991,200 for 1928. The respective amounts are not stated, but the ordinary capital is again to receive 8 per cent., less tax, while the dividend on the deferred shares is to be increased ¼ per cent. to 2 per cent. Until the amounts are published, the rest must remain a matter of conjecture, but it is clear that the deferred shares have earned more than last year.

Year ends December 31st.	1927. £	1928. £	1929. £
Net profit	4,441,894	5,212,703	5,780,208
Brought forward	...	82,681	108,807*
Preference dividend	1,145,501	1,194,550	1,407,755
Rate per cent.	7	7	7

Deferred shares :			
Earned, £	*660,791*	*1,205,462*	(Dividends on
Paid, £	169,133	178,509	Ordinary &
Earned, per cent.	*6·9*	*11·8*	Def. shares, £3,601,317)
Paid, per cent.	1·75	1·75	2
To reserve	408,977	1,000,000	529,020
Carried forward	82,681	109,634	350,923

* After deduction of dividends in respect of further shares.

The reserves of the company amount to £16,725,000, an increase of £5,715,862 on last year's reserve account of £11,009,138. The increase is apparently due to the share premiums received on the new issue of last May, and to transfers out of profits of £529,020 to general reserve and £575,479 to the Central Obsolescence fund. As a result of the fall in market values, the book value of the company's securities exceeds market value by £983,347, which, however, is amply covered by reserves.

Cunard Steamship Company, Ltd.—The preliminary figures suggest that the company has had a most successful year, the net profit, after providing for taxation, interest and depreciation, being £259,160 more than was earned in 1928—an increase of no less than 47.08 per cent. :—

	1927. £	1928. £	1929. £
Ordinary capital	5,570,261	5,570,261	5,570,261
Net profit	659,748	550,478	809,638
Preference dividend	135,000	135,000	135,000
Ordinary { *earned per cent.*	*9·42*	*7·46*	*12·11*
Ordinary { paid per cent.	7·5	7·5	7·5
Transfer to reserve	100,000	...	50,000
Carried forward	190,688	188,396	395,266

Including the amount brought forward from the previous year, the amount available for distribution is £998,035. After paying the preference dividend and carrying £50,000 to reserves, the ordinary shareholders will receive the same rate of dividend as in 1928—a conservative distribution. An explanation of the factors behind these gratifying results—which contrast with the unfavourable developments reported by other shipping concerns—must needs await the publication of the full report.

Associated Portland Cement Manufacturers. — This company and its subsidiary, the British Portland Cement Manufacturers, Ltd., occupy a leading position in the cement industry of this country. They have recently completed a four years' building programme, during which their output capacity has been increased from 2,000,000 tons per annum to about 3,000,000 tons per annum and their manufacturing costs reduced by about 40 per cent. During 1928 the Associated Portland group were engaged in a price war with the " Red Triangle " group of cement companies, which ended in November of that year when the latter joined the Cement Manufacturers' Association. During 1929, according to the directors of Associated Portland, competition both from home and Continental manufacturers continued to be severe, and lower prices were realised. Nevertheless, trading profits were maintained, an achievement which the directors attribute to the economies in production costs at the works resulting from the programme of reconstruction carried out in recent years. The company's total deliveries for the period were, in fact, somewhat in excess of the " record " figures established in the previous year. The directors are naturally silent on the question whether the train of events in the " Red Triangle " group, which culminated in the bankruptcy of Mr H. S. Horne, resulted in any appreciable transfer of business to their own companies. The results for the past three years are shown :—

(Years to December 31.)	1927.	1928.	1929.
	£	£	£
Total income (after tax)	901,649	934,580	935,115

Carry forward	139,286	140,006	140,899

The earnings shown are calculated after providing for taxation and depreciation. Gross earnings before taxation and depreciation amounted to 20.8 per cent. on the ordinary share capital of £3,000,000. The balance sheet shows a strong liquid position, stock, debtors and cash (less creditors) amounting to £1,166,000. Investments at December 31st stood at £2,515,565, and property and plant at £6,019,854. During the year first mortgage and second mortgage debenture stock to amounts of £38,088 and £57,292 respectively were redeemed, making totals of £679,756 and £685,283 respectively redeemed as at December 31st last. The ordinary shares are at present quoted at 26s. 9d., to yield, allowing for a dividend of 8 per cent., £6 8s. per cent., having been as high as 32s. 6d. last year.

Lipton's Recovery.—A striking improvement in the affairs of this company is shown in the first report published since last year's reconstruction. Gross profit has risen from £47,212 to £177,574, and the net profit is £116,821 higher at £118,377. After payment of the preference dividends, a dividend of 10 per cent. is paid on the ordinary shares, £25,000 carried to the preference dividend equalisation fund, and £20,000 to the reserve fund, leaving £8,127 to be carried forward. In July last the arrears of preference dividend were cancelled, and 8s. was written off each preference share. The £1 5 per cent. cumulative first preference shares were converted into 10s. 5 per cent. non-cumulative first preference shares, and the £1 9 per cent. cumulative second preference shares into 10s. 6 per cent. non-cumulative second preference shares. Two one shilling ordinary shares were also issued to preference shareholders for each preference share already held. The £1 ordinary shares were written down to 1s. each, the whole involving a reduction of capital from £2,850,000 to £1,022,500. Goodwill was written down by £1,345,620 to the nominal value of £100,000. The balance of the capital reduction was evidently utilised to write down the book value of property and plant, which are respectively lower by £80,131 and £249,437. Investments in subsidiary companies have risen by £84,346 to £274,885. Debtors are £94,023 greater, while creditors have increased by £200,993. These features mainly account for the drop of £49,301 in the figure of £13,486, the surplus of liquid assets over current liabilities. The ordinary shares earned 33.8 per cent., and at their present price of 4s. 3d. yield £2 7s. per cent. The market is counting on a further increase in profits this year, as a result of economies which did not become fully effective last year, and of the further fruits of the substitution of co-operative for competitive relations with the Maypole, Home and Colonial, Meadow Dairy and Unilever interests.

Canadian Pacific Railway.—The results of this company for the year ended December 31 reveal a considerable falling off from last year's record total. Gross earnings of the system total $209,730,955, against $229,039,300, a decrease of some $19,300,000, while working expenses have declined only from $177,344,845 to $166,586,411. The percentage ratio of expenses to receipts is thus 79.43 per cent., compared with 77.43 per cent. for the previous twelve months. " The reduction in gross earnings," according to the report, " is more than accounted for by the decreased grain yield in Western Canada and the retarded movement of the crop, the shrinkage in revenue on the commodity ' grain and grain products ' being $20,933,471." Net revenue, after adding $15,232,220 special income, and deducting $16,149,002 for fixed charges, stands this year at $42,227,761, compared with $49,063,438 for 1928 and $36,013,264 for 1927. Percentage earnings on ordinary shares have dropped from 15.0 to 12.2, but the distribution of 10 per cent. is still well covered.

Year ends December 31.	1927.	1928.	1929.
	$	$	$
Gross earnings	201,145,752	229,039,300	209,730,955

Special income is $2,544,536 in excess of that for the previous year, the principal increase being from investments, steamship lines, and hotels. Passenger mileage for the year actually reveals a slight improvement, being 20,145,028 against 20,131,825, but freight mileage is down from 29,838,556 to 24,996,216, while the amount of grain carried shows a drop of nearly 120 million bushels. The balance sheet remains exceedingly strong with liquid assets well in excess of potential liabilities. Investments are down from $160,296,651 to $153,067,430, but working assets have increased from $93,773,506 to $114,298,166, while on the liabilities side " reserve and appropriations " account for $56,086,952, against $50,826,431 in the previous balance sheet. At the present price of $219½ the $100 ordinary stock gives a yield of 4.6 per cent., allowing for a final dividend of 2½ per cent.

Amsterdam Rubber Company.—The annual report for 1929 of the largest Dutch rubber company shows a profit of 5,862,245 guilders, this favourable result being attributed to satisfactory advance sales of the 1929 crop. A dividend of 15 per cent. is being paid, shareholders having the option of demanding either cash or one share for eight dividend coupons, equivalent to a scrip bonus of 12½ per cent. The latter provision has exercised a depressing influence on the shares :—

(Thousand guilders.)

	1927.	1928.	1929.
Capital	18,431	18,433	18,433
Bonds	...	4,800	4,800
Earnings	8,076	5,725	5,862
Depreciation and reserves	3,585	2,136	2,194
Dividend	18%	15%	15%

The estates of the company are over 84,000 hectares (207,000 acres) in extent, 34,471 hectares of which (85,000 acres) are planted. Extensions are in progress on a large scale. Those planned in 1928 included over 3,000 hectares (7,400 acres) for oil palm plantations, two-thirds of which are expected to be completed in 1930, whilst an extension of the rubber plantations by 1,600 hectares (4,000 acres) is in the programme for this year. Rubber production during the current year is estimated at 16,200,000 metric pounds, and palm oil production at 9,000 tons. Some 30 per cent. of the rubber has been sold in advance, an appreciable part being at agreed prices above the present low market value of rubber.

MINING NOTES.

Rand Mines.—Last year's income on the part of this Kaffir finance enterprise shows a recovery, another satisfactory feature being that the difference arises entirely from dividends on shareholdings. The net earnings rather more than cover the distribution; whereas in respect of 1928 they failed to do so. For the first time in many years the appropriation account shows no transfer from reserve. On the other hand, investment reserve takes £377,200, being the net amount of the outlay, while £100,000 is set aside to meet general contingencies. Hence the decrease in the carry-forward. The portfolio now stands at £3,089,800, an expansion of £254,600 on the twelve months. The results of the past three years are summarised below :—

	1927.	1928.	1929.
	£	£	£
Dividends on shareholdings	436,360	419,330	486,530
Sundries	121,600	123,640	92,310

Carried forward	1,205,290	897,800	422,038

† Including forfeited dividends refunded.

The principal changes in the shareholdings comprise additions to the holdings of Modder B, New Modder, Village Deep, North Venezuelan Petroleum and Trinidad Leaseholds, and a substantial reduction in Daggafonteins. The directors announce a departure in the acceptance of " a participation in certain mining ventures in Bolivia." Possibly at the meeting some further information will be given in this regard. Much interest attaches to the question whether these participations are in tin properties. On the basis of 100 per cent. dividends Rand Mines 5s. shares at £3 show a return of slightly over 8 per cent.

The " Johnnies " Group in 1929.—Our mining correspondent writes :—Looked at from all points of view, the producing subsidiaries of the Johannesburg Consolidated Investment Company—which are responsible for a large proportion of the Rand gold yield—last year more than maintained their positions, although some shortage of native labour was experienced. A fresh and appreciable expansion is shown in the value of the Langlaagte ore reserves, while at the Randfontein the tonnage is higher. Dividends were unchanged, except in the case of the Van Ryn Deep. At one time the idea was entertained of an expansion to 100 per cent. in the dividends of the Government Areas, but—apart from any radical change in economic conditions—it may be that the current rate will prove the maximum. Of last year's earnings the somewhat increased amount of £1,448,900 went to the Union Government as its share. Capital expenditure absorbed £62,450, against £10,200. The improvements in the sorting and crushing plant having been " brought into commission with beneficial results," there will presumably be no great outlay of the kind this year. At the Langlaagte Estate the percentage of " payability " increased from 39 to 57 per cent. Last year's surplus earnings (£32,200) were carried forward, but if the monthly profits are no more than maintained it would seem reasonable to look for an increase in the dividend. By the purchase of £46,650 the debenture indebtedness of the New State Areas has been reduced to £279,900. The Government's share of the profits—£385,000—is naturally higher than before. The balance of £66,300 carried forward contrasts with £41,750 brought in. A five-year contrast of the results of the six principal companies is appended :—

1929	641,000	17/11	17/5	–/6	15,350	2½	372,000	5·4

Once again the Randfontein produced gold to the value of 2½ million for a gross profit of barely 10 per cent. Capital expenditure required £83,850 and debenture redemption £130,300, leaving £211,600 to be carried over, as against £180,200 brought in. By the redemption effected on March 1st last the debenture indebtedness has been reduced to £348,360; this should be cleared off within three years. The statistics relative to the Van Ryn Deep indicate quite clearly that the property has

BANK MANAGER.

Englishman, wide experience banking, finance, commerce, at home and abroad, including New York, seeks employment. Highest references. Willing go abroad in representative or any other capacity. Good French, Italian, Spanish.

—Box 29, THE ECONOMIST, 6 Bouverie Street, E.C. 4.

passed its prime. A considerable amount of dependence now has to be placed upon the upper leaders, whose extraction entails additional expense. As regards the Witwatersrand Gold, the consulting engineer states that no improvement occurred in the original mine, but that " a large tonnage of moderate grade ore " is indicated in the Knight Central and Knight's Deep areas.

Robinson Deep.—Our mining correspondent writes:—Scarcely any difference is shown by the results of last year, as compared with those of 1928, a small decrease in value being barely compensated for by increase in tonnage and saving in costs. The operating profit came out about £1,100 down at £172,830. Once again no distribution could be made on the " B " shares, which have received nothing since 1926. The fixed dividend on the " A " shares absorbed £75,000; net outlay on capital account amounted to £47,400, and various other items brought the debits up to £148,700, leaving the somewhat enhanced balance of £99,500 to go forward. This sum is represented by cash and cash assets:—

Year ends December 31st.	1927.	1928.	1929.
	£	£	£
Profit on working	189,209	173,954	172,830

"A" shares %	300	300	300
"B" Shares:—			
Earned £	*57,046*	*41,335*	*60,020*
Paid £	Nil	Nil	Nil
Earned %	*6·5*	*4·7*	*6·8*
To Debenture redemption	35,700	35,700	35,700
Other allocations	1,714	1,714	1,714
Carried forward	72,925	76,845	99,452

Performance of the record development footage of 29,160 failed to effect any expansion in the ore reserves, the payable percentage falling back from 67.5 to 50.8. The latter contrasts with 90.5 in respect of 1926, when the company's affairs appeared all *couleur de rose*. At the end of last year the ore reserves totalled 1,307,000 tons, value 6.0 dwts.—a decline of 100,000 tons in quantity and of 0.1 dwt. in value during the twelve months. Of the ore mined last year, 942,800 tons were stoped from the calculated reserves, 96,200 tons came from development, and 45,600 tons from reclamation. The available tonnage at the end of 1929 represented less than a year and a half's supply for the mill. The position, of course, is now changed by the acquisition of the property of the Village Deep, whose ore reserves on December 31st last were computed to be 103,100 tons, value 5.79 dwts. In this connection the par value of Robinson Deep " B " shares has been cut down from £1 to 7s. 6d., and a corresponding number of new shares—881,800—is being offered to the members at par under guarantee of the Consolidated Gold Fields. The proceeds will provide the £300,000 which is to be paid at the outset to the Village Deep shareholders and the bulk of the £37,500 to be handed over twelve months later. The balance of the new " B " shares—66,136—will be issued to the underwriters. By the acquisition of the Village Deep property the ore reserves of the Robinson will be nearly doubled, considerable expense in shaft-sinking will be saved, and ventilation—a difficult problem—facilitated. It is calculaeted that under the new conditions profits will average £25,000 per annum. For the current and succeeding six years the dividends on the " A " shares will continue to absorb £75,000 per annum. Allowing for this, also for taxation, etc., there will be a surplus representing 20 to 25 per cent. upon the " B " shares. Whether any distribution can be expected on account of the current year appears doubtful. After 1936 the dividend on the " A " shares decreases substantially, and they are due for repayment on January 1, 1941.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Hong Kong and Shanghai Banking Corporation, Mercantile Bank of India, Chartered Bank of India, Australia and China, Hungarian General Creditbank, London Life Clergy Mutual and Metropolitan, Norwich Union Fire Insurance Society, Norwich Union Life Insurance Society, Standard Life Assurance, the Employers' Liability Assurance, City of London Electric Lighting, Newcastle-upon-Tyne Electric Supply, Shropshire, Worcestershire and Staffordshire Electric Power, International Automatic Telephone, Powell Duffryn Steam Coal, Amalgamated Anthracite Collieries, British Enka Artificial Silk, Salt Union, V.O.C. Holding, Pinchin Johnson and Company, London and Thames Haven Oil Wharves, United Drapery Stores, Odhams Press and United Glass Bottle Manufacturers, Ltd. At the annual meeting of Amalgamated Anthracite Collieries the chairman said that there was a valuable market in Canada for Welsh anthracite, and shipments were now beginning. Presiding at the annual meeting of the British Enka Artificial Silk Company, Sir Henry Strakosch declared that, while the world production of artificial silk had increased only by about 17 per cent. as compared with 1928, compared with an expansion in consumption of almost double that rate, there was still over-production to the extent of 4 or 5 per cent. At the City of London Electric Lighting Company meeting the chairman **referred to a chart showing the** extent to which the demand for electricity for light, heating and power **had been constantly rising over a series of years.**

CAPITAL ISSUES.

Conditions in the new capital market remain satisfactory, so far as borrowers of high status are concerned. The home corporation issue of the week—£2,500,000 for the *City and County of Bristol* in the form of 5 per Stock 1950/60 at 99½—met with an instantaneous success. Birmingham is expected to follow next week with an issue of £5,000,000. The revival in home corporation loans under the stimulus of cheap money appears to be in full swing, and it is noteworthy that the issues are being made once again under the auspices of the old-established finance houses and private banks, the sponsor for Bristol being J. Henry Schröder and Company. Two semi-speculative issues have also made their appearance, the offers comprising preference shares of *Ingersoll, Ltd.*, the British company formed to exploit the Ingersoll watch, and ordinary shares of *M.R.S., Ltd.* The Ingersoll shares gave holders no " equity " rights, but were fully subscribed. M.R.S., Ltd., is a company operating a motor transport goods service and specialising in the transport of heavy plant and machinery. The railway companies have no doubt noted that this company can deliver complete railway engines by road from works to docks, and has recently constructed a fourteen-wheeled lorry designed to carry 100 tons—the only one of its kind (fortunately, perhaps) in the world. The company appears to possess a lucrative business.

City and County of Bristol.—Issue of £2,500,000 Bristol Corporation 5 per cent. Redeemable Stock, 1950-60, at £99½ per cent. This is a trustee security. Notice of redemption has been given to the holders of the Bristol Corporation 6 per cent. Redeemable Stock, 1930-40, who have the right of converting into an equivalent amount of the present 5 per cent. stock. The stock will be repaid at par on February 1, 1930, unless previously cancelled by purchase or agreement, but the Corporation will have the option of redeeming the same at par at any time on or after February 1, 1950, on three months' notice. The rateable value of the city is £2,615,386, and a rate of one penny produces about £10,500. The proceeds of the present issue will be applied to the repayment of 6 per cent. stock, 1930-40, and of £1,512,671 temporarily borrowed, the balance being used for municipal purposes.

Ingersoll, Limited.—Issue at par of 100,000 7½ per cent. cumulative preference shares of £1 each. The company has been formed to acquire, as from January 1, 1930, the business of the Ingersoll Watch Company, Ltd., which was formed in 1916. The directors are of the opinion that, including the net profit rental which will accrue from the letting of Ingersoll House, the net revenue for the current year should exceed £30,000, covering preference dividend four times.

M. R. S., Limited.—Issue at par of 59,602 Ordinary shares of £1 each. The company was incorporated as a private company in March, 1926, and as a public company in March, 1930, the name being changed from " Marstons' Road Services, Ltd." Profit for 1929, before deduction of depreciation, directors' fees and other fixed charges, totalled £19,366. Dividends for the last three years, 50 per cent. tax free, 5 per cent. and 20 per cent. Estimated net profit, £22,414.

[Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, shorter notices, and dividend announcements will be found on page 745, under the heading " Company News."]

COMPANY MEETINGS, &c.

HONG KONG AND SHANGHAI BANKING CORPORATION.

(Incorporated in the Colony of Hong Kong. The liability of members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.)

RESULTS OF DIFFICULT YEAR.

ALLOCATION OF PROFITS—BOARD'S CONSERVATIVE POLICY.

CONDITIONS IN CHINA—EXTRATERRITORIALITY SYSTEM AND SAFEGUARDS.

MR W. H. BELL'S REVIEW OF CONDITIONS AND PROSPECTS IN THE FAR EAST.

The ordinary yearly general meeting of the shareholders of the Hong Kong and Shanghai Banking Corporation was held on February 22nd last at the City Hall, Hong Kong.

Mr W. H. Bell (chairman) presided.

The chief manager read the notice convening the meeting.

The Chairman said :—Ladies and gentlemen,—The report and statement of accounts having been in your hands for some time I shall, with your permission, take them as read. (Agreed.)

PROFITS AND ALLOCATIONS.

The net profits for the year amount to $14,148,209.57, as compared with $13,430,061.61 for 1928—a return to approximately our earlier level of profits as calculated in silver. This would be satisfactory were it not for the heavy fall in the rate of conversion from silver to gold—corresponding to a fall in exchange of just under 25 per cent. between the opening and closing of the year—which substantially diminishes the sum available for our dividend in sterling. In addition the bank has suffered heavy losses from frauds perpetrated in more than one country, for which, however, I am glad to tell you full provision has been made.

It is for these reasons that—notwithstanding the good record made by the bank in a year of serious trade depression—your directors have thought it prudent to make the reduction of bonus, the possibility of which was adumbrated in the chairman's speech last year. A conservative policy of management is particularly necessary in the case of a bank, and I trust that you will concur in the board's decision and approve their recommendation in regard to the allocation of profits.

As shown in the profit and loss account, the amount available after deducting the interim dividend and directors' remuneration is $12,514,400.84, and the allocation proposed is as follows :—

A final dividend of £3 per share with bonus of £1 per share (subject to income-tax deduction)	$7,876,923.08
Transfer to bank premises account	$750,000.00
Transfer to silver reserve account	$500,000.00
Balance carried forward to the new account ...	$3,387,477.76
	$12,514,400.84

Following the example of three years ago we have made a transfer from silver to sterling reserve, your directors considering it advisable to build up the latter in view of the uncertainty in regard to silver prices. The amount, as shown in the report, is $5,000,000 converted at 2s.

BALANCE-SHEET ITEMS.

As regards the balance-sheet figures I will only remark that the slackness of Far Eastern trade is evidenced in the increases under the headings of current accounts and fixed deposits, while the cash increase, attributable wholly to Shanghai, also reflects the disturbed trade conditions which have had the effect of restricting circulation of silver.

Our investments stand at well under market quotations.

The increase of $16,500,000 in our head office note issue is related to Hong Kong's currency difficulties of the past year. During the first nine months the Hong Kong exchange failed to respond to the drop in the price of silver and in Shanghai exchange, and the notes of the three banks in Hong Kong (on the basis of which all business had for long been conducted following a mutual arrangement among the banks of many years ago) became in the end completely divorced from their nominal silver value and rose to a high premium over the silver currency which they actually represent. The resulting disturbance to trade between the Colony and China decided the banks to revert to the circulation of the silver dollar. Many of the banks then sent orders for the minting of British dollars in London or Bombay, and 20,000,000 of these and Mexican dollars have been obtained, of which the greater part are already in the Colony.

As the largest issuer of notes, and as the clearing bank, we have seen the majority of these dollars force their way into our treasuries, a state of affairs which reveals itself in our increased note issue. It is obvious that a small colony like our own cannot absorb unlimited silver dollars, and further imports of these are much to be deprecated. The increase in our note circulation, I would add, has only been rendered possible by the Hong Kong Government having made a concession in regard to the taxation of our issue, without which an increase would have been prohibitively expensive.

The only expansion which I have to record in our field of operation is the opening of a new sub-agency at Muar in the Malay State of Johore.

Of the affairs of this Colony there is little to say except that, in addition to the currency difficulties already mentioned, we have suffered the inevitable reaction from the renewal of civil war in the two Kwang provinces and other parts of China. The conditions for trade being very similar to those applying to China, I will refrain from treating them separately.

THE SILVER MARKET.

With an excess of supply over demand the silver market has trended steadily downward throughout the year owing principally to a calling off in Indian demand, Continental sales of silver, presumably released when French Indo-China decided upon the transfer of their currency to a gold basis, an operation which they have now virtually accomplished, and, finally, a continuance of sales by the Indian Government. As regards this last, it is reasonable to suppose that in future, with the refinery now working in Bombay, surplus coin in the silver currency reserve will generally be refined and sold locally as opportunity offers, thus narrowing the outlet for the world's production. The increase in the reserve is a weight on the silver market, and, with conditions as they are in China, one looks in vain for any probable source of a consumptive demand of sufficient strength and endurance to effect an appreciable recovery in prices. As I have said, our local requirements in Hong Kong are bound to prove limited.

The extreme quotations of the year for the price of silver were as follows—highest 26 7/16d., lowest 21 1/16d. per standard ounce, which constituted a low record for the metal (since then there has been a further decline). The quotations for Shanghai exchange were—highest 2s. 7¼d., lowest 2s. 1d. per tael for telegraphic transfers to London. By a curious coincidence the Shanghai exchange touched the top and bottom limits on the first and last days of the year respectively.

The mine production of silver for 1929 is computed at 275,000,000 of standard ounces, which, added to 60,000,000 from outside sources, gives a total of 335,000,000—an increase of 12,000,000 over the previous year. China's estimated consumption was 143,000,000 and India's 70,000,000, corresponding respectively to 141,000,000 and 110,000,000 in 1928. China thus again achieved a record.

UNFAVOURABLE TRADING FACTORS.

The trading conditions of last year in India and the Far East have, as I have already mentioned, been none too favourable. In the first place, China failed to realise the promise of the previous year and relapsed into civil warfare; famine and brigandage played their familiar *rôles*, and a further misfortune was added in the fall of the silver currency. This accumulation of evils effectively destroyed any chances of trade expansion, and I think we may reckon it fortunate that there has not been a more appreciable decline.

The raising of the tariff in February had little apparent effect on the volume of import trade, which was well maintained during the first few months of the year. As the year progressed, however, the various hindrances to commerce became increasingly felt. Wars and disorders in the provinces, together with the drop in exchange, checked the demand for imports, while exports fell away under the burden of military taxation and difficulties of transport. In the autumn came the disturbance of the foreign markets resulting from the crash on the New York Stock Exchange, and the end of the year found business in China at an unusually low ebb, with little prospect of an early turn of the tide.

STAPLE IMPORTS.

Taking the staple imports, foreign cotton manufactures have had to compete with a substantial increase of output from the local mills. The raising of the Japanese boycott also brought a flood of Japanese cotton goods on to the market, making competition extremely difficult for British manufacturers. The trade in woollens was dull in spite of lowered prices. The engineering business showed welcome signs of recovery from a long period of stagnation, thanks largely to the quickening of industrial developments on the Yangtze and to greater activity in the sphere of public works. There was an increased importation of railway material, including engines and rolling stock, a considerable demand for aircraft for both military and commercial use, and a good market for motor vehicles corresponding to the rapid extention of motor roads in most provinces of China. British products, I may add, were fairly well represented in the supply of industrial machinery, only moderately so in regard to railway requirements, and very slightly in the case of the motor trade.

The Customs returns for the year show a gross revenue of 152,000,000 taels, against 82,000,000 in 1928. Reckoned in silver this represents an increase of 85 per cent.; reckoned in gold 68 per cent.; in this connection I may add that, under the new tariff, the proportion of Customs revenue required for the foreign loans and indemnities at current rates of exchange is considerably less than one-half.

DECREASE IN TRADE FIGURES PROBABLE.

The Customs have not made available the comparative figures with former years which are necessary to furnish an index of the increase or decrease of trade, but one may infer by calculation a falling off—though not of serious extent—from the previous year's volume. The figures bring out the increasing preponderance of Shanghai's trade in relation to that of the rest of China; they also indicate a redressing of the balance between the northern and the southern ports, the south having recovered much of the ground lost through the Communist troubles, while the figures for the north show a distinct decline. This is especially the case in regard to Tientsin, which found itself starved of cargo from up-country owing to the political unrest and also suffered for the first half-year from the unnavigable state of the river which connects it with the sea. The Manchurian figures reflect the disastrous effect of the Sino-Russian dispute and the interruption of the Chinese Eastern Railway, which, besides increasing freight rates, upset the economic machinery of the country and severely checked all commercial development.

While on the subject of the Customs, let me add a word of recognition of the very successful manner in which the service, under Mr Maze's guidance, has emerged from the very difficult crisis with which it was faced just over a year ago. In spite of wars and civil commotion, the treaty-port revenues have been regularly remitted. We have evidence, too, of the maintained prestige of the foreign administration in the fact that the Government have transferred to Mr Maze's hands the control of important native Customs establishments in several provinces.

RAILWAYS AND COASTAL SHIPPING.

Railway communications, to which I shall again refer later, have shown some slight improvement over the conditions of the previous year, but military interference has prevented or crippled traffic on nearly all main lines. The construction of 600 miles of railway track in Manchuria during the last three years is a fact worthy of notice.

Coastal shipping has had a difficult year and again met with tragic experience at the hands of pirates. Foreign navigation on the Yangtze passed an uneventful year, the effect of reduced volume of trade being partly offset by Government commandeering of native vessels for military transport.

TRADE CONDITIONS IN INDIA AND JAPAN.

In India the past year cannot be ranked as a very prosperous period, the trade of the country having shown a decided tendency to sag. The jute and gunny markets, two of the most important, have suffered from lower prices than had been seen for several years. The tea industry also saw a steady drop in values, due to increased crops and the existence of unusually large stocks in the United Kingdom. The last monsoon was a fair one and should improve the position in regard to foodstuffs. Native manufacturers have been favoured by better relations between employers and labour.

Japan's trade for 1929 showed a marked improvement over the low level of 1928. Exports showed a large increase, and the adverse trade balance for the year, standing at 67,500,000 yen, is the lowest for 10 years. The new Government, which took office about the middle of the year, set itself strenuously to appreciate the value of the yen in preparation for restoring the currency to a gold basis. With the help of credits opened abroad—to which this bank contributed as a member of a London banking syndicate—this was accomplished on January 11th last, when the embargo on the export of gold was removed. The rise in the exchange value of the yen had the immediate result of depressing home prices and restricting commerce and industry. These sacrifices consequent on the delicate operation of restoring credit by artificial measures are, of course, inevitable, and though every effort will no doubt be made to minimise the effect, we must look forward to some continuance of the dullness in trade.

STRAITS SETTLEMENTS, MALAYA AND THE PHILIPPINE ISLANDS.

From a fairly promising start trade conditions in the Straits Settlements and Malaya deteriorated through the year and finished at a regrettably low level. A notable increase in the world's consumption of rubber was outstripped by the increase in production and export, and prices receded in the latter half of the year to abnormally low figures. The tin industry presented similar features. The import trade showed a corresponding decline and was very dull in the second part of the year.

Although trade in the Philippine Islands suffered from the effects of world over-production of sugar as well as of the devastating typhoons of the previous year, general conditions are by no means unsatisfactory. Considerable development is taking place both by private enterprise and in the form of Government works, such as new roads and bridges. This fundamental improvement in the economic state of the Islands reflects itself in the Budget surplus which the year is expected to produce.

TRADE OUTLOOK "OVERCAST."

Next year's outlook for trade between Great Britain and the Far East generally is somewhat overcast. The heavy fall in values consequent on the Wall Street collapse and inflated money conditions are, without doubt, affecting manufacturers and restricting their purchases of raw material. This will bear heavily on firms handling Far Eastern produce, such as rubber, tin, hemp, sugar and China produce generally, making it difficult to market the steadily increasing production. Unfortunately, British textile exporters generally have been correspondingly hit. Handicapped by high cost of production, they are condemned to see the market supplied by the cheaper products of Japanese mills and of domestic output in India and the Far East. The drop in silver currencies has also adversely affected the demand for British manufactures, especially cotton, woollen, and artificial silk fabrics, and it is to be feared that the marked falling-off in British exports to the East, dating from last October, may yet continue.

To take the reverse side of the picture, cheaper money and a saner perspective as to the limits of trade expansion may lead to business being in future conducted on sounder economic lines. We may venture, too, on the hope that an increased trade activity in other parts of the world will counteract the feared decline in America's prosperity and so prevent a lessening of the world's demand for commodities.

POLITICAL SITUATION IN CHINA.

Let us pass now to the political situation in China, which, more than any other factor in the present state of affairs, regulates the fortunes of those whose business lies in the Far East. The year has witnessed slow progress in the movement towards consolidation. A series of important counter-movements has threatened the stability of the Government and the peace and security of the population. None of these has succeeded, indeed, in overthrowing the Government of Nanking, and so far, at any rate, there is no evidence of any alternative to that Government. These repeated uprisings absorbed, however, most of the country's energies, and the record of the year, which I will attempt to summarise in a short space, is, as will be seen, chiefly taken up by military operations.

The year opened with the Disbandment Conference in session at Nanking. The hopes which attended this first "round table" of the military chiefs were, however, doomed to be short-lived. Within a couple of months, and before a start had been made to apply the Conference plans for demobilisation, the country had slipped back to a state of civil strife. A quarrel arose between the Central Government and the Wuhan military group centred at Hankow. By the end of March it had flared into active warfare—the first renewal of fighting since the establishment of the National Government. The revolt was quelled on the Yangtze before the end of April, but fighting dragged on in the southern provinces, especially round Canton, into the month of June.

In the meantime at Nanking an important political milestone had been passed—namely, the holding of the Third National Congress

of the Kuomintang. The result of the Congress was to confirm the central power in the hands of Marshal Chiang Kai-shek and his colleagues, leaving the membership of the Central Executive Council, the supreme authority in the country, substantially unchanged.

MARSHAL FENG YU-HSIANG AND THE NANKING GOVERNMENT.

Before the country had had time to settle down from the Wuhan revolt a fresh breach of the peace occurred. In the middle of May Marshal Feng Yu-hsiang, at the head of the Kuominchun, challenged the Nanking Government, withdrawing his army into the western provinces and destroying railways along his line of retreat. He was officially declared a rebel, and by the end of the month war was again raging in China. The state funeral of Dr. Sun Yet-sen—which took place with great ceremony on June 1st—came at an opportune moment and caused a lull in the fighting. Thereafter Marshal Feng, weakened by the defection of two of his leading generals, withdrew from active revolt, but his attitude to the Government continued to be such as to leave the situation precarious. A bold effort to reunite the leaders was made by Chiang Kai-shek in the first week of July, when he called a conference at Peiping. The attempt was partially successful; Marshal Feng again pledged his loyalty and was reinstated, and it was agreed to hold another Disbandment Conference.

This second Disbandment Conference, held at Nanking early in August, ended in fresh plans for an all-round reduction of troops and in the issue by Nanking of a further disbandment loan. The results were, unfortunately, negative, for after barely three months of peace war broke out for the third time towards the end of September. On this occasion Nanking was faced by a revolt from the so-called "Reorganisationists," a group mainly consisting of the political leaders of the left who had been excluded from office, supported by certain military commanders, including several of the Kuominchun generals. At first the rebels were successful. For many weeks fighting proceeded in the central and southern provinces, and the war was at one moment carried almost to the gates of Nanking. The tide turned, however, in favour of Marshal Chiang, who by the end of the year had the situation again in hand and averted the threat to the Government.

One can thus congratulate the Government on surviving three most serious crises during the course of the year. Whether in consequence its position has been strengthened throughout the country as a whole it is very difficult to say. A year ago it was at least possible to hope that the Nationalist victory had done away with the old disruptive forces which kept China in turmoil. The events of the last 12 months have proved this hope to be vain, and we must, I fear, now reconcile ourselves to a slower, and less dramatic, cure of China's domestic ills.

ACHIEVEMENTS OF THE YEAR.

The sequence of wars has left little room for constructive work, and the many excellent programmes of reform sponsored by the National Government have made but small progress. Such as they are, I will attempt, however, to review the achievements of the year.

In the sphere, first, of politics, the Central Executive Council announced in June the Kuomintang programme for the continued government of the country. In accordance with this programme the system of "political tutelage" is to last till 1935, thus prolonging the government of China by the Kuomin Party for six years to come.

In the matter of legislation many new laws and sections of codes have been promulgated. The texts appear to be based, in general, on good and up-to-date models. Our own experience in legislature has taught us, however, the great value of independent scrutiny and criticism of draft laws in order that they may, before acceptance, be moulded into the form best adapted to local conditions, and it is perhaps a little unfortunate that the present system of legislature in China provides no opportunity for examination by any other agency than the Central Administration itself. In the manner of their making the new fundamental laws of China might appear, in fact, to approximate rather too much to departmental regulations.

NATIONAL FINANCE.

Turning to national finance, the position is frankly disappointing. In spite of forcible pleadings by the Chinese bankers and merchants and of clear and outspoken warnings by the Minister of Finance himself, the Government have failed to achieve any of the major reforms which are so urgently needed in order to put the country on a sound financial footing. The balancing of revenue and expenditure appears no nearer and the spending of the major part of the national income on military expenditure continues as before.

There is little or no abatement of the crippling local taxation. The reorganisation of the Central Government's revenues under Mr T. V. Soong has undoubtedly made advance, but the ensuing increase, including the additional yield from the Customs, has been swallowed up almost entirely by military needs. Future income, meanwhile, has been pledged ever deeper for unproductive loans issued to the total nominal value of some $250,000,000 in the course of the past year. I must mention in this respect the great improvement effected by the creation of independent commissions for the custody and service of the funds pledged for these loans, the result showing in the fact that their price on the market has remained relatively unaffected by political fluctuations.

DEBTS FOR RAILWAY MATERIAL.

Though a special Government Committee has been appointed for debt consolidation, we still await tangible evidence of progress, and, in the meantime, the debts continue to "snowball" in alarming fashion. The Minister of Finance's arrangements for dealing with the arrears of the "Salt" loans have helped to revive confidence among holders of this class of security. Nothing, however, has been done for a very important category of creditors—namely, the purveyors of railway material, some of whom have been waiting for payment for over 10 years.

This is a very serious matter, and I consider it indefensible that a Government which disposes of the earnings of railways should withhold payment for the materials used in their working (which, let me add, include in this case a large amount of rolling-stock in every-day use on the lines), thereby involving private merchants in almost intolerable losses. We are given to understand that the Ministry of Railways has the matter of debt settlement in hand, and we must hope that it will not be long before action is taken to remove the stigma which attaches to the present state of affairs.

RAILWAYS AND MILITARY INTERFERENCE.

As regards the railways themselves, an extension programme of almost staggering magnitude, requiring an expenditure of some $800,000,000, was adopted by the Third National Congress. But when we turn from plans to achievements the record is hardly impressive. Thanks in considerable part to the use of remitted Boxer Indemnities, there has been, it is true, a greater replacement of rolling-stock than for a good many years past, and the benefit of this will inevitably make itself felt if the lines can be kept free from the plague of military interference. The "if," however, is a big one.

The past year saw little improvement—taking the railways as a whole—in regard to military occupation or to the excessive taxation which goes with military control, transportation taxes of an almost prohibitive nature being levied as before on many of the principal lines. Conditions have been more hopeful on the Shanghai-Nanking and Shanghai-Hangchow railways, in relation to which lines our associate, the British and Chinese Corporation, has been actively engaged on schemes of co-operation with the Ministry of Railways.

Disbandment remains the most important issue in China's domestic affairs, and if I mention it last this is only because there is, unhappily, nothing more to record than the holding of the two barren conferences already mentioned. The President himself has described disbandment as the touchstone of patriotism for China's military commanders; the definition is exact, and there is nothing which would do more to restore the world confidence which China so greatly needs than an effective agreement among those same leaders for the mutual reduction of troops.

EXTRATERRITORIALITY.

Passing on to China's diplomatic relations in 1929, I come to a question of vital importance for all foreign concerns—namely, the abolition of extraterritoriality. Having proved my mastery of that excessively polysyllabic word, I propose—by the way—to save my tongue and your time by using it in future in its telescoped form and to call it "extrality." The subject is so immense that I cannot deal with it as fully as I should like, and I shall confine myself to a few comprehensive remarks from the point of view particularly of our own position in the matter.

Let me begin by saying that China's ambition to abolish the extrality system and to see herself placed on the footing of other nations is one which we understand and can feel for. In the past, however, as pointed out by his Majesty's Government, the system has been a recognised necessity in China, and it is upon it that institutions like our own were founded and built up. Its abrupt termination would, I have no hesitation in saying, seriously imperil their existence and be an act of the gravest injustice. What we therefore demand is, not that extrality shall remain in its unmodified form, but that its modification shall be gradual, the rate and method being such as will at no stage leave foreign firms in China without common legal safeguards.

As to how far China has already progressed towards herself providing these safeguards opinions may vary. I can only say that the report of the 1926 Commission abundantly proved their inadequacy at that date, and that it is obvious that the four intervening years, filled as they have been by warfare and political turmoil, have wrought no radical improvement.

ESSENTIAL SAFEGUARDS.

Now the essential safeguards which we need for the carrying on of our business may be grouped under three heads—reasonable laws, their impartial application by independent judges, and, lastly, effective protection against illegal administrative acts. As regards the first, the Government, as stated, is busily enacting a body of modern law. There may, as I have mentioned before, be room for improvement in the method of compilation, but there is no reason to doubt that China will soon possess an acceptable instrument of justice in so far as the actual codes are concerned.

When we come to administration we have, however, before us the many recent cases in the Shanghai Provisional Court which have drawn forth protest from the Consular Deputies and in the foreign Press besides incurring the united strictures of the Diplomatic Body. One has only to look at the record of this Court to see the need of a further period of development before foreigners can look with confidence to the Chinese tribunals as a guarantee of justice. It is above all the lack of judicial independence—stressed by the Commissioners in their 1926 report as the outstanding defect of the Courts—which causes mistrust, since it has shown itself all too clearly in the frequent removal of Judges and in avowed submission by the judiciary to political authority.

While gladly recognising the progress already made, I cannot, therefore, but echo the British Government's statement in their Note of August last. They there pointed to the need of a far greater advance towards making a living reality of reforms, especially in regard to freeing the Courts from outside interference and dictation. Till this takes place any transfer to the Chinese Courts of powers of jurisdiction over foreigners needs to be strictly conditioned and limited.

PROTECTION AGAINST LAWLESS IMPOSITIONS.

I come now to the third, and in my opinion by far the most important, of our requisite safeguards. A glance at current conditions in China is enough to show how absolutely necessary it is that protection should exist against lawless impositions by the "powers that be." Individuals and companies are notoriously subject to illegal and often extortionary treatment, against which the Courts of law provide no defence. So many flagrant cases have been revealed in the public Press that examples need not be quoted.

This state of affairs is, of course, closely connected with the persistence of civil war throughout the provinces of China, and one can fairly hope that a few years of peace and orderly government will remove the worst of the evil. But I wish to say with all the emphasis I can that unless and until this improvement takes place it would be certainly premature, and not improbably disastrous in the fullest sense of the word, to place foreign businesses under the sovereign control of local Chinese officials. If we are presently to be called upon to come under Chinese law, it is here more than in any other direction that we look to our Government to assure us the protection so vitally needed.

FUTURE STATUS OF SHANGHAI INTERNATIONAL SETTLEMENT.

The momentous question of the future status of the Shanghai international settlement is receiving official attention. The system of municipal government under which the settlement has attained to its present size and prosperity has a splendid record to its credit. Altered conditions—of which the rapid expansion of "Greater Shanghai" outside the settlement boundaries is perhaps the most important—call, however, for an impartial examination and, it may be, for some changes.

The Shanghai Municipal Council have taken a wise step by obtaining as their adviser, in the person of Judge Feetham, a man of experience and high reputation in the practical handling of problems of an analogous nature. Let us hope that a solution will be found which will provide the desired extent of Chinese co-operation and also firmly guarantee the standards of efficiency and integrity which the administration of the Settlement has enjoyed up to the present.

Other matters in China's relations with foreign Powers to which time forbids me to make more than the briefest reference are, first, the evacuation of Shantung by the Japanese troops last May, resulting in a relaxation of the tension which had unfortunately existed between the two countries for the previous year, and, secondly, the Sino-Russian rupture over the Chinese Eastern Railway, which still awaits a final settlement although through traffic on the railway has now been resumed.

Having made already considerable demands on your patience in dealing with the state of affairs in China, I must pass over much that would otherwise claim attention. Enough has, however, been said to show that the year on which we are entering opens a more than usually anxious prospect to foreign banks and businesses whose interests are vested in that country.

TRIBUTE TO MR HYNES.

I have now to inform you that Mr Hynes has tendered his resignation, which the directors have accepted, but with the very greatest regret. He has had over 35 years' service—of which over 12 have been in Hong Kong itself—and during the past three years has been our chief manager. These three years, as you all know, have been exceptionally difficult ones, and the results attained in face of these difficulties speak more for Mr. Hynes's zeal and ability in the service of the bank than anything I could possibly say. (Cheers.)

I feel sure that you would wish to join me in offering a warm farewell to Mr Hynes and in wishing him enjoyment of a well-merited rest after his long and successful career in the bank. (Cheers.)

Mr V. M. Grayburn has been appointed to be acting chief manager when Mr Hynes leaves in two or three weeks' time. Here again I feel sure that you will join me in offering him a hearty welcome and every success. (Cheers.)

In conclusion, I would ask you to confirm the directors' vote of a bonus to the staff of 5 per cent. on their salaries. The reduction from 10 per cent.—the figure of several years past—has been made to correspond with the halving of the shareholders' bonus.

I now beg to propose the adoption of the report and statement of accounts.

After the proposal has been seconded, and before placing the motion before the meeting, I shall be pleased to answer to the best of my ability any questions that shareholders may have to ask. (Cheers.)

SIR HENRY POLLOCK'S SPEECH.

The Hon. Sir Henry Pollock, K.C., said: Mr Chairman, Ladies and Gentlemen,—In rising to second the adoption of the report and the statement of accounts, I do not propose to occupy many minutes of your time, especially in view of the very full and interesting speech which has just been made from the chair.

The first point which strikes one as satisfactory is the fact that, in spite of difficult trade and banking conditions during the past year, our earnings in silver for 1929 exceeded by some 7 lacs of dollars our earnings in silver for the year 1928.

Yet another point for congratulation is that our directors, by transferring $5,000,000 from our silver reserve at the very favourable rate of 2s. to the dollar, have raised our sterling reserve to 6½ millions sterling, and when we call to mind that only 10 years ago, at the beginning of 1920, our sterling reserve stood at £1,500,000 only, it will be readily appreciated how much the bank has strengthened its sterling position during the last 10 years. (Cheers.)

We are also transferring $500,000 to our silver reserve and $750,000 to bank premises account, and it is pleasing to hear from you, Sir, that our investments stand at well under market quotations.

THE STERLING BONUS.

While we, as shareholders, must regret that the sterling bonus for the year has been reduced from £2 to £1 per share, we feel bound to acquiesce in the decision of the board when we reflect that, at the low exchange of 1s. 7½d. to the dollar, the final payment to us of £4 per share costs only about $40,000 less in dollars than the payment of the final of £5 per share cost us for the year 1928 at the then exchange of 2s. 0¼d. to the dollar. Moreover, those shareholders who think in dollars can derive comfort from the fact that for the year 1929 they are receiving, in dividend and bonus combined, $80.37 per share, as compared with $79.02 per share for the year 1928.

In regard to the disturbed state of affairs in China, shareholders can only join with our directors in deploring the continued persistence of civil war in China with its accompaniment of famine and brigandage and of the oppression of the Chinese merchants and masses by irregular taxation and of interferences with the arteries of trade in so many Provinces of China.

MOLESTATION OF SHIPPING.

Also the molestation of shipping by pirates is still unfortunately with us, and we trust that the preventive measures, which have

recently been initiated by the Government of Kwangtung, will shortly bear fruit.

As regards the abolition of extrality, one can only express the hope that the Power-that-be in Nanking will realise the desirability for proceeding slowly and gradually, so long as Chinese Judges have no security of tenure of office, and so long as such Judges are liable to dictation and interference by political and military officials.

All shareholders will most cordially endorse the bonus of 5 per cent. to the bank staff on their salaries, and will very much regret the necessity for reducing the same.

In conclusion, Mr Chairman, I desire, on behalf of the shareholders to echo your words of appreciation of the very valuable services which have been rendered to the bank by our retiring chief manager, Mr Hynes—(cheers)—during the past three extremely difficult years, and we join in wishing him, and Mrs Hynes also, many years of happiness to come. (Cheers.)

We likewise desire to endorse your words of welcome to the incoming chief manager, Mr Grayburn, and to wish him every success in his arduous task. (Cheers.)

Mr Chairman, Ladies and Gentlemen,—I have very much pleasure in seconding the adoption of the report and statement of accounts. (Cheers.)

The report and accounts were unanimously adopted.

RE-ELECTION OF DIRECTORS.

The Chairman : The business now before the meeting is the election of directors.

Mr R. M. Dyer : I beg to propose that the appointments of Mr J. P. Warren, Mr T. H. R. Shaw, Mr M. T. Johnson, and Mr T. E. Pearce be confirmed, and that Messrs W. L. Pattenden, A. H. Compton, and B. D. F. Beith be re-elected directors.

Mr D. J. Lewis seconded the proposal, which was unanimously carried.

The Chairman : The business now before the meeting is the election of auditors.

Mr F. C. Hall : I beg to propose that Mr C. Bernard Brown and Mr John Fleming be re-elected auditors.

Mr J. W. C. Bonnar seconded the proposal, which was unanimously carried.

The proceedings then terminated.

HUNGARIAN GENERAL CREDITBANK, BUDAPEST.

NEW DIRECTORS.

The sixty-second ordinary general meeting of the institution, which took place on March 19th, under the chairmanship of Baron John de Harkányi, fully approved the balance sheet for the past year showing net profits of 7,496,453 pengös.

THE DIVIDEND.

The dividends of P. 5.50 per share will be paid from March 20th.

The general meeting elected as new members of the board of directors Monsieur Aimé Lepercq, the general manager of the Union Européenne Industrielle et Financière, Paris, and Prince Elemer de Lonyay.

The board of directors have nominated Mr Robert Beck to be managing director of the institution, and Mr Rudolf Kallay and Mr Stephen Perenyi to be assistant managing directors of the bank.

Established 1889.

NORWICH UNION FIRE INSURANCE SOCIETY.
TOTAL ASSETS, £6,289,903.

The one hundred and thirty-second annual meeting of the Norwich Union Fire Insurance Society was held, on the 24th instant, at the head office, Surrey Street, Norwich, Sir George H. Morse (the chairman) presiding.

The notice convening the meeting and the auditors' report were read by the Secretary (Mr F. C. Botting).

The Chairman said :—The operations of the society for the year show results very much the same as those of the previous year, although our sources of profit differ considerably in their proportion of contribution to the total earnings.

FIRE ACCOUNT.

The year 1929 has been a trying one for fire underwriters . . . but I trust you will feel some measure of satisfaction when I say that the Norwich Union home losses were only 8½ per cent. higher than in 1928, which speaks well for the good character and selection of the risks on our books. There is still some margin of profit in home fire business, but the losses have been steadily growing for some time past, and competition and rate reduction have not yet been stayed. We, however, hope that we may find the current year more favourable.

Summarising the fire account, you will find that the premium income at £2,179,075 is £76,441 less, and the profit £100,332, or 4.6 per cent., as compared with 6.4 per cent. in 1928.

Our accident business shows both a larger premium income and better profits than in the preceding year. The business in the British Isles has shown some expansion, and the profits earned have been satisfactory. We are particularly pleased that the motor account, which is the largest and most progressive section, did better.

Abroad we have made a gratifying advance in almost all areas, and have been enabled to get a number of our agents who previously only acted for the fire department to open an accident account with us. The Canadian accident business made a substantial improvement. The Norwich Union Indemnity Company, which transacts our casualty business in the United States, is, on conservative lines, making progress.

The employers' liability account, which refers only to business in Great Britain and Ireland, has shown good results this year. The profit we are enabled to transfer is £17,681, as against £3,283 in 1928.

In the personal accident account the transfer of £2,287 represents a very small percentage on the premium income of £130,215. It is known, I think, that personal accident policies frequently contain sickness benefits, and the very severe influenza epidemic in the early part of last year necessarily caused a large number of claims, which adversely affected the account.

GENERAL ACCOUNT.

The general account takes in the remainder of our accident business at home and abroad, and shows a premium income of £1,530,213, which is greater by £105,378 than last year, and the profit of £61,372 is rather more in spite of the fact that we have very materially strengthened the outstanding claims reserve, which should be helpful in enabling this account to show further improvement in future years.

Putting the figures of our accident business together you will find that our total income is £1,912,504, being an increase of £100,488. The loss ratio is 55.72 per cent. and the profit £81,341, being 4.25 per cent., as against 3.48 per cent. in the 1928 account.

I now turn to the marine account, where the premium income is £169,914, reflecting, in its diminution of £24,265, the policy of the board in a very careful selection of business, which has been loyally carried out by our underwriter. The 1928 underwriting account has been closed by transferring the sum of £5,280 from profit and loss, and the total of the marine insurance fund is now £171,021, which, as you will see, is slightly larger than the premium income, and substantially greater than what is required, in the judgment of our expert adviser, to run off all liabilities.

PROFIT AND LOSS.

Interest and dividends we receive on our investments, after deduction of income tax, come to £204,349, which is an increase of £8,235. On the other side of the account, we are fortunate this year in requiring £18,001 less to bring our provision for income tax fully up to the requirements for all liability of this character to the end of the year of account. The commutation of pensions also costs less by £3,787, so that, although our trading profits are somewhat less, the additional interest and lowered outgoings place us in the position that, after paying the same dividend as last year and debenture interest only reduced by a few pounds, there is available £102,500 to place in the uncalled capital reduction fund and £412,925 to carry forward, which is £6,451 more than was brought in. We propose to pay up a further £2 10s. per share, which will make each £25 share £24 paid. Our assets now total £6,289,903, an increase of £193,472.

The report and accounts were adopted.

THE MERCANTILE BANK OF INDIA, LIMITED.

SATISFACTORY RESULTS OF A DIFFICULT YEAR.
INCREASED NET PROFIT.
TRADE CONDITIONS IN INDIA AND THE FAR EAST.
MR. J. M. RYRIE'S INTERESTING REVIEW OF FINANCIAL AND TRADE POSITION AND PROSPECTS.

The thirty-seventh annual general meeting of the shareholders of the Mercantile Bank of India, Ltd., was held, on the 25th instant, at Winchester House, Old Broad Street, London, E.C.

Mr J. M. Ryrie, the chairman, presided.

The Chief Manager (Mr J. Steuart) having read the notice convening the meeting and the auditors' certificate,

The Chairman said : Gentleman,—The directors' report and the accounts have been duly circulated, and I ask you to allow me to take these as read. (Agreed.)

I am sure you will all join me in expressing regret that Mr Hambro is not with us to-day, and when I tell you his absence is due to a recent and, I am pleased to say, successful operation, I am satisfied you are with me in hoping that he will make a good recovery.

You will see that, pursuing our policy of expansion in Malaya, we have opened agencies at Kuala Lipis and Kuala Krai. As events have proved, I was too sanguine at this time last year when I ventured to refer to the outlook for the past year. The effects of the America Stock Exchange "boom" have been widespread, bringing about high rates for money, a large efflux of gold and fluctuations in rates of exchange, all of which have been to the disadvantage of trade, while above all the serious fall in the price of almost every commodity created a want of confidence. Then to all this may be added the so-called irregularities upon our own Stock Exchange and indiscriminate expansion on the part of certain companies, resulting in heavy losses. The result of the General Election also brought with it a feeling of uncertainty and the fear of even higher taxation as the result of an increase in the already heavy expenditure upon social services.

IMPORTS AND EXPORTS.

In our staple industries generally there was no real improvement except in the case of coal; conditions in cotton deteriorated further, and shipping, which is always a good barometer of trade, had a bad year. As compared with both 1927 and 1928 the value of our imports of merchandise increased, while unfortunately the value of our total exports of merchandise was lower than in 1928 though higher than in 1927, but of course the fall in prices accounts to some extent for this decrease in exports. The excess of imports of merchandise over total exports of merchandise at £382,000,000 is higher by £29,000,000 than in 1928, but lower to the extent of £4,000,000 when compared with 1927. But from the Board of Trade figures recently published, which include bullion on both sides of the account and also "invisible" exports, the balance of payments in favour of this country last year was £151,000,000, as compared with £152,000,000 in 1928 and £114,000,000 in 1927. Then the total of new issues of capital last year amounted to only £285,000,000, against £369,000,000 in the previous year, the reduction being due to high money rates in this market, and which in turn were the result of the speculative fever on Wall Street. I can only, therefore, describe 1929 as a disappointing year for this country.

INDIA.

Then I regret being unable to give an encouraging report upon conditions in India. On the whole, and apart from floods, the monsoon was satisfactory, but, like other producing countries, India suffered from the fall in prices of cotton, jute, tea, and other produce, the result of this naturally bringing about a decrease in the purchasing power of the people. At the same time, the value of the imports of merchandise at £186,000,000 shows no decline when compared with 1928, but the imports of gold at £13,000,000 and of silver at £5,500,000 both declined appreciably. The value of the exports of merchandise, however, declined from, say, £253,000,000 in 1928 to £241,000,000 last year, and in spite of the reduced imports of gold and silver the balance of trade in favour of India declined from about £40,000,000 in 1928 to £36,000,000 in 1929, according to the figures at my disposal. A feature of the trade was the large imports of wheat as compared wies previous years, while the imports of American cotton declined to a negligible quantity. In spite of the continued agitation in favour of 1s. 4d., the rupee has been maintained at or about 1s. 6d., and the Finance Member has recently stated that the Government will not consider a return to the former ratio. The highest rate for the year was 1s. 6 3/4d. and the lowest 1s. 5 31/32d., the average rate being 1s. 5 7/16d., which reflects the conditions of trade and explains why the Government were unable to fill their requirements in the shape of purchases of sterling in India.

EFFECTS OF POLITICAL UNCERTAINTY.

The set-back in trade was partly due to labour troubles and, as I have said, to falling prices, but I need hardly say that confidence was shaken by political uncertainty, while Indian credit was affected not only by the foolish attitude adopted by the Independence Party at the recent so-called All-India Congress meeting, but by mischievous articles in a certain section of the Press in this country. It is not remarkable, therefore, that, under these circumstances, the Stock Exchange prices of Indian Government securities declined, and that the Government have found it necessary to borrow at high rates of interest, but the Secretary of State dealt very promptly with the suggestion that India might repudiate her debts, and a study of her financial position indicates that she can present a balance sheet which defies unfavourable criticism. But perhaps the less I say about the political situation the better, particularly as we shall have the report of the Statutory Commission before us at an early date, though I cannot but feel that, as independence is so entirely impracticable for India, the extremists have cleared the air for those who are responsible for the preservation of law and order in a country where such irreconcilable communal differences exist.

In the early part of the year the Imperial Bank rate touched 8 per cent., but later declined to 5 per cent., and closed at 7 per cent., the average for the year being 6.41 per cent., against 6.20 per cent. in 1928. The Bombay cotton mill industry continued in the depths of a depression which has lasted since 1923, and from a statement recently published it appears that the losses of 73 mills during the six years ended 1928 amounted to a sum of £8,625,000. Then even the Calcutta jute mills, which have enjoyed a long period of prosperity, have fallen upon lean times lately, the increased working hours and reduced crops in other countries resulting in over-production and a decrease in the value of jute goods exported. It is not surprising, therefore, to find that, with so many depressing factors, the value of shipments of cotton piece-goods and yarns to India from the United Kingdom declined from £32,800,000 in 1928 to £28,300,000 last year, and unfortunately this decline is not explained by lower prices only.

BRITISH MALAYA.

I gave you a gloomy account of conditions in British Malaya at our last meeting, and I regret to say there was no improvement, if not a further set-back, last year. At the beginning of the year the prospects seemed brighter, but with the later fall in the prices of rubber and tin the position deteriorated, and there were innumerable failures among the bazaar dealers. It is true that the total value of both exports and imports increased to some extent in spite of lower prices, but this is probably explained by larger imports of rubber from the Dutch East Indies and increased exports of rubber and tin. The exports increased from £98,000,000 in 1928 to £107,000,000, and the imports from £100,000,000 to £102,000,000. The gross shipments of rubber, which include rubber produced in the Dutch East Indies, amounted to 579,000 tons, valued at £50,000,000, which compares with 409,000 tons and £36,000,000 in 1928, the average price last year being slightly higher than in the previous year, while it may not be out of place if I add here that the shipments of rubber from Ceylon at 80,300 tons, valued at £7,500,000, compare with shipments of 57,000 tons, valued at £5,300,000, in 1928.

The shipments of tin from Malaya increased from 97,800 tons in 1928 to 102,000 tons last year, but as the average price declined from £227 to £204 per ton, there was a fall in the value of the shipments from about £22,000,000 to £20,000,000. There was an increase in the value of shipments of cotton piece-goods and yarns from the United Kingdom to the Straits Settlements and the Federated Malay States from £1,900,000 in 1928, to £2,600,000, but this

was the result of the optimistic feeling which prevailed early in the year, and I am afraid losses were incurred on these imports. As elsewhere in the East, the Lancashire mills continue to suffer from competition on the part of Japan, and in the interests of all concerned it is to be hoped that the efforts now being made in Lancashire to meet this competition will succeed.

BURMA AND SIAM.

The shipments of rice from Burma, at about 2,900,000 tons, were practically the same as in 1928, but Siam had a poor crop and exports from that country declined from 1,500,000 tons in 1928 to 1,150,000 tons last year. There was a downward movement in the price of rice early in the year, but in June there was an upward turn, which continued until September, when, in sympathy with the world-wide fall in values, the price declined to practically the pre-war level, and at about this level the new crops are being marketed. The demand for Burma rice from China was unusually large, and an even larger business would have been done except for the fall in silver, but Siam did not benefit from this demand, the shipments from that country to China being proportionately less than in previous years.

A feature of the rice milling industry in Siam is that, while some of the mills in Bangkok were closed, the number of mills in the interior is growing rapidly as the result of rail and road development, which in time will no doubt bring about an increase in the acreage under rice. Of the import side of the trade in Burma and Siam I have nothing encouraging to say. The value of the exports from Siam are put down at £17,270,000, which compares with £20,075,000 in 1928, while the figures relating to imports, at £16,400,000, show an increase of £900,000 on those of the previous year. You may have noticed that, as bearing upon the competition between Burma and Siam in the rice trade, the only reduction in duties proposed in the recent Indian Budget relates to rice, the export duty on which is reduced from 3 to 2¼ annas per maund (about 1¼d. per cwt.) to correspond with the duty in Siam.

JAVA AND MAURITIUS.

In view of the further fall in the price of sugar last year as the result of over-production and the fact that, so far at any rate as Mauritius is concerned, the cost of production now exceeds the selling price, you will not, I am sure, expect me to report favourably upon the position in either Java or Mauritius, and particularly of that in our Colony, where the planters are finding it impossible to make both ends meet. As compared with 1928, the exports of sugar from Java decreased from about 3,000,000 to 2,350,000 tons, the value falling from £31,300,000 to £24,600,000. The shipments from Mauritius, however, owing to a good crop, increased from 219,000 to 277,000 tons, practically all of which came to the United Kingdom in view of the present preferential duty on sugar coming from our Colonies, but at £3,700,000 the increase in value was comparatively small.

The position of the sugar industry is such that, naturally, the planters in Mauritius, like those in the West Indies, are anxious to know what the present Chancellor of the Exchequer intends to do in the matter of the sugar duty. In the meantime, the Colonial Office have announced that the Government is prepared to give financial aid to the planters under certain circumstances, but, so far as I can understand the announcement, the offer of assistance does not go very far to meet the situation. The proposed increase of 2s. 3d. per cwt. on sugar imported into India does not, for the time being at any rate, affect Mauritius, but it will not be welcomed in Java, from whence large shipments go to India. The total shipments of rubber from the Dutch East Indies last year are given to me as 254,000 tons dry basis, valued at £23,700,000, the corresponding figures for 1928 being 227,600 tons and £21,000,000, but I confess to finding it difficult to reconcile some of the published figures relating to rubber.

CHINA AND HONG KONG.

If, in referring to China, I say it is very difficult to understand or follow the constantly changing political situation, I know you will not express surprise. But from the information at my disposal it seems clear that, in spite of civil war, indifferent transport facilities, increased taxation and predations by bandits, there was a further improvement in trade last year, the very large increase in the receipts of the Maritime Customs giving evidence of this, though, of course, much of this increase is due to higher tariffs and probably to anticipation of these coming into force. At the same time, I find that the shipments of cotton piece-goods from the United Kingdom to China and Hong Kong last year decreased in both quantity and value when compared with 1928, the value falling from £6,450,000 to £6,170,000, this, no doubt, being due to Japanese competition. The fall in silver, however, from 26⅜d., the average price in 1928, to 24 7/16d., the average price last year, with the consequent decline of the Shanghai tael from an average rate of 2s. 7⅝d. to 2s. 4½d., and the decline in the average rate of the Hong Kong dollar from 2s. 0¾d. to 1s. 10 11/16d., was not helpful to Manchester shippers, while the further fall in silver this year to a record low level must be making business with China and Hong Kong very difficult.

Arising from the decline in the value of silver, the notes issued by the banks in Hong Kong rose to such a premium on silver dollars that the export trade of that Colony was handicapped in competition with Shanghai, and to remedy this position the banks were asked to co-operate with the Government in bringing Hong Kong dollar notes more on a parity with the silver dollar—that is, to re-establish exchange on a silver basis, and this has now been accomplished, one of the results being the coinage of a large number of silver dollars for shipment to Hong Kong, which I regard with apprehension. It will be interesting to see what action China takes to protect herself against this serious depreciation in the value of silver, particularly as she is now the most important market for the metal. At present there are various rumours as to this, one going so far as to say that the importation will be prohibited, and another that, following the example of India, she will impose a duty upon imports of silver. In the meantime and from February 1st last, import duties have been levied on a gold basis.

THE ACCOUNTS.

After what has been a depressing review of the past year it is a relief to turn to the accounts, which, as you will see, show a net profit for the year of £257,458, or £7,258 more than in 1928, and this I may say is after providing a substantial sum out of profits to cover the depreciation in our Indian Government securities, which have been written down to market values on December 31st last. This result, which I attribute largely to close supervision and the exercise of caution on the part of the executive in London, is the more satisfactory because, owing to lower prices and by avoiding operations in which there was no reasonable margin of profit, such as inter-bank transactions, our turnover was less than in 1928, while in such a difficult year we could not expect to escape bad debts. The fact that the amount of profit and loss account carried to the balance sheet shows an increase of only £4,459 is due to only £162,046 having been brought in from 1928, against £164,846 at the end of 1927, but you will notice that, upon this occasion, we propose to carry forward £166,505. Out of the profit we have made the same allocations as in the previous year, that is, £15,000 to the officers' pension fund, £30,000 to reserve fund, and written £40,000 off freehold banking premises, while we recommend a final dividend of 8 per cent., less tax, on each class of shares. To comply with the new Companies Act, you will see that the amount of the fees paid to your directors is mentioned in the profit and loss account for the first time.

BALANCE-SHEET ITEMS.

The balance sheet being in the usual form requires little comment. The total figures when compared with the previous year show a reduction, and, speaking generally, I may say the different items contributing to these lower figures reflect the conditions of business in the past year. The decline of £815,000 in our current fixed deposit and other accounts is not large, and due to higher rates for money all round. The reduction in loans payable, £250,000, is offset by the reduced holding of Government and other stocks, this being explained by the redemption of a Straits Settlements Government Loan. The lower figures relating to bills receivable and loans receivable and advances, together £955,000, are clearly due to the poor state of trade. There is a small increase in cash and bullion, while the increase in the figures under the head of freehold banking premises represents principally additional expenditure upon our new building at Singapore, which is now occupied by the bank and other tenants, less the amount written off.

TRIBUTE TO STAFF.

I cannot conclude my remarks in reference to the past year without referring to the staff and the good work they have done for us throughout a difficult year, and on behalf of the board I tender my thanks to all. You all know Mr Steuart and Mr Crichton and what close attention they give to your interests, but it is not to them only that we are indebted, but to Mr Linton, the sub-manager, and all the other members of the staff in London, while I need not say the managers of our many branches in the East and their staffs also deserve our thanks for the efficient and loyal service they have rendered. (Hear, hear.)

OUTLOOK FOR THE CURRENT YEAR.

I have now only to refer to the outlook for the current year, and as this is more than usually obscure, I will require to exercise extreme caution. In regard to industry in this country, it is more particularly the fear of additions to the already heavy burden of taxation that is creating a want of confidence, while the further fall in prices since the end of last year makes considerable adjustment necessary before we can expect a revival of trade. At present there would seem to be over-production everywhere, and, owing to the disparity between wholesale and retail prices, manufacturers are in a difficult position as, while the high cost of living is maintained, wages cannot be reduced. Then as taxation in this country is now at the rate of £15 per head as compared with less than half that amount in countries with which we are in competition, it is not difficult to account for the growing increase in the number of our unemployed. It is true we have cheap money at present, but as this is largely due to depression in trade, while a high Bank rate and industrial activity usually go together, I find it difficult to believe that cheap money alone is going to bring about an improvement in trade, as so many people have predicted. The trade of India will also require to adjust itself to the present comparatively low level of prices, but given another good monsoon, no labour troubles, and some improvement in the political situation, of which I do not despair, provided the Government do not allow the Independence Party to go too far, I would not expect to see any falling off in trade, and, indeed, I think the decline in prices will bring about confidence in the position as the present prices of cotton, jute and tea would seem to form a safe basis for operations.

COTTON POSITION.

In regard to imports, the proposed increase in the duty on all British cotton piece-goods from 11 per cent. to 15 per cent., with a minimum of 3½ annas a lb., which may mean 30 per cent. on grey goods, is, of course, a blow to Lancashire, but this, with the additional duty of 5 per cent. on all goods of non-British manufacture, gives the Bombay mills the opportunity of putting their house in order. Then as the result of the progress being made by the Lancashire Cotton Corporation and others in the direction of rationalisation, for the purpose, more particularly, of competing with Japan in India and other Eastern markets, I would hope to see not only a revival of trade in Lancashire, but larger imports of East India cotton into this country. The recent improvement in prices of tea will not only benefit India, but Ceylon also, though that island, with British Malaya, would welcome some recovery in the price of rubber and which I am afraid can only be brought about by an increase in consumption.

RUBBER AND TIN.

In the meantime a tapping holiday for rubber is proposed, while an effort is being made to restrict the production of tin, in which British Malaya is so largely interested, but I cannot bring myself to believe that any lasting benefit will result from these proposals, even if observed by all concerned. A recovery in the industries in America, using rubber and tin, from the effects of the recent collapse in that country is what is wanted. In Java also the price of rubber is an important factor, but, as in Mauritius, it is the price of sugar that counts most, and at about 10s. a cwt. cost and freight India for Java sugar and 11s. 6d. cost, freight and insurance London for Mauritius sugar, it is not possible to expect prosperity in either island.

The trade of China will no doubt go on as in the past in spite of the many obstacles, but the heavy drop in the value of silver, which I cannot but think is at least partly due to speculation, must add to the disorganisation in that country and necessitate an adjustment of prices generally. Both Burma and Siam have good crops of rice, and at present low prices these should be marketed without difficulty. On the whole, therefore, I am not without hope that, as the year goes on, we may see some improvement in trade, and in any case you may depend that it will not be the fault of our chief manager and the staff if at this time next year we do not present you with satisfactory accounts. (Cheers.)

THE RESOLUTIONS.

I have now to propose :—" That the report of the directors, with the audited statement of accounts and balance sheet at December 31, 1929, presented to this meeting, be and the same are hereby received, approved and adopted, and that a final dividend on the 'A,' 'B,' and 'C' shares of this bank of 8 per cent. be paid, making 16 per cent. for the year, less income tax, as recommended in the report, and the same is hereby confirmed." I will ask the deputy chairman, Sir Thomas Catto, to second this resolution, but before I put it to the meeting I shall be glad to answer any questions which any shareholder may wish to ask.

Sir Thomas S. Catto, Bt. (deputy chairman), seconded the resolution, and, no questions being asked, it was put to the meeting and carried unanimously.

The Chairman :—I have now to propose :—" That Mr J. O. Robinson and Mr. W. H. Shelford, the directors retiring from the board in rotation, be and are hereby re-elected directors of this bank." You all know both Mr Robinson and Mr Shelford very well, and I need only say what very valuable directors they are and that they do all they possibly can for the bank.

Mr P. R. Chalmers seconded the motion, and it was unanimously adopted.

On the proposition of Mr W. B. de Ste. Croix, seconded by Mr R. G. Bamford, Messrs. Cooper Brothers and Company and Messrs. W. A. Browne and Company were re-appointed auditors of the bank.

VOTE OF THANKS.

Mr. R. L. Goddon :—Mr Chairman and gentlemen,—On behalf of the shareholders I should like to tender my thanks and their thanks for the extremely able manner in which the bank's affairs have been conducted and the good showing which has been placed before us. Considering the difficulties of the past year, it seems to me an amazing piece of work, and, in spite of the gloom which has shrouded our chairman's remarks, I cannot help feeling that we shall come out of it in the long run and that the various optimistic touches he gave to us in his speech are enough to enhearten us in the future. (Hear, hear.)

Mr A. Gardiner :—I have very much pleasure in seconding the motion.

Mr Lyall :—As an old shareholder, I should like to add a few words in support of the motion before us. The board have had a very difficult and anxious time—and the staff too—during the past year, and I hope that, in spite of the threatening appearance of things, you will be able next year to put before us an equally satisfactory state of affairs. I am quite sure that if it depended upon the board and the staff that satisfactory state of things would be repeated, but so far as it depends upon wise and firm government—to put it mildly—I do not feel so confident. (Laughter.)

The vote was unanimously accorded.

The Chairman :—I should like to thank Mr Goddon, Mr Gardiner and Mr Lyall for the very kind words they have said, and to thank you all for the manner in which you have supported the proposal. It is the staff, of course, as I always say, to whom thanks are more particularly due; but still, your directors also not only take a very keen interest in the bank's affairs, but I think I may say that we all do our share of the work.

The proceedings then terminated.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LIMITED.

POSITION IMPROVED IN A DIFFICULT YEAR.

The forty-ninth ordinary general meeting of this corporation was held, on the 26th instant, at Hamilton House, Victoria Embankment, London.

Sir Joseph Broodbank (the chairman) said that the year 1929 had been marked by industrial depression throughout the world, and had not otherwise been a favourable one to insurance companies, but the corporation had been able to maintain their dividend of 4s. per share, free of income tax, and increase the general reserve fund by £57,000. The total premium income was increased by £193,500. The fire account, while showing an advance of £30,250 in premiums, reflected what they believed to be the common experience, that 1929 had proved a year of quite exceptional losses, and consequently they were able to transfer only £4,839 to profit and loss account, instead of the average of the previous five years, £49,514 per annum. From the employers' liability and personal accident account they were able to transfer to profit and loss account £26,521, or almost 7 per cent., as against £33,586, or 9 per cent., last year. The general account showed premiums of £6,860,890, an increase of £149,849, and they were able to transfer to profit and loss £272,039, almost 4 per cent., as against £241,486, or 3.6 per cent., last year. It was satisfactory that, in a very difficult year, they had more than held their own, and had improved their position very materially in several ways.

As to the position of the Merchants' Marine Company, there was now a reasonable likelihood that premiums would balance losses and expenses, and he believed they were justified in hoping there should be eventually a profit on their transactions. The report referred to the continued prosperity of their other associated company, the Clerical, Medical and General Life Assurance Society.

Referring to 1930 as the jubilee of the corporation, the Chairman said that in the fifty years its purpose had been so enlarged that they now undertook every form of insurance. The aim of the management throughout had been the rendering of honest, efficient service in return for the payment made, and he thought he might claim that it was the consistent carrying out of that aim which had made the corporation one of the most successful British commercial ventures of recent years.

The report was unanimously adopted.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

DIVIDEND AND BONUS MAINTAINED.

SIR MONTAGU C. TURNER'S REVIEW OF CONDITIONS IN THE FAR EAST.

The seventy-sixth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held, on the 26th instant, on the bank's premises, 38 Bishopsgate, London, Sir Montagu Cornish Turner (the chairman) presiding.

Mr W. E. Preston (chief manager), having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his address, said :—From the balance sheet and profit and loss account statement, you will notice that in most cases the figures are slightly better than last year. Current accounts have fallen by about £1,500,000, but fixed deposits exceed last year's figures by nearly £2,500,000. This follows the trend of present-day movements in most banks' returns. I am glad to say that the results justify our paying the same dividend and bonus as in previous years, and we are able to place £50,000 to contingencies account with a carry-forward in excess of last year. I trust this may be considered satisfactory, seeing the difficulties under which exchange banking is now conducted in the East. (Hear, hear.) There is the same extremely keen competition with rather less business and more competitors. It seems impossible to obtain a working agreement owing to the number of banks concerned and the diversity of interests. It is therefore not surprising that exchange operations result in profits which are comparatively insignificant. Business both for the merchant and the banker has also been difficult owing to the extraordinary decline in prices of all commodities forming the staple exports from Eastern ports. As a result the sterling value of bills offering in those markets is considerably below the normal, and in some cases funds which had been laid down for the financing of the export trade have not been fully required. It is only natural that with prices constantly on the down grade, dealers in commodities are careful to avoid laying down stocks, whether it be in the East or in the Western markets. The converse to this is also true, namely, that producers of Eastern commodities securing less for their crops, are unable to buy the normal quantity of foreign goods. In other words, the purchasing power of the millions of consumers in the East of Manchester goods or manufactured British goods is correspondingly reduced.

The Chairman then gave a comparative review of the fall in prices of commodities.

INDIA.

Politically India—or we should say a section of the 300 million inhabitants of India—is at the present moment in a curiously unrestful condition, requiring most careful handling and judicious treatment. I venture to say that only those on the spot can really judge of the prevailing conditions and to what extent firmness tempered by the utmost consideration and goodwill is required. It is only right that we should, as suggested by Sir John Hewett and Sir Claude Hill, trust the man on the spot, in other words, back up the Viceroy, Lord Irwin, with all the moral support we can give. (Hear, hear.) Lord Irwin, as Viceroy and Governor-General, has a most difficult task, requiring great tact, great forbearance, and great courage. He commands our sympathy and our respect.

As regards trade in India, there has been a comparative absence of activity in nearly every class of exports, mainly owing to the restricted demand in Western markets. Wheat exports from Karachi, which in the past few years averaged three hundred thousand tons, and in some cases considerably exceeded that figure, last year reached only fifteen thousand tons, while one hundred and twenty thousand tons were imported. This was partly due to failure of crops in some districts and to the fact that a good deal more wheat is consumed in the country, and is, therefore, not available for export. But the low price in Western markets has undoubtedly helped to restrict exports. Cotton exports, on the other hand, from Karachi increased appreciably, and a million bales (being an excess of two hundred thousand bales over last year) were shipped to the United Kingdom and Continent.

REASSURANCE TO INVESTORS.

As regards repudiation by India of its obligations, the possibility is quite unthinkable, and the letter from Sir Arthur Hirtzel in *The Times* on January 28th last should give complete confidence to all intending investors in, or actual holders of, Government securities As holders of these securities (and, of course, we are bound to have them in India), we have had to face the depreciation for the last three years, which has made a serious inroad into the profits we have earned in India, but the depreciation has been met fully, and our Government securities are written down to market value as at December 31st last. At the moment, at the price at which these securities stand, they are a perfectly sound and safe investment.

The balance of trade in favour of India for the financial year 1927-28 amounted to fifty-one millions sterling, and seems likely to be rather higher for the twelve months now ending. Since 1864 the value of foreign trade has jumped from sixty millions sterling to four hundred and twenty millions sterling annually. Imports of specie, silver and gold have averaged from 28 to 30 millions sterling for the past thirty years, the bulk of which remains in the country in the shape of hoards, jewellery, etc. The British Raj has, therefore, fostered Indian trade for the benefit of India to a remarkable degree. What India means to us and Great Britain means to India can be realised by a study of the special number issued by *The Times* on February 18th last.

CHINA.

In China the present position is slightly disappointing to those who anticipated a more speedy return to peaceful conditions, and had looked for a settled and powerful central Government which could effectively control the greater part of China and repress with a firm hand the system of banditry on land and piracy on the water with all its attendant horrors. This is not so at present, but the Government at Nanking has increased its power. The War Lords seem to be once more on the move, and the future is difficult to forecast. Nanking practically controls the purse, and is backed up by solid financial and business interests in Shanghai. The relations between the Chinese Government and the British representative in China are excellent. Anti-British agitation seems to have died out and we can with all sincerity express our goodwill for the consolidation and continuance of the present Government at Nanking.

Both in Hong Kong and in Shanghai the gradual decline in the price of silver culminating in the recent slump when silver has been quoted at 18⅜d. per oz., while favourable for exports as a temporary measure tells badly against imports of foreign goods, especially British piece-goods, and general merchandise. The import of British goods, or indeed of foreign goods generally, has also suffered in Northern China from increased maritime and inland taxation. The Chinese Government have now full liberty to fix their scale of import duties, with the result that the duties have been about doubled. As an illustration it is shown that the receipts from the maritime Customs for 1929 amounted to 152,000,000 taels, as compared with 82,000,000 taels in the previous year. The limit on all foreign loans covered by the maritime Customs has been met in full. In past years Manchester supplied 75 per cent. of piece-goods business and Japan 25 per cent. Now the position is reversed, and Japan has won the premier position.

JAPAN.

As regards Japan, the chief feature has been the return to the gold standard as from January 11th of this year. During the past year the exchanges have been cleverly and effectively worked up by slow stages, the Japanese Government working in conjunction with the leading banks. The yen was worked up to 2s., and with credits opened in London and elsewhere the return to the gold standard was finally concluded and the par value of the yen made good. Japan deserves great credit for this most effective piece of finance. The silk business of Japan has not been up to the standard of previous years. Owing to the decreased buying power in the American market, consequent on the Stock Exchange boom collapse, the usual orders fell off appreciably and prices decreased to a point below cost of production. As regards the spinning and weaving mills in Japan, the number of spindles in the Rengokai mills increased to 6,159 million spindles in October, an increase of a million spindles in nine months. The mills did rather well in 1929, but with increased production stocks have begun to accumulate, which must lead to a curtailment of operations. When we seek to explain the cause for Japan ousting Lancashire from its premier position in the Eastern markets, we have to remember that, apart from cheaper labour and perhaps longer hours, Japan is benefiting by greatly improved organisation, resulting in mass production and mass distribution. Three large mercantile houses import more than three-quarters of the raw cotton consumed, and export about the same percentage of the piece-goods produced by that cotton. The three firms have established agencies in Java, East India, all over India, all over the cotton-growing portion of China as well as the United States, and selling agencies in most of the principal markets of the world. The spinning section is also largely controlled by big combines. Some 40 per cent. of the spindles are owned by four big firms. The cotton is spun into a small number of counts, and from the yarn a number of standard cloths are made in bulk. With a huge turnover, good results can be obtained from small margins.

TRIBUTE TO STAFF.

In conclusion, I desire to convey the thanks of the board to Mr Preston, Mr Bruce, and their colleagues at head office for their able management of the bank's affairs in the past year. To the managers abroad, to the foreign and home staff we also tender our sincere thanks and appreciation of the excellent work and continued devotion to the interests of the bank shown in these perplexing and difficult times. (Applause.) He moved the adoption of the report and accounts.

Sir W. F. Mitchell, M.P., seconded the resolution, which was unanimously adopted.

Other formal business having been transacted, Mr E. T. Hargraves moved a resolution, congratulating the chairman and his colleagues and the whole of the staff for their successful conduct of the bank.

Mr Frederick Tomkinson seconded the resolution, which was unanimously passed.

The Chairman having responded, an extraordinary general meeting was held, at which resolutions were passed for the adoption of new by-laws and regulations in substitution for the provisions of the bank's existing deeds of settlement, and authorising the court of directors to apply for, and if granted accept, a supplemental and consolidating charter in place of the bank's existing charters.

The above resolutions will be put forward for confirmation at a meeting of the shareholders to be held on April 16th.

LONDON AND THAMES HAVEN OIL WHARVES, LIMITED.

CONTINUED STEADY PROGRESS.

The thirty-second ordinary general meeting of this company was held, on the 25th instant, at Winchester House, London, Lord Kylsant, G.C.M.G. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that for the sixth year in succession they were able to recommend a final dividend on the ordinary shares of 5 per cent., and a bonus of 5 per cent., making a total distribution for the year of 15 per cent., free of income tax, and, with the dividend now proposed, the company would have distributed in all over 300 per cent. The company owned in the Thames Haven district 1,763 acres of freehold land, having a frontage to the river of over three miles, and to public roads of over eight miles. A considerable area of this property contained deposits of sand and ballast, and the company had now decided to develop this asset, a small separate company having been formed for the purpose. They had been fortunate in securing the co-operation of Messrs William Cory and Son, Ltd., in this development. The company's four freehold properties in the London area comprised over 12 acres of land, occupied by buildings and up-to-date plant and machinery, with over 31,000 tons of oil tank storage and a water frontage of 1,310 feet, of which 730 feet were on the River Thames and 580 feet on the Regent's Canal.

As to the French subsidiary, only about one-third of the capital was at present productive, but that company showed a reasonable and satisfactory profit at the present time, while the prospects were encouraging. The directors were satisfied that in the French business the London and Thames Haven Company had an excellent investment. The total landings into the Havre tanks for 1929 amounted to 135,000 tons, and the landings for the present year to date had been at the rate of over 180,000 tons per annum. The French company had recently entered into contracts which involved putting through the works at Havre a guaranteed minimum of 1,500,000 tons of oil products per annum over and above their present throughput. These important contracts called for the building of additional tanks and docks. The French company also controlled the largest petrol depôt in Paris. The Thames Haven Company, either direct or through its subsidiaries, was supplying a great need to both countries, and its record was one of steady and continuous progress. Under the continued expert guidance of their managing directors—Mr Adams and Mr Burgess—he looked forward to the future with every confidence.

The report was unanimously adopted.

AMALGAMATED ANTHRACITE COLLIERIES, LIMITED.

CONSIDERABLE IMPROVEMENT.

ALL COLLIERIES NOW WORKING.

The sixth annual general meeting of the Amalgamated Anthracite Collieries, Ltd., was held, on the 21st instant, at the Cannon Street Hotel, London, E.C.

Mr F. A. Szarvasy, who presided in the absence of Lord Melchett (the chairman of the company), said that the consolidated net trading profit for the year was £512,552, against a loss of £243,254 in 1928, and represented a turnover for the better of £755,807, which, considering all the difficulties and vicissitudes of the trade, was quite a satisfactory achievement. The board considered it wise to carry forward the balance of £168,323 rather than pay off arrears of the preference dividend, which would have further increased the indebtedness to the bank, but they felt that, if present anticipations materialised and there were no important setbacks in the industry, they might, in a year's time, be in a position, at any rate, to deal with some, if not all, the accumulated arrears.

At the time of the merger, towards the end of 1928, there were five idle collieries being maintained in repair at heavy cost ready for work, but whose output would have been in excess of demand. That state of things had continued until February, 1929, when the board felt justified in restarting work at all five, and since then all their thirty-four collieries had been working uninterruptedly throughout the year save for occasional idle days owing to disputes among the workmen themselves on the question of arrears of contribution to trade union funds, for which the colliery management was in no way responsible. He thought that form of sheer waste was peculiar to the colliery industry, and it indicated the difficulties under which the management of collieries was carried on. Their gross output, nevertheless, had amounted to just over 4,000,000 tons, and, compared with the previous year, the number of men employed showed an increase of 1,867.

The new sinkings were nearing completion, and it was hoped to produce coal during the next few weeks. The production should ultimately amount to 2,000 tons a day of good-quality coal, and the new pit would be one of the most modern in the district, producing at a low cost good marketable coal.

As a result of the merger, important economies not yet fully reflected in the balance sheet before the meeting had already been effected. They were about to get the benefit of the rearrangement of their power supplies, and, to give an idea of the efficiency of their most recently erected power station, current was being generated at the rate of 0.28d. per unit, including coal and labour, depreciation, etc., which was only slightly more than half the most advantageous rate paid for outside electric power. In all those matters their thanks were due for the splendid guidance of Sir David Llewellyn and of Sir Alfred Cope. Their relations with their workmen were generally good, and were improving. The management and men were recognising respectively to an increasing extent each other's point of view, and all felt that, with the cessation of outside interference, those relations could be improved even more.
