

A FATEFUL AUTUMN.

THE traditional holiday month is ending and the coming of the heat wave mocks the business man, the politician, and the worker as he returns to his daily task—mocks him the more as he realises that most dwellers in most lands, especially, perhaps, Britain, are face to face with an autumn and a winter that will call for the fullest exercise of all the qualities they can bring to the performance of their several parts in the drama of life. For one and all the continuing trade depression constitutes a common stress, and the sun is veiled with the shadow of the approaching tenth winter of unemployment. But for statesmen of all parties this intimate domestic problem, grave and urgent though it is, is only one of many that will try them to the utmost. Not since the crisis of the Great War has there been an autumn more pregnant with possibilities and more formidable in the greatness and complexity of its problems. Between now and Christmas will take place two of the most fateful Imperial gatherings of this century—the Indian Round Table Meeting and the 1930 Imperial Conference. May we hope that when 1931 dawns, we shall be a step nearer to the development of peaceful and stable government in India, and a further stage on the road towards constructive co-operation between the nations of the British Commonwealth? Meanwhile at Geneva, from next week onwards, the statesmen of Europe will be grappling with the task, set them by M. Briand, of drawing a little closer together in mutual effort to remove the obstructions which impede the return of confidence and prosperity; and the League Assembly will be followed by a meeting of the Preparatory Disarmament Committee, upon the success of whose deliberations the future of the world in no small measure depends.

To the British mind the League Assembly may seem the least important of these gatherings—no more perhaps than the formal annual general meeting of a great organisation. In a world sense it is possibly the most important. It is not merely that the agenda, as a Geneva correspondent points out on a later page, is of more than usual interest. As year after year passes by, an ever growing importance attaches to these rallies of world statesmen and the note that emerges from this sounding-box of world public opinion. Every year that takes us farther away from the last great war brings us nearer to the next, unless the foundations of security can be built in time. And the time allotted for the task is far from limitless. A generation that knows not the meaning of war is fast growing up, and unless the machinery of peace is perfected before the fervour of opinion born of the horrors of 1914-18 has faded away, the task will never be completed. The sand-glass is there for all to see, and every year the contributions which the statesmen can make towards drawing together are watched with a growing eagerness.

Less urgent, perhaps, but no less intriguing, and more tangible, are the problems that await the Imperial Conference. Here, happily, there is no threat of conflict to be averted, and, with the question of the status of the Dominions settled at the last Conference, no major constitutional difficulty impends. Economics and not politics will hold this stage; the mundane matter of markets, not the high issues of diplomacy; the bread and butter of life, not its dramatic conflicts. But in one way the problem of London is the same as that of Geneva—drawing together. To a great industrial nation in distress the market potentialities of the vast undeveloped areas of the Commonwealth cannot but present an alluring prospect. To the newer countries overseas it is natural amid a world of rising trade barriers to turn with hope to a market where special sentiment may win privileges. Britain's need for markets—markets everywhere—is generally accepted. Within the Empire there are potentialities, which no Government represented at the

Conference can afford to ignore, though here we would venture one word of caution. The results which Empire counsellors achieve in London this autumn will be in proportion to their power to resist chimerical schemes involving vast attempts at sudden trade diversion, and to concentrate upon the definitely practical, if less spectacular, possibilities of closer liaison and co-operation.

Add to this the Indian problem, which alone is big enough to absorb the whole thoughts and attention of the country and its rulers, and it will be realised that in the international and Imperial sphere the concentration of first-rank problems into the next few months is almost unprecedented. So vast and far-reaching are the issues involved that the Government should be assured of a cessation of all petty or petulant attack and of the presence of helpful and constructive criticism from every quarter. That this condition will be realised in Parliament is a hope which is encouraged by recent signs of greater Opposition readiness to abandon partisan obstruction in favour of mutual consultation, for instance, on Unemployment Insurance. But though the Opposition parties may be ready to avoid embarrassing the Government in its conduct of external affairs, embarrassments arise abundantly from the internal situation which confronts it.

It is, indeed, by no means the least of present British misfortunes that these great external problems should crop up in such plenty at a time when the fullest concentration of all who can influence the future of this country, politician, employer, worker, writer, is required for a review of the state of Britain. It would be a hardy philosopher who adapted to the case of Britain to-day the saying that fleas on a dog are a blessing because they prevent him from worrying about being a dog. The dog remains a dog just the same; and however much our thoughts are diverted by India, or Europe, or the Empire, the pressing problems of the reconstruction and re-adaptation of our industrial and economic life remain with us. More than that. The more attention is withdrawn from them, the slower is the dawning of recognition of hard facts and the acceptance of unpleasant remedies. No one likes nasty medicine, and no one will take it until he is persuaded of the utter necessity. This country has got to take nasty medicine, and the sooner it realises the necessity the better; and ingredients of the medicine may consist of tightening the belt, harder work, surrender of treasured theories and privileges, and co-operative sacrifice of varied kinds.

Shall we take the medicine? Is it worth while? Or is Britain down and out—a nation unable any longer to support her present population at a reasonable standard of living, and a decaying force in the industrial world? We reject the defeatist answer. Both in the short and in the long view there are strong elements of encouragement. The report of the Trade Union Council to next week's Congress meeting shows that, the belligerent spirit having been exorcised, organised capital and labour are learning to pull on the rope together. Look deeper into fundamentals, and the fact stands out that, whatever the new difficulties and troubles which we have to meet, three of Britain's supreme assets remain unimpaired—her geographical position, her fuel supply, and the skill of her workers. Sir Otto Niemeyer was telling the Australian people the other day that the courage which has carried them through previous crises will carry them through this. His words may be applied to Britain, too. The British people have weathered a few crises; they will weather this. But with the old determination must be united a measure of imaginative effort (less indigenous, perhaps, in the British mind) suited to create policies of adaptation to the changing requirements of a world in quick transition.

Ch. S. V. 1—5,000—17-10-34.

THE PALESTINE MANDATE.

IN the ordinary course of its duties the Permanent Mandates Commission of the League of Nations, during its recent session, inquired into the outbreak which occurred in Palestine last August, and made its report on it to the Council. The report of the Commission was based on the usual sources of evidence, consisting partly of the regular reports, in print, from the Mandatory Power, partly of discussions, upon these printed reports, with the Mandatory Power's accredited representative, and partly of other information at the Commission's disposal. When this additional information comes from sources other than the Mandatory Power itself the conditions under which the Commission may take cognisance of it are carefully prescribed in the Commission's rules of procedure. Naturally, however, when some special "incident" has occurred, a Mandatory Power frequently furnishes the Commission with additional information (over and above its obligatory report to the League) which it has obtained for its own instruction. For example, in the present case the Commission had before it the British parliamentary paper containing the report of the Shaw Commission of Inquiry. It does not, however, appear to have been supplied with a transcript of the evidence which the Shaw Commission took and upon which their report is based.

In view of what happened in Palestine last August the Permanent Mandates Commission criticises the Mandatory Power under three principal heads. First, in regard to the remoter causes of the outbreak, it blames the Mandatory for its "inaction or partial inaction" in face of its obligations towards the population of Palestine, both Arabs and Jews. The Commission expresses the opinion that the Mandatory has been remiss in promoting agricultural and educational development and in executing public works and also remiss in encouraging co-operation in all these matters between the two communities. Secondly, in regard to the immediate antecedents of the outbreak, the Commission charges the Mandatory Administration with a lack of insight, which rendered it blind to the portents of the coming storm, and with a culpable neglect of precautions. The Commission contests the British Government's thesis (based on the findings of the Shaw Commission) that the outbreak was not premeditated. It censures the inadequacy of the armed forces at the Administration's disposal. Thirdly, the Commission contests another thesis of the British Government (also based on the Shaw Report), namely, that the outbreak was not an outbreak against the authority of the Mandatory Power. The Commission holds that while the Arabs' attacks were of course directed against the Jews and not against the personnel of the British Administration, the law-breakers regarded the presence and status of the Jews in Palestine as being due to the policy of the Mandatory Power, and were consciously resisting the execution of that policy when they attacked the people whom they looked upon as its beneficiaries.

The Mandatory Power's comments upon the Permanent Mandates Commission's report have been published, as usual, at the same time as the report itself. Unfortunately, these comments are couched in somewhat querulous language; and there are two reasons why this is regrettable. It is regrettable, for one reason, because this is the first time that His Majesty's Government in Great Britain have incurred serious criticism on account of the administration of any of the mandates entrusted to them. For ten years they have escaped unscathed while the South Africans have been in trouble in South-West Africa, the French in Syria, the Australians in New Guinea, and finally the New Zealanders in Samoa. The New Zealanders have had the most to bear, for they have been patently single-minded in the whole conduct of their mandate, and the troubles that have come upon them were largely beyond their power to avoid. Yet they have taken with a good grace the Permanent Mandates Commission's criticisms (which, for that matter, are invariably expressed with extreme courtesy and moderation). Now that our turn has come at length—as it was bound to come—for having our whiskers singed, we shall only put

ourselves in the wrong and render ourselves ridiculous if we make a fuss.

There is also a more substantial reason why the tone of the British Government's comments is regrettable. The retorts which are conveyed in this querulous tone are by no means entirely convincing. For instance, in regard to the Commission's judgment upon the remote causes of the outbreak, the British Government complains that this judgment was not foreshadowed in the reports of the Commission upon the work of its earlier sessions; and the British Government finds this "surprising." Actually, it is far from surprising to observers who are acquainted with the conditions under which the Commission has to work. The Commissioners are not empowered to visit the mandated territories themselves or to depute other investigators to take evidence there for them. Normally, they are almost entirely dependent for their information upon the printed annual reports of the Mandatory Powers and upon the oral statements of the Accredited Representatives of the Mandatory Powers who are in attendance to answer questions which the examination of the printed reports may raise in the Commission's mind. Now so long as, on the surface, all is going well in a given mandated territory, it can hardly be expected of even the most honest and upright and successful Mandatory Power that it will give itself away more than necessary. In these circumstances, which are the normal circumstances, if, under the surface, anything is amiss, the Permanent Mandates Commission can only get at it by reading between the lines. The members of the Commission, who include men of great experience in colonial administration, have repeatedly displayed great acumen in discerning the truth under these difficult conditions. They cannot be blamed for failing sometimes—especially when one remembers how delicate a matter it is to cross-examine the Governments of Sovereign States. On the other hand, on those happily rare occasions on which some catastrophe occurs, a sudden flood of light is apt to be thrown not merely upon the catastrophe itself but upon the whole course of administration that led up to it; and then indeed it frequently appears that the Commission's previous reports upon the administration of this or that particular mandate have been too complimentary. This happened in regard to the South African mandate after the Bondelswarts Affair and to the French mandate in Syria after the insurrection of 1925. It was only to be expected that the Palestinian outbreak of last year should let in a flood of light upon the past conduct of the British administration in Palestine which would show, here again, that the Permanent Mandates Commission had erred on the side of thinking no evil in default of adverse evidence. To accuse the Commission of "jobbing backwards" is not, in our opinion, valid criticism.

Again, the British Government refuses to accept the Commission's findings that the outbreak was not unpremeditated and that it was actually directed against the Mandatory Power, on the ground that these findings disagree with those of the Shaw Commission and that the Shaw Commission's report is much sounder evidence than the information on the strength of which the Mandates Commission ventures to take a different view. The British Government, in its comments, refers to this other information as "*ex parte* statements reflecting on the conduct of His Majesty's Government," in contrast to "the considered judgments of the Shaw Commission, based on an exhaustive inquiry on the spot and upon evidence which had been subjected to searching cross-examination by eminent counsel." As it happens, we think well of the Shaw Report, and we defended the Shaw Commission at the time when attacks were made upon its findings by people in this country to whom they were not agreeable. At the same time, we do not see how the Permanent Mandates Commission can be expected to accept, as sacrosanct and above criticism, a British document which has been the subject of unrestrained controversy in Great Britain. After all, the Shaw Report is not an *ex parte* statement from the Mandates Commission's standpoint, inasmuch as it embodies the views of a commission of inquiry which was appointed by the Mandatory Power—that is, by one of the parties to the case.

Surely the Mandates Commission would have done less than its duty if it had made no attempt to check such a document—however weighty the document may appear to be in itself—by independent evidence. And this once granted, it must also be granted that the Mandates Commission are bound in honour to follow the evidence wherever it may lead them.

For these reasons we regret the tone of the British Government's comments on the Permanent Mandates Commission's report. We regret it further because it threatens to prolong and inflame a controversy which belongs to the past, while what chiefly matters now is the policy for the future. There is one all-important question which has so far been ignored studiously. Is the mandate workable in its present form? Are its terms practically as well as theoretically compatible with one another? This question has been rightly left out of account by the Permanent Mandates Commission, whose duty is simply to report to the Council of the League upon the administration of the mandates in the terms on which these have been conferred. It is, however, a question which must ultimately be faced both by the Council of the League and by the Mandatory Power. In the British Government's comments we detect a tendency to represent the administration of the mandate for Palestine as an onerous and invidious duty which Great Britain has undertaken at the instance of the League of Nations out of international public spirit. This is a misconception of the historical facts. That the task has turned out to be both onerous and invidious is unfortunately true; but we must remember that this task was not thrust upon us. It was originally agreed between the Principal Allied Powers that Palestine should be placed under an international administration; and it was only later that this plan was given up in favour of a British mandate at Great Britain's own desire. Moreover, in asking for a mandate, we insisted that the terms of the mandate should include a Jewish National Home. The mandate is of our seeking and our making; and the responsibility for the consequences rests on our shoulders.

RATIONALISATION AND THE CITY.

WHEN Mr J. H. Thomas, in his speech at Manchester last January, announced, with more enthusiasm than precision, that "the City" was ready to find "the necessary finance" for approved schemes of industrial reorganisation, he risked raising hopes which could not be justified. In the financing of rationalisation schemes based largely, as is bound to be the case, on the merger principle, notions of what is "necessary" may differ widely; and the criticisms levelled by Mr S. S. Hammersley against the policy of the Bankers' Industrial Development Company in connection with his scheme for

an amalgamation of Egyptian cotton-spinning concerns, have revealed the existence in some industrial circles—not confined, we fancy, to Lancashire—of misconceptions which might with advantage be dispelled.

The merits of Mr Hammersley's particular scheme, as distinct from others on similar lines, are not essentially relevant to the main principle involved. The gravamen of his charge against the B.I.D. is that the company is failing to appreciate the "conditions necessary for large-scale amalgamations in the cotton industry, or in any other industry in which the financial position of the units varies greatly." The B.I.D., he complains, declines to approve or sponsor any amalgamation scheme in which it is contemplated that fresh capital raised shall be used in any part to satisfy in cash the claims either of some of the vendor concerns or of creditors of the units to be merged. This attitude, in Mr Hammersley's view, is "of no use to Lancashire," since (a) the better-situated firms in an industry will consent to join forces with "lame ducks" only if they are bought out, wholly or in part, for cash; and (b) the fixed-interest charges on the amalgamation cannot usually be scaled down to an economic figure unless there is cash available for the liquidation of outstanding debts.

In this issue, which is of considerable importance to the whole future of British industrial rationalisation, we consider that the policy of the B.I.D.—a policy, it may be noted, which was enunciated clearly enough in the official pronouncement of the company's scope and objects at the time of its formation—is unquestionably sound. For what is the gap in our existing financial structure which the B.I.D. was specially designed to fill? It is this. In the case of many industries it may be possible to devise schemes for the concentration of production in one or more mergers, which are reasonably capitalised and calculated to lead to lower costs of production and better marketing, but are handicapped from inability, in view of the indifferent profit-earning record of their component units during the post-war trade depression, to obtain through ordinary investment channels the new capital required to re-equip and modernise their plant and organisation. In such instances the backing of the B.I.D. may appropriately be given.

But what claim to special support of this nature can be made out for an amalgamation in whose future some of the participants have so little faith that their sole desire is to "get out from under"? The B.I.D., it may be recalled, was not constituted as an industrial bank, with large resources of its own for investment in approved undertakings. Its functions are essentially those of a medium between industry and the new capital market, and it is from the investing public that all new capital for industrial reorganisation must ultimately be found. To that public the B.I.D., by reason of its unique prestige as a body representative of the Bank of England and of almost every important bank and issuing house in the City, has peculiarly exacting obligations. The

flow of national savings is by no means so ample that we can afford, at a juncture when money for re-equipment is urgently needed on a vast scale, to have any portion of those savings diverted, with the B.I.D.'s blessing, to the unproductive purpose of making good shareholders' past losses or providing gilt-edged compensation to vendors who are out to have their favour courted.

Between vendors and creditors a distinction must clearly be made, and we agree with Mr Hammersley that in mergers for rationalisation there must be a scaling down of prior charges to an "economic figure." Indeed, we regard it as axiomatic that no fresh capital should be put into an amalgamation saddled with debentures and other liens which are not fully secured on tangible assets valued at a very conservative figure, or whose annual service asks for more than an extremely moderate proportion of prospective earnings. But here again we suggest very strongly that it is not the function of the B.I.D. to assist in the questionable process of "handing on the baby" from present creditors to future investors in the "equity" of amalgamations which it is proposed to form.

Whether or not a projected amalgamation is to be enabled to convert top-heavy "obligations" into workable terms of participation in "equity" is, after all, a matter for the promoters of the amalgamation and the creditors jointly to decide. The creditors may drive, in some cases, a hard bargain; and if they have no confidence in the future earning power of the rationalised industry, they may prefer to foreclose without further ado on such saleable assets as exist. On the other hand, the real security for many outstanding loans in our depressed industries is little else but the earning power of the assets pledged, and we find it difficult to conceive that the B.I.D. would be justified in sponsoring new issues for any combine whose creditors, knowing that production and marketing were to be re-organised, and knowing that the B.I.D. would guarantee funds for re-equipment and, if necessary, working capital, still thought it more advantageous to "put in the brokers' man" and have a forced sale of "bricks and mortar," rather than agree to receive for their claims a proportionate recognition in the capital ownership of the new concern. And, when all is said, natural feelings of sympathy for the misfortune of shareholders in old-established companies which have fallen on bad times should not be allowed to blind us to the fact that the purge of bankruptcy is an old-fashioned remedy whose ultimate effects on industry as a whole, and indeed on all concerned, may be healthier in the long run than those produced by too many "facilitated" amalgamations.

In conclusion, we would emphasise a point which appears to be overlooked in industrial circles where, thanks doubtless in part to the revivalist optimism of the late Lord Privy Seal, exaggerated hopes of "rescue" by the B.I.D. have been entertained. It is not the business, and should emphatically not be the business, of a financial institution of this character to "promote" amalgamations, though its advice may often be usefully sought and the experience of its directors drawn upon. Whether with, or without, compulsion from creditors—who alone can apply pressure—it is from the managements of industrial concerns themselves that the initiative must come in framing schemes of rationalisation. It is they who must settle the terms of amalgamation, compound (if they can) with creditors, and—if there is no help for it—bury their own dead. Not till evidence of satisfactory productive plans for the future has been given, and not till all the necessary sacrifices by existing interests have been made, is it proper that the public should be encouraged by what is, in effect, a national consortium of British bankers to invest fresh capital. Public opinion will be rightly critical of the leadership of British industry if the attempt be made to represent "the City" as obstructing rationalisation because it is rigidly setting its face against the easy way of re-financing at the public's expense on the vicious basis of perpetuating inflated capitalisation.

AUSTRALIA FACES THE FACTS.

(BY A CORRESPONDENT.)

THE reports which have reached London of the initial success which has attended Sir Otto Niemeyer's mission to Australia are very encouraging. The economic factors which have combined to create a financial crisis in that Dominion were analysed recently in these columns (*Economist*, July 26), and admit of little dispute. Briefly, the efforts of successive Australian Governments, both Nationalist and Labour, to maintain by legislation an inflated standard of living have broken down in face of a combination of decreased productivity, falling prices and credit stringency abroad.

It is unfortunate for the present Government that it should have come into power at this juncture. Like other Labour administrations, it is embarrassed by its promises made during a long period of opposition, and must now face the bitter experience of not only abandoning its pledges, but also of taking measures to lower the rates of public expenditure and ultimately of wages and the standard of living. It will claim, with some justice, that the greater share of responsibility for the present crisis must rest upon its predecessors in office; but though it is probably too much to expect that the public will accept such a plea in mitigation of what Mr Reeves has called the greatest blunder a Dominion Government can commit—the encountering of a severe economic depression during its term of office—it is entitled to the fullest recognition for the courage with which Sir Otto Niemeyer's unpalatable, if salutary, report has been received.

It would be idle to gloss over the fact that left-wing opinions, shading into avowed Communism, have a certain strength in the Australian Labour movement. They are especially strong in the industrial movement, and are powerfully entrenched in some of the more militant unions. As time goes on and measures are taken to implement the agreement which has been reached at the financial conference summoned to consider Sir Otto Niemeyer's report, it is possible that direct action in the form of industrial disturbances will obstruct Australia's recovery. The High Protectionists also have indicated that while they are in full sympathy with the sections of the report which point out the necessity of lowering production costs, including wages, and of calling a halt to over-borrowing, they do not by any means accept the criticisms of Australia's tariff policy. Protectionism has become as much a fetish in Australia as Free Trade was in Cobden's England, and there will be bitter opposition to any reduction of tariff schedules.

The summaries, however, of Sir Otto Niemeyer's report which have reached London indicate that he has pointed out in plain, emphatic language the obvious causes of weakness which have been repeatedly emphasised by economists and industrial leaders in Australia itself. The chief argument for Protection in Australia is that it has enabled a greater number of people to live at a higher standard of living than might otherwise have been possible. In other words, it has transferred wealth from the landowners to workers in urban industries. The recent crisis has added an important rider to this proposition. When prices are falling in the export markets and the transference becomes a heavy burden instead of merely a sharing of good fortune, the protected industries become clearly uneconomical and the stability of the whole community is endangered by an increasing volume of unemployment.

There has been some effort on the part of left-wing Labour leaders to interpret Sir Otto's mission as impertinent dictation by London capitalists. If Australia had been able to carry through its programme of rapid development and high standards of living without resorting to London for loans which it is now having some difficulty in meeting, there might be some reason for such an attitude. But the plain fact is that Australian Governments and the commercial community also are gravely embarrassed by shortage of funds in London with which to meet short-term obligations, and still more seriously embarrassed by the prospect of more substantial loans maturing in two years' time. Failure to meet these obligations

would be a calamity for Australia, ruining its credit and causing far greater economic sacrifices than any entailed in the suggestions put before the various Governments by Sir Otto Niemeyer's report.

Fortunately, these suggestions have been accepted, and there is no longer any doubt that the crisis has passed as far as the meeting of the short-term obligations is concerned. In order to get the accommodation needed, the State and Federal Governments have agreed to cut down their expenditure, balance their Budgets, reduce their borrowing programmes, and curtail all further external loans till the short-time indebtedness is dealt with. These measures will involve retrenchment in the public services, salary cuts, and probably a considerable increase in the already large volume of unemployment; but there is good reason to hope that they will be carried through.

Whether Australia will go on pursuing what Sir Otto Niemeyer has called the path of financial peace is a rather larger question. Sacrifices which may be accepted for a short time become rather more irksome when they must be endured for a longer period. If the present falling tendency of prices persists, lowering Australia's receipts from export produce, there may well be a prolonged period of financial strain, in which rigid economy, hard work, and lower standards of living are imperative. This would be a bitter experience for a people which has been habituated to easy living over a long period, during which constantly rising prices and easy borrowing gave successive bonuses to export producers.

There are, however, several favourable factors in the situation. Sir Otto Niemeyer has pointed out that, with the present crisis over, Australia has two years' breathing space before any further large debts mature. In that two years there may well be a recovery from the present world depression, which would greatly ease the situation. There is no reason to doubt the capacity of Australians to grapple with their problems. Political parties are very evenly balanced, and since the Labour Government itself has taken hold of the situation there is a substantial majority opinion in favour of facing the facts. Opposition will doubtless spring up, and the trade unions may be expected to fight wage reductions, but the programme as a whole should go through.

One final reflection is provoked by the situation. This is not the first time that Australian and New Zealand finance has been in difficulties. The columns of the *Economist* in 1878, for example, contain many criticisms of the reckless banking policy which treated real estate as credit security; and those criticisms were fully justified by later crises. In the meantime, admittedly, banking policy has been greatly improved. Indeed, it is a saving feature of the present situation that the Australian and New Zealand banks are in a thoroughly sound position; and Governmental extravagance is easier to deal with, after all, than unsound banking policy. But the time appears ripe for another step in advance. The very presence of a Bank of England mission in Australia raises the question of the desirability of developing closer banking co-operation along Imperial lines. A central bank in each of the Dominions, working in close touch with the Bank of England, might do much, by forestalling exchange difficulties and generally guiding the flow of capital and credit, to prevent such crises as the present arising in the future.

THE LEAGUE ASSEMBLY.

(BY A GENEVA CORRESPONDENT.)

THE eleventh Assembly of the League of Nations, which opens on September 10th promises to be of interest and importance. Strong delegations have been announced from most of the leading countries, and two Dominion Premiers are coming—General Hertzog and Mr Scullin, if he is sufficiently recovered from his illness. Sir Robert Borden will be Canada's first delegate instead of Senator Dandurand, and will represent the Dominion for the last Session of the Council during Canada's present period of office. Canada, Cuba and Finland are

SKANDINAVISKA

KREDITAKTIEBOLAGET

Swedish stocks
and bonds

due to retire this year, and it will not be easy to settle who their successors shall be. Ireland is to be a candidate, on the assumption that Canada's is a Dominion seat—a thesis by no means generally recognised—but China is competing. Norway is likely to follow Finland, and a South or Central American State will doubtless replace Cuba. There are many who, taking a long view of politics, consider it essential to put China on the Council, despite the easy criticism which such a step offers.

The two outstanding subjects of a fully charged agenda (which itself is a striking illustration of the extent to which the League is occupied with international affairs) are the consideration of the proposed amendments to the Covenant to bring it into harmony with the Briand-Kellogg Pact, and M. Briand's ideas for a European federation. The latter is not strictly on the agenda, but it can scarcely be avoided in the general debate, and, if the European conference on the subject which precedes the Assembly reaches anything definite it seems bound to become an Assembly matter. The replies which M. Briand has received and the controversy in France itself show how very far the project is from meeting any general conception of the way in which saner European co-operation should be promoted. The political situation is not very promising for the present, and Germany's renewed emphasis on treaty revision—supported by Italy—has set French and Polish breasts fluttering once again.

The proposed amendments to the Covenant will probably lead to discussion over a wide field of League constitutional policy, which has been the subject of controversy from the beginning. The main points proposed are the elimination of all private right to war, the acceptance of a unanimous report of the Council under Article XV. (excluding the votes of the parties) as binding, and the acceptance of a majority vote of the Council to ask for the advisory opinion of the Court. France, Poland and others are anxious that, with the elimination of war and the acceptance of obligations to peaceful settlement, the League should undertake the further obligation of enforcing settlements; this is not likely to be accepted, and the amendments as they stand are of great constitutional importance in the development of international relations without adding still larger, though perhaps strictly logical, commitments. Logic has frequently been the bane of international conferences.

Other projects also are to be examined in connection with the League's organised methods for keeping peace. The efforts of the London Naval Conference will enter into discussions on the future work of disarmament and the meeting of the Preparatory Disarmament Commission in November. There will probably be a final decision on the draft Treaty of Financial Assistance for States victims of war or threatened by war. Then there is the General Convention for Strengthening the Means to Prevent War, by which States would agree beforehand to accept provisional measures of the Council to avert any complication of the situation while it is *sub judice*, and there are various proposals for ensuring speedy and safe League communications by wireless and by air during times of emergency. The Assembly is also expected to see a development in the wider acceptance of the General Act, whose ratification is gradually growing, and

Mr Henderson is credited with the intention of making this a General Act Assembly, as Mr MacDonald made the last an Optional Clause Assembly.

On nearly every phase of League work there are important stages to be considered—in financial and economic questions, transit and opium questions, mandates and minorities problems, slavery, and traffic in women and children—and these obviously contain elements of great significance in many of the vital controversies of the moment. Two other subjects may be selected for mention—the elections of the judges of the Permanent Court of International Justice, and the reorganisation of the League Secretariat. The nine years' term of office of the judges ends this year, and all the judges have to be elected for the next nine years. Sir Cecil Hurst stands again for Great Britain, and Mr Kellogg and several other leading American jurists have been nominated in the place of Mr Charles Evan Hughes (resigned). The report on the reorganisation of the Secretariat raises again the different conceptions of what the League should be, and is far more than a mere office question. In view, particularly, of Italy's attitude, the subject will require careful handling if the Secretariat is to be maintained as a body of objective officials under obligations to the League as a whole and not to their individual Governments. Development in the latter direction would be unfortunate, and there is little doubt that the majority of the States are opposed to it, but most of them suffer from temptation through the desire to have as many fingers in the pie as possible.

Notes of the Week.

Rumour.—When times are awry the wish becomes more easily than ever the parent of the thought. Malaise begets credulity, and Rumour, that opportunist, is ever on the tiptoe to spring to the offensive, drive logic out of the arena, and enjoy an hour of triumph. The past week in the City has seen Rumour's chance and her seizure thereof. Markets dull and idle, tone despondent, defeatism in the air, a heat wave to dull the intellect—the conditions combined to breed a ready appetite for any fairy story with a happy ending. And, obeying the eternal laws of supply and demand, out came fairy stories galore. Mr MacDonald had decided to adopt Protection—his fairy wand glittering with promises of lower income tax—and Mr Snowden had resigned. Mr MacDonald was about to resign, and Mr Snowden and Mr Lloyd George would form a Centre coalition. The "dole" was to be reduced, with refreshing results to the Exchequer. All this, mark you, Sir, in the "dog days," when even a Cabinet meeting is impossible and few prominent politicians are in Town. We are grateful. Rumour has excluded the annual reappearance of the sea-serpent from the daily Press. But readers of our Stock Exchange columns will see that there are those who are not grateful. Stock market "bears," acting, poor souls, on mere cold logic, were caught napping and temporarily discomfited. Let them console themselves. Next time, perhaps, the lying jade will play their game.

The Government and its Supporters.—When Mr MacDonald took office over a year ago we ventured to suggest that the chief menace to his security would come not from the Opposition parties, but from the danger of a mutiny in his own ship. Subsequent events have proved this forecast to be even truer than we supposed, for while, on the one hand, the debilitating split in the Conservative Party has developed more rapidly and more deeply than was expected, the restless Left Wing of the Labour Party has come out into the open with something very nearly a condemnation of the Government and its works. The Independent Labour Party has issued a manifesto, the burthen of which is that, not only has the Government failed to carry out Labour policy, but that it has made no

attempt to do so. Rebels within the party will also be on the warpath at the Labour Party Conference, to be held shortly at Llandudno, when resolutions will be discussed expressing dissatisfaction with the choice of Ministers and putting forward claims, rather reminiscent of those of the Press Lords, that certain Labour interests should dictate how the Cabinet should be composed. At the same conference the Cabinet will come under fire for their continuance of the Honours system. So Mr. MacDonald, in facing a Titan's autumn task, has the additional burden of feeling the growing dissatisfaction in the ranks behind him. It will be easier to assess how deep and wide this dissatisfaction is when, a week hence, the Trade Union Congress concludes its deliberations at Nottingham. If the Nottingham discussions are mainly confined to the report of the Council to the Congress, they will be concerned more with economic and industrial than with political problems. And if the discussions live up to the tone of that report, they should be of practical usefulness, for its most striking point is the prominence which it gives to the progress of discussions between organised employers and employed of the practical means to oil the wheels of industrial re-organisation. It is one of the cheering signs of these rather dark days that all parties to industry are showing greater inclination to realise that they are in the same boat and that, if the boat is to get anywhere, they must row the same stroke.

Affairs in India.—It would require the exercise of hardy optimism to regard recent news from India as satisfactory or reassuring. In an appreciation of the situation, published on Tuesday, the Government of India reported that though "the situation in most provinces is distinctly easier, there is no province in which the conditions are normal, or in which it can be safely said that some activities of the Civil Disobedience movement may not assume fresh vigour." Since then there have been three bomb outrages in Calcutta, including the attempt of terrorists on Monday to murder Sir Charles Tegart, the Police Commissioner, while the explosive character of the position on the Frontier has been unhappily illustrated by the death of Captain Ashcroft and nine other ranks in a clash with a *lashkar* of the *Hathi Khel* Wazirs. But what strikes us as being, in one sense, perhaps the most serious feature of a situation which is already grave, and holds obvious potentialities of increasing gravity, is the atmosphere of uncertainty and conflicting influences which is clouding the whole Indian scene. On the one hand, we have non-official opinion in Bombay, and (with strong opposition from a large dissenting minority) in Calcutta, apparently so impressed with the serious economic results of the boycott that there is a tendency to urge the Government to make, without further ado, a declaration of policy in advance of the reforms contemplated by the Statutory Commission. On the other hand, there have been further important arrests of members of the All-India Congress Working Committee for defying the notification proscribing the Committee as an unlawful assembly; the so-called "peace parleys" between the Viceroy and Sir Tej Bahadur Sapru and Mr Jayakar over the contents of Mr Gandhi's letter look like being interminably prolonged; and meanwhile the weeks are passing without any clear indication whether an adequately representative Indian delegation to the Round Table Conference can ever be secured. It has, indeed, been suggested in some quarters that the Conference may be postponed until next summer, a course which, in our view, would merely prolong the present damaging state of uncertainty and confusion. We are by no means inclined to criticise the Government of India and the Imperial Government for their patent desire to avoid either compromising the deliberations of the Round Table Conference or aggravating, by a stern exercise of authority, a situation which the intransigence of extremists has already tragically embroiled. At the same time, one is left with the impression that the Government is in the unhappy position of an engine driver watching a rising pressure gauge without being sure whether to damp the fire or open the throttle.

The Right of Secession.—The word "secession" has an ill-omened sound. It suggests "civil war," "slavery," "disaster." Fortunately, however, the position of the Union of South Africa in the British Empire to-day is so different from that of the Southern States in the North American Union last century that we can hear the word "secession" resuscitated by the South African Dutch Nationalists with equanimity. The Imperial Conference of 1926 took formal note, in explicit terms, of the fact that the position of the self-governing Dominions of the Crown overseas was constitutionally and politically identical with the position of the United Kingdom in the British Empire. (We say "took note," because the constitutional development of the British Commonwealth of Nations is something which happens of itself; the findings of Imperial Conferences usually register accomplished facts.) The attitude of the Conference of 1926 made a deep impression upon General Hertzog; and, upon his return from London to South Africa, he communicated this impression frankly and emphatically to his followers. Previously, he reminded them, he had shared the view that the British version of Dominion self-government was a sham—a story told to throw dust in the eyes of the world. His experience in London had convinced him that the story was true; that, as far as the attitude and intention of His Majesty's Government in Great Britain were concerned, the national independence of the Dominions was a reality. The point which brought conviction to General Hertzog's mind was his perception that the United Kingdom really had put the Dominions on a footing of complete constitutional equality with itself. And what could this mean but independence? For nobody could deny that the United Kingdom was an independent State. Just when he had got into these smooth waters, General Hertzog struck a snag. (He is a philosopher, and had been reading General Smuts's book on "Holism" on the voyage home.) However independent the United Kingdom might be, there was one thing that it could not do. It could not secede from the British Empire. And, since the status of the Dominions was defined as identical with the status of the United Kingdom, the question arose whether the right of secession did or did not exist for them. The inevitable answer is that the right of secession does exist for every fully self-governing Dominion and therefore—on the principle of constitutional equality—for the United Kingdom too! This second part of the answer is pertinent when read together with General Hertzog's premise (which was quite correct) that in practice a secession of the United Kingdom from the British Empire is "unthinkable." Why is it "unthinkable"? Not because the other self-governing members of the Commonwealth could or would attempt to coerce the United Kingdom if she elected to secede; but because secession could not be put forward in this country as a serious practical programme without rending the country from top to bottom and producing civil war and revolution. In other words, the sanction which keeps the United Kingdom from exercising its right of secession is a sanction internal to the United Kingdom. If General Hertzog applies this analogy to the position of the Union of South Africa, he will find that the situation is just the same. General Hertzog has already assured us that the question is academic. We can assure him that this academic question had already received its academic answer before he propounded it.

Election Prospects in Germany.—As the date of the general election in Germany approaches the political situation begins to come into focus. We can discern two dominant factors. The first is the elimination of the two foreign complications which have overshadowed the internal politics of Germany since the end of the war, that is, the Reparations Question and the Occupation of the Rhineland. Now that Reparations have been settled definitively and the evacuation of the Rhineland is complete, the internal politics of Germany are likely to be governed, more than they have been hitherto, by internal

issues. The second factor is the break-up of the German Conservative Party—a portent which the Conservative Party in this country should "behold and tremble," since the antecedents of it are singularly like the symptoms of trouble in the bosom of the British Conservative Party to-day. In Germany, the Conservative Party was stampeded last year by what is called, in the American language, a "red-blooded he-man executive," Herr Hugenberg—a Press Lord with embarrassing political enthusiasms. The old-fashioned Conservative leader, Count Westarp, was thrust aside in order to give Herr Hugenberg elbow room for a crusade. Herr Hugenberg's paynim was the Reparations Settlement. He ran full tilt against it, and was brought up short by President Hindenburg and by the facts. Indeed, the shock which his "impossibilist" policy administered to his party was so severe that it broke them; and a majority have now seceded to found a new "People's Conservative Party" under the leadership of Herr Treviranus, supported by a number of distinguished and experienced men including Count Westarp himself and General von Lettow Vorbeck. The destiny of Herr Hugenberg's "rump" is fairly clear. It will gravitate towards the Hitlerite anti-Semitic Fascists who call themselves the "National Socialist German Workers' Party," and who correspond on the extreme right to the Communists on the extreme left. On the whole, this development seems healthy, inasmuch as it brings German party politics within sight of something like a two-party system, or, more accurately, a system of two alternative coalitions. The Social-Democrats provide the permanent nucleus for the left wing coalition; the People's Party (the late Herr Stresemann's group) may conceivably co-operate with the new and moderate "People's Conservative Party" to make a permanent nucleus for a right wing coalition, with the Catholic Centre Party and the Democrats still hovering in between. On such lines, there is some prospect of the political life of the Reich becoming more stable—a consummation which everybody desires.

The Political Crisis in Poland.—It may or may not be pleasant to be a dictator (*respice finem*); but there is no doubt at all that it is extremely unpleasant to be a dictator's handyman—the business manager who has to work the pseudo-parliamentary machine, to absorb the shock of constitutional opposition, and to take the blame if the oilcan runs dry and the cylinders of the ramshackle contraption begin to "seize." When it comes to this, there is usually a race between the dictator and his "devil" to see which of them can "give notice" first. In Turkey, the other day, the Dictator, President Mustafa Kemal, won the race and threw poor Izmet Pasha to the wolves. It looks as though Marshal Pilsudski's Izmet Pasha, who is called Colonel Slawek, had taken his Turkish colleague's fate to heart; for he has now thrust his own resignation into the Marshal's hands on the score of overwork. Marshal Pilsudski has had to accept this resignation perforce and to assume the premiership himself; but he has declared emphatically that his own objections to overwork are as great as those of his right-hand man. It is a strange situation, for a work-shy dictator is no dictator at all. Readiness and ability to perform a superhuman amount of work and assume a superhuman burden of responsibility are the sole justifications for supermen; and in Poland, as things are, the hard work will have to be done and the heavy responsibility will have to be shouldered by the Dictator, or by somebody in the Dictator's entourage, if the dictatorship is to endure. The constitutional opposition to the dictatorship is mounting fast and is discovering how to express itself in effective forms. This is natural and healthy; for Poland has now safely come through the throes of her rebirth and is evidently capable of leading a normal national life. It will not be surprising if Marshal Pilsudski finds himself compelled to hold a general election, and if the electors return a parliament strong enough to insist successfully upon its constitutional rights.

Perurritania.—With "the Balkans" lost, as respectable members of the League of Nations, to the idyllic world of political "opera bouffe" where should we be without our few remaining "unstable" South American republics? The news from Lima this week has followed the best traditions. On Monday, President Augusto Leguia, putting a good face on the success of revolts at Callao and at Arequipa in the Southern Provinces, attends the races; midnight finds him feverishly at work constructing a new Cabinet, only to be confronted by a military committee, to whom in the small hours of the morning he hands his demission; next day he embarks on a cruiser *en route* for Panama and safety, popular indignation swells, the safe-conduct is cancelled and the cruiser is ordered by wireless to bring the ex-President back to Callao and trial. Picturesque politics, such as these, with no great harm done, are after all a pleasant contrast to the drab economic issues of the Old World; and if we cannot take the *coup d'état* very seriously, it is because both General Ponce and Colonel Cerro, who seized Lima and Arequipa, respectively, and had both apparently strong claims to the presidential succession, know perfectly well that the ultimate repository of power over Peru is to be found in the capital of another, greater country to the north. With this in mind, the successful claimant to the tenancy of the presidential palace—according to the latest reports the key is now in Colonel Cerro's pocket—is unlikely to exceed the limits of a president's "poetic licence." As for Señor Augusto Leguia, his fate is that which has befallen many speculators before him who have failed to "get out on the top of the market." President since 1924, and dictator since 1929, he had a good run for his money, and if at the end (did he overlook Signor Marconi's contribution to science?) he "missed the bus," he seems to have his optimism largely to blame.

Farmers and Import Boards.—In a speech at Swindon last Saturday the Minister of Agriculture threw a little fresh light on the Government's agricultural policy, though his statement in some respects was calculated to provoke as many questions as it answered. Starting from the premise that a good cultivator, producing crops in the proper way, in the right ground and at the right time, ought to be reasonably assured of a fair return for his output, and that the consumer should not be called upon to pay "a higher price than a well-ordered marketing system ought to require," Dr. Addison stated that the Government did not intend to tax imported wheat. ("What sense is there in artificially raising the price of four loaves in order that the grower, represented by the fifth, should be decently paid?") On the other hand, they ruled out "any blind system of bounties." The objective, therefore, must be to afford a secure home market by the compulsory absorption of home products of good quality through a quota system, protection against "the variation or insufficiency of the price of imported supplies" being provided by the use of import boards to make bulk purchases from abroad. The whole question of such boards would, he added, be gone into at the Imperial Conference. We should like, however, to have heard from Dr. Addison a much fuller explanation of how an import board would secure a fair price for the producer, except at the consumer's expense. Would a "standard" internal wholesale price for wheat be fixed which would enable the import board to make, on its foreign purchases, sufficient profits to cover losses on quotas delivered by British producers at a higher price? The whole scheme must be enunciated in much fuller detail before the public can have adequate material for passing judgment on it.

The Bromley Election.—Mystification as to the domestic split or splits within the Conservative Party has been deepened by the by-election at Bromley, where polling takes place on Tuesday next, September 2nd. The contest was necessitated by the death of Colonel James, who held the seat for the Conservative Party at the last general election by a majority of over 7,000. The local Conservative Association adopted Mr. E. T. Campbell as its champion, and a three-cornered contest

with Liberal and Labour candidates was expected. But a surprise was in store. A fourth candidate appeared in the shape of a Mr. V. C. Redwood, representing the United Empire Party, Lord Rothermere's recently-created organisation, and claiming the personal support of Lord Beaverbrook. The latter has not appeared in Bromley, has disavowed his support in a public letter, and his Press has not rallied to the cause. On the other hand, while Mr. Baldwin has blessed Mr. Campbell, who in turn pledges his loyalty to the official leader of his party and refuses to support Lord Beaverbrook's revolt, the Rothermere Press has brought all its big guns into play on behalf of Mr. Redwood, who as singer and as Australian politician has enjoyed the experience of a varied career. Even the services of the air heroine, Miss Amy Johnson, are mobilised in the effort to seduce Bromley from its allegiance to Mr. Baldwin. The whole episode would have its amusing side if times were not such as to make such fantastic electioneering deplorable. The one clear point about the election, whatever its result, is that Lord Rothermere and his new party will shrink from no wrecking tactics so long as Mr. Baldwin is official Conservative leader. What is not clear is where the relations between the two Press Lords stand. Once again we are reminded that the greatest strength of a harassed Government lies in the internecine strife in the largest Opposition party. But in this particular contest it may be the Liberal who is the *tertius* or, rather, *quartus gaudens*.

British Production.—The Board of Trade's index number of industrial production confirms the impression conveyed by the *Economist's* indices of industrial activity, and by those of the London and Cambridge Economic Service, that productive activity in the United Kingdom suffered a severe decline during the June quarter:—

BOARD OF TRADE INDEX.				
1924 = 100.				
	March Quarter.	June Quarter.	September Quarter.	December Quarter.
1929.....	110.5	112.0	110.6	113.9
1930.....	110.9	103.4	...	...

Industrial production, which was well maintained during the March quarter, especially in the heavy industries, experienced a sharp setback during the second quarter of 1930. The figures for the respective groups are set out in the following table:—

1924 = 100.					
Group.	Year 1928.	Year 1929.	June Quarter, 1929.	March Quarter, 1930.	June Quarter, 1930.
1. Mines and quarries....	89.2	96.8	92.6	102.0	87.4
2. Iron and steel, and manufactures thereof	102.3	114.0	117.8	113.8	95.5
3. Non-ferrous metals....	119.3	120.5	128.7	105.7	123.7
4. Engineering and ship- building.....	113.1	121.0	124.7	125.5	124.3
5. Textiles.....	99.9	98.5	99.8	92.4	78.4
6. Chemical and allied trades.....	110.3	115.8	114.6	104.9	104.9
7. Paper and printing....	(a)	(a)	(a)	(a)	(a)
8. Leather and boots and shoes.....	102.0	98.5	100.7	108.5	104.5
9. Food, drink and tobacco	101.9	106.0	109.0	96.9	104.9
10. Gas and electricity.....	126.0	135.8	(b)	(b)	(b)
Total of manufacturing in- dustries (2-10)*.....	109.4	115.5	116.9	113.2	107.5
Total of all groups (1-10)*	105.5	111.8	112.0	110.9	103.4

* Including also various industries not specified above.
(a) Not fully available. Returns received included in general index.
(b) Figures for gas not available. Returns for production of electricity included in general index.

It will be seen that the decline was almost general, with the exception of the non-ferrous metals and food groups, which show a slight seasonal increase. This recession is most pronounced in the mines and quarries, iron and steel, and textile groups. It is noteworthy that activity in these three groups was below the average level of 1924. The extent of the depression in the textile industry is shown by the fact that production during the June quarter was only 78.4 per cent. of that in 1924. The latest information indicates that production in the iron and steel, and as the other industries show no signs of an early improvement the average may be expected to decrease still further during the current quarter.

The World Rayon Surplus.—In an article in the Stock Exchange section of this week's issue the position of the shares of British artificial silk companies is reviewed. In this connection the following note by a trade correspondent as to the world position of the industry is of special interest. Estimates, he writes, of world production in the first half of 1930 show a surplus of output over sales amounting to 3,381,000 kilos., which in view of the already heavy stocks cannot but be regarded as a very serious matter. Few countries have escaped the worst effects of the position and, whilst in other times of depression in the industry the United States has proved an exception, this is not the case to-day. It has been necessary drastically to curtail production in the States, and even so stocks are unhealthily large, and it is not certain that a very large price cut recently effected will result in their being cleared. In the European countries where there is always a large surplus produced for export, the position has been very difficult, although thanks largely to an unprecedented drop in prices, there have been months this year when the export trade was so stimulated as largely to relieve the position. With world conditions as they are, however, the poorer countries are restricting purchases of rayon as much as those of any other commodity, and, where price is a factor, Japan, now a very important element in the rayon world, has got the business. This has been and will continue to be very serious for the Continental companies, who, moreover, are not backed by exceptionally large capital resources. Ever increasing tariff walls render the position more and more difficult, and it is not impossible that some considerable reconstructions will be necessary. It is impossible for Britain to ignore this state of affairs in the export markets; nevertheless her industry is far from being dependent thereon. The financial strength of the dominating British company enables it to keep out of unprofitable export business, whilst the home demand, though at lower prices, is good. Actually, in June, sales in this country exceeded production, and it may be taken therefore that, whatever the position is in other countries, Britain is relatively better off; and though her smaller producers are gradually being eliminated under stress of competition, the established concerns are likely to weather the storm with less damage than are those in any other country.

Co-operators and Trade Barriers.—A correspondent writes:—At the International Co-operative Congress, held at Vienna this week, the delegates from forty countries, representing co-operative organisations with an aggregate membership of 56,000,000, have been seeking an economic programme and policy. The attempt to develop international trading and banking relations has confronted the national co-operative societies with the problem of tariffs and trade barriers. Since the International Co-operative Congress at Basle in 1921 an expert committee of the International Co-operative Alliance has been at work investigating the problem, and their report was submitted to the Central Committee on the eve of the Congress at Vienna. This is now being referred to the organisations of the various countries. But the main conclusions against tariffs have been so well established that the Central Committee of the Alliance, recognising the vital importance of the barriers to free international exchange, recommended a resolution to the Congress urging that "all consumers, all co-operative organisations, and the workers of all countries should bring their influence to bear upon their respective governments, and through them upon the League of Nations, in order that by the conclusion of liberal long-term commercial agreements, by the establishment of uniform Customs nomenclature, by national and international traffic agreements, by customs unions, and by all other appropriate means, the free exchange of goods and unrestricted communications may, as far as possible, be restored." During 1929 the imports of the national wholesale societies in eighteen countries amounted to £81,699,852. Figures such as these illustrate the interest that the co-operative movement takes in matters affecting the free interchange of

commodities, and prove the enormous field of exploration that exists for the extension of commercial relations between these societies. Hence the importance of the investigation which will follow the decision of the Congress at Vienna. The growth of the co-operative movement in this country has been mainly along distributive channels. But in most European States the development of co-operation production has been the dominant phase; this is particularly the case in Scandinavia. Now that the wheat pools are becoming such a powerful factor, the problem of bringing the producers and consumers into friendly relationship is the urgent concern of the International Co-operative Alliance. At the outset it is faced with the barriers that have grown up between the nations; and its initial work of organising public opinion in the direction of the free interchange of commodities in order that consumption shall be increased to foster production has received encouragement from the proceedings at Vienna. The meetings between the various sections responsible for the financial operations of the movement in the various countries have convinced the leaders that Customs barriers are obstacles to the development of international co-operation; and that the policy so long advocated by British co-operators is the line to be followed throughout the world.

Transference of the Unemployed.—Hopes placed in the policy of "transferring" the unemployed, writes a correspondent, seem destined largely to be disappointed. The last Report of the Ministry of Labour disclosed the fact that during 1929 only some 32,000 persons were transferred from the districts scheduled as depressed mining areas, and an analysis of some 40,000 unemployed workers in the depressed mining areas made during October and November, 1929, disclosed the magnitude of the difficulties which hamper the successful execution of this policy. Out of these workers, all of whom were between 18 and 45 years of age, only some 7,500 were both available and suitable for immediate transfer; nearly 10,000 required a course at one of the Transfer Instructional Centres; a further 4,000 were fitted for and in need of more specialised training; while the remainder, nearly 20,000 in all, were mostly married men, many of whom could not be transferred because of their domestic responsibilities. The principal obstacle in the way of transference—apart from the question of mobility, and the complications often created by inadequate housing in the areas to which it is desired to send unemployed workers—is the unsuitability of the unemployed for such work as is available. A solution of this problem has been attempted by the institution of training centres, but the total number benefited by all the various training schemes was only some 20,000 in 1929, of whom roughly 4,800 were women and girls. Moreover, these figures, which show the number of entrants only, do not take account of the wastage involved from failure to complete the courses offered or from other causes, and which amounts to between 5 and 10 per cent. From many points of view these results are distinctly disappointing, and show that the methods of training and transference, which naturally commend themselves to commonsense as immediate and practical methods of dealing with the unemployment problem, cannot operate on a sufficiently large scale to make a substantial impression on the body of unemployed as a whole.

Gold: A Belgian View.—The Governor of the National Bank of Belgium, in his speech at the annual meeting of that institution, took a share in the controversy over the adequacy and distribution of the world's stocks of monetary gold. In general, he sought to refute the contention that the maldistribution of the world's gold was a primary cause of the recent collapse in commodity prices and setback to trade, and argued that nowhere during the last two years had industry and commerce, deserving of credit, failed to obtain it upon reasonable terms. The real causes

of the depression were, he said, under-consumption, intensified by the consequences of the Wall Street boom and collapse; artificial interferences with prices in Canada, the United States and Brazil; over-borrowing in Australia; political agitation in India and Egypt; and the unsatisfactory internal condition of China and Russia. This, on the whole, is a typical diagnosis of the orthodox banker, who takes the view that there is plenty of money about, and that he would be only too glad to lend it to reputable borrowers at remunerative rates. It is doubtful, however, if views of this character probe sufficiently deeply into the causes of the trade depression. It may be granted that "short" money is cheap and credit plentiful to-day, but this is the consequence of the depression, and cannot therefore be adduced as a reason why the cause of the depression was unconnected with monetary problems. Again, the attempts to regulate prices in various countries, and the difficulties of Australia and other countries whose main business is the production of primary materials, were all consequences, not causes, of the initial world-wide fall in commodity prices. Finally, it has never been disproved that the fundamental cause of inflation on Wall Street was not to be found in America's huge gold accumulations. Thus it is clear that the evidence cited by the Governor of the Belgian National Bank represents mainly symptoms of a more deep-seated *malaise*, and in diagnosing the real trouble it is impossible to ignore the fact that in 1929 France and the United States between them not only absorbed the whole of the year's output of gold, but also made substantial inroads into existing stocks, and that in the same year commodity prices collapsed all over the world at a sensational rate. This diagnosis of the trouble was given by Sir Henry Strakosch, in his memorandum published with the *Economist* of July 5th last, and his conclusions are supported by Sir Josiah Stamp in this week's *Nation*. It is arguable that even with the present real distribution of the world's gold there is sufficient credit available to finance a moderate revival in world business, if only traders would recover their confidence, but it is another matter to contend that in creating conditions of "under-consumption" the inadequacy of monetary gold supplies, in their recent distribution, played no part.

An American Sidelight.—The news that "racketeers" in New York City have recently sought to extend their "sphere of influence" beyond the "bootlegging" business, and have engaged in the manipulation of prices of such innocent commodities as eggs and milk is not to be taken as an indication of any moral regeneration on their part. Revolvers, shotguns and nitro-glycerine appear still to have a definite place in this remarkable side-line of the economic system of our transatlantic neighbours. As a result of the widespread drought, "gangsters" are reported to have taken advantage of the possibility of a food shortage, and by means of superior organisation, upheld, if necessary, by violence, have succeeded in obtaining control of markets and concessions and in forcing up the price of commodities. Evidence was recently given before the Assistant Attorney-General, who is conducting an inquiry into the matter, to the effect that a "milk ring," supposed to have been liquidated, had been reformed under the leadership of one Abe Tiger, and had succeeded in raising the price of loose milk from 13s. 8d. to 17s. 8d. per 40-quart can. A still larger "gang" had been engaged in trying to put out of business the Utah Poultry Producers' Association, whose aim it was to supply eggs in sufficient quantity to make possible a reduction in the retail price of five cents per dozen. The "racketeers" have adopted all the usual methods of intimidation and coercion, and it is reported that "retailers who tried to deal with the Utah Association had the tyres of their lorries systematically slashed with ice-picks, while their lorry-drivers were beaten and the more persistent threatened with death." To conclude from these stories of economic terrorism in the vein of Mr. Edgar Wallace that the distributive trade in the United

States has fallen largely into the hands of desperadoes would, of course, be ridiculous. But the "racketeer," the "hi-jacker" and the professional "gun-man" are a reality which prompts the reflection that in the youth and vigour of American civilisation, there are elements strangely reminiscent of another renaissance five hundred years ago.

Australia's Foreign Trade.—Our Melbourne correspondent writes:—The preliminary statement of Australian trade for the year ended June 30, 1930, shows a decrease of £43,886,287 in exports of merchandise, due mainly to the lower prices for wool and the smaller wheat harvest, while there is an increase of £23,884,384 in gold exports resulting from the transfer of gold from the trading banks to the Commonwealth Bank for export to assist Government finance. Imports of merchandise show a relatively small decrease, but the decline is becoming more pronounced, as merchandise imports for the month of June were only £6,355,944, against £12,706,487 for June, 1929. The totals for the last two financial years are summarised as follows:—

	1928-29. £	1929-30. £
Imports:		
Merchandise.....	143,299,604	130,840,475
Gold	348,277	293,794
Total imports	143,647,881	131,134,269
Exports:		
Merchandise.....	141,866,297	97,980,010
Gold	2,984,155	26,868,539
Total exports	144,850,452	124,848,549

As the amount to be remitted abroad on Government and private account for interest and other payments is estimated at £35 millions on the 1927-28 basis (with some addition since), the amount available out of an export trade of under £100 millions wherewith to pay for imports, in the absence of fresh external borrowing, would be only about £65 millions, instead of £130 millions. But although Australian public borrowing abroad has been at a standstill during the twelve months the Governments have obtained temporary accommodation to enable them to keep up a large proportion of their expenditure, and this has been reflected in imports. Allowance has also to be made for the overlapping of demand from the country producing classes after earlier periods of a more favourable character, and for the overlapping of importers' orders. This overlapping, and the fact that gold was available for export, have constituted reserve resources, the benefit of which has now been exhausted, the position of country producers being now very different from what it was at the middle of last year. Amongst imports for 1929-30, apparel and textiles and manufactured fibres amount to £32,548,858, or a decrease of £4,162,058, which includes a decrease of a million in corn and flour sacks owing to the smaller harvest. The group of metals, metal manufactures and machinery amounts to £36,346,960, or a decrease of £6,640,473, due largely to a decrease of £4,703,947 in the sub-heading of vehicles (motor cars, etc.), the imports of which were only £9,126,601, against £13,850,548 for 1928-29. A comparison of some of the principal exports is as follows:—

	1928-29. £	1929-30. £
Wool	61,448,288	36,506,779
Wheat and flour	26,334,799	14,982,293
Butter	7,545,430	6,697,752
Frozen meat	5,054,330	4,955,974
Fruits, dried and fresh	3,243,942	5,034,202
Hides and skins	9,291,037	6,592,739
Sugar	5,223,346	2,217,176

The apparent reduction in butter and sugar is partly due to a change from domestic to export values in the statistics.

UNITED STATES.

Drought and the Crop — Trade and Prices — Rural Situation — Money Policy.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 20.

OWING to the strenuous efforts made by President Hoover to relieve what he believes are distressing conditions in some of the agricultural States the public mind has become more confused. Undoubtedly a good deal of politics is entering into the farm relief situation. At any rate, pessimism is cooling off under sober thought and recent rains which have broken the drought in many important sections of the country.

The two great crops which are sold for cash and transported over the railroads, namely, cotton and wheat, have been little affected by the dry weather. Prices of both are the lowest in several years, but crops were raised cheaper than in recent years, and the return to growers will at least enable them to carry on until another harvest with the help of bank credit and the lending agencies set up by the Government. The distress among wheat farmers has been exaggerated. The most damage has been done to feed crops, but even there the recent rains will do much. However, the scarcity of corn and hay in some sections, coupled with low market values for livestock, are ensuring a lean year for stockmen. At most the troubles in the agricultural regions are unlikely to do more than retard a general business recovery a few months.

No convincing signs of such improvement are yet to be seen, and hopes, which first were placed on a spring revival and later deferred to the autumn, are now centring on next spring; but it looks as though the curve of depression were flattening out. As expected, foreign trade was particularly poor in July. Both exports and imports fell to the lowest figures in dollars in nearly ten years, or since the post-war depression period. Exports were \$269,000,000 and imports \$219,000,000. Virtually all classes of commodities were affected, but cotton was particularly hard hit. In July of last year exports were \$401,000,000 and imports amounted to \$353,000,000. In the seven months the country's exports have fallen approximately three-quarters of a billion.

With commodities moving slowly into domestic consumption and with foreign shipments declining, the fall in prices continues. The Bureau of Labour statistics index for July stands at 84, against 86.8 for June and 98 a year ago. Again the principal decline took place in farm products, which dropped 6½ per cent. Of the 550 commodities tabulated, increases were reported in only 57 instances. Declines were suffered in 236 cases, and 257 were unchanged. Since the first of the month wheat and cotton have further declined, but corn and some other farm products have advanced. With the harvests now fairly well known, there is more reason to look for stability. Softening of retail prices meanwhile continues, while some basic commodities are dull. Copper has dropped again, and a cut in mid-Continent crude oil prices is talked. However, the feeling is growing that at least a temporary halt to price recession is near.

Appointment of Governor Roy Young, of the Federal Reserve Board, to President Hoover's special committee on farm aid probably does not mean that the Federal Reserve Banks will do more than they have been doing to assist the agriculturists. The banks have consistently pursued a cheap money policy for a long time, but while they can force out credit they cannot keep it out when demand for it is declining. It merely becomes excess bank reserves or returns in currency deflation. The Reserve Banks can, of course, discount paper for the quasi-governmental farm banks, but no need of such discounting has yet appeared. They also could make preferential loans on farm paper, as

they did ten years ago, but during the post-armistice depression the scheme did not work well. Commercial banks which borrowed from the Reserve to make such loans were limited to a charge of 1 per cent. over the rate at which they borrowed from the central banks, and they were reluctant to do business on so small a margin.

Anyhow, the difficulty from a credit standpoint is not lack of credit, but timidity on the part of country bankers. Rural bank losses on bad loans have been mounting, and more failures are on the way, but the trouble is mainly one of "slow pay" and not of real insolvency on the part of borrowers. Inflation continues to be the policy of the Federal Reserve Banks, but its principal effects will only be felt later. Last week's statement revealed moderate increases both in bill holdings and in Government securities, and only a small decline in member bank borrowings. Still the total amount of Reserve Bank credit outstanding is only \$959,000,000, compared with \$1,310,000,000 a year ago, and the reserve ratio stands at 82 per cent. Gold reserves are only \$15,000,000 lower on the week and are up \$6,000,000 on the year.

This week the Reserve Banks are holding off the Government security market, and the scanty supply of bills does not suggest any great increase in that portfolio. Dealers are now believed to have the smallest supply of bills for several years, and some difficulty has been found in filling some large foreign orders. However, the Reserve Banks look with disfavour on a further reduction in rates for the purpose of increasing the supply, especially since this is the season when ordinarily rates begin to stiffen. Aggregate volume of bills outstanding is rising with the season, the first monthly increase this year being reported for July, amounting to \$45,000,000. The gain does not reflect increasing trade activity here, but rather a transfer of financing from the London to the American banks. This transfer on goods stored abroad or shipped between foreign countries is placed at \$53,000,000. The American Acceptance Council reports that dollar acceptances used to finance foreign transactions total \$495,000,000, a record amount, which compares with \$280,000,000 a year ago.

The gold outflow has slackened for the moment, and this week approximately \$4,000,000 has come in from Japan, China and Uruguay. Bankers expect that the movement to Paris will be resumed before the end of the month. During July excess of gold exports was \$20,600,000, and so far in August the net loss is \$15,800,000, the bulk of the metal going to France. The country is still the gainer by approximately \$186,000,000 for the first seven and a half months of the year.

Nothing but ease in money is in prospect until business demands increase considerably, and bond prices are buoyant. Only professionals are taking advantage of cheap credit to operate in the share market, but the bear side is becoming more nervous on the failure of prices to break through the early summer low levels. Call money is difficult to place at 1½ per cent. outside the Stock Exchange, while the official rate, after a week at 2½ per cent., has broken to 2 per cent. Meanwhile time money rates have risen ¼ per cent. Commercial borrowing is beginning to rise, according to the member banks' weekly report, mainly on country demand. Money markets were quite unaffected this week by payment of \$120,000,000 for the latest Treasury bill issue, most of the amount being off-set by the \$104,000,000 bill maturity. However, the volume of bills outstanding is steadily increasing, and, with Government expenditure rising on farm relief and building projects undertaken to alleviate unemployment at the same time that revenues are falling on lower imports of commodities, some uneasiness is felt over the prospect of a Treasury deficit. That the cut in the income tax rate voted last year can be maintained along with the Government's appropriations for farm relief and public works in a poor business year is subject to doubt.

The Treasury has served notice of its next tax date financing (September 15), when \$350,000,000 of 3½ per cent. certificates fall due. Later in the month a Treasury bill issue of \$50,000,000 must be retired or refunded. It is likely that both issues will be replaced, since current cash demands on the Treasury and lower collections do

not promise reduction in the floating debt. There is some discussion as to whether the Treasury may wish to retire or refund a portion of the \$1,500,000 3½ per cent. notes of 1932 now outstanding. The issue can be called on the next tax date, and the present is regarded as a favourable time for such an operation.

FRANCE.

Balance of Payments — Est Railway Bond Redemption — French Loans in America — Wheat Situation.

(FROM OUR CORRESPONDENT.)

PARIS, August 27.

M. P. DROMEL, commenting on recently published estimates of M. Meynial, regarding France's balance of payments in 1929, has produced the following statement of the position:—

Credits.	Million Francs.	Debits.	Million Francs.
Freight	3,100	Deficit on foreign trade...	10,000
Insurances	500	Foreign payments by Government	2,850
Nett balance of interest payments	5,500	Money sent home by foreign workers in France	2,500
Expenditure by foreign tourists	8,500	Foreign issues in France	1,100
Receipts from German Reparation payments	6,600	Foreign bill purchases by Treasury	1,450
French loan issues abroad	200		
Sales of foreign exchange by Bank of France ...	6,550		
	31,050		17,900

"Our balance of accounts for 1929," M. Dromel writes, "shows a balance of assets of about 13,150,000,000 francs. Now, during the same year we imported only 8,500,000,000 francs of gold. We therefore must have invested the balance of 4,650,000,000 francs (say £37,500,000) abroad. The statistics show no trace of this, because these exports of capital consisted either of short-term investments in foreign markets or in direct purchases of foreign securities, operations which entirely elude the statisticians."

The Est Railway Company, which in 1925 made a bond issue of \$20,000,000 at 7 per cent. in the United States, has given notice that it intends to exercise its right to pay off the outstanding portion of the issue by anticipation. The amount outstanding is \$19,439,700, which is to be reimbursed on November 1st next at 105 per cent. The necessary funds will be provided in the form of a portion of the stock of foreign bills in the possession of the Treasury, through the intermediary of the Caisse d'Amortissement. This stock of foreign exchange was accumulated by the Treasury, it will be recalled, in view of the then pending date of payment of the \$400,000,000 owing to the United States Government for the American army stocks in France, which were taken over by this country after the war. The payment at the original due date (August 1, 1929) became unnecessary owing to the ratification of the Washington Agreement, under which this item of commercial debt was incorporated in the system of annuities provided for by the Agreement. The Treasury received authority in the Finance Act of last April to advance the necessary amount of foreign exchange to liquidate the Est Company's loan. The amount thus borrowed will be repaid by the company to the Treasury by a series of annuities. Other outstanding French issues in the United States are:

- (1) French Government 1921 7½ per cent. Loan of \$100,000,000, issued by Messrs J. P. Morgan and Company at 95, and reimbursable on or before June 1, 1941.
- (2) French Government 1924 7 per cent. Loan of \$100,000,000, issued through a syndicate of American banks at 94, and redeemable on or before November 1, 1949.
- (3) 20-year 7 per cent. Gold Loan of \$25,000,000 for the Department of the Seine, issued in January, 1922, at 90½, and redeemable on January 1, 1932.
- (4) City of Bordeaux 1919 Gold Loan of \$15,000,000 at 6 per cent., issued at 92½ and redeemable on November 1, 1934.

(5) City of Lyons 1919 Gold Loan of \$15,000,000 at 6 per cent., issued at 92½ and redeemable on November 1, 1934.

(6) City of Marseilles 1919 Gold Loan of \$15,000,000 at 6 per cent., issued at 92½, and redeemable on November 1, 1934.

(7) City of Soissons External Reconstruction Secured Gold Loan of \$6,000,000 at 6 per cent., issued at 85½ through White, Weld and Company (secured on war damages due from the French Government), and redeemable on November 14, 1936.

(8) Nord Railway Company 6½ per cent. Loan of \$15,000,000, issued in October, 1914, at 88½ and redeemable in totality on October 1, 1924, at 102, or by annual drawings not later than October 1, 1950.

(9) P.L.M. Railway Company 6 per cent. Loan of \$40,000,000, of which \$30,000,000 was issued in April, 1922, at 83, and \$10,000,000 is for issue in April, 1932, at 83½, the whole being reimbursable not later than August 16, 1958, or by anticipation (at 103) on February 15, 1932, or at any subsequent date before 1958.

(10) P.L.M. Railway Company 7 per cent. Loan of \$20,000,000, issued in September, 1924, at 93½, and redeemable on or before September, 1958, or by anticipation (at 103) on September 15, 1932, or at any subsequent date prior to 1958.

(11) Paris-Orleans Railway Company External 5½ per cent. Loan of \$10,750,000, issued in February, 1928, at 96, and redeemable between March 1, 1933, and March 1, 1937, at 101, or between March 1, 1938, and March 1, 1968, at 100.

(12) French National Mail Steamship Lines (Messageries Maritimes) External 7 per cent. Loan of \$10,000,000, issued in December, 1924, at 91, and redeemable (at 103) on December 1, 1929, or subsequently not later than 1949.

The wheat situation continues to attract close attention here, in view not only of the fact that agriculture remains the greatest French industry, but also because of the serious effect the threatened shortage of home-grown breadmaking materials, as the outcome of the disappointing harvest, may have on the exchange value of the franc in the coming year. The situation is rendered all the more difficult because the worst of the bad weather occurred after practically all crop estimates had been made up, and nobody has as yet any reliable idea as to the extent of the damage done. All that is known is that what was expected to prove a new high record yield has seriously disappointed all hopes, while the quality is also proving much below the average. On the average, France finds it necessary to import about 10,000,000 quintals of foreign wheat every year. There is good reason for the anxiety which is being shown that every effort shall be taken to prevent the French wheat grower from being compelled to sacrifice his crop at any price he can get, in order to recoup his expended capital, and at the same time to make the stock of wheat actually in hand go as far as possible. The Government is taking active steps in both senses. An effort is being made to stabilise wheat quotations (in which connection the grain market has been thoroughly reorganised); while plans are also being worked out to ensure delivery of grain to the market in more or less equal monthly quantities. In order to render it possible for these to be put into effect, the Government proposes to furnish the growers with the means to finance their crops and at the same time to arrange for wheat to be stocked against the time when it will be actually needed.

GERMANY.

Floating Debt — Cartel Prices — Unemployment.

(FROM OUR CORRESPONDENT.)

BERLIN, August 27.

DR DIETRICH, the Minister of Finance, has in the past week given a survey of the situation of the Reich's cash situation. All floating foreign debts have been paid, and the total floating indebtedness has been reduced by 500 million marks. This includes, however, some 360 millions which represent merely a formal reduction, for the Reich was permitted to delay the payment from September 1, 1929, until the coming into effect of the Young Plan, of the difference between the Dawes and the Young payments; and following the coming into operation of the Young Plan this sum was struck off the floating debt. In addition to this, the Reich has been enabled through the first tranche of the Kreuger loan to consolidate more than 200 millions of the floating indebtedness. (The apparent roughing 300 millions, was also placed at the disposal of the Reich on the basis of advance payments to a change from the floating debt.) Hence,

in effect, what has happened is simply that a proportion of the floating debt has been funded. The plan upon which the budget of 1930 was based, which provided for the amortising in the current fiscal year of the 350 millions of "transitional" credit—the so-called Schacht credit—has proved to be impossible of realisation. The repayment was made, the creditor banks received their money, but the means were secured by the incurring of other short-term indebtedness.

All this need give rise to no misgivings. The German people would be asking too much of itself if, in this year of unprecedented economic depression, it cherished the hope of reducing the national indebtedness. It is quite proper for the national treasury to take advantage of the liquidity of the money market to meet its repayment obligations without burdening the taxpayers further in doing so. In one respect Dr Dietrich has been much more fortunate than his predecessors, and especially than Dr Hilferding, last winter's Minister of Finance. The deficit in the Budget does not make itself felt directly in a shortage of funds in the treasury, since the ministry can sell treasury certificates and treasury bills. Hence the Minister of Finance was fully justified in declaring that the situation of the treasury in the coming months furnished no ground for particular uneasiness. Unfortunately, however, he added that "the new Reichstag will have a number of months' time for undisturbed, objective labour," and would not need to make any "over-hasty decisions" in politico-financial matters. Naturally the newly-elected Reichstag will have to consider calmly the Government's projected autumn plans for financial reform, which (it has not yet been made public or, probably, formulated completely by the Cabinet) is to bring a final new regulating of the German financial system. But it will first have to see to it—and as soon as possible—that the deficit in the current Budget is compensated for by economies or by new receipts. For if this should not be done, the result would be a grave new increase of the floating indebtedness—it amounts to-day to some 1,400 million marks—and that, in view of the ever-present possibility of a new stiffening of the money market, might again cause such crises as those of last winter.

The Government has scored a small success in its battle against excessively high cartel prices. The programme for combating unemployment contemplated, among other things, important orders from the postal department, which were to include building operations. Among the industries in the building field which are strictly bound by cartels, are the cement industry and the linoleum industry. The Reichspost imposed upon both these industries, as a condition to the granting of orders to them, an important reduction of their prices. While the cement syndicate has so far not accepted this demand, linoleum prices have been actually reduced, and the Post Office thereupon granted its orders, whereas it would otherwise have got along with substitute materials. Naturally this success can become of general economic importance if other important industries follow the linoleum industry.

The German labour market grows steadily worse, although in former years no increase in unemployment worth mentioning set in at this season. The unemployment insurance department, it is true, reports for August 15th 3,000 less recipients of benefit than at the end of July, but this decline is only due to the fact that a great number of unemployed have exhausted their right to receive unemployment insurance. The "Krisenfürsorge" (emergency aid), which takes over a part of these unemployed who are no longer covered by insurance, shows an increase of 17,000 persons receiving support. The unemployment insurance department now has 1,494,000 unemployed to support, and the emergency aid 420,000. The number of unemployed recorded in the official employment agencies—this is the most nearly complete figure—increased from 2,765,000 on July 31 to 2,845,000 on August 15. Moreover, in July, according to the "Institut für Konjunkturforschung," the percentage of workers employed on full time in all industries has dropped from 75.2 to 73.6 per cent.

Trade Depression — Production — Money — Stock Markets.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, August 18.

THERE was never any doubt that the international depression would reach Sweden sooner or later, although for a long time the resistance of Swedish industry to its influence was remarkable. The first serious sign of the depression in Sweden appeared in the June statistics, which appeared in the middle of July. Whereas imports and exports in May had a value of Kr. 154 and Kr. 160 millions respectively, and whereas the corresponding figures for June a year ago were Kr. 145 and Kr. 169 millions, the import figures for June this year did not exceed Kr. 124 millions, and the export figure was Kr. 134 millions. As regards the most important staple articles, the most marked reduction in exports was in pulp, of which shipments in June were about 25 per cent. lower than last year. The pulp industry had succeeded in effecting large sales at an earlier stage, but the difficulties in making buyers accept delivery have steadily increased. At the same time, prices have progressively fallen. Strong sulphite, for example, fell from about Kr. 205 at the end of last year to about Kr. 165 at the beginning of August. In the same way shipments of iron ore have receded. Whereas normally the months of May, June and July show a rising curve with the culmination in July, this year the opposite has occurred. From 927,000 tons in May, 1929, shipments fell in June, 1930, to 803,000 tons, and in July to 773,000 tons. Last year the amount in the last-mentioned month was 1,128,000 tons. The tendency cannot be mistaken, even though the results for the first seven months of the year are comparatively good, thanks to active exports in the beginning of the year.

The depression has affected different industries very differently, however, and some industries are still carrying on comparatively satisfactorily. This is especially true of mechanical engineering and, strangely enough, of the timber industry. Timber prices are very low, it is true, but they have remained more or less unchanged during recent months. It is a favourable sign that delivery is promptly accepted, so that shipments have been on a relatively high level. *Svensk Finanstidning's* index of production for June shows, however, that the most important industries have reached the limit of resistance to the progressive international depression. All the industries represented in the index reduced their production so considerably in June that the decline cannot be explained by the usual seasonal slackening in the summer, but must be attributed to limitation of output due to the depression, even though the Whitsun holidays also affected the situation. Whereas during the first five months of the year the general index number constantly maintained a higher, and even considerably higher, level than last year, in June it fell for the first time below it and reached 123 (1923-24 = 100), as compared with 140 in May.

In the second quarter the average of the index of production was 134, compared with 149 in the first quarter. The seasonal change last year was responsible for a

decline only from 140 to 136, and in 1927 from 117 to 115. The decline is emphasised this year by the fact that there was a strike at a number of paper mills, lasting for two months, during which production was reduced by about 33 per cent. Even if the calculations are adjusted on this basis, the slackening due to the depression is still very marked in the second quarter.

It is evident that the progress of the depression must have affected other activities as well. Its effects are not yet visible in the labour market, but they are all the more clearly visible in the money and exchange market and on the Stock Exchange. Especially noteworthy are the reduced demands for credit and the large increase of short money. The liquid resources of the commercial banks have reached such dimensions that it is clearly difficult for them to employ them profitably. And this in spite of the fact that they have restricted their demands on the Riksbank to such an extent that the latter has lost its control of the market. The low-water mark of rediscounting which was reached in the spring has of recent months been surpassed. It is significant that, whereas the Riksbank's portfolio contained domestic bills for so small an amount as Kr. 50 millions on the last Saturday in July, the commercial banks had on deposit, without interest, at the Riksbank no less than Kr. 35 millions.

The considerable exchange realisations which, in the first half of the year, corresponded to the decline in credit demands, did not continue in July. On the contrary, the Riksbank was compelled to assist the market, though this was a reflection of the large subscriptions to foreign loans by Sweden, especially during June. It should be noted, moreover, that the normal tendency of the Swedish krone at this time of the year is firm owing to the surplus of foreign exchange usually available. This year, on the contrary, it has been quiet, and offers of foreign exchange have been conspicuous by their absence. This again in a way reflects the depression. It should, however, be remembered that the Riksbank still disposes of an exchange reserve of over Kr. 350 millions, an exceptionally large sum.

Finally, as regards the Stock Exchange, markets have been remarkably quiet and uninteresting of recent months, with quotations practically unaltered. The only exception was Kreuger and Toll, which recovered, in the beginning of July, part of the excessive losses occasioned by the crisis in New York at midsummer. That the Stock Exchange has remained so steady must be attributed to the hopes that the autumn will bring improvement.

BELGIUM.

National Bank and Gold — Budget — Economic Crisis.
(FROM OUR CORRESPONDENT.)

LOUVAIN, August 18.

ON August 1st the National Bank of Belgium instituted new terms for the purchase and sale of gold, which may be regarded as the final stage in the return to normal monetary conditions. Hitherto the Central Bank has not been compelled to accept gold bullion offered for sale, and has only been obliged to exchange bank notes against gold bills and paper carrying a title to payment in gold currencies. Under the new régime the National Bank will purchase and sell gold ingots of 12½ kilos., 99.5 per cent. fine, at the purchase rate of 4,763 Belgas, or 23,815 francs per kilogram pure gold, i.e., 100 per cent. fine. The selling price will be 4,780 Belgas, or 23,899 francs. The margin between the two rates makes up the charge payable for mintage. As to the gold reserve guaranteeing the redemption of the note circulation, Belgium remains, as before, governed by the gold exchange standard. There is no question of issuing gold coins. New 5- and 10-franc coins in pure nickel have just been put in circulation to replace partially the Treasury notes of 5 and 20 francs current. These new coins bear respectively the headings: "10 francs or two Belgas" and "one Belga or five francs." Though much cleaner than the paper money

for which they are a substitute, they have the disadvantage of being rather heavy. As to the designation "Belga," this is the sole new token of its existence in the economic life of the Belgian people. One realises daily more and more that its adoption has been a useless intricacy and that it will never replace the franc as a denomination of currency.

The preparation of the general Budget for 1931 is in hand and appears to be giving rise to difficulties in the realisation of the necessary equilibrium. On account of economic crisis, estimated revenue cannot be placed at a figure higher than last year, whereas estimated expenditure for 1931 shows an increase of about 1½ to 2 milliard francs. Only very few heads of the estimated expenditure are susceptible of reduction, and it is at present anticipated that the balancing of revenue and expenditure will entail an increase in postal tariffs, as well as in those of the telephonic service; perhaps it will even become necessary to raise railway freight rates and fares. Parliament will very likely have to face the restoration of a few of the taxes which were cut from the Government's Taxation Reform Bill, despite the opposition of the Minister of Finance. Finally, the structure of the Budget itself will probably have to be altered so as to carry to the heading of "extraordinary expenses" (i.e., amounts chargeable to capital account) expenditure which has been financed in 1930 by means of tax receipts. Such a device would be very questionable finance and the Budget for 1931 will, as a whole, be much less sound than the preceding one.

As is the case in all Western European countries, agriculture has suffered greatly in Belgium from bad weather. Nevertheless, as Belgium is mostly interested in the rearing of cattle and in the production of milk, butter and eggs, the damage suffered is smaller than in neighbouring countries, such as France. While the big farming enterprises show symptoms of being in straits, the small ones, which are the most numerous in Belgium and are, as a rule, equipped for intensive cultivation, are struggling through this period of general depression without getting seriously hurt. A general Act has recently been passed obliging exporters of eggs to affix their trade mark on exports, the intention being to give a complete guarantee of genuineness to the foreign buyer.

Among business people profound pessimism prevails. Nevertheless, statistics available show that Belgium, which has undoubtedly suffered from the present economic crisis, has resisted better than many other countries. The latest available return on employment, drawn up in the beginning of July, gave 50,000 as the unemployed total, of whom only 12,000 were wholly without work. Unemployment has affected mainly the textile industry and the Port of Antwerp. The output of the Belgian collieries for the first six months of 1930 was slightly higher than in the corresponding period of 1929, while Belgium exports have declined in value by 15 per cent., or exactly as much as those of Great Britain. The decrease in exports is due largely to diminished demand for diamonds from the United States of America, where the general crisis has checked purchases of gems.

The banks have had abundant funds at their disposal, since the Stock Exchange has been weak and idle and conditions in the money market very easy. For the first six months of this year dividends disbursed amounted to 2,500 million francs, against 1,850 millions for the corresponding period of last year. At the "Caisse d'Epargne" the excess of deposits over withdrawals increased one milliard, against an increase of 500 millions last year.

Since the beginning of the year only two big failures have been registered, namely, that of a Ghent textile enterprise and of a similar concern at Verviers. The very small number of bankruptcies is astonishing when the fall in the price of raw materials is taken into account. Public opinion, however, is very anxious with regard to the economic situation. The Government has instituted a "High Economic Council" commissioned to inquire into the present position of affairs and to propose means of alleviating the economic trend. This Council, which will be presided over by M. G. Inchausti, is composed of about

thirty personages, among whom are representatives of bankers, industrialists, trade unions and Parliament, as well as two economists and a few Government officials. It is not known when the Council will start working, but the members are not likely to meet before the end of September.

AUSTRIA.

New Loan — Money — Unemployment — Grain Problems.

(FROM OUR CORRESPONDENT.)

VIENNA, August 19.

DURING the last few weeks the feature in the Austrian situation has been the issue of the State Investment Loan. Subscriptions were exceedingly good. In several foreign countries subscribers were not very eager for the first few days, but, when it was seen that a surprising success was being registered with the domestic allotment in Austria itself, more interest was shown in England and America. Against the Austrian allotment of 50 million schillings par value, subscriptions were made for 152 millions, the greater portion being for scrip restricted as non-negotiable for six months. As the restricted scrip had been assured preferential treatment, some of the subscriptions for unrestricted scrip could not be met by allotments to a greater extent than 10 per cent. The savings banks and insurance companies have fought to get as much scrip as possible, and none has remained with the banks. Furthermore, important subscriptions have been made in Austria against the English quota. For some time the loan has been quoted in Vienna itself at about ½ per cent. above par.

The big subscriptions in Austria have proved that there must still be plenty of capital in this country. It is worthy of note that the savings deposits continue constantly to increase, the accretion for this year alone being from 2.4 milliard to about 2.7 milliard schillings, and scarcely any regression was recorded even in the month of July, when the loan was issued. From this it would appear that only a very slight amount of savings has been converted into subscriptions to the State Loan. It must also not be forgotten that there is a boom in life insurance business, that receipts of premiums in this branch of insurance have gone up by 15 per cent. during the last year, and that such premiums are calculated to amount to about 150 million schillings per year.

The loan has had several immediate effects. An unpleasant one is that the high rate of interest which it offers has automatically caused a stiffening of credit conditions for all the other public bodies which desire to contract loans, e.g., the Federal countries of Lower Austria and Tyrol, and the townships of Linz, Gratz, Innsbruck, Klagenfurt, Mödling and Baden. Existing investment stocks declined till their yield accorded with the rate of interest borne by the State Loan. The quotations on mortgages were, however, maintained by the Bank of Issue, 7 per cent. mortgages continuing at 97. Naturally, the big interest paid on the new loan and its absolute security are reducing the public demand for stocks and shares. Turnover on the Vienna Stock Exchange continues very small; recent figures show that in June the number of transactions fell by 29 per cent. as compared with the preceding month, and that the money changing hands in share transfers receded from 65 to 39 million schillings.

The issue of the new Loan has led to a great consolidation of the position of the National Bank of Austria. Holdings of foreign assets, which at the beginning of the year amounted to 545 million schillings and at the end of June to 687 million schillings, have now risen to 743 million schillings, and to this must be added the unchanged holdings of gold amounting to 168 million

schillings. On the other hand, there is no increase in demand for money from the business community. The bill portfolio hovers just over a hundred million schillings, though at the beginning of the year it amounted to about 300 millions, at which time, however, the end of the year and the effects of the collapse of the Bodencredit-Anstalt were still exerting their influence. Total circulation remains constant, and the cover is calculated at 81 per cent., whereas the notes are really covered by gold and foreign assets to an extent of nearly 90 per cent.

The National Bank is therefore confronted with the question whether or not it should augment its gold holdings; a reduction of the Bank rate is in general not considered opportune, as sound bills of exchange are still not available in abundance; moreover, it is feared that foreign capital might be withdrawn again. Recently foreign capital has been engaging more extensively in Austria, though on short terms only, and it is estimated that short-term indebtedness to foreign lenders aggregates about 30 million dollars. Still, it is rather strange to have a private discounting rate of 4 per cent. and a Bank rate of 5½ per cent., though actual costs of credit—not only in Austria—by no means coincide with nominal rates. It should also be mentioned that the influx of foreign values is at the present time being swollen through the Austrian foreign tourist traffic. In addition, within the last few weeks the sale of the Hungarian annuity of the State Railway Company to an English group and of the shares of the Telephongesellschaft Berliner to a German-American consortium has caused an influx into Austria of about one million pounds sterling in foreign values.

There is another unfavourable circumstance of importance in this connection. Though the deficit in the balance of foreign trade during the first half of this year has gone down to 461 millions, in comparison with 509 million schillings in the corresponding period of last year, both imports and exports have diminished. Exports have sunk from 1,046 to 936 millions and imports still further, namely, from 1,554 to 1,399 million schillings, so that for deliveries from abroad less foreign values were necessary. The slackness in Austrian industry finds expression in the fact that imports of raw materials and semi-finished goods sank by 15 per cent. below last year's figures, while, on the other hand, exports of finished goods receded by 10 per cent. Another symptom of crisis which is causing anxiety is the rise in unemployment. For the first time, an increase was observed this year in unemployment during the summer months, and there are now about 157,000 registered unemployed in receipt of benefit in Austria—exactly twice as many as in the corresponding season of last year. This is apart from the 30,000 persons who no longer have a right to the benefit, and 55,000 persons in receipt of the old-age pension. The closing down of factories owing to industrial fusions is the more burdensome to the labour market because the discharged hands, especially in small industrial towns where there are only one or two factories, have no prospects of getting other jobs, and consequently swell the ranks of the standing army of unemployed.

The agrarian community of interests of the South European States has again given impetus to the consideration in Austria of the creation of a State monopoly in grain. This is the more surprising as only last month it was decided to increase the taxes on sugar and beer and distribute the 96 million schillings anticipated from the increase as subsidies to the farmers producing grain. In addition, the land tax is to be reduced. A State monopoly administration would take over the grain from the farmers in Austria at a price which would pay the farmers, buy the additional quantity required from abroad at the world market price (the duty on grain would, of course, be dropped), and then sell to the Austrian consumers at an appropriate average price. Naturally, the whole affair amounts to elimination of private enterprise, to which there is rooted objection, partly arising from the fact that similar control of supplies during the war and for some time afterwards led to very unhappy results.

ROUMANIA.

Politics and Business — Agrarian Problems — Commercial Treaties.

(FROM OUR CORRESPONDENT.)

BUCHAREST, August 23.

IN spite of the holiday season, there has been a great deal of political activity behind the scenes during the month of August. Rumours of a divergence of opinion between the King and Mr Maniu, the Prime Minister, and the sudden arrival in Roumania of Mr Titulescu, gave rise to a great amount of speculation which sometimes degenerated into the wildest conjectures with regard to the political intentions of the King. The Government was at last obliged to take counter-measures and to issue a declaration that these rumours belonged to the realm of mere fable. Nevertheless, it seems that there was some ground for the general uneasiness, if only to judge by the emphatic statements of all the political parties, who have declared themselves, with striking unity, to be opposed to the idea of a dictatorship. That the political parties should condemn the idea is easily understandable. Whether a dictatorship could be established successfully depends upon whether men of sufficient force and standing are available. At any rate, political instability and unrest is the least desirable of all things at the present juncture. But it is always possible that the grave economic conditions of Roumania may have an influence on the political situation, and for this reason the immediate outlook is obscure.

The economic situation is indeed sufficiently alarming to cause the Government very grave concern. In Roumania, as in other parts of Europe, there is reduced activity in commerce and industry, and unemployment is spreading. In view of the approaching winter, the prospect is not encouraging. Two reports on the situation, one by Mr Madgearu, the other by Mr Manoilescu, both members of the Government, have been submitted to the economic commission of the Cabinet. Both reports bear principally, as is natural, on the excessive indebtedness of the agriculturists. But whereas the Madgearu report limits its remedies to the forced reduction of interest on existing debts and the creation of new facilities at reduced interest by loans on the cereals deposited in warehouses and by the creation of an agricultural mortgage credit institute, Mr Manoilescu suggests the conversion of the old debts by means of the issue of a State loan, the old debt being administered under the supervision of the State.

Neither report seems to insist sufficiently on the absolute necessity of a reduction in the cost of agricultural production, of which the high interest rates prevalent form only one, though an important, part. Furthermore, while Mr Madgearu alludes to the necessity of attracting foreign capital to supplement the limited resources of this country, he omits to mention that the legislation affecting credits, introduced by the Government of which he forms part, as well as the dilatory methods of the Roumanian courts with regard to the protection of the creditors, have been largely instrumental in preventing the foreign capitalist from investing in Roumanian enterprise. As to the conversion scheme of Mr Manoilescu, which, it is rumoured, is favoured by the economic commission, the adoption of this plan would undoubtedly react on the existing Government loans and throw an additional burden of almost crushing proportions on the already strained resources of the State, at least during the first few years, during which the peasant, who is notoriously insolvent, can hardly be expected to meet his commitments.

Commercial treaties are the order of the day. The conclusion of the treaty with England gives rise to hopes of intensified commercial relations between the two countries. It is also not without political importance in view of the geographical position of Roumania, and this aspect seems underlined by the visit of the British naval squadron to Roumanian waters. The treaty with France

is still in preparation, but its conclusion is expected shortly. Special interest is aroused by the meeting of Roumanian, Yugoslavian and Polish representatives in Warsaw towards the end of the month. Coming after the recent agreement between Roumania and Yugoslavia, and the previous meeting of Hungarian and Roumanian representatives, it is expected that a further step will be made towards the formation of the block of the agricultural States of Eastern and Central Europe. As a measure of defence of the agricultural interests, the importance of these conventions, as far as Roumania is concerned, cannot be over-estimated. They may even produce an effect on the unsatisfactory commercial relations between Poland and Germany, and thereby be of far-reaching influence on the economic constellation of Europe.

Letters to the Editor.

"INSURANCE OR DOLE?"

TO THE EDITOR OF THE ECONOMIST.

SIR,—The stimulating article in your issue of August 23rd rightly suggests that our unemployment policy is based on the belief that the present abnormal economic depression will quickly pass. We certainly appear to be relying on our national genius for "muddling through" in the hope that "something will turn up." May it not be, however, that certain fundamental truths must be more widely appreciated before any real solution can be found to this difficult problem?

Unemployment means that a latent power to create wealth is permitted to lie idle, and, poverty being an unsatisfied desire for wealth, there is an obvious maladjustment of economic conditions whenever unemployment and poverty exist side by side. Our present method of attempting adjustment is to take wealth from him who has and give it to him who has not. Already, however, this policy is bringing the most evil results, due to the ignoring of simple economic facts. Exceptions do not disprove the universal rule that the one and only incentive for work is to obtain wealth for the immediate or deferred satisfaction of needs, and that if these needs can be satisfied in any other manner, the work will not be given. Expenditure incurred on the satisfaction of needs without the production of wealth is just as unproductive as expenditure on war, and involves a similar disastrous wastage of wealth. It would, indeed, appear that the adoption of a convenient monetary system has blinded us to the principles of barter which must always underlie our economic life and which require that payment should be made in accordance with the productive capacity and not in accordance with the needs of the individual.

Unless our industrial system is to stand condemned as failing to promote the welfare of mankind, it is essential that we should revise our conception of the relations between the State and the individual. While, under the influence of Socialist doctrines, we aim at a redistribution of wealth by taking the wealth of one man and using it for the welfare of another, we are adding to the burden of poverty and forcing the nation into bankruptcy. On the other hand, a *laissez faire* policy is admitted even by the Liberal Party to be impracticable. The main duty of the State in industrial and sociological matters must therefore be to assist the individual to create wealth under conditions which give him a fair and just return for his productivity in industry, at the same time ministering to his needs by the establishment on a strictly actuarial basis of those social services which are considered essential to his welfare. Special cases will always require special treatment, but as a rule the consumption of wealth by the individual must be limited to his production of wealth, and increased welfare must be won from the increased production of wealth and from its more efficient conversion into welfare.

On these lines alone can a high general level of prosperity be attained. Without relaxing our efforts to stimulate industry in other ways, our first step forward must be to organise the latent but unused powers to create wealth so that the present lack of wealth is remedied. Unemployment benefit must be sharply distinguished from relief, and, with proper exceptions for the old and the sick, relief must only be given in return for work provided by the State, whenever possible designed to supply the workers with their own needs, or, in other cases, of general benefit to the community. No question of "suitable employment" can be allowed to arise; application for work must be open to all who desire it, and payment must be based on the work done. We must

accept the principle of "work and maintenance," and although there must remain a great difficulty in providing productive work which will not compete unfairly with private enterprise, the difficulty is not insuperable. Moreover, even if the work should not be productive, it would at least cure three of our present evils—the hardships inflicted on members of un-insurable trades, the penalising of casual labourers by the rules under which they now draw unemployment pay, and, most important of all, the growing disinclination for work among the dole-fed section of the population.—I am, Sir, your obedient servant,

Palmerston House,
34 Old Broad Street,
London, E.C.2.

ALL THAT IS UNDER HEAVEN.

FROM 530 B.C. to 1930 A.D. is a long step, yet a recently published book by Liang Chi-Chao,* describing the world which existed in the Far East during the three hundred years between 530 and 230 B.C., suggests a number of reflections curiously applicable to the circumstances of China to-day. The period with which the author deals was a strenuous, combative age. Periods of warfare (all against all) alternate in the story with periods of universal peace; phases of political disunity precede and follow all-embracing empires. "The contending states" of 530-230 B.C. merge into the Empire of Tsin and Han; the Empire of Han breaks up into "the Three Kingdoms" and their barbarian successor-states; the successor-states merge into the Empire of Tang and Sung, which breaks up in the fullness of time under the impact of other barbarians. And so it goes on through the ages, until in 1911 we latter-day spectators from another world have beheld the latest of these empires go to pieces to make way for the present bout of anarchy, which has lasted twenty years already and may well last another two centuries if the rhythm of Chinese history continues in the tempo of the past.

Yet, if one element in the rhythm of Chinese history is cyclic, there is another element which is constant, unflagging, sustained. This element is the movement of expansion which has persisted through all the changing fortunes of Chinese society. Inwardly, the society may be at peace or in conflict with itself, prosperous or stricken by war and famine, conscious of misery or of well-being; but every mental and material state through which Chinese society passes seems to promote its expansion in one way or the other. When war and famine stalk through the Middle Kingdom, the Chinese peasant and the Chinese merchant flee to the outer darkness in order to escape the scourge of the Chinese war-lord. When a philosopher-king sits upon the Imperial throne, he brings the outer barbarians within the pale of civilisation—exerting the glamour which a Solomon cast upon a Queen of Sheba by preference to the brute-force of a Cæsar or a Jenghis Khan. But always—by whatever arts and in whatever circumstances—the boundaries of the society are enlarged. The Chinese mind has never been bounded by the walls of a city-state or by the frontiers of a nation. From the outset, "All that is under Heaven" has been its habitat; and in the course of ages "All that is under Heaven" has steadily expanded.

In those three centuries of "the contending states," which were the Golden Age of Chinese philosophy, the Middle Kingdom scarcely yet extended beyond the basin of the Yellow River, and the present sites of Peking and Shanghai were still barbarian soil. That age of strife, and the age of the Pax Tsinica which succeeded it, expanded the borders of Chinese society southward to the southern watershed of the Yangtse and northward to the line of the Great Wall. And now, in these latter days, in the present age of iron, the indomitable, innumerable pioneers of Chinese expansion are venturing across the

* "History of Chinese Political Thought." By Lian Chi-Chao. (Kegan, Paul, Trench, Trübner & Co., Ltd.) 10s. 6d. net.

South Seas into tropical archipelagos and beyond the Great Wall into the frozen wilderness of the North. One runs into China at Penang and Singapore; and realises that the historical mission of the British Empire in Malaya may well be to lay the foundations for a new Chinese province on the Equator. And one may read in the latest news from China how the northward-flowing tide of Chinese colonisation, having submerged Manchuria and Inner Mongolia already, is at this moment gathering head before it pours over the Outer Mongolia in an irresistible flood.

But to these two influences discernible through the history of China and actively operative to-day, a third factor is now added which did not exist in the early Tsin period. Western civilisation, which had no use for the Kingdom of Heaven, brought to China its presiding spirits of nationalism and class war; and, as the present author points out, "during the last two decades China has tried to transplant one after another the political institutions of Europe on to her own soil. . . . It is like plucking the flowers of a neighbour to embellish the dying branches of one's own tree." The essential feature which emerges to-day from the conflicting accounts of civil dissensions and anarchy in China is that "All that is under Heaven" is reeling under the impact of the modern world. From that impact and its resulting throes of dissolution we may be certain that some re-birth will come. It remains to be seen what consequences it will have on Western society.

BOOKS RECEIVED.

ARTIFICIAL SILK COMPANIES.

THIS year's industrial depression has spared neither "old" nor "new" industries, and the artificial silk trade has experienced its effects with especial severity. In Great Britain, the numbers of unemployed in the silk and artificial silk trades, despite a recent reduction, are three times as high as a year ago, and four-and-a-half times as high as two years ago. Exports in the first seven months of 1930 have fallen off in value by 21 per cent. as compared with the corresponding months of 1929, while the average export price of artificial silk yarns this year has been 3s. 6½d. per lb., as compared with 3s. 11d. in the year 1929 and 4s. 6½d. in 1928. The industry, indeed, has borne more than a normal burden of depression, since its selling prices were not on a firm basis before the slump began, while, even under the most favourable conditions, a period of "over-production" would have been inevitable by reason of the recklessness with which new bubble companies were formed during the recent share boom. The depression, which has unfavourably affected even the world's strongest producers, has, indeed, rung the death-knell of many smaller concerns.

From the investor's viewpoint, British artificial silk concerns fall into one of four groups: (1) Courtaulds, the oldest and strongest producer, which occupies a class by itself; (2) British Celanese, also a large producer, but much more of an enigma to the investor; (3) the smaller concerns which have at least a reasonable prospect of "making good"; and (4) the host of recent flotations whose future is more than doubtful.

Courtaulds goes back, as a limited company, to 1904. Its leadership has been obtained and retained not merely by its being first in the field, but by virtue of enterprise on the technical side, consistently conservative finance, and vigour in building up world-wide connections. These have been achieved through the medium of share-holding interests in such concerns as the American Viscose Corporation, La Soie Artificielle de Calais, S.A., Glanzstoff-Courtaulds, Courtaulds (Canada) Limited, etc., and working agreements with Vereinigte-Glanzstoff-Fabriken A.G., and Snia-Viscosa. Its fortunate shareholders in the past have received handsome capital bonuses of 100 per cent. in 1919, 200 per cent. in 1920, 66½ (in preference shares) in 1924, and 100 per cent. in 1927. Two years ago, its £1 ordinary shares touched 105s. 7½d.; they have been dealt in, this week, at 40s. 7½d.

The company's most recent period of rapid expansion occurred after the War, its profits rising from £1,804,796 in 1920 to £5,111,413 in 1925. Since then the annual total has fluctuated considerably. If the 1925 figure be taken as 100, the subsequent totals have been, 1926, 75; 1927, 94½; 1928, 101; 1929, 73. The extent to which the published figures coincide with actual trading results, however, cannot be exactly estimated. The profits brought in from subsidiaries are believed to have been conservatively stated; many of the assets in the balance sheet contain substantial hidden reserves; the chairman, Mr Samuel Courtauld, is famous for the restrained nature of his published statements; and depreciation has been on a generous scale—as, indeed, is highly necessary in an industry like artificial silk, in which the factor of obsolescence looms so largely.

The fall in the price of the shares this year reflects fears regarding the effect of trade depression on immediate earnings, rather than any doubts as to the maintenance of the company's future strategic position. In 1929, earnings per share fell from 19.9 per cent. to 18.9 per cent., and dividends from 15 per cent. to 10 per cent. (all free of tax) though actual earnings, for reasons we have previously suggested, may have been higher than

these figures. The company did not repeat its customary allocation of £1,000,000 to reserve, but wrote £1,651,856 off its Continental Investments. The directors' report, published in February last, was gloomy in the extreme, though its tenor showed that the then possibility of a budgetary change in the silk duties filled the directors' minds. In April, certain price reductions were announced, but in June the company re-engaged certain of its employees who had previously been dismissed. The market, however, has been unable to make any guess at the potential profits for 1930, though its views are, on the whole, conservative—possibly as a result of the reduction in the interim tax-free dividend from 4 per cent. to 3 per cent. On the basis of last year's figures, the yield at the present market price of the shares is no more than 6.84 per cent. on earnings, and 4.92 per cent. on dividends (both tax free).

British Celanese has had a more chequered history. It owns exclusive rights in the Dreyfus patents for the manufacture of cellulose acetate silk in the British Empire except Canada, where the company owns 20,270 shares in the Celanese Corporation of America. It also holds 27,200 shares in the Celanese Corporation of America. The company's keenest critics have admitted the excellence of its technical achievements. Its ability to pay dividends, however, has been much less conspicuous, and it was only in 1928 that preference dividend arrears were cancelled by an ordinary share issue. The total gross profits rose sharply in 1927-28, but suffered a setback the following year, when—to the surprise of some observers—the company reduced its allocation to depreciation reserve. The following group-off may be found instructive:—

Years ended February 28th.	Total gross income.	General expenses and debenture charges.	All other deductions (deprec. reserve, royalties, etc.)	Amount remaining after all deductions
1925	409,800	169,259	240,541	£
1926	448,946	208,524	240,422	Nil
1927	799,452	222,817	576,635	Nil
1928	1,680,331	338,972	861,996	429,363
1929	1,301,518	647,032	551,330	103,156

From 1924-25 to 1926-27 total deductions exactly equalled the company's gross income. In 1928-29 they fell with the gross income, despite an increase of £258,060 in general expenses and debenture service. The allocation to depreciation reserve itself declined in 1928-29 from £378,261 to £200,000. If the allocation had been maintained at the previous level no earnings would have been available from the year's operations for either the £2,000,000 of 7 per cent. cumulative first preference shares or the £4,250,000 of 7½ per cent. participating second cumulative preference shares.

The movements of the ordinary shares (of 10s., with 4,422,667 in issue) have been meteoric. In 1928 they touched 136s. 3d. This week they were dealt in at 7s. 6d. No dividend has ever been paid on the shares.

Investors, indeed, have found the company's frequent estimates of probable earnings somewhat difficult to follow. On the chairman's showing, from £75,000 to £80,000 per month is required to cover depreciation and preference requirements. The trading profit for the twelve months to February 28th last was stated to be "in excess of £1,100,000," but this figure was struck before providing for debenture service, depreciation and research expenses. If debenture service was on the same scale as in 1928-29, a maximum of about £765,000 would be available for depreciation and preference dividend. Investors must be satisfied that the company's management must be doing well if it can maintain such a position.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
September 9.

ACCOUNT.
September 11.

Markets opened, to outward appearance, with the lassitude characteristic of recent weeks. Subsequent developments, however, went some way to support the view that the bear movement had been overdone. On Wednesday sentiment abruptly changed, and on Thursday morning prices were run up in a large number of cases, with all the usual manifestations of "House" activity. Many bears were caught, but some of the more influential held their ground, and prices, as expected, became easier. The more conservative sections of the "House," while welcoming the improvement in prices, were distrustful of its permanence, on the ground that no single substantial basic factor in the situation had been changed. The rumours circulated as regards a change of Government, or of official policy on fiscal questions, a reduction in Bank rate, etc., were, *prima facie*, so utterly fantastic as themselves to throw doubt on the whole movement—the real origins of which were obviously "technical" and psychological.

Gilt-edged prices were well maintained, though business fell off slightly and a small amount of profit-taking chiefly affected Conversion issues. Funding Loan, however, remained in demand. India stocks obtained some support. Australian issues came into favour, the market having been impressed by the genuineness of the efforts being made to improve the financial situation.

In the foreign bond market Brazilians were again marked down in sympathy with the milreis, but comparatively little stock came out. Peruvian stocks were extensively marked down on the "revolution," business becoming largely nominal. The strength of silver was more than adequately reflected in quotations for Chinese issues. European descriptions were steady on a small investment inquiry, the new Austrian stock hardening.

Home rails recovered sharply, though the best prices were not held. Like the preceding downward movement, the improving tendency was not accompanied by any appreciable expansion of business. The week's traffic returns were as bad as expected, but the market ignored them. All stocks rallied, but Great Western were particularly prominent, a considerable bear position being open. Underground issues were again firm. The foreign railway markets were largely idle, though their tone was steady in sympathy with developments elsewhere. Canadian Pacific showed outstanding strength.

The industrial market opened with a marked reluctance among operators to undertake fresh commitments, the carry-over revealing the existence of bear accounts in a number of shares. The *volte-face* on Wednesday was heralded by firmness in New York, and by various rumours with a pseudo-political context. The speed with which many bears rushed to cover was symptomatic of the condition of the market, but the volume of business was disproportionate to the recorded changes in prices, apart from the "automatic" execution of orders on which previous limits had been placed. The advance, while it lasted, particularly affected tobacco shares, Imperial Chemical, United Molasses and Unilever. In some quarters the recovery in the last-named shares was associated with the emphatic denial by a well-known house that it had recently been selling these or any other shares. The Columbia Graphophone report (discussed on page 414) was regarded as affording strong circumstantial evidence of an increase in the real earning power of the group. Support was also forthcoming for Cables and Wire-
less. Motor shares had a firmer appearance, Singers showing a quotable improvement after the "curtain lecture" delivered by the directors (dealt with on page 414). Coal and steel shares were quiet and irregular, apart from an improvement in Staveley on the favourable dividend. Courtaulds were actively dealt in, but British Celanese remained dull. The passing of the Calico Printers' Ordinary dividend did not come as a surprise, and textile shares

(Continued on page 412.)

of the 50 per cent. increase in turnover, described by the directors as having occurred last year, it is doubtful whether all preference dividends have been covered. Clearly, much depends on what the directors consider necessary to set aside for depreciation, but, in view of present conditions in the industry, and the fact that part of the company's productive capacity has been standing idle, total charges of every kind can scarcely be less than in 1927-28. The accounts will be made up to June 30th last, and the annual meeting will be held next month.

During the recent boom a host of smaller artificial silk companies was formed. The task of distinguishing, respectively, between those which have and have not a reasonable chance of survival is naturally difficult, not to say invidious. On the one hand, there is some measure of agreement that such companies as Harbens—which has an issued capital of £583,800 and earned 2.8 per cent. for its ordinary shares last year—and British Enka—which has an issued capital of £1,250,000—have at least a *locus standi* in the industry, though the latter company, despite its substantial backing, had a debit to profit and loss of £239,601 at December 31st last. The Branston company was initially regarded as having promise, but its immediate prospects have been affected by the closing down of operations this year and the loss of working capital as a result of an investment in Kirklees, another artificial silk producer, which made a loss of £22,428 last year. The position of these two concerns was discussed in last week's *Economist* (page 375).

Among the remaining concerns, some, like the Yorkshire Artificial Silk and the Western Viscose, have gone into liquidation; some, like the Scottish Amalgamated, are contemplating such a course; and some, like the British Acetate, are considering reconstruction schemes. Others, like the Rennes, the Rayon Manufacturing, and the International, have endeavoured—usually with ill-success—to obtain new money on high-yielding prior stocks; while others are carrying debit balances. A receiver was appointed for the Atlas Company this week. The rock on which many of these companies have split has been shortage of working capital, aggravated in some cases by underwriting failures. When all allowance has been made for the extravagances of "boom finance," the experience of these concerns still affords strong presumptive evidence that, save in a few exceptional instances, artificial silk is not an appropriate industry for any small concern with limited financial resources.

At the moment, the affairs of the industry appear to be taking a slightly better turn. Despite an appreciable falling off in production, British stocks of artificial silk yarn increased by 1,401,700 lbs. in the first quarter of 1930. During the second quarter, however, only a further 202,600 lbs. was added, some 89,800 lbs. being actually taken from stock in June. The outstanding feature of business this summer has been a more active demand for crêpe fabrics. Demand for viscose has been concentrated largely on the fine filament yarns—a feature which has benefited companies like Courtaulds and Harbens. The price situation, however, shows as yet no definite signs of stability, and the tendency of consumers to hold back orders for the autumn may unfavourably affect producers, unless an early announcement is forthcoming, either of specified price reductions or of the trade's decision to make none.

In these conditions, those companies which have closed down their factories, either from shortage of capital or inability to compete at present prices, would appear to have meagre chances of restarting in the near future. The elimination, temporary or permanent, of these weak producers may, however, *pro tanto*, improve the outlook for the remaining concerns. Until, however, the danger of further price-cutting has passed, profit margins are likely to remain narrow, and the earnings even of the stronger producers may be restricted for some months to come.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 409.)

generally remained steady to firm. The Waring and Gillow revelations had been largely discounted, though some of their details left an unpleasant impression. Shipping shares were undecided, a small decline in Royal Mail following the announcement of the Lamport and Holt receivership (dealt with on page 413). Bank shares recorded numerous gains, after an uncertain opening, but insurance shares remained quiet.

The rubber share market, after its own fashion, reflected the tendency in other parts of the house. Offerings of stock tended to dry up, and, on the commodity showing signs of steadiness, numerous shares were harder. Tea share market conditions were unchanged, business being meagre, and price changes in a downward direction. Sentiment in oil shares changed abruptly for the better on Wednesday, the improved tone of Amsterdam—a large seller for some days previously—having a particularly favourable effect on the Royal Dutch group.

The tone of the mining market was as dull as ever at the beginning of the week, but a certain liveliness subsequently made itself felt. In the Kaffir section, Randfontein improved substantially on an increasing demand from the Cape, while Gold Fields, Rand Selection and West Rand also hardened. The Northern Rhodesian issues at first attracted less attention than for some time past, but the market shared in the general upward swing in mid-week and several counters, led by Chartered and N'Changa, recorded substantial gains. Tin shares, with the exception of Kramat Pulai and Sungei Besi, were inactive until the latter part of the week despite an improvement in the price of the metal. Lake View and Star were a good feature in the Australian market. Tintos were harder after initial weakness.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The tone of the New York markets was appreciably firmer, though spells of irregularity followed every movement towards a higher price level. On the whole, the volume of trading showed a measurable increase, a small amount of public buying making itself felt. For the most part, however, outside investors remained distrustful of the position, being impressed by the divergence of view between some of the service agencies, whose prophecies are still conservative (with Babson as a possible exception), and that of the majority of New York brokerage houses, who look for a further price improvement. The bulls emphasised the more favourable steel outlook, as revealed by the increase in the Steel Corporation's operations from 62 to 66 per cent. of capacity, and in the rate for the whole industry from 54½ per cent. to 58 per cent. Though the bears were quick to exploit any signs of weakness, and were particularly successful in their attacks on Vanadium Corporation, many of the leading investment stocks advanced appreciably, the list including Steel Corporation, Allied Chemical, Eastman Kodak, Sears Roebuck and Warner Brothers, the receivership suit against the last-named concern being dismissed. Oil stocks continued to show scattered liquidation, but hardened as the week progressed. That the general situation is, at least, not depreciating is suggested by a further small increase in car loadings and a slight improvement in the employment situation. The bond market shows continued strength, and money remains cheap. Outside call money has even been obtainable at 1½ per cent. The general feeling is that while there is little chance of an early resumption of a bull market, many high-grade common stocks are in a buying range.

* 2-hour session.

INVESTMENT NOTES.

Waring and Gillow.—This company's annual report, published on Monday last, came as a shock to investors, in view of the fact that, as recently as June 4th, the chairman, Lord Waring, informed the Press that record profits had been earned. In point of fact, the net profit for the year ended January 31st last was only £54,234, as compared with £209,760 in 1928-29 and £147,151 in 1927-28. In a letter published in the Press last Monday Lord Waring stated that he based his prediction on the profits anticipated to accrue to the company on the sale of a certain property. We understand that the property referred to was the Princess' Theatre site. It would be interesting, however, to know how such a transaction could possibly affect the accounts for the year which ended on the previous January 31st, and also how any such profit could, at any time, be included among the distributable earnings. At a meeting on August 18th the creditors refused Lord Waring's offer of second debentures in satisfaction of their claims, but decided to adjourn for three weeks to allow him to make satisfactory financial arrangements, covering the payment of their claims in instalments in six, nine and twelve months. These negotiations are, it is stated, progressing satisfactorily. Lord Brentford and Sir Harry Peat have been appointed to handle the settlement of the claims, with power to co-opt two others, and have invited the creditors to appoint a representative. Several creditors had served writs on the company, many of which have been withdrawn in response to the committee's recommendation of a moratorium, and it is hoped the few outstanding will be withdrawn. This will facilitate the work of the committee and obviate the necessity for the appointment of a receiver by the trustee for the debentureholders. On the completion of negotiations with certain holders, the company will collect its debts, paying the committee £10,000 per week, which will be deposited. Payments to creditors will be made in 1931 on March 1st, June 1st and September 1st, together with interest at the rate of 5 per cent. per annum. It appears that Waring and Gillow disposed of the site, referred to above, between January 31, 1927, and January 31, 1928, part of the payment taking the form of a mortgage of £172,585, against which there was a reserve of £45,000, and a further sum of £127,585 has now been drawn from the profit and loss account, making the "reserve against a mortgage debt" £172,585. Efforts are being made to find a new purchaser, but in view of the present conditions in the real estate market a quick sale is scarcely to be expected. Of the "debtors" total, in the balance sheet, of £812,992, some £98,691 is due by the chairman, but is secured. After paying the preference dividend of £45,000, and transferring £127,585 to the mortgage reserve, there remains £57,253 to be carried forward, as compared with £175,604 brought in from the previous year. Creditors amounted to £623,726, and a bank loan of £119,340 is shown, against which appears a cash credit of £191,155. Despite Lord Waring's statement, disquieting rumours had already caused the market to mark down the shares, which slumped only a little further last Monday. Their slight subsequent fractional increase may, possibly, reflect the market's hope that the outstanding creditors will agree to the proposals, thus giving the committee a chance to do its work without encumbrance.

Lamport and Holt.—The appointment by the Court, on Wednesday, of Sir William McLintock as receiver and manager of Lamport and Holt, Ltd., may be regarded as a more or less inevitable step in the clearing up of the affairs of the Royal Mail group. Lord Kysant is chairman of Lamport and Holt, while another of his lordship's companies was the joint plaintiff in the motion for a receiver. In this instance, knowledge as between the right and left hand may be confidently assumed. Sir William McLintock, further, is a member of the Advisory Committee to the Royal Mail group, whose appointment and duties we discussed in the *Economist* of June 14, 1930 (page 1335). This week's development, in fact, brings Lamport and Holt closely under the control of those who are charged with the duty of re-organising the position of the whole Royal Mail group. Their action may conceivably be interpreted in some quarters as suggesting that they regard the company as one of the group's less profitable properties, and that while operations may be continued for the present, their ultimate intention is to dispose of the assets when a favourable opportunity offers. The company has had a long history, having been first established in 1845, and it is only of comparatively recent years that it has fallen on bad times. Its preference dividends were, in fact, paid up to June, 1925. The last balance sheet, which we analysed in detail in the *Economist* of June 14, 1930, afforded presumptive evidence of the over-valuation of many of the company's investments and loans, which accounted for £6,875,000 out of a balance sheet total of £8,059,000. The company has lately not been paying its way, net losses being made, after charging debenture interest, of £66,000 in 1925, £110,000 in 1926, and £70,000 in 1929; while the "profits" of 1927 and 1928 were microscopic. All these figures, however, are meaningless, their dimensions being dependent on the amounts written-off for depreciation of the fleet and the investments which, in the latter case at least, were

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

shown by the last balance sheet to have been inadequate. On the basis of that document, we calculated that approximately 77 per cent. of the company's ordinary capital was then unrepresented by any existing assets. The actual position will, of course, be ascertainable only when Sir William McIntock has gone fully into the "inside" figures, but the 6 per cent. cumulative preference shareholders, at least, will hope that, if and when the company's assets are disposed of, something will be left over for them. The majority of the share capital is, however, held inside the Royal Mail group. An analysis of its distribution, made some months ago, suggested that approximately 69½ per cent. of the then total was held, in the aggregate, by the Royal Mail Company, its directors, and other companies in the group. The 6 per cent. cumulative preference shares of £1 were quoted this week at 2s. 0½d., and the 5 per cent. redeemable debenture stock at 38s.

Columbia Graphophone.—The complete report of the Columbia Graphophone Company for the year ended June 30, 1930, adds considerably to the preliminary figures discussed in the *Economist* of August 16th last (page 329). Profits and their appropriation in the last three years have been as follows:—

	15 months to June 30, 1928.	Year to June 30, 1929.	Year to June 30, 1930.
Issued ordinary capital ...	491,046	1,069,550	1,282,871

Increase in carry-forward	148,169	3,217	46,011

* Equivalent rates for 12 months, 73.4 per cent. and 48 per cent., respectively.

The report does not directly throw any light on the question whether last year's increase in the parent company's profits was due mainly to increased trading or to slightly less conservative dividend distributions by the subsidiaries—exclusive of the American subsidiary, which made a loss, written off out of its own balance-sheet surplus. The accounts, however, certainly convey the impression that the real earning power of the group, as a whole, has been maintained to an extent which speaks well both for the management and for the company's strong competitive position in the gramophone trade. The figures may also reflect the coming into production of factories which were under construction last year in such overseas countries as Argentina, Brazil, Chile, France, Germany, Italy, Japan, Spain and Turkey. It is not clear to what extent the company has continued its practice of writing-down, out of earnings, the values of all its factories. Some £402,255 of a total premium of £1,710,080 from the issue of shares last year has, however, been applied in writing-down the value of "certain newly acquired assets" and in augmenting the internal reserves included in the balance-sheet item "trade creditors, reserves and credit balances"—the remainder having been carried to reserve account. The company has also carried out a detailed investigation of the accounts of all subsidiary companies. This has confirmed the board's view that, on a conservative basis of valuation, the net assets represented by the investments in subsidiary companies (matrices, patents, trade-marks and goodwill being excluded), before making the provision from share premiums referred to above, exceed the value at which those investments are carried in the balance sheet. Contrary to general expectation, the company has not, apparently, as yet used the proceeds of the last share issue to extend its gramophone interests. For the most part the new money would seem to have been invested in gilt-edged securities (which are shown,

for the first time, in the balance sheet at £900,715), or left on deposit at the bank (cash having risen by £542,861). The chairman's speech at the last meeting suggested that the intention of the company was to use this money to enter the radio industry. It may be, therefore, that the board wisely decided, after making the issue, to hold its hand until the general trade depression had passed. This point may possibly be made clear at next Thursday's meeting. The shares rose from under 60s. to 65s. 7½d. after the publication of the report.

Singer and Company's Accounts.—The report of Singer and Company, one of the "big three" in the British motor-car industry, has been published this week. Profits and their distribution are shown below:—

	YEARS ENDED JULY 31.	1928.	1929.	1930.

* After allowing for miscellaneous receipts and expenses.

(a) Plus capitalised bonus of 50 per cent. in 7% cumulative preference shares.

(b) Paid by allotment of preference shares to ordinary shareholders in proportion of 1 to 7, some £95,251 being thus capitalised, while company paid income tax of £27,654 to Inland Revenue.

The report is of interest for several reasons. Firstly, it records a check to the remarkable increase of profits during recent years, which has made the company's history one of the most remarkable in the whole motor trade. The conditions responsible for this development have been common to the whole industry, and are due mainly to general economic depression. The company's stocks of finished cars, and work in progress, are valued this year at £597,509, against £361,843. The actual decline in profits is, however, due partly to a larger allowance for depreciation of plant, etc. The second feature of the accounts is the directors' decision to pay the year's ordinary dividend, not in cash but in preference shares, in order to conserve the company's resources for capital purposes. This is an unusual, but in the circumstances a commendable, decision. It may, however, involve those shareholders in a "loss" who may endeavour to "cash" their dividend by way of a sale of their new shares on the Stock Exchange. The directors, presumably, have this contingency in mind, since they take the unusual course of admonishing shareholders against parting with their interests at an unduly low value. They declare that they "view with dismay the low price at which small holders dispose of their shares," which is "detrimentally affecting the monetary interests of the large shareholders"—especially, it would seem, those of the directors and their friends, who are described as holding approximately one-third of the capital. Another, and possibly sounder, argument might have been that depressed share quotations increase the cost of raising new capital, and, in the case of a conservative company, such as Singer and Company undoubtedly is, may result in the shareholders making what is virtually a compulsory subscription, as in the present instance. The directors declare categorically that the market price does not represent the intrinsic value of the shares, and recommend that these should not be sold in future at less than 20s. per preference share and 35s. per ordinary

share, which they declare to be the value on an *assets' basis* (the italics are the directors'). The shares were dealt in before the report at 14s. 4½d. and 18s. 9d. respectively, but improved on its issue to 15s. 7½d. and 20s. Shareholders will doubtless regard the advice as valuable, since it comes from so influential a quarter, but will regret that the directors have not, by defining such a notoriously elusive term as "assets' basis," rendered their statement something more than an *obiter dictum*.

Calico Printers' Association.—The general depression in the export trade of Lancashire and the Indian boycott of printed piece-goods have adversely affected the results of this company. For the financial year ended June 30th last, net profit has fallen to £69,186, compared with £140,173 in 1928-29, and £421,316 in 1927-28. An interim dividend on the preference shares amounting to £75,402 has already been paid for the half-year ended December 31, 1929. Some £50,000 is being transferred from reserve to profit and loss account, and a final preference dividend will be paid, but the ordinary dividend is being passed.

	1928.	1929.	1930.

Carried forward

In the following table, the percentage earnings and payments on the ordinary capital are set out over a period of ten years.

ORDINARY CAPITAL.						
Year to June 30.	Earned %	Paid %	Year to June 30.	Earned %	Paid %	
1921	7.5	5.0	1926	3.2	7.5	
1922	7.5	7.5	1927	3.6	7.5	
1923	27.3	12.5	1928	13.4	7.5	
1924	16.9	10.0	1929	Nil	5.0	
1925	22.3	15.0*	1930	Nil	Nil	

* Including 5 per cent. bonus.

The balance-sheet position remains liquid, while reserve funds total £1,260,000. The market had discounted the passing of the ordinary dividend, the shares showing no change on the publication of the preliminary figures.

Crompton, Parkinson Results.—This large electrical manufacturing firm continues to increase its earnings, the net profit for the past year being £103,613, an increase of £21,041. After paying the preference dividends, a dividend of 30 per cent. has been declared on the ordinary capital, and £15,000 has been carried to the reserve fund.

	Year ended June 30.	1928.	1929.	1930.
Net profit	£	70,826	82,572	103,613

Increase in carry-forward	18,950	5,848	10,389	

* Fifteen months.

During the year 200,000 5s. ordinary shares were issued at a premium of 5s. per share. In 1929 no amount was shown as having been written off for depreciation, but this year £12,000 was set aside. Stock increased by £16,967 to £198,733, and debtors at £287,709 showed an in-

crease of £34,626, cash being £11,488 greater at £23,345. The cash received for the new shares was partly used to repay a loan of £30,000 to the bankers, and also to reduce the debt to F. and A. Parkinson by £31,884 to £14,786. Creditors appear at £98,168, an increase of £6,753 over the figures of the previous year, while the unclaimed mature debentures have evidently been claimed. The surplus of liquid assets over current liabilities at £198,100 is £93,298 greater than in 1929. The ordinary shares at 23s. 9d. per 5s. share yield £6 6s. 3d. per cent.

Port of London Authority.—At a time when most company reports reflect the unsatisfactory commercial situation, the expansion shown in the recent returns of the Port of London Authority is the more gratifying. According to the twenty-first annual report, for the year ended March 31st last, the total net register tonnage of vessels using the Port of London in the calendar year 1929 was 57,578,355 tons, against 55,423,681 tons in 1928, while the net register and deck cargo tonnage of shipping paying river tonnage dues inwards and outwards during the year ended March 31, 1930, totalled 43,138,737 tons, an increase of 2,327,699 tons, or 5.7 per cent. Of this total, 26,481,107 tons used the wet docks of the Authority (an increase of 5.4 per cent.) while 2,280,292 tons of imports were received for warehousing or immediate delivery—an increase of 200,776 tons or 9.7 per cent. The total revenue was £6,103,295, total expenditure, £4,520,238, and interest on Port stock and other fixed charges £1,459,009, leaving a surplus of £124,048, which, with the £396,584 brought forward raises the total surplus to £520,632. In view of the satisfactory outlook the Authority decided to continue its considered policy of returning profits to traders by way of reduced charges. The introduction of a revised schedule of rates, as from January 1st last, was also facilitated by the relief from local rates under the Local Government Act, 1929 (amounting to approximately £150,000) obtained by the Authority. It remains to be seen, however, to what extent traffic this year will be affected by the prevailing depression. Whereas the total imports and exports of the United Kingdom increased in 1929 from £1,920 millions to £1,952 millions, the corresponding figures for the first seven months of 1930 show already a decline of £141 millions, chiefly arising during the past four months. In some quarters, however, the view is taken that the steady growth in the traffic handled by the Authority can be attributed more to the increasing popularity of London as a Port than to general trade conditions. The heavy burden of depression in the North of England and the slow but steady southward "shift" of trade is reflected, indeed, in many British port returns. While the values of total imports and exports for London showed an increase of 1.8 per cent. in 1929, compared with an increase for the United Kingdom of 1 per cent., the Liverpool figures declined by 1.7 per cent., and those of Glasgow by 7.4 per cent. The Port of London Authority has always endeavoured to cater for the needs of users, and in twenty-one years has spent no less than £17,000,000 on improvements. In view of the complaints frequently made by traders regarding the high level of British port charges as a whole, as compared with those of their Continental rivals, we trust that the Port Authorities will endeavour still further to carry on the good work of rate reduction in the future.

British International Pictures.—Mr John Maxwell, at the general meeting of British International Pictures, Ltd., last week, gave some interesting statistics of the capital invested in the film industry. There are approximately 55,000 cinema theatres in the world—about 20,000 in the United States and Canada, 4,000 in this country and 1,800 in Australia and New Zealand. Approximately 250 million people attend cinema theatres throughout the world each week. In the United States the total investment in the film industry exceeds £400,000,000, but in this country the amount invested

is no more than £80,000,000. As regards the production of films the United States is spending about £25 millions a year on new films out of a total world expenditure of about £35 millions. The rentals paid by the cinemas for film hire are calculated at about £50 millions a year in the United States and about £8 millions in this country. Of this amount, the bulk goes to American companies. Mr Maxwell emphasised the importance of increasing British film production in order to retain a greater part of this expenditure at home. In America it is estimated that 30 per cent. of the revenue of film-producing companies is derived from export sales, and that each foot of film exported brings back \$1 of trade for other American industries. Mr Maxwell added that in the case of his own company export sales were rapidly approaching 30 per cent. of their total sales. The most striking development in the film industry this year, according to Mr Maxwell, has been the desire of British theatre owners to hire British talking pictures. The American talking picture has for the most part proved foreign to the taste of English audiences. Similarly, French and German audiences require talking pictures in their own language, a demand which has led to foreign companies making French and German versions of British film productions in British studios. This is a development of great importance, for it is impossible for French and German companies to make a sufficient supply of films in their own countries, and it is equally impossible for them to transfer their artists to Hollywood from Paris or Berlin. Mr Maxwell ended with an appeal to the American film companies for a more enlightened attitude towards British pictures. While in foreign markets British films have an open door, they are barred in the United States. Surely it is unwise for the big American film companies, drawing such large profits from Great Britain, to close their theatres to the films of British film-producing companies. The cinema subsidiary of British International Pictures paid £500,000 last year in film hire to American companies, yet these companies barred the film productions of their British customer. As Mr Maxwell said, greater success and profit must surely come to both parties from mutual co-operation.

Shell Union Oil Corporation.—The passing of the quarterly dividend of 35 cents in respect of the quarter ending September 30th has been explained by the directors of the Shell Union Oil Corporation as being dictated by the decreased earnings of the company. The latter's reduction has been due partly to the curtailment of production, in conformity with the "restriction" agreements in the various fields, and partly to the unsatisfactory price levels prevailing in the markets. Although, after making its usual liberal allowance for depreciation, the company was operating at a profit, there was as yet no indication of any early improvement in the unsettled conditions prevailing in the industry. For that reason the directors considered it prudent to conserve cash resources so that the company would be able to continue its normal programme of development without further financing. A summary of the trading account for the first six months of the year as compared with the first six months of 1929 is as follows:—

	6 months. 1929.	6 months. 1930.
Gross income*	34,311,066	25,959,685
Depreciation, depletion, drilling expenses &c.	24,801,407	23,084,686

Earnings per share	73 cents	...
Dividends per share	70 cents	70 cents
Surplus or deficit	370,604	Dr. 10,529,844

Common shares outstanding 13,055,793 13,069,391
* Including a half interest in the income of Comar Oil Company.
The failure to earn preference dividends in the first half-year is explained by the loss suffered in the first quarter,

which is always the worst of the year for the big oil-marketing companies. In the second quarter the company was operating at a profit and, after paying its preference dividends, earned more than half its common stock quarterly dividends. In the third quarter the company should show even better results, this quarter being the period when the consumption of gasoline reaches its maximum. It may be added that oil companies' profits are largely determined by the amount of depreciation and depletion allowed. In this connection the practice of the Shell Union is extremely conservative. The company is writing down heavily the cost of the marketing plant acquired at somewhat high prices in the period of recent expansion. Further, at the end of each quarter it writes down its stocks of oil to or below current market prices. There is, therefore, no question of the company taking an inventory loss at the end of the year. The common shares have fallen from a high level this year of 25½ to 14, the lowest price since 1928.

Warner Brothers' Affairs.—A factor in the recent liquidation in American industrial shares has been the crisis in the affairs of Warner Brothers Pictures. On August 7th the directors passed the quarterly dividend of \$1 on the common stock (the last quarterly dividend of \$1 having been paid on June 2nd). The controller of the company stated that the dividend had been passed to conserve the cash resources, which might be needed for future production and expansion. On August 12th it was announced that plans for new financing were being discussed by Goldman Sachs, the company's bankers, and Hayden Stone, and on August 14th an offer was made to shareholders of the right to subscribe for one new share for each four shares held, at \$20 per share. After giving effect to this financing, it was calculated that the current assets of the company on August 1st totalled \$41 millions, while current liabilities were less than \$17 millions. Last week, however, an application was made in the Courts for the appointment of a receiver on the ground of mismanagement, but the suit was dismissed. The earnings of the company in its last financial year amounted to \$6.34 per share. When the issue of the new shares was made, the earnings of the company for the nine months ended May 31, 1930, after depreciation and Federal taxes, were estimated at \$11,750,000—or slightly more than \$4 per share on the 2,823,796 shares of common stock outstanding. It would appear, however, that the earnings in the third quarter (i.e., the three months ended May last) had fallen precipitately, and in the fourth quarter may be still worse, since June, July and August are normally the months when cinema earnings are at their lowest seasonal level. The common shares have fallen from a high level of 80½ to the low level of 25½.

Selection Trust.—Our mining correspondent writes:—A noteworthy expansion was recorded in profits for the year ended March 31st last, the net surplus being £307,830, against £223,350. At £77,630, income from dividends shows a moderate increase, and sundry receipts have risen from under £1,000 to nearly £9,100, but the lion's share of the increase is attributable to profit on realisation of investments, which is shown at £242,600, against £156,470. The latter increase is the more re-

INSURANCE COMPANY, LTD.

Head Office: 1, Dale Street, Liverpool. Chief Office: 1, Cornhill, E.C. 3. London:

markable in view of the market conditions prevailing during the period. The capital has been increased, both by the allotment of bonus shares in respect of the preceding year's profits, and also by the subscription in January last of a further 160,000 ordinary shares at par. The directors recommend a balance dividend of 27½ per cent., making a total of 30 per cent. for the year, against a cash distribution of 10 per cent. (plus 10 per cent. in scrip) for 1928-29, the amounts absorbed being respectively £209,000 and £60,000. An issue of £300,000 of debentures was also made last year. With these additional resources, the company's interests in Rhodesian and Jugoslavia undertakings were substantially increased. Investments now stand at £1,518,680, as against £905,540 twelve months ago. The last figure is arrived at after deducting expenditure on mining ventures, which is now set out separately. A new item in the balance sheet is a loan to an associated company of £77,250. Cash and debtors total less than £29,000, while on the other side are secured advances for £89,860, and a secured bankers' overdraft for £85,730. It would thus appear that some financing will be required to provide the £192,500 which will be absorbed by the final dividend. The directors state that quoted securities represent approximately 90 per cent. of the total investments, and have a market valuation substantially in excess of their book value.

COMPANY MEETINGS, &c.

TAVOY TIN DREDGING CORPORATION, LIMITED.

INCREASE OF CAPITAL APPROVED.

The annual general meeting of Tavoy Tin Dredging Corporation Limited, was held, on the 26th instant, in London, followed by an extraordinary general meeting to consider resolutions providing for the increase in the capital of the company necessary to carry through the proposed scheme of amalgamation.

Mr Louis Hardy, who presided, recalled that within three or four years of the formation of the company, the whole of its original capital had been repaid in dividends, and, in addition, a reserve fund had been built up sufficient to offset the cost of all the plant, &c.; during 6½ years no less a sum than £318,854 had been distributed in cash as dividends, free of tax.

The technical managers of the corporation had satisfied the directors that the only method of achieving the necessary consolidation of the interests of this company and its three allies in Burmah was the complete fusion of the four companies. The terms provisionally agreed were, the directors believed, fair and equitable to all concerned, and on the completion of the amalgamation the issued capital would be only £359,031, which, apart from the issue of debentures, would be covered by the whole of the assets of the four properties. To provide the corporation with liquid resources, to place it in a position of financial strength, arrangements had been made for the issue of £125,000 in 7½ per cent. debenture stock at par, repayable in ten years, and with an option to convert at any time within the next three years into fully-paid shares on the basis of four for every £1 of debenture stock, the London Tin Corporation had offered to subscribe for the whole of the £125,000 of debenture stock at par free of cost to the corporation, but the board had insisted that the prior right to subscribe must be reserved for shareholders of this company and its three affiliates.

The board attached no little importance to that right. Apart from placing the finance of the corporation on such a sound footing that there need be no anxiety for the future, it was the fact that the option to convert provided shareholders to put up the debentures with an opportunity of reaping the full ultimate benefit of any improvement in the price of tin and in conditions generally; the option was equivalent to a free call of Tavoy shares at 5s. per share for a period of three years, and there was reason to believe that tin prices were now at bottom.

The report and accounts, and the proposed increase of capital were unanimously approved without question or comment.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper, Ltd.,"

6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1 to August 23, 1930, were £4,773,491, of which £4,720,000 was remitted by purchases of sterling in India and £53,491 was transferred from the Paper Currency Reserve in England to the Treasury Account of the Secretary of State for India in Council to meet sales of sterling in India.

BULLION.

The following statistics of imports and exports of gold for week ended Aug. 28, 1930, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
France.....	3,128	Denmark	275
Brazil.....	336,270	Germany	63,558

Aug. 25	Nil	Sovs. for export	2,000
Aug. 26	164,000	Aug. 25 Bars sold	27,531
Aug. 27 Sovs. from abroad	56	Aug. 26 Bars sold	Nil
Foreign coin bt.	Nil	Aug. 27 Bars sold	22,724
Aug. 28	Nil	Aug. 28 Bars sold	73,985
Total arrivals ...	576,056	Total withdrawals.....	73,985
Net arrivals, £502,071.			

GOLD.

The Bank of England gold reserve against notes amounted to £154,333,732 on the 20th instant (as compared with £153,091,518 on the previous Wednesday), and represents an increase of £8,373,648 since January 1st last. The consignment of bar gold from South Africa, which arrived this week, amounted to £804,000, of which £30,000 had been sold forward, leaving about £774,000 available in the open market yesterday. There was a good demand for Switzerland and France, the former securing £436,000 and the latter £289,000 at the fixed price of 85s. 0½d. per fine ounce. Home and Continental trade requirements absorbed £29,000 and £20,000 was taken for India. Movements of gold at the Bank of England during the week show a net influx of £503,972. Of the receipts, £576,000 was in sovereigns, and withdrawals consisted of £58,995 in bar gold and £13,100 in sovereigns.

SILVER.

Although the week under review opened with an advance in quotations to 16½d., subsequent movements have tended towards a lower level. A Reuter message from Shanghai dated August 23rd, stated that "The Indian Government has sold to the Hong Kong and Shanghai Bank 5,000,000 ounces of silver for delivery next week.

It is understood that a similar quantity will be sent in a later delivery." This announcement was followed by bear selling, and silver was offered freely from both China and the Indian Bazaars, with the result that on the 23rd instant prices fell ¼d. from 16½d. to 16¼d. There was a recovery to 16½d. on the 25th instant—the next working day—China being inclined to buy, but with silver freely offered from America, a somewhat easier tendency has since been apparent, and the price for both deliveries had again receded by to-day to 16¼d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 18th instant to mid-day on the 25th instant:—

IMPORTS.		EXPORTS.	
	£		£
Mexico	129,387	British India	70,368
Other countries	26,998	Other countries	7,291
	£156,385		£77,659

* Plus capital bonus of 25 per cent.

At a meeting of directors of the Bradford Dyers' Association, Ltd., held on August 18th, it was decided to declare an interim dividend on the ordinary shares on account of 1930 at a rate of 5d. per share (2½ per cent.), subject to Income tax. Warrants will be posted on September 1.

REPORTS AND NOTICES.

We are informed that Sir Basil Blackett has been elected a director of De Beers Consolidated Mines, Limited.

Sir Charles H. Bedford has resigned his seat on the board of Service Petroleum Company, Ltd., on account of pressure of other work.

The London Committee of the Companhia de Mocambique state that the Customs Receipts for the Port of Beira during June amounted to £29,321, as compared with £16,801 for the corresponding period of 1929.

RUBBER, &c.

ANGLO-JAVA RUBBER AND PRODUCE COMPANY, LIMITED.—The directors are asking stockholders to release the company from all liability to pay the interest (at the rate of 7 per cent. per annum, less tax) which would be payable on the debenture stock on October 1, 1930, and April 1, 1931, respectively, in consideration of the allotment to each debenture stockholder in respect of each £50 of stock held of (28) 8 per cent. cumulative preference shares of 2s. each, now increased at meeting to 35 shares for each £50 of Debenture Stock credited as fully paid, which will be created for this sole purpose. While it is hoped that a sufficient improvement in the price of the commodity will have taken place to enable the company to resume the payment of interest on the debenture stock on October 1, 1931, it is also proposed to authorise the trustees at their absolute discretion at any time prior to that date, to release the company from all liability to pay the interest to become payable on the stock on October 1, 1931, in consideration of the allotment to each debenture stockholder of a further (14) 8 per cent. cumulative preference shares in respect of each £50 of stock held.

LARAS (SUMATRA) RUBBER ESTATES, LIMITED.—A circular has been issued by this company to holders of 7 per cent. first mortgage debentures, asking them to release the company from all liability to pay the instalments of interest (i.e., at the rate of 7 per cent., less tax, per annum), which would be payable on the debentures on October 1, 1930, and April 1, 1931, respectively, in consideration of the allotment to each debenture holder in respect of each £100 debenture held of (56) 8 per cent. cumulative preference shares of 2s. each in the capital of the company, now increased at meeting to 70 (shares for each £100 Debenture credited as fully paid, which will be created for this sole purpose, and to authorise the trustees of the debenture trust deed on behalf of all the holders of the debentures at the absolute discretion of the trustees at any time prior to October 1, 1931, to release the company from all liability in respect of the instalment of interest to become payable in respect of the debentures on October 1, 1931, in consideration of the allotment to each debenture holder of (28) 8 per cent. cumulative preference shares in respect of each £100 debenture held by him. Notwithstanding the authority proposed to be given to the trustees in respect of the interest payable on October 1, 1931, it is to be hoped that a sufficient improvement in the price of rubber may have taken place by that date to enable the payment of the debenture interest to be resumed.

MISCELLANEOUS.

ASSOCIATED LEAD MANUFACTURERS, LIMITED, AND GOOD-LASS, WALL AND COMPANY, LIMITED.—At separate class meetings of the preference and ordinary shareholders of the Associated Lead Manufacturers, Ltd., and Goodlass, Wall and Company, Ltd., which were held respectively in London and Liverpool on August 25th, the scheme of arrangement and amalgamation was passed by overwhelming majorities at both meetings.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LIMITED.—Traffic receipts for month of July, 1930, amounted to £437,220, as compared with £514,994 for July, 1929. Aggregate receipts for seven months of 1930 were £3,244,943 as compared with £3,623,143 for first seven months of 1929. The relation between trade and telegraph receipts is illustrated by the appended figures of the foreign trade of the United Kingdom, shown side by side with the Communications Company's traffic receipts calculated on a daily basis:—

Imperial and International Communications, Ltd., Traffic Receipts, £000 per day.			United Kingdom Imports and Exports, including Re-Exports, £000,000 per day.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

A spell of warmth and sunshine during the past week has considerably improved harvest conditions, farmers being able to make good progress with the ingathering of cereal crops. Only small quantities of native wheat are, so far, reaching the Statute markets, while of variable quality, fine dry milling samples are scarce. On the import market, trade was of a spasmodic character, with buyers disinclined to operate beyond pressing requirements. Prices generally continue to sag under the weight of daily offerings, particularly from North America, and which are expected to be increased now that new crop supplies are moving. The Canadian new crop will have to be marketed without Government aid, though it is reported that the banks will render financial support on the basis of current world's prices only. A bearish factor was the initial low payment by the Canadian Pool to farmers of 60 cents per bushel for the 1930 crop, being 40 cents per bushel under last year. This should ensure a regular flow of supplies for export, as it is scarcely likely that the policy of withholding stocks, similar to last year, will be repeated, particularly in face of greater competition by other exporters for European custom. Russia is shipping freely, large tonnage bookings being recorded for all positions up to November, while fair quantities are moving from the Danube to United Kingdom and Continental countries. Owing to the failure of the maize crop and an abundance of wheat, it may be more profitable for American farmers to utilise the latter for feed, which would mean an increase in domestic consumption compared with last year. Offerings, however, of winter wheat for export are still quite liberal, and prices kept in check by outside competition. Shipments are on a larger scale, and floating supplies also increased. Flour is in quiet demand and prices are drooping in sympathy with wheat. Feeding stuffs were less in request, and most descriptions obtainable at lower prices, large shipments and increasing arrivals of maize being contributory factors. It is interesting to note that further supplies of South African maize have been booked to Canada, presumably for seeding purposes.

WHEAT.—Easier. No. 1 Northern Manitoba, ex ship, 37s. 3d.; No. 2 ditto, 36s. 9d.; No. 3, 35s. 9d.; No. 5 Manitoba, 33s. 3d.; No. 6 ditto, 28s.; No. 1 hard winter, 37s. 3d.; No. 2 ditto, 36s. 9d.;

Aug. 25, 1926	60,511	15,907	26,544	11 5	9 10	8 10

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Aug. 28, 1929.	Jan. 2, 1930.	Aug. 13, 1930.	Aug. 20, 1930.	Aug. 27, 1930.
Winnipeg (No. 1 Manitoba)	122	152½	148½	93½	92½	88½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	116½	130	130½	88½	89	86½
—Cents per 60 lb.						

The visible supply of wheat in Canada at 51,541,000 bushels shows a decrease on the week of 2,812,000 bushels. Supplies a year ago stood at 62,157,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes: There has been rather increased activity in the export market with no further decline in prices, whereas the demand for industrial fuel still tends to shrink. Supplies of secondary qualities and smalls continue excessive and stocks are large. In the home coal department considerable business has been done in sales of best qualities for winter stocking chiefly in the South of England. The South Yorkshire Coal Owners' Association have notified that house coal prices will be increased next week to the figures obtaining in October last year. Owing to further stoppages of furnaces, sales of coke have again declined, but the contracts for coke for central heating are being considered, and the demand from this source should soon help producers in disposing of their output. Best steam coals are quoted at 14s. 6d. and 15s. f.o.b., and blast furnace coke at 11s. 6d. upwards.

Our Glasgow correspondent writes:—Washed nuts continue to be the only firm feature of the Scottish coal market, and this is probably due more to the restricted supplies as a result of curtailed outputs of round coal than to pressure of demand. Higher prices are being asked for forward delivery of all classes of nuts, but in view of the prospects of better supplies over the next month or two, when normally coal outputs should be increased, buyers are not keen to commit themselves forward. Large coal generally is dull.

The Swedish State Railways have asked for tenders for 20,000 tons of steam coal and 8,000 tons bunkers, for shipment October-December, but there appears to be little hope that any Scottish offers submitted will be accepted. Current prices for shipping business are approximately as follows (f.o.b. district ports):—LANARKSHIRE: Ell best, 13s. 3d.; splint best, 15s. 6d.; splint second, 14s.; navigation, 15s. 6d. to 16s.; navigation second, 14s. 6d.; Hartley, 15s.; all per ton f.o.b. Glasgow; steam, 12s. 6d.; trebles, 13s.; doubles, 12s. 6d. to 13s.; singles, 12s.; pearls, 11s. 6d.; dross, 9s. 6d., all per ton f.o.b. Grangemouth. FIRE: Screened navigation, 16s. 6d. to 17s. 6d.; first-class steam, 11s. 9d.; third-class steam, 10s. 9d.; trebles, 13s. to 14s.; doubles, 12s. 6d. to 13s.; singles, 11s. 6d. to 12s.; pearls, 11s. 3d.; all per ton f.o.b. Burntisland or Methil. LOTHIAN: Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s.; doubles, 12s. 9d.; singles, 11s. 6d. to 12s.; pearls, 10s. 6d. to 10s. 9d.; all per ton f.o.b. Leith. Ayrshire: Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s. 3d.; pearls, 11s. 9d.; dross, 10s. 6d.; all per ton f.o.b. Ayr or Troon.

Our Cardiff correspondent writes:—There has been no material change this week in the state of business on the Cardiff coal market. Shipments at the South Wales docks last week totalled 522,800 tons, compared with 498,900 tons the previous week, but they were still more than 100,000 tons less than in the corresponding week last year. Collieries have been almost entirely dependent on their contract commitments, but these have not been heavy enough to absorb the current reduced rate of production, and in many parts of the coalfield pits have been working irregularly. The ascertainment for the three months ended July will be issued on Tuesday next, and it is expected to show a substantial decrease in production and an increase in costs, compared with those for the three months ended April. The colliery owners and the workmen's representatives are at present considering their respective proposals for a new wages agreement, and the first meeting of the Conciliation Board for the consideration of these will be held early next month. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; Western Valleys, 18s. to 18s. 3d.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. to 27s.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 11s. 6d. to 12s. 6d.; foundry coke, 30s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 27s. to 27s. 3d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Notwithstanding the generally lethargic condition of the iron and steel markets, there are signs that an improvement in demand is at hand. The volume of inquiry has increased and in some cases buyers appear willing to enter into long-distance contracts. This is taken as an indication that the usual autumn buying movement will not be long delayed. In the pig-iron department more business has been stirring than for several weeks past, and the recent reductions in prices appear to have created some interest amongst consumers in forward purchases. Stocks of pig iron, however, are large in some of the producing districts and competition from Indian iron and cheap Continental iron is being experienced. Irregular conditions continue to rule in the semi-finished steel department. The Continental steel-makers claim that they are maintaining the official prices; but little business has been reported and British buyers are still antagonistic to the Cartel's new selling arrangements. One consequence of this is that the British makers are securing a certain amount of business that formerly went to the Continent. The demand for finished steel appears to be improving slowly; but it is still rather spasmodic. There has been slightly more demand from home buyers of late, and the inquiry from overseas markets has been rather more active. The total volume of business has not been large, but it is sufficient to encourage hopes that a revival is at hand.

Our Middlesbrough correspondent writes:—With the holidays over, conditions on the market for Cleveland iron are becoming normal. So far no important volume of fresh business has occurred as a result of the recent reduction in prices, but the tone is better and it is expected that consumers will now be more disposed to contract ahead rather than limit their purchases to immediate requirements only. The effect of the lower prices will be to reduce, if not entirely shut out, the competition of Midland and Continental

INTERIM BONUSES INCREASED.

48 Gracechurch Street, London, E.C.4. Conditions should stimulate our Australian varieties received fair sale. Singapore pines very steady. The market for fish is dull. The canned meat trade is

irons from this district and thus enable stocks in the hands of local makers to be liquidated. There was more interest shown in business at Tuesday's weekly market; a few sales were made to consumers for delivery over a month or two and merchants also made moderate purchases to cover over-sales and in anticipation of new business. Prices were at the recently amended figures, viz.: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. In hematite, deliveries are being gradually resumed under contracts, but there is not much new buying coming forward so far. As, however, stocks are now being reduced to some extent, producers are not willing to cut prices and adhere to a minimum of 71s. for mixed numbers. As it is unlikely that any further concession in prices will be obtainable, consumers are expected to come on the market very shortly to make fresh purchases. Shipments of pig iron have improved, the clearances to 26th inst. being 15,160 tons, against 14,288 tons to July 26th. In the manufacturing departments no orders of importance are reported this week. Most of the mills laid idle for the holidays have now resumed operations, but in one or two instances the stoppage will be extended until the beginning of next week. Prices for steel materials under the rebate scheme are unaltered, viz.: Plates, $\frac{3}{4}$ in. up, £8 15s.; joists, £8 10s.; sections, £8 7s. 6d. Other quotations £8 15s.; iron crown bars, £10 15s.; and 24-gauge galvanised corrugated sheets, £11 17s. 6d., all for home use. There is no movement in the ore trade. Best rubio remains nominally 19s. c.i.f. and the in current freight Bilbao to Middlesbrough, about 5s. 6d. Coke is in slow demand, supplies of good furnace qualities being still offered at 16s. 6d. delivered consumers works for early delivery. The furnaces damped down last week are now in operation again, which restores the total in blast in the district to 25.

Our Sheffield correspondent writes: While the position of the iron and steel trade remains unchanged as regards output and sales, there are signs that the depression has run its course, and the tone in industry is more confident than at any time during the present year. These indications are slight but significant. An increase of inquiries raises hopes that consumers are realising that the conditions of the markets for material are exceptionally favourable, and that a buying movement may follow at any moment. Unfortunately, the state of the principal overseas markets constitutes a hindrance to a full revival of trade. Exports continue at a low level, although a considerable weight of electrical apparatus and machinery is going abroad. Requirements of builders of commercial vehicles are being maintained, whereas trade in the touring car section is very poor. There has been no further decline in the turnover of the tool, cutlery and plate sections. Prices of iron and steel material are low and unchanged.

"THE INVESTORS' CHRONICLE"
quotations to a lower level. A Reuter message from London, E.C.2. stated that "The Indian Government Bank Limited" had Shanghai Bank 5,000,000 ounces of silver for delivery.

Our Glasgow correspondent writes:—The dullness which has prevailed in the West of Scotland iron and steel trade for some time continues, and the only improvement noticeable at the moment is the greatly increased number of inquiries coming on the market just recently. The orders placed are sufficient to keep operating plants steadily employed, but their number is unusually small. Buyers are still confining their purchases to materials for immediate requirements, and this is evident in practically every branch of the industry. During the present week several orders for steel structures for export have been placed with Glasgow firms, involving quite a considerable tonnage, and most of the local structural steel concerns have a fair amount of work on hand at present.

Our Cardiff correspondent writes:—General conditions in the Welsh steel and tinplate industries are unchanged. Business in tinplates has been done at the minimum price of 18s. per basis box, f.o.b. works port, but wasters are the only firm spot at from 15s. 9d. to 16s. 9d. per box. The demand for galvanised sheets continues inactive, but manufacturers are adhering to their minimum price of £11 17s. 6d. per ton f.o.b. Welsh steel bars have ruled between £6 3s. 9d. and £6 5s. per ton net, with foreign bars offering at £4 17s. 6d. per ton. Shipments last week were heavier than in the preceding week, and stocks have accordingly been reduced, the official figures giving the total of 119,592 boxes compared with 138,843 boxes in the previous week, and 186,639 boxes at the corresponding period last year.

OTHER METALS.

TIN.—The standard market displayed quiet features and, with sellers prominent, values pursued a downward course, while influenced by lower Eastern cables. The close was firmer on lighter offers. Standard cash changed hands at £134 5s. to £132 10s., and £135 10s.; three months, £135 10s. to £134 5s. and £137 5s. In the East sales were reported at £137 17s. 6d. to £137 and £138 10s. ton c.i.f.

COPPER in moderate support, with slight price fluctuations. Standard cash sold at £46 17s. 6d. to £46 16s. 3d.; three months, £47, £47 1s. 3d. and £47.

LEAD was a generally idle market, though sellers refrained from pressing and tone fully steady. Good soft foreign pig, August, sold £18 5s. to £18 7s. 6d.; September, £18 3s. 9d. to £18 2s. 6d. and £18 3s. 9d.; November, £18 2s. 6d. to £18 1s. 3d. and £18 2s. 6d.; December, £18 1s. 3d. to £18 2s. 6d. ton.

SPELTER in fair request at irregular prices, closing firm. August, sold, £15 13s. 9d.; September, £15 17s. 6d., £15 16s. 3d. and £15 18s. 9d.; October, £16 5s. to £16 3s. 9d.; November, £16 6s. 3d. to £16 3s. 9d. and £16 7s. 6d.; December, £16 8s. 9d. to £16 11s. 3d. and £16 10s. per ton.

ALUMINIUM steady. Home trade, £95; export, £100 per ton.

QUICKSILVER maintained. Spot, £22 2s. 6d. per bottle.

ZINC OXIDE quiet at £25 to £32 per ton, as to quality, delivered United Kingdom.

TIN PLATES steady. I.C. coke, prompt and forward, 18s. per box, f.o.b. Swansea.

ANTIMONY.—Quiet and tendency easier. English regulus, quoted £38 to £45; Chinese ditto, spot, £27; August-September, £25 5s.; crude, August-September, £14 12s. 6d. per ton c.i.f.

ANTIMONY OXIDE.—August-September, £27, with spot lots selling at £30 ton.

ANTIMONY ORE.—60 per cent., August-September, 4s.; ditto, 50 per cent., 3s. 6d. per unit c.i.f.

WOLFRAM quiet. Chinese spot, 18s.; August-September, sellers, 18s. 9d.; Burmese, spot, 18s.; August-September, 17s. per unit c.i.f.

THE COTTON TRADE.

LIVERPOOL, August 27th.

During the past week prices reached their new low level, October being quoted at 5.89 and January at 5.97, but since then values have improved some 33 points, on shorts covering mainly on the statement issued in New York that the Federal Farm Board was prepared to advance loans up to 90 per cent. of the value of cotton. The advance has had the effect of causing the South to hold and also raising the basis. We have still before us the weight of the hedges, both of the American and other growths, against this, trade demand which, at present, seems to be from hand to mouth and so helping to steady prices somewhat. There is no sign of the trade making long distant contracts. Weather conditions in the Eastern belt continue to be very favourable. Temperatures continue high in the West and Central belts and cause some shedding, but beneficial rains have fallen in the Western area and the drought can now be said to have broken. The United States Census reported ginnings to August 6th as 573,000 bales against 304,000 last year and 280,000 in 1928, the total being higher than expected, and reflected early maturity of the crop owing to the favourable conditions in Georgia and South Texas. Spot sales for the week 21st to 27th (inclusive) are 23,000 bales, of which 8,930 are American, 2,900 Brazil, 1,600 Argentina, 2,500 Peru, 2,250 Egyptian, 3,050 African, 1,650 East Indian, and 120 sundries. Imports for the same period are 18,551 bales, of which 4,120 are American, 3,023 Argentine, 5,053 Peru, 3,817 Egyptian, 315 African, 2,205 East Indian, and 18 sundries.

Quotations to-day are: American Middling, 6.59; Egyptian Sakel, 12.40; Uppers, 8.40; Brazil Fair, 5.84; Peru G.F. Smooth, 6.84; West African Middling, 6.59; and East African G.F., 7.44.

MANCHESTER, August 27th.

At the lower level of values buyers have tested prices on a freer scale. Traders, however, still fear a downward reaction in raw cotton rates, with the result that there is much hesitancy in placing orders. At the same time, the turnover has shown a slight expansion without there being any need for producers to restart idle machinery. The conditions in India are still against active operations, but during the week there has been more price testing and a few more orders have been booked, chiefly for Madras and Karachi. There has been a little more inquiry for China, and demand for South America and Egypt has also been slightly better. Shippers with connections in the other markets have reported more price testing. Spinners of American yarns have complained of the poor bids put forward. At the same time, sales have been rather larger than recently. Only restricted operations have occurred in Egyptian numbers. Buyers all round are impressed by the bearish cotton position, and larger orders will not be given out until there is plenty of evidence for arriving at the view that prices have grounded.

THE WOOL TRADE.

Our Bradford correspondent writes:—Perhaps the most timely subject on which to offer comment is the differences in the estimated decrease in the forthcoming Australian new clip, the first sale of the season being held at Perth on September 9th. A new South African season also opens at Port Elizabeth on Monday, when about 3,000 bales of new Karroo wools are expected to be available. Regarding the Australian clip, one official report states that the shrinkage will be about 112,000 bales, while the Australian Mercantile, Land and Finance Company, Ltd., estimate a decrease of 200,000 bales. We do not think that too much importance need be attached to either estimate. The fact of there being a carry-over of about 108,000 bales counter-balances any anticipated falling off in supplies, and with Australia continuing to enjoy a bountiful rainfall, it should help to give plenty of feed and water as Spring approaches, besides helping young lambs in particular. We look for a good commercial clip, and anticipate a steady demand for the new wools when the season opens. There is no change in consuming centres. A fairly good tone obtains in Bradford for merinos, which undoubtedly are in the best position of any class of raw material. It is with great difficulty that more than 28d. can be made for warp 64's tops, and there have been considerable sales at 4d. less. Most spinners have bought something, but no party seems prepared to purchase big weights to cover their requirements to the end of the year, which has been customary in the past. What is wanted above everything else is more business in yarns and piece-goods, and until these orders materialise, we are not likely to see anything more than hand-to-mouth buying in wool and tops. Crossbreds are still on the easy side, and good 46's carded tops can be bought to-day at 14-14½d.

HIDE, LEATHER AND ALLIED TRADES.

Very little alteration occurred in the prices for cattle hides at the auctions held at Manchester this week; warbled cows were 4d. per lb. dearer and bulls cheaper by a similar amount, but apart from these, other classes were unchanged. Calf skins are not quite so good a market. Shearlings are firm to a slight advance, but the market for lambskins still remains unsatisfactory and values are weaker. A better atmosphere prevails in the market for foreign hides. In the South American market a fair amount of business has been transacted for various destinations at prices which show a hardening tendency. Sales of Argentine ox have been made to America, Russia, Europe and the home trade at the equivalent of 6½d., with 5½d. paid for light ox, and 6½d. for cows. The market for dry hides has improved and B.A. Americanos have changed hands at 7½d., Inservibles at 4½d., and M.V. Americanos at 7½d. A fair amount of business has been passing in Cape hides, firsts and second dries being on offer at 8d. and 7d., with drysalted, 20-30 lbs., quoted at 7½d. and 6½d. for the same selections. Australians were inclined to weaken, but with a fair amount of business passing at the lower quotations values are again firming up. Producers and merchants of sole leather have experienced quite a satisfactory turnover since last writing, with the demand covering most descriptions. Dry

hide bends have been in demand for the manufacturing end of the trade: English and wet-salted bends in the medium to heavy weights have also been responsible for a good call, and a satisfactory feature of the business passing is that a large part of the inquiry is on account of the better quality leather. The offal market, which has inclined to be slow of late, is also showing an improvement. Prices for most classes are firmly held. Business with upper leather merchants and manufacturers has also been better with a firmer tone noticeable for certain lines. Willow calf still accounts for the bulk of the sales being made, but at the same time the turnover in connection with black and brown glacé kid is satisfactory. Box calf sales show an upward trend, but against this the call for semi-chrome upper leather is very poor. Patent and reptile upper leathers are neglected. Reports of trade with curriers this week are just a shade better.

OVERSEAS PRODUCE.

SUGAR.—Previous quotations were repeated for all British refined goods on the spot, but there is only a comparatively small business doing as trade buyers are not inclined to exceed pressing requirements. However, they are inclined to show more interest in forward deliveries where an appreciable discount in price is marked. The suggestion put forward by Cuban producers not to export more than 2,800,000 tons to the U.S.A. for a few years, subject to native crops of the latter and production of their preferential sugars not being increased, has been received with mixed feelings. Terminal sections opened firmly, but soon assumed a quieter tone. Moderate sales in raw, include December delivery, 5s. 3d. to 5s. 2½d.; March, 6s. 3½d. to 6s. 3d.; May, 6s. 6d. and August 6s. 9½d. Parcels of some home-grown granulated, October-December delivery ex store, London, receive attention at 19s. Continental kinds dull. Cuban receipts last week 36,579 tons, against 31,828 same time last year; exports, 69,374, against 108,021; stocks, 1,292,801, against 792,323. Messrs. Willett estimate stocks on plantations and in transit to ports of shipment in Cuba at 1,488,000 tons. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending August 23rd, 140,137 tons, against 101,117 last year.

COFFEE.—Demand continues steady, both on home and export account. All desirable qualities of which supplies are limited, realise very steady rates. Brazilian qualities for shipment show a downward tendency.

COCOA.—Sales in spot goods have been small, and prices moved against the seller. In forward positions, a smart decline was registered, mostly West Coast African, as a large crop movement there, coincides with general slackness of consumption. Accra F/F October-December, London contract, sold down to 29s.

TEA.—During the week, 45,650 packages Indian were submitted to auction. Good competition ensued for the finer qualities at advancing rates, clean common ruling steady, but most others manifested slight irregularity and weakness. Ceylon sales of 30,653 packages attracted fairly good general support, and prices were scarcely changed. Demand for China descriptions quieter of late, but prices hold together very well. Java and Sumatra sales generally steady.

RICE.—Market generally quiet, but sellers adhere to steady asking prices. Two Stars, spot, London, quoted 13s. 1½d.

BEANS.—A quiet market, but prices show no material change where sales result.

PEAS.—Steady but slow. Japanese current crop, August, 17s.; September-October, new, 18s. 9d.

POTATOES.—Trade in the Spitalfields market remains quiet, with ample supplies on offer. Quotations: Lincoln King Edward, 6s.-6s. 6d.; whites, 4s. 6d.-5s. 6d. Essex King Edward, 5s.-6s.; whites, 4s.-4s. 6d. Bedford King Edward, 5s.-6s.; whites, 4s.-5s. per cwt.

SPICE.—Pepper steady on the part of sellers, though business was conducted on quiet lines. Lampong black, spot, London, quoted 6½d.; May-July, 5½d.; July-August, 5½d.; August-October, 5½d.; Muntok, white, spot, 8½d.; May-July, 7½d.; July-August, 7½d.; and August-October, 7½d. London stocks 20 tons higher on the week respecting black at 827 tons, against 1,173 same time last year; white, 27 up, at 410, against 327 last year.

FRUIT.—Currants: The spot position remains steady, with inquiries chiefly for Australian descriptions. Sultanias: Spot market quiet, but prices firm for new crop Cretans to arrive. Smyrna, common to good, 37s.-50s.; Cretan, 34s.-55s. Raisins dull. Valencia, 1 boxes, 34s.-35s.; new crop, 30s.-32s. 6d. to arrive. Dates slow of sale. Evaporated fruits: Apricots moved off more freely, but demand generally quiet.

CANNED GOODS.—The general position of fruit remained unaltered, but a return to better climatic conditions should stimulate consumption. Both English and Australian varieties received fair attention, but Californian proved slow of sale. Singapore pines steady. The market for fish is dull. The canned meat trade is

quiet, but steady for hams and tongues. Trade in condensed milk and milkpowders is steady, with a better demand. Quotations: English, full cream, sweetened, 5-cwt. casks, 40s. The market for honey continues weak on liberal offerings, but buyers were more in evidence. Jamaica white, 47s. 6d. to 50s.; good amber to fine pale, 40s.-45s.; New Zealand, 65s.-87s. 6d. cwt.

MEAT.—According to the official report, prices in the Smithfield market showed a weakening tendency. Beef, per 8 lbs.: English long sides, 5s. to 5s. 8d.; Argentine chilled hindquarters, 4s. 10d. to 5s. 4d. Mutton, per 8 lbs.: English, 5s. 8d. to 7s. 4d.; New Zealand wethers, 3s. 4d. to 4s. 4d. Pork, per 8 lbs.: English (under 10 st.), 7s. 4d. to 7s. 10d.

RUBBER.—Quietness again governed this market and prices at times disclosed slight irregularity. Standard sheet, spot and September, sold, 4½d.; October, 4½d.; October-December, 4½d. to 4½d. and 4½d.; January-March, 5½d. to 5½d. and 5½d.; April-June, 5½d. to 5½d. and 5½d.; July-September, 5½d. to 5½d. London stocks increased 394 tons on the week, landings being 1,586, deliveries 1,192, stocks 80,618 against 34,653 last year. Liverpool stocks, 625 higher, landings 857, deliveries 232, and stocks 29,673 against 7,285.

HEMP.—Business in Manila qualities confined to a narrow compass and rates disclosed slight weakness, as sellers were inclined to meet buyers. J2, October-December, quoted £22 10s.; K ditto, sellers, £20 10s.; L1, £20 10s.; L2, £18 15s.; M1, £19; M2, £18 10s.; G, £23 5s.; H, £21 5s. c.i.f. Receipts last week cabled 16,000 bales against 26,000 last year and 29,000 in 1928. Estimate for next week 26,000, and week after 23,000. Manila shipments last week: United Kingdom, 4,000; Continent, 2,000; U.S.A., 5,000; Japan, 6,000; local consumption, 1,000; stocks, 143,000.

VEGETABLE OILS AND OILSEEDS.—The feature of the markets is the further weakness in linseed. Old crop Argentine linseed offers freely, and for August and September shipment to Hull is quoted around £14 15s. or less. The yield of the new crop is anticipated to be favourable and export will begin in December, and actual business in this is reported done at £13 10s. Cottonseed is a shade steadier, with old crop Egyptian offering at £6 15s., and new crop for September and October loading held for £7. Linseed oil is in poor request, and values have sharply declined. Current value of raw oil, August delivery, ex Hull, being £32, and for September-December £31. Cotton oil is quiet. Crude Egyptian offering at £26 10s. Other seed oils are barely steady. Demand for oilcakes and meals is fair. The market for copra remains very dull, and the trend of prices is weak. Straits S.D. September, to Rotterdam, quoted £16 15s.; October, £17; Dutch East Indies, September, £16 15s. Palm Kernels, September-October, to Hamburg, quoted £12 5s. c.i.f.

THE MONEY MARKET.

THE past week has seen no appreciable change in the general conditions of ease which characterise the present situation of the money market. On Monday calling-in operations and some considerable credit displacements resulted in a fair demand for loans at from $1\frac{1}{2}$ to 2 per cent.; but on the following day the effect of Monday's Government dividend disbursements, amounting to over £9 millions, were felt more fully, and fresh money was obtainable

down to $1\frac{1}{2}$ per cent., at which figure old day-to-day loans were also renewed by lenders outside the clearing banks. These rates continued to prevail during Wednesday and Thursday, supplies being increased by the large excess of Treasury bill maturities.

Notwithstanding the monetary ease, discount rates from Monday onwards had a firmer tendency under the influence of the unfavourable course of the leading foreign exchanges. The three months' bill rate by Wednesday was appreciably firmer at $2\frac{1}{4}$ per cent., with 2 per cent. offered by the clearing banks for October bills and $2\frac{3}{4}$ per cent. generally asked for six months' bills. On Tuesday a moderate Continental demand was reported for 90-day bills at $2\frac{1}{2}$ per cent., but on the following day this demand appeared to have been satisfied. The new six months' Australian Commonwealth bills changed hands round $2\frac{1}{2}$ per cent., giving a useful turn to the market.

On Monday £215,000 in gold was withdrawn from the Bank of England, the purchaser being generally believed to be Switzerland. This week's supply of fine Cape gold available in the open market amounted to the substantial sum of £1,169,000. Of this total £35,000 was disposed of to the trades, and £960,000 was bought on Tuesday for shipment to Paris at the higher price of 85s. 0 $\frac{1}{2}$ d. per ounce fine, the franc being quoted on that day at 123.74; and on the following day the balance of £174,000 was also purchased for Paris, notwithstanding a rise in the franc quotation to 123.77. On Wednesday the Bank statement showed that 400,000 sovereigns had been set aside, making a net efflux for the week of £381,398.

Though French francs cheapened on Thursday to a point which gives ground for hoping that the threatened renewal of a gold drain to Paris may be averted for the time being, the distinct weakness of sterling in terms of the dollar has gone far to damp the somewhat premature optimism which inspired, last week, talk in some quarters of the market of a reduction in Bank rate to $2\frac{1}{2}$ per cent. It is true that the technical position of the Bank is strong, and that trade depression may reduce the volume of this season's import financing, but with open market rates at their present level, it seems probable that more of that financing will be effected in London than was at one time expected. Moreover, present rates appear to be attracting a certain amount of not particularly desirable foreign finance paper. Thus, on the whole, we should look for a gradual narrowing of the present margin between open market and Bank rates, rather than for any further reduction in the latter.

	Aug. 14, 1930.	Aug. 21, 1930.	Aug. 28, 1930.	Sept. 4, 1930.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1 $\frac{1}{2}$ (May 1, '30)
Discount Call	1	1	1	1	1 $\frac{1}{2}$ (May 1, '30)
Houses' Notice	1 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	2 $\frac{3}{4}$	2 $\frac{3}{4}$	2 $\frac{3}{4}$	2 $\frac{3}{4}$	...

The week's Bank return reflects chiefly the effects of Government dividend disbursements. Public deposits were reduced by £10,255,376, but Government securities have declined by £1,260,000, and a further £627,977 of "other" securities have been allowed to run off. Bankers' deposits were £4,827,899 higher, but, despite the loss of gold referred to above and an increase of £2,114,331 in the active circulation, the reserve proportion was well maintained at 47 $\frac{2}{3}$ per cent., a figure which compares very favourably with 26 per cent. in the corresponding week last year.

NEW YORK.

On Tuesday, when markets reopened after Labour Day holiday, money on call was steady at 2 per cent., but on Wednesday the rate advanced to $2\frac{1}{2}$ per cent., the influences usually apparent at the beginning of the month drawing funds away from New York. Acceptance dealers

report that the supply of cotton bills is noticeably small, and it is believed London is attracting much of this business. There have been no further movements of gold to France during the week, but \$2 millions were shipped on Wednesday to Canada, and on Tuesday the import was announced of \$725,000 from Brazil.

THE STOCK MARKETS.

A firmer tone again obtained in the stock markets, industrial share prices further recovering, though public interest was not conspicuous. Gilt-edged stocks were slightly easier on the resumption of gold exports to France, but India stocks showed a welcome recovery. Home railways remained out of favour. The strength of industrial stocks was exemplified, not only by the attention paid to the recognised market leaders, but by improvements in less active sections, such as steels and textiles. Rubber shares were harder, despite the decline in the commodity to a new low "record." A moderate selective business was done in mining shares.

THE COMMODITY MARKETS.

The announcement of a pending increase in the price of house coal led to a temporary increase in sales, but the general situation in the coal trade remains depressed. Although activity in the iron and steel industries continues on a low level, there is evidence of a slight improvement, particularly in the pig-iron section. Falling prices of raw cotton resulted in a slight increase in demand, but the market in manufactured goods remains dull. The wool trade remains quiet. Hides and leather are slightly firmer. The jute trade is depressed; the supply of the raw material is far in excess of demand and the stocks of manufactured goods are very large. Wheat prices declined sharply.

THE FOREIGN EXCHANGES.

No great activity was apparent in the Foreign Exchange market this week, and the tendency of sterling was rather dull compared with several of the leading currencies. New York opened at 4.87, but the rate gradually fell away to 4.86 $\frac{1}{2}$, or $\frac{1}{8}$ lower than last week. Montreal gained $\frac{1}{4}$ at 4.86. Paris, after touching 123.73, declined to 123.81, or 4 points worse than last week. Brussels lost over a point at 34.84 $\frac{1}{2}$. Milan was better at 92.91, a gain of seven points on last week. Madrid was again erratic, and closed weaker on balance at 46.00. Amsterdam went against this country and gained $\frac{1}{4}$ at 12.08 $\frac{1}{2}$. Berlin, after moderate fluctuations, was unchanged at 20.39. Switzerland gained a point at 25.04 $\frac{1}{2}$, after touching 25.03 $\frac{1}{2}$. Stockholm was firm at 18.10, Oslo unchanged at 18.16 $\frac{1}{2}$, as was Copenhagen at 18.16. Of the South American exchanges, Rio was again uncertain, but gained $\frac{1}{8}$ d. on balance at 4 $\frac{3}{4}$ d. Buenos Aires was very weak, and declined steadily from the opening level of 40d. to 38 $\frac{1}{2}$ d., though it later recovered to 39 $\frac{3}{4}$ d. Montevideo lost $\frac{1}{2}$ d. at 40 $\frac{1}{2}$ d. In the Far East the rupee was steady about 1s. 5 $\frac{3}{4}$ d., as was the yen at 2s. 0 $\frac{3}{4}$ d. Batavia was firm at 12.08 $\frac{1}{2}$. In the forward markets dollars were less in demand at lowered premiums of $\frac{1}{8}$ and $\frac{3}{8}$ cent. Paris was more sought after at 3 and 7 centimes premium, against 2 $\frac{1}{2}$ and $\frac{1}{2}$ last week, as was Brussels at 1 centime premium for both periods. Milan was quoted at 10 and 31 centesimi discount, whilst Madrid went to 1 $\frac{1}{2}$ and 4 centimos premium for one and three months respectively. Amsterdam was weaker at $\frac{1}{8}$ and $\frac{1}{4}$ cent premium. Berlin remained unchanged at 1 and 3 pfennigs discount. Switzerland was static at $\frac{1}{4}$ centime premium for one month, but was more in demand for three months' delivery at 1 $\frac{1}{2}$ centimes premium, against 1 centime last week. Silver advanced by $\frac{1}{4}$ d. for both spot and forward at 16 $\frac{1}{4}$ d., on better support from China. The silver exchanges were not greatly affected, Hong Kong remaining unchanged at 1s. 4d., whilst Shanghai gained $\frac{1}{4}$ d. at 1s. 7 $\frac{1}{2}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Bonville Street, London, E.C.4.

THE REGIMENTATION OF TRADE.

Novum omne pro magnifico. Among the values which the "classical" economists had to consider there did not figure—fortunately for them—that which to-day attaches to "news." It is a value which has a regrettably distorting effect, well illustrated during the past week by the reception accorded in the Press to two closely related expressions of opinion on trade policy—that of the National Association of Merchants and Manufacturers, and that of the Trades Union Congress. The first, issued as a counter-blast on more or less traditional "City" lines to the "heretical," and therefore widely advertised, pronouncement of the recent so-called "Bankers' Resolution," has received a minimum of publicity. The second, acclaimed (or assailed, according to taste) as a novel departure from the accepted rules of Labour's fiscal policy, has attracted so much limelight, directed exclusively upon its least familiar aspects, that its full implications, as a coherent whole, are in danger of being obscured by this selective illumination. The result is that a foreign observer, unused to the working of the contemporary British Press, might be led to conclude not only that the "City" is allowing the case for Free Trade to go by default, but that there is a fundamental cleavage of opinion on trade policy between the Government, whose attitude towards tariffs is officially one of uncompromising opposition, and the organised ranks of industrial Labour. In reality, such is by no means the case. The signatories of the "Reply to the Bankers," who form an impressive body of opinion, representative of bankers, manufacturers and trading interests, have lent weighty support to the Free Trade Cause, and the pertinent questions which they address to those who subscribed to the "Bankers' Resolution" cannot be lightly disregarded. What are the grounds, they ask, for the recent "conversion"?

"Four years ago a number of distinguished bankers and commercial leaders signed a plea for the removal of tariffs and restrictions upon trade, on the ground that they raised prices, diminished production, created artificial dearth, and led to the impoverishment of Europe. Quite recently a resolution signed with some of the same names has been published, appealing for 'reciprocal trade agreements between the nations constituting the British Empire,' and contemplating, as a condition of securing such agreements, the imposition of duties 'on all imports from all other countries.' The only reasons offered for this change of attitude are the disappointment of the hopes expressed four years ago, the increase of trade restrictions in the interval, and the growing sale of 'surplus foreign products in the British market.'"

"We cannot think these reasons adequate for the sudden reversal of the system of free ports and open markets on which British commerce has been founded now for many years."

The "Reply" goes on to draw attention to some of the glaring fallacies in the Protectionist argument and to re-state in simple terms the general case against tariffs, whose alleged advantages are demonstrably inapplicable to the circumstances of this country. "It will not be seriously disputed," say the signatories, "that tariffs are levied in order to raise prices." But how, they ask, can a tariff help British producers, whose need, if they are not to be perpetually out-competed in foreign markets, is essentially to reduce their costs of production? Apart from the fact that experience shows that a policy of tariff retaliation merely encourages and does not allay fiscal warfare, and that a large-scale diversion of our foreign trade would be attended by serious and incalculable reactions on our exports and our income from foreign investments, what evidence is there, they inquire, that the general expansion of our trade would be aided, or the total volume of employment in this country increased, by imposing taxes which would raise the cost of living, enhance labour charges on production, and diminish the purchasing power of the home consumer?

Turning from "the City" to this week's conference at Nottingham, we cannot find in the proceedings of the Trade Union Congress any evidence that industrial Labour has made up its mind either to "plump" for a Protective tariff or to accept the validity of the thesis

put forward by the proponents of so-called "Empire Free Trade." The report, in which the General Council's Economic Committee explored the possibilities of a "Commonwealth group," and whose cautious and in the main very sensible terms we have already analysed in detail (*Economist*, July 5, 1930), was carried by 1,878,000 votes against 1,401,000; but from the debate on the report and from the President's inaugural address to the conference little emerged from which either of the rival camps of Protectionists can derive much satisfaction. There was not the least likelihood, Mr Beard, the President, declared, that the trade union movement would ever adopt a policy of all-round Protection, though trade unionists were not disposed "to make a fetish of Free Trade or to maintain that at no time and in no circumstances whatever must the principle of 100 per cent. Free Trade be questioned." Mr Bevin, moving the adoption of the Economic Committee's report, explicitly derided "the tariff solution." In conceivable circumstances (by these he appeared to mean primarily the case of a nationalised industry menaced by import-dumping conducted by private enterprise) the use of a fiscal weapon might be necessary, but "it could not be the basis of a solution of any problem at all, least of all the problem of unemployment"; and as for the suggestion that the problems of Empire development could be settled by tariff arrangements—"no more crazy idea was ever submitted to intelligent people."

What, then, has the Nottingham conference done to elucidate the attitude of the industrial side of the Labour Movement towards the question of British trade policy? It has demonstrated, as we see it, four things. Firstly, it has revealed not so much a weakening of Labour's fidelity to Free Trade ideals as a growing, and healthy, disinclination on the part of trade unionists to accept "*laissez faire*" as a self-evidently valid policy to be unquestioningly followed. Secondly, it has shown that Labour is as alive to the fallacies of protectionist argument as are the signatories to the "City" manifesto quoted above. In the third place, both the tenor of the speeches which followed Mr Bevin's and the size of the vote against the Economic Committee's report are strong evidence that though trade unionists are ready to explore actively the possibility of developing more effectively the resources of the Empire, a very substantial section, if not indeed the majority of their ranks, appreciate that success in this direction would not of itself solve the difficulties of our exporting industries, and that any attempt to form an exclusive "Commonwealth group" on lines of "Economic Imperialism" would be disastrous. Fourthly—though this is really a complement of the first line of thought noted—the conference has demonstrated how strikingly Labour is turning from the old conception that if once the instruments of production were socialised all would be well (foreign trade somehow looking after itself), and is approaching the view that its key problem is to achieve in the first place "conscious control and regulation" of supplies of foodstuffs and raw materials and of the outward flow of British products.

In this notion that foreign trade can be "rationalised" or "regimented" there are both considerable potentialities and obvious dangers; and though we found little ground for quarrelling in any vital respect with the Economic Committee's report on the problems of increasing British markets, whether in the Empire or elsewhere, we should like to be reassured that the leaders of the T.U.C. will not allow themselves to drift on the tide of political expediency into accepting, as a substitute for a tariff, crude schemes of import control by the State—devices whose aim would be equally Protectionist and whose effects might be even more vicious.

In urging the need for closer and more continuous consultation with the Dominions on market possibilities, the General Council of the Congress have done good work, and

we do not dispute their general thesis that the present circumstances of Britain call for a maximum not only of individual effort but of concerted, co-operative planning, if our vital foreign trade and our domestic production are to be maintained. But in the detailed application of that thesis to practical requirements much foresight and close thinking are wanted. The best hope for the future in this respect is that the *rapprochement* which the past three years have brought about between organised labour and capital in industry may be developed and strengthened by continuous discussion and consultation.

THE LENA CASE.

THE judgment given in the Arbitration Court in the case of Lena Goldfields v. the Soviet Government this week has clearly an economic and political significance considerably wider than that attaching to the interests of investors in this particular company. Indeed, at a time when the interests both of England and the U.S.S.R. in the expansion of markets were pointing to the advisability of a closer commercial *rapprochement*, if only a settlement of outstanding difficulties could be secured, the Lena award has inevitably reopened so many old sores, and raised in such an acute form the whole question of Anglo-Soviet relations, that a dispassionate examination of the facts of this potential *cause célèbre* and what they seem to imply appears desirable.

For an adequate appreciation of the situation leading up to the final collapse of this important mining concession, it is necessary to hark back to 1921, when Lenin introduced the New Economic Policy into Russia, and so put an end to the active revolutionary era and the period of "war communism." In that year it became apparent that the available capital resources of the U.S.S.R. were likely to prove wholly insufficient to repair the ravages of the Revolution and the civil wars, and to set Soviet national economy on a sound financial and technical footing. The introduction of "N.E.P." was consequently accompanied by the resuscitation of private enterprise in the distributive and other trades, and to some extent in industry, and by the launching of a new scheme whereby foreign capitalists would be offered "Concessions" on Soviet territory, and would be asked to develop certain branches of the Soviet economy—particularly manufactures, mining and agriculture—on terms which provided for the division of profits between Government and concessionaire in agreed proportions, and which undertook to secure for foreign enterprise privileged conditions of working as compared with State-owned enterprises.

In pursuance of this policy, a concession agreement was signed in November, 1925, between the Soviet Government and Lena Goldfields, Ltd., a company which united the former owners of Lena Goldfields of Siberia and a number of enterprises interested in the former Sysert mining district and the South Altai mixed ore deposits of Southern Siberia. By this agreement the company was granted the concessionary right to enterprises in the gold mining and subsidiary industries for a duration of thirty years in the Lena-Vitim district and for a duration of fifty years in the Ural-South Altai district. Relations between the company and the Government continued on fairly amicable lines until the latter part of 1928, when, before Lena had had occasion to voice any strong discontent, the Soviet Government apparently began to protest that certain provisions of the concession agreement—the provision of capital for prospecting in the Altai, the smelting of copper in the Degtiar copper foundry, the construction of mines and works, the production of gold in the Lena-Vitim area according to plan, and the payment of agreed deductions from the output of the various enterprises—had not been fulfilled. The company retorted that the Government, on its part, had violated both the spirit and the letter of its concession obligations, in that it had failed to transfer to Lena, in the specified time, the whole of the properties which formed the subject of its concession; that it had prevented the company from securing supplies of raw materials, food, clothing and other goods, and from

selling its products freely in the markets of the U.S.S.R.; that it had failed to secure for the concession, on a footing of equality with State enterprises, the necessary facilities for transport; that it had failed to give adequate protection to the properties, and had terrorised its employees; and that, to cut a long story short, it had deliberately put such obstacles in the way of the company as to make the fulfilment of its part of the bargain a virtual impossibility.

For these reasons, Lena informed the Soviet Government, on March 7th of this year, that it could no longer continue to operate the concession. Work was stopped, and both parties proceeded to discuss the composition of the Arbitration Tribunal for which the concession agreement provided. Following negotiations extending over several weeks, the personnel of the Court was satisfactorily arranged, and sittings were about to open in Berlin, when, on April 29th, Lena informed the Government that "resumption of work had become entirely impossible." On May 1st the company followed up this repudiation of responsibility by the withdrawal of power of attorney from its local representative, and an intimation to its foreign employees in Russia that they could return home, thereby irrevocably abandoning the whole enterprise before the Court had met. The Soviet Government regarded this as a breach of paragraph 86 of the agreement, in accordance with which the Concession could only be wound up by the decision of an Arbitration Court, and refused to have anything more to do with the process. The Court, consequently, met in London with Dr. Otto Stutzer, of the Mining Academy in Freiburg, as the super-arbitrator, and Sir Leslie Scott, K.C., as the nominee of Lena Goldfields, the Soviet Government being unrepresented. On Tuesday last the Court decided that the Soviet Government had, in fact, rendered the continuation of the concession impossible, and ordered it to pay the company the sum of £12,965,000 sterling as compensation, all moneys due to the company to carry interest at the rate of 12 per cent. per annum.

From whatever angle it be viewed, this result can hardly be considered a matter for satisfaction. It is possible, and, indeed, probable, that had the Soviet Government been represented, and submitted its own case, the findings of the Court would not have been materially different. Indeed, the Arbitration Court seems to have been at pains to do its best to arrive at an unbiased conclusion on the necessarily one-sided evidence laid before it; and though it is arguable that the amount of compensation awarded is somewhat exaggerated, we are not concerned to dispute in general the justice of the Court's findings. What we regret is that the Soviet Government, which would have been well-advised to waive any imagined juridical right to abstain, has, whether by deliberate or mischance, left its whole attitude to foreign capital operating in the U.S.S.R. in a state of damaging obscurity and uncertainty.

In this issue, which is a matter deeply affecting international relations between the Soviet Government and foreign countries, it has been suggested in some quarters that the attitude adopted by the Soviet Government towards the Lena Goldfields is indicative of a more general *volte face* which has occurred throughout the Soviet economic system. Up to the beginning of 1928, it is said, the New Economic Policy was still a *sine qua non* of Russian economic development, and the Soviets still relied to some extent on foreign concessions for the reconstruction of their industry. With the introduction of the Five Year Plan, or Piatiletka, in that year, the official viewpoint, it is argued, tended to become more and more hostile to foreign capitalists in a nascent Socialist State, and the Government has now decided that the Piatiletka can provide enough working capital from within to allow of adequate financing of industrial operations, so that the period when concessions were welcomed for what they would bring has passed. On this showing, the attack on Lena Goldfields is but symptomatic of a change of heart which would make all capitalist enterprise in Russia virtually impossible.

It seems difficult, however, wholly to reconcile this reading of the situation with other facts. For the truth appears to be that, far from decreasing the urgency of

Russia's need for foreign capital and foreign technique, the Piatiletka, by aiming at a trebling of the total output of Russian industry in five years, has emphasised the acute shortage of capital resources in every branch of Soviet economy. Indeed, not only were concessions not considered to be obsolete in 1929, but they were actually incorporated in the Five Year Plan, and Lena Goldfields formed an essential part of the whole scheme, in that the company was responsible for the production of 35 per cent. of the total output of gold in Russia. There is no clear evidence that the Soviet Government was particularly anxious to acquire the Lena properties at this juncture, and there is even less conclusive proof of organised hostility to concession holders as a whole. The fact that, out of fifty-nine different concessions, only a handful have been liquidated, suggests *prima facie* that the Soviet antipathy to the Lena Goldfields may have been brought about by conditions peculiar to that company, and should not necessarily be regarded as the prelude to a concerted attack on concessions in general.

However that may be, and whatever may be the precise rights and wrongs of the parties to this unfortunate dispute, the fact remains that the Lena case threatens to be of great disservice to the future of Anglo-Russian commercial relations. A concession, of course, which forms a sort of capitalist oasis in a collectivist Sahara, is a very different matter from a foreign trade contract; and even were the Government of the U.S.S.R. to pursue the most outrageously confiscatory policy in relation to its concessionaires, it does not follow that there would be any serious risk of the repudiation of contracts made with importers and exporters abroad. None the less, it would be idle to pretend that the breakdown of the Lena concession will not administer a serious shock to the barely nascent confidence of bankers, traders and industrialists of this country in the good faith of the Soviet authorities. It seems likely, in addition, to complicate regrettably the proceedings of the forthcoming bi-lateral conference on claims and counter-claims. There is no reason to suppose that the Soviet Government will pay the compensation awarded against it, and the addition of this claim to the already astronomical figure of paper demands against the U.S.S.R. on private account, will not facilitate a settlement of the whole debt question. There is also the danger, which, we hope, need not be taken too seriously, that the Lena case may be used as an excuse for a recrudescence of anti-Soviet propaganda, whose only results, in our opinion, would be to exacerbate international relations to no purpose or advantage.

RESTRICTION SCHEMES AND PRICE CONTROL.

IN a recent series of articles we attempted, so far as the defective available statistics permitted, to examine the part played in the depression of the past twelve months by the antecedent accumulation of stocks of certain staple commodities. The evidence by no means tended towards the same conclusion in all cases: stocks of a number of raw materials and foodstuffs were sufficiently heavy a year ago to make the situation precarious, but on the other hand, many other important commodities whose prices have since fallen to an equally severe extent were not apparently being carried in unduly large quantities before the onset of the depression. It would therefore be straining the evidence to attribute the current slump primarily to a predisposing condition of unstable equilibrium brought about by a preceding abnormal accumulation of stocks.

Once started, the depression has run true to type in that it has been accompanied by an almost universal increase in stocks, but one feature which has distinguished this trade cycle, at least in degree, from its predecessors, has been the variety of the steps taken to combat "over-production"—by restriction of output where possible, and failing that, by restriction of sales. Restrictive schemes

for control of the output of staple foods and raw materials are by no means of recent development—nitrate restrictions began early in the eighties; coffee valorisation schemes came in virtually with the century—and some of the most important, as for example those concerning sugar and rubber, were abandoned before the present depression was even in sight, but the onset of the trade difficulties of last autumn intensified the efforts of the producers of wheat, tea, copper and tin to check the supply of their commodities to the market; nitrates and mineral oil remained under partial restriction; and the coffee control system, which has now been abandoned, remained in force during the first months of the depression.

As this policy of restriction on the part of producers, often aided by their Governments, for the purpose of maintaining the price of their products, threatens to become the rule rather than the exception—among other commodities which are or have been subject to some degree of output or export control can be cited: diamonds, camphor, quinine, citrate of lime, Egyptian cotton, currants, mercury, potash, pulpwood, Japanese silk and sulphur—it is pertinent to consider how far it is possible that such a policy should succeed in its object, and how far such success is desirable from the standpoint of public welfare.

On the question of possibility, experience of past schemes has abundantly illustrated the obvious fact that attempts at market control divorced from control over production cannot be applied with success for more than a short period. It is also obvious that no scheme of output restriction can be effective unless the parties to it possess some degree of monopoly of the commodity in question. One hundred per cent. monopoly, or anything approaching it, is by no means necessary, but the restrictive agreement must cover a preponderant share of the potential supply if it is to exercise the desired influence on the market, as the experience of the two North American wheat control organisations, in the face of competition from the Southern Hemisphere, has only too painfully shown. In the second place, it is impossible to exercise effective restriction, monopoly or no monopoly, if there is even potential competition, whether from the creation of new sources of supply or from substitutes. These were the twin rocks on which the Stevenson rubber scheme was shipwrecked, for not only were rubber plantations developed in new regions, but the use of reclaimed rubber reduced the demand for the crude material by 15 per cent. Thirdly, unless the product be one the output of which is almost wholly controlled by human agencies, restriction is apt to prove a two-edged sword. All vegetable crops and, to a less extent, animal products such as wool and silk, are susceptible of such wide variations from natural causes within the limits of acreage set by the producer that the best-laid schemes for their control are liable to go seriously agley.

Thus, effective restriction seems possible only in the case of a limited range of products, almost wholly confined to minerals, and even within that range only where there is an absence of serious competition, actual or potential, from alternative sources of production or from substitutes. Even where it can be effectively maintained, restriction can only give the control of price which is its ultimate object if the demand for the commodity in question is inelastic—that is, if the price can be raised

without a disproportionate check to consumption. This depends on conditions (as, for example, the relation of the cost of the raw material in question to the total cost of the finished goods in whose manufacture it plays a part) which vary with individual commodities, but it is probable that the peculiar psychological conditions of a trade depression tend to increase inelasticity of demand in general, since a rise in price may promote, and a fall discourage, confidence in the future movement of prices.

If the possibilities of supply control are limited, the possibilities of price control are therefore still more so. The question remains whether such control, within the narrow limits of its possibility, is desirable in the interests of the general prosperity. It is usually assumed by its advocates that such control will only be exercised for the purpose of securing a "fair price," but outside the nursery, whose denizens have the advantage of a right of appeal to beings of superior wisdom, the question of what is or is not "fair," whether in the matter of wages, prices or methods of trench warfare, is rarely susceptible of a satisfactory answer. The answer it is liable to receive is well illustrated by the following quotation from a chapter in a recent American book* dealing, *inter alia*, with the British rubber restrictions: "As evidence of how an appetite may grow with indulgence, it will be observed that the average spot price in July, October, November and December, 1925, was three times as great as the price considered fair when restriction was first adopted." It is true that it may be demonstrated by the analytical methods of the professional economist that in certain circumstances the exercise of monopolistic powers of control purely in the monopolist's own interest redounds incidentally to the interest of the community, but it is doubtful whether the necessary conditions present themselves in the concrete cases which arise at the moment, and more than likely that restriction of output, if it could be successfully practised, would be made to profit the restricters at the expense of everybody else.

Supposing, however, that the price fixed were "fair," would that justify restriction as a policy? A successfully sustained system of control would have the great advantage of creating confidence in prices, though the fate of copper, wheat and rubber prices, in spite of attempts at control, must have been somewhat detrimental to the psychological effect of restriction in general. Unfortunately this advantage has to be paid for too dearly. If the slump in prices affected only one commodity, it might be arguable that it was being relatively "over-produced" and that its producers were in consequence receiving less than their fair share of the world's goods in exchange for their contribution. The remedy, then, would be to produce less and so to command more of other people's products for each unit of their own output. But if all producers try to do this simultaneously, their efforts neutralise each other, as do those of a circus audience if every member tries to get a better view of the performance by standing on his seat. If every association cut down its output by 50 per cent., thinking to command twice as much per unit, the amount of every other commodity commanded by each unit of it (apart from differing demand conditions which may be neglected for the purpose of this argument) would remain unchanged, but everybody would be only half as well off. If some commodities are being over-produced relatively to others, the conscious and deliberate adjustment of the balance could only be effected by an omniscient being who, if he combined wisdom with his knowledge, would undoubtedly operate by expanding the output of those which were scarce instead of by restricting the more abundant. But for ordinary mortals to attempt to achieve the same results by restriction of output is to court failure at three stages of the process: failure to maintain control of output; failure to produce the desired effect on price; and stultification of the ultimate object through retaliation by holders of other commodities, among which labour might prove by no means the least important.

BRITISH COKE PRODUCTION.

(BY A CORRESPONDENT.)

SINCE the production of pig-iron depends in modern conditions on the existence of adequate supplies of metallurgical coke, the coke-oven industry is one of the most important basic industries in the Kingdom. Its magnitude may be gathered from the fact that in 1929 some 9,500 coke ovens in use (the total in existence may be put at, roughly, 14,000) carbonised nearly 20 million tons of coal, and produced, roughly, 13½ million tons of coke, in addition to other by-products. The capital invested in the industry was estimated, in evidence before the Royal Commission on the Coal Industry of 1925, to be about £40,000,000; and the coke-oven industry, together with its sister, the gas industry, accounts for the consumption of, roughly, one-seventh of all the coal raised from the coal mines in Great Britain.

The organisation of the industry depends to a large extent on the ownership of the plant, and stretches backwards into the coal-mining industry on the one hand, and forward into the iron and steel industry on the other. Figures produced before the Samuel Commission in 1925 showed that the total tonnage of coke produced was divided, roughly, as follows between different classes of owners:—

Coke ovens owned by—	Proportion of Total Output of Coke. Per cent.
Colliery companies	41.6
Iron and steel companies	7.0
Coal, iron and steel companies combined	38.0
Independent coking and by-product companies.....	13.4
	100.0

Although these figures relate to the year 1924, there is no evidence that the position has altered in any important respect since that date.

Each of these several classes of coke-oven owners has somewhat different problems to face. Thus, the iron and steel concerns, which are also coke producers, are primarily interested in obtaining supplies of fuel for their blast furnaces; whereas the collieries are chiefly concerned to broaden the market for their coal and, by improved preparation for sale, to increase their aggregate financial returns. This divergence of interest naturally reflects itself in differing attitudes towards rationalisation. In the case of the iron and steel firms, coking plant can only be modernised as part of a general scheme of rationalisation, while in the case of the collieries the improvement of coking plant is bound to be connected in fact (though not in theory) with the general reorganisation of the coal industry which, it is to be hoped, will now be carried out under the new Coal Mines Act.

Nevertheless, there are certain general considerations which apply to all owners of coking plant; and the first of these is cost. Coke ovens fall naturally into two different classes, the beehive oven and the by-product oven, which are distinguished from one another by the nature of their products. The beehive oven is the original and simple form of coke oven, which was intended to produce coke and nothing else. The by-product oven, on the other hand, is more complicated, and, as its name implies, is designed not merely to fulfil its primary function of producing coke, but also to separate and preserve the various gases and by-products such as tar, benzol and ammonia, which are given off in the process of coal carbonisation. Although the quality of the coke differs but little as between the beehive oven and the most modern by-product oven, in other respects the beehive is by comparison very wasteful and inefficient. A large number of beehive ovens are still in existence in this country, but they are comparatively little used, and of the 9,500 ovens in production in 1929 only 1,400 were beehives. The major part, therefore, of the output of coke in Great Britain is produced in by-product ovens of one type or another.

The manufacture of by-product ovens has now been in progress for many years, and the efficiency of the various types available varies very greatly. Owing to the accelerated rate of progress in technical advance, which

has been a feature of the last ten years, the most modern types of oven are relatively very much more efficient than the older types. Consequently, in order to arrive at a true estimate of the efficiency of the coke industry as a whole, it is very necessary to have some evidence about the average age of the industry's plant; and such evidence has recently become available in the Report of the Departmental Committee on Area Gas Supply, which was published a few weeks ago. The coke ovens covered by the investigations made for the Departmental Committee were responsible in 1928 for nearly two-fifths of the total tonnage of coal carbonised in Great Britain. Even assuming, then, that the results of this examination of conditions in Yorkshire—an area relatively modern in equipment—may be applied to the entire country, it appears that some 80 per cent. of existing coke ovens are more than ten years old, 60 per cent. more than 15 years old, and as much as 40 per cent. more than 20 years old. Now it is generally assumed in the coke industry at the present time that the amortisation period of even the most modern types of by-product ovens is 13 to 14 years. It is, therefore, not unreasonable to infer that 60 per cent.—and, in fact, the figure is quite possibly larger—of the country's coke-oven plant is at the present moment obsolete.

These figures justify the presumption that a very large measure of modernisation is urgently required in the coke-oven industry. The presumption is strengthened by a comparison of the respective costs of old-fashioned and of up-to-date plant. Such a comparison is given in the following table, which is taken from a paper read at the World Power Conference in 1928:—

COMPARATIVE CONVERSION COSTS PER TON OF COKE.

Costs.	By-product Ovens.	
	"Waste-heat" Plant.*	"Regenerative" Plant.
	s. d.	s. d.
Wages.....	3 9.0	1 9.5
Materials	2 6.5	2 3.5
Repairs	2 7.6	1 1.0
General charges	1 0.0	1 0.0
Depreciation.....	0 9.5	0 9.5
Total	10 8.6	7 8.0

* The figures in this and the following table refer to a waste-heat plant erected in 1905.

These figures relate, it is true, to different years—those of the waste-heat plant to 1927 and those of the "regenerative" plant to 1928—but, as wages and prices (other than the price of the converted coal, which is not included above) were fairly steady in 1927-28, the comparison is not vitiated by this fact. On the contrary, the table very plainly shows how great are the savings possible in the most modern type of plant, particularly in respect of wages. The next table, which is taken from the same source and gives the details of the labour costs in the two types of plant, emphasises the great extent to which labour has been superseded by mechanical devices in the most modern coking plant.

LABOUR COST PER TON OF COKE.

Category.	"Waste-heat" Plant.		"Regenerative" Plant.	
	s.	d.	s.	d.
Coal handling (including crushing, drying and blending)	0	7.5	0	1.5
General foreman	0	1.3	0	1.3
Ovens.....	1	7.0	0	8.0
Coke handling	0	1.5	0	0.8
By-product plant	0	4.5	0	4.7
General labour (including mechanical and electrical)	0	11.2	0	5.2
Total	3	9.0	1	9.5

These two tables of costs are a clear indication that, other things being equal, the substitution of the most modern types of oven for the obsolete types at present in use will bring a decrease in costs of production of the order of magnitude of 30 per cent.

A second factor which will determine the producers' attitude towards modernisation is the possibilities of the market. Of the total output of metallurgical coke nearly two-thirds is used in British blast furnaces. The expansion of the market for coke, therefore, depends in the first instance on the recovery of the British iron and

steel industry; but as the cost of steel is to a large extent influenced by the cost of coke, the coking industry by its own action can materially help this recovery.

Since coke is only one of the products of the coking industry, attention must also be paid to the other by-products. There is little doubt that the growing needs of the chemical industry will supply a large part of the solution of this problem, while another part of the solution might be provided by the formation of a marketing association to deal, perhaps, with coke itself, as well as with by-products.

Another vital issue is that of the surplus combustible gas produced in coke manufacture. This has been occupying the attention of the official National Fuel and Power Committee. A scheme for the establishment in South Yorkshire of a gas network similar to those now working in many districts of Germany was put forward early this year, and it now appears that the Sheffield Gas Company have taken the first step towards putting this scheme into operation. Its success will prove of the highest importance. If the South Yorkshire scheme works well, similar schemes will doubtless be prepared for other areas; and the general adoption of such schemes wherever possible would clearly be a strong additional inducement to the coking industry to modernise its plant.

But modernisation and rationalisation of the coking industry are too important to wait solely on success elsewhere; and it is therefore greatly to be hoped that the coking industry will take immediate and vigorous action to bring all its plant thoroughly up to date. Technical progress abroad, particularly in Germany and America, has made rapid strides in recent years; and the British coking industry is, therefore, faced with the need to act quickly and well if it is to recover its former position and hold its own in the future.

THE PROSPERITY OF SIAM.

(BY A CORRESPONDENT.)

PEACE and progress in Siam offer a pleasant contrast to the disorders afflicting other parts of Asia at the present time. Siam has no foreign enemies and few serious internal problems. Her native statesmen and foreign advisers guide her on a path of steady advance without rash experiment. Financially, the country is solvent and strong. The monetary system was strained by the war, and Treasury notes became for a while inconvertible; but this trouble was removed by the Currency Act of 1928, which fixed a new "gold exchange" standard at 11 baht or ticals to the pound sterling, and there has subsequently been no material fluctuation in the sterling rate. A debt redemption fund, for the discharge of foreign liabilities, receives all surpluses of the Budget, and, thanks to this wise precaution, two foreign loans carrying interest at 6 and 7 per cent., and amounting to £5,000,000, can be repaid without difficulty in 1932 and 1934, the earliest permissible dates. The outstanding debt will thus be reduced to £6,500,000, and at lower interest rates.

The Budget also indicates prosperity; revenue in the present year should amount to £9,500,000, and expenditure to £9,000,000. Though the Excise income shows a tendency, perhaps not regrettable, to decline, the loss is being made good by the growing proceeds of the Customs, and a cautious but regular policy of developing the productive sources—railways, mines and forests, and irrigation—is being carried on. Specially profitable are the canals in the river basins, the Menam and Prasak barges, which are now being supplemented by minor works and combined into a larger network. In order to combat the shortage of local water reserves in dry seasons, the Irrigation Department has also secured a stock of small pumps for lifting water, and is in a position to supply these to the cultivators.

It is pre-eminently on the rice crop that the fortunes of the Siamese State and the equilibrium of the Budget depend. A cultivator in the valleys will sow annually some 10 acres of paddy, seldom varying the crop or resting the land, still less often making good its exhaus-

tion by the application of adequate manure. He is a diligent but not a progressive husbandman, falling into debt in bad years and hoping for a stroke of fortune which will release him when the trouble is over. Fate may, however, be adverse, the estimated outturn in the more advanced rice districts having varied from nearly 1,600 lbs. of paddy per acre in 1926-27 to 650 lbs. in 1928-29. In the latter case the cultivator borrows, perforce but lightly, from the Hindu moneylender-merchant or the local Chinese shopkeeper. His dealings with the Chinese are normally in kind, cash being needed only to pay his land revenue and his capitation tax; and the variability of the weights and measures used in the village shops and markets makes him an easy prey. The metric system was nominally introduced by a law of December, 1924, which allowed a minimum period of five years before the use of the kilogramme and its parts should become compulsory. Five years have elapsed, but the Chinese storekeeper smiles, produces his familiar lumps of metal and his responsive hand balance, weighs out his goods by the old names, and blandly invites his customer to estimate the number of grammes and kilogrammes received. Novelties and complications are not for him, and it is scarcely surprising that the metric system has not yet been declared in force throughout the country.

The Siamese Government, on the other hand, is not forgetful of the interests of the cultivator. Complaints of the quality of exported rice have led the Government and the millers to concert plans for standardised grades, the effect of which may be perceptible in course of time. Indiscreet haste is unsuited to a land of peace. More definite progress has been made in co-operative organisation, which is at present confined by executive order to rice growers. The earliest societies were founded in the districts of Lopburi and Pitsanulok in the year 1916, and followed the Raiffeisen principle of joint liability and moral security. So far as societies formed during recent years are concerned, in deference to the wishes of the Siam Commercial Bank, which has advanced a sum of 500,000 ticals (£45,000) on a State guarantee, the lands of the co-operators have been taken in joint mortgage as security for the bank's loans, and the clarity of the co-operative ideal has to that extent been dimmed. The societies in all number nearly one hundred, each with a membership of fifteen to fifty farmers. Though small, they are effective, training the Siamese peasant in the ways of foresight and thrift, and assisting him to purchase seed and cattle and to market his produce without pressure from alien creditors. Many of the cultivators are now free from debt and are extending their area under rice.

Rice represents 70 per cent. of the total exports of Siam in an average year. The exports of 1928-29 were valued at £23,000,000, of which £16,000,000 consisted of rice. The area under this crop has increased by 150 per cent. in the last generation, and the produce contributes to the payment of an export duty as well as of the land tax. Thanks to this large sale, Siam enjoys regularly a favourable trade balance, which amounted in 1928-29 to £6,000,000. Internal development is thus facilitated by the cheap purchase of machinery from abroad. It is, however, noteworthy that British goods, particularly of iron and steel, are expensive in comparison with those of European rivals. Their superior quality is not disputed, but consular reports comment freely on the difference of price. The British Empire, however, still holds 70 per cent. of the import and 80 per cent. of the export trade of Siam, though much of this passes through Penang, Singapore and Hongkong to other countries.

It is important in this connection to consider the possible consequences of a ship-canal, such as has from time to time been projected, through the isthmus of Siamese territory dividing Lower Burma from the peninsula of British Malaya. The narrowest point is the Isthmus of Kra, where a cutting of no more than twenty-five or thirty miles (according to the exact route taken) would be required. While access to Bangkok would thus be afforded by a more direct route than *via* Singapore, it is unlikely that the Chinese or Japanese trade would be diverted to any considerable extent. Siamese trade is

already carried in Norwegian rather than in British bottoms, and it is possible that the British share in this business would be further diminished. British ships would still prefer to visit Singapore, while minor nations might use the more direct channel. Prophecy is uncertain, in view of the cost of digging through a considerable range of hills, but the possibility of a Kra canal and its economic reactions should not be overlooked.

Notes of the Week.

The Verdict of Bromley.—The result of the Bromley by-election, in which the official Conservative candidate got home by a comparatively narrow margin of 1,606 votes over the Liberal, seems likely to occasion some uncomfortable reflections for the managers of all three orthodox parties. Even allowing for the fact that the election was fought on a stale register and in the middle of the holiday season, when many electors were away from home, a poll of 39,000, as compared with 54,000 at the last General Election, in an electorate numbering 74,000, indicates a remarkable apathy and lack of interest. Though it is not quite certain that Mr. Redwood's surprisingly large total of 9,483 adherents should be regarded exclusively as a deduction from the Conservative vote (the "United Empire" candidate probably drew a considerable measure of support from that body of unattached opinion which is always inclined to vote for any freak cause), neither the Government nor the Liberal Party can derive much encouragement from the heavy fall in their candidates' respective polls. On the other hand, the Conservative Party can hardly fail to be impressed uncomfortably with the unexpectedly strong pulling-power apparently exerted by Lord Rothermere's Press, at any rate in constituencies of the Bromley type, even when the official Conservative candidate takes up an attitude on the tariff question which differs from that of Lord Beaverbrook by little else than the degree of emphasis placed on fidelity to the present Conservative Party leadership.

The Liberal Statement of Policy.—The National Liberal Federation has issued, six weeks in advance of the annual meeting which is to be held in Torquay, a list of resolutions which virtually constitute a statement of party policy. First in this declaration of faith comes the question of tariffs. The view is reiterated that "there is no hope of economic recovery unless we maintain the system of open markets upon which the very existence of this nation depends. . . . We depend for our livelihood upon a vast export trade, and it is impossible to maintain exports if we shut out imports. . . . If we cannot meet our competitors at home we cannot meet them abroad." Further, on the question of Empire development the Federation takes the stand that this cannot be promoted by exclusive tariffs against other countries, but should be encouraged by the establishment of a permanent Imperial Economic Council and a permanent Imperial Secretariat, with different sections to deal with different branches of policy. The Liberal taxation policy is to combine ruthless economy in expenditure with the revision of existing taxation, combined with the possible introduction of new forms of taxes—an interesting suggestion of which we hope to hear more. In addition, the Party is asked to approve of "a systematic policy of capital investment," and to commit itself to the assistance (by advances under Government guarantee) of industries which are prevented by lack of capital from carrying out necessary reorganisation; to capital assistance for schemes of agricultural development; to the development of such public works as create favourable conditions for industry; to a clear differentiation between unemployment insurance and relief; and, finally, to various measures of constitutional reform, including the adoption of a new electoral system, preferably proportional representation. The programme should give ample scope for discussion when the Federation meets.

The Unrest in Latin America.—Last week we chronicled the revolution in Peru—the departure of Señor Leguia and the recall by wireless of the cruiser on which he had taken his leave. The cruiser is now in port again with the ex-President still on board, "too ill to land." The illness appears to be a *crise de nerfs*, and we may conjecture that Señor Leguia's successors are as much embarrassed by his present position as he himself is agitated. Colonel Cerro should have read up the history of 1688 before launching his glorious revolution in the New World. He would have learnt how ill-pleased the revolutionary leaders were with the officious person who brought King James II back and how expeditiously they bundled him off again lest the smooth course of the Revolution should be upset by the ex-autocrat suffering some mishap. That wireless message was a blunder which Colonel Cerro should beware of making worse. Meanwhile, it is satisfactory to learn that Señor Leguia's relations and associates have found asylum in the American Legation. Colonel Cerro has now assumed the Presidency with the acquiescence of General Ponce, who made a simultaneous pronouncement and seemed inclined for a moment to dispute the spoils with his colleague; so that Peru, after exchanging one dictatorship for two Juntas, may congratulate herself on seeing one of these hydra's heads struck off. This is a step towards political stability; but other features in the situation are less reassuring. There have been one or two political murders, and public references which the new Government has made to "the territorial mutilation" of Peru (by the settlement of the Tacna-Arica dispute, which actually restored some territory to Peru *de facto*) open up vistas of foreign complications. There are also hints of an anti-foreign movement in the charge that Señor Leguia has "put the country at the mercy of foreign lenders and imperilled national sovereignty." In this connection, "anti-foreign" virtually means "anti-United States"; and two United States citizens have been arrested and placed on trial for alleged misconduct when they were in Señor Leguia's service—one of them as Head of the Peruvian Air Force, the other as Director of Irrigation Works. The Peruvian situation has been under discussion between President Hoover and his Secretary of State, Mr. Stimson, and it is announced that the United States Government will not here apply the principle which it follows in Central America of refusing recognition to any Government that attains power by way of revolution. The attitude of the United States towards new régimes in South America will continue to be determined by general considerations of international law and by particular considerations of expediency. Thus, the recognition of Colonel Cerro's régime by the United States is not ruled out *à priori*, but it is evident that the State Department at Washington is not inclined to accord recognition at this stage. These alarms and excursions in Peru seem to have produced a repercussion in the Argentine, where emergency measures have been taken to guard the President's residence and other public buildings against—nobody quite knows what. Do the Argentinos, in these latter days of their prosperous, stable respectability, look back wistfully to their revolutionary past, and did the news from Peru strike a chord in their hearts?

Reichswehr and Red Army.—Since Germany and Russia are the two Powers which suffered the greatest losses in the war (save for Austria-Hungary, which has ceased to exist and is therefore out of the reckoning), the idea of a Russo-German coalition for a war of revenge was bound to suggest itself. In fact, it has been with us ever since the peace-settlement—in some minds as a bogey, in others as a ray of hope. There have, indeed, been moments when the idea came within range of possibility—for instance, in 1920, when the Red Army, striking at Warsaw, actually traversed a corner of the former German territories that had been transferred to Poland under the Treaty of Versailles; or again in 1923, towards the end of the struggle in the Ruhr, when the German people as a whole were in a despairing mood and when the annihilation of the value of the mark left the once-privileged classes momentarily in a position where they

had nothing to lose. In such situations it was conceivable that the German nation might have acquiesced in a Machiavellian alliance between their "Die-hards" and the Communist Power in Russia with the object of overthrowing the European peace-settlement by force of arms and perhaps afterwards deciding, by ordeal of battle with one another, whether the new Europe was to be "White" or "Red." But any such prospect faded away with the revaluation of the mark, the settlement of Reparations, the conclusion of the Pact of Locarno, the entry of Germany into the League of Nations, the general adherence to the Kellogg Pact and all the other international measures which have been taken to restore Germany to her natural place in a comity of nations which has put a ban upon war. At Locarno the Germans, while refusing to accept the present Polono-German frontiers as unalterable in perpetuity, pledged themselves never to attempt to alter them by violence; and therewith the idea of a German-Russian military understanding virtually ceased to be a matter of international concern. It has remained a matter of internal politics in Germany; for the constitutional parties—from the Social Democrats to the Moderate Conservatives—have still some fear that the men of violence on the extreme left and right might make an unholy alliance to overthrow the present Republican régime, and that they might seek to strengthen their hands in this everyday more forlorn enterprise by securing Russian support. This scare has just had a revival, which may be traced partly to the excitement over the imminent general election, partly to recent visits of one or two German officers—or ex-officers—to the U.S.S.R., and partly to a report that General Heye, the present Chief of the Army Direction, is about to retire and that General von Hammerstein—reputed to be one of the "political generals"—is to succeed him. This scare deserves attention because it has been taken up by *Germania*, the newspaper which is the organ of the Centre Party. The Reichswehr Ministry has now formally denied that Lieutenant Amlinger, the officer whose visit to Russia has evoked the most comment, was charged with an official mission and has stated that he had already retired from the Reichswehr before the visit was paid. For foreign observers, the moral of this incident is not that the scare deserves after all to be taken seriously by Germany's neighbours, but that the majority of the German nation who desire peace and stability at home and abroad are sharply on the watch to see that the present régime in Germany shall not be threatened by irresponsible intrigues.

The Dissolution of the Sejm.—Last week we discussed the portent of Marshal Pilsudski's assumption of the Premiership. On Saturday the premier-dictator dissolved both chambers and ordered elections for November. But he did not let the unfortunate Polish senators and deputies go without verbal castigation. In an interview he declared that "the Constitution . . . at present is like a piece of rotting meat mixed with foul bacon and putrid cabbage, and as much unwashed as the spirit of the deputies, who in Poland are an infamous band. The entire work of the Parliament stinks so that the air is poisoned." This seems a little hard on a Parliament which was first prorogued and then dissolved without ever being permitted to meet in the

extraordinary session which had been demanded by more than one-third of the deputies in accordance with constitutional requirements. Marshal Pilsudski really need not exert himself so violently nowadays, for since the deposition of his fellow-dictator, Professor Valdemaras, from the curule chair in Lithuania, the Marshal remains pre-eminent among living heads of states—without peer and without competitor—in the art of vituperation. The bacon and cabbage might have been spared. Yet, in Poland, blessed are those deputies who are castigated with tongues alone. At Vilna and Novogrodek three White Russian deputies and one senator were arrested immediately after the dissolution of Parliament, when their immunity expired. And at Warsaw, on August 29th, the leader of the Polish Peasant Party, Pan Jan Dabski, was assaulted on the threshold of his suburban residence and castigated—not with tongues—by four persons alleged to have been wearing the uniforms of a major, a captain, a lieutenant and a corporal in the Polish Army. What will the Opposition Parties do between now and November? The first thing that they ought to do is to combine, for in this last Seym they had between them 314 deputies against the Government's 130. Even a partial combination would produce the foundations for an alternative Ministry and would make the constitutional position clear. It is truly said that countries get the Governments which they deserve. We have all taken our schooling in parliamentary government by finding ourselves "up against" outocracy. Marshal Pilsudski might claim with some plausibility that he is educating his countrymen in the rough political school in which Englishmen were educated three centuries ago.

France and Mr Hearst.—We shall not, we hope, be accused of lack of sympathy with the perhaps understandable distaste of France for the company of Mr W. Randolph Hearst, if we regret his expulsion from French territory as a petulant, and rather childish, act of reprisal scarcely consonant with the dignity of the French nation. However mischievous the activities of the Hearst Press may be, and with whatever justice its policy may be regarded as inimical to France, the bodily location of Mr. Hearst seems a matter of small importance. Some have limelight thrust upon them; to others the achievement of limelight has its uses. After the flood of limelight which the European Press has combined to throw on the movements of the self-effacing Mr Jack Diamond, France should have been wiser than to endow Mr Hearst with an equally needless illumination.

The Protection of Dyestuffs.—The Dyestuffs (Import Regulation) Act, 1920, is due to expire next year unless it is prolonged by Parliament. It is therefore disappointing that the Dyestuffs Industry Development Committee in its Report* just issued makes no definite recommendation on this point, but confines itself to suggesting that the Government, the users and the manufacturers "continue to consider the problem." Fortunately, the body of the report is as suggestive as its recommendations are indefinite. The Committee states, without hesitation, that a substantial dyemaking industry has been built up and maintained by the operation of the Act; that the quality of British dyes, which before and during the war left much to be desired, now compares very favourably with that of foreign material, and that the effect on the other chemical industries has been satisfactory. On the other hand, "the achievement of that object has admittedly laid a serious burden upon the colour-using industries." This burden has apparently taken three forms: until very recently prices have been extraordinarily high as compared with Continental prices for corresponding goods, though lately this has to a large extent been remedied; secondly, the import licensing system has operated in such a way that "there has been throughout the period of the Act considerable interference with the users' ability to obtain supplies of dyestuffs of proved quality"; and lastly, the procedure for

obtaining licences has involved delay which has seriously handicapped producers of novelties by preventing their access to developments and improvements in the world's market until their contemplated products ceased to be novel. Since the report states that there has been a tendency for British makers to concentrate on those materials for which there is a comparatively large demand and leave the more diversified for foreign makers, even going so far as to enter into an agreement with foreign producers by which the British manufacturers are excluded from the production of one complete range of dyes, one is tempted to wonder whether some part of the loss of markets, both at home and abroad, to British textiles may not be indirectly the work of the protection of dyestuffs. The Committee speak, moreover, of "lack of research of an original character," though it appears that the British dyestuffs industry has played a distinguished part in the development of the new technique demanded by the development of the rayon industry. One of the advantages which protectionists claim for their system has certainly not accrued in this instance: the industry has so far shown no sign of developing an export trade worthy of its importance, and British exports compare very unfavourably in extent with those of our leading competitors. In short, by bringing the industry from infancy through adolescence and establishing it on a firm footing in respect of quality and price, the Act of 1920 has probably done all the good it can do. The time has now come when the stimulus of foreign competition would do no harm, and would enable the consuming industries, to whose generous co-operation tribute is paid in more than one passage of the report, to have access to that more varied and up-to-date range of material, without which their efforts at rehabilitation may be seriously hampered.

International Steel Cartel Developments.—As our Paris correspondent points out on a later page, the International Steel Cartel appears to be making "heavy weather." It will be remembered that when the Cartel was formed in 1926 its original function was to control production in the member countries by means of fines imposed on those whose production exceeded certain quotas while compensating those which under-produced; the Cartel had no control over distribution or price. It was clear from the start that, if the Cartel was to be fully effective, these functions would sooner or later require to be added, but it was not until the date for the automatic termination of the Cartel was within measurable distance that these aspects received serious attention. The Cartel regulations provided that the agreement should terminate on April 1, 1931, but a clause provided for its earlier dissolution (on April 1, 1929) on notice being given by any member country. No such notice was given, but it was generally understood that modifications of the existing regulations would take place. The first step taken was an attempt to regulate the export trade by means of an international distribution bureau, and this was followed early this year by subsidiary associations to deal with semi-finished material, sections, bars, heavy plates and hoops. The different national producers or syndicates were to carry out the actual sales, and to maintain contact with their customers, but prices were to be those fixed by a committee of the Cartel. Disciplinary powers were vested in a Control Board who could impose fines for exceeding export quotas or for underselling. The original associations were temporary in character, and were to function until August 1st, by which time it was hoped that a more rigid organisation would have been set up which would undertake central selling on behalf of the Cartel countries. In spite of the existence of these associations, however, under-selling continued, until on July 9th all semblance of control for bars, plates and hoops was definitely abandoned. Control was maintained over girders and semi-finished material, but even this broke down at the close of last month. Prices for this material will now doubtless fall still further and render the position of British makers still more difficult.

Coal Trade Depression.—This week there have been issued the reports of the independent accountants for the South Wales coalfield for the three months ended July and for the Scottish coalfield for the months of June and July. Both show much less favourable results than those under the previous audits. In the South Wales coalfield there was a decrease in production from 11.2 million tons to less than 10.2 millions, and this diminished output was accompanied by an increase in the costs of production and a slight decrease in the pithead proceeds. Total costs per ton of coal raised have reached 14s. 1.19d., compared with 13s. 8.80d. in the three months ended April, while the pithead price was 14s. 1.86d., compared with 14s. 3.51d. The effect of these altered conditions was a decrease in the profits from £314,324, or 6.71d. per ton, to £28,311, or 0.67d. per ton. The economic wage certified by the auditors under the terms of the agreement providing for the distribution of the net proceeds in prescribed proportions between profits and wages was only 8.66 per cent. on the 1915 basis rates, compared with 15.05 per cent. under the previous audit. The miners, however, are secured a minimum wage of 28 per cent. above the 1915 basis rates, and the deficiency due to the obligation on the owners to finance the difference between the certified and the minimum wage exceeded £600,000, and increased the total deficiency carried forward to over £15½ millions. Thus, the trading results in the three months ended last July were the least favourable since the three months ended last October, and it seems probable that the audit for the three months ended next October will show a considerable loss. The audit for the Scottish coalfield shows a trading loss for June of £113,758, or 11.66d. per ton, and for July of £124,574, or 1s. 2.79d. per ton. The tonnage raised during the two months was only 4.3 million tons, compared with 5.5 millions in April and May, and nearly 5.7 million tons in February and March. Since the early part of the year the average proceeds per ton have declined from 12s. 1d. to 10s. 11½d., while the costs of production have increased from 11s. 6d. to 12s. 2d. In the first three months of the year the audits show a credit balance of about £230,000, but in the three months ended July the Scottish industry suffered a loss of £307,000. The economic wage certified by the auditors was 56.53 per cent. above the basis rates of 1888, but the Scottish agreement provides for a minimum wage of 110 per cent. above the basis rates, and the deficiency due to the payment of the minimum wage was £214,977, which increases the deficiency carried forward to £7,308,557.

Our Index Number.—Another month has passed with no clear evidence that the protracted fall in wholesale prices has yet come to an end. At the end of August our index number stood at 76.1 as compared with 77.6 on July 31st, a fall on the month of 1.9 per cent., following a previous decline of 1.5 per cent. As compared with a year ago the fall shown amounts to 18.7 per cent. Recent movements of the group figures are shown below:—

AVERAGE, 1927 = 100.					
	Aug. 1929.	May 1930.	June 1930.	July 1930.	Aug. 1930.
Cereals and meat	101.3	82.0	82.2	84.2	82.5
Other foods	86.2	79.0	77.8	76.3	75.2
Textiles	91.7	71.1	66.5	63.6	61.7
Minerals	96.3	84.3	82.8	82.1	81.5
Miscellaneous	91.0	84.4	84.1	81.5	79.7
Complete Index	93.6	80.6	78.8	77.6	76.1

Once again the most pronounced decline was that recorded by the textiles group, in which the price of all the items, except wool and silk, fell sharply. In raw cotton the decline was particularly marked. Among foodstuffs, in whose case a moderate recovery last month was due mainly to a seasonal rise in the cost of potatoes, movements were irregular, but the trend on balance was downwards. Barley, oats, rice, bacon and tea were dearer, but there were substantial falls in the price of cocoa, cheese, butter and beef. In the minerals group, the tendency of non-ferrous metal prices showed more satisfac-

tory signs of having re-attained equilibrium, but pig iron was significantly cheaper. Among the miscellaneous commodities, linseed oil, tallow, rubber and creosote all declined. Changes as compared with a month and a year ago are set out in detail in the following table:—

	Inc. (+) or Dec. (-) per cent. compared with			Inc. (+) or Dec. (-) per cent. compared with	
	Month Ago.	Year Ago.		Month Ago.	Year Ago.
Wheat, Foreign	- 2.6	- 36.3	Flax	- 3.6	- 20.6

Silk	...	...	Miscellaneous	- 2.2	- 12.4

In the next table we show the course of our index number during the last three months in comparison with the annual averages for 1924, 1928 and 1929, the figures in each case being converted to a percentage of the average level of 1913:—

AVERAGE, 1913 = 100.						
Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168.5	215.8	214.7	149.3	122.6	166.2
" 1928	152.9	189.7	165.0	115.2	111.2	140.9
" 1929	143.0	173.5	144.7	119.6	105.0	132.8
End Aug., 1929	149.5	174.3	143.9	120.4	105.6	134.6
" June, 1930	121.3	157.3	104.4	103.5	97.8	113.2
" July, "	124.2	158.3	99.8	102.7	94.6	111.5
" Aug., "	121.7	152.1	96.8	101.9	92.5	109.3

If 1924 be taken as 100, the current figure of our index number works out at 65.8, as compared with 67.1 at the end of July and 80.8 a year ago.

The Forth and Clyde Canal.—Seldom can an economic project have been so witheringly condemned by the committee appointed to examine it as the proposal to join the Forth and the Clyde. The canal would probably cost over £50 millions (twice as much as the Channel Tunnel); the return on the capital, if any, would be negligible, and there might not even be enough revenue to cover maintenance and working expenses; construction could not be begun for three or four years and the peak of employment would not be reached until 5-8 years hence. On the other hand, the canal would not be of much use to the trade with North Europe or North America, the shipping interests think it would be of little use to the coastwise trade, and the committee do not think that it would benefit either the coal or the fishing industries. Finally, it would apparently be regarded as a local nuisance by reason of the obstacles it would present to communication between the districts on either side of it. In short, a thoroughly naughty proposal in every sense of the word. Considering what the railways have to meet in the shape of road and air competition it certainly would seem an anachronism to go back yet another stage in the evolution of transport, and it is well that this very decided committee has administered such a thorough *coup de grace* to the proposal.

* Cmd. 3658. H.M. Stationery Office. 1s. 6d.

International Cotton Statistics.—The annual cotton statistics issued this week by the International Federation of Master Cotton Spinners' Associations reflect the depressed state of trade in the world cotton industry. According to the Federation, writes our Manchester correspondent, the total world's mill consumption of American cotton for the year ended July 31st last was 13,023,000 bales, as against 15,076,000 bales in the previous season. The consumption of East Indian was 6,087,000 bales, against 5,178,000 bales; consumption of Egyptian 937,000 bales, against 987,000 bales; and consumption of sundries 5,162,000 bales, against 4,639,000 bales; making a total consumption of 25,209,000 bales, against 25,882,000 bales to July, 1929. The feature of the returns is the big decrease, amounting to 2,053,000 bales, in American cotton consumed, and the large increase of 909,000 bales in the consumption of East Indian cotton. The consumption of American cotton in Great Britain during the past six months amounted to 594,000 bales, against 880,000 bales to January 31st, and 939,000 bales for the six months ended July 31st last year. The total world's mill stocks of American cotton on July 31, 1930, were 1,985,000 bales, as compared with 2,129,000 bales at the same time in 1929. According to the International Spinners' Federation reports, the amounts of short time worked in each country during the past six months is as follows, the figures denote the stoppage in weeks of 48 hours:—Great Britain, 10.77 weeks; Japan, 8.56 weeks; Canada, 6.21 weeks; Austria, 5.44 weeks; Switzerland, 5.20 weeks; China, 3.51 weeks; Norway, 3.38 weeks; Poland, 2.54 weeks; France, 2.41 weeks; Belgium, 2.19 weeks; and Italy, 1.60 weeks. In the English cotton industry, 61 firms spinning American cotton and controlling 4,029,741 spindles were completely stopped during the half-year ended July 31st. In the Egyptian section eight firms with 342,901 spindles were completely stopped during the six months. Firms owning 1,219,968 spindles have been closed indefinitely during the period under review.

An Interesting Yarn Offer.—Our Manchester correspondent writes:—There has been considerable interest throughout the cotton industry at the new move made by the Lancashire Cotton Corporation towards recapturing some of the lost trade in cotton piece goods. The Corporation has been carrying out experiments with regard to the production of low-quality yarns, and all manufacturers of coarse fabrics have now been advised that the Corporation is prepared to sell certain yarns at a very low price in order to enable cloth to be produced on a cheap basis, so that it will compete with the products of Far Eastern competitors. The yarns are 16's and below, Weft paste bottoms; 14's and below, Twist Cop paste bottoms; and Ring Beams 12½'s and below. The prices range from 6½d. per lb. for 12's Weft and below, and 7½d. for Ring Beams 12½'s and below; and as all prices are based on 6d. futures the cheapness of the yarns need not be emphasised. This is the first attempt of the corporation to provide manufacturers and merchants with a yarn at a very low price. The yarn has been tried out on the Corporation's own looms with excellent results, and a large number of manufacturers have already made arrangements to experiment in the manufacture of the particular type of cloth which can thus be produced.

Equitable Life Assurance Society.—The amount of new life assurance business completed in 1929 by this society was £965,264, compared with £1,002,328 in 1928, but the chief feature of interest in the Equitable new business is the increasing degree of diversification which now characterises it. For, in addition to life assurance business, a large sinking fund account is maintained, and a big volume of business is transacted on the basis of deferred or immediate annuities. Thus, in 1929, new sinking fund policies were issued for £174,674, compared with £110,652 in 1928; deferred and contingent annuities were issued carrying an ultimate liability of £97,761 per

annum, compared with £41,859 per annum in 1928; and, in addition, consideration money for new immediate annuities was received for £34,349, compared with £14,727. In accordance with the society's usual practice, a statement is embodied in the report of the death claims, analysing and comparing the amount paid out with the original sum assured. From this it appears that one claim occurred last year in respect of a policy effected as far back as 1854 and in that case the amount actually paid out was more than five times the original sum assured. The next example is of a policy effected in 1859 whereunder the amount paid out was over 4½ times the original sum assured, and numerous cases are quoted where the amount paid out exceeds twice the sum assured. These remarkable results have been achieved by the accumulation of bonuses, which in the case of the Equitable have, particularly for older lives, been distributed at a very high rate, though it might perhaps be argued that the ability to pay such large bonuses is merely a reflection of the fact that the premiums charged were at an unnecessarily high rate, thus reducing the death cover in the early years and impairing the value of the policies from the point of view of protection. The balance sheet shows two changes of interest. One is an increase in British Government securities held from £220,000 to £366,000, the latter amount now constituting rather less than 5 per cent. of the total balance sheet assets. The second change is represented by an increase in ordinary stocks from £57,000 to £253,000, in addition to which the society holds the whole or the greater portion of the stocks of the Reversionary Interest Society, the Equitable Reversionary Interest Society, Ltd., and the University Life Assurance Society.

Scottish Amicable Life Assurance Society.—During 1929, the 104th year of its history, the Scottish Amicable passed another landmark: the total funds for the first time exceeded £10,000,000. The new life business secured, however, was again rather lower than before, the amount being £1,235,527. The real decrease, moreover, is rather greater than £32,000, as shown in the report, since the 1929 business was assisted by a considerable increase in single premium assurances—a source which will, of course, not be open to the society in future under the new surtax provisions. There has been an increase in the amount paid away in death claims, from £389,000 to £436,000, and the chairman explained in his speech that this increase was due to deaths having occurred to an exceptional extent among larger policyholders. Apparently, however, the incidence continues to be favourable, and, according to an interesting table showing the age distribution of the claims, the average age at death was 66.5 years. Claims occurring as a result of the maturity of endowment assurances have tended to rise substantially within recent years. In fact, the amount paid out in this way during the four years of the current quinquennium was over twice the corresponding amount during the four years of the preceding quinquennium, the actual figures being £1,058,000, as compared with £456,000. This result, of course, is only to be expected from the increasing popularity of endowment assurances, which commenced as a form of policy about 30 years ago. The expense ratio in 1929 worked out at 12.8 per cent., compared with 12.5 per cent. in 1928, and is well within the proportion of premiums reserved for expenses in the valuation, namely 20 per cent. The net rate of interest earned on the funds registered a small advance, from £4 13s. 6d. per cent. to £4 14s. 3d. per cent., and the balance sheet indicates that a further movement of funds has occurred during the year out of British Government securities into debentures, preference and particularly ordinary shares, the amount invested in the latter now being 10 per cent. of the total balance sheet assets. In the course of his speech the chairman revealed that, notwithstanding the heavy depreciation in market values last year, the actual loss suffered by the Scottish Amicable amounted to less than 5 per cent. of the values of Stock Exchange securities, and that these reduced values are still substantially in excess of the book values.

Mercantile and General Insurance Company, Ltd.—

This company is a reinsurance company with important connections on the Continent. Reinsurance companies habitually operate on a very small margin of profit, and, being precluded by their nature from sharing in the most profitable section of fire business, namely, private house business, they are doubly affected when, as was the case last year, fire losses show a world-wide increase. Thus, in 1928, there was a profit of £19,824 on a premium income of £709,000 derived from fire and miscellaneous business, but in 1929 a loss of nearly the same amount was registered on a premium income of some £30,000 larger. In spite of the company's efforts to limit its commitments in marine insurance, the account again shows a loss, although the amount on this occasion, namely, £6,976, is a good deal smaller than that for 1928, namely, £11,739. Combining these figures, and allowing for items debited to profit and loss account, the total loss on trading in 1929 was £35,604, compared with a loss in 1928 of £7,026. Interest earnings exceeded £35,000, compared with which the dividend costs only £5,000. Owing to the increase in capital, the rate of dividend is 5 per cent., free of tax, compared with 8 per cent., but the payment takes £5,000 instead of £4,880. In addition to fire and marine business, the company has a rapidly growing life account, which undertakes reinsurance business only on a without-profits basis, largely from foreign connections. The life fund now amounts to £336,000, and the premium income to £87,000.

Fire Losses.—Since the statistics of fire losses were last commented upon in these columns, the tendency towards reduction of fire wastage in the United Kingdom has continued. The recent publication of the statistics for July (as compiled by *The Times*) show that the total losses for the first seven months of the year are £4,987,000, compared with £7,234,000 for the corresponding period of 1929, which, it will be remembered, was responsible for an unusually heavy fire wastage. The statistics, however, of fire losses of the United States and Canada during July (as compiled by the *Journal of Commerce*, New York) indicate an increase from \$31,985,493 in July, 1929, to \$34,847,750 in July, 1930. Detailed monthly figures during the last three years are as follows:—

	1928.	1929.	1930.
United Kingdom:—	£	£	£
January	710,000	1,086,000	1,387,000
February	557,000	733,000	632,000
March	448,000	1,677,000	796,000
April	588,800	1,160,000	600,000
May	858,000	930,000	546,000
June	576,000	843,000	421,000
July	754,400	805,000	605,000
Total for 7 months	4,492,200	7,234,000	4,987,000
August	713,400	1,210,000	...
September	760,800	1,126,000	...
October	1,370,600	883,000	...
November	583,400	598,000	...
December	708,800	733,000	...
Total for 12 months	8,629,200	11,784,000	...
United States and Canada:—	\$	\$	\$
January	43,260,800	44,713,825	42,847,000
February	41,105,500	41,520,290	43,206,940
March	30,377,000	41,277,814	42,964,392
April	25,980,600	36,845,795	43,550,996
May	23,202,000	32,129,408	38,415,142
June	11,123,000	33,605,663	31,818,266
July	17,106,400	31,985,493	34,847,750
Total for 7 months	192,155,200	262,078,288	277,147,486
August	17,723,600	30,446,893	...
September	17,182,800	29,249,355	...
October	22,414,160	31,652,385	...
November	20,587,800	29,061,860	...
December	31,935,400	39,215,338	...
Total for 12 months	301,267,560	422,215,128	...

The increase of nearly 9 per cent. in American fire losses in July is accounted for to a large extent by the prevalence of drought conditions over the greater part of the country during the period in question.

Money Market — Conversion Plans — Agriculture — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 27.

WITH the near approach of the next income-tax payment date the money market remains as easy as it has been any time this summer. It is apparent that nothing more than a ripple will be caused by month-end dividend payments and the Labor Day holiday currency requirements, estimated at \$100,000,000, about 40 per cent. of which probably will not return from circulation until next winter. Call funds are still quoted on the Stock Exchange at 2 per cent., but bankers are unable to place all their surplus in the "open" market at 1½ per cent. They are reluctant to lower rates, because they do not wish withdrawal of interior funds, and they feel that further concessions would not develop new demand. Speculation on the Stock Exchange is at low ebb, the daily volume being around 1,500,000 shares, and less and less money is needed to handle the operations, which are largely professional. A further decline of \$27,000,000 last week in brokers' loans brings that item to \$3,128,000,000, the lowest since July, 1927.

Bankers expect that the Treasury will take advantage of current money ease to refund some of its short-term obligations. On September 15th it has relatively small maturities, consisting of \$351,000,000 of certificates of indebtedness and, later in the month, \$50,000,000 in discount bills. Most likely both issues will be refunded. There are outstanding three series of 3½ per cent. notes, due March 15, 1932, totalling about \$1,500,000,000. One series of \$674,000,000 can be called for redemption at par on March 15th next, provided notice be given next month. Since the Treasury has no maturities for next March, in all probability it will announce a plan for retiring the Series "A" notes.

If no financing be done next spring, a good deal of disturbance to the money market might take place, in view of the heavy income-tax collections. The market expects replacement of the 3½ per cents. with short-term obligations, since the long-term bond issue for them would not be economical. If the notes be called at par, holders will, of course, lose the current premium; the notes are quoted around a 2 per cent. basis.

In addition to the notes, the Treasury is making plans for meeting Liberty Bond maturities within the next few years. First Liberty 3½ per cents., of which about \$1,500,000,000 are outstanding, can be called June 15, 1932, with six months' advance notice. They mature in 1947. The Fourth Liberty 4½ per cents., about \$6,000,000,000, do not become callable until October, 1933. Discussion of a refunding plan for this issue is regarded as rather premature. In the first place, the Treasury must occupy itself first with the Treasury notes. Secondly, a current market premium of about 3 per cent. on the Fourth Liberty 4½ per cents. makes it difficult to devise a refunding issue which could be offered to holders on a basis assured of success while at the same time saving money for the Treasury.

A coupon bond of ten to fifteen years' maturity bearing 3½ per cent. has been suggested, but it is doubtful if bondholders would take kindly to it. They could expect the new issue to sell at 103 or higher, perhaps, but the scarcity value imposed upon the unconverted portion of the 4½ per cents., in case some holders failed to respond, would boost them higher than the best levels at which the conversion loan could sell. In addition, of course, the non-converters would have a higher coupon. Con-

version of the First Liberty 3½ per cents. presents similar obstacles at this time, although the money market is favourable to a large refunding operation.

This week brought a further weakening in time rates, four months' money falling one-quarter of 1 per cent. to 2½ per cent. Commercial paper also weakened, a reduction of a quarter taking place, which attracted a good deal of attention, inasmuch as at this season rates usually harden. The quotation of 3 per cent. for best names compares with 6 per cent. a year ago at this time. Softening in money is, of course, another reflection of slow trade and conservative views on the prospect for recovery, although the cheap money policy of the Federal Reserve Banks is a factor.

Commercial banks are having a difficult time in keeping their funds at work. Denied the proper outlet through loans to trade and industry, they are scrambling for commercial paper, the supply of which is not increasing much, and which offers better yields than most other short-term investments. Commercial loans of reporting member banks in leading cities (estimated at 40 per cent. of the banking resources of the country) are about where they were at the middle of July. In the same period last year these loans rose by \$182,000,000. They now stand \$948,000,000 under last year. Meanwhile the banks are also buying bonds steadily. This week's statement of reporting banks shows a further increase of \$105,000,000 in investments, bringing the total to a new high record of \$6,300,000,000. Investments stand \$855,000,000 higher than a year ago. Total loans of reporting member banks are \$143,000,000 less than this time last year, and reserves with the Federal Reserve Banks are \$157,000,000 larger.

Markets for bonds are advancing steadily under the influence of cheap money, the indifferent trade prospects and the lack of new offerings. Even after the Labour Day holidays bankers do not anticipate great activity in the new capital market. Shares also are improving moderately, on a reaction from the excess of gloom prevailing up to a short time ago rather than on actual improvement in business. Chairman Legge, of the Farm Board, has performed a good service in setting out facts on the agricultural situation. He asserts that the great farming regions of the Middle West and upper Mississippi River and Missouri River Valleys "will enjoy almost, if not fully, as good or better farm incomes this year than in 1929." He finds the drought serious only in the tiers of counties adjoining the Rocky Mountain region and in some of the Southern and Border States. His observation that "there has been too much conversation and misinterpretation of facts regarding the drought," which has "resulted in the mistaken impression that the damage has been widespread throughout the agricultural States, resulting in a decrease in farm incomes," is warmly approved in Wall Street.

Some scattered reports of a seasonal upturn in trade are found, but in the main the pace has not quickened. Unemployment is about as large as ever. Estimates compiled from the Census records, covering about half the country, place the total at 2,527,000, but these figures are read with a good deal of caution. In the twenty-eight States for which figures have been received the unemployed are 2.06 per cent. of the population. Motor production is increasing but slowly, and the July output, as announced by the Department of Commerce, was the smallest for any month since last November and the lowest of any July in a good many years. Freight traffic on the railroads is still at the 1922 level, although the earning statements for July show improvement, compared with last year. Whereas in the first six months the net railway operating income was about 34 per cent. under 1929, in July it apparently has been only 30 per cent. lower. Steel industry operations are rising moderately.

FRANCE.

Curtailment of Public Expenditure — Foreign and Colonial Investment — Iron and Steel Production.

(FROM OUR CORRESPONDENT.)

PARIS, September 3.

M. TARDIEU has confirmed by definite action the announcement he made at Nancy recently to the effect that economy of a very real character is to be the outstanding feature of the Budget for 1930-31. "There is a limit to taxpaying capacity," he said, "and that limit has been reached." Hence the nation has heard with no surprise, although with deep satisfaction, the Premier's statement that the next Budget must involve no increase of departmental expenditure.

From the moment he realised that the various draft estimates included fresh expenditure totalling between 5,000,000,000 francs and 6,000,000,000 francs, M. Tardieu appointed seven inspectors attached to the Treasury, with definite instructions to comb out every possible item of proposed additional expenditure from the departmental estimates. The Premier and Minister for the Interior has proved his sincerity by approving "cuts" of 17 per cent. in the draft estimates for his own department, which have now been brought down to 16,000,000 francs lower than the total voted under the current Budget. M. Germain Martin, the Minister for the Budget, is reported to be taking a special interest in bringing to light as many as possible of the numerous hidden increases of expenditure that have crept into some of the recent Budgets owing to the excessive zeal of many of the permanent officials. A practice has sprung up of securing approval for expenditure which apparently applies only to the current Budget but which really, through skilful "wangling" by the draughtsmen, automatically sanctions the inclusion of such increased expenditure in future Budgets also. The present Budget estimates are stated to include something like 2,000,000,000 francs of expenditure which has thus escaped all real parliamentary sanction. Ministers are to present to next Saturday's Cabinet Council the lists of reductions in demands for additional credits which they have succeeded in imposing on their own departmental permanent officials.

Both for economic and political reasons, the attention of French public opinion is being more and more closely focused on the need for colonial development, and there are many signs that this question is rapidly assuming greater importance. Bound up with it is the question whether French financial policy shall in future tend towards fostering, as in the past, the investment of the savings of the nation in purely foreign issues, or shall be directed towards utilising the refurbished woollen stocking primarily for the development of purely French industry and well-being. The Bourse, as might be expected, is clamouring for free trade in all kinds of foreign stocks, as before the war, and is loudly demanding the abrogation of the protective measure, imposed during the war, which renders Governmental approval necessary before any additions can be made to the list of foreign issues quoted in the French market.

During the ten years that ended with 1904 the French invested the huge total of 16,000,000,000 francs in all kinds of foreign loans, with the result that in the year mentioned, out of 148,000,000,000 francs representing the nominal capital value of the issues quoted on the Paris Bourse, 81,500,000,000 francs consisted of shares and bonds of foreign issue, and only 66,500,000,000 francs of French internal issues. By 1910 the proportions had become still more striking. Out of 6,000,000,000 francs of new issues in that year, 5,220,000,000 francs were furnished to foreign borrowers, and only 780,000,000 francs subscribed for French internal purposes. Eight loans were made to Roumania, 11 to Sweden and Brazil, 13 to Serbia, 16 to Russia, and 18 to Norway, and innumerable others to all kinds of foreign governments, municipalities and commercial companies. The effect was that, when the war broke out, banks and other financial institutions were almost choked with scrip for which it was

impossible to find purchasers, and a disaster was staved off only by the universal moratorium which became imperative.

The one thing that is now preventing a repetition of pre-war conditions in this respect is the fact that (as already mentioned) no foreign loan can nowadays be issued in this country except after formal approval by the Government. The majority of French opinion is probably in favour of the maintenance of this law, but the Government is being strongly pressed by powerful interests to authorise the admission of a large number of additional foreign issues to the market here, as a means of avoiding further gold imports, accumulation of still larger stocks of foreign exchange, and inflation of the note issue.

It is possible that a way of compromise between economic desirability and the risk of excessive foreign lending may be found by the issue of a number of badly-wanted loans to the French colonies. One of the first matters to receive attention from the Chamber after the holidays will be the Bills sanctioning the issue of loans totalling 3,600,000,000 francs to five of the French colonial administrations (French West Africa, 1,750,000,000 francs; Indo-China, 1,250,000,000 francs; Madagascar, 700,000,000 francs; Togo, 65,000,000 francs; Cameroons, 15,000,000 francs). The greater part of this money is to be used for economic development, with a view to rendering the Motherland less dependent on non-French supplies of certain food-stuffs and raw materials. It is interesting to note that the commercial exchanges between France and her colonies and protectorates have for some years past resulted in a handsome profit to the Motherland. During the first half of the present year French exports to the colonies and protectorates totalled 4,722,000,000 francs, while imports from the same territories amounted to 2,902,000,000 francs, thus leaving a balance of 1,820,000,000 francs in favour of internal home industries.

Iron and steel production figures for July indicate an increase on the month of 19,000 tons of iron and 36,000 tons of steel. The total output of pig iron was 860,000 tons, against 841,000 tons in June, and monthly averages of 870,000 tons in 1929, 882,000 tons in 1928 and 749,000 tons (Alsace-Lorraine plants included) in 1913. The tonnage of crude steel was 789,000 tons in July, against 753,000 tons in June and monthly averages of 806,000 tons in 1929, 791,000 tons in 1928 and 559,000 tons in 1913. Both steel and iron prices continue to fall, and there are signs that all is not going well with the European International Steel Entente. Experts here regard the recent developments as an official recognition of the impossibility of imposing strict discipline on all its members, and as foreshadowing what would be for all practical purposes the dissolution of the Entente. At the same time, representatives of the British, French, German, Italian, Austrian, Swiss, Hungarian and possibly Scandinavian and American groups of iron merchants are to meet at Luxemburg on September 17 with a view to reviving the commercial relations that existed between them before the war. Price problems and the situation of the various markets will be among the questions to be examined.

GERMANY.

Financial Programme — Taxation and Housing — Agricultural Assistance — Problem of Large Estates.

(FROM OUR CORRESPONDENT.)

BERLIN, September 3.

THE Government has now published an outline of its financial programme, and the expectation is confirmed that its principal intention is to reduce the so-called property taxes, special levies on land and manufacturing industries which are raised by the States and the Communes, in addition to the general income and property tax. According to the Government announcement, this reduction is to begin as from 1931. It is difficult, however, to see where the money is to come from. It is, of course,

out of the question for the Communes, which already are wrestling with almost greater financial difficulties than the Reich, and for the States which, with the exception of Prussia, are very little better placed (the Bavarian Government has just been defeated on a question of raising 8,000,000 Reichsmarks) to forgo any of the income they derive from the property taxes. Their reduction, therefore, depends on the possibility of offering some substitute for them to the Communes and the States, but that would only be possible by developing the system of consumption taxes. This, however, is strongly opposed by influential groups in the Government Coalition, and the possibility of overcoming this resistance depends on the results of the election.

The Government has intimated that it proposes to adopt another method. In Germany there is a very substantial rent tax on all dwellings which were built before the end of the war, and hitherto half its yield has been devoted to the promotion of housing. It is lent by the Communes at a very low rate of interest of 1 to 3 per cent. to builders of houses so that, when supplemented by a bank mortgage at a rate of 9 or 10 per cent., it enables the building to be financed at an average rate of 4 or 5 per cent. Without these cheap mortgages it would have been quite impossible to continue the building of houses in Germany, for in spite of reductions the rents of new houses, owing to the very great rise in building costs, have been almost prohibitive for the mass of the population, so that most of the new houses had to be let to members of the middle class, and since the depression have been almost impossible to let at all.

The Government now desires to use, for general financial purposes, that part of the rent tax which has hitherto been used for assistance to housing. It is not intended that building should thereby be in any way restricted, but only that it should be financed to a greater extent from the capital market. If that were done, however, it would be exceedingly difficult to find a solution of the interest problem, and an equally serious difficulty would arise in the additional burden which would thus be thrown on the capital market. From the economic point of view, the building of houses out of the proceeds of taxes has hitherto constituted an addition to capital. The accumulation of capital in Germany has proceeded far too slowly, and all experts are agreed that any financial reform should have as its first object to remedy this. The present plan of the Government in so far as it relates to rent taxes would produce precisely the opposite effect.

The remainder of the Government programme is concerned with objects, as for example the relief of the Treasury from the fluctuating demands of unemployment insurance, which are certainly desirable but hardly attainable. The programme has not given the impression that the Government has a clear, decisive, and practicable plan for dealing with the present difficulties. True, the Government could hardly, in present conditions, promise definite reliefs within a stated period, and the disappointment which their programme is calculated to occasion in many quarters may, to some extent, be reckoned to their credit as a result of praiseworthy foresight. It might, however, have been possible, without making delusive promises, to put forward a programme which would have roused more confidence in its prospect of being carried out, and that would have had a very sound psychological effect on economic conditions in Germany.

The programme for the relief of agriculture in Eastern Germany (*Osthilfe*) is being carried out only with considerable friction. The emergency decree of the President contemplates co-operation between the Government of the Reich and the Prussian Government. As the chief purpose of the programme is the substitution of cheap long-period mortgage credits for the fluctuating debts of those farmers who are in financial difficulties, with a view to forcing some concessions from creditors, it is only practicable to include in the programme those farmers who have a reasonable prospect of meeting their interest and redemption obligations on the reduced and cheapened loans. The remainder must be left to go out of business, and an attempt is to be made to use their land for the establishment of small holdings. The Reich and the Prussian State cannot agree as to the principle on which farmers are to be selected for the granting of the new credits. In this disagreement a considerable part is played by the difference of political colour between the Prussian Government, which is composed of Social Democrats, the Centre (Catholic Party) and Democrats, and the Reich Government, which is composed to a larger extent of the parties of the Right. The Prussian Government wishes to set up a very strict standard for distinguishing between farms which are, and farms which are not, eligible to receive further credit. It would like the Reich and the State jointly to guarantee new mortgages, and, above all, it wishes to avoid imposing upon the community, in addition to the sums which are to be given outright from the outset, a fresh burden for meeting the obligations under the State guarantee, simply in order to keep in existence the large agricultural holdings of the East. The agricultural-political advisers of the Prussian Government consider that the present system of land holdings in East Germany is a source of perpetual agricultural crises, and they see no purpose in attempting to maintain that system. The Reich Government, on the other hand, is unable to do without the political support of the agricultural organisations, in which the large landholders play a leading part. They are, therefore, firm in basing their policy on the present large holding system. Moreover, they are able to adduce an important practical argument in support of this policy—namely, that the establishing of small holdings is very costly (the cost of a self-supporting holding just large enough to pay its way amounts to about Rm. 30,000, half of which must in practice be given outright to the holder), so that it will be very difficult to utilise the land of East Germany economically if a large number of big agricultural estates are to be allowed to disintegrate.

The Reich is in the stronger legal position in this disagreement, because it has the power of supreme legislation, but Prussia has an important practical advantage as, in the administration of earlier programmes of agricultural assistance, it has built up a staff of trained experts, who are extraordinarily experienced in estimating the credit-worthiness of agricultural undertakings. This staff is under the control of the great agricultural credit institute of Germany, the Preussische Zentral-genossenschaftskasse. The Reich is dependent upon the assistance of this staff for the execution of the present programme, but the Rentenbankkreditanstalt, which was established by the Reich and has the strong support of the agricultural societies, is endeavouring, with the assistance of the local chambers of agriculture (the German chambers of agriculture are modelled on the chambers of commerce), to create a new organisation for the control of credit, to instil its own principles into it, and to secure its use in the execution of the *Osthilfe*.

Though the antagonism between the ideas of the Reich and of Prussia is not as keen in practice as it appears in the utterances of theorists on both sides, yet this struggle will have to decide whether the large landed properties of East Germany are to be maintained on approximately their present scale with the aid of public funds, or whether they are to be reduced even at the cost, if this would avoid economic sacrifices, of turning land which has hitherto been used for agriculture into State owned

forests. The importance of the question appears greater when it is remembered that the large land holdings of East Germany, together with those of Austria, are almost the only ones which have survived the post-war agricultural reforms.

HUNGARY.

Public Finance — Foreign Trade — Crops — Money and Banking — Balance of Payment in 1929.

(FROM OUR CORRESPONDENT.)

BUDAPEST, August 25.

THANKS to the latent reserves of the Treasury accumulated in the last five years, the financial year closed on June 30th without an actual deficit. According to the monthly reports published by the Finance Minister, the total gross revenue in 1929-30 amounted to 953.9 million pengös, and expenditure totalled 953.7 million pengös, leaving a small surplus of 0.2 million pengös. Although the total receipts of the Treasury are not much behind the revenue realised in 1928-29, which amounted to 964.9 million pengös, the budgetary situation is far from being satisfactory. Owing to the economic crisis prevailing throughout the last financial year, tax revenue in all categories declined, and the total gross revenue derived from taxation was only 774.2 million pengös in 1929-30, as against 844.3 million pengös in the previous financial year. The deficiency of 70 million pengös in the current tax revenue was made up by the increased return of the departmental receipts, which totalled 164.3 million pengös, as against 104.4 million pengös in 1928-29. This considerable increase is due to the fact that certain non-recurring revenue items were included, such as profit of minting silver coins, and interest on and repayment of advances granted by the Treasury in former years to local authorities and other bodies.

The prospects of the Treasury for the current financial year are not encouraging. The economic crisis is reflected in the diminishing tax revenue, and there is little hope that the receipts of the Treasury will be higher in the present Budget year than in 1929-30, on the basis of the present taxation. As increase of taxation is practically out of the question the only means of securing permanent budgetary equilibrium would be a ruthless cutting down of expenditure. If the Finance Minister succeeds in keeping to the expenditure limit as voted by Parliament of 895.7 million pengös for 1930-31, there need be no fears for budgetary equilibrium, but if that amount is exceeded the imposition of new taxes, however unpopular, will be absolutely necessary.

Foreign trade returns are very satisfactory. For the first seven months of 1930 exports amounted to 514.4 million pengös, against 480 million pengös in the corresponding period of 1929, and imports decreased from 629.8 million pengös in January-July, 1929, to 479.6 million pengös in the present year. The deficit of the past year, amounting to 149.8 million pengös in the first seven months, is replaced by an active balance of 34.8 million pengös. It is hoped that the coming months will further improve the trade balance, for in the absence of long-term foreign loans the country is compelled to finance its merchandise imports by the export of its own products. This development, which began in the middle of 1929, is very satisfactory, since it demonstrates that Hungary is capable of adjusting herself to the changing situation of the outer world. It is only natural, however, that while she is living on her own resources without the stimulation of foreign capital, economic conditions, aggravated by the low agricultural prices, are far from good.

Crop reports are disappointing. Both grain and root crop estimates are behind those of last year. Prices are the lowest ever recorded in the post-war period. The low prices of agricultural products and the difficulties of grain export seem to be bringing closer together the agrarians of Roumania, Yugoslavia and Hungary, but there is little evidence that a workable scheme will be found to defend the common interests of the Danubian agrarian countries

against the protectionist policy of the industrial States. The Sinaja Conference between Roumania and Yugoslavia was followed here with keen interest, but the fact that this conference dealt with an economic problem from its political aspects only shows that hopes for a united agrarian policy are premature.

The money market is easy. Short-term credits are abundantly offered at 3-3½ per cent., but owing to the economic crisis there is very little demand for new enterprise. The discount rate of the National Bank is 5½ per cent., and rates for good commercial paper are 5½ to 6 per cent. The low money rates mean a considerable saving for Hungary, as it is estimated that the country's borrowings on short-term accounts are between 500-600 million pengös. All the important commercial banks have published their half-yearly balance sheets. In spite of the economic crisis the volume of business was slightly increased and the high profits of last year fully maintained. There is little doubt that the banks will be able to pay the same dividend for 1930 as for 1929. A considerable portion of the profits realised by the banks operating with foreign funds is due to the cheap accommodation obtained from abroad and lent on short-term account in the domestic trade. On the other hand, losses were sustained from their security holdings, as quotations on the Stock Exchange have fallen by 10-20 per cent. since the beginning of the year. Owing to the absence of long-term loans the mortgage business of the banks does not show any development in the past six months. Negotiations with the Guarantee Trust Company, New York, and the Hambros Bank, London, for the centralisation of mortgage loan issues are making good progress. It is highly important that the long-delayed negotiations for the centralisation of mortgage loan issues should come to a successful conclusion, because the piecemeal borrowing of the Hungarian financial institution in New York and in London does not serve the interest of the credit of the country.

The balance of payments for 1929, as published by the Statistical Department, shows a deficit of 213.5 million pengös, as against 501.1 million pengös in 1928. This great improvement was due to the shrinkage of the merchandise trade deficit, which decreased from 370.3 million pengös to 22.6 million pengös. Hungary's balance of international payments is determined by two main factors, trade and borrowing from abroad. The biggest current item of the balance of payments against Hungary is the interest on long and short-term debt owed to foreign countries, which increased from 142.4 million pengös to 156.9 million pengös in 1929. The other current items do not materially influence the balance of international payments, as the surplus arising out of the emigrants' remittances, railway and shipping transit is offset by the deficit of tourist traffic and outgoings for insurance and commissions. The favourable returns for the first seven months of the current year justify the hope that the balance of payment for 1930 will show further improvement.

CANADA.

Crops — Business — New Government and Tariffs.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 16.

HARVESTING operations are now in full swing in Western Canada, and the crops are being reaped under favourable conditions. Estimates of the total yield of the prairie wheat crop still vary greatly, but an average figure of the experts' forecast is about 375 million bushels. Later-sown crops, which are not yet ripe, are suffering deterioration as a result of the ravages of rust, but the full extent of the damage is not yet known. Grain prices have lately shown some improvement, and the smaller yields of some European countries, combined with the failure of the maize crop in the United States, which will mean heavy calls upon wheat for poultry and other feed, offer a better prospect for the disposal of Canada's wheat crop than has existed for some time past. At the same time, there is a good deal of dissatisfaction among members of the wheat pools

with the performances of their managers. On August 12th, at Carman, the centre of the wheat-growing region of Manitoba, a meeting of dissatisfied pool members was held and a resolution was submitted to the effect that the provincial Government be asked to take the necessary steps to release pool members from their contracts. Mr Burnell, the chairman of the Manitoba pool, addressed the meeting in defence of the pool executive, and eventually an amendment was passed urging the members of the pool to stand by their contracts until they expired. This year the new "combine" machine is being used more extensively than ever on the prairies and has enabled so much human labour to be dispensed with that the railway companies for the first time in many years did not run any special harvest excursions to the Western provinces. In the Eastern provinces harvesting operations are well on the road to completion, and most of the field crops show an average yield.

General business conditions cannot yet be described as satisfactory. Manufacturing activities and the movement of merchandise remain at a substantially lower level than at the corresponding date in 1929, and there are no signs of any immediate improvement. However, if the export movement of wheat reaches the normal autumn volume it will put large sums of money in circulation among the Western farmers which should start a flow of orders from the West; and the raising of the tariff which is contemplated should at least temporarily increase employment in the Eastern industrial areas. But it will require a very substantial improvement in various directions for Canada to avoid a very difficult winter. As long as great basic industries like agriculture, mining, pulp and paper are experiencing a serious depression, there can be no hope of any general prosperity for the Dominion. This year's programme of new building construction showed considerable curtailment and comparatively little finishing work will be left over for the winter months. The number of people who have been admitted into Canada during the present immigration season is less than half as large as in the previous year, and from this date onward the Government intends to make the barriers against immigrants virtually prohibitive until conditions improve. The Canadian stock markets have also shown a recessionary tendency in recent weeks, and the prices of many seasoned issues have fallen to their lowest level for the year. The Federal revenues are still falling ominously, and in view of its commitments, which will entail heavy special expenditure, the new administration is faced with a difficult financial problem.

The change of Government which was a consequence of the general election was effected quietly at Ottawa on August 8th, when Mr R. B. Bennett announced the personnel of the new Conservative Ministry and took over office from Mr Mackenzie King. Only in the case of Mr Rhodes, the Conservative Premier of Nova Scotia, has he gone outside his immediate parliamentary following for his Ministers, and, while his Cabinet cannot be described as an assemblage of brilliant political talent, it contains a number of experienced politicians and a satisfactory infusion of new blood. One of its more gratifying features is the exclusion of certain veterans whose questionable claims to office had been strongly pressed. For the present, Mr Bennett has decided to take charge of the Ministry of Finance in addition to the Department of External Affairs, but, when he has returned from the Imperial Conference, he will look around for a competent Finance Minister. His chief lieutenant will be Mr Rhodes, who assumes charge of the new Ministry of Fisheries, and he will have the benefit of the services of Sir George Perley, the ex-High Commissioner, who joins the Ministry without portfolio.

The new Parliament will meet for a special session in the first week of September, and will be asked to pass a series of measures designed to fulfil the pre-election pledges of the Conservative leaders that they would deal effectively with the unemployment situation. The Ministry of Labour is undertaking a rapid survey of employment conditions throughout the Dominion and several provincial administrations have undertaken to co-operate with the Federal authorities in alleviating unemployment by winter work on the proposed trans-Canada-highway and other enter-

prises for which parliamentary authority will be sought. Apparently Mr Bennett also intends to go ahead immediately with the upward revision of the tariff to which he specifically committed himself during the campaign. As a preliminary step he has abolished the Tariff Advisory Board, a creation of the previous Government whose activities he had severely criticised. He proposes to substitute for it a new fiscal tribunal, to be known as the Tariff Commission, along the lines suggested by Sir Robert Borden before the war. Semi-official Press forecasts indicate that at the special session the Government will ask Parliament to sanction a number of emergency tariff adjustments for the purpose of conferring additional protection upon the textile and other key industries which are suffering from depression. The existing commercial treaty with France, which has been the target of persistent Conservative criticism, will be cancelled unless the French Government agrees to its drastic modification; and trade arrangements with twenty other countries, like Belgium, Denmark, Italy and Argentina—to whom the benefits of the French treaty were extended—will be affected by this move. The countervailing duties introduced in the last Liberal Budget are also to be abolished on the ground that Canada must not have any part of her tariff policy at the mercy of the decisions of Washington. The manufacturing interests are naturally pleased at the prospect of higher duties, but there is some apprehension about the possible consequences of a policy of extravagant protectionism, and New Zealand's plans for retaliating for the ban upon her butter by higher duties upon Canadian exports of motor-cars are causing considerable disquietude. The Liberal Opposition will be strong in debating power, and is certain to subject the fiscal proposals of the new Ministry to vigorous criticism.

The new Ministry has been forced to concern itself with the problem of marketing the Western grain crop, which caused so much worry to its predecessor. Soon after assuming office Mr Bennett and some of his colleagues held a conference at Ottawa with the Premiers of the three Prairie Provinces and representatives of the Canadian Bankers' Association, and it is understood that satisfactory arrangements for financing the marketing of the crop of 1930 were arrived at. The Federal Ministers made it clear that there could be no question of their extending any guarantees to the banks, as the three provincial administrations did during the crisis of last February, but in their capacity as administrators of the Canadian Banking Act they are in position to render very useful assistance to the banks in connection with the marketing problem.

ARGENTINA.

Business Conditions — D'Abernon Agreement — Subway Concession.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, August 10.

THANKS to reports of damage done by drought to the American crops, Argentine cereal prices have suddenly improved, exchange has moved in favour of the peso, and, maize shipments increasing on a market short of prompt tonnage, ocean freights are decidedly firmer. Coincident with this better feeling in the export trade comes increased inquiry on the part of importers. Their orders, especially in textile lines, have been singularly small for the past four months, thus leaving the market somewhat bare as regards supplies. Now, with the dread of a low exchange gradually lifting, there is a decided wish to buy in order that goods may be available when the tide really turns, which it is expected to do before the end of the year. Monetary conditions also favour expanding trade, since banks are finding themselves with steadily growing deposits and but a moderate demand for funds—a situation which has brought rates to an average of 7 per cent. for loans, with 3½ to 5 per cent. paid for three to six months' deposits, while there has been brisk buying of all Argentine national bonds. Banks' cable drawing rate on London is 4½d. and New York 119.10, and further substantial improvement may safely be pre-

dicted for the near future, even if no steps are taken to reopen the Conversion Office. That event would obviously have an instantaneous effect. Nor is it likely that it would lead to very heavy extractions of gold, inasmuch as the first rush to ship specie would be sufficient to drive the rate to a figure that would skim all the profit from the business for late comers.

In short, general conditions in Argentina have much improved during the last fortnight, nor is there reason to suppose that such improvement is but temporary. The reaction upon Argentine opinion brought about by the United States tariffs and by the possible changes which may be introduced in this respect in Great Britain, is not wholly unfavourable to trade. Various writers in the British Press, and notably Sir Malcolm Robertson, late H.M. Ambassador to Argentina, have hastened to correct the unfavourable feeling caused by Lord Beaverbrook's injudicious remarks about "gipsy labour," while the Argentine journals are also quick to observe that if the United Kingdom closes the door ever so little upon Argentine produce, thereby prejudicing Argentine trade, such a course hits directly at the income derived from the £430,000,000 British capital permanently invested in this Republic. It is interesting to note, especially if one holds the apparently unfashionable faith of one's fathers in the matter of Free Trade, that not only does Sir Malcolm come forward in a hurry to point out that Argentina must not be regarded as a foreign country when British tariffs are to the fore, but that the United States Ambassador paid a special visit to H.E. President Irigoyen in order to assure him that the United States Government was willing at the present time to effect tariff modifications which could be shown to be reacting unjustly abroad. Meanwhile commercial bodies here are calling for careful revision of all "most-favoured-nation" treaties, some twelve of which are actually in force, and the general impression is that far from being seriously damaged by the coming tariff war, Argentina looks like winning all round, provided that she holds to her traditional neutrality in international affairs.

As far as Great Britain is concerned Argentina's attitude is distinctly non-committal. The D'Abernon agreement still awaits the sanction of the Senate, and there is some reason to think that, to use the Spanish phrase, it will be a case of *esperame sentado*, or "take a seat while you wait"—perhaps for ever. Party political reasons are possibly more responsible for this attitude than any desire to go counter to Great Britain's wishes, but it ought to be clearly realised at home that a good many Argentines, while firm believers in a *beau geste*, feel that the matter ends there if circumstances make practical fulfilment difficult. The D'Abernon Mission was well received, hospitably treated, and given a good send-off. Had circumstances been such as to enable Argentina to float a loan in London, invest the proceeds in British material, and dispense with the use of credit and the purchase of material obtained elsewhere, the agreement would have been put to practical use. Circumstances having turned out otherwise, nobody is to blame if the practical results, viewed from the cold mercantile standpoint, are nil. The friendly feeling remains, and when material advantage can be obtained by recalling it, then, and not before, is the question of the agreement likely to come up anew.

Somewhat illustrative of this matter is the recent announcement that the Buenos Aires Municipal Council have granted a new subway concession to a Spanish company, the Cia. Anonima de Proyectos y Construcciones, notwithstanding that the technical committee appointed by the Intendente, or Lord Mayor, pronounced a decided negative when called upon to examine the company's proposals. They turned them down as lacking financial backing of a serious nature, and it seems highly probable that the actual construction of the lines will not be undertaken by the concessionaires. It is openly said that American capital may be counted upon, but that remains to be seen. What is certain is that the first line to be built of the four routes sanctioned will be at once the shortest, and the most profitable, running as it does from Retiro to Constitucion—a route comparable to City-Charing Cross.

Hence the concessionaires' willingness to accept the condition of a flat 10-cent fare, and their readiness to put down a deposit, running into some \$2,000,000 paper, for the subsequent construction of suburban lines. It may pay the company to forfeit the deposit and be content with the steady profits that the first line is certain to provide. Public opinion cares little one way or the other, provided something is done, and that soon, to relieve the present state of congestion. The effect of the subway on tramway receipts will be acute, but inasmuch as the line will take three years to complete, it will be some time before that effect shows up in the traffic returns.

Books and Publications.

WEALTH AND POVERTY.

IN *The Workers' Share** Mr Humphrey sets himself to expound the following thesis, as outlined in the first paragraph of his first chapter:—"The general standard is to-day so low, insecurity is so widespread and the poverty problem as a whole so vast and urgent, as to justify the conclusion that capitalism is incapable of coping with it. In short, capitalism has been weighed in the balance . . . and found to be gravely wanting." That this thesis is, in its entirety, not proven, a large section of Mr Humphrey's readers will certainly insist. The old stark antithesis between that which is and that which is not "capitalism" is less convincing to-day than it once was. Even in the circumscribed house of capitalism there are many mansions, and the civilised world is capable of evolving many more. We may therefore venture to doubt whether, in demonstrating the present breakdown of capitalism as sustainer and feeder of the toiling masses, Mr Humphrey has adequately "justified the conclusion" that capitalism is, of its very nature, incapable of coping with the situation. It may be—but to prove that it is would involve a series of finely-drawn definitions and an analysis of capitalistic organisation such as would clearly lie beyond the scope and practical intention of the present volume.

The thesis which Mr Humphrey does in fact attempt to substantiate is a somewhat narrower one, i.e., that the increased productivity achieved under the ægis of the capitalist system has been, and indeed still is, consistent with an intolerable incidence of poverty and with a rise in real wages wholly inadequate to meet the primary needs of the workers. And his method of substantiation is perhaps the most workmanlike and convincing method that he could have selected. It involves a minimum of rhetoric and a maximum of fact. Under the three headings of "Wages and Wealth," "Social Investigation" and "Present-day Wages and the Poverty Line," he has assembled in a compact space the summarised results of innumerable statistical inquiries into the volume and distribution of national income and property, the changes in real wages, and the incidence of poverty as measured by such eminent investigators as Booth, Rowntree and Bowley. Whatever may be said for or against the political intentions of its author, this is a very handy book for the student of social science.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Australia. By W. K. Hancock. (London) Ernest Benn, Ltd., 154, Fleet Street. 15s. net.

Books on various aspects of Australian economic and political problems have not been wanting lately, but this publication falls into a different category from any of them. Written by a historian who is a keen student of Australian problems, it constitutes an appreciation in which each of these individual problems falls into its proper perspective.

* *"The Workers' Share."* By A. W. Humphrey. George Allen and Unwin. 3s. 6d. (paper 2s. 6d.). pp. 92.

The British Year Book of International Law, 1930. (London) Oxford University Press, Warwick Square. 16s. net.

Eight articles by prominent international lawyers include: "The Indian States," by D. B. Somervell; "The Optional Clause (The British Signature and Reservations)," by Sir John Fischer Williams; and "The Proposed Amendments to the Covenant of the League of Nations," by Professor C. A. W. Manning. There are also shorter notes, reports of decisions of tribunals, and numerous book reviews.

L'Amérique et l'Europe. By Orestes Ferrara. (Paris) Les Œuvres Représentatives, 41, Rue de Vaugirard. 12 francs.

An interesting study, in which a Cuban statesman discusses, with great tolerance and understanding, the attitude of Europe to Pan-Americanism.

Economic Rhythm. By Ernst Wagemann. (London) McGraw-Hill Publishing Co., Ltd., 6, Bouverie Street. 15s. net.

A very thorough analysis of the phenomena of the trade cycle, in which the author makes the fullest use both of statistics and of the theories advanced by his predecessors.

Mathematical Introduction to Economics. By Griffith C. Evans. (London) McGraw-Hill Publishing Company, Ltd. 15s. net.

A fairly simple mathematical treatment of a group of economic problems.

International Labour Review, July, 1930. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Contains an interesting account of the Italian Corporations Act.

The Banker, August, 1930. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

Contains articles on the Australian Reserve Bank and the future of bank trustee work.

Banking for Advanced Students. By Percy G. H. Woodruff. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street. 7s. 6d. net.

A useful text-book.

Tariffs and Peace. By Professor Gilbert Murray. (London) National Council for the Prevention of War, 39, Victoria Street. 1d. net.

A pamphlet in which it is opportunely demonstrated that the building up of tariff walls is contrary to the spirit of internationalism on which alone the world can rely for the prevention of war.

Free Trade or Food Taxes? By the Right Hon. Sir Herbert Samuel, M.P. (London) Liberal Publication Department, 42, Parliament Street. 3d.

Protection versus Free Imports. By Ramsay Muir. (London) Liberal Publication Department, 42, Parliament Street. 3d.

British Agriculture and Free Trade. By Mr. Arthur Holgate. (London) Liberal Publication Department, 42, Parliament Street. 1d.

LONDON ELECTRICITY SUPPLY COMPANIES.

IN the *Economist* of August 25th we examined the prospects of five leading electricity supply companies operating outside the London area. Under the London Electricity Acts of 1925, the companies operating within an area of approximately 1,785 square miles—extending, roughly, from Windsor to Gravesend and from St. Albans to Reigate—are to be taken over by the Joint Electricity Authority, in 1971, on certain terms. The shares of these companies, therefore, fall into the class of redeemable securities, and in calculating their dividend yields allowance must be made for capital loss on redemption at par in forty-one years. The Acts allow these companies to charge such "standard" rates as will enable them to cover all expenses and interest on debentures, to pay preference share dividends, to provide sinking funds for the repayment of capital in 1971, and to pay dividends on ordinary shares at the rate of 10 per cent. up to 1931 (with 7 per cent. on the capitalised reserves) and at the rate of 7 per cent. from 1932 to 1971. If a company charges rates less than the "standard" the difference between its actual revenue and the revenue which would have accrued at standard prices is called "consumers' benefit." Such a company is entitled, if earnings permit, to pay on its ordinary shares, in excess of the standard dividends, a sum equal to one-sixth of the "consumers' benefit."

The companies whose *whole* undertakings come under the *regime* of the London Electricity Acts of 1925 are as follows:—City of London, South London (which, in company with the South Metropolitan, is controlled by the County of London), and all the constituent companies (except Metropolitan) of the London Power Company—namely, Brompton and Kensington, Central Electric, Charing Cross, Chelsea, Kensington and Knightsbridge, London Electric, Notting Hill, St. James and Pall Mall, and Westminster. The position of these companies was examined in detail in the *Economist* of June 22, 1929. It is impossible to predict what dividends these companies will be able to pay beyond the standard dividends. The following table gives the standard dividends allowed and the actual dividends paid in the last three years, together with (1) the current yield at present market prices and dividends, and (2) an estimated yield, including redemption at par in 1971, after making an allowance for dividends till 1931 at present rates and thereafter at 7 per cent.:

Company.	Standard Dividend to 1931.	Dividends paid.			Present Market Price.	Current Yield.	Yield for Redemption in 1971.
		1927.	1928.	1929.			
City of London	£ s. d. 10 0 0	% 10.0	% 10.0	% 10 0 0	34/6	5.80	3 16 9
South London	£ s. d. 8 11 7	% 8.5	% 8.5	% 8 10 0	27/6 cd	6.28	5 2 6
London Power Group:							
Brompton & Kensington	£ s. d. 8 10 8	% 8.6275	% 8.6275	% 8 10 8	27/-	6.32	5 1 0
Charing Cross	£ s. d. 8 3 2½	% 8.151	% 8.151	% 8 3 0	27/6	5.93	4 19 0
Chelsea	£ s. d. 8 16 8	% 8.875	% 8.875	% 8 16 8	27/-	6.57	5 4 3
Kensington & Knightsbridge	£ s. d. 7 19 10	% 8.0095	% 7.9921	% 7 19 10	27/-	5.92	5 1 0
London Elec.	£ s. d. 8 8 7	% 8.4285	% 9.00	% 9 0 0	29/9 ex	5.67	4 10 6
Notting Hill*	£ s. d. 0 13	% 13/7.636	% 14/4.006	% 16/7.817	7½	11.10	†
St. James and Pall Mall ...	£ s. d. 7 17 11	% 7.8954	% 7.8954	% 7 17 11	27/6	5.74	4 19 0
Westminster	£ s. d. 8 16 0	% 8.8	% 8.8	% 8 16 0	27/6	6.40	5 0 6

* "Consumers' benefit" has enabled Notting Hill to increase its dividends steadily.
† Notting Hill has not yet been able to capitalise its reserves.
‡ Standard dividend, 1931 to 1936, £8 0s. 6d. per cent.

The shares of these companies make a limited appeal to investors, in view of their redemption at par in 1971. It should be noted that the redemption yields are ex-

ceedingly low, but no allowance has been made for any dividend increases which may arise from "consumers' benefit." Interest in the London companies on the Stock Exchange is chiefly centred in the debenture stock of the London Power Company, which is of "gilt-edged" character. Each of the ten constituent companies of this group has agreed to provide its due proportion if the revenue of the London Power Company is insufficient to meet all charges and debenture interest. Actually the profits of the London Power Company last year were sufficient to cover its debenture interest 1.6 times. The total amount of debenture stock issued by the London Power Company is £13,748,400 and the present market price of the stock is £102½.

The "outer London" companies, whose undertakings fall within the scope of the London Electricity Acts *only in part*, are the County of London Electric Supply, North Metropolitan Electric Power, South Metropolitan Electric Supply, which is controlled by County of London, and Metropolitan Electric Supply, which is one of the London Power group.

County of London Electric Supply, with its subsidiaries, has wholesale powers over a wide area east of a line drawn approximately north and south from the centre of London, and stretching to the coast. Apart from its extensive metropolitan area, its system covers the greater part of the counties of Kent and Essex. The company has also an interest in the Bournemouth and Poole Electric Supply. The bulk of the company's territory is residential rather than industrial, but considerable industrial development is taking place both in Essex and Kent, and the opening up of the Kent coalfield may have far-reaching effects on part of its territory. The company's principal generating stations are at Barking (237,500 kw.) and Wandsworth (27,500 kw.), besides a small station in the City. Barking and Wandsworth are "selected" stations under the Central Electricity Board's scheme, and the Barking station is to be operated as a principal base load station for the south-east of England. It is unfortunate that the company is unable to publish separate accounts showing how much of its revenue and capital is affected by the provisions of the London Electricity Acts, or to present separate accounts of its subsidiary companies. Probably the company is earning on that part of its undertaking which comes within the London Electricity Acts a rate in excess of the 10 per cent. standard rate on its ordinary capital, so that when the standard rate is reduced to 7 per cent. in 1932 shareholders may not be affected, particularly as the company may increase its standard dividends on account of "consumers' benefit." It is also probable that, in view of the rapid progress of some of its subsidiaries, the declared earnings of the parent company understate the true earnings position.

The North Metropolitan area of wholesale supply extends from the northern fringes of inner London, including Willesden, Hampstead, Highgate, Wood Green, Tottenham and North Walthamstow, northwards and east over Middlesex, Hertford and Essex, as far as Royston, Baldock and Hitchin in the north and Bishop's Stortford, Harlow and part of Epping in the east. The company also possesses retail powers in a number of districts. The total area, covering 660 square miles, includes a rapidly growing residential population and a diversity of new progressive industries, such as automobiles, safety glass, films, etc. Among its large consumers are the Metropolitan Railway, London Midland and Scottish Railway, and a large number of local autho-

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
September 9. September 11.

The firmness which developed last week in industrial stocks was again in evidence, accompanied by a faintly perceptible tendency to withdraw money from gilt-edged stocks. The volume of business was certainly larger than for some time past. The extent of public participation, nevertheless, remained limited, and before the week ended the movement had lost part of its first careless rapture. In many cases stock was in short supply, the rise in prices thus being disproportionate to the volume of buying. On the whole, the market was disposed to interpret the past fortnight's events as a sharp rebound from an over-sold condition, but not much more.

A slight falling off in gilt-edged prices was attributed partly to a switch from less to more speculative investment, and partly to a resumption of the flow of gold to French vaults. War Loan was less firm, but Funding Loan improved before suffering a slight reaction like the rest. Optimistic views on the Gandhi "conversations" caused strength in India stocks, but Australians sagged on fears of political complications arising out of the Government's spartan budgetary programme.

Among foreign bonds, Brazilians enjoyed an all-round recovery, as a result of improvement in the milreis, short supplies of stock, and the near approach of large sinking fund operations. Mexicans were firmer on the ratification of the Debt Agreement, but political news from Argentina had an unwelcome sound. Chinese bonds were in demand, particularly the Tientsin Pukow railway issue, which attracted speculative interest on decidedly optimistic expectations of its becoming a charge on the Maritime Customs. Europeans were steady, though business was no more than moderate.

Home railways were among the ordinary stocks outside the orbit of the week's activity. Available supplies were more than equal to demand, and the continued bad showing of the traffic figures was the more unfavourably commented on by reason of last week's excellent holiday weather. The Underground figures, however, were again favourable, the new debentures reaching 4½ premium. Among foreign railways, Argentines were lower on a small turnover, but Leopoldinas recovered sharply in sympathy with Brazilian Government stocks. Canadian Pacific was less active.

Industrial shares opened uncertainly each day, but developed strength every afternoon. The past fortnight's developments are discussed in an Investment Note on page 452. Attention was concentrated mainly on recognised market leaders, such as Courtaulds, Imperial Chemicals and Dunlops. Austins and Leylands resumed their rôle of active counters in the motor share market. The movement, however, spread to sections formerly out of the picture. Textiles, for example, were supported on the view that the willingness of the Lancashire Cotton Corporation to sell yarn at nominal prices, to enable manufacturers to compete abroad, was part of a determined effort to tackle the industry's many problems. Iron and steel shares were also in greater favour, interest centring on Babcock and Wilcox, Dorman Long, and Vickers. Brewery and tobacco shares were in steady demand, and electrical shares were another active feature in the "investment" sections. A partial revival of interest in shipping stocks benefited P. & O., Cunard, and Furness Withy, but stopped short of Royal Mail. The Swedish group recovered part of its recent losses, but other international, which were marked up in anticipation of strong American demand, receded when this failed to arrive. Unilever and its satellite issues made ground on further bear closing and a partial renewal of outside demand. Bank shares were firm, apart from those of institutions operating in South America. Insurance shares were steady on a moderate investment inquiry.

(Continued on page 452.)

rities. The company's principal generating stations are at Willesden (25,000 kw.), Brimsdown (50,000 kw., to be increased to 150,000 kw.), and St. Albans. The Brimsdown station is remarkable for its technical efficiency. It uses pulverised fuel, and is equipped with a 25,000-kw. turbo-alternator, generating directly at a pressure of 33,000 volts. The London Electricity Acts affect this company only indirectly.

South Metropolitan, controlled by the County of London Electric, need not be considered in detail, as it operates only a small territory (in Kent) outside the scope of the London Electricity Acts.

The area of the Metropolitan Electric Supply covers an inner London district (Holborn, Strand, Bloomsbury, Paddington and Finsbury), and a western, northern and southern area in Outer London covering part of Buckinghamshire, Middlesex, Hertfordshire, Berkshire and Surrey. The company purchases the bulk of its power supply from the London Electric Power Company, to whom, in common with other London companies, it sold its generating station in 1927. Of the company's ordinary capital of £2,000,000, some £883,465 is considered to apply to the London area and £1,116,535 to the Western area.

The net profits and earnings of these companies in the last three years are shown in the following table:—

County of London Electric:	1927.	1928.	1929.
Net profits	£ 597,864	£ 665,951	£ 638,849
Preference dividends ...	193,500	196,396	199,291
Percentage earned	13.7	16.4	14.1
Percentage paid	7½	10.0	11.0
Carried forward	204,988	364,210	445,037
Ordinary capital	3,103,334	3,103,334	4,427,179*

* Including 1,106,795 shares issued in December, 1929, in respect of which cash had been received at December 31, 1929, amounting to £61,526.

North Metropolitan Electric:	1927.	1928.	1929.
Net profits	£ 311,393	£ 326,365	£ 355,492
Preference dividends ...	74,000	69,000	69,000
Percentage earned	20.7	22.7	19.9
Percentage paid	10.0	10.0	10.0
Reserve	100,000	120,705	126,548
Carried forward	19,042	28,202	28,146
Ordinary capital	1,275,000	1,275,000	1,600,000*

* Subsequent issue (in March, 1930) of £250,000 6 per cent. preference shares and £750,000 5½ per cent. debenture stock.

Metropolitan Electric:	1927.	1928.	1929.
Net profits	£ 227,630	£ 190,419	£ 202,130
Preference dividends ...	22,500	22,500	22,500
Percentage earned	14.8	11.7	12.5
Percentage paid	9.0	9.0	10.0
Reserve	...	29,272	32,033
Carried forward	83,508	87,149	84,746
Ordinary capital	1,500,000	1,500,000	2,000,000

The net profits are shown after allowing for depreciation, debenture interest and taxation, but as the companies may adopt different practices in making allowance for depreciation the figures of percentages earned must not be regarded as exactly comparable. The companies need not be unduly concerned by the present trade depression, in view of the considerable part played by domestic household demand in their sales of current, though each has an appreciable industrial load, which will be more closely affected. The chairman of the County of London, however, stated at the general meeting in April that for the first three months of this year there was an increase of 20 per cent. in the units sold over the corresponding period of last year, and a steady growth in the number of new consumers. Nevertheless, the ordinary shares of these companies have shared in the general reaction in the security markets:—

	Highest Price, 1929.	Highest Price, 1930.	Present Price.	Yield on last Dividends.
County of London	58/3	49/9	44/-	5.0
North Metropolitan	58/3	49/3	46/3	4.32
Metropolitan Electric	49/-	41/9	39/6	5.06

The shares of these companies may appeal to the investor on a long view. Their zones of supply outside the Metropolitan area have potentialities for great development, particularly in view of the "southward" trek of industries in this country.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 449.)

Rubber shares, for once, were less depressed than the commodity, which touched a new "record" low level. A number of stocks improved, including Anglo-Dutch, Malayalam and Trusts. Tea shares were uninteresting, dealings being of negligible proportions. Oils, at one time, appeared to be attracting less than their normal share of interest in an improving market, but more active conditions were established in mid-week, the leading stocks showing moderate gains.

Mining shares had a cheerful tone, but the volume of business was still below normal. Kaffirs received a certain amount of attention in mid-week, and renewed support was forthcoming from Paris and the Cape for Rand Mines, Gold Fields and "Johnnies," while Randfontein moved up on inquiries from Johannesburg. In the Rhodesian market, prices moved within narrow limits. A big turnover occurred in the shares of "Chartered," where a pool was believed to be operating. In the Northern section Congo Borders, N'Changa and Bwana M'Kubwa showed fractional declines. Ashanti Goldfields was a good feature in the West African list. Tintos registered an improvement. Though the price of tin declined on disappointing August statistics, changes in share values were insignificant.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The New York markets failed to reproduce the harder tendency of London. Some bear closing occurred before Monday's Labour Day holiday, and markets resumed business prepared to see active conditions develop. Prices, in fact, rose in some cases, but buying was pro-

fessional, markedly selective, and by no means free from nervousness. Some of the quarterly dividend announcements—a daily feature at this season—were below expectation, and created an "atmosphere" in which bull operations had a spice of danger. Brokers still announce their faith in a further rise of prices, but an important short interest believes that the public is in for disappointment over the size of the autumn business revival. Money has been dearer, the usual turn-of-the-month influences being in evidence. The export is announced of \$2 millions of gold to Canada. The monetary outlook presages firmer conditions for some days. Government and railroad bonds, however, are as steady as ever.

INVESTMENT NOTES.

Better Markets.—The improvement in market sentiment, which we noted a week ago, has made further progress. The thirty industrial ordinary shares in the *Financial News* daily index have risen, on the average, by 11 per cent. in slightly over a week, and are back at the level of mid-July. The extent of the recovery in repre-

sentative share values may be seen from the following table:—

	Highest, 1929.	Lowest, 1930.	Aug. 25, 1930.	Sept. 4, 1930.	Yield at Last Price.
Cables "B" (£100) ...	£88	£8½	£9½	£17	Nil

† Free of Income Tax.

The movement, which had its origin in the over-sold condition of the market, started as a professional operation, which rapidly drove many of the bears to cover. This week, however, there has been more evidence of public interest, the improvement in values having brought in a certain number of investors who regarded many sound securities as cheap, but were waiting to see them go cheaper. Whether the movement marks a real turn of the tide, or a mere "secondary cycle"—such as occurred last March and also after the passing of the so-called "Bankers' Resolution"—is being keenly debated. The trade and financial horoscope promises merely the autumnal seasonal revival, while a permanent Stock Exchange recovery would pre-suppose definite emergence from world depression. On the other hand, the stock markets have frequently in the past shown an uncanny prescience of coming events. This week's movements in prices, however, have exaggerated the real increase in the volume of business in the "House." In many cases the amount of available stock has been limited, and when a fair supply has been in sight prices have proved surprisingly "sticky." Investors, on the whole, will await further evidence before assuming that the approaching autumn and winter will necessarily see the beginning of another Stock Exchange summer.

Market Value and "Intrinsic Value."—Some comment has been caused in market circles by the decision of the directors of Singer and Co. to include with their annual report an exhortation to shareholders not to dispose of their holdings below certain figures (as we pointed out in a Note last week). The directors are perfectly frank. They and their friends hold one-third of the whole capital, on which they would have a heavy "loss" in the event of realisation. They attribute the depression entirely to selling by small shareholders, and are considering "what method can be adopted to prevent" its continuance. It may be suggested that they should examine the methods adopted, at various times since the War, by Governments who, for various reasons, were faced with a similar problem in the foreign exchange market. The initial tendency in such cases has invariably been to blame the market (or "speculation," which is the same thing), and to endeavour to raise quotations by restrictions on market dealings. These cost little, but unfortunately have never succeeded in arresting any decline of values. Sooner or later, those concerned have been compelled to go to the heart of the problem, firstly, by "supporting" the market with hard cash, and, secondly, by removing the root-cause of the trouble. The directors of Singer and Company, should they press the matter, will probably be forced to the same conclusion. The value of a share is what it will fetch. Its price at any moment depends on contemporary conditions as regards not the large amount of stock closely held, but the relatively small quantity which is "in the market." The directors have, however, an excellent opportunity at one and the same time to prevent a further fall in prices and to show their faith in the

company. They may make an offer to every small holder who is compelled to sell, by conditions outside his control, to buy his preference shares at 20s. and his ordinary at 35s.—these being the prices fixed by the directors, in the report, as representing the true values of the shares "on an assets basis." As the present market prices are 15s. 7½d. and 21s. 3d. respectively, shareholders would doubtless be more than willing to fall in with this suggestion.

Proxies at Company Meetings.—The last few months have produced an unusually large crop of unsatisfactory company meetings, as is inevitable in a period of disillusionment after a boom. Many observers have been struck, however, by the almost unfailing regularity with which favourable voting majorities have been secured, although the feeling of those present has clearly been hostile. Such a result has frequently followed even when the board has not held a controlling share interest, as a result of large numbers of shareholders having returned proxy forms in favour of directors. The theory of British law on the matter is plain. It is assumed, firstly, that proprietors, who for "physical" reasons cannot be present at a meeting, are nevertheless entitled to record their decision; and, secondly, that the directors, representing the "government in power," must, *prima facie*, be understood as having the company's interests at heart. Accordingly they may, and should, use the company's money for the printing and postage of proxy forms, while any opponents of their policy must circularise shareholders at their own expense, in the short time available between report and meeting. The directors, in fact, work on interior lines, which gives them an enormous strategic advantage in any campaign. Various amendments to existing practice have been suggested—as, for instance, that directors should not be allowed to hold proxies for more than, say, 20 per cent. of the total votes cast—but all these involve the danger of substituting the fire for the frying-pan. A supine majority may do considerable damage to its own interests, but, after all, it is a majority. In no circumstances could the law tolerate a state of affairs in which a comparatively small but active minority could impose its own will on the majority, however lethargic the latter might be. In all but a very few glaring instances the proxy system works well, and affords real protection for absentee shareholders. The remedy in the exceptional cases would seem to be the taking of a more active interest by shareholders in the affairs of their companies, and their refusal to return a proxy if they are dissatisfied with the conduct of affairs. In this connection, investors may be reminded of their right to cross out the names submitted to them on printed proxy forms and to substitute those of any other persons, provided the latter are members of the company.

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL,
RAILWAY, PUBLIC UTILITY,
INVESTMENT TRUST AND
INDUSTRIAL FINANCING

The Fixed Trust.—Investors, who have been for many years familiar with the Investment Trust and its ways, are now offered an opportunity of investing their money in what is known as a Fixed Trust. The Société Internationale de Placements, formed by reputable houses in various countries, has entered into an agreement with the Union Bank of Switzerland whereby the latter becomes trustee for the holders of what will be known as International Investment Deposit Certificates. Thirty securities, spread over ten countries, have been selected, and include "equity" shares in such companies as British American Tobacco, Suez Canal, Philips' Glowlamps and Swedish Match. Taken over five years, the average yield of these securities has been 13.46 per cent. The countries represented, and their proportion of the total, are: Great Britain (14.1 per cent.), U.S.A. (18.3 per cent.), France (15.6 per cent.), Germany (13.0 per cent.), Holland (11.9 per cent.), Switzerland (8.9 per cent.), Sweden (7.4 per cent.), Belgium (2.9 per cent.), and Denmark (2.5 per cent.). The complete selection represents a "unit," which is valued at approximately £4,000, the cost varying with the market price of the various securities. Each of the latter represents about 3 per cent. of the total. Divided into one thousand sub-units, certificates will be issued for 5, 10, 25, 100 and 1,000 sub-units. As each unit is subscribed, the S.I.P. will purchase the securities, lodging them with the Union Bank of Switzerland for a period ending September 15, 1935, when the agreement may be renewed for a further 25 years. Should the liquidation take place in 25 years, the S.I.P. will sell the securities to the best advantage of the certificate holders, who will receive their share of the proceeds. The holder of a complete unit may, at any time, obtain his securities in exchange for his certificate. At the same time, the S.I.P. will re-purchase certificates from holders of sub-units at a price representing their share of the value of the unit at that time, together with all accumulations. The purchase price includes a charge of 5 per cent., to cover the cost of issue and administration charges, equivalent to only one-third of one per cent. per annum. To ensure that the annual distribution is not less than 5 per cent., subscribers are also asked to pay a sum equal to one year's distribution, which will be held by the trustees in the form of a dividend equalisation reserve. Constituent companies have an average age of 57 years, an aggregate capital of £1,093,000,000, and reserves and assets totalling £1,133,000,000 and £3,200,000,000 respectively. Should any company officially pass its dividend, the S.I.P. "may sell the shares of that company"—a departure from the practice of similar concerns in America, whose rules generally lay down that under these conditions the stock "shall be sold." The trustee, or the S.I.P. may send a representative to any meeting of any of the thirty companies. Distributions, free of Swiss tax, will be made on March 31st and September 30th of each year at the Basle office of the Union Bank of Switzerland, the first distribution being made on March 31st next. The investor who subscribes to this type of "trust" has the advantage of knowing exactly in what securities his money is to be invested, the human factor in administration being all but eliminated. The units can also be turned into cash, when necessary, with considerable facility. On the other hand, the assumption behind the "fixed trust" idea—that, provided the initial choice of securities is eminently sound, there is no need to change them for long periods—runs counter to the British investment trust maxim that the price of maximum earning power and security is eternal vigilance.

The Position of the Motor Industry.—In a period of industrial depression it is somewhat surprising to find that the motor manufacturing industry, which has to depend for its sales on a highly elastic demand, has hitherto felt the effects of the slump to so limited an extent. An examination of the accounts of the thirteen motor companies whose reports have appeared this year shows that their total net profits amounted to £3,084,356, against £2,932,696 in 1928 and £2,655,560 in 1927. Five companies increased their aggregate profit by £418,966, of

which Austin and Leyland accounted for £367,188, while eight companies recorded an aggregate decline of £262,306. Seven companies distributed unchanged dividends on their ordinary shares, five increased their dividends, and only one, Alvis Car and Engineering, recorded a decrease. Four companies paid no ordinary dividend at all, compared with six in 1928. Moreover, though registrations of new cars in 1930 show a marked decline, particularly in the "baby" class, and though it is estimated that sales of British-made private cars for the year will be down by at least 5 per cent., the registration of commercial vehicles shows a considerable advance, and there seems every likelihood that last year's total will be exceeded. When, however, an attempt is made to gauge the probable future development of the industry as a whole, there can be little room for any but tentative optimism. Though, hitherto, a large part of the home market has been assured to the British companies, partly as a result of the heavy duty on foreign imported motors, the establishment of the new Ford works at Dagenham (which, even on the most conservative estimate, promise to reach full productive capacity within the next twelve months) will involve the older companies in vigorous competition as regards a popular class of vehicle in a market which, to all appearances, is slowly reaching saturation point. The export market has its own peculiar set of problems. British car exports for the first seven months of 1930 were valued at £4,330,609, compared with £4,930,908 for the similar period of 1929. Even when all allowances have been made for the depression, which has naturally affected the foreign as well as the home market, few people within or without the industry would pretend that either of these figures approaches the potential maximum exports of British motors. In Scandinavia, in Poland and the Eastern European States, where tariffs are relatively low, and the urban population is considerable, there are obviously wide undeveloped markets, of which Britain should be able to secure at least a proportion. In another hemisphere, Australia and New Zealand may offer a certain scope for expansion, if English manufacturers can compete with those of America in the matter of "service." On that reservation, indeed, the future of the British motor industry would seem largely to depend. Foreign markets can be won only if British manufacturers will consent to such a degree of rationalisation, amalgamation and co-operative effort as will enable them to set up a competitive "service" organisation wherever their products are sold. Investors would welcome clear and unmistakable evidence that British motor manufacturers have realised these facts, and are prepared to act upon them.

Waring and Gillow Meeting.—The annual meeting of this company, whose financial situation we discussed last week, was held on Monday last, and passed off very quietly, the balance sheet and report being adopted with only one dissentient. Lord Waring accepted full responsibility for the statement forecasting record profits, which appeared in the Press during July. He confirmed the statement appearing in the *Economist* of August 30th, that the property on which his hopes had been based was borrowing no further sums from the company, he declared that it had been his right to draw certain sums in the form of commission, but that he waived this right, and, consequently, such sums as he had drawn were shown to the debit of his account. With this money he had contracted liabilities on certain transactions, which he trusted would eventually realise sufficient to repay the debt. It is the intention of the board and the committee to appoint, as chairman, a man with wide financial experience, in order to avoid a recurrence of the company's difficulties, but, according to Lord Brentford, this cannot be done until the cause of the present state of affairs has been located. Lord Waring further stated that, despite the depression, the half-year ended June 30th last, had shown a slight improvement over the corresponding period in 1929. In a speech following that of Lord Waring, Lord Brentford

stressed the company's need of ready cash. He stated that negotiations were still proceeding satisfactorily with the banks. The decision of the latter is expected by to-day. Accompanied by Sir Harry Peat, Lord Brentford will visit the company's factories throughout the country, and will insist on economies involving many thousands of pounds a year. On the conclusion of the general meeting, Lord Brentford and Sir Harry Peat attended a meeting of the leading creditors, at which the latter's representatives agreed to withhold further action pending the receipt of the banks' decision, when a full meeting will be called.

Eastwoods, Ltd.—The profits of these brick manufacturers and dealers in builders' materials, for the twelve months ended March 31, 1930, are shown as £88,101, against £83,125 in the previous year. Thanks mainly, however, to increased provision for bad and doubtful debts, net earnings show a decline of £7,370, and the ordinary dividend is reduced:—

* £1,000 directors' remuneration subsequently charged.

The profits appear to be conservatively arrived at, and the directors' decision to reduce the ordinary distribution rather than the appropriation to reserve is a piece of commendably sound finance. A similar policy of conservation of resources has been followed in the case of the subsidiary company, Eastwoods Cement, Ltd., whose ordinary distribution has been reduced from 10 per cent. to 5 per cent., despite an increase in net profits from £12,405 to £24,634. The balance sheet of Eastwoods, as might be expected, shows a liquid position, and if a period of trade depression is to be faced the company, *pro tanto*, is in a strong position to face it. Some shareholders, however, have criticised the past policy of the board in going out of their way to describe the prospects of the company in glowing colours, and, by repeated references to "business expansion," "increased turnover," etc., creating an expectation of significantly higher earnings, which have not matured. The interim report, issued at the end of January this year, exemplified this tendency, its contents certainly affording shareholders no inkling that any reduction of dividends was in contemplation. The shares have been dealt in this week at 28s. 9d., and at this price, cum 1s. 6d. final dividend, yield 14.1 per cent. on earnings and 9.2 per cent. on dividends.

German Chocolate Combine Developments.—Shareholders in Unilever have a certain interest in recent developments in the German chocolate industry. In March, 1928, the Czechoslovakian Schicht concern—which, since the beginning of 1930 has had a working agreement with Unilever interests—attempted to turn its experience in marketing standard articles to advantage in the German chocolate market. It proceeded to acquire numerous important German concerns, including the Reichardt Works (in Hamburg-Wandsbeck), which had a capital of 10 million marks, together with the smaller chocolate factories of Gaedtker-A.-G. (in Hamburg) and J. G. Hauswald (in Magdeburg). It also secured an option on the Goldina A.G., of Bremen. The Unilever interests, however, have now decided to abandon the attempt on the German market. The largest German chocolate factory, that of the Stollwerck Brothers, of Cologne (which has a capital of 16½ million marks and a yearly turnover of 40 million marks), is to take over the

operation of the factories purchased by the Schicht concern. Their production is to be transferred to the Stollwerck's factory at Cologne. The Reichardt chocolates alone are said to have an assured yearly turnover of 12 million marks, and the Stollwerck Company looks for an increase in turnover of 50 to 60 per cent. from the transaction. The extensive sales organisations were sold to another chocolate firm. The Unilever group are to receive a percentage on turnover and a payment from net profits during each of the ten years from 1932.

New Capital Issues in August.—In the following table we show the new capital raised in London by issue to the public and to shareholders in August, and in recent periods.

(000's omitted.)

August, 1929	Dr. 250	Nil	411	Nil
August, 1930	600	431	Nil	451

The new capital market has been unusually quiet this month, even for August, though the total new money obtained was, in fact, in excess of that for August last year. The £600,000 shown in the heading "British Government" reflects the excess of new Savings Certificate sales over encashments—a pleasing feature in a period of industrial depression, though the firmness of gilt-edged stocks as a whole may have encouraged additional purchases of certificates by some of the larger investors who did not already hold their maximum of 500 certificates. Public prospectuses have been conspicuous by their absence, the amounts shown as being subscribed under the second and fourth headings in the table being attributable to offers of new capital to shareholders in existing companies.

Broken Hill Proprietary.—Our mining correspondent writes:—A cabled summary of both the annual report and the meeting have now become available. After providing £256,700 for depreciation, as against £417,600 previously, last year's net profit figures at £161,900, or less than half the amount for the twelve months ended June 30, 1929. The net cash assets have shrunk by £304,000 to £488,000. Operations at the steelworks were greatly hindered by the stoppage at the Northern Collieries, while conditions at Broken Hill were adverse owing to the fall in metal prices. In the circumstances

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address

.....

it is perhaps surprising that the company fared as well as it did. Nevertheless, dividend distributions were out of the question. The last dividend was 1s. per share in May, 1929. By purchase or exchange of shares the directors have further extended the scope of the company's activities, but labour is the crux of the position. During the recent past, wages have been greatly increased and hours sensibly shortened; while social legislation has increased the burden. The consequences of these developments must be frankly faced.

Selfridge and Company.—We are authorised by the chairman of Selfridge and Company emphatically to deny the rumours, circulated in certain quarters this week, that the company is in a position calling for special financial measures. The reports are described as being "ridiculous beyond words," and the chairman is prepared to take steps against their originators in the event of their discovery.

COMPANY MEETINGS, &c.

WARING AND GILLOW, LIMITED.

"BUSINESS ABSOLUTELY SOUND."

The annual general meeting of Waring and Gillow, Limited, was held, on the 1st instant, at the company's premises, 164-182, Oxford Street, London, W., Lord Waring (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The profit for the year showed a decrease over last year of £155,527, a decrease attributed to the severe competition for work caused by the general trade depression. Their cash position showed the material reduction of £186,144 as compared with the previous year, and, in addition, there appeared loans from bankers of £119,340, advances made to assist them in carrying out certain contracts and for meeting the expansion of the company's business. Those loans were of a fluctuating and temporary nature. A further cause of financial stringency had been the fact that, although the business of the company had largely expanded during the last few years, the capital had not been increased.

VALUATION OF THE PROPERTY.

In accordance with the requirements of the new Companies Act, the debtors had been dissected to show separately the trade debtors, which amounted to £710,679, after making full provision for all bad and doubtful items, apart from the debt due by the purchasers of a leasehold property who had not yet completed their payment. The balance still due in respect of that sale amounted to £172,585, which was secured by a second mortgage on the property. The property had been valued by an eminent firm of valuers at considerably more than sufficient to liquidate the balance outstanding in respect of it, but owing to the fact that the purchaser had not yet finally completed the full payment for the purchase the directors had decided that it would be prudent to set aside the whole amount of the balance due as a reserve. The purchasers were now negotiating for the resale of the property, and on the completion of that the balance reserve of £172,585 would then be available to be brought into the profit and loss account.

As to the accounts owing by himself, the balance of £34,999 due under mortgage on a property in the occupation of the company was only a debt in the sense that he had made himself personally responsible for the completion of the purchase of a property, and had given the company the right to take it over at that figure. The property was, in fact, valued at a considerably larger amount, and was essential for the purpose of the company's business. In the normal course of events it would, in his opinion, have been advantageous for the company to have taken over the property, but, in view of its present financial requirements, he was now arranging for the mortgage to be taken over by an outside source, thus releasing to the company the £34,999. His own indebtedness on loan account mainly arose because he had become entitled over a period to substantial sums by way of commission under his service agreement. He, however, had decided, as being in the best interests of the company, to waive that commission, and had therefore found himself debited with money he had drawn on account which had now to be regarded as a loan. He had given personal guarantees for large sums on behalf of the company, and had himself contracted liabilities on other property transactions which he intended to realise to enable him to repay his indebtedness to the company.

THE CASH POSITION.

The balance of the profit and loss account had been depleted by the reserve for mortgage debt, £172,585, already referred to, and, in view of the shortage of working capital, the directors had decided they could not recommend the payment of any dividend on the ordinary shares, and for the same reason had deferred payment of the interim dividend, which was cumulative, on the preference shares. It was at that point that the directors had decided to enlist the help of Lord Brentford and Sir Harry Peat, who had been asked to advise the board on the financial and administrative control of their affairs. Those gentlemen had at once advised that the cash position of the company should be strengthened, and to that end had commenced negotiations with leading bankers to obtain the necessary financial

The report and accounts were unanimously adopted, and at an extraordinary general meeting which followed, the articles of association were modified to conform with the new arrangement with the French undertaking, and the title of the company was changed to British Dardet Threadlock, Ltd.

SINGER AND COMPANY, LIMITED.

GROSS PROFIT WELL MAINTAINED.

The twenty-second ordinary general meeting of Singer and Company, Ltd., was held, on the 4th instant, at Coventry.

The following directors were present:—Mr Rodolph Fane de Salis, Mr Arthur Charles Bournier, Mr William Edward Bullock and Mr George Albert Eastwood.

Mr R. Fane de Salis said that, as pointed out in their report, they had had, in common with all industrial companies, a very difficult and disappointing year. Their sales had been less than they anticipated when they budgeted last year and their production being greater than their sales they had a large stock. In spite of that they had a gross profit of £206,382, or only £2,887 less than last year. The net profit they had to deal with was £144,266, as against £173,921, or after adding their carry-forward and deducting the dividend on the preference shares, £210,162, as against £233,822. They had a surplus and reserves of £307,785, and undivided profits £221,823, or a total of £529,608. Their stock of materials and work in progress at £597,509, was a heavy item, comparing with £361,343 last year. If sales had been up to expectation their stock would not have been so large. Their stock was £236,166 greater than it had been last year, in consequence of their sales of motor cars for the whole of the season being less than they had hoped for.

The directors viewed with concern the price at which both ordinary and preference shares in such a sound company as theirs changed hands. They had, during the year, opened a depot in Piccadilly. Their overseas trade showed a steady expansion, and they had received considerably increased orders and much encouragement for 1931 models, which they thought would surpass all previous cars. They were not speculators, but experienced and capable motor producers, giving value for money, and in no way misrepresenting the merits or value of the goods they produced.

If the motor industry was safeguarded for the purpose of finding employment for their mechanics, the shareholders—over 4,000—would reap such benefits as fair and honest trading could provide. It would be a day of misfortune when the costs of production precluded the possibility of obtaining a sale price which would leave any margin of profit, and their staff should realise that and, as they had done in the past, give of their best so that they might meet any and every competition.

Mr A. C. Bournier, F.C.A., said he was a chartered accountant and was qualified to know and claimed to know the value of the concern of which he was a director, and thus to be able dogmatically to place a value upon the shares of the company and to be entitled to tell his fellow shareholders the course they should follow.

Assets basis meant, in their case, the cost of the securities, less depreciation, as a going concern having a prosperous record and possibilities of large income. Financially, the assets of the company had been augmented by the year's revenue of £144,266, or over 18 per cent. on the ordinary share capital, warranting an increased price in value of the £1 ordinary shares over that of a year ago.

Let them send the voice of that meeting to all their absent members by agreeing that the shareholders' advice to them was to hold to their shares for a fair price, which it was suggested should approach 35s. for an ordinary share and 20s. for a preference share, recognising that the assets on a good going concern basis at cost, and the large annual profits obtained warranted that price. On earning power alone the Stock Exchange could not justify their valuation.

Shareholders would no doubt have appreciated the directors' report on the causes which had affected their revenue results and financial position. The preference dividend of 7 per cent. cumulative required annually £23,322, and as their average income had been £139,732, it was covered six times. The ordinary dividend on a reasonable basis to warrant a share having a par value might be placed at 10 per cent. on £666,760, requiring annually £66,760, a total of £90,082, leaving £54,184 as a surplus of annual income, equivalent to a further dividend of 7½ per cent. and on a dividend basis warranting a £1 ordinary share being valued at 35s. per share.

The only sound deduction from the above facts was axiomatic that the present market price was an undervalue of what was a real and unassailable position and warranted their principal partners enouncing it for the benefit of their co-partners, and incidentally the investing public.

For the past year their revenue of £144,266 was equivalent to over 18 per cent. on their ordinary share capital and on their preference capital 7 per cent. With their preference capital covered six times by their net assets and their ordinary capital covered nearly twice by their net assets, and an earning capacity of over 18 per cent. on the ordinary capital, could it be reasonably contended that the former were only worth 15s. per share and the latter only worth par?

The investor who not only watched events, but observed their trend would see the opportunity for sound investment was now, and that by a careful study of their prevailing conditions and tendencies there was the possibility of success which might never occur again.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Aug. 30, 1930, amounted to £6,392,200, against ordinary expenditure of £7,635,800. After allocating £620,000 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £42,366, the week's operations, as shown below, increased the National Debt by £1,910,000 to £7,662,000,000:—

(000's omitted.)	
National Savings Certificates ...	+ 300
Public Department Advances ...	+ 1,900

Messrs Samuel Montagu and Company write on September 3, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £154,839,601 on the 27th ultimo (as compared with £154,333,732 on the previous Wednesday), and represents an increase of £8,795,517 since January 1st last. Gold from South Africa to the value of £1,169,000 was offered in the open market yesterday. The demand from France was keen and £960,000 was secured for that country at the fixed price of 85s. 0d. per fine ounce. Home and Continental trade requirements amounted to £15,000 and £20,000 respectively. The balance of £174,000 was to-day bought for France, the price remaining unchanged. Movements of gold at the Bank of England during the week show a net efflux of £381,398. Of the receipts, £250,000 was in sovereigns from Australia, and of the withdrawals, totalling £657,786, £400,000 was in sovereigns "set aside" and about £200,000 in bar gold for Switzerland.

SILVER.

A steady tone has been maintained during the past week. Sellers showed some reluctance, and demand from China was sufficient to cause an improvement in prices, not, however, without attracting some selling from the same quarter. Until yesterday, America had not offered so freely, but small bear sales have been made on account of the Indian Bazaars. The rise from 16½d. to 16½d. yesterday was mainly due to absence of selling, and at this level the market proved overstrained, America being a willing seller in the afternoon. There was a reaction of ½d. to-day, prices again being quoted at 16½d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 25th ultimo to mid-day on the 1st instant:—

REPORTS AND NOTICES.

The following New Rule 101A has been passed on the Stock Exchange: "A Seller cannot demand payment against delivery before the date fixed by the contract, but subject to the other provisions of these Rules he may do so at any later date before the security has been bought in, and time shall not be of the essence of the bargain."

BANKS.

BANK FOR RUSSIAN TRADE, LIMITED.—The balance sheet of this bank, dated June 30, 1930, shows that total assets have increased during the year by £1,231,866 to £11,434,275. Comparing the latest balance sheet with June 30, 1929, we find that cash in hand and with bankers in London has declined from £532,133 to £436,650, while cash with bankers abroad also shows a decline from £172,901 to £97,392, but investments in British Government securities reveals an expansion from £624,000 to £666,081. Bills discounted stand at £770,417 against £652,724. Loans, advances and other accounts have expanded from £766,536 to £1,462,643. Bills re-discounted stand at £3,650,041 against £3,101,490. Turning to liabilities, there is to be noted an increase of £50,000 in the issued capital of the bank, which is now £600,000, all in ordinary £1 shares. Reserve is £60,000 higher at £250,000. Loans against investments and other security is at £1,354,119, against £775,269. Deposits are lower at £1,229,064, against £1,358,025.

COMMERCIAL BANK OF AUSTRALIA.—The balance sheet as at June 30, 1930, shows total of £32,952,049. Deposits stand at £22,165,235, against £24,181,046, and bills payable, etc., at £1,634,023, against £1,704,584. Coin, bullion, Australian notes, and cash at bankers is at £2,944,911, against £3,278,933; money at call and short notice in London, £1,517,500, against £810,000; short-dated Commonwealth Treasury Bills, £1,300,000, against £1,815,000; investments, £762,637, against £761,362; bills receivable in London and balance of remittances and drafts in transit, £2,022,561, against £2,000,574; notes and bills of other banks, £113,209, against £186,172; balances due from other banks, £95,077, against £266,299; bills discounted and other advances, exclusive of provision for bad and doubtful debts, £20,677,515, against £22,260,876.

COMMERCIAL BANKING OF SYDNEY.—The net profit for year ended June 30, 1930, amounted to £637,619, against £655,195 for 1928-29, and £71,508 was brought forward. The dividend for the year is 10 per cent., as before, but the allocation to reserve fund is reduced from £125,000 to £100,000. The bank premises account again receives £50,000, while the carry-forward is increased from £71,508 to £85,226. The total of the balance sheet is £80,315,544. Deposits, etc., show a decline from £54,420,876 to £49,402,323. Bills in circulation show a fall on the year from £2,104,183 to £1,488,019. On the assets side, cash and notes at £8,205,825 compares with £8,732,102, while money at short call shows a small decline at £1,335,000, against £1,360,000.

THE INTERNATIONAL COMMITTEE OF BANKERS ON MEXICO.—We understand that copies of the agreement of July 25, 1930, between the United Mexican States and the International Committee of Bankers are now available in London for inspection by bondholders at the office of the Committee, 1 Broad Street Place, E.C.2, and at the office of Morgan Grenfell & Co., 23 Great Winchester Street, E.C.2.

RAILWAYS.

CANADIAN PACIFIC RAILWAY COMPANY.—Under the authority of an Act of the Parliament of Canada and pursuant to a by-law approved by the shareholders of the company, the par value of the shares of the company's ordinary capital stock will, on October 2, 1930, be changed from one hundred dollars per share to twenty-five dollars per share.

MISCELLANEOUS.

EDISON BELL (INTERNATIONAL), LIMITED.—The attention of the directors having been specially drawn by certain shareholders to the price at which the company's shares have been quoted on the Stock Exchange, they inform shareholders that nothing of a detrimental character in the progress of the company has occurred to justify the fall in prices. The general trading from the London centre has shown an increase on that of the similar period of last year. The reports concerning the foreign subsidiaries in which the company has large interests are generally favourable, but the accounts of these companies, which are separately audited and are made up to June 30th, are not yet to hand, but will be referred to in the annual report of the company. The company adds that the share holding of the directors, and/or their nominees is still approximately the same as at this period last year.

FERNHILL COLLIERIES.—Operations during year ended June 30, 1930, resulted in a profit of £17,767, against a loss of £3,323 in preceding year. Deducting this profit from a debit of £20,205, there is a debit balance of £2,438 to carry forward. Bank loan is at £122,878, against £136,864 at end of June, 1929. The report points out that the collieries have been fully engaged during the past year, and goes on to say it is impossible to forecast the effect of the new legislation, both upon the mining industry in general and upon this company in particular.

GROSVENOR HOUSE (PARK LANE).—The accounts of Grosvenor House (Park Lane) show that the net profit for the year to June 30 was £111,061 and £2,210 was brought forward. The profit represents 11 per cent. on the ordinary shares. No dividend is recommended, but the directors propose to write off the preliminary expenses, £24,912, and the debenture stock discount, £60,000, and to transfer £5,000 to reserve, leaving £23,369 to be carried forward. The net profit for the initial period from May 17, 1928, to June 30, 1929, was £2,210, which was carried forward.

NEW MONCKTON COLLIERIES, LIMITED.—The accounts for year ended June 30, 1930, show that the net profit amounted to £36,095, as compared with £12,475 for the preceding year. Preference dividend again absorbed £5,100. The ordinary shareholders receive 2½ per cent. free of income tax, against nothing for preceding year. This dividend absorbs £7,437. The carry-forward is increased from £1,496 to £25,054. The cash resources of the company have increased from £295 to £33,719. Bank overdraft at June 30, 1929, was £42,823. This item does not appear in the latest balance sheet. The report states that the De-rating Act is proving of great assistance.

R. AND W. HAWTHORN, LESLIE.—The report shows profit for the year to June 30, 1930, amounted to £36,802, against £26,617 for 1928-29, to which must be added £17,631 brought forward. The directors recommend a dividend of 5 per cent., against 3½ per cent., absorbing £35,827, leaving £18,606 to be carried forward. The accounts show a holding of £698,702 in British and Colonial Government securities. These had a market value on June 30th last of £720,590.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions over the United Kingdom have remained favourable for the completion of harvest operations, and the grain is being secured in fine dry condition, though reports from several quarters indicate reduced yields. Supplies of old native wheat are practically exhausted, while offers of new grain meet with a quiet demand at declining prices. The import market has been very depressed, and values were again on a lower basis owing to lack of buying interest. Heavy offerings of Canadian and Russian were the principal factors, while supplemented by increasing supplies coming forward from the Danube. In these circumstances, buyers adopt a reserved attitude, particularly in face of excellent crop prospects in Argentina and Australia. Shipments continue on a large scale, especially to Continental destinations, while floating supplies also tend to increase, being fully equal to estimated requirements. Excellent crops have been secured in the United States, the official estimate of the winter yield reaching 597 million bushels, compared with 568 million bushels last year, while a good portion of the Canadian crop is safely secured. With competition general from all exporting countries, including Europe, ample and cheap supplies of grain should be available throughout the cereal year. A dull tone pervaded the market for flour, and prices are steadily declining in sympathy with the wheat situation, both for home milled and imported on spot. North American sellers were pressing offers for shipment parcels without attracting much attention from importers. A marked falling off in consumptive demand for feeding stuffs resulted in weaker values, while influenced by large shipments and increased offers of Plate maize. Competition from South Africa is still a feature, and has forced Plate shippers to come into line, but Danubian varieties are held above market parity. Barley moved off slowly at rather easier rates, and oats were also the turn in buyers' favour, though less pressed for sale compared with other feeders.

WHEAT.—Again easier in sympathy with reduced c.i.f. quotations. No. 1 Northern Manitoba, ex ship, 35s. 6d.; No. 2 ditto, 35s.; No. 3, 34s. 3d.; No. 6 ditto, 26s. 3d.; No. 1 hard winter, 35s. 3d.; No. 2 ditto, 34s.; No. 2 mixed Durum, 30s. 6d.; Barusso, 62½ lbs., ex ship to arrive, 34s.; Australian, 35s.; choice white Karachi, 34s. per 496 lbs.; English, new, 6s. 3d.-7s. per 112 lbs.

FLOUR.—Dull and weaker. London straight run, 32s. per sack for country deliveries, and 31s. London area. Of imported, Manitoba patents, 29s.-31s. 6d.; Buffalo ditto, 29s.-31s.; Australian, 26s. 6d.-27s. 6d. ex store. On c.i.f. terms, Manitoba top patents, August-September, 28s. 6d.-29s.; export ditto, 26s.-26s. 6d.; Australian, 24s. 6d.-25s. per 280 lbs.; Argentine, low grade, October-December, 26 5s. per ton.

MAIZE.—Easier forward. Plate, landed, 27s.; ex ship, 25s. 6d.; August-September, also September-October, 25s.; Bessarabian, landed, 26s. 6d.; No. 2 white flat African, ex ship, 24s. 6d.; No. 6 yellow ditto, 25s. 6d. per 480 lbs.; yellow maize meal, ex ship 28, f.o.r. London; yellow African, ex ship, 25 17s. 6d.; white, 25 12s. 6d. per ton.

BARLEY.—Weak. Californian, old, landed, 30s.-35s.; new, ex ship, 29s.-38s., as to sample; Chilian brewing, landed, 33s.-37s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 30s.-33s. per 448 lbs.; Black Sea, ex ship, September-October, also Danubian, 16s. 9d.; Persian, new, ex ship, 16s. 6d. per 400 lbs.; English, new, malting, 6s. 3d.-7s. 9d. per 112 lbs.

OATS.—Quiet and occasionally easier. Plate, landed, 15s. 3d.; ex ship, 14s.; Chilian tawny, ex ship to arrive, 15s.; fine white, landed, 21s. 9d.; German, landed, 22s.; mixed Canadian feed, ex ship, 12s. 3d.; landed, 13s. 3d. per 320 lbs.; English new, 5s. 4d.-5s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27:—

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Sept. 4, 1929.	Jan. 2, 1930.	Aug. 20, 1930.	Aug. 27, 1930.	Sept. 3, 1930.
Winnipeg (No. 1 Manitoba)	122	153	148½	92½	88½	83½
Chicago (No. 2 Winter)	116½	131½	130½	89	86½	82½

THE COAL TRADE.

Our Sheffield correspondent writes:—The announcement of a pending increase of prices braked up sales of house coal last week, as large quantities were bought for winter stock. Business has now tapered off again. Exports of steam coals are being maintained and the industrial demand is a little better than of late, but supplies continue excessive. There is great surplus of smalls. The coke position is most unsatisfactory, deliveries having been suspended to the extent of 40 per cent. of the contract commitments, but prices have undergone no further recession. Best steam coals are quoted at 15s. f.o.b. and blast-furnace coke at 11s. 6d. to 12s. 6d. at ovens.

Our Glasgow correspondent writes:—Short-time working is still the rule in most coal trade districts. Export trade is particularly dull, and it would seem that the collieries will have to look mainly to the home trade for improvement over the next month or two. The feature of the market is the sustained strength of washed nuts as a result of the scarcity of supplies owing to restricted coal outputs. Among large coal Hamilton ells are moving away quite readily and prime splint material in Lanarkshire as well as one or two navigation sorts in other districts are quite firmly held. Prices for shipment are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 13s. 6d.; splint best, 16s.; splint second, 14s. 6d.; navigation, 16s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 13s.; doubles, 12s. 6d.-13s.; singles, 12s.; pearls, 11s. 9d.; dross, 9s. 6d. FIRE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 9d.; third-class steam, 10s. 9d.; trebles, 13s.-14s.; doubles, 12s. 6d.-13s.; singles, 12s.; pearls, 11s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s.-13s. 3d.; doubles, 12s. 9d.-13s.; singles, 11s. 6d.-11s. 9d.; pearls, 10s. 6d.-10s. 9d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s. 3d.; pearls, 11s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—There has been no improvement this week in the situation of the South Wales coal trade. Inquiries have been inactive, and tonnage has become so scarce that on Wednesday 37 tips were reported idle at the South Wales docks. Stocks have further increased, and owing to the lack of wagons collieries are finding it difficult to keep working. One important group of pits is being operated only up to 70 per cent. of its capacity. Prices for all classes of coal are at the minimum figures scheduled by the Marketing Association, and it is not anticipated that these will be reduced in the immediate future owing to the increased cost that will be for some time unavoidable under the reduced working hours provided by the Coal Mines Act. A report that the Brazilian Central Railways have diverted to Germany an order for 250,000 tons of locomotive coal is discredited; many are still entertained that this business will be secured by South Wales. Pitwood prices are easier under the pressure of heavy stocks and of the arrivals of speculative cargoes from Russia. Three of these have already arrived; arrangements are being made for the disposal of three more in the immediate future; and it is feared that other cargoes will be dumped before the end of the Baltic season. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; cargo smalls, 12s. to 12s. 6d.; best small steams, 13s. 3d. to 13s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubble culm, 11s. to 11s. 9d.; foundry coke, 30s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 27s.

IRON AND STEEL.

We extract the following from the weekly report of The London Iron and Steel Exchange:—Rather more business has been stirring of late in the iron and steel markets. This has encouraged hopes that the usual autumn buying movement, which generally begins towards the end of September, will set in somewhat earlier this year. In the pig iron department the demand has broadened somewhat, and consumers have shown more interest in forward buying, although so far this has been on a small scale. Competition is still being experienced from foreign and Indian pig iron in the home market, particularly in Scotland. In the semi-finished steel department dull conditions have ruled, and consumers are apparently waiting to see the effect upon the market of the collapse of the European Steel Cartel's price control scheme. Statements that the scheme was abandoned owing to under-cutting by British manufacturers are inaccurate, since any contracts which may have been obtained by British works have not been secured by these methods. The hostility of British consumers to the scheme, however, has certainly diverted some business to British producers of semis. Following the withdrawal of control, the price of Continental material fell sharply, but no large volume of business has been reported. The demand for finished steel materials has become more active, and there has been a certain amount of buying from overseas. Business in the home market has increased sufficiently to encourage hopes of an early improvement in trading conditions.

Our Middlesbrough correspondent writes:—The market for Cleveland iron is steady. The number of transactions has slightly increased as a result of the reduced prices, and indications point to further expansion. The production of iron for the open market is only light, and as stocks in makers' hands are of comparatively small dimensions, prospects for increased business are considered favourable. At Tuesday's weekly market a fair number of transactions were reported for moderate quantities for early delivery, and also a few months ahead, prices being, No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. Practically all the business transacted is on home account, very little export trade being available. In hematite, more iron is being taken against contracts and a few new purchases are being made, but the quantities are not large, and are mostly for fairly early delivery. Makers anticipate increased buying shortly, and are firm at 71s. for mixed numbers for delivery over two or three months, but might shade this a trifle for very prompt delivery. Shipments of pig iron last month were just 67 tons ahead of July, but manufactured iron and steel showed together a decrease of 8,373 tons, the details being:—

	August, 1930.	July, 1930.
Pig iron	16,863	16,796
Manufactured iron	4,223	3,613
Manufactured steel	41,953	50,936
	63,039	71,345

In the finished departments a fair amount of work is in hand, but some mills are not so regularly employed as others, and new orders would be welcome. Prices for the different materials are unchanged from last week. The ore market continues quite idle, with best rubio nominally 19s. c.i.f. and freights Bilbao/Middlesbrough about 5s. 6d. Coke of good blast furnace qualities is offering at 16s. 6d. delivered works, for early delivery. The number of furnaces in blast in the district is unchanged at 25.

Our Sheffield correspondent writes:—Conditions in the iron and steel trade are believed to be slightly better in parts, due to the return of principals from their holidays, but, taken as a whole, the depression remains deep and widespread. In the Lincolnshire district two of the five open hearth furnaces at the Frodingham Works, which were closed six weeks ago, have been put into com-

mission. The other melting plants in the same district are operating as usual, but there is a shortage of work at the mills. In Sheffield, orders for open-hearth steel continue on a hand-to-mouth basis and comparatively no forward work is being placed, so that the outlook remains uncertain. Quietude prevails in railway steel, wire rods and strip and bars of basic material. Demand for cold wrought strips is picking up. No improvement in the pig iron section can be reported. There is no present indication of a resumption of normal buying, and the majority of the foundries are on short time. Output of blast furnaces still exceeds consumption. Makers of special alloy steels are more disposed than of late to place contracts for materials. Conditions in the hand tool department are variable; demand for cutlery and plate is a little better. All sections of local industry are suffering from the contraction of business with all markets overseas.

Our Glasgow correspondent writes:—Business remains very quiet in the iron and steel industries in the West of Scotland, and orders booked do not involve a heavy tonnage. In Glasgow and neighbourhood there are several large consumers of semis, and the disruption so far as price is concerned of the Continental Sales Organisation for joists and semis is of considerable interest to them. During the present week Continental semis have been offered at exceedingly low prices, apparently below cost, but only for delivery within the next month or two. Tube makers are, on the whole, finding business dull, although some works have a fair amount of work on hand. At the sheet mills the export demand both for black and galvanised sheets does not show much improvement, but there has been no further reduction in the number of mills operating. Practically all branches remain quiet with prices unaltered.

Our Cardiff correspondent writes:—On the Swansea Metal Exchange on Tuesday it was reported that inquiries were very limited, both in the export and the home markets, but it is anticipated that there will be an expansion of business early in the autumn. A fairly substantial order is reported to have been placed with a non-associated works by South American consumers. Current prices of tinplates are ruling at the minimum of 18s. per basis box, and galvanised sheets are unchanged at from £11 17s. 6d. to £12 per ton. Welsh tinplate bars are easier at from £6 to £6 3s. 9d. per ton, but there has been a further cut of about 7s. 6d. in foreign bars, which are now reported to be offering at £4 10s. per ton. Shipments last week were below normal, but owing to curtailed production, as a result of the heat wave, stocks show no material change.

OTHER METALS.

TIN.—The market ruled quiet and prices eased on selling pressure, occasioned by larger visible supplies for August and disappointing Eastern advices, while dealings disclosed slight irregularity. Shipments from the East during August totalled 7,095 tons, embracing 5,055 tons to the United States, 1,070 tons United Kingdom, 1,275 Continent, and 505 other countries. U.K. stock and landing, 25,338 tons, against 23,836 in July. Total visible supplies, 43,625, against 42,210 the previous month and 25,878 at the corresponding period last year. Standard cash sold, £133 12s. 6d. £134 10s. and £133 2s. 6d.; three months, £135-£136 and £134 15s. In the East, sales were reported at £137 5s. to £137 15s. and £137 5s. ton c.i.f.

COPPER was a generally steady market as sellers refrained from pressing and offers fairly well absorbed. Standard cash sold £47 10s. to £47 12s. 6d. and £49 11s. 3d.; three months, £47 10s.-£47 15s. and £47 7s. 6d. ton.

LEAD in steady support, and values barely steady. Good soft foreign pig, September, sold £18 5s. to £18 3s. 9d.; November, £18 3s. 9d.; December, £18 3s. 9d. to £18 5s. and £18 3s. 9d. per ton.

SPELLER.—Tone fairly steady, though offerings were moderately absorbed. September sold £16 1s. 3d. to £16 5s. and £16 2s. 6d.; November, £16 8s. 9d.; December, £16 11s. 3d. to £16 12s. 6d. and £16 10s.; January, £16 12s. 6d. per ton.

ALUMINIUM steady. Home trade £95, export £100 ton.

ZINC OXIDE quiet at £25 to £32 as to quality, per ton, delivered U.K.

QUICKSILVER maintained. Spot £22 2s. 6d. per bottle.

Deposits are received for fixed periods on terms which may be ascertained on application.

TIN PLATES quietly steady. I.C. coke, prompt and forward, 18s. per box f.o.b. Swansea.

ANTIMONY.—Steady, quiet. English regulus £38 to £45; Chinese ditto, spot, £27; September-October, £26; crude ditto, £14 15s. c.i.f. per ton.

ANTIMONY OXIDE.—September-October, £27 10s. c.i.f. per ton.

ANTIMONY ORE.—60 per cent., September-October, 4s.; 50 per cent. ditto, 3s. 6d. per unit c.i.f.

WOLFRAM.—Quietly steady. Chinese spot, also September-October, 18s.; Burmese spot, also September-October, 17s. per unit, c.i.f.

THE COTTON TRADE.

LIVERPOOL, September 3rd.

The market during the week has been more two-sided, but prices have fallen 18 points. Weather news has been better, and the drought in the central belt has been relieved. Lower prices have brought about a slightly increased business. The U.S. Agricultural Bureau Report is due on the 8th of this month, and two or three private estimates have already been issued, Fossicks being 13,740,000 bales crop, 52.4 per cent. condition, showing a decrease of 9,000 bales from a month ago. More business has been put through in Manchester, and the feeling of the market at present is a little less depressed, and there have been more inquiries for actual cotton. Spot sales for the week August 27th to September 3rd (inclusive) are 25,000 bales, of which 7,400 bales are American, 6,050 Brazilian, 1,900 Argentine, 3,550 Peruvian, 2,600 Egyptian, 1,650 African, 1,550 East Indian, and 300 sundries. Imports for the same period are 18,470 bales, of which 6,408 are American, 921 Brazilian, 1,015 Argentine, 2,348 Peruvian, 488 Egyptian, 281 African, 7,001 East Indian and 8 sundries. Quotations to-day are: American Middling, 6.50; Egyptian Sakel, 12.23; Yarns, 32's twist 10½d. per lb., 40's twist 11½d. per lb., 60's twist 19d. per lb., Uppers, 8.26; Brazil Fair, 5.72; Peru Smooth, 6.62; West African Middling, 6.27; East African G.F., 7.22.

MANCHESTER, September 3rd.

The low quotations for yarn and cloth have continued to attract the attention of buyers, but definite business has been scarce. Many leading operators have evidently satisfied their requirements for the time being, and it is expected that the present quiet conditions will remain in force until the results of the second Bureau report on the American crop, which will be published on Monday, is known. There have been no sales of importance in the cloth market, although a fair amount of inquiry has been met with from day to day. Buyers for India have given attention to light bleaching styles and fancies, but the turnover has not been so large as recently. News from India generally, however, has been more encouraging. Better clearances have taken place at the weekly auction sales in Shanghai, but business on this side remains scrappy. Only modest transactions have been recorded for the other markets. American yarns have been in quiet request. This section, of course, is practically closed down for the whole of the week on account of the annual Oldham holidays. Only a retail trade has been done in Egyptian numbers.

THE WOOL TRADE.

Our Bradford correspondent writes:—We are indebted to Dalgety and Co., Ltd., for cable showing the quantity of wools shipped from Australia and New Zealand during July—the first month of a new wool year. The figures show that more wool has been shipped during the first month this season than during the corresponding period last year. The shipments from Australia during July are returned at 200,000 bales, an increase of 123,000 bales compared with the corresponding month a year ago. The shipments from New Zealand are 39,000 bales, an increase of 24,000 bales, thus making a total of 239,000 bales, a total increase of 147,000 bales. The opening of a new South African selling season took place at Port Elizabeth last Tuesday. Cables indicate that there has been a most encouraging sale with all countries fairly keen to operate. The selection was not too good, but apparently the early shorn wools were wanted for testing purposes. The sale appears to have gone off with considerable competition. Next Tuesday the first sale of the Australian season will commence at Perth. Conditions in the home market this week are scarcely changed. There has been a fairly well sustained turnover in merino wool and tops, and the trade is looking forward to the forthcoming London sales with considerable interest. The most satisfactory feature during the interval has been the well sustained consumption, particularly in fine wool and tops, and active preparations are now being made for the forthcoming spring and summer trade of 1931. There is certainly more hopefulness about the entire industry, and though there is room for improvement, the placing of new business clearly indicates that wool will be wanted for the execution of these orders.

THE JUTE TRADE.

DUNDEE, September 3rd.

The district returns for the final jute crop forecasts for season 1930-1931 were published in Calcutta yesterday, estimating 11,231,000 bales. This is a huge supply, and considerably more than will be required by the trade. The consumption of raw jute is very much curtailed on account of dullness of trade in manufactured goods. For months past, the jute market all round has suffered a continual and steady decline, until prices are now down to a level

which has not been touched for many years. Yet buyers are holding off in the hope of still lower prices, in view of the huge stocks of Calcutta goods which have accumulated to immense proportions during the period of increased production in Calcutta. By their policy of curtailing production by stopping for one week in each month to the end of March, 1931, a total of nine weeks' idleness, the Indian mills will consume much less fibre, probably not more than five million bales, while the exports from Calcutta will certainly not be anything like normal, which is round about 4,500,000 bales. Producers outside of India are calculated to be reducing production all over to about 50 per cent. of capacity. The carry-over of old crop jute has been estimated at 6,500,000 bales, so that, with the quantity estimated for this season, there is an available supply of 17,731,000 bales to satisfy requirements of between 8 and 9 million bales. Sellers of raw jute became reserved when the figures were published, but later were more willing to sell at even lower prices than those ruling prior to the forecast. Good First Marks were quoted at £20 5s., and good Lightnings at £18, while Daisee could have been bought at £15 and Tossa assortment at £17 10s., September-October. Jute yarns are very quiet and lower all round. Common 8-lb. cops have been sold in several instances at 2s. and 3-lb. spools at 2s. 1d., which prices are expected to be maintained for some time, as spinners are experiencing such huge losses and would require jute at many pounds per ton less than those to-day to enable them to sell at these rates. Twist is from 4½d. for 3-ply 8 lb., and 24-lb. sacking web at 2½d. and less for inferior spins, while 3-lb. chains are from 3½d. Rove is down to £17 10s. for 48 lb. and £18 for 200 lb., and fine yarns are also on the easy side. Cloth orders continue of small dimensions to meet immediate needs, and prices are not being seriously tested at from 3½d. for 10½-oz. 40-in. hessians and 2½d. for 8 oz. Less is sometimes being taken in order to induce business, which is badly required to keep works running, even at reduced capacity. Linoleum hessians are slow, and heavy goods, though sometimes showing brighter symptoms, are in general quiet. Calcutta hessians have shown signs of easiness again after being steadier. Prices are from 21s. 3d. for 10 oz. and 18s. 9d. for 8 oz., September shipment; 21s. 6d. and 17s. for October-December, and 21s. 9d. and 17s. 3d. for January-March. On spot, 20s. has been done for 10 oz.

HIDE, LEATHER AND ALLIED TRADES.

Prices for cattle hides were slightly firmer at the Manchester auctions held on Tuesday of this week, and with a fairly satisfactory enquiry it is expected that for the time being any change in values will be upwards. Calfskins were more or less unchanged, while the position of sheepskins is still inclined to be on the weak side—particularly for lambs. Foreign hides have experienced a better sale, and the tendency of prices for most descriptions is towards advances. In the South American market a fair amount of business has been passing, and Argentine ox have been sold on the basis of 6½d., while cows have made 6½d. and Montevideo ox 6½d. Values of dry River Plates have hardened in sympathy with salted hides, and sales of B.A. Americans have been made at 7½d., with M.V. Americans realising 8½d., and Sierra Cordobas 8½d. Good business has been done in Cape hides with prices showing an upward trend. First and second dries have sold at 8½d. and 7½d., while dry salted, 20/30 lbs., have changed hands at 7½d. and 6½d. Australians are a better market, and here also certain descriptions are making slightly higher figures. Business in connection with sole leather has shown an improvement, some fairly satisfactory deals having been negotiated during the week. The repairing trade have taken up considerable quantities of English and wet salted bends in the medium to heavy-weights, a large proportion of which has been in connection with the better grades. Some of the commoner descriptions, however, have marked an improvement, and with the prices for these showing a certain amount of firmness, there is every probability that the better qualities will eventually record slight advances. Light dry hide bends have been called for on manufacturing account, and with no large stocks available there is every prospect for advances being asked for here. The call for rough leather remains poor. Satisfactory business has been done in upper leathers with an improvement noticed in the enquiry for box calf. Willow continues to be the most popular line, but at the same time a steady trade is being done in both black and brown glacé kid. Suede and reptile leathers also are a shade more active, while the call for patent is still concentrated for the most part on the cheaper qualities. Curriers have experienced a slight improvement in the turnover.

OVERSEAS PRODUCE.

SUGAR.—No further change occurred in prices of British refined, and moderate clearances resulted for prompt delivery, while interest is still shown forward up to the end of the year, where prices are at an attractive discount. There is nothing new to comment upon in the general situation, and affairs will be held in check until something definite is known about a meeting between representatives of the Cuban producers and U.S.A. and Canadian banking interests, to discuss means of bringing prices to a remunerative level. Apparently, growers in Java resent exploitation by Cuba of Far Eastern markets. It is stated in London market circles that Java now grants a concession of 1 to 1½ guilders on quantities purchased by Eastern houses, where Cuban sugar has secured a foothold. It will be remembered that some time ago a similar concession was in force for Java sugars westward of Suez, a warning note at that period to Cuba to keep to her own domains. The 15,000 tons browns recently disposed of doubtless carried the concession clause. Raw refining sugars are steady, but quiet of sale. Terminal sections weaker, but business was on a

more extended scale, and included September raw at 4s. 10½d.; December, 5s. 0½d. to 4s. 11½d.; March, 6s. 1½d. to 6s.; May, 6s. 4½d. to 6s. 3d.; August, 6s. 7½d. to 6s. 6d. Cuban 96 per cent., September, to the United Kingdom, sellers, 5s. 7½d.; October, 5s. 9d.; November-December, 5s. 9½d. c.i.f. Mauritius, 99 per cent., refining crystals, October-November, to the United Kingdom held for 10s. 1½d., with bids of 10s. 0½d. invited, f.a.q.; white, October-November, quoted 10s. 10½d. c.i.f. Continentals nominally unaltered. Cuban receipts last week cabled 32,867 tons, against 49,850 same time last year; exports, 46,463, against 94,028; stocks, 1,278,970, against 739,068 at corresponding period last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending August 30th totalled 136,870 tons, against 103,869 last year.

COFFEE.—The market on balance remains steady, and there is only a small quantity of desirable qualities on offer, which rather hampers business. Arrivals of new crop Kenya are not attractive in point of quality, but this is usually associated with early gathering with improvement attending later ones. Some fine bold Costa Rica sold steadily, also attractive Colombians. Brazilian varieties for shipment after a good business at low prices mark a recovery on the part of sellers, but buyers are now shy.

COCOA.—The depressed tone of this market became more accentuated during the week, as consumptive trade is very meagre, even for this period of the year, when quietude reigns supreme. Only retail sales occurred on the spot at rates favouring the buyers, while marked declines set in forward. The chief factor for the downward move is to be found in stocks on the Gold Coast assuming large proportions, the outcome of holding back supplies. And now an unwilling market has to be faced, crumbling prices is but the natural sequel. Accra F/F, October-December, London contract, sold 27s. 6d. f.o.b. G/F, October-December, Continent, 29s. 6d. c.i.f. Terminal quite neglected.

TEA.—Indian auctions totalled 49,550 packages. Best liquoring teas attracted attention and sold at full rates, some choice parcels of broken orange pekoe from 6s. 3d. to 8s. 3d. lb. Medium teas rather irregular, but the good ones were quite steady. Clean common grades marked no essential change. The 24,800 packages Ceylon catalogued experienced a good market, prices ruling firm to occasionally dearer except for commonest qualities, which are frequently easier. Java and Sumatra sales received fair attention at steady prices. There is only a small movement in China sorts on about former terms.

RICE.—No material change apart from Saigon qualities being easier, and there is no apparent revival in trade interest as far as Europe is concerned. Two Stars Rangoon, spot, London, sold 13s. 3d.

BEANS.—Market quite unaltered, but trade moves slowly.

THE CRAFT OF CRIME

When Bill Sykes and the Artful Dodger represented the craft of crime little ingenuity was needed to counter it.

To-day the modern burglar commands all the resources of science. His ingenuity is wonderful. His knowledge of engineering practice is complete and his skill must be admitted—yet we in no way fear him.

For almost one hundred years we have been at war with the burglar, and he has yet to win his first battle against The Chatwood Security.

What The Chatwood Safe has it holds, for delivery only to the owner of the key.

		Italian—Raw, fr. Milan	12 0 14 0				

PEAS.—Generally steady. Japanese, August-September, sold 16s. 9d., and September-October, 18s. 3d.

POTATOES.—Business remains quiet and prices are scarcely changed on last week.

SPICE.—Pepper remains quiet, but with sellers equally reserved, prices are tolerably steady. Lampong, July-August steamer, sellers 5 1/2 d.; August-October, 5d.; Muntok white, 7 1/2 d. and 7d. respectively. Spot market unchanged.

FRUIT (Dried).—Currants in quiet demand, small inquiries being chiefly for low-grade Australian. Pyrgos, spot, 36s.; Australian, 36s.-58s. Australian sultanas are selling well, and there is a fair inquiry for Cretans to arrive. Raisins quiet of sale. Sales in better support. Figs move off slowly. Evaporated Fruits: Market dull and without new feature.

CANNED GOODS.—Fruit: Australian descriptions were in steady request, consumption being stimulated by the recent spell of warm weather. Californian, however, moved off rather slowly, though prices are fairly attractive. Fish: Sardines steady, demand being centred on best quality. Meats: Market steady with improved inquiries for ham and tongues. Condensed Milk and Milkpowders: Market steady with a fair demand. Quotations: Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 33s. 9d.; machine-skimmed ditto, 21s. 6d. English condensed milk, full cream, sweetened, 5-cwt. casks, 33s. 6d. Honey: Market shows rather more activity, but values easy on liberal offerings. Jamaica white, 47s. 6d. to 50s.; New Zealand, 65s. to 87s. 6d. per cwt.

MEAT.—Prices of home-killed meat have been firmer, but imported beef and mutton showed a weakening tendency. Beef, per 8 lbs.: English, long sides, 5s. 4d. to 6s.; Argentine chilled hindquarters, 4s. 4d. to 4s. 8d. Mutton, per 8 lbs.: English, 6s. 8d. to 8s.; New Zealand wethers, 3s. 2d. to 4s. 2d. Pork, per 8 lbs.: English (under 10 stone), 7s. 8d. to 8s. 4d.

RUBBER.—Dull and featureless. Sheet, spot sold, 4 1/2 d. to 4 1/2 d.; October, 4 1/2 d. to 4 1/2 d.; October-December, 4 1/2 d. to 4 1/2 d.

January-March, 5d. to 4 1/2 d.; April-June, 5 1/2 d. to 5d.; July-September, 5 1/2 d. to 5 1/2 d. London stocks 7 tons down on the week, landings being 1,345, deliveries 1,352, stocks 80,611, against 35,605 last year. Liverpool, 116 tons higher, landings 371, deliveries 255 and stocks 29,789 tons against 7,560 last year.

HEMP.—Market for Manila again weak, though sellers were not unduly pressing, but lack of sufficient trade support exercises a baneful influence. Sales include, J2, October-December, at £22; K, July-September, also August-October, £20; L2, August-October, at £18 5s., and M1, ditto, also £18 5s. African sisal No. 1, f.a.q., August-October, quoted £21 10s. c.i.f. Receipts last week cabled 24,000 bales against 30,000 last year and 29,000 in 1928. Estimate for next week 23,000, and week after 25,000. Manila shipments last week: 3,000 bales to the United Kingdom, 2,000 Continent, 8,000 U.S.A., 8,000 Japan, 1,000 other countries, and 1,000 local consumption, leaving stocks at 144,000 bales.

VEGETABLE OILS AND OILSEEDS.—Linseed has continued to fall on favourable crop reports in Argentina, the area of which, it is officially reported, is larger than 1928-29, when a bumper yield was harvested. At the lower level of prices, however, a good business has been effected, £14 10s. being paid for old crop Plate to Hull in practically all positions, while for new crop, December-January shipment, £13 6s. 3d. and £13 7s. 6d. have been paid. Cottonseed is quiet and there is very little demand for the balance of the old crop of Egyptian, which offers at about £8 15s.; new crop is rather steadier around £8 17s. 6d. for shipment to December. Very little business is done in other oil seeds. Linseed oil has continued to decline in sympathy with seed raw oil ex Hull September, delivery having dropped to £31 per ton naked, with October-December offering at £30. Cotton oil is neglected and lower, the Hull mill price for crude Egyptian being £26. Oil cakes are in moderate request and unchanged. The market for copra is steady, F.M.S. Straits, October, to Rotterdam, quoted £17, with buyers at £16 17s. 6d.; Dutch East Indies, October, £17. Palm kernels are steady but quiet.

THE MONEY MARKET.

AFTER the extremely easy conditions prevailing over the week-end, balances at the close on Saturday being only lendable with difficulty at 1 per cent., old day-to-day loans were freely renewed on Monday down to 1 1/2 per cent., notwithstanding the absence of Treasury bill maturities. On Tuesday, however, money was more wanted; credit supplies were somewhat depleted by "window-dressing" operations on the part of the clear-

ing banks; and new money commanded generally 2 per cent., with old loans renewed at $1\frac{1}{2}$ per cent. On Wednesday the clearing banks were lending more freely again, and with a larger amount of Treasury bills maturing, fresh advances were usually obtained at $1\frac{1}{2}$ per cent. Conditions on Thursday were still easier, and the ruling rate for day-to-day loans was no more than $1\frac{1}{2}$ per cent.

Business in the discount market throughout the week has been stagnant, and the total turnover has been of unusually small dimensions. On Monday, as a result of the weakness of sterling against the dollar over the week-end, $2\frac{1}{2}$ per cent. was quoted by most dealers as the minimum buying rate for 90-day bills, but this rate was barely effective, and by Thursday, as a result of the better tendency of the pound on the principal foreign exchanges, the average quotation for three months' fine paper had relapsed again to little better than $2\frac{1}{8}$ per cent. A small Continental demand at $2\frac{3}{4}$ per cent. was in evidence, but otherwise there was little outlet for bills. The rate on six months' paper was fractionally firmer at $2\frac{7}{8}$ per cent.

The consignment of Cape gold in the market this week was comparatively small, totalling £560,000. Of this sum, £485,000 was taken by France, notwithstanding the fact that the franc closed on Monday at 123.83 and on Tuesday at 123.86. The lower price, however, which was paid, namely 84s. 11½d. per ounce fine, was a welcome indication of lessening competition. The exchange quotation for the Swiss franc might have enabled a higher price to be paid for shipment to Switzerland, but the Swiss banks appear to be reluctant to add further, by means of gold imports, to the existing plethora of credit in the Swiss market. On Thursday, £226,500 in sovereigns, apparently part of a consignment arrived from Brazil, was paid into the Bank, and £400,000 was "unmarked." Thus, although the possibility of a renewed appreciation of the dollar to a point entailing the risk of an efflux of gold cannot be wholly disregarded, the market towards the end of the week was inclined to take reassuring views of the gold outlook, more especially as the Bank's technical position, as shown below, was unexpectedly strengthened by a large addition to its gold stocks, not accounted for in the daily statements of gold movements.

	Aug. 21, 1930.	Aug. 28, 1930.	Sep. 4, 1930.	Sep. 11, 1930.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount Call	1	1	1	1	1½ (May 1, '30)
Houses' Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½	...

The week's Bank return revealed a contraction in the note circulation of £1,656,210, and an increase of £1,052,223 in the stock of gold. These two changes enabled Government securities to be reduced by £1,970,000, without any appreciable diminution of bankers' deposits, although public deposits were over one million higher, while the reserve rose from £51,477,359 to £54,219,531. The proportion, at 50 per cent., showed an increase of $2\frac{3}{4}$ per cent. on the week. The most probable explanation of the discrepancy between the net influx of £267,405 shown by the daily gold statements and that disclosed by the Bank return, appears to be that the balance represents gold paid in by one or more of the joint stock banks.

NEW YORK.

As a result of seasonal withdrawals of funds from New York, call money during the week has ruled rather firmer at $2\frac{1}{2}$ per cent. Gold movements have been confined to the shipment of \$2,000,000 to Canada, offset by the receipt of \$1,000,000 from Venezuela. Following the offer of \$325,000,000 of twelve months' certificates of indebtedness carrying $2\frac{3}{4}$ per cent. interest and issued at

par, it is reported that the Treasury will redeem \$1,000,000,000 of $3\frac{1}{2}$ per cent. notes outstanding.

THE STOCK MARKETS.

The recovery in share prices was arrested this week, the public showing no inclination to join in the movement. Gilt-edged, however, remained firm, with some influential buyers in the market. Argentine bonds improved on the supersession of President Irigoyen, but German "Reparation" bonds declined sharply. Home rails continued to sag, on the unfavourable current earnings position. Dealings were on a restricted scale in the industrial markets, with few significant price changes. Rubber shares recovered slightly after a precautionary marking down on the "no restriction" decision, but business in tea shares was negligible. Oils showed pronounced susceptibility to day-to-day changes of sentiment. Mines were generally quiet, though a certain liveliness occurred in a narrow range of South African stocks.

THE COMMODITY MARKETS.

There is no improvement in the coal trade, and German competition is being increasingly felt in the export markets. The improvement in the pig iron section of the iron and steel industry has been maintained, but the volume of transactions in finished goods is still on a low level. The price of raw cotton has shown a further fall as a result of the United States Bureau's crop estimate, which was larger than was expected. The market in cotton goods remains dull. There is evidence of a slight seasonal improvement in the wool trade. Hides and leather are firm. Wheat prices are scarcely changed on the week.

THE FOREIGN EXCHANGES.

Although the fluctuations were numerous in many currencies in the foreign exchange market this week, they were mostly within narrow limits, and did not result from any real activity or large turnover of business. New York moved rather sharply against us from 4.86½ to 4.86½. Montreal gained $\frac{1}{8}$ at 4.85½. Paris, after touching 123.77½ and 123.86½, lost two points on balance at 123.83. Brussels was also two points worse at 34.86½. Milan improved at 92.84 and Madrid was rather less erratic, and settled down at 44.15, after touching 46.02 and 43.65. Amsterdam went rather against us at 12.07½, but Berlin was very much weaker at 20.41½, against 20.39 last week. Switzerland moved in our favour to 25.05½. Of the Scandinavian exchanges Stockholm was $\frac{1}{2}$ better at 18.09½, the other currencies remaining unchanged. The South American exchanges all showed a decided recovery, the feature being the sharp rise in the Argentine peso after the recent political upheaval. Rio gained $\frac{3}{32}$ d. at 5d., Buenos Aires was better by 2d. at 41½d., and Montevideo also by 1½d. at 41½d. In the Far East the rupee was firm and unchanged at 1s. 5½d., but the yen was $\frac{1}{8}$ d. weaker at 2s. 0½d. Batavia gained $\frac{1}{4}$ d. at 12.08. In the forward market one month's dollars remained at last week's quotation of $\frac{1}{8}$ cent premium, but three months' were less in demand at $\frac{1}{8}$ cent premium, a decline of $\frac{1}{8}$ in the week. Paris, after being at 4 and 9 centimes premium, receded to last week's quotations of 3 and 7 centimes, also premium. Brussels was unchanged. Milan was a little weaker at rather wider discounts of 12 and 33 centesimi. Madrid gained a little at enhanced premiums of 2 and 4½ centimos. Three months' Amsterdam went from $\frac{1}{4}$ to $\frac{1}{8}$ cent premium. Berlin and Geneva were practically unchanged. A slightly better tone characterised the silver market, and in the absence of sellers a small turnover sufficed to improve prices for both spot and forward by $\frac{3}{4}$ d. to 16½d. The China silver exchanges were differently affected, Hong Kong losing $\frac{1}{4}$ d. at 1s. 3½d., whilst Shanghai gained $\frac{1}{4}$ d. at 1s. 7½d.

Inquiries should be addressed to Moody's Economist Services, 6, Boulevard Street, London, E.C.4.

THE OUTLOOK IN INDIA.

THERE is at least this satisfaction to be derived from the latest developments in the Indian situation: the atmosphere has been clarified and the position of affairs rendered more capable of definition. Commenting on conditions as they existed a fortnight ago, when the negotiations between the Government of India and the imprisoned leaders of the Congress Party looked as if they were to be interminably prolonged, and when rumours of "peace by compromise" accorded strangely with the persistence of civil disobedience and with recurrent outbreaks of terrorism, we voiced the concern which was then beginning to be felt—even in sections of British opinion most sympathetic with Indian aspirations—at the appearance of drift, temporising and general uncertainty which were befogging the whole Indian issue. At least that obscurity, with its attendant hopes and fears, is now dispelled; we know where we are. The Congress Party will not be represented at the Round Table Conference, and the Non-Co-operative campaign will not be "called off"; but the Conference, unprejudiced by any pact or understanding and attended by an Indian Delegation broadly representative of all shades of opinion save that of Congress, is to go forward.

Regrettable though the absence of the Congress leaders from the Round Table Conference may be, there was little in the attitude of the "Non-Responsivists" at any time during recent months to warrant hopes that the "peace negotiations" would succeed; and their failure serves further to widen the gulf which has grown up since the Calcutta Congress of 1928 between extreme Indian Nationalism and plain, matter of fact realities. The diligent and public-spirited efforts of the two mediators, Sir Tej Bahadur Sapru and Mr Jayakar—efforts facilitated by Lord Irwin with unexceptionable patience and sympathy—broke down simply because of the "impossibilist" character of the Congress leaders' terms. The statement which the mediators have issued discloses the fact that on August 15th, after a final discussion in Yeravda Gaol, they were given a letter to convey to the Viceroy, embodying the demands put forward jointly by Mr Gandhi and Pandits Motilal and Jawaharlal Nehru. According to the cabled summaries, these were: (1) recognition of India's right to secede from the British Commonwealth; (2) a responsible national Government with full control both of finance and the armed forces; (3) reference to an independent tribunal of all such British claims and concessions (including the Public Debt) as "seemed unjust"; and (4) the repeal of all special Ordinances providing for public security, and the release of all political prisoners not found guilty of violence. If these "preliminaries" were settled, the Nationalist leaders intimated that they would be prepared to discuss the composition of the Round Table Conference and would "call off" civil disobedience, but the picketing of foreign cloth and liquor shops and the illegal manufacture of salt would, even so, continue.

Now, whatever ideas may have been in the mind of Mr Gandhi, who thinks in terms of an applied metaphysic peculiarly difficult for Europeans to appreciate, there can be little doubt that the Nehrus, whose ascendancy over the Mahatma at the moment seems fairly obvious from the history of the negotiations, knew very well that these were terms *pour rire*—put forward, presumably, for subsequent propaganda uses. One need not be an Englishman, still less a die-hard reactionary, to recognise that acceptance of these demands would have meant complete abdication by the Government. And so long as a Government—whether British, "dyarchic" or Indian—is established in India, unconditional surrender to any section of opinion which seeks to dictate its own terms in that vast sub-continent could not be contemplated as a Governmental act.

The Government of India, however, were clearly right in giving every facility for the mediators' efforts, unsuccessful though those efforts have been. In the history of the British Raj in India, whose fine achievements need fear no detractors, there has been quite enough "standing on dignity." By his patient forbearance in waiting to see if any possible common ground with Congress could be discovered, Lord Irwin has strengthened his position and that of the appointed Delegation as well.

Of the composition of that Delegation this may be said. Although the absence of any member of the Congress Party inevitably robs the Delegation of the title to be regarded as completely representative of Indian opinion, the names of those who have been invited to attend (a few further additions are expected to be made to the list already published) should be sufficient to acquit the Government of India, in the eyes of every unprejudiced observer, of the charge of having endeavoured to "pack" the conference with "easy" men likely to favour unduly the British point of view.

The Delegation from British India naturally, and properly, contains a good sprinkling of delegates who have held, at one time or another, official positions, and whose practical experience in administration should, therefore, be of the greatest value in the deliberations. On the other hand, not only has an impressive representation been secured for almost all the interests, religious, economic, and racial, outside Congress—landholders, business men, the Depressed Classes, the European community, Anglo-Indians, and Indian women—but the Delegation includes a number of men whose outlook is by no means far removed from that of Congress, and indeed is distinguished from it only by a greater capacity to take long views, and adhere to the practical realities of the situation. Mr Jinnah, among the strong Moslem team, and such prominent Indian Liberals as Sir Tej Bahadur Sapru and Mr Srinivasa Sastri, stand little behind the Congress body in their strong opposition to the principle of having a dictated constitution imposed on India from above.

Indeed, if any useful measure of agreement is to be reached, it is clear that it is to these "progressives" that the British negotiators will have to address their arguments. At the same time, though the complexion of the majority of the Delegation may perhaps be regarded as "moderate," it would be a profound mistake were opinion in this country to jump to the conclusion that "moderation" in India to-day means a disposition to accept uncritically the report of the Statutory Commission, or to abate one whit of India's claim to the ultimate attainment of full Dominion status. Thus the Indian side of the Round Table Conference, in which a strong and influential Delegation from the States has been invited to participate, should be such as to give to the Conference discussions a full measure of reality.

It now remains to be seen what long-range influence the Congress Party can bring to bear on the proceedings of the Round Table Conference itself. That it will seek to embarrass the negotiators on the Indian side may be taken for granted; but though we are by no means disposed to under-estimate the force of Nationalism (any more than we are ready to admit that Nationalism and India are synonymous), it is by no means certain now that the Conference is a *fait accompli*, whether all those members of Congress whose opinion shades off from "advanced" Liberalism to the barren formulæ of the irreconcilables will be whole-heartedly glad that their representatives, by their own decision, are taking no part in this historic attempt to find a basis whereon a new Constitution for India can be built.

THE TWO EUROPES.

SINGULARLY little attention has so far been directed in Great Britain to the conference of the agricultural States which took place at Warsaw last month. It is clear nevertheless that a European movement of a new kind is on foot. It may or may not succeed; and, if it does, it may find its place within the League of Nations framework, or in that of the Briand plan, or both. Or it may develop independently as between the States that have first conceived it, with the probable addition of a few others.

What is most significant about the Warsaw Conference and the conceptions it embodies is that it represents the domination, temporary and partial it may be, of economic aims over political. That was most clearly illustrated by the earlier gathering out of which the Warsaw Conference originated—the meeting between Roumania, Yugoslavia and Hungary at Bucharest in July. It is safe to say that Hungary and Roumania have never met under even the most transparent cloak of cordiality since the war, except at League of Nations Assemblies; and the Bucharest meeting, convened to consider the conservation of the common interests of three contiguous agricultural countries, must be interpreted as a sign of a new recognition of fundamental realities by States which hitherto played politics all the time and let economics go. No doubt the removal of the eternal Optants dispute from the field of controversy, as the result of the Hague financial settlement, eased the situation a little; but the fact that the three States in question should not merely have met at Bucharest to take counsel together, but should as a result have sent verbally identical replies to the League of Nations questionnaire regarding negotiations for further tariff understandings, is indicative of a new outlook in South-Eastern Europe.

The next step was the Sinaia Conference at the beginning of August, when Roumania and Yugoslavia tried to develop still further, as between themselves, the understandings already initiated on a rather wider scale with Hungary as third party. The conversations seem to have carried cordiality to the point of impracticability, the idea of a full Customs Union between Roumania and Yugoslavia being enthusiastically welcomed in the full confidence that such a development could be achieved with little difficulty or delay. Customs Unions, however, are easier to discuss than to realise, and what the conference actually did bring forth was something much less ambitious. Agreement was reached regarding the interchange of goods between the two countries (on a basis which appears rather to ignore the effects of most-favoured-nation treaties by which either of them may be bound), veterinary arrangements, and rail and river accords.

The weak point about the Sinaia agreements is that they deal in the main with trade between two countries of similar economic structure, which have in point of fact little to export to one another. Both of them are predominantly agricultural, and their common concern is with their exports to other countries, not their interchange of products with one another. That is what differentiates Sinaia, and to a lesser extent Bucharest, from Warsaw. The purpose of the Warsaw Conference may be defined roughly (in a phrase which needs many reservations) as the presentation of a combined front to the industrial States of Europe. The conference was attended by nine States, representing a population of some 90,000,000, but not all of them can be regarded as probably very active partners in any movement to which the conference may give rise. Finland, a little remote geographically, was represented only by an observer, and Estonia and Latvia, small States in fairly comfortable enjoyment of specialised markets, are still intent rather on their Customs Union negotiations than on co-operation in any larger developments. Bulgaria, again, is rather remote and has no extensive export trade, while Czechoslovakia, though represented at the conference, is at least as much industrial as agricultural. One of the most significant recent events, indeed, in this par-

ticular field has been the economic gravitation of two of the members of the Little Entente, not towards the third member, Czechoslovakia, but towards the traditional enemy, Hungary.

But if the core of the Warsaw Conference consisted of Poland, Roumania, Yugoslavia and Hungary, that must be regarded as a very solid core. The meetings lasted only four days. There had been little direct preparation for them, so far as the majority of the States were concerned; there was a general uncertainty at the outset as to what was on foot; and some of the conclusions reached were tentative and vague. But in spite of all that the conference gave opportunity for the expression of a synthesis of very definite views, to the formulation of which M. Delaisi's book, "Les Deux Europes," must have contributed not a little. The thesis of that very suggestive work, it may be recalled, is that industrial Europe and agricultural Europe, "horse-power Europe and draught-horse Europe," can be delimited geographically; that industrial Europe, with its science, its enterprise and its capital, has developed most of the world and made itself new markets there; but that for one reason and another the future possibilities of those markets are not considerable, and that as a consequence industrial Europe's best hope is to turn to the development of the still primitive agricultural Europe, thereby increasing the production of the foodstuffs industrial Europe needs and at the same time creating a new and effective demand for the commodities industrial Europe produces.

The Warsaw Conference was only concerned with its own half of M. Delaisi's conception. It had the desperate state of agriculture in Eastern Europe before it, and it had to discover its remedies where it could. A general diagnosis of the situation was not difficult. As M. Madgearu, Roumanian Minister of Commerce, and in some ways the leading figure at the conference, put it, what was needed was new outlets and cheap money. That means that the problem was both internal and external. Agricultural credits, the financing of the erection of chains of silos, and like undertakings, are for the most part matters for each State to deal with individually, though the Warsaw Conference by no means excluded the possibility of inter-State agreements, either bilateral or multilateral, regarding some of them. But the main concern of the delegates was to lay the foundation of some understanding with industrial Europe which should provide an assured market for agricultural products at remunerative prices. The resolutions adopted at the close of the conference accordingly contemplate the elimination of competition between agricultural States, the "rationalisation of agricultural export," the abolition of direct or indirect export subsidies, the co-ordination of veterinary and sanitary restrictions, a demand for a preferential treatment of European cereals and other agricultural products by European importing States. The co-operation in these fields initiated at Warsaw is to be developed in similar gatherings to be held annually in future.

This represents an ambitious and not very deeply considered programme. The assumption that the predominantly industrial States of Europe will be willing to accord preferential treatment to European as against transatlantic wheat argues an optimism for which no visible base exists at present. Many such countries, notably Germany, are almost as much concerned about European competition with their own agricultural products as about any imports from overseas, and here, too, the most-favoured-nation difficulty seems to have been, not indeed completely ignored, for specific reference is made to it, but rather lightheartedly dismissed. The general view expressed was that imports of European agricultural products form so small a proportion of the whole that it would be easy to make an exception in their favour. Even if that is true, it by no means follows that a manipulation of tariffs represents the line of least resistance.

But what is important at this stage is not what the agricultural States are co-operating to achieve, but that they should be co-operating in a practical way at all. No

one doubts that the agricultural land of which Eastern Europe so largely consists is capable of raising its present output by perhaps 100 per cent., given the fulfilment of the two conditions M. Madgearu laid down, new outlets and cheap money. There is obviously scope, too, for some rationalisation of selling machinery. The Warsaw Conference recommended the establishment of selling agencies in all participating countries and the provision of some financial assistance which should make it possible for grain to be stored and put on the market only as the power of absorbing it justified. Though there are a thousand pitfalls in doing this, as the Canadian pools have discovered, the orderly marketing of crops holds the possibility of much benefit to the producer, if the funds can be found to make its realisation possible. And it is here that political considerations suddenly impinge on economic. A country like Poland, for example, could readily enough raise money abroad if more confidence existed abroad in Poland's political future. But with a German menace on one frontier and a Russian menace on the other, and the vagaries of Marshal Pilsudski keeping the country in a ferment internally, Poland's appeal to the foreign investor is not compelling. That obstacle will only disappear as political conditions in Europe improve, and the improvement depends on a great many more States than were represented at Warsaw. The key even of the economic situation under discussion at Warsaw must be found ultimately at Geneva.

RATIONALISATION AND UNEMPLOYMENT.

THE task of the professional economist is often thankless, but now and then he finds an opportunity of demonstrating to a surprised business world the practical value of a mind trained in those methods of abstract analysis which are generally an object of suspicion. The most favourable opening for doing this effectively is afforded by some such occasion as the appearance of the legendary emperor in his alleged suit of new clothes, when everybody is secretly thinking what nobody dares to say or perhaps even clearly to formulate in his own mind. Then the economist plays the rôle of the *enfant terrible* in the legend and cries aloud: "But the Emperor hasn't any clothes on at all." Something of this sort has just been most opportunely done by Dr. Gregory in his presidential address to Section F. of the British Association. Rationalisation is at present one of the most frequently prescribed remedies for unemployment, yet, though at the same time it is pretty generally recognised that a substantial part of the present unemployment in the leading industrial countries is due to it, few have frankly faced the question how long this is to last, whether it

may not have to be reckoned with as a permanent phenomenon, and, if so, what is to be done about it.

Dr. Gregory accepts the fact that rationalisation must in the first instance displace labour; indeed, as prices in general have fallen while that of labour has not, the saving of labour is often the motive for rationalisation. Statistics of output and employment illustrate this strikingly, though they are not to be regarded as conclusive evidence, since they do not cover all occupations. Everything therefore turns on the extent to which, in the long run, the displaced labour is reabsorbed.

As far as the reabsorption of labour in a rationalised industry by that same industry is concerned, Dr. Gregory makes it sufficiently clear that this can by no means be counted on as a certainty. Even if the demand is greatly stimulated by price reductions, the technical conditions may be such that an ample expansion of output can be achieved with a smaller labour force than before. As for the concomitant expansion of the industries supplying equipment to the main industry, there is always the probability that they, too, will sooner or later be rationalised, so that there is no certainty of their demand for labour expanding to the extent required to absorb the ex-employees of the original industry.

There remains the fact that rationalisation, by increasing the national dividend, must, unless it is all taken out in increased leisure, mean greater purchasing power. Here Dr. Gregory joins issue with Mr G. D. H. Cole, who makes the problem one of distribution and contends that unless the increased output is accompanied "by a pouring of fresh purchasing power into the pockets of consumers" the goods will be unsaleable and further unemployment will result. Mr Cole appears to consider that only wage-earners are consumers; Dr. Gregory, who admits entrepreneurs into that category, states definitely that in the absence of coincidental monetary disturbances "rationalisation involves an increase of the monetary purchasing power in the hands of the consumer," and argues that unless consumers prefer, as they very well may, to hoard it (a possibility whose ultimate consequences we should have liked to see more fully worked out), rationalisation will not in the long run involve unemployment. He emphasises the fact that the "run" may be very long indeed, but cites American experience in pointing out that an increased demand for personal services may help to solve the problem. The fact that the additional purchasing power will largely be spent in personal services and luxuries means that employment in the "staple" industries will no longer be a principal measure of prosperity, and in this connection Dr. Gregory makes the interesting and valid point that "those countries which have the highest standards of life ought to be those employing the largest proportion of their populations in the supply of 'luxuries'."

Dr. Gregory thinks that in the future a higher "normal" level of unemployment may have to be faced.

This conclusion presumably follows from a conception of rationalisation as a steadily continuing process: with rationalisation going on all the time in one industry or another there will always be a number of persons who are the victims for the time being of the short-run disturbances involved, and it does not necessarily mean that any individual among them will be out of work for long. A minimum of unemployment is inevitable in an economic system that is constantly developing, and the more rapid the development the higher the minimum, but that is not to say that the increased time lost by the individual may not be more than compensated by his higher earnings when at work.

In any event, as the process of rationalisation is going on all over the world, and has proceeded faster in other countries than here, this country cannot avoid its less desirable consequences by refusing to participate. Since rationalisation has the effect of reducing production costs, the choice really lies between unemployment as the result of being undersold both at home and abroad by rationalised countries and unemployment as the result of rationalisation—a question of character rather than of volume. As Dr. Gregory succinctly remarks: "Unemployment resulting from rationalisation is a lesser evil than unemployment resulting from relative inefficiency."

The problem, as summarised by Dr. Gregory, is therefore essentially one of adapting the displaced workers to supply the new wants which will ultimately develop as a result of increased wealth and increased leisure. This would solve the problem in the long run, and would also help greatly to shorten the period of inevitable friction, for new kinds of demand develop more rapidly, the more rapidly and cheaply they can be met. The question is thus ultimately one of mobility of labour, and not so much of mere geographical mobility as of what may be termed occupational mobility. Here it becomes necessary to call in question a principle which has been embodied in the Unemployment Insurance Acts from their inception—namely, the principle of the right to refuse work of a humbler character than that to which the insured person has hitherto been accustomed. The original purpose of the clauses in which this principle is embodied was twofold: to prevent skilled men from being forced into work which might react detrimentally upon their efficiency in their usual trade and to safeguard workers in general from being forced by temporary necessity to take a step down the economic ladder which it might be difficult to retrace. At present the effect is to stereotype an obsolete distribution of labour as between various branches of employment, and if the right to refuse "unsuitable" employment could be confined to those of the unemployed who are still actuarially entitled to benefit, a large step would be made in the direction of inducing people to relinquish the forlorn hope of work in industries which no longer need them and to find a more permanent place in the satisfaction of new wants. Sooner or later this will have to come, for one of the effects of rationalisation is to increase the field for semi-skilled labour of a kind which requires so little previous training that the technological difficulties of transference are rapidly becoming less important.

If the mobility of labour were increased by a reform of the unemployment insurance laws, and further promoted by such means as training centres and more general use of the labour exchanges by employers, a great fillip would be given to the development of new occupations. There is much confusion of thought, however, on the question whether this can be achieved without a sacrifice of wages. If rationalisation is to increase the national income, we may assume, pending proof to the contrary, that it will increase the income of the working classes, but the wartime experience of this country and the subsequent experience of the United States suggest that it may be conditional upon a readjustment of relative wage rates as between different groups. Certain limited groups may find their wages reduced, and certain individuals may find themselves obliged to move into lower-paid groups, but as far as the effects of rationalisation alone are concerned this should be more than counterbalanced by the opposite effect on the remainder.

THE RUBBER CRISIS.

In order to appreciate in all its bearings the present critical situation of the plantation rubber industry, a brief retrospect may be a useful preface. During the years 1914-18 rubber consumption increased rapidly, but it was restricted during the later phases of the War by the rationing of cargo space as a result of shipping losses. The end of the War thus found the plantation industry with considerable stocks and with a capacity for greatly enlarged output. During the post-war boom, however, all the rubber available was readily absorbed, and it was not until the slump arrived that capacity was seen to be seriously in excess of demand at the existing level. By the autumn of 1922, prices had declined so far, and had remained low for such a considerable period, as to bring the weaker producers into a position of acute difficulty, with the result that a clamour arose for governmental restriction.

Before the end of 1922 the Stevenson restriction scheme was in force. Originally it was hoped that the Dutch Government would join the British Government in the experiment, but after some hesitation they decided not to do so. It so happened that the imposition of restriction synchronised with the lifting of the post-war depression and also with the beginning of the phenomenal expansion of the American motor industry, which, absorbing two-thirds of the output of rubber, was destined to raise world consumption from 400,000 tons in 1922 to over 800,000 tons in 1929.

It would perhaps be unfair to tax the sponsors of the Stevenson scheme with lack of prescience in that they did not foresee these developments. The dogged maintenance of the scheme for a period of six years, however, was a less excusable mistake, and is, moreover, directly responsible for many of the present difficulties. Increasing demand and restricted output were soon reflected in excessive prices, and consumers were driven to the use of substitutes, particularly reclaimed rubber. More serious still, high prices artificially stimulated world productive capacity, large areas of rubber being planted by the Dutch estates and Dutch natives to supply the gap left by the diminished output of the restricted British areas. The removal of restriction in 1928 thus found a productive capacity much enhanced by extensive areas of new Dutch plantation and Dutch native rubber, together with the full force of unrestricted production from the well "rested" British estates.

The shock of the transition from restriction to unfettered production was softened by the accident of an unprecedented increase in consumption during the first nine months of 1929. With the arrival of a world-wide depression at the end of that year production began to outrun consumption. Since October, 1929, there has been an almost unbroken increase in stocks and a corresponding decline in prices to record low levels; and the continuation of low prices for many months actively stimulated the native producers and the weaker plantation companies to produce maximum outputs in order to obtain revenue at all costs. The unbroken prospect of world depression held out no hope of any immediate improvement in demand. The effect of a "tapping holiday" by British and Dutch estates during May, 1930, was insufficient to arrest the increase in stocks. Once more the clamour for restriction arose, though it was by this time appreciated that to be effective for its purpose restriction must be agreed on by both British and Dutch producers, and enforced by Government on estates and natives alike. Last week it was announced in very definite terms that the Dutch Government was not prepared to impose any form of restriction, and with this pronouncement the restriction controversy may be presumed to be dead.

The immediate effect has been a sharp slump in prices to less than 4d. per lb., as compared with 6d. in June and 8d. in February of this year. Production is still outrunning consumption, and it must be expected that during the present year 100,000 tons of rubber will have been added to world stocks. At a rough estimate, production for 1930 should amount to 860,000 tons and consumption to 760,000 tons. World stocks by the end of December

will, if these figures are reached, amount to 480,000 tons, or roughly eight months' supply at the present level of consumption.

These figures reveal a state of genuine depression, and it is not to be supposed that recovery to a state of prosperity will be rapid. On the other hand, there is little doubt that the present level of prices reflects a psychology of depression which the facts do not warrant. With rubber at the low levels of recent months, there have been signs both in the Dutch East Indies and Malaya of a decline in native output. Although, up to August, plantation companies continued to strive for a maximum output, this was no doubt partly attributable to the hope that it would be possible to hold out until the advent of restriction. With this hope finally removed, it would be surprising if there is not a considerable decline from this source before the end of the year. Moreover, the further recession in price from 6d. to 4d. is enough to make the crucial difference of it being more costly to tap than to close down. The indications, therefore, are that output will decline gradually for the remainder of the year, and it should be observed that once estates are put on to a "care and maintenance" basis, it will take a considerable increase in price to bring them back into production. The disbandment of staffs and repatriation of natives to India would make it practically certain that a decline in production from this cause would be maintained for at least twelve months.

For these reasons it is not extravagant to suppose that in 1931 output may be no more than 820,000 tons. On the other hand, there is a fair probability that a general, and particularly a motor, industrial revival in the United States in 1931 may cause consumption to outrun production; consumption for that year may easily reach 840,000 tons. The effect of this would not in all probability raise prices above the cost of production, and it would not be sufficient to bring closed-down estates back into production; but it should inaugurate a long period in which prices will move slowly but steadily upwards.

The importation of relative stability into rubber prices even at low levels would be a benefit of the highest value. A long period of prices around 6d. per lb. would in the past have spelt disaster to the industry. As it is, that price will doubtless spell an extremely difficult period, especially for marginal producers. But the superficial resemblance of the present crisis to those with which the rubber industry has been previously afflicted conceals a radical change in the factors which are vital to the future of rubber growing. If a comparatively short and sharp crisis compels the industry to face its real problems and put its house into order more quickly than it would have otherwise done, it may well be a blessing in disguise. It is for this reason that the death of restriction, which leaves the industry to face the facts, is an event of the highest importance.

On the production side, it should be realised that since the last crisis the problem of the native producer has become paramount. Taking a long view, the battle is between the European and the native producer, and given present organisation—except on the most efficient estates—the advantage is with the native. The conclusive argument against restriction at the present juncture was that it ignored the long view and would finally have given away the position to the native producer with the object of alleviating a temporary slump due in the main to world depression. Until rubber can be sold at a profit at 6d. per lb. or less by the plantation industry as a whole, the competition of the native producer will not be arrested. For the native has no "overheads" and virtually no cost of production, and the price has got to be low enough to leave him no margin after the cost of preparing and shipping his rubber has been defrayed. Productive efficiency of this order will be achieved only by large-scale units with the necessary resources for scientific research and replanting with bud-grafted rubber, and through the exercise of the strictest economy from centralised marketing organisation. The way has already been pointed out by the more efficient producers, and a transformation of the whole industry on these lines must be looked for during the next few years.

established in 1830

On the consumption side, the outlook is not without its bright features. It is true that the wide fluctuations of the rubber industry in the past have been due in some measure to its extreme dependence on one industry and one country—the United States motor trade—for the consumption of rubber. But the long-run prospects of the motor industry and equally of the United States are essentially good; and once the producers are masters in their own house (*vis-à-vis* the native) and are organised in large-scale units, co-operation with large-scale consumer units should simplify the problem of adjusting supply and demand and stabilising prices. Moreover, the importance of new uses of rubber and the spread of rubber manufacturing, both of motor and other rubber products, which has been growing so rapidly in recent years, would certainly be accelerated by a long period of low and comparatively stable prices. Finally, having regard to the future of rubber consumption, present world stocks, though large, are not seriously oppressive. If the present situation is handled intelligently and the painful process of rationalisation resolutely faced, it should be possible to look forward to a greater and more solid prosperity for the rubber plantation industry than it has known in the past.

GERMANY'S REAL PROBLEMS.

With the approach of polling day, the prospects of the German elections, which we discuss in a Note of the Week, have given rise to feelings of anxiety, reflected in the weakness of the price of the 5½ per cent. Loan, lest the solution of Germany's economic problems should be hindered by some loss of political stability. In the following article a correspondent deals with those problems from the angle of practical business, with particular reference to the application of electrical technique.

APART from the influence of the world trade depression, Germany has reached a critical point in her post-war economic development. As long as the Dawes Plan was in operation, she was under the threat of being penalised for her prosperity. Clearly, there was little incentive to carry out radical reforms. But now that the total amount Germany is expected to pay has been definitely fixed, and the burden of expenditure lightened by the evacuation of the Rhineland, the actual economic task before the country is clearly defined. Concisely, Germany has to increase the excess of exports over imports till the balance in her favour is at least £150,000,000 per year, £100,000,000 of this being foreign credits for meeting the Young Plan instalments, and £50,000,000 for the import of the requisite raw materials and payments of interest and amortisation on foreign loans.

However one may look at the complex of problems involved, the essential task is the lowering of the general price level for potential export articles. For already, as far as the quality of her goods is concerned, and their suitability for the foreign market, Germany has done all that is required, as her continuously growing export proves. She has also equipped herself with the machinery for keeping in touch with the world's changing needs, so as to modify her industry as often as may be necessary. But as Germany is not in the position to grant long credit terms except on a very small percentage

of exports of a specialised character, she depends on attracting the foreign customer by offering her products at very tempting prices.

Hence the stubbornness with which organised industry has lately demanded radical reforms of public finance. Until Germany's war debts were finally determined there was no great incentive towards rigorous economy. Mr Parker Gilbert's last report showed what great ameliorations for the taxpayer were possible. Everybody in Germany, for instance, knows that immense sums have been squandered through a fiscal system which obliges the Reich to include in its Budget the raising of revenues to be spent by the State governments. These naturally resist any scheme of retrenchment proposed by the Reich. Moreover, they levy their own taxation as well, as do also the municipalities. Thus the burden of taxation is not only heavy; it varies widely from city to city and from industry to industry, and it is high time that a more equitable system was devised.

But the question of fiscal reform is complicated by a further consideration. Shortly after the first World Power Conference, held in Wembley in 1924, Germany set to work to "rationalise" her industry, taking as model the United States. By 1929, when the effects of this policy were apparent, Germany had realised that it had been a mistake. For whereas the United States is a country rich in raw materials and working capital, but short of workers, Germany has few raw materials, little capital of her own, but great armies of skilled workers. Mass production and the wholesale substitution of machines for human labour may suit conditions in the United States, but have resulted in a vast increase of unemployment in Germany, without the resulting products being any more saleable. It is even estimated that nearly one-third of the workers now unemployed in Germany are suffering directly from rationalisation of the wrong kind. From the recognition of this has arisen the conviction that, in future, taxation must be apportioned so as to favour those industries in which the raw materials pass through many stages of refinement, in a word, where many hands are employed, while the heavier burdens must be borne by those industries in which, as the Germans express it, there are but "short-chain" processes.

For instance, brewing is a "short-chain" industry. It consists merely of farmer—brewer—consumer. The tobacco industry is still shorter. But the generation of electrical current is an almost infinitely long-chain process. Formerly coal was burnt as coal. Now a whole series of operations have been pushed between the raw product and the fuel. First comes the distillation yielding coke, gas and tar. With the coke, electrical current is generated. The tar is the starting point of dye-making and a host of other chemical industries, in which the current generated from the original coal meets the products obtained from the tar. Or the current is employed in the electro-chemical industries or in electro-metallurgy, when the copper or aluminium obtained as end-product is the raw material of a vast number of industries. The last World Power Conference led to a recognition of the fact that any system of taxation that makes power dearer, and above all, makes electrical current dearer, inflates the general price level of export goods.

In another direction Germany is doing much to explore the possibility of economising in imports. Using a modified form of the Bergius processes for the liquefaction of coal, the I.G. Farbenindustrie has, for about eighteen months past, been producing pure benzene from inferior coal. The output has now reached 100,000 tons a year. Germany consumes altogether about 1,500,000 tons of benzene per year, practically all of which has to be imported. Thus the synthetic product has already acquired commercial importance. Whether it is being manufactured profitably or not cannot be said with certainty, since the costing in such a complex plant as the Dye Trust owns is an obscure matter. But at any rate the I.G. Farbenindustrie have proved that under certain conditions, Germany might make itself independent of import of foreign benzene.

No less important are the attempts being made to substitute energy for imported raw materials. The most striking instance is that of the chemical industries. Formerly, Germany imported great quantities of Chilean nitrates. Germany is now not only producing all she needs herself by the fixation of atmospheric nitrogen at Merseburg but is exporting heavily. The ultimate result is the stimulation of the production of home-grown food. The way in which artificial silk is replacing cotton is well known. Synthetic rubber can now be prepared in any quantity in Germany, should its market price ever make commercial production attractive. Most amazing is the way aluminium and its alloys have taken the place of other metals, notably copper.

But, from every point of view, cheap power is the key to Germany's economic future. Indeed, the accelerated production of electrical energy in Germany has been the logical consequence of Reparations. Freight rates reached such a height that lignite and coal could not be profitably carried to the industrial consumers. It was cheaper to put up power works and send the energy along a wire, automatically. Moreover, another great advantage of increasing the consumption of energy to synthesise raw materials instead of depending on foreign markets for the supply is that, while the price of the raw materials is affected by a host of causes and is constantly fluctuating, the electrical current remains practically constant in price.

To build power works, however, capital is necessary. This, for Germany, means the raising of loans abroad, with the disadvantage that, in times of economic depression and stress, instalments of interest and amortisation have to be met promptly, whereas with raw materials one always has the possibility of postponing the purchase. Hence, it would seem that for Germany, the ideal arrangement would be the import of electrical current itself where this is available, rather than the construction of new works and distribution nets. Already this is being done from Switzerland and plans for the import of current from Norway are under discussion. In such cases, the financing would fall chiefly on other countries. At first sight, it would seem as though this would simply be equivalent to the import of current from the power producing countries instead of merchandise from the raw material countries. There is, however, a fundamental difference. Germany would not cease developing her own latent power as fast as possible. Moreover, the current producing countries can only send their power where the transmission cables are laid, so that the partnership, once established, would tend to be indissoluble.

Notes of the Week.

Nottingham and Downing Street.—Though the feature of major interest in the doings of the Trades Union Congress at Nottingham was the acceptance of the General Council's report on foreign trade and Empire markets, on which we commented last week, several other resolutions were carried of no small importance. Some, perhaps, may be regarded as representing the habit, to which the Congress is cheerfully addicted, of "letting off steam." In this category may be placed the demands for a statutory 44-hour week, inclusive of meal times, for the employment by Government at trade union rates of all workers whom "capitalism" fails to employ, and—hardest of all annuals—for the nationalisation of the Bank of England. To these resolutions the Government, we imagine, will not lend a very attentive ear; and the decision of the Congress to oppose the principle of family allowances will at least save the Chancellor of the Exchequer from the task of financing that additional commitment, albeit the opposition was inspired less by zeal for public economy than by fears lest the system might weaken trade unionism itself. There was, however, one decision taken, of which more is likely to be heard at the forthcoming Labour Party Conference: a Bill reversing the Trades Disputes Act must be the first measure of the

new Session. In this highly controversial issue, pregnant with possibilities of a parliamentary crisis, the Government was reminded at Nottingham that its industrial supporters (if that be the *mot juste* for those whose votes control in the last resort the Party's official programme) have been patient. It looks as if one of the most embarrassing of all Mr MacDonald's election pledges were coming home to roost—an unwelcome and singularly ill-favoured bird.

The Commonwealth Cuts its Coat.—It was not to be expected that the process of giving practical effect to the programme of retrenchment, which the Australian Government in principle accepted before Mr Scullin sailed for England, would be painless or free from difficulties. We are glad, however, to note that Mr Hughes's deplorable outburst, in which economy appeared to be denounced as a "policy of stagnation" and the dangerous line of "increased spending-power" once more held out as a remedial policy, seems to have met with little response in Australia, and that Mr Hughes himself has lost no time in modifying his position. Mr Fenton, the acting Prime Minister, has uncompromisingly disavowed the irresponsible talk of debt repudiation emanating from a section of Labour opinion in New South Wales, and, at a meeting of the Commonwealth Cabinet last Saturday, he repeated the promise that there would be departmental economies and a reduction in the cost of administration. In the light of the widening gap between income and expenditure disclosed by the latest revenue return, it is evident that public retrenchment must be drastic if budgetary equilibrium is to be maintained. Federal and State finance, however, is by no means the whole story; and with regard to the general question of the Australian wage-level, the attitude of the Council of Trade Unions towards the suggestion of reductions does not seem conciliatory.

The Elections in Germany.—The closing phases of the German election campaign, further reference to which will be found in a letter from our Berlin correspondent on a later page, have engendered heat without much light. Forecasts of the result appear to be regarded in Germany with general scepticism, and are doubly perilous for foreign observers. On the whole, it looks as though the Centre and the Moderate Left may secure much the same representation in the new Reichstag as in the last. The incalculable point is what effect the disintegration of the Conservative Party will have on the fortunes of the Right and, as an indirect consequence, on those of the Extreme Left. It cannot be gainsaid that the combined effect of the electoral activities of the Communists, the National Socialists, and Herr Hugenberg's adherents has done not a little to undermine confidence abroad in the future political stability of Germany. There has been much wild talk; and even Herr Treviranus, the leader of the new "People's Conservative Party," has been guilty of some indiscreetly nationalist rhetoric which, as the League Council debate on the Saar last Tuesday demonstrated, has gravely prejudiced the efforts of Herr Curtius to reach an agreement with Monsieur Briand on this vexed question. For our part, we do not take too serious a view of Germany's political outlook. The new Reichstag may be as difficult a body to manage as the last, and as pregnant with possibilities of further recurrent Cabinet crises, but we are convinced that the vast majority of German opinion is totally opposed to all the various shades of extremism which would repudiate the Reparations Settlement and wreck the Constitution in the interests of some vague combination of national freedom and dictatorship.

The Revolution in Argentina.—Last week we remarked on the precautions against revolution which were being taken at Buenos Ayres by President Irigoyen's Government. The precautions did not avail to prevent a revolution from breaking out on Friday, September 5th, and succeeding the next day. Its success was rapid and complete. Both President Irigoyen and his Vice-

President, Dr. Martinez, resigned and put their signatures to declarations of resignation on paper. A provisional junta, under the presidency of General Uriburu, stepped into the late administration's shoes, and published a proclamation declaring their respect for the constitution, giving a pledge that no member of the junta would become a candidate for the Presidency, and announcing that the present parliament would be dissolved with a view to holding free elections. The Revolution was not effected without bloodshed. There was one clash in which about ten people appear to have been killed and about 100 wounded. But these figures are gratifyingly small when it is considered that the late Government had taken elaborate measures for the military defence of public buildings, and that the Revolution was led by the Army and Navy. As was to be expected in a country as stable and orderly as Argentina is to-day, there has been practically no disturbance of public order by criminals taking advantage of the momentary breakdown of government. There also appear to have been few political arrests and no vindictive measures against the heads of the deposed régime. Thus, though in form the Revolution has been a military revolt against a dictatorship, it hardly belongs to the well-known Latin-American category of revolution (rife in Argentina two or three generations ago and in some other South and Central American countries down to this day), in which one military despot is hurled from power only to be succeeded by another, while the civilian population remain passive victims of each despotism in turn. In Argentina, last week, the Army seems only to have stepped in at the last moment to carry out a political change which public opinion was already demanding. The late President was a man of radical views and of conspicuous personal disinterestedness. But the dictatorial habit seems to have grown upon him with age (he is now 77), when his powers were no longer what they used to be; and during the last two years the concentration of public business in his hands threatened to bring the machinery of government to a standstill. In a great and complicated modern community that is taking an important part in the work of the world this kind of government is an anachronism. On a later page we discuss the outlook, after the Revolution, from the point of view of foreign capital in the Argentine, and a reassuring message from our Buenos Ayres correspondent will be found on page 492. Here we shall content ourselves with wishing the new administration good fortune.

A Decision in China.—While the civil war drags slowly and disastrously on, the omens seem now to be definitely in favour of the Government at Nanking. After the military blow which the Feng-Yen coalition suffered in the defeat of Yen's army by the Nanking forces in Shantung, the Northern militarists apparently hoped to restore the prestige which they had lost at the front by a political demonstration at Peking. Feng and Yen announced the formation at that city of a rival government, and published a list of office-holders; but any political effect which this gesture might have produced has been more than offset by the announcement, on the part of several persons whose names were mentioned as participating in the new administration, that they had been placed on the list without being consulted and that they would have nothing to do with it. The most significant of these repudiations comes from "the young marshal," Chang Hsueh-liang, who controls the three Eastern Provinces of the Republic in Manchuria. The other day Chang was reported to have died a mysterious death at Peitaiho, a watering-place on the Chihli coast, in Yen Hsi-shan's domain, where he was spending the summer. It now appears that Chang has withdrawn, not from this world, but merely from his neighbour's domain into his own on the other side of the Great Wall; and it is now rumoured that he meditates taking action to put an end to the civil war, either by mediation or by intervention on the Nanking Government's side against the Northern Coalition. In the present political and

military situation, any action which he took might be decisive (if the word "decisive" exists in the vocabulary of Chinese affairs). President Chiang Kai-shek seems to have refrained, for the moment, from pursuing the defeated Shansi troops of Yen Hsi-shan from Shantung northwards into Chihli, and to have concentrated all his strength upon an offensive against Yen's ally, Feng Yü-hsiang, in the West. There is no news yet of how this offensive is faring; and, considering that Feng's army has several times held these lines successfully against the Nanking army's attacks in previous bouts of fighting, it is not unlikely that this campaign would end similarly in a stalemate if the two combatants were left to themselves. Here is Chang's opportunity for intervening decisively and reaping his reward; yet it is by no means certain, or indeed probable, that he will be tempted into the adventure. The Manchurians have not forgotten the fruitless losses of men and money which they suffered a few years ago when Chang Hsüeh-liang's father, Chang Tso-lin, marched south of the Wall. That adventure ended in the death of Chang Tso-lin himself; and the moral will not be lost on Chang Hsüeh-liang. Meanwhile, in the South, the Nanking Government are also making better head against the Communists, who were driven off the other day when they attempted to loot Shasi as they had looted Changsa. Foreign well-wishers of China can only rejoice at anything which strengthens the Nanking Government's hands, for Nanking is the one centre from which the unification and pacification of China can conceivably be carried out as things are to-day.

Mr Henderson on Palestine.—Mr Henderson made a good beginning at the meeting of the League Council in going far to remove the unfortunate impression produced by the rather peevish tone of the British Government's comments on the Permanent Mandates Commission's report regarding last year's disturbances in Palestine. At this meeting of the Council, the report of the Commission, which is simply an advisory body to the Council, came up for action; and in view of the British Government's apparent attitude, the Council's *rapporteur*, M. Procope, representing Finland, must have felt that he had a delicate task. He acquitted himself of this task with courage and tact; for while he used no language which would wound the Mandatory Power's feelings, he gave the Permanent Mandates Commission due praise and loyal support. He pointed out that, after all, the Commission's interpretation of the mandate and recommendations on policy were based on statements made by the Mandatory Power itself, and he moved that the Secretary-General of the League should be instructed to forward the Commission's report to the British Government officially, together with his own report to the Council and the minutes of the present meeting, and that the British Government should be requested to adopt such measures as it might think fit for giving effect to the recommendations, and further to take the action suggested by the Commission in its observations on the Mandatory Power's annual report for the year 1929. In reply, Mr Henderson expressed appreciation of M. Procope's report, and announced the readiness of His Majesty's Government to associate themselves with the terms of M. Procope's resolution. This statement of course removed any obstacle to the resolutions being carried; but the most important passage in Mr Henderson's statement was a declaration to the effect that "His Majesty's Government recognise that it is the duty of the Permanent Mandates Commission to criticise, and they fully appreciate the Commission's attitude in this respect." This passage is an *amende honorable* for the somewhat petulant tone of the first British communication on the subject. Incidentally, it will put the British Government's position right in the eyes of the world and will repair any damage to British prestige which the previous statement may have caused. It may, however, have a more far-reaching effect than this; for it will assuredly strengthen the Permanent Mandates Commission's hands. In carrying out its delicate duties with the

combination of tact and frankness which has become its tradition, the Commission has repeatedly proved itself to be the best friend of Mandatory Powers in difficulties. Mr Henderson's handsome acknowledgment of this truth may be expected to produce a considerable effect on the minds of other Mandatories who do not happen to be in trouble at this moment.

The Executions in Trieste.—Last week, eighteen Italian subjects of Slovene nationality were tried on a charge of terrorism before a special tribunal for the defence of the State of Trieste. The trial began on Monday and ended on Friday evening, when all the prisoners were found guilty and received their sentences—four to death and the rest to long terms of imprisonment. The four death sentences were carried out early on Saturday morning; for though the four condemned men had all signed an appeal for pardon, the army commander at Trieste exercised his legal discretion by deciding not to send the appeals forward. Being in ignorance of the nature of the evidence, we cannot judge whether these sentences were warranted in law or justified in equity by acts of violence which the condemned men had committed. Yet, even if, from every point of view, the four men could be shown to have deserved their fate as individuals, this is scarcely the right method for dealing with the problem of minorities. Whatever these men may have done, they were giving expression—though, it may be, a wrong-headed and illegitimate expression—to a legitimate grievance of the national minority to which they belonged. This Slovene population which was made subject to Italy in the peace-settlement, for Italy's strategical convenience, had been hoping for years for liberation from German-Austrian domination. The sufferings of a war which changed the face of Europe brought them nothing better than a change of masters. No wonder that they should look wistfully across the new frontier towards the Serb-Croat-Slovene State in which the majority of their countrymen have at last found national unity under a national government. Even if, on the principle of the greatest convenience of the greatest number, it were to be regarded as reasonable that the desires of these few hundred thousand Slavs should be subordinated to the interests of forty million Italians, it would seem to be a moral obligation on the Italian State to make up to its unwilling Slovene subjects as far as possible for their political disappointment by respecting their culture, their language and their institutions in every possible way. Nor is this a moral obligation which really imposes political sacrifices or involves political dangers. The real interest of the Italian State is to win the loyalty and affection of the Slovenes on the Italian side of the frontier, and to ensure that they suffer nothing which might arouse the pity and indignation of their compatriots in Yugoslavia. Any other policy is not merely wrong in itself. History proves that it produces the exact opposite of the effect that is intended. For nationalism is a form of religion, and in every religion "the blood of the martyrs is the seed of the Church." The present map of Europe will not last unless the nations can contrive to win the goodwill of the minorities within their boundaries.

Shipbuilders and Rationalisation.—The first-fruits of the plan for "rationalising" the British shipbuilding industry are to be found this week in the announcement that National Shipbuilders' Security, Ltd., has purchased for dismantling the shipyard of Messrs William Beardmore and Company, Ltd., at Dalmuir. Designed primarily for naval construction, this famous yard had been faced since the war with the almost total loss of its old business; and in competition for mercantile orders it represented an economically unwanted addition to already more than adequate shipbuilding capacity. Its sale and closure will relieve Messrs Beardmore of a cumbrous and unprofitable asset, and should enable them to concentrate more effectively on the steel and engineering branches of their undertaking. From the point of

view, however, of the shipbuilding industry as a whole, this evidence of ability to carry through a co-operative effort towards "setting the house in order" is satisfactory so far as it goes—and National Shipbuilders' Security has announced that negotiations for the purchase of two other yards are nearing completion—but it may be well to bear in mind that the elimination of redundant units is not the whole end and sum of rationalisation. Even if it be admitted that there is a difference (and the distinction is somewhat fine) between "buying out" the vendors of Lancashire cotton mills and "buying up," in order to extinguish, "surplus" shipbuilding berths, the fact remains that what the shipbuilding industry is doing is to saddle itself collectively with a certain amount of debt simply in order to expedite in an orderly manner the contraction of capacity which economic forces, less quickly and perhaps in a less scientific way, would ultimately achieve unaided. If this stimulated contraction is the preface to a further stage of rationalisation—the pooling of resources, allocation of contracts, and specialisation, which can be attained only by radical concentration of ownership—then the price may be well worth paying. But it would be a mistake to regard the closure, by purchase, of a few yards as sufficient in itself to solve the industry's major problem—the reduction of costs.

The Coal Delegation to Scandinavia.—This week-end a delegation representing British coal exporters and all the exporting coalfields is to leave for a tour of Stockholm, Oslo, Gothenburg, Bergen and Copenhagen for the purpose of studying the Scandinavian coal market. The delegation will meet three national associations of importers and discuss the requirements of Scandinavian consumers, standards of salesmanship and marketing, methods of analysis and grading, and any other questions, including, if necessary, those of finance and credit, which appear to have a bearing on the promotion of exports to Scandinavia. That British coal has lost ground in Scandinavia since the war is shown by the following figures:—

EXPORTS OF BRITISH COAL (IN THOUSAND TONS).			
	Norway.	Sweden.	Denmark.
1913	2,298	4,563	3,034
1929	1,444	2,335	2,194

While some of this loss is due to the steady development of water power in these countries, so that a complete recovery may be too much to hope for, scope for a certain expansion is indicated by the fact that in 1928 Great Britain supplied only 53 per cent. of the coal imported into Norway, 38 per cent. of Swedish and 53 per cent. of Danish coal imports. Her chief competitors have been Poland, with 33, 35 and 33 per cent. respectively, and Germany with 2, 26 and 14 per cent. Now that the Coal Mines Act has made it possible to develop a national policy for the export trade, exporters may be able to recover some of the ground lost to German and Polish competition; at all events they are to be congratulated upon taking appropriate measures towards that end.

August Overseas Trade.—The preliminary figures of August overseas trade, published in this week's *Board of Trade Journal*, record no improvement in trading conditions. Both imports and exports have declined as compared with a month ago; nor is the comparison with a year ago any more encouraging.

MONTH OF AUGUST.
(000's omitted.)

	1930.	Increase or Decrease as compared with			
		August 1929.		August, 1928.	
Imports	£ 79,923	£ -20,070	% -20.8	£ -17,784	% -18.2
British exports	42,777	-20,268	-32.1	-19,440	-31.3
Re-exports	6,342	-2,678	-29.7	-2,414	-27.5
Total exports	49,119	-22,946	-31.8	-21,854	-30.9

HEAD OFFICE:
54, LOMBARD STREET, LONDON, E.C.3.

It is true that the fall in the value of imports may be accounted for largely by the fall of commodity prices, which has particularly affected imported materials. But the decline in the value of exports is greater than that of imports, and it is only too apparent that a shrinkage in volume must have taken place.

EIGHT MONTHS ENDED AUGUST 31st.
(000's omitted.)

	1930.	Increase or Decrease as compared with			
		1929.		1928.	
Imports	£ 706,681	£ -92,145	% -11.5	£ -91,718	% -11.5
British exports	398,375	-89,932	-18.4	-79,959	-18.7
Re-exports	62,285	-15,417	-19.9	-22,411	-26.4
Total exports	460,660	-105,349	-18.6	-102,370	-18.2
Excess of imports over total exports	246,021	+ 13,204	+ 5.7	+ 10,652	+ 4.5

A more detailed analysis will be made next week when the complete returns are available.

The American Cotton Crop.—Our Manchester correspondent writes:—On Monday last the Crop Reporting Board of the United States Department of Agriculture published important statistics relating to the cotton crop for 1930-31. It was stated that on September 1st the condition was 53.2 per cent., against 62.2 per cent. a month earlier and 55.4 per cent. at the same time last year. The indicated crop was given as 14,340,000 bales, as compared with 14,362,000 bales a month earlier and a final crop for last season of 14,828,000 bales. The yield per acre is put at 153.2 lb., against 155 lb. for last season. It was announced that up to August 30th the amount of cotton ginned was 1,878,000 bales, against 1,568,000 bales at the same time last year. The statistics were more favourable than anticipated, and prices in Liverpool declined about ½d. per lb. On the following day the spot quotation for Middling American was 6.18d., this being the lowest figure for 15 years. Since July 1st there has been abandonment of acreage of 2.2 per cent. The Government states that throughout the past month boll weevil activity was generally held in check by hot, dry weather, and the present prospects indicate that the total loss from weevils will be less than in any recent year except in 1925. The crop generally is maturing rapidly, and there are many complaints of unripe bolls opening prematurely because of the dry weather. Although traders in Lancashire welcome the signs of substantial supplies of raw material during the next twelve months, the falling tendency of prices is checking any improvement in demand for manufactured goods. If the American crop should turn out as indicated, with a carry-over from last season of 6,150,000 bales, the available supplies will be about 20,500,000 bales. It is believed that at the present moment world

consumption is on a basis of not more than 11,000,000 bales per annum. It is reasonable to anticipate, however, that if prices steady round current figures there will be a tendency for consumption to increase.

Shipping Freight Index Number.—Further progress was made last month in the seasonal revival of whole-cargo chartering, and our index number of "tramp" shipping freights at 96.1, a figure which compares with 111.8 a year ago, recorded a rise of 5.8 per cent. over July. The following table summarises recent movements of the various group indices:—

AVERAGE 1898-1913=100.

	Average, 1913.	Aug., 1929.	June, 1930.	July, 1930.	Aug., 1930.
European Waters	110.0	125.5	91.3	86.3	86.7
North America	113.1	99.6	85.2	89.6	94.2
South America	123.4	115.6	90.7	94.6	99.7
India	106.3	117.0	95.7	102.8	104.5
Far East and Pacific	117.4	104.7	74.6	78.3	84.7
Australia	127.9	108.6	90.8	93.5	106.8
Total	116.3	111.8	88.1	90.8	96.1

Demand for tonnage to load grain for Europe broadened considerably in the Plate, North American and Australian markets, and homeward quotations from the Argentine showed a particularly sharp recovery as a result partly of reports of forthcoming maize shipments to the States. In Europe, Soviet Russia emerged as a charterer of grain tonnage on a considerable scale, but ore traffic continued to be restricted by poor demand, and outward coal freights were generally dull. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade	73.6	- 0.7	South America—out-		
Bay—outwards	102.7	+ 5.5	wards	87.2	-20.5
Bay—homewards	93.5	+ 1.6	South America—		
Mediterranean—out-			homewards	112.2	+30.8
wards	86.6	- 3.1	India—outwards	120.0	+ 2.1
Mediterranean—			India—homewards	88.9	+ 1.2
homewards	90.0	- 0.6	Far East, &c.	84.7	+ 6.4

Expressed as a percentage of the average for 1913, the total figure of our index number for August works out at 82.6, as compared with 78.1 in July, and 96.1 a year ago.

Licences and General Insurance Company, Ltd.—Founded originally some thirty years ago for the primary purpose of protecting licensees against the consequence of the non-renewal or forfeiture of their licences, this company has of late years developed to an increasing extent a general fire and accident business. Licences insurance still remains, however, the largest department, and furnished a premium income last year of £322,000; and it is satisfactory to note that the profit of £8,188, though small, is a good deal larger in proportion to premiums than in any of the last five years. The next largest account is the fire account, which brought in premiums of £134,000 last year, but a disastrous underwriting experience resulted in a loss of £30,000. In his speech at the annual meeting the chairman attributed this loss to re-insurance business, the dearth of which was responsible largely for a reduction in premium income, and the smaller amount resulted in a more adverse experience. In addition to small accident and employers' liability accounts, there is also a modest marine account, with premiums of £19,000, and, although this account has given trouble in the past, it appears now to be in a thoroughly sound condition, having a fund equal to one year's premium income. Combining the results of each department, and allowing for profit and loss items, which are on an unusually large scale for such a company, the net result of the year

was a trading loss of £53,361, compared with the corresponding loss in 1928 of £19,535. The dividend has been maintained at 20 per cent., and the margin in interest earnings over and above the cost of the dividend has reduced the loss to a net figure of £47,187, compared with £13,106 in 1928. In face of this figure, which is equivalent to practically one-half of the ordinary paid-up capital, we can see no justification for the maintenance of the dividend. From the capital point of view, the company's position has been strengthened during the year as a result of the premiums derived from a new issue of share capital in May of last year. The premiums from this brought in a net sum of £115,000, which has been partly spread over the departmental accounts and reserve funds, and the balance has been added to profit and loss account.

British Oak Insurance Company, Ltd.—This company dates back to 1908, but since its conversion from a private company to a public company in 1918 no dividend has been paid. The company is controlled by Spillers Milling and Associated Industries, Ltd., and the fact that a large proportion of its business is naturally derived from the milling industry means that its risks are less well diversified than those of the normal company. After a series of losses, a reconstruction scheme was carried through in 1928, when £75,000 was written off the issued capital and utilised to strengthen the balance sheet. As things turned out, however, the 1928 balance sheet still contained a debit profit and loss balance of £18,000, and unfortunately the results of 1929 have been so adverse that this has been more than doubled, and now amounts to £39,000. The accident and general business is responsible for a premium income of £312,000, on which there was a loss last year of £23,000. This result was due to the motor section, it being stated that the combined loss ratio of other sections was under 54 per cent., as compared with a total loss ratio of 65 per cent. In the fire account the premium income was reduced from £103,000 to £81,000, but, owing to losses on foreign treaties, there was again a heavy total loss amounting to £14,000, compared with £21,000 in 1928. The brightest feature is the marine account, which has been gradually reduced in volume, and now produces a premium income of just over £50,000. Last year, for the first time during the last four years, a sum has been transferred to profit and loss account amounting to £7,400. The total net result of the year's operations in 1929 was a loss of £33,358 on trading, compared with a still greater loss in 1928 of £92,271. These figures were reduced in each case by the sum of £14,000 from interest earnings.

Economic Outlook — Corporation Profits — Production — Prices — Money Market.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 3.

LEADING bankers and economists are still much at odds in their views on the outlook. In their monthly review the National City Bank economists take a moderately cheerful attitude. They feel that "the situation affords a basis for belief that the worst months of the depression have been seen." At the same time the Guaranty Trust survey finds that "conditions have not changed sufficiently to justify any more optimistic view than was possible a month ago," and that "any recovery in the near future is likely to be very slight." Brokers and stock market operators, on the other hand, on the look-out for business and hoping for public interest to revive, are largely on the side of early improvement.

Share prices have now recovered their entire losses of July-August, incurred largely as a result of the drought scare. Progress from this point is likely to be more difficult, and even the most optimistic agree that it cannot be maintained without the nourishment of real trade improvement. Those inclined to the cheerful side rest their case mainly on the recent small gain in steel ingot output, the rise in freight car loadings (which, however, are still at the 1922 level), the reopening of automobile factories, moderate increase in building contracts, steadier commodity prices, and a more reassuring outlook for agriculture. Confidence as reflected in the share market will, nevertheless, be called upon to stand a good deal when the third quarter earning statements are published next month.

It is now clear that corporation earnings in the second quarter fell sharply as compared with the first quarter. A compilation of reports made by the Federal Reserve Bank of New York shows that 247 industrial and mercantile concerns suffered a drop of 35 per cent. in net profits in the second quarter, as compared with 1929. The decline was 14 per cent. on 1928 levels. For the same companies profits were 25 per cent. smaller in the first quarter as compared with January-March, 1929, but 2½ per cent. larger than in the corresponding period of 1928. For the six months' period more reports are available. Approximately 400 concerns report a decrease of 30 per cent. compared with a year ago, and of 5 per cent. compared with the first half of 1928. Nearly all groups were affected. Only food, paper, printing, leather and railroad equipment groups did better than last year. Public utilities enjoyed a 3 per cent. rise in profits, but the gain was the smallest in eight years. Railroad companies lost about 33 per cent.

An even larger list of reports is compiled by the National City Bank, but the results, stated in percentages, are virtually the same. The bank finds, however, that between January 1, 1929, and January 1, 1930, the net worth of the companies in its tabulation increased by 11 per cent. The increase in capital and surplus since January 1, 1928, has been 19 per cent. Thus net earnings in the first half of this year were at the annual rate of 9.2 per cent. on combined capital and surplus, compared with 14.8 per cent. in 1929 and 11.7 in 1928.

Reduction and elimination of corporation dividends continue, but most of the changes have been anticipated by the market. On the whole, the reductions are smaller than might have been expected, and corporation directors are constrained to dip into surplus to maintain payments as far as they dare, against the hope of better business just round the corner. Copper producers have taken the most drastic action. None are earning anything to speak of, and only the more provident are now paying any dividends. Oil companies, which did fairly well in the first six months, are beginning to feel the pinch and have started to reduce dividends.

Meanwhile there has been a further moderate increase in steel mill operations, now reported at 55 per cent. of capacity, compared with 52 per cent. three weeks ago. The mills also are taking a firmer stand on prices, hoping thereby to encourage fourth quarter buying. Principal consumers as yet are giving no indication of increasing their orders, and the pig-iron production rate in August fell to the lowest for any month since 1924. Freight car loadings, at long last, are beginning to reflect a seasonal increase in traffic. They have risen for the second consecutive week, but are still lower than for corresponding weeks since 1924. Railroad earnings in July, while about 30 per cent. under those of a year ago, were larger than in June.

A firmer tendency in commodity prices is shown by Dun's and Bradstreet's indices for August. The former rose nine-tenths of one per cent., and the latter declined only two-tenths of one per cent. The advance in the Dun's index was the first since October, 1929.

Money markets are little changed. Short-term rates scarcely felt the month-end and holiday cash demands. Dividend and interest payments exceeded \$500,000,000,

and close to \$100,000,000 was needed for holiday cash, most of which probably will not return to the banks for two months or so. Last week's report of the Federal Reserve system was particularly devoid of change. Discounts, bill holdings, Government security account and total Reserve credit outstanding were virtually unaltered, while the Reserve ratio remained exactly the same.

Reserve credit used by the banks has not increased, apart from moderate borrowings over the month-end; money has been a glut in the market. Central banking policy is as strongly as ever on the side of easy money. Money in circulation has been rising since August 1st. Although \$300,000,000 lower than a year ago, circulation increased \$51,000,000 last month. In the same period the net gold loss was \$23,000,000. Gold exports in the preceding month, which were heavier, were largely offset by currency returning from circulation. As a counter to the combined gold shipments and currency circulation rise in August, the Federal Reserve Banks added \$32,000,000 to their bill holdings and increased Government security and other forms of credit by \$28,000,000.

The resignation of Governor Roy A. Young from the Federal Reserve Board to take the position of governor of the Boston Reserve Bank is unlikely to mean any shift in central banking policy. As Governor, Mr Young failed to swing the Board to the regional bank view of sound central bank policy, exemplified in the prompt use of the discount rate in preference to oral and written persuasion. His difficulty lay mainly in the political character of the Board. Procrastination undoubtedly accentuated the stock market difficulties and business depression, and serious people feel that the question of the governorship is less important than that of a general revision of the Reserve Act to strengthen the Board.

FRANCE.

Taxation — Prices — Colonial Cotton-growing — Coal Industry.

(FROM OUR CORRESPONDENT.)

PARIS, September 10.

THE success achieved by M. Tardieu, and particularly by M. Germain-Martin, the Minister for the Budget, in inducing the heads of the various Government departments to cut down their total estimated expenditure during the next financial year to a point that will ensure that the next Budget shall not exceed the total of the current one, has been received with universal satisfaction. How it has been found possible to suppress estimated additional expenditure next year of between 5,000 and 6,000 million francs is not yet known. The country has been assured, however, that these sweeping economies have been realised without in any way compromising the national defence.

It is also stated, on official authority, that the Minister for the Budget, notwithstanding reductions of taxation effected during the past twelve months of some 5,700,000,000 francs, is working out plans for improving the situation of the finances of the departments and communes, which have latterly been reduced to limits far below normal requirements. The Minister is said to be considering, in particular, the possibilities of reducing the cost of the services of local government loans contracted at high interest rates during the period 1924-26, when it was necessary to ensure lenders against an irreparable fall in the franc. It is hoped by a scheme of conversion operations to reduce the present burden of the local debt services to such an extent as to furnish the local authorities with a substantial amount of additional revenue without necessitating any increase in the burden on the taxpayer. In this regard, as in connection with the plans which are being worked out for large-scale conversion of several of the national war loans, the Budget and Finance Ministers are endeavouring not only to reduce present burdens but to make preparations to meet the heavy additional expenditure which the national insurance plan will

undoubtedly necessitate in 1932 and 1933, when it will have come fully into operation. For the time being everybody is, for all practical purposes, entirely in the dark as to what the cost of this new departure will be. The two technical Ministers, therefore, are determined to plan well in advance, so that the country may be saved from the costly experience which Great Britain and Germany have undergone in regard to national insurance.

Behind this policy is the conviction that taxation has reached, if not surpassed, the capacity of the taxpayer, and that the time has more than arrived for a drastic policy of economy, if the country is to be able to continue to hold its own in the struggle for economic existence. The continual and often reckless increase of taxation during the past few years, it is becoming growingly felt, has resulted in elevating the State, in a large number of industrial and financial undertakings, to the situation of a partner who appropriates the bulk of the profits while shouldering none of the risks. Taking the selling price of a ton of coal at the pithead as 36 francs 48 cents, for instance, colliery owners can count on retaining only 8.20 francs out of which to pay working costs and secure a profit, the portion going to the State for obligatory "social charges" being 17.65 francs, while 10.63 francs represents taxation extracted by the Government. During the past four years the taxation payable by 18 fire insurance companies working on fixed premiums has increased from 130,000,000 francs to 337,000,000 francs. The equivalent of the proceeds of two months' working is paid by the railways in taxation, and the portion of the year's earnings available for dividend distribution to shareholders represents the receipts of only four days. Two-thirds of bank profits are paid in taxation. "Superfiscality," as Professor Barthelémy pointed out recently, has now reached such a point that the system of participation by the State in industrial enterprises, which is so strongly advocated in certain intellectual circles, has become unnecessary. The disastrous results of the State's venture into the nitrate industry, by organising an enormous plant at Toulouse, which has already swallowed up hundreds of millions of public money, might have been avoided, as M. Barthelémy points out, if the State had left the matter to private industry and extracted from it by taxation as many millions, probably, as it has wasted in posing as capitalist.

The August wholesale prices index of the Statistique Générale is 644, or the same as at the end of June, the four-point rise in July having been cancelled last month. The drop is solely due to a further fall in the prices of imported commodities, which have gone down another 14 points (following 10 points in July), whereas prices of French products, which rose 9 points in July, are now a further three points higher. Native products are now 153 points higher than imported ones, as against a mean of 33 points only during 1929, while in 1928 they were on an average 41 points below those of imported commodities. The figures for the principal categories of commodities are as follows (1913 = 100):—

	Articles.	End of month of		
		June.	July.	August.
General index figure.....	45	544	548	544
French products.....	29	585	596	599
Imported products.....	16	470	460	446
Foodstuffs (general figure).....	20	517	538	543
Raw materials (general figure)	25	567	557	546

The "sugar, coffee, cacao" category of foodstuffs shows a drop of 16 points on the month.

Forecasts of the French beet sugar crop indicate a record yield of around 1,000,000 tons (as compared with 825,000 tons in 1929), owing to the recent warm and dry weather. French sugar consumption has not come up to the tonnage expected when the recent substantial reduction of taxation on this commodity was announced. It is estimated as now being about 950,000 tons, which works out at about 24 kilogrammes per head of the population, or much below that of Great Britain and still more below that of the United States, which is estimated at over 50 kilos. per head. The import duty on sugar was increased recently from 100 francs per 100 kilos. to 140 francs, while the excise was brought down from 125 francs to 85 francs. In view of the recent drop in selling

prices, refiners are now asking for a further increase in the import duty from 140 francs to 200 francs.

Following the British example in developing colonial cotton-growing, in order to lessen the nation's dependence on American imports, the French are paying a good deal further 15 tons were furnished by Northern Nigeria, and African and other possessions. According to recently-published figures, French West Africa exported in 1929 6,500 tons of cotton, or 1,000 tons more than in 1928. A further 15 tons were furnished by Northern Nigeria, and 34 tons by Western Morocco, while Syria made a beginning with the export of rather over a ton. The French colonial cotton industry, as the figures show, is still only in the experimental stage, but the results of the initial practical experiments are stated to have been sufficiently encouraging to render substantial development certain in the immediate future.

The coal crisis remains much less serious in France than in Great Britain, Germany and Belgium, and there are strong hopes that, by a continuance of the present careful handling, matters will at least become no worse. The index of production in July shows an increase of three points on the month, while the figures for consumption and imports are both two points lower. Output totals in July were six points lower than the maximum figure recorded in January last, while consumption was 10 points lower and imports 21 points less. Stocks at the mines, however, are four-fifths larger than the maximum tonnage registered during the coal crisis in 1927-28. Prices at the same time have gone only a fraction lower, steam coal now being 118 francs, against 122 francs during the first half of the year, while that for forge coal has dropped from 152 francs to 150 francs and for coke-making coal (from the Saar) from 125 francs to 120 francs. Meanwhile, complete import returns for the first six months of the year show that coal exports to this country from Great Britain totalled 7,130,000 tons, against 5,975,000 tons in the first half of last year. The entries of Dutch coal were 150,000 tons (about 3 per cent.) larger, while the amount imported from Belgium-Luxemburg was 150,000 tons less and from Germany 340,000 tons less. Imports of British coke during the six months increased from 8,823 tons to 30,246 tons, whereas the total imports of this product were 2,455,000 tons, against 2,762,000 tons in the corresponding half of 1929. The better situation of the French coal industry at the moment, as compared with those of Great Britain and Germany, lies in the fact that, although this country is obliged to import special coals for gas- and coke-making and for shipping and domestic use, the consumption of ordinary coal, which is now substantially larger than before the war, is largely met from the country's own pits. Tentative efforts have been made with a view to the organisation of a European coal agreement, but they are alleged here to have failed owing to the refusal of British and German coal owners to take part in any international cartel of this kind.

GERMANY.

Politics — Grain Policy — Ruhr Wages and Hours — International Mortgage Bank.

(FROM OUR CORRESPONDENT.)

BERLIN, September 10.

As the German election campaign approaches its termination it grows progressively more lively. The question how government is to be carried on after the elections, obscured during the first few weeks by the tactical subterfuges of all the parties, is now emerging more and more clearly as the crucial problem. The Prussian Minister-President, Herr Braun, whose position as the leading personality of the Social Democratic Party is becoming steadily stronger, has asked the Federal Chancellor, Herr Brüning, whether he would be willing to co-operate with the Social Democratic Party in the new Reichstag. Herr Brüning began by rejecting this approach, on the ground that in view of the lively agitation the Socialists were conducting against him personally he could not suppose that they would wish to co-operate with a man against whom they were making such charges. Herr Braun, however, raised

the question again on the election platform, and stressed the willingness of his party to set aside personal differences for the sake of statesmanlike co-operation. On the acceptance or rejection of this offer of the Socialists depends the decision as to whether constitutional government is to be resumed or whether the Government will proceed to further dissolutions and endeavour in the meantime to solve unconstitutionally the urgent financial and economic problems with the aid of the emergency clause. So far the Chancellor and his party have given no conclusive reply.

One of the most important political questions which will have to be settled after the elections is that of the attitude of the State to agriculture. For the time being the Reich Government is supporting the grain market by measures which are too costly to be maintained for more than a limited period. The Getreidehandelsgesellschaft, which is controlled by the Reich and acts on instructions from the Minister of Food, has for several weeks been organising the purchase of rye, and, to a limited extent, also of wheat, at prices very much above the market level. While the price of rye early in the summer was 160 Rm. per ton or less, it has now been driven up by the Getreidehandelsgesellschaft to 187 Rm. for immediate delivery, and well over 200 Rm. for futures. Already the resources of the purchase organisation are inadequate to take up the whole supply forthcoming at the price it offers, for the output of farmers who wish to sell their crops is, of course, only a small part of the supply, which comes mainly from speculators who, in anticipation of the collapse of the scheme for market support, are now selling short in the expectation of covering themselves at lower prices. In consequence, side by side with the official price for the products purchased by the Getreidehandelsgesellschaft there has arisen an unofficial lower price for goods sold in the open market. That is a thoroughly unhealthy state of affairs and bodes ill for the duration and the ultimate success of the scheme.

As the scheme has been principally applied to the rye market, the relation of wheat and rye prices has shifted in favour of rye. That also is highly undesirable just now, before the autumn ploughing, for a reduction in the cultivation of rye is urgently needed, with the substitution of wheat for rye over as wide an area as possible. As rye requires very much less cultivation than wheat, the widest possible margin between wheat and rye prices is called for, in order to give the maximum of encouragement to a diminution in the rye area.

In order to reduce the financial burden on the Getreidehandelsgesellschaft, the Food Ministry has recently been considering a plan which figured earlier in the programme for assistance to agriculture. In order to encourage pigkeepers, who hitherto have mainly used foreign barley as fodder, to purchase home-grown rye, it is proposed to grant a rebate of the duty on imported barley, which was sharply increased last year, to those pig farmers who simultaneously buy a prescribed quantity of rye on the home market. This proposal might have some merit if the pig market were in a condition to make compliance with the terms practicable, but the coming months are expected to bring exceedingly unfavourable prices for pigs, so that farmers will reduce their stock and will not be in a position to use increased quantities of rye. The Government cannot help itself: it cannot now allow the inflated price to fall without losing all its support from the farmers. In this, election considerations, of course, play a large part, but even after the elections, if the present Food Minister, Herr Schiele, remains in office, everything possible will be done to prevent a collapse of the grain price maintenance scheme, for the conflict will continue between the extremist elements in the agricultural organisations, which support Herr Hugenberg or Herr Hitler, and the moderate section; and as long as Herr Schiele holds responsible office he must, as leader of the Moderates, leave no stone unturned to prevent a collapse of prices, if he is to maintain his own position.

The price-maintenance scheme is ultimately financed by the Reich, but as the Reich has not at present the necessary funds the Getreidehandelsgesellschaft has

raised them temporarily from a consortium of banks. For this purpose it invoked the intervention of the "Getreideindustrie und Commissions A.G.," which is jointly owned by the Reich and Prussia, and is dominated by the Prussian Zentralgenossenschaftskasse. It thus comes about that the Prussian Government, which is led by the Social Democrats, is not resisting the questionable grain policy of the Reich Government, though it no doubt disapproves of it, but is even helping to overcome the difficulties in its way. This shows clearly how cautiously the Social Democratic Party is obliged to proceed for the time being, for fear of blocking the way to future co-operation with the parties of the present Government coalition.

The mineowners of the Ruhr published some weeks ago the wage tariff with the aid of which, through a lowering of prices made possible by lower wages, they anticipate a revival of the market. The employees' organisations have invoked arbitration, as a result of which the present tariff has been extended to the end of the year. The elections were no doubt responsible for this, as this is not the moment to invite a disturbance, but at the end of the year, unless some sign of trade revival makes possible a more optimistic view of the Ruhr mining industry, there is likely to be a very serious wage dispute. The position is further complicated by the demand of the miners for a reversion to the seven-hour day. The unions have denounced the agreement by which the normal length of a shift was extended to eight hours.

The forthcoming establishment in Amsterdam of an international mortgage bank has lately been the subject of much discussion in German financial circles. In Germany, as the short-term money market is very fluid and the long-term market very much the reverse, there would be great scope for the activities of an international mortgage bank. It was, therefore, a foregone conclusion that the German banks would agree without further inquiry to some degree of financial participation in the new institution, and raise no objection to investment in its bonds by the Bank for International Settlements. The opinion is, however, expressed in Germany that the new bank can only operate successfully if it is, in a position to open up the French capital market to a very considerable extent. The substantial participation of French banks in the new bank is therefore regarded as a good sign, but it is generally agreed that exaggerated hopes must not be built on it.

POLAND.

Dissolution of Parliament — Budget — Export Premiums — Warsaw Agrarian Conference.

(FROM OUR CORRESPONDENT.)

WARSAW, September 5.

THE Slawek Ministry resigned on August 23rd, and two days later Marshal Pilsudski accepted the Premiership. His Cabinet is unchanged from Colonel Slawek's except that Colonel Beck has been brought in as Minister without portfolio to relieve the Marshal of routine work. It is the feeling in Poland that when Marshal Pilsudski takes the premiership something is going to happen, so

it was no surprise when a Presidential Decree appeared on August 30th dissolving Parliament and announcing new elections in November. There is a feeling that before the elections some changes in fundamental laws will be enacted by Decree (to be ratified subsequently by the next Parliament), and that no efforts will be spared to make the business outlook appear more favourable, so that the chances of the Government bloc will be improved. Although the Government party had the largest membership in the Sejm just dissolved, it had not a majority.

Despite the fact that the latest published figures indicate that State expenditure is being kept well within the revenues collected, there is nevertheless a certain degree of apprehension over the Budget situation. During the 1928 election campaign it was claimed—and the contrary has not yet been proved—that large amounts of public money were used for electioneering propaganda. The Treasury is heavily committed for the next few months on its grain export premium policy, and with tax revenue becoming harder and harder to collect because of the prevailing depression, there appears to be good reason for believing that before the end of the present year the prospect of a Budget deficit may have to be faced. It might be mentioned in passing that the Treasury's available balance at the Bank of Poland, which stood at 255 million zlotys on August 10, 1929, and at 260 millions on December 31st, was down to 114 million zlotys on August 10, 1930. The Government have promised to continue the payment of export premiums on cereals until the end of October, and then to review the situation again in the light of the condition of the Treasury and the outlook for agriculture. As the elections will then be close at hand, it would hardly be feasible to discontinue the payment of grain export bounties on October 31st. The bounties now being paid are (per 100 kilogrammes) 4.00 zlotys on barley, 6.00 zlotys on wheat and rye, and 12.00 zlotys on flour. It is estimated that the Ministry of Finance during the first seven months of the present Budget year (that is, until October 31st) will pay more than 50 million zlotys in export premiums.

Hopes are entertained that the Agrarian Conference which was held in Warsaw on August 28th-30th, and at which the Bulgarian, Czechoslovakian, Estonian, Finnish, Hungarian, Latvian, Roumanian, Jugo-Slavian and Polish Governments, as well as the League of Nations, were represented, will ultimately be productive of considerable benefit to agriculture in general in Eastern Europe. The groundwork for the Conference was well prepared in advance by the Polish authorities, and a series of resolutions were adopted which can be briefly summarised as (1) favouring co-operative action for regulating and rationalising the export of agricultural products, and for the elimination of unnecessary competition between the States represented at the Conference; (2) a recommendation that "most-favoured-nation" concessions granted by European countries should be subject to restrictive application in respect of agricultural imports from overseas, to the benefit of agricultural products of European origin; (3) the desirability of securing intermediate credits (up to five years, if possible) for agriculture through the co-operation of the League of Nations; (4) recommending the preparation and distribution of adequate and uniform statistical data; (5) a joint recommendation to the League of Nations that a standard form of veterinary regulation be imposed on all countries importing and exporting livestock and meat products; and (6) similar international action to prohibit the payment of export premiums.

For reasons indicated earlier in this article, Poland is anxious to see the complete abolition of export premiums on agricultural produce. The Polish authorities are likewise very much concerned over the matter of veterinary regulations, since this medium is used by certain countries for the exercise of discrimination against cattle and meat imports from Poland. It is much too early yet to indicate any practical benefits that are likely to result from the Warsaw Conference, but it is at least a hopeful

sign that the countries of Eastern Europe are investigating the roots of their economic distress, have agreed on remedial action that can be taken, and are now directing international thought thereon. Furthermore, it is felt here that the Conference was only the starting-point for the building up of an Eastern European agrarian bloc that will henceforth be a sort of co-operative movement for self-help in the external marketing of agricultural products, and for exercising united pressure on the League of Nations and other international bodies (for example, the International Bank) for the benefit of agriculture in Eastern Europe.

The American Financial Adviser, Mr Charles S. Dewey, and his staff, will leave Poland in November, on the expiration of Mr Dewey's three-year contract with the Polish Government and the Bank of Poland. Mr Dewey was invited to accept the position of financial adviser and to supervise the carrying out of the stabilisation plan which was drawn up at the time the stabilisation loan was arranged three years ago. Because of political and other difficulties, the plan as then prepared has not yet been carried out in its entirety (especially as regards the reform of the taxation system), but it is understood that the Government have undertaken to carry on with the execution of the plan after the departure of the financial adviser. The Bank of Poland will then act as fiscal agents for the American group which sponsored the stabilisation loan.

NORWAY.

Depression — Paper Industry Agreement — Stock and Money Markets — Prices — Crops.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, August 29.

THE general depression on the world market has hitherto been less felt in Norway than in most other countries, apart from the slump in the freight markets, the consequences of which, to the shipowners, have been rather severe. So far, the repercussions from the heavy fall in prices have not been such as to reduce materially the figures representing turnover of trade, export, employment or banking activities. During recent weeks, however, certain signs have seemed to point towards the fact that the reaction has at last set in. Exporters are now reporting a slowing up of the influx of fresh orders, and a comparison of the figures of our foreign trade balance for the last three months of the year with those of the corresponding period last year shows that there has been a contraction, both as regards value and quantity, in the figures representing our chief export items. Although unemployment was lower by about 2,000 at July 15th, as compared with June 15th this year, subsequent weeks have brought an increase, which may perhaps to a certain extent be attributed to the extraordinarily early termination of harvest work. With regard to banking activities, there is a noticeable increase of deposits, especially with the provincial banks, the greater part of an increase of seven million kroner during July being due to the latter. The money market remains unusually easy for this season of the year, a fact which can only be explained by a certain restraint in the disposition of liquid funds. Whether this is again due to the position of the international markets or the usual uncertainty prevailing in connection with new Storting elections is difficult to tell.

In the midst of the general uncertainty and lack of activity, the recent agreement in the paper industry forms one of the bright features. According to this agreement, the present tariffs are to be prolonged for another year, thus providing favourable working conditions for this important branch of our industry. The news of the settlement brought some stimulus to the share market, which has otherwise been rather quiet on account of the holidays. However, public interest is at present chiefly directed towards the bond market, which has lately been very firm with steady prices. It seems that investors are beginning to realise that it will be difficult in future to obtain as favourable effective interest rates for their money as

hitherto, as there is every likelihood that deposit rates will fall in accordance with the decreasing tendency of discount rates. Even if there be no reason to anticipate an immediate reduction of the Norwegian bank rate, especially in view of the fact that the note circulation of the Norges Bank does not show any conspicuous contraction in spite of lower prices and reduced turnover, it is not considered likely that the Bank will find it opportune to maintain the rather big difference now prevailing between foreign and inland discount rates.

The cost of living index of the Central Bureau of Statistics for July 15th is unaltered from the preceding month at 175 inclusive of taxes, and 167 exclusive of taxes. The wholesale price index for August 15th stands at 141, against 142 on July 15th. The weather conditions this summer have on the whole been satisfactory, though the northern parts of the country suffered somewhat from a prolonged period of drought. The yields of fruit, berries and vegetables have been satisfactory, and the crops of grain and hay are somewhat above those of an average year.

IRISH FREE STATE.

Drumm Tests — Agriculture — New Companies — Trade.

(FROM OUR CORRESPONDENT.)

DUBLIN, August 24.

MUCH interest is being excited in the practical tests of the Drumm battery which are being carried out on the Great Southern Railway. Official reports have been issued regarding the working of the battery, and, while these are of a highly technical nature, it is possible to gather from them that the tests have proved satisfactory. Great importance is attached to the battery by the Government, which has advanced public money for experimental purposes and has acquired a controlling interest in the invention. It is claimed that, if the battery is a success, the electrification of the Irish railways will be possible at very little expense. The economies effected by such an electrification would be, first, a large reduction in the imports of coal and, second, a lower unit cost of production in the Shannon Scheme owing to the increased demand for current. The patent rights in the battery would also become an important addition to the public assets of the country.

The cattle-breeding industry, both for beef and milk, is by far the most important economic activity in the Free State. Steady progress is being made in cattle-breeding as regards both quantity and quality. Premiums have been awarded to 2,500 bulls this year, including 758 Aberdeen Angus, 697 Dairy Shorthorns and 668 Shorthorns. The number of bulls submitted at the spring inspections held under the Live Stock Breeding Act was 14,026, of which 7,655 were licensed and 6,371 rejected. This is the largest number of bulls presented, and also the largest number licensed since the Act came into operation in 1925. The percentage of rejections is also the highest yet recorded, and is an indication that the standard of merit required by the inspectors is being raised. There is still room for considerable improvement in the quality of livestock, and farmers are being requested to exercise greater care in the selection of bull calves intended for breeding purposes. The Live Stock Breeding Act will apply to boars after October 1st. After that date it will be illegal to keep a boar for breeding purposes without a licence.

The annual report of the Irish Agricultural Organisation Society shows that the co-operative movement in dairying is in a healthy condition. Several new creameries were opened during the year, and many old societies were consolidated and reorganised. In order to get the best results from the plentiful supply of electrical power now available from the Shannon, the Committee invited experts from the Dairy Machinery Institute in Kiel to visit Ireland. The director of the Institute and one of his assistants accepted the invitation and examined the plant and layout of several creameries with a view to their electrification. A somewhat pessimistic note is struck regarding the progress of Irish Associated Creameries, Ltd., the central selling organisation for butter. "It is regrettable," the report

Westminster Bank Leaflets

¶ Points before Travelling, Notes on the Protection of Travellers from Loss. ¶ Thirty-nine Advantages of an Account with the Bank. ¶ The Saving Habit, an outline of the Home Safe system. ¶ The Postal Account, a service for those living in outlying rural districts. ¶ The Financial Machinery of the Export and Import Trade, or the function of the Documentary Credit. ¶ Foreign Exchange, with particular reference to Forward Exchange. ¶ Safeguards for Travellers, a warning against carrying foreign notes. ¶ Securities, their Custody and Supervision. ¶ Wills, Trusts, and Settlements, the Bank as an Executor.

41, Lothbury, London, E.C.2

states, "that the situation in respect of internal difficulties has not improved and that the minds of the producers have become befogged in a cloud of controversy. Producers in this country must decide whether, in a changing world where combination and amalgamation are the feature of modern industry and modern agriculture, they alone are still to plod along the worn rut of individualism." The president of the society, Sir Horace Plunkett, made it clear in his speech at the general meeting that compulsory organisation of centralised selling might be necessary in the event of the failure of voluntary action.

Official figures have been published showing the number of companies registered in the Free State. On December 31, 1929, the total number of companies on the register was 1,773, of which 1,700 were companies registered with share capital of a nominal amount of £49,662,761. Of these companies, 1,493 were private and the rest public. The sums invested in different types of enterprise were as follows:—Distributive trades, £11,000,000; banking and finance, £8,800,000; transport, £5,600,000; hotels and theatres, £2,000,000; newspapers, £1,300,000; miscellaneous manufactures, about £22,000,000. Last year 134 new companies were registered, with an average nominal share capital of £5,700. It is interesting to observe that only a very small fraction of these new companies are concerned with the production of protected commodities, and it is obvious that the tariff has had very little result in encouraging the investment of capital in the Free State.

The statistics of external trade for the first six months of the year suggest that the Free State is faring better than many of its richer neighbours in the prevailing depression. While the value of the imports has sunk to £29,405,282 from £30,447,790 in the corresponding period last year, exports have increased to £21,295,638 from £20,043,685. The export of fat cattle has decreased, but that of store cattle and pigs has substantially increased both in quantity and value.

Books and Publications.

COMMUNITY LIFE ON TRIAL.

In 1928 Professor Charles Gide published "Les Colonies Communistes et Co-opératives," a short but informative work based upon earlier lectures. In "Communist and Co-operative Colonies" * we now have a competent English translation of it, a book so full of queer human interest and unexpected incident as to be safely commendable, apart from its serious historical interest,

* "Communist and Co-operative Colonies." By Charles Gide, translated by Ernest R. Row. George Harrap and Co. 7s. 6d. pp. 222.

as a subject for light holiday reading. Beginning with the community life of ants and bees, M. Gide moves forward, with a passing reference to certain early tribal communities and to the monastic communities of the middle ages, to that extraordinary and relatively permanent expression of the community ideal, the Jesuit Republics of South America. He concludes his survey of religious communities with a brief account of some of the varied and often wildly fanatical settlements which flourished in the U.S.A. during the nineteenth century. Their peculiarities have recently been brought to the notice of English readers in greater detail through the medium of Mrs. Oliver Strachey's study of "Religious Fanaticism." But the details selected by M. Gide are peculiar enough. This exhausts his tale of religious communities and brings him to the question of communities inspired by economic or political ideals: the more generally familiar experiments of Owen and Fourier, the lesser-known Icarian Colonies, the anarchist colonies, the co-operative colonies, and the agrarian colonies—prominent among which are the Palestinian experiments in Zionist land settlement, which have a peculiar and living interest to the modern administrator.

This recital is, we repeat, a really enthralling chronicle of human events—and, indeed, one might be tempted to add, of human failure. But M. Gide will not have it so. There is, in his view, a kind of coherence in this tale of non-related endeavours of different races, operating in different centuries, to achieve what appear to be different ends. He sees them one and all as a "touching and instructive" expression of man's eternal quest for an environment consistent with his loftiest ideal of justice and freedom, and therefore free of class inequality and of the profit-making operations which produce it. To the contention that these experiments have, almost without exception, had their day and ceased to be, he opposes the pertinent question: "How many business companies or commercial houses are there which can celebrate their centenary?" "The real proof of vitality lies not in continuance, but in rebirth, and this characteristic is possessed in the highest degree by the communities of which we are speaking: they are continually being born again from their ruins." But certain tentative conclusions he is able to draw as regards the conditions of relative stability. And one is that a strong personality with a background of religious discipline is an invaluable asset.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

English Banking Methods. By L. Le Marchant Minty. (London) Sir Issac Pitman and Sons, Ltd., Parker Street, Kingsway. 15s. net.

A textbook intended to furnish knowledge of the type which a bank employee would acquire in the course of experience were it not for the brevity of human life.

Währungssicherung und Währungskosten. By Dr. Hans Schöne. (Berlin) Carl Heymanns Verlag. 12 marks.

A German treatise on currency in which the subject is treated from a somewhat novel point of view.

The Dual System of Stabilisation. By J. Taylor Peddie. (London) Macmillan and Company, Ltd., St. Martin's Street. 8s. 6d. net.

A programme of currency reform based on the issue of credit against bills of exchange.

Fractional Money. By Neil Carothers. (London) Chapman and Hall, 11, Henrietta Street. 20s. net.

A history of the United States coinage.

Social Problems and Policy during the Puritan Revolution, 1640-1660. By Margaret James. (London) Routledge and Sons, Ltd., Carter Lane. 21s. net.

A contribution to English social and economic history which should prove of value to the historian and of interest to the general reader.

American Industry and Commerce. By Edward Dana Durand. (London) Ginn and Company, Ltd., 7, Queen Square, Southampton Row.

A descriptive account, in which the statistics which form its foundation are kept out of sight, of the economic activities (excluding finance) of the United States.

Die Einkommensverschiebungen in Österreich Während des Weltkrieges. By Professor Dr. Wilhelm Winkler. (London) Oxford University Press, Warwick Square. 16s. net.

This volume in the German series of the Carnegie Endowment covers a wider scope than the title might imply and virtually deals with changes in Austrian economy during the war.

Politica Doganale Differenziale e Clausola della Nazione Più Favorita. By Professor Jacopo Mazzei. Vol. I. (Firenze) Libreria Internazionale Seeber, Via Tornabuoni, 20.

A well-documented historical treatise on differential tariff policies.

Rural England as a Market. Second Edition. (London) The Farmer and Stock-Breeder, Lennox House, Norfolk Street.

A simple statistical examination, largely in diagrammatic form, of the potentialities as consumers of the rural population of England and Wales.

Organisation in the Cotton Trade. By F. Greenhalgh. (Manchester) John Heywood, Ltd., Deansgate. 1s. 6d. net.

This pamphlet contains an exposition of the urgent necessity of the adoption of an adequate method of costing in the cotton industry, and puts forward a very fully worked-out scheme.

India at the Cross Roads. By Lex. With a foreword by the Rt. Hon. Lord Meston, K.C.S.I. (London) "India" Publications, Ltd., 19, Charing Cross Road. 1s.

International Labour Review, August, 1930. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Includes an article by J. R. Bellerby and K. S. Isles on "Wages Policy and the Gold Standard in Great Britain."

The Bankers' Magazine, September, 1930. (London) Waterlow and Sons, London Wall. 2s. 6d. net.

The Economic Journal, September, 1930. (London) Macmillan and Company, St. Martin's Street. 6s. net.

Of particular topical interest is an article on "The Artificial Control of Raw Material Supplies" by J. R. F. Rowe.

Wilkinson's Tea and Coffee Share Manual, 1931. (London) The Investors' Chronicle, 20, Bishopsgate. 3s. 6d. net.

The Canadian Mining Book, 1930. (London) Thomas Skinner and Company, 330, Gresham House. 10s.

The Stock Exchange.

ARGENTINA AND THE INVESTOR.

THIS week's Argentine revolution is of moment to large numbers of investors. British holdings of Argentine Government bonds were put, two years ago, at £65 millions. Independent research under our own auspices has suggested that, of the total issued capital of British-owned companies operating in the Argentine, some £171,400,000 in shares, and £111,440,000 in debentures, etc., are British owned. British capital has played a leading part in the development of Argentina's national railway system, and of other public utilities. Argentina is the largest individual contributor of Great Britain's raw materials, the third most influential purchaser of British merchandise, and the largest "foreign" market for British cotton and woollen goods and railway material. The River Plate trade gives employment, annually, to 5,000,000 tons of British shipping. The stability and prosperity of Argentina thus touch British interests at many points, and it is opportune to discover the causes of last week's events and their probable repercussions, from the British investor's point of view.

By every criterion, Argentina's development in the past decade has been gratifying. During the ten years ended 1928, the population increased by 30 per cent., the cultivated area by 7 per cent., the national revenue by 106 per cent., the national exports, in terms of value, by nearly 30 per cent. (despite an extensive fall in prices), and the tonnage of goods carried on the railways by the same percentage. The yields of the staple crops have increased more rapidly than the cultivated area, the production of wheat per hectare, in the quinquennium 1924-29, being 23 per cent., and that of linseed 46 per cent. higher than in the war years, 1914-19. The number of cattle, in the post-war census, exceeded the 1914 total by 43 per cent.

Argentina's progress, in short, has made her the leading economic power in South America, so that five years ago the Government's statistician was able to point out that his country, with a population equal to 16 per cent. of that of the whole sub-Continent, transacted 50 per cent. of its total foreign trade, and accounted for 60 per cent. of the total railway goods traffic. What causes have temporarily clouded the picture? In the first place, Argentina, as a primary producer, has suffered heavily during the present world-wide depression as a result of lower prices and reduced trade in her staple export commodities. Her statistical returns are not up to date, but the figures for the first four months of this year show a drop of 42 per cent. in volume and 41 per cent. in value of her exports of grain, as compared with the corresponding months of 1929. Her wool exports were down by 23½ per cent. in volume and 52 per cent. in value, and though her trade in meat and dairy produce was maintained, and that in forestal products increased, her total exports had fallen by 37 per cent. in volume and 33 per cent. in value.

In the second place, her financial situation was not well adapted to take the shock of a severe depression. Even in 1928, when she had a favourable "visible" trade balance of 129 million gold pesos, it was estimated that her real balance (including "invisible" items) showed a debit of at least 125 million pesos. Her budget has balanced for some years past, but no effective legislative effort has been made to deal with the very large floating debt, including various short-term loans whose total has increased since 1925 from 347 million paper pesos to at least 390 million pesos. Central banking in Argentina, again, has significant gaps in its organisation. Many well-informed observers attribute to this cause the real responsibility for the unfortunate decision to close down the Conversion Office last December, as a result of which Argentina, while retaining her generous supplies of gold in the face of an unfavourable trade balance, has suffered a decline in the exchange value of the peso from 46½d.

to under 40d. The quotation, however, has improved, this week, to 41½d.

A third factor in recent developments has been the quasi-dictatorship exercised by the late President, who, having taken control of all important affairs into his own hands, was usually too ill to attend to them. The dual fact that ex-President Irigoyen was *persona non grata* with many foreign financiers, and himself a holder of strong ideas on the undesirability of further foreign borrowing, accentuated the effects of the economic crisis.

The "revolution," from the investor's point of view, may thus prove to be by no means an unmitigated evil. Characteristically, it has been almost bloodless. It has brought into power a Government which, by present evidence, will be sound rather than brilliant, but will for that reason command increased confidence abroad. Revolutions from which investors have most to fear are those which involve civil strife sufficiently protracted to arrest economic development, or bring into power governments with heterodox ideas regarding their predecessors' financial obligations. Happily, in Argentina's case, neither contingency would appear to be in prospect.

The fact that the news of the change of Government was immediately followed by an improvement in the exchange value of the peso, the London quotations of Argentine Government bonds, and the share prices of companies operating in Argentina, suggests that reasonably well-informed quarters take a reassuring view. In this connection, we would refer our readers to a cable, in reassuring terms, from our Buenos Aires correspondent, which appears on page 492. The broad conclusion, from the viewpoint of the investor, would seem to be that the future course of Argentine security values will be governed mainly by the rapidity of Argentina's economic recovery—which in any case must be largely a function of reviving world prosperity—and only indirectly by political factors. The relative importance of the latter may hinge upon the ability of the new Government to carry through, within a reasonable time, long overdue reforms, such as the overhauling of the central banking machinery and the consolidation of the floating debt.

The following table, showing the recent investment history of a number of representative Argentine stocks and shares, bears upon this point. The figures suggest that while prices have recovered substantially since the dark days of 1921, the movement, so far as Government stocks are concerned, has been held up of recent years. The equity stocks of all Argentine companies have fallen heavily from the "peaks" of last year:—

	Highest, 1921.	Highest, 1925.	Highest, 1929.	"Pre-Revolution" Price (Sept. 4, 1930).	"Post-Revolution" Price (Sept. 10, 1930).	Yield at Last Price.

† 7% pref. ord. || Calculated on basis of 1928-29 dividends. a Free of income tax. b On 1929-30 dividend.

The position of the railways was discussed at length in the *Economist* of July 19th last. This week's announcement that the 1929-30 dividend on Central Argentine ordinary and deferred will be 5 per cent., against 7 per cent. in 1928-29, suggests that our views erred but slightly, if at all, on the conservative side. The stocks of the Central Government now stand on a $5\frac{1}{2}$ to $5\frac{3}{4}$ per cent. yield basis, and as the Government must inevitably borrow considerable future sums, an early improvement in prices would be an optimistic assumption. The credit of the individual States stands lower than that of the Federal Government, and the possibility of tightening the latter's control over State finances forms an addition to the list of urgent problems confronting the authorities.

The prospects of many British companies trading in the Argentine are not unpromising, given the return of reasonably prosperous conditions. The attitude of the authorities is, generally speaking, helpful, and public utility concerns, especially in urban centres like Buenos Aires, have made rapid headway. Whether this field will come to an increasing extent under American control is a question which only the future can decide. Among other concerns, reputable British trust managements have recently shown a certain interest in the prospects, *inter alia*, of Argentine Navigation, Harrods (Buenos Aires), and Agar Cross. The first is one of the strongest companies in the Royal Mail group, the second typifies the ever-increasing material and moral influence of the capital city in Argentine affairs, while the third is a British company which, as a leading exporter of agricultural machinery to the River Plate, should benefit from the future expansion of Argentina's main industries.

The time-table of Argentina's eventual recovery can be postulated only when clearer evidence is available that the decline in world commodity prices has been arrested, and when the world's industrial activity is demonstrably on the upward curve of a new cycle. In the meantime, the crop outlook for the coming season is not unsatisfactory. Wheat, linseed and oats are in good condition after moderate rains, supplies of pasture for cattle and sheep are plentiful, and freight rates have shown a firmer tendency.

Patience must necessarily fill a leading rôle, at the moment, in the mental make-up of the investor in Argentine securities. He may, however, derive substantial consolation from the reflection that, so far as current evidence goes, the date of eventual recovery should not, at least, be retarded as a result of the *coup d'état* of September, 1930.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 23.	September 25.

THIS week revealed the previous fortnight's apparent revival as an unsubstantial pageant. Business resumed its mid-August dimensions, and although prices suffered no appreciable reaction, the public steadfastly refused to come in. The bears were by no means eliminated by the so-called "squeeze" of the previous fortnight. Even the most optimistic observers see as yet no break in the trade depression, the week's batch of new data—including such economic "pointers" as commodity prices, unemployment, and overseas trade—being all bearish for choice. The narrowness of many share markets, other than gilt-edged, renders generalisations based on price movements peculiarly dangerous at the moment.

The gilt-edged market was somewhat unsteady at the outset, but resumed its slow upward trend, some large institutions being buyers of short-dated stocks in mid-week, in the expectation of the continuance of cheap money until the end of the year. Five per cent. War Loan and Funding Loan were firm.

India loans enjoyed a moderate recovery after being marked down, less on the failure of the Gandhi negotiations, than on the impossible nature of the terms put forward. Australians were unsettled on scattered selling.

Argentine bonds defied precedent by strengthening on the news of the "revolution." This matter is discussed at length on other pages. Brazilians obtained moderate support on the further improvement in the milreis, while San Paulo bonds advanced further on the latest coffee figures. Among Europeans, the new German Five and a-Half per Cents. provided a minor "sensation," declining sharply on the unloading of a large line of stock on an unwilling market. Chinese loans attracted moderate attention, and Japanese remained very firm.

Home rails again sagged, holders showing signs of anxiety at the dimensions of recent traffic losses, though little stock actually came out. The position is discussed in an Investment Note on page 489. Undergrounds, however, further improved. Among foreign rails, Leopoldinas were weak on rumours of the possible passing of next week's interim dividend. Argentines improved on the resignation of President Irigoyen, the strength of the peso, and improving trade indications. Canadian Pacifics were in steady demand.

Industrial shares generally held their ground, but the tone was much more irregular than last week, the upward movement of prices being definitely arrested. New York exerted, on the whole, a sustaining influence, and a certain amount of bear covering prevented reactionary tendencies from developing in a predominantly professional and narrow market. Imperial Chemical continued to improve, and a modest amount of buying gave a firm appearance to Cables and Wireless. Motor shares were in fair demand after a weak opening. A partial revival occurred in tobacco shares, and breweries strengthened after a shaky start, though Distillers continued to shed their recent gains. Columbia and H.M.V. were steady on a small business, but Vocalions were sold owing to the equivocal position of British Automatic Gramophones, in which the company is interested. Courtaulds strengthened, but elsewhere movements in the textile group were small and irregular. Store company shares continued to ease. Dunlops receded on the Straits Governor's announcement, but were firmer on the chairman's subsequent explanation of the company's attitude to the restriction question. Much interest was centred in the position of the Match group, despite the denial of the rumoured deal with the Diamond Match Company of America. Bank shares showed no decided trend, but a fair business was done, on selective lines, in insurance shares.

Rubber share dealers, having a week-end in which to meditate upon the "no restriction" announcement, promptly marked down prices on Monday in self-defence. Actually, only a moderate amount of stock came on the market, and quotations subsequently recovered slightly with the price of the commodity, though business was of consistently small dimensions. Dealings in tea shares were negligible, with quotations still trending downwards. The oil share market showed more than normal sensitivity to changing currents of opinion, the tone fluctuating from day to day (and even, on occasion, from morning to afternoon), on a narrow trading margin.

The tone of the mining share market was very quiet throughout the week. Kaffirs showed considerable weakness at the outset, but a modest inquiry arose later from the Cape, and Randfontein and Sub Nigel both recorded gains. "Johnnies" were sold on the report, and the virtual reduction in dividend. Among Northern Rhodesian issues Selukwe was early in demand, but the rise was not held. Professional business was practically non-existent, and both Congo Borders and Bwanas were marked down, the latter reviving somewhat on late support. The price of tin rose slightly, without affecting the share market, where changes were mainly against holders. Tintos advanced on Paris demand, but closed a trifle easier on balance.

FOREIGN STOCK EXCHANGES.

NEW YORK.

A fair amount of bull and bear activity has left prices some points to the good. The trade situation is as much an enigma as ever, but while no one is confident as to the date of permanent recovery (though many continue to make predictions), there are signs of increasing activity among speculative groups in the market. The most important bear feature of the week, a decrease of 442,000 tons in the Steel Corporation's unfilled orders, was accurately forecast and fully discounted in advance. On the other hand, the national steel ingot production increased for the fourth week in succession and car loadings showed a further gain. Altogether, though it is early to speak yet, the seasonal improvement in business activity seems to have opened under moderately favourable auspices. Bank stocks have shown some strength, and elsewhere gains have been recorded by Radio Corporation, Westinghouse Electric, and Montgomery Ward. Railroad stocks have also come in for attention. Call money is steady at $2\frac{1}{2}$ per cent. The bond market has been slightly less firm, with numerous fractional declines in mid-week.

INVESTMENT NOTES.

Home Rail Prospects.—Stockholders who have recently been furnished with abundant evidence of the sensitivity of railway earnings to national trade depression, are showing pardonable curiosity as to their probable position at the end of the year. In the following table the gross traffic figures of the four railways for the first thirty-five weeks of the current year are compared with those of 1929 :—

	(000's omitted.)			
	L.M.S.R.	L.N.E.R.	G.W.R.	S.R.
35 weeks	£ 48,909	£ 36,903	£ 20,966	£ 15,546
1929	45,958	35,007	20,029	15,215
Decrease £.....	2,951	1,896	937	331
Decrease per cent.	6	5½	4½	2½

In the main, the largest lines have been the greatest sufferers, both absolutely and proportionately. The North-Eastern and Midland and Scottish have borne the brunt of the depression in coal, iron and steel, and shipbuilding in the North, the latter company having also suffered from the disastrous conditions in the Lancashire cotton industry. The Southern has reaped some benefits from its electrification and suburban development policy. Recently, the receipts of the Midland and Scottish and North-Eastern have declined roughly by £150,000 a week, while the Great Western shows an average drop of about £45,000 and the Southern of about £20,000. A simple arithmetical calculation, therefore, suggests that unless there is a fair seasonal revival in trade before the winter the total decline in the gross receipts of the railways for 1930 will be something approaching £12 millions, of which the Midland and Scottish will account for between five and six millions, and the North Eastern for between four and five millions. To argue from gross to net receipts is a more than usually hazardous proceeding. All the companies appear to be making important cuts both in staff and service, but the axe cannot

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

be wielded indefinitely. On the other hand, all the companies expect to obtain a certain increase in revenue from their interests in road transport. Rationalisation may continue to exert a salutary, though declining, influence on expenditure. But the 2 1/2 per cent. cut in wages and salaries lapsed in May of this year, and in the six months' "truce" which has followed, the companies are facing an increase in the wages bill amounting, in the case of the Midland and Scottish, to something like £600,000, and in that of the North Eastern to roughly half a million pounds. Altogether, it is difficult to see how total net economies can offset more than, say, half the traffic declines. The L.M.S. and L.N.E.R. may thus be left with a decline in net revenue of something between £2 and £3 millions, and the prime concern of the directors will probably be to maintain the trustee status of their stocks. The railways will doubtless press for wage reductions when the "truce" ends on November 12th. Whereas, however, the rank and file of the three unions were to a large extent prepared for the sacrifice of August, 1928, they are now pressing their leaders to draw up a new programme of demands whose *raison d'être* cannot be regarded as being wholly tactical. Stockholders may be well-advised closely to follow the November wage negotiations. Apart from this question, their long-term prospects must depend on the possibility that the efficiency of the railways, admittedly higher to-day than at any previous epoch, will enable them to obtain a full share of the fruits of eventual trade revival.

The Argentine Situation.—The complete success of the recent movement in Argentina, and the general tranquillity of the Republic (cables our Buenos Aires correspondent), have reacted favourably on commercial and financial prospects. Local bond prices have all improved. The national finances are regarded as sound, and the errors of the late Government should readily be corrected. The Provisional Government has placed competent men in charge of all the finance departments. The state of the Banco de la Nacion is sound, but some changes may be

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"

6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

found necessary in its statutes. The new Cabinet, which is composed of men of responsibility, probity and competence, is pledged to a policy of economy and orderly administration on conservative lines. Meanwhile excellent crop prospects over the whole agricultural area and rising foreign exchange quotations afford some foundation for hopes of business improvement, with bigger railway traffics and increasing imports. Altogether, the change of Government may well open a new era for local industrial enterprise. It is rumoured that the new administration may reopen the Conversion Office in the near future. It has no intention of checking foreign capital investment by discriminative taxation. Meanwhile, the underlying tone of business and finance is firm, and the banking position normal. Public nervousness is absent, the fullest protection and encouragement having been afforded for all services. Our readers may find these views of a well-informed observer, in the Argentine capital, eminently reassuring. Our conclusions on the broader question of Argentina's prospects, from the viewpoint of the investor, are given in a leading article on page 487.

No Rubber Restriction.—An announcement was made last week-end by the Straits Settlements Government that, in view of the refusal of the Dutch authorities to intervene in the rubber question, economic laws must be left to take their course. This finally bolts and bars the door against any fresh scheme of restriction in the rubber industry. Whether the British Government would have been willing to re-impose compulsory restriction had support been forthcoming from the Dutch authorities will never be known. The fact, however, that the Straits Governor, Sir Cecil Clementi, was willing to make the journey to Java to see the Governor-General of the Dutch East Indies, suggests that the British authorities were not unfavourably disposed. Broadly, the Dutch refusal was based, firstly, on the declared aim of the Colonial Government to apply as little compulsion as possible to the native population, which had not asked for restriction; secondly, on the practical impossibility of enforcing any concrete plan; and thirdly, on the likelihood that international resentment might have vented itself by the raising of import duties against the restricting countries. These contentions appear entirely sound. The industry, indeed, has accepted the decision as final, not merely for the present but for all time. Rubber restriction, in fact, is dead. Producers must tighten their belts and rely on the virility of the industry to see them through a severe crisis. A review of the position will be found in a leading article on page 474 of this issue. The strength of the industry lies in its general freedom from debt, funded or otherwise, its weakness in its scattered organisation. There are too many companies, too many directors (their number is put at over 900), and too few connections—financial or personal—with the consuming side. Above all, the problem of a 50 per cent. "native" output must be faced. The effect of the Malayan and Dutch Governments' decision must inevitably be to force out some of the weaker companies. The future may see production increasingly concentrated, on the European side, in large estates, whose aim will be to make profits by mass production at a moderate selling price. Such companies may act, possibly, as intermediate buyers of a good deal of native rubber, and may, in some cases, be interlocked with large consuming companies in America, Great Britain and Europe. Under such a regime, the industry may look for some respite from the distressing price fluctuations which have been its bane ever since its establishment in an Eastern habitat. Never again should it be possible for prices to go above 4s. 6d. and below 4d. within a single quinquennium.

Kreuger and Toll and Ericsson's.—The affairs of Kreuger and Toll have once more been brought before the public, as a result of its recent acquisition of the control of the L. M. Ericsson Telephone Company, Ltd. We understand that Kreuger and Toll now hold

approximately 66 per cent. of the "A" shares in this company. The purchase, incidentally, was denied on several occasions, and only when it was rumoured that America was buying these shares was a definite statement made. Following this deal, it was stated in the Press on Tuesday that Messrs Kreuger and Toll intended to purchase the control of the Diamond Match Corporation, the largest match manufacturers in the United States of America. This has been officially denied. Formed in 1911, with a capital of Kr. 1,000,000, as a real property business, Kreuger and Toll undertook the contracting and manufacture of building materials for its acquired properties. In 1917 the contracting business was handed over to a subsidiary, and the company is now purely a finance house, its main interests being in the match and building industries. Its investments, which represent 90 per cent. of its assets, include such items as 272,000 shares in the Swedish-American Investment Corporation, with a book value of Kr. 101,620,000, and Kr. 32,000,000 in the Swedish Match Company, and Kr. 15,500,000 in the Grängesberg Company, Ltd., besides interests in certain Swedish banks. Kreuger and Toll and the Swedish-American Investment Corporation, together are the largest stockholders in the Swedish Match Company. In exchange for match monopolies, these two companies arrange loans to various countries. In future the L. M. Ericsson Telephone Company will be able to acquire monopolies by the same means, its greatest trade competitor being the International Telephone and Telegraph Corporation of America. The capital of Kreuger and Toll is Kr. 65,000,000, in Kr. 10,000,000 of Kr. 100 "A" shares, carrying one vote per share, and Kr. 55,000,000 of Kr. 100 "B" shares, which receive one vote per 1,000 shares. The reserve fund in 1928 was £133,700,000. The capital of L. M. Ericsson Telephones is Kr. 60,498,800, in 806,651 Kr. 50 "A" shares and 403,325 Kr. 50 "B" shares, both having the same voting power as the shares of Kreuger and Toll. It is, therefore, to be assumed that Kreuger holding is in the vicinity of 500,000 Kr. 50 "A" shares of the L. M. Ericsson Telephone Company.

Columbia Graphophone.—The speech of Lord Marks at the general meeting of Columbia Graphophone on September 4th confirmed the good impression made by the directors' report and accounts. Lord Marks made it clear that the Columbia Company understates its financial strength in its published accounts. The whole of its patents, processes, and goodwill stand in the balance sheet at £1, while plant, freehold land and buildings and investments in subsidiaries are valued at very conservative figures. All obsolete stock has been written off, the stock carried consisting only of current merchandise. The fall in the value of raw materials used has been written off out of profits. The profits of the subsidiaries are included in the trading accounts to the extent only of dividends declared. The loss made by the American company and an exchange loss suffered by another subsidiary have been met out of the reserves of those companies and are allowed for in the value of "investments." Lord Marks emphasised the benefit of having investments well spread. A loss in one part is compensated for by an increased profit in another part of the world. While the present trade depression must affect the purchasing power of the company's customers—and he did not see any sign yet of a trade revival—Lord Marks believed that the developments which the company had in hand would enable it to tide over this difficult trading period. In France a new factory was in course of completion to meet the increasing business in that country; another factory was being built in Greece, and in Japan the reorganisation of the existing factory had been responsible for increased earnings. A new portable gramophone at 57s. 6d. was being marketed to meet the decreased spending power of the masses and the company was developing its sales of radio sets. Lord Marks, unfortunately, made no reference to the company's plans in the sound-film industry, which is so closely allied with the gramophone

trade. As regards the possibility of amalgamations Lord Marks added that they were continually in contact with their competitors and that if any negotiations materialised the shareholders would be informed, but he suggested that the various rumours recently in circulation should be ignored.

Calico Printers.—The complete report of the Calico Printers' Association adds materially to the information given by the preliminary figures which were reviewed in the *Economist* of August 30th last (page 415). The company's experience in the last three years is summarised in the following table:—

	Years ending June 30,		
	1928.	1929.	1930.
	£	£	£
Gross working profit	1,052,150	777,582	698,793

Carried forward	172,704	61,536	29,917

The report shows clearly that the decline in the Association's profits has been mainly due to a reduced volume of business. The Association's problems are the precise converse of those of certain large concerns which, with a more or less assured earnings position, have lately been put into jeopardy by a shortage of working capital. The Calico Printers' balance sheet is distinguished by its liquidity. At June 30th last it had visible reserves of nearly £1,300,000, the fruits of thirty years' financial conservatism. Its quick assets showed a surplus over current liabilities of £3,371,000, including realisable investments, carried at or below market value, of £1,154,000. On the other hand, its earning power since the war has been subject to considerable fluctuation, and has recently declined as a result of acute depression in Lancashire. Over 80 per cent. of the Association's production is for export. A year ago, earnings just failed to cover the preference dividend; last year they covered less than half requirements under this heading. The Association must earn gross working profits of at least £780,000 before anything is available for the ordinary shares. Trade fluctuations, consequently, are magnified many times over by the time they reach the ordinary shareholder. In 1927-28 working profit rose by one-fifth, and the earnings on the ordinary shares were nearly quadrupled. In 1928-29 a drop of

one-fourth in working profit entirely wiped out the dividend margin. The Association, with its long experience and strong internal position, is well equipped to withstand a prolonged period of difficulty if need be. At the present time, however, a purchase of either the preference or ordinary at 9s. 9d. or 9s. 3d. respectively must be regarded mainly as a gesture of faith in the Lancashire cotton industry.

Metropole Industries.—It is to be hoped that the meeting of shareholders of Metropole Industries, Ltd., next Monday, will decide once and for all which faction of the board of directors is to be trusted to carry out the company's business—Mr J. L. Blum, whose resignation has been requested by the other directors and refused, or the "management committee," consisting of Sir H. Cassie Holden, Mr F. de F. England and Mr S. R. Mullard. We do not profess to know which faction is entitled to be supported, but we think that the shareholders should take steps to obtain a proper account of the stewardship of the old board of directors, consisting of the Marquess of Winchester, Sir Godfrey Fell, Mr J. L. Blum and Mr H. J. Bruce. These directors were responsible for the flotation of two subsidiary companies—Everlith and Metdure, which have entirely failed to live up to their prospectus promises. The parent company, Metropole Industries, which has a capital of £347,500, presents a deplorable report for the period from May 1, 1929, to May 31, 1930. A trading loss of £32,036 is disclosed, following a trading loss of £42,590 in the previous period, to which have been added certain "reserves" and expenses of a non-recurring nature, bringing the total debit balance on profit and loss account to £193,618. After deducting a credit balance on reserve account at April 30, 1929, of £49,078, there remains a debit balance to carry forward of £144,541. This loss includes £8,485 reserve against a loan without security to Mr Blum, and £12,844 reserve against an investment in Associated Automatic Machine Corporation. The directors refer to the first-rate order of the company's gramophone factory, but add that the past management had showed a "complete lack of businesslike qualities" and hold Mr Blum responsible for certain transactions of an undesirable nature. The company is not past the stage where reorganisation and reconstruction may be effective, and we trust that the shareholders will combine to secure efficient management.

Power Corporation of Canada.—The directors of the Power Corporation of Canada, which has large interests in the B.C. Power Corporation, Dominion Power and Transmission, Canada Northern Power, Winnipeg Electric and other Canadian power companies, are able to show a further increase in gross and net earnings for the year to June 30, 1930, in spite of the trade depression. Earnings applicable to the outstanding common stock, at \$4.21 a share, are somewhat below the comparable earnings for the preceding year, but the number of shares outstanding have, in the meantime, been increased to 445,806 from 395,557. The operating revenues showed a gain of over \$800,000, or about 40 per cent. The profit and loss figures for the past three years compare as follows:—

	1928.	1929.	1930.
Revenue	\$ 849,871	\$ 1,947,590	\$ 2,784,681
Profits on sale of securities	1,278,770	1,364,514	918,231
Gross earnings	2,128,641	3,312,104	3,702,912
Net earnings (after expenses, taxes and interest)	1,624,186	2,445,829	2,478,958
Dividend on preference	487,500	680,000	600,000
Earnings on common	5.67	4.46	4.21
Surplus carried forward	1,681,932	2,502,919	3,491,304

In the balance sheet total assets have risen to \$49,596,291 from \$46,963,044. Investments in affiliated companies and other investments are both slightly higher, the former at \$18,920,222, and the latter at \$30,119,964. According to the president, the market value of the securities held by the corporation at

June 30th was well above their "book" value, about 75.7 per cent. of the securities held being Canadian and 18 per cent. American. The increased earnings shown by the subsidiaries indicate that the big power companies, unlike other industrial concerns, are able to maintain their progress in a period of trade depression.

Mining Trust.—It is possible within a short space, writes our mining correspondent, only to touch upon a few points regarding this enterprise. A new phase has quite recently been entered upon, by virtue of the arrangement with the American Mining and Smelting Company, a concern responsible for one-third of the world's production of lead, copper and silver. In this connection, 1,246,000 shares were issued, raising the capital to £5,746,000. On June 30th—prior to this transaction—the stock in hand stood at £102,970; debtors and creditors were comparatively small. Investments totalled £3,494,100; advances, chiefly to subsidiary companies, £892,600. The net income in the shape of interest on investments totalled £34,600—subject to taxation, and with no allowance made for depreciation. On this point it is observed that the quoted securities, which represent the greater part of the amount, showed a very considerable depreciation; but the market prices were nominal and "did not, in the opinion of the directors and their technical advisers, reflect the true value of such investments." The holdings in question include large blocks of shares and debentures in Mount Isa; shares in the New Guinea Goldfields and the Mining Trust of Northern Rhodesia; shares in and advances to the Villamagne and St. Sebastien d'Aigrefeuille mixed-metal properties in Southern France. In the progress report to August 30th of the Technical Committee a new estimate is given of ore reserves at the Mount Isa mines. The total of 30,534,000 tons includes 26,954,000 tons of sulphide containing lead, zinc and silver. The balance, carbonate ore, carries only lead and silver. It should be emphasised that these totals, although conservatively calculated, are merely based on drilling results. The treatment plant is expected to begin operations about the end of the current calendar year, its initial capacity being 1,500 tons per day. The particulars given regarding developments on the property of the New Guinea Goldfields suggest that the possibilities are very considerable. On several of the "locations" good average widths and values have been shown for many hundreds of feet. Results in Northern Rhodesia have so far proved disappointing. On the Villamagne property the proven ore reserves are placed at nearly 4,000,000 tons, the quantity actually blocked out being 405,000 tons. On this lead-zinc proposition, milling is in progress at the rate of 15,000 tons monthly. When conditions become more favourable, i.e., when a sustained rally in metal prices occurs, the company's indebtedness to the Mining Trust is to be discharged by an issue of shares.

Johannesburg Consolidated.—Having regard to the conditions that prevailed during the period, the results for the year ended June 30th last must be regarded as fully up to expectations. It is true that the net profit shows a small decrease; but this has arisen from the necessity of making provision for abnormal depreciation in some of the company's shareholdings. Again no addition is made to the reserve. At the end of 1927-28 this fund stood at the round figure of £1,000,000—a fully adequate provision. It may be recalled that in last year's "Note" we hinted at the possibility of some reduction in the dividend rate. For the first half of the current year the distribution was maintained at the 15 per cent. per annum tax free which has prevailed since 1922-23, but the amount for the second half of the session—which has just been deducted from the shares—is paid subject to tax. Despite the exceptional writing-off already referred to, the company's "stocks and shares" display an increase, due to the acquisition of additional interests in Northern Rhodesia. As usual, the holdings stand in the books at or below current market

prices on the date of the accounts. The results of the last four years are shown:—

	Year ended June 30.			
	1927.	1928.	1929.	1930.
Stocks and shares	4,261,580	4,452,880	4,569,530	4,609,690
Mining properties and advances	110,550	150,680	132,200	156,790
Real estate and buildings	299,320	292,370	295,660	296,680

In two branches of industry in which the "Johnnies" company is particularly interested the developments of the past twelve months have been of an unsatisfactory character. The benefits of the modification in the United States tariff on diamonds have been more than counterbalanced by the after-effects of the financial crisis; and "the position has been aggravated by the methods adopted by the Union Government in the disposal to South African cutters of part of the Government diamonds found in Namaqualand." Then, as regards the Potgietersrust Platins, improved results are being obtained from the plant; the grade of ore is well up to expectations, and the developments at the mine have been satisfactory. Unhappily, a fall in the price of platinum to a lower level than for 15 years past has rendered profit-earning by no means easy. On the favourable side may be noted the marked recovery which has lately taken place in the shares of the company's gold-mining subsidiary, the Randfontein Estates. In regard to this the directors observe that "the outlook is very encouraging." Hopeful references are made to the prospects of the Northern Rhodesian Copperfields. On the basis of the current price the shares yield approximately 8 per cent. irrespective of tax.

Modder East.—With this Witwatersrand mine the performance last year of a slightly increased development footage did not fully maintain the ore reserves. Accordingly, it has become necessary, in the first place, to continue a policy of vigorous exploration, and, in the second place, to conserve the reserves by drawing as far as possible from marginal or low-grade material not included in the computation. More than one-half the ore mined in 1929-30 was of this character. The payable ore developed last year amounted to 554,100 tons, value 5.9 dwts., the pay percentage being 17½, as against 19½ in 1928-29. Our usual table is appended:—

	Year ended June 30.		
	1928.	1929.	1930.
Ore crushed, tons	721,000	775,500	817,000
Revenue per ton	26/6	26/7	25/3
Costs per ton	21/-	20/8	20/2
Profit per ton	5/6	5/11	5/1
Total working profit, £	198,591	228,330	206,540
Dividends	117,950	185,780	186,160
Rate per cent.	13½	20	20
Carried forward, £	142,490	177,370	173,990
Ore reserves, tons	1,942,100	2,045,400	2,013,000
Value, dwts.	6.1	6.1	5.8

The increase in tonnage milled reflects the improvements to the treatment plant; but the effects of this, and of a moderate reduction in costs, were more than counterbalanced by decline in grade. Although paying an increased dividend, the directors followed a conservative policy as regards the distribution of the 1928-29 profits. Accordingly, by drawing to a small extent upon the carry-forward, they have been able to maintain the rate. On the basis of the distribution of the past two years, the shares, at the current price of about 2½s., show the high yield of 17 per cent. gross. This must be regarded as an insurance against the uncertain character of the developments.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Sept. 6, 1930, amounted to £10,071,900, against ordinary expenditure of £14,067,100. After allocating £1,825,500 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £142,971, the week's operations, as shown below, increased the National Debt by £5,985,000 to £7,668,000,000:—

(000's omitted.)

National Savings Certificates	£	200
Public Department Advances	£	2,350
Treasury Bills	£	3,410
Sundries	£	25
	£	5,985

A complete analysis of the National Debt at the end of last quarter was printed in the *Economist* of July 5, 1930.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Good progress has been made with the ingathering of cereal crops in the United Kingdom during the past week under favourable climatic conditions, but a continuance of fine weather is necessary to complete the harvest and secure the grain in dry condition. Offerings of native wheat at the Statute markets are increasing, and although general run of quality proved somewhat indifferent, some fine dry milling samples were obtainable. Prices vary considerably, but are generally on a lower basis in sympathy with imported varieties. A dull tone pervaded the market for cargoes and parcels, and prices further moved in buyers' favour under heavy offerings from Canada and European countries. Shipments from the latter source, and Russia in particular, have dominated the international situation of late, and forced North American sellers to come into line. Although reliable estimates of the total Soviet surplus this season cannot be accurately gauged, the fact remains that shipments are, and will continue to depress prices while the movement is maintained. Balkan countries are also seeking an outlet for surplus supplies, and competition is likely to be keenly felt from the Danube in the near future. The extent of European offerings has naturally lessened the demand for North American grades resulting in pressing offers from the United States and Canada, where estimates of spring yields are better than expected. Crop prospects are favourable in the southern hemisphere, and chartering is proceeding both from Australia and Argentina for new season's loading. In these circumstances, consumers are naturally confident of abundant supplies throughout the year, and only operate to cover pressing needs. Flour prices are also declining in sympathy with wheat and spot trade is of a retail character, with shipment offers pressing from North America, though American millers require a substantial premium on January-March loadings. Prevailing fine weather and increasing arrivals of maize tends to check consumption and prices ruled easier for near at hand parcels. Barley was obtainable at lower rates, while oats met a dragging sale.

WHEAT.—Easier in sympathy with reduced c.i.f. offers. No. 1 hard Manitoba, ex ship, 36s.; No. 1 Northern Manitoba, ex ship, 35s. 9d.; No. 2 ditto, 35s.; No. 3, 34s.; No. 5 Manitoba, 32s.; No. 6 ditto, 26s. 9d.; No. 1 hard Winter, 34s. 9d.; No. 2 ditto, 34s.; No. 2 mixed Durum, 31s. 6d.; Barusso, 62d. lbs., ex ship to arrive, 33s. 6d.; Australian, 34s.; choice white Karachi, 33s. 3d. per 496 lbs.; English new, 6s. 8d.-7s. per 112 lbs.

FLOUR.—Dull and tendency easier. London straight run, 32s. per sack for country deliveries, and 31s. London area. Of imported, Manitoba patents, 28s.-31s.; Buffalo ditto, 28s.-30s.; Australian, 26s.-27s., ex store. On c.i.f. terms, Manitoba top patents, September-October, 28s.-28s. 6d.; export ditto, 25s. 6d.-26s.; Australian, 23s. 6d.-23s. 9d. per 280 lbs.; Argentine low grade, October-December, 26 7s. 6d. per ton.

MAIZE.—Quiet. Plate, landed 26s. 3d.; ex ship, 25s. 3d.; August-September, also September-October, 25s.; Bessarabian, landed, 26s. 6d.; No. 2 white flat African, ex ship, 24s.; No. 6 yellow, landed, 26s. 6d. per 480 lbs. Yellow maize meal, ex ship, 28, f.o.r. London. Yellow African, ex ship, 25 15s.; white, 25 12s. 6d. per ton.

BARLEY.—Dull. Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s., as to sample; Chilian brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, ex ship, September-October, also Danubian, 16s. 3d.; Persian, new, ex ship, 16s. per 400 lbs.; English, new malting, 6s. 3d.-12s. 9d. per 112 lbs.

OATS.—Quiet. Plate, landed, 14s. 9d.; ex ship, 13s. 9d.; Chilian, tawny, ex ship to arrive, 14s. 9d.; fine white, landed, 12s.; German, landed, 22s.; mixed Canadian feed, ex ship, 12s.; landed, 13s. per 320 lbs.; English, new, 5s. 4d.-5s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Sept. 6	Cwts. 129,208	Cwts. 229,935	Cwts. 178,461	Cwts. 202,924
Average price of English wheat per cwt.	s. d. 7 8	s. d. 10 3	s. d. 9 3	s. d. 11 2

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.						
Aug. 30	Cwts. 103,890	Cwts. 8,350	Cwts. 29,296	s. d. 8 3	s. d. 7 3	s. d. 6 2
Sept. 6	129,208	33,625	31,959	7 8	8 4	6 0
Sept. 4, 1926	288,467	67,266	58,100	11 9	12 9	8 8
Sept. 3, 1927	75,184	34,688	32,310	12 1	14 1	9 7
Sept. 8, 1928	178,461	255,496	62,716	9 3	13 8	9 2
Sept. 7, 1929	229,935	106,178	49,234	10 3	10 1	8 0

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Sept. 11, 1929.	Jan. 2, 1930.	Aug. 27, 1930.	Sept. 3, 1930.	Sept. 10, 1930.
Winnipeg (No. 1 Manitoba)	122	156½	148½	88½	83½	83½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	116½	135½	130½	86½	82½	83½
—Cents per 60 lb.						

The visible supply of wheat in Canada, at 50,129,000 bushels, shows a decrease on the week of 243,000 bushels. Supplies a year ago stood at 63,367,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Export demand for coal remains disappointingly quiet except in the case of best hard, which are in good request at 15s. f.o.b. The glut in the supply of secondary qualities is less pronounced. Washed nuts and smalls for industrial use are in slow request and inclined to be easier. In the house coal section business has fallen off somewhat since the higher prices came into operation and supplies are excessive. Demand for foundry coke continues poor at 11s. 6d. and upwards at furnaces.

Our Glasgow correspondent writes:—There has been a slight improvement in shipping business lately, and in the home trade the household demand is opening up. Generally the market may be said to be steadier, but there has not so far been any question of price advances. In fact, washed nuts, the strength of which has been a feature of the market for some time past, owing to limited supplies, seem now to be easing in price. Meetings of the coal masters' committee dealing with the new marketing arrangements and other matters raised by the new Act have been held this week. It is understood that the committee have their proposals now completed, and they will be put before the coalmasters shortly. Prices for shipment are as follows (f.o.b. district ports):—LANARKSHIRE: Ell best, 13s. 6d.; splint best, 16s.; splint second, 14s. 6d.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 13s.; doubles, 12s. 6d.-13s.; singles, 12s.; pearls, 11s. 9d.; dross, 9s. 6d. FIRE: Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 9d.; third-class steam, 10s. 9d.; trebles, 13s.-14s.; doubles, 12s. 6d.-13s.; singles, 11s. 3d.; pearls, 11s. 3d. LOTHIAN: Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s.-13s. 3d.; doubles, 12s. 9d.-13s.; singles, 11s. 6d.; pearls, 10s. 6d.-10s. 9d. Ayrshire: Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s. 3d.; pearls, 11s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—General conditions on the Cardiff coal market are unchanged. Inquiries this week have again been inactive, while contractors are reluctant to make arrangements over next year, pending the introduction of the new marketing scheme, and the issue of the negotiations for a new wages agreement. The Conciliation Board met on Tuesday and had a preliminary discussion on the new position created by the Mines Act, but the meeting was adjourned till September 30th, when the employers and workmen will submit their respective proposals for inclusion in the agreement which is to supersede that terminating at the end of the present year. Shipments this week have been substantially less than in the corresponding period last year, and there have been days when over 20 tips have been idle. Quotations have generally ruled on the minimum basis as follows:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 11s. to 11s. 9d.; foundry coke, 30s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood,

Australian hides is a trifle firmer, with a fair amount of business passing. Conditions in the sole-leather market have shown a further improvement this week. Repairers have been responsible for some satisfactory sales of English and wet-salted bonds in the 10-14 lbs. averages, while at the same time there has been a moderate amount of inquiry for lighter weights. Dry hide bonds, also, have accounted for an increased turnover on manufacturing account, and with a general firming up of prices producers of footwear are inclined to cover their requirements with more freedom than has been the case for some time past. Sales of upper leathers have shown signs of expansion. Willow calf features mostly in the orders being received, but at the same time the call for box calf tends to increase. Black and brown glaze kid is a regular trade. Producers of semi-chrome upper stock continue to experience difficulty in effecting sales, and stocks tend to accumulate. Business with curriers is below normal. Suede leather moves off in moderate quantities, while an improving tendency is noticed in connection with the market for reptile skins.

OVERSEAS PRODUCE.

SUGAR.—The market generally lacks stability, and the chief feature of interest was a general decline in British standards of 6d. per cwt., at which a fair business was effected. Other descriptions tend to be easier, and the demand for raw refining kinds marked no improvement. T.L. granulated, spot, London, 19s. 3d. Cuban, 96 per cent., September-October, quoted 5s. 6d.; November, 5s. 6½d.; December, 5s. 7½d. Peruvian ditto, afloat, 5s. 6d. c.i.f. United Kingdom. Of preferentials, British West, August-September, quoted 9s. 3d. c.i.f. London. White Java, September-October shipment, quoted 8s. 3d. c. and f. Calcutta. Mauritius crystals, 99 per cent., October-November, 10s. c.i.f. London. Terminals steady, with a fair business passing. Raws, September sold 4s. 6d.; December, 4s. 8½d.; January, 5s. 5½d.; March, 5s. 9½d. to 5s. 9d. cwt. Cuban receipts for past week totalled 40,443 tons, against 44,035 at same time last year; exports, 47,727, tons, against 100,484; stocks, 1,270,810, against 680,018 tons. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending September 6th totalled 126,331 tons, against 118,954 last year.

COFFEE.—Market generally steady, with a fair demand for all the better liquoring grades. Kenya, good bold, sold 81s.; Costa Rica, common to good, 90s. 6d. to 112s. 6d.; Colombian, bold, 87s. to 112s. 6d.; Maragogipe, 122s. 6d. cwt.

COCOA.—Spot market steady, with moderate dealings. Forward irregular. Accra, F.F. grade, London contract, October-December, sold 27s. 6d. to 26s. 9d.; Liverpool, 27s. to 26s. 3d. f.o.b. G.F. to Continent, October-December, sold 29s. 6d. to 28s. 9d. c.i.f. Terminal market steady but inactive. September sold 30s. 6d.

TEA.—Indian offerings for the week totalled 50,785 packages, which encountered a fair general demand, though prices disclosed slight irregularity. A useful assortment of finest Assam and Darjeeling invoices sold under strong competition at advanced rates, but medium descriptions were barely steady. Southern Indian offerings ruled firmer where quality marked improvement, but otherwise moved off quietly. Flowery broken orange pekoe sold up to 8s. 5d. per lb. Ceylon offerings of 28,290 packages came to a somewhat quieter market. Finest kinds were occasionally dearer, but lower grades often ruled in buyers' favour, especially plain and thin liquoring sorts. Java sales passed off steadily, with a fair demand for the better qualities. Of China, there is only a small trade passing on about former terms.

RICE.—Market weak on lack of European demand. Rangoon two stars, spot, London, 13s. 3d.; Spanish, 15s.; Italian, 15s. 6d. Two stars, September-October shipment, 11s. 7½d., c.i.f. London. Spanish, new crop, 13s. 3d. c.i.f. S.Q., October shipment to Cuba, 11s. 9d. c.i.f.

BEANS AND PEAS.—Beans quiet. Madagascar butters, spot, London, 30s.-33s. 6d.; new crop, October-December, 29s. steady, but business fails to expand. Japanese, spot, 19s.; old, 17s.; September-October, new, 18s.; Dutch marrowfats, prompt, 19s. 6d.; September-October, 19s. 3d. per cwt.

POTATOES.—The market in potatoes has been quiet and prices showed no change on last week.

SPICE.—Pepper in fair support and market firm. Black Lampong, July-August, 5½d.; August-October, 5½d.; October-December, 5½d. Muntok white, August-October, 7½d.; October-December, 7½d. Zanzibar cloves maintained, spot, 1s. 1d.; September-October, 1s. London stock of black increased by 3 tons on the week at 857, against 1,263 at same period last year; white, 78 tons up at 449, against 403 tons last year.

FRUIT (Dried).—Currants quiet, apart from some inquiry for low-priced Australian. Greeks practically cleared and largely nominal on spot. Pyrgos, 27s. 9d.-28s.; Australian, spot, 35s.-47s. Sultanias quiet and old crop cleared. Raisins dull. Figs easier. Evaporated Fruits: Australian apricots continue in demand, but otherwise demand generally quiet and quotations occasionally the turn in buyers' favour.

CANNED GOODS.—In fruit there has been rather more movement of late, chiefly for Australian descriptions, though trade remains below normal. Californian moves off slowly, with ample supplies on offer. Meats: Hams and tongues sell steadily, but corned beef quiet of sale. Condensed milk and milkpowders: There is a fair trade passing at barely steady prices. Honey: A fair inquiry prevailed at the reduced rates current. New Zealand, 66s.-87s. 6d.

WHEELS OF PROGRESS

DUNLOP IS PROGRESSIVE

—Each year shows substantial progress in Dunlop quality and design. The Dunlop Tyre to-day, is as near perfection as the unrivalled testing and research facilities of Dunlop experts can make it. Dunlop do not hesitate to scrap machinery, change processes or designs, when their research experts have proved there is something better.

Fort DUNLOP

The Tyre Incomparable

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

MEAT.—The price of foreign meat has been slightly firmer, while that of home-killed beef and mutton is practically unchanged. Beef, per 8 lbs.: English, long sides, 5s. 4d. to 5s. 10d.; Argentina, chilled hindquarters, 4s. 6d. to 4s. 10d. Mutton, per 8 lbs.: English, 6s. 4d. to 8s. 8d.; New Zealand wethers, 3s. 3d. to 4s. 4d. Pork, per 8 lbs.: English (under 10 stone), 8s. to 9s.

RUBBER.—Market has been depressed and prices dipped to a new low level record of 3 1/2d. per lb. owing to the refusal of the Eastern authorities to intervene regarding restrictive measures. A moderate recovery since occurred on improved buying orders. Plantation standard sheet, spot, also October, sold, 4 1/2d.; October-December, 4 1/2d.; January-March, 4 1/2d.; April-June, 4 1/2d. to

4 3/4d.; July-September, quoted 4 1/2d.; January-December, 1931, 4 1/2d. per lb. London stocks were increased by 1,219 tons on the week, landings being 2,119, deliveries 900, stock 81,830, against 36,620 at same time last year. Liverpool stock, 1,370 tons up, landings being 1,567, deliveries 197, stock 31,159, against 8,351 tons at corresponding period last year.

HEMP.—Manilla quiet and rather featureless. J2, October-December, quoted £22; K, £20 5s.; L, No. 1, £20; with lower grades in proportion. African sisal, No. 1, f.a.g., October-December, sellers £21 12s. 6d.; January-March, £21 15s. c.i.f. Manila receipts for past week totalled 22,000 bales, against 36,000 at same time last year, and 24,000 in 1928. Estimate for this week 24,000, and the following week 23,000 bales.

VEGETABLE OILS AND OLSEEDS.—Markets are not so active, crushers who bought extensively a few days ago having apparently covered their immediate requirements with prices in their favour. Old crop Plate linseed continues to offer, and is being absorbed fairly well, £14 17s. 6d. having been conceded for seed on spot at Hull, and £14 15s. for September shipment. Pressure on the part of Indian shippers to sell has forced down values. The condition of the new crop in Argentina is satisfactory. The quantity of linseed on passage to Europe is 103,000 tons, and there still remains for shipment this season from South America and India 390,000 tons, or about 40,000 tons more than was actually exported in the concluding stages of last year. Cottonseed is dull, and prices of Egyptians are easier in the absence of demand, old crop quoting about £6 10s., and new offering at £6 12s. 6d. In the oil section linseed oil is in better request from consumers, and prices are steadier, with September delivery ex Hull at £32, and October-December at £30 15s. Cotton oil is quiet, crude Egyptian offering at £26 5s. Other seed oils are quiet, and oilcakes and meals in fair demand at unchanged prices. The market for copra is weaker. Straits S.D. to Rotterdam, September, also October, sellers, £17; November, £17 2s. 6d.; Dutch E.I., October, £17. Palm kernels to Hamburg, September-October, £12 5s.; October-November, £12 7s. 6d.; November-December, £12 10s. c.i.f.

THE MONEY MARKET.

MONEY remains very easy, and on Thursday was described as being almost unlendable at rates running for new money from 1 1/2 down to as low as 1 per cent. Renewals of day-to-day loans were effected at 1 1/2 per cent. Discount rates also remain low. Three months' bills were quoted at 2 1/2 per cent. until Thursday, when business was reported at 2 3/4 per cent. On Monday, it was reported that the Bank was selling October Treasury bills

at 2 per cent. This may have represented an attempt to stiffen up discount rates, but if so it has so far proved abortive. Another explanation lies in the fact that this week the Banking Department has increased its Reserve by £4,495,381, and so if the Bank sold Treasury bills to this amount it would simply be following its normal neutralisation policy. In actual fact, Government Securities held by the Bank have been reduced by £7,151,347, and Bankers' Deposits by £1,858,594. This suggests that the Bank went beyond its neutralisation policy, and that the reports that it wished to exert some pressure upon the market were partially justified.

This week £780,000 of Cape gold was offered in the London market, of which £719,000 was bought on French account at the high price of 85s. 0½d. per ounce fine. Next week £500,000 is due to arrive, but £250,000 of this has already been bought forward for France, and so only the balance will be on offer. The only gold withdrawal of note from the Bank of England was one of £188,000 on September 15th, and this was more than offset by the Bank's gold acquisitions during the week, the Bank return showing a net gold increase of £987,000.

The renewed weakness of sterling against the franc is explained by the withdrawal through London of some French funds from Germany as a result of the German elections. The fact that the mark has maintained its strength in the face of these withdrawals is ascribed to transfer of some Dutch money to Berlin. The recent fluctuations in the New York exchange, which were in the main adverse to sterling, are said to be due to operations of a speculative character. It is not believed that the seasonal pressure upon sterling is yet making itself felt, and in any case restricted trade and the low level of cotton and grain prices means that the autumn demand for dollars will be far below its usual dimensions.

	Aug. 26, 1930.	Sep. 4, 1930.	Sep. 11, 1930.	Sep. 18, 1930.	Previous Rate and Date Changed.

Market rate (3 months' bills)	2½	2½	2½	2½	...

The August statements of the nine English clearing banks reveal a sudden reversal in the recent upward trend of deposits. This may be to a limited extent the result of withdrawals of money by the public for use during the holidays, and the reduction of £7.2 millions in the banks' cash holdings may be due to the same cause.

Total assets	2,075.7	2,017.9	2,050.8	2,050.5	2,020.9

Bad trade is reflected in the reduction of £16.1 millions in loans and advances, and in the further contraction of £2.8 millions in acceptances. Possibly owing to the low level of discount rates, the banks last month allowed £5.2 millions of their bills to run off, and, instead of buying fresh bills, added £9.5 millions to their investments.

NEW YORK.

Money remains very easy, and, on Tuesday, call money, which previously had been quoted at 2½ per cent.,

fell definitely to 2 per cent. Open market discount rates on Wednesday were 1½-2 per cent. for ninety days' bank bills, while commercial paper was quoted at 3 per cent.

THE STOCK MARKETS.

The stock markets relapsed into a state of unbroken lethargy, business being of narrow dimensions, though average prices showed only a small decline. Gilt-edged stocks were less firm. Australian Government loans declined, and the election results unfavourably affected German issues. Home rails were marked down on the customarily disappointing traffic figures, while the Argentine railway dividend declaration failed to obviate foreign selling. Industrials attracted less attention than in recent weeks, prices generally showing fractional downward changes. Rubber shares held their ground, but tea shares were again dull. Oils were firmer on inquiry from Paris and Amsterdam. Little interest was taken in mining counters, owing mainly to indications of further instability in base metal prices.

THE COMMODITY MARKETS.

The coal trade continues depressed. Industrial consumption of fuel is still shrinking, and there is no evidence of an improvement in exports. The production of iron and steel has fallen to a low level, but stocks are being slightly reduced; transactions in finished steel are few in number. Outlets for Manchester goods are still difficult to find, but there has been an increase in inquiries from India. A slight improvement has become noticeable in the wool industry, and the hide and leather trades are experiencing an increased demand at higher prices. The jute industry is depressed, and there is no hope of an improvement until the large stocks of finished goods have been reduced. Wheat prices are hardly changed on the week.

THE FOREIGN EXCHANGES.

Business was quiet in the Foreign Exchange market, but movements were generally unfavourable to sterling. Towards the end of last week New York fell away from 4.86½ to 4.85½ on Friday last, but subsequently recovered to 4.86½. Montreal was also lower at 4.85½. Against French francs, sterling was offered down to 123.73 and Belgas were no better than 84.85½ at the close. Milan eased off to 92.82, and there was a distinct demand for Dutch guilders, the rate falling to 12.06½, as against 12.07½ a week ago. Swiss francs were wanted at 25.05½. Madrid displayed less violent fluctuations than recently, but after improving to 43.75 closed at 45.50. Stockholm improved to 18.08½. The results of the German elections failed to affect the exchange, the Reichsmark improving to 20.40, compared with 20.41½ a week ago. The recent improvements in the Argentine and Brazilian exchanges were not fully maintained, the former being 40½d. and the latter 43½d. In the forward market, dollars were quoted at narrower margins, one month being ½ cent premium and three months ¼ cent premium. Forward Paris was at par for one month, and three months was quoted 2½ cents premium. Forward Belgas were in better demand at 1 and 3 cents premium for the respective dates, while Milan forwards continued on offer at discounts of 13 cents for one month and 34 for three months. Madrid forwards showed considerable variation and were dealt in only with some difficulty, one month closing at 1 cent premium and three months at 2½ cents premium. One month Amsterdam continued at par and three months was at ¼ cent premium. Berlin forwards came on offer, one month being 1½ and three months 3½ pfennigs discounts. Forward Switzerland was in demand at premiums of ½ cent and 1½ cents for the respective periods. A slightly better tone was apparent in the silver market, Chinese demands causing an improvement to 16½d. for both spot and forward positions. Hong Kong was quoted at 1s. 3½d. and Shanghai at 1s. 8d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Bouverie Street, London, E.C.4.

THE GERMAN ELECTION RESULTS.

BORN in Germany and abroad the results of the polling which took place last Sunday have come as a surprise and have been received in most quarters with something like consternation. It had been hoped that these elections would bring Germany one step nearer towards a two-party—or, in Continental terms, a bi-coalitional—system, which would enable constitutionally-minded and effectively-supported Governments of the moderate Right and the moderate Left to alternate with one another in office at reasonably long intervals. This hope seemed to be warranted by certain features in the home and the foreign situation; at home, by the separation between the sheep and the goats in the Nationalist (Conservative) Party, a split which looked as though it would make co-operation between the moderate Conservatives and the middle parties easier; abroad, by the definitive settlement of the Reparations problem and the complete evacuation of the Rhineland. This hope has been disappointed, and the misgivings which we expressed last week have, unfortunately, been more than justified.

The outstanding feature has been the success of the unconstitutional "parties of violence" on the two extreme wings. The Communists have raised their representation in the Reichstag from 54 to 76; their "opposite numbers" on the extreme Right, the Fascist "National Socialists" (called "Nazis" for short), have made the sensational gain of 95 seats and will come to the new Reichstag 107 strong, after having been represented in the old Reichstag by a band of twelve. These gains have not been made for the most part at the constitutional parties' direct expense; for nearly five million more voters went to the polls last Sunday than in 1928, and this heavier polling will account for more than two-thirds of the additional votes that the Communists and the National Socialists between them have gained. Since, under the German constitution, the number of seats in the Reichstag varies in accordance with the heaviness of the polling at each general election, it follows that, in absolute numbers of seats, the representation of the constitutional parties in the Reichstag will not be very different from what it has been. For example, the groups corresponding to the old Nationalist Party and its minor allies have actually gained half a dozen seats in the aggregate, in spite of the split between the followers of Herr Hugenberg and those of Herr Treviranus. The Centre Party has gained seven seats. The Social Democrats have lost only nine seats; and, with 143 against the National Socialists' 107, they remain by far the strongest single party in the Reichstag. The only serious absolute loss in the ranks of the constitutional parties has been suffered by the German People's Party (the late Dr. Stresemann's group), which will be represented by only 29 members instead of 45.

The meaning of all these figures is this: The occasional voter has voted this time in strength, and has cast his vote solidly against the constitutional parties, whose performance he knows from experience, in favour of the "parties of violence," whose capacities are quite untried, and whose prowess up to date amounts to vociferating that any way they will not commit the sins of omission of "the old gang." The casual voter is apt to vote on impulse, not on reflection, but just for this reason, when he does bestir himself, he is a good weather-cock. What is it that, in his eyes, has so damaged the prestige of all the constitutional parties alike—from the Social Democrats at one end of the scale to the Conservatives at the other?

Partly, the constitutional parties have lost prestige through their own fault, or (perhaps it is fairer to say) through their misfortune in having formed their habits of political action under the old régime, when the

Reichstag did not have the last word and therefore did not have the ultimate responsibility. Responsibility is the only school of Government; and to go through the forms without having to answer for the consequences is the worst schooling that politicians can have. This bad schooling accounts for the ineptitude which all the constitutional parties have displayed to some extent during the last dozen years, when power has really been in their hands. It explains the instability of every combination and the interminable bargaining ("kuhhandel") that has never produced the effective government which the country needs and which it more and more insistently demands. These bad political habits can only be cured by experience; but the German people's patience is running out before the German politicians have learnt their trade.

On the other hand, these inexperienced German constitutional parties, during these first dozen years of their apprenticeship, have been compelled by the international situation to bear a greater burden of odium than any political parties in any country could carry with impunity. The signature and ratification of the Peace Treaty, the military occupations of the Rhineland and the Ruhr, the exaction of reparations, the alleged "oppression" of the German minorities in half a dozen countries outside the post-war frontiers of the Reich—all these national misfortunes and humiliations are laid by the man in the street at the constitutional parties' door. They came into power at the moment of national disaster; their very names are associated with the idea of defeat. One remembers the unpopularity of the Republican parties in France, and the instability of the Republic itself, after the national disaster of 1870-71; and the discomfiture of France then was slight compared to the discomfiture of Germany in and after 1918.

But surely Germany is rapidly being restored to a footing of equality with the other Great Powers? So it seems to us; but things do not look quite the same to German eyes. We congratulate ourselves over the evacuation of the Rhineland, forgetting the last pin-pricks, inflicted by the French army of occupation, from which the evacuated territory is still smarting. We point to the Minorities Treaties, shutting our eyes to the actual plight of the German minority in Poland. We make the most of our painful progress towards disarmament, while the Germans notice that France and her allies have successfully resisted the demand that, in constructing the "yard-stick" for disarmament on land, "trained reserves" shall be taken into account in countries which, unlike Germany, have not been compelled to abandon conscription. We observe how greatly the original reparation demands have been reduced, while the Germans feel the weight of the actual load. Finally, as our Berlin correspondent points out on a later page, the man in the street has been turned against the constitutional parties by the economic crisis from which Germany is suffering like the rest of the world. The rise in German unemployment figures is surely related to the rise in Communist and National Socialist votes. When a depression of the present severity is developing, unhappy is the Government in any country that is compelled to seek the suffrages of the electors. Blame for growing troubles is always imputed to those who have just left the helm, and the swing of the pendulum is accentuated. This has very recently happened in Canada, and, whatever the strength of other influences at work, full allowances must be made for this factor in the case of Germany.

These considerations explain the result of the General Election. But what is the outlook? This is a matter of general concern, for Germany has remained the key country on the Continent, notwithstanding the debacle

of 1918. For instance, it was the failure of Communism to capture Germany in 1919, 1920 and 1923 that accounted more than anything for the failure of Communism to carry the Continent as a whole. If either Communism or Fascism were to get the upper hand in Germany now the repercussions throughout Europe would be very strong. Thus we cannot afford to be indifferent to either of these possibilities. At the same time, we can see a number of features in the situation which may mitigate our anxiety.

The first feature is the existence of Prussia; for the Prussian State, which is two-thirds of Germany, seems to have succeeded already, where the Reich has so far failed, in adapting itself to the political conditions of the new *régime*. Prussia has been, and still is being, effectively governed by a stable coalition of the moderate Left; the Social-Democrat Prime Minister of Prussia, Herr Braun, has become the leading personality in the German Social-Democratic Party; and during the recent election campaign Herr Braun has been making an urgent appeal to the Chancellor of the Reich, Dr. Brüning, for co-operation between the Catholic Centre Party and the Social-Democrats in the politics of the Reich, notwithstanding the personal bickerings between party leaders. If the Social-Democrats are animated by this spirit, and the German People's Party has been chastened by its losses, it is not inconceivable that a coalition, embracing both these groups and everything between them, could be formed. Such a coalition would possess a working majority in the new Reichstag, and if it could secure the friendly neutrality of Herr Treviranus's moderate Conservatives, that would be some offset to the turbulence of the wild men at either extreme.

We may also hope that the extremists will be sobered to some extent by their very success, which seems to have taken them almost as much by surprise as it has taken the rest of the world. At any rate, we need not take it for granted that the "Nazis," when they find themselves the second strongest party in the Reichstag, will behave as badly in that arena as they have behaved in Thuringia since they have dominated the government of that minor member of the German confederation.

We have, no doubt, to contemplate the possibility that the inability of the constitutional parties to co-operate and the determination of the unconstitutional parties to obstruct may make parliamentary government temporarily unworkable in Germany; but, even then, the alternative would not necessarily be a minoritarian dictatorship of either Communist or Fascist complexion. Besides the stability of the Prussian State, there is one other solid rock in Germany's political foundations, and that is the personality and prestige of President von Hindenburg. If there is any living statesman in Europe who could carry on a provisional regime of "government by decree" without closing the door upon an early restoration of parliamentarianism, President Hindenburg is the man.

Thus there are several features in the internal situation of Germany which give reasonable ground for optimism; but a great deal also depends on the reaction abroad. Our Paris correspondent's account, in a later column, of French opinion is not very encouraging; but we are convinced that for Germany's neighbours the moral of the election results is not that we have moved too fast in restoring Germany to her natural place among the nations, but that we have not moved fast enough. If, for example, the evacuation of the Rhineland had been completed a year or two years ago, instead of only this summer, the figures recorded at the polls last Sunday might have been very different. We deplore these German election results; and it is wholesome that this feeling—which is, we believe, widespread—should be realised in Germany. But international public opinion will fail of its effect in Germany if international statesmanship does anything at this juncture which the National-Socialists could represent as being a retaliation for the votes which have been cast in their favour. Nothing would suit them better. In other words, nothing would be so much against the larger interests of Germany and of the world.

THE LEAGUE AND THE BRIAND PLAN.

PARTLY through force of circumstances, partly through more direct design, the Eleventh Assembly of the League of Nations has in its earlier phases revolved largely round the Briand Scheme for a European Union. To say that is perhaps in some ways to give M. Briand's actual proposals an importance they might not have assumed if other factors had not existed to direct the stream of discussion into much the same channel. But the essential fact about M. Briand's plan, nebulous as it so far is, is that it aims at a *rapprochement* which would have imposed itself in any event in the economic field so far as Europe was concerned. Consequently it is certain that, if the French Foreign Minister had never moved at all, the delegates at the Eleventh Assembly would have talked about economic problems, would have talked about them in special relation to Europe, and would have groped about, however tentatively, for some means of creating an economic understanding between European States in particular.

That statement may seem a little hypothetical so far as it is an assertion about what might have happened if something else, namely, the promulgation of the Briand plan, had not happened. But in fact it is a statement that rests on very solid foundations. So far as the League of Nations is concerned, its chief warrant for future economic action is the Protocol regarding the Programme of Future Negotiations adopted at the end of the largely abortive Conference on Concerted Economic Action (the Tariff Truce Conference) last March. The essential feature of the Convention is that it has been signed by every European State and by no non-European. There is already projected, therefore, as part of the definite programme of the League's Economic Section, the prosecution of negotiations making for closer understandings specifically between European States and specifically on tariff questions. To that extent the ground is prepared for M. Briand's proposals in advance, or as his critics, so far as he has any, might prefer to put it, to that extent his proposals are superfluous or redundant.

In point of fact, the opposition between these two points of view is unlikely to arise. If the Briand plan develops within the framework of the League, its expression on the economic side will be identical with the programme the League has already set before it, and no one will be disposed to quarrel about the apportionment of any credit for success or blame for failure. But no questions of that kind belong to the immediate future, for the Briand plan will not be seen in action before 1932 at the earliest, for a committee has been appointed to study the whole plan in detail and report on it to the Assembly of 1931.

At this point it may be well to observe, paradoxical as it sounds, that in reality no Briand plan exists. The French Foreign Minister has produced nothing that can properly be called a plan, and the discussions at Geneva have added no precision to his very tentative suggestions. That is not said in any way in disparagement of M. Briand's initiative. It is far better that definite propositions should be worked out at leisure by the collective wisdom of European statesmen than that the League, or Europe, should be confronted with some concrete scheme elaborated in all its details by the Quai D'Orsay. But it is well to recognise in how primary a stage the proposals remain as yet. On the desirability of some such "closer unity" as M. Briand advocates, there is unanimity—the Assembly discussions have made that entirely clear—but beyond that there is none. As Count Apponyi put it from the Assembly platform, every answer to the Briand questionnaire began with a "yes," but every "yes" was followed by a "but." It might be added, perhaps, that the answers—almost, if not quite, without exception—laid it down that the European organisation, if there were to be one, must fall definitely within the framework of the League. Assembly speakers laid varying degrees of emphasis on that requirement, but M. Motta, of Switzerland, was obviously expressing a general sentiment when he spoke of Europe being "organised through the League and by League means."

THE SOUTH AFRICAN HOLIDAY

A noted medical authority, writing recently of sea-voyaging, as the true antidote of city life, described it as a rhythm of living, of eating and of sleeping, which in turn induces a rhythm of thinking. There is a monotony in ocean travel which may oppress at first but later heals and soothes. The restful influence of ocean horizons and the invigorating effects of sea air, day after day, replenish mind and body alike.

It is these benefits of sea-voyaging that have helped to bring the South African Holiday into such general favour, but the ocean trip is merely a prelude to the fuller change of climate, scenes and interests in this Dominion of sunshine, health and happiness.

"Blue and Gold Tours" is an informative little book on this new field of travel which will be gladly sent *post free* on application to:—

**The Director, Publicity and Travel Bureau,
South Africa House, Trafalgar Square,
London, W.C. 2,
and the leading Tourist and Travel Agencies.**

This was not quite the French idea, and there has been throughout at Geneva an under-current of latent opposition between the French desire to get the Briand plan past the Assembly as quickly and quietly as possible and into the hands of a Committee of European States, and the general Assembly view, interpreted primarily by Mr Henderson, that whatever was done should be done definitely through the League and by the League's authority. That view has definitely prevailed. The meeting of European States, held before the Assembly opened, lasted for three hours and turned solely on questions of procedure. Neither there nor in the Assembly itself has the content of the plan, so far as it yet has content, been discussed, but, both at the European meeting and in the plenary Assembly, insistence on League predominance has been universal. Taking full cognisance of that, M. Briand himself devoted the main part of his Assembly speech to protestations of his own conviction that everything must be by the League and through the League and for the League.

But what is that "everything" to be? For it is clearly time that the plan which has been before the public for twelve months as an idea should now take a more precise shape. It quite definitely has not done so at Geneva. It remains still what it was when M. Briand asked his European colleagues to lunch in September, 1929—a project of a "closer federal link between the States of Europe." As a result of the replies he has received to his subsequent memorandum, M. Briand has summarised what he considers to be more or less agreed conclusions. The European States as a whole, in his view, recognise the necessity for "European co-ordination." Most of them desire the inclusion of non-members of the League like Russia and Turkey in any new organisation. Most of them are prepared to agree to regular conferences between European States, and the majority would favour the establishment of a "committee, bureau or secretariat" to keep the machinery moving in the intervals between conferences. It is mainly to economic co-operation and in some cases to concurrent political action that most Governments look for the most immediate progress in the direction of security.

Such is the summary. This, it will be observed, does not amount to much, but it is all that the European States are prepared at present to accept with any unanimity. It is the sum total of what emerges from the chorus of "ayes" qualified by the chorus of "buts." Something, nevertheless, has been established. The committee of the European States will work out its programme in the next twelve months, conscious of the fact that it is a committee appointed by the League's authority and answerable to the League. There are at least certain lines of advance marked out by events and circumstances. The recent Agrarian Conference at Warsaw was much in the minds of Assembly delegates from the nations participating in it. Herr Schober, the Austrian Chancellor, was one of many speakers who

emphasised the importance of the problems raised at Warsaw, notably the organisation of the Agrarian States and their fiscal relations with the industrial; M. Zaleski, of Poland, and M. Mironesco, of Roumania, concurred; and in another quarter of the field Mr Graham's closely-reasoned speech on the necessity of further action in the direction of tariff reduction supplies the European Committee with a second item for its agenda. Tariffs, it may be argued, are not a specifically European problem. That is obviously true, but in view of the Convention already mentioned, signed by European States alone, looking to future tariff negotiations, it is clearly the line of least resistance to study this problem at first in relation to Europe only.

Speaking generally, the impression that results from a week's discussions at Geneva is surprisingly, though not of necessity disappointingly, vague. All M. Briand has done is to give expression to a general aspiration, and the disquiet everywhere prevailing regarding the condition of Europe has secured a ready hearing for his appeal by delegates who, if convinced of nothing else, are convinced at any rate that something must be done. The German elections, of course, have not made matters easier; and one French paper has immediately brought them into relation with the Briand plan by remarking that "these are the people with whom we are asked to federate." But these are only first reactions, which may differ very much from second thoughts, and if the Assembly debate has not been fertile in suggestions, its outcome is, at least, a universal insistence that, whatever it does, Europe must work within the League, and making use, if possible, of the machinery of the League. We have not, in other words, progressed beyond the starting-point, but at least the right starting-point has been chosen.

THE SLUMP IN ADVERTISING.

THE recent announcement by a Sunday newspaper in the Rothermere Combine that its charge for a page of advertising space is to be reduced from £1,000 to £700 may be regarded as symptomatic of the difficulties confronting the daily and Sunday "national" Press in its efforts to maintain advertisement revenue during the present acute trade depression. For such journals the problem is a vital one, particularly in the case of the "national" dailies with huge circulations, where the cost of production so greatly exceeds receipts from the sale of the paper that, to make ends meet, a vast advertising revenue is a necessity. Poor trade and general lack of confidence in the political and economic outlook have been significantly reflected in a reduction of many advertisers' appropriations for newspaper publicity; in fact, the decline in advertising space would serve, if further proof were needed, as a fairly accurate index of the general commercial recession. In the first of the following tables (our acknowledgments for the data on which they are based are due in each case to *The Newspaper World*), we show

the advertising space occupied in a representative list of papers with a "national" circulation during an early week of July, 1925, and of the corresponding month in each of the past three years:—

	ADVERTISING SPACE (Thousand sq. inches.)			
	Early week in July—			
	1925.	1928.	1929.	1930.
Twopenny Group—				
Times	28.8	30.6	28.7	24.6
Daily Telegraph	23.5	22.4	22.5	19.6
Manchester Guardian	13.3	13.5	14.5	12.1
	65.6	66.5	65.7	56.3
Penny Group*—				
Daily Dispatch	10.9	13.9	14.4	11.8
Daily Express	16.4	20.8	20.7	17.7
Daily Mail	17.0	22.7	20.1	18.1
News-Chronicle	9.1	12.4	11.8	12.5
	53.4	69.8	67.0	60.1
Illustrated—				
Daily Mirror	5.3	8.6	7.3	7.1
Daily Sketch	4.8	7.8	7.8	6.7
	10.1	16.4	15.1	13.8

* The figures shown for the *News-Chronicle* are those for the *Daily News* prior to 1930. Owing to the changed conditions resulting from the fusion of the *Daily News* and *Chronicle*, these figures are excluded from subsequent tables. Figures for the *Daily Herald*, which appeared in a new size and under new auspices in March of this year, are not given by the *Newspaper World*.

Thus, in July of this year, as compared with a year ago, there has been a fall of 14 per cent. in the volume of advertisements in the first group, over 10 per cent. in the second (13 per cent. if the *News-Chronicle* is excluded), and nearly 9 per cent. in the third. The drop shown in July seems fairly representative of the year as a whole, for though similar analyses in February and March show larger reductions in the aggregate for the three groups, the reductions in May and June were smaller. Although, therefore, the figures for a single week are liable to give a mistaken impression owing to special circumstances, we may safely conclude that "national" advertisers in the aggregate have been spending this summer between 10 and 15 per cent. less than a year ago, whereas their expenditure rose by 18 per cent. between 1925 and 1928, and declined about 4 per cent. between 1928 and 1929. In this contraction, it should be appreciated that the recent stagnation of the new issue market has been a contributory factor.

From the point of view of newspaper finance, a further analysis, viz., of total space, is required before the full implications of the slump in advertising can be seen:—

	TOTAL SPACE. (Thousand sq. inches.)			
	Early week in July—			
	1925.	1928.	1929.	1930.
Twopenny Group—				
Times	62.6	68.8	66.5	61.2
Daily Telegraph	55.8	61.0	60.9	53.9
Manchester Guardian	37.1	46.0	54.2	48.2
	155.5	175.8	181.6	163.3
Penny Group—				
Daily Dispatch	25.2	31.5	33.0	31.5
Daily Express	32.3	40.6	40.6	37.8
Daily Mail	32.3	43.4	41.0	37.8
	89.8	115.5	114.6	107.1
Illustrated—				
Daily Mirror	15.2	26.9	21.3	20.2
Daily Sketch	15.0	23.5	21.3	19.6
	30.2	50.4	42.6	39.8

It will be observed that, save in the case of the "Twopenny Group," whose average is somewhat overweighted by the exceptional 1929 figure for the *Manchester Guardian*, the year 1928 seems to have marked the climax of the huge increase in newspaper size which was a feature of the previous years. During the past twelve months smaller advertising space has not only reduced the total,

but, as the next table (in round figures) shows, there have been considerable variations in the ratio borne by advertisement space to aggregate size per copy:—

	RATIO OF ADVERTISEMENTS TO TOTAL SPACE.			
	Early week in July—			
	1925.	1928.	1929.	1930.
Twopenny Group—				
Times	46	45	43	40
Daily Telegraph	42	37	37	36
Manchester Guardian	36	29	27	25
Average	42	38	36	34
Penny Group—				
Daily Dispatch	43	44	44	37
Daily Express	51	51	51	47
Daily Mail	53	52	49	48
Average	49	50	48	44
Illustrated—				
Daily Mirror	35	32	34	35
Daily Sketch	32	33	37	34
Average	33	33	36	35

In the "Twopenny Group" the ratio of advertisements to total space had been declining steadily long before the present trade set-back. In the "Penny Group," the proportion before the slump was falling in the case of the *Mail* and steady in the other two cases. This year all have fallen in varying degree. The "Illustrateds" have been more successful in maintaining the advertisement percentage. How the purchaser of the newspaper has fared in this respect may perhaps be appreciated more easily from a final table, in which we show the percentage changes in "news matter" and advertising space since 1925:—

	NEWS AND ADVERTISEMENTS. (July, 1925 = 100.)		
	Early Week in July—		
	1928.	1929.	1930.
Twopenny Group—			
Total space	113	117	105
"News matter"	122	129	119
Advertisements	101	100	86
Penny Group—			
Total space	129	128	119
"News matter"	128	130	130
Advertisements	129	125	107
Illustrated—			
Total space	167	141	132
"News matter"	169	137	129
Advertisements	162	149	137

The "Twopenny Group" treated the reader very generously, notwithstanding the lack of growth of advertising revenue, up to 1929; the past twelve months have forced them to cut down his "rations" appreciably. The "Penny Group," thanks largely to the policy of the *Daily Dispatch*, have preferred (or, it may be, have been compelled by competition from the new *Daily Herald* and the amalgamated *News-Chronicle*) to let their advertising "proportion" sink, rather than stint their readers of "news." In the "Illustrated Group," the advertiser's unwillingness to pay freely for so expensive a piper has resulted in a more than proportionate diminution of the reader's tune.

CANADIAN WHEAT PROBLEMS.

(BY OUR OTTAWA CORRESPONDENT.)

THE fortunes of the co-operative wheat pools of Canada have been for the past twelve months a subject of controversy—not confined to the Dominion itself. Admittedly their directors and managers have been struggling with a very difficult situation created by the drastic decline in grain prices, and it would be premature to claim that the organisation has surmounted the severest test which it has faced in its whole history. Last February a very serious crisis for the pools was averted by the intervention of the Provincial Governments of Manitoba, Saskatchewan and Alberta, who gave financial guarantees for bank advances made on the crop

CREDIT BALANCES.

of 1929. This succour tided the pools over the spring and summer months but the termination of the crop year at the end of July found them saddled with a very substantial proportion of Canada's carry-over of wheat (placed by the Dominion Bureau of Statistics at 111 million bushels) and unable to make any further distribution to their members than the initial payment, which had been one dollar per bushel on the basis of No. 1 Northern at Fort William. At the end of July, when the crop of 1930 was approaching the harvesting stage, the pool officials had to face the problem of securing the financial support necessary for marketing it. In view of their experiences with the crop of 1929, the banks were exceedingly chary about making any advances to the pools without some sort of governmental guarantees, but the three Provincial Governments on the prairies decided the guarantees already given had put a sufficient strain upon their financial resources and could not be extended to cover the crop of 1930. So an effort was made to induce the Bennett Ministry, which had assumed office early in August, to act as guarantor for the pools, and there took place at Ottawa a conference on the subject, which was attended by members of the interested Governments and representatives of the pools and the banks. The Federal Government, however, after hearing the representations of the different parties, intimated that it could not consider undertaking the rôle of financial guarantor for the pools: all it would promise to do was to put as liberal a construction as possible upon its powers as administrator of the Finance Act under which Dominion note issues are controlled, for the purpose of helping the banks to finance the movement of the new grain crop.

The pools were thus thrown back upon their own resources and had to drive the best bargain that they could with the banks. After considerable negotiations it was announced that the initial payments for the crop of 1930 would be as follows: wheat (basis No. 1 Northern, Fort William), 60 cents per bushel; barley, No. 3 C.W., 25 cents; and oats, No. 2 C.W., 30 cents. The figure for wheat is 25 cents below the lowest mark for an initial payment recorded in the annals of the pools and 40 cents below the dollar figure, which has been the initial payment in every year except 1928, when a record yield on the prairies sent prices down to a level which necessitated fixing the initial payment at 85 cents. In making this announcement, Mr A. J. McPhail, the chairman of the board of the Central Selling Agency, issued a supplementary statement explaining some of the difficulties which were responsible for the low initial price, exhorting the pool members to stand by their organisation, and promising that "a further payment will be made at as early a date as market and financial conditions will permit."

Unfortunately, the majority of the pool members cannot hope to receive anything like 60 cents per bushel as an initial payment. The wheat crop is, on the whole, reported to be grading fairly well, but it will probably not average much above No. 3 Northern quality, and there will also fall to be deducted the freight charges to Fort William. Freight rates for Saskatchewan, by far the most important grain-growing province, run between 18 and 25 cents per 100 pounds, and on this basis the advances to Saskatchewan farmers for representative grades will be as follows:—

	18 Cent Freight Point.	25 Cent Freight Point.
Wheat.		
No. 1 Northern	44c.	40c.
No. 3 Northern	36c.	32c.
No. 5 Wheat	21c.	17c.

Now from these figures there will also be deductions for threshing costs, which are variously estimated at between 10 and 20 cents per bushel, and for toughness, dampness, smut, etc. As a result, only on the three higher grades can prairie farmers who are members of the pools expect to get a net return of more than 25 cents per bushel, a figure which would have been counted unthinkable two years ago. Moreover, in the case of the coarse grains the net returns will be so small that it will simply not pay the farmers to thresh these crops. Their obvious course will be to utilise them as feed for live-

stock; but, unfortunately, thanks to the operation of the Smoot-Hawley Tariff Bill, the livestock market is in a very depressed condition and there is not yet any assurance that the attempts now being made to revive the export trade in Canadian cattle to Britain will meet with success. Under these circumstances the returns for their labours available for western farmers, whether pool members or not, will be deplorably meagre.

Now the pools, when grain prices were good and a "bull" market was in evidence, claimed a good deal of credit to themselves for increasing the financial returns of their members, and it was inevitable that they would have to meet a barrage of discontented criticism from their members when the present slump in grain prices developed. At present non-pool farmers are getting from 50 to 75 per cent. more in cash for their wheat than are the pool farmers. The latter, it is true, are now receiving only part of what they may ultimately expect, but in view of the experience of the last two years they are none too hopeful regarding further payments, especially as the pools have probably incurred a substantial debt to the three Provincial Governments in connection with the latter's guarantee for the crop of 1929. The private grain interests and other critics of the pools could not be expected to miss the opportunity of exploiting this situation to the detriment of the co-operative organisation and their propaganda has helped to stimulate discontent among the pool members. At numerous places on the prairies disgruntled pool farmers have held meetings to discuss ways and means for escaping from their pool contracts. The favourite suggestion has been that pressure should be brought upon the Western Provincial Governments for legislation which would give pool members freedom from their contracts.

The pool officials have naturally bestirred themselves vigorously to combat such proposals, but undoubtedly they will have to contend with a considerable volume of "bootlegging" of wheat. While they can proceed to enforce the heavy financial penalties which are attached to breaches of the pool contracts, proof of the wrongdoing is not always easy to secure; and if the practice became widespread, enforcement of the penalties would become virtually impossible. Already the pool officials have taken out injunctions against several defaulters who have openly broken their contracts, and they are now involved in the test of legal battle with a wealthy Manitoba farmer who defends his breach of pool contract on the ground that the pool executive also broke it by failing to sell properly the wheat delivered to them in 1928 and to make full payments to their members. The case is likely to be carried to the highest courts and the decision will be very important.

The pool officials are fully cognisant of the difficulties which lie before them unless grain prices materially improve, and the directors of the Saskatchewan pool, whose marketings represent 60 per cent. of the total grain yield of the province, recently submitted to the local Provincial Government a memorandum urging that there should be established, with governmental aid, a Wheat Board which would market the whole of the crop of the province including that of non-pool farmers. Premier Anderson, of Saskatchewan, invited the Premiers of Manitoba and Alberta to discuss the proposal at a conference, but neither of them found it convenient to

attend; he also wrote to the members of the Legislature asking their opinion on the subject and it is understood that the majority of them considered the scheme impracticable. So the idea of a Wheat Board has made no further headway, but if the marketing situation grows much worse, it may have to come into existence under the sponsorship of the Federal Government, for Mr Bennett cannot afford to wash his hands of responsibility for the plight of the western farmers. Meanwhile, the pools will have to struggle along with their problems and their officers can derive some satisfaction from the fact that their competitors of the private grain trade are involved in equally grave troubles.

But over and above the fate of the pools there remains the wider question of the whole future of wheat growing in Western Canada. The most authoritative opinion holds that for some years the prairies must reconcile themselves to a wheat price of something between 75 cents and a dollar per bushel. At this price it will be extremely difficult for the farmer who cultivates a "quarter section" (160 acres) to make ends meet unless he is prepared to accept the standards of living of the peasantry of Eastern Europe; and shrewd judges think that the tendency will be towards very large farm units which, if cultivated with power machinery, can keep their costs of production low and yield adequate profits even with wheat below a dollar.

COAL MARKETING SCHEMES.

The Coal Mines Act of 1930 provided that in the event of the colliery owners failing—either "centrally" or in any district—to formulate a marketing scheme, the task would devolve upon the Board of Trade. The date appointed for the submission of schemes was reached last Friday. Though in a few areas the schemes appear not yet to have taken final shape, the fact that the central scheme and those for most of the important districts are now in the hands of the Board of Trade is clear evidence that the possible eventuality of "Non-Co-operation" contemplated in the Act will not arise.

Details of the important central scheme are not yet available, but sufficient is known of the plans projected in South Wales to throw some light on the policy which coalowners, so far as can be ascertained, are following. The scheme for the South Wales coalfield, we understand, is based on that which has been voluntarily in operation since September, 1929, and which, during that period, is claimed by its originators to have secured for the inland and export prices of South Wales coal a greater measure of stability than those of the other competitive export districts of the United Kingdom. It determines the basic output for the purposes of the Act, the annual and quarterly outputs to be produced, and the minimum prices at which the various classes of coals are to be sold. The standard tonnage is based on the production either in selected quarters during the twelve months ended June, 1928, or in March, 1929. There are special provisions for dealing with collieries that during these datum periods were either not working or were in the course of development, or at which production was wholly or partly suspended owing to alterations, accidents, or other causes, but the main principle governing the determination of the standard tonnage is that of actual production under the trade conditions of the past three years. The actual standard tonnage fixed by the scheme is 90 per cent. of the total output in the selected period, and this standard is to remain unchanged for two years or until the Executive Board shall determine to alter the basis of the standard tonnage for all the owners, and shall carry out any modification of the scheme. There are separate standard tonnages applicable to (a) the anthracite collieries, (b) the Swansea steam coal collieries, and (c) other steam bituminous collieries, and provision is made for the revision of the standard tonnage if it is found that there is a substantial number of owners who for more than a period of one quarter have failed to produce the proportion of standard tonnage which the

total output of the whole district bears to the total standard tonnage of all the owners in the district, the aim being to bring the standard tonnage for all owners into line with actual experience and working. When a change of ownership takes place the standard tonnage of the colliery concerned goes to the new owners, or, where a colliery is closed down, to owners who, before the scheme, controlled its output; in other cases the standard tonnage disappears with the discontinuance of the working of the pit.

In the regulation of production the governing principle is to be an estimate of the amount of "the minimum demand for coal likely to be produced from the district for the forthcoming year (the estimated annual quota)," and "of the reasonable amount of coal (the estimated quarterly allocation) required for the ensuing quarter." In making these estimates the Executive Board is to have regard to the respective estimated quantities likely to be produced for disposal for export and for inland consumption and the corresponding amounts of coal raised and weighed at the pithead. The Board has to take into account, in framing these estimates, the quantities of each class of coal, and it is when these estimates have been approved by the Central Council that they become the basis of district operations. The percentage of the standard tonnage authorised for production will be governed by the state of trade, but it is provided that the quota for each colliery owner shall bear the same proportion to the standard tonnage of such owner as the total annual quota bears to the standard tonnage of all the owners. This principle is also to apply to any additional quantities which may be allocated from time to time, either to the owners generally or to those producing any particular class or classes of coal. It is permissible for colliery companies to carry forward deficiencies from one quarter to another, but only for a period of one year. There are special provisions for the security of the execution of old contracts. Moreover, an owner may agree with any other owner, with the approval of the Executive Board, to produce less than his quarterly allocation for not more than one quarter at a time, provided that they are in respect of the same class of coal, and it is laid down that the approval of the Executive Board to these transfer arrangements shall not be unreasonably withheld.

For the purpose of fixing minimum prices, mines and coals have been divided into groups according to the class of coals produced, and in the grouping and classification of coal for price-fixing purposes the Executive Board is to have the assistance of committees, with consultative powers only, for each group. The minimum prices for the various classes of coals in these groups are to be fixed at as nearly as possible the same time as the quarterly allocations, "but (the Executive Board) may nevertheless, if it think fit from time to time, and at any time, fix or alter any minimum prices, whether at the time of the fixing of the quarterly allocations or not." These prices are to be f.o.b. prices for shipment coal, whether sold f.o.b. or c.i.f., and pithead prices when sold for inland consumption. Discretionary powers are given to the Executive Board also to fix a special minimum price higher or lower than that applicable to coal of any class in respect of any specific contract or series of contracts for the sale of such coal, providing that no "special minimum price shall be fixed which shall deprive one owner in favour of another of any specific contract or series of contracts being in all cases a contract in respect of business normally passing through him and likely to pass to him." The Executive Committee shall consider the matter, and if any variation is proposed by the Board it shall notify all the owners or those affected, or likely to be affected, of the variation. There are stringent regulations aiming at the prevention of evasion by discounts, rebates, extended credit, or allowance in respect of the price, quantity, or the weight of the coal, and a ban is imposed on speculative sales by a provision which states that "no owner shall ship or cause to be shipped any cargo of coal otherwise than in pursuance of a bona fide contract for the sale thereof at a price fixed before the time of shipment, not being a price lower than the minimum price for the time being in force for the class or

classes of coal contained in such cargo for shipment, and any owner committing a breach of this clause shall contribute to the Board 2s. 6d. per ton upon the number of tons of coal shipped." The penalty for over-production is 2s. 6d. per ton, and owners are liable also to a penalty of this amount for any sales under the minimum prices; while there are several additional penalties imposed for delays or refusal to comply with the rules giving the Executive Board access to all the necessary documents and information required by them in administration of the scheme. Collieries producing less than their allocations in the observance of the provisions of the scheme are to be compensated up to a maximum rate of 2s. per ton on the ascertained deficiencies.

It is one of the provisions of the Act that, with the sanction of the Board of Trade, any district may make arrangements for facilitating "the production, supply, or sale of coal or any class of coal"; and for the imposition of a district levy for this purpose. The expiring voluntary scheme in the South Wales coalfield contained a provision for the granting of a subsidy or contribution to certain classes of members or to members in respect of certain classes of coal, but in the scheme as submitted by the South Wales colliery owners for the approval of the Board of Trade this provision is not included. The scheme, however, reserves for the owners the right to submit to the Board of Trade any alteration or amendments in addition to the existing provisions. The Executive Board is to be elected annually, and is to consist of 36 members, 30 representing associated and six non-associated owners.

It remains to be seen what modifications of the foregoing principles other districts will import into their several schemes, but there seems every likelihood that in broad essentials—regulation of price as well as of output—the South Wales plan will be typical of all the district schemes. Final judgment of their merits may await fuller details; but so far as South Wales is concerned it is clear that experience alone will show whether the proposed penalties are heavy enough to act as an effective deterrent on excessive production by individual collieries, or on evasion by combines of the minimum price provisions through the marketing operations of subsidiaries. The best hope is that the transfer arrangements will tend towards the increase of the size of the producing unit, the concentration of the production at the more efficient pits, and therefore a higher level of general efficiency.

Notes of the Week.

Geneva and Tariffs.—The President of the Board of Trade, in a straightforward and courageous speech, has informed the League Assembly that the British Government will ratify the Tariff Truce, thereby giving a definite lead to Europe and the negative direct to the many counsellors who proclaim that only in one form or another of Protection can a remedy be found for the pressing ills which beset this country. Whether Mr Graham will have any success in his plea to the nations to call a halt in tariff warfare and get together in an effort to reduce trade barriers, this winter will show; but the commitment to which he pledged this country is after all a very short one, and the sting in the President's speech was in the statement that we should hold ourselves free to renounce the Truce next spring if nothing is done. In emphasising this proviso Mr Graham was, in effect, repeating the warning given to the World Economic Congress by the British delegates, that, if other nations persisted in pursuing increasingly national and restrictive economic policies, it might well prove impossible to hold in check the influences in Britain which demanded the weapon of retaliation. Be that as it may, Mr Graham has performed good service in three directions. He has forcibly reminded the world of the unanimous conclusions of the World Economic Conference. He has given the chief governments of the world an eleventh-hour chance to pause and consider whether they should not strike away

from a path which is leading them anywhere except to prosperity. He has boldly struck the note of internationalism both in his diagnosis and in his prescription for the depression which is world-wide:—"I cannot see tariffism or economic nationalism making any real contribution. . . . More than ever in the light of the difficulties left by the war we have to sound the international note in our economic relations, in order to promote recovery and to break down the barriers that separate us." That is truth, pure and undiluted. If governments will not swallow it, Mr Graham is none the less justified in presenting the cup once more.

Canada Retaliates.—Mr Bennett, the new Prime Minister of Canada, has lost little time in presenting the first instalment of the fiscal programme on which he won the recent general election, which was that Canadian unemployment and business depression could be cured by effective protection of the home market. Full details of the new proposals, which actually came into force on Wednesday, are not yet available, and detailed comment is therefore not yet possible, but apparently an average increase of 25 per cent. is made in the duties on wide classes of imports, including iron and steel, textiles, metals, paper, boots and shoes, and agricultural implements. It is not yet clear what the net effect on British exporters will be of higher duties, coupled in some cases with increased preferences, although Mr Bennett has endeavoured to meet one Lancashire grievance by lowering the British content of cotton of goods qualifying for preferential treatment from 50 to 33 per cent. While awaiting, not very hopefully, further knowledge on this point, the chief fact to observe is that Canada's new tariff is essentially a reply, and a fighting reply, to America's Smoot-Hawley Tariff. Such information as is available shows that the schedules bristle with measures designed against the United States, and the underlying aim of the whole enactment is laid bare when power is taken to prohibit imports "from any country which is not a contracting party to the Versailles Treaty." Although the avowed object may be to regulate certain shipments from Russia, it is impossible to believe that America is not the target. Tariff war is in full swing on the American continent, with the usual result, which our retaliators here might well observe, of a rise and not a fall in the height of trade barriers. Coming on the eve of the Imperial Conference and on the morrow of Mr Graham's acceptance of the Tariff Truce, Mr Bennett's new policy is a very sharp warning to some British publicists of the severe practical limits which present circumstances impose upon fiscal co-operation within the Empire. Mr Bennett has indeed torpedoed Lord Beaverbrook, which is rather cruel action between two men who in some respects live in the same atmosphere of fiscal delusion. The latter has told us that he can guarantee that under his system of Imperial Protection prices would not rise, and now we have Mr Bennett naively stating that he has "a definite and positive assurance from the manufacturers that the tariff increases will involve no increase of prices to the consumer." Unhappily the consumer has heard that so often that he can no longer be taken in by that form of "confidence trick." He knows, for he has learnt from frequent and bitter experience, that such promises are not and cannot be worth the paper on which they are written.

The Evacuation of the Saar.—On Friday, September 12th, the Council of the League of Nations was enabled, through a previous understanding between the French and German Governments, to take the welcome decision that the Saar Territory is to be evacuated within the next three months by the Franco-Belgian "Railway Protection Force," which is at present stationed there. Some form of Franco-Belgian military occupation of the Saar was a logical corollary of the occupation of the Rhineland, since the territory lies on the border between the Rhineland and France, and some of the lines of communication of the French Army of the Rhine ran

through it. The same logic demanded that, when the Rhineland was evacuated, the Saar should be evacuated too; and it is fortunate that reason has prevailed—and this without too long a delay. The maintenance of a small Franco-Belgian force in the Saar under the new circumstances could not conceivably have ministered to French security, while it could have done much to perpetuate bad relations by making the Germans feel that the evacuation of German occupied territory was not yet quite complete. Technically, of course, the Saar is not German occupied territory; for in the Peace Treaty the territory was ceded by Germany and placed under a Governing Commission responsible to the Council of the League, while the coal-mines in the territory became the property of the French State, in compensation for the French mines in the war-zone which had been temporarily put out of action. This *régime* is due to last for fifteen years from the coming into force of the treaty: that is, until the beginning of 1935. When this period expires, it is provided that a plebiscite shall be held to ascertain whether the population desires the territory to revert politically to Germany or to become part of France. If the population votes for reverting to Germany, then the German State is to repurchase the mines from the French. It has long been a foregone conclusion that, if and when the plebiscite is held, the vote in favour of Germany will be practically unanimous; and Germany has urged France to "make a clean job" of "the liquidation of the war" by adding the rendition of the Saar to the evacuation of the Rhineland and to the definitive settlement of the Reparations question. It is pointed out that the French coal mines are now in working order again, and that the product of the Saar mines during the next five years might be less valuable to France than an anticipation, by five years, of the re-purchase of the mines by Germany. What has France to gain by insisting on waiting for the treaty date, now that the question of military security is no longer involved, while the prospect of the Saar being incorporated in France (if the French ever really cherished that dream) has entirely evaporated? On this point France has not yet seen her way to accept the German point of view; but, in the meantime, the withdrawal of the Franco-Belgian force from the Saar territory will be all to the good.

Poland and her Minorities.—On Thursday, September 11th, *The Manchester Guardian* published, in translation, the alleged text of a Polish official document which, if authentic and accurate, is of serious international concern. The Polish Government has issued a denial of its authenticity; and, pending investigation, the question must not be prejudged. But we may recall that the Polish Minorities Treaty—with which the document, if authentic, is in flagrant conflict—has had to be upheld by international action on two occasions already, and this on behalf of the German Minority whose rights are in question in this case. The document purports to be an instruction from the Governor of the Polish Province of Pomerania (a province which includes "the corridor" as well as certain adjacent territories also previously belonging to Germany). It is addressed to the President of the District Land Office at Graudenz, *à propos* of the plan of expropriation for the year 1930 which this official had submitted in pursuance of the Polish Agrarian Law of December 28, 1925. In virtue of certain co-ordinating and over-riding powers with which he is invested, the Governor instructs the local agrarian authority to revise his plan on the ground that "it entirely leaves out of account political considerations as well as the needs of the defence of the State." In plain words, the plan will not do because it fails—in its proposals for local redistribution of land—to discriminate against German citizens of the Polish State. The Governor corrects this political remissness in detail by giving precise instructions for special discrimination in strategically and politically important districts and special discrimination against certain categories of Germans and even against individuals. The worst passage in the document is the direction that, "because of the necessity of keeping absolutely secret

the above-mentioned political considerations," the real reasons which have influenced the method and manner of settling the various cases must on no account be revealed, and that fictitious reasons "of a departmental character" must be entered in the official records. The point is that the Governor's instruction (if he has really issued such instructions) fly in the face of the obligations undertaken by the Polish State when it signed, with the Principal Allied and Associated Powers, the Polish Minorities Treaty. This treaty followed the common form of the Minorities Treaties signed by States which were newly created or newly enlarged at the peace settlement in consequence of their having been on the winning side in the war; and, among other things, the Polish Treaty provides that "Polish nationals who belong to racial, religious or linguistic minorities shall enjoy the same treatment and security in law and in fact as the other Polish nationals." This is a signed and ratified international instrument which is part and parcel of the peace settlement to which Poland owes her reappearance on the political map of Europe. If the Minorities Treaty is not held sacrosanct, then the political and territorial terms of the Peace Treaty, of which Poland is the beneficiary, forfeit their sacrosanctity in equal measure. The allegation, it will, therefore, be seen, is a very grave one. Neither the Polish Government nor the Council of the League of Nations can let the matter rest as it is. There must be a searching inquiry. The authenticity of the document must be either disproved or proved beyond question. And if it is proved, strong action ought to follow; for if the Minorities Treaties are allowed to go by the board, the new map of Europe certainly will not last.

Back to Politics.—In times like the present there is really no "close season" for politicians, but the period that usually passes as such is over, and a sign of its passing is the resumption of meetings of the Cabinet. Ministers are said to have had under discussion the agricultural policy of the Government which was so sketchily outlined by Mr Snowden in the very last hours of last session. Other urgent topics are not lacking, and if preparation for the Imperial Conference and the Indian Round Table meeting were not sufficient, unemployment, with its ever-rising figures, has thrust itself forward more ominously than ever. Meanwhile the Liberal-Labour conversations regarding emergency works for the absorption of unemployed workers continue intermittently—just frequently enough to give rise to idle gossip of an approaching party pact, and just seldom enough to inspire a popular cartoonist to portray Mr Lloyd George as seated on the step of 10 Downing Street awaiting the Premier's return from his holiday. As regards the sanctioning of specific plans, there is still no official news, although there is much talk of telephone extensions such as were outlined in the famous Liberal pre-election publication, "We can conquer unemployment." As for the rest of the Liberal plans contained in that volume, it has been stated in usually well-informed quarters that the Liberal plans have been "submitted to the Departments"—a phrase which usually serves as a euphemism for "pigeon-holed." There is little evidence, indeed, of the new "drive" which was believed to have been introduced after the translation of Mr. Thomas.

Impending Wage Revisions?—It will not have been forgotten that November brings to an end the period within which the railway companies and their employees are mutually pledged not to put forward demands for alterations in wages. With the cessation of the truce, demands from both sides will doubtless be tabled and negotiations are likely to be protracted and difficult, for the very measures of economy by means of which the railways are endeavouring to restore their prosperity, and with it their power of paying wages, are for the time being resulting in increased unemployment. Short time is spreading and dismissals continue, though the spirit in which the unions have endeavoured to see that the burden of these is distributed as fairly as possible, perhaps promises well for

the atmosphere in which any forthcoming wages negotiations will be conducted. Meanwhile another of the principal sheltered trades is also faced with the necessity of working out a new agreement. Since February the building trades operatives have been chafing under the operation of the sliding scale, and joint meetings have been held to consider the revision of the present national agreement. The unions have asked for some revision of the wage standard, and have put forward other suggestions which in effect involve some reduction in working hours and increases in certain classes of earnings. The employers, in their reply, expressed themselves as unable to concede these requests, and suggested a grading of labourers with differential rates. A conference of all the unions in the building industry will meet on September 26th to consider the matter. The knots to be resolved are more than usually complicated in view of the changes in the demand for different classes of labour which have resulted from the introduction of machinery and new processes, but as six months' notice is necessary to terminate the agreement, there should be time for the highly-developed bargaining machinery of the industry to evolve a peaceful settlement.

Eight Months' Overseas Trade.—We recorded last week a further heavy decline in our foreign trade in August, which brought the total for the year to date even further below the level for the corresponding period of last year than it had been at the end of July. Imports for the eight months amounted to £706,663,000; British exports were £398,375,000, and re-exports, £62,285,000. From the Trade and Navigation Returns, which have since been published, we extract the following details of our imports of raw materials:—

SOME LEADING RAW MATERIAL IMPORTS.
(Quantity Retained.)

	First Eight Months.		
	1928.	1929.	1930.
Iron ore and scrap	3,169,979	3,716,818	3,333,319
Wood and timber, soft sawn	2,520,708	2,706,034	2,892,613
Cotton, raw	8,591,587	8,973,907	6,619,551
Sheep's and lambs' wool	3,830,523	3,880,360	3,913,925
Raw silk, knubs and nolls	2,316,942	2,830,568	2,648,754
Flax, hemp and jute	203,621	205,584	180,691
Cotton seed	387,106	388,120	345,750
Flax or linseed	251,261	212,077	126,879
Petroleum, crude	339,326	333,507	309,537
Hides, wet	392,741	304,066	399,018
Hides, dry	474,996	245,598	319,868
Wood pulp	763,206	1,017,207	1,022,507
Rubber	7,994	1,532,501	1,946,770

These figures, read in conjunction with the corresponding figures of values, reveal the fact that a substantial part of the decline in the total value of our foreign trade is due to the fall in prices, for while the volume of our retained imports of soft sawn timber, wool, hides, wood pulp and rubber has increased, the value of all except the first-named has diminished. What comfort there is in this is somewhat chilled by the heavy fall in the volume of our imports of iron ore and scrap, raw cotton, silk, flax, hemp and jute, oilseeds and crude petroleum. These figures reflect only too plainly the decline in industrial activity as compared with last year. Nor are the details of manufactured exports more encouraging:—

SOME LEADING EXPORTS.
(Quantities.)

	First Eight Months.		
	1928.	1929.	1930.
Coal	33,014,890	38,918,150	37,135,926
Pig iron and ferro-alloys	284,520	385,828	238,157
Railway material	442,538	330,049	302,847
Total iron and steel	2,830,610	2,974,825	2,319,812
Textile machinery	83,923	89,150	66,871
Total machinery	385,712	378,016	336,670
Cotton yarns	114,327,800	115,968,300	93,306,400
Cotton piece-goods	2,612,466,100	2,610,813,900	1,853,242,600
Wool tops	243,095	216,409	187,091
Woolen tissues	93,422,400	76,495,500	55,857,600
Worsted tissues	26,861,900	34,354,200	23,795,500
Linen piece-goods	46,719,400	48,864,400	43,956,000
Boots and shoes	741,268	624,511	604,607
Leather	286,445	234,266	179,123
Paper and cardboard	3,037,472	3,291,465	3,021,112
Locomotives	28,982	27,279	31,734
Motor cars and chassis	20,263	28,758	20,811

Locomotives are the sole redeeming feature of this table. Of the rest there is nothing to be said except that textiles form perhaps the gloomiest patch in a gloomy picture. It would be idle to pretend that these figures are anything but unsatisfactory.

August Iron and Steel Production.—A further heavy contraction in British iron and steel production was recorded during August. The output of pig iron amounted to only 416,700 tons, this figure comparing with 486,100 tons for July, with 682,000 tons for August last year, and with a monthly average of 855,000 tons for the year 1913. The number of furnaces in blast at the end of August was 104, a decrease of only one since the end of July, but of 28 since the end of June. Steel production fell to 451,300 tons for August, as against 621,400 tons for July, 753,300 tons for August last year, and a monthly average of 638,600 tons for 1913. While the holidays, naturally, make August an inactive month, this factor does not account for the reductions in output revealed by comparing last month with August of last year. These reductions amount to 39 per cent. in the case of pig iron, and to 40 per cent. for steel production, and these figures illustrate very clearly both the severity of the trade depression, and the extent to which it is affecting the iron and steel industries. Further evidence is afforded by the August trade returns, which show that, compared with August last year, iron ore imports have fallen from 576,000 to 227,000 tons, or by over 60 per cent.; and that exports of iron and steel products have fallen from 358,192 to 218,828 tons, or in exactly the same proportion as that of the decline in home production. Retained imports of iron and steel products have fallen from 255,000 to 194,000 tons, or by 24 per cent. Pig iron imports were larger than a year ago, but there was a substantial reduction in those of steel blooms, billets and slabs. Finally, home iron and steel prices, according to the Board of Trade index number, registered a fall of 2.5 per cent. during the past twelve months, and in August last stood at only 12.0 per cent. above pre-war. Thus judged from every angle, it is clear that the depression in the steel industry was intensified during August, and it is greatly to be hoped that the faint signs of an autumn revival now becoming apparent possess a real basis. The decline in iron and steel production is common to all iron and steel producing countries, though the fall is insignificant in the case of France. The following table compares the output of pig iron and steel in the first seven months of this year with the corresponding period in 1929:—

PRODUCTION OF PIG IRON AND STEEL IN CHIEF PRODUCING COUNTRIES (FIRST SEVEN MONTHS, 1929 AND 1930).

	Pig Iron.		Steel Ingots and Castings.	
	1929.	1930.	1929.	1930.
(In Thousands of Tons.)				
United Kingdom...	4,269.8	4,206.2	5,687.5	4,983.1
U.S.A.	25,426.1	20,900.9	33,805.4	26,685.1
Germany	7,650.9	6,264.1	9,636.0	7,370.6
France	5,980.1	5,951.6	5,542.0	5,505.4
Belgium	2,324.1	2,111.8	2,358.1	2,110.8
Luxemburg	1,637.0	1,504.1	1,526.7	1,337.7
Total	47,288.0	40,938.7	58,555.7	47,992.7

The decline in the total of the chief producing countries amounts to 13 per cent. in the case of pig iron, and 18 per cent. in the case of steel; the decline has been most severe in the United States, where it amounts to 21 per cent. in steel and 18 per cent. in pig iron. In view of the reduced demand, the meeting of the International Steel Cartel held at Liège last week decided to restrict production by a further 15 per cent., but since the imposition of fines for over-production was abolished some time ago the decision is largely a matter of form.

Cotton Mill Amalgamations.—Our Manchester correspondent writes:—In Manchester this week there have been many rumours of important developments in the near future with regard to the control of the Egyptian cotton spinning trade. Recently there has been a move-

ment described as the formation of a Convention in order to regulate production and prices of yarns. A few weeks ago it was announced that on a ballot the owners of only 62 per cent. of the spindles affected had voted in favour of the scheme; and the promoters are not prepared to proceed with the matter until support has been obtained from 90 per cent. of the employers. Since then, the Provisional Committee which is endeavouring to organise the Convention has had discussions with the firms that voted against the proposals or did not trouble to vote. It is understood that important developments may take place in connection with this matter in the near future. In the meantime reports are being circulated of some working arrangement in the Egyptian spinning section on the lines of marginal prices for standard yarns. It is understood that the part of the Convention scheme which has not met with favour is that relating to the pooling system whereby mills exceeding the average output would make contributions to a pool, whilst those firms producing less than the average would receive payments. There are rumours of discussions taking place of a more ambitious character, which include an amalgamation of concerns now running single-handed. A movement of this kind might result later in an agreement being reached between the half-dozen combines which would then exist. Some trade authorities, however, point out that, if the firms in Lancashire engaged in spinning Egyptian yarns build up an organisation for the purpose of fixing prices on an artificial level, such a development will only mean an extension of competition from other countries; and it is being urged in several directions that relief from the present depression can only be secured by a reorganisation which will have for its object the reduction of standing charges and overhead costs.

Lancashire and the Gold Standard.—Our Manchester correspondent writes:—The memorandum on the gold standard, which has been published by the Directors of the Manchester Chamber of Commerce this week, may have far-reaching importance on the discussions which it is understood are about to take place in political and economic circles. Such an expression of opinion from such an important trade organisation could not have been thought of two or three years ago, and the memorandum has been compiled after very careful consideration. The directors say that they are convinced that the present depressed state of British industry is attributable in a very large degree to handicaps and difficulties resulting from monetary policy, national and international. They think it unlikely that the statement will be questioned that the restoration of the gold standard and the bringing of the pound sterling to its pre-war level of gold value have created numerous difficulties of the gravest character for British industry. This action, they argue, automatically increased the real cost of wages and fixed charges, increased for the State the real cost of the service of the national debt and thus added to the direct and indirect burdens of the producing industries, and especially those working mainly for the export trade. It is pointed out that it is becoming increasingly evident that there is not, nor is there likely to be, an early increase in the production of gold which will be sufficient and adequate to sustain the full volume of world productive capacity and maintain a profitable level of prices for commodities generally. There may be some discussion on the point as to whether the gold standard has not operated internationally the last few years as the industrialist and merchant have always been told by those who support it that it would act. The business man has been led to suppose that if prices fell too far under the régime of the gold standard the fall would be minimised by the provision of cheaper money, and *vice versa*. The statement of the Chamber then boldly asserts that "the present depression is largely due to the persistent fall in prices which monetary policy has entirely failed to correct. It seems to the Board that the world supply of gold is not adequate for the present volume of world productive capacity. It is the considered opinion of the Board that until this difficulty is removed, attempts to

solve the problem of unemployment are doomed to failure." In the circumstances the Board earnestly request the Government to instruct the Macmillan Committee to report at once as a matter of urgency on their findings. Further, the Board urges the Government to take action on the monetary question without delay, and with the guiding principle that the well-being of British industry is of more vital importance to the people of the country than any financial consideration. This action of the Manchester Chamber of Commerce will undoubtedly stimulate the efforts of those who for several years have been agitating for monetary reform. There are rumours that immediately after the resumption of Parliament the Economic Advisory Council will issue a report which will have an important bearing upon the gold standard and world prices and their effect upon industry and unemployment.

Employment and Cost of Living in August.—There was a further decline in employment during August. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at August 25th was 17.5, as compared with 17.1 per cent. at July 21st and 9.9 per cent. a year ago. It is estimated that on the same dates the numbers of insured persons in employment were 9,548,600, 9,584,700 and 10,274,700 respectively. At August 25th the registered number of persons unemployed (excluding those normally in casual employment) was 1,333,850. This was 107,446 more than a month before and 533,314 more than a year before. Those temporarily unemployed amounted to 609,809 at August 25th, as compared with 652,451 at the end of July and 279,702 a year ago. As regards those normally in casual employment, the number registered as unemployed at the end of August was 96,543, and was 2,668 higher than the number recorded at the end of July, and 20,978 above that of a year ago. It was announced by the Ministry of Labour this week that at September 8th the total number of registered unemployed was 2,139,571. This total includes 1,368,030 wholly unemployed, 674,450 temporarily stopped, and 97,091 persons usually in casual employment. With regard to the cost of living during August, the index number of the Ministry of Labour at September 1st stood at 57 per cent. above the level of July, 1914, and was the same as for a month ago. It compares with 64 per cent. a year ago. For food alone the figures were 44 per cent. at September 1st and August 1st and 54 per cent. a year ago.

An Ingenious Evasion.—Our Berlin correspondent writes:—A compromise has apparently at last been achieved between agricultural and political-commercial interests on the question of the German tariff on butter. By the commercial treaty with Finland, the German Government undertook to limit its butter duties to a maximum of 27.5 Rm. This rate was raised by last year's supplementary agreement to 50 Rm., but was to be reduced in two stages to 30 Rm. by 1935. Meanwhile, however, the German farmers demanded to be released from all obligations in connection with the butter duty, and the Government was requested to renew negotiations with Finland for this purpose. The Government attempted to offer certain special privileges to Finland in return for this concession, but as these were hardly consonant with the most-favoured-nation principle, they gave rise in Holland and Denmark, the butter-exporting countries of the greatest importance to Germany, to a boycott movement against German industrial products. As the negotiations with Finland came to nothing, this most-favoured-nation question ceased to be of practical importance. Subsequently, the German Government sent a special emissary to Helsingfors to reopen negotiations with Finland on a new basis, and the result has just been made public: Germany is to be free to fix what butter duties she likes, but she is to admit a quota of 5,000 tons at the 50 Rm. duty. This quota exceeds the total present export of butter from Finland to

Germany, but is very much less than the amount imported into Germany from Holland and Denmark. The other countries can legally, by virtue of the most-favoured-nation clause, only claim the same privileges which have been granted to Finland, that is to say, to a quota of 5,000 tons at a duty of 50 Rm., and this will certainly be granted to them. At present, it is true, nobody is subject to a duty exceeding 50 Rm., and the quota question will not become acute until the German duty is raised. Thus everything is legally in order. Though the Government fully realised that the whole proceeding might have a very bad psychological effect on German industrial exports, they were of opinion that in the interest of farmers this would have to be endured.

An Austrian Road Scheme.—Our Vienna correspondent writes:—Both as an engineering project and as a contribution to solving Austria's unemployment difficulties, the plans for a road up the Gross Glockner are of interest. The road will give employment to about 3,000 persons for three years. The cost is estimated at 12 million schillings, whereof 10 millions will be raised by the emission of shares and two million by the emission of bonds. A joint-stock company is to be formed, the Federal State to take 60 per cent. of the stock, the A.E.G. in Berlin 33 per cent., and the building firms 7 per cent. The road will be 40 kilometres long and rise to a height of 2,600 metres. This will not only mean further attraction to foreign visitors but also increased transit traffic, as the road will be the shortest route between Munich and Venice, and will consequently play an important part. It will be self-supporting, i.e., a toll will be levied on the expected annual traffic of 17,000 automobiles and 3,500 autobuses to cover interest and amortisation service on the capital sunk. The reason why a German electricity concern is participating in such an enterprise is that the Berlin A.E.G. wants to tap the tremendous hydraulic power of the Austrian Tauern district, and the building of the Glockner road would greatly facilitate the commencement of this work from a technical standpoint. Moreover, the Berlin concern hopes by this procedure to mitigate the doubt which is felt in Austrian economic circles as to the advisability of permitting foreign control of hydraulic power. However, there is a good deal of scepticism entertained in regard to the Tauern power project, not merely in regard to the possibility of solving the problem technically, but also in regard to the possibility of raising the milliard schillings or more which would be necessary to complete the work, even though this money would be sought exclusively abroad. On the other hand, the concession for the extension of the West Tyrol hydraulic power is to be given to a consortium of the Austrian banks. These, too, will raise the necessary capital of about 500 million schillings chiefly abroad, negotiations in this regard having already advanced rather far with French and American financial groups. Both of the above-mentioned projects are based chiefly upon exporting the electric energy generated, particularly to Germany.

Depression in Japan.—Our Tokyo correspondent writes: The midsummer dividends declared by Japanese joint-stock banks have not been maintained in many instances. Two hundred and six out of six hundred and one banks, which had reported by August 2nd to the Bank of Japan, have lowered their rates of dividend for the past half-year. Among the leading banks the Daiichi and the Yasuda in Tokyo and the Thirty-Fourth and the Sumitomo in Osaka reduced their rates each by one per cent. per annum. These dividend reductions are a distinct reflection of generally lower bank earnings, which must be primarily ascribed to the fall in money rates and the decline in the commercial and industrial demand for credit. To these causes may be added the banks' policy of keeping increased cash reserves in hand, prudently pursued since the return to gold. July brought no respite from the depressing downward movement of wholesale prices, though the fall in the general price level was considerably offset by a sharp advance registered by rice and

barley owing to the damage done to the crop by the recent floods. Following the fall of 4.3 per cent. in June, the Bank of Japan's wholesale index number for July recorded a further drop of 2.5 per cent. on the month. Thirty-nine out of fifty-six commodities participated in the decline, but among others textiles and building materials recorded the most conspicuous falls. In comparison with a year ago, prices are down by 19.5 per cent., and in many cases the dimension of the decline is very wide, the fall amounting to 51.3 per cent. in cotton yarn, 44.7 per cent. in raw silk, 29.4 per cent. in copper, 27 per cent. both in wheat and in steel, and 22 per cent. in timber. Retail prices also are falling sharply. The Bank's retail index number for July was down by fractionally less than 2 per cent. on the month, and by 15½ per cent. as compared with a year ago. Despite the continuous contraction in the value of imports and exports, the export season has set in normally this year. The trade returns for last month show that there was a favourable balance of 12,338,000 yen, imports totalling 108,915,000 yen and exports 117,253,000 yen. In comparison with July, 1929, imports fell in value by 62,331,000 yen, or 36.3 per cent., and exports decreased by 70,961,000 yen, or 37.7 per cent. Even when account is taken of the heavy fall in commodity prices, the percentage changes compared with the corresponding month of last year make a rather depressing picture. The decline in imports is largely accounted for by raw cotton, iron and steel, machinery, and timber. On the export side the textile trades made a very poor showing. Raw silk, cotton piece-goods, and silk and rayon manufactures represent in the aggregate more than 70 per cent. of the total shrinkage in exports. A feature in the July returns is a small but welcome net inflow of gold bullion, amounting to 2.6 million yen, after several months of heavy efflux since the return to gold. The gold is understood to have come mostly from China. The agricultural situation is far from cheerful. The average price of spring cocoon for this year is put at 3.98 yen per kamme, as against 7.49 yen a year ago. The fall of other farm products is no less serious, and the sad predicament of the farming classes serves to intensify the trade depression and to militate against an early revival of trade activity. Unemployment is increasing; wholesale dismissal of workers has now extended from the textile trades and the mining industry to other branches of industry.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during August reached a new high record, amounting to 921,081 ozs. of fine gold, as compared with 912,652 ozs. produced during July. In August, 1929, the output amounted to 889,601 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.
January ...	796,768	823,692	796,270	839,782	843,857	876,452	882,801
February ...	760,617	753,925	753,924	779,339	816,133	818,284	818,188
March	795,671	825,479	834,340	860,511	877,380	866,529	889,370
April	768,923	787,519	803,303	824,014	825,907	872,123	869,506
May	809,003	813,249	849,214	859,479	866,186	897,698	916,213
June	773,053	780,251	824,145	855,154	862,363	856,029	887,367
July	829,437	818,202	860,134	851,661	867,211	889,480	912,652
August ...	809,571	808,218	843,854	863,345	891,863	889,601	921,081
September ...	799,422	797,247	839,939	842,118	857,731	849,553	...
October ...	827,583	812,832	853,296	855,743	897,720	888,690	...
November ...	802,313	787,633	840,276	848,059	872,484	861,593	...
December ...	825,273	791,455	836,157	851,225	859,761	851,134	...
Total ...	9,597,634	9,599,702	9,962,852	10,130,630	10,358,696	10,414,066	...

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Dec., 1929.	Jan., 1930.	Feb., 1930.	March, 1930.	April, 1930.	May, 1930.	June, 1930.	July, 1930.	Aug., 1930.
Gold mines	184,280	190,663	196,752	200,134	202,434	202,182	201,324	201,111	202,257
Coal mines	15,326	15,288	15,495	15,250	15,109	15,028	14,943	14,670	14,788
Diamond mines	4,811	5,889	6,584	7,002	5,565	5,340	5,126	5,490	5,754
	204,417	211,840	218,831	222,386	223,108	222,550	221,393	221,271	222,799

There was an increase in the number of natives employed in all branches of mining during August.

United British Insurance Company, Ltd.—Until a year ago the control of this company was vested in the Motor Union Insurance Company by ownership of about two-thirds of the ordinary share capital, the Motor Union being now in turn a subsidiary company of the Royal Exchange. At that time, however, an extensive reorganisation of the United British was undertaken, the preliminary to which was the acquisition from the Motor Union of a proportion of their share holdings by the General Reinsurance Corporation of New York. That the Motor Union, and therefore the Royal Exchange, still retains an interest in the company is evidenced by the fact that the general manager of the Royal Exchange is a member of the United British board. The first step in the reorganisation of the company was the transfer to the Royal Exchange of the life assurance account, as a result of which there has been released to profit and loss account in 1929 the sum of £19,868. Marine business also, which at one time formed the largest account and was responsible for very heavy losses, has been discontinued, and although there appears in the 1929 accounts a small premium income of £18,000 from this source, it is made clear that this income relates to risks entered into before last year. The first effect of the new connection established with the United States has been a tremendous expansion in the motor and general account, the premiums received in this account having risen from £133,000 in 1928 to £290,000 in 1929. The underwriting results, however, have not been encouraging, for there has emerged a loss of £16,000 on the year's working, compared with £12,000 in 1928. In the other departments the premium income has remained comparatively stationary, but an adverse experience in the fire department has resulted in a loss of £22,000, compared with a loss of £4,300 in 1928. Combining the results of all departments and taking account also of items in the profit and loss account, there has been a net trading loss in 1929 of £16,979, compared with a profit of £18,107 in 1928. The preference dividend, costing £22,400, has been maintained out of interest earnings of £30,000, but naturally no ordinary dividend has been paid, the last payment on the ordinary shares being at the rate of 5 per cent. in 1925. The departmental reserves, plus general reserves and profit and loss account balance, total £277,000, and are equivalent to 62 per cent. of the total premium income of the company.

West of Scotland Insurance Office, Ltd.—The greater part of the premium income of this small Glasgow office is derived from fire insurance, which last year was responsible for £165,000 out of a total premium income of £187,000. Judging from the results of this and other comparable companies, the increased fire losses of 1929 seem to bear more heavily on the smaller companies, and in the case of the West of Scotland there was a loss on last year of £8,546, equal to 5.2 per cent. of the premiums, compared with a profit in 1928 of £19,390, equal to 10.8. Indeed, the loss last year would have been heavier but for a welcome and substantial reduction in commission paid, which absorbed 30.5 per cent. of the premiums, compared with 34.1 per cent. in 1928. The accident account yielded a very satisfactory surplus of £2,000, equal to 9 per cent. of the premiums of £22,000. The net result of the year's working was an underwriting loss of £11,160, compared with an underwriting profit in 1928 of £15,249. Notwithstanding this, the dividend has been increased, and the payment for 1929 absorbs £26,000, compared with £24,000 in 1928, being over £10,000 in excess of the interest earnings. The company is controlled by the Commercial Union, which purchased the share capital in 1924 for the equivalent in cash of £462,500. On this original investment the 1929 dividend represents a yield to the parent company of over 5½ per cent. net. The financial position is strong, and the balance sheet shows that, as compared with the paid-up capital of £50,000, the general reserve fund amounts to £108,000.

Four Public Lectures on "The Economics of the Grain Trade" will be delivered by Mr Sydney S. Gampell, M.Sc.Tech., at the City of London College, White Street, Moorfields, E.C.2, on the undermentioned dates at 6.30 p.m.

1. Wednesday, September 24th:
"The Position of the Grain Trade in the Nation's Economic Life."
2. Wednesday, October 15th:
"The Organised Grain Exchanges."
3. Wednesday, October 22nd:
"Pools and Combines in the Grain Trade."
4. Wednesday, October 29th:
"Pre-war and Post-war Governmental Intervention in the World's Grain Trade."

All interested are invited to attend and to participate in the discussion.

Overseas Correspondence.

LEAGUE OF NATIONS.

The Assembly and M. Briand — Disarmament — Amending the Covenant.

(FROM OUR CORRESPONDENT.)

GENEVA, September 16.

THERE has been plain speaking in the general debate of the Assembly, the outstanding subjects being M. Briand's scheme (which the meeting of twenty-seven European States quite properly decided to bring into Assembly discussion), economic problems both in a general sense and as linked up with the Briand scheme, and disarmament. The debate has also ranged over a wider area, including minorities, mandates, arbitration, the amendments to the Covenant, and the organisation of the Secretariat.

Up to the present the general discussion in the Assembly has carried the Briand scheme no further. M. Briand himself, who said that his idea had been received perhaps "too politely," refrained from entering into any detailed analysis of the different views which had been expressed in reply to his memorandum, and contented himself with a general advocacy of closer European union. The tendency has been to approach the matter from the economic rather than the political angle proposed by M. Briand, but despite the obvious variety of critical opinion and the obvious unanimity in favour of closer European co-operation, there is the usual tendency amongst the few out-and-out supporters of the Briand way of approach to criticise the British attitude as the main obstructive force. This is unfair, as the most cursory glance at the replies to the French Memorandum and at the general course of the debate will show. An interesting and outspoken contribution came from Mr Bellegarde, the delegate from Haiti, who supported closer European co-operation as the only means of saving Europe and the world from the "economic and financial imperialism" of the United States. As long as American occupation of Haiti continued business would be interrupted and peace threatened. Confidence could only be restored by a formula of non-intervention, by a strict application of legal equality in the American continent, and absolute respect for the independence of South American States. It was about time, he declared, that the uncertainty of the Monroe doctrine was cleared up.

Mr Henderson added nothing to the British note on European union, but his emphasis on the necessity for the reduction and limitation of armaments as the most important issue has echoed all round Europe. He said quite frankly that after eleven or twelve years this Treaty undertaking still remained unfulfilled despite repeated and solemn acceptances of the obligation, which, he reminded the Assembly, was no less sacred than other Treaty obligations. It was time to honour it, and a disarmament con-

ference ought to be held next year. He announced the British Government's readiness to accept the proposed amendments to the Covenant and the scheme for financial assistance (both of which he considered measures for the promotion of national security), but he made this acceptance subject to a general armaments treaty being carried through. The British Government was also favourable to the acceptance of the principles contained in the General Act which would be a matter for consideration at the Imperial Conference. He strongly supported the majority report of the Committee on the reorganisation of the secretariat.

Mr Graham, the President of the Board of Trade, dealt wholly with the economic depression, which, he said, could only be dealt with internationally. He made a reasoned plea, supported by many other delegates, for putting into practice the principles of the World Economic Conference of 1927, with special reference to a general reduction of tariffs. This was the theme also of Mr Hymans, the Belgian Foreign Minister, M. Beelaerts van Blokland, the Dutch Foreign Minister, the first Swedish delegate, and others. The Dutch Foreign Minister went so far as to say that protection had done the greatest harm to the development of the League.

General Hertzog, addressing the Assembly for the first time, said that in South Africa they were beginning to wonder how much longer Europe would continue to maintain large armaments. He supported Mr Henderson's attitude on amendments to the Covenant and on the General Act, and made one or two rather curious observations on what he seemed to regard as the irritating practice of the Mandates Commission of entering upon "academic" discussions on general principles; however, he gave an assurance that South Africa would never do anything contrary to the mandate. It is also a strange thing that M. Briand, in his otherwise admirable expression of loyalty to the general purpose of the League and his conditional assertion that disarmament was a necessary corollary of security, should have taken credit for France not only for her military reductions but also for her achievement of them during a "régime of complete insecurity!" It is not an encouraging omen that M. Briand, of all men, can speak in these terms. He announced, however, the existence of friendly conversations with Italy and his determination to seek an arrangement which would help forward preparations for a general disarmament conference, and he declared roundly that so long as he remained in office there would be no war. This was undoubtedly well meant, but it has a singular air of limited national liability. The truth of the matter is that neither Europe nor any other part of the world has yet reached the stage where it appreciates or is ready to accept in fact the revolution which the Paris Pact, the Covenant, and other instruments have brought into the constitutional life of the world. It was scarcely to be expected that it would immediately be acted upon, but it is on the realisation of this that most of the essential things now depend.

In a general way it seems probable that the amendments to the Covenant will be substantially accepted—not, perhaps, without some difficulties—that the majority report on the reorganisation of the secretariat will substantially go through, with possibly still greater difficulties in view of the Italian attitude, and that a definite impetus will have been given to both the economic and disarmament work. On some of these things many governments have shown their impatience with the League—that is to say, with a number of governments in the League—for saving its face too long; they consider that the time has come for broader achievement, and the Dutch Foreign Minister, especially, in appealing to the governments to adopt a wiser and more active policy, went so far as to inquire whether the rhythm of League work was to resemble the hitherto leisurely inactivity on the new League buildings. Economic work has certainly not been held up merely for want of a European organisation. At the same time he, with others, recognised that all that had been done in the last ten years had sensibly diminished the risks of war.

UNITED STATES.

Treasury Operations — Money Market — International Mortgage Bank — Industry — Stock Exchange.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 9.

TREASURY plans for tax date financing have been announced. Their effect has not been altogether favourable to the security markets. With a note maturity of \$350,000,000 and a bill issue of \$50,000,000 to meet and interest payments of \$35,000,000 to make, the Treasury is asking for subscriptions to a \$325,000,000 one-year note issue, bearing 2½ per cent. interest. Never before has the Treasury been able to borrow short-term money at so low a rate, the nearest approach to it being a 2½ per cent. coupon in 1924. While at first there was a question raised in some quarters whether the Treasury might not be cutting the corner too sharply, subscriptions to the new issue have been coming in quickly and an over-subscription is anticipated by Treasury and Reserve Bank officials. It is felt that a thorough canvass of banking opinion had been made in advance of the financing, and that the consensus was that cheap money is bound to last for some time to come.

The difference between the amount of the new issue and the maturities and interest payments will be made good by sinking fund accumulations. Sinking fund money since the beginning of the fiscal year has been used sparingly to buy outstanding bonds, and on the next tax date there will consequently be a net reduction of \$75,000,000 in the public debt. Income-tax collections, which, it is hoped, will run at about \$500,000,000, should be sufficient for running expenses until the December quarterly tax day. On November 17th a \$120,000,000 bill issue falls due. It will probably be replaced by another.

As anticipated, the Treasury has also called in some of the 3½ per cent. notes, due in 1932. Series "A" and "B," outstanding in the amount of \$1,149,880,000, have been called in for payment on March 15, 1931. That date was purposely left "open" for the refunding of the notes. There is also a series "C" of the notes, of which about \$450,000,000 are outstanding, which may be called later. In all probability the Treasury expects easy money to continue well into next year, and contemplates refunding the notes at a lower rate than 3½ per cent.

Next week the money market should feel the temporary easing effects of Treasury borrowing to meet maturities pending collection of income-tax cheques. For the past week the call rate has been a trifle harder on the slowness of funds to return to the banks after the month-end and the holidays, and time rates are up ¼ per cent. Reserve Banks increased their credit outstanding by about \$45,000,000 in the week of September 3rd, the bulk of it the result of borrowing by member banks in New York. Holdings of bills and Government securities were little changed; circulation increased considerably; and gold reserves dropped moderately. The recent weakness of francs has shut off further gold exports to Paris, but Canada continues to take gold in small quantities. Bankers here do not believe that seasonal pressure against francs or sterling will bring gold to this country.

Reserve Board policies will undergo no change with the selection of Eugene Meyer, jun., as chairman to replace Roy A. Young. Mr Meyer has had a good deal of experience as a financier, and is well acquainted with the New York money market. If his appointment be confirmed by the Senate, the influence of the New York bank over the Federal Reserve system probably will not suffer.

Interest here is not very active in the plans of a banking group, headed by Lazard Frères, to join the European bankers in an international credit institution, which proposes to grant mortgage credit in countries where long-term money is scarce. The institution will

be comparatively small to begin with, and it is understood that it will have no relation to the Bank for International Settlements. Eventually the new enterprise may become of some importance, but capital in this country is not at present internationally minded enough to give it the attention which it perhaps deserves.

A marked change for the better in business mood has come about within the past week or so. In numerous industries there is still no sign of improvement, but in others gains have been noticeable. Factory orders in general merchandising lines have risen sharply here and there, under the influence of early autumn buying, which has caught the retail trade with small stocks on hand. Commodity prices were much steadier in August, Dun's index of wholesale prices showing a gain of nine-tenths of 1 per cent. and Bradstreet's index disclosing a drop of only three-tenths of 1 per cent. However, the increases were confined wholly to agricultural groups, and recently both wheat and cotton have declined. Both crops are turning out to be about as large as last year.

Steel mill operations in August turn out to be better than was generally reported during the month. Ingot production, as estimated by the American Iron and Steel Institute, was higher in August than in July, the first monthly increase in five months. The gain over July was 161,894 tons, against an increase of 88,503 tons from July to August of last year. Compared with August, 1929, production last month was 844,000 tons lower. Average daily output for the eight months is 144,067 tons, compared with 186,663 a year ago.

Reviving share markets are doing as much as anything else to lift drooping spirits. The unfortunate experience of the public with the market's prophetic powers last spring has not been forgotten, and small investors are hesitating to buy common stocks because of the large number of dividend reductions. Nevertheless, the trend of prices has been upward since the middle of August, and the public is beginning to think that insiders have knowledge of trade improvement which may be denied to them. Professional operators attempting to draw in public buying are having a hard time of it. Should the market advance decidedly from this point much would be done to restore confidence in autumn business. Fixed interest bearing securities continue to advance, and that is an important factor in restoration of confidence.

FRANCE.

Effect of German Elections — Franco-Roumanian Agreement — Production Indices — Stock Exchange.

(FROM OUR CORRESPONDENT.)

PARIS, September 17.

THE result of the German elections has proved a severe blow both to the supporters of M. Briand's plans for the organisation of a United States of Europe and to the large mass of public opinion which had begun to believe that the Briand-Stresemann Locarno policy would lead to a definite and permanent rapprochement between Germany and France. The situation in Germany, from the average Frenchman's point of view, is still admittedly obscure, and there are strong hopes among the mass of the people here that Hitler's astonishing increase of voting strength represents merely the voicing of a large amount of discontent with Germany's general economic condition and not a determination to wreak vengeance on France for the German defeat. It is not overlooked, however, that the looting and destruction of the property of Allied sympathisers after the recent evacuation of the Rhineland was directly due to Hitler's own followers, brought in from other parts of Germany. This caused at the time an immediate strengthening of the doubts felt here as to whether the German people as a whole have really undergone any change of heart worth speaking of. The practical wiping out by the recent election of the former Stresemann Party as an effective force in Germany, and the enormous increase of both the

Communist and the Hitlerist votes, are held by many sections of opinion here to have justified the most pessimistic conclusions as to the real state of the German mind.

To what extent the situation of M. Briand has been prejudiced by the revelation of the strength of the Hitler Party it is as yet impossible to decide. It seems to be recognised, however, by all parties—Socialists and Communists excepted—that French foreign policy, in view of the changed outlook, must undergo modification to meet the more threatening outlook, unless the German Moderate Parties can contrive to get together under the leadership of a Cabinet that will effectively muzzle the Hitlerists. Apart from the Briandist factor, the Tardieu Government will undoubtedly find the German election results a tonic and a source of increased strength to its leader. The most hopeful factor in the situation, from the French point of view, is that any serious attempt to apply the Hitlerist programme would undoubtedly be fatal to German credit, in which case both Russian Soviet and Italian help would be worthless.

The text of the new Franco-Roumanian commercial agreement has now been published by the *Journal Officiel*, and has come into provisional operation. Under this agreement, which is concluded for two years and is renewable automatically, unless either party gives six months' notice of denunciation, each country gives the other the benefit of its minimum tariff and most-favoured-nation conditions. The question of the export to France of Roumanian petroleum products is apparently left outside the scope of the agreement proper, except in the form of a general undertaking, and is to be dealt with independently. The protocol to the agreement contains a special clause running as follows:—

In so far as concerns petroleum products subject to contingent and especially to illuminating oil, motor spirit, heavy mineral oils for lubricating purposes and gas oils, the French Government will consider with the greatest benevolence demands for special authorisations presented by companies, either French or Roumanian, producing derivatives of petroleum or by-products for "cracking" which will result in these products.

The French Government will also consider with benevolence demands for special authorisation of imports of petroleum or residuals for "cracking," which will form the object of a comprehensive programme to be discussed in advance with the Roumanian Government.

Meanwhile, the Compagnie Française des Pétroles, the undertaking which is to handle the French share of 23½ per cent. of the yield from the Mesopotamian oil wells, announces an increase of its capital from 150,000,000 francs to 205,200,000 francs by the issue of 110,400 "B" shares of 500 francs. Of these new shares 100,000 are offered at 550 francs, against payment in cash, to holders of old "A" or "B" shares, and the balance of 10,400 at 700 francs to companies or persons of French nationality, nominated by the board. The company, which is under the control of the French Government, holds 55 per cent. of the capital of 100,000,000 francs of its subsidiary, the Compagnie Française de Raffinage.

Industrial production index figures for July show a drop of three points in the general figure for the nine principal industries, which is 141 (1913 = 100) against 144, the high record figure maintained during March, April, May and June, as compared with a mean of 139 in 1929 and of 127 during 1928. Engineering and building fell 1 point, paper 2, leather trades 3, metallurgy 4, textiles 5 (to 82, against an average of 92 in 1929 and 99 in 1928), motor-car production 8, and rubber industry 15 (913 to 876). Mining shows a rise of three points on the month, to 122 (from 130 in February). The figure representing railway traffic is 130 for both July and August, and that for trucks loaded is given as 130 for July, or a point higher than in June and May and five points lower than the mean during 1929. Railway receipts touched the new high record figure of 306,000,000 francs. Shipping tonnage during July totalled 5,464,000 tons entries (or 230,000 tons less than in June), against a monthly average of 4,840,000 tons in 1929 and 4,620,000 tons outward (or 255,000 tons more than in June), against a monthly average of 4,099,000 tons in 1929. The number

of workers in receipt of unemployment allowances in August was 964 for the whole country, against averages of 909 in 1929 and 5,067 in 1928. The average weekly number in June of applicants for work for whom the labour bureaux were unable to find places was 9,655, and the number of jobs for which employers were unable to secure labour was 18,595. Bankruptcies in August numbered 570, against an average of 726 in 1929 and 684 in 1928.

New share issues in August totalled 152,000,000 francs (of which 17,000,000 francs were new companies and 136,000,000 francs increases of capital by old companies), against 471,000,000 francs in February and monthly averages of 699,000,000 francs in 1929 and 546,000,000 francs in 1928. New bond issues in August were 735,000,000 francs, against 2,790,000,000 francs in February and monthly averages of 567,000,000 francs in 1929 and 298,000,000 francs in 1928. The average rate of interest offered was 4.55 per cent., against 4.65 per cent. in July, and averages of 5.36 per cent. in 1929 and 6.03 per cent. in 1928. The index figure representing quotations of 300 French issues (of variable yield) on the Paris Bourse in August is 424, equivalent in gold to 86 (1913 = 100), against 440 in July, a mean of 507 in 1929 and of 415 in 1928. Business on the Bourse remains at its lowest level, and for the moment there is no indication of the present period of stagnation coming to an end. The plans for the reform of the *Coulisse* market are the subject of much controversy, but the market itself appears to be much more interested in the question of inducing the Government to authorise the introduction of a large number of additional foreign issues here. The Government appears to be insisting on *Coulisse* reform, however, as one of the conditions precedent to any move in this direction. One reason for postponing such a move is the desire not to prejudice the pending important war loan conversion operations, the success of which it is held would be endangered if any appreciable quantity of additional foreign issues were introduced here, or if the Government sanctioned the issue of further loans for the benefit of foreign countries.

GERMANY.

Election Results — Political Prospects — Foreign Trade — Proposed Bata Factory in Silesia.

(FROM OUR CORRESPONDENT.)

BERLIN, September 17.

THE result of the Reichstag elections, with the spectacular success of the Hitler Party and the substantial gains of the Communists, has created a difficult task for the Government, but to all appearances the victory of the extremists has so stimulated the defensive forces of the constitutional parties that it may serve the cause of economic and financial reform better than a more favourable election result would have done. At present, it is true, matters look anything but cheerful: the big budgetary deficit, the gigantic volume of unemployment, with winter approaching to swell the numbers still further, and now, to crown all, a parliament in which the extremist parties are strong enough seriously to hamper the passage of any measures attempted by any Government.

Moreover, the election results are, perhaps, even more disquieting as a symptom of the state of public feeling. Not that the section of the electorate which supported the National Socialists would vote in favour of another war: in the minds of these people, who belong for the most part to the unpolitically-minded section of the population which has hitherto not taken part in elections, the Reparations Agreement represents, not a peace treaty but a net in which the German people has been entangled by international Jewish finance. If they talk of "scrapping the Young Plan," they have in mind a sort of world revolution against the Bourse, which a fantastic political legend has taught them to regard as the source of all exploitation. In these imaginations there is also

involved a feeling that the reparation payments are partly responsible for the economic plight of Germany, and, fundamentally, this idea cannot be attacked by any party because it is true. The reparation payments have obviously contributed to the shortage of capital in Germany, and scarcity of capital is in Germany, more patently than elsewhere, the prime cause of unemployment, and, therefore of the greatest social evil.

The immediate object of the National Socialist agitation was, however, far more concerned with internal than foreign politics. The six million voters whom it mustered were, above all, anxious to make it clear that they have no more faith in a Government which had failed to avert the consequences of the economic crisis. As the Government will need the greatest possible degree of confidence during the coming winter, that is a serious matter, and the task of the parties supporting the Government will be no easy one.

During the election campaign the parties of the Centre fought the Social Democrats on the question whether Germany had hitherto been governed too socialistically or not socialistically enough. Fortunately, it was realised immediately after the elections were over that this dispute was utterly irrelevant and that what matters at the moment is to see that Germany gets governed somehow. Once this idea has thoroughly penetrated, the increased strength of the National Socialists will be recognised as a bogey from which no terrors are to be feared. The idea which must at first occur to every democratically-minded person, that an opposition party which has just achieved a great election triumph should be given a chance to form a government, is as difficult to act upon in the case of the National Socialists as in that of the Communists, for it is perfectly certain that they would not exercise their power within the framework of the constitution, and resign if they were defeated at a future election. They have never allowed any serious doubt of the fact that they would use their power, if they had it, for the construction of a dictatorship. Such a party lies outside the rules of democratic parliamentarianism.

Politically, also, it will be unnecessary to give the Social Democrats enough governmental rope to hang themselves with, if the other parties play their part properly. The only rational solution is a "Great Coalition" of the Centre, the Social Democratic Party, the State Party, and the German People's Party, with a few of the small centre groups to complete its majority. Such a Government *bloc* would have a very firm popular foundation: the Social Democrats and the Centre have an organisation with whose strength nothing, not even the network of local organisations rapidly constructed by the National Socialists, is in any degree comparable. In spite of their losses to the Communists, the Social Democrats, with their 143 out of 575 seats, are still by far the strongest group in the Reichstag. The Prussian Government, which controls the administrative machinery of three-fifths of the Reich, is stronger than ever, and will now, perhaps, be able to carry out its old project of increasing its majority in the Landtag by including the German People's Party in the Prussian Government Coalition.

Thus, public order and safety are not in the smallest degree threatened, nor will the election results in any way imperil the fulfilment of the public or private obligations of Germany. The Prussian Minister-President, Herr Otto Braun, has already declared his conviction that the "Great Coalition" will be formed and will concentrate its entire strength upon the economic problems which are waiting to be solved. If that happens, the further prophecy of the Minister-President will also be borne out, that the rapid rise in the poll of the radicals of the Right will be followed by an equally rapid fall, like the temperature of a patient when the cause of the fever is removed. In 1924 the National Socialists had a similar accession of votes at the Spring elections, but lost them all in the same year, after another dissolution.

The German balance of trade for August shows an export surplus of Rm. 175 millions. The value of exports at Rm. 970 millions is far below that of August,

1929, when it was Rm. 1,189 millions, but has been slowly rising since the spring. Imports, as much owing to the fall in raw material prices as to the depression, have been steadily falling for months, and at Rm. 796 millions are far below last year's figure of Rm. 1,073 millions. The downward tendency of world prices is also noticeable on the export side, and while it explains the lowness of the figure as compared with last year, it makes the increase during the last few months all the more remarkable.

The proposal of the Czechoslovakian shoe manufacturing company, Bata, to build a large new factory in Germany has roused great interest in industrial circles. Bata is negotiating with the Prussian Government for the purchase of an estate, and the Prussian Government, for its own part, would be glad to sell it, for the proposed factory would employ 3,000 workers, and so be of some help in relieving the severe unemployment in Silesia. The German shoe industry, however, is protesting against the proposal on the ground that if Bata carried out its intentions it would lead to dismissals of workers from other factories. A further argument brought forward against it is that Bata has hitherto conducted its Czechoslovakian factories under systems of piece-wages and arrangement of hours which in Germany are regarded as constituting sweating. A demand has been put forward that the future employees of Bata in Germany should be governed by the agreement prevailing in the industry, and so would have to be paid on the same scale as the employees of the other German shoe factories. The Prussian Government has accepted this demand, but Bata has not yet agreed to it, so the negotiations for the purchase of the estate are not yet completed. Until 1929, Bata exported large quantities of shoes to Germany, but in the last two years it has lost ground owing to the increased tariff and the development of the German factories, so that now it would like to resume competition from within Germany itself.

HOLLAND.

Stock Exchange — Industry — Foreign Trade — Capital Issues — Money.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September 12.

DURING the past month public interest has largely been focussed upon the sensational drop of prices on the Amsterdam Stock Exchange. The steep decline naturally involved many compulsory liquidations, and the pressure from these forced liquidations brought practically all issues to new low records, as a consequence of which one firm of Amsterdam stockbrokers became involved in financial difficulties and had to close its doors.

The drastic drop in quotations in Amsterdam cannot be regarded as being entirely justified by developments in the economic life of the Netherlands. It is undeniable that trading, shipping and industrial circles in this country are experiencing a pronounced setback, but there are no signs of crisis comparable to those which manifested themselves in 1921-22. At that time there was certainly a feeling resembling panic; old-established businesses and banks of repute had to resort to drastic reorganisation; and by reduction of share capital and other means it was sought to write off losses accumulated. Things at present are by no means as alarming as that, and Holland appears to be undergoing a period of intense depression rather than an economic crisis.

The statements issued by the directors of the Royal Dutch, of the Philips Works, and of the Breda Silk Company express the decided view that the present circumstances provide no reason for disquietude, and that the future can be viewed with optimism. These pronouncements were issued by the three concerns in view of the steep and, in their view, unwarranted decline on

the Stock Exchange. The directors of the Philips Works stated that "our business is running satisfactorily in all respects, and the turnover has been larger than in the preceding year, both as regards quantity and value. Furthermore, a new and inexpensive wireless set is being put on the market." Reports concerning other branches of industry are also fairly satisfactory, so that there is no question yet of anything in the nature of a disastrous setback.

The position of the plantation companies, however, gives little occasion for satisfaction, and in view of the sharp decline of rubber and sugar prices there is reason to fear that the worst has not yet been seen in this section. These circumstances will not fail to be reflected on the Amsterdam capital market, as Dutch capital is involved to a very great extent in the rubber, sugar and tobacco companies of the Dutch East Indies, which in past years constituted such an important source of revenue. Now, however, very many of the plantation companies will have to pass their dividends or to reduce them considerably.

The less satisfactory state of business is also reflected in the trade figures. According to the official statistics, the value of imports in July, 1930, was 204 million guilders, against 240 millions in July, 1929. The decline in exports was somewhat less pronounced this time, the value dropping from 107 million guilders in July, 1929, to 154 millions in July, 1930. Compared with June of this year, when the value of exports was 135 millions, the figure for July in fact represents some improvement. The import balance in the first seven months of 1930 amounted to 455 million guilders, as against 434 millions in the corresponding period of 1929. The percentage of imports covered by exports was 69.2 per cent. in January-July, 1930, compared with 72.2 in the first seven months of last year. The decline, as compared with July, 1929, applies not only to the value but also to the weight of the imports and exports; that of the imports being 2,922 million metric tons in July, 1930 (last year 3,040 millions), and that of the exports 1,453 million metric tons (against 1,508 millions last year).

The almost incredible degree of pessimism now prevailing, and the extent to which confidence has been undermined by the continual decline in commodity and share quotations, are strikingly illustrated by the statistics for the capital issues in Amsterdam during the months of July and August, the totals being 35,197 million and 18,102 million guilders respectively. Compared with the previous months of this year, the month of July showed already a decidedly disappointing decline in activity on the issues market, but now August follows with only about half of the July total, in spite of the fact that in the preceding months of this year the issues considerably exceeded the figures for the corresponding period of 1929.

Debentures are the only issues likely to find any favour on the market. In this respect 1930 differs very strikingly from 1929, as will be seen from the following table setting forth the issues, divided into shares and debentures:—

(In million guilders.)		
January-August.		
	1929.	1930.
Shares	213.51	26.92
Debentures	123.32	398.07
	336.83	424.99

During the last two months foreign loans have been floated on the Netherlands capital market to a far less extent than in the first five months of the year. The failure of the German and Austrian loans already brought the figures for June and July far below the average, but during the months of August the total of foreign issues dwindled down to only 3½ million guilders. Only a few public authorities and several very substantial concerns ventured to come on the market with an issue. Industry, trading, plantation and electricity undertakings were conspicuous by their absence, and this certainly speaks volumes as to the circumstances prevailing here.

ARGENTINA.

Impending Revolution — Sound Economic Position — Crop Prospects.

(FROM OUR CORRESPONDENT.)

Buenos Aires, September 5.

The events of September 6th, on which comment was made in last week's ECONOMIST, lend particular interest to this letter, written by our Buenos Aires correspondent on the eve of the revolution.

THAT a drastic change in the government of Argentina is imminent is certain. Equally certain is it that such change will be brought about in a perfectly constitutional manner, even if it involves, as seems highly probable, the resignation of President Irigoyen, and assumption of control by Dr. Enrique Martinez, the Vice-President. Popular affection towards President Irigoyen has been largely alienated by the all-round incompetence in administrative affairs shown by his present régime, and, more particularly, by the growing certainty that he himself has been hoodwinked, and in certain directions misled, by advisers whose only claim to exercise influence rests on their party connections. For the most part unlettered and untravelled men, they have apparently undermined the various departments of State, replacing old and competent officials by nominees of similar mental attainments to their own, though of a humbler social category. The result has been an all-round loosening of the springs in the administrative machine, together with an absence of all Parliamentary control. Open charges to this effect have been made by the Minister of War, who has just resigned, and inasmuch as he is one of President Irigoyen's oldest friends, and was formerly one of his warmest supporters, General Dellepiane's letter to the Press, in which he gave the reason for his action, has created a profound sensation.

It must not, however, be thought that the general commercial and financial situation of Argentina is anything but prosperous. Official finances are momentarily straitened owing to the reduced revenues caused by falling imports throughout 1930, but there has been no great addition to national indebtedness, and the banking and general financial figures are sound. Party capital is being made by the Opposition of the fact that the Government owes some \$140,000,000 paper to the Banco de la Nacion Argentina, and that this debt, being in excess of the 20 per cent. of the Bank's capital, which is the limit of government borrowing laid down in the Institution's statutes, is unconstitutional. It is true; but, as a similar breach of the law has been regularly committed any time during the past ten years, there is no cause for alarm, and the general position of the Banco de la Nacion according to its latest balance sheets is thoroughly sound. Nor is the slight drop in the stock exchange quotation of national bonds anything to cause alarm, while exchange, which fell to 38d., banks' cable drawing rate on London, promptly recovered, and is 39½d. at the time of writing. It is, indeed, reasonable to expect that if the actual state of uncertainty gives place to a feeling of confidence, brought about by the appointment of a strong and able ministry under a responsible head more closely in accordance with modern ideas than is the present occupant of the Presidential Chair, a sharply favourable reaction will at once characterise all sections of Argentine business.

Natural conditions are exceptionally satisfactory throughout the whole cereal growing regions of the Republic, with a total area sown which is slightly in excess of last season's ploughing. Wheat is 8,150,000 hectares; linseed, 3,050,000; oats, 1,653,000; barley, 617,000; rye, 462,000; birdseed, 31,800. In all, an increase of 4.1 per cent. on the year. Both wheat and linseed have never looked better, and as another month will see linseed harvesting begin, while the northern wheat ripens early in November, it looks very much as though, if no untoward disaster occurs, Argentina will see one of her bumper crops. Moreover, weather conditions are excellent for the sowing of maize, while conditions and prospects for

the pastoral industry could not be better. Nor is the general trade movement of the country in any way responsive to the immediate political unrest, though import business is beginning to feel the effect of depreciated exchange, inasmuch as stocks are now running down and will cost much more to replace. Prices are therefore rising, with the natural tendency towards checking consumption. Nevertheless the commercial situation, regarded as a whole and viewed in its relation to the season of the year, is quietly firm and at the same time fraught with much promise. Heavy crops and improved exchange are two factors which may be reasonably expected before the end of 1930, and their favourable influence on Argentine railway prospects needs no emphasis, while the multiple productive and industrial forces of the Republic have so many ramifications, and the capital interests involved are so varied, that it is to everyone's interest to seek out an amicable and, above all, a pacific solution to the present political difficulties which will be already a matter for history before these lines are in print.

HONG KONG.

Currency Situation — Trade in Textiles — Politics — Piracy.

(FROM OUR CORRESPONDENT.)

HONGKONG, August 7.

THE Colony is gradually adapting itself to its depreciated currency, but the process is causing disturbance to trade and individual hardship. The fall in the gold value of the dollar from 2s. to the present level of 1s. 3d. has not sent local prices up in the same proportion, for there were appreciable quantities of stocks imported before the slump in exchange, and these have tended to moderate prices. Moreover, the worldwide fall in commodity prices has offset the higher dollar equivalent of gold prices. This is shown in the piece-goods trade, where bulk business in woollens earlier in the year, and in cottons within the past few weeks, has been effected at prices very little above the level of those for the buying seasons of the previous year. The individual member of the community who has commitments in England is, however, a heavy sufferer, unless he is fortunate enough to be a civil servant or on the staff of one of the institutions which pay salaries on a gold basis. If he is dependent upon an income in local currency, he is in the unenviable position of having to meet an increase in the cost of living here, while having to disburse some 60 per cent. more than normally for his remittances to England. This bears heavily upon a man who has to provide for the education of children.

The appointment of an Economic Mission to the Far East has aroused a certain amount of mild interest here. It is not expected that the Mission will gain much information which is not already well known to any home organisation trading with the Far East, but the inclusion of a cotton section with representatives of textile operatives will probably provide the workers of Lancashire with indisputable evidence of the great strides made by Japan in recent years. During July the buying season for cotton fancy piece-goods opened, some three months later than usual. Tentative inquiries in the early part of the summer led to no results, as Manchester prices, at the current rate of exchange, were far above the Chinese dealers' ideas. A revival of the inquiries a few weeks ago met with a more reasonable response and ultimately substantial business was booked. This was only made possible by certain foreign importers utilising favourable exchange contracted for before the dollar had sunk to its present level.

The policy of giving dealers the benefit of profit on exchange has not commended itself to the majority of foreign importers, and at one time it looked as if the latter would be excluded from participating in the busi-

ness. However, the dealers have slightly improved their offers and, with a temporary rise in exchange, further business has been effected, orders to the value of over £100,000 having been placed so far. It is obvious that this business has been of little advantage either to Manchester or to local import firms, but it indicates that there is still an appreciable demand for Lancashire cloths, despite the increased activity of Japanese manufacturers. The steady impoverishment of Chinese consumers has greatly stimulated the production of Japanese piece-goods. While the latter cannot compare for quality and finish with cloths manufactured in Lancashire, their low price and wide variety of designs suit the consumer, who gets something good enough for his purpose at probably not much more than half the price he would have to pay for the British article.

The political situation has recently undergone further development, but it does not appear to be leading to any definite result. The emergence of Mr Wang Ching Wei, who has now thrown in his lot with the Northern War Lords, will probably lead to a re-grouping of the politicians, but it looks as if the Nanking Government will manage to retain its hold of Shanghai, where most of the wealth of the country is concentrated. The capture of Changsha by so-called Communists, who are now threatening Hankow, is a menace to the trade of the Yangtze Valley, but, beyond adding to internal chaos, it is not likely to affect the situation. Canton has enjoyed comparative peace and quietness for some time past, and the activities of various hostile armies in Kwangsi and Northern Kwangtung have not had any disturbing influence. It is, of course, extremely disappointing that, after the promise of early 1929, the Nanking party has been unable to extend its authority to-day beyond its two home provinces. It still controls Canton and Hankow in name, but both these centres are practically independent and, although they continue to remit revenue to Nanking, their allegiance is far from strong.

After a respite of ten months another successful piracy has been carried out. The steamer concerned was a small coaster flying the British flag, but was not subject to the usual anti-piracy regulations, as it plies between Saigon and Hongkong without calling at a Chinese port. As usual the steamer was taken to Bias Bay, where the booty was landed. The withdrawal of a Canton Government gunboat, which for several months had been patrolling the approaches of Bias Bay, provided the pirates with an opportunity which they lost no time in seizing.

The new 26,000-ton liner *Empress of Japan* arrived here last week, having done the voyage from Southampton in the record time of 20 days. She sails for Vancouver to-day on her maiden voyage, carrying as far as Shanghai an anti-piracy guard of a detachment of White Russians. These Russians have been organised by the Hongkong Police Department to take the place of regular British troops who have hitherto acted as steamer guards. British owners wishing to protect their steamers from attacks by Chinese pirates now have to employ Russian guards at their own expense. Those companies which are subject to British income tax are not unnaturally dissatisfied, but so far they have been unable to persuade the authorities at home that British forces should be employed to safeguard British steamers from piracy on the high seas.

Letters to the Editor.

KREUGER AND TOLL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest your "Note" last week on the position of Kreuger and Toll. In this connection it appears to me to be of the utmost importance to obtain a correct perspective of the events of the past year by comparing earnings, yields, market prices, &c., over a period of

the last three years, as such a comparison makes it abundantly clear that the decline in market prices of the shares and debentures is solely due to technical and psychological factors.

The comparison is as follows:—

	Profit.	Divi- dend.	Debentures. High. Low.	Shares. High. Low.
	Kr.	%	%	%
1928 ...	19,854,000	25	684	635
1929 ...	27,119,000	30	863	430
1930 ...	...	...	656	446

It appears from the above that, although the recurring consolidated profits for the present year have been officially estimated in the last report to total Kr. 75,000,000, compared with Kr. 53,000,000 for 1929, without taking into consideration any new acquisitions made during the year, of which there have already been two very important ones in the Svenska Cellulosa and Ericsson Telephone Company, and although the dividend was in April raised from 25 per cent. to 30 per cent., the price of debentures has since April been as low as 480 per cent., compared with a high and low two years ago of 684 and 635, when the dividend was only 25 per cent.

The consolidated earnings for 1929 were 72 per cent., of which 35 per cent. were stated to be recurring. This year the recurring earnings should be at least 45 per cent., and there is no reason to suppose that the non-recurring earnings (so-called) will not be maintained at the same rate. I recall two major items of revenue during the present year which did not appear in last year's profit—one being the increased or restored dividend of the Grangesberg Company, from 5 per cent. to 17 per cent., the difference amounting to about Kr. 2,800,000, and the other being the large profit realised on the disposal of the \$75,000,000 of French Government bonds, which perhaps turned the scale in favour of the increased dividend for 1929, as that profit was made just before the declaration of the dividend in April.

The decline in prices to, at one time, absurdity levels, has in my opinion been due to three causes in no way related to the intrinsic value of the shares. There is no shadow of doubt that Kreuger and Toll, Swedish Match and International Match are all three in very much stronger positions than last year or the year before. Expansion of the first two has proceeded relentlessly in complete disregard of the international depression, and is still proceeding apace, and yet market prices of the shares are lower than in 1928.

The three reasons are:—

(a) World deflation. The lower level of share prices in all countries has led to repatriation of shares to Sweden from foreign markets to an extent that the Swedish market cannot or could not possibly absorb.

(b) Complete change in the investor's psychology—yield is now the sole determining factor in share prices, investors refusing entirely to discount prospects, whereas for many years the steady expansion of the Kreuger group made investors willing to accept as low as 3 per cent. in current yield, in consideration of the future prospects. The prevailing depression has obscured the fact that Kreuger expansion has proceeded at the same steady rate, new developments having taken place with the usual regularity in spite of the depression.

(c) The severest criticism of the Kreuger and Toll Trust has related to the alleged lack of sufficient diversification. Attention has been centred in these unhappy days on the company's huge portfolio of largely exotic bonds, and in view of the persistent political unrest in the countries where Kreuger has large interests, it is alleged that should political troubles come seriously to a head, the sentimental effect on the market for Kreuger shares might be to depress prices very considerably.

The remedy for the last-mentioned fault has been largely found in developments this year, when, quite recently, the company acquired the controlling interest in the Ericsson Telephone Company, which certainly provides a first-class means for diversification. The Svenska Cellulosa Company—although the pulp business is very depressed at the moment—also provides another basket for some of the eggs. Apart from all this—although it may be admitted that political disturbances could have a depressing effect temporarily on the price of the shares—any such disturbances should have no effect whatsoever, intrinsically, as Kreuger has tied up very effectively all the countries to whom loans have been granted, and there need be no fears that political troubles could possibly lead to loss for Kreuger and Toll.—I am, &c.,

London, E.C.3.

MIGRATION.

IN his highly concentrated survey of human migrations in pre- and post-war years,* Dr. Ferenczi, of Geneva, has produced a stimulating and provocative piece of work—provocative, that is to say, of the constructive thought on international lines which he himself indicates as the only satisfactory solution of a problem impregnated with the seeds of political discord. The main focus of his study is upon those mass movements of labour power which traverse political frontiers without traversing continental boundaries. Thus, apart from its reactions upon intra-continental migrations (and he is able to show that the imposition of the U.S.A. quota system has gravely affected the movement of European labour and that where labour cannot come to capital, capital will tend to come to labour) he has very little to say about the large streams of emigration which have peopled the British Empire and diversified the United States. His main preoccupation is with the movement of labour power as between European continental States—including, of course, those large movements of seasonal labour which were a striking feature of pre-war German economic life. In such discussions France and Germany emerge as the principal immigrating States, and the respective national policies pursued by these two countries in regard to the assimilation and regulation of immigrant labour form the subject matter of two of the most instructive sections of Dr. Ferenczi's monograph. They bring us into immediate relation with the reverse side of the coin, the corresponding problems of the two principal emigrating States: Italy and Poland. Though it is not heavily stressed, the post-war political menace of Franco-Italian friction under the sway of this particular economic relationship, looms large through these sections of Dr. Ferenczi's study. Nor is it merely Italian relations which are complicated by the problem of immigrant labour. According to Dr. Ferenczi, the position of Polish workers in France has been the subject of "endless complaints" concerning the linguistic, educational and political rights of the immigrants.

Such is the nature of the material which the author presents on behalf of his plea for further study, as a preliminary to the supercession of particular national agreements by general international regulations as the normal method of dealing with the problem of migrant labour.

* "Kontinentale Wanderungen und die Annäherung der Völker." Von Dr. Imre Ferenczi. Verlag von Gustav Fischer. Jena, 1930. pp. 50.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Eastern Frontiers of Germany. By René Martel. (London) Williams and Norgate, 38, Great Ormond Street, W.C.1. 7s. 6d. net.

A history of the German-Polish controversy, with an attempt to present impartially the points of view of both sides.

Interest Rates and Stock Speculation. By Richard N. Owens and Charles O. Hardy. (London) Allen and Unwin, Ltd., Museum Street. 10s. net.

A competent study of the influence of the money market on the stock market.

Volkswirtschaftliche Theorie des Bankkredits. By Dr. Albert Hahn. (Tübingen) J. C. B. Mohr (Paul Siebeck). 9 m.

An analysis of the functions of credit and the part it plays in trade cycles.

La France Economique en 1929. (Paris) Librairie du Recueil Sirey, 22, Rue Soufflot.

An excellent year-book in which each branch of French economic activity is the subject of a separate signed article.

Die deutsche Zahlungsbilanz. (Berlin) Verlag bei E. S. Mittler und Sohn.

A most valuable analysis of Germany's international balance of payments for the years 1924-29, preceded by a discussion of the nature of an international balance of accounts.

Der Neue Plan. By M. J. Bonn. (Leipzig) Verlag von Duncker und Humblot. 11 Rm.

An examination of the Reparations question which contains an interesting chapter on the future of German financial policy.

Deutschland und der Young-Plan. Von D. Carl Bergmann. (Berlin) Wilhelm Christians Verlag, Unterwasserstr. 8. Rm. 4.40.

Contains the documents relating to the Young Plan, with a useful introduction.

Che Cosa è la Banca. By Prof. R. Bachi. (Rome) Tipografia del Senato.

A lecture on the functions of banks.

Das Münzwesen und Seine Reform. By Dr. Eduard Kellenberger. (Bern) Verlag A. Francke A.-G. 8 fr.

The first volume of a projected series in currency banking and stock exchange organisation in Switzerland.

Haushaltsrecht und Reichsstat. By Dr. jur. Max E. F. Kühnemann. (Berlin) Wilhelm Christians Verlag, Unterwasserstr. 8.

A well-documented volume on the laws governing German public finance.

Moody's Steam Railroads, 1930. (London) Moody's Investors Service, Ltd., King William Street House, E.C.4.

The usual exhaustive and up-to-date book of reference, running to almost two thousand pages and generously furnished with maps. To summarise is impossible; it can only be said that the investor or the statistician who wishes to know anything about a railway, American or foreign, will be well advised to begin by referring to this volume.

Official Year Book of the Union of South Africa, 1928-29. No. 11. (London) Union of South Africa, Trafalgar Square. 5s. net.

An indispensable work of reference to everybody who has to deal with South African economic or political matters. It contains a most comprehensive range of official statistics, carried in many cases up to 1929, but in a few instances only to 1927.

The Banker, September, 1930. (London) Financial Newspaper Proprietors, Ltd., Bishopsgate, E.C.2. 2s. 6d. net.

Includes an article by H. Parker Willis on "The Gold Position of the United States."

Journal of the Parliaments of the Empire. July, 1930. (London) Empire Parliamentary Association, Westminster Hall, Houses of Parliament. 10s. net.

Overseas Official Publications. Vol IV. No. 2.—July, 1930. (London) Royal Empire Society, Northumberland Avenue. 5s. per annum.

The Sociological Review. July, 1930. (London) Leplay House Press, 65, Belgrave Road, S.W.1. 5s. net.

The National Trust for Places of Historic Interest or Natural Beauty. Report for 1929-30. (London) 7, Buckingham Palace Gardens.

A report of a successful year's work, with some beautiful photographs of recent acquisitions.

Tolley's Complete Income Tax, Super-Tax, Sur-Tax, etc. (London) Waterlow and Sons, Ltd., London Wall. 3s. 6d.

A chart which reduces the arithmetical ability required by the income-tax payer to a working knowledge of the first four rules.

City of Manchester: Abstract of Accounts, 1929-30; Financial Abstract, 1918-30. (Manchester) City Treasurer, Town Hall.

L'Imposizione delle Imprese di Carattere Internazionale. By Mario Pugliese. (Padova) Casa Editrice Dott. A. Milani, Già Litotipo.

A discussion of the taxation problems raised by the rapid development of undertakings having an international sphere of action.

Die Finanzierung des deutschen Strassenbaues. (Berlin) Berliner Börsen-Zeitung G.m.b.H., Kronenstr. 87.

A most elaborate German treatise on the finance of roadbuilding and road upkeep. There are chapters on the experience of France, England and the United States.

The Stock Exchange.

AUSTRALIAN FINANCE.

THE immediate crisis in Australian Government finance has been sensibly relieved of recent weeks. While the world is congratulating Australian statesmen upon their good sense in having enlisted the help of the Bank of England and followed Sir Otto Niemeyer's sound, if stern advice, holders of Australian Government stocks may well consider their position. Sir Otto has declared that, with her short-term loans provided for, Australia has two years' breathing space before any large debts mature. What are her long-term, as distinct from her short-term, prospects?

The economic problems of Australia have been discussed in the *Economist* of July 26th and August 30th last. The financial problem before the Federal Government this year was concerned with the means of providing for payment abroad of the interest on the external debt and for the repayment of maturing loans. Mr Scullin has stated that the annual requirements for loan interest and services of the Commonwealth and State Governments and semi-government authorities now amount to about £36 millions a year. In previous years the Commonwealth and State Governments have been in the habit of borrowing abroad considerable sums. They have, therefore, had no difficulty in finding exchange cover for their external interest obligations. This year, however, it has been impossible for Australia to raise new loans in London or New York. At the same time there has been a severe drop in the value of Australian export trade. Since July, 1929, the price in Great Britain of foreign wheat has fallen by nearly 41 per cent., and that of Australian wool by 36 per cent., with the result that Australia's income from exports has been reduced by about £40 millions. The Commonwealth Government, which is now responsible for all the State debts, confronted in its financial year 1930-31 with the difficult task of finding exchange cover for interest and sinking fund payments, called upon the Old Lady of Threadneedle Street for advice and assistance.

A way out of these difficulties was found, but not before Sir Otto Niemeyer and the chairmen of several Australian banks had told a number of plain home-truths to Australian ministers and had obtained assurances of far-reaching financial measures. In the first place, a foreign exchange pool has been formed in London on which the service of Australian external loans is to be the first charge. The commercial banks in Australia have undertaken to find sterling exchange for £36 millions a year in London against the payment of a like amount by the Federal Government into a special account to be opened at the Commonwealth Bank in Australia. For this relief the Commonwealth Government is entirely indebted to the good offices of the commercial bank directors. In the second place, the Bank of England has agreed to help in providing for the repayment of maturing loans this year. The £5,000,000 Treasury bills maturing on September 2nd were met by offering new six months' bills in the market by tender. These bills were actually placed at an average discount of £3 0s. 2d. per cent., the issue being over-subscribed.

The Australian financial system is to undergo a thorough overhaul. The Federal and State budgets are to be balanced. The Federal and State Governments' expenditure is to be reduced. The State Government's borrowing programme is to be cut down from £24 millions to £17 millions. All external borrowing is to be suspended until short-term maturities have been provided for. No approval is to be given to new unproductive works.

Objections to these drastic measures have, naturally, been voiced in several quarters. Mr Hughes regards Sir Otto Niemeyer's advice as favouring Great Britain's at the expense of Australia's industries. The Australian Council of Trade Unions has called upon the Federal and State Labour Governments to repudiate the decisions on

the ground that they involve wage reductions and a lowering of the standard of living. As an alternative plan the Council of Trade Unions has recommended the inflation of credit, the maintenance of Trade Union wages and working hours, the dissolution of the Loan Council, the compulsory reduction of interest rates and limitation of dividends, and the revision in Australia's favour of the Australian War Debts Settlement with Great Britain. These views are no doubt those of the extremists, but the majority of the delegates at the decisive Conference failed to reject them, and they stand on record as the declared policy of Australian labour.

Indeed, the question arises whether Mr Scullin will be able to hold his colleagues to the "bargain" made with Sir Otto Niemeyer and the bankers. Mr Lyons, the Acting Federal Treasurer, is reported as having informed the Victorian Labour Party's Conference in Melbourne that Sir Otto's opinions on reducing costs of production "did not express the Government's views," and that the Government "did not stand for wage reductions at the workers' expense to benefit other interests." When Sir Otto returned from New Zealand, Mr Lyons added, he would investigate the question of reduced interest on loans. The investor, however, has only a cabled summary of Mr Lyons's speech available, and is unable to put these pronouncements into their true context.

There is a real danger that sacrifices agreed to readily enough at a conference of premiers under the stimulus of the convincing logic and reasoning of Sir Otto Niemeyer may become irksome when they have to be endured for years. It has already been pointed out (*vide* the *Economist* of August 30th) that if the present fall in commodity prices continues, there may well be a prolonged period of financial strain for Australia in which rigid economy, hard work and lower standards of living will be imperative. Unless the volume of Australian exports shows an increase, a heavy reduction in her receipts from abroad will imply a heavy reduction in purchasing power in the country. If, in these circumstances, she cannot borrow abroad the £36 millions she requires to meet her debt obligations, she must raise this at home and still further reduce internal purchasing power. Unless and until export prices recover, this situation can only be relieved by a fall in the internal price level—which must take time. Australia will be fortunate if she is able to effect considerable wage adjustments without industrial troubles. While prospects of a bumper wheat harvest this year and a recovery in wool prices afford some grounds for believing that economic conditions may be improved by next year, it is by no means certain that the improvement will be so marked as to make it easy for the Federal Loan Council to borrow again, on an appreciable scale, in London or New York.

The problem of providing for maturing loans in the next few years is, therefore, a serious one. It is fortunate, as Sir Otto Niemeyer has pointed out, that Australia has a breathing space before large maturities occur. The following table gives the amounts of the loans maturing in London, New York and Australia in the next ten years:—

Year to June 30th*	STATE MATURING LOANS.		
	In Australia.	In London.	Total.
1930	£ 38,118,884	£ 3,781,700	£ 41,900,584
1931	27,811,893	25	55,784,108
1932	14,571,595	Nil	43,853,435
1933	23,491,639	12,992,904	81,338,303
1934	33,744,913	13,634,199	64,078,773
1935	24,328,062	15,560,089	53,000,931
1936	15,388,283	14,769,698	55,647,901
1937	3,699,074	2,006,336	19,324,840
1938	4,113,608	Nil	59,409,748
1939	412,598	2,358,276	2,770,874
1940	9,058,058	9,390,095	32,641,733

* Including W. A. and Queensland figures.

COMMONWEALTH MATURING LOANS.

Year to June 30th	In London.	In Australia.	Total.
1931	Nil	£ 27,972,190	£ 27,972,190
1932	Nil	29,281,840	29,281,840
1933	Nil	44,853,760	44,853,760
1934	Nil	16,699,661	16,699,661
1935	Nil	13,112,780	13,112,780
1936	Nil	25,489,920	25,489,920
1937	Nil	13,619,430	13,619,430
1938	Nil	55,296,140	55,296,140
1939	Nil	Nil	Nil
1940	Nil	14,193,580	14,193,580

It will be seen that so far as redemptions in London are concerned no Commonwealth loans mature between now and 1940. The States' maturities are negligible until 1932, when nearly £13 millions fall due in London.

On the whole, the market values of Commonwealth and States Government stocks—all of which now rank equally in security—have held their ground remarkably well in the face of these uncertainties. The next table compares the present market prices of representative stocks with those ruling in December, 1928, when the Commonwealth Government assumed responsibility for the States' debts.

	December, 1928.		Present Time.	
	Price.	Yield.	Price.	Yield.
Commonwealth 5% 1945/75	98½	5.10	86	5.9
Queensland 5% 1940/60	98	5.12	84½	6.15
Victoria 5% 1945/75	98½	5.09	85	5.95
S. Australia 5% 1945/75	97½	5.12	85	5.95
New S. Wales 5% 1935/55	97½	5.19	83	6.375
W. Australia 5% 1945/75	99½	5.05	86	5.9

There appears to be no disposition on the part of large holders of Australian stocks to part with their holdings at the present depressed levels. Investment trust companies and other professional investors will doubtless watch the development of Australian finances carefully before deciding upon any change of policy.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT
September 23.	September 25.

ALL traces of the end-August "boomlet" having disappeared, markets relapsed this week into a condition of boredom. Business was meagre in the extreme, the public evincing a lack of faith, while professionals waited for a lead. Such information as the week's news afforded was negative, the speeches of Australian statesmen and the results of the German elections being alike unfavourably commented on. The scandalous state of affairs revealed by the Combined Pulp and Paper Company's statement had a bad effect on sentiment in the industrial market, while mining and other speculative counters were dull on the absence of any indication that commodity prices had touched bottom. In these circumstances the fact that prices on the average have receded no more than about 2 per cent. from the levels reached a fortnight ago is a not unencouraging sign. In few cases is any considerable weight of stock in the market. The Stock Exchange, in short, is prepared for better times, but lacks faith in their early arrival.

The gilt-edged market was dull throughout the week, quotations on the whole tending to ease. Funding Loan dropped back slightly, but Five per Cent. War Loan was steady to firm. Australian loans slumped on the ambiguities in the speech of the Acting Federal Treasurer, to which reference is made in the preceding article. Dealers showed unwillingness to take stock on to their books, and "turns" became wide.

The result of the elections was a bear point for German bonds, though only a moderate amount of stock was offered after the first bout of selling. Other European loans were easier. Brazilians were quiet despite sinking fund purchases. Little business was done in Far Eastern stocks, though Japanese remained firm.

The home railway traffic figures induced the usual precautionary lowering of quotations, particularly of the two "heavy" group stocks. The traffic position is discussed in an Investment Note on page 535. The Argentine railway final dividends (which are set out on page 536), were generally in accordance with expectation, but the market lowered prices on the fear that the companies had divided over the hilt. The Entre Rios and Central Uruguay payments were, however, regarded as disappointing, while the Leopoldina announcement that the interim dividend on the preference would be deferred until the end of the year came as a thoroughly unwelcome surprise.

The industrial markets were quieter than for some weeks past, price changes being fractional. A few investment orders were reported for electric supply shares, and the approach of the annual show produced the usual ripple of speculation in motor shares, the favourite counter being Austins. The lower profits and dividend of Imperial Airways brought out some selling, though the market had been bearish for some weeks. Match shares were steady on a narrow business. A few orders were received for Imperial Chemical, though every slight rise tended to bring out stock. Turner and Newall showed a fresh decline. Breweries were quiet, Allsopps being marked down on the proposed ordinary share issue, while dealings in tobacco shares were scarcely sufficient to test quotations. Among store shares, Selfridge Provincial fluctuated sharply before the issue of the report (which is dealt with on page 537). Gramophone shares were in moderate demand in mid-week, but did not hold their ground. The news of the Argentine Navigation deal (discussed on page 537) caused further slight buying of the ordinary shares, which had risen by 50 per cent. during the previous month. No interest was taken in textiles. Cables and Wireless again met a friendless market. Bank shares hardened slightly, but insurance shares had a dull appearance.

Rubber shares held their own fairly well in the absence of new developments, good or bad, in the industry. Dealings, as usual, were on the most modest of scales. Tea shares were dull, though few measurable price declines were recorded, apart from Consolidated Tea shares, which were further realised. The slightly harder appearance of the oil share market was due less to the American position than to a moderate amount of support from Paris and Amsterdam, centring on Eagle issues and Royal Dutch respectively.

A marked dearth of business continued in the mining share market. A feature in the Kaffir section was the rise of Van Ryn Deep and New Kleinfontein on amalgamation rumours, afterwards denied. Village Deep improved on Cape support, while Central Mining, "Johnnies," and Rand Mines all made some headway. Northern Rhodesian issues were very quiet, movements being mostly downwards. Congo Borders failed to hold on early rise. De Beers deferred and preferred advanced on Paris buying, but tin shares continued to stagnate. The fall of copper to a new low level had little effect on share values, Tintos and Tharsis improving slightly.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The bull movement of early September has been brought to a halt, like its British counterpart. A fair volume of selling at the beginning of the week has been succeeded by all-round caution, with the volume of trading sharply restricted. Numerous causes have contributed to this result. At a time when real confidence is lacking, the slightest check to an upward movement is apt to produce nervous profit-taking. The effect of the German elections was initially exaggerated, some persons even envisaging a flight of capital from Germany. The delay in the autumn business revival in America, again, is causing a downward revision of estimated corporation earnings. Numerous brokerage houses have appreciably shaded off their expectations of the course of values during the next few weeks. Steel production shows little change, though prices are firmer. Oil shares have been steady on a decrease in gasoline stocks, but copper shares have reflected the fresh weakness in the position of the metal. Call money is cheaper at 2 per cent.

BERLIN.

After the severe declines in security prices which continued from the beginning of June to the beginning of August, the tendency in Berlin became somewhat calmer last month. Weak selling appeared to have come to an end—the Bourse being characterised by complete absence of turnover and narrow fluctuations. Small purchases (in which, however, the general public took only a minor part) even brought about substantial rises in certain classes of securities. Political conditions in July, contingent on the dissolution of the Reichstag and the fear of a budgetary deficit, were unfavourable to the market, but opinion subsequently became more optimistic. The gains of the extreme parties, particularly of the National Socialists, in last Sunday's election, produced immediate weakness in values, shares like Potash, Siemens and the Reichsbank falling as much as 10 points last Monday. In the period before the elections mortgage bank shares were particularly strong. The business of these banks, unlike that of the credit banks, has been developing very favourably. A keen demand occurred for departmental store shares, the companies having suffered much less than the smaller individual shops from unfavourable trading conditions. The condition of the steel industry is unfavourable, the break-up of the International Steel Cartel foreshadowing an intensification of competition. Bonds were again neglected, and in spite of the great liquidity of the money market, the demand for long-term securities remained restricted.

Official "Cash" Quotations in all cases.

AMSTERDAM.

After many weeks of unbroken pessimism, the beginning of September witnessed a turn for the better. Bear interests withdrew or hastened to cover their positions. Though the public gave some support, professional speculation was chiefly responsible for the upward turn of quotations, and prices have since receded. Disturbing fluctuations have occurred in quotations for

Royal Dutch shares. Philips and Margarine Unie have fallen to new low records. The directors of the A.K.U. issued a statement to the effect that the company was not in need of new funds, and no issues of shares or debentures were contemplated. The market was unaffected by this statement. Rubber shares were unfavourably influenced by the final failure of the rubber restriction negotiations. Amsterdam Rubber declined to 80, against a peak price of 295 in 1929. Sugar shares declined on rumours that the V.I.S.P. was disposing of an important quantity of sugar at a cut price. Some sales of inferior sugar have in fact been made to Japan at a reduced figure, and the V.I.S.P. may be prepared to dispose of additional quantities. For superior sugar, however, a further reduction in price is doubtful.

INVESTMENT NOTES.

New Issue Prospects.—The offer, on Monday next, of £3,500,000 of 5 per cent. debentures by the General Electric Company, at 98, will mark the effective opening of the autumn's new issue season. In few recent years has the outlook been more difficult to discern. The country has now had the benefits (such as they are) of cheap money, for a full six months, and many borrowers are feeling that it is high time that long-term capital rates moved in sympathy. For the present, foreign issues in London are not being encouraged. A Hungarian Government Loan, postponed from the spring, may be floated shortly, but borrowers like Danzig, Greece and Brazil are in a less favourable position, while internal political factors may be a bar to borrowing by Poland and Yugoslavia. At home, Liverpool, Birmingham, Ipswich and Ayr are probable or possible corporation borrowers during the next few weeks, on terms which will doubtless afford investors a yield of around 5 per cent. Some of the larger industrial concerns may test out the market with issues of debentures, but the effective rate in their case is much more difficult to prophesy. Strong concerns like Tate and Lyle deemed it advisable in the spring to offer the investor 5 1/2 per cent. or more. The General Electric issue represents an effort to tighten up the rate by 1/2 per cent. Whether this will be successful, in the case of other industrial borrowers, remains to be seen. It may be hoped, however, that if signs of stringency develop, issuing houses will choose to offer slightly more generous terms rather than to leave large amounts of undigested stock on the market. A few concerns may endeavour to market limited amounts of "equity" shares. Samuel Allsopp & Sons, the brewers, for instance, will shortly issue £466,408 £1 ordinary shares to holders,

without rights, at 22s. 6d. per share. For ordinary share issues in general, however, and for speculative company flotations in particular, present conditions are entirely unsuitable. The fewer issues made of the latter type, the better for all concerned.

Home Rail Traffic.—Last week we considered the position of the "Big Four" railways in the light of their total gross traffic returns for the first thirty-five weeks of the current year, and suggested that, if the present depression continued, total gross receipts in 1930 would be not less than £12 millions below the 1929 figures. In the following table, the returns of each company for the first thirty-seven weeks of 1929 and 1930 are set out category by category:—

	(000's omitted.)

£1,814,000 (representing an "acceleration" of £832,000), and for the third period £2,103,000 (an "acceleration" of only £289,000). The next few weeks will show whether this feature was due merely to normal summer influences, or to more permanently reassuring tendencies.

Argentine Railway Dividends.—All the leading Argentine railways, except the Buenos Aires and Pacific, have now announced their final dividends for 1929-30. The figures are necessarily below those of a year ago, but they exceed, in some cases, the estimated earnings we forecast in our article of July 19 last. The following table shows the rates of dividend paid in recent years, and the yield on Argentine railways ordinary stocks at present prices:—

	Total Ordinary Dividends.			Ordinary Stocks.		Yield at Present Price.
	1927-28.	1928-29.	1929-30.	Highest Price, 1929.	Present Price.	
B.A. Great Southern.....	% 8	% 8	% 6	110½	86	£ s. d. 7 4 6
Central Argentine	7	7	5	100½	75	7 2 0
B.A. Pacific	7	7	4	106½	85½	6 2 9(a)
B.A. Great Western	7	7	4	100½	66	7 19 0
Entre Rios	7	7	5	100½	79	7 19 0
N. Eastern	Nil*	Nil*	Nil*	41	29	Nil

* "O" debentures paid in full each year. † Not yet announced. (a) Yield based on 1928-29 dividend.

Broadly speaking, the market's writing down of Argentine railway share values in the last twelve months has represented an intelligent anticipation of actual facts. Present prices, on the basis of this week's dividends, bring the shares within the 7 per cent. to 8 per cent. yield category, which the market usually regards as appropriate for these stocks. The detailed accounts of the various companies, which will appear during the next few weeks, will show whether this year's dividends have been fully earned in every case, whether reserve allocations have been reduced, or whether the railways have, under pressure of hard times, discovered new and productive sources of economy to offset decreased gross receipts, without prejudicing present or future efficiency. Investors will also be anxious to learn whether operations have been continued in respect of the somewhat overdue programmes of mileage extension, which were in hand, or in contemplation, before the depression started. In any case, this week's dividends may be interpreted as an encouraging indication of the confidence of the various boards in Argentina's recuperative powers, when "normal" times return.

Combined Pulp and Paper Mills.—The most recent addition to the growing list of scandals connected with the recent new company boom is revealed in a report issued by the present board of the Combined Pulp and Paper Mills, Ltd. This company was formed in October, 1927, to acquire various German companies producing pulp for the paper and rayon industries. It has a present issued capital of £790,000, in 700,000 ordinary shares of £1 and 1,800,000 deferred shares of 1s. In 1929, the ordinary shares were run up to 36s. 8d. and the deferred shares to 6s. 6d. This week, business was done at 1s. 10½d. and 3d. respectively. There have been many changes on the board, Sir Henry Penson having relinquished his office because he did not share the board's opinion with regard to its policy in Germany, Mr B. Philipp on private grounds, and other directors for reasons which have not been made public. Sir Walter Towneley, speaking at the adjourned annual meeting on March 28th last (vice Mr A. M. Oppenheimer, who resigned during 1929), declared that the company was solvent and should have a prosperous future, though profits had been made on certain deals which "would not repeat themselves." The auditors, Messrs Oscar Berry, Froude and Company, whose report, dated March 19, 1930, had contained stringent qualifications, were not reappointed. Two new directors, Messrs H. D. Drysdale and W. Tudor Pole, were elected at the meet-

ing, and Mr C. Baker joined subsequently. These three new directors now state that profits amounting to £301,251 shown in the last two years' accounts were non-existent, a total loss of £418,819 having, in fact, been sustained. An investigation, carried out by Messrs Sissons, Bersey, Gain, Vincent and Company, has revealed amazing irregularities in the compilation of the accounts. The company is, in fact, in a critical condition. Unless £240,000 is quickly forthcoming to complete the purchase of certain shares in two Silesian companies, the company is in danger of losing the greater part of its assets. In all, a minimum of £500,000 is required to save the assets and provide working capital. The new directors suggest that this sum might be obtained by subscription from shareholders to an issue of 8 per cent. debentures with participation as to 25 per cent. of profits. The directors also suggest that shareholders should appoint a committee with whom they could discuss various other questions. The revelations in this case are among the worst in the long recital of financial irregularities which began exactly a year ago, when the Stock Exchange Committee suspended dealings in the "Hatry" securities. If the good name of the London company capital market is to be preserved, some effective means must obviously be devised of safeguarding bona fide investors not merely against such victimisation as these scandals have revealed, but also against the consequences of their own excessive optimism in boom times.

Gaumont British Picture Corporation.—The report of Gaumont British Picture Corporation for the year to March 31, 1930, is a disappointing document. Gaumont British is by far the largest cinema-theatre circuit in this country—the total number of theatres owned or controlled through its subsidiaries being approximately 837—but its earning power appears to be inferior to that of its rivals. This is largely due to the unfortunate effects of the acquisition of Denman Picture Houses, Ltd., and General Theatre Corporation in 1928. These companies, according to the Gaumont British report, are able to distribute nothing after paying their prior charges and providing for amortisation of leases and depreciation. The only flourishing theatre subsidiary of Gaumont British is Provincial Cinematograph Theatres, Ltd., which was acquired in 1929. The total share capital of Gaumont British now amounts to £3,750,000, of which £1,250,000 consists of 7½ per cent. preference shares and the balance of ordinary shares of 10s. After providing for all expenses, depreciation, debenture interest and preference dividends, the company only earned sufficient to pay the 6 per cent. dividends on its ordinary shares, the dividends on the new shares being calculated on the due amount of the instalment payments. The ordinary shares, however, have been issued from time to time at considerable premiums which have been applied to reserve. This premium reserve amounts to £2,459,530, which is approximately the size of the issued ordinary capital. It will therefore be observed that the company is only earning 3 per cent. on the cash subscribed on its ordinary share capital. The following table gives an analysis of the profits for the last three years:—

	Years ended March 31st.		
	1928.	1929.	1930.
	£	£	£
Total profits	282,711	305,826	387,584
Overhead expenses	16,053	21,102	70,506*
Income tax	33,119	25,288	19,311
Depreciation	10,500	30,603	10,603
Debenture interest.....	47,249	52,000	67,740†
Preference dividends	70,449	84,375	93,750
Earned for ordinary	105,341	92,458	125,673
Percentage earned	10.5%	6.0%	6.0%
Percentage paid	6.0%	6.0%	6.0%
Carried forward	45,341	27,296	27,816
* Including £56,824 interest account.			
† Including £17,040 debenture stock sinking fund account.			
Overhead expenses now include an item for interest account of £56,824, which is only partly explained by the			

secured loan and interest accrued at the National Provincial Bank for £223,670. It is difficult to ascertain the exact liquid position from the balance sheet, but, eliminating the items of amounts due from and owing to subsidiary companies on loan and current accounts, the company would appear to have current assets (cash and debtors) of £168,165, against current liabilities (creditors and interest and dividends accrued) of £318,214. The company would thus appear to be by no means well provided with working capital. The balance sheet declares shareholdings in subsidiary companies at no less than £5,718,702. The Gaumont British group is still expanding. The directors declare that the profits of the theatres this year will benefit from the British Acoustic apparatus, which is being installed at a much lower cost than other systems. The 10s. ordinary shares, which were as high as 32s. 10½d. last year, are now quoted at 12s. 9d.

The Dunlop Company and Rubber Restriction.—The official announcement that no new scheme of rubber restriction is to be enforced, has quickly been followed by an intimation that two producing companies are suspending operations—the Lanadron Rubber Estates in Malaya and the Java Rubber Estates in the Dutch East Indies. Other announcements of the same tenor are expected during the next few weeks, though difficulties connected with the dispersal and repatriation of native labour may prevent the Eastern export figures from showing any marked decline during the next month or two. Meanwhile, the Dunlop Rubber Company, which owns 70,000 acres of rubber-planted lands in the East, has lost no time in defining its attitude. A statement issued over the signature of the chairman, Sir Eric Geddes, declares that the company was in accord with the action of the Government when it abolished the restriction scheme, in 1928, though not with the precise procedure of abolition. The company believes that, under the urge of high prices, the native "family" grower in the Dutch East Indies could quickly raise his output from 100,000 tons to 350,000 tons per annum. With a London price of anything above 8½d., this incentive would be in evidence. Can the European owner produce at a profit below such a figure? By implication, the Dunlop Company replies in the affirmative. Last year, its costs were as low as 5½d. per pound, f.o.b. Singapore. This year it is cropping on an average of 4½d. per pound. For the month of August last, the cost was estimated to be under 4d. When new and improved areas come into tapping, a cost of under 3d. per pound is expected. These cost figures have been obtained, Sir Eric declares, by rigid economies, extensive group management, improved tapping methods, cultivation, manuring and rejuvenation of old rubber land, and by the use of improved planting methods and materials in new areas. Whether these figures include any allowance for home administrative charges is not clear, and in any case, charges for freight, landing, etc., must be allowed for before the prices can be compared with the London market quotation. They remain, however, an impressive testimony to the possibilities of reduced costs, which are open to large, efficient, and well-situated European estates, even in difficult times like the present.

Selfridge Provincial Stores.—In one respect the accounts of Selfridge Provincial Stores, Ltd., to August 30th last—presented with exemplary promptitude—are encouraging to shareholders, since they show that profits have been fully maintained in a year of difficult trading conditions. Closer inspection suggests several qualifications to this statement. In the first place the figures relate to dividends received from the subsidiary companies during the twelve months, and the full effect of the setback in general trade may not have been experienced in the average trading period covered by the subsidiary accounts. Secondly, there is no sign of earnings regaining the 1926-28 level, not to mention the prospectus forecast (in November, 1926) of a profit

of £350,000, "advancing within a reasonable time to £450,000." The results achieved since the company's public debut are shown below:—

	Period ended Oct. 31, 1927.	Period ended Aug. 31, 1928.	Year ended Aug. 31, 1929.	Year ended Aug. 30, 1930.
	£	£	£	£

* Contributed by Selfridge & Company, Ltd.

When the company's ordinary shares were first publicly offered, the chairman, Mr Gordon Selfridge, Senr., clearly contemplated that the company would be well on its feet by 1929, when Selfridge and Company's guarantee of the 7 per cent. ordinary dividend had expired. Last year this guarantee was extended for another twelve months. Will it be further extended, seeing that the dividend payment still involves distribution of profits up to the hilt? Mr Selfridge's contribution of £10,000 this year for the writing down of the Provincial Company's "preliminary expenses" (which will now stand at £80,000), is a "gesture" which will reassure some shareholders, but the extension of the guarantee would open up much bigger questions. Selfridge and Company has already been called on this year to pay out £31,000 on a guarantee of the 25 per cent. ordinary shares of William Whiteley, Ltd., which does not expire for another twelve years. There is obviously a limit to the extension of such obligations. Shareholders will also look for enlightenment, at the meeting, as regards the increase, during the last twelve months, of £154,390 in the Provincial Company's loans from subsidiaries, and the expansion, on the other side of the balance sheet, of £151,000 in its total shareholdings in subsidiaries, taken at cost. A full statement covering such points as these, at next Friday's meeting, would be a most effective means of silencing the "efforts . . . to spread misleading and entirely unfounded information as to the value of the shares," of which the board complains in a letter issued with the report.

Argentine Navigation and the Royal Mail Group.—It was announced in the Press (apparently unofficially) on Tuesday last that the Royal Mail group had disposed of its holdings in the Argentine Navigation Company (Nicolás Mihanovich). The purchasers are understood to be an Anglo-Argentine syndicate for whom Hambros Bank and Messrs J. Henry Schroeder and Company are acting as banking guarantors. The Royal Mail group has hitherto held the control of the Argentine company, which was one of its most successful subsidiaries. The company's capital is £2,000,000 in 400,000 £1 preference

shares and 1,600,000 £1 ordinary shares. The following table shows the manner in which the group's holdings were distributed:—

	Preference Shares.	Ordinary Shares.
R.M.S.P.	£ 19,108	£ 356,392
Lampport and Holt	45,361	50,639
Liverpool, Brazil and River Plate S.N. Co.*	...	658,000

* Subsidiary of Lampport and Holt.

The balance sheet and report of the Argentine company, for the year ended December 31st last, disclosed a net profit of £287,584, from which dividends of 12 per cent. and 10 per cent. were paid on the preference and the ordinary capital respectively, and £90,000 was carried to the reserve fund. The fleet of over 300 vessels, aggregating over 100,000 tons, appeared in the balance sheet at £1,149,350, and a further £467,043 represented payments on vessels under construction. The liquid assets at that date exceeded current liabilities by £243,460, the company holding British Government securities of £627,473. The sale would appear to be a further step towards the clearing up of the administrative and financial affairs of the Royal Mail group, for which an advisory committee was formed some time ago. Last month the Court appointed Sir William McLintock receiver and manager of Lampport and Holt, at the request of the debenture-holders. This would appear to have been an essential preliminary to the conclusion of the present arrangement. The rise of the Argentine Company has been one of the picturesque stories in the annals of commerce. The founder, Nicolás Mihanovich, a Dalmatian, immigrated to Argentina as a young man and earned his living by ferrying passengers ashore from visiting vessels. As time went on he enlarged his business and eventually formed the Argentine Navigation Company in 1909. In 1917 the Royal Mail acquired his holding, and in 1920 the company's vessels flying the Uruguayan flag were transferred to a Uruguayan subsidiary. The company carries on a network of passenger and cargo services along the South American coast, in certain ports of which it enjoys something like an exclusive position. It has also plant for towing, salvage, shipbuilding and repairing purposes, and maintains a regular passenger service between Buenos Aires and Asunción.

Staveley Coal and Iron.—By contrast with most iron and steel companies this old-established Midland concern has shown considerable stability of earnings during the last few years:—

Year ended June 30.	1928.	1929.	1930.
	£	£	£
Net profit	204,723	266,118	266,094
Brought forward.....	73,970	114,313	111,162
Ordinary Capital.			
Paid, £	164,380	169,269	203,121
Earned per cent.	6.2	7.9	7.8
Paid per cent.	5.0*	5.0*	6.0*

To reserve	100,000	75,000
Carried forward	114,313	111,162
	99,135	

* Tax free.

Below are set out the percentage earnings and payments on the ordinary capital for the past ten years:—

ORDINARY CAPITAL.					
Year to June 30.*	Earned %	Paid %	Year to June 30.*	Earned %	Paid %
1921.....	10.0	10.0	1926	2.4	5.0
1922.....	7.3	7.5	1927	7.4	7.5
1923.....	12.5	10.0	1928	6.2	5.0
1924.....	14.3	10.0	1929	7.9	5.0
1925.....	9.8	7.5	1930	7.8	6.0

* Free of tax.

The sum of £75,000 is set aside this year for reserve against £100,000 last year, raising the general reserve item to £775,000. The balance of £99,135 is carried

forward, against £111,162 brought in. The company continues to follow a conservative financial policy, both in the matter of depreciation allowances and dividend distribution, while technical improvements in pipe manufacturing promise favourably to affect earnings in the future. The balance sheet reveals a satisfactory liquid position. At 1½, the ordinary £1 shares yield £5 16s. 6d. per cent. free of tax, allowing for a final dividend of 3½ per cent.

The Copper Position.—American Copper Exporters Incorporated has reduced its price for electrolytic delivered in Europe by 0.25c. to 11.05c. per lb. Its domestic price for America is thus reduced to 10½c. per lb., which compares with a high level of 24 cents per lb. in March, 1929. Some of the smaller independent producers in America are now offering electrolytic at only 10½c. per lb. In London standard copper has fallen to £46 5s. per ton cash, and electrolytic to £50 per ton cash. The American quotation is the lowest for nearly thirty years, and the London quotation is the lowest level touched since January, 1902, when £45 2s. 6d. was recorded. A year ago Copper Exporters Incorporated had copper firmly stabilised at 18c. per lb. The initial cut from 18c. to 14c. was made in April this year, and the tendency has since been downward. The decline this week follows upon the publication of depressing statistics in America for August, showing a heavy increase in stocks of refined copper. With only a small decline in the stocks of blister, the combined stocks at the end of August were over 17,500 tons higher. The following table shows the increase in stocks in America during the last three months, together with output and deliveries:—

	June.	July.	August.
	Tons.	Tons.	Tons.
Refined output	124,821	123,179	120,778
Domestic deliveries	71,887	75,436	56,810
Exports	44,818	42,466	38,319
Stocks (end month)	316,762	322,089	347,738
Blister output	108,574	107,754	111,497
Stocks (end month)	256,531	242,212	234,135
Combined stocks (end month)	573,293	564,301	581,873
United States mine output	56,465	54,249	56,779

The marked decline in deliveries is disturbing. Moreover, in spite of a further closing down of mines in the United States during August, it is remarkable that the mine output should show a small increase. Mines in the United States are now producing 50 per cent. less than last year, but South American mines show only a moderate decline, while Canada has actually increased its output. An uncertain factor is International Nickel Company, which is about to make a heavy increase in its output of copper. It is believed probable that International Nickel will ask for an import tariff to protect the Canadian producers of copper, and will then endeavour to place its surplus in the European market. It seems doubtful whether even the present low level of copper prices will hold. The outlook for copper-producing companies must remain, for the present, uncertain, and it is not surprising that even the shares of Rhodesian copper companies, which will not enter production for years, have suffered from the general liquidation in the market.

Rand Rumours.—During the week, writes our mining correspondent, some activity at rising prices has been witnessed in the shares of the Van Ryn Deep and of the New Kleinfontein—the latter a concern regarded as being virtually on its last legs. Rumour postulated a scheme for the absorption of the little company by the big one. Reference to a map of the field suggests the improbability of any such arrangement. The main area of the Kleinfontein—the Apex—lies on the dip of the Van Ryn Deep but alongside that of the Brakpan. In point of fact, some years ago a drive from the Brakpan workings was

PRELIMINARY NOTICE.

The List will open on Monday, 22nd September, 1930, and will close on or before Wednesday, 24th September, 1930, for Cash Applications. Applications by holders of the existing 7 per cent. Debenture Stock, desiring to convert their holdings, will be received up to and including Monday, 29th September, 1930.

The General Electric Company Limited.

SHARE CAPITAL.

	Authorised.	Issued.
6½ per cent. "A" Cumulative Preference Shares of £1 each ...	£1,800,000	£1,800,000
7½ per cent. "B" Cumulative Preference Shares of £1 each ...	1,800,000	1,800,000
Ordinary Shares of £1 each ...	2,400,000	2,253,645
British Ordinary Shares of £1 each ...	1,600,000	—
	<u>£7,600,000</u>	<u>£5,853,645</u>

There is now outstanding £2,919,340 7 per cent. Mortgage Debenture Stock (of which £60,100 Stock has been drawn for repayment on 30th September, 1930), but the whole amount of such Debenture Stock will be paid off by 30th September, 1931, or satisfied by the issue of 5 per cent. Mortgage Debenture Stock, together with a cash payment, on the terms stated below.

Holders of 7 per cent. Mortgage Debenture Stock (except the Stock drawn for repayment on 30th September, 1930) have the right exercisable up to the 29th September, 1930, to convert their holdings into an equivalent amount of 5 per cent. Mortgage Debenture Stock, together with a cash payment of £4 per cent., in addition to the interest accrued up to the 30th September, 1930, on the Stock so converted.

ISSUE OF

£3,500,000 5 per cent. Mortgage Debenture Stock at 98 per cent.

Interest payable 31st March and 30th September.

SECURITY.—A Specific Mortgage (subject only to the charge securing the existing Debenture Stock above-mentioned, which is to be paid off), on the main part of the Company's freehold and leasehold properties, fixed plant and machinery, etc.

REDEMPTION.—At 100 by 1967 by drawings at 100 per cent. or by purchase at or under 100 per cent.; or up to and including 30th September, 1937, at 105 per cent.; or after 30th September, 1937, and up to and including 30th September, 1947, at 102 per cent.; or thereafter at 100 per cent.

The Prospectus will state (inter alia):—

1. The Company was registered in 1900 and is one of the largest electrical manufacturing concerns in the British Empire.
2. **Assets.**—At 31st March, 1930 (including surplus from present issue after conversion or repayment of the 7 per cent. Mortgage Debenture Stock and payment of the expenses of the issue) ... £10,912,400
or sufficient to cover the Debenture Stock now offered more than three times.

3. Profits. —1926 ...	£936,537
1927 ...	872,661
1928 ...	901,118
1929 ...	902,771
1930 ...	979,476

The amount required to provide the Interest and Sinking Fund for the present issue is £210,000 per annum, and it will be seen that such amount is covered more than four times on the above basis of profit and without reckoning any additional profits from the use of extra capital raised by the present issue.

extended into the Kleinfontein ground—with most disappointing results. In September, 1929, New Kleinfontein shareholders were advised that the company could not continue normal operations and must begin the process of closing down. Meantime, owing to various causes—including the unexpected improvement in the value of the ore mined—the company has been making fairly substantial profits. Nevertheless, failing fresh developments, the closing-down process has merely been prolonged. An official cable advises the discovery in the central area of the mine—i.e., the original property—of a discovery the exact nature of which is to be tested by diamond drilling. This may represent the actual reason for the buying of the shares. According to an official cablegram from Johannesburg, there is no foundation for the amalgamation rumours.

The Yorkshire Insurance Company have removed to Yorkshire House, 66 and 67 Cornhill, London, E.C.3. Telephone: Avenue 2648 (six lines).

The Canadian Pacific Railway Company intimate with reference to its shares of the new par value of \$25 per share that, in the case of European shareholders, the new certificates will be issued in denominations not exceeding ten shares, unless otherwise requested.

COMPANY MEETINGS, &c.

INITIAL SERVICES (1928), LIMITED.

RESOURCES FURTHER STRENGTHENED.

The second ordinary general meeting of Initial Services (1928), Ltd., was held on the 17th instant, at Winchester House, Old Broad Street, London.

Mr W. J. Chinneck, who presided, said that the trading profit for the year ended June 30, 1930, including gross dividends on shares of subsidiary companies, amounted to £206,940, after providing working expenses and management remuneration. That showed an increase of £5,132 over the previous year. The total profit for the year, carried to the balance sheet, amounted to £210,482, compared with £158,527 for the previous year. When considering the profits of the year ended June 30, 1929, however, they must remember that the company was only incorporated on September 17, 1928, and the sum of £43,678, being the estimated profit for the period preceding incorporation, was used to reduce goodwill.

The liquid resources of the company were very considerable. At June 30th last, cash at bankers and in hand amounted to £140,866; investments in British Government securities to £98,070; sundry debtors and payments made by the company in advance to £40,634; and amounts owing by subsidiary companies, including dividends since declared, to £24,726—a total of approximately £304,000. Against that total were sundry creditors and amounts owing to subsidiary companies, which together were less than £16,000, and the reserve for income tax had now increased to £80,000, a sum which should be more than sufficient to cover the liability of the company to June 30th last. The directors had also reserved the sum of £8,000 necessary to provide the preference dividend accruing for the three months to June 30, 1930. After providing for the preference and interim dividends mentioned and for all taxation there remained a balance with which they now had to deal of £117,255.

In order to consolidate still more the strong position of the company, the directors recommended that goodwill should be further written down by £13,694, reducing it to £200,000, which was less than one year's profit; also that the sum of £30,000 should be transferred to general reserve account, which would then stand at £55,000. They further recommended a final dividend on the ordinary shares of 4d. per share, less tax, which, together with the interim distribution of 2d. per share, less tax, already paid, was at the rate of 50 per cent. for the full year on the ordinary shares of 1s. each. That final dividend, less tax, would absorb £58,125, leaving a balance of £15,436 to be carried forward to the next year's account. It must be remembered that the past year had been one of extreme difficulty in all businesses. The directors hoped, therefore, that shareholders would consider that the accounts before them were satisfactory and that they would approve the directors' proposals for further strengthening the company's resources. Since the close of the financial year they had continued to make satisfactory progress.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 6 Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Sept. 13, 1930, amounted to £5,674,400, against ordinary expenditure of £10,408,200. After allocating £620,000 to the Sinking Fund, and having allowed for a decrease in Exchequer Balances of £538,818, the week's operations, as shown below, increased the National Debt by £4,790,000 to £7,673,000,000—

REPORTS AND NOTICES.

BANKS.

AUSTRALIAN BANK OF COMMERCE, LIMITED.—The thirtieth report reveals a profit for year ended June 30, 1930, of £180,693, as compared with £218,545. The ordinary dividend is reduced from 8 per cent. to 7 per cent., absorbing £154,560, against £176,640. A transfer of £25,000 is made to reserve, against £40,000. Carry forward is increased from £28,670 to £29,803. Total assets have fallen from £19,980,768 to £17,765,510. Coin, bullion, &c., stands at £1,814,495, against £787,122. Cash at London bankers at short call has fallen from £659,168 to £229,622. British Treasury bills and other Government and municipal securities stand at £749,182, against £881,105. Bills receivable stand at £1,382,558, against £2,375,570. Deposits stand at £13,353,280, against £14,714,138.

COMMONWEALTH BANK OF AUSTRALIA.—The report for the half-year ended June 30, 1930, shows profit on banking business of £246,282. This compares with a profit of £254,166 for half-year ended December 31, 1929, and £240,356 for the half-year ended June 30, 1929. From rural credits department the profit was £40,198, against £29,211 for December half-year and £28,133 for June half-year, 1929. Profits from note issue department for the half-year was £491,272, comparing with £446,954 for December half-year and £477,094 for June half-year, 1929. Total assets at June 30, 1930, amounted to £97,308,552, against £97,921,005 at June 30, 1929. Investments stand at £22,310,233 (face value, £22,314,850). Investments at June 30, 1929, stood at £16,949,187. Note issue department amounted to £44,954,327, against £42,798,227 on June 30, 1929. Deposits, &c., amounted to £42,813,732, against £43,873,957 at June 30, 1929.

MISCELLANEOUS.

IMPERIAL AIRWAYS.—In a preliminary statement the directors of this pioneer airway company announce a net profit for the year to March 31st last of £60,138, compared with £78,861 for the previous twelve months. Together with the balance of £6,689 brought forward from last year, there is available £66,827, against £82,911. The ordinary capital, which is now fully paid, receives a dividend of five per cent., requiring a net amount of £18,371, against a previous

distribution of 7½ per cent. requiring £35,558. This year, however, a provision of £25,000 is made for income tax. The sum of £20,956 is carried forward to the next account. Last year the balance of the preliminary expenses and underwriting commission were written off, taking £20,664, while the directors provided an additional reserve for obsolescence of £20,000 over and above the "normal" allocation for depreciation, the amount of which was unstated. This year the allowance for obsolescence is £85,387.

INCORPORATED ACCOUNTANTS' EXAMINATIONS.—The next examination of candidates for admission to the Society of Incorporated Accountants and Auditors will be held on November 3rd, 4th, 5th and 6th in London, Manchester, Cardiff, Leeds, Glasgow, Dublin, Belfast, Cape Town, Johannesburg and Durban. Women are eligible under the society's regulations to qualify as incorporated accountants upon the same terms and conditions as are applicable to men. Particulars and forms are obtainable at the offices of the society, Incorporated Accountants' Hall, Victoria Embankment, W.C.2.

THE INTERNATIONAL NICKEL COMPANY OF CANADA, LIMITED.—The company offer common stockholders additional common shares for subscription *pro rata* in the ratio of six shares of common stock for each 100 shares of common stock held of record on August 7, 1930. Subscription price per share will be \$20 Canadian currency if paid in Toronto or Montreal, \$20 United States currency if paid in New York, or £4 2s. 2½d. if paid in London.

R.M.C. TEXTILES (1928), LIMITED.—The board of directors notify that dividend warrants will be posted on September 30th in respect of interim dividends at the rate of 8 per cent. per annum, less tax, on the preference shares of the company, and 3 per cent. actual, less tax, on the ordinary shares. The directors state that, notwithstanding the untoward general trading conditions at home and abroad, sales have increased and the clientele has grown very considerably during the initial half of this year. Prospects for the coming season are good, particularly as a satisfactory response has resulted from very extensive development work which has been undertaken to widen the range of fabrics, with a view to neutralising any possibility of adverse trading conditions interfering with the natural progress of the company. From present indications, the company's factories should be engaged at full capacity throughout the coming season. The board has decided to make March 31st the end of the financial year in future.

WORKING PROFIT, TRANSVAAL.—Total estimated working profit of the gold mines of the Transvaal for the month of July 1930, amounted to:—Witwatersrand, £1,128,807; outside districts, £55,300; total, £1,184,107. The estimated working profit in June, 1930, was: Witwatersrand, £1,090,090; outside districts, £51,107; total, £1,141,197.

ELECTROLYTIC ZINC.—Production during four-weekly period ended August 20th—4,216 tons zinc, of which 60 tons used at the works.

CROWN DIAMOND.—Output for August:—66,300 loads washed yielded 9,221 carats.

DUNDER COAL.—Output and sale for August, 43,780 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

The completion of the United Kingdom harvest is being attended by unsettled climatic conditions, and yields of grain in many districts are below average. Barley is showing indifferent quality, really fine malting samples being scarce, but oats are fairly satisfactory. Larger supplies of native wheat are reaching the Statute markets, but trade still drags, and prices generally ruled in buyer's favour. On the import market, demand shows no improvement, and in face of abundant supplies, both actual and prospective, buyers are able to cover their requirements quite easily as occasion arises, and consequently show little desire to enter into forward commitments. Russian offerings have been somewhat intermittent, but heavy shipments from the Black Sea ports constitute a depressing factor in the International situation. Certain quantities have been purchased by United Kingdom millers, but the bulk is being directed to Continental and Mediterranean destinations, Italy in particular purchasing heavily, reported sales being in the neighbourhood of 1,000,000 quarters. A continuance of the movement is indicated by the active demand for freight space, upwards of 100 vessels booking so far this month, from Danubian and South Russian ports, as Rumania and Bulgaria have liberal quantities to ship. In these circumstances, export sales from North America are difficult to effect, despite continued price concessions. Northern Hemisphere receipts are rapidly increasing, as both the United States and Canadian new crops are turning out much larger than previously expected, visible supplies in the Dominion approaching a record. Elevator accommodation is full to overflowing, both on the Atlantic and Pacific seaboard, and with every prospect of larger supplies forthcoming from the Southern Hemisphere at the turn of the year, there appears nothing to check the downward course of prices. Flour was marked down in sympathy with wheat, though not following the full decline, presumably on account of the poor demand for feeding offals, while Canadian and American makes are pressing for shipment. Feeding stuffs shared in the depression, the sale of maize being adversely affected by the low prices accepted for Russian and Danubian barley, which attracted more attention of late. Oats dull and tending in buyer's favour.

WHEAT.—Unsettled. No. 1 hard, Manitoba, ex-ship, 35s. 6d.; No. 1 Northern Manitoba, ex-ship, 34s. 9d.; No. 2 ditto, 34s. 3d.; No. 3, 33s. 6d.; No. 5 Manitoba, 31s.; No. 6 ditto, 26s. 9d.; No. 1 hard Winter, 34s.; No. 2 ditto, 33s. 6d.; No. 2 mixed Durum, 31s. 6d.; Barusso, 62½ lbs., ex-ship to arrive, 32s.; Australian, 33s.; choice white, Karachi, 32s. 6d. per 496 lbs. English, new, 6s. 5d.-6s. 11d. per 112 lbs.

FLLOUR.—Easier. London straight run 31s. per sack for country deliveries, and 30s. London area. Of imported, Manitoba patents, 28s.-30s.; Buffalo ditto, 28s.-30s.; Australian, 25s.-26s. 6d., ex-store.

MAIZE.—Easier. Plate landed, 25s. 9d.; ex-ship, 23s. 9d.; August-September also September-October, 23s. 6d.; Bessarabian landed, 25s. 9d.; No. 2 white flat African, ex-ship, 21s. 6d.; No. 6 yellow, landed, 25s. 9d. per 480 lbs. Yellow maize meal, ex-ship, £7 15s. f.o.r. London. Yellow African, ex-ship, £5 15s.; white, £5 10s. per ton.

BARLEY.—Easier. Californian old landed, 30s.-35s.; new, ex-ship, 30s.-41s. as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 30s.-32s. per 448 lbs. Black Sea, ex-ship, 15s.; Danubian, 15s.; Persian new, ex-ship, 14s. 3d. per 400 lbs. English new malting, 6s. 3d.-13s.; feed, 5s. 3d.-5s. 9d. per 112 lbs.

OATS.—Weak. Plate landed, 14s. 3d.; ex-ship, 13s. 3d.; Chilean tawny, ex-ship to arrive, 14s.; white landed, 21s.; German landed, 22s.; mixed Canadian feed, ex-ship, 11s. 9d.; landed, 12s. 9d. per 320 lbs. English new, 5s. 4d.-5s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Sept. 13	Cwts. 183,823	Cwts. 309,008	Cwts. 266,589	Cwts. 233,852
2 weeks to Sept. 13	313,031	538,943	445,050	511,960
Average price of English wheat per cwt.	s. d. 7 3	s. d. 9 11	s. d. 9 2	s. d. 10 8

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.						
Sept. 6	Cwts. 129,208	Cwts. 33,625	Cwts. 31,959	s. d. 7 8	s. d. 8 4	s. d. 6 0
Sept. 13	183,823	96,724	36,250	7 3	8 3	5 11
Sept. 11, 1926	389,336	124,119	71,527	11 2	12 9	8 6
Sept. 10, 1927	202,924	127,318	54,400	11 2	13 8	9 2
Sept. 15, 1928	266,589	284,109	79,428	9 2	12 4	9 0
Sept. 14, 1929	309,008	206,624	52,131	9 11	11 5	7 11

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Sept. 18, 1929.	Jan. 2, 1930.	Sept. 3, 1930.	Sept. 10, 1930.	Sept. 17, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	150½	148½	83½	83½	80½
Chicago (No. 2 Winter) —Cents per 60 lb.	116½	131½	130½	82½	83½	83½

The visible supply of wheat in Canada, at 73,779,000 bushels, shows an increase on the week of 23,650,000 bushels. Supplies a year ago stood at 64,792,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—There has been a slight progress in the export trade of South Yorkshire, Notts and Derbyshire, but the position remains extremely unsatisfactory. Industrial consumption of fuel continues to shrink and there is little or no forward buying of furnace coke. Prices are unchanged, except that bargains can be had in secondary and small sorts. The advance in prices has checked sales of house coal. Best sorts have been increased as much as 5s. per ton.

Our Glasgow correspondent writes:—There has been little change in the coal trade position. With the exception of prime splint coal in Lanarkshire, which is moving off steadily, all classes of large coal are freely offered and the collieries are shading their prices when offered definite business. Nuts are well maintained on the whole, although there is some irregularity as regards the smaller sizes. To-day's prices for the shipping trade are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 13s. 6d.; splint best, 16s.; splint second, 14s. 6d.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 13s.; doubles, 12s. 6d.-13s.; singles, 12s.; pearls, 11s. 9d.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 9d.; third-class steam, 10s. 9d.; trebles, 13s.-14s.; doubles, 12s. 6d.-13s.; singles, 11s. 3d.; pearls, 11s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 9d.-trebles, 13s.; doubles, 12s. 9d.; singles, 11s. 6d.; pearls, 10s. 6d.-10s. 9d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s. 3d.; pearls, 11s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Business on the Cardiff coal market this week has again been very depressed, and owing to the decreased volume of trade, the Great Western Railway Company have decided on the drastic course of shutting down temporarily the twelve tips in the Cardiff East Dock, seven at Barry, two at Newport and one at Port Talbot. It is probable that this action has been precipitated by the recent order of the Ministry of Transport further reducing the charges for the tipping and weighing of coal. It has been estimated that the two decreases have involved a loss of place since October, 1929, in these charges have involved a loss of revenue to the company of over £200,000 per annum. Contract inquiries in respect of supplies over 1931 continue exceptionally quiet, but it is pointed out that the advantage of arranging forward a statutory scheme involving minimum prices as well as output regulation. During the week the supply of tonnage has been insufficient to cope with colliery outputs, with the result that there has been much irregularity of working, while some pits have been permanently abandoned. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rully culm, 11s. to 11s. 6d.; foundry coke, 30s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 26s. to 28s. 3d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Although the slight improvement in business noticeable in the iron and steel markets at the end of August has not continued, the gain then made has been maintained. Merchants and consumers in all branches of the trade continue to buy cautiously and show a conservative attitude in undertaking commitments. The belief seems to be growing that prices have touched bottom, and one of the brighter features of the market is that there has been some inquiry for forward delivery. This has been particularly noticeable in the pig-iron market, in which the closing down of furnaces has considerably reduced output, and has enabled the producers to dispose of some of the heavy stocks which had accumulated. Consumers apparently realise that in some districts a revival in demand might find the market somewhat short of material, and as a consequence are more inclined to consider buying forward. The position in the semi-finished steel department has been rather confused since the breakdown of the European Steel Cartel's price-fixing scheme. Prices at first fell heavily, but have since become firmer. The British makers continue to receive a fair amount of support from the home consumers, but are experiencing keener competition from Continental producers than for some time past. The demand for finished steel is irregular. The general attitude of all buyers in this department is one of caution. Export business has improved somewhat from the stagnation experienced during August, but is still far from satisfactory.

Our Middlesbrough correspondent writes:—A fair business is passing in Cleveland iron with home consumers, and the tone of the market encourages the feeling that business will gradually widen out. This is supported by the improved statistical position, and according to which the current production is being absorbed, and the some reduction in the stocks held by makers is taking place. The business transacted at Tuesday's weekly market was of moderate extent and practically all for home consumption. Prices were unchanged, viz.: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d., and No. 4 forge, 62s., f.o.b. or f.o.t. In hematite new orders are coming to hand for fair quantities, and there are more on export account than recently. Deliveries against old contracts are on a better scale, so that altogether stocks are being reduced, which is a satisfactory feature. Makers are expecting an increased demand in the near future, and adhere to 71s. for mixed numbers for delivery over a month or two, but for very prompt delivery it would be possible to obtain slight concessions. Shipments of pig iron are poor, the total to the 15th inst. being only 6,968 tons against 8,770 tons for the same period in August. In the manufactured departments no new contracts of importance are reported, but several are under negotiation, from which it is expected some business will result. In the meantime, several mills are working very irregularly. Continental billets and sheet bars are being offered on this market at much below local prices and some business has been done. Prices for local finished steel, &c., are unchanged from last week. The ore market is still idle, and imports against running contracts are on a much reduced scale this month. Best rubio is nominally unaltered at 19s. c.i.f., and the current freight Bilbao-Middlesbrough, is about 5s. 6d. Coke for prompt delivery is offering at 16s. 6d. delivered furnaces, but for delivery ahead 17s. to 17s. 6d. is asked according to period. The number of furnaces in operation in the district remains at 25.

Our Sheffield correspondent writes:—The expectations of a revival of trade in the iron and steel industry this month have not so far been realised and the position is very disappointing. In a few instances orders are coming in rather better, but, taking things as a whole, there is no improvement. In fact, the steel trade has never been worse and the output in August was the lowest recorded for many years. Here and there in the lighter and finished sections

one hears of briker conditions and the position and outlook for stainless steels and the more modern special steels is regarded as favourable, but these materials are not bought in large quantities. The worst of the depression is found in semi-finished steels. Many of the local open-hearth furnaces are standing. Orders for railway steel, alike from overseas and at home, are sluggish, and firms here are feeling the effects of the severe economies which are being practised by the British railways. The present month has brought additional business for some classes of hand tools. Australian buying has been reduced to the lowest level ever recorded and stocks of essential commodities in the Commonwealth are approaching exhaustion. Prices are unchanged but weak.

Our Glasgow correspondent writes:—Dulness still persists in the iron and steel industries in the West of Scotland. Purchasers continue to buy only small parcels to meet immediate needs. Competition from the Continent for semis is still keen but buyers here are exercising considerable caution and, considering the low prices offering, purchases are not extensive. The principal orders reported during the last few days are those placed by the Soviet Government for mining machinery with the engineering firms of Messrs Mavor and Coulson, of Glasgow, and Messrs Andrew Kyle and Company, of Galston. There is no fresh development in the tube trade and sheet makers are still finding export business poor.

Our Cardiff correspondent writes:—Slightly improved conditions have existed this week in the tinplate trade, and a fair amount of merchant business has been arranged on the basis of from 17s. 6d. to 18s. per basis box in anticipation of a reduction in the makers' present minimum price of 18s. This expectation of a lower minimum price is based on the recent decline in the prices of raw materials, and particularly tin and scrap. Local steel bars are unchanged at £6 per ton and foreign bars at £4 10s. per ton. Imports of foreign materials continue fairly active, and there are now only two blast furnaces in operation in South Wales compared with nine at the beginning of the year. Galvanised sheets continue a quiet market on the basis of £11 17s. 6d. per ton, and it is stated that makers are contemplating the reconsideration of their present quotations.

OTHER METALS.

TIN.—Market opened with a generally quiet tone and prices gave way under selling pressure, but with firm Eastern cables and a better demand, values subsequently marked some improvement. Standard cash changed hands at £133 12s. 6d. to £134 5s. and £134 2s. 6d.; three months, £135 7s. 6d. to £136 and £135 12s. 6d. In the East, sales were reported at £137 10s. to £138 7s. 6d. per ton c.i.f. terms.

COPPER was in fair request, but offerings proved in excess of market capacity and values moved in buyers' favour. Standard cash sold at £47 2s. 6d. to £46 1s. 3d.-£46 3s. 9d., and three months £46 18s. 9d. to £46 3s. 9d. and £46 5s. per ton.

LEAD quiet and easier on liberal supplies. Good soft foreign pig, September, sold £18 5s. to £17 11s. 3d.; October, £18 2s. 6d. to £17 11s. 3d.; December, £18 2s. 6d. to £17 10s.; January, £18 1s. 3d. to £17 10s. per ton.

SPELTER in poor support, but holders refrained from pressing and market fairly steady. September sold £15 17s. 6d. to £15 18s. 9d.; November, £16 3s. 9d.; December, £16 6s. 3d. to £16 5s. per ton.

ALUMINIUM steady. Home trade, £95; export, £100 per ton.

QUICKSILVER maintained. Spot, £22 2s. 6d. per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 18s. per box, f.o.b. Swansea.

ANTIMONY quiet and barely steady. English regulus quoted £38 to £45; Chinese ditto, spot £27; September-October, £26 10s.; crude, September-October, £15 5s. per ton c.i.f.

ANTIMONY OXIDE, September-October, £20 10s. ton c.i.f.

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low. Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £74,000,000. Annual Income £10,500,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY Established 1849. 75-76 King William St., London, E.C.4. D. E. WALKER, Manager for the United Kingdom.

ANTIMONY ORE, 60 per cent. September-October, 4s.; 50 per cent. ditto, 3s. 6d. per unit c.i.f.

WOLFRAM dull and easier: Chinese, spot 18s.; September-October, sellers 18s.; buyers 17s.; Burmese, spot, sellers 17s.; September-October, 17s. c.i.f. per unit.

THE COTTON TRADE.

LIVERPOOL: September 17th.

For the past week the market has been steadier, but very little business has been transacted. There has been no change in the weather conditions in the cotton belt, improvement in the East offsetting any deterioration in the West. The United States figures of consumption for August were 352,000 bales, against 379,000 bales last month and 558,000 bales in August last year. There is no pressure by the South to sell, for, whilst the ginnings are fairly heavy, farmers are reported to be holding for the co-operative associations. There is plenty of inquiry from spinners, but not much business is going through. A few long-distance contracts have been made, but neither spinners nor merchants seem anxious at present to encourage this. Spot sales for the week 11th to 17th (inclusive) are 25,000 bales, of which 8,670 are American, 5,750 Brazil, 1,160 Argentine, 4,750 Peru, 3,050 Egyptian, 1,450 African, 1,600 East Indian, and 580 sundries. Imports for the same period are 14,387 bales of which 8,202 bales are American, 50 Argentine, 2,832 Peru, 481 Egyptian, 900 African, 1,760 East Indian, and 162 sundries. Quotations to-day are: American Middling, 6-20; Egyptian Sakel, 10-50; Uppers, 8-52; Brazil Fair, 6-00; Peru G.F. Smooth, 6-60; West African Middling, 6-25; and East African, 7-20.

MANCHESTER, September 17th.

Although the tone of the market rather tends to improve, and spinners and manufacturers are encouraged by the larger inquiry, actual business is slow in broadening and contracts are still for very limited quantities. Nervousness with regard to future prices continues, and uncertainty exists as to conditions in markets abroad. In cloth for India there has been an increased inquiry, and the trade outlook is rather better. Cables have been received from Calcutta and even Bombay asking for prices to be wired out, but so far very few bids have come back. Some fair lines have been booked in light fabrics for Madras. Reports have come to hand of larger clearances in China and a few more transactions have been put through in white shirtings, whilst for Hong Kong fancies have been sold more freely. Operations for Egypt, South America and the Continent have been rather featureless, and home trade buyers remain cautious. It is still impossible for manufacturers to restart idle looms. The general inquiry in the yarn market continues rather healthier and moderate sales have occurred in American counts. A slight improvement is taking place in the Egyptian yarn section, certain spinners having booked orders more freely.

THE WOOL TRADE.

Our Bradford correspondent writes:—Interest this week has centred mainly on the raw material markets. In Sydney the sales opened in an encouraging manner, not the least satisfactory feature being the good clearance effected; in fact, about 95 per cent. of the wool was sold. There was good general competition in which Continental and Japanese buyers made their presence felt, but Yorkshire buyers were by no means silent. Based on cable quotations from Sydney, Bradford prices of tops are very low, and if the sales in the primary markets continue on the opening level, efforts will have to be made to bring prices of tops more into line with the cost of production. In London, also, wool has sold this week rather better than many traders expected. Bradford and French buyers operated fairly freely in merinos on the opening day, and it soon became obvious that most owners were willing to sell greasy and scoured merinos on something like the July basis of values. Some really super wools made practically the prices ruling at the last series, but declines were recorded in most of the others. Ordinary merinos, for example, were about 5 per cent. down, with the same percentage decline shown in Queensland and Victorian scoureds. It was noticeable that seedy or burry sorts were neglected. In fine crossbreds there was a fall of not more than 5 per cent., though medium sorts suffered to the extent

of anything from 7½ to 10 per cent. About 5 to 7½ per cent. would cover the decline in scoured Australian crossbreds, and 10 per cent. in New Zealand, though few of either description were sold. Slips revealed a decline of from 7½ to 10 per cent., and both greasy and scoured crossbred lambs were about 10 per cent. down. In Cape wools greasy combings and scoureds were about 5 per cent. cheaper. The effect on the Bradford market has not been very pronounced, but merino topmakers are adopting a firmer attitude in view of the difficulty likely to be experienced in replacing. It is recognised that Bradford is still below the raw material markets, and there seems to be a growing impression in some quarters that wool is not likely to be much cheaper. Demand for tops however, is "spotty," and weak sellers both in tops and yarns, undermine the market and make it exceedingly difficult for others to realise reasonable rates. The liquidation of stocks is proceeding under pressure from the banks in some cases, and this has a disturbing influence. It is apparent, however, that most traders have more confidence in merinos than they have in crossbreds, and fashion in piece-goods is decidedly in favour of the finer and soft handling wools which are now relatively cheap.

THE JUTE TRADE.

DUNDEE: September 17th.

After a considerable decline a steadier tone has developed in the raw jute market. "Bears" have now become much more reserved, and are unwilling to discount the Calcutta prices further, especially in regard to Daisee fibre, which has all along been the most depressed. Recently the Calcutta mills have been buying large quantities of jute, and so far this season have bought about three million bales, or more than half of their requirements for the whole season, while shippers also have been buying on a larger scale at the low prices ruling. There is a rumour that the Indian Government is to be approached with a view to inviting support for the ryots, or jute growers, in order to enable them to withstand the continued fall in prices of raw jute, while there are statements made that the export tax might be increased. Daisee assortment has been sold down to £14 for October-November shipment, but now sellers are quoting £14 10s. lowest, with threes at £14 and fours at £12, the latter having been done as low as £11 12s. 6d. Tossa assortment rules at £16 10s., threes at £16 and fours at £14 15s., October-November. First Marks and Lightnings remain unchanged from the lowest at which business has been done. The respective prices are £19 and £17 for good marks. The Calcutta goods market fails to be supported, so that there is a tendency for prices to decline. Stocks of goods throughout the world are very heavy and, until these are taken up by consumers, it is not expected that values can improve. This week, the Indian mills are all idle in accordance with their policy of working one week less per month in order to reduce output and stocks. The agreement in this respect goes on until the end of March next year, but there are indications that this agreement might be extended. Business in jute yarns in this market continues of small importance, owing to the poor demand for jute cloth. The value of common 8 lb. cops is steadily held at 2s. and 8 lb. spools at 2s. 1d., but twist is lower at 4½d. for 3-ply 8 lb., and sacking yarns are easier at 2½d. for 24 lb. weft, and 3½d. for 8 lb. chains. Heavy rove is reduced to £27 for 48 lb., but the 200 lb. quality is maintained at £18. Fine yarns are very quiet, and carpet qualities are entirely neglected. Orders for jute cloth are still of small dimensions, and prices are rather lower. The value of 10½ oz. 40 in. hessians is 3d. to 3½d., and for 8 oz. 2½d. to 2½d. is wanted. The latter prices are low in comparison with the heavier weights. Linoleum hessians are dull and nominal, but inquiry for heavy goods, especially sacking and tarpauling, portends the placing of more orders in this branch. Prices for Calcutta hessians have fallen to 19s. 3d. for 10 oz., and 14s. 9d. for 8 oz., September; 19s. 6d. and 15s. respectively, October-December; and 19s. 9d. and 15s. 3d. for January-March.

HIDE, LEATHER AND ALLIED TRADES.

The upward trend of prices for hides and skins at the auctions held at Manchester on Tuesday suggests a considerable improvement in demand. However, there is a feeling that the forcing of prices beyond what the present state of the leather industry can stand will only result in a setback in values. Owing to this, not a few in the hide trade view the possibility of further considerable advances as remote. In the South American market regular business has been done with the United States and Europe in frigorifics, parcels of Argentine ox having changed hands on the basis of 6½d., while 6½d. has been realised for cows. The River Plate market for drys has been fairly active. Parcels of B.A. Americanos have changed hands at 8d., and M.V. Americanos at 8½d. An active demand has been experienced for African hides and sales of Capes 7½d. and 8½d. for the same selections of dry-salted 20/30 lbs. Enquiry for sole leather has again been of a satisfactory character, and fair quantities have been bought, especially by the repairing section at slightly firmer prices. Manufacturers of footwear have accounted for moderate sales of dry hide bends, and there seems to be more tendency for this branch of the trade to place orders for future delivery. Offal is not a good market. Generally speaking, the position is considered sound, consumers for the most part have been working on very small margins of stock, and with the higher prices now being made for hides, there must of necessity be a readjustment of leather values. The upper leather section has also experienced a better call for most descriptions, especially for willow calf. Curriers are still short of orders.

OVERSEAS PRODUCE.

SUGAR.—The market remains in the same quiet and generally featureless state as that existing for some time past. Continental crop conditions are favourable, and a large production is indicated. The condition of the crop in the United Kingdom is less good, owing to a lack of sunshine, and previous estimates may have to be modified. Raw refining sugars meet a slow market, but prices are steady. Terminal sections opened steadier, but soon became quieter. Moderate transactions in raw include December, 4s. 8½d.; January, 5s. 5½d.; March, 5s. 9d.; May, 5s. 11½d.; August, 6s. 1½d. Cuban 96 per cent., October sellers, 5s. 4½d. c.i.f. U.K. Czecho granulated ready to the U.K. 7s. 9d.; November-December, 6s. 9d. f.o.b. Hamburg. Cuban receipts last week cabled 36,450 tons against 24,230 same time last year, exports 75,480 against 70,560, stocks 1,231,490 against 630,330. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending September 13, 1930, amounted to 117,558 tons against 137,070 last year.

COFFEE.—With sustained inquiries, both on home and export account, general stability characterised the market, with Kenya qualities marking a decided advance. Quantities of new crop so far to hand have sold readily. Costa Rica is in small supply. Some mountain-grown Jamaica fared well.

COCOA.—Only retail transactions occurred on the spot at easy prices. Forward positions, after a rather sharp decline, became irregular. Accra F/F, October-December, London contract, sold 27s. to 28s. 6d.; Liverpool, 28s. f.o.b.; G/F, October-December, Continent, sold 29s. to 28s. 6d. c.i.f. Terminal, September, sold 30s. 7½d. to 30s.; October, 29s. to 30s.; December, 30s. to 29s. 3d.

fraction under 2 per cent., and although the three months' bill rate was generally given as $2\frac{3}{4}$ per cent., a fair amount of business has lately been done at a level 2 per cent. Rates such as these leave no margin at all to bill brokers, who obtain the bulk of their money from the clearing banks, while the banks in their turn are earning far less than their usual rate of profit on their bill holdings. Unfortunately, it is difficult to see how rates can improve, so long as money remains so plentiful, and as the abundance of money is due to the depressed state of trade no early rise in rates can be expected. It will be recalled that last week the Bank's attempt to stiffen up rates by selling some of its bills proved a complete failure, and while the gradual increase in the volume of Treasury bills may eventually have a slight effect, rates are likely to remain low for some time to come.

* * * *

This week £496,000 of fine gold arrived from the Cape, of which £250,000 had already been sold forward to Paris. Of the balance, £60,000 was taken by India and the trade, and the remaining £186,000 was bought for Paris at 85s. 0½d. per ounce. Paris also withdrew standard gold from the Bank on the first four days of this week, the total sum withdrawn amounting to £753,477. Apparently these shipments were arranged at the end of last week, when the franc exchange fell to Frs. 123.67, and although the rate has subsequently risen it has not been practicable or profitable to cancel the arrangements with the refiners.

* * * *

The key to recent exchange fluctuations and gold movements is to be found in the reactions following the German elections. For a few days at the beginning of the week there was an incipient flight from the mark, the French withdrawing funds, and other money going to Holland. This accounts for the recent strength of the franc and florin and weakness of the mark, especially as the Reichsbank had been meeting demands upon it by sales of sterling. Fortunately, the Reichsbank responded to the emergency by ceasing to sell sterling and instead shipping gold both to Paris and, it is believed, to Amsterdam. The exchanges at once responded, and by Wednesday the mark was back at Mk. 20.41, and confidence had been partially restored.

	Sep. 4, 1930.	Sep. 11, 1930.	Sep. 18, 1930.	Sep. 25, 1930.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount / Call	1	1	1	1	1½ (May 1, '30)
Houses / Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2	...

This week's Bank return revealed few notable changes. Public deposits were £4,376,714 higher, and bankers' deposits declined by £1,133,866; but, as Government securities rose by £2,290,000, it would seem that the Bank has discontinued any attempt to bring pressure on the market by curtailing resources. Note circulation underwent a further contraction of £1,998,923, and the "proportion" was maintained at the satisfactory figure of over 55 per cent.

NEW YORK.

A favourable impression has been created by the recent increase of 6 per cent. in debits of individual bank accounts outside New York City. This is regarded as a sign of improving trade. The New York Reserve Bank has denied the report, inspired possibly by Dr. Luther's visit, that an international bankers' conference has been arranged, but it is still believed that such a conference will take place late in the year. Money remains very easy and plentiful. Call rate is still 2 per cent., while the open market discount rate on 90-day bankers' acceptances is only $2\frac{1}{4}$ per cent.

THE STOCK MARKETS.

The stock markets were overshadowed by political portents and the news of a further "break" on Wall Street. Gilt-edged advanced sharply on Wednesday. German loans slumped, recovered and relapsed, closing well below pre-election prices. Home Rails were weak on uncertainty as to the impending wage negotiations and poor traffics, but among foreign rails "Bags" were in demand, and Pacific advanced on the dividend announcement. Industrials were mainly quiet with business restricted. United Molasses declined on the passing of the interim dividend. Rubber shares trended downwards, but tea shares were well maintained. Oils fell on the cut in petrol. Mining shares recorded further falls, Congos relapsing to £12, while London Tin was marked down on the passing of the preference dividend.

THE COMMODITY MARKETS.

Although there has been a slight improvement in best qualities, the demand for coal shows no signs of expansion. Activity in the iron and steel industries continues on a low level, and the improvement in the pig-iron section has not been maintained. The low prices of raw cotton and raw wool have not yet stimulated the demand by manufacturers. Hides and leather are firm. Stocks of timber are still large, but it is hoped that the decline in imports will result in an improvement in this trade. Wheat prices show a sharp decline.

THE FOREIGN EXCHANGES.

Business continued quiet in the exchange market, and temporary improvements favourable to sterling in the principal exchanges were not maintained. New York, after falling to 4.85½, improved at the close to 4.86, as against 4.86½ a week ago. Paris touched 123.85, but was in demand again at 123.78 later. Demands for sterling took the Belgian exchange to 34.86½, representing a difference of ½ cent. in favour of sterling on the week. Milan improved to 92.80, while heavy German demands for guilders took the Dutch rate quickly to 12.04½ on September 22, although the close was slightly better at 12.05½. Switzerland continued steady at 12.05½, but Spanish pesetas displayed considerable fluctuations, showing a slight gain on the week of 30 cents at 45.20. The German exchange was subjected to heavy pressure by Continental sales, and the Reichsmark depreciated to 20.43 on 23rd inst.; a better tone was evident towards the close and a rally to 20.41 occurred. The Scandinavian exchanges showed no noticeable change, while the Eastern exchanges continued steady at last week's levels. Buenos Aires, however, depreciated by ½d. to 40.4, but Rio was ½d. better at 5.8. In the forward market dollars were cheaper at par for one month and ¾ cents premium for three. Paris forwards continued at last week's small premium. Forward belgas were in good demand at premiums of 1½ centimes for one and 3½ centimes for three months. Milan forwards were strongly offered at discounts of 16 and 40 centesimi respectively. Forward pesetas moved to discounts of 2 and 5 centimos for the one and three months' positions. Forward guilders, with the fall in the spot rate, moved to discounts of ¼ and ½ cents, while forward Reichsmarks were at one time unsaleable at discounts of 6 pfennigs for one month and 11 pfennigs for three. These later steadied to 3½ and 9 pfennigs for actual business. After a relapse to 16½d. owing to Chinese selling silver displayed a slightly firmer tone, and closed 7d. under the week's highest price at 16½ for both spot and forward positions. Hong Kong was 1s. 4d. and Shanghai 1s. 7½d.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

THE IMPERIAL CONFERENCE.

In one respect there is a similarity between the circumstances which surrounded the last Imperial Conference in 1926, and those which face the Dominion delegates as we welcome them to our shores to-day. On both occasions our visitors found the Mother Country plunged in gloom. Four years ago the aftermath of the general strike and the prolongation of the coal dispute were impeding a long-hoped-for recovery; while to-day Britain, like some of the countries from which the delegates come, is in the clutches of deep economic depression, and many of her public men are casting round indiscriminately, if not despairingly, for a quick patent cure for the ills of the body politic. But there the similarity comes to an abrupt end. The outstanding tasks of the Conferences of 1926 and 1930 are as different from one another as they could well be. High constitutional politics dominated the former; practical economic problems will engage the latter. The Conference of 1926 will live in history for the decisive step taken in the evolution of inter-Imperial relations. When it opened, grave doubts existed in more than one Dominion whether membership of the British Commonwealth was really compatible with perfect national freedom and equality of status. When it ended, the greatest doubter of all, General Hertzog, was able to say that the question of Dominion status had been settled for ever. The real meaning of the work of that Conference was that British hegemony in the Commonwealth—a stage in itself painfully and slowly evolved out of sovereignty—had passed peacefully into a free and equal partnership. Thus were the prophets confounded who had predicted that the niceties of pride and status would disrupt the slender, fragile bonds of a loose-knit Empire.

No major constitutional or political problems confront the Conference of 1930, and with these out of the way the assembled statesmen will be able more freely to discover and pursue objects which are common to their interests in the economic field. It is essentially in that field that the work of the present Conference will lie. As the Prime Minister indicated in the House of Commons towards the close of the Session, such "policy" questions, for instance, as that of limitation of armaments and its relation to security of Empire routes, and machinery for the settlement of inter-Imperial disputes will come up for discussion. But there can be no doubt that both in the full-dress debates and in the work of the sub-committees practical economic questions will occupy the centre of the stage. No member of the Commonwealth has escaped the effects of the world depression. All want more markets and more trade for the various commodities which they produce. There is a big field for exploration in the vast territories of the Empire, and we trust it will be explored with determination. But the explorers will not, we are convinced, achieve satisfactory results unless they first school themselves to the observance of the limits of practical politics. There are those in this country who believe that it is possible to create an Empire fiscal unit or to divert the great stream of British exports to Imperial markets; there are those who even harbour dreams of huge migration schemes which are more chimerical than ever to-day, when unemployment touches every Dominion; there are those in the Dominions and at home who believe that members of the Commonwealth can persuade each other to reverse fiscal policies and surrender long-cherished ambitions. If the Conference were to start from any such angle as these, it would run straight up against a brick wall and break up without accomplishment. But, in spite of the vigorous efforts put forth in some quarters to lead the Empire statesmen on the trail of the Chimera, we do not believe that they will follow.

If they will avoid the spirit of megalomania they will find abundant practical work ready to their hands. Let them start from the common fact that the Empire and every one of its units want more trade, and that not one

of the units is ready for spectacular changes of economic policy. There remains enormous scope for establishment of common interests, and the devising of machinery for their satisfaction; for finding methods of drawing closer together in mutual knowledge and consultation. In fact, the great opportunity of the Conference which meets next week is to establish the means for regular economic liaison work for the Empire very much on the pattern of that which functions at Geneva for a larger field. Surely within the Empire such work has far more favourable opportunity, for it will be inspired by similarity of outlook, and will not be hampered by so great a diversity of interest as is, of necessity, the work of the League. Moreover, the time is very ripe for such co-operative effort. The units of the Empire have achieved not merely political equality but full economic manhood, and with that manhood must come increasingly a realisation of the economic interdependence of nations, not merely British nations, but of all the great nations of the world. We may expect, therefore, that as Conference succeeds Conference, all economic problems, whether they be of tariffs or communications, of marketing, of finance, of agriculture or what-not, will be approached with an ever-increasing breadth of vision.

It is high time, then, to set to work upon the machinery of co-operation. Most opportune is the lead given to the Conference in a joint memorandum by the accredited representatives of British Capital and Labour—the Federation of British Industries and the General Council of the Trades Union Congress. The gist of this memorandum, which arises out of the separate but harmonising reports previously issued by the two bodies, is that "the better economic organisation of British Commonwealth of Nations" demands permanent consultative machinery, whose establishment in the form of a Secretariat should be preceded by an Empire Economic Conference on the lines of the World Economic Conference of 1926. What is wanted, the memorandum emphasises, is not "spasmodic effort" but "permanent machinery." To this line of thought and to such proposals we hope the Conference will give unstinted attention, for in a sense other discussions will be of a secondary and subservient interest. Important individual subjects will not be lacking on the agenda, and, as the Prime Minister has said, they will include the development of trade by trade commissioner services and publicity, the work of the Imperial Economic Committee and the Empire Marketing Board, agricultural co-operation, industrial research, transport and communication. All these are questions of immediate practical importance, but discussions on such problems at each successive Conference would be infinitely more fruitful and valuable if, in the interval between the Conferences, a permanent and expert body were to have them under unceasing consideration.

There is another subject, listed by the Prime Minister for discussion, which, when it is reached on the agenda, will evoke the liveliest interest, both here and in the Dominions. That is the question of establishing Import Boards, or, to use Mr MacDonald's words, "bulk purchase and price stabilisation." The idea is one that has greatly attracted some sections of the Labour Party, including certain members of the present Government. But it is one which bristles with difficulties and dangers—and bristles all the more, if discussions are to proceed upon the assumption that British "bulk purchases" of food and raw materials are to be confined wholly or in any specified degree to the products of those countries which form the British Commonwealth. Mr E. F. Wise had the teachings of practical experience behind him when last session he warned the House of Commons that if bulk purchase boards are to operate to the public advantage, the field of their operations must know no hampering restrictions. Equally serious difficulties beset the "quota system" recently advocated, in the case of

wheat, from the Conservative as well as from the Labour ranks. It is much to be hoped that the Conference will not allow itself to be stampeded by the superficial attractions of far-reaching schemes of this sort, but will at least insist upon a thorough investigation as a precedent to action. This remark is one that we might well apply to the whole work of the Conference. If it pursues the spectacular its performance will inevitably be nugatory. If it eschews alluring improvisation and sticks to its humdrum last of practical organisation, seeds of great results may be sown.

It has been said that the last Imperial Conference brought into being the Third British Empire. *Divide et impera* was the motto of the first; *Primus inter pares*, of the second; *liberté, égalité, fraternité*, of the third. But with the fateful Indian Round-Table Conference looming so closely ahead we cannot forget that the evolution of the Empire is not yet complete. Some day there will be a fourth British Empire in which partnership will have been extended to many a race and creed. India, British India and the Native States will be represented at the Imperial Conference, and their presence will be a reminder of the essential fact that the future of India is not merely a British problem or an Indian problem, but a problem of close and urgent importance to the Empire as a whole. Let us hope that coincidence in the same autumn of the assembly of Empire statesmen and the Anglo-Indian discussions may prove a happy one, and that from the first helpful influences may be wafted into the second.

THE LEAGUE AND GOLD.

EIGHT years ago the Genoa Conference recommended the nations of the world to put an end to exchange chaos by linking their currencies to gold as rapidly as possible. It added, however, that when this had been done, it was important that efforts should be made to prevent "undue fluctuations in the purchasing power of gold." The return to the gold standard was achieved by one country after another in the ensuing few years, and in the opinion of the World Conference of 1927 the greater stability of foreign exchange rates was one of the main reasons for the increase in international trade which was then beginning to take place. A downward drift of prices, however, which was already becoming apparent, brought into prominence the importance of the second part of the Genoa Conference recommendations. In 1928 the Advisory Committee set up in connection with the World Conference recalled the fears entertained at Genoa of the dangers that might arise from large movements in price level and the detrimental effects upon industry, agriculture and conditions of employment that would follow, and invited the Council of the League to call the attention of its Financial Committee to the subject. This was followed by the setting up of an international Gold Delegation to explore the problem. The urgency of the problem committed to it has been emphasised in the meantime by the continued downward drift of prices culminating in the present slump.

The first interim report of the Delegation has been issued this week and is summarised on a later page. It is based upon a collection from the most authoritative sources of statistics and estimates of gold supplies and requirements, and presents in terse and clear language a comprehensive picture which suggests that there is a real danger of disequilibrium between the supply of gold and expanding monetary requirements due to the normal increase of the world's production and trade, and that this disequilibrium will grow unless steps are taken to prevent it. The report includes some preliminary observations as to measures that might be taken for this purpose.

Sceptics have, from time to time, pointed out that some comparatively recent estimates of future gold production, like those of coal and oil resources, have constantly been falsified by the event and proved to be under-estimates. But the Delegation have been alive to this experience and for the purposes of exposition have adopted, not the more gloomy estimates from official, or

semi-official, sources, but the rather more optimistic figures of Mr Kitchin. It has also been urged that the output of gold should increase if its value rises, that is to say, if wages and other prices included in the cost of producing gold increase. But according to the Delegation the available evidence seems to show that gold production is remarkably insensible to changes in the price level. In our view there is no legitimate reason to distrust as overdrawn the account given by the Delegation, which had at its disposal the best expert opinion in the world, and is itself composed of a highly-qualified body of bankers and economists. We do not, in fact, anticipate that there will be any serious challenge to the estimates adopted by the Committee.

What the world's requirements are likely to be depends upon the currency and credit systems imposed by legislation on banking practice. What action is needed to harmonise these requirements with the probable supply without involving a violent disturbance of the price level cannot be so categorically laid down. Clearly, there is no problem more suited to be considered, and, if necessary, dealt with by common agreement between the nations, than this question of the monetary standard common to them all. It may at times appear in the course of the world's economic history that one nation may benefit at the expense of another; but recent events have emphasised once again that, even though this may for a time appear to be the case, the welfare, at all events, of the great trading nations, is bound up increasingly with that of each other. This is due to increasingly close relations in many spheres, but in none is the connection more intimate than in regard to monetary policy. It needs no extended argument to prove that all have a common interest in the stability of the value of gold; no nation can take action or change its policy in regard to its use of gold without affecting all, and, as the Delegation rightly point out, there is inevitably a tendency among the nations to imitate one another in their monetary legislation, since national credit to some extent depends upon conventional ideas as to the relation between gold reserves and a country's monetary system.

The present document, therefore, has a great international significance in two respects. In the first place it puts forcibly before those concerned in all nations what may fairly be regarded as an agreed view of the world's gold situation. Any action that any nation may take hereafter must be taken in the light of the conditions here portrayed, and have regard to the effect of its actions on the situation as a whole. A common agreement in diagnosis of a situation is, in this as in other matters affecting many nations, the first, the most important, and sometimes even the only necessary step towards harmonising international policy. The setting up of the Delegation would have been justified even if its work had gone no further than this. But the report also foresees that international action, or perhaps we should say co-ordinated national action, will become necessary. It is true that many of the suggestions of the Delegation relate to local action, but their most important observations concern the suggestion that, as trade and commerce expand, it may be desirable to modify present standards as regards the ratio of gold cover to notes and sight liabilities. This minimum is in normal times never used; its function is to establish confidence, and its amount is largely conventional. Obviously any reduction of these ratios must be very gradual and only proceed strictly according to the necessities of the gold situation; but the Delegation are clearly right in thinking that if the gold basis of the world's currencies proves insufficient for its expanding trade without involving a fall in the price-level with all its undesirable consequences, some such action as that proposed will become inevitable. The only other alternatives are to break the link between the currencies of the world, and to face again the hindrances to economic intercourse involved in fluctuating exchanges, or to attempt the much more difficult and complicated feat of devising some other common standard.

The matter is thus one for consideration by governments and by the monetary authorities of the various nations. So far as the latter are concerned, the Bank

CABLE ADDRESS: NYTRUSTCO

for International Settlements, one of whose primary objects is to provide facilities for banking co-operation, affords a means ready to hand for harmonising ideas. We hope that both governments and banking authorities will not only study the situation presented in this important report, but will express their willingness to co-operate in such steps as may be desirable and practicable to meet the situation here portrayed, and to be guided in their national arrangements in accordance with it. There should, at all events, be no doubt as to the attitude of Great Britain, whose authorities have been so prominent in working for international reconstruction and banking co-operation, whose money market has played so important an international rôle, and whose industrial life is so deeply affected by the general conditions of world trade.

THE LATEST TURN IN CHINA.

"THE Young Marshal" Chang Hsüeh-liang has intervened in the *mêlée* after all. By amicable arrangement, his troops are moving south of the Great Wall, from the three Eastern Provinces of Manchuria, into Hopei, the *quondam* metropolitan province of Chihli, and are taking the province over from the Shansi troops of Yen Hsi-shan, who are peacefully retiring. Thus we have yet another new move in the Chinese war-game. This time it is easy to record the facts, but the interpretation is as difficult as ever.

The least doubtful inference is that the recent attempt to set up at Peking an All-China Government, in rivalry to the Government at Nanking, is acknowledged to have been a failure. The attempt was made, under the aegis of Yen Hsi-shan and Fêng Yü-hsiang, by Wang Ching-wei, the leader of the Left Wing of the Kuomintang Party and the head and front of the Opposition in the Party to Chiang Kai-shek. Evidently, Wang Ching-wei has not met with success in his latest move on the political chess-board. But what about Yen Hsi-shan? His policy and prospects must remain obscure until we learn (if we ever do learn) where his troops that are now evacuating Hopei are going. If they are going west into their native highlands of Shansi, that would indicate that Yen is repenting of his intervention in the general affairs of China during the past two years and is reverting to his old policy of keeping within the borders of his own province—a policy which he pursued with such remarkable success from the beginning of the Chinese Revolution down to 1928. On the other hand, if the Shansi garrisons in Hopei are moving south, that would indicate that Yen is gathering all his forces for an attempt to retrieve his position at the front in Shantung, where he recently met with a serious defeat at the hands of Chiang Kai-shek. If we only knew in which direction the Hopei garrisons were moving, we might divine not only Yen Hsi-shan's policy, but Chang Hsüeh-liang's as well; for it is evident that the

understanding on which the province of Hopei is being transferred to Manchurian hands must have covered the question of where the retiring Shansi troops are to go.

Of Chang Hsüeh-liang it is reported that he telegraphed to Yen Hsi-shan, Fêng Yü-hsiang and Chiang Kai-shek simultaneously, calling upon them to conclude an armistice forthwith, proposing that, during the ensuing negotiations for permanent peace, the three commanders should maintain the military *status quo*, and threatening to take punitive measures against any of the three who would not fall in with his plan of pacification. This *démarche* has the air of being impartial and disinterested, but presumably that is just the common form of diplomacy. The real question is: On which side of the fence is "the Young Marshal" at last coming down?

On the whole, it seems likely that he is coming down on the side of Nanking, and that the golden bridge which he is building for Yen Hsi-shan in Hopei is to enable Yen to retreat and not to assist him to advance. This seems likely when we consider the internal situation in Manchuria, and the direction in which "the Young Marshal's" personal interests require him to travel.

Of course, "the Young Marshal's" first object is to remain in power; and it might be supposed that the most serious threat to his power would be the claim of the Nanking Government to become the central Government of China in fact as well as in name. Chang Hsüeh-liang, however, did not take that view in 1928, when the Kuomintang forces reached the southern borders of Manchuria at the climax of an advance which had carried them in three campaigns from Canton to Peking. In that advance, they had overthrown one warlord after another; and their latest victim had been "the Young Marshal's" own father, Chang Tso-lin, who had found himself compelled to hand over the province of Chihli to Yen Hsi-shan and to retire to the north of the Wall—only to be blown up in his train as it steamed into Mukden. Yet, even in those alarming circumstances, "the Young Marshal" elected to come to terms with Nanking and to hoist the Kuomintang flag. Now, after the lapse of two years, when the union of all China south of the Wall, momentarily, achieved by Nanking in 1928, has unhappily dissolved, Chang Hsüeh-liang has far less reason to be afraid of the Nanking Government than he had then. Accordingly, we may leave this negative consideration on one side.

What is the chief positive consideration in "the Young Marshal's" mind? Like all Governments, democratic or despotic, his *régime* depends upon retaining a certain measure of support from public opinion; and local Chinese public opinion in the three eastern provinces of the Republic in Manchuria is bound to be strongly Nationalist—in the literal if not in the technical sense of the term. For the Chinese in Manchuria, the personal and party politics of China south of the Wall are of little interest or importance in themselves. The Manchurians are colonial pioneers who are glad to have left the problems

and quarrels of the old country behind them. All their energies are bent upon taking effective possession of a new country of vast potential wealth. But in their struggle to make Manchuria Chinese they have not only to wrestle with Nature—with frost and drought and cold. Their most formidable opponents are other human competitors—the Russians and the Japanese. At present, these foreign rivals both have the advantage over the Chinese in Manchuria in technical and in military power. In spite of industrious Chinese railway-building and abortive Chinese railway-snatching, the two trunk railways in Manchuria remain respectively in Japanese and in Russian hands. Japan's military superiority to the local Chinese Government in Manchuria is so evidently overwhelming that there can be no question of the Chinese trying conclusions with the Japanese on this ground for an indefinite time to come. And Russia's military superiority was demonstrated last year to be just as overwhelming for practical purposes. Last year, it will be remembered, Chang Hsueh-liang's Government tried to jostle the Russians out of their treaty rights in the Chinese Eastern Railway by a show of force. The experiment was a disastrous failure. The Russians hit back to the minimum extent necessary to compel the Manchurian Government to reinstate them. "The Young Marshal" lost the greatest possible amount of "face"; and his representatives are at this moment engaged in an aftermath of negotiations with the Soviet Government in which the diplomatic support of Nanking is appreciated. Thus, instead of finding themselves this year with the Russians eliminated and with only the Japanese to deal with, the Chinese in Manchuria are rather further than before from their goal. They are probably reflecting that there is no short cut and that they can only hope to win in the long run by weight of numbers. In numbers lies their strength; for, while the Russian and Japanese populations in Manchuria remain stationary, the Chinese population has been increasing lately at an average rate of something like three-quarters of a million souls a year. This vast annual increase is produced by immigration; the immigrants come from Old China, south of the Wall; and from this point of view the Chinese in Manchuria are not indifferent to the politics of the Old Country. It does not much matter to them what persons or parties exercise authority there. It does matter, very much, that China Proper should be united and at peace, because it is only under these conditions that the whole weight of "the Four Hundred Millions" can be thrown into the scales of international competition in Manchuria until the Chinese scale tips the Russo-Japanese scale into the air. This is how the civil war between Chiang and Feng and Yen presents itself to Manchurian eyes; and, if we place ourselves in this standpoint, we may conjecture that Chang Hsueh-liang's present intervention is designed on the whole for the benefit of Nanking.

While Chinese internal politics churn round in cyclic motion, the revision of China's relations with foreign Powers—other than Russia and Japan—goes steadily forward. It has been officially announced that the rendition of Wei-hai-wei is to take place on October 1st. It is reported that the British Minister in China has exchanged notes with the Minister of Foreign Affairs at Nanking for the rendition of the British Concession at Amoy (a small affair, it is true) on the conditions on which, last year, we "rendited" the Concession at Chiukiang. It is further reported that an agreement has been reached regarding the disposal of the British share of the Boxer Indemnity Fund. Moreover, the Anglo-Chinese negotiations for the relinquishment of extra-territoriality are in train; and the report of a hitch does not mean that the negotiations are likely to break down. Meanwhile, a British trade mission is on its way to the Far East. British business men are as anxious as Manchurian Nationalists to see unity and peace restored in China. If this happy result is to be achieved at last, we are in good posture for taking advantage of it for the mutual benefit of China and Great Britain.

NINE MONTHS' NEW CAPITAL.

THE third quarter of the year is normally slack in London's new capital market; but this year, as last, special influences have been at work to keep new applications down to a very low level. Last year the public had been rendered cautious by the spectacular collapses of new boom flotations of the previous two years. This year the deepening trade depression and the unchecked slide of commodity prices have undermined the public confidence; and we have a combination (curious to the casual observer) of a superabundance of cheap money and a lack of demand for the public financing of enterprise. The present month has actually seen only one public issue of any prominence, and that was for conversion purposes. For the past nine months the total of London's new capital issues is, by a coincidence, almost identical with the figure for January to September, 1929. As will be seen from our first table, foreign borrowers contribute more, and Empire borrowers less, to the total, while the amount taken for employment at home is rather larger:—

NINE MONTHS (JANUARY 1 TO SEPTEMBER 30).

	1913.	1927.	1928.	1929.	1930.
Total new issues	Mln. £. 150.3	Mln. £. 249.8	Mln. £. 290.7	Mln. £. 193.0	Mln. £. 192.5
Destined for domestic use	25.6	171.2	211.7	116.7	123.1
Destined for British possessions	56.9	52.9	52.1	56.3	38.1
Destined for foreign countries	67.8	25.7	26.9	20.0	31.3

These figures represent "new money," and do not take into account any issues or parts of issues made for the purpose of conversion or replacement. The totals for all borrowings including all issues for conversion would read as follows:—(January to September in each case) 1928, £462,585,817; 1929, £230,488,270; 1930, £286,140,421. The amount of new money absorbed by domestic purposes, it will be seen, is very substantially less than in 1928 or 1927. Our next table analyses more closely, in comparison with previous years, the destination of the new capital issued in the past nine months:—

DESTINATION OF NEW CAPITAL.

	First Nine Months.					
	1912.	1913.	1927.	1928.	1929.	1930.
United Kingdom—Government	Nil	Nil	66,853,800	84,311,000	200,000	43,790,000
Other	36,533,400	25,595,200	104,362,000	127,336,400	116,488,200	79,309,200
British Possessions—Government	7,714,900	20,003,800	19,673,100	38,283,000	26,366,100	27,294,800
Other	27,786,900	36,944,200	33,224,800	13,858,800	29,939,200	10,862,200
Foreign countries—Government	35,501,800	56,948,000	52,897,900	52,141,800	56,305,300	38,157,000
Other	9,584,500	24,021,500	3,577,500	10,253,800	3,650,000	21,330,000
Grand total	151,030,700	150,321,400	249,854,400	290,685,200	193,057,700	192,589,200

In the September quarter net sales of National Savings Certificates were £1,850,000, and, in view of the hard times that the country is passing through, it is remarkable that in only one week of the present year—the first week in February—did encashments exceed sales of these certificates. Classed with home Government issues in the past quarter is the Ulster Loan of £2,000,000 5 per cent. stock at 99 issued in July. Otherwise the first item under the heading 1930 in the above table was built up entirely in the first half of the year, and consists mainly of new cash, not directly required to meet maturities, raised by the February issue of 4½ per cent. Conversion Loan. Borrowings for other than Governmental purposes by both Dominions and Foreign countries have been unusually low. How stagnant the demand for new financing by home commerce and industry has been in the past

quarter is revealed by the very last item in our next table, which classifies quarterly figures according to classes of borrowers:—

CLASSES OF BORROWERS. (£ million.)

	Total.	British Government.	Foreign and Colonial Govts.	British, Colonial and Foreign Corpns.	Foreign Railways.	Mines, Finance and Exploration.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1923	271.4	77.7	95.8	4.8	5.4	15.5	7.7	64.5
Total whole year, 1924	209.3	13.7	90.6	18.8	1.0	12.7	2.3	70.2
Total whole year, 1925	232.2	45.6	30.7	25.3	3.8	18.0	19.1	89.7
Total whole year, 1926	230.7	4.7	54.6	49.2	8.2	26.9	6.2	80.9
Total whole year, 1927	355.1	66.0	67.5	37.9	5.4	33.2	11.0	134.1
Total whole year, 1928	369.0	83.8	56.1	26.4	3.1	49.7	8.7	141.2

3rd " "	22.9	3.8	3.0	Nil	0.8	3.0	0.5	11.8

A comparison of the figures in the last three columns for 1928 and for 1930 reveals with great clarity the absence of investment enterprise or of the speculative spirit. The next table carries our analysis of the issues of the nine months into greater detail:—

ANALYSIS OF NEW CAPITAL APPLICATIONS.

Description.	Total First Half-Year, 1930.	Third Quarter, 1930.	Total, Nine Months to September 30,	
			1929.	1930.
British Government Loans	£ 39,960,000	£ 3,830,000	£ 200,000	£ 43,790,000
Colonial Government Loans	27,000,800	294,000	26,366,100	27,294,800
Foreign Government Loans	18,480,000	2,850,000	3,650,000	21,330,000
British Corporation, County and Public Board Loans	32,971,300	Nil	7,826,000	32,971,300
Colonial Corporations and Public Board Loans	1,739,000	Nil	3,859,900	1,739,000
Foreign Corporations	Nil	472,500	Nil	Nil
British railways	4,265,000	4,875,000	1,920,000	9,140,000
Colonial railways	2,512,500	363,100	10,200,000	10,755,000
Foreign railways	2,685,000	825,000	3,835,000	3,510,000
Australasian mines	Nil	257,800	12,000	257,800

Gas and water	Nil	Nil	3,739,000	Nil
Hotels, theatres and entertainments ..	367,500	Nil	6,987,400	367,500
Patents and proprietary articles ..	Nil	Nil	544,500	Nil
Docks, harbours and shipping	3,023,600	2,067,600	4,691,400	3,023,600
Banks and insurance	13,507,000	46,253,000	15,574,500	15,574,500
Manufacturing and miscellaneous ..	169,655,600	22,933,600	193,057,700	192,589,200

A glance at the latest figures for all the categories which might be described as speculative or semi-speculative serves to enforce the conclusions which we have just drawn. The most significant drop of all will be found in the category "exploration, financial and investment trusts." In our previous quarterly articles the largest issues of the first half of 1930 have been listed. In the September quarter issues of over £1 million were few and far between. Here are the chief:—

Date of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Latest Price.
July 19	Austrian Govt. International Loan, 1930, 7% star. bonds, 1957	£ 3,000,000	95	1½ dis.
12	London Electric Ry., 5% deb. stk., 1985-95	5,000,000	97½	4½ prem.
26	Skoda Works, 6% deb., 1985-95	2,500,000 (a)	95	2 dis.
5	Newcastle-upon-Tyne Electric, 5% deb. stk.	2,300,000 (b)	96	5 prem.
5	South Metropolitan Gas, 5% deb. stk., 1950-60	1,000,000	97½	3½ prem.
Sept. 22	General Electric, 5% deb. stk.	3,500,000 (b)	98	...

(a) £1,189,935 for conversion purposes. (b) For conversion purposes.

In view of the persistence of economic depression and of the uncertainty produced on the Continent by recent events in Germany, the new capital market has not yet awakened from its slumber, and slack times appear likely to continue.

It should be appreciated that the new capital issues included in our quarterly surveys take no account of Stock Exchange "introductions," an aspect of the capital market which was discussed fully in the *Economist* of July 27, 1929 (page 175). In the following table we show the total amounts involved in these "introductions" during the past seven quarters. "Cash values" are calculated on the assumption that the whole of the nominal value of the stock "introduced" is taken up at the price at which dealings on the Stock Exchange open:—

TOTAL CASH INVOLVED IN ISSUES BY STOCK EXCHANGE INTRODUCTION.

	United Kingdom.	Colonies.	Abroad.	Total.
Year 1929—	£	£	£	£
1st Quarter	15,191,600	393,700	3,094,400	18,679,700
2nd Quarter	9,465,500	1,284,400	2,166,400	12,916,300
3rd Quarter	3,574,700	217,100	5,778,300	9,570,100
4th Quarter	733,400	304,400	1,437,500	2,475,300
Total Year 1929	28,965,200	2,199,600	12,476,600	43,641,400
Year 1930—				
1st Quarter	3,982,300	1,477,000	8,399,900	13,859,200
2nd Quarter	839,600	Nil	2,685,100	3,524,700
3rd Quarter	67,200	100,000	601,500	768,700
Total, Nine Months, 1930	4,889,100	1,577,000	11,686,500	18,152,600

† Nominal amount of capital introduced, £31,519,934.

‡ Nominal amount of capital introduced, £16,467,378.

Fairly active in the first quarter of this year this method of introducing new investments to the British public has dwindled away almost to nothing.

Issues for public information only have been on a very small scale during the past quarter, the total cash involved in such issues of the first nine months of 1930 amounted to £18,152,600, as compared with £41,166,100 recorded in the first nine months of 1929.

THE GROZNY OIL TRUST.

(BY A CORRESPONDENT.)

The Grozny Oil industry has this year celebrated the tenth anniversary of its activity under the Soviet régime. That these ten years have been a period of very successful working is illustrated by the fact that, whereas the annual output before the war was about 1½ million tons, it is expected to amount to some 6 million tons this year.

Before the war Grozny produced 14 per cent. of the total Russian output of mineral oil, but its production has now risen to 36 per cent. of the total, owing to the coming into production in 1913 of an entirely new area, known as the New Grozny Fields. From 1922-23 onwards, the output of the New Grozny Fields has exceeded that of the old fields, and now amounts to about 84 per cent. of the total Grozny output. Further, there have been added to the Grozny Oil Trust the Maikop Fields, which are yielding at present three times as much oil as they did before the war.

The following table shows the total output, spouter production and drilling since 1920. From 1927-28, the figures include the Maikop statistics:—

OUTPUT AND DRILLING OF THE GROZNY TRUST.

Year.	Total Output. Thousand Tons.	Of which from Spouters. Thousand Tons.	Drilling. Metres.
1920-21	1,155	706	1,842
1921-22	1,416	732	3,441
1922-23	1,446	612	16,800
1923-24	1,583	864	40,517
1924-25	1,978	1,231	57,029
1925-26	2,356	1,548	73,309
1926-27	3,022	2,051	102,946
1927-28	3,717	2,654	86,400
1928-29	4,660	3,512	101,400
1929-30 (9 months)	4,426	3,587	90,000

In Grozny, as in all the Russian oil fields, it took about five years after the war for drilling to get thoroughly under way. By 1925-26, the time of the inception of the Soviet selling organisation abroad, very substantial production was attained both at Baku and at Grozny. Owing, however, to the fact that about 80 per cent. of the oil produced by the Trust is from spouters, its output is subject to violent fluctuation. In the old fields, the spouter output fell from 571,000 tons in 1925-26 to about 150,000 tons for the first nine months of this year. It is possible that similar fluctuations may occur at the new fields, but whereas the wells at the old fields give about 75 per cent. of water, the amount of water at the new fields is insignificant and the spouters appear to be well under control.

The number of producing wells has increased from 177 in 1920-21 to 691 in 1928-29, but though there was an increase of 316 wells at the old Grozny fields, their output has fallen to 50 per cent. since 1925-26. There has been less drilling this year than was laid down in the annual schedule; though there has been extensive exploitation drilling in the old fields, practically none of the numerous new fields have been prospected, with the single exception of the tapping of a prolific new pool in the Maikop.

The Grozny refineries are adequate to handle present output. Their condition leaves much to be desired, but new refineries and cracking plant are being built both at Grozny and Tuapse, and a paraffin extracting factory has also been constructed. During the first few years of operation, the amount of petrol and lamp oil extracted from the crude oil was low: the proportions in 1920 were, 5 per cent. petrol, 4 per cent. lamp oil, and 80 per cent. fuel oil. In 1925, the percentages of petrol and kerosene had improved to 14½ and 10.7 per cent. respectively. By 1929-30 the proportions had risen to 19.4 per cent. petrol and 18.5 per cent. lamp oil, while fuel oil constituted only 51 per cent. The production of lubricating oil amounts to less than 2 per cent. The quantity of crude oil treated by the Grozny Oil Trust refineries in various centres during 1929-30 was 4,195,000 tons.

The capital outlay of the Grozny Oil Trust has been very considerable. The main items in its constructive expenditure have been: pipe-line from Grozny to Tuapse, Rs. 28,700,000; refinery and cracking plant at Tuapse,

Rs. 27,200,000; paraffin factory at Grozny, Rs. 5,200,000; refineries and cracking plant at Grozny, Rs. 13,000,000; electric stations, Rs. 3,400,000; and water supply for New Grozny Fields, Rs. 3,500,000. Before the war, there was only one pipe-line from Grozny to the port of Petrovsk on the Caspian Sea; since 1929, a new one has been in operation to Tuapse on the Black Sea. Products from Tuapse amounting to about 1½ million tons annually go to the Ukraine and abroad. Though the demand for petrol in Russia is increasing with the development of transport, it is not yet great, and most of the petrol is exported. The kerosene, on the other hand, probably because the quality is inferior to the Baku product, and not up to foreign government specifications, is all shipped to the Ukraine.

The table below shows the rapid progress made in the export of oil products:—

EXPORTS OF THE GROZNY TRUST OIL.

Year.	Petrol. (Tons.)	Kerosene.	Crude Oil.	Fuel Oil.
1921-22	25,900	...	4,100	...
1922-23	29,600	...	28,000	...
1923-24	119,000	543	71,000	...
1924-25	227,000	113,000	55,000	...
1925-26	285,600	71,700	96,200	...
1926-27	382,000	59,000	112,000	10,000
1927-28	469,600	100,100	143,200	5,200
1928-29	633,600	2,000	157,000	213,400
1929-30 (6 mos.)	353,900	2,500	84,100	163,500

As the table shows, the bulk of the exports consist of petrol. There has been some difficulty in finding a market for the fuel oil owing to its high paraffin content, but in the last two years substantial progress has been made in the disposal of this product.

THE GOLD DELEGATION'S REPORT.

A SUMMARY.

THE Interim Report of the Gold Delegation of the Financial Committee of the League of Nations is concerned with the future of the world's gold supply and with the question "whether the current and prospective production of gold on the one hand and the normal increase in demand as world production and trade increase on the other are such as to make it likely that the general trend of prices over a series of years (and apart from short-term oscillations) will be in an upward or downward direction." The Committee propose to deal, in a later report, with the methods of the distribution of gold, the effect of price fluctuations on general prosperity, the best method of measuring such fluctuations, and with short-term, as distinct from long-term, movements of prices. The following is a summary of their report:—

THE SUPPLY OF GOLD.

(a) *Gold Production.*—The present production of gold in the world amounts to about \$400 million per annum and is likely to rise slightly above that figure during the next three or four years. On the other hand, both the official or semi-official estimates of probable production in the course of the next ten years and the unofficial estimates compiled and submitted by Mr Joseph Kitchin, a recognised authority on precious-metal statistics, suggest that a decline is to be expected thereafter. Forecasts for the next ten years are given in Table I.

TABLE I.—ESTIMATES OF FUTURE PRODUCTION OF GOLD.
(In millions of dollars.)

Year.	South Africa. *	Canada. *	U.S.A. *	Australia. *	India. *	Others.	Total.	Total according to Mr Kitchin.
1930	211.7	40.3	42.8	11.2	7.6	91	405	404
1931	207.3	40.9	42.2	12.4	7.5	91	401	402
1932	213.2	41.5	41.5	12.2	7.4	91	407	410
1933	206.8	42.1	41.0	11.9	7.3	90	399	407
1934	198.1	42.8	40.3	11.7	7.3	90	390	403
1935	189.8	43.4	38.9	11.4	7.2	90	381	398
1936	166.7	44.0	37.3	11.2	7.1	90	356	397
1937	167.4	44.7	36.7	10.9	7.0	90	357	392
1938	167.4	45.3	36.5	10.7	7.0	90	357	384
1939	133.3	45.9	36.3	10.5	6.9	90	323	370
1940	124.1	46.5	36.1	10.2	6.8	90	314	370

* Official or semi-official estimates furnished to the Gold Delegation.

(b) *Monetary Gold Stocks.*—"The gold reserves of banks of issue and Treasuries at the end of 1928 amounted to about \$10,035 million, to which must be added a further sum estimated at about \$915 million representing gold in circulation in a few countries, gold in commercial banks and hoarded coin, &c., outside Asia—a total therefore of \$10,950." The provisional figures to the end of 1929 show a total monetary stock of \$11,175 million. There is no evidence that gold flows to any large extent from non-monetary sources such as private hoards, ornaments, &c., to monetary resources except during times of war. Such accumulations may, therefore, be disregarded.

THE DEMAND FOR GOLD.

(a) *Non-Monetary Demand.*—The trend of gold to India is assumed by the Delegation to be from \$80 to \$90 millions per annum, a rate of consumption rather less than in the last pre-war quinquennium. They observe that attempts are being made to extend banking and investment habits in India, but they do not think it would be safe to anticipate any material reduction in the Indian demand for many years to come. Information as regards industrial use is far from complete, but after studying the evidence available, the Delegation consider that the total may be estimated at from \$180 to \$200 millions per annum, leaving rather more than half of the new production available for monetary purposes.

(b) *The Monetary Demand.*—The Delegation have collected statistical information from the great majority of the gold using countries, from which it appears that the aggregate of note and sight liabilities at the end of 1928 amounted to about \$24,500 million. At the end of this year "the actual gold held amounted on the average to a little over 40 per cent. of these liabilities and minimum legal requirements to from 29.34 per cent. If the actual proportions in which central banks empowered to do so divide their reserves between gold and foreign assets be accepted as normal, then their legal gold requirements, as interpreted in practice, amount on an average to about 32 per cent.

"But banks of issue must normally keep some margin of cover over and above their minimum legal requirements—possibly 7-10 per cent., or even more. If some such margin in excess of legal requirements as that mentioned were actually held by all banks and the distribution of gold in the world was in precise proportion to the notes and sight liabilities of each country, the total gold stock at present available would only just suffice."

The demand for currency depends on the volume of production and trade and the transactions to which such trade gives rise. In the absence of any important changes in currency systems, it may be assumed that future gold requirements will increase in proportion. Various estimates have been made as to the annual growth of the world's trade in past years, a rate of 3 per cent. having been put forward by Professor Cassel and Mr Kitchin. The Delegation do not attempt to decide this difficult question, and consider it wiser not to employ a single figure. They have accordingly framed an estimate on rates of growth of both 2 and 3 per cent. per annum. On this basis they have drawn up Table II., showing the future supplies of gold available for monetary purposes in relation to the increase in demand for gold "in the absence of any measures to economise its use or to redistribute local surplus stocks."

For the purposes of this table the Delegation have used the more optimistic unofficial estimate of Mr Kitchin, instead of the somewhat lower official or semi-official estimates; but on every one of the assumptions made, except the first, the supply of new gold available for monetary purposes will be inadequate in 1934. This first assumption is, however, incompatible with existing currency requirements and practice. "In view of the present decline in prices and monetary circulation and of the business depression through which we are passing, the demand for monetary gold has received a temporary check. It is, moreover, not impossible that industrial consumption may be slightly lower than we have presumed, with the result that more new gold will reach the reserves of central banks. But, in spite of this possibility, the evidence points,

in our opinion, conclusively to the prospect of a serious situation arising as soon as or shortly after business activity revives, unless steps to alleviate it are taken in time. Moreover, unless new and unexpected sources of supply are discovered, the decline in the output of gold is likely to continue at an accelerated rate after 1940, as the South African Mines, which account for over 50 per cent. of present annual production, become gradually exhausted.

Such, roughly, are the general outlines of the situation as we see it to-day in the light of the information available. That situation will, of course, be further aggravated if countries endeavour once more to put gold coin into circulation, or if the tendency, which has been noticeable in certain quarters, to convert foreign asset reserves into gold is accentuated. Moreover, in view of the situation in the silver market, the possibility of China's employing gold by one method or another for currency purposes must be borne in mind. On the other hand, certain countries have a very low gold cover and, if the actual ratios are not increased, an average cover for all countries of under 40 per cent. might prove adequate even under existing legislation."

THE DISTRIBUTION OF GOLD.

The Delegation then proceed to consider the distribution of gold. They point out that fifteen countries hold over 90 per cent. of the gold reserves of the world, and that in these fifteen countries there was, in 1928, a surplus of roughly \$2,450 million over the 33 per cent. cover. Three of the fifteen countries had a deficit of nearly \$300 million, so that the surplus of the remainder amounted to \$2,750 million. Of this latter sum, \$1,500 million were in the United States. The legal minimum requirements of these twelve average about 38 per cent., and if a further 7 per cent. is added for normal use, the surplus totalled nearly \$750 million, or, including gold held by commercial banks in the Argentine and Australia, \$1,000 million. "The general conclusion to which these figures point is that, in the unlikely event of those countries which now hold reserves of less than 33 per cent. remaining content with the ratios existing at the end of 1928, a theoretical surplus exists which about equals the amount of new gold likely to become available for monetary purposes during the next five years." Commenting on these figures, the Delegation remark that "if the distribution of gold is the result of excessive or abnormal competition by a few countries, or if it has the effect of sterilising important amounts of monetary stocks, serious consequences will arise affecting the general level or prices."

In recent years an unusual movement has taken place. France and the United States, for example, in 1929 increased their reserves by some \$540 million, while in the three years ended 1928 ten countries acquired \$1,055 million, or nearly 90 per cent. of the gold mined during that period. "To some extent the acquisition of gold by a relatively small number of countries represented the exceptional movement of gold to reserves which, for one reason or another, had become depleted during or after the war; to some extent it was the inevitable result of the general economic disequilibrium from which the world has been suffering. We cannot shut our eyes to the fact that the question of the most effective distribution of gold is likely to become of steadily increasing importance in future years as the supplies of new gold become smaller. It may, however, be expected that the special causes which have determined the gold movements of the last few years will gradually work themselves out and that the possibility of an optimum distribution being achieved later by means of intelligent co-operation will steadily increase."

REMEDIAL MEASURES.

Clearly, unless certain important changes in general currency practice and legislation as compared with pre-war conditions had been effected, with the result of economising gold, there would have been a serious shortage to-day, and in view of the future shortage indicated in the Delegation's tables, "the probable trend of prices in the future must obviously give rise to some anxiety." The

TABLE II.—ESTIMATE OF FUTURE MONETARY DEMAND FOR GOLD IF NO ECONOMY IN ITS USE IS MADE.
(In millions of dollars.)

Year.	Estimated gold production.	Non-monetary demand.	Available for monetary purposes.	Increments to gold reserves required to provide				Excess or deficit of amount of new monetary gold available compared with increment required to provide			
				33% cover for average increases in notes and sight liabilities of:		40% cover for average increases in notes and sight liabilities of:		33% cover if notes and sight liabilities increase at:		40% cover if notes and sight liabilities increase at:

1939	370	198	172	200	330	240	396	- 28	- 158	- 68	- 224
1940	370	200	170	204	340	244	408	- 34	- 170	- 74	- 238

Delegation is, however, of opinion that if the need is recognised, "certain remedial measures may be found which may be expected, for at any rate the next decade, to correct the consequences we fear." Of the changes that have already taken place, the replacement of gold by notes for domestic use has in no way weakened the general credit structure, but the concentration of reserves has greatly facilitated the task of those responsible for monetary policy. "It has enabled banks of issue to appreciate from week to week and from month to month the variations which take place in the total demand for currency; in addition, it has helped to substitute savings which fructify for gold in the pockets of the people or for gold in hoards which constitute a direct and useless charge on the community, and it has enabled the world to judge how far the available monetary gold stock and the accessions to it are likely to prove adequate for the needs of the future. We trust that the concentration of monetary gold in the reserves of central banks and its limitation as a means of payment to international transactions may shortly become generalised, and that, in those countries where gold coin is still employed for domestic transactions or lies locked up in the vaults of private banks, measures of reform may be adopted. In this connection, we would remark that there is no essential difference between gold coin and gold certificates. An appreciable economy might be effected if all gold coin, gold holdings against certificates and gold immobilised in commercial banks, were made available to perform what is now generally recognised as its proper function in the currency mechanism of to-day."

The most important suggestion of the Delegation, however, relates to minimum reserve percentages. Countries may require varying proportions according to their economic situation. "But the minimum reserves which are required by law to-day are to a large extent the outcome, not of these considerations, but of past tradition, of convention and habit, of the natural fear which each individual legislature has that a departure from general practice may impair confidence in the currency." Moreover, the legal minimum cover is not in general used, its main function being "to establish confidence, active operations being conducted, not with this minimum, but with the additional margin which is held in gold or assets immediately convertible into gold. The minimum is largely conventional, and a considerable economy could quite certainly be accomplished were the current accepted minima reduced. We believe that this could be done without in any way weakening the general credit structure." If a single country, however, were to act alone it would weaken confidence in its currency and most countries would demand that an international understanding should first be reached. The Delegation does not think the difficulties of reaching agreement should prove insuperable. Universal agreement would not at first be required, but if the countries with the largest reserves adopted an agreed policy, others would almost certainly follow their example. The Delegation, of course, presumes that if such action were taken the central banks would reduce the proportion actually held; otherwise the agreement would be abortive.

Other suggestions are concerned with the increased use of cheques, post-office banking facilities, giro transfers, clearings, etc., and the replacement of bank notes of small denomination which require gold cover by token coins which do not.

Care, however, should be taken to see that such measures are not taken in advance of actual needs and that a credit structure should not be built on the gold so economised in excess of the normal growth of production and trade.

Referring to the economies of gold resulting from the adoption of the gold exchange system, the Delegation observe that it would be helpful if countries which have not yet stabilised their currencies, or were considering the desirability of modifying their currency, would adopt a similar system.

Finally, attention is drawn to the danger of the consequence that might result if countries on this standard were to convert their foreign assets into gold. "We are aware that the extension of the gold exchange system has been criticised in certain quarters on the grounds that it may involve, if improperly applied, a risk of inflation. But we believe that this danger would be largely obviated if reserves of foreign assets were as a rule concentrated in central banks." Confidence in these foreign assets would be strengthened if by international agreement such reserves were immune from seizure or confiscation in time of war.

Further consideration is to be given to remedial measures at subsequent meetings.

The Delegation responsible for the report, which is forwarded without any dissenting minute, is composed as follows:—M. Albert Janssen (Chairman), Professor at the University of Louvain, formerly Minister of Finance, formerly Director of the National Bank of Belgium; Professor M. J. Bonn, of the University of Berlin; Professor Gustav Cassel, of the University of Stockholm; Comte de Chalendar, Managing Director of the "Compagnie d'Assurances Générales sur la Vie," formerly Financial Attaché to the French Embassy in London, formerly Inspector of Finance; Sir Reginald Mant, K.C.I.E., C.S.I., Member of the Council of India, Member of the Royal Commission on Indian Currency and Finance, 1925-26 Dr. Feliks Mlynarski, Professor of Banking at the Academy of Commerce in Warsaw, formerly Vice-Governor of the Bank of Poland; Dr. Vilem Pospisil, Governor of the National Bank of Czechoslovakia; Professor O. M. W. Sprague, of the Bank of

England, formerly Converse Professor of Banking and Finance at the Graduate School of Business Administration, Harvard University; Sir Henry Strakosch, G.B.E., Chairman and Managing Director of the Union Corporation, Ltd., London; Dr. L. J. A. Trip, formerly Governor of the Java Bank, formerly Treasurer-General of the Netherlands. Resigned before the second session: Professor Alberto Beneduce, President of the Credit Institute for Public Works, Rome. To succeed Professor Sprague after the second session: Mr George E. Roberts, Vice-President of the National City Bank of New York.

In presenting the report to the Council, the Financial Committee commends it to the serious attention of the authorities responsible for the monetary systems of the various countries and proposes that it should be communicated to all members of the League as well as to non-member States. This recommendation has been accepted by the Council.

Notes of the Week.

New Moves in the Tariff Campaign.—Although the Cabinet has held several meetings, no news is forthcoming of the result of the Labour-Liberal conferences on unemployment remedies, and no light on the subject could be gleaned from Mr Lloyd George's week-end speech at Stowmarket, when he contented himself with saying that the Government's prestige was depreciating, but that he would support "any Government that deals wisely, firmly, and promptly with the trade and unemployment situation." More interest attaches to two new moves from various quarters of the tariff camp. Mr Neville Chamberlain's speech at the Crystal Palace, on September 20th, is notable, because, speaking with authority as the Chairman of the Conservative Central Organisation, he carried Conservative fiscal policy a stage further than Mr Baldwin has ever ventured. "Safeguarding" is nominally the official Conservative policy, but, according to Mr Chamberlain, it will, if his party returns to power, be something much more far-reaching and rapid than any interpretation which has hitherto been attached to that phrase. We put his actual words on record:—

It cannot be too clearly understood that it is not our intention to repeat that cumbrous, slow, and partial procedure which we adopted in the experimental stage. The new Government of Canada has brought in an emergency tariff, which is a tariff of a provisional character. Why should not we take a leaf out of the Canadian book? It is all in the family. Why should not we, in the first few months of our office, bring in an emergency tariff? It may be, perhaps, somewhat of a rough-and-ready kind, but it will give our home manufacturers a breathing space.

In other words, unless Mr Baldwin disowns his chief lieutenant, the official Opposition policy has become a lightning general tariff, thrust upon the country in "rough and ready" form, which is a euphemistic way of saying "unconsidered and haphazard." Political recklessness could hardly go further, and we do not believe that the country would give a blank cheque of so fateful a nature to any political party. Perhaps Mr Chamberlain was encouraged to make this strange pronouncement by the appearance, on Friday of last week, of a manifesto signed by a group of prominent industrialists, headed by Sir W. R. Morris. The avowed object of the manifesto was to call for the formation of a National Council of Industry and Commerce, with the object of "restoring prosperity to the country and insuring employment to its people"—a laudable object which all men of goodwill are endeavouring in their own ways to promote. But since the manifesto states that the council's object will be "to secure the adoption of proper measures for protecting the home market," we take it that the promoters of this movement are principally concerned with throwing their weight into the protectionist campaign.

Native Policy in Africa.—On Wednesday, September 17th, at the annual congress of the Transvaal Nationalist Party, Mr Piet Grobler, the Minister of Lands, made an uncompromising attack on the native policy in Africa which has been pursued by His Majesty's Government at Westminster continuously under alternating party administrations, and has found its most recent expression in the present Ministry's "Memorandum on Native Policy in East Africa." It is not surprising that a South African Nationalist politician should declare the Westminster policy unsuitable for South Africa, and proclaim his preference for his own party's policy of "segregating" the natives and safeguarding "the natural superiority" of the Whites. The remarkable features in Mr Grobler's speech was his contention that this latter policy could not be pursued successfully within the borders of the Union if the Westminster policy was being pursued in African territories further north, and his demand that, in these non-Union territories, native policy should be brought into line with the policy which the South African Nationalist Party is pursuing at home. "We expect," he said, "a readier acceptance of our ideals in British territories north of the Zambesi. The Union cannot passively acquiesce in the enforcement of conceptions and principles on Europeans in the north, who have their own white man's future, which are not in accordance with our mutual European ideals. We deny that any European nation, England included, has the right to act anywhere in South Africa in conflict with our ideals." The first thing that we discern here is a gesture of response to certain overtures which have been made latterly from the side of the white communities in Southern Rhodesia and Kenya. "Let us drop," they are saying to one another, "the old feud between Dutch and English. It is out of date, and we can no longer afford to indulge in it. The real division of camps to-day is between all white people permanently domiciled in any part of Africa on the one side and the natives, backed by Downing Street, on the other side." On this basis, the Union of South Africa may aspire to expand over a continent from Table Mountain to Kenya, as the United States expanded from the Atlantic to the Pacific. But the aspiration is dictated by a nervous sense of insecurity as well as by a healthy ambition. It curiously recalls the anxiety of the Southern States of the American Union, in the generation before the Civil War, to fortify their "domestic institution" by extending it over an ever-increasing area. In America, the Southerners and Northerners both believed, and rightly, that two conflicting systems of relations between Whites and Blacks could not permanently subsist side by side on the same continent. *Mutatis mutandis*, the same truth probably holds good in Africa. So far, we can agree with Mr Grobler. Beyond that, we must agree with the verdict of history—pronounced last century in the New World—that, if one of the two systems has to disappear, it is the less liberal and not the more liberal system that is doomed.

The "Goeben" Again.—The name "Goeben" recalls unpleasant memories of suspense during the early months of the war. Would she reach the Dardanelles? And, when she did reach them, would she bring Turkey into the war? Both questions were answered in the affirmative, with the result that the war was greatly extended in area and prolonged in duration. Thus we cannot read without a twinge of disquiet the news that last month the "Goeben"—reconditioned at last—underwent speed trials and gunnery tests in the Sea of Marmara. And we take no comfort in her change of nationality and name. Whether as the German "Goeben" or as the Turkish "Yamuz Selim," this dreadnought is a bird of ill omen; and her reappearance has already evoked answering gestures in neighbouring countries. For instance, early in the year, when the reconditioning of the "Goeben" was already in progress, two dreadnoughts of the Soviet Baltic Fleet—the "Pariskeya-Kommuna" and the "Profintern"—came round to the Mediterranean and passed through the Straits into the Black Sea on a visit to their sisters of

the Soviet Black Sea Fleet; and this visit has not yet come to an end. In this there is nothing "incorrect"; for the U.S.S.R. is not bound by any international agreement for the limitation of armaments, and is entitled to keep as large a fleet in the Black Sea as it chooses. Nor again (it appears) were these two Soviet vessels bound to notify their intention to pass through the Straits to the Straits Commission which was established by the Peace Treaty of Lausanne. This obligation only applies to warships belonging to States that possess no sea-boards of their own on the Black Sea. The riparian States may send their warships in and out of the Straits at will and without notice. All the same, this recent increase in the local naval strength of two of the Black Sea Powers is unfortunate, because it looks like the first step towards naval competition and because this incipient naval rivalry is already threatening to spread. There is now talk of Roumania constructing, at great expense, a naval base at Costanza—a proceeding which would be as wanton as the construction of a Polish naval base on the coastline of the "Corridor." If all this were happening in some region remote from the centres of international tension, it would be of no more concern than the spasmodic naval rivalry between the "A.B.C." States of Latin America. Unfortunately, the Black Sea adjoins some of the principal danger-zones of Europe, and local naval competition in the Black Sea would readily link itself up with the general European system of tension. The Lausanne Treaty allows non-Black Sea Powers to send naval forces into the Black Sea up to a strength as great as that of the strongest Black Sea Power at any given moment. It will be seen that any increase of strength among the Black Sea Powers themselves is to be deplored.

Poland and Her Minorities—A Correction.—With reference to the note published under this heading in our issue of September 20th, we are informed by the Polish Press Bureau that the Polish Ambassador has written to the *Manchester Guardian* stating that, after making inquiries on the spot, he is authorised to make a complete and unqualified denial of the authenticity of the alleged official document relating to the Polish Agrarian Law. As the chief purpose of our note was to urge that the authenticity of the document must be either disproved or proved, we are glad to publish this *démenti*.

The French Rentes Problem.—The news emerged this week that a British official note had been received by the French Government on the question of the French rentes issued in London under the auspices of the Bank of England during the war, at the time when the franc was worth practically its old par value of Frs. 25.22 to the pound. The effect of the depreciation of the franc, followed by its stabilisation at the present parity of Frs. 124.21, has meant that these rentes have lost four-fifths of their original sterling value, and it is not surprising that British holders have for long been under a sense of grievance. On purely legal grounds it was difficult to see that the complainants had a case, but on moral grounds they always had strong arguments on their side. Recently the French Government obtained from the International Court at the Hague a judgment in its favour in respect of certain Brazilian and Serbian bonds which were issued in Paris and which subsequently depreciated in exactly the same way, and though from the legal standpoint the parallel was not exact, the British Government apparently thought that the circumstances justified the despatch of a friendly note. The terms of the note have not been officially announced, but it apparently suggests that the question should be referred to arbitration at the Hague. It also appears that the note was actually despatched several months ago, and that it is only now that even an unofficial announcement of its existence has been made. This delay is not without its practical significance, for it is believed that comparatively few of the rentes around which the controversy rages are still held in this country. If this belief has any foundation, the controversy has assumed a mainly academic character.

Bankers' Payments.—A general announcement was made this week concerning a new scheme designed to save business houses and others who have a large number of payments to make at any particular time the trouble of drawing a separate cheque for each payment. It is believed that the scheme has been drawn up by a Committee appointed by the British Bankers' Association, and, in any case, it must be regarded as being still in the experimental stage. Briefly, what is proposed is that a customer making use of the plan shall hand into his bank a list in duplicate giving the names of the intended recipients of the payments, the banks where they keep their accounts and the sum due to each. He must also hand in a separate credit slip, containing the same details as above, for each transaction, and finally a cheque payable to his bank for the total sum involved. The banks will then proceed to distribute this sum to the credit of the recipients' accounts, wherever they may bank, through their usual machinery. At first sight the clerical labour in which the customer is involved in preparing his lists and credit slips may seem to outweigh the possible advantages of the scheme. It is doubtful, however, if any more labour is involved than is required to-day to fill in a separate cheque with its counterfoil for each payment, especially as the banks will probably accept a carbon copy for the second of the two lists required. It is understood that the banks may make a charge for these new facilities, but against this must be set one of the most important features of the whole plan, namely the economy in cheque stamps which those using it will be able to make. Statements in the public Press suggest semi-officially that the whole plan is perfectly legal, and we see no reason to differ from that view. If so, the Inland Revenue stands to lose an appreciable proportion of the present yield from cheque stamps, and it will be interesting to see if any counter-action is taken in next year's Finance Bill. At present it looks as if the joint-stock banks are successfully devising a new system, which will be for them a new source of revenue, and for their customers a slight saving of trouble and money—all at the expense of the national revenue.

Russia and the Wheat Trade.—A trade prepared for "corners" and not unaccustomed to formidable "bear raids" has none the less been startled and even disconcerted by the Russian Government's appearance on the wheat market as a considerable seller for September and October delivery. The Russian wheat exports in the four years before the war were rather over fifteen million quarters per annum. For September they were 2,916,000 quarters in 1910, 917,000 in 1911, 1,078,000 in 1912 and 1,792,000 in 1913. For September they are this year about a million quarters, and as much is said to have been sold forward for October. A grain market correspondent writes: This sudden reversion to pre-war conditions excites surprise, since post-war Russia has been no more than self-supporting, and 1930 has seen the reaping of no more than an average crop. These exports probably represent a mortgaging of the future, since Russia may have to buy in the spring up to the level of autumn sales. But the position of the Russian Government is not easy, and geographical considerations may be assumed to have had weight. The great rivers flow south to the ports of the Azoff and Black Sea, whence grain is easily shipped at a low freight. Down these rivers come the wheat-laden barges at river freights, which are but one-third of railway charges. Even if Russia did not export, the wheat grown south of about the 55th parallel would require later in the cereal year to be sent north to that half of the country which is never self-supporting. Rolling stock and engines, trucks and rails were severely taxed in pre-war days. Neglect, not yet made good, may easily have rendered the replenishment of Northern Russia by Southern Russia and the black-soil wheat region no longer practicable except by sea, in which case imports of breadstuffs in May, June and July into Leningrad and the East Baltic would be the one available course to pursue. Moreover, the wheat trade regards, say, £2,400,000 in gold in the autumn as a powerful inducement to a government situated as is that of Russia to-day. The estimate of £2,400,000 is American.

Wheat there now averaged four shillings per bushel, but there is an import duty of one shilling per bushel, and thus Russia, selling two million quarters of wheat to America would only obtain 24s. per quarter, or 8s. per bushel, net. With respect to consignments to the British Isles, the fact that the British loaf is a blend has to be considered. The miller needs 15 per cent. of home-grown soft and mild wheat and 15 per cent. (or more) of Canadian hard and strong wheat. These sorts he will buy before he turns to the remaining 70 per cent., out of whose acquisition he undoubtedly looks for the most part to making his profit. It is on the consignments of American red winter, of Argentine tawny, and in a lesser degree on those of Australian white wheat that the Russian wheat would, and, indeed, is already found to be "invasive." The chartering of 170 vessels by the Russian Government has excited disproportionate attention. It is already very largely forgotten how many vessels were from 1910 to 1913 inclusive ordinarily chartered to bring Russian wheat in September and October. In September and October, 1910, over 300 were taken up for wheat alone.

The Price of Petrol.—The cut of 2d. per gallon in the price of petrol, and ½d. per gallon in the price of kerosene, which was announced by the national distributors on Tuesday, was as welcome as it was unexpected by the British motorist. The petrol cut was the reply of the big combines in this country to the situation which has developed in the United States. The export prices of petrol and other refined products at American ports have hitherto been fixed by the American Oil Exporters Association. In February this year the association reduced the export price of the U.S. "Motor" grade of petrol from 8½ cents to 8 cents per U.S. gallon, but thereafter continued to ignore the downward trend of petrol prices in the domestic market. From 7 cents per U.S. gallon, at the beginning of this year, the domestic price of U.S. "Motor" grade of petrol had fallen to 5½ cents by the end of July, and has only recently recovered—for no obvious reason—to 6½ cents per gallon. It has been apparent for some time that the American Oil Exporters Association was in danger of breaking up. It has been guilty of the same mistaken policy as the Copper Exporters Inc. It has held on too long to artificially high prices in the face of excessive stocks of the commodity. The statistical position of petrol is not so bad as that of copper; up to the end of July petrol consumption had shown an increase of 7.6 per cent. over that of the corresponding period of 1929; and stocks had declined from approximately 55 million barrels, at the end of March, to 37,832,000 by September 13th. These stocks, however, were still excessive for the time of year when petrol consumption is at its maximum. A year ago stocks were only 31,714,000 barrels. The result has been a good deal of price cutting in the retail petrol markets. In spite of the settlement of the price war in California, some months ago, the Sinclair Oil and Texas Oil have been pursuing a policy of cut-throat competition. Rather than confess its failure to agree upon reduced export prices, the American Oil Exporters Association decided last week to go into liquidation for 120 days, allowing each member complete freedom of action in the fixing of export prices during this period. This strange decision leaves importers in the European markets free to import cargoes of petrol at cut rates. The petrol trade in Great Britain has already been invaded by the Texas Company, which has threatened to take business from the national distributors by wholesale price-cutting. It was to protect their market against a flood of cheap American petrol that the national distributors agreed to reduce their prices by 2d. per gallon this week. Whether the last has been heard of the petrol war remains to be seen. Recent changes in the price of petrol in the London and Home Counties area were as follows:—September 23, 1930, a fall of 2d. to 1s. 5d.; March 6th, 1929, a rise of 2½d. to 1s. 7d.; April 28, 1928, a rise of 4½d. to 1s. 4½d. (to cover 4d. petrol tax); April 1, 1928, a fall of 1d. to 1s. 0½d. On an estimated yearly consumption of petrol in this country of 1,000 million gallons, 2d. per gallon will save the British consumer over £8 million.

A Retail Trade Index.—Attention has frequently been called to the gap in the statistical equipment of this country left by the lack of any index of the volume of retail trade. The Bank of England, in collaboration with the Incorporated Association of Retail Distributors, is now engaged in making good that deficiency. At present only a small number of stores have agreed to report, but it is hoped to increase the number by next month. Until the reports have been collected for a sufficient time to constitute a base period, the results cannot be converted into an index, but can only be expressed as a percentage of the corresponding month of the preceding year. Even with these limitations, however, the data are a very useful indication of the trend of retail trade, and the new index will form a most valuable addition to our sources of economic knowledge. The full return, which is published in this week's *Board of Trade Journal*, shows Scotland, the North, the South, West London and the London suburbs separately:—

RETAIL TRADE RETURN, DEPARTMENT STORES.

AUGUST, 1930.

(25 working days as compared with 26 in 1929.)

	Sales (at selling).		Stock at end of month (at cost).	
	No. of Stores re- porting.	Percentage change compared with August, 1929.	No. of Stores re- porting.	Percentage change compared with August, 1929.

Total	86	- 7.1	74	- 3.4

Only five Scottish stores reported in all, and not more than four in any one class. On these grounds, perhaps, the fact that rather substantial increases occurred there under certain heads, notably boots and shoes, children's wear, furniture and hardware, should be discounted, for only four increases occurred in any items in the other four districts, and of these only two were substantial—a rise of 10 per cent. in music sales and one of 7.9 per cent. in miscellaneous sales, in suburban London. By far the heaviest falls in the North were in boys' wear and miscellaneous items, and in suburban London men's and boys' wear and women's "fashion departments" recorded the heaviest declines in turnover. In the West End the decline was more nearly uniform, and is attributed partly to the extreme heat at the end of the month. In an explanatory note the compilers of the index state that, though the value of the turnover was less, the number of transactions was greater than in August, 1929. Some part of the decline in value is obviously due to the fall in retail prices during the past year, this is one more illustration of the urgent need for a representative index of retail prices. The existence of such an index would still further increase the value of these very welcome compilations of retail trade turnover.

Minimum Coal Prices.—A correspondent writes:—The Mines Department of the Board of Trade, in its administrative capacity, has addressed to the Mining Association of Great Britain, an important direction concerning the fixing of minimum prices under Part I of the Coal Mines Act, 1930, relating to the marketing of coal. The statutory obligation to fix minimum prices is placed by that Act on the District Executive Boards. Among the points which have been raised in the districts during the preparation of their schemes are: (a) Does the obligation to prepare a scheme involving, *inter alia*, the fixation of prices, render it necessary for the Executive Board to fix minimum prices for every class of coal produced in the district? (b) Is it competent for an Executive Board to fix minimum prices for a class of coal according to its

The Premier Consideration —Your Son's Education

Head Office: 10 Fleet Street, London, E.C.4. Estd. 1836

destination? There is, naturally, a great deal of uncertainty as to how far a system of minimum prices will disturb the existing distribution of business in the inland and export trades, and both in their individual capacities in their respective districts, and in their collective capacity in relation to other districts, colliery owners desire as far as practicable to protect their present trade associations. The Mines Department of the Board of Trade has had its attention officially drawn to the above two points, and it has given, on the advice of the law officers of the Crown, a definite direction on both. In regard to the first point the Mines Department has expressed the view that a minimum price must be fixed for every class of coal produced in the district. On the second point the Mines Department state that they are satisfied that the Act does not make provision for fixing different minimum prices for one class of coal, having regard to its destination. Under Section 18 of the Act the following interpretation is given to the word "class":—

"Class" in relation to coal, means a class determined according to the nature of the coal or of the trade, industry, or other category of consumer supplied, or according to whether it is supplied for use in Great Britain or for export to any other country.

It is agreed that, under the Act, price differentiation in the home market is permissible, but the point is emphasised by the Mines Department that it is not possible in Great Britain to have a class of coal according to the destination to which it is going, and that the words "other category of consumer supplied" must be *ejusdem generis* with the words "industry and trade," and would not include a category governed by the destination of the coal. It is also emphasised that, under the Act, the only class which is determined by destination is that where coal is supplied for use in Great Britain or for export, and the Department is advised that it would not be legal to determine a "class" geographically in any other way.

Low Cotton Price Level.—This week, writes our Manchester correspondent, a fresh low price level has been established for American cotton in this industry, as on Wednesday last the quotation for Middling qualities on the spot in Liverpool was 5.98d. per lb., this being the lowest price for over fifteen years back. The recent downward movement has been due to hedge selling and less favourable advices generally from the United States with regard to finance and the stock markets. A strong bearish factor at the present time is the poor consumption. So far this season the forwardings to mills of the world are only 929,000 bales, against 1,349,000 bales last year, and 1,576,000 bales in 1928. On Tuesday last the United States Government announced that up to the middle of September 3,730,000 bales had been ginned, as compared with 3,352,000 bales in the corresponding time last year. The total announced was rather less than expected, as some private firms anticipated a return of over 4,000,000 bales. Despite the low prices ruling there is nervousness in trade circles as to a further decline. In view of values for other commodities, compared with pre-war rates, it looks as though there is room for a still lower level.

M. Moreau's Resignation.—On Wednesday it was announced in the Paris Press that M. Moreau was resigning his governorship of the Banque de France and was about to become a vice-president of one of the leading Paris banks. It is believed that the bank he is about to join is the Banque de Paris. M. Moreau has held his governorship since 1926, when he succeeded M. Robineau, and his term of office has thus covered a very important period in French financial history. It included the stabilisation of the franc, the rehabilitation of the national finances, the inauguration of the Young Plan, and the foundation of the Bank for International Settlements. In all these M. Moreau played a prominent part, for to mention but one of his important activities, he was the leading French representative upon the Young Committee. M. Moreau has lately had to concern himself with the problems attendant upon the heavy influx of gold into France. It is generally understood that he never welcomed these gold arrivals, and, indeed, he has lately interested himself in the development of the Paris discount market and in other proposals designed to impart greater elasticity to the French monetary system and so to minimise the importation of gold. This work must now be left to his successor, whose name has still to be announced. Meanwhile, it is right to place upon record the fact that M. Moreau has served France well in a critical period of her history.

Incorporated Accountants and Company Abuses.—In his Presidential Address to the Incorporated Accountants' Conference in Sheffield this week, Mr Henry Morgan quoted some very disquieting figures in illustration of his contention that much remains to be done to put shareholders legally in possession of the powers which the law evidently means them to possess. He stated that in the last six months of 1928 the prospectuses of 58 companies, formed for the purpose of establishing new businesses or developing new inventions or processes, were advertised in *The Times*. Their issued capital amounted to £15,117,000, and the estimated profits of 52 of them to £5,219,000. According to the latest available information, 27 of these companies are already in liquidation, 14 under compulsory orders; only five earned profits, which amounted to less than £48,000, compared with prospectus estimates of over £214,000, and only one has paid a dividend. The losses of 31 of these companies aggregated £690,000, as compared with prospectus profits estimated at £3,178,000. The value of the shares of those of the companies which are still quoted is under £750,000, so that some 95 per cent. of the capital has been lost, not allowing for the further loss to shareholders in the shape of heavy premiums. Mr Morgan expressed the opinion that if the Companies Committee could have had this experience before them, the new Companies Act would have been more stringent. His own proposal for remedying those abuses which result from the lack of control of shareholders over the affairs of their companies, is the institution of a right of voting by post on all resolutions to be brought before company meetings. While this might be effective in remedying certain classes of abuse, it is difficult to see that the existence of such a right would have done very much to protect the public against the disastrous losses which, as previous analyses in the *Economist* have shown, were incurred as a result of the unfortunate flotations of the 1928 "boomlet."

Conditions in the Catering Trade.—Following representations made to the Minister of Labour that the conditions prevailing in the catering trade were such as to warrant the application of the Trade Boards Act, inquiries were instituted in 1929 as regards licensed and non-licensed hotels, public houses, licensed restaurants and proprietary clubs, with a view to obtaining particulars as to remuneration, hours of employment, and the degree of industrial organisation among the workers. As an investigation had already been made in 1925 in the light refreshment and dining-room (non-licensed) branch of the

trade, only such further inquiry was necessary in that connection as would provide an indication of the extent to which conditions had changed since 1925. In view of the large number of catering establishments, it was decided that the inquiries should be by way of sample, covering a sufficient number of establishments distributed over towns of varying size and character and in different areas, to ensure that the information obtained should be representative of conditions in the trade as a whole. The data collected has now been published in a Blue Book*, from which it appears that the number of workers covered by the returns received totalled 31,566, of whom 16,604 were males. The task of assessing their remuneration was rendered more difficult by the fact that allowances had to be made in some cases for board and lodging, tips, uniforms, free laundering and free beer, the amounts included in the statistics being based mainly on the employers' statements. When all allowances were made, however, it was found that the number of male workers earning under forty shillings varied from 45.8 per cent. in public houses, inns, etc., to 3.3 per cent. in the larger licensed hotels, while the number of female workers earning under twenty-five shillings varied from 41.0 per cent. in public houses to 0.8 per cent. in licensed hotels. Of the 45.8 per cent. of men whose total remuneration was under 40s. in public houses, 42.4 per cent. were employed for less than 30 hours per week, while of the 41.0 per cent. of females earning less than twenty-five shillings per week, 37.9 per cent. were working less than 30 hours per week. The medium wage for adult males varied from 55s. to 76s. 6d., according to class, and for adult females from 39s. to 52s. 6d. In each section of the trade there was a wide variation in hours of duty. At the larger licensed hotels nearly 15 per cent. of the employees covered by the returns were working a week of 48 hours or less, whilst 36 per cent. were on duty for sixty hours or more. The report indicates that organisation among workers employed in the catering trade is weak, less than five per cent. of the whole being members of trade unions. As concerns the light refreshment branch of the trade, the results of the inquiry indicate that at establishments other than those of the large "multiple" firms the general level of remuneration in 1929 was slightly lower than in 1925 among adult men and among many of the waitresses, and that the weekly hours of duty were, on the whole, slightly longer at the later date. At the large "multiple" firms, however, total remuneration increased between 1925 and 1929, whilst hours of duty remained generally unchanged.

New Form of Life Assurance.—Much interest has been aroused by a scheme just announced by the National Mutual Life Assurance Society for attracting the public to a new form of life assurance. In effect the society is prepared to issue policies payable not in sterling, but in 5 per cent. Conversion Loan. Immediately upon issue the policy will give rights over a specified amount of the stock to the policy-holder at the end of fourteen years, or to his representatives in the event of his previous death. The cost is defrayed by periodical payments over the fourteen years, and these payments may be made annually, half-yearly, quarterly or monthly. In the event of death during the term, no further payments are required, and the stock is handed over to the policy-holder's representative, whatever its then market value may be. The scheme has therefore the advantage of providing at death, or maturity in fourteen years, an attractive gilt-edged investment without trouble or expense. Moreover the policy-holder is secured against the anxiety that on his death the proceeds of his policies may be either dissipated or invested in an unwise fashion. This is a very real advantage in thousands of cases where the executors have no knowledge or experience of investment and finance. The policies are entitled to the usual income-tax rebate, and in fact are ordinary endowment assurances for a term of fourteen years with the exception, already stated, that the proceeds are payable not in cash but in 5 per cent. Conversion Loan. As to the cost, at age 35, for instance,

* Report on an Inquiry into Remuneration, Hours of Employment, etc., in the Catering Trade in 1929.

a policy for £1,000 5 per cent. Conversion Loan could be secured for an annual payment for the fourteen years of £62 7s. 6d. without allowing for income tax rebate. Since these rates of premium are based on a sum assured of £1,000, and not on the present price of £1,000 stock, it is obvious that the policy-holder is offered an immediate and tangible free benefit. The present price of 5 per cent. Conversion Loan is over 105, so that at this price there is a free benefit of £50 per £1,000 stock. If the price rises to 110, the free benefit becomes £100 per £1,000 stock. On the other hand, since 5 per cent. Conversion Loan is redeemable at par after 1944 and before 1964, it is probable that the price at maturity in 1944 will more nearly approximate to par. And yet, 5 per cent. War Loan, of which it is true there is a much larger amount outstanding, is standing at 103½, although it may now be redeemed at par at any time and must be redeemed by 1947—three years after the first redemption date of 5 per cent. Conversion Loan. It may be thought that if an office is prepared to issue a policy payable in 5 per cent. Conversion Loan, it would do so in some other security—in 4 per cent. Consols, in L.C.C. 4½ per cent. Stock, or in ordinary shares such as 100 Courtaulds, 500 Dunlops or 500 United Molasses. On reflection, however, it will be seen that a general extension of the principle would, in existing circumstances at any rate, be impracticable. Life assurance is designed to guard against the financial consequences of premature death. The premiums are calculated, and are payable in sterling, and the policy moneys are in the same currency. It would obviously be impracticable for an office to receive payment of premiums in sterling, and to undertake to hand over at an unknown date in the future the equivalent in Stock Exchange securities. The mortality risks of a large number of lives brought into combination are susceptible to actuarial calculation, but fluctuations in the future prices of Stock Exchange securities are obviously not only unknown but unforeseeable. Moreover, the office would be unable to protect itself against these fluctuations by buying at the outset the whole amount of the security for which it would be ultimately liable, since it receives at the outset only one premium. The society has chosen the psychological moment for launching its scheme, for "safety first" as an investment slogan must have gained many thousands of new adherents as a result of recent experiences in equity stocks.

Car and General Insurance Corporation, Ltd.—The Car and General is particularly associated with motor insurance, in which it occupies a very prominent position and from which nearly 80 per cent. of its total premium income is drawn. Last year, out of total premiums of £1,086,942, the company earned a gross underwriting profit of £47,822, compared with a gross profit in 1928 of £21,378 on total premiums of £1,160,870. It is not possible to say precisely which department has been responsible for the improvement, because the accounts are presented in a different form, but since the motor department has itself produced a profit of £30,446 on premiums of £865,000, it is probable that the greater part of it is attributable to this department. Allowing for miscellaneous items charged to profit and loss account, the total net trading surplus for the year works out at £41,052, compared with £9,504 in 1928. The net interest earnings have contributed £38,876, compared with £42,881. The company enjoys the advantages of having a very small capitalisation, the total amount paid up being only £51,436, this amount consisting as to £25,000 of 5 per cent. preference shares of £1 and, as to the balance, of £1 ordinary shares with 5s. paid up. Thus the rate of dividend is naturally very high, and for 1929 it has been increased to 200 per cent., against 140 per cent. in 1928, the larger amount absorbing £42,298. Since the capital of the company is held by the Royal Exchange, the increased dividend payment will help to swell the 1930 interest earnings of the parent company. It is satisfactory to note that on this occasion separate revenue accounts are furnished for the operations of each department.

Universal Automobile Insurance Company.—The Universal Automobile was founded in 1908, is worked on non-tariff lines, and nearly the whole of its business is derived from motor insurance. Last year's premium income was £94,230, compared with £86,593 in 1928, and whereas there was a small profit of £190 in 1928, last year there was a heavy loss of £4,987, increased by income tax, etc., to a total net loss on the year of £6,659, compared with a loss of £1,633 a year ago. The dividend has been maintained at 12 per cent., and the cost, namely £2,400, is well within interest earnings of £3,885. We are glad to see that the company has taken the opportunity to strengthen the underwriting fund from 33½ per cent. to the more normal proportion of 40 per cent. of the premiums. The desirability of taking this step was pointed out in a previous review of this company's accounts. As a result of the year's operations the company's surplus assets have been decreased by a sum of £5,174, but the credit balance of profit and loss account has been reduced only from £8,778 to £5,831. This has been achieved by the use of £10,000 from the general reserve fund of £15,000, a part of which has been needed for the strengthening of the underwriting account, while the remainder has been transferred to profit and loss account.

The British Association.—On the occasion of the Centenary of its foundation, which will be celebrated in London in 1931 (September 23-30), the British Association aims at raising a fund which not only will cover all necessary and desirable expenditure in connection with the Centenary Meeting, but also will assure for the future an adequate financial basis upon which to develop its approved activities. The total sum which is the Association's objective is £40,000. Contributions may be addressed to, and will be gratefully acknowledged by, the General Treasurer, British Association, Burlington House, London, W.1.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament — Economic Situation — Warsaw
Resolutions — New Council — European Union.
(FROM OUR CORRESPONDENT.)

GENEVA, September 22.

THERE seems little evidence so far that the plain speaking in the general debate of the League Assembly will lead to vigorous action. The committees have not yet arrived at the point in their agenda which deals directly with disarmament, and on this subject not much more can be expected than an effort to put more drive into the deliberations of the Preparatory Commission, which is to meet in November. There are no new encouraging signs as yet, however, and the German election results will be a welcome argument in the hands of those who are reluctant to do anything appreciable. What is useful is that the Italians—whatever view may be taken of motives—lose no opportunity of backing every reference, direct or incidental, to the necessity for achievements in this field of international work; this may not be regarded by some States as encouraging, but it is at least a tactical attitude which happens to suit the policy of States which really desire progress.

As a matter of fact, the German election results have not ostensibly influenced Geneva discussions, though their effect goes disturbingly deep. The German Foreign Minister's speech in the Assembly was moderately phrased, but the aims of German policy were definitely maintained. To M. Briand's assertion that the League should never shirk responsibilities, however difficult and complicated, and should never be afraid of new ideas, he gave a deft assent, and he cordially welcomed Mr Henderson's views on disarmament. The German contribution to the minorities debate in the Sixth Committee, in

which M. Briand, M. Benes, M. Zaleski, M. Marinkovitch and other foreign ministers took part, was also pitched in a quiet tone, and no precise proposals were made. It was nevertheless a valuable discussion, and its generally accepted conclusion that the subject should be similarly explored every year really makes of the Sixth Committee something of the advisory and exploratory committee which Germany and others have previously advocated as a separate League body.

There has been a great deal of discussion but not much sign of appropriate action on the economic situation. Soviet dumping, the interpretation of the most-favoured-nation clause, the Warsaw resolutions on agriculture, and the tariff situation have been the main subjects of debate, but there has been a singular lack of noticeable determination to grapple with the extremely serious economic depression all the world over. Apart from the general programme for concerted economic action, which is conditionally to form the subject of negotiations in the autumn, the main proposal for practical, if long-dated, action has been India's suggestion, on the basis of Mr Graham's general idea, that there should be a methodical study of the present economic depression "with due regard to the special situation of overseas countries." India, Japan, Australia, South Africa and the Irish Free State have all shown definite dislike of the tendency of the Warsaw resolutions on agriculture, and they have reminded the Assembly that the greatest agricultural countries are extra-European. The Netherlands representative could not support the Warsaw idea of establishing import duties on cereals from overseas in order to favour European agriculture, as this would have the effect of raising the cost of living; and the German delegate observed that the agricultural countries, while requesting a preferential system for their products, did not offer industrial countries some concessions of this kind must be made. The French Minister of Commerce, M. Flandin, did not consider the Indian proposal desirable, as the negotiations already contemplated seemed to him a sufficiently vast undertaking. While Australia has reservations on the reduction of tariff barriers (with Canada an active practitioner in raising them), Japan has threatened that if the upward tariff movement continues she will have to take measures for her own protection.

Altogether, it is not a bright prospect. The Australian delegate criticised the anxiety of some States to use the League of Nations for the advantage of European as opposed to extra-European countries, and he and the Indian delegate objected to that method of approach to problems of universal concern. There is not likely to be any League action on the restricted Warsaw basis. Definite and bold leadership, however, seems lacking, partly because there are very few signs of any general agreement as to how the economic difficulties should be met, and because there is little indication of the slightest departure from narrow economic nationalism. If and when conditions become desperate, perhaps there will be a readiness, if it is not then too late, to face unpleasant realities. At present, while most countries seem content to hope for the best, others, like Canada, are taking action which tends towards the narrowing of international trade relations rather than towards the opposite development unanimously urged by the International Economic Conference. If Great Britain should follow the same path the particular and general effect would be deplorable.

Agreement has been more or less reached on the final text of the Financial Assistance Scheme. The new members of the Council are the Irish Free State, Norway and Guatemala. As China failed to obtain the necessary two-thirds majority for re-eligibility, this is a good sign of reluctance on the part of the Assembly to extend this system, though on a long view of relations with China it is perhaps unfortunate in this particular case. Mr Kellogg was elected to succeed Mr Hughes as a judge on the Permanent Court, but Cuba's obstinacy, on not very creditable grounds, is making it doubtful whether the election of the full bench of judges under the new statute of the Court will be possible this year. Spain and Luxembourg have acceded to the General Act, bringing the number

of accessions to eight. The Australian Premier arrived on Saturday and addressed the Third Committee on Disarmament.

There has been some dissatisfaction over the Assembly resolution that the Committee to study M. Briand's proposals for closer European union should consist of Europeans only, but the fact that it is to consult, if necessary, non-European States, is to be a League committee officered by the League Secretariat, and is to report to the next Assembly, is a fairly reasonable safeguard, and hardly justifies the view of the *Journal de Genève* (representing the general Swiss attitude of opposition to the plan) that it will be the death of the League. Nevertheless, the committee will have to be carefully watched if a sound general conception is not to be allowed to degenerate into a harmful particularist organisation.

UNITED STATES.

Money — Capital Issues — Foreign Trade Prices — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 17.

MONEY markets are feeling the ease created by the Government's tax date operations. The obligations of the Treasury on September 15th, including a note maturity of \$350,000,000, a bill issue of \$50,000,000 and about \$35,000,000 in interest payments, were offset by allotments of \$334,000,000 on a new Treasury certificate, four times over-subscribed, and the third quarterly income tax collections. However, tax cheque payments are slow, and at the beginning of the week the Treasury borrowed \$225,000,000 on special certificates. About three-fourths of the amount was taken up by the banks, while the remainder was obtained from the Federal Reserve Bank. Official rate on call money quickly dropped to 2 per cent. on the Stock Exchange, and funds were difficult to place anywhere at 1½ per cent.

Ease in money and the prospect of its continuation for a long time are only mildly stimulating new capital issues. A good deal of foreign financing was under consideration by some of the banks, to be offered this month and later; but political disturbances in South America, the German elections and the present general dislike of the investment market here for "foreigners" will doubtless keep down these offerings. August proves to have been the lightest month for new capital flotations in the past two years. Tabulations prepared by the *Commercial and Financial Chronicle*, which include new financing of all sorts, amount to \$290,469,000, compared with \$583,238,000 in July. Last August, also a comparatively inactive month for new financing, the total was \$884,095,000. In September last year new offerings in this market reached a peak at \$1,616,465,000.

Bond issues continue to exceed stock flotations. The total of corporation stock issues last month was only \$57,673,000, of which \$43,844,000 was common shares, whereas a year ago stock issues made up six-sevenths of the new corporation financing. Foreign financing also fell to a low ebb. Foreign corporate issues amounted to only \$38,016,000, all for Canadian account, and the only foreign Government borrowing was \$2,680,000 for the City of Bergen. Most of the domestic financing was for railroads and public utility companies.

Foreign trade figures for August are mildly surprising. Exports were \$300,000,000 and imports were \$217,000,000. Inward shipments were about \$2,000,000 lower than in the previous month and the smallest in ten years, but exports increased \$34,000,000. The actual quantity was, of course, even larger.

Compared with August of last year, exports were down about 25 per cent., and imports were more than 40 per cent. lower. The Department of Commerce estimates that, in quantity, foreign trade is running between 80 and 85 per cent. of that of last year. According to this estimate, it finds exports have dropped about 30 per cent. in quan-

tity in the first seven months and imports 5 per cent. Cotton exports were more than twice as large in August as in July and over 60 per cent. above the same month of a year ago. Domestic consumption, on the other hand, was smaller in August than for any time since 1924, and with two or three exceptions was the lowest for any month since the war. Wheat exports also are running higher than a year ago. There was a net loss of \$19,618,000 in gold last month, but for the eight months the country is the gainer by \$183,000,000.

Other trade indices do not indicate anything more than a slight seasonal gain. The volume of bankers' acceptances declined more than \$10,000,000. Railroad freight traffic, while rising slowly, is still far below that of recent years. The steel industry is barely holding its own around 58 per cent. of capacity, although there is some inclination to place forward orders which indicates the growing belief that prices have reached bottom. Motor sales are not expected to be larger this month than in August, and only a moderate gain is likely for October.

Apart from the recent weakness in grain and cotton prices, and softness in the copper market, the commodity price structure seems to be strengthening. The Bureau of Labor Statistics index for August was unchanged at 84. Prices for most farm products rose on the month, and foods were slightly higher. Textiles were lower, as were metals and building materials. Price changes by groups were as follows:—

INDEX NUMBERS OF WHOLESALE PRICES. (1926 = 100.0.)

Groups and Sub-groups.	August, 1929.	July, 1930.	August, 1930.
ALL COMMODITIES	97.7	84.0	84.0
Farm products	107.1	83.1	84.9
Foods	103.1	86.3	87.1
Hides and leather products	109.7	100.7	98.9
Textile products	93.1	80.0	77.7
Fuel and lighting materials	80.9	75.4	75.4
Metals and metal products	104.3	94.3	92.7
Building materials	96.7	88.9	87.4
Chemicals and drugs	93.7	87.8	87.3
House furnishing goods	97.1	96.2	95.9
Miscellaneous	81.3	71.7	71.2
Raw materials	98.9	81.1	81.8
Semi-manufactured articles	96.2	79.7	78.1
Non-agricultural commodities	94.3	84.4	83.8
Finished products	97.3	86.7	86.4

Employment decreased last month, and is probably even lower this month. The Bureau of Labor Statistics reports a drop of 1.4 per cent. in employment in 13 major industries, and a decline of 2.6 per cent. in employees' earnings. Seasonal industries, exclusive of manufacturing, show a gain of two-tenths of 1 per cent. with a drop of 1 per cent. in pay-roll. Manufacturing alone declined 2.1 per cent. in employment, and 2.6 per cent. in pay-rolls. The comparisons are with July of this year. An average of 78 per cent. of a full normal force of employees, working an average of 91 per cent. of full-time, was reported by 10,370 establishments. Last month the principal decreases were in sugar refining, farm implement manufacturing, tobacco manufacturing, machine tools, automobiles, cotton goods, hardware, sawmills, structural ironwork trades, steel and rubber and tires.

Demand for credit is rising slowly. The weekly statement of reporting member banks of the Federal Reserve system shows another small gain in commercial borrowing and brokers' loans have gone up for two weeks in succession. However, the increases in this respect have been less than seasonal, even taking into consideration the influence of lower commodity prices. Although no one expects cheap money to bring on a business revival, Federal Reserve policy will nevertheless continue to be one of low money rates, and stimulation for the bond market. A good deal has been accomplished in the direction of promoting an easier long-term capital market, making the short-term market less attractive, and this course will be continued, in co-operation with central banks abroad.

Recent stagnation in new capital flotations has not been due to any indigestion in the market. Prices for the best

grades have been strong, and investment demand is overflowing into second grades and preferred shares. More than half the important bond issues since the first of the year are now selling at a premium over the issue prices, although the rise in price has been confined mostly to seasoned issues.

Federal Reserve system accounts for the past week reflect the deflation of month-end credit requirements. Total credit outstanding dropped \$27,000,000 to a total of \$985,000,000, the decline coming entirely through repayment by member banks of their borrowings. The Reserve Banks tempered the decline by adding \$23,000,000 to bill holdings, while Government securities were unchanged. Gold reserves rose \$25,000,000, and circulation dropped moderately. The reserve ratio is now 81.3 per cent., compared with 73.7 per cent. a year ago.

Opinion here is that South American troubles are pretty well over, and the bond and exchange quotations of the republics are steadier. Only temporary disturbance was caused by the German election results. In the best quarters confidence is expressed that the security of German bonds has not been disturbed, and that the reparation payments are not endangered. On the contrary, it is felt here that the election may give a wholesome warning to the elements pledged to the maintenance of the present economic order. International bankers with German leanings also are inclined to believe that a good effect will be had on the Allied Powers, tempering their policy, and so strengthening the position of the centre parties with the electorate.

FRANCE.

International Politics — British Holders of Rentes — Foreign Trade — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, September 24.

THERE are numerous indications that, as forecast last week, the German outburst of Hitlerism is likely to prove one of the strongest unifying factors that French public opinion has known for some years past. Dr Curtius's unfortunate step—although doubtless due more to domestic reasons than anything else—in bringing forward at Geneva at the present juncture the thorny question of the protection of minorities, is another factor which has made more difficult the task of consolidating European relations and will not be likely to aid M. Briand in his effort to translate the project for a European Union into accomplished fact.

Simultaneously, the prospects of a solution of the disarmament problem have been largely diminished. "Security first, then arbitration, then disarmament," thus crystallised in slogan form, is now the programme that is daily finding more general support among the various political parties, and from French opinion in general. A significant instance of the present trend of thought occurred at Lyons a day or two ago, when the militants of the local Radical Socialist Party held their preliminary caucus, in preparation for their forthcoming party congress at Grenoble. A private member of the organisation ridiculed the idea that time should be wasted in dealing with the question of another possible war. "The Kellogg Pact," he said, "categorically proscribes war, which is no longer possible, therefore let us dismiss it from our minds." To the surprise of most of those present, M. Herriot, who presided, took quite a different view. "The Kellogg Pact," he quietly pointed out, "is only a moral pact. Unfortunately, it is not accompanied by sanctions." M. Herriot's expression of opinion—which has attracted wide attention and has been acclaimed by his opponents as being as courageous as it was unexpected—has since been confirmed in another quarter, from which it was as little expected to come. This was by M. Painlevé, in a speech on Sunday, in which he said he "could not conceive a peace without security," and that "a France disarmed would not be an example but a temptation." In its first leader commenting on the results of the German elections, the *Temps* summed up their effect in the phrase: "A new era has begun in

Germany." All France has been quick to realise the fact, and is busily completing its preparations to meet the changed situation, as will undoubtedly become apparent when the Chambers reassemble at the end of next month.

The announcement that the British Government, towards the middle of July, sent a formal Note to the Quai d'Orsay, suggesting that the question whether British holders of French Rente issues, made in London during the war, should be paid in pre-war gold values or in depreciated paper francs, shall be submitted to arbitration, has caused both surprise and a certain amount of irritation here. The Note has brought the reiteration in many quarters of the accusation that, but for the sudden cutting off of French credits by the Lloyd George Government in 1919, the collapse of the franc would have been avoided and there would have been no necessity to stabilise it at its present value. The French thesis is that there is no correspondence between the French Rente issues in London and the Brazilian and Serbian issues here. The latter, it is argued, were veritable international issues, offered on exactly the same conditions in the different financial centres of Europe, while French, British, Swiss and other holders were all originally paid in gold. When the franc collapsed, however, the borrowing Governments took advantage of the opportunity to pay French holders in an equivalent number of depreciated paper francs, while continuing to pay their other creditors in the original gold basis. The London Rente issues, on the other hand, it is claimed, were all integral portions of corresponding loans issued in Paris, and therefore the British holders could not claim to be more favourably treated than their French fellow sufferers, who have been called on to sacrifice four-fifths of their capital and interest rights. The absence of any legal ground for arbitration or compensation in any form was recognised as far back as July, 1928, it is argued, when Mr Churchill, then Chancellor of the Exchequer, expressed the opinion in the House of Commons that no legal basis existed for claiming differential treatment for British holders of these issues, as the scrip is denominated in francs, no guarantee is given in regard to exchange and no distinction is made between the various classes of holders.

The foreign trade returns for August show that exports for the month totalled 3,108,000,000 francs (against 3,580,000,000 francs in July last, and 4,257,000,000 francs in July, 1930), and imports 4,068,000,000 francs (against 4,120,000,000 francs in the previous month and 4,604,000,000 francs in July, 1929). The heavy drop in exports, which was primarily due to the general economic depression in the purchasing countries, still continues; while the small further decline in imports confirms the view that the French internal situation is now being comparatively little affected by the universal slump. The detailed figures for the first eight months of the year are as follows:—

	First Eight Months of 1929.	1930.	Differences in 1930.
Imports.			
Foodstuffs	9,144,039,000f.	6,787,252,000f.	-2,356,787,000f.
Raw materials...	23,982,264,000f.	20,615,762,000f.	-3,366,502,000f.
Manufactured goods	6,429,683,000f.	7,635,475,000f.	+1,205,792,000f.
Totals	39,555,986,000f.	35,038,498,000f.	-4,517,497,000f.
Exports.			
Foodstuffs	3,918,073,000f.	4,054,511,000f.	+ 136,438,000f.
Raw materials...	8,395,883,000f.	6,916,965,000f.	-1,478,918,000f.
Manufactured goods	20,485,883,000f.	18,329,691,000f.	-2,056,192,000f.
Totals	32,799,839,000f.	29,301,167,000f.	-3,498,672,000f.

The most unsatisfactory feature of the eight months' figures is the fall in exports of manufactured goods, while imports of the same category have increased. The continued soundness of the French internal economic situation is confirmed by the fact that, although imports of raw materials have decreased by 3,366 million francs in value as compared with the corresponding period of 1929, the tonnage of this category of entries has increased by 2,393,975 tons, or over 7 per cent..

The imports of raw materials since January have included an increase of 1,070,000 tons in the entries of

foreign coal, in spite of the continued larger output of the French collieries. Coal production returns for July, which are issued this week, show a total output of 4,591,539 tons during the twenty-six working days, against 4,212,044 tons in June (twenty-four days), and monthly averages of 4,577,000 tons in 1929 and 4,369,000 tons in 1928. The output of metallurgical coke by the colliery plants during July totalled 427,121 tons, against 416,992 tons in June last and 408,597 tons in July, 1930. Pourparlers are in progress between the coalowners and miners in the Northern coalfield in regard to a demand put forward by the workers for annual holidays on full pay. A 24-hours general strike has been ordered for October 10th, as a protest against the slowness of the negotiations, but there now appears to be a probability that this will be called off, in view of the likelihood of an agreement being reached shortly. The men state that they are prepared to "make up" the necessary time, represented by the holidays demanded, by working on Saints' Days and other orthodox public holidays in this country, during which the mines are normally idle. The employers are putting forward a demand for the application of certain modifications of the eight hours' days, which would enable them to work longer time during periods of increased demand for coal. These modifications, which would conciliate the men's claims with production requirements, now seem likely to be adopted.

GERMANY.

Political Situation — Stock Exchange — Reichsbank.

(FROM OUR CORRESPONDENT.)

BERLIN, September 24.

THE great subject of speculation in German politics is the solution contemplated by the Chancellor for the present complicated situation. At the moment of writing the projected meeting of the Cabinet has not yet taken place, but it is sadly to be feared that even when it is held it will not clear up the position very much, for it is only to discuss the actual programme of the Brüning Government and will not touch upon the question of the coalition, which is the kernel of the present difficulties. From the Government's announcement of their intentions it is difficult to say whether they propose to turn to the Right or to the Left, and it is high time that the public should be given some definite information and an end put to such speculations.

Unsophisticated newspaper-readers might take the attempt of the Government to shelve the question of the coalition and to discuss only definite measures for evidence of remarkable statesmanship, for naturally the goal of every rational government is actual achievement, not the mere establishment of particular party groupings. In Germany's present condition, however, these party groupings are of quite extraordinary importance. By whatever means government is carried on it will be impossible to avoid laying new burdens on the mass of the population, and especially on the wage-earners. The emergency decrees include reductions in the scale of social insurance, whose full effect will be felt in the coming winter. Nevertheless, the contributions, half of which are paid by the workers, will have to be considerably raised in order to maintain even the reduced benefits. In order to meet the rapidly growing Budget deficit new taxes, which must fall upon working-class consumption, will perhaps be inevitable. If the depression continues, the arbitrators affairs it is essential to make it clear to the workers that the Government wishes to take these measures, not in hostility to them, but in co-operation with them. This necessity has become the more urgent because of the outstanding election success of a party which is hostile to the Constitution—the National Socialists. Anxiety for the safety of the State must now force the parties which are loyal to the Constitution to range themselves side by side with the Social Democrats. If, in spite of this common danger, the bourgeois parties refuse to come to an understanding with the great working-class party, the Socialists,

the workers are bound to get the impression that war is to be waged on them at all costs. Such an impression, just at the time when the Communists also have been successful at the elections, would be highly undesirable and would betoken in the long run a far greater danger than the growth of the National Socialist Party.

People in Germany can hardly get over their astonishment that the immediate danger of an attempted rising of National Socialists should have been taken so seriously abroad. This danger is entirely non-existent. True, the National Socialists are a thoroughly revolutionary group, and their intentions against the present State the worst conceivable, but if they were to attempt force at present it would be the end of their organisation. Not only in Prussia, but in Bavaria, Baden, Württemberg and most of the small States the police are under the control of Governments who are absolutely determined to suppress by force any act of violence by the Hitler Party. The Reichswehr is under the military leadership of General von Hammerstein, who proved his loyalty to the Constitution in the Kapp Putsch. The trial of several officers which is at present being conducted before the Reichsgericht is evidence that the attempt to create National Socialist "pockets" in the Reichswehr has been nipped in the bud. The Hitlerites are well aware of all this, and knowing it, are endeavouring first of all to give themselves the appearance of a legal party. That they would behave quite differently if they were in power is another matter; at the moment the danger lies only in the lack of that unity among the parliamentary groups which is necessary to give the Government a constitutional foundation.

The Social Democratic Party is undoubtedly ready to go to all possible lengths in reaching an understanding with the bourgeois parties of the Centre, but it is frankly not prepared to join a Government which insists in carrying out the decrees of the Brüning Cabinet without modification. It must be able to show the workers, after the substantial success of the Communists, some gain to the working classes from its co-operation. Given goodwill, it would certainly be possible to find in the numerous details of the new social insurance regulations abundant possibilities of compromise, but the parties to the right of the Centre will at best only accept very grudgingly the admission of the Social Democrats into the Government, and are not at all inclined to offer them any price for their adhesion. The Chancellor's attitude seems similar, though it is not clear how far Dr. Brüning is taking this line on his own account and how far under pressure from the German People's Party.

If the agreement with the Social Democrats fails to materialise, there remain only two possibilities: either the inclusion of the National Socialists in the Government bloc or continuance of the Brüning Government in its present form, with the certainty that it will not obtain a majority in the Reichstag and will have to go on governing unconstitutionally under Article 48, since fresh elections would only make its position worse. It is still very unlikely that the Centre will enter into a coalition with the National Socialists, though not quite so impossible as it seemed last week. A Government of the Centre, ruling by dictatorial methods, would perhaps be more justifiable for the moment than a division of power with the enemies of the Constitution. In the long run, however, such a régime would involve the danger that the Government would lose touch with the democratic elements in the Reichstag and fall under the influence of extremists.

On September 15th, the day after the elections, the Berlin security market was exposed to very severe selling pressure, but the fall in values was largely recovered the following day. The hope that the election results would be calmly received both at home and abroad soon turned out, however, to be a delusion. Towards the end of last week, and at the beginning of this week, the Berlin Bourse experienced the heaviest declines in values since October of last year. The fall in German foreign loans (the Young Loan), and the reduction in the foreign exchange holdings of the Reichsbank were the direct cause of the decline, which was intensified by heavy selling

orders from all sections of the German public, offset by only a very small demand. For the most part, only German fixed-interest-bearing securities were sold for foreign account. The heaviness of the decline in so short a period shows the complete inability of the market to cope with the situation. On other occasions of sudden downward movements the big German banks have applied the brake; their intervention has repeatedly supported the market in the past and thus made possible the fulfilment of numerous engagements. On this occasion, the intervention of the banks was on a very small scale and confined to a very small number of securities. It is true that the immense scale of the selling orders would have made more extensive intervention exceedingly difficult, but there was also another important reason for the reserve displayed by the banks: during the last year and a-half they have already taken up a very large volume of securities, and at present it would not be compatible with a due regard for their own liquidity and for their profits to increase substantially their holding of securities. The decline in the prices of the principal Berlin shares is shown in the following table:—

	Highest, 1929.	Highest, 1930.	Sept. 13.	Sept. 22.
Reichsbank	338	313½	249	224½
DD-Bank	176	154	123½	117½
Norddeutscher Lloyd	137	117	91½	79
I. G. Farbenindustrie	267	190	152½	134½
Siemens	428	309	198½	171½
A.E.G.	202	182	138½	125
Salzdetfurth	531	425	330	287
Schultheiss	329	324	248	198
Vereinigte Stahlwerke	121	107	78	70
Gelsenkirchen	146	144	107½	100
Karstadt	236	142	102	91
R.W.E.	266	198	170	154

In ten days, German shares have lost on the average over 10 per cent. of their value, and in the case of some of the most important industrials the loss is even greater. The bond market, the firmness of which has been conspicuous during the current year, also experienced a sharp decline with falls ranging from 2 to 5 per cent. The average yield on German loans has risen in the last few days from about 7.8 to almost 8 per cent. The effect of the movement is also seen in the money market, the excessive abundance of short-term money has come to an end, the rate for bank acceptances has risen from 3½ to 3¾ per cent., and contango rates are at present 5 per cent. against 4½ ten days ago.

In spite of heavy withdrawals, the position of the Reichsbank is still very strong. Immediately before the elections the bank held about Rm. 2,600 millions gold and about Rm. 1,000 millions foreign bills. During the first week after the election it parted with more than 150 million foreign bills, and on September 20th the Reichsbank was obliged to reinforce its foreign exchange holdings by a sale of gold to the value of several million dollars. This shipment of gold from Cologne to Paris was the first consignment sent from Germany since May, 1929. This situation arose from a combination of three circumstances: in the first place, from the withdrawal of the holdings of foreign, and especially French banks in Germany; secondly, foreigners have been selling German securities and having the proceeds sent abroad; and, finally, the most important phenomenon of the last few

days, the export of capital has been accelerated. German capitalists have felt it advisable not to keep their entire property in Germany and preferred to invest abroad. Too much importance must not be attached to this flight of capital, but it is reducing the already inadequate volume of capital at the disposal of German economy. In spite of the heavy losses in gold and bills, the German note circulation is still covered to the extent of more than 60 per cent. by gold and foreign bills, so that the Reichsbank can contemplate with perfect calm a continuance of the present withdrawal of gold and foreign exchange.

SWEDEN.

Production — Foreign Trade — Money Market — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, September 12.

THE depression which first became clearly evident in June has become still more pronounced, for though July marked some recovery, August showed an extension of the setback. Its consequences may be seen in all directions, not least in the general tendency to expect a prolonged period of depression. The slight recovery in July had a purely psychological background. As in other countries, the hope was entertained that autumn would bring an improvement. When the production figures for July were published at the end of August, experience had already shown that this hopefulness was not borne out by the facts. After the sharp fall of the *Svensk Finanstidningens* index-number of production (1923-24 = 100), from 140 in May to 123 in June, the figure for July rose again to 130. Such rapid fluctuations are still more surprising when one remembers that July usually shows the low-water mark in the seasonal decline. In this case almost all the leading industries showed increased production. The explanation of this unexpected development is probably to be found in the fact that as June included the Midsummer and Whitsuntide holidays, the index number for June exaggerated the curtailment of output, and the July figure represented a corresponding exaggeration in the opposite direction.

The statistics of foreign trade in July reveal the very remarkable fact, for the time of the year, that the balance of trade was passive, even though by the small amount of Kr. 3 millions. July is one of the very best months for shipments, and the balance of trade is usually distinctly active. In 1913 there was a surplus of exports of Kr. 7 millions, of recent years the lowest surplus has been Kr. 10 millions, and in two years, 1927 and 1929, it amounted to Kr. 30 millions. It is necessary to go back to 1921 and 1920 to find an excess of imports in July. The passive balance in July, this year, was due to unusually heavy imports. At the same time exports were lower than those of last year, and this is an evident symptom of the depression. The reduction in exports affected practically all branches, and has clearly begun to spread to the engineering industry. In timber shipments were 11 per cent. below last year, in pulp 7 per cent., in paper 21 per cent., and in newsprint 34 per cent. In quality goods, motors fell by 4 per cent., but separators and telephones rose by 10 per cent., and ball-bearings by 16 per cent. Exceptional in this respect was electrical machinery, the export value of which increased by 23 per cent. Both butter and bacon—especially the latter—showed satisfactory figures.

There can be no doubt that these figures reflect actual developments better than the production figures, and the money and exchange markets show the same results. The demands for credit have fallen much more rapidly than is usual at this time of year. At the same time the cash reserves of the commercial banks have increased considerably despite an abnormal decrease of rediscounting at the Riksbank. Finally, the exchanges have shown a development quite contrary to the normal at this season. As a rule there is a surplus of foreign exchange, a fluctuating reserve at the Riksbank, and a firm tendency of the

krona. This year, on the contrary, there has been a demand for exchange in the first half of July and August, which has caused a considerable reduction of the Riksbank exchange reserves. It is true that equilibrium was reached in the latter part of these months, together with a firmer tendency for the krona, but even so the position was not normal for the time of the year.

The volume of credit was reduced by no less than Kr. 101 millions, whereas the corresponding figure a year ago was Kr. 89 millions, and in 1927 Kr. 62 millions (1928 is not comparable owing to the great labour disputes). Taken absolutely, the volume of credit has not only touched a low record for the year, but also for all the post-war years at this season. Still more striking from this point of view is the reduction in rediscounting at the Riksbank. At the end of July the total was Kr. 14 millions, a mere nothing compared with the Kr. 4.4 milliards total of loans by the commercial banks.

The abundance of ready money and the difficulty of employing it profitably is also seen in the necessity for the commercial banks to invest their funds abroad, in spite of the low rates of interest prevailing there. Thus their net holdings abroad increased by Kr. 55 millions in July, while the Riksbank was compelled to furnish the market with Kr. 31 millions. There can scarcely be any doubt that this circumstance is the explanation of the above-mentioned developments in the exchange market.

Even after the passive balance of trade in July the excess of imports for the year is quite moderate. At Kr. 89 millions for January-July the figure certainly exceeds the corresponding figure for 1929 by Kr. 24 millions, and also the 1927 figure. But it only slightly surpasses the figures for the first seven months of 1925 and 1926. The balance of payment has so far developed favourably. In July it improved by Kr. 23 millions, and Sweden's net claims abroad amounted to Kr. 565 millions, or almost Kr. 75 millions more than last year, despite the fact that exports of capital were considerably larger this year.

All these developments sketched above became more marked in August. Apart from numerous cases of curtailed output, the Stock Exchange furnishes perhaps the best evidence of this fact. Domestic stocks, which had previously revealed remarkable firmness and at the end of July were still quoted higher than at the beginning of the year, fell in August by no less than Kr. 110 millions. The fall of international stocks by Kr. 130 millions was due primarily to a decline on foreign bourses. The optimism which was still apparent in July appeared to have no foundation in fact. In view of the general opinion that the depression will be prolonged, the resistance of the Stock Exchange collapsed. At the end of August there appeared a slight recovery, but there is nothing to show that the corner has been turned.

ITALY.

Società per le Bonifiche Ferraresi — Effect on Stock Exchange — Proposed Reform of Company Law — Auditors.

(FROM OUR CORRESPONDENT.)

TURIN, September 9.

THE Italian Stock Exchange opened very badly after the usual mid-August recess, owing to lurid disclosures with regard to one of the oldest and best-known Italian joint-stock companies. The Società per le Bonifiche Ferraresi (Ferrara Land Reclamation Company) was founded in 1872 by a group of Italian and foreign, mainly Swiss, capitalists, with the aim of reclaiming malarious and partly-submerged territories in the province of Ferrara, near the mouth of the River Po. The company, which did for a time true pioneering work in a country where only a few fishermen lived, got into difficulties and the shareholders decided in 1882 to put it into liquidation. Another group, this time headed by capable Piedmontese capitalists, reconstructed it in 1898, and its fortunes were thenceforward assured. It owned 23,000 hectares (about 57,500 acres) of well-reclaimed land, with good roads,

buildings, machinery and cattle, in what had become the most fertile agricultural belt of Italy. The policy of the old directorate, which was popularly identified with the name of the chairman, Signor Marangoni, was one of conservative dividend distribution, building up of hidden reserves out of undistributed profits, and periodical writing off of capital. In this way the capital was reduced from 15 million lire in 1898 to 9.2 million in 1918.

After the death of Signor Marangoni, the Piedmontese group, in 1919, sold its interests, apparently at a good price, to another group headed by Comm. Gino Lisi, of a different and more adventurous financial school. The capital was rapidly raised from 9.2 to 100 million lire; and while in pre-war times 7½ per cent. dividends were paid on the small capital, in the last years from 12½ to 14 per cent. was paid on the vastly increased capital.

The most extraordinary feature of the collapse was that, as recently as last April, a balance sheet was laid on the table at the general shareholders' meeting in which, in addition to the capital of 100 million lire, there appeared reserves to the amount of upwards of 90 million lire, and debts, mostly long-term mortgages, for only 83 million lire. The debts seemed to be amply covered by the assets, among which the lands were said to be very conservatively valued at 136 million lire. Assuming the 23,000 hectares of good land to be worth only 10,000 lire per hectare, it appeared that there was a hidden reserve of almost 100 million lire. The meeting, at which, in a not very prosperous year, profits available for distribution amounted to 15,078,808 lire were announced, passed a unanimous vote of thanks to the chairman and directors.

Suddenly it was made known that during the August recess, the Tribunal of Ferrara, where the company had its administrative seat—its legal seat was always Turin—had granted to the company the benefit of the *concordato preventivo*, that is to say, had initiated a procedure in virtue of which, with the consent of a certain percentage of creditors, the company may settle its debts with the payment of at least 40 per cent. of the sums due to creditors. A balance sheet presented to the Tribunal purported to show total debts to the tune of 250 million lire and total assets valued at only 150 million lire. The moral shock in the Italian bourses was great. How could it happen that 23,000 hectares of the best land in Italy had been swallowed up, so that not a penny remains in favour of the shareholders, and creditors are left with a percentage of 40 per cent., or not much more than that? How can the shareholders of other companies feel sure that lands, houses, machinery and good visible assets will not fade away, leaving them with worthless scraps of paper? The Bonifiche Ferraresi shares, which some time ago were up to 800 lire, and closed before the recess at 160 (par value 200 lire), were offered at from 5 to 20 lire. The market in general was bad and many shares suffered heavily. The public prosecutor instituted a vigorous investigation and his conclusions were certainly of a serious kind, as the chairman, Signor Lisi, and various other directors were arrested.

Though the worst of the shock is over, markets remain sluggish. In the commercial daily *Il Sole* there is published to-day a list of current prices of the shares of 54 big and favourably-known companies, from which it appears that none of them yield less than 6.53 per cent., the great majority ranging from 7 and 10 per cent., four going over 10 per cent., and one going as high as 12.50 per cent. Chances of picking up good shares at low prices seem abundant. To restore confidence, an official communiqué announced that joint-stock company law is to be reformed. Such reform is at present under discussion in many European countries, in consequence of the world stock exchange crises, and of such incidents as the Hatry case in England, the *Gazette du Franc* case in France, and the present affair in Italy. Besides the usual questions, the right of shareholders to have their questions answered, plural voting, the right to a vote of shares pledged as collateral for speculative loans (*riporti*), and items to be compulsorily and separately specified in the balance sheet, one point in particular is raised here: the constitution of the body of auditors

NATIONAL BANK OF GREECE Established 1841

(*collegio dei sindaci*). At present the auditors are appointed annually by the shareholders assembled in general meeting, that is to say by the very body which also appoints the board of directors. The consequence is that the group of men who are able, because they possess the majority of shares, or represent such possessors, to appoint the board of directors, are also able to appoint the auditors. These last know that they will only be reappointed if they are subservient to the wishes of the dominant group. Therefore, auditors' reports are mostly colourless and always conclude that everything is in order. Shareholders in such cases as that of the Bonifiche Ferraresi, awake only when it is too late. A solution would be found in a return to the practice which existed before the enactment of the present Commerce Code (1882), of the appointment of auditors by tribunals, from a list of candidates having certain minimum qualifications. The system was then discarded because the auditors, as official employees, without a stake in industry, did not notice irregularities until they were too advanced to be cured. Another suggested solution is to give to a possible minority of shareholders the right to appoint a certain proportion of the auditors.

Perhaps when the markets take a turn for the better, all these discussions will be suddenly forgotten. To-day, in Italy, as elsewhere, much ink is consumed in order to persuade the public to come back to the stock exchanges. It is doubtful whether good regulations can have such an effect; but it is certain that periods of crisis are sometimes useful, as they force on public opinion the necessity of reform.

SOUTH AFRICA.

Mines Report — Gold Forecasts — Transvaal Finance — Central Government and Provinces — Proposed Labour Law.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, August 20.

THE annual report of the Government Mining Engineer (Ref. No. U.G.21—1930) has just made its appearance. The information to be found in it does not support the statement, made both here and elsewhere, that the gold mines of the Reef have passed their zenith in output. It is possible, but unproven, that they have passed their zenith of prosperity. They may be even now passing their zenith of output—more one cannot say. In 1929, the Transvaal produced 10,412,326 ounces of fine gold, of which the Witwatersrand was responsible for 9,979,107 ounces. The Witwatersrand companies employed 21,610 Europeans (who earned £8,078,988), and 191,861 natives and coloured persons (who earned £6,498,886 plus quarters, rations and medical attention). Stores expenditure amounted to £9,391,078 for South African supplies and £4,687,464 for imports. In addition

to gold worth £44.2 millions, South African mines produced other minerals worth £16.7 millions, of which diamonds accounted for £10.6 millions and coal £3.8 millions.

In the Official Year Book of the Union (No. 11), also just issued, there is a new official estimate of the life of the gold-mining industry, which has been taken out during the last few months by the Government Mining Engineer. The estimate states that the lives of the mines would appear likely to be from 15 to 20 per cent. in excess of the "official" lives as estimated for income tax purposes. The estimates are based on present costs, and it is considered that a fall of two shillings per ton in costs or a permanent sufficiency of labour would prevent any fall in production for the next ten years. The estimate also assumes the inclusion of the produce of three new West Rand and three new East Rand mines between 1935 and 1940. The qualifications seem numerous and of vital importance, but it is obvious that the real usefulness of the Government Mining Engineers' figures is not impaired by his abandonment of the pontifical certainty of previous estimates. The outputs forecast, subject to the above qualifications, are:—

	£		£
1930	43,500,000	1940	25,500,000
1931	42,600,000	1941	25,500,000
1932	43,800,000	1942	20,100,000
1933	42,500,000	1943	20,100,000
1934	40,700,000	1944	15,500,000
1935	39,000,000	1945	15,500,000
1936	34,250,000	1946	11,700,000
1937	34,400,000	1947	10,100,000
1938	34,400,000	1948	10,000,000
1939	27,400,000	1949	10,000,000

The rather strong light which has lately been beating on the Provincial Councils has been intensified by recent proceedings of the Transvaal Council. Faced with a somewhat serious deficit in the funds necessary to furnish the expenses of education, roads, and hospitals, the Council could agree on no proposals for fresh taxation. The members are divided for voting purposes into two equal parties, the Nationalists having a theoretical preponderance of one or two votes in a House of 54. Trusting in this majority, the Administrator and his Executive Committee proposed finally to meet their deficit by taxes on horse-racing and other amusements and by heavy increases in the Provincial income tax. These imposts would fall almost entirely on the towns—especially those of the Reef—while a substantial proportion of the money is spent on purely rural requirements. When the proposals were actually before the House, two of the Nationalists abstained, and the deficit remains unprovided for. This *impasse*, added to difficulties of a similar nature in other Provinces, presumably brings us a step nearer to some revision of the relations between the Central Government and the provinces.

The Government, through the Labour Department, but with the evident approval of the Cabinet, are proposing to compel employers to employ European labour in place of native unskilled labour and semi-skilled labour. The professed object of the scheme is to release native labour for mines and farms and to provide employment for Europeans. A definite scheme has been put to the baling trade, whereby the Government would pay the master bakers the difference in the cost of the labour. On the other hand there have been vague threats from political platforms that industrialists should investigate their position voluntarily or risk the loss of protective Customs duties. One noticeable point is the absence of any excuse for compelling a native who is competent at work carrying say £5 per month, to accept other work of which the value would be, say, £3 on the mines or much less on a farm. A curious and surprising characteristic of our Government and its officials is the want of sophistication which enables them to anticipate a successful outcome for such proposals.

Letters to the Editor.

INDUSTRY AND THE CITY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The difference of opinion between the City and Lancashire as to the part which finance should play in the reconstruction of the cotton trade, shows no sign of being composed. The policy of the Bankers Industrial Development Company—that finance should only be found for new machinery or additional working capital, and that no money should be paid to any existing interests in the industry—is approved by the City. In Lancashire it is looked upon as a policy which is in the main impracticable and which will impose great and unnecessary delays in the reconstruction of the cotton industry.

On the face of it, the attitude of the Bankers Industrial Development Company seems so wise and reasonable that many people, whose knowledge of the intricate financial structure of the cotton industry is not great, have doubtless come to the conclusion that this quarrel is only another example of Lancashire's "obstinate mindedness." If, however, we probe a little deeper we shall find that economic righteousness is by no means exclusively confined to the side of the Bankers Industrial Development Company. For a correct understanding of the problem it is important to appreciate the historic perspective. The Bankers Industrial Development Company is not an ordinary finance house. It has been set up under the auspices of the Bank of England for the purpose of assisting in the rationalisation of British basic industries. Its activities must, therefore, be examined from the point of view of whether or not the methods adopted are the best methods in the existing circumstances to carry out the purpose for which it was ostensibly formed.

The cotton industry as a whole is in favour of amalgamation, not because there is unanimity of opinion that amalgamation *per se* will effect considerable economies in costs of production, but because it is appreciated that the industry is in too many hands, that its outlook is parochial, and that if the industry were consolidated, material and very great advantages would arise through a co-ordinated policy. The industry is anxious to carry out the recommendations of the Government Committee. Actuated by this desire what do they find? Already a large scale amalgamation exists in the Lancashire Cotton Corporation, which has been formed according to the principles now being insisted upon by the Bankers Industrial Development Company. The Lancashire Cotton Corporation is an aggregation of the financial lame ducks of two years ago. Incidentally, it may be mentioned that there are many more financial lame ducks now. As the Lancashire Cotton Corporation has not paid one penny in the form of interest or dividend to the creditors or shareholders of the mills absorbed, it is true to say that the Lancashire Cotton Corporation has had the whole of its productive units up to now for nothing. What is the result? Has the volume of Lancashire's production been augmented? Has the trade been consolidated? Has the present sacrifice of the investor been mitigated by a knowledge of future permanent benefit? The answer to all these questions is in the negative.

Lancashire is experiencing the peculiar phenomenon of efficient mills being closed down while inefficient mills are being started up. Men who have spent the whole of their lives in the industry cannot believe that a financial policy, the practical effect of which is to reconstruct the industry through its weakest units, is industrially sound. They think that if the implications of this policy were thoroughly understood the policy would cease to command influential support.

By the very nature of things the mesh through which companies absorbed by the Lancashire Cotton Corporation have passed, and companies which the Bankers Industrial Development Company are prepared to help must pass, is the mesh of insolvency. The most efficient concerns are on the whole the least insolvent.

The fact is that the Bank of England, in its new guise of the Bankers Industrial Development Company, just as in its old guise of the Lancashire Cotton Corporation, is only prepared to rationalise that part of the industry which it can get for nothing. It follows, therefore, that the policy which Lancashire is asked to approve of is the policy of rationalising the industry through its least efficient units—a policy of selecting units for improvement not because they are industrially suitable to this end, but because they are financially incapable of resistance. Is it to be wondered at that Lancashire looks upon this policy as industrially suicidal, and looks upon the financial view which dictates this policy as being misguided?

Since in practice the working out of the Bankers Industrial Development Company's policy excludes the more prosperous companies, it tends automatically to deprive itself of the most skilful management. Rightly or wrongly Lancashire believes that, rationalisation or no rationalisation, good management is the key to profitable trading.

The dual aspect of the Bankers Industrial Development Company is the cause of much misunderstanding and complaint. In the Government's cotton report the Bankers Industrial Development Company figures as an almost benign financial body, determined not to allow any preconceived ideas to stand in the way of assistance being given to the country's most important export trade. When their policy is examined in practice, it is found to consist of securing the control—without payment of any kind—of all Lancashire's most financially embarrassed productive units and, under the name of rationalisation, endeavouring to "make a good thing of it."

Lancashire feels that the Bankers Industrial Development Company does not appear to the public in its true colours. If it is a semi-official financial body formed to rationalise British basic industries, then it cannot ignore the more prosperous companies and inscribe on its banner "Building up on Bankruptcy," "Your Misfortune is our Opportunity." If, on the other hand, it is a collection of shrewd financiers, anxious to gain control of a large proportion of Lancashire's production without the expenditure of any capital, then the more prosperous concerns have a legitimate cause of complaint in that the Government associates itself with the Bankers Industrial Development Company's policy, and because through this association all normal avenues of finance have been closed to the cotton trade.

In point of fact, it is likely that the Bankers Industrial Development Company occupies neither of these two extreme positions. Unconsciously it prevaricates. When it talks to the Government it stands hesitatingly on one leg; when it comes to consider practical schemes it rests firmly on the other. The City looks at the Bankers Industrial Development Company dubiously and suspiciously in its former attitude. In its latter position it is patronisingly patted on the back.

It is, of course, typical of our English way of never thinking out a policy to its logical conclusion that this welter of misapprehension and misunderstanding in respect to industries and the "City" should have arisen. This, however, is poor comfort for the industries that require a helpful and comprehensive system of rationalisation. It should not be forgotten that it is the Government, through its prolonged inquiry, that has interfered with the Lancashire cotton trade. It is the Government that has said that the Lancashire cotton trade must be rationalised through amalgamations, and it is the Government and the Bank of England in consort who have stated that finance to this end will be provided. For the Bankers Industrial Development Company now to take up the position that it is only the medium between industry and the new capital market, and that by reason of its unique situation it has to be more, not less, careful than the ordinary merchant banker, is to ignore the whole of the history of Government and Bank of England intervention in the cotton trade.

But the intervention of these two most important bodies is a fact which cannot be ignored. Lancashire is still without a plan or policy for comprehensive rationalisation. The 8-loom system ought to have been introduced long ago. Automatic looms are absolutely essential. "High drafting" must be more extensively used. As a body, the operatives are quite prepared to make the sacrifices which these alterations in the existing system entail. They demand, however, that rationalisation should be comprehensive, that progress should be made on a broad front, and that the economies in cost of production achieved by their efforts should be used to swell the economic efficiency of the whole industry and not swallowed up through enabling uneconomic mills now stopped to begin production again.

The operatives realise that automatic looms and a two-shift system must entail a concentration of production. They appreciate that this production ought to be concentrated in the most economic units, and they observe that the financial policy dictated from outside the industry is working in precisely the opposite direction—namely, a concentration of production in the least efficient units.

For these reasons the practical application of the Government's recommendations is held up. Lancashire—employed as well as employers—attributes the blame in no small measure to the impractical theory of the Bankers Industrial Development Company. Perhaps Lancashire would be well advised to ignore the Bankers Industrial Development Company and concentrate on internal reorganisation in spite of the many difficulties. In the interests of the economic health of the whole country, the present deadlock should be brought to an end. It should not be beyond the wit of man to devise a system which is financially acceptable and industrially sound. Perhaps a way out could be found through a round-table

conference called by the Government and including representatives of all the joint-stock banks as well as representatives of the industry.—Yours faithfully,

S. S. HAMMERSLEY.

Stroods, Uckfield, Sussex.

GOLD AND THE PRICE LEVEL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The following is an extract from a letter received from an American correspondent, the head of a prominent American financial house:—

"I have read with great interest the memorandum by Sir Henry Strakosch on Gold and the Price Level. Under one name or another, this theory of the distribution of gold has been under discussion by economists for more than thirty years to my personal knowledge. In this country discussion of it was acute for about fifteen years before the enactment of our Federal Reserve Act. It was then usually known as the 'Quantitative Theory of Money.'

"I can see how the world supply of gold can be theoretically distributed among the gold basis nations on an equitable basis, but I do not see how this can be accomplished in a practical way. England, Germany, Japan and Italy undoubtedly are short of the amount of gold they should have, and the United States, France and Argentina have more than they require. To move the gold from the latter to the former would require the purchase of securities or goods by the latter from the former.

"Americans are not disposed at this time to take substantial additional amounts of foreign securities, for the reason that they can purchase equally as desirable and profitable securities in their home markets, which they believe, over a period of years, offer better chances of enhancement than do the foreign securities. If the first group of nations, mentioned as being short of gold, offered securities on a basis materially more attractive than the prices prevailing for similar American securities, I believe Americans would suspect that there was something wrong about them or they would not be offered so cheaply. Further, if the first group offered securities at a price which would make them attractive to American investors, it is probable that they would be paying more for the American dollar than they could make out of it when it was employed in the countries named in the first group.

"The movement of gold from America, say, to Germany through purchase of goods could only come about if Germany shipped us more than we ship them, and that is a condition which, naturally, every American would be loath to see happen. So long as our trade balance is in our favour, it is inevitable that the gold will move toward us instead of away from us. The only practical way which occurs to me of getting the gold out of our hands and into the hands of Great Britain, Germany, Italy, etc., is through purchase by us of European securities in large amounts and over an extended period of time. This is a matter of education on the one hand and of satisfying our people on the other that the European securities are more attractive as to yield, safety of principal and ultimate hope of principal gain than our own securities. We will have to wait a time for that, although I believe it will gradually come about.

"One index used by Sir Henry impresses me as being subject to attack: He divides the world's gold and the gold held by each gold standard nation on a per capita basis. It would seem reasonable that a country, highly industrialised, with a great export and import business like the United States, would require for the conduct of its business a larger supply of gold per capita than a country like Italy, which has few and relatively small manufactures, imports and exports, and where perhaps 60 to 75 per cent. of the population live on the land, as against 25 per cent. in the United States. I cannot at the moment think of a unit which would be more fair than 'gold per capita' used by Sir Henry, but if the gold were divided, say, on the basis of 'per million dollars of business done,' the distribution of gold among the gold standard nations might not be so much out of line as Sir Henry's table, 'Annex B,' indicates.

"These studies are always highly interesting and instructive, but business has always worked up to a peak and then taken a 'nose dive,' and, after a period on the ground, started up again. I think it will keep on doing this, but any plan which could bring the high and low points closer together would be to the advantage of the whole civilised world."—I am, etc.,

REGINALD WINN.

London, E.C.2.

THE RUBBER CRISIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the valuable review of the rubber situation in your issue of September 13th, you suggest that in 1931 production may be less than consumption. World production in 1929 amounted to 840,000 tons. In 1930 we should normally have seen an increase, but it is now apparent that there will be a falling-off to, say, 810,000 tons. (This total may be composed of 475,000 tons estate produce; 315,000 tons grown by native small holders; and 20,000 tons wild rubber.) With a continuance of low prices a further decline—perhaps to about 780,000 tons—should be seen in 1931. Absorption by manufacturers in 1929 may be put at 805,000 tons (U.S.A., 470,000 tons; other countries, 335,000 tons). Absorption in 1930 looks like being no more than, possibly, 725,000 tons. On these estimates 120,000 tons will have been added to world stocks in 1929 and 1930.

In the past we have no experience of a downward curve in rubber consumption for so long a period as two years; and even under existing circumstances it is probable we shall see a reversal of the downward tendency long before the end of another year. A further increase in stocks is improbable in 1931.

For the current volume of turnover the weight of world stocks is not unduly heavy; but the current rate of output is below and, in another year, will be well below, the potential. From now on, therefore, supply should be elastic; and any marked tendency towards a rise in price is likely to be damped down by expansion of output. The indications are for a prolonged spell of more stable prices than we have enjoyed in the past, with only intermittent demand for the produce of the marginal producer, though with fair profits for the most economical. Among the latter will be found, no doubt, the more favourably situated small holders in the various Eastern countries; but scientifically organised estates will continue to supply the bulk of the demand. For the discriminating investor there are bargains to be picked up in the rubber share market at present levels.—I am, yours, etc.,

1-4 Great Tower Street,
London, E.C.3.

Books and Publications.

ECONOMICS RESTATED.

PROFESSOR RUFENER has produced a very comprehensive text-book on general economics,* but as one of its outstanding features is a wealth of practical illustration, and as this practical illustration relates to conditions in the U.S.A., its value to the English student is somewhat diminished. A second outstanding feature, to which Professor Rufener himself draws attention in his preface, is the development of the subject "with a natural sequence of chapters, each chapter growing out of and developing further the preceding discussion," rather than the conventional classification of chapters under the headings "Production, Exchange and Distribution." The resulting arrangement is not unlike that evolved many years ago by Professor Henry Clay in his *Economics for the General Reader*. It is, however, in many ways less satisfactory; for whereas Professor Clay moved from very simple analysis to the larger problems of modern economic life, Professor Rufener plunges straightway into the latter, and gives us, on page 14, a classification of "five fundamental reasons for scarcity of goods" which are an anticipation, but not a very helpful anticipation, of subsequent discussions. There is, for instance, cause No. 4, which suggests that the gradual increase of the earth's population is responsible for some part of our present difficulty of providing an adequate supply of food, clothing and shelter for all.

Perhaps the most satisfactory chapters of Professor Rufener's book are those in which he deals with demand and market price, and constructs a lucid little demand schedule in which adequate emphasis is laid upon the effect of varying degrees of elasticity in response to price changes, on the part of various classes of buyers. Nevertheless, one misses, and feels that Professor Rufener's

students may also miss, as part of the elementary treatment of the subject, that somewhat academic grounding in the conception of value which the more orthodox textbooks attempt to provide, and which, however much they may stir Professor Rufener's ire by their "tone of unreality," do impart a unity and continuity to the treatment of economics by providing it with something in the nature of a philosophical background as well as a habit of careful definition.

ESSAYS ON POPULATION.*

THIS volume contains eight essays of very unequal merit on some of the major population problems of the world. In the first three, Professor Corrado Gini expounds again his theory that the birth and growth and death of nations follow a cycle comparable to the life history of an individual. Accordingly he ascribes the declining fertility of the Western peoples, not to voluntary limitation of births, but to the senile decay of the actual physiological power of reproduction. The differential birth-rate, which has agitated so many eugenicists who identify economic status with biological value, does not disturb Professor Gini; for, on his view, the upper classes in any society are necessarily drawn from those families which, having climbed to high estate during the heyday of their powers, are now comfortably declining into extinction. "To hope to improve the race by artificially stimulating the fertility of the upper classes is a delusion comparable to that of those who hope to increase the efficiency of the population by prolonging artificially the life of the aged."

Professor Gini states his thesis plausibly and quotes a certain amount of evidence in its support, relying particularly on the history of the decline and fall of great nations and on the fact that the interval between marriage and the birth of the first child appears to be growing considerably among the "low-birth-rate" peoples. From the experience of the birth-control clinics he argues that the birth of the first child is less likely to be voluntarily postponed than that of its successors. Such evidence, however, seems hardly adequate to sustain the large hypothesis erected upon it. The racial impurity of nations alone, for example, makes short work of the argument from history. Nevertheless, Professor Gini is, as usual, worth reading even while he is not always convincing.

Dr Oliver E. Baker contributes an informative paper on the Trend of Agricultural Production in North America. Some remarkable facts are disclosed, notably the large decline, amounting to 87 per cent. since the beginning of the century, in the American consumption of cereals. Conversely, there has been a no less significant increase in the quantity of milk and milk products consumed. Altogether it appears that the diet of the average American has undergone a profound revolution in the last thirty years.

Dr Kuczynski writes of the World's Future Population, on the whole, in a cheerful strain. He sees no real danger of over-population, while on the probable changes to be expected in the racial composition of the world's population he is discreetly non-committal. Everything depends, he says (thereby implicitly denying Professor Gini's thesis) on whether the birth control movement becomes as universal in the East as it is in Europe and North America.

The remaining papers by Professor Shiroshi Nasu are of much less interest. Professor Nasu does not take us very much beyond the obvious facts that the lower stage of capitalistic development in the East makes Eastern population problems fundamentally different from Western, and that the inferiority of the Mongolian races must not be assumed without proof.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Slum Problem. By B. S. Townroe. (London) Longmans, Green and Co., Ltd., 39, Paternoster Row. 6s. net.

A sound and valuable book on housing to which has been added a new chapter on the 1930 Housing Act.

The Experiment of Bolshevism. By Arthur Feiler. (London) Allen and Unwin, Ltd., Museum Street. 10s. 6d. net.

Of the innumerable books on this subject by observers who claim to be impartial, this is one of the more worth reading. It contains the results of a keen, detached observation, discussed with an absence of emotion which is as welcome as it is unusual in books on Soviet Russia.

Some Economic Consequences of the Great War. By Arthur L. Bowley. (London) Thornton Butterworth, 15, Bedford Street, W.C.2. 2s. 6d. net.

Dr. Bowley has performed a prodigious task of selection in compressing the essence of his subject within the scope of a Home University Library volume.

Business or Bankruptcy. By Norman Tiptaft. (London) Elkin Mathews and Marrot, Ltd., 54, Bloomsbury Street. 2s. 6d. net.

A stimulating little book, full of commonsense proposals for increasing our foreign trade.

Keynes e Gli Alti Salari. By Carlo Pagni. (Torino) Arti Grafiche-Ditta Fratelli Pozzo.

Brief comments on a recent article in the *Political Quarterly*.

Railway Accounts. By C. H. Newton. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway.

A survey of the form, construction and general principles of railway accounts.

Unemployed or Reserve? By Mrs M. A. Cloudesley Brereton. (London) Knapp, Drewett & Sons, 30, Victoria Street, Westminster. 1s. net.

A pamphlet on the unemployment problem.

Porto Rico and Its Problems. (London) Williams and Norgate, Ltd., 38, Great Ormond Street. 21s. net.

This scientific and thorough survey by the Brookings Institution will undoubtedly become the standard work of reference on the economic situation in Porto Rico.

The Handbook of Cyprus. Edited by Sir Ronald Storrs and Bryan Justin O'Brien. (London) Christophers, 22, Berners Street. 7s. 6d. net.

An attractively arranged and printed little book which gives just that amount of information on the geography, history, religion, political and economic activities, fauna and flora of Cyprus which the general reader having an intelligent interest in the country might be expected to require.

Annual Statistical Report of the American Iron and Steel Institute. (New York) American Iron and Steel Institute, 75, West Street.

Tea Producing Companies, 1930. (London) Mincing Lane Tea and Rubber Share Brokers' Association, Ltd. 14, Mincing Lane. 3s. 6d.

Contains a very full summary of the financial position and results of each company.

The China Stock and Share Handbook. (Shanghai) North China Daily News and Herald, Ltd.

Contains useful general information, together with full financial details, of the individual companies.

The Singapore and Malayan Directory, 1930. (London) F. Algar, 58, Gracechurch Street.

Tolley's Tax Manuals: Super-tax and Surtax. (London) Waterlow and Sons, Ltd., Birch Lane. 2s. 6d. net.

A very useful handbook.

Secretarial Bookkeeping and Accounts. By H. E. Collesworthy. (London) Sir Isaac Pitman & Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

Investigations. By J. H. Benton. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street. 5s. net.

A textbook on the most difficult branch of accountancy.

Small-scale Production in India. By V. G. Ramakrishna Ayyar. With a Preface by Henry Clay. (London) Williams and Norgate, Ltd., 38, Great Ormond Street. 2s. 6d. net.

An effective plea for an investigation of small-scale production in Indian industry and agriculture, based on the belief that a change to large-scale production is at present undesirable.

Report of the Indian Tariff Board on the Salt Industry. (London) India Office, Whitehall. 1s. 9d. net.

India and the Simon Report. By C. F. Andrews. (London) Allen and Unwin, Ltd., Museum Street. 3s. net.

It is difficult to account for the presence in the title of the last four words.

Employers' Additional Unemployment Benefit Schemes in Great Britain. By Mary B. Gilson and E. J. Riches. (Geneva) International Labour Office. 1s.

An American study of schemes operated by certain British employers as a supplement to national unemployment insurance.

Danzig's Shipping and Foreign Trade. By Dr. Kurt Peiser. (Danzig) A. W. Kafemann.

A useful statistical summary of the commercial development of Danzig.

Instituto de Economia Bancaria sus Fines, su Organización y su Funcionamiento. (Buenos Aires) Universidad de Buenos Aires.

FREE TRADE OR PROTECTION?

By ARNOLD GOLODETZ

A clear and concise exposition of the respective merits of the two policies, written by a business man with a thorough knowledge of economics. Free from either political bias or the dry monotony of text-books.

"It is one of the clearest and most convincing statements of the tariff question I have ever read and I wish that all electors in the country would read it. It would clarify their minds on this issue and expose to them the fallacy and falsity of current statements which pass for economic truths."

—Philip Snowden.

TRUSTEE SECURITIES.

The Act, it will be seen, authorises investment in mortgages, but not in building societies, which handle the lion's share of present-day mortgage business; in the prior charges of railways, but not in those of gas companies, electricity undertakings, port and harbour authorities, banks, insurance companies, or the soundest industrial concerns. In the case of British railway and water concerns, it makes ordinary dividends and not earnings the test of trustee status. Even so, the margin prescribed is narrow, and in recent years the prior stocks of the second largest British railway have failed to fulfil the terms of the Act, their trustee status being retained only by order of the Court.

This year's Australian crisis, indeed, has drawn attention to an aspect of the trustee laws which has long been a matter of serious concern to economists. The desire to protect both trustees and *cestius que trust* has resulted in the diversion of a by no means inconsiderable part of the stream of new capital into certain restricted channels. If the scope for investment of trust money is not enlarged in proportion to the growth of trustee funds, beneficiaries under trusts will tend to receive an uneconomically low income, while enterprises outside the charmed circle of investment will be compelled to pay a higher price for capital. The newer public utilities, such as electricity supply—not to mention the great industrial corporations—are likely, as time goes on, to become increasingly impatient with the maintenance of a vested interest in new capital, exercised by older interests.

Such is the case for a complete overhaul of the Trustee Acts, to bring them into harmony with modern investment knowledge and modern requirements. While it might be unwise to make any new enactments retrospective, it is certain that the list of securities for future investment should include much less and much more than the present Trustee List. The task of revision should, however, be undertaken by a body representative not only of the legal but of the investment profession.

October 7.	October 9.

Home rails continued to droop, the market regarding a further batch of poor "traffics" with its usual despondency, and showing some anxiety as to the outcome of the wage negotiations in November. Westerns were slightly better at the close, and Undergrounds hardened on the

The mining share market was hardly more fortunate than other sections, and quotations generally gave way. Among the finance descriptions, Central Mining declined on apprehensions regarding the dividend declaration due in November. Van Ryn advanced and Crown Mines were a good feature. In the Northern Rhodesian section an all-round subsidence occurred, led by Congo Borders, which fell to £12. Tin shares lost ground following a fall in the metal to £138, and London Tin were marked down on the passing of its preference dividend. Tintos relapsed, and Tigon were a dull spot.

NEW YORK.

(Continued on page 582.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 579.)

were drastically cut, the new efficient "tickers" being unable to cope with the business. The stronger appearance of German bonds on European markets allayed exaggerated fears in one direction at least, and with a mild revival of confidence and some support from the banks, a mid-week recovery took prices well above the worst. The improvement was not held, however; commodity prices further receded, and a fresh wave of selling occurred on Wednesday. Several counters touched levels lower than for weeks past, the withdrawal of pools assisting the collapse, and offering further evidence that informed circles have lost faith in an autumn revival. Renewed fluctuations occurred in wheat prices, while reports from the steel industry indicate that the demand is being well maintained. Copper shares were easy in anticipation of further dividend reductions, and renewed declines in the metal. Call money closed steady at 2 per cent. bid.

INVESTMENT NOTES.

"Buying In" and the Stock Exchange.—The general public, writes a Stock Exchange correspondent, is frequently puzzled by the practice, as distinct from the theory, of "buying in" stocks and shares. The man who buys 100 Imperial Chemicals to-day, for payment on October 9th, and who does not receive delivery of the shares within ten days from the latter date, has the right to instruct his broker to "buy in" the shares against the seller. This operation should, theoretically, produce the shares and satisfy the buyer. If the man who sold the shares cannot obtain them, the Stock Exchange official concerned is nominally supposed to be able to obtain them by standing in open market and bidding practically what he likes for them. What actually happens is that the buying-in broker steps upon a form in the market, announces that he wants to buy 100 Imperial Chemicals, and is mildly chaffed by a dozen or more men standing round. After a perfunctory effort to obtain the shares, he steps down again and reports to the purchaser's broker that he has endeavoured to buy-in the shares, but without success. The purchasing broker sends the notice to the client, who, seeing that the shares are marked in the Stock Exchange Official List dozens of times every week, usually manifests surprise at the inability of his broker to obtain them. If, however, he asks the latter to try again, the broker probably demurs. He knows that while his endeavour will, as likely as not, be fruitless, it may cause the person against whom the loss falls, to lose a certain amount of commission. Members of the "House" are naturally reluctant to buy-in against one another, and, although the official broker goes round day after day trying to get odd lots of undelivered shares, the success which he achieves is trifling. It frequently happens that the shares to be bought in are very scarce. On the other hand, the unwritten etiquette of the Stock Exchange, which discourages one member from involving another in a loss unless he is absolutely obliged to do so, has the effect of nullifying what ought to be a useful method for enforcement of delivery. Buying-in and selling-out have sufficient intrinsic importance to justify the existence of a separate Stock Exchange department. The practice itself, however, is carried out in so perfunctory a manner as to make it of little practical effect.

German Bonds.—Early this week the foreign bond market was depressed by a sharp reaction in German Government bonds. Anxiety as to the political situation, the weakening of the German exchange, the discount on forward reichsmarks, and a shipment of gold from Berlin to Paris, all served to accentuate the marking down of German loans. It would, however, be an exaggeration to say that large holdings of the different bonds were liquidated. The market was too narrow to permit of wholesale liquidation even if it had been attempted. The selling, in fact, was of a scattered nature, and the movement in prices was out of all proportion to the size of the business transacted. The reassuring reports which came from Berlin Stock Exchange firms to brokers in London on Wednesday helped to bring about a general recovery, and the impression gained ground that the marking down of prices had been overdone. The following table gives the prices of the leading German loans before the elections, the lowest prices touched in the downward

movement, the extent of the recovery by Wednesday, and the yields at prices of that day:—

	Sept. 12.	Sept. 22.	Sept. 24.	Yield %
German 5½% (new)	85½	77	80½	6.87
" 7%	106½	101½	103½	6.76
Berlin City 6%	90½	79	81½	7.36
Saxony 6%	91½	82½	85	7.06
Hamburg 6%	99½	96	92	7.00
Munich 6%	87½	84½	82	7.80
Westphalia Prov. 7%	99	92	95	7.45
German Potash 6½%	101½	99	99½	6.56

On Thursday, after Herr Hitler's inflammatory speech, the market failed to hold its recovery, and the prices of all bonds weakened. During the recent depression the new German 5½ per cent. (Young) loan suffered worse than the 7 per cent. (Dawes) loan, partly because there is a weak technical position in the former, partly because there is a general feeling in the market that the price of issue of the Young loan, which was 90, was too high. That the Young loan should return a lower yield than the 7 per cent. Dawes loan is considered anomalous in view of the prior security held by the latter. The 7 per cent. Dawes loan, besides being the unconditional obligation of the German Government chargeable on all assets and revenues, had a specific first charge on all payments under the Dawes plan, this charge being prior to reparation and other treaty payments, which in turn have priority over existing German debt. It had also a first charge by way of collateral security on the "controlled revenues," i.e., Customs, taxes on tobacco, beer and sugar, and the spirits monopoly. The Young Plan provided for the distribution of the annuities in accordance with the new provisions "subject to the service of the 7 per cent. external loan of 1924, which averages approximately 76½ millions reichsmarks annually till 1949." It dealt with the controlled revenues "without prejudice to the securities of the 7 per cent. external loan of 1924." The fixed annual tax of 660 million reichsmarks on the German Railway Company for 37 years by way of guarantee for the service of the annuities under the Young Plan, merely serves to emphasise the prior security of the Dawes loan; but that Germany should default in the service of either of these loans is not regarded as practical politics in responsible City quarters.

United Molasses.—A feature of the industrial share markets this week was the sharp fluctuations in United Molasses ordinary shares on the passing of the interim dividend. In reply to a letter dated July 21st from a shareholder, the secretary of United Molasses stated that a half-yearly report would be issued at the time of the announcement of the interim dividend in the autumn, and that there had been no development of sufficient importance to warrant the directors anticipating that report. In the light of the interim report now issued, the secretary's letter of last July appears difficult to explain. This report is couched in almost alarmist terms. It states that up to the beginning of June the demand for, and the price of, molasses had been well maintained and that freights had been satisfactory, the company's fleet being fully employed at remunerative rates, but that in June and July the demand for molasses began to drop off and the freight market to weaken and that in the last six weeks the position had become much worse. To quote the most serious passage from the directors' report: "During the last few days the company has been notified by some of its customers abroad that, owing to accumulation of stocks and declining prices, they may not be able to carry out their commitments. In consequence, quantities of molasses which would under normal conditions have gone into consumption, are accumulating in our tanks. Unfortunately, this coincides with a serious depression in the tanker freight market, and for the first time in our history we are experiencing difficulty in finding employment for all of our vessels." The directors presumably refer to the industrial alcohol situation in the United States. American distillers of alcohol had bought molasses forward last year at high prices in anticipation of the industrial boom continuing, and apparently are now en-

deavouring to get released from the contracts into which they had entered. "The difficulty of prevailing conditions and the uncertainty as to how long they may continue" have caused the directors to conserve the company's financial resources by passing the interim dividend. The financial position of the company is, however, declared to be "one of great strength." Moreover, an arrangement has been concluded with the Distillers Company for an exchange of shares on the basis of two United Molasses for one Distillers ordinary share. This arrangement will necessitate the issue of an additional 375,000 ordinary shares of United Molasses, making a total issued ordinary share capital of £4,851,251. The chairman of each company is to be elected to the board of the other. As far as the Distillers Company is concerned there will be no fresh issue of shares, the ordinary share capital being £10,690,962. We do not suggest that the directors have overstated the seriousness of the United Molasses position. Indeed, they have not made any mention of the fact that following on the sharp fall in the price of molasses the company will have to take a heavy inventory loss at the end of this year. For the seven months to July 31st the net profit of the company was stated to be £635,000, which is at the annual rate of £1,088,571, as compared with £1,146,458 in the previous year. Since the end of last year the company has issued £850,000 of preference shares and increased its ordinary share capital by a 50 per cent. bonus issue. A year ago an interim dividend of 10 per cent. was paid on the ordinary capital, which was followed by a final dividend of 12½ per cent. and a bonus of 2½ per cent., making a total of 25 per cent. Prior to the distribution of the capital bonus of 50 per cent. this year the ordinary shares of United Molasses were as high as 6½. On the announcement of the passing of the interim dividend they fell from 30s. to 24s., and at the moment of writing are 25s. 6d. The high level reached in 1929 was 8½. No more striking record of boom and slump conditions can be found among the leading shares of the industrial market.

Rationalisation in Tin Smelting.—The announcement that the Penpoll Tin Smelting Company is shortly closing down its works at Bootle, Lancashire, was received with considerable surprise in the tin share market. This smelter, owned by the London Tin Corporation of the Anglo-Oriental group, was re-equipped with the most up-to-date machinery in 1928, and has been operating profitably on Bolivian ore. It was taken over early this year by the Consolidated Tin Smelters, which was formed in December, 1929, with a capital of £5 millions to acquire four out of the five principal smelting plants of the Empire; namely—Eastern Smelting, Cornish Tin Smelting, Penpoll Tin Smelting and Williams Harvey and Company. Apparently Consolidated Tin Smelters is now concentrating the smelting of Bolivian ore at the smelter of Williams Harvey, which is also at Bootle. The closing-down of Penpoll was curiously explained as due to the

Established 1889.

shortage of tin ore. With a world over-supply of tin this statement may hardly be believed, but it refers to the fact that following on restriction of output, shipments of Bolivian and Nigerian ore have been drastically reduced. It should here be explained that Bolivian ore requires to be smelted with Nigerian to retain the requisite purity in the metallic tin. In August Bolivian shipments were 50 per cent. below and Nigerian 38 per cent. below those of January, as the following table will show:—

SHIPMENTS OF TIN TO GREAT BRITAIN.					
	Nigerian Arrivals.	Bolivian Arrivals.		Nigerian Arrivals.	Bolivian Arrivals.
* 1930.	Tons.	Tons.	1930.	Tons.	Tons.
January	958	4,467	May	764	3,562
February	851	3,206	June	548	2,820
March	1,230	2,152	July	687	2,601
April	969	3,580	August	595	2,193

* NOTE.—All figures represent concentrates converted into metal at the following percentages: 70 per cent. for Nigerian and 55 per cent. for Bolivian.

The plight of the Penpoll Tin Smelting Company calls attention to the depreciation which has overtaken the shares of the Anglo-Oriental Mining group. The London Tin Corporation 7½ per cent. preference shares of 10s. are now quoted at 5s. 6d., and the ordinary shares of 10s. at 9s. 6d. The 7½ per cent. £1 preference shares of the Anglo-Oriental Mining Corporation, which were issued in March, 1928, at 21s., are now quoted at 10s. 7½d., and its 5s. ordinary shares which were issued at 10s. are now standing at 7s. 9d. It will be recalled that the London Tin Corporation absorbed the Tin Selection Trust and London Malayan Tin Trust this year, and had previously acquired the Ropp and Northern Nigeria (Bauchi) Tin Mines, which gave it virtual control of the Nigerian tin industry. The largest individual shareholder in London Tin Corporation is the Anglo-Oriental Mining Corporation. On Thursday the directors of the London Tin Corporation announced that the publication of the accounts has been postponed till January, and that consideration of the payment on the preference shares for the second half of the current year would be deferred until the final accounts are made available. Profits are declared to be double those of the previous year, but in the meantime the capital has been trebled.

Harrisons and Crosfield.—In their report for the year to June 30 last the directors of this well-known company of general merchants and rubber and tea agents state that in view of the world-wide depression they consider the results for the year to be satisfactory. Net profit is down by £38,519 to £352,004. Preference dividend again takes £37,800, and preferred ordinary dividend £100,000. Management shares absorb £39,030, against £84,062, while the deferred ordinary dividend is lowered from 35 per cent. to 20 per cent., taking £73,059, against £114,187, out of £124,117 earned. It will be remembered that deferred shareholders have the right of applying for the allotment at par of deferred shares to the extent of one-half of their additional dividends in excess of 10 per cent. :—

Year to June 30.	1928.	1929.	1930.

It is symptomatic of the conservative financial policy which the directors have followed in the past that in

spite of the heavy fall in stock prices, the market value of the company's holdings still shows an appreciation over book values. Since June 30th, however, prices have declined further, and are now in many cases merely nominal. Although the directors are of the opinion that the present depression in the plantation industries is likely to be of only temporary duration, they have decided to set aside out of profits the sum of £100,000 to be written off the book cost of the company's plantation investments, which appear in the balance sheet at £954,538. The mortgage of £26,000 on the company's freehold property in Ceylon has been paid off during the year. The sum of £106,587 is being carried forward to the next account, against £104,472 brought in.

Imperial Airways.—The accounts of Imperial Airways, Ltd., for the year to March 31st last show a trading profit of £169,376, compared with the corresponding figure of £141,000 for the previous twelve months, the amount in both cases being struck after crediting Government subsidies for the year, shown in the last air estimates as £341,500. After provision for obsolescence, depreciation and taxation, net profit amounts to £35,139 or 9.5 per cent. on the ordinary capital, against £78,861 or 16.6 per cent., income tax requiring an allocation of £25,000, against £2,853 last year. The ordinary dividend drops again to the 1928 level of 5 per cent., compared with 7½ per cent. last year, and absorbs £18,371.

Year to March 31.	1928.	1929.	1930.
Trading profit	132,550	141,000	169,376

Carried forward	4,049	6,688	20,956

The directors report that traffic has continued to improve on the regular European services, and has progressed satisfactorily on the England to India service, but that, in general, business has not increased as fast as was anticipated. The benefit of extended accommodation has, therefore, not yet fully matured, while at the same time the provision for obsolescence, which is determined by contract with the Government, has risen from £38,176 in 1928-29 to £85,887 in the current year. The sum of £2,500 has been set aside for writing-off part of the balance-sheet item "consideration for waiver of any claims by the Air Ministry for repayment of subsidy," while £20,956 is being carried forward, against £6,688 brought in. The ordinary £1 shares were marked down on the preliminary dividend announcement last week, and at their present price of £1½, give a yield of about £4 18s. 6d. per cent. allowing for the dividend of 5 per cent.

Scottish Electricity Merger.—The announcement that the directors of the Scottish Power Company have been in successful negotiation with the Scottish Southern Electric Supply Company with a view to the acquisition of that company's interests, marks a further stage in the process of developing and rationalising the supply of electricity in Southern Scotland. The Power Company will take over the whole of the issued capital of the Southern Electric, which consists of 120,000 6 per cent. cumulative preference shares of £1 each and 80,000 ordinary shares of £1 each, on the basis of an exchange for an equal number of its own preference and ordinary shares, the offer having been accepted by all the shareholders of the Southern Electric with the exception of the holders of thirty ordinary shares. In order to secure the benefit of the relief of capital stamp duty afforded by the Finance Acts in cases of amalgamation such as

the above, it is necessary for the Power Company to increase its share capital to the extent required to effect the exchange of shares. Notice is therefore given of an extraordinary general meeting to pass the necessary formal resolution to increase the capital of the Power Company to £4,200,000 by the creation of 200,000 new shares of £1 each. The areas to be acquired embrace the counties of Selkirk, Peebles, Roxburgh, Midlothian and Berwick, and the directors are of the opinion that these districts can be operated advantageously with, and should prove a valuable addition to, the company's existing properties. These have been considerably extended recently, for in 1929 the Scottish Power Company absorbed several power and lighting undertakings in Fife, besides purchasing the Fife Electric Power Company from the Fife Tramway, Light and Power Company for the sum of £1,025,000 in cash, raised by increasing its capital to £4,000,000, and issuing 1,000,000 £1 shares at 28s. per share. In April last 650,000 £1 shares were issued from the unissued capital at 27s. per share, the purpose of the issue being to finance the hydro-electric works and transmission lines of the Grampian Electricity Company. The issued capital is at present £3,350,000 in 350,000 £1 6 per cent. preference shares, and 3,000,000 £1 ordinary shares on which a dividend of 8 per cent. has been paid for a number of years.

Sheepbridge Coal and Iron.—This old-established Midland company appears to have suffered less than most from the prevalent depression in iron and coal. The accounts for the financial year to June 30, 1930, show a gross profit of £150,452, against £96,099, and a net profit after debenture interest, depreciation and directors' fees, of £93,723, compared with £52,089 for the previous twelve months. Preference dividend again requires £8,368, while the distribution on the ordinary capital is increased from 2½ to 5 per cent., absorbing £58,558, against £29,279.

Year to June 30.	1928.	1929.	1930.

In the following table, the percentage earnings and payments on the ordinary shares are set out for the past ten years.

ORDINARY CAPITAL.					
Year to	Earned	Paid	Year to	Earned	Paid
June 30.	%	%	June 30.	%	%
1921	8.1 f.t.	7.5	1926	5.1	5.0
1922	5.9	6.0	1927	8.6	7.5
1923	9.2	7.5	1928	2.5	2.5
1924	9.6	7.5	1929	3.7	2.5
1925	8.3	5.0	1930	7.2	5.0

The sum of £30,000 is placed to reserve account, which now appears in the balance sheet at £250,000, while £99,842 is carried forward, against £103,045 brought in. The balance sheet position is strong, liquid assets, comprising sundry debtors, loans by the company, and cash, totalling £383,244, against current liabilities of £128,809. The directors report that it has been considered desirable to utilise certain sums which had been reserved for taxation and other contingent liabilities to write down the values of the fixed assets and investments, but these items still exceed by £67,961, the total for last year. It is stated that the profits realised by the Yorkshire Amalgamated Collieries, in which this company has a large interest, show a distinct improvement for the year to March 31st last, and a dividend of 9d. per share on the

"A" shares and 3d. per share on the "B" shares has been received. At their present price of 11s. 6d., the ordinary £1 shares of the company give a yield of about £9 per cent., allowing for a final dividend of 3½ per cent.

The Carlsberg Brewery.—British investors may be interested in the position of a type of enterprise which has no parallel in this country. The Gamble Carlsberg Brewery, of Copenhagen, was established in 1847 by J. C. Jacobsen. In 1870 the founder built the Ny Carlsberg Brewery, which he leased to his son, Carl Jacobsen. In 1875 the Carlsberg Laboratory was inaugurated. A year later the Carlsberg Fund was established, of which the Gamle Brewery formed an endowment. In 1902 the two breweries were amalgamated when Carl Jacobsen handed over the Ny Carlsberg Brewery to the same fund, whose governors are elected by the Royal Danish Academy of Science. The brewery property, which covers 64 acres, has no shareholders, its profits being devoted entirely to artistic, scientific and horticultural purposes. The fund is responsible for the Carlsberg Laboratory, the National Historical Museum in Frederiksborg Castle, and various scientific objects. The brewery's chief aim is "to develop the art of making beer to the greatest possible degree of perfection." It has an annual output of 200,000,000 bottles of beer and 400,000 bottles of mineral waters. In the last five years it has paid 61,000,000 kroner, or over £3,000,000, in beer tax. It has a power station with an annual output of 3,000,000 kw. The brewery's products are known all over the world. As a thoroughly efficient and profitable enterprise, which is based neither on state control nor private ownership, it has few, if any parallels the world over.

This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Thomas W. Ward.—The accounts of this Northern engineering firm for the financial year ended June 30th last reveal a net profit, after charging directors' fees, income tax, and interest, of £80,078, compared with the corresponding figure of £111,915 for 1929. Dividend on the first preference shares absorbs £5,953, and on the second preference shares, £25,000, while the 53,122 £1 employees' shares, which rank with the second preference shares for 5 per cent. cumulative dividends, and equally with the ordinary shares after the latter have received 5 per cent., require £2,643. The ordinary capital has earned 5.2 per cent., and the dividend of 6.45 per cent., less tax, which compares with a previous distribution of 6.25 per cent., tax free, is consequently not covered. Payment is effected by a reduction in the carry-forward from £36,677 to £28,159.

Year to June 30.	1928.	1929.	1930.

* Tax free. † Less tax.

The balance sheet fails to reveal a liquid position, current liabilities at £733,427 exceeding available assets by £312,898. Investments in subsidiary companies, which appear in the balance sheet at cost, total £248,027, and investments in other companies at £60,150. The auditors' report states that no provision has been made for depreciation in respect of plant and machinery this year, as the directors consider that ample provision has been made in previous years. At their present price of 13s. 9d., the ordinary £1 shares give a yield of £9 18s. 3d. per cent., less tax, allowing for a final dividend of 3½ per cent.

Argentine Land and Investment.—The profit of this company for the year ended June 30th last shows a further decrease of £3,793 to £159,326, representing 15.5 per cent. on the company's capital of £1,026,884. The dividend, maintained at 10 per cent., absorbs £102,688, and after £37,067 has been transferred to reserve for contingencies, and £25,474 to investment reserve, the amount carried forward is £5,903 less at £21,043.

Year ended June 30.	1928.	1929.	1930.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name

Address

The directors state that the above allocations to reserves are considered advisable owing to the heavy falls in security quotations. The investment reserve now stands at £50,000, and the contingencies reserve at £80,000. The revenue for the year includes land sales of £97,758 and interest of £92,900, which compare with £120,554 and £96,788 respectively in 1928-29. There is also a profit of £22,061 on the sale of house properties. The total of the assets is £33,022 less at £2,005,290. The main reductions are land instalments unmatured, which, at £573,357, are down by £55,025, and bills receivable, which are £88,275 lower at £2,657. During the year £20,000 was transferred from the reserve fund, now £110,000, to mortgage loans to provide for a probable loss in connection with one loan. The amount owing by the company on certain properties has been reduced by £67,538 to £566,801, and creditors are £10,733 lower at £14,061. The ordinary shares are secured by net tangible assets of 24s. 8d. per £1 share fully paid.

Sherwood Starr.—The recent discoveries of high-grade ore in depth by this Rhodesian gold undertaking, writes our mining correspondent, are reflected in last year's results. Although the tonnage treated—57,800—was only a little above the 1928-29 total, the yield averaged 46s., in place of 34s. 9d. Hence, despite a small expansion in cost, the working profit came out at £60,400, as against £33,200, and the dividend rate was raised from 15 per cent. to 25 per cent. On the present occasion £10,000 is transferred to reserve, but the carry-forward is £7,100. lower at £15,000. Capital expenditure during the past year amounted to £25,200, certain additions to the treatment plant being chiefly responsible. The ore reserves are now computed at 110,000 tons, value 66.7s., in place of 113,000 tons and 58.1s. twelve months ago. The small decrease in quantity is attributed partly to the expansion in the tonnage milled and partly to a contraction in the width of the ore body between the ninth and tenth levels. In regard to the prospects, the consulting engineers state that "there is every indication of the persistence of the ore body to still greater depths." In the light of these facts and opinions, surprise has been expressed in some quarters at the tendency of the shares to fall rather than rise. The explanation is not far to seek. In the first place, the narrowing of the ore body, already referred to, may, as suggested by the directors, prove only temporary; on the other hand, it may become accentuated. Further, the financial position is far from liquid, the cash assets totalling £14,000, against creditors for £34,500. Finally, twelve years' dividends at the 1929-30 rate would be required to repay the capital at the current market price of 15s. 7½d. for the 5s. share.

North Charterland.—Allowance being made for depreciation and taxes, last year's operations resulted in a loss of £16,400, increasing the debit balance to £45,500. These results represent an improvement upon those of 1928. Tobacco-growing is now the chief activity. As stated in the progress report of the Mining Trust, exploration for minerals has been attended with disappointing results. At the moment chief interest in North Charterland affairs relates to the directors' report and recommendations re the company's "petition of right," which concludes by urging that there should be a public inquiry into the circumstances under which, many years ago, the company became dispossessed of a portion of its property. The matter is too long and complicated for discussion here, but the suggestion may be put forward that at the time neither of the parties concerned attached any great importance to the area set aside for native reserves.

CAPITAL ISSUES.

The autumn new issue season was opened this week by the offer of £3,500,000 debenture stock of the General Electric Company for conversion purposes. The market appeared content with the flat yield of a little over £5 per cent., and the issue was oversubscribed.

General Electric Company.—Issue of £3,500,000 5 per cent. mortgage debenture stock at 98 per cent. The whole amount of the outstanding £2,919,340 7 per cent. debenture stock will be paid off by September 30, 1931, out of the proceeds of this issue. Holders of the 7 per cent. debenture stock, however, have the right, exercisable up to September 29, 1930, to convert their holdings into an equivalent amount of 5 per cent. debenture stock, together with a cash payment of £4 per cent. on the stock so converted. The new stock will be redeemable at 100 per cent. by September 30, 1967, by means of a cumulative sinking fund of 1 per cent. per annum commencing in 1931 and operating by annual drawings at 100 per cent. or by purchase at 100 per cent. or under. Any stock not previously redeemed will be repayable on September 30, 1967, at 100 per cent. The company reserves the right to redeem the stock in whole or part on three months' notice at 105 per cent. up to and including September 30, 1937; at 102 per cent. up to and including September 30, 1947, and thereafter at 100 per cent. The stock gives a flat yield of about £5 2s. per cent.

[Other Stock Exchange information, including the latest dividend announcements, summary of balance sheets, profit and loss figures and shorter notices will be found on page 593 under the heading "Company News."]

COMPANY MEETINGS, &c.

THE SECOND ALLIANCE TRUST COMPANY, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

SATISFACTORY REVENUE ACCOUNT.

INCREASED DIVIDEND ON LARGER CAPITAL.

The annual ordinary general meeting of the Second Alliance Trust Company, Ltd., was held, on the 19th instant, in the company's office, Meadow House, 64 Reform Street, Dundee.

Mr James Prain presided.

After formal evidence of the proper calling of the meeting had been submitted, the Secretary (Mr J. K. Greenhill) read the auditors' report to the shareholders.

The Chairman, in moving the adoption of the annual report, said: I have now to submit for your adoption the directors' report and accounts for the year to July 31 last, which have been in your hands for the usual period, and which you will, no doubt, agree to hold as read.

The balance-sheet figures reflect the increase in our capital, both share and debenture. The latter, you will observe, is held both in the more or less permanent form of debenture stock, and in that of terminable debentures and interim loans. The balance sheet shows that we have now been successful in putting into effect our policy of having the greater amount of our borrowed money in the more permanent form, but to retain a substantial amount on debentures maturing at short dates or on deposit. The permanent money stabilises our position, while the possession of short money enables us to take advantage of periods of cheap money such as we are now going through. Our abundant reserves and strong financial position enable us to obtain the most favourable terms available.

THE DISTRIBUTION.

Turning to the revenue account, you will find a satisfactory showing which fully justifies the distribution which we propose—namely, a dividend of 22 per cent. on the increased ordinary stock, against 21 per cent. last year, in addition to which you received with the interim dividend a free bonus of 20 per cent. in preference stock. As regards the figures before you, the increase of capital during the year makes an exact comparison impossible, but the fact that we are able to recommend an increased dividend on the increased capital, and after carrying the same amount to contingent reserve fund substantially to increase the carry-forward, sufficiently indicates the healthy advance which we have made. I think it right to state that in view of the general outlook we have dealt in an exceptionally conservative manner with our revenue showing this year, and that our recommendation of an increase in your dividend is made without hesitation.

STOCK MARKETS POSITION.

But there can be no doubt that holders of securities generally are called on at present to view the outlook in a conservative spirit. It is true that the stock markets recently showed a general rise, particularly in industrial shares, but this was not due to any change in basic conditions. It was merely due to the fact that the stock markets themselves are healthier. After many months of more or less continuous liquidation, the weak bulls have been mainly eliminated, those holders who were compelled to sell have sold, and probably a considerable bear account is in existence. There is also a plentiful supply of idle money. The technical situation is, therefore, improved, and ready to respond very vigorously indeed to a real change for the better. But there is at the moment no sign of that, and indeed we cannot expect trade to recover from a slump of the present magnitude except very slowly.

The *Economist's* index shows that wholesale prices fell nearly 33 per cent. all over between 1924 and this year, but it is the steepness of the falls which have taken place during the past 12 months that attracts attention. Textiles have come down over 30 per cent., Australian wool 36 per cent., foreign wheat 41 per cent. This kind of thing cannot go on, and we must expect the fall in prices to slow down, but before a real change for the better takes place the great world factors must move, and no quick recovery or easy roads to prosperity are open to us. Economically, the world is in a constant state of adjustment and readjustment, and the only proved method by which adjustments can be effected, particularly when the whole world is involved, is the slow one of allowing prices to find their own level. Stability is what is needed, and until we have got that any advance in stock market prices will reflect nothing but the somewhat barren fact of technical improvement.

RESULTS OF CONSERVATIVE POLICY.

But, as we have said to you before, we do not regard market prices as the main interest of a trust company. What should be

chiefly regarded is the strength and permanence of its earning power, which, in the main, depends on the power of those concerns in which its funds are invested. It is in this connection that we must consider the present position. The fall in commodity prices, the world-wide depression in trade, and other troubles are affecting almost every undertaking, and reductions in dividends and default in interest cannot be avoided. Moreover, these reductions and defaults are matters not only of the present, but must continue to some extent into the future as the results of present trading materialise in future reports. They cannot fail to be to some extent reflected in the revenue accounts of trust companies, and the time, therefore, is as I have said one in which we must look forward in a spirit of the utmost conservatism.

It is no time for making optimistic prophecies or promises for the future, but one in which to be thankful that we have acted on conservative lines in the past, and to resolve to continue to do so in the future. We here, however, do not need to look to the future in a spirit of pessimism. We have every confidence in the ability of our company to stand the strain, and, as I have said, we recommend you to approve of an increased dividend for the year without any hesitation whatever.

AGRICULTURAL CONDITIONS.

It is characteristic of the universal nature of the world's troubles that agricultural conditions in our mortgage fields are worse than they have been for a quarter of a century. Drought has scorched and sterilised large parts of the agricultural area of the United States, and poor crops are in unique conjunction with poor world prices. Fortunately our interest in this matter is now small—only 4 per cent. of our whole funds—and our troubles there are not large enough to change the note of confidence with which I am able to close these somewhat sober reflections.

I should wish, in concluding, to express the warm appreciation which we always feel for the loyal and effective services of the staff during the year. I shall not detain you further, but conclude by moving that the directors' report and accounts for the year ended July 31, 1930, be approved and adopted, and that the final dividends be declared at the rates therein recommended on £700,000 preference stock at the preferential rate of 4½ per cent. per annum, and on £350,000 ordinary stock at the rate of 22 per cent. per annum, all subject to income tax.

The resolutions declaring dividends, re-electing the retiring director, and appointing auditors were unanimously passed.

INDUSTRIAL FINANCE AND INVESTMENT CORPORATION, LIMITED.

SOUND LIQUID POSITION.

The fifth annual general meeting of the Industrial Finance and Investment Corporation, Ltd., was held, on the 19th instant, at Winchester House, Old Broad Street, London, Mr Paul Lindenberg, the chairman of the corporation, presiding.

The Chairman said: The actual value of our investments is in excess of the figure of £705,000 shown in the balance sheet, and in view of the heavy depreciation which has occurred in Stock Exchange values during the past year, it is satisfactory to know that we have still a certain reserve in hand, which, of course, will increase with any improvement in market conditions. I would like to point out that your company is in a very sound liquid position, and that we are in consequence able to deal with any new business which may be offered.

Turning to the profit and loss account, you will see that the gross profit at £196,420 9s. 6d. is slightly in excess of last year's figure. After deduction of all expenses, directors' fees and debenture interest, there remains a net profit of £155,117 15s. 7d.

No doubt you appreciate the fact that the past year has been a difficult one for all companies transacting financial business, and in view of the conditions prevailing throughout the period in question, and in particular since the break in the American stock markets, I think you will not be dissatisfied with the result we place before you; the more so as the activities of your company have, of course, been influenced by the lack of confidence prevailing among the investing public and in the city as far as new issues are concerned.

This situation is partly due to the heavy losses incurred through the many unsound flotations and issues made during the preceding year. I had occasion to comment on this matter at our last year's meeting, and at the time I pointed out that it would be advisable to safeguard the public against the issue of securities of speculative companies. Since then a good deal has been done in this direction, and the Press has also taken the matter up. For the time being, at any rate, only issues of securities of the highest class are find-

CAPITAL and INTEREST

are both lost if your investments fail.

This loss may be avoided by investing in "Globe" Life Assurance, a gilt-edged security not liable to depreciation.

A copy of our new comprehensive prospectus, featuring many attractive schemes, will be sent post free on your request.

THE LIVERPOOL & LONDON & GLOBE

INSURANCE COMPANY, LTD.

Head Office: 1, Dale Street, Liverpool. London: Chief Office: 1, Cornhill, E.C.3.

It is a source of great satisfaction to my colleagues and myself that all the companies which your corporation has sponsored have continued to progress in a very successful manner. Every one of the undertakings of which we have issued securities has been able to show better results than those of the previous accounting period.

The report and accounts were unanimously adopted; a dividend of 7 per cent., less tax, for the year on the ordinary shares was declared, and the formal business having been transacted, a vote of thanks to the chairman terminated the proceedings.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Sept. 20, 1930, amounted to £12,000,400, against ordinary expenditure of £7,228,600. After allocating £495,000 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £1,084,800, the week's operations, as shown below, reduced the National Debt by £3,192,000 to £7,670,000,000:—

		(000's omitted.)	
National Savings Certificates	+ 150	Bank of England Advances	£ 750
Treasury Bills	+ 8	Public Department Advances	2,600
	+ 158		— 3,350

A complete analysis of the National Debt at the end of last quarter was printed in the *Economist* of July 5, 1930.

BULLION.

The following statistics of imports and exports of gold for week ended Sept. 25, 1930, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
Brazil.....	697,519	Germany.....	56,660
Straits Settlements.....	7,100	Netherlands.....	26,268
		France.....	348,967
		Switzerland.....	20,500
		Austria.....	13,000
		Hungary.....	1,280
		Other Countries.....	443
Total declared value of imports	704,619	Total declared value of exports	467,718

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

ARRIVALS.		WITHDRAWALS.	
Sept. 19, 1930.	£	Sept. 19, 1930.	£
Sovs. released	350,000	Sovs. sold	27,768
Sovs. from abroad	23,000	Sovs. for export	7,000
For coin bought	11	" 20 Bars sold	6,990
" 20	"	" 23 Bars sold	106,625
" 22	"	" 24 Bars sold	90,858
" 23	"	" 25 Bars sold	10,000
" 24	"	" 24 Bars sold	272,770
" 25	"	" 25 Bars sold	6,000
		Sovs. for export	283,224
		Bars for export	4,000
Total	373,011	Total	815,235

Net arrivals, £442,224.

Messrs Samuel Montagu and Co. write on September 24, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £156,419,699 on the 17th instant (as compared with £155,545,822 on the previous Wednesday), and represents an increase of £10,459,615 since January 1st last. The consignment of bar gold from South Africa which arrived this week amounted to £511,000, of which £250,000 had been sold forward to France. Of the £261,000 available in the open market to-day, the bulk—£187,000—was also taken for France, the Home and Continental trades absorbed £59,000 and India £15,000. There has been a resumption of withdrawals of gold on French account from the Bank of England, the recent firmness of the franc having permitted refining charges to be incurred on such gold in order to make it of the requisite fineness for the Bank of France. Movements of gold at the Bank of England during the week show a net efflux of £155,000. Receipts totalled £373,011 and consisted of £350,000 sovereigns released from "set aside" and £23,000 sovereigns received from abroad. Withdrawals amounted to £528,011, of which £23,000 were in sovereigns, the remainder being bar gold, which included about £380,000 for France.

SILVER.

The steadiness of the market has been well maintained, as supplies have continued to be restricted. An improvement in the Shanghai exchange was followed by a demand on China account, but as the same quarter sold at the advance in prices, the tendency of the market is difficult to gauge. The Indian bazaars have bought to cover bear sales and America has also shown a disposition to buy during the week. Quotations on the 18th instant rose to 17d., and although a reaction followed, this figure was again quoted on subsequent days of the week; it was the highest price recorded since June 2nd last. Demand for prompt silver has of late been poor, and on the 19th and 20th instant cash silver was quoted at a discount of ½d. as compared with two months' delivery; even prices were, however, re-established on the 22nd idem.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 15th instant to mid-day on the 22nd instant:—

IMPORTS.	£	EXPORTS.	£
Canada	24,008	France	12,092
United States	7,042	British India	16,549
Java	8,800	Germany	7,300
Other countries	1,416	Other countries	6,092
	£41,266		£42,033

INDIAN CURRENCY RETURNS (in lacs of rupees).

AUSTIN MOTOR COMPANY, LIMITED.—At a meeting of the board, held at Longbridge Works, the directors decided to recommend the payment of the following dividends:—7 per cent. per annum on the 7 per cent. preference shares for one month to July 31st, less tax, £1,458 gross amount; 6 per cent. per annum on the "B" preference shares for one month to July 31st, free of tax, £6,452 gross amount; 2½ per cent. per annum on the preferred ordinary shares for seven months to July 31st, less tax, £87,500 gross amount; 60 per cent. actual on the ordinary £185,410 gross amount. The payment of these dividends is subject to the passing of the resolutions, which will be submitted to the various classes of shareholders at the meeting of the Association to deal with the termination of the company's financial year at July 31st, which in the year 1930 necessitates a seven months' accounting period. The balance sheet and copies of resolutions will be sent to the shareholders in the course of a few days.

The Midland Bank announces the opening of a new branch at 23 Ripple Road, Barking, Essex.

The National Provincial Bank Limited announce that a branch of the bank is now open at 424 Holdenhurst Road, Queen's Park, Bournemouth; also that an office of the bank, to be known as St. Giles' Circus Branch, is now open at 40-42 Oxford Street, W.1.

The Westminster Bank have opened the following new branches: 185 Sloane Street, S.W.1; 196-198 High Street, Stoke Newington, N.16; 383 Shirley Road, Shirley, Southampton.; also at 161 Mason's Hill, Bromley Common, Bromley, Kent.

TRANSVAAL GOLD OUTPUT STATISTICS.

Name of Mine.	July, 1930.			August, 193
---------------	-------------	--	--	-------------

SERVICE PETROLEUM COMPANY.—Production from the company's oil wells at Gura-Onitzei, Ceptura and Moreni for the week ended August 24th was 4,234 tons (29,638 barrels).

STEUA ROMANA (BRITISH), LTD.—Production of the Steua Romana Company Bucharest for the month of August was 64,060 tons.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during August was 21,372 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,603 barrels.

TUCUYO OILFIELDS OF VENEZUELA, LTD.—Oil produced during August, 1930, 3,334 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced in August, 28,400 tons; oil purchased in August from other companies, 61,550 tons.

THE VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended August 23rd was: Bolivar district, 102,920 m. tons; Maracaibo district, 9,802 m. tons; total, 112,722 m. tons. Production for the week ended August 30th was: Bolivar district, 103,857 m. tons; Maracaibo district, 9,439 m. tons; total, 113,296 m. tons. Production for the week ended September 6th was: Bolivar district, 101,790 m. tons; Maracaibo district, 10,934 m. tons; total, 112,724 m. tons. Production for the week ended September 20th was: Bolivar district, 98,929 m. tons; Maracaibo district, 11,973 m. tons; total, 110,902 m. tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions, although somewhat unsettled, were generally favourable during the past week for agricultural operations, and farmers have been busily engaged in preparing the land for autumn sowings. The depressed state of the grain markets, abundant supplies, and the extremely low prices, do not afford much encouragement to an increase in the area under cultivation. Offerings of native wheat at the principal staple markets have been considerable, but demand proved slow and prices tended easier in sympathy with the general situation. On the import market, values suffered a further relapse as offerings were greatly in excess of demand, and weekly shipments on a large scale. The outstanding feature in the international situation was the continued wave of selling by Russia, which has forced down the world's price level, while unprecedented large bookings of tonnage indicate a continuance of the movement for some while ahead. Already considerable quantities have been purchased by the United Kingdom and Continental and Mediterranean countries, which means lessened imports from other exporters. Inherent weakness was apparent owing to the heavy statistical position, but the Russian campaign has brought about a climax sooner than expected. Meanwhile, Canadian and United States sellers are reducing their limits in order to compete for European custom, as obviously export sales must be pressed up to the end of the year, when new crops in Australia and Argentina become available. Oriental countries have been purchasing more freely of late, both from Australia and the North Pacific, and increased takings by Eastern consumers may be expected while prices are at a low level. Flour values were also marked down in sympathy with wheat, both for home milled and imported, but as is to be expected, buyers are confining their operations to immediate needs. Shipment offers from North America are freely made at declining rates, but meet with little response from importers. All descriptions of feeding stuffs shared in the depression, and consumption of maize is still adversely affected by cheap offers of European barley.

WHEAT.—Again easier in sympathy with reduced c.i.f. offers. No. 1 hard Manitoba, ex ship, 33s.; No. 1 Northern Manitoba, ex ship, 32s. 6d.; No. 2 ditto, 31s. 9d.; No. 3, 31s. 3d.; No. 6 Manitoba, 24s. 9d.; No. 1 hard winter, 32s. 3d.; No. 2 mixed Durum, 30s.; Barusso, 6½ lbs., ex ship to arrive, 30s.; Australian, 32s.; choice white Karachi, 31s. per 49½ lbs.; English new, 6s. 6d.-6s. 11d. per 112 lbs.

FLOUR.—Dull and tendency easier. London straight run, 30s. per sack for country deliveries and 29s. London area. Of imported, Manitoba patents, 27s.-29s. 6d.; Buffalo ditto, 27s.-29s. 6d.; Australian, 24s. 6d.-26s., ex store, per 280 lbs.

MAIZE.—Easier. Plate, landed, 24s. 9d.; ex ship, 22s. 9d.; August-September, also September-October, 22s. 6d.; Bessarabian, landed, 24s. 3d.; No. 2 white flat African, ex ship, 21s. per 480 lbs.; yellow maize meal, 27 5s., f.o.r. London; yellow African, ex ship, 25 7s. 6d.; white, 25 2s. 6d. per ton.

BARLEY.—Weak. Californian, old, landed, 30s.-35s.; new, x ship, 30s.-41s., as to sample; Chilian brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 30s.-32s. per 44½ lbs.; Black Sea, ex ship, 14s. 6d.; Danubian, 14s. 6d.; Persian, new, ex ship, 14s. per 400 lbs.; English new, malting, 6s. 3d.-13s.; feed, 5s. 3d.-5s. 9d. per 112 lbs.

OATS.—Easier. Plate, landed, 13s. 3d.; ex ship, 12s. 3d.; Chilian tawny, ex ship to arrive, 13s. 3d.; mixed Chilian white, 17s. 6d.; ex ship; best whites, ex ship, 20s.; landed, 21s. 6d.; German, landed, 21s. 9d.; mixed Canadian feed, ex ship, 11s. 9d.; landed, 12s. 3d. per 320 lbs.; English, new, 5s. 4d.-5s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Sept. 20	Cwts. 176,086	Cwts. 421,436	Cwts. 314,112	Cwts. 247,437

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Sept. 25, 1929.	Jan. 2, 1930.	Sept. 10, 1930.	Sept. 17, 1930.	Sept. 24, 1930.
Winnipeg (No. 1 Manitoba) Cents per 60 lb.	122	143½	148½	83½	80½	74
Chicago (No. 2 Winter) Cents per 60 lb.	116½	128	130½	83½	83½	79½

The visible supply of wheat in Canada, at 63,945,000 bushels, shows an increase on the week of 10,166,000 bushels. Supplies a year ago stood at 70,628,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Conditions in the South Yorkshire coal trade remain much as before, with some slight improvement in best qualities. Rather more best steams are being exported, but the industrial demand is inclined to shrink and the surplus supplies of small coals are increasing. There are large stocks of these at many of the pits. Sales of house coal are below normal. The coke market is very depressed. Best steams fetch 15s. f.o.b., and furnace coke 12s. 6d. to 13s. at ovens.

Our Glasgow correspondent writes:—Business remains slow in the Scottish coal trade, and until the effects of the new marketing scheme can be more accurately gauged, no increase in activity can be looked for. At time of writing it is not known whether the proposals submitted by the Scheme Committee have met with a majority acceptance. These, it is understood, provide for the use for the benefit of export business of any surplus of home coal prices over 20 per cent. in excess of those for shipment. Round coal is still plentiful, but washed nuts maintain recent firmness. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 13s. 6d.; splint best, 16s.; splint second, 14s. 6d.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 13s.; doubles, 12s. 6d.-13s.; singles, 12s.; pearls, 11s. 9d.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 9d.; third-class steam, 10s. 9d.; trebles, 13s. 6d.-15s.; doubles, 12s. 6d.-13s. 6d.; singles, 11s. 3d.; pearls, 11s. 3d. LOTHIANS.—Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s.; doubles, 12s. 9d.; singles, 11s. 6d.; pearls, 10s. 6d.-10s. 9d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s. 3d.; pearls, 11s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The general position on the Cardiff coal market this week has been unchanged. Shipments from the South Wales docks last week showed a slight increase, but the

improvement was due entirely to the movement of shipping, and both current and contract inquiries have been extremely scarce. It is now officially confirmed that the Brazilian Central Railways have placed a contract in Germany for the supply of about 210,000 tons of large and small steam coals at a price approximately about 1d. per ton less than that tendered by South Wales firms. It is understood, however, that the credit terms are extremely onerous. The Great Western Railway Company has modified its intention of losing all the tips in the East Dock to the extent of agreeing to operate three tips capable of dealing with 20-ton wagons. Current quotations are on the basis of the minimum schedule and for the principal classes of coal they are as follows:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. to 27s.; stove nuts, 39s. 6d. to 43s. 6d.; French nuts, 43s. to 46s.; ruggly culm, 10s. 6d. to 11s. 6d.; foundry coke, 30s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 25s. 9d. to 26s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Although quiet conditions rule in the iron and steel trades, there is a steady if small volume of business which consists principally of small orders. The unsettled conditions in the Continental steel market to some extent react upon all departments, and as a natural consequence buyers pursue a cautious policy. British steel manufacturers find that business is spread irregularly over the market, with the result that in some districts it is difficult to keep plant working even at a moderate rate of operation. The demand for pig iron which has shown more activity of late, seems to have subsided somewhat; but production has been reduced to a level which prevents the stocks in makers' hands reaching unwieldy proportions. There has been a steady demand for semi-finished steel material; but in this department in particular the effect of unsettled conditions on the Continent has been especially noticeable. The price position is weak, and as a result buyers are carefully following the market, placing only small orders. The finished steel department of the market is in a subdued condition, and, although one or two good contracts have been placed of late, general buying has been quiet. Consumers generally show a disposition to limit their purchases to immediate requirements. The recent reduction in the price of galvanised sheets seems to have stimulated business with India; but in other directions the export demand for steel is disappointing for the time of year.

Our Middlesbrough correspondent writes:—Buying of Cleveland iron is on a somewhat reduced scale, as many home consumers have covered the bulk of their requirements for prompt and also a month or two ahead, and they are now inclined to wait and see how new orders for their products develop before committing themselves further. At the weekly market on Tuesday moderate purchases were reported on home account for early delivery and also a little ahead, but there was again an almost entire absence of business on export account. Prices were unchanged, viz.: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. The hematite market is steady, and the volume of new business is gradually increasing, in addition to which arrears under old contracts continue to be taken at a better rate, so that under old contracts reduced. A furnace is being changed stocks are being gradually reduced. Dorman's Eston works, but the bulk of the production will be taken up for the firm's own requirements. Makers still quote 71s. for mixed numbers for delivery over a few months, but odd prompt lots are obtainable at a trifle less. Shipments of pig iron show no improvement, the total cleared to 23rd inst. being only 10,903 tons, against 14,970 tons to the same date last month. In the manufactured departments new business matures very slowly, but prospects of an early improvement are still considered favourable. In the meantime there is a fair out-turn at the different works against old contracts. Home prices for steel materials under the rebate scheme are unchanged, viz.: Plates, ½-in. upwards, £8 15s.; joists, £8 10s.; sections, £8 7s. 6d. Other quotations, also for home use, include heavy steel rails, £8 10s.; iron crown bars, £10 15s.; 24-gauge black sheets, £9 10s.; and 24-gauge galvanised corrugated sheets, £11 17s. 6d. In the ore market sellers predominate, but there is very little buying. An odd prompt cargo of best rubio is reported to have been sold at a very low figure under special conditions. Sellers generally are now willing to accept 18s. c.i.f. for this mineral and the current position is inclined to be a little firmer. Some producers are now quoting 17s. both for prompt delivery and up to the end of the year. The total number of furnaces in blast in the district is unchanged at 25.

Our Sheffield correspondent writes:—Trade revival in this area is confined to a small number of special lines. The depression in tonnage steel and tool steels is as acute as ever, and as regards the open-hearth steel in semi form the position has receded since the holidays. Many furnaces have been standing for months, and the business coming through scarcely suffices to provide work for the present restricted plant. Traders are counting upon an early improvement in the Continental situation. Railway companies, for purposes of economy, are curtailing their programmes of rolling-stock construction which were announced at the beginning of the year. Overseas railway orders have increased a little, but the

trade from this source is comparatively inconsiderable. Demand for shipwork steel tends to contract, as the yards are not booking much new business. The pig-iron position remains as before. Prices of steel material are unchanged but weak, and concessions are frequently offered. Inquiries are a little more numerous. A slight seasonal revival is noted in tools, cutlery and plate, but here the output is below the average for the period.

Our Glasgow correspondent writes:—There is little of interest to report this week regarding the West of Scotland iron and steel industries. In almost every branch there is a steady business being done, but there is no extensive buying. The reduction of 5s. per ton on minimum prices, and the freeing of weights, etc., for India for galvanised sheets, has caused a little more activity in the sheet trade, but export business both in black and galvanised is still poor. In Glasgow and district, works will be closed on Saturday and Monday for the annual trades and autumn holidays.

Our Cardiff correspondent writes:—On the Swansea Metal Exchange on Tuesday it was decided to reduce the minimum price of tinsplate per basis box f.o.b. works port from 18s. to 17s. and that of tinsplate bars from £6 to £5 15s. per ton. The Galvanised Sheet Makers' Association had previously decided to reduce the prices of galvanised sheets from £11 17s. 6d. to £11 12s. 6d. per ton. Current business continues restricted, but it is hoped that these price concessions will help to stem the importation of foreign steel bars and to stimulate the exports of tinsplates and galvanised sheets. The English Crown spelter works at Swansea have been closed down owing to the current extremely low price of spelter. Quotations this week have been down to £15 10s. per ton, compared with £24 at the corresponding period last year.

OTHER METALS.

TIN.—In the standard market values gave way under selling pressure and lower Eastern cables, with some irregularity in attendance. Moderate sales included standard cash at £132 5s.-£131, £132 15s. and £131 7s. 6d.; three months, £134 10s.-£132 10s., £134 10s. and £132 17s. 6d. In the East, sales were reported at £138 2s. 6d., £137 12s. 6d., £138 15s. and £136 15s. ton c.i.f.

COPPER also declined, owing to liberal offerings, which were moderately absorbed. Standard cash sold at £45 12s. 6d. to £45 1s. 3d.; and three months, £45 12s. 6d. to £44 18s. 9d. and £45 2s. 6d. per ton.

LEAD opened firmer and a good demand was reservedly met, but later buyers were less in evidence and movements disclosed slight irregularity. Good soft foreign pig, September, sold £17 16s. 3d. to £17 15s. and £17 17s. 6d.; October, £17 13s. 9d.; November, £17 11s. 3d. to £17 10s. and £17 12s. 6d.; December, £17 12s. 6d. to £17 10s. ton.

SPELTER dull and easier under liberal offerings. September sold £15 16s. 3d. to £15 10s.; October, £15 13s. 9d. to £15 2s. 6d.; November, £15 7s. 6d.; December, £15 17s. 6d. to £15 10s.; January, £15 12s. 6d. per ton.

ALUMINIUM steady. Home trade £95, export £100 ton.

QUICKSILVER quiet. Spot £22 2s. 6d. per bottle.

TIN PLATES easier. I.C. coke, prompt and forward, 17s. per box, f.o.b. Swansea.

ANTIMONY easier. English regulus, £38 to £45; Chinese ditto, spot, £26 10s.; September-October, £25 15s.; Chinese crude, September-October, £15 per ton c.i.f.

ANTIMONY OXIDE, September-October, £28 10s. 6d. per ton c.i.f.

Increasing Interest in South American Markets

THE Bank of London & South America experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. Status reports are supplied on request, and a Monthly Review of Market information is issued free with the concentrated on application.

WOLFRAM firmer and sellers more reserved in face of improved inquiries. Chinese spot, 20s., October-November, 19s.; Burmese, spot, 18s. 6d.; September-October, buyers, 17s. 6d. per unit c.i.f.

THE COTTON TRADE.

LIVERPOOL: September 24th.

Values on the week are about 20 points lower. There has been a better trade inquiry and an improved demand on the spot, but this has been offset by hedging and speculative selling and the general political news. The weather in the south continues favourable, and scattered rains have fallen in the drought areas of Texas and Oklahoma. The favourable weather has enabled picking to go on without interruption. Ginnings up to September 16th are 3,730,000 bales, against 3,353,000 bales for the same time last year. At each decline in prices there is more resistance on the scale down, buying orders being in evidence. So far very few contracts have been entered into for far ahead. The Brazilian crop was reported as being much less than last year and of a lower grade. There is a more cheerful tone in Manchester. Spot sales for the week 18th to 24th (inclusive) are 33,000 bales, of which 14,790 American, 6,500 Brazil, 300 Argentine, 7,250 Peru, 2,050 Egyptian, 900 African, 800 East Indian and 410 sundries. Imports for the same period are 48,646 bales, of which 25,644 are American, 13,786 Peru, 1,895 Egyptian, 362 African, 4,408 East Indian, and 2,551 sundries. Quotations to-day are: American Middling, 6-02; Egyptian Sakel, 10-20; Uppers, 8-37; Brazil Fair, 5-78; Peru G.F. Smooth, 6-48; West African Middling, 6-03; and East African G.F., 6-98.

MANCHESTER: September 24th.

Although the general inquiry in the market continues rather larger, trade is still slow in expanding and numerous spinners and manufacturers have reported that the prices offered by customers cannot be accepted. The attitude of buyers has been somewhat affected by the further easier movement in raw-material rates, and there is not sufficient confidence in the general outlook for free operations to take place. Inquiry in cloth for India continues more encouraging, and moderate lines have been booked in light fabrics, chiefly for Madras and Karachi. Only isolated sales have occurred for Calcutta, and operations for Bombay remain at a standstill. Although the picking of bazaars has been weakened, the boycott of foreign goods is still in force. News from China has been rather mixed, but fancies continue to be sold for Shanghai and Hong Kong. Bleaching and finishing cloths have attracted moderate attention for Egypt, South America and the Continent. There has not been much activity in home-trade cloths. Quotations in American and Egyptian yarns have been irregular when tested. Some spinners continue to sell a little more freely, but trade is not sufficient to strengthen prices, which are very poor.

THE WOOL TRADE.

Our Bradford correspondent writes:—The market throughout the week has remained in a nervous state and business has been exceedingly difficult to negotiate. Weakness in the raw wool markets has been the main factor in curtailing turnover in tops and yarns, and the decline in values has again destroyed confidence. Judging from the cable reports from the primary markets, really good wool is still selling well under active competition from foreign buyers, but faulty and heavy-conditioned lots are irregular. A private cable from Sydney this week states that warp 64's wool is selling on a basis of about 23d. clean, delivered Bradford, or about 2d. per clean lb. below the opening rates. It is not without interest to note that a year ago the price was 32d. clean. In South Africa there appears to be a good general demand for the best types,

and superior 12 months' wool has been sold at Port Elizabeth this week on the basis of 25d. clean, Bradford, with 10-12 months' at about 23d. In London since the opening of the current series of auctions there has been a marked decline in most classes, though greasy wools have suffered less than scoured and slipes. In Queensland scoureds, for example, the top price in July was 30d., but the best figure so far this series is 27d. On the other hand, some types in special demand, such as really super West Victorian greasy merinos and New Zealand scoured merinos, have made last sales' rates. In Bradford users have been influenced by the ease in values and general financial stringency at home and abroad, and the hand-to-mouth policy of buying for current requirements is more in evidence than ever. Forced sales in tops and yarns, particularly in the latter, are having an unsettling effect, and quotations all round compare most unfavourably with costs based on wool prices. To a large extent quotations are nominal, because there is not sufficient business to test the market, and in many cases offers from users are frankly of the sort generally described as "sporting bids." There is also a good deal of irregularity in quotations for by-products. The market is simply marking time and awaiting developments, the general impression being that no expansion in demand can be looked for until a firmer tendency develops in the raw wool markets.

HIDE, LEATHER AND ALLIED TRADES.

Hides from home-slaughtered cattle were again dearer at the auctions held in Manchester on Tuesday, most weights in both clear and varbled ox and heifers recording an advance of ½d. per lb. Cows and bulls were also ½d. per lb. dearer, while calfskins sold at the previous week's figures. Sheepskins generally are steady. The market for foreign hides is still strong, although a slightly easier tendency is to be noticed in some quarters. In the South American market sales of frigorific hides have been made to Europe and the United States on the basis of 6½d. for Argentine ox and cows. Sales of dry River Plates include B.A. Americanos at 8d., and M.V. Americanos at 8½d. Trade in African hides has been of smaller dimensions: dry Capes have changed hands at 8½d. and 7½d. for firsts and seconds, and dry salted 20/30 lbs. at 7½d. and 6½d. Prices for Australians are inclined to be weaker with slightly less business passing. The market in sole leather is in a better position than for many weeks past. English and wet-salted bends have been inquired for and some very satisfactory deals have been negotiated for weights suitable for the repairing section. Shoe manufacturers have also been interested in dry hide bends, and although most of the business has been confined to meet immediate requirements, a fair amount of inquiry has come to hand in regard to forward delivery. The offal market does not show much improvement. Trade in the upper leather section proceeds on steady lines, the bulk of the inquiry being in connection with box and willow calf and glacé kid. In regard to the former, prices are very firm and any alteration that may take place in the near future is likely to be in an upward direction. Glacé kid in both black and brown is a regular feature of the trade passing. Suode leathers have not been quite so active, but there is a trifle more inquiry for both real and imitation reptile leathers for shoe uppers. Patent leather is a moderate sale in the cheaper grades.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The market for imported European timber has undergone a change, which should have some effect in giving it more steadiness than it has experienced this summer. Instead of an increase of imports of sawn deals, battens and boards, so persistent between May and July, there was a shortage last month compared with August last year, of 181,831 loads (of 50 cubic feet) on an import of 626,829 loads, bringing the increase this year down to 186,063 loads, compared with January-August, 1929. The sharp decline in Russian shipments last month was unexpected, considering the great attempt the Soviet timber authorities are making to increase their trade with the United Kingdom. There is no certainty as to whether the demand is better or worse than in September, 1929, for the weekly statistics of London dock deliveries are not published now. But there seems to be less complaining of bad trade, by which one is left to presume that—although auction prices show very poor results to sellers—things might be worse. Building trade returns for work outside the L.C.C. area last month showed a sharp drop compared with July, but were about the same as the poor one of August, 1929. The unemployed building trade operatives numbered 14.3 per cent. in August, 5.1 per cent. more than for August last year, whilst the state of trade generally is not promising for a greater demand for wood. The free on board market is weak generally, and there are two factors which are assisting that weakness (1) that all the Russian supplies for last year have not yet gone into consumption, and (2) that the Soviet timber authorities have cargoes in the U.K. on consignment. The first especially depresses spot merchanting whilst the second makes importers shy of buying forward when they know of unsold cargoes already landed. The hardwood market has improved since the turn of the month. Pitwood has increased considerably in import this year, an augury that there is hope of better trade in the colliery districts. Imports of plywood decreased last month compared with August, 1929, by 26.5 million square feet on receipts of 21.7 millions, and this year's supplies are now 14.5 million square feet down, compared with a year ago. Importers held off buying owing to too large stocks compared with the demand, but with the above-mentioned decrease the plywood market position is now in better condition for domestic sales and forward buying.

OVERSEAS PRODUCE.

SUGAR.—The market remains in the same subdued state as that existing for some time past. There is a moderate movement in British refined goods at 6d. per cwt. decline. Raw refining descriptions are difficult of sale. Terminal sections displayed a certain easiness with moderate sales effected in raw. December delivery sold 4s. 6d.; January, 5s. 3½d.; March, 5s. 6½d.; May, 5s. 9d.; August, 5s. 11½d. Foreign, 96 per cent. centrifugal, October, 5s. 3d. c.i.f. Cuban receipts last week cabled 36,000 tons against 28,000 same time last year; exports 87,980 against 103,560; stocks 1,179,290 as compared with 550,606. Stocks of raw sugar in the three chief ports of the United Kingdom for past week amounted to 126,786 tons.

COFFEE.—There is a sustained movement from the spot and previous prices not only fully maintained, but in some cases improved upon. Kenya qualities, and the finer qualities of Costa Rica, which are in limited supply, monopolise attention. Brazilian kinds are steady but quiet for shipment.

COCOA.—A very quiet market on spot and trend of prices weaker. Forward position dull and easier. Accra F/F, October-December, London contract, sold 24s. f.o.b., and G/F to Continent 26s. c.i.f. Terminal, October, sold £27s. 6d.; December, 27s. 6d. to 26s. 6d.; January, 26s. 9d. to 26s. 6d.; March, 28s.; May, 27s.

TEA.—Indian sales of 60,847 packages came to quite a good market. Perhaps competition was more active on Wednesday than previous Monday. Usual common teas quite steady and sold readily, while several other growths marked some irregularity. Finest broken orange sold 5s. 10d. Ceylon auctions produced 21,271 packages. An active and buoyant market prevailed. Amongst the finer teas which showed quality improvement, very firm rates were paid, common at times being in sellers' favour. Good to fine pekoes in demand by exporters. Java and Sumatra sales met a fair demand at mostly steady rates.

RICE.—Market quite featureless at the moment and trend of prices weak for most descriptions. In the case of Spanish this is largely attributable to rate of exchange. Burma Two Stars, October, to London, 11s.; Spanish oil, 13s. c.i.f. Others call for no comment.

BEANS AND PEAS.—The small trade doing in butters and haricots is at previous rates. Peas easier and buyers are very cautious just now. Japanese, September-October, quoted 15s. 3d. c.i.f.

POTATOES.—The market in potatoes has been more active, and prices were generally higher.

mainly New Zealand, formed 76.4 per cent. of the total supply, as against 74.9 per cent. last year. The price of home-grown meat was generally lower than last week, but foreign meat showed a slight rise.

RUBBER.—Only fractional alteration occurred. General tone steady, and there appears to be quite steady buying, partly on investment account, while some manufacturers continue to purchase far ahead at the very low rates now current. A further substantial increase anticipated in London-Liverpool stocks on Monday next. Standard sheet, spot, October, also November sold, 3½d.; December, 3½d. For October-December, 3½d. was accepted; January-March done 4d.; March alone at 4½d.; April-June, 4½d.; July-September 4½d. to 4½d.; January-December, 1931, sold, 4½d.; October-

December, 1931, at 4½d., and January-March, 1932, at 4½d. To New York, estate sheet, September-October, sold 3½d. c.i.f. London stocks increased 415 tons on the week. Landings 2,651, deliveries 2,236, stocks 82,648 against 40,151 last year. Liverpool stocks 2,289 tons higher, landings 2,546, deliveries 257, and stocks 34,085 tons against 9,780.

HEMP.—There was no essential change in the position of Manila descriptions. Buying power at the moment is rather meagre, but sellers adhered to steady asking prices. Quotations on the basis of £20 15s. for K grade, October-December shipment. African Sisal c.i.f. Manila hemp: Receipts last week cabled 22,000 bales against 22,000 last year and 26,000 in 1928. Estimate for next week, 22,000; week after, 23,000. Manila shipments last week, 9,000 United Kingdom, 4,000 Continent, 9,000 U.S.A., 6,000 Japan, 2,000 other countries and 1,000 local consumption, making stocks 131,000 bales.

VEGETABLE OILS AND OILSEEDS.—Markets generally continue to display considerable weakness and prices have followed the downward trend. Considerable pressure to sell, together with a poor demand for oil, has sent linseed down many shillings per ton old crop Plate loading for London having been done at £13 5s. Cotton seed is also lower, black Egyptian (old) on spot offering at under £8, while new crop first arrived is quoted around £6 2s. 6d. and for shipment £5 18s. 9d. In the oil section business is very quiet, and buyers absent. Linseed oil on spot dropped sharply to £27 15s., and for September delivery to £27 6s., later positions being at a substantial discount. Cotton oil is neglected, and lower crude Egyptian, ex Hull, offering at £23 10s., and common edible at £27. Most other seed oils are easier. Oilcakes have been reduced in price, but demand is still poor. The market for copra was quiet but sellers refrained from pressing for business and previous prices were maintained for virtually all descriptions. Business in mixed Dutch E.I. Padang excluded September-October to Marseilles at £15 12s. 6d. c.i.f. Palm kernels, October-November, Hamburg, £11 12s. 6d.

THE MONEY MARKET.

DURING the early part of the week the market was disturbed by the fact that Tuesday was the last day of the quarter, and consequently exactly three months before the turn of the year. This meant that Treasury bills due to be paid for on that day were the popular end-of-the-

The Handy Tin keeps the Flavour in

PLAYER'S WHITE LABEL

NAVY MIXTURE

2-oz. Pocket Tin 1/10

year maturity, and so an unusually large number of Tuesday's bills had been applied for by the market and the banks. Furthermore, there was the usual end-of-the-month turnover of funds, including a large foreign exchange settlement, and all these factors combined to take money off the market.

* * * *

As a result of this, on Monday and Tuesday the market found itself extremely short of funds, just at the time when brokers had an unusually large number of bills to pay for. Consequently there was a keen demand for money; 3 per cent. and even 4 per cent. was freely paid for loans over the night; and though the Bank came to the market's aid and bought some early December bills at 2½ per cent., the market finally had to resort to the Bank and borrow for a week at 3½ per cent. The Bank return affords some indications as to what actually occurred. The increase of £3,484,000 in Government Securities represents the Bank's own purchases of bills, while that of £6,244,000 in Discounts and Advances is a measure of market borrowings. On the other side of the return, the expansion of £8,335,000 in Public Deposits is explained by Tuesday's payments for Treasury bills, while the decrease of £2,856,000 in Bankers' Deposits may be accounted for by the Bank's share of the Treasury bill payments less the money they called from the market.

* * * *

On Wednesday the market reverted to its customary ease. The market was still in possession of the money borrowed from the banks, while dividend payments in respect of the 3½ per cent. Conversion Loan released further funds. Thus, by Thursday, the rate for day-to-day loans had fallen to 1½ per cent. for old and new money alike, while December bills were a level 2 per cent. The three months' rate, on the other hand, now relates to January bills, which are not a useful maturity, and so it is not surprising that they were quoted up to 2½ per cent. Friday's Treasury bills were also expected to be allotted at that rate.

	Sep. 11, 1930.	Sep. 18, 1930.	Sep. 25, 1930.	Oct. 2, 1930.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount / Call	1	1	1	1	1½ (May 1, '30)
Houses / Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2	2½-1	...

The market has thus had a difficult and unprofitable week. Some brokers had to sell to the Bank at 2½ per cent. bills which they had previously bought at 2½ per cent., and others had to borrow from the Bank at 3½ per cent. for a week in order to carry bills bought at rates running down to the same low level of 2½ per cent. It is possible that the market bought Tuesday's Treasury bills in excess of its power to pay for them, but the banks have also been criticised for buying too many of these bills and calling too much off the market. Meanwhile it looks as if money will once more become and remain easy and plentiful. France is continuing to take gold, but the strain has been eased to some extent by the month's shipments from Berlin, amounting in all to nearly £9,000,000. Trade is no better, and all the indications are that money in all centres is only too anxious to find employment.

NEW YORK.

On Monday, call money fell to an official renewal rate of 1½ per cent., this being the first time since 1915 for so low a rate to be recorded. Little interest, however, was aroused, and on the following day the rate returned to 2 per cent. This week's statement of the position of member banks shows an increase over last week of \$57,000,000 in security loans. Reports that the Reserve Banks were bringing pressure upon individual banks to

reduce these loans are denied. Apparently, it is still felt that any move of the kind would have a bad influence upon business.

THE STOCK MARKETS.

THOUGH the political situation showed some improvement, markets continued to be oppressed by poor transatlantic advices and renewed weakness in commodity prices. Gilt-edged held their ground and Australians improved on Imperial Conference hopes. In the foreign market, Chinese bonds were a strong feature on the latest peace moves. Home rails were weak on a further disastrous batch of "traffics," though Metropolitan and Undergrounds were active. Nitro-fagast and Nitrates receded on the unsatisfactory interim dividend statement. Industrials were inactive, but Austins strengthened on the report. Rubber shares were again heavy, but tea shares continued to enjoy unwonted liveliness. Oils were again easier. Among mining shares, Kafirs were sold from Paris and Central Mining declined sharply, but Rio Tintos advanced at the close on an improvement in copper.

THE COMMODITY MARKETS.

Except for a seasonal increase in the demand for household purposes, the coal trade shows no signs of an early expansion. The volume of business in the iron and steel industries seems to be increasing slowly, and stocks are being reduced. The downward tendency of cotton and wool prices continues to check trade development in these industries. Hides show a weakening tendency, but leather is still firm, although the demand for it is only on a moderate scale. The position of the jute industry is critical; despite a reduction in output, stocks of finished goods are still large, and there is about two years' supply of the fibre in view. Wheat prices are scarcely changed on the week.

THE FOREIGN EXCHANGES.

During the past week movements in the foreign exchanges continued, with few exceptions, to be unfavourable to sterling. The New York rate fell away to 4.85½, as against 4.86 a week ago. Montreal was steady at 4.85½. Paris fluctuated between narrow limits, closing at 123.79. Belgium at 34.83½ showed a loss on the week to sterling of 2½ cents. Milan was in demand, and closed at 92.78. Further German demands for guilders and Dutch offerings of sterling caused the Amsterdam rate to fall to 12.04 on Wednesday, but the close was slightly better at 12.05½. Heavy demands for Swiss francs caused a fall in the rate to 25.03½. Disturbing political news from Spain caused a collapse in the peseta to 47.00, this being the worst rate yet reached. German marks depreciated to 20.42½ on the announcement of the new Government's financial proposals, but a rally to 20.40½ occurred later. Buenos Aires lost 1½d. to 30.8½d., but a further improvement occurred in Rio to 5½d. Among the Eastern exchanges yen were better at 2s. 0.7½d. In the forward market dollars approached nearer to parity with spot prices, 1½ cent premium being quoted for one month and 1½ cent for three. The demand for forward Belgas fell off, and par was quoted for both the one and three months' positions. Forward Paris was unchanged. Milan forwards were 15 and 40 cents discount respectively. Forward pesetas were a difficult market, business being done around spot prices. Forward guilders were ½ cents and 1½ cents discount for the two periods. Forward Reichsmarks were quoted at discounts of 3 and 9 pfennigs, but business was on the small side. Silver was weak and fell away to close at the week's lowest price of 16½d. for both spot and forward positions. The easiness was attributed to Indian and Chinese selling. Hong Kong was 1s. 3½d., and Shanghai 1s. 7½d. at the close.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Boulevard Street, London, E.C.4.

THE PRIMROSE PATH.

EVEN the great prominence and importance of the world discussions at Geneva and the Imperial discussions which have just opened in Whitehall cannot divert the attention of the country from the outstanding and ever-growing problem of unemployment. Week after week passes without any appreciable break in the upward movement of the figure of the workless. Through the Parliamentary recess two inter-party committees have been hard at work in the search for remedial measures, members of the Cabinet, in the one case, consulting with Mr Lloyd George and his colleagues on the expediting of public works, and, in the other, conferring with representatives of both Opposition parties on the at least equally important question of the complete overhaul of the system of unemployment insurance. It has been true of every Parliamentary session for some years that it has been dominated by the unemployment issue, and it cannot fail to be truer than ever of the session of 1930-31. Most timely, therefore, is the weighty contribution to the study of the problem made this week by Sir William Beveridge who, in revising his well-known work* published in 1909, has added to it an up-to-date examination of the course of events since the war, both in relation to the growth of unemployment and its causes, and with regard to the working, and, finally, the breakdown, of the unemployment insurance scheme.

As the depression deepens, louder and more varied becomes the medley of voices, each with its fresh diagnosis and remedy. Mr J. M. Keynes makes the high interest rate on long term borrowings bear the blame; last week some prominent industrialists, under the lead of Sir William Morris, told us that the cause of unemployment is Free Trade and high taxation; others find it in the gold standard and the inelasticity of currency policy. Of late, perhaps, the tendency has been for popular attention to be strenuously concentrated upon the fiscal aspect, whereas expert opinion has been more and more pre-occupied with problems of gold and its regulation and supply. Sir William Beveridge performs the service of reminding all who are brought into contact with the problem that causes, and, consequently, the means of alleviation, are more intricate and more various than are sometimes supposed by those who attach primary importance to one particular theory or aspect.

Although the book bears traces, especially in its order and arrangement, of the pressure under which it was produced, Sir William has provided a great deal of material and expressed views to which both Parliamentary Com- mittees should give their fullest attention. On the insurance aspect he is clearly in entire agreement with the views put forward recently in the *Economist*, that the time is over-due when a distinction between insurable and uninsurable risks, and between real insurance and State relief must be clearly drawn. It is impossible, he remarks, "without grave danger to continue any longer to mix up relief with insurance": the choice has to be made between the two. There is no satisfactory alternative to going right back to the principles embodied in the Act of 1911, which were that every workman, in virtue of the contributions made by him and his employer, had the right to a definite income in a limited period of unemployment; and this, as Sir William points out, involves an attempt to adjust contributions to the risks of unemployment in different industries, and also the organisation, quite separately, of some kind of relief for those who pass out of the scope of insurance proper.

As to the workings of the Insurance Acts as they are now, Sir William is not greatly impressed by the current belief that the abuse of the dole facilities is widespread,

and his criticism of the effects of the system now in force is not that it demoralises the recipient of relief, but that its danger lies "in the risk of demoralising governments, employers and trade unions, so that they take less thought for the prevention of unemployment." And here, again, is a stern warning:—"A State which undertakes to relieve adequately and indefinitely from a bottomless purse all the unemployed, will soon find itself subsidising the manufacture of unemployment, unless it adopts counter-measures." Finally, Sir William develops the striking and true thesis that Governments have, in their concentration upon insurance and relief, neglected the evolution of Labour Exchanges and the organisation which should have grown from their institution.

This brings us to the second of the three main themes in the book. Here the main insistence is upon the ever-increasing need for a far more effective organisation of the labour market, and for devising methods for increasing labour's mobility. But it is in the third main theme that the principal interest lies in view of the urgency of existing troubles. The result of Sir William's searching analysis of the causes that have produced the vast army of the workless can be summarised in a sentence. He finds the fundamental cause in the disequilibrium between wages and national productivity. The former, he declares, are higher than the latter can justify, and from this proceeds the obvious argument that either wages must come down or productivity must be increased, or both. To put it another way, we cannot maintain the present standard of living unless national production is adequately increased. The extensive rise in real wages that has taken place "must naturally cause extensive and enduring unemployment, above all in export trades, either by raising the prices of British products in competition with those of other countries, or by reducing the margin from which capital is saved, or by causing a transference of capital to more remunerative use in other countries, or by a combination of two or more of these methods." Somehow or other the proper relation between real wages and productivity must be restored. That is the crux of Sir William's teaching, and such words from so eminent a teacher must carry great weight.

The theory of course is not a new one. It is the authoritative emphasis with which it is re-stated which should compel the attention of the country and its rulers. Doubtless Sir William's intense concentration upon it will lay him open to the criticism that he has allowed too little weight to such factors as the restriction of trade by tariffs, the high level of taxation, gold problems, and perhaps, above all, "ring" price agreements. He will be attacked by the "high wage" party on the ground that under-consumption is at the root of our present troubles, and that the depression of real wages would still further reduce purchasing power. He will be attacked as a "low wage man," because of his statement that at least there should be no wage increases for the time necessary to allow productivity to "catch up." He will be accused of too great a concentration on the wage factor to the neglect of all the other factors that affect the discrepancy between the prices of primary products and those of finished goods. He will be asked how lower real wages in this country would have prevented the slump in wheat and wool, and rubber and tin and copper, and all the effects that followed upon it. But however much room there may be for such questionings and criticisms, Sir William's conclusion and his method of presenting it remain such that they cannot be dismissed. They must be faced.

What then shall we do to remove this disequilibrium? A stiff dose of protection might depress real wages—but at a price which some new converts to that policy would do well to ponder. Reduction of labour supply by vast emigration is impossible, as Sir William points out, and

* "Unemployment. A Problem of Industry." By Sir William Beveridge. London: Longmans, 21s. net.

although inflation might produce a temporary solution, its inevitable after-effects, in the opinion of Sir William, rule it out of the sphere of statesmanship. What then? Either lower wages, or increase productivity. The former course has grave objections to which Sir William is wide-awake. There remains his main conclusion—productivity must be made to grow more quickly than it is growing now. At that point Sir William disappoints us by leaving to others to discuss the ways and means by which this can be brought about. But he has said enough to show the lines on which his mind is running. His conclusion, after surveying the "Treasury theory" and the "Lloyd George theory" of relief works, is that the difficulties involved "limit severely the application of the method." His keynote is "organisation"—organisation of the labour market, and organisation for industrial efficiency—and with the same courage with which he warns governments and employers, he has this cogent message for the Trade Unions:—

The higher standard of life of those who are in regular work is to some extent won at the cost of the unemployment of those who are not. The former and their leaders are in honour bound, not merely to remove restrictions on output, not simply to avoid opposing improvements of industrial technique and organisation, but to further such improvements in every way in their power. . . . Output has somehow to be allowed to overtake consumption, and this means, at the very least, that for some time to come there should be no further general rise of wages.

Again, we must "organise completely the labour market, abolishing the hawking of labour and casual under-employment, and the anarchic recruiting of trades and the blind choice of careers." These things cannot be done in a day, but, says Sir William, "with time they can be done."

The importance of Sir William's book is this: one of the deepest of our economic thinkers has told the Government of the country that it is treading the primrose path that leads to the economic bonfire. To such a warning from such a quarter, supported by such a wealth of argument and material, the Cabinet and the inter-party committees, statesmen, industrialists and trade union leaders cannot afford to turn a deaf ear. Many readers, we think, will close the book with a very curious mixture of comfort and alarm. Comforting is Sir William's belief that even though the economic world is in transition, and permanent changes are going on around us which must permanently affect our industrial life, the problem of British unemployment is one whose solution lies mainly in the hands of the British people. Practicability, he admits, is a relative term, but giving the word a reasonable interpretation, he believes that a solution by our own efforts is practicable. "Unemployment remains in 1930 as in 1909, a problem of industry, not an act of God." But hard upon this note of comfort comes the note of alarm. There are passages in the book which will, we are afraid, be singled out from their context and used by our modern defeatists in support of their case. From a review of the recent history of coal, and of the plight of our export trades, Sir William passes to the comment that "all these indications leave no room for easy optimism, but throw a new colour over all thoughts of Britain's future." Again, "the dominance of no nation is immortal. Shall Britain be content to be an island again, self-sufficing, or nearly, for a smaller people?"

There lies the choice for Britain. She can decide that the tightening of the belt, the strong pull on the rope, and the hard constructive organising of work demanded in any solution of unemployment is too unattractive. In that case she can dally for a while on the primrose path till she sees before her a new and littler future far different from the old days of industrial prestige. Or she can awaken to the warnings such as those that Sir William has given, and take such unpleasant steps as are necessary to reach a new economic adjustment, through which alone Britain can find her chance of maintaining her standards and holding much at least of her old foothold in a world of intensified competition.

DISARMAMENT.

DISARMAMENT has now been on the agenda of international politics for more than ten years. The War itself made it plain, to everyone who had eyes to see, that states must disarm if civilisation is to survive. The Covenant of the League of Nations imposes an obligation to disarm eventually upon all states members. The principal allied and associated Powers, when they imposed immediate disarmament upon Germany in the Treaty of Versailles, justified their action on the ground that it was intended as a first step towards eventual disarmament all round. Since then, one notable step in disarmament has been achieved. The three principal Naval Powers—the British Empire, the United States and Japan—have agreed upon a limitation and reduction of their naval armaments in all categories. And if these three navies were the only armed forces in the world, the Tripartite Treaty of this year might be rapidly followed by a proportionate reduction of all three to the bare minima that are necessary for policing the seas. Unhappily, while the Tripartite Treaty of 1930 is a unique agreement up to date, there are other armed forces which have to be taken into consideration by one, at least, of the signatories. There are the navies of France and Italy; and there are the land armies of all the continental European Powers, except those which have been disarmed by the peace treaties. In the reduction of these other armaments, there is little or no progress to record; and we have not unlimited time at our disposal. After having marked time, in these fields, for ten years, the movement towards disarmament must now advance substantially at last or else palpably begin to recede.

If we wish to see the signs of the times, we may turn our eyes to Germany. Last week, at Geneva, the German delegate, Count Bernstorff, was protesting, as he had protested a dozen times before, that the labours of the League of Nations Preparatory Commission for the Disarmament Conference have been totally inadequate. Almost at the same moment a witness at the treason trial at Leipzig, Herr Hitler, was announcing that his party, the National Socialists, who have just gained a sensational success in the German general election, would not recognise existing treaties and would evade or violate them by every means in their power. Many millions of people in Germany to-day are giving ear to Herr Hitler's threats because they know that, for years, Count Bernstorff's foreign colleagues at Geneva have been deaf to Count Bernstorff's warnings and entreaties. The National Socialists are not in power in Germany yet, but they may come into power very soon if the other signatories of the Versailles Treaty fail much longer to redeem the promise of disarmament all round which they gave more than ten years ago. And if, in Germany, the National Socialists do come into power before the present naval deadlock between France and Italy is resolved, Germany and Italy will assuredly join hands. If and when that happens, Europe will again be divided into two rival armed camps, as she was during the twenty years that ended in 1914. We know the sequel.

With this prospect before us, we keenly regret that the Eleventh Assembly of the League has dissolved without fixing a date for the Disarmament Conference, towards which the work of the Preparatory Commission has ostensibly been leading for years past. We regret, no less, that the Franco-Italian naval conversations have been suspended. At the moment, the Franco-Italian deadlock dominates the disarmament situation. For unless France and Italy can agree upon some ratio for the limitation, if not reduction, of their respective navies, the tripartite naval agreement between the British Empire, the United States and Japan cannot be carried further, and may even have to be revised in an upward direction. Again, so long as France and Italy are at loggerheads over this or any other serious political issue, the danger of the Continent becoming once again divided into two camps will be ever present.

The issue which the French and Italians have so far failed to settle is a question of parity. At the Washington Conference of 1921-2, the French accepted parity with the Italians in capital ships. In 1928, the Italians claimed parity in all categories of warships with "the strongest

"BLUE AND GOLD TOURS" TO SOUTH AFRICA

The South African Railways, in association with the leading Shipping Lines on the African routes, have organised an attractive programme of sunshine tours to South Africa for the coming winter.

Sailings from British and Continental ports will be made at frequent intervals between 8th November, 1930, and 30th January, 1931. The steamer fares, on a liberal concessionary basis for the return voyage of 12,000 miles, are unique in travel values.

A comprehensive series of rail tours in South Africa has been arranged in conjunction with the steamship sailings, and the inclusive costs of the combined sea and land tours range, according to duration, class of accommodation, etc., from £70 to £205.

The full descriptive programme "Blue and Gold Tours" will be sent, post free, on request. Apply:—

and the leading Tourist and Travel Agencies.

Continental European Naval Power"; and it was this claim, and the French refusal to concede it, which made it impossible to conclude a five-Power treaty at the London Naval Conference this year. When the British, Americans and Japanese signed their three-Power treaty without French or Italian participation, the British Government, as the party most closely concerned, urged the French and Italian Governments to continue discussions with a view to reaching an understanding *à deux*, and offered them its good offices if they thought that "an honest broker" would be useful to them. Since then, Franco-Italian exchanges of views have been carried on half-heartedly and intermittently until the most recent conversations—held at Geneva during this session of the Assembly of the League—were suspended last week.

In these desultory discussions, the Italians seem throughout to have taken the more conciliatory line. They first proposed a Franco-Italian naval holiday—a proposal which the French rejected, or, perhaps it is more accurate to say, refrained from accepting until a moment when acceptance involved no immediate slackening in the pace of French naval construction. After that, the Italians suggested a "yard-stick," in which the two factors of tonnage and number of ships were to be taken into account, which would have had the effect of leaving France with a superiority in global tonnage of 100,000 tons until 1936. The French made two counter-proposals: First, that the "yard-stick" should take account of aggregate numbers of ships only—leaving either party free to distribute the numbers as it chose between the categories and to give each vessel as heavy a tonnage as it pleased. Alternatively, the French proposed that the discussions should be restricted to annual building programmes and should not attempt to deal with aggregate or ultimate figures. Since neither of these counter-proposals commended itself to the Italians, the conversations came to a standstill, and it was merely a choice between saying that they were "suspended" or saying that they were "broken off."

The naval policy of France is to insist upon satisfying her own "absolute" naval needs and to assess these at a high figure, but a figure which it is within her financial power to attain if she decides to make the effort. When Italy demands parity, the French decline to conclude a Franco-Italian parity agreement, but tell the Italians that they are welcome, as far as France is concerned, to assess Italy's "absolute" needs at whatever figure they like, and to build up to it. In maintaining this attitude, the French are counting upon their greatly superior financial strength. They believe that they can build on a scale and at a pace which will make Italian competition impossible; and presumably they expect Italy to abandon the aspiration to parity and resign herself to an inferiority which would leave France mistress of the Mediterranean as far as the French and Italian Navies are concerned.

It is not difficult to appreciate the French point of view. In the first place, the French feel that their navy has many more defensive tasks than the Italian Navy to perform, so that arithmetical naval parity between the two Powers would spell strategic inferiority for France.

France draws a considerable portion of her land forces from North Africa; she has coastlines on the Atlantic and the Channel as well as on the Mediterranean; she has colonies all over the world. The French Navy has to protect all these French lines of communication, while the Italian Navy has nothing to do but to threaten them. This line of argument is familiar to us, because we have used it, and felt the force of it, as between ourselves and the Americans. But there the analogy ends. For between the British Empire and the United States war is really unthinkable; and that is why it has proved possible, after all, to agree upon an Anglo-American "yard-stick" symbolising naval parity between the two Powers. Between France and Italy, however, war is not unthinkable at all; and we must bear in mind this vital difference in the situation when we are inclined to feel censorious towards the French. Signor Mussolini, with his love of plain speaking, would probably agree that the French are not unreasonable in taking precautions. He might even be offended if it were suggested that these French precautions are unnecessary. But a detached observer will rather question whether the French are going the right way to achieve the "security" which they naturally desire. They have insisted in taking Germany's place as the strongest military Power on the Continent, and this has been accepted, as Germany's military preponderance was accepted after the war of 1870-1. May they not jeopardise their security on land by entertaining naval ambitions as well?

Before the War, Germany's fatal error, as we can see now in retrospect, lay in persuading herself that her destiny was on the water. By indulging ambitions on land and sea at once, she drew down upon herself a concentration of forces which ultimately overwhelmed her. In the play of armaments, history is terribly apt to repeat itself with an interchange of rôles between the players. If some such fatal repetition is to be avoided now, statesmen must see to it that the movement for disarmament shall at last make a substantial advance along the whole front. There is no more time for procrastination. The sands are running fast.

THE GIANT STEAMER.

So great an interest has been taken in the new steamers to be added to the Cunard fleet that the chairman of the company, instead of waiting for the general meeting of shareholders, has sent out a circular letter explaining his scheme and policy in the matter of the giant ships. And the occasion is no small one, for the decision of the Cunard Company to build two steamers, each of a value of £6,000,000, marks (at any rate, for English shipowners) a new era and sets up a fresh standard, just as twenty-three years ago the "Mauretania" and the "Lusitania" worked a complete change in the meaning of size and luxury at sea. Years must pass before these new steamers can take their place in the Cunard service, and, apart from the actual cost of building, many thousands of pounds will

be spent on making the world a world fit for these giants to live in. For the giant that will be built in Scotland, the channel in the Clyde must be specially deepened before the launching can take place, and to that end out of an estimated cost of £70,000, £34,000 has already been voted by the Clyde Trust. New dry docks must be made ready at Southampton, and their details are still under discussion between the Cunard Company and the Southern Railway. The capacity of the marine insurance market must be explored, and already the help of the Government has been invoked and promised. Altogether, the birth of a super-giant liner is more expensive and not less exciting than the birth of a baby in the direct line to the throne.

The figures of size and cost that are being bandied about so easily in connection with these steamers are to the plain man really staggering. Seventy thousand pounds to dredge a channel for one of them to be launched into; three hundred thousand pounds a year gone in interest alone on the building cost of each of them; how in the name of common-sense, says the ordinary man, can such things pay? The chairman of the Cunard, in his circular letter, assures his shareholders that they can and should pay, and tells them that unless he and his fellow-directors were satisfied that the scheme is a money-making scheme they would never have laid the plans for building the steamers or asked the Government for help in getting them insured. Merely to win back the blue riband of the Atlantic would not, he says, have been a sufficient reason, for the blue riband, though it may have some advertising value, is not a dividend-payer, and would not justify so vast an undertaking. The reason that he gives is the strictly business reason that the traffic calls for it:—

For the first time in the history of naval architecture it is a practical proposition to run a Weekly Service from Southampton via Cherbourg to New York with two steamers which can pay. Hitherto such a service has required three steamers.

To maintain this service the steamers must be very fast, and speed is very costly. So they must be large enough to provide sufficient saleable space to bring in on each voyage a revenue that will pay for the speed; and the two new boats, gigantic as they are, are the "smallest and the slowest which can properly fulfil all the essential economic conditions." They are, if the chairman's letter may be paraphrased, the Cunard's contribution to the science and practice of rationalisation—the concentration of capacity into larger units for the achievement of an ultimate economy.

But while economy is the motive emphasised in this official statement, there is undoubtedly another motive which lies at the back of all this big building, and that is the psychology of the Atlantic passenger. Most men who have travelled much at sea will tell you that true comfort is to be had when you travel in a boat of about 20,000 tons at a speed of about 17 or 18 knots, but having told you that quite definitely they will, if they are contemplating a trip across the Atlantic, probably go off and book their passage in a 40,000- or 50,000-ton boat that will carry them across to New York at 24 or 25 knots. For the Atlantic passenger demands size and demands speed and demands luxury. Those who play no games but golf or bridge love to think, when they are crossing the Atlantic, that in the bowels of the ship there is a court where squash can be, and by others possibly is, played. Elderly gentlemen suffering from blood pressure and a tendency to apoplexy are thrilled when they cross the Atlantic to know that somewhere on board is a real bath where the adventurous may swim and dive, and a real gymnasium with rings and jumping horses and punch balls and a professional pugilist. The big steamer in fact is, on the Atlantic, an attraction for its own sake, and even though the smaller boats are more comfortable it will always entice traffic away from them. The "Bremen," for example, at the end of her first year is reported to have had an extraordinarily good record and a much smaller proportion of unoccupied cabins than is customary in the Atlantic trade. Here are the figures as reported in Lloyd's List:—

One year's round voyages	17
Passengers carried	54,153
Accommodation occupied, per cent.....	72.37

This figure of 72.3 per cent. compares with an average in the Atlantic service of less than 50 per cent., so that the giant liner has an advantage of at least 22.3 per cent. over the average in the employment of her passenger accommodation. So popular, indeed, has the "Bremen" been that her owners, the Norddeutscher Lloyd, have gone to the trouble and expense of altering their older steamer, the "Columbus," to make her look like the "Bremen," the argument apparently being "If you can't get your reservation on the 'Bremen,' get it on something that at a distance of five miles might be mistaken for the 'Bremen.'"

Of the insurance of these new boats much has been written, and the subject has inspired some of our livelier gossipers to outstrip even their own lofty standards of inaccuracy. So far no insurance of any kind has been offered to the market on either of the boats, and no one can say how much the world's marine market will be able to absorb either while the vessels are building or after they have come into service. But the directors of the Cunard Company, who are not altogether inexperienced in the matter of insurance and are doubtless advised by brokers with some knowledge of the market, have concluded that a value of £6,000,000 on one hull is greater than can be carried by private enterprise; and when we consider the values of steamers that have hitherto been thought enormous, and which actually do fill the world's insurance market, their conclusion is not surprising. Here are half a dozen steamers with their gross tonnage and their insured values:—

	Tonnage.	Value.
"Bremen"	51,656	1,860,000
"Europa"	49,746	2,000,000
"Majestic"	56,621	1,300,000
"Mauretania"	30,696	1,500,000
"Berengaria"	52,226	1,500,000
"Columbus"	32,565	1,100,000

It is clear that a market which at its fullest, or almost at its fullest, capacity can absorb a value of £2,000,000 cannot suddenly swell itself out to accept a value of £6,000,000, and as the whole tendency of the marine market is to contract rather than to expand, and as the only hope of any underwriting profit for anybody lies in this process of contraction, it seems tolerably clear that some outside help will be wanted if cover is to be obtained for such unheard-of values. In present circumstances, there is only one quarter from which such help can come—the British Government. The suggestion seems to have been made that a Socialist Government may seize this opportunity to start a general scheme of State marine insurance and so collar the profits of marine underwriting. One is tempted to suggest that, if the Labour Party went to the country on a policy of socialising marine insurance, their opponents need only plaster the hoardings with reprints of recent marine balance sheets, and victory would be theirs.

PRICES: OUR INDEX NUMBER.

Up to the end of September, there were no visible signs that the catastrophic fall in wholesale commodity prices, which has been a feature of the world-wide trade depression, had been arrested. Following a decline of 1.9 per cent. in August, and of 1.5 per cent. in July, our index number recorded during September a further violent recession amounting to no less than 3.8 per cent. At the end of the month the complete index figure (1927 = 100) stood as 73.2, as compared with 78.8 at the end of the previous quarter, and 91.8 a year ago. Thus, during the past twelve months, prices on the average have fallen by 20.3 per cent., or approximately 4s. in the pound. Fluctuations during the quarter in the group figures comprised

in the index are shown in the first of the following tables:—

AVERAGE, 1927 = 100.

End of	Sept., 1929.	June, 1930.	July, 1930.	Aug., 1930.	Sept., 1930.
Cereals and meat	95.8	82.2	84.2	82.5	79.5
Other foods	86.6	77.8	76.3	75.2	74.5
Textiles	87.7	66.5	63.6	61.7	56.9
Minerals	96.2	82.8	82.1	81.5	79.5
Miscellaneous	91.5	84.1	81.5	79.7	76.7
Complete Index	91.8	78.8	77.6	76.1	73.2

During the past month, as was also the case in August and July, the most pronounced decline was registered by the textiles group, which fell by nearly 8 per cent. A large part in this fall was played by flax, but raw and semi-finished cotton and wool, hemp and jute also cheapened appreciably. In the cereals and meat group, potatoes and both English and imported beef and mutton were all somewhat dearer, but the price of Danish bacon fell heavily, and grain stuffs, with the exception of English barley, underwent a severe general decline, particularly pronounced in the case of maize and wheat. The market in the latter commodity was especially depressed by the considerable shipments from the Black Sea, to which reference was made in last week's issue of the *Economist*. Movements in the "other foods" section were irregular, cheaper prices for sugar being counterbalanced by dearer tea. Among minerals, apart from a seasonal increase in the price of household coal, the tendency was again generally downwards, non-ferrous metals all falling to fresh low levels. The "miscellaneous" group, after being comparatively stable for some months, recorded a sharp fall of nearly 4 per cent. as a result of the renewed slump in rubber, a cheapening in the price of linseed oil, and the recently announced reductions in the price of petrol and petroleum oil.

Changes in the price of the individual commodities on which our index number is based are set forth in the next table in the form of percentage movements as compared with a month ago, and with the end of September, 1929:—

	Inc. (+) or Dec. (−) per cent. compared with			Inc. (+) or Dec. (−) per cent. compared with	
	Month Ago.	Year Ago.		Month Ago.	Year Ago.
Wheat, Foreign	-17.4	-43.8	Flax	-25.9	-39.4
Wheat, English	-12.1	-25.8	Hemp	-2.2	-38.9
Barley	-9.5	-25.0	Jute	-3.5	-42.8
Flour	+18.1	-14.4	Textiles	-7.8	-35.1
Maize	-2.7	-24.2	Pig iron	...	-12.4
Oats	-11.9	-31.9	Steel rails	...	...
Rice	-6.4	-24.1	Iron bars	...	...
Potatoes	+9.1	+33.3	Timber, English	-5.6	-9.3
Beet, English	+8.7	+3.3	Timber, Swedish	...	-5.3
Beet, Argentine	+1.8	+1.5	Cement	...	-1.5
Mutton, English	+7.1	+9.8	Leather	+4.6	+2.3
Mutton, New Zealand	+9.0	+12.7	Petrol No. 1	-11.4	-11.4
Bacon, Danish	-29.2	-35.4	Petroleum oil	-4.2	-4.2
Cereals and meat	-3.6	-17.0	Fuel oil	-12.5	-36.4
Tea	+10.4	+11.4	Linseed oil	-3.6	-11.2
Coffee	+1.9	-8.7	Tallow	-23.1	-62.0
Cocoa	-9.5	-17.4	Rubber	...	...
Sugar, cane	-8.8	-20.4	Soda, crystals	...	-24.1
Sugar, refined	-0.6	-18.8	Sulphate of ammonia	...	-17.6
Cheese, Canadian	+1.4	-27.0	Creosote	-3.8	-16.2
Butter, Danish	-1.8	-25.4			
Coco oil	...	...			
Tobacco	-0.9	-14.0			
Other foods	-12.0	-43.8			
Cotton A.	-7.1	-40.2			
Cotton E.	-9.5	-36.7			
Cotton yarn	-9.1	-34.7			
Cotton cloth	-8.0	-28.1			
Wool, English	-3.7	-18.7			
Wool, Australian	...	-38.1			
Wool tops	...	...			
Silk	...	...			

It will be observed that, in comparison with a year ago, the textiles group, as a result of individual price falls ranging from 18.5 to nearly 44 per cent., has declined on the average by over 35 per cent., whereas the extent of the downward movement recorded by the four other groups has been fairly uniform between the limits of 17.4 per cent. in the case of minerals, and 14 per cent. in the case of other foods. As between individual commodities,

however, the divergence of movement forms a striking feature of the foregoing table. For example, an increase of 11.4 per cent. in the price of tea contrasts with the fall of 62 per cent. in that of rubber, while an appreciation of nearly 10 per cent. in the price of English mutton contrasts strikingly with the fall of about 44 per cent. in the price of Canadian wheat. Thus, apart from the depressing influence exercised on commerce by the general fall in the value of stocks of commodities which has taken place during the past twelve months, a further complication impeding the recovery of trade has been the serious disequilibrium created within the price structure itself.

The next table illustrates the net result of movements during the current year in the case of a number of important commodities, whose cash quotations at the end of each quarter are contrasted with those ruling at the end of 1929 and on December 31, 1928:—

	End 1928.	End 1929.	1930		
			End March.	End June.	End Sept.
Wheat, Canadian, per qr.	49/3	55/6	43/9	39/-	30/9
Potatoes, per ton	26	£3/15/0	£3/5/0	£3	19/3
Beef, English sides, per 8 lbs.	5/4	5/8	6/-	5/8	5/3
Mutton, New Zealand, per 8 lbs.	5/-	4/10	4/6	3/10	4/-
Tea, Indian auction, average, per lb.	17.50d.	13.12d.	16.50d.	13.50d.	17.12d.
Sugar, granulated, per cwt.	24/7½	22/9	22/-	21/9	19/3
Cotton, American middling, per lb.	10.59d.	9.42d.	8.57d.	7.58d.	5.70d.
Cotton yarn, 32's twist, per lb.	15.50d.	13.87d.	12.37d.	11.50d.	9.50d.
Wool, Australian, per lb.	44d.	33d.	24d.	27d.	23d.
Jute, per ton	£32/5/0	£27/15/0	£24/15/0	£22/5/0	£17/5/0
Pig iron, Cleveland, No. 3, per ton	66/-	72/6	67/6	66/6	63/6
Coal, best Welsh, per ton	19/4½	20/1½	20/-	20/-	20/-
Tin, Standard, per ton	£225/15/0	£178/2/6	£170/10/0	£136/12/6	£125/5/0
Copper, per ton	274	268	271	£49/5/0	£43/10/0
Linseed oil, per ton	£29	£45	£40/10/0	£41	£28
Rubber, plant, sheet, per lb.	8.69d.	8.06d.	7.62d.	6.25d.	5.70d.
Cement, Portland, per ton	47/-	47/-	47/-	47/-	47/-

The only commodities listed in the above table whose price has risen during 1930 are potatoes and Indian tea. Articles which bulk large in the world's markets, such as wheat, cotton, wool, tin, copper, and rubber have all been subject to a steady downward movement whose dimensions threaten to become cataclysmic. By way of contrast, the price of Portland cement, in which a free market does not exist, shows no alteration—a fact which prompts the reflection that if our index number included more commodities whose selling prices are the subject of price fixing, a still greater disharmony between the "exchange value" of different commodities one with another might be disclosed.

In the final table, we show the course of wholesale prices as measured by our index number during the past six months in relation to the average level of the last year before the war. The average figures for the years 1924-29 are added for purposes of comparison:—

1913 = 100.						
Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924-29	168.5	215.8	214.7	149.3	122.6	166.2
" 1925	168.4	204.2	194.6	139.8	126.2	160.9
" 1926	151.7	195.3	152.6	149.8	120.7	149.4
" 1927	147.6	202.2	157.0	125.1	116.1	143.7
" 1928	152.9	189.7	165.0	115.2	111.2	140.9
" 1929	143.0	144.7	119.6	113.6	105.0	132.8
March, 1930	125.0	167.2	114.6	112.3	99.2	119.4
April, "	125.3	163.4	114.4	107.1	96.6	117.2
May, "	121.0	159.7	111.6	105.4	98.0	115.8
June, "	121.3	157.3	104.4	103.5	97.6	113.2
July, "	124.2	154.3	99.8	102.7	84.6	111.5
Aug., "	121.7	152.1	96.8	101.9	92.5	109.3
Sept., "	117.3	150.7	89.3	99.4	89.0	105.2

From the above table, the remarkable fact emerges that even when allowance is made for the relatively high price of "other foods," the average level of commodity prices (it should be appreciated that the *Economist* index reflects, in the main, the price of "primary" products), is now only some 5 per cent. higher than in 1913; and, excluding all foodstuffs, the index figure for raw materials is now substantially below the pre-war figure. The increasing discrepancy between the actual level of our index number and that of the official index of retail prices,

is a feature whose significance requires little emphasis, and the problem of re-establishing equilibrium between the selling value of primary products, finished goods, retail articles and the price of labour itself—a problem to which reference has already been made in a previous column—goes deeply to the roots of our present industrial difficulties.

CONTINENTAL DISCOUNT MARKETS. I.—AMSTERDAM.

While much has been written lately of the development of the Paris and New York discount markets, less notice has been taken of the progress in other centres. The following is the first of a series of articles dealing with the development of a discount market in Holland, Switzerland, Berlin, and other Continental centres.

NOTWITHSTANDING the spectacular development of the Paris discount market since the stabilisation of the franc, Amsterdam still holds the lead among the discount markets of the Continent. It is difficult to quote even approximately accurate figures to compare the volume of bills in Amsterdam and Paris, but those who have had experience with both markets consider that Amsterdam easily holds the lead. Although essentially a post-war creation, the Amsterdam market has attained a high degree of technical perfection, thanks to the versatility of Dutch bankers and the adaptability of their staffs. Its technical organisation admittedly does not compare with that of the London bill market; nor does it possess sufficiently the large and steady supply of bills that is the preliminary condition of a first-rate market of international importance. Within its comparatively modest dimensions, however, it fulfils its task satisfactorily.

While the development of the Paris discount market has received a great deal of publicity, that of the Amsterdam discount market has passed almost unnoticed. This is probably because the progress of the Amsterdam market was gradual, whereas that of Paris was sudden; because the growth of Amsterdam was largely natural while that of Paris was to a great extent artificial; and because the ambitions of Amsterdam are far more modest than those of Paris. The original object of the French authorities in encouraging the development of acceptance business in Paris was to stimulate the creation of a leading international financial centre in Paris. (It is not until recently that the necessity for a good discount market from the point of view of French domestic finance has also been realised.) In the case of Amsterdam, however, the stimulus given by the Netherlands Bank to the development of a discount market was a consequence of, and not a means to, the development of an international financial market. During, and especially after, the war, considerable amounts of German and other foreign capital took flight to Holland. A large portion of these funds were kept in a liquid form, so as to be ready to be transferred at a moment's notice. Although the facilities for short-term investment were adequate for the normal requirements of Holland, they proved to be inadequate for these abnormal temporary requirements. Amsterdam suffered, consequently, from an acute *embarras de richesse*. For this reason, the Netherlands Bank induced commercial banks and private banks to take up and expand acceptance business. The establishment of German bank "affiliates" has also helped considerably the development of the Amsterdam bill market. A great part of the acceptance business which was done by the London branches of German banks before the war is now done by these "affiliates."

After the cessation of the plethora of liquid foreign funds, there was no longer any need for forcing the expansion of the discount market. Far from encouraging a further rapid increase, the Netherlands Bank is, in fact, desirous of checking any undue expansion that may become detrimental to stability. It has restricted the volume of bills by exercising extremely strict discrimi-

nation against finance bills and other bills of an undesirable kind. Thanks to the disciplined and loyal co-operation of the banks, it has succeeded in establishing an absolute control over the bill market. Every bank of standing, before granting an acceptance credit of any importance, submits the full particulars of the transaction to the Netherlands Bank for preliminary approval. The latter informs the banks, in an entirely non-binding form, whether or not the bills to be drawn on the credits in question would be eligible for rediscount. As in London, so in Amsterdam the great majority of bills are never actually presented for rediscount. In spite of this, the preliminary blessing of the Netherlands Bank is essential to make the bills marketable. While in London ineligible bills—such as acceptances of foreign bank branches, for instance—are actively dealt in at rates above the prime rates, in Amsterdam ineligible bills are practically not marketable, and no bank of standing would either accept or discount such bills.

Thus, although the amount of rediscounts of the Netherlands Bank is comparatively small, its moral control over the market leaves nothing to be desired. It is probably owing to this circumstance that the authorities can afford to pursue a policy that is in several ways more liberal than that of other central banks. The acceptances of foreign banks established in Holland are admitted for rediscount on the same terms as those of Dutch banks. It was found desirable to treat these banks on an equal footing with Dutch banks, not merely because they assisted in the development of the Amsterdam market, but also because, granting them equal treatment, the authorities are in a better position to control their activities. Owing to their strength, the German banks established in Holland would have probably been able to develop a market for their acceptances, even if they had not been given rediscount facilities; this market would have probably escaped the control of the Netherlands Bank. It is worth noting that, although these acceptances are eligible for rediscount, the rate they command in the discount market is slightly above prime rate.

Thanks to its control over the market, the Netherlands Bank is in a position to keep bill rates low, to the benefit of domestic trade, without thereby provoking an abnormal increase of foreign acceptance credits which would eventually lead to a rise in discount rates. There is no discrimination against bills financing trade between two foreign countries; so long as they appear to be genuine commercial bills they are admitted. As, however, it is in most cases impossible to ascertain beyond doubt whether or not a bill is genuine, the strict or lenient attitude of the authorities towards the large number of doubtful cases determines to a great extent the volume of bills.

But for the conservative policy of the Netherlands Bank, it would have been possible to bring about a considerable expansion of the Amsterdam bill market, for there has always been a keen demand for bills on the part of Dutch banks. In spite of the withdrawal of the major part of foreign funds, there is also some demand on foreign account; the Netherlands Bank often buys bills on account of foreign central banks, and part of the French balances in Amsterdam have also assumed the shape of bill holdings. Generally speaking, however, there is no systematic foreign demand for bills as in London, and it may be said that the Amsterdam bill market is local rather than international in character.

It is probably for this reason that the development of the Amsterdam bill market did not arouse any jealousy in London, or in New York. On the other hand, the subsequent development of the Paris discount market aroused no jealousy in Holland. Dutch banking circles are well aware that, if the development of Paris continues at its present pace it will soon overshadow Amsterdam as the leading Continental discount market, but the Amsterdam banker does not begrudge the progress of Paris, even if it is more rapid than that of Amsterdam, so long as the former's expansion does not actually divert business from the latter. Generally speaking, this is not the case. Amsterdam can attract as much business as it is able to

carry without overstraining its resources. So long as this is the case, the question whether Amsterdam is first or second on the Continent is considered of little importance in Dutch banking circles.

For similar reasons, the decline of the demand for Dutch acceptance credits for Central European countries, brought about by the recovery of these countries, did not worry banking interests in Amsterdam. In 1924, though monetary stability in Central Europe had been restored, London and New York were reluctant to grant direct credits. Amsterdam acted as intermediary, until confidence in progress towards stability had been sufficiently restored to make the establishment of direct links with the two leading centres possible. The Amsterdam bill market did not, however, suffer a setback as a result of the change. If there was a decline in the volume of certain types of acceptance business, it was more than offset by the expansion of other types. Nor did the withdrawal of part of the German, French, and Belgian balances after the stabilisation of their currencies deprive the Amsterdam market of the liquid resources necessary for maintaining a steady demand for bills. Although originally it was the existence of these balances which necessitated the creating of a discount market, meanwhile Dutch banks and business houses recognised the advantages of keeping their liquid reserves in the shape of commercial bills, and their gradually increasing demand has more than counteracted the decline of demand on foreign account. In fact, the authorities are in a way relieved at the reduction of elusive foreign resources to comparatively normal proportions, as it has contributed towards the stability of both bill market and foreign exchange market.

Amsterdam, as every other discount market, has been affected by the world-wide increase of demand for short-term investments, which, together with the simultaneous decline of demand for acceptance credits by first-class borrowers, has created a rather anomalous position. There is every reason to believe that, once equilibrium is restored, the Amsterdam discount market will continue its moderate expansion. Dutch banking quarters are well aware of the limitations of their resources, and the sober and practical spirit of the authorities will safeguard the market in future, as in the past, against the disturbing effect of sudden growth followed by sharp reactions. There is a natural desire for expansion, but only because it means additional business, and not for the sake of the somewhat illusory benefit of the enhanced international prestige attached to it.

THE TIN POSITION.

(BY A CORRESPONDENT.)

AFTER a period of stability, lasting through July, August and most of September, the tin market has again collapsed, and the price has declined to new low levels. Before this week, £130 per ton was the lowest quotation in recent history; a new low point, fractionally under £125, was reached on Tuesday last. At the moment of writing, prices are somewhat above this level; but, in the absence of more settled conditions, it seems unlikely that a permanent improvement will be realised.

Since early in 1928, and particularly during the present year, production has been substantially in excess of consumption. The total visible supply of metallic tin has been as follows:—

	Tons.
December 31, 1927	15,610
December 31, 1928	23,703
December 31, 1929	27,724
August 31, 1930 ("peak")	43,518
September 30, 1930	40,137

The average price in 1927 was £289; in 1929, it was £204. The further decline this year, to an average figure of £135 in August, is sufficiently explained by the marked increase in stocks during the first eight months of 1930;

AND DRAFTS ISSUED.

but it is less easy to explain the renewed slump in September, when a definite reduction in stocks was known to be in progress. The cause can only lie in market anticipations regarding the future course of production and consumption.

Stock accumulations during 1930 were due, in part, to the reduced activity of industrial consumers; and in part to the already excessive capacity of the mining industry. During 1929, consumption was at a level in excess, not only of all previous records, but also of the world's real present needs. The world depression is partly due to the fact that many industries were, in 1929, producing goods at a greater pace than the world could absorb them; of these industries many are users of tin. It follows that the figures of tin consumption in 1929 err on the side of overstating the world's real need of the commodity. Nevertheless, visible supplies rose by 4,021 tons during the year; in addition, invisible stocks are estimated to have increased by some 2,000 tons. Additions were made during the year to the producing capacity of the industry; judging by figures relating to the last quarter of 1929, a year's full production would amount to at least 8,000 tons above the total figure for the year. From these figures, it would seem that the world can produce tin at a yearly rate 14,000 tons, or 7½ per cent., in excess of the inflated consumption figures of 1929; and the further surplus, in terms of "normal" consumption, is a matter for conjecture.

With a view to mitigating the effects of this surplus, at a time when consumption was inevitably reduced, various schemes of restriction have been sponsored by the Tin Producers' Association. The first scheme, which operated from the beginning of January, was eventually consolidated, in the form of a 20 per cent. cut in output on the part of assenting members of the association. With a view, further, to reducing the amount of tin in warehouse, various companies agreed to a two months' stoppage of production. This stoppage began in July, and, when the usual allowance is made for "time-lag," it is clear that its statistical effects could not appear before the end of August; the reduction of stocks during September may, therefore, be attributed in part to this cause. Total supplies of tin coming into sight were 7,455 tons, the smallest monthly figure since 1925, and 3,740 tons below the previous lowest of the present year. The Straits Settlements shipped 5,308 tons, against an average of 8,578 tons in the preceding eight months; and supplies from other quarters were similarly reduced from an average of 4,035 tons to a September figure of 2,147 tons. These figures, reflecting a certain measure of success for the new policy, may afford some encouragement to the supporters of restriction. They are, however, essentially a *tour de force*, and within the next two months the statistics may be once more affected by the output of companies restarting after the stoppage. For the remainder of the year, the 20 per cent. curtailment recommended by the Tin Producers' Association will be the limit, under present arrangements, of the industry's voluntary effort.

According to a recent circular issued by the Association, output during the first eight months of the year amounted to 113,377 tons, or 8,658 tons less than in the corresponding period of 1929. An analysis of these figures compiled

from returns comparable with those used by the Association, gives the following results:—

TIN PRODUCTION BY COUNTRIES.
(Long tons, in terms of metallic tin.)

	First Eight Months of 1929.	1930.
Federated Malay States, exports (at 72 per cent.)	43,758	43,377
Unfederated Malay States, exports (at 72 per cent.)	1,571	1,422
Imports to the Straits (at 72 per cent.):—		
From Dutch East Indies and Sumatra ...	14,259	12,042
From Burma and Siam	7,350	8,148
From other quarters	1,298	1,327
Nigerian arrivals (at 70 per cent.)	6,816	6,602
Bolivian shipments (at 55 per cent.)	29,520	24,581
Banks shipments (metal)	8,682	8,067
Australian shipments (metal)	614	245
Other countries	8,167	7,566
Total	122,035	113,377

It will be seen that the countries in which voluntary restriction has been in force have contributed less to the total reduction than countries altogether outside the Association. Malaya, Nigeria, Burma, Siam and Australia must be classed as definite participants in the scheme; Bolivia and the Dutch colonies are definitely non-participants. On this basis, the data contained in the above table may be re-classified as follows:—

TIN OUTPUT IN RESTRICTING AND NON-RESTRICTING COUNTRIES.

	Total Output. January–August, 1929.	1930.	Reduction. Per cent.
	Long Tons.		
Participants	60,109	59,794	0.5
Non-Participants	52,461	44,690	14.8
Miscellaneous	9,465	8,893	6.1
Total	122,035	113,377	7.1

Of the total reduction in output, no less than 89.8 per cent. is attributable to non-participants, against 3.6 per cent. to participants in the restriction scheme. In fact, it would seem, from these statistics, that the main reduction has occurred in fields courted, but not embraced, by the Association. In Bolivia, tin-mining is expensive, and it has been known for some time that producers in this field were in financial difficulties. For the reduction in the Dutch East Indies, where tin is won as cheaply as anywhere in the world, it is less easy to find an explanation. The Dutch producers have been sparing in their promises of restriction, and non-expansion has been understood to be the most definite commitment into which they would enter. On the other hand, the sales from this source are notoriously sporadic, and are adjusted, in some measure, to meet the niceties of budget requirements. The most that can be said about the output of these producers is that their promises have been kept, and would not be infringed by a considerable expansion in the next few months. It is to be hoped that the low output has not been due to any exaggerated expectations regarding the results of the official restriction policy. In any event, and in the absence of an explanation, it would appear unwise to rely upon indefinite continuance of the present Dutch output policy.

It may be argued that, but for restriction, the production of Malaya and Nigeria would have surpassed even the record figures of 1929. This raises the broader issue as to whether the present policy is the most effective way of dealing with the situation. Restriction of output can be justified only as a temporary measure; its purpose is to maintain the industry's capacity at a level which will suffice to meet the world's probable needs. For this purpose, normal slackness of consumption, occurring in times of world depression, may possibly be met by means of temporary curtailment; but when, as in this instance, capacity is essentially excessive, the task of the restrictionists is impossible. Moreover, as a "long-term" policy, restriction serves only to maintain unwanted pro-

ducers at the expense of those whose output is more economically won.

In the absence of a revival in consumption, the statistics hold out no pronounced hope of an early reduction in warehouse stocks. During September, deliveries amounted to 10,836 tons, an increase of 1,000 tons over the August figure; this was due entirely to the figures for the United States, which, at 7,250 tons, were 1,555 tons higher than in the previous month. Tin is reported to have been transferred to non-reporting warehouses, and deliveries scheduled for October are said to have been accelerated. In these circumstances, and in view of continued pessimism in the reports of American industry, it would be rash to assume from the statistics that a revival is already in progress.

Stocks of tin, having been reduced by the temporary stoppage of production, may be expected to accumulate again under the influence of renewed output activity. The course of the market will depend, in the meantime, on the degree of support accorded to it by speculative buying. It is thought that, of the present stocks, a large quantity is held by a group which purchased it over a long period beginning in November, 1928. The buyers, if they succeeded in unloading during the "holiday" period, will have had to face heavy losses, and it is to be supposed that they will be chary of supporting the market again, at a time when renewed difficulties seem assured. Had the market lacked this support in the past, it is fair to assume that prices would have fallen faster and further; if the same support is wanting when stocks again begin to accumulate, the outlook is far from bright. It is at least comforting to know that a marginal price appears now to have been reached, and that the more expensive production is beginning to be reduced. The sooner this process is carried to a conclusion, the sooner will the industry be in a position to face the future.

THE EARL OF BIRKENHEAD.

LORD BIRKENHEAD's death deprives public life of the wittiest and the most versatile of British statesmen. It is true that he did not box the political compass like so many other major and minor political stars, to whom a change of party nowadays seems as easy as a change of coat. When he came up from Birkenhead School to join the famous athlete, C. B. Fry, at the scholars' table of Wadham College, he was a Tory; as a Tory he won his fame in the debates of the Oxford Union Society; as a Tory he captured the ear of the House of Commons by a brilliantly audacious maiden speech in 1906; as a Tory he joined the Coalition Government of Mr Asquith in 1915; as a Tory again in the Coalition Government of Mr Lloyd George he was appointed Lord Chancellor, and finally, after breaking with Mr Baldwin, accepted from him the office of Secretary of State for India, which he resigned in order to earn higher emoluments in the City. Those who knew him at Oxford recognised the good fighting party man who relished controversy and excelled in the cut and thrust of a hot debate. Had he lived in the days before the Reform Bill, Canning would have been his ideal leader, and Canning's famous phrase: "Disfranchising Grampound I will save Old Sarum" is just the sort of coinage that might have issued at any time under similar circumstances from F. E.'s busy mint.

It is natural to compare his meteoric career with that of his friend and contemporary at Oxford, Sir John Simon. They were both Presidents of the Oxford Union; both gained Fellowships; both rose with unexampled rapidity at the Bar. With the exception of Judge Jeffreys, Sir John Simon might have been the youngest of Lord Chancellors in 1915. Lord Birkenhead actually earned this distinction, when he accepted that great office four years later. They have both contributed their quota, nearly always as antagonists and often as protagonists, to all the great controversies of British politics since they entered Parliament together in 1906.

There was in Lord Birkenhead a dash of almost romantic chivalry which sometimes had the air of

Notes of the Week.

The Conference Opens.—The proceedings of the Imperial Conference were opened at the Foreign Office on Wednesday in a manner which augurs well for its success. At first sight the account of the opening session appears to reveal it as of lesser importance than opening days of past Conferences. The reason is that Mr MacDonald refrained from following his predecessors in the custom of presenting a long and detailed review of the course of Imperial affairs during the preceding four years. In order to save time and facilitate the protracted work of the Conference, Mr MacDonald and Mr Henderson are circulating their reviews of Imperial and Foreign Affairs as Conference papers. This decision is welcome as indicating a determination to relieve the Conference of unnecessary strain and to give the delegates fullest opportunity to get down speedily to hard business. Of equally good promise is the general insistence on economic problems as the chief theme of the Conference, and the equally general declaration of eagerness to join in co-operative economic effort, which marked the speeches of the Dominion Premiers. Nor did this talk of co-operative effort convey the impression of mere lip service; there was a practical earnestness about it, coupled with a recognition of limits imposed by the various needs, policies and interests of various members of the Commonwealth. Better still, the desire for co-operative effort in the economic sphere took immediate concrete shape in the appointment of a Committee of Economic Experts, under the chairmanship of Sir Sydney Chapman. The Conference has settled down to work with surprising speed, and we are encouraged to look for workmanlike procedure and definite results.

The Conservative Party Split.—As each successive bye-election calls for a presentation of Conservative policy, the quarrel within the ranks of the Party becomes more bitter and more confusing. The South Paddington contest has brought fresh trouble and fresh bewilderment. Sir Herbert Liddiard was adopted as official Conservative candidate. He was supposed to be too orthodox to suit Lord Rothermere, and so the United Empire Party put forward a candidate of its own and hoped for the collaboration of Lord Beaverbrook and his Empire Crusaders. Then came a big surprise. Sir Herbert, pressed by the Crusaders, promised to support Empire Free Trade, whether the official Conservative Whip forbade it or not. This step had two results. It robbed the United Empire candidate of the co-operation of the Crusaders, and it also caused the Central Conservative organisation to disown Sir Herbert and all his policies. So there are two Conservative candidates in the field, both disowned by the Party officials, and rivalling each other in their advocacy of Empire trade. The *Times*, on Wednesday, suggests that there should be a third Conservative candidate, backed by Mr Baldwin and the Central Office. Why not, we are moved to ask, a fourth representing Sir William Morris and his new organisation? The position would be amusing enough if it were presented to us in comic opera. But in real life, and in very critical days for this country, it is more than a little regrettable that the only Opposition Party, which can at the moment hope to offer an alternative Government, should be so hopelessly at sixes and sevens. Those who guide the destinies of the Party owe it to the country to take action. As impartial spectators, we suggest that Mr Baldwin should either assert and secure mastery or else make way for someone who can. The country wants to know, and has a right to know, what the policy of His Majesty's official Opposition is on the vital economic questions of the day.

The Plan for Financial Assistance.—From an Assembly singularly barren of achievement one positive agreement of considerable importance has at any rate emerged: on Monday of this week the League adopted in final form the Convention providing for financial assistance to be

theatrical extravagance, as when he joined Sir Edward Carson in the projected Ulster revolt and gained the title or nickname of "Galloper Smith." This was only a kink; he was too fond of success, too bent on a career, to devote his life to lost causes. The blood of the martyr did not flow through his veins, and it would be difficult to find any principle or set of principles to which he gave unswerving support. His loyalties were personal rather than moral or political. He possessed in a conspicuous degree the genius of friendship. For him, a friend in need was a friend indeed; and political ties, even party allegiances, were comparatively unimportant in his eyes when he saw, or thought he saw, a friend or a colleague or a subordinate in difficulties. This, rather than any agreement or disagreement on policy, explains why he fell out with Mr Baldwin when Mr Baldwin, followed by the great majority of the Conservative Party, broke with Mr Lloyd George.

To the question whether Lord Birkenhead was a great man, an affirmative answer is difficult. Really great men are rare in this or any other age. Lord Birkenhead has made little permanent contribution to our political history. He used to say that he was the only member of the Cabinet who opposed the so-called Montagu Reforms; but he did not persist in his opposition, and at the India Office he was inactive at a time when strength and energy and industry were sadly needed. His opposition to woman suffrage was ardent but futile. His support of Tariff Reform was ineffective. He never made any scientific study of economics, and preferred flashy railery to solid argument on a subject which he neither understood nor cared to understand. Perhaps his most remarkable and effective contribution to history was the part he played in the negotiations with De Valera, when, to the surprise of those who remembered "Galloper Smith," he very patiently and successfully exerted himself to bring about the treaty that established the Irish Free State. For this and for his support of Mr Lloyd George he was never quite forgiven by genuine Conservatives; and from that time onwards his influence in the Party declined. A sense of political disappointment and the approach of ill-health may have been partly responsible for a resignation, which was mainly based on an urgent desire to rid himself of pecuniary embarrassments by making a fortune in the City. Whether he would have succeeded, had health permitted, is doubtful. Even his versatility was, perhaps, unequal to success in business after a career devoted to politics and the law. Nor can it be said that his large earnings as an author have established for him an enduring place in English literature.

Yet withal, as lawyer, judge and statesman he has made a name and a fame for himself which will not soon be forgotten or fade away. Nothing could be further from the truth than to regard him as a mere trifler. Few men worked harder at the law at Oxford or afterwards in preparation for the Bar. Few Lord Chancellors in modern times have delivered more striking judgments. In the reform of the laws of real property he employed with conspicuous success the powers of a strong and penetrating intellect, impatient of obsolete rules which concealed actualities and clogged the working and comprehension of the law. But it was perhaps in conversation, in repartee and in the invention of marvellous stories, equally effective and equally fictitious, about his friends and his opponents, that his talents shone most vividly. One instance of his ready wit it may be permissible to recall. There was once a deputation of Kentish and Sussex hop-growers to Mr Bonar Law, then leader of the Opposition. Bonar Law invited F. E. Smith to sit beside him. It appeared there had been a fine crop, but the hop-growers were dissatisfied about the price of "ops." In the midst of plenty they were suffering from cheapness. When the situation had developed, F. E. whispered to his chief, *Tantus inter opes inops*; but Bonar Law's classical knowledge was meagre, and afterwards, when "F. E." tried to explain the joke, he failed to see it.

rendered in the shape of guarantees for loans to States who are signatories to the Convention and who are the victims of aggression, always provided that the State to which financial assistance is granted must undertake to submit to pacific arbitrament the dispute from which the aggression takes its rise. All signatory States become guarantors, the annual liabilities of each being limited to a fixed sum, while "special" guarantors, *i.e.* permanent members of the Council and other States upon invitation, undertake to "underwrite"—apart from their own guarantees—the liabilities of the ordinary guarantors. By thus fortifying the credit of victims of aggression (and, by implication, making it doubly difficult for aggressors to obtain resources from the world's markets), the Convention is, in our view, a valuable weapon in the hands of the League for use in the prevention of future armed conflicts. It is difficult to set at too high a figure the cost of the insurance which it is worth while to pay against the risk of war, and it is satisfactory that within a few hours of the Convention being laid open for signature, no less than twenty-eight States subscribed. Our only regret is that the British Government, in what seems to us to be an excess of caution, should have persuaded the Assembly to insert in the Convention a clause providing that it shall not come into effect until "a plan for the reduction of armaments adopted in execution of Article 8 of the Covenant" has entered into force. It is obvious that this proviso is likely to delay considerably the effective operation of the Convention. This makes it the more urgent that statesmen of good will in every country should press forward along the road to disarmament, progress along which has been so painfully hesitant and slow.

The League and Slavery.—Last Saturday the Sixth Committee of the League adopted a resolution, reported to it by its sub-committee on slavery, in favour of leaving as it is the present admittedly inadequate procedure for dealing with this international evil. This action—or, rather, inaction—was naturally agreeable to States like Abyssinia and Liberia, whose record in this matter might not bear examination. But these States, while they were rightly represented on the sub-committee, would scarcely have been able to resist the strong desire of international public opinion for more effective measures, if they had not been supported by more influential Powers, with France at their head. In fact, it seems to have been the French delegates who really carried this most unsatisfactory resolution through the sub-committee and the committee alike. The protagonist on the side of reform was the British delegate, Mr Buxton. He first proposed that a Permanent Slavery Commission of the League of Nations should be set up; and this was a proposal which all sincere friends of reform must favour, since the experience of ten years has shown that, in business of this kind, permanence is an essential factor of success for any commission of the League. This proposal being thrown out in the sub-committee, Mr Buxton next proposed the revival of the temporary commission on slavery which the League appointed several years ago. When this proposal was rejected in turn, he proposed that a committee of experts should be appointed to ascertain how the Slavery Convention of September, 1926, was working. Even this third suggestion was unacceptable; and, instead of it, the present purely obstructive and dilatory resolution was moved and carried. This failure is deplorable from every point of view. For one thing, slavery itself is very far from being an obsolete abuse. In its old, undisguised form, it has raised its head in the two African countries aforementioned since the command of modern weapons gave their ruling elements a new and terrible power over the more unsophisticated natives in their hinterlands. Moreover, there is the risk of slavery reasserting itself, under more specious titles, in more than one of the vast tropical territories into which the industrial system—and, with it, an enhanced demand for labour—is being introduced under Western administrations. The war with this dragon is not over yet; and if the League will not wage it, who will? For this is a matter in which concerted international

action is indispensable, and if the League will not assert itself on this humanitarian ground, where prospects of immediate achievement are greater than in the political field, it will stand self-accused of a dereliction of its obvious duty to the world.

The Situation in Germany.—In a trying situation the German Cabinet have kept their heads. They have drawn up a programme the essentials of which any Government of any complexion that took office now would find itself compelled to carry out, willy-nilly. A fund is to be established, to run through the next three budgets, for the purpose of covering the anticipated deficit of 750-900 million Reichsmarks on the present budget. Expenditure in 1931 is to be cut by about a milliard marks as compared with 1930 in order to balance the anticipated decline in revenues; the principal steps to this end are an increase in the cut in official salaries from 2½ to 6 per cent., and the removal of unemployment insurance from the Budget. In order to restore the unemployment insurance fund to solvency there is to be a further rise in contributions, from 4½ to 6½ per cent. of wages. The Chancellor is now engaged in the laborious, intricate and rather sordid task of negotiating for parliamentary support. It is, perhaps, too much to hope that the older parties will have been sobered by the successes of the National-Socialists and the Communists so far as to be shaken out of their habit of petty bargaining, but we may still hope that the Social Democrats and the Bourgeois parties of the Right Centre will see the necessity of co-operating to give the present Chancellor a substantial majority. If these parties in Germany co-operate, and if Germany's neighbours take serious steps towards honouring their pledges to disarm, Herr Hitler's prospects of coming into power may be written down to a very low figure. No doubt Herr Hitler counts upon one or other of these conditions not being realised; and last week he was given an opportunity for publicity, of which he took full advantage, when he was put in the witness-box in the trial of three officers of the Reichswehr for treason before the Supreme Court at Leipzig. The officers were charged with conspiring to spread National-Socialist ideas among their brother-officers, to form National-Socialist "cells" among their men, and to secure the neutrality of the Reichswehr in the event of another "Putsch" by the revolutionaries of the Right. Herr Hitler was summoned to give evidence as to whether his party intended to seize power by violence and whether they were conducting propaganda among the Reichswehr with this in view. He seized the opportunity for a flamboyant fanfaronade, and, while disclaiming any intention to take power by force, his intimation of what he intended to do when he came into power by peaceful means was as blood-curdling as it was vague. Herr Hitler achieved one immediate success: he produced a slump on the Berlin Bourse. But perhaps this is not the best way to win the German people's hearts.

Lunch chez M. Poincaré.—In view of the supreme importance of French political reactions to the result of the German elections, considerable interest attaches to the visit which M. Tardieu paid on Wednesday to M. Poincaré. But though the luncheon party at Bar-le-Duc seems, on the face of it, to be significant of a possible future re-orientation of French policy, it is by no means clear in what direction M. Tardieu thinks of moving. In his letter on a later page, our Paris correspondent recalls the fact that M. Poincaré has frequently expressed himself as desirous of seeing the establishment of a Government including the Radical Socialists, and he suggests that recent speeches of M. Herriot and M. Renoult, laying emphasis on "security," are perhaps indicative of a desire on the part of the Radical Socialist leaders to respond cordially to a contemplated move by M. Tardieu Leftwards. It is to be feared, however, that the luncheon party of M. Poincaré is capable of quite another interpretation. Rumours of divergence of opinion between M. Poincaré and M. Briand, the distinctly more

chauvinistic attitude on the part of the majority of the French Press, and indications of fresh strength having been given to Nationalism in France by Hitlerism in Germany, all suggest that M. Tardieu's visit to Bar-le-Duc may be the preliminary to a move to the Right rather than to the Left.

The Republican Movement in Spain.—Though many months have passed since the Spanish Directory faded away, the *status quo ante* has not returned. Indeed, with every month it comes to seem more probable that Spain has a serious political crisis ahead of her. The late dictatorship was ephemeral; the dictator himself is dead; and both are more or less forgiven and forgotten by the Spanish people to-day. The Spanish Republicans, however, have neither forgiven nor forgotten the complacency shown by King Alfonso to the Marquess de Estella at the time of his *coup d'état* and thereafter. They declare that, without countenance from the King, the Directory could never have been established; and they insist that the Dynasty must atone, for having suffered the Directory to exist, by forfeiting its own existence and making way for a Republican régime. Last week there were local strikes in several industrial areas in the extreme north-west of Spain, and these disturbances—which resulted in a clash between some rioters and the police, with the loss of one life—appear to have been political rather than economic in character. Their political significance, however, cannot be compared with that of the great Republican meeting in the Old Bull Ring at Madrid, which took place last Sunday. This meeting was attended by thousands of delegates from all over Spain, representing every shade of Republican opinion from left to right, but all united in their wish to see the Dynasty deposed. The assemblage of the delegates was not prevented by the Government's veto upon the putting on of special trains for their benefit; and they were not deflected from their intention of meeting in an orderly way by the concentration of Governmental armed forces in the immediate neighbourhood of the meeting-place. The proceedings appear to have been admirably disciplined. At the same time, the speeches were remarkably plain-spoken. Several speakers offered the Dynasty the choice between abdication and revolution; and the present Prime Minister, General Berenguer, came in for strong criticism. His administration has been a kind of political limbo—neither dictatorship on the one hand nor constitutional government on the other. His prestige has never recovered from the military disaster at Arwal in Morocco in 1923, for which he was at least technically responsible. It seems unlikely that such a colourless régime can permanently hold its own against so determined an opposition. It is to be hoped that if and when the Republican movement in Spain asserts itself, it will maintain the high standard of orderliness which it set itself, and successfully maintained, last Sunday.

The Viceroy's Speech.—As matters stand in the Indian situation it is more than usually true that no news is good news; and apart from the regrettable clash at the end of last week between police and a mob of villagers near Panvel, in the Kolaba district, there appear to be welcome indications that the Congress agitation is waning in effectiveness. In its latest appreciation of the position, the Government of India observes that though reports from Local Governments indicate the continued need of vigilance against the possibility of sporadic disorder, "there are definite signs that the public recognise that Government is determined to retain control and that the civil disobedience movement is failing. There is growing resentment against Congress interference in ordinary life, and, as a result, increasing acquiescence in a return to normal conditions." The prestige of the Congress leaders will not be enhanced by the weighty and statesmanlike speech of Lord Irwin at the farewell banquet given to him by the Punjab Government on Tuesday. The Viceroy recalled, as he was fully entitled to do, the consistent efforts which the Government of India has made since the beginning of the year to hold

open the door for reconciliation and to secure as fully representative a delegation as possible from India for the Round Table Conference. If those efforts had failed, it was, he declared with justice, because of the Congress leaders' "bankruptcy of statesmanship." The civil disobedience campaign had inflicted cruel damage to India on the economic side, and on the civic side had done irreparable harm to future citizens of India by encouraging them at an impressionable age to defy discipline and plunge into wanton disorder and contempt for law. "Those who direct the policy of the Congress have assumed a heavy responsibility for which history will assuredly not hold them guiltless." We are confident that Lord Irwin's strong, though measured, words—coming from a Viceroy whose sympathy with Indian aspirations is beyond dispute—will carry weight in India. Nor do we see any reason to dissent from the optimistic note on which he closed, expressing, as he did, the hope that those representatives of India who, actuated by a spirit of truer patriotism than that displayed by the Congress leaders, had agreed to attend the Round Table Conference, might yet succeed in achieving for India "something as great as anything that has been done in her whole history."

Reform in the Argentine.—Our Buenos Aires correspondent writes:—General satisfaction is felt in commercial and financial circles at the course which political events have taken. The resignation of President Irigoyen and delegation of the presidential duties to Dr. Enrique Martínez, the Vice-President, came too late to save the Radical Party. Nor was it desirable that their errors should be allowed to continue. For far too long has the Argentine nation waited in hopes of some definite constructive action, only to see the country plunged deeper and deeper into the mire of party politics *a la criolla*, with obstructionism rife in Congress notwithstanding that the Radicals had a big working majority, and every branch of the administration suffering through the wholesale dismissal of competent civil servants and their replacement by persons whose only claim to the posts they filled was based on their party vote. The most absurd abuses sprang from this out-of-date method of rewarding services rendered at the polls, and Argentina is too large and her affairs too complex to make the methods of fifty years ago other than impossible in 1930. And although the Army and the Navy are jointly responsible for taking the final step, the first act of General Uriburu was to call together a provisional Cabinet of leading citizens whose names are a guarantee that the work of regeneration will be taken in hand in a satisfactory manner. Congress has been dissolved and martial law declared. Moreover, save for some desultory shooting at the military columns by private individuals posted in the Congress Hall and its vicinity, the affair was carried out without violence, and in the midst of vociferous popular manifestations. It is too soon as yet to give fuller details, but one may point out that exchange has improved, and that the financial situation of the provisional government is likely to be much easier than was that of its predecessors. There is, in a word, a general sense of relief, and a feeling that the grave error made when President Irigoyen was called to fill for a second term the Presidential Chair has now been corrected. It has been rumoured that a foreign loan may be sought, and that it will be coincident with the re-opening of the Conversion Office. If this is confirmed there is every reason to hope for a steady improvement of the Argentine dollar, and an all-round revival of trade in general. Much hard work lies before the provisional ministry, but they may be relied upon to tackle it in the right spirit, and in all likelihood before these lines appear in print the machinery of government and the normal course of trade will be fully re-established.

The Half-Year's Revenue.—Although the past six months were the "lean" half of the financial year, it is possible to form some idea as to how Mr Snowden's expectations are being realised. Income tax to date has yielded £59.8 millions, against £57.5 millions in the first

six months of 1929-30, while surtax has yielded £13.6 millions, as against £11.5 millions last year. Little can be deduced from these figures, for they represent only a fraction of what falls due at the New Year, while many of the payments made during recent months were based on last year's assessments and at the old standard rate of 4s. in the pound. Other revenue items, however, tell a different and more definite story, for the revenue they bring in is spread evenly over the whole year. Estate duties have, so far, come up to the mark, for Mr Snowden has received £42.9 millions out of his estimate of £83.0 millions. Customs, too, with a yield to date of £59.8 millions, are not seriously behind the year's estimate of £122.7 millions. On the other hand, Excise so far has only produced £59.8 millions, against a year's estimate of £129.9 millions, so that here Mr Snowden is so far five millions short. The yield from stamps is the deplorable figure of £7.9 millions, against a year's estimate of £27.0 millions. This is not the first time in recent years that stamp duties have fallen seriously behind their estimate, and it looks as if Mr Snowden has, in this respect, been infected by his predecessor's optimism. Post Office net receipts, at £4.6 millions to date, are on the low side compared with a year's estimate of £10.1 millions, and among non-tax items, the bulk of Miscellaneous Receipts have apparently still to come in. Taking a general survey of the revenue returns to date, it looks as if Mr Snowden will be fortunate if, next April, he has realised his expectations, and this makes it all the more important to see how the expenditure side of the accounts is shaping. As regards National Debt interest, cheap money and low Treasury bill rates have, so far, saved Mr Snowden nearly £12 millions as against last year, and this extra sum will be automatically allocated to the Sinking Fund. Supply services have so far required £204.6 millions out of an estimate for the year of £418.9 millions. On the face of it, this suggests a possible saving on the year of nearly 10 millions; but, unfortunately, the experience of recent years shows that supply services usually cost the country more in the second than in the first half of each financial year, and when due allowance is made for this fact, it appears likely that by the end of the year supply services will have cost more and not less than the sum of £418.9 millions estimated six months ago. This means that, taking revenue and expenditure together, Mr Snowden will be faced with a serious deficit.

Coal Mining Results.—The renewal of depressed conditions in the coal-mining industry of the United Kingdom seriously affected trading results in the June quarter. In the March quarter every district was worked at a profit, and the credit balance for the whole industry in that period was £3,341,536, equivalent to 1s. 1.37d. per ton on a disposable output of just under 60 million tons. In the June quarter, according to preliminary returns issued by the Mining Association of Great Britain, Northumberland, Durham and South Wales were the only coalfields where the joint ascertainment showed credit balances, and in these cases the profits were considerably less than those in the previous three months. The following table gives the balances in the March and June quarters of the present year and for the June quarter of 1929:—

District.	June, 1929.		Mar., 1930.		June, 1930.	
	Credit +, Debit - per ton.		s. d.		s. d.	
Scotland	- 0	4.42	+ 0	7.19	- 0	6.50
Northumberland	+ 0	4.32	+ 1	3.68	+ 0	4.33
Durham	+ 0	1.07	+ 0	10.98	+ 0	3.25
South Wales	- 0	4.43	+ 0	7.37	+ 0	0.73
Yorkshire	- 0	1.99	+ 1	7.31	- 0	0.33
Notts. and Derby	- 0	6.56	+ 1	6.19	- 0	5.09
S. Derby group	- 0	3.82	+ 1	11.40	- 0	2.98
Lancs., Ches., and N. Staffs.	- 0	10.89	+ 1	1.44	- 0	10.72
Other districts	- 0	7.53	+ 0	8.67	- 0	6.08
Great Britain	- 0	3.43	+ 1	1.37	+ 0	1.88

As compared with the June quarter, the production of coal for the industry as a whole showed a decrease of nearly 10 million tons, from 67,909,900 to 57,999,300 tons. This heavy fall in the output was due mainly to smaller home consumption. The volume of the export trade was also

lower than that in the March quarter, but only by about 1½ million tons, the shipments as cargo and bunkers totalling 17,384,094 tons, compared with 18,862,812 tons. The effect of the smaller production was an increase in the costs for the industry as a whole, calculated on the commercially disposable coal, from 13s. 4.06d. to 14s. 0.44d., which is the highest recorded since the September quarter of 1928. Proceeds at 13s. 10.56d. per ton in the June quarter show a decrease of 6.87d. per ton as compared with the previous quarter, but they are 3.49d. better than in the June quarter of 1929. It will be seen from the above table that the depression has fallen with far greater severity on those coalfields dependent mainly or entirely on the inland demand than on the exporting districts, three of which were able to show small credit balances.

Cotton Mill Combine.—Our Manchester correspondent writes:—Apart from the Lancashire Cotton Corporation, Ltd., there is much discussion in Lancashire trade circles with regard to further mill amalgamations. During the last two or three months negotiations have been taking place between representatives of certain groups of mills, and this week substantial progress has been made. On Monday last there was an important conference in Manchester between leading spinning mill directors and representatives of London financial interests, and a considerable measure of agreement was reached with regard to a scheme which is expected to combine about 50 mills, containing about 4,000,000 spindles. The mills are chiefly situated in Oldham, Shaw and Rochdale. The bulk of them are in the American section, although some of the factories may use Egyptian cotton. The scheme is being organised by a company which was registered rather more than a year ago under the title of Allied Spinners, Ltd., with a nominal capital of £100. The directors of the company are Mr Frank Platt and Mr Albert E. Wild, who are also directors of about half a dozen mill companies, and have an intimate knowledge not only of the technical side of the trade, but also of selling organisation. The promoters of the combine have received a definite promise of financial assistance from a high quarter in London. Certain formalities have still to be gone through, but it is understood that the amalgamation will probably be an accomplished fact before the end of the year.

Cotton Trade Organisation.—An important meeting of the Joint Committee of Cotton Trade Organisations was held in Manchester on Tuesday last, when the Government Report on the cotton trade was discussed. Since its formation, writes our Manchester correspondent, the Joint Committee has had to face the difficulty of one section of the trade criticising another branch and the Committee has not been able to take sides when such developments take place. The chairman, Mr Herbert W. Lee, who is also president of the Manchester Chamber of Commerce, moved a resolution in which the opinion was expressed that the Joint Committee is anxious that no reproach should attach to the cotton industry regarding its efforts to apply the recommendations of the Cotton Inquiry Committee. The Joint Committee wishes to observe that definite action is already being taken in various sections, particularly towards the introduction of more modern technique and mill organisation. It is recognised that, though in many directions progress can only be achieved by the sections acting independently or in direct negotiation with one another, the final result of sectional progress affects the well-being of the industry as a whole, and the potential benefits of improvements in one section may be destroyed or impaired by failure on the part of another section to make corresponding progress. In the opinion of the Joint Committee, therefore, apart from those aspects of the report which affect it directly as a Joint Committee, it has also the duty of informing itself fully on sectional action and even, should it be necessary, of representing to any particular section the considerations which seem to other sections to be of special importance to the industry as a whole. The Joint Committee cordially

invites sections not only to make reports to this and subsequent meetings of the endeavours they are making, but also to agree, as a matter of principle, that frank discussion by the Joint Committee of these efforts should be encouraged. The Joint Committee has also made the important pronouncement that in its opinion, whatever action is taken by the cotton industry, many of the causes of the present depression are beyond its control and that the responsibility for dealing with these lies in the hands of the Government and of other interests outside the cotton industry. It is pointed out that such problems as are raised by the difference in working conditions and hours between this country and its competitors, the burden of national and local taxation, and the anomalous effects of monetary policy call for immediate action.

Copper and Lead Prices.—Although stocks have been accumulating ever since the beginning of the trade depression, American Copper Exporters Inc. kept up the price of electrolytic copper at 18 cents per lb. until April last. Since then, writes a correspondent, the price has been declining rapidly, and this week the metal changed hands at 10 cents per lb. in America, and at just over £43 per long ton in London. This is the lowest level reached since 1896. Production, which in 1929 was over 100,000 metric tons in excess of requirements, has been severely curtailed since the beginning of this year. The United States, which produced nearly 55 per cent. of the world's total output in 1929, curtailed its production by about 20 per cent. This decline, however, was partly offset by Canada, which has doubled its output since last year. In addition to this, the high price maintained in the United States stimulated the production of secondary copper, which amounted to 520,000 metric tons in 1929, as compared with 480,000 tons in 1928. Output continued in excess of demand until April this year, when stocks stood at the high level of over 530,000 metric tons, which is equal to nearly four months' consumption. There has only been a slight increase in the total quantity of stocks since then, but the figure for refined copper has been increasing in proportion as that for rough copper has decreased. It is this huge quantity of refined copper overhanging the market which has exercised such a depressing influence on the price, and until stocks show signs of a downward tendency, there will probably not be any considerable upward movement in prices. Although lead has been steadier than copper, its present price of about £16 10s. per long ton (foreign refined) is, roughly, £6 below that of September last year. Stocks of lead have not materially increased during the past twelve months and are equal only to about a month's consumption. Although both production and consumption are on a lower level than those of a year ago, the position of lead is much more favourable than that of copper and cannot be regarded as essentially unsound.

New Banque de France Governor.—M. Clément Moret, the First Deputy-Governor of the Banque de France, has been appointed Governor in succession to M. Emile Moreau, whose resignation was noted in the *Economist* of last week. M. Moret, who previously had held the office of Directeur du Mouvement Général des Fonds at the French Treasury, came to the Banque de France together with M. Moreau four years ago. He had a leading share in the work of carrying through the *de jure* stabilisation and revaluation of the franc in 1928, and a year later, when M. Rist left the Banque de France to become economic adviser to the Roumanian Government, M. Moret became First Deputy-Governor in his stead. His close association with M. Moreau, the late Governor, during recent years suggests that under his guidance the Banque de France will follow the same lines of policy as under his predecessor. M. Moret is succeeded as First Deputy-Governor by M. Fournier, who hitherto has held the office of Second Deputy-Governor. M. Fournier is to be succeeded in his turn by M. Farnier, who is the present occupant of M. Moret's old post at the Treasury.

New Road Regulations.—Progress is being made with the new regulations under the Road Traffic Act, and there is a prospect that Part I, which deals with the regulation of motor vehicles, may be brought into operation by December. The order dealing with the construction and use of motor vehicles requires discussion with so many interests that its operation is likely to be longer delayed, but the discussions with insurance companies have made good progress and the insurance section will probably be applied by the beginning of next year. One of its provisions will require a certificate of insurance against third party risks to be carried in every car. Part IV deals with the licensing of public service vehicles and is not expected to come into operation before April. Twelve commissioners are to be appointed in place of the present 1,300 licensing authorities, and as one of their first tasks is to secure co-ordination of road services and eliminate overlapping, motorist and pedestrian will for once agree in welcoming a measure that will help both to keep down the volume of traffic and to improve the facilities offered by public vehicles. The new rules for the granting of licences will probably include an eyesight test, and extremely defective eyesight is to be an absolute bar to the obtaining of a licence. The other disqualifying condition is liability to disabling fits, but on this point the applicant's statement is to be accepted, subject to heavy penalties for non-disclosure of essential facts. How far these penalties will be effective in preventing epileptics and persons liable to heart attacks from driving before their disability has betrayed itself through a serious accident remains to be seen. Part III, which includes the new highway code, comes into operation in the New Year, and will be generally welcome as standardising practices already widely in use among more responsible motorists. For the most part there seems reason to hope that the enforcement of the new regulations will promote the comfort and safety of all classes of road users.

Collapse of German Rye Support Scheme.—Our Berlin correspondent writes:—The attempt of the Food Ministry to force up rye prices has broken down, as was to be foreseen weeks ago by anyone familiar with the cost of valorisation even when carried out in favourable circumstances. When the Getreidehandelsgesellschaft, acting under Government instructions, abandoned "support" purchasing proper on September 16th and confined itself to buying and selling at the market prices as one trader among many, the Berlin quotation for palatine rye fell from Rm. 187 to Rm. 173 for immediate delivery and from Rm. 215 to Rm. 203-206 for March delivery. In order so to inflate the price the Getreidehandelsgesellschaft had been obliged to buy 700,000 tons of rye between the middle of July and the middle of September, at an expenditure of Rm. 140 millions. During the same period it had resold 300,000 tons as fodder to pig-keepers, after colouring it with eosin to render it unfit for human consumption. This, of course, could only be done at a substantial loss, and the extent of the financial relief afforded by the sale of these 300,000 tons cannot be accurately estimated, as the Getreidehandelsgesellschaft must have held substantial stocks at the middle of July, so that the subsequent sales cannot simply be set off against the subsequent purchases. In any case, at the time of the discontinuance of the support

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM, in the undermentioned periods of the Year ending March 31, 1931, as compared with the corresponding period of the preceding year.

	Quarter from July 1 to September 30, 1930, compared with the corresponding Quarter of the preceding Year.				Period from April 1 to September 30, 1930, compared with the corresponding period of the preceding Year.

scheme, the Getreidehandelsgesellschaft had all its available funds locked up, and had applied in vain for an extension of the Rm. 60 millions bank credit which had previously been procured for it with the aid of the Prussian Zentralgenossenschaftskasse. The Finance Minister was both unable and unwilling to help, though it is not yet certain that small contributions will not be available from public funds to assist in the discharge of outstanding obligations. There was therefore nothing for it but to give in to the bear movement, a capitulation which the official communiqué has unfortunately tried to explain away when a courageous confession of failure would have made a much better impression. The whole business is a warning which should be taken to heart wherever it is proposed on economic-political grounds to force a rise in the prices of particular commodities by letting State institutions enter the market as buyers with the taxpayers' money.

Co-operative Insurance Society.—Founded in 1867, this society is the joint insurance department of the Co-operative Wholesale Society, Ltd., and the Scottish Wholesale Society, Ltd., and its rapid expansion, particularly in recent years, has naturally followed from a like increase in the co-operative movement. The society now has 181 district offices, employing a full-time staff of 4,190 people. Notwithstanding that business in 1929 must have been adversely affected by a dispute with certain of the society's agents, new life business is remarkably well maintained. In the ordinary life branch new business was secured amounting to £1,233,900, compared with £1,236,288 in 1928, while in the industrial branch the respective totals were £10,511,764 and £11,244,044. The expenses in the ordinary branch are moderate, and those of the industrial branch, although heavy at 38.5 per cent. of the premium income, are decreasing and compare not unfavourably with those of other comparable companies. In 1929 the society realised a satisfactory yield of £4 18s. 1d. per cent. net of tax on its funds, compared with £4 17s. 7d. per cent. net in 1928. The annual report is accompanied, in accordance with the society's usual practice, by a report on the annual valuation, and the results of this, together with those relating to the valuations of 1927 and 1928, are set out below:—

	1927.	1928.	1929.
Ordinary Branch—			
Surplus earned during the year	£ 217,941	£ 269,765	£ 340,488
Brought forward from previous year ..	38,876	45,150	50,065
	256,817	314,915	390,553
Allocations—			
To Bonuses to policyholders	211,667	264,850	339,268
" Carried forward to next year	45,150	50,065	51,285
	256,817	314,915	390,553
Industrial Branch—			
Surplus earned during the year	38,583	62,517	167,047
Brought forward from previous year ..	15,936	24,508	31,204
	54,519	87,025	198,251
Allocations—			
To Bonuses to policyholders	20,011	48,321	66,873
" Investment reserve fund	...	...	90,000
" General reserve fund	10,000	7,500	6,883
" Carried forward to next year	24,508	31,204	34,495
	54,519	87,025	198,251

There has again been a considerable increase in the surplus earned in each branch. The reversionary bonus allotted to ordinary branch policyholders has been maintained at the same rate as before, namely, 42s. per cent. The industrial branch policyholders under certain classes of policies will again receive a simple reversionary bonus of £1 per cent., while post-1922 policies will receive varying amounts of bonus in order to bring the total amount assured into line with that now offered under the society's current prospectus for the same premiums. Most remarkable results have been achieved in the fire, accident and general departments, where the total premium income has declined from £1,109,317 to

£1,068,247. The whole of the decrease has occurred in the general department, which is responsible for more than two-thirds of the premiums, and in this department a profit of 7.5 per cent. of the premiums has been earned, compared with a loss of 6.4 per cent. in 1928. The fire department also has yielded the very high rate of profit of 18.4 per cent., compared with 19.8 per cent. The combined trading results of all departments show a net surplus of £94,913 on the year, compared with a corresponding loss of £11,943 in 1928. Combining interest earnings with these figures, the society's surplus assets other than in the life department have increased during the year by no less than £132,858, of which £125,000 has been added to investment reserve fund.

LEAGUE OF NATIONS.

The Assembly and Economic Problems — Minorities — Memel.

(FROM OUR CORRESPONDENT.)

GENEVA, September 29.

Of the Assembly Committee discussions to which reference was made last week two—namely, those on minorities and economic questions—took a sharper turn during subsequent days. At no previous Assembly have economic problems been so thoroughly or so frankly debated, just as at no other Assembly has the economic situation of the world been so serious. There has been a deep note of anxiety and with it a growing recognition that a remedy for the confusion now existing in world commerce must be found in concerted action. In what direction, is another matter. Is it by closer co-operation between groups of countries, by lowering customs barriers, by rationalising the most-favoured-nation clause, by regulating credit, or laying down rules for the circulation of gold that a firmer basis can be created for international trade? Very few have questioned the value of one or other of these measures, but differences of opinion arise whenever an effort is made to reach an agreement on action.

The debate, however, has provided a diagnosis of the prevailing economic troubles and has led to some general direction of policy. National action alone cannot solve the problem, and the tendency is now towards isolated group action. The general endeavour of the Second Committee of the Assembly has been to keep developments within the framework of general League policy and practice. The difficulties over the application of the most-favoured-nation clause, the movement of agricultural countries of Eastern Europe for preferential treatment in Europe, the decision of the Foreign Ministers of the Scandinavian countries and Holland to take common measures to assure the application (at least between themselves) of the principles and consequences of the commercial convention of last March, the movements for closer action between States of Central Europe, and the larger idea of European union, are all symptoms of prevailing uneasiness. The Assembly has not given precise blessing to any particular one of these tendencies, but has held on to its programme of economic negotiations for the autumn. In preparation for it, an earnest appeal is made to all States to put the commercial convention of March into force. It is then, and there, that the Warsaw resolutions will have to be considered in relation to the negotiations as a whole. So far as the dumping developments and most-favoured-nation clause difficulties are concerned, they are brought to the pressing attention of the Economic Committee, which has already done considerable work in these connections.

The discussion on the Warsaw resolutions led to some lively interchanges to-day between the Dominions delegates and some of the representatives of European States. The Dominions delegates have all along protested against any approval by the League of the

European preference proposals from Warsaw, and a written protest, to which India also subscribed, takes the rather curious line that these proposals conflict with the principle of economic equality between States members of the League and with the recommendations of the Economic Committee on the application of the most-favoured-nation clause. It is not unreasonable that extra-European States should oppose League blessing being bestowed on regional preferences (it has not, in fact, been bestowed), but it is intelligible that European States should fail to understand Dominion objections to such preferences. It will be interesting to observe whether Canada and Australia maintain the same principle of economic equality between members of the League when the Imperial Conference approaches the subject. As some delegations have not failed to point out, if the question of regional preferential treatment is raised, it should be applicable to all preferential treatment. What is sauce for the goose is sauce for the gander. The Dominions have not improved their reputation by further objecting even to the appeal for ratifications of the March convention in preparation for the autumn negotiations, in which they will have full opportunity of intervening to protect their own interests. They withdrew from this untenable position, not without reservations, and not before M. Flandin (the French Minister of Commerce) sharply inquired what their object was, and warned them that such action would ruin the whole economic policy of the League. It was not perhaps for M. Flandin to throw a stone, even though the target was so easy. It has been a nice foretaste of the troubles which inter-continental tariffs might bring into general international relations.

A variety of resolutions are to be presented by the Committee, designed mainly to speed up existing work. Time is certainly short if effective results are to influence present tendencies. One resolution proposes that there should be more frequent meetings of Ministers of Commerce to get measures accepted and put into practice. Another emphasises the necessity of the work of the European Committee of Study on the Briand plan being kept closely related with the work arising from the execution of the March commercial convention, and a long resolution is devoted to a plan for a comprehensive study of the causes and factors of the present depression. The Economic and Financial Organisation, which is already investigating the causes and effects of the fluctuations in the purchasing power of gold, is asked to inquire into the development and phases of the depression and to indicate the characteristic circumstances and factors. It is to get into touch with all other appropriate organisations and examine the means of co-ordinating the work already undertaken on the problem of the recurrence of periods of economic depression; so that it may be in a position to examine at the right moment the advisability of international action. This is the outcome of a proposal originally tabled by India. These are none of them heroic measures, but much can be made of them if the States are willing to act. The pity is that the years since the Economic Conference in 1927 have been so largely frittered away and precious time wasted.

The Assembly's debate on minorities ended on a harsh note and without any practical results. The report is a mere recapitulation of tenaciously opposing theories. No one has budged an inch, and none of the Powers with minority obligations has shown the slightest indication to treat the subject on any but the most rigid defensive lines. They let it be known that they would not stand for such nonsense as an annual Assembly debate on minorities—this they cannot avoid—and they are in no mood to begin to consider any more liberal policy of procedure. It is a sorry commentary on the fine professions of European solidarity, and shows how difficult the League's task is in face of such intransigence, with M. Briand the champion of the diehards; he was most indignant at the suggestion that the protection accorded was not perfect and complete, and M. Zaleski's offer to go further if all States accepted minority obligations was not by any means to his liking. Short of that, the idea

of the Treaty Powers seems to be that it is only a matter of time—the sooner the better—before all the minority nuisances are gobbled up and no trace left of religious, racial or cultural safeguards. It is wickedly narrow and short-sighted, whatever be the failings of the minorities and their often too politically zealous friends.

Discussion is still proceeding on the amendments of the Covenant, and fairly satisfactory progress has, so far been made on the general principles of the organisation of the League Secretariat. The Council decided against Lithuania in its protest that Germany could not put the subject of infractions of the Memel Convention on the Council agenda, and the Norwegian member of the Council was appointed *rapporteur* on the substance of the complaint that Lithuania has consistently failed to observe her obligations. The Council has authorised the Secretary-General to accept the invitation of the Government of Uruguay to pay that country a visit. He leaves later in the year, and will also visit other South American countries.

UNITED STATES.

Share Market — League Gold Report — Industry — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 24.

A LULL in the moderate improvement in trade which was noticeable in late August and early September is serving to stir up pessimism, and the share market has had a fresh relapse. It is now feared that autumn trade will not do much to relieve the situation, and that a dull winter is in prospect. However, the best of the season's business usually takes place in October, and it will be a few weeks yet before prediction can give way entirely to facts.

Fresh weakness in the wheat market is having an unfavourable repercussion on other markets and, to add to the confusion of thought, the Government has seen fit to give undue importance to Russian short selling on the Chicago Board of Trade. In the grain trade and in responsible quarters everywhere the absurdities of the accusations and conclusions of the Secretary of Agriculture, Mr Hyde, are clearly recognised. Just what the political effect of it all will be is difficult to say, but attempts to draw attention away from the business recession on the eve of Congressional elections will probably not be very successful.

With wheat and cotton markets under pressure and the bullish professionals in the share market already discouraged by their failure to draw the public into larger participation, the influence of political changes in South America and in Germany was greater than it would have been during a period of rising markets. The financial community is too familiar with the shifts in South American scenery to attach too much importance to what is now taking place. At the same time, it is realised that such things hamper business recovery, inasmuch as they cause postponement of capital flotations and a general weakening of confidence.

While the general public may be chary for some time of new South American financing, bankers familiar with the position are feeling no alarm. This week there was active competition here for a \$50,000,000 one-year loan to Argentina, and certain other credits are being negotiated. With the return of more settled conditions a considerable increase in foreign financing is anticipated, particularly that of a refunding nature. Short-term money has become more of a drug on the market than ever, and the banks are having to buy more bonds. The growing unattractiveness of the short-term market is, of course, aiding the long-time capital market and making the way easy for a larger volume of capital flotations.

Bankers are expecting that a large portion of approximately \$300,000,000 of foreign government, state and municipal obligations which are callable or will become callable in the next two years will be refunded here. Among these issues are \$30,000,000 of Danish 6 per

cents., a like amount of 5½ per cents., and a Danish consolidated municipal issue of 8 per cents. In the next two years also various sterling and dollar bonds of the Dutch East Indies become redeemable, including \$100,000,000 of loans issued in 1922. It is thought likely that the Belgian and French dollar issues may be paid off without refunding. Certain German municipal loans become callable shortly, and the same is true of Norwegian city loans.

The approaching visit here of Dr Luther of the Reichsbank is stirring up some interest, and rumours have sprung up that a general conference in New York will be held among the heads of the principal European central banks and the Reserve Bank officials. These stories are discredited in Reserve Bank circles, although it is expected that the officials of one or two of the smaller European central banks may come over shortly.

The reaction of most bankers here to the preliminary report of the Gold Delegation of the Financial Committee of the League of Nations is that the seriousness of the case has been somewhat overstated. The views of the American member of the committee, that remedial measures undoubtedly will be found and taken in time to cope with whatever situation may develop, are generally subscribed to by Federal Reserve and Wall Street bankers. Moreover, some do not agree with the low estimate of available supply given in the report, and they emphasise the increasing economy which is being made in the use of gold, particularly in this country, where currency circulation is steadily being replaced by the use of cheques and other credit devices. Those who disagree with the main conclusions of the report on the dangers involved feel that it does not adequately take into account this development. In the view of Mr George E. Roberts, this country's delegate, the relation of gold production at present to the situation with regard to credit inflation and restriction is impossible of calculation. He calls attention to the Federal Reserve Bank's calculation that all gold production available for monetary use since the world war has been absorbed by three countries: United States, France and India—and thinks it may be questioned whether, if output had been 25 per cent. larger, the distribution would have been any different, or the world business situation any better.

Investors are preparing themselves for the reading of unsatisfactory third quarter earning statements. Not only have production and distribution of goods fallen to the lowest point of the year, but prices also have been the weakest. It is still hoped that some improvement will take place in the remaining three months, but it is unlikely to be great.

Department of Commerce figures on motor output in August correspond closely with the preliminary estimates of the National Automobile Chamber of Commerce, showing a drop of more than half as compared with a year ago, and a small decline from July. Output in August was 223,046 vehicles, and for the first eight months it was 2,704,957, compared with 4,224,911 in the same period of last year. Steel production has increased a little, the operating rate now being around 61 per cent., compared with 58 per cent. for the past fortnight, and increasing disposition is shown to buy ahead. However, specifications against orders are mostly for replacement account. Railroads are not yet re-entering the market, and the motor industry is doing some cancelling.

Production of motor cars probably will be lower this month than it was in August. Railroad traffic, while responding somewhat to seasonal influences, is still the lowest for several years. Railroad earning reports for August are now being published. They are running about 25 per cent. under a year ago, which is an improvement over the 33 per cent. decline of previous months, but the comparative gain is due wholly to drastic reduction in maintenance expenditures. Gross revenues are not rising appreciably.

Last week's sharp rise in brokers' loans was due almost wholly to income tax payments, and the recent upward trend will scarcely continue in the face of weak markets. Commercial borrowing at reporting member banks of the Federal Reserve system, after a moderate gain during

late August and early September, is now stationary. Meanwhile Japan is again sending gold this way, and about \$25,000,000 is expected on this movement, which would bring the total received from there since the beginning of the year to \$175,000,000.

FRANCE.

Politics — German Loans — M. Moreau's Resignation — Income Tax Yields.

(FROM OUR CORRESPONDENT.)

PARIS, October 1.

THE political world is still strongly under the influence of the recent developments in Germany, and there are daily fresh indications that carefully planned steps are under consideration here for the purpose of meeting the new international situation that has developed. It goes without saying that French opinion, as a whole, is distinctly nervous as to the future, and it may be taken for granted that this will in all probability be reflected by definite strengthening of the political combination now in power.

Just what form this will take it is difficult to forecast. M. Tardieu, in his Alençon speech last Sunday, confirmed the statement made here last week that the French programme in regard to Germany, Italy, disarmament and other burning questions is summed up in the words, "Security, Arbitration, Disarmament," with disarmament very much in the third place, and to this all parties, with the exception of the Socialists, now appear to have plainly pledged themselves. M. René Renoult, another of the Radical Socialist leaders, who has held high office in several Cabinets, last Sunday re-echoed the views of his colleague, M. Herriot, in regard to the necessity for France, "in the absence of any international force," to maintain "military forces sufficient to guarantee the integrity of her territory and permit of the fulfilment of international obligations." Whether the various statements of the same character from the Radical-Socialist leaders foreshadow any extension of the Tardieu Government's majority towards the Left, in the near future, it is not clear.

At the same time, however, M. Tardieu's visit to M. Poincaré to-day in his country home at Sampigny, and the reports—which appear to be well-founded—of the ex-President's return to political life in the near future, are regarded as more than usually significant, particularly in view of the imminence of the reassembly of the Chambers. M. Poincaré, it is well known, has frequently expressed himself desirous to see the formation of a Ministry that should in part depend upon the numerically still powerful Radical Socialist Party, and it was notoriously the fault of neither M. Poincaré nor M. Tardieu that M. Herriot and his friends ceased to form part of the Cabinet. It is possible that the pending annual congress of the Radical Socialists at Grenoble may result in some appreciable modification of the present uncertainty.

The line adopted by President von Hindenburg and his Ministers, with a view to finding a solution of the new problem arising from the elections, has allayed a certain amount of the anxiety felt here when the results of the voting first became known, and it is still hoped that the policy may put an effective brake on Hitlerist extremism. At the same time, doubts are expressed here whether the financial situation of Germany, if it is really as bad as asserted, may not result in another upheaval that would place the whole Young Plan in peril. This aspect of the situation is receiving increased attention owing to the distribution here, as well as in London and New York, of prospectuses of a new German State Railway 6 per cent. loan of 150,000,000 Reichsmarks, with the announcement that the issue is guaranteed by the State Railways themselves. The prospectus states that the State Railways offer every guarantee to subscribers, and that the pledging of this form of security has been authorised by the Prussian Minister of Commerce, as formally

announced in the official journal of the Prussian Government on July 26th. Attention is called here to the allegation that the revenue from the German State Railways already forms the guarantee for the subscribers of the recent German reparations international loan of \$300,000,000, and it is insisted that, in these circumstances, the security offered by the prospectus to potential holders of the new issue is valueless, unless the Prussian Minister of Commerce (under the terms of the convention of 1920, by which the railways were ceded to the Reich) had beforehand the formal authority of the Governments of the Reich and of the eight German States who formerly owned the lines. In view of the fact that the statements thus discrediting the *bona fides* of the issue are being publicly made here, it would be well if some official announcement as to the facts were forthcoming from those responsible for the issue.

The resignation by M. Moreau of the Governorship of the Bank of France, where he bore the chief weight of the task of the stabilisation of the franc, came into effect last Thursday, when he was succeeded by M. Moret, who has shared with him (as one of the Deputy Governors) the work which has been so brilliantly accomplished since 1926. M. Moreau's departure has been foreshadowed for some time past, and was due solely to the fact that he regarded his task as finished and that he desired to undertake a more congenial post where he would be freer from official fetters. M. Moreau has already joined the board of the Banque de Paris et des Pays Bas, at the request of its chairman, M. Jules Cambon, whom it has been arranged he shall succeed, next spring, as the titular head of the institution.

The annual statistics showing in detail the yield from income tax and such other imposts as are included in French practice under the head of "direct taxation" indicate that the total recoveries registered in 1929 in respect of income tax, etc., appertaining to 1928 totalled 15,891,000,000 francs. This was made up of 8,634,643,000 francs, representing yield from income tax (general and scheduled) which went entirely into the State coffers, and 7,256,000,000 francs derived from land taxes, imposts on securities, the old "door and window" taxes, and the yield from "patentes," or trading permits, which are required from all persons in France (except journalists and midwives) who carry on any kind of trade or profession. The 7,256,000,000 francs derived from the last-mentioned taxes was distributed as follows:—To the State, 1,946,912,000 francs; to the departments, 2,693,180,000 francs; to the communes, 2,616,220,000 francs. The yield from income tax in 1928 was 7,600 million francs, as against 8,634 millions in 1929, while the revenue divided between the State and the local authorities in 1928 was 6,728 millions, against 7,256 millions last year.

The revenue derived from the general income tax (exclusive of all consideration of the yield from the schedule rates of income tax) furnishes the only existing key to the very interesting problem of what the average French income really amounts to. The "general" income tax is a thing quite apart from and supplementary to the scheduled rates, which vary according to the nature of the income, as in Great Britain. It is based on the total yield from the scheduled rate applied, plus the amount of yield from any income that may be derived from investments (with the exception of that from Defence Bonds and 4 per cent. 1925 Rentes, which are exempt). General income tax is now levied, under the Finance Act of December 31, 1928, only on persons in receipt of an income of over 10,000 francs (£80). The French abatements for income-tax purposes have been gradually raised to that level during the past few years. The present abatement rate, however, is the minimum; small income earners with children are conceded supplementary abatements of from 3,000 to 4,000 francs, according to the number of dependent persons, if the income is over 10,000 francs; and this allowance is duplicated in regard to the amount of their scheduled assessments. These deductions in 1929 affected an extra 7,000

millions of income. The loss to the revenue from this was only compensated to a very small extent by the taxation of unmarried and childless persons at rates ranging from 10 to 25 per cent. higher, for the yield from these supplementary charges in 1929 was only 63,082,000 francs.

The total incomes of all kinds assessed for general income tax in 1929 amounted to 57,665,460,000 francs, representing 1,922,542 distinct incomes. This would suggest that the average French income (exclusive of the great mass of wage-earners depending on not more than 30s. a week) works out at within a shade of 30,000 francs (say £240 a year, or under £5 a week). Over 50 per cent. of the total number subjected to general income tax returned incomes in the category between 10,000 francs and 20,000 francs; 473,000 as between 20,000 francs and 30,000 francs; 249,000 as between 30,000 francs and 50,000 francs; 113,000 as between 50,000 francs and 100,000 francs; 38,361 as between 100,000 francs and 200,000 francs; 9,390 as between 200,000 francs and 300,000 francs; and 5,889 as between 300,000 francs and 500,000 francs. The detailed return shows that 9,524 persons (less than one-half per cent. of the total assessed) enjoyed incomes in 1928 of over 300,000 francs (£2,400 each), and paid to the State 1,338,000,000 francs, or 54 per cent. of the total yield from the general income tax. The number of persons who declared their incomes as over 1,000,000 francs was 851, whose combined incomes were returned as totalling 1,835,853,000 francs, or a little over 2,000,000 francs (say £16,000) per head. The number of income-tax payers who were called on to pay the extra 25 per cent. "bachelor's tax" was 258,548, or about 14 per cent. of the total assessed. Childless married couples, whose income tax was increased 10 per cent. in consequence, numbered 230,000, of whom 56 declared incomes of over 1,000,000 francs (£8,000) a year.

GERMANY.

Politics — Lord Rothermere — Government Programme — Stock Exchange — Money Market — Wheat Duty.

(FROM OUR CORRESPONDENT.)

BERLIN, September 20.

It is not yet clear how the Chancellor proposes to solve the problem of the coalition. The decided, in some instances almost passionate, rejection by the Press of the Centre of any idea of a coalition with the National Socialists would be proof that a coalition is out of the question but for the necessity of taking into account the great adaptability of the Centre Party's tactics. There are, however, other indications that Herr Brüning wishes to try to reach an agreement with the Social Democrats. The chief of such symptoms is the decision, though so far it has only been published in a non-committal form, to recast the emergency decrees in the form of Bills for submission to the Reichstag. As this is impossible without negotiations on the subject of the content of the decrees, it would open the way for compromises on the conduct of social policy. It is indeed exceedingly doubtful whether these laws are capable of being so drafted that both the Social Democrats and the right wing of the present Government coalition can support them in the Reichstag, but even a gesture of good will from the Chancellor to the Social Democrats would be of some use. It would at least bring about a joint search for a means of escape from the unusually difficult situation, and, failing such co-operation, the rift which the election campaign opened, even between the parties which are loyal to the constitution, would continue to yawn dangerously.

Lord Rothermere's declaration in favour of the Hitler Party and his idea that the National Socialist movement can be used as a bulwark against Bolshevism has aroused great interest and intense astonishment in Germany. Lord Rothermere is, of course, quite right in thinking that the Versailles Treaty has played a large part in bringing the German people into such a state

that they gave 107 out of not quite 600 seats to the National Socialists. It is true that large sections of the young people of Germany have despaired of the idea of a united Europe and that the failure in many matters of the League of Nations has destroyed all their faith in the effectiveness of international co-operation. Still, a movement does not become a possible instrument merely by reason of its having arisen out of indignation at a real and severe injustice, and the disappointment of noble aspirations. German communism is animated to a large extent by a similar despair of Europe. The National Socialists come to blows almost daily with the Communists in the streets of Berlin and other cities, but they are far too close to them in spirit to be regarded as a sort of defensive army against Bolshevism. Co-operation between the National Socialists and the Communists may come about at any moment when the tactical advantage of such an alliance appears to both these extreme groups to be sufficiently substantial. Though the National Socialists are reprinting Lord Rothermere's article with enthusiasm in their journals, no German party would be able to keep its position with the German public if it really allowed itself to be used by foreigners as an army wherewith to combat Bolshevism. Further, if Lord Rothermere does not expect the policy he desires even from the British Conservative Party because "their leader himself is infected with semi-Socialist doctrines" he must have overlooked the fact that *inter alia* the nationalisation of joint-stock companies, compulsory profit sharing and the abolition of interest form part of the programme of the National Socialists, who until a few years ago were demanding expropriation of landowners without compensation.

Herr Hitler's evidence at the Leipzig trial has been received with mixed feelings. His statement that his party has confidence in the results of future elections and therefore is not contemplating a *putsch*, that it has been completely reconstituted since 1923 and now proposes to pursue its goal by legal means, was naturally received with satisfaction by the groups which would like to form a Government coalition with the National Socialists. These groups are, for the moment, the Hugenberg group, large sections of the German People's Party, and the "Economic Party of the German Middle Classes." On the other hand, his declaration that after their victory the National Socialists would set up a revolutionary tribunal and set heads rolling in the sand so that the crime of November, 1918, might at last be expiated, horrified thinking people in all parties, as did also his statement that the National Socialists would evade or repudiate the Reparations agreement when they came into power.

Thus, on the whole, Herr Hitler has hardly accomplished his purpose of convincing the bourgeois parties that he is eligible to join a coalition. His kindly intentions should not, of course, be taken too tragically; the idea that the National Socialists might be able to form a Government without the co-operation of other parties is, at any rate, within measurable distance of time, a pure chimera. Such a thing could not come about without a collapse of the great Centre and Social Democratic Parties, and all the evidence is pointing in precisely the opposite direction. Even those parties which are willing at present to help the National Socialists to a share in government are so only because they think that by doing this they would help them to destroy themselves. In the execution of their real home and foreign programme the Hitlerists would not even be supported by the Hugenberg Party, much less by anyone else.

The Government's financial programme is not yet known in full detail. In August the Government believed that its emergency decrees imposing new taxes had restored financial equilibrium and that the reduction of benefit and the raising of contributions had placed unemployment insurance on a sound footing. It has since become evident that these assumptions were far too optimistic, and a further deficit of nearly a milliard is now threatened. The Government now proposes to raise the *Notopfer* of officials, which amounts to a reduction

of salaries, from 2.5 per cent. to 6 per cent. of the salary. Contributions to unemployment insurance are to be raised from 4½ to 6½ per cent. of wages; further economies are to be attempted, including a contemplated reduction, as from next spring, in public expenditure on housing. This last is very regrettable, as either building will have to be curtailed, with catastrophic consequences for the labour market and for the homeless, or else public credits will have to be substituted by still further demands on the already overburdened capital market.

The unfavourable effect of political developments on the Stock Exchange and the money market are still in evidence. The Reichsbank return of September 23rd shows that the bank had up to that date lost 35 million Reichsmarks gold and 260 million Reichsmarks foreign exchange since the elections. Since September 23rd about 105 million Reichsmarks gold and about 100 million Reichsmarks foreign exchange have been added to the efflux. The total currency reserves are still nearly 3 milliard Reichsmarks, so that the position is strong. Withdrawals of foreign and even of French funds from Germany have diminished in the last few days, but the export of German capital continues, and there is consequently a perceptible stringency in the home money market. Market discount rate has gone up to 3½, and is only ½ per cent. below the Reichsbank rate. This very narrow margin might in itself suggest an impending rise in bank rate, but it is very unlikely that this step will be taken at present.

The Food Minister, Dr. Schiele, has raised the duty on wheat from 15 Reichsmarks to 18.50 Reichsmarks, on account of the fall in the world price. This is an exercise of the very wide margin of discretion left to the Government by the sliding scale of grain duties at present operative in Germany. Simultaneously with this rise in the duty, the percentage which German wheat must form of the total milling was raised from 60 to 80. The import of foreign wheat into Germany has recently been small, as even the 15 Reichsmarks duty exercised an exceedingly severe check. For the most part, foreign wheat was only imported into Germany to the extent that it was needed for blending, so that it is doubtful whether the checking of these imports will prove to be in the interest of the grain industry, for a deterioration in the quality of bread might easily lead to a decline in consumption. The trade may perhaps evade the difficulty by importing more flour, but that would, of course, entirely stultify the Food Minister's intentions.

DENMARK.

German Trade Treaties — Prices — Foreign Trade — Royal Marine Insurance Company.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, September 19.

DURING the last few months Danish trade has to some extent been affected by certain German commercial treaties, which have caused difficulties for two important branches of Danish exports—cattle and butter. Germany endeavoured a year ago to effect a limitation of the import from Denmark of cattle for killing. As these endeavours were unsuccessful the duty was increased; but Sweden was given by treaty the right to export to Germany, at the previous low rate, a number of head of cattle which was in excess of the previous cattle export from Sweden to Germany. On the strength of its rights as "most-favoured-nation," Denmark claimed similar conditions for its entire cattle export, which is several times in excess of that of Sweden. The German refusal to agree to this created much bitterness in Danish trade circles, and especially in agriculture. Furthermore, Germany has now demanded that two counties in Southern Jutland, where isolated cases of foot-and-mouth disease have occurred, should be closed for the export of cattle, though opinion here is that there is no veterinary necessity for this.

The German import duty on butter has been raised, while endeavours are made to obtain a still further increase. At the same time, Germany has made a com-

mercial treaty with Finland by which that country has been secured the right to export its surplus butter into Germany at a lower rate of duty. The fear that this arrangement will lead to the unjust treatment of the Danish butter export to Germany has increased the ill-will against this country in certain agricultural circles, and has led to the proposal to boycott German goods. A dairy organisation, the "Sydjdysk Mejeriforening," in Kolding has thus recently published a proposal to this effect, and intends to effect its joint purchase of coal in England. At the same time, the "Sydvestjyllands forenede Elektricitetsværker" at Esbjerg, which required a generator, has ordered this from a Danish machine factory, although a German concern had made an offer at 10 per cent. lower price. However, it is as yet uncertain how German Customs policy will develop after the recent election.

As a result of this situation, there has been an increase of interest in British goods. This interest has been greatly stimulated by the visits to Copenhagen of the Mayor of Liverpool and the Lord Mayor of London, on which occasions the most friendly feeling developed between the prominent representatives of English municipalities and the Danish circles concerned. At the same time, it is pointed out in several quarters that it will be necessary for English exporters to meet as much as possible the wishes of the Danish importers and retail purchasers with regard to qualities and sale methods.

The declining prices all over the world continue to be reflected in the Danish wholesale price index, which is declining month by month. From a figure of 150 in August, 1929, the wholesale price index dropped to 128 in August, 1930 (1913 = 100), but for the last few months the rate of decline has been slower. This price-movement has been most pronounced for agricultural export goods and for grain and cattle food, and it has accordingly not been in favour of production. Retail prices have also continued to fall, and the cost-of-living index has declined from 173 in July, 1929, to 165 in July, 1930. The same influence is traceable in Danish foreign trade, of which recent returns are shown below:—

	Million Kroner.		Excess of	
	Imports.	Exports.	Imports.	Exports.
April	154	125	29	—
May	141	145	—	4
June	141	134	7	—
July	133	134	—	1

The slightly reduced value of industrial exports in 1930 as compared with 1929 is also to some extent a result of the price developments. In January-June, 1930, Danish manufactured articles to the value of Kr. 150,000,000 were exported, while for January-June, 1929, the value was Kr. 164,000,000. For some few articles—cement, vegetable oils and cattle food—a decline of quantity has taken place in addition.

August brought a very regrettable event—the suspension of the Royal Chartered Marine Insurance Company (Det kgl. octroierede So-Assurance Kompagni). This was one of the oldest marine insurance companies in the world, and had existed for 204 years. In the years after the war it suffered heavy losses and was reconstructed, but the new management was not able to carry it safely through the difficulties which have beset insurance business, especially marine insurance, during the last few years.

FINLAND.

Money Market Interest Rates — Foreign Trade — Prices — Production.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, September 20.

THE money market was easy in August and the first weeks of September. The accumulation of capital is, indeed, still small, but credit requirements have also been limited, so that credits granted by the banks have been reduced. Thanks to the warm summer, the fairly satisfactory harvest was gathered earlier than usual, so that

the consequent tightening of the market in the autumn set in earlier than usual. The balance-sheets of the joint-stock banks show that deposits were reduced in August by 118.8 million marks, compared with a reduction in credits of only 49.0 millions. While there is a slight tightening in this respect in the joint-stock banks, their position towards other countries has gone on improving, their foreign balances having grown by 10.2 million marks to 647.3 millions, whereas the corresponding indebtedness has decreased by 2.4 million marks to 387.6 millions. The joint-stock banks thus have a net credit balance abroad amounting to 259.7 million marks, which is more than at any time since the Great War. A year ago they still had a net foreign indebtedness of 280.2 million marks.

The total credits of the Bank of Finland fell off in August by 54.4 million marks to 702.8 millions, so that the drop since the beginning of the year amounts to 678.9 million marks. Balances with foreign correspondents decreased during August by an insignificant sum of 42.3 million marks, but in spite of that the note reserve increased by 10.6 million marks to 862.0 millions. The ordinary cover consequently represented at the end of August 80.5 per cent. of all liabilities payable on demand. The corresponding figure a year before was only 50.5 per cent., which shows clearly how much the position of the Bank of Finland had been strengthened.

The changes in the position of the Bank of Finland during the first fortnight in September were very slight. Credits were reduced by 7.3 million marks, the foreign balances grew by 8.9 millions and the note reserve dropped by 7.4 million marks. Owing to the growing easiness of the money market, the time was ripe for a lowering of rates, and the Bank of Finland reduced its bank rate on August 26th from 6½ per cent. to 6 per cent. The last reduction, also of ½ per cent., occurred on April 28th. The joint-stock banks, which had reduced their rates on deposits by ½ per cent. on July 1st all along the line, again lowered their rates on deposits withdrawable on demand on September 1st to 4 per cent. Other rates on deposits are also expected to fall, but the competition for deposits with the savings banks, savings funds and co-operative credit societies delays the step.

Foreign trade in July and August showed a diminution, which was only partly due to falling prices. The value of imports amounted to 457.2 and 443.8 million marks for these months compared with 639.1 and 610.4 millions last year. For the whole completed part of the current year the value of imports records a drop of 29 per cent., while the quantity of imports has fallen 17 per cent. Exports kept at a higher level even than last year in the early part of this year, but in July and particularly in August the reduction was considerable. The value of exports was 707.2 and 535.9 million marks, compared with 801.6 and 904.4 millions last year. The reduction in value for the whole period from January to August amounted to 9 per cent., while the quantity shows a slight drop of 5 per cent. As the fall in prices only gradually influences exports, which were contracted for to a great extent some months ago at the higher prices then ruling, one must be prepared for a continued reduction in the value of exports. In any case it looks as though the balance of trade, and with it the balance of payments, would turn out very much more favourable than in previous years. At the end of August the value of exports exceeded the value of imports by 294.0 million marks, whereas the balance of trade usually has a surplus of imports at this time of the year; last year it was 678.1 million marks, in 1928 1,463.2 millions and in 1927 91.1 millions.

The fall in prices continues. The wholesale price index, which was still 94 in January, taking the prices for 1926 as a basis, sank gradually to 90 in July and 89 in August. Up to the present the fall in price has been comparatively advantageous for Finland, the index for imported goods having sunk to 79, but for exported goods only to 89. If prices on foreign markets are stabilised at their present low level, one must be prepared here for a continued fall in price for some important classes of goods.

The production figures for the third quarter of the Ministry for Social Affairs indicate that both the number of workmen and the number of working hours have, indeed,

exceeded the figures for the second quarter of this year, but have nevertheless fallen by no means inconsiderably short of the figures for the corresponding period last year. Simultaneously the number of unemployed registered at the municipal labour exchanges has risen week by week, as is customary during the autumn. The total number registered in the middle of September was, however, no more than 6,220.

INDIA.

Trade Returns — Joint-Stock Companies — Banking Inquiry — Money Market — Security Prices.

(FROM OUR CORRESPONDENT.)

BOMBAY, September 13.

THE trade returns for the first four months of the financial year, ending on July, 1930, show a fall of 22 per cent. in the value of imports, which amounted to Rs. 63 crores, as compared with Rs. 81 crores in the corresponding period of the previous year. Exports of Indian merchandise have fallen in value by Rs. 18 crores, or 17 per cent., as compared with the corresponding months of the last year. The most striking feature in the trade returns of July is the fall in imports of piece-goods. For the four months of the present financial year the fall is 154 million yards in quantity and Rs. 586 lakhs in value, as compared with the corresponding four months of the last year. This gives a fall of 25 per cent. in quantity and 35 per cent. in value. In exports the most striking features are the decreases in raw cotton, raw jute and jute manufactures.

Two important Blue Books have been issued containing statistics of joint-stock companies and banks for the year 1927-28. The number of companies has in each of the last ten years shown a steady increase. While the paid-up capital has increased in this period, the authorised capital has fallen. The steady increase in paid-up capital is very satisfactory, but the paid-up capital is still unduly small. Of the 626 companies registered in 1927-28 the authorised capital was Rs. 17,57 lakhs and the paid-up capital was only Rs. 86 lakhs. During the year under report 335 companies, with an authorised capital of Rs. 23,73 lakhs and a paid-up capital of Rs. 7,64 lakhs, ceased to do business. Of the total paid-up capital in 1927-28, 39 per cent. belongs to Bengal and 36 per cent. to Bombay. Burma follows with 9.2 per cent., and Madras and United Provinces with 4.6 per cent. each. The Gwalior State has 1 per cent., Indore and Mysore .6 each, Baroda .5, and Travancore and Hyderabad .4 each. The total number of companies which have been incorporated elsewhere than in India chiefly with sterling capital, but carrying on business in India, was 861, and the paid-up capital amounted to £632 millions, besides debentures to the extent of £126 millions. Only a portion, often a very small portion, of the capital just mentioned is invested in India, as many of these companies work in other countries also. At the third annual meeting of the Federation of Indian Chambers of Commerce, held at Delhi in February last, Sir George Schuster quoted with approval the recent estimates of Mr G. Findlay Shirras, showing that the figure of British capital invested in India could be placed somewhere in the neighbourhood of £500 millions.

The banking Blue Book reveals the urgent need for a more widespread system of banking throughout the country at the present moment. The present Banking Inquiry Committee will doubtless show the way by which the indigenous banking system can be linked with joint-stock banks. In a few months the names of foreign experts who are to assist the Committee in its final stage will be announced. Some days ago Sir George Schuster, in a speech before the Provincial Finance Secretaries, who met at Simla, said that "what India requires is the foundation of a sound Central or Federal Reserve Bank, which, based on national support, will co-operate with the central banks of the world in a sound currency policy, and this action should be reinforced by the diversion of India's powers of investment into productive channels." It

appears that the Exchange Banks have deposits amounting to Rs. 71 crores, out of a total of all bank deposits in India amounting to Rs. 274 crores. The respective shares of the three classes of banks in India in the total bank deposits in 1928 were: Imperial Bank of India, 36 per cent.; Exchange Banks, 33 per cent., and the Indian Joint Stock Banks, 31 per cent. The percentage of cash to total deposits was 13 per cent. for the Imperial Bank, 11 per cent. for the Exchange Banks, 13 per cent. for Indian Joint Stock Banks having a capital and reserve of Rs. 5 lakhs and over, and 15 per cent. for those having smaller capital and reserve.

Sir George Schuster has kept the promise which he made in the Budget Speech in regard to the sale of silver, viz., that the Government would not go into the market unless they were advised that, as in the past, the market would not be appreciably affected by their operations. Recently the Government of India, it is understood, has sold an additional five million ounces of silver. The price of this sale was announced (August 23rd) as Rs. 47.13.0 per 100 tolas, and to-day the price is Rs. 47.5.0. The Government of India has not made any announcement, as was not unnatural, but silver bullion from the Paper Currency Reserve was withdrawn in the return for the week ended August 22nd, which would tend to confirm the cable from Shanghai. It was not a suitable opportunity for Government to sell silver in India, but it was sound business to seize the opportunity of successfully selling a fairly large quantity in the Chinese market. The average off-take of silver in the Bombay market is now 80 bars per day, and the present stock is 3,660 bars. Gold is in demand. The monsoon has been good, and the price is Rs. 21.6.9 per tola. The net imports of gold this year for the four months ended July show that imports have increased from Rs. 5.66 crores to Rs. 6.85 crores, or 21 per cent. as compared with the corresponding period last year. The imports of silver have been 37 per cent. greater in quantity than in the four months of last year, and amounted to 39.6 million ounces, valued at Rs. 5.16 crores. Low prices are a great attraction in India.

Although the share market has been lifeless in the last few weeks, the Tata Iron and Steel Company especially having had a rather depressing year, the market for Government securities has been remarkably steady, showing great confidence in the Government. The 3½ per cents. are higher (Rs. 65.8) than they have been for many months, and the 5 per cent. tax-free loan (1945-55) is higher than during the last four months. The new 6 per cent. stands at 12 annas premium. Sterling exchange has remained steady at 1s. 5½d.

AUSTRALIA.

Agreement Between States and Commonwealth — Sir Otto Niemeyer's Address.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 28.

THE new agreement between the States and the Commonwealth was decided upon on August 21st, after some days' conference in which the representatives of the States expressed their disapproval of the policy of the Commonwealth Government of maintaining expenditure and increasing taxation. Most of the States are attempting to deal with their own problems by reducing expenditure, as is palpably required in view of the reduced taxable capacity of the country.

The attitude of the Commonwealth representatives in the early part of the Conference showed insufficient appreciation of the seriousness of the financial position, but the impending maturity of Treasury Bills in London helped to hasten decisions. The resolutions provide for a settled policy of maintaining Budget equilibrium, with further steps during any financial year to ensure that object if revenue shows indications of failing to meet expenditure. The Loan Council is to raise no further loans overseas until existing short-term indebtedness has been completely dealt with. This decision includes over-

seas borrowing by large public authorities. New works to be financed by internal loans are to be reproductive in the sense of yielding within a reasonable period a revenue at least equal to interest and sinking fund. A standing committee, consisting of the Treasurers of the Commonwealth and three out of the six States, is to be appointed to watch the operation of the plan adopted. Duplication between Commonwealth and State services is to be examined, and if possible eliminated. Five States are to forego a portion of certain sums which the Commonwealth Budget proposed to grant to them during 1930-31 for unemployment relief, and the amount foregone is to be paid to South Australia, which State has exceptional difficulty in balancing its Budget.

Sir Otto Niemeyer's address was published simultaneously with the Conference resolutions. His address dealt with the economic basis of Australian affairs, and especially the slow rate of progress in productivity as compared with the United Kingdom and the United States, together with the effects of the decline in the world's prices for wool and wheat, especially the latter. He pointed out that there is considerable reason to fear that the prices of those particular products in which Australia as an exporter is primarily interested will fall more rapidly than the general price level. He states that the resolutions now passed by the Conference are "wise and necessary," and that as Australia depends to a large extent upon the primary producer to emerge from a régime of emergency tariffs and rationed exchange, and the primary producer's power to sell abroad depends on his costs, which in turn depend very largely upon general costs in Australia, the issue has to be faced whether Australian standards have been raised too high "relatively to Australian productivity and to general world conditions and tendencies."

The results of the Conference and Sir Otto Niemeyer's address have been commented upon from two divergent points of view. The business view is that they simply represent what has been known and stated for years past by qualified observers, though when coming from any quarter of less weight they have received little attention from politicians, especially Labour. The Labour view on the other hand, is against curtailment of expenditure, whether from revenue or loans. The large expenditure from loans and the past prosperity of the country have certainly enabled the natural industries to carry for a time the burden of the artificial structure of the towns, including the Arbitration Court, but the general opinion is that the latter will have to be adapted to the real conditions of the future.

Books and Publications.

THE SOCIAL SERVICES.

DR. SLATER'S comprehensive survey of the development of our social services* is, in fact, somewhat wider than its title would suggest; for it covers a large area of voluntary activity both philanthropic and co-operative, and this is perhaps the most valuable feature of the book. It brings before the general reader a great deal of material bearing on the day-to-day problems of social life in a civilised but imperfect community, which has not hitherto been readily accessible without much delving into highly specialised literature. This would apply to his commendably objective account of the genesis of the Charity Organisation Society, to his summary of voluntary effort with regard to blind, deaf and mentally afflicted persons, and above all to his brief but illuminating exposition of voluntary hospital finance (on which subject he expresses decided views) and to his historical account of the growth of the friendly society movement. It may be argued that such material is very properly comprised in any study of State action in relation to the problem of poverty, since State action is usually the

* "Poverty and the State." By Gilbert Slater. Constable. 12s. 6d. Pp. vii+480.

consolidation of voluntary action, without a study of which its form and intent would be difficult to expound. Nevertheless the close interaction of the two types of social effort is continually understressed by writers and often sadly neglected by practical administrators; and we may be grateful to Dr. Slater for the fine understanding of practical student needs which has resulted in this particular interpretation of such a title as "Poverty and the State."

Just as it is humanly impossible to peruse an anthology of poetry without mentally execrating the compiler for sins of omission and commission in relation to the reader's personal taste, so it is equally difficult to embark upon a literary tour of the social services without indulging in similar strictures at the expense of one's guide. One may be inclined to think, for instance, that the agricultural programme expounded on page 67 constitutes a somewhat airy leap ahead of evidence—that, in fact, Dr. Slater's very definite expressions of opinion on many subjects may intimidate the politically suspicious social worker and that more evidence and less verdict would in the end minister more effectively to the author's gospel. One suspects that on page 53 he somewhat underrates the killing power of mediæval famines, and it is certain that the indefatigable Miss Hannah More deserves the place which she has not been assigned in the history of working-class education. There is not much illumination in the cryptic reference to the Medical Research Council which concludes Chapter IX, and in the long section which deals with pre- and post-war unemployment a better balance in relation to the general subject-matter of the book would have been achieved by devoting less space to the historical treatment of wage and currency theories—very easily accessible to the student in up-to-date publications—and more to the practical problems and finance of unemployment insurance. Finally, in touching the question of poverty in relation to family dependence in his closing chapter, Dr. Slater has perhaps neglected an opportunity for co-ordinating his material in a general survey of the statistics of poverty, helped out by the researches of Professor Bowley and Miss Hogg.

But it is an invidious job to pick holes in so valuable an instrument for the training of good citizens as that with which Dr. Slater has provided us. His book is brimful of good stuff, and to crown all, it is eminently readable.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Unemployment. By Sir William Beveridge. New edition. (London) Longmans, Green and Company, 39, Paternoster Row. 21s. net.

This new edition of the most important British work on unemployment forms the subject of the first leading article in this issue. Most of the original work is retained as Part I., with an entirely new Part II., written in the light of recent experience.

The Economic Policy of Soviet Russia. By Professor Paul Haensel. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 9s.

The author, who held a chair in Moscow until 1928, has aimed at strict accuracy and impartiality. His book, which is exceptionally well-informed, is very critical of the Soviet régime.

Problems of Monopoly and Economic Welfare. By F. Zeuthen. With a Preface by Professor J. A. Schumpeter. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 7s. 6d. net.

A valuable contribution to pure economic theory.

The British Empire. By D. C. Somervell. (London) Christophers, 22, Berners Street. 12s. 6d. net.

An outline of the development of the Empire with separate chapters for each Dominion and group of Colonies. The book is well printed and agreeably illustrated.

The Stock Exchange.

LONDON STORES AS INVESTMENTS.

THE big London stores occupy a highly privileged position. They cater for the household needs of the greatest concentration of the middle classes in Great Britain. There is, for example, in the Metropolitan Police District, which extends over a radius of fifteen miles from Charing Cross, comprising an area of over 700 square miles, a total population of about 7½ millions. The big London stores cover, and even extend beyond the limits of, the Metropolitan Police District area. They will, no doubt, claim to supply only "the select" of this large population. In this country the middle-class householder values his credit as the hall-mark of his respectability. It is part of his class-consciousness that he should pay his household bills. The fact that the London stores have not found it necessary to introduce to any large extent the hire-purchase system for household necessities speaks well for the character of their trade. Moreover, the "select" middle-classes which they serve are probably among the last to be affected by a general trade depression, so diverse are the industries, trades, agencies and financial services carried on in the metropolitan area. At any rate, last year, though from September onwards there was a marked slowing down of general trade activity, the accounts of most of the London stores at the end of 1929 did not so far point to any appreciable decline in profits. This fact is brought home in the following table, giving the net profits, earnings and dividends for the last three years:—

	Year to Jan. 31, 1928.			Year to Jan. 31, 1929.			Year to Jan. 31, 1930.		
	Net Profits.	% Earned.	% Paid.	Net Profits.	% Earned.	% Paid.	Net Profits.	% Earned.	% Paid.

* On 25 per cent. cumulative ordinary shares, the deficiency between earnings and dividends being made good by Selfridge's.
† On ordinary shares, after allowing for dividend on 10 per cent. cumulative preferred ordinary shares.
‡ On deferred shares of 1s., after allowing for 10 per cent. dividend on cumulative participating preferred ordinary shares.

The profit figures in this table are shown before allowing for preference dividends, and the percentages earned are calculated on the ordinary or deferred capital. It will be seen that only Whiteley's, Gamages and Waring and Gillow had disappointing results to show last year. The directors of Whiteley's explained that trade "in the higher grade utilities, furniture and motors" was affected by the business depression, although the number of by the business depression, although the number of customers served was greater than ever. Gamages re-ferred to "unusual losses" on account of the special writing down of stocks and the reorganisation of the management. Waring and Gillow reported that, while the volume of business was maintained, profits had fallen sharply "owing to the severe competition caused by the general trade depression." The further complication arising from the failure to complete a real property purchase on which the company is owed £172,585 has been dealt with in the *Economist* of August 30, 1930, page 413. That the profits of stores (such as Waring and Gillow and Gamages), which deal chiefly in household goods and not in provisions, should be among the first to feel the effects of a depression is not unnatural.

The real testing time, however, for all the big London stores is now at hand. The protracted trade depression has gone far enough to reduce the purchasing power of the middle classes and to give most trading companies some anxiety in the collection of their accounts. Waring and

Gillow has already suffered from a shortage of working capital and has been forced to postpone payment of its preference dividends and to negotiate for further finance to enable it to meet its creditors and carry on its trade. An analysis of the liquid assets position disclosed in the last balance-sheets of the other London stores may therefore be of interest. The following table gives the cash, Government securities and debtors, less current liabilities, as at the end of January, 1930, the figures for stocks being shown separately:—

(In thousands of £'s.)						
	Harrods.	John Barker.	Selfridge.	William Whiteley.	Army and Navy.	A. W. Gamage.

* Includes "other securities." † Less reserve.
‡ Includes £159,000 current and loan accounts of subsidiary and associated companies.

This table shows the liquid position of the companies with and without including stocks among current assets. Obviously, in a period of trade depression, when prices are falling steeply, stocks may become a burden, necessitating a heavy writing-down at the end of the year, and should not be included among "quick" assets at the values given in the balance-sheet. Disregarding stocks, it will be seen that none of the companies can claim to have a really strong liquid position, with the possible exception of William Whiteley, in whose case liquidity is a result of a curiously high ratio of debtors to other liquid assets. Actually, in each case liquidity would appear to depend upon the rapid turnover of stocks and regularity in the payment of customers' accounts.

It will be clear from the next table, showing the present market prices, as compared with the highest prices for this year, and the yields at the present market prices, that the Stock Exchange is taking a conservative view of the prospects of the London stores this year:—

	Highest 1930.	Present Price.	Div.	Yield.
Harrod's £1	74/6	60/-	20	6.7
Barker's £1	67/9	58/9	20	6.8
Selfridge's £1, 10 per cent. preferred ordinary	27/9	22/6	10	8.9
Gamages £1	15/9	10/9	5	9.3
Army and Navy 10s.	41/6	1 1/8	25	6.5
Whiteley's £1, 25 per cent. ...	51/3	41/3	25	12.1
Waring and Gillow	28/3	3/9	...	...

In the case of John Barker and Harrods it is satisfactory to observe that the interim dividends have been maintained at the same rates as in the previous year, namely, 5 per cent. The Army and Navy have also maintained their interim dividend at 6½ per cent., but it should be borne in mind that the chairman of this company, at the general meeting in April, announced the suspension of the company's rebuilding and modernising scheme and declared that the trade situation to-day was such as to render the outlay of large capital sums entirely unjustified. Nevertheless, Gamages have gone ahead with the

building of their West End store, which was opened to the public this month and have guaranteed the payment of the 7½ per cent. dividends on the £375,000 preference capital of Gamage's (West End). It would seem doubtful whether the parent company will be able to maintain its 5 per cent. dividend distribution this year. Selfridge's position is complicated by its guarantee of the 25 per cent. cumulative dividend on the £450,000 ordinary share capital of William Whiteley's. This guarantee holds good until April, 1942. In the year to January 31, 1930, Selfridge's paid under this guarantee £31,002. This year Whiteley's have declared an interim dividend of 10 per cent. on their ordinary share capital, but that they will earn sufficient to pay a final of 15 per cent. without calling upon Selfridge's for help seems doubtful. The guarantee which Selfridge's gave of the 7 per cent. dividends on the ordinary share capital of Selfridge's Provincial Stores came to an end at August 31st last, and it was satisfactory to observe that the earnings of the Provincial Stores covered the 7 per cent. dividends for that year. It is, therefore, only the question of the Whiteley guarantee which affects the prospects of Selfridge's for the current year.

In the long run the safety of an investment in the shares of these London stores remains largely a question of management. A year ago it appears to have been errors in management which caused Gamage's to write exceptional amounts off the value of stocks and the trouble which Selfridge's have had in reorganising Whiteley's seems attributable to the defects of the old organisation. On the other hand the prosperity of John Barker and Harrods is largely due to the excellent management which they have enjoyed.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 7.	October 9.

HARDLY a single ray of hope this week penetrated the gloom which has lately been overhanging the share markets. The weight of political events was not quite so oppressive, however, and the chief German issues remained fairly steady pending further developments. The decline in commodity prices, particularly those of tin, copper and rubber, continued, and though there were occasional signs of a professional disposition to pick up good-class shares, the public gave no intimation that it was preparing to take any part in the proceedings. The week opened with news of a further wave of selling on Wall Street, and the International descriptions made heavy weather in the "Street" market, though a better tone later supervened. Stock price indices continued their steady downward drift, and everything pointed to fresh low levels for the year.

Following the short-lived display of activity which characterised the market at the close of last week, Gilt-edged early developed a quiet tone, and business was on a very small scale. War Loan was a good feature, but securities reflected the further drop in sterling, and the increase in public expenditure during the first half of the year, and some weakness ensued. Indian loans were dull at first, but closed quietly steady. Dealings opened in the new Ceylon loan on Wednesday, and the stock soon went to a premium. Australian issues enjoyed a marked recovery on Imperial Conference prospects, and reassuring utterances from Mr Scullin, stocks in many cases gaining from one to two points. Home Corporations were firm throughout.

In the foreign department, the Sino-Japanese group provided the chief feature of strength, Chinese bonds further improving on the latest peace moves and encouraging news regarding the Salt loans. German loans remained weak, but there was no recurrence of last week's heavy liquidation. French "rentes" moved within

narrow limits, but Poland Sevens were a weak spot. South American issues were flat, and Chile Sixes were sold to effect a "straddle," while Brazilians suffered from Continental realisations. Argentine loans were fairly firm, but San Paulos were a trifle heavy.

Home Rails were again utterly depressed on one of the worst batch of traffics yet recorded. Prior charges remained steady, but the junior stocks were all marked down a fraction. Interest centred on Metropolitans, which received attention on the prospect of the London traffic amalgamation and continued to rise. Buyers were again in evidence for Undergrounds, "traffics" again comparing favourably with last year's figures. Among Foreign Rails, Argentines were fairly steady despite poor returns, and were helped by a better exchange position. Antofagastas and Nitrates declined on the interim dividend announcements.

Dullness characterised the opening of the Industrial market in almost all sections, but the better tone of New York on Wednesday, and a certain amount of profit-taking inaugurated a firmer tendency later in the week. Among the "Record" leaders, Columbia were a weak spot at first, and Vocalions receded, but a general improvement occurred subsequently. Among Iron and Steel shares, Babcocks advanced on a satisfactory interim dividend. Interest in Electricals focussed on the new General Electric debentures, dealings in which opened at a premium. Equipment shares, however, were not popular, and Associated weakened. Stores were dull, International Teas suffered, and Home and Colonial were marked down, though Unilevers enjoyed a mild recovery. There was little disposition to support Rayon and Textile shares, and prices tended downwards. Motors were irregular, but Austins hardened on the report, details of which are found on p. 638. Breweries had an undecided appearance, and little interest was taken in Tobacco shares. Triplex reflected an increase in profits. Bank and Insurance shares were irregular, and movements were slight.

Conditions in the Rubber share market continued to have a very idle aspect, and the low level of the commodity, which touched 3½d., gave little promise of renewed activity, though prices were fairly well maintained among the mixed producers. Tea shares held the advance which they achieved last week, and continued to strengthen, with Allynugers leading. Oil shares were irregular, Shells, Burmahs and Anglo-Persian declining, while Lobitos and Canadian Eagles improved.

Conditions in the Mining market were overshadowed by a further sharp slump in the price of copper, tin and lead, and the tone was generally quiet. Kafirs were heavily sold from Paris, and Central Mining lost as much as 15s. to 13½, while Gold Fields, Rand Mines and Union Corporation all shared in the decline. Movements were very restricted among Northern Rhodesians, and few changes were recorded. Diamond shares were dull, and De Beers continued to fall, but Tintos advanced smartly at the close on the improved price of copper, after repeated losses throughout the week.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets opened this week with a resumption of forced liquidation, and the movement, which initially consisted of selling drives at individual stocks and groups, later developed into a pronounced break. New low levels were recorded for the present slump and also for the year, and on Tuesday four and a half million shares changed hands, the recession receiving a further impetus from the failure and suspension of a large brokerage house. Call money dropped to 1½ per cent. for the first time since 1915, but the fact attracted little attention. Scattered bulls claimed to see signs of the long-awaited seasonal revival, but renewed weakness in commodity prices, especially of grain and oil, went far to undermine confidence. A change for the better took place on Wednesday, however, and after an irregular opening, a brisk demand arose for certain specialties, and the bears hurried to cover. Steady investment buying was a feature in the better-class issues, while brokers reported a sizeable volume of foreign business. Reserve officials did their best to avoid forcing credit liquidation, while a slight improvement in the prices of some commodities brought renewed courage. If the recovery holds it will have brought to a close a "bear" movement wave unequalled in point of duration even by the dark days of October last.

Continued on page 630.)

£4% TREASURY BONDS, 1934-1936.

Interest payable half-yearly on the 15th April and the 15th October.

ISSUE OF BONDS BY TENDER.

MINIMUM PRICE £100: 10s. PER CENT.

A First Interest payment of £1: 2s. per £100 Bond will be made on the 15th April, 1931.

This Loan is an investment authorised by "The Trustee Act, 1925," subject as regards securities payable to bearer to the provisions of section 7 of that Act.

THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND give notice that they are authorised to receive tenders for the above-mentioned Bonds to be created by the Lords Commissioners of His Majesty's Treasury.

The Principal and Interest of the Bonds will be chargeable on the Consolidated Fund of the United Kingdom.

If not previously redeemed, the Bonds will be repaid at par on the 15th April, 1936, but His Majesty's Treasury reserve to themselves the right to redeem the Bonds at par at any time on or after the 15th April, 1934, on three calendar months' notice being given in the London Gazette.

The Bonds will be issued in denominations of £50, £100, £200, £500, £1,000 and £5,000.

The Bonds may be registered, free of cost, in the books of the Bank of England, as—

1. "Transferable in the Bank Transfer Books," or
2. "Transferable by Deed";

Holdings of Registered Bonds, which will be transferable in any sums which are multiples of one penny, may be re-converted at any time in whole or in part (in multiples of £50) into Bonds to Bearer with coupons attached.

Interest will be paid half-yearly on the 15th April and the 15th October. A first payment of £1 2s. per £100 will be made on the 15th April, 1931. Dividend warrants for interest on Registered holdings will be forwarded by post; Income Tax will be deducted at the source from dividends of more than £5 per annum. Interest on Bonds to Bearer will be paid by coupon.

Powers of Attorney, Transfers and Bonds to Bearer will be free of Stamp Duty.

This issue will not be regarded as a "Loan issued for the purposes of the present war" within the meaning of Rule 3, Schedule C, of the Income Tax Act, 1918.

Tenders must be delivered at the Chief Cashier's Office, Bank of England, before 1 o'clock on Thursday, October 9, 1930, and a deposit of £10 per Cent. upon the nominal amount of the Bonds tendered for must be paid at the time of the delivery of the tender; the deposit must not be enclosed in the tender.

Where no allotment is made, the deposit will be returned in full; in the case of partial allotment the sum deposited in excess of £10 per Cent. upon the amount of Bonds allotted will be returned.

Tenders must be for sums of £10,000 or multiples thereof. Each Tender must state what amount of money will be given for each £100 Bond.

The minimum price, below which no Tender will be accepted, has been fixed at £100 10s. per £100 Bond. All tenders must be at prices which are multiples of sixpence.

Tenders at the lowest price accepted may be subject to a *pro rata* diminution. The Lords Commissioners of His Majesty's Treasury reserve the right of rejecting any tenders.

Tenderers will be notified forthwith of the result of their tenders. The balance of the money to be provided for allotments made will be due for payment on Thursday, the 15th January, 1931. Payment in full may, however, be made after allotment under discount at the rate of £1 per Cent. per annum; but in the case of full payments made before 1st December, 1930, discount will only be allowed from the latter date. Failure to pay on or before the 15th January, 1931, the balance due in respect of an allotment will render the deposit liable to forfeiture and the allotment to cancellation.

Fully-paid allotment letters will be exchangeable for Bond Certificates with coupon attached for the dividend due the 15th April, 1931. These Bond Certificates may be inscribed or registered, or they may be exchanged after the 16th March, 1931, for Bonds to Bearer.

A Commission of 2s. 6d. per £100 nominal will be paid to Bankers and Stockbrokers on allotments made in respect of tenders bearing their stamp.

Tenders must be made upon the printed forms which may be obtained at the Bank of England or at any of the Bank's branches; of Messrs. Mullens, Marshall, Steer, Lawford & Co., 13 George Street, Mansion House, E.C. 4; or at any Stock Exchange in the United Kingdom.

BANK OF ENGLAND,
LONDON,

2nd October, 1930.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

PARIS.

Once again the tendency on the Paris Bourse has been very irregular. During the first three weeks of September business took on a slightly more active appearance, with a firming up in most departments. There was, however, no consistency about the movement, and the market was later affected by less and less encouraging advices from abroad—nervousness in New York and Berlin, the renewed weakness of commodity prices, and the result of the German elections. In spite of these unfavourable factors, French "rentes" shared in whatever upward movement there was, and the price of the Young loan was maintained, although the situation resulting from the German elections was still not clear. From September 22nd, however, the tone of the market was noticeably less satisfactory, and prices slowly declined. The Young loan suffered a perceptible reverse, and "rentes" were heavy. At the end of the month the prices of the principal shares and bonds were approximately at the same level as at the opening. Rio Tintos were an especially poor feature. Easy conditions prevailed throughout in the money market, and the settlements of the 15th and the 30th presented no difficulties. Accommodation was obtained *au Parquet* at 1/2 per cent., the same as for the previous month, and at 4 1/2 per cent. *en Coullisse*, against 4 1/2 per cent. at the end of August.

INVESTMENT NOTES.

The Wall Street Slump.—The New York Stock Exchange has experienced this week its third slump of the year. The failure of an important brokerage house—J. A. Sisto and Company—helped to intensify the selling, and prices declined below the level reached in the April slump, which in turn broke the low levels of the great autumn slump last year. If we take the high-level prices in the 1929 boom for representative industrial and railroad stocks as 100, the following indices, based on the

Dow Jones averages, may serve to show clearly the subsequent reactions:—

	30 Industrials.	20 Rails.
Sept. 16, 1929 (1929, high).....	100	100
Nov. 18, 1929 (1929, low)	60.9	76.7
April 15, 1930 (1930, high)	78.5	85.6
June 25, 1930 (first reaction)	57.7	68.4
July 28, 1930	64.7	73.5
Aug. 12, 1930 (second reaction)	58.1	69.3
Sept. 10, 1930	65.6	72.6
Sept. 28, 1930 (third reaction)	54.8	66.6

It will be seen that the average prices of leading industrial stocks are now not much more than half the high levels reached in the 1929 boom, while railroad stocks have lost 33 per cent. of their paper values. The movements can be viewed in greater detail by reference to the following table, which is based on figures supplied by the Standard Statistics Company:—

Group Indices.	Highest, 1929.	Lowest, 1929.	April 17, 1930.	June 25.	July 30.	Aug. 13.	Sept. 10.	Oct. 1.
335 Industrials.....	218.9	134.5	172.7	130.6	140.8	134.7	144.0	126.6
33 Rails.....	173.5	127.8	142.1	117.2	123.9	119.5	124.9	116.5
34 Utilities.....	330.4	177.6	266.0	202.8	216.9	205.4	223.8	199.5
Total, 402 stocks	228.1	140.3	182.7	139.3	150.1	143.4	153.6	136.5

The present reaction in values has assumed serious proportions, but there is this difference between this and the slump in June—that the public is not so deeply involved as it was in June last, and that the present decline is not so steep. The new wave of liquidation this week started under pressure of the fresh slump in commodity prices. The exaggerated news of political unrest in Germany and South America served to upset the nerves of traders in Wall Street, while domestic trade reports continued to shake confidence in a business recovery. The price-cutting in the gasoline markets and the weakness of copper further increased "bearish" sentiments. It was pointed out that there are still some twelve billions of security loans with the banks, and that so far no deflation of this position has been attempted. Obviously, the decline in market values is likely to force the liquidation of many bank loans and add to the rout in markets. On Wednesday, a sharp recovery occurred, although the volume of sales was lower at 3,147,000. Rubber, wheat and cotton stimulated investment buying, and there was a general rush of the bears to cover.

A Treasury Bond Issue.—In view of the persistent rumours which have lately been abroad in the City with regard to the imminence of a large conversion operation, the announcement on Thursday of a short-term Treasury bond issue, the proceeds of which would be used on January 15th next to repay the 4 per cent. (income tax compounded) War Loan, 1923-42, created considerable interest in the market. The issue takes the form of an offer for sale by tender of 4 per cent. Treasury bonds at a minimum price of £100 10s. per cent., at which price they allow a flat yield of £3 19s. 7d. per cent. The loan is a trustee security, repayable at par on April 15, 1936, but the Treasury reserve the right to redeem the bonds at par at any time on or after April 15, 1934, on three months' notice. Tenders must be for sums of £10,000 or multiples thereof, and applications must be received at the Bank of England not later than Thursday, October 9th. The outstanding amount of the 4 per cent. War Loan, which is at present quoted at about 100 1/2, is £75,144,120. While it is probable that tenders for the new bonds will approximate to the minimum price, the yield obtainable must be regarded as a fairly satisfactory return in the light of present money market conditions, and though hardly attractive to the ordinary investor, should find favour with institutions which habitually deal in short-term securities.

Electrical Power in Canada.—The Royal Bank of Canada recently published a circular dealing with the development of power in Canada. At present Canada ranks as the third largest producer of electrical energy in the world, the United States of America and Germany holding first and second places. The following table

gives a comparison of the investment in, and production of, power in these countries and in Great Britain:—

	Investment (in billion \$).	Electrical Power Production (billion kilowatt hours).	Investment per k.w.h. of production. Cents.
Canada	1.0	18.0	5.5
Germany	2.7	34.0	7.9
U.S.A.	11.0	125.0	8.8
Great Britain	1.5	16.2	9.3

Great Britain has an investment 50 per cent. larger but a production figure 10 per cent. smaller than that of Canada. According to the Royal Bank, the new power projects on hand in Canada will necessitate the expenditure of \$100 millions a year during each of the next three years. Can this new power output be utilised and made to earn adequate profits? It is, of course, essential that in a period of development large amounts of capital should be raised on which revenue will not be earned for some years, but the Royal Bank of Canada believes that the normal rate of expansion of established industries and the requirements of new industries which are being attracted to Canada, should absorb the new power as it comes on the market. The bank somewhat vitiates this argument by adding that cheap power, in itself, is rarely a decisive factor in the location of a manufacturing establishment. Apart from pulp and paper and aluminium there are few industries in which the cost of power constitutes 10 per cent. of total manufacturing costs, so that a variation of 20 per cent. in power cost would not ordinarily make a difference of 2 per cent. in total manufacturing costs. In the past five years the average increase in the amount of electrical energy generated in Canada has varied between 10 per cent. and 20 per cent., and the present depression in trade has resulted in an increase in the first five months of 1930 of only 4 per cent. over the amount generated in the corresponding period of 1929. If the trade depression lasts for another year the rapid development of power in Canada may bring a number of serious problems in its train.

Austin Motor Company.—The accounts of this company for the seven months to July 31st last record a trading profit of £858,187, equal to £1,471,092 for a full year, compared with a gross profit for the twelve months ended December 31st last of £1,297,446. Together with the balance of £75,952 brought in from the last account, there is available £934,089. Directors' fees require £2,375, depreciation and maintenance £242,670, income tax £150,000, and debenture interest £78,750. Preference dividend absorbs £42,911 and preferred ordinary dividend £67,813, while, as already announced, a dividend of 60 per cent. is paid on the £150,000 ordinary capital, requiring, less tax, £69,750, against 20 per cent. for the previous twelve months:—

* 15 months.

† 7 months.

‡ Including 3 years' arrears on 6 per cent. pref.

‡ Including 6 1/2 years' arrears on 6 per cent. pref.

The sum of £279,820 is carried forward, against £75,952 brought in. The cash item appears this year in the balance sheet at £1,129,118, compared with £704,481 in the preceding accounts, while stocks and tools are down from £1,870,644 to £1,166,936. The directors report that the new prices operating from September 1st, coupled with the new models, have been favourably

received, and that the sales turnover since July 31, 1930, to date, shows a distinct improvement. Owing to the fact that the manufacture of the 7-h.p. car by the American Austin Car Company, Inc., was only in its initial stages, no licence fees were received during the period under review. The ordinary 5s. shares are at present quoted at about 89s.

The Borneo Company.—For the first time since its incorporation as a public company in 1922, the Borneo Company records a decline in profits. After deduction of £5,000 for directors' fees, £13,865, against £13,026, for depreciation, and £16,000 for taxation, net revenue totals only £82,162, compared with £113,986 for the previous twelve months. Dividend on the 7 1/2 per cent. preference shares requires £24,215, while the ordinary shares receive 6 per cent. for the year, against 9 per cent. in 1929, and absorb £28,233, out of £57,947 earned. A further sum of £15,000 is placed to general reserve account, compared with an allocation last year of £40,000, raising that item to £340,000. The sum of £76,796 is carried forward, an increase of £14,644 on the amount brought in.

Year to March 31st.	1928.	1929.	1930.

In the following table the percentage earnings and payments on the ordinary capital are set out year by year since 1922.

Year to March 31st	Earned %	Paid %	Year to March 31st	Earned %	Paid %
1922	2.9	Nil	1927	16.1	8
1923	3.3	5	1928	17.0	8
1924	5.4	5	1929	18.5	9
1925	6.8	6	1930	12.3	6
1926	13.1	7			

The directors attribute the current fall in profits to bad trading conditions, and particularly to the decline in the values of practically all Eastern produce, especially of rubber, tea, sugar and tin, which led to a diminished purchasing power in the area in which the company trades. The delivery of teak was maintained, and sales were made at remunerative prices; but, as regards the Haboka Tea Estate, though the crop was 1,065,806 lbs., against 1,048,918 lbs. last year, the company registered a

HARRIS, FORBES & COMPANY LTD

GOVERNMENT, MUNICIPAL,
RAILWAY, PUBLIC UTILITY,
INVESTMENT TRUST AND
INDUSTRIAL FINANCING

small loss as a result of the low level of tea prices. The results of the Borneo Company's other subsidiaries, Borneo Motors, Ltd., and Alexandra Brickworks, Ltd., were also adversely affected by general conditions, but both companies showed a profit. The fall in the price of manufactured articles has necessitated writing down stocks of merchandise, while plant, stocks of teak and produce, stores and investments all appear in the balance sheet at a lower figure, the balance-sheet total being £2,457,246, against £2,751,440. The position is satisfactorily liquid, available assets exceeding current liabilities by some £350,000. The 7½ per cent. preference shares, which are convertible into ordinary shares within ten years from October 1, 1922, on one month's notice from the holder, are quoted at 22s. 6d., and the ordinary shares at 18s. 9d., at which prices both classes of share offer a yield of about £6 13s. 4d. per cent.

First Co-operative Investment Trust.—The directors of the First Co-operative Investment Trust are to be congratulated on their persistence in reducing dividends. It takes courage to carry through an unpopular, albeit essential, programme of financial conservatism after the shareholders had become accustomed to the imprudent dividend policy of 7 per cent. per annum. For the half-year ended July 31, 1930, the interim dividend is to be 2 per cent., against 2½ per cent. in the previous half-year and 3 per cent. in the half-year to July, 1929. The net revenue for the past half-year is £48,231, as compared with £59,678 in the corresponding period of 1929. This would have permitted an interim dividend of 2½ per cent., but the directors have wisely decided to transfer £10,000 (over ½ per cent.) to reserve and to carry forward £8,273. On the book value of the investments of £1,980,689 at July 31, 1930, there was a depreciation of 21.8 per cent., which is reduced to 17.75 per cent. if credit is taken for the total reserves of £80,203. This is serious enough, but the directors are doing their best to improve the position by gradually increasing the proportion of first-class bonds to the total holdings. The distribution of the Trust's holdings at July 31st last was as follows: 51.36 per cent. in bonds and debentures, 16.05 per cent. in preference shares and 32.59 per cent. in ordinary and deferred shares. The capital now consists of £1,659,006 in 14,451,912 ordinary shares of 2s. and 42,763 withdrawable preference shares of £5. It is proposed to alter the articles of the Trust to make the ordinary shares transferable, but not withdrawable. It has long been impossible to allow members to obtain repayment of shares at par in view of the depreciation in the Trust's holdings, and the Trust has therefore been offering facilities for bringing buyers and sellers together at agreed prices. The new article proposed allows the directors to repay members direct, if funds of the Trust are available, at rates to be agreed upon in writing between the board and the member. Another proposed amendment to the articles concerns the payment of directors' fees. Under Rule 47 the directors were not entitled to any remuneration unless a dividend of not less than 5 per cent. is paid on the ordinary share capital. It is proposed instead that the directors should be paid in respect of each half-year a sum calculated at the rate of one-eighth of one per cent. of the issued and paid-up share and loan capital. Shareholders may object that as the directors obtained very high fees in the halcyon past, taking all the co-operative trusts together, they should forgo their fees in the lean times; but we would hardly regard it as sound policy to leave any inducement to the directors to declare 5 per cent. dividends when caution would dictate 4 per cent. The co-operative trusts, since Mr Emil Davies announced a radical change of policy, are, we believe, now being put into better shape, but it is unfortunate that they should have to lose in the process most of the characteristics of a "co-operative" association.

Richard Thomas and Company.—The advisory committee, consisting of Mr F. A. Szarvasy, Sir Gilbert Garnsey and Mr W. W. Paine, which was appointed in December, 1928, to consider the problem of reorganising the share capital of this tinplate and steel manufacturing company, have reported this week to the directors. The committee state that after taking into consideration the results of the experiments at Redbourn, which were understood to have resulted in a saving during the current financial year of £40,000, they have concluded that share capital to the extent of approximately £3½ millions has been lost or is at present unrepresented by available assets. Their conclusion was arrived at after taking into consideration the directors' view that, under existing conditions, a net annual profit of £250,000 could be earned after paying all fixed charges and providing approximately £120,000 per annum for depreciation. The floating indebtedness of the company, which at the time of the committee's appointment totalled about £1,200,000, had been reduced by about £300,000, and the committee had been informed that the company had made arrangements with the bankers, subject to satisfactory progress, for the existing indebtedness to remain outstanding, provided that a fixed portion, of not less than £100,000 per annum, of the net profits was applied towards its reduction before any distribution was made to shareholders. The committee suggest that any scheme for the reorganisation of the present share capital should be linked with the raising of necessary new money, "which would be an extremely difficult operation at the present time." They therefore consider it desirable, before formulating a scheme of reorganisation, to have further experience for a year or two of the working of the business under the new arrangements. In a circular addressed to shareholders the directors of the company express their agreement with the conclusions of the committee, and state that, while the expectations of the board have been fully realised, they are unable to recommend the payment of a dividend for the current year, though "it may reasonably be expected, if the earnings of the past year are maintained, that payments of dividends on the preference shares may be resumed next year on a reduced scale." No dividend has been paid on the £3,120,346 preference capital outstanding since 1926 and on the £2,790,560 ordinary capital since 1924.

Tyre Investment Trust.—The accounts of this company for the year to May 31st last show income totalling £59,667, against £66,809 for the previous fifteen months. Considerable savings have been effected in management expenses, while the items debenture interest and reserve for taxation which last year required £10,918, do not recur. Net profit is £9,078 less at £41,344. Preference dividend, paid for the fifteen months from March 1, 1929, to May last, absorbs £69,125, after deducting tax of £18,375. Income tax reserve of £12,500 no longer required is transferred to profit and loss account.

Period ended	Feb. 29, 1928.	May 31, 1929.	May 31, 1930.

Decrease in carry-forward	20,871	19,578	15,28

* For 12 months ended Feb. 28, 1929. † For 15 months.

Of the total assets of £1,913,860, a holding of 1,200,000 6s. 8d. ordinary shares of the Dunlop Rubber Company accounts for £1,912,988. At this valuation each share is worth about 32s., while the present market quotation of the shares is 11s., giving a total value of £660,000. The holding is divided into 1,050,000 fully-paid 6s. 8d. shares and 150,000 shares still to be allotted by the Dunlop Rubber Company. The allotment is governed by an agreement dated July 27, 1929, supplemental to that of November 2, 1928, by which the Trust undertakes not to require the company to allot 150,000 of the shares due pending the complete repayment of the loan made by the company to the Trust, while, until the shares are allotted, the company will pay the Trust sums equivalent to the

net amount of any dividends declared on 150,000 ordinary shares of the company. The amount of £47,100 received by the Trust from the company for the past financial year represented a dividend of 15 per cent., less tax, on 1,200,000 ordinary shares.

Chairmen's Speeches.—At the general meeting of the Gaumont British Picture Corporation, on September 28th, the chairman, Mr Isidore Ostrer, declared that the current year's profit up to the present date had already shown a considerable increase over that of the corresponding period last year. This is welcome news, seeing that the Corporation only earned 3 per cent. last year on the actual cash subscribed on its ordinary share capital, the greater part of which had been issued at high premiums. Mr Ostrer also announced that the Corporation was enlarging its studios at Shepherd's Bush to enable them to produce 30 to 40 films a year and was engaged in a big theatre-construction programme in London and "key" provincial towns. Gaumont-British, he added, now controlled about £20 millions worth of assets—more than 25 per cent. in value of the total investment in cinema theatres in the country. At the general meeting of Selfridge Provincial Stores, on September 26th, Mr Gordon Selfridge referred to attacks on the company's credit and was at pains to show that the subsidiary companies' earnings had been maintained, indeed slightly increased, and that their cash position was strong. He could see no greater difficulties ahead than those the companies had already met, and he declared that they were fully equipped to take every advantage of a turn in trade when it came. He added that the book value of the fixed assets was much below their present replacement value, and explained that the small difference in the values this year was due to the closing down of two small concerns, valued at £17,663. An action, at the company's instance, for alleged libel is pending against the Financial Telegraph, Ltd.

Bajoe Kidoel Rubber and Produce.—The accounts of this holding company for the year to March 31 last reflect the sharp decline in rubber and coffee prices. Net profit is £11,023 down at £19,353, of which £16,666 is supplied by the operating company, N.V. Rubber Cultuur Maatschappij Bajoe Kidoel, in the form of a dividend, compared with £28,394 last year. The ordinary capital of £218,160 receives a distribution of 5 per cent. out of 8.9 per cent. earned, against 12½ per cent. out of 13.8 per cent. earned. No further allocation is made to reserve fund, which stands at £50,000, but £41,348 is carried forward, against £32,903 brought in.

	1928.	Year to March 31, 1929.	1930.

Other allocations	...	273	...
Carried forward	35,070	32,903	41,348

The trend of percentage earnings and payments on the ordinary capital since 1923 is set forth in the following table:—

ORDINARY CAPITAL.					
Year to March 31.	Earned %	Paid %	Year to March 31.	Earned %	Paid %
1923	14.7	12.5	1927	42.7	30.0
1924	14.9	15.0	1928	14.0	10.0
1925	28.4	25.0	1929	13.8	12.5
1926	50.6	45.0	1930	8.9	5.0

The report states that the amount of rubber harvested during the year was 1,724,540 lbs., compared with 1,579,648 lbs., and the amount of coffee 18,330 piculs, against 13,385 piculs. The average net sale price of rubber was 6.56d. per lb., compared with 9.17d. per lb.,

PRELIMINARY NOTICE.

J. DARNELL AND SON, LIMITED.

(Incorporated under the Companies Act, 1929.)

WHOLESALE BOOT & SHOE FACTORS

SHARE CAPITAL :

Authorised.	Issued.
£250,000	£250,000
Divided into 500,000 Ordinary Shares of 10/- each.	
There are no Debentures or Mortgages outstanding.	

OFFER FOR SALE OF 499,000 Fully-Paid Ordinary Shares of 10/- each AT THE PRICE OF 16/- PER SHARE.

- J. Darnell and Son, Limited, was formed to acquire as from 31st December, 1929, the business of Boot and Shoe Factors established by the late Mr. Job Darnell in 1854. The business was commenced in a small store, but it has grown steadily and is to-day one of the leading London Wholesale Houses for all classes of boots and shoes.
- The Company belongs entirely to the Ordinary Shareholders, there being no Debentures or Mortgages outstanding, and no Preference Shares.
- Profits for the past three years have been as follows:—

Year to 31st December, 1927	£63,091
" " " " 1928	£64,644
" " " " 1929	£58,110

The Company is entitled to the profits from December 31st, 1929, which for the current year are estimated at not less than £50,000, and represent approximately 20 per cent. on the Share Capital of the Company.

- It is proposed to use part of the profits earned prior to incorporation of the present Company for writing off the entire Goodwill, and as the preliminary expenses are payable by the Vendors, no intangible assets should appear in next year's Balance Sheet.
- The Company's business is done on practically cash terms, the Management remains in the same hands and the trading territory is being considerable broadened.
- The name of Darnell is one of the best known in the Boot and Shoe trade.

The List will open on Monday next, the 6th instant, and copies of the Offer for Sale and Application Forms can now be obtained from:—

THE BANKERS :

while the average net price realised for coffee was 71s. 2d. per picul, compared with 81s. 8d. In view of the further collapse in the quotations for these commodities since March, the company's immediate prospects cannot be considered too rosy. At their present price of 17s. 6d., the £1 ordinary shares give a yield of about £6 1s. 3d. per cent., allowing for the dividend of 5 per cent.

New Capital Issues in September.—In the following table we show the new capital raised in London by issue to the public and to shareholders in September, and in recent periods.

Monthly Average.	(000's omitted.)			
	United Kingdom.	British Possessions.	Foreign Countries.	Total.
	£	£	£	£
1924	7,051	6,023	4,370	17,444

The month of September opened the autumn season of capital flotations. Sales of National Savings Certificates exceeded encashments by £850,000. The only Government issue was made by the Ceylon Government, which issued £1,750,000 in 4½ per cent. Inscribed Stock at 95, redeemable on November 1, 1935. The largest company issue of the month, and also the only one to the public, was made by Grosvenor House (Park Lane), Ltd., with 500,000 £1 7½ per cent. cumulative preference shares at par. Other large issues included that of Samuel Allsop and Sons, who offered shareholders 466,408 £1 ordinary shares at a premium of 2s. 6d. per share.

New Capital Issues in the United States.—The following table shows the new capital issues in the United States during the first nine months of the year, compared with three preceding years, which we are able to publish below by courtesy of the *Journal of Commerce* of New York:—

UNITED STATES ISSUES. FIRST NINE MONTHS.				
	1927.	1928.	1929.	1930.
Foreign.	Dollars.	Dollars.	Dollars.	Dollars.
Government	643,779,880	675,013,000	71,667,000	566,040,000
Corporate	486,628,625	636,873,482	203,831,347	395,010,000
Domestic.				
Municipal	1,130,603,781	664,499,116	679,863,151	773,677,810
Railroad	672,522,500	555,888,843	392,095,700	965,741,670

Castbury
Maker
of Fine Chocolates.

The effects of the Wall Street slump is clearly shown in the marked reduction in issues for industrial and other purposes. Issues of a less speculative character have, however, been on a much larger scale. The total offerings are lower than for the past two years.

Rhodesian Selection Trust.—From a financial point of view the outstanding feature of last year's operations was the arrangement with the American Metal Corporation, under which a total of £1,500,000 had to be advanced. Of this, £312,500 had been received up to June 30th. The year's expenditure on prospecting and development work on the N'Kana concession brought the total up to £757,800, of which £246,800 has been contributed by the Bwana M'Kubwa Co., and £295,600, relating to the Mufulira area, has been treated as representing part of the cost of the 3,000,000 shares in the company to which the property has been transferred. The two parent concerns, in conjunction with the Chartered company, are financing the Mufulira. Up to February last, work on this area was calculated to have indicated the existence of fully 45,000,000 short tons of sulphide ore, averaging 4.68 per cent. copper. Further drilling has disclosed "additional large tonnages." The mine is being equipped with a view to the treatment of 2,000,000 tons annually. As regards the Selection Trust's own properties, drilling to a recent date on the Chambisi has indicated about 24,000,000 tons of sulphide ore, averaging 3.68 per cent. copper, and on the Baluba 21,000,000 tons, averaging 3.47 per cent. Developments on the former are described as "very encouraging," and work is proceeding; on the latter, operations are for the present in abeyance. Hopeful discoveries have been made on several other areas. The view is entertained that before any of these Northern Rhodesian propositions have attained the production stage, copper will stand much above the level to which it has lately fallen. This belief is based upon the expansion in the consumption of the metal which occurs over a period and upon the fact that some of the large American mines are within sight of exhaustion. Time alone will prove or disprove the accuracy of these anticipations.

Renong Dredging.—Our mining correspondent writes: The decline which took place in the price of tin last year was considerably more than offset by the expansion in the output and some saving in costs. The production totalled 912 tons, as against 654, and the profit came out at £51,200 in place of £40,160. That in these circumstances the dividend should have been reduced from 17½ per cent. to 15 per cent. is due partly to increase in the amounts written off and partly to the caution of the directors, the sum carried forward being £26,400, or £7,140 more than a year ago. The amortisation total of £15,700 included £3,900 prospecting and legal expenses in connection with a neighbouring property, which in the end the company failed to secure. Since the date of the accounts—June 30th—the two dredgers have in turn been shut down for a period of two months, and further restriction is probable. In view of this and the renewed depreciation in tin, the outlook for the current year is obviously none too hopeful.

CAPITAL ISSUES.

The chief issue of the week was the offer of 4 per cent. Treasury bonds, which is discussed in an Investment Note on a previous page. The offer of £1,750,000 4½ per cent. inscribed stock by the Ceylon Government was also open to trustees, and, Ceylon being a popular borrower, the issue was promptly over-subscribed. Grosvenor House (Park Lane) headed the autumn industrial list with 500,000 7½ per cent. cumulative preference shares at par, and J. Darnell and Son, Ltd., boot and shoe factors, followed with an offer of 499,000 ordinary shares of 10s. each at 16s. per share.

Four per cent. Treasury Bonds, 1934-36.—Issue by tender of 4 per cent. Treasury Bonds, 1934-36, minimum price £100½ per cent. The bonds constitute a trustee security. If not previously redeemed, the issue will be repaid at par on April 15, 1936, but the Treasury reserve to themselves the right to redeem the bonds at par at any time on or after April 15, 1934, on three months' notice. Tenders must be for sums of £10,000 or multiples thereof. At the minimum price, the bonds give a flat yield of about £3 19s. per cent.

Ceylon Government.—Four and a half per cent. inscribed stock, 1965. Issue of £1,750,000 at £95 per cent., of which £400,000 has already been placed in the terms of the prospectus. Trustees are authorised to invest in this loan, which is raised to meet the cost of the construction or acquisition of certain public works in the Colony. The loan is secured on the general revenues and assets of the Government of Ceylon, and the principal will be repaid at par on November 1, 1965. A sinking fund will be formed for the redemption of the loan, and half-yearly contributions at the rate of one and a quarter per cent. per annum will be commenced on or before May 1, 1934. The public debt of the Colony on September 19, 1930, amounted to £14,119,193. The stock gives a flat yield of £4 14s. 9d. and a redemption yield of £4 15s. 11d.

J. Darnell and Son, Ltd.—Offer for sale of 499,000 fully-paid ordinary shares of 10s. each at 16s. per share. The company was formed to acquire from the Darnell Trust, Ltd., as from December 31, 1929, the goodwill and assets of a business of boot and shoe factors established in 1854 and converted into a private limited company in 1922 under the style of J. Darnell and Son, Ltd. On the basis of eight months' trading, the directors affirm that the company should earn £50,000 during the current year, representing 20 per cent. on the share capital.

Grosvenor House (Park Lane).—Offer for sale of 500,000 7½ per cent. cumulative preference shares of £1 each at par. The company was incorporated in 1928 and owns a valuable block of service flats in Park Lane. Net profit after debenture interest totalled £111,061 for the year ended June 30, 1930, covering dividend on the present issue 2.9 times.

[Other Stock Exchange information, including the latest dividend announcements, summary of balance sheets, profit and loss figures and shorter notices will be found on page 643 under the heading "Company News."]

COMPANY MEETINGS, &c.

RHODESIAN SELECTION TRUST, LIMITED.
EXTENSIVE DEPOSITS.

The second ordinary general meeting of the Rhodesian Selection Trust, Limited, was held on the 2nd instant, at River Plate House, Finsbury Circus, London.

Mr A. Chester Beatty (chairman of the company) said in the course of his speech:—During the past year prospecting, geological work, and drilling were carried out in Mufulira prior to its being formed into a company and in the areas still held by our company. Drilling was chiefly concentrated on Mufulira, Chambishi, Baluba, and Luansobe, but a certain amount of prospect drilling was also carried out at Kalulushi, Mokambo North and South, Luansobe Extension, and Mutundu South.

SATISFACTORY DRILLING RESULTS.

The drilling carried out during the year was extremely satisfactory, and while in certain of the special grants our work has not yet reached the stage where we can decide as to the value of the ground, we have definitely blocked out three large ore bodies—namely, Mufulira, Chambishi, and Baluba.

In these three properties we have already proved the following quantities of sulphide ore:—

	Tons.	Average % of Copper.
Mufulira	45,000,000	4.68
Chambishi	24,000,000	3.68
Baluba	21,000,000	3.47
Total	90,000,000	4.13

IMPROVED CONDITIONS IN RHODESIA.

During the past year general conditions in Rhodesia have shown a very rapid improvement by the application of scientific methods to the problem of the elimination of the malarial mosquito and by the introduction of modern sanitary methods. Living conditions have been improved to a point where they compare favourably with Europe. By training, and particularly by the use of mechanical equipment underground, the efficiency of the native labour in the mines has made great progress.

During the year a central recruiting bureau was formed, with the result that a decided improvement in both the numbers and quality of natives available was evident within a very short time. I have no hesitation in stating that the supply of both white and native labour is entirely satisfactory and their health conditions good.

In a time like this, when there is a general world-wide depression, and when the price of commodities is considerably below the actual cost of production, it is necessary to take a long view and not be confused by existing prices. Copper at the present price of about £47 per ton is selling below the production cost of more than half the world's mines. There are several reasons why such a condition may continue much longer than is at first apparent.

In the first place, such a drop in price as we have just had must be the result of both over-production and over-buying. The manufacturer buys too far ahead and, because of this, the price rises and in turn the producer strains every effort to equal consumption and to derive the benefits of a high price. Eventually there must be a day of reckoning which, when it arrives, finds all consumers overstocked with the supply of metal. This can mean only one thing—a rapid drop in price and a loss of confidence on the part of both the producer and the consumer. When such a condition exists the manufacturer must, of course, use up his stocks, which in turn must be sold to the ultimate consumer at a time when new work is being curtailed.

On the other hand, the producers of copper attempt to keep their heads above water, and in doing so large numbers of small mines, whose production cost is high, will stop all development work and for a time may actually operate at a cost which shows them a slight profit. The aggregate tonnage that comes from mines of this type is fairly large and will not show a material reduction until a low price is continued for some little time.

INCREASED CONSUMPTION ANTICIPATED.

It is certain that over a period of, say, five years we may look forward with the greatest confidence to the normal increase in copper consumption. Over 60 per cent. of the world's copper is used in the electrical industry and the whole world to-day is increasing its consumption of electrical energy very rapidly. In the United States, where there has been a huge expansion in the quantity of electricity consumed during the last twenty years, we find that the copper consumed *per capita* is increased as follows: In 1912, with a population of 95,000,000, there was a consumption of

8.66 lbs. per person, while in 1928, with a population of 110,000,000, the consumption per person was 16.49 lbs.

In Great Britain in 1912, with a population of 45,000,000, the consumption was 6.98 lbs. per person, and in 1928, with a population of 48,000,000, it was 7.89 lbs. per person. There may be times in the next ten years when too much copper will be produced, but the average consumption during that period should be sufficient to give a fair average price, and I am sure that we can look forward with great confidence to the future of Northern Rhodesia and that there is no cause for alarm because of the present low prices.

The report and accounts were unanimously adopted.

ANGLO-SIAM CORPORATION, LIMITED.

DIFFICULT TRADING CONDITIONS.
DISTRIBUTION OF 27½ PER CENT.

The thirty-third annual ordinary general meeting of the Anglo-Siam Corporation, Ltd., was held, on the 30th ultimo, at 5 St. Helen's Place, London, Mr J. M. Ryrie, the chairman of the corporation, presiding.

After referring to the difficult trading conditions prevailing during the period covered by the accounts, the chairman said that, although the profits for the year ended on March 31st last at £62,134 compared unfavourably with those of recent years, he thought that, when the almost universal depression was taken into account, the result was satisfactory.

The accounts, he mentioned, had been drawn up in accordance with the new Companies Act, and, as all losses had been provided for out of the profits of the year, he considered the reduction in the dividend and bonus on the ordinary shares from 35 per cent. to 27½ per cent. was comparatively small.

Investments had increased from £308,442 to £348,007 during the year, but, in view of the deplorable conditions prevailing in India, he was sorry to say that any scheme of reconstruction of the Bombay Woollen Manufacturing Company or sale of the property which the corporation held as mortgagees had proved impossible.

In dealing with the progress and position of the Siam-Malay Rubber Company, Ltd., in which the corporation was largely interested, the chairman announced that it had been decided, after mature consideration, to bud-graft the 2,320 acres in Nos. 2 and 3 clearings, and that, arising from this, the cost of production would be so reduced that, with rubber at, say, 5d. per pound, a profit could be expected.

Mr Ryrie then dealt at some length with conditions prevailing in Siam, and pointed out the strong currency and financial position of that kingdom.

CURRENT YEAR'S OUTLOOK.

As regarded the outlook for the current year, he was unable to say anything of a favourable nature respecting the probable results of the general trade of the corporation, except that the heavy losses incurred last year were not likely to recur, but, given a good floating season, he looked for satisfactory results from the timber side of the business.

Mr Ryrie, however, looked forward to more activity when confidence in the present low level of prices was established, and remarked that, at values ruling to-day, many commodities were selling below the cost of production.

In view of the important part the corporation had taken in the development of the teak trade of Siam, and, indeed, Siamese trade generally, the chairman was hopeful that, in due course, the corporation would be at least granted a lease of the now closed area forests, he said, involved considerable lock-up of money and a large organisation, and as, in view of this, it was important the corporation should know in good time what they were to expect, he hoped at the earliest opportunity.

The directors' report and statement of accounts for the year ended March 31, 1930, were adopted, and final dividends of 3½ per cent. on the preference shares and 12½ per cent., together with a bonus of 7½ per cent., on the ordinary shares were declared, making a total distribution of 27½ per cent., less tax, on the ordinary shares for the year.

Mr J. M. Ryrie and Mr J. Mackenzie were re-elected directors, and Messrs Turquand Youngs and Company were appointed auditors for the current year.

The proceedings terminated with a vote of thanks to the chairman, directors and staff.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowyer Street, Fleet Street, London, E.C.4.

IMPERIAL SMELTING CORPORATION, LIMITED.

THE FALL IN NON-FERROUS METALS.

Sir Robert Horne (the Chairman) presiding yesterday at Winchester House, E.C., at the first ordinary general meeting of the Imperial Smelting Corporation, Ltd., which was registered and commenced business on August 3, 1929, first dealt with the accounts submitted, and the severe decline in non-ferrous metal prices, pointing that comparing present prices with those ruling in 1925, spelter had fallen from £36 5s. per ton to £14 15s., lead from £35 17s. 4d. per ton to £16 5s., copper from £61 19s. 7d. per ton to £43 17s. 6d., and silver from 34.6404d. per fine ounce to 17.6875d.

HANDICAP OF TAXATION AND FREE IMPORTS.

Having referred to arrangements which had been entered into for future supplies of zinc concentrates, the chairman, continuing, said: While this contract helps us with a reasonable assurance of raw material, and while our works have been made as efficient as possible by large capital expenditure and the employment of a highly trained staff and a skilled and industrious body of workers, it would be folly to forget the handicaps to which an industry such as smelting in this country is subjected in competition with our rivals in other countries. We, and all those who provide services for us are the victims of taxation more grievous than exists anywhere else. It throws a heavy burden on the financial conduct of our business, and tends to impede its development and the adoption of new processes. Not only do these conditions adversely affect our prospects in external markets but, under our present fiscal system, domestic sales are equally menaced when a free entry to the British market is granted to the products of countries where workers in the smelting industry receive at best 5s. to 7s. a day, and where taxation and internal transport costs are a mere tithe of what we have to pay.

It is worth while to observe that we import zinc in all its forms to the extent of over 200,000 tons a year, and that, to obtain and transport this tonnage of imports, about 1,000,000 tons of coal or its equivalent and 1,000,000 man-days of labour have been consumed. We are therefore importing these two items as well, and to sum up, that extent depriving our own people of employment. Our exports of manufactures representing British coal and British labour are taxed wherever they go. There is no reason why all the zinc requirements of the United Kingdom, both for its home and export trades, should not be produced within the Empire, and provide a profitable use for our own resources and more stable employment for our people.

PROSPECTS.

Declining prices have not been confined to the metal markets, but have been general amongst almost all staple commodities. Sugar, tea, coffee, wheat, rubber, wool, cotton, have all suffered a similar fate, and producers of such articles throughout the world are the victims of a consequent serious decline in their revenues. This movement does not represent any orderly adjustment of the world's price levels—it has been sudden and violent, and for this reason has in some cases assumed the character of a catastrophe, seriously disturbing the social as well as the financial and commercial structure of many important countries. Abrupt dislocation of employment has been one of its gravest effects. The first to suffer—and suffer severely—from movements of this character, are debtor countries and those whose industries are in an important degree concerned with the production and distribution of basic commodities. Creditor nations and those largely exporting manufactured goods were, for a short time, only slightly affected, but now with a decline in the purchases of manufactured goods and a heavy reduction in the return on their external investments they, too, are being severely hit.

In this country there has been a tendency to regard the difficulties of the countries engaged in primary production—who in this time of vicissitude find themselves embarrassed by borrowings made for developments—as entirely due to some form of improvidence peculiar to them, the punishment for which has now inexorably arrived. From a pinnacle of high rectitude we have shown a disposition to admonish them with some severity, referring them to the science of economics and warning them to reduce their costs and curtail their expenditure. But, because of the low prices which their produce is fetching, these critics have only gone half-way in their criticism and advice. They would be well advised to turn their gaze homeward. Our own position and practice deserve just as severe scrutiny. We have been and are improvidently dissipating the national resources and spending with a folly that becomes more and more evident when misfortune in other countries lessens or destroys the yield on our overseas investments and decimates the demand for our manufactures. These troubles in other countries must add to our domestic difficulties, already grave enough. Our national revenues will be materially affected. We shall have less to spend. It is incumbent

on us, equally with the debtor countries, to reduce our costs, increase our efficiency, cut out public and private extravagance, and reduce the overwhelming burden of national expenditure, if we are to escape conditions which might easily assume the character of a crisis.

Whether this adverse movement in commodity prices is nearing its end, or whether a recovery is now near at hand are questions which are being actively debated in every important centre. The mal-distribution—and perhaps the insufficiency—of the world's gold supply and the destruction, by the forced decline in silver values, of the purchasing power of the great Eastern nations are important factors in causing existing difficulties. I humbly agree with the views recently enunciated by Sir Henry Strakosch that the cause of the present low prices is not to be found in the over-production of commodities, but in the failure of the medium of exchange. The increased production which we have witnessed is not lopsided or confined to a narrow limit of articles, but extends over almost the whole range of those commodities which are usually most in demand. Logically this ought not to lead to any disturbance in markets. The world, indeed, ought to benefit through greater well-being.

EXPLANATION OF PRESENT TROUBLES.

The explanation of the present trouble seems to me clear. Low prices of commodities may be otherwise expressed as appreciation of gold, and nothing is worse for trade than wide fluctuations in the value of gold. This was foreseen by a great conference of economists of all European nations over which I had the honour to preside at Genoa in 1922; and, in recommending a reversion to the gold standard, we at the same time proposed that measures should be taken to co-ordinate the demand for gold in order to avoid such fluctuations in its purchasing power as might arise from the competitive efforts of a number of countries to secure metallic reserves. To this end the conference suggested close co-operation on the part of the central banks, with a view to "preventing undue fluctuations in the purchasing power of gold." This task, unfortunately, still remains for the banks to accomplish. The inauguration of the International Bank for Reparations might afford an opportunity for tackling a problem whose vital importance has been only too clearly demonstrated by the misfortunes which have come upon us for that lack of co-ordination which has resulted in the sterilisation of gold in considerable quantities in some countries, while the trade of the world is impeded for want of a sufficient quantity of money to effect the necessary exchanges of goods.

If due attention were given to this aspect of the world-problem, I believe that a solution could be found which would, at least, tend to alleviate the world's distresses. The whole question ought to be studied in conjunction with the statistics of gold production, which seem to warn us that in a few years we may be faced not only with the difficulty of mal-distribution of the precious metal, but also of its insufficiency to meet the demands of world trade. At the same time, consideration ought to be given to the position of silver, whose loss of value, brought about to a large extent by Government action, has grievously impaired the purchasing power of India and China and helped to destroy the prosperity of Lancashire, and all other regions which depend upon Eastern trade.

FALL IN PRICES OVERDONE.

Estimating the situation to-day as best I can, it seems to me that the fall in commodity prices has now been overdone. There have been similar occurrences in the past, but none so wide in extent or so serious in result. If experience furnishes any guide, it would appear safe to expect the great gap between the selling prices of commodities and their cost of production to be bridged—in greater degree by lowered costs, and, to a lesser extent, by some recovery in prices from their present depressed levels.

The prospect of rapid recovery is, however, far from promising. No group of industries has felt the effects of the world-wide industrial malaise more severely than the base metal industries, and it speaks well for the equipment and arrangement of your concerns that they have stood up so well against the violent and sudden market movements, to which I have already referred. We have to accustom ourselves to a lower level of prices; but by effort and economy and sacrifice, fairly distributed amongst all concerned, we feel that we can face the future with calm—a calm which would grow into assurance if we could rely upon the Government to mitigate the unequal burdens which industry has to bear in this country; and to make the conditions of competition between ourselves and our foreign rivals fair to the products of our own people.

The report and accounts were unanimously adopted and a dividend of 5 per cent., less tax, on the ordinary shares was declared.

GAUMONT-BRITISH PICTURE CORPORATION, LIMITED.

CONSIDERABLY INCREASED PROFITS.

The third annual general meeting of Gaumont-British Picture Corporation, Ltd., was held, on the 26th ultimo, at Film House, 142-150 Wardour Street, London, Mr I. Ostrer (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net result of the year's working was an increase in revenue earnings of £81,758. That increase was offset to some extent by the charge of £56,824 for interest, being the debit balance on that account written off. A material saving in that item was anticipated in the future. The directors recommended a dividend of 6 per cent. on the ordinary shares, the same as in the two preceding years. He did not think the results could be regarded as other than satisfactory, particularly when taking into consideration the conservative methods that had been applied in arriving at the results. The profit to date already showed a considerable increase over that of the corresponding period of last year.

Since the accounts closed, they had taken over the management of United Picture Theatres, Ltd., owning or controlling 17 theatres, and since last year associated and subsidiary companies had completed and opened a number of new theatres—some of which ranked with the finest in the world—rebuilt some, and acquired others. They had also in course of construction theatres in the most important districts around London and in some of the principal key centres in the provinces. In addition, it was their definite policy to keep their theatres and properties in first-class condition, and wherever possible to bring even their oldest theatres into line with the most modern.

By its association with some of the principal British producing companies, the corporation controlled an output of British films that was second to none, and might justifiably claim to take the leading part in the world of British films.

When he reminded them that there had come from those units such famous films as "Journey's End," "Rookery Nook," "High Treason," "Alf's Button," "Splinters," "The Great Game," and "Symphony in Two Flats," they would appreciate the fact that their corporation was definitely unwilling to take second place in production to any other company operating in the kingdom.

The report was unanimously adopted.

D. GESTETNER, LIMITED.

RECORD OF PROSPERITY.

Mr Sigmund Gestetner, chairman of the company, presided at the annual general meeting of D. Gestetner, Ltd., held, on the 30th ultimo, at Aldwych House, London. Mr Gestetner said that the figure of profit for the past year represented a record of prosperity since the commencement of the business by Mr D. Gestetner some forty-nine years ago. Most of those present would agree with him that these were not times of general prosperity; in fact, it would be no exaggeration if he said that, throughout a great part of the period covered by these accounts, the world had been passing through an unparalleled economic crisis. They in the business were confident that their products were easily first of their kind, and the constant improvements which emanated from Mr D. Gestetner and the research staff, coupled with the energy and enterprise of their sales organisations, enabled them to maintain their prosperity in times when prosperity was hard to come by. As they were all aware, the Gestetner business was not confined to this country; in fact, they were doing a very large business with all the countries of the world. He felt he could truthfully say that the same courage and energy that had been shown by the home staff had been employed by their associates abroad. He felt that it would be the wish of many friends, in many parts of the world, if he, the chairman, paid a tribute to the inventive genius, courage, and determination of their founder,

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name
Address

Mr D. Gestetner, who had started the business from nothing and had brought it where it was. Those same qualities, even though they had been used for half a century, had not been used up, and would not be lacking in the future.

Turning to the balance-sheet, the main item of change was an increase of just over £140,000 in the investments in subsidiary companies. This figure practically represented an increase in their interest in the Gestetner Duplicator Corporation of New Jersey. The corporation had already established branches in New York, Buffalo, Newark, Philadelphia, Washington, Chicago, Baltimore, and Boston. Everything was proceeding according to plan. Breaking into a new market, and especially the American market, was no easy matter, and they realised that they would have their difficulties and their struggles; but once the necessary spadework had been done, and their machines became known, they were confident that they would attain success.

The report was unanimously adopted.

CITY AND INTERNATIONAL TRUST, LIMITED.

REVENUE POSITION MAINTAINED.

The ordinary general meeting of the City and International Trust, Ltd., was held, on the 30th ultimo, at Winchester House, London.

Mr. Louis H. Kiek (chairman and managing director) said that after paying the dividend on the preferred stock they had £38,136, or slightly over 9½ per cent. on the ordinary stock. They recommended a final dividend of 4 per cent., making 6½ per cent. for the year. Considering the anxieties and difficulties of the period, he thought the result gave cause for moderate satisfaction.

For their new book year, they must be prepared for a possibly less satisfactory diet, for they could not expect to be entirely immune from the consequences of the universal economic crisis. They might, however, as far as their own company was concerned, derive comfort from the fact that their net revenue prospects for the year appeared reasonably satisfactory. Subject to unforeseen political or economic complications, there appeared solid ground for the view that lower interest rates than had prevailed for the last few years would rule for some time to come and that consequently those easier conditions would gradually exercise their effect also on the long-term investment market.

He was therefore fairly confident that in their new year they need not apprehend any increased cost in bank interest charges. Incidentally, the investment demand already in evidence for high-class securities would sooner or later also turn to investment trust company debentures, whose remarkable record of security and wide margin of revenue cover had of late been singularly overlooked.

Their investments numbered 334, and after deducting capital profit on the year's changes in investments, they represented a book value of £1,831,383, or an average of £5,483, as against 320 and £5,465 respectively last year. About 48 per cent. of their securities were of the fixed interest-bearing type. Next came 13.6 per cent. in preference shares, the remaining 38.8 per cent. being in ordinary stocks or shares. In the light of their revenue position he trusted it would be conceded that they might look with comparative equanimity upon the depreciation which their investments showed at this time of abnormal depression.

The most crying need to-day was relief from the burden of excessive taxation, which was now levying direct tribute on our industrial and commercial working capital and was thus crippling enterprise and increasing unemployment. The immediate outlook at home and abroad remained obscure, but he was convinced that they would successfully emerge from their protracted ordeal.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the ten days ended Sept. 30, 1930, amounted to £9,591,700, against ordinary expenditure of £13,093,400. After allocating £1,552,500 to the Sinking Fund, and having allowed for operations, as shown below, increased the National Debt by £5,075,000 to £7,675,000,000:—

Oct. 2.....	Oct. 2 Bars sold.....
Total.....	Total.....

Messrs. Samuel Montagu and Company write on October 1, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £156,304,901 on the 24th ultimo (as compared with £156,419,699 on the previous Wednesday), and represents an increase of £10,344,817 since January 1st last. Gold from South Africa to the value of £390,000 was available in the open market yesterday. At the fixed price of 84s. 11 1/2d. per fine ounce France secured £72,000. To-day a further £600,000 was offered from an outside source, besides about £30,000 of West African gold, the whole being taken for France at 84s. 11 1/2d. per fine ounce.

There have been further withdrawals from the Bank of England of gold for despatch to France after refining, but the movements of the French exchange being more in favour of sterling, some of the arrangements for refining previously made have been cancelled. Movements of gold at the Bank of England during the week show a net efflux of £748,052. Receipts totalled £9,088 and withdrawals £757,140. Of the latter, £25,000 was in sovereigns and £732,140 in bar gold, of which about £480,000 was for France and £100,000 for Switzerland.

SILVER.

A weaker tendency has been manifest in the silver market during the past week, and from 16 1/2d. quoted on the 25th ultimo the price moved steadily downward. The pressure has been mainly from China, further weak advices from Shanghai yesterday being followed by a fall of 1d. here, lowering the quotation to 16 1/2d. There have been some offerings on Continental account, and America has operated moderately both ways. The weakness in the Shanghai exchange is probably due to the adjustment by Chinese operators of oversold positions in gold exchanges, and the outlook for the moment is therefore somewhat uncertain.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 22nd ultimo to mid-day on the 29th ultimo:—

IMPORTS.	£	EXPORTS.	£
Mexico.....	101,725	British India.....	7,402
Canada.....	30,452	New Zealand.....	9,500
Australia.....	18,098	Other countries.....	11,057
Other countries.....	8,339		
	£158,614		£27,959

the bank had outstanding bonds for a total of £5,362,000, of which £3,330,000 were external issues. Against this, it had granted mortgage loans for £5,910,000 secured on properties valued at £15,181,000. Net profits for the half-year were £86,242, which compares with the previous earnings as follows: First half, 1928, £69,824; second half, 1928, £78,764; first half, 1929, £78,641; second half, 1929, £85,238. The dividend for the half-year was raised from £1.70 to £1.80 (equivalent to 18 per cent. for the year), and £12,000 was allocated to the reserve fund as compared with £8,400 in the first half and £10,000 in the second half of 1929, bringing the total reserves and undistributed profits up to £308,000.

MISCELLANEOUS

PLAISTOWE AND CO., LIMITED.—The nineteenth annual report and accounts shows a profit for the year ended March 29, 1930, of £3,591, after charging interest on debentures and loans and debenture sinking fund instalment. For the preceding year to March 31, 1929, there was a loss of £8,249, with no provision for debenture sinking fund. As a result of the amalgamation proposals made by Messrs. Crosse & Blackwell, Ltd., since the date of the accounts (which were accepted by an overwhelming majority of the debenture stockholders, preference and ordinary shareholders of the company) the unpaid arrears of debenture interest are cancelled as from April 1st last. The effect of this is to convert the balance of profit and loss account from a debit of £22,152 to a credit of £318, and, adding the profit for the year to March 29, 1930, there is a total of £3,909, which it is proposed to carry forward. During the year, £9,615 of the company's 6 per cent. mortgage debenture stock was purchased and cancelled, leaving £177,646 outstanding. The profit arising thereby, £3,917, and £186 interest on stock cancelled in advance of sinking fund requirements have been transferred to a debenture stock reserve account.

SCOTTISH AMALGAMATED SILKS, LIMITED.—The committee appointed by the shareholders have devoted considerable time in investigating the present position of the company, and the prospects of continued running under more favourable conditions than in the past. They find the company practically at the end of its cash resources, without a complete selling organisation, and unable to produce its commodities at most of the mills on a profitable basis. Complete re-organisation is required. This is impossible without

considerable new capital, and, in the present state of trade, it is doubtful whether this course would be advisable if the money could be obtained. The committee are hopeful that some scheme of re-construction or amalgamation may yet be evolved, but are satisfied that the liquidation of the company is unavoidable, and are prepared to support the recommendations of the directors with that end in view, as they think that voluntary liquidation would give more latitude in dealing with any scheme that might be forthcoming. The committee thinks that forced realisation, at the present time, would be disastrous to all concerned.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Ploughing operations are proceeding under fairly favourable climatic conditions. Recent rains have interfered with threshings, with the result that comparatively light supplies of native wheat were forthcoming at the principal statute markets. The general tone, however, remains depressed and prices easier on balance. Latest reports indicate yields below normal, while certainly under earlier anticipations. On the import market, trading has been somewhat spasmodic, and prices registered a further decline, though sellers are now showing more resistance to the downward movement. Attempts to arrest the decline in North America prove difficult in face of free offers of Russian here, and a good business was reported in this quality to United Kingdom and Continental countries at competitive rates. Australian and Canadian parcels were selling more freely, and there is scarcely any doubt that deficiency countries are taking the opportunity to rebuild stocks at the low prices current. It is stated that wheat has touched the lowest level on the Winnipeg market since its inception, and in view of huge stocks held in Canada and the United States any marked improvement in prices appears out of the question until healthier conditions prevail. New crops in

Australia and Argentina are progressing satisfactorily and will be competing for European custom a few months hence, thus increasing materially the world's supply, and tending to force down prices still further. Meanwhile, it is interesting to note that Russian chartering operations have subsided, but in view of recent large bookings, shipments will be well maintained for many weeks ahead. The market for feeding stuffs also shared the depression, and prices for Plate maize were marked down sharply, due to acute competition of cheap Russian and Danubian barley. At the lower levels, however, buyers showed more inclination to operate on a larger scale, both cargo and parcel sales being recorded for all positions up to the end of the year. Prices of oats have recovered slightly, of late, with Plate shippers more reserved.

WHEAT.—Steadier. No. 1 hard Manitoba, ex ship, 32s.; No. 1 Northern Manitoba, ex ship, 31s. 9d.; No. 2 ditto, 31s. 3d.; No. 3, 30s. 9d.; No. 6 Manitoba, 24s. 6d.; No. 2 mixed Durum, 28s. 9d.; Barusso, 61½ lbs., ex ship to arrive, 28s. 9d.; Australian, 30s. 6d.; choice white Karachi, 30s. 6d. per 496 lbs. English, new, 6s. 4d.-6s. 8d. per 112 lbs.

FLOUR.—Quiet. London straight run, 29s. per sack for country deliveries and 28s. London area. Of imported, Manitoba patents, 26s. 6d.-28s. 6d.; Buffalo ditto, 27s.-28s. 6d.; Australian, 24s.-25s. 6d. ex store per 280 lbs.

MAIZE.—Steady. Plate, landed, 24s.; ex ship, 22s.; September-October and October-November, 21s. 3d.; Bessarabian, landed, 23s. 9d.; No. 2, white flat African, ex ship, 20s. 6d. per 480 lbs. Yellow maize meal, £7 f.o.r. London. Yellow African, ex ship, £5 10s.; white, £5 per ton.

BARLEY.—Quiet. Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s. as to sample; Chilian brewing, landed, 30s.-35s. Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, ex ship, 14s. 3d.; Danubian, 14s. 3d.; Persian, new, ex ship, 14s. per 400 lbs. English, new, malting, 6s. 3d.-13s.; feed, 5s. 3d.-5s. 9d. per 112 lbs.

OATS.—Steadier. Plate, landed, 13s. 3d.; ex ship, 12s. 3d.; Chilian, tawny, ex ship to arrive, 13s. 3d.; mixed Chilian, white, 17s. 6d.; ex ship, best whites, ex ship, 20s.; German, landed, 22s.; mixed Canadian feed, ex ship, 11s. 3d.; landed, 12s. 3d. per 320 lbs. English, new, 5s. 8d.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Oct. 2, 1929.	Jan. 2, 1930.	Sep. 17, 1930.	Sep. 24, 1930.	Oct. 1, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	144½	148½	80½	74	74½
Chicago (No. 2 Winter) —Cents per 60 lb.	116½	135½	130½	83½	79½	80½

The visible supply of wheat in Canada, at 65,894,000 bushels, shows an increase on the week of 1,949,000 bushels. Supplies a year ago stood at 74,491,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—While export trade in South Yorkshire best steams is steady, conditions are not so good in the industrial and household sections. Buyers show an inclination to hold off the market until the effects of the operation of the new cut are more apparent. Prices are generally as before, with bargains obtainable in secondary and small coals. Best steams are worth 15s. and 15s. 6d. f.o.b. Coke is as depressed as ever. The prices of furnace coke are 11s. 6d. to 12s. 9d. at ovens.

Our Glasgow correspondent writes:—Business is still very slack. In the home market the demand on household account is naturally opening out, but the industrial works are not in need of their average requirements for the season of the year owing to the slackness in trade. Shipping business still consists largely of a day-to-day trade, as the collieries are not disposed to quote freely beyond October in view of the uncertainty created by the new Act. Prices generally show little change over the week. Among round coals, Lanarkshire splints and Hamilton ells are firmly maintained, while in washed nuts trebles and doubles are stronger than singles and pearls. Prices for shipment are approximately as follows:—LANARKSHIRE.—Ell best, 13s. 9d.; splint best, 16s.; splint second, 14s. 3d.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 13s.; doubles, 12s. 6d.-13s.; singles, 11s. 9d.; pearls, 11s. 6d.; dross, 9s. 6d. FIRE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 9d.; third-class steam, 10s. 6d.-10s. 9d.; trebles, 13s. 6d.-15s.; doubles, 13s.-13s. 6d.; singles, 11s. 3d.; pearls, 11s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s.; doubles, 12s. 6d.; singles, 11s. 6d.; pearls, 10s. 6d.-10s. 9d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s. 6d.; doubles, 12s. 9d.; singles, 12s. 3d.; pearls, 11s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The most important event in the South Wales coalfield this week has been the opening of negotiations for a new wages agreement. A meeting of the Conciliation Board was held at Cardiff on Tuesday, but the discussion centred chiefly on the present serious financial position of the collieries. No definite proposal was submitted by either side, but "having regard to the great diversity of opinion"—to use the words employed in the official report—it was agreed to appoint a small joint committee "to consider the present position and the future possibilities in relation to the wages and conditions of employment." The owners are contending that in view of the fact that the collieries are being worked at a loss, and that costs will increase under the new Act, a reduction in wages is imperative; while the workmen's representatives declare that they will decline to consider any proposal involving a wage reduction. There has been no improvement in the state of the coal market, and shipments have continued to decline. The market is glutted with small and other grades of coal, but prices are maintained at minimum basis, and it is stated that there is no likelihood of any of them being lowered in the immediate future. Best house coals have actually been increased by 1s. 6d. per ton as from Wednesday. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 10s. to 11s. 3d.; foundry coke, 30s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex-ship, 25s. 3d. to 25s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Although business in iron and steel remains lethargic, there are signs of returning confidence. The iron and steel plants, both in this country and on the Continent, are working at much below capacity, and there is keen competition to secure export orders which has resulted in some price cutting. The volume of business in iron and steel, however, seems to be gradually if slowly increasing. In the pig-iron department the demand has been quiet, and the tendency noted recently for buyers to consider forward business seems to have subsided. The greater part of the transactions reported lately have concerned small tonnages for near delivery. Few orders are reported in Continental

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING BUSINESS TRANSACTED.

iron for the home market, but Indian iron is still being imported into Scotland. The position in the semi-finished steel department has become quiet after rather active buying, but a considerable proportion of this business was placed with Continental makers. For the time being, users appear to have satisfied their near requirements, and are not showing a deal of interest in the market. In the finished steel department competition has been keen for any orders passing, but the volume of business transacted has been disappointing. There has been a considerable amount of inquiry, but only a comparatively small proportion of this has materialised into business. Although the tone of the export markets has been rather better than for some time past, there has been practically no buying on a large scale, and the belief persists that overseas consumers must shortly come into the market.

Our Middlesbrough correspondent writes:—Business in Cleveland iron has fallen off recently, and it looks as if a quiet time is to be experienced for a little period ahead. Consumers have covered their early requirements, and they are now inclined to wait for developments before making further purchases. They hardly look for any reduction in prices for the present, but on the other hand they do not consider an advance likely. The limited make of Cleveland iron available for the open market is all going into consumption, and stocks are being reduced to some extent, so that the position of the makers is a fairly comfortable one, and they anticipate that there will be a resumption of buying before long. There was only a very moderate business reported at Tuesday's weekly market, and prices were unchanged, viz.: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d., and No. 4 forge, 62s., f.o.b. or f.o.t. The demand for hematite shows a steady improvement, both on home and export account, which promises to extend. The present small make is insufficient for current requirements and stocks are being reduced. Makers' price for mixed numbers is firm at 71s. for delivery over a few months, but odd prompt lots are obtainable at a trifle less. Shipments of pig iron for September totalled only 14,130 tons, a loss of 2,733 tons on August. Manufactured iron and steel together also showed a loss of 2,780 tons compared with the previous month. The details are as follows:—

	September.	August.
Tons.	Tons.	
Pig iron	14,130	16,863
Manufactured iron	3,446	4,223
Manufactured steel	39,950	41,953
	57,526	63,039

In the manufactured departments there is very little new demand, and works are urgently in need of fresh orders. The rolling mills at the Acklam works of Dorman, Long and Company, Ltd., have just closed down for want of work, and it is feared that other units will have to follow unless there is a change for the better very soon. A blast-furnace producing steel-works iron has also been damped down at Acklam. Prices for the different materials are unchanged from last week except that 24-gauge galvanised corrugated sheets are reduced 5s. to £11 12s. 6d. and 24-gauge black sheets by 10s. to £9. The ore market is almost idle, best rubio is nominally 18s. c.i.f. and the current freight Bilbao-Middlesbrough is unchanged at about 5s. 6d. Imports of all descriptions of ore into Middlesbrough during September amounted to only 65,312 tons against 97,571 tons in August. Coke is slightly firmer, and 17s. delivered works is generally quoted for ordinary blast-furnace qualities for delivery up to the end of the year, but odd prompt lots can still be secured at 16s. 9d. The total number of furnaces in blast in the district is reduced to 24 by the damping down of one basic at Acklam works.

Our Sheffield correspondent writes:—Conditions in the iron and steel industry are still disappointing, a few instances of improvement being annulled by further reaction elsewhere. Taken as a whole, the industry has declined rather badly since the end of July. Turnover is heavily down in mill products, especially rods and plates. Output alike in Sheffield and North Lincolnshire indicates contraction, and there is no improvement in inquiries or tonnage business. Railway and shipyard requirements are below the average. Steelmakers are being badly hit by the inability of the leading export markets to buy on a normal basis. In fact, there is no real bright spot in the overseas trade. A blast-furnace (one of three) has been stopped at Lysaghts' works, Lincolnshire. Special steels still command a moderate trade and the output of non-corrodible irons and steels is being maintained at a substantial level. Tool makers report a moderate home demand but less doing overseas. In the cutlery and plate branches no reasonable development has made its appearance at present. Iron and steel prices are unchanged.

Our Glasgow correspondent writes:—Business in the West of Scotland remains quiet and the majority of the plants are employed considerably below capacity in practically every branch of the iron and steel trades. Clyde shipyards are unfortunately finding the tonnage booked not equal to the tonnage launched and have too many vacant berths. Messrs Wm. Denny and Bros., Ltd., of Dumbarton, have, within the week, received an order for a vessel of some 550 tons gross from Messrs. David MacBrayne (1928), Ltd. The demand for semis is poor and there has been little buying either of home or Continental material. Tube makers also find business unchanged. There has been rather more buying in the sheet trade—probably the result of reduced prices—and a considerable tonnage of galvanised sheets for export has been booked during the past few days. The home trade also, both in black and galvanised, shows some expansion.

Our Cardiff correspondent writes:—Notwithstanding the recent decreases in the prices of Welsh tinplate bars and tinplates, the volume of business in the tinplate trade continues of a restricted character. Galvanised sheets are being quoted for the Indian market at £11 8s. 9d. per ton f.o.b., compared with the general minimum quotation of £11 12s. 6d. per box for other markets. Foreign steel bars are quoted down to £4 2s. 6d., compared with £4 10s. a week ago, and £5 17s. in the corresponding period last year. Scrap prices are generally easy at recent figures.

OTHER METALS.

TIN.—In the standard market, prices continued on a downward course under selling pressure and lower Eastern cables, but, at the lower levels established buyers were more in evidence and a partial recovery resulted. Dealings were attended by a good deal of irregularity, and included cash at £128-£123 2s. 6d. and £124 5s.; three months, £131-£126 5s., £124 10s. and £125 12s. 6d. In the American deliveries were reported at £135 17s. 6d. to £128 per ton c.i.f. 7,100 tons; Pacific, 150 tons; and stock, 3,360 tons; with landings, 2,660 tons.

COPPER.—Market opened weak, but, later, sellers showed more resistance to the downward trend, and tone firmer on good support accorded. Standard cash sold at £43 10s. to £44 12s. 6d.; three months, £44-£42 17s. 6d. and £44 11s. 3d. per ton.

LEAD.—Market irregular and easier, but dealings were on a fair scale. Good soft foreign pig, October, sold £16 15s. to £16 8s. 9d.; November, £16 13s. 9d. to £16 8s. 9d.; December, £16 12s. 6d. to £16 5s. 6d. 6s. 3d.; January, £16 17s. 6d.-£16 3s. 9d. and £16 6s. 3d. per ton.

SPELTER in moderate support, but market easier on liberal offerings. October sold £15 to £14 12s. 6d.; November, £14 17s. 6d. to £14 13s. 9d.; December, £15 2s. 6d., £14 17s. 6d. and £15; January, £15 2s. 6d. to £15 and £15 2s. 6d. per ton.

ALUMINIUM maintained. Home trade, £95; export, £100 per ton.

QUICKSILVER steady. Spot, £22 2s. 6d. per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 17s. per box f.o.b. Swansea.

ANTIMONY easier. English regulus, £38 to £45; Chinese ditto, spot, £26 10s. to £27 10s.; October-November, £25; Chinese crude, October-November, £15 per ton c.i.f.

ANTIMONY OXIDE, October-November, £27 per ton c.i.f.

ANTIMONY ORE, 60 per cent. October-November, 3s.; 50 per cent. ditto, 2s. 6d. per unit c.i.f.

WOLFRAM firm on scanty offers. Chinese, October-November, buyers 18s. 6d., sellers 20s. per unit c.i.f.

THE COTTON TRADE.

LIVERPOOL, October 1st. During the past week the market has shown further weakness, and prices reached new low levels. Hedge selling has been more in evidence, and, though there has been considerably more inquiry for cotton, purchases by spinners have been mainly on "basis" days, and, with the usual month-end trade fixing of prices, values are now a few points above the lowest reached. Investment buying has been taking place on the scale down. There is no change in weather conditions in the United States cotton belt. The latest advices indicate that the Federal Farm Board, through the Co-operative societies, are prepared to handle 3,000,000 bales of cotton. There has been a little more mill activity in America. Spot sales for the week September 25th to October 1st (inclusive) are 40,000 bales, of which 10,250 are American, 12,500 Brazilian, 1,250 Argentine, 10,500 Peruvian, 1,600 Egyptian, 1,650 African, 2,000 East Indian, and 250 sundries. Imports for the same period are 38,363 bales, of which 32,073 are American, 733 Argentine, 1,967 Peruvian, 206 Egyptian, 539 African, 2,812 East Indian, and 33 sundries. Quotations to-day are: American Middling, 5-75; Egyptian Sakel, 9-95; Uppers, 7-82; Brazilian Fair, 5-75; Peru Smooth, 6-30; West African Middling, 5-80; and East African G.F., 6-75.

MANCHESTER, October 1st. Since last week, trade developments have again been checked by the falling tendency of prices, and, owing to the weakness in the raw cotton markets, buyers of yarn and piece-goods have not been in the mood to operate with any freedom. The general inquiry, however, continues more extensive, and numerous customers are kept in close touch with prices. Advices from India have tended to improve, and the boycott movement is undoubtedly weakening. Some fair cloth sales have been put through for Madras and Bombay. China merchants have been somewhat discouraged by the fall in exchange rates, but some white shirtings have been taken place for Hong Kong. Printing cloths have moved off America, but very little has been done for Egypt and the Near East. Home trade buyers remain generally cautious. Restricted operations have occurred in American yarns and prices have favoured buyers. There has also been very little life in Egyptian counts.

Statement of the Cotton Trade.

THE WOOL TRADE.

Our Bradford correspondent writes:—The sales have been continued in London on very similar lines to those of last week. No higher values have been realised, though the offerings of both merinos and crossbreds have been fairly attractive. It is stated that the Queensland new clip is not so fine in quality as last season, but it has commanded very good Continental competition, whilst the home trade has bought greasy and slipe crossbreds. Very good New Zealand greasy halfbreds have sold readily, making practically the same prices as at the opening. Slipe have been offered in good quantities, but have made no more money. Many feel that it would have been as well if the sales had been closed yesterday, four sales being abandoned instead of two. Considering the state of home consuming markets, it would seem as if prices ruling in London have been fully equal to what can be realised for tops, yarns or piece-goods. This is one of the anomalous features of the situation, the raw material being unprofitable both for growers and users, too cheap and yet too dear. A very disappointing state of affairs obtains in consuming centres. Spinners are having their hands forced by manufacturers, these being pressed by wholesale buyers for a reduction in the cost of cloth. It is impossible to state definitely what tops are worth, but average 64's have been sold in Bradford for forward delivery at 24d. The best topmakers are still asking 26½d. for warp 64's. All qualities of crossbreds are irregular. Topmakers are mostly asking what they were prepared to sell at a fortnight ago. The steady downward movement of prices revealed every time any sales are effected is destroying confidence.

THE JUTE TRADE.

DUNDEE, October 1st. Holidays in Calcutta during the first four days of this week are tending to interrupt business. There is, however, a great watchfulness on the part of speculators in raw jute, who this week have done some buying on the strength of the rumour that the Indian Government is to call a conference of representatives of the jute industry to consider the crisis which has arisen through the abnormally large stocks and the almost entire absence of orders for jute goods. There seems to be an idea that the Government will take some action which may lead to the arrest of the downward trend of values of raw jute and also goods. It is generally believed here, however, that the Indian Government will not create a precedent by subsidising any industry, because of the difficulty of stopping such a measure. In Calcutta, efforts are being made to elicit Government support for the purpose of curtailing the cultivation of raw jute, owing to the fact that, with the quantity carried forward from last season and the large crop expected to be yielded this season, there is about two years' supply of the fibre in view. In normal times, the large supply of jute would create no alarm, but business in jute goods is so bad that even the greatly curtailed output of the producing centres is not being taken up by consumers. The position in Dundee is depressed and further stopping of looms and spindles has had to be resorted to, while many works are running only on alternate weeks. Prices of raw jute have been advanced through speculative operations, and the value of Daisee assortment has risen from £14, done the other day, to £15 10s., while Tossa assortment has advanced to the same extent from £16 to £17 10s., October-November shipment. Good First Marks are nominal at £20, and Lightnings are offered at £18, with Hearts at from £15 to £16, September-October. Jute yarns are firmer as the result of the higher raw jute values. Common 8-lb. cops have been sold down to 1s. 10d., and 8-lb. spools at 1s. 11d., but now there are no sellers quoting less than 2s. and 2s. 1d. respectively, and some small sales have been made at these rates. Buyers generally, however, are not following the rise. Twist is from 4d. to 4½d. for 3-ply 8-lb., and sacking yarns are quoted at from 3½d. for 8-lb. chains and 2½d. for 24-lb. weft. Rove is easier at £26 10s. for 48 lb. and £17 15s. for 200 lb. Fine yarns are very steady, but carpet qualities continue neglected. Cloth orders are not numerous, but buyers are keeping in close touch. The very lowest prices possible are 3d. for 10½ oz. 40 in. and 2d. for 8 oz. Only small quantities are being purchased to meet immediate needs. The Calcutta goods market is steadier at the moment, but prices have recently shown weakness owing to lack of demand.

HIDE, LEATHER AND ALLIED TRADES.

Trade in connection with hides has not been so satisfactory during the past week, and the general tendency of values is towards lower levels. Hides from home-slaughtered cattle were only just able to realise last sales prices at the auctions held at Manchester

on Tuesday, and there is a feeling that the markets at which sales are held during the week-end will register lower figures. Business in connection with foreign hides has also been quieter, and, with buyers not showing the same amount of interest as of late, the outlook for the future is rather uncertain. In the South American market sales of Argentine ox have been made to the U.S.A. on the basis of 6½d., while 6½d. has been paid for cows, 6½d. for light ox, and 7d. for Montevideo ox. Dry River Plates are fractionally weaker, and at the lower figures a fair amount of business has been put through, including B.A. Americanos at 7½d., M.V. Americanos at 8½d. Business has been limited in connection with African hides, although sales of Capes have been made at 8½d. and 7½d. for first and second dries, with 7½d. and 6½d. accepted for the same selections of dry-salted. The turnover in the leather market has again been of moderate dimensions, although for certain classes there is just a slight temporary falling off. Prices, however, are maintained on a firm level, and any change that may occur is likely to be in an upward direction. In sole leather the bulk of the business done has been in connection with English and wet-salted bends in the medium to heavier weights. A steady demand is experienced by the majority of producers and distributors of upper leathers, and, all things considered, business moves on quite respectable lines. Improvement has been noticed in the call for box calf, while sales of black and brown glacé kid are well up to the average of recent weeks. The best enquiry experienced, however, is in connection with willow calf, and some decent-sized parcels of this leather have again changed hands. Suede leather and reptile skins are not a good market. Patent continues to sell in the lower-priced lines, but enquiry is not up to the average for the time of the year. Curriers have experienced a slight improvement in the call for waxed and russet kip butts and dressed ofal, but business is still very restricted, orders being confined to very small quantities.

OVERSEAS PRODUCE.

SUGAR.—The market manifests steadiness, and business proceeded with more freedom in British refined at a decline of 3d. Anglo-Dutch and Anglo-Scottish, granulated, marked down 3d. The Java Trust now quotes white sugar at 8½ guilders, ex go-down for any quantity. All raw refining kinds continue to meet a slow market. Terminal markets stronger and fair support accorded raw. December delivery, sold 4s. 0½d. to 4s. 3d.; March, 5s. 2½d. to 5s. 5½d.; May, 5s. 5½d. to 5s. 8½d.; August, 5s. 7½d. to 5s. 9½d. Foreign, 96 per cent. centrifugal, October, quoted 4s. 9d., and November, 4s. 9½d., c.i.f. U.K. Polish crystals, October, quoted 6s., and Czecho granulated to the U.K., 6s. 9d. f.o.b. Cuban receipts last week cabled 30,014 tons, against 20,890 last year; exports, 46,408, against 65,726; stocks, 1,162,515, against 503,590. According to Messrs Willett, stocks on plantations and in transit to ports of shipment amount to 1,301,000 tons. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending September 27 amounted to 122,774 tons, against 152,489. Mr F. O. Licht's estimate for Europe, excluding Russia, amounts to 7,851,000 tons, against 7,299,000 last season. Including Russia, an increase of 1,400,000 is indicated.

COFFEE.—Quite a healthy tone still prevails. There seems no diminution in demand, either on home or consumption account, especially for all desirable grades. Supplies of such are in very narrow compass. Kenya and Costa Rica in particular are favoured. Brazilian kinds for shipment, firm but quiet.

COCOA.—Only a small movement on spot, including fine Grenada at 51s. and Trinidad 57s. Forward positions irregular but firm on balance. Accra F/F, October-December, London contract, quoted 24s., and January-March, 24s. 6d. f.o.b.; G/F, October-December, 26s. c.i.f. Terminal, December delivery, sold 26s. 6d. to 26s. 9d.

TEA.—Indian auctions during the week amounted to 58,256 packages. With good general competition, fine and tippy teas made firm to dearer prices. Most other descriptions went off firmly. Common tea now 9½d. Choice broken orange sold 4s. 7d. 17,362 packages Ceylon, of attractive quality generally, came to quite a strong market, with export orders in evidence for good to fine leaf grades. Prices advanced ½d. to 1d. and, in the case of fine and finest, from 2d. to 3d. Only moderate are expected from the island for some little time ahead. Java and Sumatra auctions ruled firm with a good demand.

RICE.—There is only a small movement and trend of prices still weak. Two Stars, October-November, London, quoted 10s. 6d.; Spanish oil, 12s. 9d. c.i.f.

BEANS AND PEAS.—The market in beans is steady, though business moves slowly. Madagascar butters of good quality, spot, quoted 33s. to 34s. Rangoon haricot, 11s.-11s. 3d. The market in peas is fully steady and reserve is marked on the part of spot holders. Japanese spot current crop, 18s. 6d.; afloat, quoted 17s.; September-October, 15s. c.i.f. Dutch quiet unaltered.

POTATOES.—The market in potatoes has been quiet at unchanged prices.

SPICE.—Pepper held steadily, but there was only moderate response from buyers. Lampung, August-October, quoted 5½d.; October-December, 5½d.; Muntok white, August-October, 8½d., and October-December, 8½d. Zanzibar cloves, on spot London, sold 1s. 2½d.; August-October steamer, quoted 1s. 1½d. Tapioca and ginger, quiet unaltered. Sago flour dull, and Sarawak, October-November, to Liverpool, quoted 8s. 6d. c.i.f. London stocks of black reduced 58 tons on the week to 786 against 1,493 same time last year. Muntok white, 90 tons lower at 320 against 1,000 same time last year.

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

FRUIT (Dried).—Currants: Supplies of new crop are now available. Gulf sold 38s. to 40s.; sun-dried Patras, 38s. Sultanais in fair demand. Cretan, 50s. to 74s. Raisins met with good support. Valencia, quarter boxes, sold, medium to good, 43s. to 58s.; fine to choice, 59s. to 87s. Dates quiet of sale. Evaporated fruits: Market quiet and trend of prices easier.

CANNED GOODS.—Fruit: The general position remains unchanged regarding Californian varieties, and buyers evince little disposition to operate in new pack. Apricots are available at reasonable prices and attractive offers of pears are also being made. Fish: Sardines: Market steady, but business restricted. Meat: Market remains steady, but trade proceeds on quieter lines. Condensed milk and milkpowders: Market steady, with improved inquiries for winter deliveries. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 33s. 6d.; English, full cream, sweetened, 5-cwt. casks, 39s. Honey: A fair demand continues for the better qualities, and tone steady. Jamaican, white, 47s. 6d. to 50s.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 8,625 tons, as compared with 8,600 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.2 per cent. of the supplies, as against 84.2 per cent. a year ago, and imported mutton, mainly New Zealand, formed 86.0 per cent. of the total supply, as against 81.9 per cent. last year. Prices are scarcely changed on the week.

RUBBER.—Nothing occurred to relieve the monotony attaching to this market. Moderate sales resulted and prices show but fractional changes, closing tone steady. Standard sheet, spot, sold 3 1/2 d. to 3 3/4 d.; October, 3 1/2 d. to 3 3/4 d.; November, 3 1/2 d. to 3 3/4 d.; December, 3 1/2 d. to 3 3/4 d.; January-March, 3 1/2 d. to 3 3/4 d.; April-June, 3 1/2 d. to 4 1/4 d.; July-September, 4 1/4 d. to 4 1/4 d.; October-December, 1931, at 4 1/4 d. to 4 1/4 d. To New York, estate sheet, April-June, sold 4 1/4 d. c.i.f. Straits shipments for last month

total 49,229 tons, against 47,800 last month and 53,484 corresponding month last year. London stocks increased 488 tons on the week, landings being 2,825; deliveries, 2,337; stocks, 83,136, against 42,077 last year. Liverpool stocks 773 tons higher; landings, 1,444; deliveries, 671; stocks, 34,858, against 10,161 last year. Hemp: Manila qualities held with some reserve and a firm market prevailed. K grade, October-December, quoted £21, sisal, No. 1, f.a.q., October-December, quoted £21 10s. c.i.f. Receipts last week cabled 18,000 bales, against 26,000 same time last year and 30,000 in 1928. Estimate for next week, 23,000; United Kingdom, 4,000 Continent, 7,000 U.S.A., 9,000 Japan and other countries 3,000 making stocks 123,000 bales.

VEGETABLE OILS AND OILSEEDS.—Markets have continued to display great weakness, and in most cases prices have gone down. Plate linseed, in sympathy with lower exchange rate and Argentine options, has declined almost daily, though at the close there is a revival of demand both here and on the Continent. Old crop for and new crop, December-January, at £11 8s. 9d. and £11 10s. The crop outlook in both Argentina and North America remains touched, new crop black Egyptian for shipment having fallen to £5 8s. 9d., at which latest business has transpired. In the oil section linseed oil is weak, and ex Hull raw oil on spot sharply declined but is steadier at £24 15s., and October delivery at £24, a fall of £9 per ton being registered within the past three weeks. Cotton oil is weak and lower crude Egyptian on spot offering at £22 and common edible at £25. All other seed oils are lower but have not declined to the same extent. Oilcakes and meals are in poor demand and prices have been reduced. The market in copra tone later. Straits S.D., November-December, to Rotterdam, quoted £15 5s.; Dutch E.I. ditto, £15 5s.; Ceylon, £15 17s. 6d. Palm kernels, October-November, to Hamburg, £10 8s. 9d. c.i.f.

THE MONEY MARKET.

EARLY in the week some apprehensions were felt that money might prove difficult, as on Tuesday the sum borrowed from the Bank at the end of September fell due for repayment, while two days later the initial payment for the new Treasury Bond issue had to be made. These

fears, however, proved groundless, and money has remained easy all the week. Rates down to $1\frac{1}{2}$ per cent. have been quoted for day-to-day loans, while in the discount market short bills have commanded 2 per cent. and three months' bills $2\frac{3}{4}$ per cent. As the latter rate now relates to January, or after the turn of the year, it is not surprising that it is a shade higher than a few weeks ago; and it does not betoken an upward trend in rates.

At one time, the new Treasury Bond issue was not viewed too enthusiastically in the market, partly because for all practical purposes they were six-year bonds, and partly because 90 per cent. of their price did not fall due for payment or rank for interest until January 15th, when in the normal course of events money could be expected to be more needed and rates to be higher than at the present moment. When the time came, however, the issue proved a success, for applications amounting to £116,000,000 were received. Allotments were fixed at £105,000,000, those applying at the minimum price obtaining 56 per cent. of their needs, and the remainder being satisfied in full. Thus the Treasury seems to have judged the position to a nicety, while the market apparently considers that money is likely to remain easy and plentiful for some time to come.

Including Tuesday's repayments to the Bank and Thursday's 10 per cent. initial call upon the Treasury Bonds, some £17,000,000 must have been taken off the market during the week. Normally the withdrawal of so large an amount would have had some effect, and this week the opinion has been freely expressed that special steps were taken to keep money easy so as to facilitate the Treasury Bond issue. No direct evidence to this effect is forthcoming, though it may be significant that the leading banks did not call so heavily as usual. In any case, the decrease during the week of £8,748,090 in Public Deposits, shown by the Bank return, and due presumably to the encashment of Conversion Loan dividend warrants issued the previous week, eased the situation. Thus bankers' deposits increased during the week by £5,129,283 to £66,447,014, which meant that the market was well supplied with funds.

	Sep. 18, 1930.	Sep. 25, 1930.	Oct. 2, 1930.	Oct. 9, 1930.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	3 (May 1, '30)

Houses / Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{1}{2}$	2	$2\frac{1}{2}$	$2\frac{1}{2}$	...

As a result of arrivals, amounting to £2,000,000, of sovereigns from Australia, the Bank has gained £1,857,751 in gold during the week. On Wednesday £138,062 gold was withdrawn from the Bank on Swiss account, while France has continued to take the week's supply of Cape gold. The chief monetary developments abroad were the increase in the Reichsbank's rate on Thursday from 4 to 5 per cent., and the increase of $2\frac{1}{2}$ per cent. in the Australian banks' selling rate for telegraphic transfers on London. It is common knowledge that both countries concerned have lately been losing gold as a result of well-known circumstances peculiar to them alone, and neither development must be taken as indicating that the era of cheap money is coming to an end. In London, New York and other important centres the position remains unchanged.

NEW YORK.

Money remains easy and plentiful. Call money is quoted at 2 per cent., and ninety days' bankers' acceptances at $2\frac{1}{2}$ per cent. The outflow of gold noticeable in July and August has been reversed, mainly owing to arrivals from Japan. The Federal Reserve system states that the net importation of gold during September amounted to \$3,000,000, while last Monday the arrival of a further \$1,000,000 from Colombia was notified.

THE STOCK MARKETS.

Stock market conditions remained depressed, the foreign bond market a semi-panic occurred, or absence of news—of the Brazilian revolt, industrial shares were steady at the outset, but lost ground, tobacco shares, in particular, being fears of a possible price "war." Business in speculative markets was on very restricted lines, and tin shares being affected only to a minor degree, the stronger and weaker tendency, respectively, at commodities concerned. Gold-mining shares were in the absence of interest from the Cape and Paris, various "finance" issues coming again on offer, though to a less extent than last week.

THE COMMODITY MARKETS.

The coal trade continues depressed; the demand for industrial fuel still tends to shrink and competition in the export markets is increasing. The improvement in the iron and steel industries has not been maintained and transactions are few in number. The falling tendency of cotton and wool prices continues to check trade developments. The demand for hides has fallen off and prices show a weakening tendency. Wheat prices show a small decline on last week.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was quiet during the week, and the turnover was on the small side. Sterling on New York, after touching 4.85 $\frac{1}{2}$, closed at 4.85 $\frac{1}{2}$. The Montreal rate fell to 4.85 $\frac{1}{2}$. French francs came on offer and closed at 123.82. In Belgium there was a further loss to sterling of $\frac{1}{2}$ cent. at 34.83. Milan was steady at 92.79. Heavy German demands for Dutch guilders and Swiss francs caused these exchanges to appreciate to 12.04 $\frac{1}{2}$ and 25.00, as against 12.05 $\frac{1}{2}$ and 25.03 $\frac{1}{2}$, respectively, a week ago. A further steady depreciation occurred in Spanish pesetas, the rate closing at 48.60—a new record adverse to Spain. Reichsmarks were offered from German sources, and showed further depreciation at 20.41 $\frac{1}{2}$, compared with 20.40 $\frac{1}{2}$ last week. Among the Eastern Exchanges, rupees improved to 1s. 5 $\frac{1}{2}$ d., as did yen to 2s. 1 $\frac{1}{2}$ d. The South American exchanges showed heavy depreciation. Buenos Aires was 38 $\frac{1}{2}$ d., as against 39 $\frac{1}{2}$ d. last week, while Rio was quoted nominally at 4 $\frac{1}{2}$ d. for delivery at the expiration of the fourteen days during which all banks have been closed on governmental instructions, consequent upon the political disturbances. In the forward market, New York was quoted at premiums of $\frac{1}{4}$ cent and $\frac{1}{2}$ cent for one and three months, respectively. Forward Paris was at premiums of 2 cents and 5 cents. Forward Belgas were less in demand, and moved to a slight discount. Milan forwards continued at last week's levels. Dealing took place in forward pesetas at premiums of 1 cent for one month, and 2 cents for three months. Forward guilders were in better demand at discounts of $\frac{1}{4}$ cent and $\frac{1}{2}$ cent for the two periods. Business in forward Reichsmarks was small, the quotations being 1 $\frac{1}{2}$ pfennigs discount for one month, and 6 $\frac{1}{2}$ pfennigs discount for three months. Silver was better on the week owing to Chinese and Indian purchases, and closed at 1s. 6 $\frac{1}{2}$ d. for both spot and forward positions. Hong Hong was 1s. 3 $\frac{1}{2}$ d., and Shanghai 1s. 7 $\frac{1}{2}$ d.

ECONOMIST BANKING SUPPLEMENT.

The Economist Autumn Banking Supplement is published with this week's issue. It contains an analysis of the current British banking situation, a commentary upon the Interim report of the Gold Delegation of the League of Nations Financial Committee, and an examination of recent banking developments in the Dominion and the United States.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Boulevard Street, London, E.C.4.

BRITAIN FIRST.

"If 'twere done, 'twere well 'twere done quickly." If, as is now obvious, Mr Bennett, the new Prime Minister of Canada, came here with the intention of bringing the whole question of fiscal policy to a head, it is all to the good that he has wasted no time, and (subject only to such ambiguities of detail as are inseparable from a brief statement on a vast problem) has made his general intentions and wishes clear beyond a peradventure. The crux of his proposal is contained in two passages of his speech which he delivered to the Imperial Conference on Wednesday. Here is the first:—

"I offer to the Mother Country, and to all the other parts of Empire, a preference in the Canadian market in exchange for a like preference in theirs, based upon the addition of a 10 per cent. increase in prevailing general tariffs or upon tariffs yet to be created. In the universal acceptance of this offer, and in like proposals and acceptances by all the other parts of the Empire, we attain to the ideal of Empire preference."

Here is the second:—

"The primary concern of Canada to-day is profitably to sell its wheat. We believe that we shall be reaching towards a solution of that problem if we can establish a better market in Great Britain. This market we want, and for it we are willing to pay by giving in the Canadian market a preference for British goods."

Regardless of the considerable preferences already accorded to Canadian goods coming under the "Safeguarding" and "McKenna" schedules, Mr Bennett in effect says to the Mother Country:—"Revolutionise your fiscal policy, put duties on primary foodstuffs imported from foreign countries in order to admit under preferential rates larger quantities of Canadian wheat, and we will give your manufactured goods, not lower duties, but a preference conditioned by the further raising of our own tariff barriers against the rest of the world."

The first and most vital point in Mr Bennett's offer is that it entails not lower but higher tariffs. There is a vast body of opinion in this country, even among those reared in the Cobdenite faith, which would have been inclined to give the most careful and favourable consideration to any proposals for Imperial preference which might have foreshadowed progress through the lowering of tariffs to anything like a system of Imperial Free Trade. Had any such prospect been instinct in Mr Bennett's proposal, the Government and the country would have been obliged seriously to face the issue whether Britain's international interests permitted her to consider the gradual diversion of trade channels which such a proposal would have meant. But Mr Bennett has made it abundantly clear that the road which he proposes to follow, and on which he wishes to take the Empire with him, is a path of high Protectionism which leads anywhere but to such a breaking down of barriers between constituent members of the Commonwealth as has been achieved between the constituent members of the United States of America. In set terms he rules out the possibility of anything in the nature of Empire Free Trade, and in this he was explicitly supported by the other Dominion Premiers.

We are grateful to Mr Bennett for his frankness and, in particular, for his outspoken declaration that the essence of Canadian fiscal policy is "Canada first." He will not take it amiss if we remind him that the considerations which must determine the answer of the British Government, for which he is apparently unwilling to wait, must be based on a policy of "Britain first." When that reply is framed—and with all due deference to Mr Bennett, statesmen cannot reasonably be asked to sign away a country's economic birthright in five minutes—its key-note must be that the basic requirement of Britain in her present difficult commercial position is to seek the lowering of tariff barriers whenever and wherever she can find any promise of success; and the lowering of tariffs is the precise opposite of what is entailed by Mr

Bennett's proposals. Without prolonged and detailed investigation it is quite impossible to assess the probable value to our own manufacturers and traders of the terms which Canada offers in exchange for a complete reversal, with all its unlimited ramifications, of our fiscal policy, and for an attempt at the diversion of the channels of trade which must react on every purchaser throughout the world who deals in British products. But, on the face of it, there would appear little doubt that in terms of hard commercial advantage Mr Bennett is offering to this country the equivalent—if we may reverse a much used political phrase—of "fourpence for ninepence."

Mr Scullin, the Prime Minister of Australia, who followed Mr Bennett, unconsciously perhaps, yet very effectively, emphasised the greatness of Britain's trade connections with foreign countries which might be jeopardised by such proposals as those discussed on Wednesday. Mr Scullin was at pains to bring out a fact of which everyone is aware, namely, Australia's importance as a market for British goods; and to illustrate his argument he produced figures comparing Britain's trade with his Dominion with her trade with the two foreign countries of Argentina and Denmark. When these figures are examined their chief conclusion seems to us to be this—not the remarkable nature of our trade with a country isolated in the Pacific Ocean, and almost as accessible geographically to this as to other countries, but that our trade with Denmark and Argentina—two countries differing in language and tradition and both having industrial neighbours strongly competing with us—is of a magnitude comparable with our trade with the Dominion. Indeed, in the case of cotton and woollen goods, Mr Scullin's figures show the foreign to be the better market. They show also that the potential opportunities in Denmark and Argentina—countries of high living standards and with larger populations—are greater than in Australia. On Mr Scullin's figures a deal with these two countries would pay us better than one with Australia, if the Commonwealth insists that the basis of discussion must be the excessive duties at present levied by her against British goods, and the only inducement is to be still higher tariffs against the rest of the world.

What then is Britain's reply to be? She wants markets, markets everywhere, and in fulfilment of the promise already given to examine any and every proposal with an open mind, Mr MacDonald may agree to the establishment of a committee to consider whether out of any far corner of Mr Bennett's proposals anything practicable and advantageous can be disinterred. He would, nevertheless, be wasting the time of the Conference unless he made it abundantly clear from the outset that this country must rule out the possibility of participating in or encouraging a general upward movement of tariffs within the Commonwealth in which she is a partner. Indeed, the speech which the British Prime Minister delivered at the Labour Party Conference at Llandudno, on Tuesday, suggests the lines on which the reply must be framed. In defending his Government's action in signing the Tariff Truce at Geneva last month, Mr MacDonald said that they had signed it "expecting results" in the direction of lowering tariff walls in Europe. "The truce," he said, "has only been signed to allow negotiations to be begun. If those negotiations are not successful, the Government will certainly take its freedom to take the next step that has been imposed upon it by the failure of other nations to meet it in its advances."

These simple sentences should be pondered carefully by Dominion as well as European statesmen. They reveal a policy to which enlightened opinion of every fiscal school subscribes, namely, that the prime economic interest of Britain lies in securing anywhere and everywhere, and by all means at our disposal, the lowering of the incidence of protective tariffs. Spoken before Mr

Bennett's speech, they might have been read as a warning to Europe that we might be driven towards a special agreement for freer trade within the borders of the Commonwealth. That alternative has now been removed from the sphere of practical politics by the speeches of Mr Bennett and his Dominion colleagues. But the bearing of Mr MacDonald's words remains the same. The British Dominions, in pursuit of their own unfettered freedom in fiscal policy, have deliberately chosen the path of high protection and apparently intend to pursue that path up-hill. We cannot follow them; and if, in their turn, they recognise the peculiar economic needs of the Mother Country and the duty of her Government to observe them first and foremost, they should realise that the latest developments must enhance in the eyes of Britain's rulers the importance of the existence of a low tariff group of foreign countries with whom co-operation may prove an alternative road to the achievement of freer trade and better markets.

Mr Bennett has achieved fame. He has imported sensation into a Conference which promised to be nearly humdrum; he has at one blow killed the latest of British political parties; he has brought from the wings, where it has remained too long, into the centre of the stage the supreme fact about Imperial preference, namely, the practical limitations to which the development of Imperial trade is subjected by the varying needs and accepted policies of the Commonwealth's individual members. We hope that in matters of general principle the British reply—the only, inevitable British reply—will be given without undue delay. Then, perhaps, with the air cleared, and facts frankly faced, the Conference will settle down to the practical work of organisation, research and the establishment of machinery for continuous consultation and, indeed, for getting closer together on every aspect of economic life. There, if we would only look for it, so much common ground exists between the chief countries of the Empire.

THE PROSPECTS OF THE LEAGUE.

LAST Saturday, October 4th, the Eleventh Assembly of the League of Nations closed its proceedings in an atmosphere of pessimism which inspired Lord Cecil's speech and was not dispelled by Monsieur Titulescu's. Letters in this and recent issues from our League correspondent have described the vicissitudes of this session—the "ups" and "downs" of feeling, the successes and failures of action. On this showing, if we confined our attention to the scene at Geneva during the last few weeks, it could be argued with almost equal plausibility that the League was prospering and that the League was in a bad way. But, we may suppose, the statesmen who have just concluded their work in this Assembly do not estimate the prospects of the League (whatever their estimates may be) on so narrow a view. They may well look before as well as after, and keep in mind the whole history of the League up to date, since its building during the Peace Conference of Paris and its launching on January 10, 1920, when the Covenant came into force as the first chapter of the Peace Treaty of Versailles. In this perspective the prospects of the League ought to be estimated not only by the statesmen but by the peoples of the world. And the League Secretariat, foreseeing and providing for the needs of the day, has just published a clear, compact and authoritative survey of the League's performance during the first decade of its existence.*

What is the League? We must ask first: What is the task which the League has been called into existence to perform? And the answer to this second question is that it is a political task more difficult than any that the world has ever before set itself. The supreme difficulty of our generation—a difficulty which underlies the war problem, the unemployment problem, the gold problem, and every other problem with which we are beset—is

that our achievements on the economic plane of life have outstripped our progress on the political plane to such an extent that our economics and politics are perpetually falling out of gear with one another. On the economic plane, the world has been organised into a single all-embracing unit of activity. On the political plane, it has not only remained partitioned into sixty or seventy sovereign national States, but the national units have been growing smaller and more numerous and the national consciousnesses more acute. The tension between these two antithetical tendencies has been producing a series of jolts and jars and smashes in the social life of humanity; and the smash which pushed us into founding the League—the Great War of 1914-18—was not a unique catastrophe. It was merely the worst that has occurred so far, and we know that worse will follow unless we succeed in putting our politics into gear with our economics again. The League is an association of States for this purpose. Its immediate object is to prevent the recurrence of war, that is, the recurrence of the most dangerous and destructive form of political sabotage to the economic life of the world. Its minimum programme for the future is, over and above the prevention of war, to bring the political organisation of the world into line with its economic organisation far enough to take off the political brake which is at present retarding our advance towards world-wide economic efficiency and prosperity. Its maximum programme (if we may be bold enough to pitch our expectations so high) is to make the political factor in modern international life a positive asset to humanity instead of the incubus which it is to-day.

In this first decade, what progress has the League made towards attaining its successive objectives? In the first place (and this is the chief ground for present pessimism), it has certainly not eliminated the danger of war between Great Powers, that is, it has not made life safe against the only kind of war which is capable, nowadays, of bringing catastrophe upon the world at large. We do not take too tragically the failure of the League, in the field of disarmament, to obtain this or that concrete result—the failure to carry the Geneva Protocol of 1924, the failure of the Preparatory Commission for the Disarmament Conference, in meetings drawn out over half-a-dozen years, to produce an agreed "yard-stick" for the comparative measurement of armaments as the basis for an agreed limitation and reduction; or the failure of this Eleventh Assembly to incorporate in the Covenant of the League the provisions of the Multilateral Treaty of Paris (the so-called "Briand-Kellogg Pact") for the renunciation of war as an instrument of national policy. To read the proceedings of the League and of its organs *à propos* Disarmament is certainly discouraging. The effort seems quite disproportionate to the achievement. But this is largely because the League does not acquiesce in its own failures. It goes on trying again and again.

And here we have put our finger on one of its main points of strength—the permanence of its organisation and the continuity of its work. Before the war such attempts as were made at ensuring peace through inter-State action were spasmodic and desultory; and if the failures of the Hague Conferences were not "rubbed in," as the failures of the League Preparatory Commission have been, that was mainly because, unlike these, they were not followed up by fresh efforts to overcome the *impasse*. The ground for pessimism lies rather in the general temper and outlook of the statesmen and parties who are in the ascendant in certain great countries. The symptom that is really alarming is the persistence, or recrudescence, of the belief that national interests can be served best by a policy of "sacred egoism"; and the most ominous instance of this attitude is its prevalence in France. We can understand it in Germany and Italy, whose statesmen and peoples would like to see drastic changes in the present political disposition of the world. In a country which has everything to lose by change and everything to gain by the establishment of a political world-order which rules out change by violence, a nationalist policy is such a piece of perversity that it becomes rather a terrifying portent.

France is reported to have made up her mind not only to obstruct the progress of Disarmament, but to oppose the extension of the League's activities in every sphere. Some colour is given to this allegation by the leading part which the French took, at this Assembly, in frustrating the efforts to enable the League to take effective action for the suppression of slavery—a humanitarian duty which is explicitly within the province of the League and is essentially a matter for international co-operation. If this is really the explanation of the French delegation's action on this point, we are inclined to take this more seriously than the failures to incorporate the terms of the Kellogg Pact in the Covenant or to fix a date for the Disarmament Conference. In attacking war and armaments, the League, after all, is making a frontal attack upon the traditional activities and attributes of sovereign States; and frontal attacks seldom carry their objectives straight away. They are a form of tactics which almost invites repulses and setbacks. On the other hand, the League in its humanitarian and economic work is swimming with the tide—the mighty tide of modern economic life which is making all the time for world-wide co-operation. These considerations suggest that a small setback to the progress of the League in its humanitarian and economic work may be a ground for greater disquiet than a much more sensational setback to its efforts after peace and disarmament.

Yet, whatever the general policy of France towards the League may be to-day, no one can say that the French Government is inclined to ignore the League nowadays or neglect it. And this brings us to the remarkable change in the position of the League in international politics in the course of these first ten years. In 1920, the League was an "epiphenomenon," a "fly on the wheel" of international affairs. The important business of the day was being transacted by other bodies—the Supreme Council of the Allies, and the Conference of Ambassadors. Prime Ministers and Foreign Ministers could not be bothered to attend the sessions of the Council and the Assembly; they left that sinecure to enthusiasts and amateurs. In 1930, on the other hand, Geneva is the forum where the current work of international politics is being done; and the statesmen who really control the policies of the countries which they represent are coming to Geneva to do this work there. The League has become a real and vital instrument, and this is a great advance; but it has its disadvantages, too; for when an organisation is effective its powers and functions are closely scrutinised and cannot easily expand unnoticed and unopposed. This point is serious, because the League, as set up in 1920, was intended by its architects to be the modest beginning of an ambitious building. The Covenant and all its provisions—for the maintenance of peace, for the reduction of armaments, for the protection of minorities, for the supervision of mandates—were meant to be foundations, not copings, beginnings and not ends. When we measure the growth of the League

during its first decade we cannot help being disappointed to find how small this has been, or disturbed to see how vigorous and wide-awake the opposition is apt to be nowadays whenever any question arises of completing the original plan.

And what of the future? What will be made of the League by the generation, now nearing manhood and womanhood, which has had no personal experience of the war? In the modern world, with its organised universal education, no institution can hope to impress itself on the minds and implant itself in the hearts of the rising generation unless it finds its place in the educational curriculum. We may conclude this survey of the prospects of the League on a note of optimism when we observe how warm a response has been made by education authorities, all over the world, to the Assembly's appeal for "the instruction of youth in the existence and aims of the League of Nations." Uninspiring and academic? Well, so it may be. And yet this humdrum, unobtrusive measure for making the work and purpose of the League familiar to the mass of mankind may be more momentous for the future than anything which was done or left undone last month by the statesmen at Geneva.

INDUSTRIAL PROFITS.

OWING to the natural "time-lag," varying in extent for different companies, between the closing of a working year's accounts and the publication of results, the trend of the profits of British industrial joint-stock undertakings, surveyed in our usual quarterly analyses, has been slow to reflect the influence of the major recession in trade which set in last autumn. Three months ago an increase in net profits amounting to 8.6 per cent. was revealed; and, though this was accounted for almost entirely by higher earnings in the case of three prominent oil companies, the results disclosed in the other groups did not merit a more adverse description than that they were "patchy." Our latest analysis, however, depicts a very different situation. The accounts of the 329 companies which have reached us during the last three months show net earnings, after payment of debenture interest, amounting to £23,626,502, against £25,232,486 a year ago, a decline of 6.4 per cent. —

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

Third quarter	329	25,232,486	23,626,502	— 1,605,984	— 6.4

* "League of Nations: Ten years of World-Co-operation: foreword by Sir Eric Drummond" (Secretariat of the League of Nations, 1930).

The September quarter's industrial reports are less numerous than those of any other quarter of the year, and it is, consequently, unsafe to draw too confident conclusions from their showing in comparison with the results of preceding quarters. The next table, however, which gives quarterly fluctuations in net earnings since the beginning of 1924, seems to suggest that, after a period of comparative stability in 1929, followed by a brief and irregular upward movement in the first half of this year, we are now at the beginning of a phase in which industrial profits will show a marked downward movement:—

	1924.	1925.	1926.	1927.	1928.	1929.	1930.
First quarter	+ 8.7	+ 9.1	+ 7.6	+ 4.0	+ 15.2	+ 1.5	+ 1.9
Second quarter	+ 3.0	+ 11.1	+ 8.3	+ 5.7	+ 1.3	+ 0.7	+ 8.6
Third quarter	+ 2.3	+ 4.8	+ 2.8	+ 2.4	+ 9.7	+ 3.0	+ 6.4
Fourth quarter	+ 13.3	+ 6.4	+ 3.8	+ 0.3	+ 3.1	+ 1.4	...
Year	+ 6.6	+ 8.7	+ 6.3	+ 3.0	+ 7.2	+ 0.0	...

This impression is strengthened by the next table. Of the results disclosed by the various groups which make up the total, only four groups show an increase (substantial only in the case of breweries) whereas twelve groups record decreases, in many cases of very considerable extent. In fact, with the exception of the first half of 1927, when the effects on profits of the industrial troubles of the previous year were observable, it is not since the slump of 1921-22 that our analysis of earnings has revealed such a pronounced or general decline:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.)

	No. of Companies.	Reports published in Quarter ended Sept. 30th.		Increase.	Decrease.
		1929.	1930.		
Breweries	21	£ 8,398,161	£ 8,977,019	6.9	...
Gas	4	72,445	83,115	15.0	...
Hotels, Restaurants, &c.	2	113,477	141,225	24.5	...
Iron, Coal and Steel	27	672,125	740,135	10.1	...
Land Mortgage, &c.	20	1,244,760	1,063,616	...	14.6
Motor and Cycle	3	331,858	266,952	...	19.6
Nitrate	3	23,611	Dr 83,063	...	451.8
Oil	3	448,158	421,103	...	6.0
Rubber	64	1,477,191	1,005,460	...	31.9
Shipping	9	1,034,818	823,868	...	20.4
Shops and Stores	15	1,048,713	999,973	...	4.7
Tea	23	319,096	139,850	...	56.2
Textiles	12	1,125,806	614,082	...	45.5
Trusts	19	1,231,863	1,092,611	...	11.3
Waterworks	6	33,930	33,267	...	2.0
Miscellaneous	108	7,656,454	7,307,325	...	4.6
Total	329	25,232,486	23,626,502	...	6.4

So far as domestic industry is concerned, the heavy fall in the net profits of nitrate, rubber and tea companies is not directly significant. But it is noteworthy that the large "miscellaneous" group shows a decline of nearly 5 per cent., while motor and cycle and shipping profits are both down by about 20 per cent., and in the case of textiles the drop amounts to the disastrous figure of over 45 per cent. In the iron, coal and steel group the increase shown must be judged in relation to the depression already existing a year ago. Investment trusts, it will be noticed, suffered a sharp contraction in earnings, and though brewing profits, as already mentioned, continued on their upward path, the decline in the profits of the shops and stores group would appear to point to diminished spending power on the part of the public as a result of the trade depression.

In our next table we set out the distribution of profits during each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1929.	£ 23,327,747	£ 14,368,539	61.6	£ 4,149,124
Third quarter	33,404,593	22,054,466	66.0	5,356,375
1930.	£ 62,021,337	£ 38,408,282	61.9	£ 12,233,520
First quarter	79,717,393	45,045,105	56.5	19,848,375
Second quarter	23,626,502	14,830,457	62.8	4,469,225
Third quarter				

As compared with a year ago, dividends on ordinary and preference shares account for a somewhat larger proportion of total earnings, and the percentage of total profits left in the business fell from 20.6 per cent. to 18.3 per cent. The comparison with the third quarter of 1928, when the reserved proportion amounted to 26.9 per cent., is still more unfavourable. The next table shows how the aggregate distribution was divided up as between the different groups:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
Breweries	£ 8,977,019	£ 6,418,479	71.5	£ 563,868
Gas	83,115	76,529	92.1	5,586
Hotels, Restaurants, &c.	141,225	98,739	69.9	Nil
Iron, Coal and Steel	740,135	619,637	83.7	232,005
Land Mortgage, &c.	1,063,616	688,144	64.7	350,390
Motor and Cycle	266,952	122,904	46.0	279,494
Nitrate	Dr 83,063	Nil	...	Dr 115,077
Oil	421,103	215,403	51.2	Dr 83,063
Rubber	1,005,460	582,321	57.9	205,700
Shipping	823,868	349,416	42.4	221,612
Shops and Stores	999,973	587,078	58.7	177,238
Tea	139,850	438,187	313.5	235,621
Textiles	614,082	136,545	22.2	Dr 44,776
Trusts	1,092,611	650,425	59.5	362,702
Waterworks	33,267	26,225	78.8	226,406
Miscellaneous	7,307,325	3,793,625	51.9	2,015,908
Total	23,626,502	14,830,457	62.8	4,469,225

It will be seen that there were wide divergencies in the treatment of reserves. In order to maintain dividends heavy drafts on accumulated funds were made by the textile, tea, nitrate, motor and cycle, and iron, coal and steel groups, while at the other end of the scale the proportion of profits reserved by the oil, rubber, shipping, shops and stores and brewery groups was distinctly conservative. In the important "miscellaneous" group the amount reserved, 20.5 per cent., compares with 24.4 per cent. at this time last year.

Turning to earnings on capital, we next give the ratio of net profits and of sums reserved to total ordinary and preference capital:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1929.	£ 203,191,686	£ 23,327,747	11.2
Third quarter	323,129,955	33,404,593	10.3
1930.	£ 595,281,227	£ 62,021,337	10.4
First quarter	751,909,913	79,717,393	10.6
Second quarter	268,078,042	23,626,502	8.8
Third quarter			1.6

The ratio last quarter of net profits to total capital shows, at 8.8 per cent., an appreciable decline in comparison with 11.2 per cent. a year ago and 11.9 per cent. in the third quarter of 1928. The proportion of reserve allocation to capital has also fallen to a somewhat disquietingly low figure.

The next table summarises for each quarter since the beginning of 1927 the average rates of interest and dividend paid on debenture, preference and ordinary share capital:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1927.	1928.	1929.	1930.	1927.	1928.	1929.	1930.	1927.	1928.	1929.	1930.
1st quarter	4.80	4.78	4.89	4.89	5.1	5.3	5.4	5.8	10.4	11.3	10.9	10.0
2nd "	5.30	5.43	5.10	4.94	5.9	6.0	5.9	6.3	11.8	10.0	9.8	10.3
3rd "	4.98	4.90	4.88	5.36	5.2	5.4	6.0	5.0	10.2	10.7	10.3	8.3
4th "	5.19	5.04	5.29	...	4.9	4.9	4.7	...	10.1	10.3	10.6	...
Year	5.08	5.02	5.15	...	5.3	5.4	5.5	...	10.8	10.6	10.5	...

Ordinary dividends have declined to the lowest rate shown for a number of years, a fact not without significance in connection with the problems which will confront Mr Snowden when he makes up his Budget for 1931-32. On the other hand, the Chancellor of the Exchequer may find some consolation in the fact that our final table shows that in the two largest groups, breweries and "miscellaneous," which between them account for nearly half the aggregate capital, the rate of ordinary

dividend actually records a fractional increase over that shown a year ago:—

	Debenture Capital.	Rate of Int.	Preference Capital.	Rate of Int.	Ordinary Capital.	Rate of Int.	Rate of Div. a year ago.
Breweries	£ 15,090,999	4.7	£ 14,780,994	3.8	£ 34,191,340	18.8	17.7
Gas	243,176	3.8	9,000	...	1,028,240	7.4	7.5
Hotels, Restaurants, &c.	Nil	...	Nil	...	1,608,190	6.1	17.4
Iron, Coal and Steel	11,299,411	6.3	10,442,312	2.2	18,925,452	3.3	5.1
Land Mortgage, &c.	10,408,263	5.5	6,657,955	5.4	13,776,199	5.0	8.1
Motor and Cycle	611,250	7.2	2,212,774	12.6	2,176,858	5.6	17.5
Nitrate	Nil	...	Nil	...	2,000,000	...	...
Oil	2,986,651	6.6	73,202	4.7	15,773,293	3.7	7.8
Rubber	2,150,000	5.2	4,155,000	5.3	7,695,399	4.5	7.2
Shipping	947,660	6.0	3,405,071	5.2	5,874,438	10.0	10.6
Shops and Stores	136,452	6.7	883,361	2.4	2,778,490	5.9	8.1
Tea	5,461,054	4.1	7,898,051	4.6	8,319,002	5.3	6.1
Textiles	6,496,042	4.5	6,156,726	3.7	13,499,678	4.8	8.7
Trusts	94,096	4.6	89,235	5.5	399,615	6.6	7.6
Waterworks	16,134,987	5.8	32,650,353	6.2	44,967,629	8.5	8.4
Miscellaneous							
Total	72,059,141	5.36	89,414,034	5.0	178,664,008	8.3	10.3

In many of the groups the *caveat* may perhaps be repeated that the number of companies publishing results during the last quarter is not sufficiently large to afford completely reliable evidence for drawing conclusions as to the general trend in particular industries. With this qualification, however, it should be observed that marked reductions have occurred not only in the oil, nitrate, rubber and tea groups, but also in the case of both investment trusts and of companies drawing their revenue from land, mortgage, etc. It is to be feared, given prevailing trade indications, that the results disclosed during the next few quarters may be even less encouraging to investors than those revealed by our present analysis.

THE AIRSHIP DISASTER.

(BY A CORRESPONDENT.)

THE vital need, in regard to such a disaster as has befallen the airship R 101, is to view the circumstances of the tragedy in their right perspective. It would be as foolish to belittle this catastrophe as it would be to say, prematurely, that it spells the doom of all airship progress. Profound sorrow is felt at the loss of all those brilliant men who have sacrificed their lives for the cause they had at heart, and our deepest sympathy goes out to their sorrowing relatives. But these pioneers are now beyond recall, and what they themselves would have wished, were they still here, would be for us to seek dispassionately every means which might prevent such a disaster happening again.

What must be our point of view in endeavouring to see this great tragedy of the air in its proper proportion? Two questions at once arise:—(1) The effect of the disaster on airship construction; (2) its influence on the general position of the airship in world transport. A public inquiry, in addition to a close technical scrutiny of all the facts, is already promised. No stone is to be left unturned in arriving at the truth. To-day, reviewing all the facts known at the moment, one may say this. The crash appears to have been due to one or other of two causes:—(1) The airship may have been driven to earth in a violent squall while heavily-laden and flying low; (2) just before the accident she may have been the victim of some structural failure which rendered her only partially controllable. The preliminary technical investigations which preceded the design and construction of the R 101 led British experts to believe that, in previous large airships, the margin of structural strength had been insufficient. In the R 101, therefore, the prime consideration was to ensure the amplest margin of safety in every part of the enormous hull. Steel girders, instead of those of aluminium alloy, were employed, while as an additional precaution, to avoid fire risks while in the air, the expedient was adopted of using oil-burning instead of petrol burning engines. Incidentally, even with oil engines, in the case of such a

Int. Tel.: Stockholm. 0101

crash as that of the R 101, the risk of a fire starting, through sparks igniting escaping hydrogen, cannot be obviated. Here lies the convincing argument in favour of the use, when it can be procured, of the non-inflammable gas, helium.

The essential point, however, is that all these safety precautions resulted in the R 101 having a heavier structural weight than had previously been estimated, and this was a very definite drawback from the point of view of her use as a commercial vessel, carrying passengers and mails for long distances. It was found, as a matter of fact, that unless she could be given a bigger lift, by the introduction of more gas compartments, she would be unable to carry out the demonstration programme which had been planned in the shape of long trans-Empire flights. Thus, recently, a new 45-foot bay was introduced into her hull, increasing her lift by approximately 15 tons.

Even so, when she left London on the first stage of her flight to India she was very heavily loaded, remembering always that the vessel itself was of a heavy structure. This meant that, for a considerable distance after she had begun her flight, she was obliged to fly at a low altitude. This would not have mattered had weather conditions been favourable. But as she crossed the Channel, and began to fly over France, the conditions of wind and rain grew rapidly very much worse. Torrents of rain fell, soaking the fabric of her great hull and rendering her still more sluggish. The wind blew in gusts of increasing strength. In the neighbourhood of Beauvais, where she crashed, atmospheric conditions are notoriously dangerous for air navigation, and a good many aeroplanes have come to grief in this region.

We have the testimony of survivors that just before the crash the airship, labouring heavily in the raging wind and driving rain, dipped her nose steeply. From this dive those controlling her managed to bring her back on an even keel. But then came another plunge, and this time the bow of the airship struck the crest of a ridge which rises something like 700 feet high. There is the story as it is known to-day, and what experts have to do is to derive the clearest possible lesson from it.

One positive fact must be borne in mind. What the world requires to-day of an airship is that it should be an economic proposition as a commercial transport vehicle. It has not only to be safe and fast in flight, but it is imperative that it should carry a paying load. An airship might be built so strong that nothing in the world would break it up; but if its weight was so great that it would not carry a remunerative commercial load, then it would be a useless proposition from an economic point of view. It is vital that a most careful balance should be struck between the structural strength of a great dirigible and the load it can carry over long distances without alighting. That is the problem in a nutshell, and this disaster must be viewed critically from just this one point of view.

Although the provision of moorings is a serious factor, the scope for the airship in aeronautics is that it offers a means of long-distance non-stop aerial transport which, at the moment, no other aerial machine provides. Gratifying progress, fraught with great possibilities, is being made with large multi-engined flying-boats; but when it comes to a non-stop crossing of oceans, with a big commercial load, no heavier-than-air machine, at the

present time, can approach the performance of the airship. But can the big dirigible be made strong enough, and at the same time light enough, to enable it not only to survive very bad weather, but, in addition, to carry a load of a sufficient weight to permit it to be operated on an economic scale?

Airship designers have been talking recently of very much bigger airships, into which it would be possible, without undue risk, to import a lower factor of structural strength than had been employed in the R 101. They have realised that if they build a dirigible with a large margin of safety, it may not be able to lift a really commercial load. Therefore, the idea has been to reduce sheer structure weight. But this does not deal with the problem fully.

Both the R 101, and her sister ship, the R 100, have proved too slow in flight to be of any real value in operating an all-the-year-round ocean service. Therefore, the experts are examining the possibility of building bigger and lighter airships and at the same time of equipping them with far more powerful engines to drive them through the air at speeds approaching 100 miles an hour. But here a further problem of the gravest significance, and one so far unsolved, arises. It concerns the enormous strains which may be imposed on a great light-weight hull when flying at a high speed in weather which is producing rapid and powerful atmospheric disturbances.

The airship designer appears, to-day, to be on the horns of a dilemma. If he builds a great machine of high structural strength, such as the R 101, it may not carry a sufficiently large paying load; or, if it is laden very heavily for some long flight, it cannot, for some considerable distance after it has started, attain a height sufficient to render it immune from a risk of powerful downward eddies in the air. And if a designer, in an endeavour to produce a great vessel which shall be a really commercial proposition, cuts down his weight and puts up his speed, then he appears to be running heavy risks of structural failure should his machine be beaten and tossed about in a violent gale.

Until answers which are completely satisfactory can be provided to the problems, and until convincing evidence is forthcoming that any repetition of the R 101 disaster can be averted, giant airships as transport vehicles must be held to be susceptible to risks so great that an expenditure of further large sums of public money upon their construction is unjustified.

"NAZISMUS."

(BY A CORRESPONDENT.)

WHEN Herr Hitler and his "Nazis," after the German elections, became figures on the international stage, their success was certainly not due to the party programme, for the most part a conglomeration of absurdities. Nor was it due to marked ability or character on the part of the leaders of the movement, most of whom are demagogues of the purest water unhampered by experience or knowledge. Nevertheless, Herr Hitler's movement has caught the imagination of millions of young Germans, many of them of the best type, and seems likely to grow apace now that it is in the limelight. Herr Hitler may not be as absurd as he seems when he disclaims all intentions of a "Putsch" and declares his intention of "conquering the German soul."

This remarkable phenomenon has been explained in a variety of ways. Undoubtedly discontent with the incapacity of the old parties, fear of Communism, severe economic distress, continual scandals in local administration, the burden of reparations, the disarmament fiasco, have all played their part; but this is hardly the whole story. Under the surface of German life a reaction against the whole tendency since 1918 has been germinating, and more by chance than anything else it has chosen this particular way in which to manifest its strength.

The power of an idea over the German people was sufficiently demonstrated by their achievements during the War. The collapse of 1918 produced a widespread reaction towards materialism, which has been perhaps the principal characteristic of political life under the

Republic. The political parties which have alternated at the helm have tended more and more to represent material vested interests of one kind or another. The Social Democrats, representing mainly organised Labour, failed to establish Socialism, but succeeded to a very large extent in establishing themselves. The Democratic Party had its ideals, but it has been handicapped by becoming more and more associated in the public mind with the Jews and the Jewish Press, and it has increasingly suffered from the general failure of Liberalism in Europe to command the enthusiasm of the masses. The Centre is Catholic; the People's Party represented mainly "business"; the Economic Party's *raison d'être* is exclusively the pursuit of material advantages for the small shopkeepers, house-owners, etc., which compose it; Hugenberg Nationalists, and the groups which seceded from them, are mainly agrarian. None of these parties offered ideas or ideals capable of commanding enthusiasm. In the negotiations preceding the dissolution of the Reichstag they had confined themselves to "Kuhhandel," an expressive German word denoting party bargaining for petty advantages. The Government's programme, though necessary, was uninspiring. The National Socialists and, to a much lesser extent, the Communists offered something which the others lacked. They were not burdened with unfulfilled promises; they had never been in office. By voting for them, then, the average man could express his desire for a complete change, for a thorough clear-out, for new ideals.

The idealistic basis of the National Socialist Party is perhaps best expressed by a remarkable pamphlet published some ten years ago by Oswald Spengler, the author of "Der Untergang des Abendlands." Under the heading "Prussianism and Socialism," Spengler compares Socialism with the Prussian ideal of service for the State, and contrasts this with the Anglo-Saxon ideal of individual enterprise which built up the Empire. The Anti-Semitism of the movement is bound up with this view; the Jew is looked upon as a person whose only law is that of private profit, and who is therefore bound to come into conflict with the ideal of service to the German people as a whole. Hence, too, the animosity against "international bankers," who are very often supposed by the general public invariably to be individuals who put their profits before the interests of the nation. From here, it is not a far cry to the idea of the Young Plan as an instrument of international finance to exploit the German people.

A further important basis of the movement is in the domain of what in Germany is described as "cultural policy." Before the War Germany was morally strict and neatly divided socially into watertight compartments. The War and the disturbed period which followed it undermined the established order to a far greater extent than in most other European countries. Laxity became the rule, particularly in the larger cities, and went to unprecedented lengths in literature, theatre and conduct. The National Socialist movement has cleverly utilised the inevitable reaction. Their most successful election poster was that of a stern-faced giant wielding an iron broom and cleaning the Augean stables of the "Weimar System." Here they join hands with the Right or clerical wing of the Centre Party, which partly explains the unwillingness of the Centre to turn to the Social Democrats at the present juncture.

The theoretical attitude of the movement towards the Young Plan and the Treaty of Versailles is one of frank repudiation. The practical proposals of the foreign policy experts in the party organs are so tame that, according to the *Deutsche Allgemeine Zeitung*, they make Herr Koch-Weser's pronouncements in Geneva sound like those of a Nationalist hothead. Bismarckian "Realpolitik" is the slogan—utilising every opportunity as it presents itself. This, added to vague ideas of an alliance with Italy and even with England, is the sum of National Socialist wisdom in the domain of foreign policy. The party demands a cessation of payments under the Young Plan, but most of its members would admit that this is only intended as a gesture, as the indication of insistence on negotiations for a revision, and not as repudiation. In practice, it is far more likely that application would merely be made for a moratorium under the terms of the Plan itself. Whichever course is taken, unless there is absolute

catastrophe in Germany nobody would dream of repudiating any private liabilities, including the Young Loan.

Two problems confront those who are interested in Germany's political and economic development. The first is the problem of the immediate future—say, of the next two years or so. The Brüning Government, confronted with very great difficulties, has presented a far-reaching programme of reform whose keynote is drastic reduction of expenditure, including salaries. With this programme it will face the Reichstag. Since nobody really wants to govern at the present juncture, it may be able, like the Labour Party in England, to continue minority government. If the Reichstag, particularly the Social-Democrats, prove obstreperous, it is difficult to see how a majority could be obtained. Government by decree might conceivably be introduced for a time under President Hindenburg's authority. Any temporising, and particularly any coalition with the Social-Democrats, would undoubtedly largely increase the National Socialist vote. There is a body of responsible opinion which urges that the best course would have been to take the National Socialists in at once and try the effect of responsibility upon them. It is probably too late to do this, at least, upon reasonable terms. The situation is thus extremely obscure, although the fundamental good sense of the German people leads one to believe that some solution will be found to enable the critical winter months at least to be tided over.

The immediate future, however, is not fundamental. It is necessary frankly to face the question what would happen if the National Socialists attained such strength at future elections that they dominated the situation. Is their radicalism a sign that Germany is breaking up, or one that she is, according to the Hitler slogan, waking up? Is the movement essentially sound, and can it become constructive if properly handled? Of two things there is no doubt. The main support of the movement does not come from extreme Labour, but from the discontented middle and upper class—the stablest elements in pre-war Germany. And this support is uncertain, experimental. Hitler might have 200 seats at the next elections or he might have 20. Judging from the comparative caution of the party pronouncements, it looks as though he is well aware of his position.

Notes of the Week.

The Labour Party Conference.—The annual conference of the Labour Party, which opened at Llandudno on Monday, was awaited with especial interest for two reasons. It would, in the first place, obviously provide the occasion for the full-dress parade of the malcontents of the Left Wing; and secondly it was expected to reveal the trend of opinion within the party and among its leaders on the fiscal issue. From both points of view the proceedings of the opening days provided plenty of interest, but no excitement. Although Sir Oswald Mosley cogently remodelled the facts and arguments in favour of his own unemployment policy, which he presented to the House of Commons some months ago, the attack from the Left was successfully resisted by the executive. It is clear, however, from the fact that Mr Thomas was eliminated and Sir Oswald Mosley elected in the voting for seats on the Party Executive, that the latter's speech produced a real impression on the delegates. The threatened storm over the Government's failure to amend the Trades Disputes Act was more easily averted by Mr Henderson's promise that such a Bill would definitely be introduced next session. The Conference, therefore, produces no appearance of danger or threat to the Government. Nor has it produced any serious support for revolutionary proposals. Impatience with the slow progress towards Socialism was evident in abundance, but there seemed to be a sort of reluctant acquiescence with the "inevitability of gradualness," and Miss Susan Lawrence, in her presidential address, sounded this very note when she bemoaned, but faced, the fact that the capitalist system is internationally and firmly entrenched. Nevertheless, the

voices of the malcontents were sufficiently loud to create the fear lest the Government should be driven to appease them by even increasing social expenditure; and this fear is not allayed by Miss Lawrence's choice of ground for defending the Government's record, which was that it had in the last Budget taken money from the rich to give to the poor—a process which she amiably described as "Robin Hood" finance. We wonder how Mr Snowden appreciates the rôle which his lady colleague has thus cast for him? It is one which hardly tones with the peroration of his Budget speech, in which he promised, if possible, to leave the shorn lamb with such remnants of fleece as he still can boast.

The Unrest in Latin America.—The present economic depression is world-wide, but the social and political reactions to it naturally differ in different regions. In Latin America, it is producing something like a political regression to an era of political revolutions which seemed to have been left behind once and for all—at any rate, in the normally prosperous and progressive "A.B.C." States of South America and in the Caribbean Republics which have had prosperity and progress thrust upon them by the intervention of the United States. After having had to record revolutions in Peru and Argentina within the last few weeks, we have now to add to the list. In Ecuador, the President of the Republic has first tendered and then withdrawn his resignation, after encountering military opposition to a scheme of financial reform which he is carrying through on the advice of a commission of private financial experts from the United States. In this story, we cannot tell yet whether there are more chapters to come. Meanwhile, in Cuba, there has been a clash, involving casualties, between the police and a band of armed students who were demonstrating against President Machado—the Dictator whose function it has been to maintain in Cuba that state of affairs which meets the requirements of the United States. But the most serious and extensive new disturbance is the revolution which broke out on October 3rd against the Federal Government in Brazil. This outbreak appears to have started in the three States of Rio Grande do Sul, Minas Geraes and Parahyba, and to be extending rapidly over the vast territories of this largest of Latin American Republics. At the time we go to press, reports of the progress of the revolt are conflicting, but the rebels have apparently captured Pernambuco and are said to be at the gates of Sao Paulo, and to be within 300 miles of Rio Janeiro. As we show on a later page, the shock to Brazilian securities has been severe. It remains to be seen how the new Governments that have come, or are on the point of coming, into power in half-a-dozen Latin American countries will acquit themselves. No doubt they will be expected to perform miracles, quite beyond their power, in conjuring prosperity back. It is to be hoped that they will not try to divert their supporters' attention from their inability to do the impossible by embarking on any foreign military adventures. There are still a number of unsettled boundaries and disputed territories in Latin America which offer opportunities for mischief to anybody who has an interest in making it.

The Fascist Trend in Germany and Austria.—Last Saturday, October 4th, the three officers of the German Reichswehr who were on trial for treason before the Supreme Court at Leipzig were sentenced each to eighteen months' detention in a fortress for "jointly preparing a highly treasonable undertaking." The two of them who were on the active list were also dismissed the service. The public in court made enthusiastic demonstrations in favour of the prisoners when the verdict was read, and the demonstrations have spread. They have been particularly violent in Munich, a city that, as the headquarters of the National-Socialists, may hope to retain some of that independence and importance which all other local capitals in Germany have lost irretrievably to Berlin. The Fascist idea has entered Germany from the south side of the Alps, and it is in the South German States—no longer content to acquiesce in the

hegemony of a demilitarised and socialised Prussia—that the movement is establishing its strongholds. Herr Hitler himself is an Austrian by origin; and a young Austrian aristocrat, the Prince of Starhemberg, who is one of Herr Hitler's disciples, has just come to office in his own country. He has been given the Ministry of the Interior, and his partisan, Dr. Hueber, the Ministry of Justice, in the new Austrian Cabinet, which was formed on September 30th by Herr Vaugoin. Evidently the Austrian Christian-Socialists do not feel that they can face the coming general election with confidence unless they have allies; and the inclusion of the Prince of Starhemberg and Dr. Hueber in the new Cabinet is a bid for the support of the Heimwehr—the Fascist organisation in Austria, of which the Prince is commandant. In this latter capacity he has issued a proclamation declaring that his party has accepted office not to save the Christian-Socialist Party, but to save Austria, that the Heimwehr now hold the rudder of the State firmly in their hands for their own benefit, and that they will not allow it to be wrested from them, even if, in the forthcoming elections, the "Reds" prove victorious. This declaration, from a Minister whose office gives him control over the police and the gendarmerie, is tantamount to producing a revolution in advance unless the elections yield the results that he desires. Meanwhile, Herr Hitler has given an interview in which he has once again emphatically disclaimed any intention of seizing power in Germany by unconstitutional means. We are neither seriously alarmed by the Prince of Starhemberg's statement nor appreciably reassured by Herr Hitler's.

The Round Table Conference.—The list, announced on Wednesday, of the representatives of the British Government and of the two Opposition parties who will attend the Indian Round Table Conference occasioned little surprise, for it had been understood for some time that the Oppositions would not be represented by their leaders. The British Government are to be represented by the Prime Minister, Lord Sankey, Mr Wedgwood Benn, Mr Henderson and Mr J. H. Thomas; the Conservatives will be represented by Earl Peel, Sir Samuel Hoare, the Marquis of Zetland and Major Oliver Stanley, and the Liberals by the Marquis of Reading, the Marquis of Lothian, Sir Robert Hamilton and Mr Isaac Foot. It is to be regretted that the Opposition in the House of Commons are not to be represented by strong Front Bench teams, and though there are those who have been strongly pressing the case for including younger men who have less commitments round their necks than some of their older colleagues, the fact remains that the Opposition nominees from the Commons will be sitting with a very much stronger team from the Government side. The Government have, in effect, nominated the inner circle of the Cabinet, and it is difficult to see that the Commons representatives of the Liberals and the Conservatives can be much more than observers for their respective parties. The representatives selected from the House of Lords are in a rather different category seeing that they include an ex-Secretary for India, an ex-Viceroy and an ex-Governor of Bengal. But the task before the Conference is at once so important and so difficult that the combined strength of Mr MacDonald, Mr Baldwin and Mr Lloyd George could most profitably have been employed upon it.

London Traffic Co-ordination.—Last December, a few months after the rejection of the private Bills promoted by the L.C.C. and the Underground group, Mr Morrison, the Minister of Transport, announced in Parliament the Government's general intentions. Briefly, these lay in the direction of the unification of all forms of London passenger transport under a "single and simple form of public ownership," to be combined with the principle of commercial management, thus ensuring the advantages of vigorous business enterprise. Last week, following consultations between the Ministry and the various traffic interests, Mr Morrison issued a statement elaborating

these proposals. The Government now intend to create a new statutory public body to embrace the "Underground" transport undertakings, the Metropolitan Railway, all municipal tramways, and all other omnibus undertakings operating within the London area. The suburban lines of the four trunk railways are to be excluded, on the ground that they are inseparable from the main systems, and the new Traffic Board is to be given considerable elasticity as to its relations with omnibus companies operating long-distance road services between London and provincial centres. In deciding the composition of the Board the idea of a joint municipal authority has been rejected, on the ground—as Mr Morrison naively explains—that such bodies have too much "joint" and not enough "authority" about them. Instead, there is to be a small Board consisting of persons of "proved business capacity," led by a chairman who should "combine business acumen and vigour with wide knowledge and experience." In fact, Mr Morrison is following the example of the Electricity Board, and in so doing he is devising the kind of machinery most suitable for the functions it is to perform. It should, however, be recognised that the new body has many difficult problems to solve. It must, for example, avoid the temptation of establishing new omnibus services which would add to road congestion, danger, and noise, and at the same time starve existing railways of traffic which they could readily handle. It must recognise that the electrification of a suburban line, even though outside the Board's control, may be the best solution to a particular traffic problem. It must realise that the Metropolitan Railway is a hybrid system, which extends not only from New Cross to Kensington, but also from Baker Street to Verney Junction in the heart of Buckinghamshire. In short, it owes a duty not only to the London travelling problem and to those who have invested their capital in the undertakings which it controls, but also to all other road users, to all those living alongside main roads, and to other traffic interests which lie by their own right outside the new Board's ambit. The task will call for discretion as well as zeal.

The Coal-owners' Refusal.—The Mining Association have announced their refusal to exercise the right given to them under the Coal Mines Act to suggest six out of the seventeen members of the National Industrial Board, established by the Act to consider such questions of wages and labour conditions as may be submitted to it. Although their refusal will not prevent the constitution of the Board according to law—for the Minister of Mines can now act on his own initiative—it shows that the Mining Association have only accepted this section of the Act under protest, and that they are not prepared to admit the principle laid down in the Act that wages and labour conditions ought to be determined nationally rather than district by district. By so doing, the Mining Association have only followed past precedent, for it will be recalled that they have always held out for district rather than national settlements, and in furtherance of their policy they have previously been known to declare that they have no power to act as a national body. Nevertheless, their refusal upon this occasion is creating a bad impression. For good or for evil, the new Act is now law, and in failing to fulfil it in the spirit as well as in the letter, the members of the Mining Association are open to the charge that they are shirking the duty every citizen owes to his country. It is particularly unfortunate that this should have occurred just at the time when many important and far-reaching decisions have to be taken in the industry, and when a general atmosphere of good will and desire to co-operate is essential. Must it be said that once again the Mining Association has shown itself to be still living in the past?

Midland Coal Schemes.—A correspondent writes:—The district marketing scheme which the Midland coalowners were required to submit to the Mines Department under the provisions of the Coal Mines Act has been the subject of considerable negotiation with the Department. Soon after the scheme was forwarded, certain amendments were submitted by the Department, and these have been

the subject of conferences with the separate Associations which comprise the Midland area. There is by no means unanimity among the members of these Associations, and considerable difficulty is being experienced in getting agreement on some of the provisions of the scheme. On another matter arising out of the Act the attitude of the Yorkshire owners differs from that of many of the owners in other parts of the country. The Yorkshire owners do not agree with the attitude of the Mining Association in declining to nominate representatives to the proposed National Board. This is only consistent with their attitude ever since 1926. Then the Yorkshire owners voted in favour of a national wages agreement, and they still maintain that this is the proper course. It is not unlikely that some Yorkshire owners would accept a seat on the Board if given the opportunity.

More Cotton Yarn "Stabilisation."—This week, writes our Manchester correspondent, another scheme has been considered for the stabilising of cotton yarn prices. On Tuesday last there was a special meeting in Manchester of the General Committee of the Master Spinners' Federation to discuss a proposal from the Oldham Masters' Association. After some discussion a resolution was passed in which the Committee favoured the attempt being made to establish a scheme, with compulsory powers, for the purpose of stabilising prices amongst spinners of American cotton. A sub-committee was appointed to prepare a plan in full detail, with a view to a further discussion taking place at a later meeting of the Federation Committee. The President of the Federation, Mr Fred Holroyd, said that the object of the proposed scheme was not so much to fix definite prices as to establish a principle by which prices can be calculated on a basis which will prevent selling at less than the cost of production of efficient and reasonably financed mills on full time working. In trade circles there is very little expectation of a scheme of this kind being a success. It is evident that the Master Spinners' Federation have an idea of doing something on the lines of the recent proposed Egyptian Cotton Spinners' Convention which up to now has not received adequate support. Leading authorities in the trade contend that the proposed action will not have the desired effect, even should it be possible to secure a big majority in favour of the scheme. The need in Lancashire to-day is to reduce production costs so as to bring our prices on to a competitive level with world prices.

Cotton Supplies.—On Wednesday last the United States Government published important statistics relating to the cotton crop for the season 1930-31. The growth is estimated at 14,486,000 bales, as compared with a forecast a month ago of 14,340,000 bales. The amount ginned so far this season is 6,805,000 bales, against 5,906,000 bales at this time last year. The yield per acre is given as 154.7 lbs., the condition being 53.5 per cent. The carry-over from last season was over 6,000,000 bales, so prospective supplies for the twelve months are about 20½ million bales. Owing to the trade depression the world consumption at the moment is very low, and authorities are of opinion that the amount being used is only on a level of 10½ million bales per annum. The figures, writes our Manchester correspondent, were about equal to expectations, and did not result in any particular change in prices, but values have recently declined and are now on a lower level than at any time since 1915, futures in Liverpool being round 5½d. At the beginning of this week the Ministry of Agriculture of the Egyptian Government estimated the cotton crop at 8,420,435 cantars, including 2,328,068 cantars of Sakellaris. This forecast was better than expected, and resulted in a sharp drop in prices in Liverpool and Alexandria.

Trade Union Membership.—Statistics of trade union membership at the end of 1928, contained in the Report of the Chief Registrar of Friendly Societies for 1929,* show that the decline of previous years continued, though at a slower rate. The table below gives the number and membership of trade unions on the register during the last ten years:—

TRADE UNIONS AND MEMBERSHIP.					
	Number.	Membership.		Number.	Membership.
1919	544	6,516,436	1924...	484	4,458,147
1920	557	6,928,666	1925...	488	4,447,818
1921	524	5,453,815	1926...	485	4,147,653
1922	514	4,505,941	1927...	487	3,903,048
1923	490	4,368,877	1928...	481	3,764,865

The percentage decline in membership during 1928 was greatest in quarrying, where it amounted to 9.7 per cent. of the membership. Declines were also recorded in the general miscellaneous group, in building, textiles, entertainments, clothing, metals, printing, leather, pottery and glass, transport and agriculture. There were, on the other hand, increases in the fishing, commerce and finance, professional, woodworking, food and chemical groups. On the financial side, 1928 was in a sense a successful year, as diminished income was more than balanced by diminished expenditure, with a consequent increase in the funds from £9,709,538 to £10,602,403 during the year. Expenditure on unemployment benefit was low, though this is partly due to the fact that one large union has ceased to administer State unemployment benefit, and expenditure on dispute pay exceptionally low, as compared with other post-war years. Superannuation benefit, on the other hand, is putting an increasing strain on union funds, and the United Society of Boilermakers has been driven by it to suspend its "donation" benefit to unemployed members. It is not yet possible to estimate the full effect of the Trade Disputes and Trade Unions Act, 1927, on the political funds, but it is significant that the number of members returned as contributing fell from 2,222,000 in 1927 to 1,634,000 in 1928, and the amount shown as contributions fell in the same period from £133,000 to £100,000. The promise, repeated by the Government at the Llandudno Conference of the Labour Party, that an amending Bill will be introduced before Christmas, is doubtless a reflection of a further decline in "free-will" political contributions.

Builders on Rationalisation.—The Building Industry Council of Review, on which are represented employers, operatives, building materials manufacturers and suppliers, architects and surveyors, has issued a report

* Part IV, Section 1 (60-42-1-29). H.M. Stationery Office. 1s. net.

embodying the first results of an inquiry into the possibility of introducing the methods of rationalisation into the building industry. Rationalisation is defined as "the elimination of waste and the reduction of costs by improvement in general organisation and technical methods. The view is expressed that though much progress has been made recently in the organisation of the industry, there is still a great deal to be done, and that efforts within the industry itself must be supplemented by help from Government departments and local authorities, particularly in the form of revision of out-of-date legislation and regulations. One of the most interesting points made in the report is the great scope for economies both in time and labour by the use of "time and progress schedules," to which the greater economy of building in the United States, with the consequent higher wages, is largely attributed. A time and progress schedule is a carefully co-ordinated programme drawn up before building is begun, which makes possible a methodical succession of operations and a consequent saving of from one-sixth to one-third of the time otherwise required. In the case of expensive buildings, this means a very substantial economy in interest charges, and the report recommends as wide an extension as possible of the system. In order to carry this out, the closest collaboration between architect, engineer and quantity surveyor would be necessary from the very early stages. Other recommendations deal with the education of students for the building industry and the need for giving the industry as a whole the benefit of the very most recent developments and experience; with the need for closer contact between different branches of the industry and the associated trades, and with the possibilities of wider use of standardisation and the use of machine methods. It is satisfactory that the majority of the recommendations are calculated to reduce costs without increasing unemployment; indeed, the most important of them would tend to reduce it by eliminating certain causes of lost time. A further inquiry into the possibility of mitigating the effects of instability of employment by control of recruitment and training, better weather protection and the regulation of the flow of orders for public building is suggested, and the report concludes by recommending the establishment of a permanent central council to represent all branches of the industry and associated trades with a view to securing a greater measure of co-operation. This programme of rationalisation, interpreted in its best sense as a policy of economy and simplification, should, if carried out, help to create the necessary conditions for the expansion of the industry, for the experience of the United States has shown that the demand for buildings is surprisingly elastic and can readily be stimulated by a sufficient reduction in costs.

Shipping Freight Index Number.—The seasonal rise in shipping freights was arrested during September, and our index number, at 97.3, recorded an increase (monthly averages being compared in each case) of only 1.3 per cent., against 5.8 per cent. in August. Recent movements of the various group indices are summarised below:—

AVERAGE 1898-1913=100.

	Average, 1913.	Sept., 1929.	July, 1930.	Aug., 1930.	Sept., 1930.
European Waters	110.0	129.7	86.3	86.7	87.3
North America	113.1	99.9	89.6	94.2	91.2
South America	123.4	112.3	94.6	99.7	95.7
India	106.3	115.3	102.8	104.5	103.0
Far East and Pacific	107.4	100.4	78.3	84.7	89.2
Australia	127.9	107.7	93.5	106.8	117.5
Total	116.3	110.9	90.8	96.1	97.3

Among the homeward trades, the Plate market underwent a sharp reaction as a result of the unsettling influence on grain prices exercised by unexpectedly substantial shipments from South Russia, and the North American trade was depressed by the same factor. Rates from Australia and the Far East were firm, but the volume of business remained small. Except for Russian chartering, conditions in Europe were quiet, and the out-

ward coal market was dull. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade.....	76.1	+ 2.5	South America—out-		
Bay—outwards	100.9	— 1.8	wards	89.7	+ 2.5
Bay—homewards	93.5	—	South America—		
Mediterranean—out-			wards		
wards	86.4	— 0.2	homewards	101.6	— 10.6
Mediterranean—			India—outwards	122.1	+ 2.1
homewards	90.7	+ 0.7	India—homewards	83.9	— 5.0
North America	91.2	— 3.0	Far East, &c.....	89.2	+ 4.5
			Australia	117.5	+ 10.7

Expressed as a percentage of the average for 1913, the total figure of our index number for September works out at 83.6, as compared with 82.6 in August, and 95.3 a year ago.

Anglo-Russian Timber Trade Agreement.—Our timber trade correspondent writes:—The lack of confidence so rife this year in the United Kingdom imported wood market will be allayed to no small extent by a provisional agreement which has been arrived at between the Soviet timber authorities and the Central Softwood Buying Corporation, Ltd.—a consortium of the larger timber importers in the United Kingdom representing, it is claimed, some 80 per cent. of British first-hand purchasing power for European timber. The C.S.B.C. is to enter the market as a buyer (whereas before it stood aloof); it will take over on January 1st next all Russian stocks unsold in shippers' hands in the United Kingdom, and it will control the purchase and distribution of the whole of the Russian cut intended for the United Kingdom and to be shipped in 1931. A prominent feature in the arrangement is that the Russian shipments will be conducted this and next year more in ratio to demand, compared with the previous intensive export plans of the Soviet timber authorities. Thus this year's receipts are to be approximately 500,000 standards, against the 650,000 standards the trade recently anticipated, and next year the import of Russian wood is to be approximately 600,000 standards. The actual price terms for the 1931 market have not at time of writing been divulged, but they will be on an even lower basis than this year, and will have the effect of forcing Russia's principal competitors either to come down in their price ideas, or to limit their output. The latter policy would be tantamount to giving up the game, whereas by practising the severest economies they may succeed in meeting the Russian competition. That other than Russian timber is required here is shown by the 1929 imports of 1,398,000 standards of sawn and planed woods, whereof Russia sent 517,000 standards. Any serious drop in exports by any other country would be more loss to that country than to the United Kingdom, as—except during the war—supplies always seem to be forthcoming, especially, as now, when money is so scarce in European afforested areas.

Overseas Correspondence.

LEAGUE OF NATIONS.

The End of the Assembly — Results Reviewed.

(FROM OUR CORRESPONDENT.)

GENEVA, October 8.

THE Assembly concluded on Saturday, and the general impression of the delegates was aptly described by the President as "not satisfied, not discouraged." There was not much encouragement in the final Assembly debate on the disarmament resolution, which expressed the conviction that the Preparatory Commission would be able to conclude the preliminary draft convention in November so that the conference might be summoned "as soon as possible." The German, Austrian and Hungarian delegations abstained from voting because the resolution did

not fix the date of the conference for 1931, the German Foreign Minister suggesting with some logic that if they were convinced that the Preparatory Commission could finish in November there seemed no reason why they should not also be convinced that the conference could take place during the following twelve months.

M. Briand made one of his occasionally disconcerting contributions, due doubtless to the political situation in France. On the morning of his speech in the Assembly there had appeared a report of an extremely liberal statement made by him to the women's international organisations, and his afternoon speech in the Assembly was described as a reply to himself. He claimed, in effect, that France had done as much as could be expected of her in the way of reduction (he flattered himself that she had reduced the period of military service from three years to one, and her effectives from 810,000 to 556,000), and that only when the League had given France an assurance that it would always provide sanctions would there be sufficient security for France to do anything more substantial. He referred to recent events in Germany as showing the necessity for prudence, and said nations must not by disarming create new dangers; there could be no real solution outside the formula of arbitration, security and disarmament. To this the German Foreign Minister, Dr. Curtius, replied that the maintenance of armaments at their present level was a much greater danger to peace than reduction, and he pointedly observed that German opinion—that the best means of achieving security was to begin with disarmament—was shared by the British and Italian delegations. On M. Briand's reference to recent developments in Germany, he observed that Germany was not the only country where anxieties existed, and that causes of unrest would not be removed by failure to respect treaties or to disarm.

Count Apponyi, of Hungary, also reminded M. Briand that, though there might be danger for countries which had means of self-preservation, it was even graver and more intolerable for countries subject to unilateral disarmament which had been imposed on them with a promise that it would only be for a transitional period. He, Dr. Curtius, and Lord Cecil drew attention to the fact that while little or nothing had been done towards disarmament, a good deal had been done towards arbitration and security. With the failure or suspension of the Franco-Italian negotiations, and the hardening of the French position, the Assembly's "conviction" in regard to the successful outcome of the Preparatory Commission's meeting seems optimistic.

The resolutions on economic questions, as summarised last week, were adopted by the Assembly, and the Council subsequently instructed the Economic Committee to draw up concrete proposals for the conference which is to meet on November 17th. A point of interest in the Assembly debate was that the French Minister of Commerce said that the volume of credit in the world should be increased by a redistribution of the gold supply; and this was capped by the Italian rapporteur, M. Michelis, with an observation which he described as even more "revolutionary," namely, that there might be a redistribution of soil.

Of what might be termed the three security questions on the Assembly agenda—amendments to the Covenant, the financial assistance scheme, and the draft convention for strengthening the means to prevent war—one only, the financial assistance scheme, was definitely concluded. The other two questions were postponed to the next Assembly. It was always likely that the amendments to the Covenant to bring it into harmony with the Paris Pact would lead to controversy on wide political issues when the report of the Committee of Jurists came before the Assembly. How far the interpretations which accompanied the accessions to the Paris Pact would remain effective if the proposed amendments were adopted; how far the amended Covenant would be compatible with other treaties, such as the Locarno treaties, which were the object of express reservations when the Pact was concluded; the conditions of the application of the sanctions of Article 16 to the new obligations—these are all ques-

tions upon which differences exist. Moreover, there were some substantial changes proposed, including the elimination of the proposal of the Committee of Jurists that a unanimous decision of the Council under Article 12 should be binding. It is easy to see how far all these factors carry the discussion, and although Lord Cecil pressed hard for a final decision at this Assembly, it seems too important a question to be hurried through. On the other hand, there are obvious dangers in prolonging the discussion, which would be much simpler if one word of guidance were forthcoming from the United States of America as to what she would consider her obligations to be if the Pact which she proposed to the world should be violated. The Assembly's resolution approved of the necessity of incorporating in the Covenant a general prohibition of resort to war, and decided to submit to the Governments the report of the Committee of Jurists, and that of the First Committee, asking them to present their observations before June 1, 1931.

For the rest, the report on the minorities' discussion gave rise to no further debate in the Assembly, but the rapporteur, M. Motta, discreetly took his stand on the more liberal interpretation of the treaty obligations; resolutions were adopted to facilitate League communications in times of emergency; a European conference on road traffic is to be summoned for March, 1931; a general conference on the limitation of drug manufacture is to meet in May, 1931; a provisional agreement was reached between the German and Lithuanian Governments concerning Memel; the Polish and Lithuanian Governments are to enter into direct negotiations to restore order and tranquillity in the region of the administrative boundary. Arrangements were approved for the committee inquiring into the traffic in women in the Far East; various health organisation developments were authorised; and satisfactory progress reported in health service organisation in China. The discussions on the organisation of the Secretariat led to a reaffirmation of its international character, and the adoption of conditions designed to strengthen it; a consideration of the number and status of the higher officials has been referred to a committee which is to report to the next Assembly. The Assembly noted with great satisfaction the improvement of the position in Palestine, and also the renewed undertaking of the British Government to give the Mandates Commission an opportunity of making observations on whatever might be decided in regard to the scheme for closer union between Tanganyika, Kenya and Uganda before this decision became operative. In the Council, a resolution was adopted inviting the British Government to adopt in Palestine such measures as it considered fit to give effect to the recommendations and conclusions of the Mandates Commission, and the British representative informed the Council that the Government would be able shortly to state its intentions as to future policy on immigration and on the development of the territory.

UNITED STATES.

Economic Situation — Industry — Money Market.

(FROM OUR CORRESPONDENT.)

NEW YORK, SEPTEMBER 30.

FRESH liquidation in the share market, which has carried the prices of most shares to the lowest levels of the year and of many to lower prices than were touched in the 1929 crash, reflects a sudden increase in pessimism growing out of disappointment at the lack of pronounced business recovery. From hopes of an upward turn this autumn, the mercury of sentiment has dropped to fears of worse times this winter and of various financial troubles. The German elections, the South American troubles, the Canadian tariff, the Russian grain affair, and, above all, the renewed declines in wheat, cotton, rubber, sugar, copper and other important commodities have combined to give Wall Street an exaggerated fear of what may lie behind the horizon.

Yet, in spite of the undisputed evidence that the volume of business sagged further in August to new low

levels for the year and that no widespread progress was made in September, the feeling is still strong in many quarters that the worst is over and that recovery, while promising to be slow, is directly ahead. A survey of the situation has just been published by President Hoover's National Survey Conference, of which Mr Thomas W. Lamont, Mr Owen D. Young and Mr Myron C. Taylor are members. Unfortunately, the survey does not go much further than August with most industries. It attempts no interpretations or predictions, but summarises briefly conditions in leading industries. The picture painted is one of modest gains here and there, but of continued slackness in the major industries and an abundance of both short-term and long-term capital.

In the New York Federal Reserve district, where conditions are perhaps typical of those for the entire country, department store sales in August were 7 per cent. below the previous year's level, but the decline in daily volume of sales was not greater than it was in July, and stocks on hand at the end of the month showed a record-breaking decrease as compared with the same month of a year ago. Chain store sales were 8 per cent. less than last year, while wholesale trade dropped 24 per cent. Goods in the hands of wholesalers, with the exception of shoes and drugs, were smaller than a year ago. Since August trade has picked up considerably at the stores and among the wholesalers, and with cooler weather ought to increase further. Purchasing power is revealed as greater than many had supposed, but a species of "buyers' strike" has developed in many goods of the luxury type and in others where price reductions have not been made.

Heavy industries show little improvement. The steel trade is holding around 60 per cent. of capacity, but its principal consumers are not increasing their orders to any extent. Motor makers, farm implement manufacturers, the building industry and the railroads are buying only from hand to mouth and their operations are at a rather low point. Railroad traffic has increased somewhat with the season, but grain movement is disappointing, owing to farm holding of wheat. If there is an increase in traffic early next year, most railroads will be able to maintain their dividends, as they are cutting expenditures drastically.

Dividend cutting has affected already most of the motor companies and further suffering is in prospect, inasmuch as the leaders of the trade expect no sudden and sharp increase in motor sales. Copper companies are losing money, even with reduced output, with the metal selling at 10 cents a pound, which is below production costs for the large majority even at a larger rate of operation. Those companies which continue to pay dividends are doing so out of their surplus, and the same is true of most motor companies.

Oil companies are finding conditions growing worse, if anything. It is rumoured that the export association has decided to dissolve, as it is unable to keep all members in line on export prices. Stocks of both crude and gasoline in the hands of the producers, the refiners and the distributors are so huge that the struggle for "gallage" is growing hotter daily, and there are reports that the much talked of agreement on ethics made a year or so ago has been badly strained. Some companies in the south-west, to ensure larger outlets for their gasoline, are favouring a system of giving a concession of two cents a gallon under the cash price to those who buy on time, the theory being that the "charge account" purchasers will stick to one distributor. Accounts for most companies promise to be "in the red" for last quarter.

Meanwhile lower prices for commodities and the comparatively small volume of trade have accentuated the ease in money. Call money has at times been unobtainable, even at 1 per cent., although with the exception of one day this month, the Stock Exchange official renewal rate was maintained at a minimum of 2 per cent. Time money is nearly as cheap as call money. Thirty-day money is over plentiful at 2 per cent. and six months' loans are made at 2½ to 2¾ per cent., while prime names

on commercial paper go at 2½ per cent. Nothing more than a ripple was caused by the month-end financial transactions, involving a turnover of about \$750,000,000, including, for this season, record-breaking dividend and interest disbursements.

The Federal Reserve Bank finds that the return flow of currency to the bank after the beginning of September, usually small owing to expanding autumn payrolls and trade, was this month very large. In addition, the reporting member banks failed to expand their loans to the extent they usually do. Commercial loans have actually declined recently, while loans on securities have risen slightly, the gain being due to replacement by New York City banks of loans to brokers reduced by out-of-town banks and corporations. Rumours have been heard that the Reserve authorities are undertaking an investigation of the status of member bank loans on securities, which are considerably higher than a year ago, but there is nothing in them. The matter was investigated some time ago and reported upon at length by the Reserve Bank and the board. With the exception of a few unimportant interior banks, such loans were found to be quite safely protected with collateral and by no means a danger either to banking stability or to the security market. Doubtless in many instances banks have urged the reduction of such loans, but liquidation for such cause has been orderly.

Lacking the natural outlet for their funds the banks have continued as heavy buyers of securities. The advance in the fixed-interest-bearing securities market has carried prices to the highest in two years. The strength naturally has stimulated the new capital market and in September new issues were greater than in the previous month. Both domestic, corporation and foreign issues increased and were larger than in September of last year. State and city financing was stationary and new share sales were unimportant. Political disturbances abroad have hurt foreign financing, but only temporarily. Banks arranged a \$50,000,000 Argentine credit almost immediately after the new Government took office, and a credit of \$110,000,000 to \$125,000,000 is expected before long for German account. This will be arranged with private bankers and no Government bond issue is anticipated just now.

With the announcement to-day of the release from earmark of \$9,000,000 in gold held for foreign account, a transaction designed to put to work an idle central bank balance, the country had a net gain of \$12,000,000 on the month. The net gain for the year to date is \$212,000,000, which has, of course, emphasised the ease in the money market.

FRANCE.

Radical-Socialist Congress — Disarmament — Anti-Dumping Measures — Iron, Steel and Coal Output.

(FROM OUR CORRESPONDENT.)

PARIS, October 8.

In the political world the attention of all parties is focussed on the annual congress of the Radical-Socialist Party, which is to take place at Grenoble this week-end, and which, it is anticipated, will throw some definite light on the future policy of the largest group in the Chamber. The situation of M. Herriot and his followers is at present nebulous, as all recent events have shown. The question is whether they will persist in their effort to revive the Cartel, in spite of the repeated refusals of the Socialists to co-operate with them, or will abandon their policy of refusing to support M. Tardieu, unless they receive, as the price of their collaboration, the portfolio of the Ministry for the Interior and other key positions in the Cabinet. M. Tardieu and his predecessor, M. Poincaré, have long shown every disposition to meet the Radical Socialists half way, but they strongly object to be dominated by what after all is only one of the numerous groups in the Chamber. The extension of the Government majority to the Left, by including the Radical Socialists, would settle

many problems and probably give substantially more stability of policy. It would also solve the problem of the situation of M. Briand, arising from the changed outlook in regard to Franco-German relations since the recent elections. For the moment, however, it appears probable that the Nationalist Wing of the Government majority will not emphasise their distrust of the Foreign Minister by any overt action. Any attempt of the Right to remove M. Briand could only result in overthrowing M. Tardieu, and could only succeed with the help of the Radical Socialists, which is most unlikely to be accorded for such a purpose.

Meanwhile, no change in Ministerial policy seems likely, and there are indications that, whatever paper resolutions may be voted by the Grenoble Conference, a substantial section of M. Herriot's supporters will endorse the Government policy of "Security, arbitration, disarmament." Incidentally, M. Herriot has troubles of his own at Lyons, where on Sunday he escaped—thanks only to the votes of the seven Nationalist members of the Municipal Council, and by a majority of one vote—two defeats by his Socialist opponents that would have cost him the post he has held for so many years as Mayor of the Silk City. The incident may appear unimportant to those unacquainted with the idiosyncrasies of French local politics, but opinion in general inclines to the view that the new situation set up thereby at Lyons may have an important repercussion on the country's general policy.

The announcement last week that 170 steamers had been chartered by the Soviet Government to transport grain and other Russian products to Western European ports was followed on Saturday by the promulgation of a Presidential decree, countersigned by the Minister for Commerce, applying forthwith Article 5 of the tariff law of March 3, 1910, to all supplies of cereals, sugar, meat, poultry, eggs, timber, glues, gelatine, stearine, etc., and flax of Russian origin henceforward exported to this country. The Article in question gives the Government the power, at any given moment, to place under a special régime of import permits any category of products whose entry may prove undesirable. Provision is also made with a view to controlling indirect import of the same products. The decree authorises the entry (without special permit) of any goods belonging to the categories affected in respect of which documentary proof is supplied showing that they were dispatched from Russia prior to last Saturday, and provided that they are declared for immediate consumption. It will be noted that Soviet petroleum, of which large quantities have been brought into this country for some time past, is not included in the list of commodities now subjected to special authorisation. This is explained by the fact that all mineral oils, irrespective of origin, have for some years past been subjected to special entry permits.

The returns of French foreign trade "by countries" for the first eight months of the year, which are issued to-day, show that British exports to France have fallen off by 330,000,000 francs as compared with the corresponding period of 1929, while German exports (including reparation payments in kind) were 145,000,000 francs more. French exports to Great Britain, Germany and the United States all showed substantial declines.

Iron and steel production returns for August show a decline of about 2 per cent. under both heads. The total output of pig iron was 845,000 tons, against 861,000 tons in July and monthly averages of 871,000 tons in 1929 and 841,000 tons in 1928. The output of crude steel was 775,000 tons, against 790,000 tons in July and averages of 805,000 tons last year and 783,000 tons in 1928. The export market remains depressed, with falling prices and reduced activity. The past few weeks have also registered a certain slowing down in the home market, as in those of most other countries, with declining selling prices. The partial break-up of the European Steel Cartel, as shown in the decisions taken at Liège in the middle of September, is indicative of the difficulties at present experienced by all countries represented in the international market. The international agreement in regard to half-finished products

and small girders has been definitely terminated. The continuation of the international entente so far as the remaining categories are concerned was recognised at the Liège meeting as being possible only by a general consent to reduction of output up to 25 per cent. (including the 10 per cent. cut which has been in operation since November last) as from the beginning of October; or, in the alternative, to a return to the original total tonnage programme of 27,190,000 tons, fixed in 1926; subject to a penalty clause (whichever alternative is accepted) that each national group shall be strictly called on to pay a fine of \$4 per ton on any quantity exceeding its fixed quota. Finally, it was decided that in the event of the various groups failing to agree on one or other of these alternatives, the Cartel in its present form should be brought to an end on September 30th. On present figures, France and Luxemburg would find it to their interest to accept their original quotas of 1926, whereas Belgium, Germany and the Saar would probably prefer the extra 15 per cent. cut. The Cartel's managing committee of four is holding frequent meetings with a view to working out details as to the future form of a modified Cartel, but in any case a still greater reduction of output is probable (and particularly by France and the Saar, if they are to escape fines).

Coal production figures for August indicate a total output tonnage of 4,441,347 tons, as against 4,591,539 tons in July, as compared with monthly averages of 4,577,000 tons in 1929 and 4,369,000 tons in 1928. The decline in August was due solely to the fact that the month comprised only 25 working days, against 26 in July, the shortage being partially compensated for by an increase in daily average output from 176,598 tons to 177,654 tons. The output of metallurgical coke was 4,500 tons less than in July. The general situation in the French coal market, though quiet, remains better than in other countries, with prices unchanged. Coalowners have so far failed to come to any agreement with the miners' unions on the question of holidays on full pay, and on Monday the threatened protest, in the form of a 24-hours' general strike, became an accomplished fact throughout the French coal districts. In the northern coalfield the number of absentees from work reached over 90 per cent. Coal imports continue to increase, larger British entries being registered in all the coastal districts, while German imports are increasing in the East, and British, German and Belgian consignments in the Paris area. Both French and foreign prices remain steady, however, and there is no indication of any price war. Wage levels at the French mines are being maintained at their old figures. The Belgian miners have accepted a further cut of 4 per cent. in wages, following 5 per cent. in July.

GERMANY.

Government Programme — Deficit — Future Financial Reform — Wages — Housing.

(FROM OUR CORRESPONDENT.)

BERLIN, October 7.

The official announcement of the financial programme with which the Brüning Government intends to go before the Reichstag contains some surprises. True, the actual proposals do not differ very much from what was already publicly known. The deficit for 1930, which amounts to about a milliard, is to be temporarily covered by short-term borrowing, and the new foreign credit of 500 million Reichsmarks, already assured, is to be used for the same purpose. In order to prevent a further expansion of the deficit, unemployment insurance contributions are to be raised from 4½ to 6½ per cent. of wages, so that the system will become independent of the Treasury, provided that nothing unexpected occurs further to depress the labour market.

Financial reform proper will begin with the Budget of 1931. The cut in official salaries will be 6 per cent.; for

ministers, members of the Reichstag, and apparently also for the highest local government officials it will be 20 per cent. The Reich is expected to save 120 millions on this reduction, and the saving to the states and communes will be far greater, as they have a very much more extensive personnel. In consequence, the Reich is reducing the share of the states and communes in the assigned taxes by 388 millions. The Reich is making further reductions amounting to 300 millions in its new expenditure; as it is not yet known under what heads, it is impossible to say whether these are effective economies or merely postponements of expenditure.

Another quarter of the rent tax, half the yield from which has hitherto been used for the building of houses, is to be withdrawn from this object and placed at the disposal of the states and communes for general financial purposes. The consequent diminution in the funds available for housing purposes is to be made good by borrowing, but it is not quite certain if this will prove possible. The states and communes are to be required to use these additional proceeds of the rent tax for the reduction of the factory and land taxes, which are particularly burdensome to industry.

This programme of the Brüning Cabinet shows a very great measure of decision and courage. A Government which is far from possessing a parliamentary majority, and yet ventures to propose a reduction of official salaries can at least not be accused of timidity. Possibly it was not necessary to postpone these measures, with the raising of the tobacco duty, until the end of the Budget year, but by putting them off until April Herr Brüning gains time to prepare a solution of his parliamentary difficulties. At present he would probably be defeated, since the Social Democrats can hardly associate themselves with the reduction of salaries unless they obtain concessions for the workers at the same time, and the inclusion in the Cabinet of a social democratic minister may even prove necessary for this purpose. The moment, however, that such concessions were made to the Left, the Right wing of the Government coalition would have broken away. There is, of course, great anxiety lest this situation remain the same until the new Budget comes up for discussion in the early months of next year, but it may be possible to achieve some temporary agreement which will enable the Government to steer their reform programme, in its present form or remodelled, through the Reichstag.

True, it is not impossible that some fatal political difficulty may arise before then, as, for example, if the Social Democrats, under pressure from their Radical section, join in the vote of no confidence against the Brüning Cabinet which the Communists or the National Socialists, or both, will immediately bring in, or if they put forward a motion to rescind the emergency decrees of the President which provide for economies in health and unemployment insurance. But although a process of fermentation is going on in the ranks of the Social Democrats, the Parliamentary Party has taken such a cautious attitude that it may be assumed that it will not move against the Government at the outset. The Chancellor has gone so far to meet it as to announce that the emergency decrees must be recast as Bills, which will open the way for fresh discussion of their contents.

In addition to measures designed for the mitigation of the immediate financial crisis, the Government programme contains a series of proposals whose effect will for the most part only be felt in future years. Of the greatest immediate importance is the reduction in wages which is openly contemplated by the Government. The official announcement states, somewhat obscurely: "The income and the standard of living of all classes of entrepreneurs and workers, and the price level of German goods, must be such as to enable us to hold our own in world competition." The Minister of Labour has already intimated in a speech that in the opinion of the Government wages and salaries must come back to the level of 1927, as every increase above that level has imposed an exces-

sive burden. That it might have been better in the interests of the workers themselves if the wage increases of 1928 and 1929 had never taken place is very probable. It can almost be regarded as a certainty that unemployment would then have been very much less, or at least that the period of prosperity would have lasted longer, but to depress wages now would create a degree of political unrest which might easily outweigh the economic advantages. Whether the Government is really disregarding this consideration and proposing immediate steps for the reduction of wage scales is bound to be revealed almost at once, for the Berlin metal industry has at this moment a wage dispute under arbitration, the result of which will set the standard for the rest of industry. The Government arbitrator has to deal with a proposal by the employers to reduce wages by 15 per cent., which is naturally being strongly resisted by the unions.

The Government programme deals in detail with the housing question. It is proposed not only to reduce gradually the housing subsidy, but also to abolish the restrictions on free bargaining between landlord and tenant. The allocation of tenants by housing officials of the communes is to cease as from April 1, 1934, and the official fixing of rents and the protection of tenants against eviction as from April 1, 1936. Meanwhile every effort is to be made to build, not the greatest possible number of new dwellings, but the cheapest possible dwellings. This last idea is quite sound, but whether the necessary conditions for the removal of restrictions will be present within the next few years it is impossible to say, and the Cabinet's plan can only be explained by a desire to retain in the Government bloc the Economic Party, whose support is indispensable for the maintenance of a majority. This little group has taken upon itself the championship of the interests of house owners. On the other hand, this part of the programme will, if it is retained, prove a serious hindrance to any alliance with the Social Democrats.

For 1932 and succeeding years the Government programme contemplates a new financial arrangement between the Reich, the states and the communes. In this matter a compromise has been sought between the various proposals which have been publicly put forward, and attention has also been paid to the recommendations in Mr Parker Gilbert's report. The Government proposes to keep for the Reich a larger share of the income tax, which at present goes for the most part to the states and communes, and to make the states and communes rely more upon consumption taxes. They are, however, to receive a right of levying a supplementary income tax, but the exercise of this right is to be made conditional on the simultaneous imposition of a poll-tax, an arrangement which was already provided for in the last emergency decree of the President. If the communes were given a free hand in the taxation of alcohol and beverages a supplementary income tax would be superfluous. The socially undesirable poll-tax could thus be done away with; it is only intended as a safeguard against the levying of this supplementary income tax, and is meant to prevent the communes from indulging in excessive expenditure and then making property owners foot the bill while the mass of the electorate goes scot free.

The Government is planning a very rapid reduction of floating debt. For three years from 1931 onwards, 420 millions out of the approximately 1,700 millions short-period debt of the Reich are to be redeemed out of tax revenue. This decision seems almost excessively radical, for such rapid extinction calls for efforts from the taxpayer which are not really necessary.

To sum up, the virtues of this programme are vigour and an appreciation of the connection between financial and economic policy. The chief defects are the lack of financial provision for the communes in the current year, the overburdening of the programme with premature and to some extent even impracticable projects, and the renunciation of still higher revenues from tobacco and alcohol. Perhaps, however, many of these deficiencies may be remedied in the course of the negotiations.

BELGIUM.

Coal Industry — Industrial Conditions — Tourist Revenue — Banking and Stock Exchange.

(FROM OUR CORRESPONDENT.)

LOUVAIN, September 21.

THE coal problem, though less acute in Belgium than in other countries, has been growing more serious. Sales of coal are effected through the central agency in Brussels of the coal cartel, which has succeeded, in spite of the strong competition from abroad, in keeping the fall in prices to less than 10 per cent., but an increase in unsold output was the inevitable consequence. Shortage of labour curtailed coal production till the end of 1929, but since the collieries were able to obtain the necessary labour there has been a tendency to increase output, though sales during the last year have only reached 92 per cent. of the total production. While output averaged 2,250,000 tons per month, stocks at the pithead grew as follows:—

UNSOLD COAL OUTPUT.			
Thousand Metric Tons.			
End of		End of	
September, 1929	280	June, 1930.....	1,585
December, 1929.....	322	July, 1930.....	1,719
March, 1930	1,100	August, 1930.....	1,845

In view of the present situation a reduction of both output and wages appears almost inevitable. During previous periods of depression in the coal industry, as for example in 1925, unsold output never exceeded 1,860,000 tons. The expansion of bank deposits enables industrial holding banks to grant to subsidiary pit-owning companies the advances required for holding stocks, but this unusual financial support is, of course, limited.

Last July there was a 5 per cent. wage reduction in the coal industry, which gave rise to a small regional strike in the Borinage. Pit-owners and employees have again entered into negotiations on a proposal of the employers for a further reduction of 4 per cent. The trade unions are resisting, but they will probably agree to a diminution which is generally regarded as unavoidable. There has hitherto been little wage reduction in the other industries. Decreases have been reported in the diamond industry, and in building, but there is no general downward movement, and it is generally hoped that there will be no widespread reduction.

The revenue from foreign tourists has fallen, despite the exceptional attraction for touring of the centenary pageants and the Antwerp-Liège Exhibition. Income from abroad on account of tourism has been estimated at a minimum of 1,250 millions (£7,000,000); though considerably lower than the corresponding item in France's balance of payments (say £80,000,000) this minimum figure is, nevertheless, satisfactory. Industries whose main revenue comes from this source (e.g., hotels and garages) have experienced a very bad season, but it appears that the real reason for this is excessive competition. There has been a great deal of hotel building in Brussels and in the seaside resorts. The figures of the passenger traffic on the Ostend-Dover line as well as on the Belgian railway shows that the number of tourists has remained very satisfactory, though the amount of expenditure per head has probably been less.

The critical economic situation is forcing industrialists to energetic efforts towards rationalisation and industrial concentration. The amalgamation of the mechanical window-glass works utilising the Fourcault process was registered at the end of August. Thus thirteen companies have merged into the "Union of Belgian Mechanical Glassworks, Cy., Ltd.," founded with a subscribed capital of 200 million francs. It was reported a little later that the above-mentioned merger has entered into a sales agreement with the Belgian company which works the Libbey-Owens patent. The production of mouth-blown glass has almost ceased, and practically all the Belgian glassworks have been grouped either in syndicates or in cartels. The output of the glassware industry has temporarily declined, but it is anticipated that many

mechanical glass-kilns will soon be put to work again. Wage negotiations are at present in progress.

In the heavy metallurgical industry the amalgamation of *Ougrée-Marihaye Cy., Ltd.* and *Alliance Monceau Cy., Ltd.*, is anticipated; the situation of the latter is said to be bad. The shareholders of this company are trying to avoid amalgamation, which they consider will be unfavourable to their interests. The remaining metallurgical companies made substantial profits last year, though less than in the previous year.

Since the end of August the industrial situation seems in general a little less bad. A slight improvement has been registered in metallurgy and in the glassware industry, though this is not a decisive index of a general recovery. On the Stock Exchange this feeling of slight revival has had a steadying effect and put an end to the bear movement of the previous months. All the same, the National Bank share index which was 125 in 1928 was only 62 at the beginning of September, 1930. In the stock market, total turnover remains very small, and the public takes at present hardly any part in transactions. The present inactivity is, of course, prejudicial to the banks which previously enjoyed substantial profits from transactions and new issues. In addition, the banks have been facing serious difficulties in the quest of a profitable investment for their deposits. Burdened with heavy general expenses and the necessity of numerous employees, they have been compelled to raise their rates for current services and transactions, *inter alia* the collection and receipt tariff. Only very limited profits can be made by this means, however, on account of the competition from the Postal Cheque Service, which is managed by the State and carries only very small general expenses.

ROUMANIA.

Budget Prospects — Stewart Contract — Foreign Trade Balance — Prices — Petroleum Industry.

(FROM OUR CORRESPONDENT.)

BUCHAREST, September 19.

THE principal problem confronting the Government in the coming parliamentary session will be the budget. It is regrettable that the Minister of Finance has not been able to keep his promise of tax reduction made at the end of last year, and it appears that the only hope of reducing the crushing burden weighing at present on the taxpayer lies in effecting economies. Instructions have gone forth to the various Government departments to reduce their budgets by considerable sums, amounting in all, it is reported, to 8,000 million lei. It seems unlikely that economies of such size will be realised. Probably the Minister of Finance asks much to obtain little. At any rate, he is determined to reduce expenditure as the imposition of new taxes is impossible, and the appropriation of extraordinary revenue to meet ordinary expenditure is definitely labelled by him as unsound. The future of the present Government probably depends on the successful solution of this difficult problem.

It is reported that the contract of the Government with the firm of Stewart and Partners for the repairing of the roads, ratified by Parliament at the end of last session, is

after all to be cancelled for lack of the necessary financial support. The opposition parties endeavour to make capital out of this lack of elementary providence on the part of the responsible ministers, and Mr Madgearu, who is said to be chiefly instrumental in the conclusion of this contract, is the principal butt of their attack. It is, indeed, almost incredible that the Bill for this contract should have been placed before Parliament without having been examined in all its details, especially with regard to so important a point as the financial arrangements.

Roumania's foreign trade figures for the first six months of this year show a favourable balance of 641 million lei, exports amounting to 12,857 million lei, against imports of 12,216 million lei. This compares with an adverse balance of 4,104 million lei in the corresponding period of last year, when exports amounted to 10,171 million lei and imports to 14,275 million lei. In the spring of 1929, a very small quantity of cereals was available for export owing to the bad harvest of the previous year. This year's figures, on the other hand, have been swelled by the fact that considerable quantities of the 1929 harvest were not immediately exported in the hope of better prices, unfortunately not realised, but were held back for a time, and only exported in May and June last. It is, therefore, not surprising that exports of cereals are principally responsible for the improvement in the trade balance; in fact, they were over 900,000 tons higher this year than in the corresponding six months of last year.

Petroleum products show a satisfactory increase with 1,788,000 tons in 1930, against 1,309,000 tons in 1929. Timber exports have decreased, but those of cattle are slightly greater. The truly significant feature of the trade figures is the substantial contraction of the imports, obviously the direct result of the diminished purchasing power of the population of Roumania. As the excess of exports over imports is generally greater in the second half of the year than in the first, it may be expected with confidence that for the whole twelve months of 1930 Roumania will have a very considerable active trade balance which is estimated in some quarters at between 4,500 to 5,000 million lei. Already in the month of July and August exporters have been very busy owing to this year's satisfactory harvest of wheat, barley, oats and rye. It is true that the maize crop shows a decrease against last year of 88 per cent., but in 1929 the harvest of maize was particularly abundant.

The result of this satisfactory position is noticed in a marked improvement of the rate of exchange during the last two months. Indeed, the supply of foreign bills has been plentiful and the National Bank has easily covered its substantial requirements of foreign exchange for the coupons on the foreign loans due in September and October, and, in the light of this year's experience, no fear need be entertained, given average conditions, as to the maintenance of the stability of the currency. Unfortunately, however, owing to the low prices which have been obtained, the trade figures do not mean prosperity. The fall in average prices recorded this year against those of 1929 is as follows: cattle 7 per cent., cereals 48 per cent., timber 24 per cent., and petroleum products 11 per cent. Lately the prices of cereals, which had shown a slight recovery in June and July, partly owing to the reduction of the export duties, have fallen again to almost low records. Thus wheat is quoted at Braila Port at 400 lei, oats at 200, maize at 300 per 100 kgs., against 500, 320 and 400 lei two months ago. The result is a serious decline in the value of land which threatens to undermine the credit system of the country already badly shaken by the prolonged economic crisis. This is causing grave concern to the Government, but so far nothing practical has evolved to mend matters. In its campaign against usury, in its endeavour to create cheaper credit facilities, especially for agriculturists, it does not appear to make much progress, while its negotiations with other agricultural countries in South Eastern Europe and the much acclaimed results thereof, valuable as they may be at some future time, do not seem to be of a nature to cause immediate improvement of conditions.

Under the plan for the reduction of petroleum output, the maximum daily production for the period up to October 1st was fixed at 1,350 waggons. On the basis of this figure the apportionment of the quantity was determined which each company taking part in the plan was allowed to produce. On September 12th a test of the potential productivity was made which well serve as a basis for the establishment of the proportions to be attributed to the various companies for the period of the six months following October 1st. The latest output results are not yet definitely known, but they are supposed to surpass the most sanguine expectations, being estimated at over 3,000 waggons. It is expected, therefore, that the maximum production will be increased. The restriction agreement has already borne good fruit, as prices for interior consumption have been sensibly raised. It must be noted that in the last two years the export of petroleum products has surpassed that of cereals and now takes first place in Roumanian exports. Important developments are expected from the negotiations which are to take place as soon as possible to determine a programme for the purpose of encouraging the export of Roumanian petroleum to France.

(FROM OUR CORRESPONDENT.)

TOKYO, September 9.

THE national accounts for the fiscal year ended on March 31st last, which were published on August 30th, disclosed a surplus of 90,127,000 yen, revenue amounting to 1,826,444,000 yen, and expenditure to 1,736,317,000 yen. The revenue shows an increase of 52,877,000 yen, in comparison with the original estimates for the year, but a decrease of 179,246,000 yen, as against the actual receipts of the preceding year. The excess over the estimates, however, is mainly accounted for by the unexpectedly large transfer of the preceding year's surplus. Receipts from taxation revealed a decrease of 4,066,000 yen. While land tax, business tax, death duties, and sake duty produced 3.8, 2.2, 3.7, and 7.9 millions respectively more than were anticipated, income tax, textiles duty, Bourse tax, and Customs fell by 2.8, 3, 2.6, and 14.2 millions respectively short of the original estimates. As for non-tax revenue, profits of State monopolies alone show an increase of 6.3 millions, while postal receipts declined by 10.1 millions, earnings of Government undertakings by 10.7 millions, and revenue from State-owned forests by 6.5 millions. On the other hand, aggregate departmental expenditure shows a fall-off of 87,537,000 yen upon the preceding year, and of 172,524,000 yen on the original estimates. Of the realised surplus, 49.5 millions has already gone over to the current year, and 40.5 millions is earmarked for deferred expenditure, leaving little or no margin available for the coming fiscal year as a budgetary offset against a sum for new items of expenditure to be claimed by the spending departments.

A syndicate of the leading banks in Tokyo, Osaka and Nagoya announced last week the formation of the "Bankers' Committee of Industrial Research," designed much along the lines of your Bankers' Industrial Development Company, to receive schemes for rationalisation put forward by basic industries and to provide money necessary to carry them out. The plan has been warmly supported by the Finance Minister and the Governor of the Bank of Japan. The membership is open to trust companies and insurance offices, and the Committee represents a co-operative effort on the part of all the important banking and financial institutions of the country to assist in restoring the depressed staple industries to a condition of soundness and prosperity. But a certain section of official circles seems to look askance at the scheme, which involves a centralised control by finance over industry, and tends to strengthen more than ever the banker's position as the autocrat behind the scenes. The life assur-

ance offices also are talking over the projected Life Assurance Securities Company, Ltd., to be designed to pool and safeguard their security investments.
